"There were no lights on the switches," Mr. Egan continued, in describing the advances made in engineering. "The switch lever was six to eight feet long, and when it was standing in a vertical position that indicated that the track was set for the main line. Hand cars for the section men were propelled by crank wheels, and later levers were installed. Station buildings at important points were constructed of stone or brick, and so were roundhouses and shop buildings. Turntables were made of wood.

"I have frequently been asked the difference between railway men of fifty years ago and today," Mr. Egan said. "My reply has been, not reflecting upon the loyalty and fidelity of many present-day employes, that there was more individuality at that time among employes and the railroads on which they worked. Every employe vigorously resented any aspersions cast upon his road, the officials under whom he worked, or the methods used. Trouble makers were relegated to the background.

Praises the Railway Pioneers

"My duties caused me to travel in advance of the railroads mile after mile over plains and mountains in our Northwestern states and in Canada. Before the railroads were built the territory was devoid of habitation, without any evidence of civilization. Now, how changed is the scene! The country is dotted with cities, towns, industrial plants, cultivated fields, modern farm dwellings and buildings, all populated with prosperous inhabitants. The railroad has been the carrier of modern civilization throughout this vast country.

"How loath we are to give due credit to the men who furnished the funds and the brains and met with many severe reverses and obstacles to accomplish their task, but whose confidence in the country's future compensated them for their troubles and anxieties. To them, as the railway pioneers, in my humble judgment, there is due an obligation that can never be fully repaid by the citizens of our country. I say that because I have seen, in foreign countries, unpopulated territory devoid of improvements that will remain so until the means of modern transportation such as we have in the United States are provided."

The Egan family has played an important part in the story of the Illinois Central System. John M. Egan had six brothers who received their early training with the Illinois Central, and there were six sons of his father's brother who were railway men, a number of them also getting their first experience with our road.

How to Cut Down the Bill for Lubricants

Traveling Engineer Von Bergen, of Memphis Division, Urges Further Economy Practices

By E. VON BERGEN,

Traveling Engineer, Memphis Division

WHENEVER the subject of saving oil or other lubricants is first broached to the average railway man, his usual comment is: "I don't believe in stinting the engines or cars for oil. Oil is cheaper than valves, cylinders or brasses. I think it better to use a barrel of oil a trip than to burn up a bearing and also probably seriously delay a train."

All of us will agree that such a comment is correct, *provided* the barrel of oil accomplishes this purpose. But let us stop a moment and consider how much benefit would be derived from this barrel of oil if applied to a bearing at one application. All who have made any study of the problem understand that the only oil in a journal box, or cellar, that serves any purpose whatever is the exceedingly thin film that passes between the brass and the journal, and this film is so thin no man has ever been able to measure it. It has been definitely determined, however, that the cost of the oil required to supply this film is only one-tenth of 1 cent per journal for each thousand miles run, or eight-tenths of 1 cent for a car with eight journals. As it costs on an average of from 6 to 12 cents per thousand miles to lubricate freight and passenger cars, we must conclude that a great deal of this money is wasted.

Chief Causes of Waste of Oil

The following are the chief causes of waste:

Spilling oil about the yards.

Throwing away used packing that should be reclaimed through the soaking vat.

Indiscriminate pouring of oil into journal boxes instead of properly adjusting the packing.

Packing improperly applied, resulting in oil's wasting down wheels or out from boxes.

Hot boxes, requiring additional oil, due to bearings improperly applied, packing improperly prepared, packing improperly applied.

Thus we see that no advantage can accrue from pouring large quantities of oil into a box. It would simply follow other oil wasted out the front of the box to the ground and accomplish nothing.

It has been found that approximately 90 per cent of the hot boxes on freight and passenger cars are caused when the packing settles away from the journal at the back end of the box. When the lid of a box is opened for inspection, the packing may appear in good condition, but fre-

E. Von Bergen

quently, when the packing hook is inserted in the back end of the box, it is found that the packing has settled away from the journal, leaving a depression or hole. Pouring quantities of oil into a box with packing in this condition will avail nothing. Sufficient packing should be pulled so the remainder can be pushed home in the proper position; then the packing that was pulled should be returned to the box in accordance with instructions.

Oilers should never attempt to push back the entire mass of packing in the box, in an attempt to fill such a depression, as invariably the packing will be jammed under the journal before reaching the back end, and thus make bad matters worse. Merely punching the packing in the front end of boxes and adding more packing indiscriminately is a waste of both time and material. It is of utmost importance that oilers, when working boxes, satisfy themselves that the packing in the back end is in the proper position.

Excess Oil Causes Trouble

The only portion of the valve oil introduced into the locomotive steam chests and

cylinders which serves any purpose is that which forms the thin film between the valve rings and bushings and between the cylinder packing and cylinder walls. Any additional amount is scraped off by the valve rings or cylinder packing and passes out the exhaust ports and passages, creating more or less carbon deposit *en route*, which not only is waste but interferes with the efficiency of the locomotive and requires additional expense to remove. The best prevention for this carbonization has been found to be as follows:

Supply only sufficient oil to lubricate the valves and cylinders.

Permit no pockets or sags in oil pipes between the lubricator and the steam chest and cylinder connections.

Maintain openings in the choke plugs at the lubricator and steam chests or cylinders within standard limits.

Admit enough steam while drifting down grades or to a stop to prevent a vacuum in the steam chests or cylinders.

On superheated engines, more economical lubrication and less carbonization will result from feeding two or three drops of oil to the cylinder to each one to the valve. This is accounted for by the following reasons: The temperature in the steam chests is higher than that in the cylinders; hence, when the temperature reaches such a degree that it breaks down the oil, the cylinder will receive no lubrication at all, under a practice of feeding all the oil to the steam chests. Tests with gauges on steam chests have shown the pressure in the chests building up higher than boiler pressure, with a wide-open throttle, and working in a short cut-off.

No Pipes to Valves on Some Roads

Under such circumstances oil will build up in the oil pipes. Should the throttle be shut off immediately thereafter, an excessive amount will enter the steam chests just as the relief valves are opened, or a back suction from the smoke-box takes place, which is the worst time for oil to enter. The travel of the piston is much longer than that of the valve; hence it requires more lubrication. With cylinders well lubricated, very little oil need be given directly to the valves. In fact, some roads which had experienced much trouble with cylinder packing on large superheated engines, while feeding oil to valves alone, disconnected the oil pipes from the valves entirely, fed all the oil to the cylinders and overcame the trouble. However, it is better practice to feed a small amount to the valve to assist the lubrication of the admission side of the rings.

Some engineers, upon nearing the end of the run or arriving at the roundhouse, open the lubricator feeds wide, allowing all the remaining oil to feed into the steam chests and cylinders in a short time, the idea

being to provide sufficient lubrication to last while the engine is being handled about the roundhouse yard. This is bad practice, as cases have been found where great chunks of carbon built up on the valve spools on this account, and in others, where the temperature was not sufficient to carbonize, a lot of oil dripped from the cylinder cocks after the engine was placed in the roundhouse. Lubricator sight feed glasses should be kept clean on the inside as well as out, and lubricators should be bracketed to boilers in such a position that the feeds can be plainly seen in day time without the aid of artificial light.

Should Check Up Occasionally

Engineers can save a great deal of valve oil by frequently checking the feeds against the watch. They will be astonished to find that the drops are feeding nearly twice as fast as they thought they were when set by guess or count.

It is marvelous what a small amount of oil is required to lubricate a given surface on a locomotive. An engineer will never realize how small this amount is until he tests it. A recent test to determine the amount of engine oil required to lubricate our Pacific type locomotives in passenger service, over a 226-mile division, developed that 1½ pints were sufficient. This did not include oil used by roundhouse men, but did include all used by the engineer. The test surprised even those conducting it.

Much rod-cup grease can be saved by rod-cup fillers in the roundhouse by placing only enough grease in the cups to bring it to the pin and reasonably fill the cup, instead of screwing down the plugs and refilling repeatedly, until the grease projects from between the brass and the collar in the form of a ribbon. Engineers can also economize in this feature by screwing down plugs on the road only when actually necessary, rather than at stated intervals regardless of necessity, and by protecting the grease carried along on the engine, so as to prevent its being incrustated with dirt and rendered useless or perhaps causing a hot pin when some of this dirt is introduced into the rod cup along with the grease.

Care Saves Time in Long Run

Too much stress cannot be laid upon the importance of packing driving cellars with journal compound exactly in accordance with instructions. Some of the men who do this work are tempted to slight various details described in these instructions, falling into the error that they are saving time thereby. It is true that to do the work as the instructions provide requires more time, but we are repaid for this many times over by the results obtained. A driving cellar properly packed will run for months with no

attention except inspection, while if the work is done in a haphazard manner a state of continual uncertainty exists which requires frequent removal of the grease cake for inspection.

Great care should be taken when jacking up engines in the roundhouse to protect indicators from being bent on account of binders' pressing against them, which in turn will cause them to hang on the cellar and prevent the follower plate from exerting pressure against the grease cake, and thus prevent its feeding.

Successful driving journal lubrication depends in a large measure on the judgment used by the engineer in oiling hubs. Only enough oil should be applied to the hubs to prevent their cutting. When too much engine oil is applied, it runs down into the grease cake and causes carbonization. If valve oil is used, too much of it will also result in its working into the grease cake and softening the grease next to the hub, causing it to feed faster and tilt the follower plate, which is likely to result in a hot driving box. Neither journal compound nor rod-cup grease requires the assistance of oil. They will function much better on the bearings for which they are intended if oil is kept away from them.

Standard Instructions Are Correct

Many of those who use the lubricants furnished do not realize the amount of waste that can be prevented. The individual who sees a small amount of oil or grease wasted and thinks nothing of it is also usually imbued with the idea that, if a small amount of lubricant is good for a bearing, a large amount must be much better. Much study has been devoted to the problem of lubrication, and many tests in everyday service have been conducted to determine the most efficient methods. Our standard instructions covering the lubrication of locomotives and cars are the results of these studies and tests. Many demonstrations have proved that when these methods are substituted for individual ideas the cost of lubrication is reduced and hot bearings are eliminated. Therefore all those who have to do with the use of these lubricants should adhere rigidly to instructions and refrain from substituting individual ideas therefor.

Some are inclined to view the conservation of lubricants as unreasonable, feeling that machinery must suffer in consequence. This is not the case. Locomotives and cars can be provided with ample lubrication and yet allow of large savings by the use of good judgment and the following out of instructions.

Saved Thousands of Dollars in Year

The amount expended by our company for the lubrication of locomotives and cars

appears small in comparison with larger items, such as fuel, and it appears to some that the conservation of lubricants does not deserve attention. However, the following statement shows that a large amount of money is expended for this item. It also shows the savings effected in 1922 as compared with 1921. The total amount expended for lubrication of locomotives and cars was reduced \$47,430.83. However, when the increased mileage is taken into consideration and the reduction in cost per thousand miles is applied to the mileage of 1922, we find a saving of \$95,034.20. Approximately one-fifth of this saving is accounted for by reduced prices of lubricants, and the rest can be laid to better practices. Our lubrication cost is still too high. With the co-operation of all concerned, the same locomotive and car mileage should be produced in 1923 with a reduction in cost of at least \$50,000.

The 1922-1921 comparison of lubrication statistics for the Illinois Central System is as follows:

Engines			
	Miles	Cost Per 1,000 Miles	Total Cost
1922.....	52,652,210	\$4.6901	\$246,945.48
1921.....	47,860,214	5.9378	284,182.59
Increase	4,791,996		
Decrease		\$1.2477	\$ 37,237.11
Passenger Cars			
	Miles	Cost Per 1,000 Miles	Total Cost
1922.....	103,752,707	\$0.0866	\$ 8,988.19
1921.....	100,659,926	.1005	10,119.76
Increase	3,092,781		
Decrease		\$0.0139	\$ 1,131.57
Freight Cars			
	Miles	Cost Per 1,000 Miles	Total Cost
1922.....	948,941,530	\$0.0965	\$ 91,568.49
1921.....	799,549,539	.1259	100,630.64
Increase	149,391,991		
Decrease		\$0.0294	\$ 9,062.15
Grand Total			
1922.....			\$347,502.16
1921.....			394,932.99
Decrease			\$ 47,430.83
Reduction in Cost Per 1,000 Miles Applied in Mileage in 1922			
	Miles	Decreased Cost Per 1,000 Miles	Total Decreased Cost
Engines	52,652,210	\$1.2477	\$65,693.90
Passenger Cars.....	103,752,707	.0139	1,442.16
Freight Cars.....	948,941,530	.0294	27,898.89
Total Saving			\$95,034.95

In the foregoing I have refrained from indulging in theories. The statements are based on facts demonstrated in actual practice. The management wants our equipment well lubricated. It does not desire to spare any expense necessary for proper lubrication, but let us eliminate all waste, which means the saving of thousands of dollars.

Pana, Ill., Where Roses Grow by the Acre

*Thousands of Flowers Are Gathered There
Daily for Both Wholesale and Retail Trade*

ROSES of every variety are grown by the thousands at Pana, Ill., on our line just south of Decatur. Probably more roses are produced there than at any other place in the United States, with the possible exception of Chicago. Pana is recognized by all the prominent florists as one of the greatest rose centers in the country.

There are three large greenhouses at Pana, and they have a total of more than 210,000 plants and flowers. More than \$500,000 is invested in greenhouses there. Two of these companies, the Walter A. Amling Company and the Pana Floral Company, produce nothing but roses and sell exclusively to wholesale dealers, while the third, the Henderson Floral Company, has miscellaneous flowers. The latter concern takes care of the local demand for flowers, while the other companies ship their products to commission houses in St. Louis. Some shipments are made to Chicago. The commission houses reship the roses to retailers in various parts of the United States. On an average, more than 10,000 roses are shipped out of Pana each day during the season.

The Walter A. Amling Company is the largest floral company at Pana. This concern has 300,000 square feet of space, in which are planted 140,000 rose plants. This is considered to be one of the largest greenhouse companies in the United States.

Gathering 30,000 Roses a Day

The first greenhouses of the Walter A. Amling Company were constructed three years ago, and since that time many additions have been made. At present there are fourteen houses of steel frame construction. Plans are now being completed for the con-

struction this spring of even more glass houses on the grounds.

Walter A. Amling says that as many as 30,000 roses have been gathered in his greenhouses in a single day.

During the coldest weather, the temperature where the plants are producing is kept between 61 and 71 degrees. Some days it has been necessary to burn as many as sixty tons of coal. There are fifty miles of steam pipe in the Amling greenhouses.

The Pana Floral Company has 100,000 square feet of space, with 45,000 rose plants growing. This property is adjoining that of the Amling company. One of its greenhouses—the largest—is 60 by 400 feet. It was constructed as an experiment, according to the contractor, and is proving to be practical. The Pana company has five houses in all.

The Henderson Floral Company built the first greenhouse at Pana, and it was doing business long before the Amling and the Pana floral companies came there. It has 25,000 miscellaneous plants and flowers growing and sells its products at retail only.

New Plant Being Built

In addition to these, Pana is to have a fourth floral company in the near future. The Asa Brothers Company is now constructing greenhouses over 60,000 square feet of ground in the neighborhood of the Amling and the Pana companies' properties and is to start 30,000 rose plants. This company will be similar to the Amling and the Pana companies and will sell its roses to commission houses.

The American Greenhouse Manufacturing Company, one of the largest factories of its kind in the United States, is located at Pana. It is near the properties of the

Interior of one of the Amling company's greenhouses

Greenhouses of the Pana Floral Company

Amling, Pana and Asa companies. The factory has some four acres of floor space and about one mile of switch tracks.

Pana was chosen as the site for this factory on account of the four trunk lines that go through there. Transportation facilities were necessary because the object of the owners of the factory was to ship material for the construction of greenhouses to all parts of the country. The factory started operation in 1917, and today there are fifteen gangs of workmen erecting greenhouses with American Greenhouse Manufacturing Company material in as many different parts of the United States. Last year the total number of greenhouses constructed by this company covered 1,500,000 square feet of ground.

Every part of a greenhouse, with the exception of glass, is made at this factory, and a large percentage of the raw materials moves over our lines. An average of five cars of cypress lumber a month are shipped to the factory from Louisiana. This particular wood has been found to be best suited for use in greenhouses, because it allows for the expansion and contraction of the glass and metal parts in various temperatures. The only parts of the greenhouses that are wood are the beams on which rests the glass.

A Good Place for Roses

Mr. Amling says that he is not sure whether it is the soil, climate or water of Pana that makes rose-growing so profitable

there; but it is a fact that a growing plant at Pana will produce thirty roses while a similar one any place else is producing twenty. In an effort to determine the cause for such splendid results at Pana, he is to ship a carload of the soil to Chicago to be used in one of his branch greenhouses. He tested the soil before he built the greenhouses at Pana and found it to be particularly adapted to rose-growing. It is porous and never sours. But he is not sure that the soil is responsible for the results obtained. For fertilizer he uses dried blood, ground bone and between 200 and 300 cars of cattle manure each year from the stock yards at Chicago.

The Columbia, Premier and Butterfly roses are the varieties that are now grown at Pana. They are all three the products of experiments by E. G. Hill of Richmond, Ind. These varieties are 5, 4 and 3 years old, respectively. Whenever Mr. Hill produces a new rose that is profitable, the rose growers immediately set beds of the new plants. His rose plants are practically all thornless.

Mr. Hill's experiments consist of grafting various rose plants on the roots of the Manetti, a wild plant of good roots but no flower, that grows abundantly in England. The grafted plants are wrapped in raffia and placed in airtight sweat boxes at 100 degrees for three weeks. Then each day a little air is allowed to enter and the box allowed to cool, so that the tender plants will gradually gain strength. They are

Greenhouses of the Walter A. Amling Company

An airplane view showing the factory of the American Greenhouse Manufacturing Company in the foreground, the Walter A. Amling Company's greenhouses at the upper left and the Pana Floral Company's at the upper right.

carefully packed to avoid bruising and shipped in rapid transit to the planters.

Money in Transporting Roses

On one occasion Mr. Hill paid express charges to the amount of \$3,800 for the transportation of some of his plants in a refrigerator car from Richmond, Ind., to Santa Ana, Cal. The car moved in passenger trains.

Three months after the plants are set out the roses will begin to bloom, but florists say that it is better for the plants if these first buds are pulled off. This allows the plants to gain more vitality and will enable them to produce much better roses a little later. Greenhouse roses are not allowed to bloom in the summer.

After plants have produced roses for three years, they are destroyed and new soil and plants are put in the beds.

The roses are gathered while in bud each morning and afternoon, and shipments are made mostly at night, unless there is a rush order. The roses that are particularly tender are gathered while the bud is tight, in order to insure safe shipment.

Rose plants require lots of water, Mr. Amling says, but they should not be watered too often. The trouble with the amateur florist, he says, is that he waters his plants a little each day. The best way is to give the beds a good soaking only once a week. In this way the poison is washed from the soil about the roots.

Mr. Hill has just produced a new successful rose, the America, and is now offering it to the florists. Mr. Amling expressed his intention of planting this spring 20,000 of the new plants in two of his greenhouses.

The American Beauty, which is indeed one of our most beautiful roses, is considered by the Pana florists to be too difficult

to raise to be profitable, even though the buds can be sold for as much as a dollar each. The plants are probably the most healthy of all rose plants and grow very large, but they do not produce:

A successful career is like a great boulder which a man pushes up a hill, and which is as large as one can move. It is a steep up-grade all through life, and when you take your shoulder from the stone, it begins to go back, and if you let go altogether, it goes to the bottom and it may bury you under it.—MARDEN.

Atonement

On dark Golgotha's hill there gleamed
The shadow of the Cross,
Outlined against a lowering sky,
Where angry clouds were tossed,
Rebelling 'gainst a heedless world
Whose only hope was lost.

For with the dawn, they took the Lord,
And carried Him away,
And laid Him in the rich man's tomb,
Alone—where strangers stay,
And set a watch and rolled a stone,
To keep Him there alway.

O weary traveler o'er life's way,
Who com'st to yon dark hill,
And sink'st beneath thy weight of woe,
Forsaken, hopeless still,
Nor lift'st thine eyes beyond the place,
Which only He could fill—

Look up! Rejoice! O lonely heart,
Sweet rest be thine for aye;
Behold an empty cross and tomb!
The Lord is risen today,
For angels came on Easter Morn
And rolled the stone away.

—ANNE ROSE SWEENEY.

Possibilities of "Egypt" Now Recognized

*Southern Illinois Offers Inducements of Many
Kinds to Farmers, Miners, Manufacturers*

By F. KOHL,
Centralia, Ill.

IF you will take the trouble to look at the Douglas map of February 15 (in the March issue of the *Nation's Business*), showing the business conditions of the United States, you will find Southern Illinois marked in white, which designates that business is good, with "high pressure" buying power. As you analyze the resources of southern Illinois, you become impressed with its possibilities in contrast with the former slanderous statements that "Egypt" is a land without a future.

The writer can well recall that, years ago, as the trains on the Illinois Central left Effingham, going south, the conductor would tell you that you were now entering the poor man's country.

Today there is truck farming going on in southern Illinois on a large scale, and many trainloads of early vegetables, splendid sweet potatoes, etc., are hauled out of this end of the state. Not only are big markets close by, but our population is jumping with leaps and bounds, and we have only made a fair start at our producing capacity.

Good Transportation Available

This territory is webbed with railroads, and more are building. It is two-thirds surrounded by deep rivers in which fish are plentiful, and many of the tributaries can be made navigable with little expense. So here we have good locations, with the very best transportation facilities at hand.

Centralia, a fast growing and prosperous city, is especially well supplied with trunk lines, and an abundance of sweet water is available from Lake Centralia.

We are not only large producers of bituminous coal, but we are the gateway of the ever-expanding coalfields of "Egypt."

You will find here a bunch of practical business men, taking on full responsibilities of leadership, and a bracing vigorous atmosphere such as expanding manufacturers are seeking. We are pushing forward into progress and prosperity.

When fruit growing is considered, especially of peaches and apples, we find soil, climate and sunshine, which are the essential factors, giving our fruit that delicious taste that characterizes fruits grown to maturity where the elements blend perfectly with the substances of the soil. Our

F. Kohl of the Kohl & Meyer Company, Centralia, Ill., is one of the foremost advocates of the agricultural and industrial possibilities of southern Illinois, commonly known as "Egypt." Mr. Kohl also has always been one of the firmest friends of the Illinois Central System in his vicinity. Since the prosperity of the Illinois Central System is so closely bound up with the prosperity of southern Illinois, it is doubly a pleasure for the Illinois Central Magazine to present Mr. Kohl's views upon his favorite subject.

Duchess and Transparent are the perfection of summer apples, and where would you go to find the equal of our Winesaps, such as grow in our Ozark Hills, where they hang abundantly, luscious and brilliant in a favored sunshine? The Almighty might have made a better peach than ours had he tried, but He failed to do so.

Our country is especially well adapted for the growing of Keifer pears. They grow easily, are large producers, and offer a splendid field for some preserver.

Wonderful Resources in Coal

It is now well known that this is developing into the world's greatest bituminous coalfield, and large sums of money are

being distributed in wages. It is a recent discovery that southern Illinois coals coke well. A successful coking plant has been installed at Granite City, and thousands of tons of our coal are used by the steel manufacturers in and about Gary, Ind., for conversion into coke. These coke ovens are likewise making many valuable by-products from our coal, and in many instances these corporations own large coal acreages in this part of the state which they themselves are developing.

There is even now a large production of crude oil and gas, and the fields are constantly being expanded and developed. There are also many valuable deposits of clays, such as kaolin and Fuller's earth. There are enormous deposits of shales and limestones, as well as spar, silica, novaculites and other minerals.

The increase in dairy cows is encouraging and is adding to the wealth and buying power of our farmers. With a climate of Virginia, our winters are much milder than most dairy sections. Our springs are earlier, our fall pastures last later, and many farmers are now making their silos do double duty. The scrub sire, too, is finding it harder and harder to hold his standing.

Limestone Now Being Used

It is true that many years ago we raised very satisfactory crops, but on our prairie lands the soil was thin and the fertility was finally mined out. Then along came men like the late Dr. Cyril G. Hopkins, who taught us that there were several different kinds of farmers as well as varieties of farming, and that our soils were acid and that our system of farming, as we were accustomed to it, was all wrong. He was one of the first men with the vision of the use and value of crushed limestone, and how it would make the growing of legumes possible, to be followed by crushed phosphate and livestock farming, and it was gratifying to find vast deposits of limestone in many portions of this part of the state. It was not long before we could increase our acre production of wheat on our prairie lands and make it possible to grow fair crops of corn.

Southern Illinois has much rich bottom land along her rivers, where excellent corn and alfalfa are grown, and as you reach the extreme southern end of the state you enter a territory with good cotton and peanut possibilities. Here you find a climate so tempered by the warm waters of the Cumberland and Tennessee rivers that the magnolia tree grows in all its glory.

Poultry raising has lately had a remarkable growth in southern Illinois.

We mention Albion as one of the outstanding communities where the chicken industry has expanded to large proportions. It certainly is a pleasing sight to see the large flocks of pure white birds dotting big fields in every direction as they forage for a living.

In addition to the adjacent large markets, New York offers a field for further expansion, and eastern buyers are actively competing for this product.

Bee Raising Has Possibilities

Southern Illinois offers bee possibilities, and some very earnest men are now pioneering in this work in the encouragement of larger honey production, with a slogan that reads: "More bees, more honey; more honey, more money."

Still, Dame Nature was not satisfied with the things she had created in this wonderful storehouse. Originally there were as fine hardwood forests in this part of the state as are found anywhere. This section is considered a tree paradise, and many beautiful patches of virgin timber still stand. We, too, made the common error indicative of the times by denuding much of our hill land, which should never have been cleared. But the matter of reforestation is now being seriously considered, and we look forward to the time when much of this land will again be devoted to growing timber. The pecan nut is indigenous to our section, and we hope to develop it.

Finally, the completion of our hard roads, many of which are now under construction, will give the people an opportunity to motor into this undeveloped empire. Our southern Illinois Ozarks are full of beauty spots, a few of which we hope some day will become state parks as playgrounds for the people.

A Scene of True Beauty

For example, the high road drive from Cobden to Alto Pass always brings forth exclamations of surprise and admiration. The high point of these hills is Bald Knob, standing out clearly in the background, while picturesquely situated between the hills is a broad, fertile valley dotted like a checkerboard with attractive orchards and prosperous farms. A view from the top of this mountain will be long remembered, for in the distance flows the Father of Waters like a silvery ribbon glittering in the golden sunlight amid a vast expanse of forests.

Returning to Cobden by the lower road, you pass vast orchards which are well cared for and are good producers for their owners. Lands are still cheap. Our resources have only been scratched. You will find us a hospitable people. There is a genuine development taking place in which you are invited to join.

Lack of Thought Causes Most Accidents

*General Superintendent G. E. Patterson Shows
the Need for Teaching Individual Responsibility*

The following address on "Accident and Injury Prevention" was delivered by G. E. Patterson, general superintendent of our Northern Lines, before a meeting of the National Union Assurance Society at Washington Hall, 19 West Adams Street, Chicago, March 24. It was a special meeting, and was called "Illinois Central Night." The program, which contained various features of entertainment as well as educational talks, included selections by the Illinois Central Employes Orchestra and the Hannon Four, specialties by Ned Melroy, "Rillian Lussell" and "Chappie Drew," and addresses on "Safety First" by S. S. Morris, chairman of the general safety committee of the Illinois Central System; Senator Henry C. Smale, Dr. Tracy H. Clark and Mr. Patterson. Employes in all lines of service for the Illinois Central were urgently requested to attend with their friends. There were many women present at the meeting.

THERE is an ancient saying that "to err is human." It is commonly taken for granted that everybody makes mistakes—some more frequently than others, but nobody's exempt; sooner or later, by some hasty or ill-advised or careless action, we're all likely to make a blunder that costs us dearly—at least that's the universal theory. The trouble lies in the fact that we take too many things for granted in this world. We don't stop to think. The average person, instead of looking before he leaps, is too often inclined to leap and look back.

That plan of procedure frequently results in his looking back from the other side of the dark river, or, if he's lucky, from the chaste confines of a white cot, with a solemn-faced nurse in attendance. There is no truer saying than the one which declares that "fools rush in where angels fear to tread."

The greater part of humanity is given to taking chances. We're practically all gamblers at heart. We may not be the sort that will bet his last dollar on the chance of catching the other fellow bluffing—when he isn't—or on his alleged ability to distinguish between a race horse and a goat; we don't need to be devotees of the green table, or the pool-room or bucket-shop, or what not; gambling isn't necessarily confined to playing cards or dice. You can take a gambler's chance by over-eating, by drink-

ing ice water on a hot day, by smoking in bed, by not providing for a rainy day (in more ways than one) and by doing or leaving undone any one of a million different things.

A New Danger in Gas

Blowing out the gas was once the high test of criminal foolhardiness, but we've a new stunt, now. It is called "stepping on the gas." A man who is so safe and sane and conservative that he might easily be selected to pose for a sculptor engaged in carving a statue of Safety First will take a chance that Daredevil Dick would have fainted at, simply by going for a little pleasure spin in the car of a gas-stepping friend.

Accidents and personal injuries, after all is said and done, are due to the fallibility of the individual. The greater number of all accidents could have been avoided if somebody, somewhere, had taken proper thought and precautions. Boiling the thing down to its final essence, the individual and his habit of thinking are responsible for most of the serious or fatal accidents which occur.

Carelessness causes more trouble than recklessness. People permit themselves to form habits of thinking that are slipshod and irresponsible. Usually this class of person is selfish; he takes no thought of, or consideration for, others. The man who lights his pipe, cigar or cigarette and heedlessly tosses aside the burning match, perhaps to start a disastrous fire, has no regard for others. Consideration for others never slams a door on somebody else's fingers or drops a brick off a building in course of construction so that it falls upon the head of a fellow workman.

Safety and prevention of accidents depend to a large degree upon the individual. No system of safety regulations, no mechanical safeguard or automatic gate, shield or barrier against chance-takers can protect a careless man or a fool. All campaigns to promote safety must take into account the element of human fallibility and individual habits of thoughtless and selfish disregard for the convenience or well-being of fellow-men. The most important thing of all is to rouse within the consciousness of every one a sense of moral, if not legal, responsibility not only for that one's own personal safety but for the safety

of every person with whom he may be associated.

Need to Teach Responsibility

Bring to any man a sense of his own definite and absolute responsibility, and he will form habits of correct thinking. There is the story of Ole Oleson, who got a job as engine-wiper in a roundhouse. Ole's foreman was an exponent of economy. On all occasions he expounded the importance of saving oil and cotton waste. He dinned it into Ole's ears morning, noon and night that oil costs money and waste costs money, that they are valuable and must be used sparingly. In all cases they must be conserved whatever might happen. In time he made Ole realize his personal responsibility for such oil and waste as might be intrusted to him.

One day Ole was sent out as extra man to fire a freight engine. Before he started the foreman said: "Now, Ole, have you remembered all the good advice I've given you? I've tried hard to train you in the first principles of good railroading. If you'll follow the rules I've laid down for you, you can't go wrong. You'll be ready for any emergency. Now, let's suppose that you're in your cab, and you swing around a curve, and there, rushing toward you on the same track, is a fast express train. What would you do in that case, my boy?"

Ole deliberated. Then he made answer: "I grab dam oil can; grab dam waste; then, by gar, I yump lak hal!"

Safety Needed Everywhere

A great many men give serious thought to responsibility. Other men are addicted to "passing the buck." Some respond to kindness and reason; some need to be managed by drastic methods; there are men who are encouraged and stimulated to give the best that's in them by a little praise; other men become arrogant and utterly spoiled by being complimented. The employee's attitude toward accident and injury prevention depends in a great measure on the attitude of the foreman or supervising authority. If the foreman or supervisor is indifferent and careless, his men will be likely to reflect those traits. Only by earnest and persistent effort on the part of those whose duty it is to instill the principles of safety can the saving sense of carefulness and precaution be aroused in the workers. The habit of carefulness, once formed, becomes second nature. It is just as easy to be careful as to be careless, if a man only takes thought of possible consequences.

Mechanical devices and rules which make

for safety of employees are generally in use in most of the industrial establishments, mines, mills, shops, foundries and on the railroads. We are now in the stage when personal education is the essential thing. It is not sufficient to give a man a pair of goggles, a safety lamp or any other mechanical safeguard, and let it go at that. He must be instructed in their proper uses and made to understand that safety includes not only himself but in many cases the lives and limbs of his associates.

Safety must not be confined in the bounds of those places where men work. Safety extends to the streets and highways, to the homes, and to every nook and corner of the world where human beings go or congregate. There should be no relaxation of vigilance and thoughtfulness. There are hazards everywhere.

Human life has been called the cheapest thing on earth. But it isn't cheap when it's our own life. There's a story about a certain private soldier in a negro regiment whose officer called for volunteers to go on a dangerous scouting expedition. One more man was needed. The officer addressed Rastus:

"What's the matter with you, man, you ain't scared, is you?"

"No, sah," Rastus said, "I ain't scared, I'se jus' circumspec'tious."

"These heah other men done volunteered. Dey's willin' to risk dere lives 'thout hangin' back. Is yo' life wuth mo'n what theirs is?"

"It's wuth mo' to me, sah," Rastus declared emphatically.

That covers considerable ground. The human race has been too much concerned about its individual convenience and too little concerned about the other fellow's rights. Life is cheap when it's the other fellow's. When men begin to consider that the lives and limbs of their brothers are also precious to them, there'll be fewer accidents, fewer fatalities, fewer cripples and widows and orphans.

A Reflection of Inefficiency

Accidents and personal injuries reflect inefficiency, as a rule. Careless craftsmanship leads to blunders. Sometimes these blunders result in fatalities. The organization of the gang or crew of men for safety depends a great deal upon the organization for efficiency. The foreman who considers his men as so many animate units to be kept occupied, at an outward aspect of diligence, at least, has no real organization. The boss must be really concerned about the welfare and progress of those under him. He must be able to win and hold their confidence. If he believes in them,

they will believe in him. Confidence, like anger or hatred, is contagious. There is a vast difference between the men who work *with* their boss instead of merely for him. Mutual teamwork makes for safety.

The management also has its definite responsibility. Hazards should be removed as far as is humanly possible. The safety thought should begin at the top and permeate the entire organization throughout. On the Illinois Central System this responsibility has been accepted from the highest executive to the humblest employe. It is a prevailing thought in every branch of our great organization, with our more than 60,000 employes, to eliminate, in so far as we are able, the element of danger. Mistakes occur; there are still careless and thoughtless individuals who gamble with life and death. But, we have made appreciable progress, and we are encouraged to redouble our efforts for greater results month by month and year by year. Our plan, and it is a good plan, is to give special attention to men who display an open disregard for safety rules. Such individuals are like a firebrand in a powder magazine. They are potentially dangerous.

The essentials of safety depend, in order of importance, I believe, upon three things: First, the individual; second, the job he's doing; third, the organization. Education of the employe in safety principles is a paramount consideration; installation of safety devices and elimination of hazards comes next; and lastly there is the teamwork for efficiency and the welfare and safety of all.

The Grade Crossing Peril Today

I would like to say a few words about one of the most serious safety problems confronting the public as well as the railroads today—the automobile grade crossing peril. To prevent the appalling increase in the number of lives snuffed out, of persons maimed and left crippled for life and of the little children left to struggle out their existence requires sober, cautious and fair safety thinking. Whenever such a calamity occurs, where loss of life is involved, the immediate populace is horrified and aroused. A coroner's inquest is usually held. The coroner's jury hears the testimony of witnesses. Often, to save the public, to ease their conscience and to pass the buck to the railroad, jurors recommend gates, watchmen or signal devices at crossings, giving no thought to the practical value of such devices. The public is satisfied; the coroner has performed his duty; but the slaughter goes on. Crossing protection teaches the public that railway crossings are safe. The opposite should be taught. All crossings

are dangerous. When this fact is impressed upon the public, these accidents will diminish—not until then.

The railroads are doing their part in the matter of education, as illustrated by the extensive "Careful Crossing Campaign" last summer. Newspapers and civic bodies joined with the railroads in presenting the message of the grade crossing problem. Railway engineers did their part by sounding signals in a proper and distinct manner before reaching public highways. "Stop, Look and Listen" is an old story, but old stories are best. This remedy may not be popular; drivers of automobiles dislike to shift their gears, and then proceed. They would rather ramble right along over a railway track with no thought or care, except perhaps that the railroad will direct their attention, by signals, gates or flagmen, to impending danger. Until drivers exercise care, gentlemen, until the public is taught to think that all railway crossings are dangerous, I can see no immediate relief in the grade crossing problem.

Public Must Learn Safety

It is our duty to impress upon the public the supreme importance of taking precautions. The driver of a motor car can bring his vehicle to a stop without much inconvenience. A heavy passenger or freight train traveling at high speed cannot stop at a moment's notice. Neither can it turn aside. It must follow two lines of rails four feet eight and one-half inches apart, no matter what happens. There is no case in history where an engineer who struck an automobile would not have stopped before doing so if it had been possible. It is a shocking and terrible experience to sit in a locomotive cab and run down a fellow mortal, with the resulting tragedy that involves often women and little children. There can be no more frightful thing in a man's life than that. Yet many an engineer is called upon to experience it, knowing that he is helpless to avert it.

Every one of us here tonight should go forth determined to do his share, be it little or much, toward educating the thoughtless, the heedless and the reckless drivers of cars that they take a gambler's chance when they attempt to cross ahead of an approaching train. A train traveling sixty miles an hour covers eighty-eight feet a second. It is practically impossible for most persons to judge the speed of a train, particularly if it is coming toward them. There is only one safe and sensible thing to do. Take no chances. The only safe procedure is for drivers of motor cars to come to a full stop before crossing railroads, in all cases.

Our Only Y. M. C. A. South of Ohio River

*Establishment at Canton, Miss., Serves the
Employees Working on Three Divisions*

THE Railroad Y. M. C. A. at Canton, Miss., terminal point for engine and train service employes of the Louisiana, Mississippi and Tennessee divisions, is the only Illinois Central Y. M. C. A. south of the Ohio River. It is also one of the pioneer associations in the railway field, and D. G. McLaurin, its secretary, is dean of all the Y. M. C. A. secretaries in Mississippi.

In 1901 the Illinois Central System furnished a lot at Canton, built a Y. M. C. A. home, and turned the property over to the Young Men's Christian Association for operation. Its doors have never been closed, night or day, in the twenty-two years since then. Railway men have always found there a warm welcome, regardless of membership in the association, and the officers of the Y. M. C. A. have labored incessantly for the physical, mental and spiritual development of the members and the whole community.

Since the establishment of the Railroad Y. M. C. A. at Canton, and up to the close of the last fiscal year, April 30, 1922, 6,300 membership cards have been written, 160,965 beds have been used, 196,260 baths served, 230 persons taught to swim, and 7,560 persons have attended the Bible classes and other religious meetings. Local classes have been held for educational training, and several members have been enrolled in the United Y. M. C. A. Correspondence School.

More Than Twenty Years' Service

Secretary McLaurin has served the Canton association continuously since its organ-

D. G. McLaurin

ization in 1901, with the exception of about six months overseas in Y. M. C. A. work during the war, when the work was carried on at Canton by his brother, H. G. McLaurin, who resides there. Overseas, Mr.

The Railroad Y. M. C. A. Building at Canton, Miss.

Left to right: Frank Schmidt, R. H. Powell, I. H. Martin.

McLaurin was first stationed at Le Havre, France, and later he was at Paris and Le Mans, France.

The use of a swimming pool built in 1918 has been one of the principal features of the athletic programs carried on by the Canton Y. M. C. A. since that time. The pool is a monument to the indefatigable energy of Mr. McLaurin. He raised \$2,600 toward its construction by selling books of swim tickets to the members, and that fund was used in the erection of the building. The Illinois Central System furnished some of the building materials and rebated the freight charges on shipments of materials. A number of local concerns also made gifts. Last summer seventy-five persons qualified in the life-saving test. The pool is open six months in the year, from April 1 to October 1, and the facilities also are extended to the women and girls of Canton. There are two tennis courts in the rear of the older and main Y. M. C. A. building, and these are in almost constant use throughout the summer.

Planning on Community Work

Secretary McLaurin has requested the Community Service Corporation (a war-time welfare organization) to furnish funds for the erection of a community hut. A community secretary will be placed in charge of community work, however, regardless of the building desired, and funds are now being raised by popular subscription to employ a suitable man. It is expected that this community organization also will serve the residents of the veterans' colony that is being formed at Canton. The Railroad Y. M. C. A. has assisted in the establishment of the colony by giving the

use of its building free to the ex-soldiers and the members of their families.

One of the social features of the Canton Y. M. C. A. activities has been an annual father's and son's banquet, which is open to the entire community. There are now 240 members of the Canton Y. M. C. A., including about thirty community members in addition to the railway people. Charles

Charles J. Barnett

Natatorium of the Railroad Y. M. C. A. at Canton

J. Barnett, engineer, is president of the association, and R. H. Powell, local attorney for the Illinois Central, is vice-president. Other employees who are members of the board of directors are I. H. Martin, engineer, and Frank Schmidt, flagman.

Although that event is three years off,

the members of the Y. M. C. A. at Canton are beginning to plan on celebrating their twenty-fifth anniversary in 1926. They hope to make it a big community affair, with a number of the general officers of the railroad present, in addition to the local and division officers and employees.

Stephen A. Douglas' Birthday This Month

The following appreciation of Stephen A. Douglas, whose birthday falls on April 23, was contributed to the Chicago Daily News of April 20, 1922, by a writer signing himself "Wriothesley." The Douglas monument is a familiar sight on our lines along the lake shore in Chicago.

At the foot of East 35th Street there is a little public park scarce an acre in extent. On the east it is hard by the Illinois Central Railroad, which separates it from the lake. Its immediate surroundings otherwise are a somewhat run-down neighborhood, filled mostly with decent negro people, with here and there startling reminders of the day when it was an abode of the elite of Chicago.

In the center of this old park rises a noble monument, surmounted by the bronze effigy of one of Illinois' greatest sons, Stephen Arnold Douglas. The broad base is more than a cenotaph, for it contains his mortal remains. The little park was called, when the writer played in it as a boy, Douglas Monument Park. Many people in Chicago have never seen it, and many more, perhaps, have never heard of it. Like the exquisite "Massacre" monument at the foot of East 18th Street, it is not much honored as a mecca.

Even to outline the work and fame of Stephen A. Douglas would require much

space. The popular adulation of his political opponent, the great and good Abraham Lincoln, has served to eclipse Douglas' true brilliance. But next to Lincoln and Grant he stands the great Illinoisan. He died in Chicago in 1861.

The children who will play about this monument on Sunday, April 23, the 109th anniversary of Douglas' birth, should memorize, as many of us did in our youth, the simple words engraved on his tomb. They are especially applicable at this time to a few elders:

"Tell my children to obey the laws and uphold the constitution."

A CHARACTER BUILDER

Accustom the children to close accuracy of statement, both as a principle of honor and as an accomplishment of language, making truth the test of perfect language, and giving the intensity of a moral purpose to the study and art of words; then, carrying the accuracy into all habits of thought and observation, so as always to think of things as they truly are, as far as in us rests—and it does rest much in our power, for all false thoughts and seeings come mainly of our thinking of what we have no business with, and looking for things we want to see, instead of things which ought to be seen.—RUSKIN.

A Farmer's View of the Railway Situation

*Public Ownership of Roads Is Now a Fact,
He Says; Sympathetic Treatment Needed*

An article from the March, 1923, issue of Better Farming, headed "The Farmer and the Railroad: Are Their Interests Hostile or Mutual?"

By **FREDERICK L. CHAPMAN,**

Editor of Better Farming

I SHIPPED twelve carloads of sheep from our Western ranch to the Chicago market. The distance is 1,600 miles. The run should have been made in seven days. It required twelve. The losses and shrinkage were heavy, and I was mad.

A railroad is an impersonal corporation, but when you hear repeatedly that a particular railroad which appears to have done you an injury is owned mostly by a man down near Wall Street, the grievance is harder to control. I had heard so often that this man and that man owned this road and that road that I foolishly made the assertion myself, and my accuracy was challenged.

I investigated. I was wrong. For instead of that gentleman or any gentleman owning all or half or even a quarter of that particular road, he didn't own enough stock to elect himself a director, unless quite a few of the other 33,246 stockholders voted for him.

Public Ownership of the Roads

It will be a surprise to many people, as it was to me, to learn that we have already achieved in rather recent years public ownership of our railroads. With very little effort I could ascertain the present number of stockholders. All I know at the moment is that ten years ago there were more than 300,000. At that time the Pennsylvania railroad had 65,000, and more than half of them women or minor children. Today the Pennsylvania has 137,000 individual stockholders. Since its lines constitute nearly one-tenth of the country's total mileage, it is possible that ten times 137,000, or 1,370,000 stockholders, are the actual owners of our American railroads.

Frederick L. Chapman

But I said, as many others are saying, "Well, I don't own any of it." Possibly you don't! But who owns the bonds, about nine billion dollars' worth? Very largely the banks in which you and I are carrying a deposit or a loan. We don't wish our bank to lose out, for then we may lose our deposit or may have to pay our loan before it is convenient to do so. The life and fire insurance companies also own a lot of railway securities, and all of us carry some insurance. Perhaps some of us have a life savings involved. So I kept thinking and the longer I reflected the more I became convinced that I was very much interested in railroads, and I began to think of their problems more sympathetically.

To study a problem sympathetically is to study it with understanding. To approach it with hostile prejudice is to blind the eyes with ignorance in advance. So I took the pains to trace as far as possible the causes for poor service on my shipment of sheep.

Present Railway Troubles

I found there was, at first, a shortage of cars, which delayed the loading; second, engines in poor repair; third, track in many places out of condition; fourth, cars from weaker foreign roads in bad order—a draw-bar pulled out of one, a brake-beam fell down on another and almost ditched the train.

There are a dozen causes, major and minor, and for every one of them I was as much to blame as the president of that railroad, because I had been doing too little to combat the unreasoning and unintelligent and unfair hectoring and hampering of the railway industry, for ten or fifteen years past, while every responsible official on that particular line has sweated and struggled to keep the line open and trains on time and give service to the public while they were giving not one cent to the 33,000 stockholders, little and big, who owned that road.

* * *

I am thinking of this question purely in my character

and occupation of a farmer, and this is what I think.

I think that the farming business and the railway business are so utterly dependent upon each other, their interests are so identical, that the man who drives a wedge between them is either crazy or a crook.

Perhaps he is neither, but just ambitious to capture leadership among farmers, and, to entice them, he is willing to deceive them to their great injury.

The railroads collect about a billion dollars each year from the farmer and his family for freight going and coming to and from the farm. That's a heap of money. Is it too much? I don't know, but I do know that the average rate is only 50 per cent more than it was in pre-war days, although the cost of doing business just as the cost of doing farming has increased by more than 50 per cent. For the three big items of railway operation, namely, labor, taxes, coal, the *cost has more than doubled*. I know also that railway net income has been so precarious for ten years past that railway stocks have gone the direction of the German mark, and they will go the full route if malevolence and ignorance do not desist in their intent, which intent appears to be to put the railroads out of business, compel government ownership, create two million positions little and big for the politicians to haggle over and let those two million employes tell the rest of us one hundred eight million when the trains will run and when they will not run.

Two Facts Worth Pondering

But that is not my only objection to government ownership, which is something, by the way, that I almost favored very briefly at one time. I changed my mind. The man who will not change his mind, if necessary, on presentation of new facts hasn't much of a mind to change.

These two facts changed it.

1. I don't wish to increase our national debt twenty billion dollars. That's the least the roads would cost us. We would have to issue bonds to buy them. They would be government bonds with the government's guarantee of interest every minute.

2. I don't wish to pay more taxes. If the railroads belong to the government they pay no taxes, no more than any other public property. In one county where I do some farming, two railroads paid \$113,000 of the taxes last year. If that amount had to be distributed among the sparsely scattered farmers and small people of that county, it would be adding to their burden cruelly.

Therefore, I prefer to pay the present

rates on traffic. I prefer that to a big increase in my taxes. Especially so since freight rates may again come down, as they have done twice for the farmer in eighteen months. But taxes come down? Never in your lifetime nor mine.

What I want most of all is service, and I don't see how any railroad can give it unless it has a good safe track and sufficient cars and the ample power to pull them, and that means *enough money to buy them*.

The "Burden" of Freight Rates

Doesn't it make you tired to hear some of these bushy browed declaimers trying to make us believe that the present high freight rates are paralyzing agriculture? How much of our total expense bill in farming is freight, anyway? Six, possibly 8 per cent. How much do we wish knocked off? Enough to bring the rate down to that of 1913? All in favor say "aye"! The ayes have it. Now we have saved 2 per cent of our yearly expenses. The annual expense of the average farmer is \$1,500. Two per cent saved on that is \$30. That settles it. We are saved. The country is saved. Everybody is happy except the agitator who is hunting for a new issue.

My dear good farm people I should not play with such a serious topic. But the fact is, that isn't the topic which confronts us. The question before us is not "shall we save a few dollars on freight?" but "shall the railway business remain a business or shall it be a government agency owned in common but run by political employes?" If it is to remain a business it will have to be run as a business and run to pay at least 6 per cent for its owners. If it is to be communized, that is owned in common, I am just warning you that the communists will not wish to stop there. They will some day covet our farms.

They can't have mine!

LEGION POST ORGANIZED

Employes of the Illinois Central System at Chicago organized the Illinois Central Post of the American Legion February 17. About thirty-five former service men attended the organization meeting. F. K. McCarty was chosen temporary chairman and T. C. Kiernan was named temporary adjutant. The first Friday of each month was designated as the regular meeting date, and March 2 was the last day on which an applicant could be made a charter member. The members of the Illinois Central Post desire to attract the attention of former members of the American Legion who have severed their connections with their home posts and desire to join a post where they will know the majority of the members.

Some Hints for Success From Chief Clerk

*R. L. Guensler Declares It Takes More
Than Working for Pay Day to Get Ahead*

By LUCILLE SIMS,
Minnesota Division Editor

R. L. GUENSLER, for the last three years chief clerk to Superintendent L. E. McCabe at Dubuque, says: "The employe who works for pay day only can never attain any great success. The man or woman who gains advancement does all the duties required of a position, and then does just a little bit more, thereby qualifying for bigger fields and responsibilities of life. If you love your work, this will be easy; if you do not, get off the job and give someone a chance who wants to get ahead."

On the other hand, Mr. Guensler believes "All work and no play makes Jack a dull boy." You owe it to yourself, your family, your superior and the corporation or firm you represent to get sufficient good, clean recreation to keep your mind clear and alert, he holds; otherwise you will become "rusty" on the general modes of life. As in the case of a machine, continuous application along one confined line of endeavor, without proper attention and repairs, will cause certain parts to wear out and eventually fail.

When you work, work like "blazes," Mr. Guensler advises, and when you play, do it with the same good spirit—then you will have a good, clear, thinking mind and a body ever ready to respond to emergencies that you will be called upon to meet; when opportunity raps, you will be ready to take advantage of your chance.

Experience Valuable When Used

While experience and knowledge are fundamental factors toward one's success they are of no relative value unless put to practical use, Mr. Guensler feels. Do not let mistakes frighten you into inefficiency. On the other hand, do not be indifferent about them, but gain by the experience of having made such mistakes and guard against their recurrence. A good quotation, Mr. Guensler thinks, is: "He who makes no mistakes, does nothing; he who makes too many, loses his job." And, while your job may not look altogether desirable to you at times, it looks mighty good to the other fellow.

The doughnut has been rhymed and ridiculed and has been used as a figure of speech again and again. We say of the man who takes the pessimistic view of life that he is looking at the hole in the doughnut. The man who looks out upon life with

R. L. Guensler

faith and hope observes the doughnut, and not the hole.

Today many a man is in the rut of failure because he has not faith in himself, and without faith in himself, how can he expect others to have it? Lack of self-confidence will fossilize any man, Mr. Guensler believes, and he recalls the incident of the bishop who once asked a young man if the young woman he had been courting had agreed to marry him.

The young man answered: "Not yet."

"How many times have you asked her?"

"Nearly every time I have seen her."

"How long are you going to keep it up?"

"Until I get her."

Are you looking at the hole or the doughnut? Are you discouraged in business, in society? Faith builds a bridge across the gulf of despair, shatters enemies of gloom, and lights a path through the dark night of disappointment.

Now in Fourteenth Year of Service

Our chief clerk is now in his fourteenth year of railway service. Born in Freeport, Ill., he attended the public grade and high schools and a commercial college at that place. He entered the service of the Illinois Central as a material gang laborer at Free-

port, July 1, 1908. January 1, 1909, he took a position as an office boy in the superintendent's office. Since then his career has been as follows: July 1, 1909, promoted to track supervisor's clerk; August 7, 1909, promoted to bridge and building supervisor's clerk; May 17, 1910, promoted to trainmaster's clerk; August 1, 1914, made clerk in superintendent's office; April 23, 1918, promoted to secretary to

general superintendent, Waterloo, Iowa; July 7, 1919, transferred to correspondence clerk; January 22, 1920, promoted to chief clerk to superintendent, Minnesota division, Dubuque, Iowa.

"Don't forget, there are bigger things in life than pay day," Mr. Guensler sums up, "and while that is essential for sustenance, it is secondary when the question of a future is concerned."

Muckl Is Just One Handful of Monkey

Recent visitors to the office of Photographer John K. Melton at Central Station, Chicago, were Muckl and his mistress, Mrs. Meta Kirchberg, 5112 Broadway, Chicago. Muckl is a monkey about the size of a man's fist—an Australian singing monkey, seemingly a combination of bird and beast, with a voice like that of a canary and claws and feathers, but with the head and body of a monkey, except that his arms are shorter than his legs and he has a bushy tail.

This is a seemingly impossible combination, but seeing is believing in Muckl's case, and Mr. Melton has the photographs, reproduced herewith, to prove the fact.

Muckl is almost 5½ years old, but at that he is a mere infant, as Mrs. Kirchberg declares that his relatives in freedom frequently live to the age of 100. He was born on shipboard and was the pet of the captain of the ship on which Mrs. Kirchberg came to this country from Germany about a year ago. The captain had brought him up on a bottle.

Muckl weighs six ounces and a half. His body is five inches long, and his tail is two

inches longer than that. He is a lively little beast, with alert black eyes, but he is of a friendly disposition and likes very much to be petted and to be held in someone's hands. Mrs. Kirchberg ordinarily keeps him in cage with a canary, whose song he copies closely. The canary frequently takes up a position on Muckl's head, and the two sing a duet.

Muckl. Above he is shown with his pal, the canary.

Saw Railroad's Part in Growth of Illinois

*George D. Chafee, Local Attorney, Nearly 84
Years Old, First Knew Our Line in 1861*

Judge George D. Chafee of Shelbyville, Ill., nearly 84 years old, who has been a local attorney for the Illinois Central continuously for fifty years, has given us the following reminiscent article. In the February, 1923, number there was an article concerning Abraham Lincoln to which Judge Chafee contributed a fund of information.

By **GEORGE D. CHAFEE**,
Local Attorney, Shelbyville, Ill.

THE Illinois Central Railroad Company was chartered in February, 1851. Probably 90 per cent of those who now ride on this railroad or use it for freight know less of its origin than they do of King Tut, just resurrected after a 3,500-year sleep in Luxor. Some of them may have heard of Senator Stephen A. Douglas, Judge Sidney Breese and General William F. Thornton, but do not know what these men had to do about this railroad. Nor is it my aim to tell them at this time.

It is a wonderful line, running from Sioux Falls, S. D., to the Gulf of Mexico, nearly across the temperate zone. I first saw it at Chicago in April, 1861. The station was near the mouth of the Chicago River, about two blocks from the site of old Fort Dearborn. The road was laid on a trestle over the lake north of 12th Street, the shore curving in nearly to where the Auditorium now stands. What is now Grant Park was nearly all water. Chicago was then in the mud, and I did not foresee its immense possibilities.

I now think the Illinois Central Railroad was a great factor in building the city of Chicago, and the city was a child to be proud of and no mean help to the road. In fact, the railroad put Illinois on the map and put untold value into its boundless wilderness of unused prairies.

Champaign and Urbana Were Separate

In April, 1861, I rode on the line to Mattoon. Champaign had one building, the station, part of which also was used for a hotel. Urbana was two miles to the south-east through the mud. David Davis was holding court in Urbana upstairs over a grocery, and Joe G. Cannon was prosecuting a man for murder.

The war coming on at once paralyzed legal business in a country town, and for

April, 1923

George D. Chafee

a few years the study of personal economy was paramount. Board at the "Tavern" was \$2 a week, and my office rent was \$5 a month. My office, with a cot, was also my bedroom.

In 1866 S. W. Moulton was elected to Congress for the state at large and Anthony Thornton for our district. I was then engaged by Mr. Moulton. A farmer and stockman had a bunch of mules north of Pana, and the railroad's fence was one side of the pasture. One night an Illinois Central train ran through them where they had broken through the fence and killed and maimed over twenty. The owner, Abe Middlesworth, saw Mr. Moulton and was informed he had no case; he then saw Judge Thornton and was told he had no case. After these gentlemen went to Congress I told Mr. Middlesworth I thought he had a case, and he employed me for \$150 to handle it. I might have got ten times as much had I known how to sell my goods. I did not then know I would have to try it four times. We got a verdict

against the railroad for \$2,840, but the Supreme Court of Illinois reversed the decision (43 Ill. 64), remanding the case for retrial. On second trial the verdict was for the plaintiff, and this verdict was sustained (46 Ill. 494).

Made a Memorable Decision

Judge Breese wrote the opinion, in his usual vigorous style, reversing four former decisions and making this a leading case till now, on the maxim which he quotes in the original Latin: *Sic utere tuo ut alieum non lae das*. It has been the law for a thousand years, might be called a natural law: "So use your own property as not to injure another."

Soon after this (in 1868) General B. F.

Ayers, chief counsel for the railroad, sent for the writer, and then Moulton & Chafee became local attorneys for the road, until Mr. Moulton's death, and I have acted since that time, associated with Hon. W. C. Headen part of the time and with Chew & Baker later.

In all this long time no man or officer of the road has ever, so far as I know, sought or tried to do any act that was not absolutely fair and honest with the public. The uniform instructions were to ascertain all the facts and advise what to do. The controlling policy of the road is and ever has been to incarnate Judge Breese's maxim, hoary with age but ever young in justice: "So use your own property as not to injure another."

To Check Up Efficiency of Our Employes

Beginning April 1, all employes subject to the rules and regulations of the transportation department of the Illinois Central System, including the Yazoo & Mississippi Valley lines and the Illinois Central's Southern, Northern and Western lines, will be re-examined with regard to their knowledge and understanding of rules, their physical condition and, where necessary, their familiarity with and efficiency in the use of airbrakes.

The examining board will comprise the following: Trainmaster C. W. Davis, Illinois division, chairman; Trainmaster E. L. McLaurine, Louisiana division; Trainmaster George S. Rought, Wisconsin division; Traveling Engineer B. J. Feeny, Memphis terminal; Airbrake Inspector Frank Hinton, with one assistant; Company Physicians C. D. Lambird and J. F. Curry. The board will travel in a special train running on schedules arranged by the officers of each division, so that the territory may be covered as expeditiously as is consistent with thoroughness.

Members of the examining board reported at Chicago on March 26 for a meeting with the train rules committee, of which J. F. Porterfield is chairman and G. E. Patterson, J. W. Hevron, J. M. Walsh, F. T. Wilbur and M. B. Morgan are members. Final details of the re-examination work were discussed and decided upon at this conference.

The field work of the examining board will probably begin at Memphis and cover the Yazoo & Mississippi Valley lines first. Examinations will then proceed on the Southern, Northern and Western lines of the Illinois Central in respective order. Meetings with division superintendents and their staffs will be held on the first day the board reaches each division. If possible,

it is desired that general superintendents be present at these meetings. Superintendents, roadmasters and signal maintainers will spend as much time as may be possible with the board while it is on their divisions. Trainmasters, traveling engineers and supervisors will be required to accompany the board over their respective territories.

Each division will have three lists of employes, by classes, in alphabetical order for use of the examiners, and detailed records will be kept by the board of all examinations. It is planned to conduct three classes, if possible, and in any event not less than two classes daily by two divisions of examiners, who will rotate in conducting classes.

Proper notices by bulletin will be issued by superintendents, and division officers on each district traversed will attend to arranging for all employes subject to examination to report at the proper time and place. In the event that, for any reason, this is not done, the employe must be sent to the board, with proper credentials and data for his test.

Re-examinations of employes in the transportation department have been conducted on several occasions. The last previous series of tests was held about ten years ago. The plan is in keeping with the policy of the Illinois Central System to maintain a high standard of efficiency, not only of equipment and mechanical facilities but also of man power directly connected with the operation of trains.

Our friends come to us unsought. We seek people only for selfish gain. Selfishness and friendship are antonyms.—*The Watchman*.

Editorial

PUBLIC RELATIONS

The unqualified success of the Illinois Central System as an agency for the performing of dependable transportation service is well established. In many phases of its service, indeed, it has taken a position of leadership among the railroads of the country. Examples of its leadership are the courtesy of employes who come in touch with the public, on-time operation of passenger trains, reductions in the causes of freight claims, the safety of patrons, and so on. The list is a large one.

During the last few years a number of the leading railroads of the country have been devoting more and more attention to the problem of giving the public information about the railroads, in order that the railroads may be accorded the kind of treatment by the public that will permit them to prosper and expand their facilities to meet the growing needs of the country for transportation. In this work also the Illinois Central System is an acknowledged leader.

An interesting and attractive brochure which summarizes the public relations work that has been carried on by the Illinois Central System since the end of federal control has been issued during the past month. In it are reproduced the series of monthly statements to the public which have been made by President Markham through the newspapers published on our lines, lay-outs which show the manner in which the newspapers have given additional publicity to the subjects of Mr. Markham's statements, and a large number of splendid editorials which reflect the results of this work. There is an introduction which tells of the manner in which the public relations work has been carried on.

The booklet is being given a wide circulation among those who have shown an interest in Mr. Markham's program. It will doubtless serve to impress those who study it with the leadership of the Illinois Central System in this very important phase of railway activities.

Public opinion rules the railroads. There is no getting around that fact. The railroads are being, and will be, dealt with accordingly as there is crystallized a public sentiment favorable or hostile to their best interests. If that public sentiment stands for railway progress, the railroads will be

permitted to give a good account of themselves. If it points in the other direction, the railroads will be bound down by restrictions which react with deadly effect upon the life of our entire population. The duty of railway people, therefore, is to help create a public opinion that will be favorable to the future progress and prosperity of the railroads. Since the welfare of our country is so thoroughly bound up with the welfare of our railroads, the problem is one in which every citizen is concerned.

OUR OWN MAKE

The resignation of Vice-President L. W. Baldwin to become president of the Missouri Pacific Railroad Company, reported on another page of this magazine, brought in its train a series of promotions of operating department executives all the way down the line. It is significant to note the fact that all of the officers advanced are men trained in our own methods of operation, men who have worked their way up from the ranks, men to whom the Illinois Central System has meant opportunity and service. Illinois Central System operation has come to be well and favorably known in railway circles as combining methods of distinct efficiency. Perhaps much of its consistent success can be traced to our "family" tradition of service—the fact that, when we need operating executives, we find that we have made them ourselves.

THE COST OF GOVERNMENT

A review of what it costs the American people annually to operate the vast and complicated structure called government is illuminating and instructive. Taking it by and large, it is the best government the world has ever known, but it is also mighty expensive.

In 1921 the various ramifications of our government cost something like eight and a half billion dollars, or about 14 per cent of our estimated entire national income. In that year there were, in round figures, two million persons on the public payroll. This is about 5 per cent of all wage earners; one in every twenty was working for the government. These figures are for all government—federal, state, county, municipality, and so on. The costs of federal government are fairly well known, but the expense of maintaining the governments of

states and cities can only be estimated; they are too loosely run and in many cases are without adherence to intelligent accounting methods. The foregoing estimates, however, are conservative; they tend to understate rather than to exaggerate.

In fairness to those who are trying to administer government on a business basis, 1921 may be said to represent the peak year of high cost under conditions approaching normal. In 1922 a reduction of federal expenses was effected of about \$870,000,000, and in many parts of the country economies have been made in the administration of state and municipal affairs. Prices of materials and supplies have decreased materially, and it has been possible to save millions of dollars on expenditures for such items, for instance, as public improvements.

Nevertheless, the burden of taxation is still heavy. The national income has been estimated at about sixty billion dollars annually. With government costing eight and a half billions a year, each person employed at gainful industry must contribute (indirectly if not directly) about \$210 of his yearly earnings to pay the bill. If we should pay our taxes in labor—and in the final analysis we do pay them in labor—every person employed for wages would be called upon to contribute seven weeks of labor each year, without compensation, as his proportion of the cost of government.

Too many of us display no interest in the conduct of government. We feel that our responsibility is too small, our influence too slight, to compensate us for the time and effort necessary to act intelligently upon governmental affairs. However, if we but realize that each of us is contributing the earnings of about one hour and twenty minutes of each business day for government, our interest should be quickened into a real concern as to how our contribution is expended. It is certain we would not contribute a similar amount to any other enterprise without showing more interest in what becomes of it.

OUR REVISED TRADE MARK

Those who study carefully our cover design for this month will note a change in the wording on the diamond that is so familiar to all of us. The previous wording, "Central Mississippi Valley Route," has been changed to read "Courtesy, Efficient Service Always."

This change, which is official and which will be observed henceforth whenever the trade mark is used, is significant as a recognition of the fact that the success of our railroad is based not alone upon our fortunate geographical location, but also—and this is increasingly important in these

highly competitive days—upon the loyalty of our employees and the satisfactory service they render the public.

A certain responsibility, of course, accompanies this change. We must live up to our reputation. We must not promise the public something we cannot give. The public will come more than ever to scrutinize the character of our service. There may be those who will question our courtesy and efficiency. There must be no let-down, even in isolated cases. That "always" is a promise every one of us must bear in mind.

THE DIRECTOR GENERAL'S VIEWS

If anybody is qualified to write clearly and impartially about the post-war situation of our American railroads, that person is James C. Davis, director general of railroads, whose recent address on railway problems, delivered before the Prairie Club at Des Moines, Iowa, is reprinted in this issue of the *Illinois Central Magazine*. Mr. Davis, in closing up the accounts of the Railroad Administration, has been forced to do business with many impoverished carriers, and he is in a position to know the difficulties with which they have had to contend. He points out in this address that the views he expresses are wholly personal, but no one can doubt that his plea for fair dealing in public regulation of the railroads is based upon the experiences he has gained in his official capacity.

THE SPICE OF LIFE

Imagination is the spice that seasons the stale food of life. Dreams are the heady wine that stirs the sluggish pulse of being. The lonely watcher in the interlocking tower possesses an "open sesame" to Ali Baba's wonderland. The man in the isolated way-station, marooned far from the busy haunts of his fellows, holds a golden key to Elysian fields. In his mind's eye he can call the vivid scenes of the world to pass in animated review.

Does the average man find life tedious and dull as he tramps his dreary treadmill round? Let him visualize the moving panorama of the great living world with its teeming millions of workers. Each soul has its own magic carpet to bear it across vast distances. In fancy we can all visit the far corners of the earth. Imagine flying on one's magic carpet at night across this vast North American continent. First, there would be the land itself—the rugged bulk of mountains, the shaggy reaches of wooded hills and dales, the wide levels of prairie and valley and plain. Then, there are great rushing rivers, and lakes which lie like molten silver holding the sheen of the starlight; cities and towns, set like

glowing jewels, each sentient, throbbing, pulsing with the endless activities of human endeavor that never sleep. Not the least of these activities would be the railroads which cover the land like an interminable net that has caught an empire in its meshes of steel.

Think of the complex and interrelated details that are comprehended in the operation of the combined railway systems of America. Try to grasp the marvelous co-ordination which flings the speeding legions of freight and passenger trains northward, eastward, southward, westward, safely and ceaselessly, through sunshine and star sheen, through fog and driving sleet, through twilight and morning glow and darkness of midnight.

Have you ever felt the thrill that comes from thinking of thousands of twinkling signal lights, green and red and yellow, like myriads of fireflies, between the Atlantic seaboard and the far-off Pacific coastline, between the Canadian border and the Mexican Gulf, each prickling point of colored flame a tiny beacon marking the path of safety for keen-eyed men on their rocking seats above whirring drive-wheels which thrust the miles behind them with each tick of the watch? Those men, whose eyes are ever watching ahead and whose capable hands never leave throttle bar or air lever for long, hold in their keeping the arbitrament of life and death.

There are other men, too, upon whom rest responsibilities no less vital. There are the dispatchers bending over their train-sheets, noting each changing aspect of that intricate, swiftly moving puzzle of scurrying energy which must function to an orderly plan or end in chaos. The man who works on the track; the shadowy figure that thrusts a smoking torch against a journal box at night, or taps a wheel flange with an inquiring hammer; the towerman in his glass-walled eyrie; the crossing watchman with his traffic flag; the worker in some isolated pump house; the helper at a coal chute—all along the line, from the highest to the humblest, each one has his essential part in the great scheme. Each is necessary to the integrity of this stupendous, interdependent structure of transportation.

It is the task of those at the head of a great railway organization—executives and officers charged with directing operation, maintenance of facilities, construction—to co-ordinate the whole, to solve the problems and remove the difficulties that arise. The men upon whom that responsibility rests serve mightily. A little imagination will help us to appraise the actual size of their task, as well as to understand better the relationship which each of us bears to

the great machinery that constitutes the whole.

Cultivate imagination. It's the spice of life.

RAILROADS IN CHINA

The best way for Americans to realize how well off they are is for them to ponder on conditions in other countries. Take the railroads. When we think of European service and rates, in connection with the staggering cost of railway operation to so many of the governments, we find that the situation in the United States is not so bad. And sometimes when we are inclined to think there is a chronic shortage of transportation in our country (which, in comparison with the demand, there is), it might do us good to think about China.

China has a population of 400,000,000 and a railway mileage of 7,000—one mile of line to every 57,000 persons. We have a population in excess of 100,000,000 and a railway mileage in excess of 250,000—about a mile of line for every 400 of us. Two-thirds of the Chinese republic remains to be developed, as America was developed (so largely by the railroads) in the nineteenth century.

A writer recently called attention to the fact that in China the bulk of the freight is moved to navigable water on the backs of men, at a cost of 14 cents a ton mile and up. "American railroads," he said, "haul freight for 1 cent and 1 mill per ton mile."

In railway mileage we are apparently 142 times as well off as the Chinese and in cost of transportation we have them bested about fourteen times.

FOOD FOR THOUGHT

The Chicago, Peoria & St. Louis Railroad, operating 205 miles of main line between Peoria and St. Louis via Alton and Springfield, with about fifty miles of branch lines, has been in the hands of receivers for several months. Recently a petition was filed by the holders of \$2,000,000 first mortgage bonds asking the permission of the Interstate Commerce Commission to abandon the railroad and scrap the roadway and equipment. The property is said to represent an investment of \$9,000,000 or \$10,000,000, and its estimated scrap value is placed at about \$3,000,000.

This railroad serves an important agricultural, manufacturing and coal mining section. Strong protests against its abandonment have been raised by patrons all along the line. It is pointed out that there are sixty-six cities, towns and villages with an aggregate population of more than 300,000 that would be vitally affected by

cutting off transportation and that there are located on the line, and in most cases exclusively served by it, fifty-three grain elevators, six coal mines and twenty-one other important industries. At least one coal mine, it is claimed, has already been forced to close down because sufficient cars are not available to transport its output. It is also stated that the abandonment of the line would result in losses to mine owners, manufacturers, merchants and other interests—including practically all the farmers in that territory—the extent of which cannot be even approximately calculated. The threatened losses to farmers alone through depreciated land values is placed at \$25,000,000.

A campaign is being prosecuted vigorously throughout the territory traversed by the impoverished railroad to interest the people in coming to its financial aid. The expenditure of about \$3,000,000 on improvements and equipment is needed, it is said, to put the road in condition for operation.

There is food for sober reflection in the situation of the Chicago, Peoria & St. Louis Railroad. It is a pertinent reminder of the grave menace which casts its sinister shadow over the entire transportation structure of the country. The railroads are confronted by an ever-present threat which lurks in waiting—the threat of curtailed earnings resulting from an unwise rate policy. Other roads have survived where this road has collapsed, because of more fortunate location or other advantages, but no business undertaking, large or small, can survive indefinitely without adequate revenues. Its earnings must be sufficient to pay operating expenses, taxes, rentals and interest and leave a return for the owners that will be sufficient to attract the new capital needed from time to time to keep it a going concern.

Railroads find themselves the unwilling victims of a peculiar condition. They are caught between the devil of condemnation for earning a fair return and the deep blue sea of bankruptcy if they do not earn it. Other contributing factors complicate the situation. A deliberate plan is being forwarded by those hostile to the whole plan of private and competitive ownership of public utilities to discredit the management and operation of the railroads under such a plan. Allied with this movement are the organized attempts of the avowed enemies of the railroads to confiscate more than one-third of the actual value of railway properties by scaling down the tentative valuation established by the Interstate Commerce Commission for rate-making purposes from \$18,900,000,000 to less than \$12,000,000,000.

A curious departure from elemental consistency is seen in the attitude of some of these proponents of government ownership. For years they advocated taking a physical inventory of railway properties, claiming that such an appraisal would reveal the presence of excessive capitalization. Senator La Follette of Wisconsin was one of the leaders of this movement, and in 1913 the valuation act which he sponsored was passed by the Congress. It provided how the valuation should be made and required the Interstate Commerce Commission to make it. It expressly stipulated that no account should be taken of capitalization as represented by railway stocks and bonds, at par or market values. The valuation was to be based only upon an inventory of the properties. Advocates of the plan were confounded when the Interstate Commerce Commission announced a tentative valuation which was almost \$2,000,000,000 in excess of the total railway capitalization. Those who formerly argued for a physical valuation changed front. They now declare that the real value of the railroads should be determined from the lowest level reached by their stocks and bonds on the open market. These low levels were reached in 1920 and 1921, when the effects of government control were most sharply reflected in depreciated security values.

The most astonishing thing about this remarkable inconsistency is that sound-minded men permit themselves to be misled by it. A cult which advocates the confiscation of private property is inimical to every basic principle of free government.

The restrictive policy which existed in the years prior to the passage of the Transportation Act, if radically pursued, would force most of the railroads of the country into the condition of the Chicago, Peoria & St. Louis Railroad. The wrecking of our national transportation system could mean only one thing—a total disintegration of the economic fabric of American civilization.

BROTHERHOOD

Begin the morning by saying to thyself, I shall meet this day with the busybody, the ungrateful, arrogant, deceitful, envious, unsocial. All these things happen to them, by reason of their ignorance of what is good and evil. I, who have seen the nature of the good, that it is beautiful, and of the bad, that it is ugly, can neither be injured by any of them—for no one can fix on me what is ugly—nor can I be angry with my neighbor, nor hate him. We are made for co-operation. To act against one another, then, is contrary to nature; and it is acting against one another to be vexed and turn away.—MARCUS AURELIUS.

PUBLIC OPINION

What the

World Thinks

PROMOTING FRIENDLINESS

First one and then another of the big corporations makes the discovery that the best way to circumvent the crooked politician and to silence the lying agitator or blatant demagogue is to make the public its confidant, to give the people the facts about itself and its relation to them and their prosperity. Usually there is nothing to hide, only the habit of reticence or secrecy creates the suspicion that there is. To give an instance in point, we believe that the defeat of the mines license proposal at Helena the other day was due largely to the effect of the campaign of publicity carried on by the Anaconda company last year, which revealed to the people for the first time, in a simple, direct manner, the important part the mines of Butte bear in the production of public revenue. These periodical announcements by both the mining company and the Montana Power Company supplied facts which overwhelmed arguments based on fallacies and suppositions, hatred and falsehood.

But corporation publicity renders its best service in establishing or cementing friendly relations with the public. We always have had the rather odd notion that corporations, like individual men, as a rule do the best they can. The trouble has been that the public in general does not know it and is swayed by street corner oratory, which heretofore has been regarded as beneath the notice of a self-respecting railroad, power or public service company. When that attitude is abandoned, when studied and sustained efforts are made to face every liar with facts, the country will be better off.

Instances of the power of publicity to establish pleasanter relations between the public and its corporate servants multiply. Not so very long ago C. H. Markham, president of the Illinois Central Railroad, decided that the old policy of secretiveness was bad for the transportation business. He went enthusiastically to the other extreme and told the people all along his lines just what the railroad was doing, what its troubles were, how it was endeavoring to overcome them, and what it hoped for in the way of improved service. The other day an expert observer had the opportunity to note the results. He was amazed to find that nowhere in the long and broad valley

of the Mississippi was there to be found a railway patron who was not an Illinois Central fan. It was wonderful, he said, and yet it was simple. Mr. Markham merely had succeeded in showing the people of his territory that their interests and those of the Illinois Central were identical.

Some day in this state it will be realized that the politician who strives to array one class against another, the farmer against the mines, the stockman against the farmer, is an enemy to the community. When that day comes Montana will be a great deal better off.—*Livingston (Mont.) Enterprise.*

THE POSTOFFICE PEN

For years we have drawn lessons on government ownership from telephones, railroads, and street cars, but if we were asked right now to give our strongest, most convincing argument against government ownership we should put ourselves on record by saying:

The postoffice pen!

Did anyone ever see a good pen in a postoffice or a bad one in a bank? And who owns and controls the postoffice? And who owns and controls the bank? We hurl this argument at any advocate of government ownership and we remind him:

"You can't change your postoffice but you can change your bank."

Also that:

"What's everybody's business is nobody's business."

And these two things explain why postoffice pens are bad and bank pens are good and why government ownership is no unmixed blessing.—*The Nation's Business.*

THE RAILROADS AND SOCIALISM

It is virtually certain that one of the three or four principal subjects which the next Congress will tackle is railway legislation. There will be radical demands for repeal of the Esch-Cummins law and a variety of proposals for amendment of our system of regulation. There may be such balance of forces as will result in no important action's being taken. That may be the best to be hoped for under existing conditions. It would give railway management a chance to adjust itself to the present laws and a chance for the present system to demonstrate its strength and weaknesses.

But if important action is resorted to, the

people of the United States should realize that it will have a very important effect upon their material welfare and may very well prove to be a critical turning point in America's economic and political history. Not since the fight for sound money, that is, in a quarter century, have there been presented to the American people issues more vital, not merely to their material welfare, but to their moral and political character, than are several raised by western radicalism in its attacks upon alleged railway evils and its proposals for their remedy. For example, in the guise of demands for squeezing out "water" and for so-called "deflation of railway capital," is the issue of confiscation.

There is the very greatest need, therefore, that there should take place during the months intervening before the next Congress begins to consider railway legislation a thorough public discussion of issues, interests, and proposals. If there had not been such discussion leading up to the election of 1896 there could have been no such decision as then was given decisively on behalf of the nation's financial integrity. Today in such discussion as we have of railway problems the grossest misstatements are reiterated without adequate challenge, such as the repeated assertion that the Esch-Cummins law guarantees a return of 5% per cent to the railroads. There is needed, then, a clarification of facts, and there is also needed an honest consideration of the principles involved and of the real meaning or inevitable consequences to be expected from the adoption of radical proposals.

For example, it should be pointed out to the public that the radical program can have but one certain conclusion, whether that conclusion be reached soon or in the course of a painful period of deterioration. That conclusion is called by the mild and ingratiating term of nationalization. If private capital is not protected in its essential rights, if regulation in one plausible form or another becomes so multiform and oppressive that private capital ceases to flow into transportation enterprise, if confiscatory measures under one pretense or another are adopted or are even threatened so that private capital is taken or driven away from railway enterprise, the only alternative is what is labeled nationalization or government ownership.

To radicals and self-styled champions of popular interest this consequence is not undesirable and we think in most instances is deliberately aimed at, though not always openly confessed. But to the general public it is not yet clear, and proposals for regu-

lation are considered, if at all, solely according to what is expected from them in the way of immediate benefits. The result of this state of public opinion must be that we shall allow a steady drift toward nationalization, that is, toward a transfer of our function of transportation from private initiative under regulation to political operation under the guise of nationalization.

But we trust nationalization is far from inevitable, and we are confident it will not be accepted if it is given thorough discussion. It will not come if we do not drift into it. It will not come if it is taken out of the cloudy atmosphere of theory, examined in the light of experience, and tested by American principle.

For while it is easy to favor giving anything to the people, what that amounts to in practice is giving it to politicians. Nationalization sounds altruistic and patriotic. If the American public acquaint themselves with nationalization as it exists in other countries the appearance of altruism and the patriotism will fade. What, in plain English, nationalization means is the management and exploitation of transportation by politicians for political ends. Undoubtedly private management has its faults, but at the worst they are easy to bear in comparison with the evils inherent in bureaucracy. If private capital has been selfish and oppressive, the bureaucracy erected in the name of government ownership would make it seem beneficent.

This is not theory. Let any honest doubter go to Europe and study its nationalized railroads, with their army of functionaries and their elaborate system for having three men do what one could do better. Americans complain bitterly of every defect of service by our railroads and of what they declare to be high rates. They would think less of radical physicians if they experienced service according to the standards of a bureaucracy and paid European prices.

Let Americans consider this also, that the heaviest stone that hangs about the neck of European governments to prevent them from raising out of the mire in which the war engulfed them is the curse of socialism, or nationalization of industry. If America allows its enterprise to be taken over as European peoples have, we shall see an end to American prosperity as we have known it in the past. We shall set up a tyrant more oppressive than a Caesar and less vulnerable to our resistance. A king, after all, would have but one neck. Bureaucracy is hydra-headed, anonymous, but omnipresent.

Self-styled progressivism which heads to-

ward socialism offers not progress but retrogression. If the American people have not lost their genius for practical affairs and their love of liberty, they will not be led into bureaucracy, nationalization, socialism, under any name.

This is a real issue in American thought today and it is the more dangerous because it is not immediate, but hides itself away in plausible tendencies, winning advances under cover of passing discontents and misfortunes, superficial indeed in comparison with those which an entrenched bureaucracy would inflict upon us.—*Chicago Tribune*.

ABOUT "WATERED" STOCK

The editor of the *Sioux City (Iowa) Live Stock Record*, writing in a department called "Viewed From the Curb," recently had occasion to defend the railroads against

the common charge of "watering" stock. Some protests he received against the original article called forth another, in which he reaffirmed his original stand and made the following explanation of his own neutrality:

"The editor of the *Record* and writer of the article referred to was born on a stumpy farm. Before he was 15 years old he plowed corn, bound wheat behind the old 'dropper,' pitched sheaves at threshing time—and went from May to December with nothing to wear other than blue drilling pants and a hickory shirt. He has been a live stock market reporter and editor for more than thirty years—and that is one of the best reasons on earth why he does not own either railway or any other bonds."

The original editorial, headed "Water in One Thing and Another," read as follows:

"If all of us humans, both he and she,

Two Views of Government Ownership

MERGERS

A great railway merger will probably go through, uniting the western railroads into four big systems, each with about thirty thousand miles of tracks.

The merger needed is a merger of all the railroads of the country, under ownership of the government, and taken out of politics—the kind of politics that tries to build up individual popularity by squandering the people's money and the other kind of politics that tries to build up private fortunes by exploiting the people's property.

The combination planned in the West will make exploitation of the people more convenient and profitable, eliminating even the pretense of competition. The right kind of merger under government control, considering first public service, second, good pay for employes, and last, profits, would solve the railway problem. That problem has outgrown private management and private pocketbooks. And the private owners privately admit it.—ARTHUR BRISBANE, in the *Chicago Herald and Examiner*.

BAD FOR THE PEOPLE

The plan on foot to consolidate lines of railroad into groups should be most carefully considered before anything definite is done.

We had a taste of unified railway operation during the war. It may have been very good for the railroads, here and there labor was saved, but the public was not served. With competition eliminated there was slack service, poor

delivery, neglect, and we are sorry to say, an exhibition of insolence on the part of many railway employes.

Many of the men realizing they were working for the government got it into their heads that the government was something above the plain people and that the plain people need not be considered.

There are three lines of railroad competing for the Memphis and St. Louis business. There is keen competition out of Memphis for western and southwestern business. There is a choice of four routes to New York. The rates are the same. The excellence can only be had in service.

Under this competition the railroads use more comfortable passenger cars and better sleepers. In the matter of freight it is the constant effort of competing companies to cut down the running time between shipping and delivering points.

There is no obligation on the part of the people of the United States to keep unnecessary roads going. Some roads never should have been built. They have never had a day of usefulness.

The railroads should be turned loose and each one should be required to work out its own salvation. The money that it earns should be its to spend in improvement and dividends. If it cannot earn its way, then it should go to the scrap-heap.

Memphis needs every road that enters this city. All of them are serving territories that need them. There is no reason why any of them should be consolidated with others.—*Memphis (Tenn.) Commercial Appeal*, edited by C. P. J. MOONEY.

would refuse to talk about anything excepting something that we knew how to talk about—well, then, there wouldn't be much said, would there? There's me, for instance; I never built a railroad—fact is, I have mosed along the pike for some few years and have never yet drawn rations from a railroad. But ever since the first old Wabash wood-burners roused the owls and slumbering echoes in the tall timbers of the big swamp country, back in Mr. Harding's state, it has been me figuring that railroads cost some little money—also, that civilization would have been a long time getting out into this western country had it not been for railroads. And, if you did not have civilization, with its folks, and its churches, and its schools, and its eighteenth amendment, also its nineteenth amendment, how much 300-dollar-an-acre land would the stars of tonight be twinkling down upon in this Missouri River country? A few nights ago one of these railway smashers and country savers was snorting around the hotel lobby and wanting to kick seven billion dollars' worth of water out of the railroads of this country. Maybe there is seven billion dollars' worth of water in the railroads, and maybe there isn't. I'll get down on my prayer bones and confess that I don't know whether there is that much water in the railroads or not—but at that, I expect I know as much about it as does the fellow who wanted to kick a hole in the roads and let the water out. And, anyway, that reads to me like a whole lot of water. "Why don't you go out here and kick a few demi-johns of condensed fog out of some other things that seem to be pretty well soaked?" I suggested. When the railroad first came to your town its trains rolled in on wrought-iron rails; it had dinky wooden cars; it had hand couplings; its passenger cars were lighted with tallow candles and were heated with wooden stoves. Today it has steel rails, steel cars, mechanical automatic couplings, electric lights, steam heat—also red plush cushions for you to sink into and loll in luxury while going from one town to another. The railroad is probably worth twice as much as when it was first built. What's your land worth as compared with the day the railroad notified the town that it was coming in, blew its whistle and steamed into the depot? Seems to me, if my memory isn't wandering, land was worth around \$25 to \$50 per acre when the first toot of the steam engine was heard down the track—and it is rated anywhere from four to six times that today; multiplied by four to six while the railroad has been about doubling in value. I don't think any farmer whose land value was quadrupled by the coming of a railroad would want to be told that his increase in value

is nothing but a lot of water. When you got the railroad into your country and town you at once began to get more people. Land became more valuable because there was an increased demand for it and a means of getting the product of land to market; when more people came it made a demand for more land; more people made a demand for more business from the store—and that also made more earning power for the railroad. The printer sold more papers—the printer did not create the demand for more papers; it was the bringing in of more people by the railroads. The land accumulated increased value, so did the railroad, so did the merchant's store, so did the print shop. If the increased land value was unearned increment, then the increased value of the railroad, the store and the print shop was unearned increment. There is no more water in one case than in the others. Fact is, it's me sort o' leaning over to the very excellent student of economics who said, not long since: "There is not and never has been such a thing as watering stock." But, with about every third man prancing up and down the land, snorting out demands for draining the water out of stocks, and the other two-thirds believing that the said third man knows what he is snorting about and for—with this kind of mental condition prevailing, getting anywhere looks to me like an impossible chance, hoping against a chance that is about 99½ per cent water. The more one thinks about water and propaganders, the more dog-goned both of 'em look."

HOPES FOR REVOLUTION

Comrade Lenin, pausing in the strategic retreat he has been conducting from the bolshevik Utopia, discusses the prospects of the world revolution. He regrets that the "masses of the Far East must be educated" before that glorious event can take place, and meantime Russia must adopt an economic policy capable of preventing the imperialistic European states from crushing her.

By that we infer he means that the Red army must be kept up and an economic system adopted which will work regardless of Marx. If capitalistic America continues to feed millions of Russian children and the proletarian czar continues to adopt capitalism, the evangel of communism can be carried to the benighted West and some day perhaps all the world may be enjoying the benefits of the proletarian dictatorship.

Over four years Lenin and his associates have been in charge of a nation of a hundred and fifty millions occupying one of the richest portions of the globe. They have had full sway to erect the perfect state,

they have slaughtered everyone in reach who opposed them, destroyed every vestige of individual liberty, confiscated wealth, imposed forced labor, revived the worst evils of the czarist secret police, paralyzed commerce, and discouraged production by confiscation until one of the greatest famines in history was brought about in a land once the great granary of Europe.

This is the achievement of the glorious revolution, according to Marx, for which Lenin asks the workers of the world to strive. When we all get that revolution we shall have no capitalists to feed the liberated proletarians, no bourgeois engineers to run the railroads or direct the factories. The dictatorship of the proletariat will arrange all that, as it has done for four years in Russia, and those who don't like

it will be convinced with a machine gun. The world will be all proletarian, and the proletarians will be happy though hungry, as long as they hold out. There will be equality at last, for everyone will be equally wretched (except the dictatorship and the army), and there will be complete freedom of thought and speech, because anyone who does not think according to Marx will be eliminated from this glorious proletarian world.

Lenin, though recognizing that the masses must be educated to appreciate the charms of bolshevik management, is hopeful. Workers unite, and you may yet enjoy the blessings showered upon the Russians for four years by the dictatorship of the proletariat.—*Chicago Tribune*.

Finds Life Pleasant on the Coast of Florida

C. D. Cary, Illinois division claim agent, has been spending a leave of absence in Florida and vicinity. He has been cheering up his friends in the wintry North by writing back like this:

Let me tell you briefly of one wonderful trip. Man here from Massachusetts has a private cruiser named "Trump." She is a handsome creation in boat building—speedway engine and cabins that are luxuriously appointed. I sort of got acquainted with him. One day last week he invited me to go with him down among the Keys for a few days' fishing.

Me with a millionaire! Ye gods! Did he leave anything undone? Not anything that was visible with the naked eye. He has a captain on this cruiser whom he pays \$6,000 a year just to have the boat ready and up to date the moment he wants to go. The captain told me that last year he lay around here all season, and his master never came down at all; but this winter he is here, and the time is being well utilized.

This cruiser cost \$28,000. It has a mahogany interior, beautiful upholstery and drapes and can make twenty-one knots—and that is stepping along. Every nook is utilized in a most artistic manner.

We drifted down to Long Key, some ninety-five miles south, where we put in and slept on board that night. Next morning we went out on the shoals, some ten to eighteen miles, and landed some king fish and Spanish mackerel. That night we went out on some long reefs. The captain set out some nets, and then we got in front of them and made considerable fuss with a small boat and paddles. This caused

about seventy-five ocean crawfish to back up and back into the nets, so that we could pull them all on board at one haul. They are large, spiny creatures with stalked eyes, no great crushers like the sea lobsters but fully as large. My friend was very fond of them, but I'd sooner have ham. I never saw so many creeping, crawling, horny things in my life as when we pulled up that net.

We then drifted down to Big Pine Key, Knight's Key and other little coves and inlets along the coast that were formerly the refuge and asylum of old pirates of the days of treasure trove, pieces of eight and the old buccaneers who made the Spanish Main a thing of horror and disaster. This wonderful craft would respond to every touch of her master, and he was a jolly and splendid host—just one of us folks; when working he makes silk, but when fishing he just fishes.

The captain spied an object off port about three points one afternoon as we lay off Saddle Bunch. It was so close to the boat we could almost reach it with our oar. He quickly grabbed the harpoon and sank it deep into the side of the monster. In about thirty minutes we had a good 400-pound porpoise on board. Porpoises are of no value. We kept this one over night and laid him to rest in his natural element the following morning.

After a cruise of three days and nights among the Keys, the interesting and wayside places one cannot see or know unless overtaken by good fortune such as came to me, we put back up along the reefs and little islands of the south coast and landed at the dock, after one of the eventful experiences of my life.

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them.

In the apartment house with little Elsie's parents lived two young ladies who, every time they made sandwiches or candy, delighted the little girl with a sample. One day the girls made some pimento sandwiches and as usual called Elsie and gave her one. Running to her mother, she exclaimed, "Oh, mother, look, I have an egg sandwich!" Eagerly she bit into the sandwich, then with an excruciating expression on her face, turned to her mother with this: "Angels, mother, it's rotten eggs!"—KATHLEEN HADAWAY, *Mississippi division editor, Water Valley, Miss.*

When my 3-year-old cousin from Arizona visited me last summer, one of the features of the visit was a trip to Chicago. While there, we took the family over to see the lake. Little Mickey's only experience with water had been in the bath tub and in irrigation ditches around his arid home in Arizona. When he saw Lake Michigan's vast expanse, he was awed into complete silence for several minutes. Then he looked at his uncle with great seriousness and said: "Uncle Earl, I'd like to know who dug that big a hole!"—FLORENCE MCSHANE, *Indiana division editor, Mattoon, Ill.*

Roger, 3 years old, was crying bitterly, having been severely lectured and whipped by his mother for bad behavior. His aunt, finding him crying, exclaimed, "Why, what a bad boy you are, Roger!", to which he replied, "Aunt Hetty, I asked God to make me a good boy, but he didn't."—J. MILTON MAY, *New Orleans terminal editor, New Orleans, La.*

A little girl recently entered a toy store with a 5-cent piece. She spent much time looking over the toys, taking up the attention of the clerk, apparently unable to select anything, although several good suggestions were made by the salesman.

Finally, his patience being exhausted, he said: "You must want the earth with a little red fence around it, all for a nickel."

"Let me see it," returned the young shop-

per promptly.—S. F. LYNCH, *New Orleans division, Vicksburg, Miss.*

Tested Recipes

RHUBARB PIE.—Select young and tender stalks of rhubarb and cut into small pieces without peeling. Use about three-quarters of a pound of sugar to one pound of rhubarb, mixing some cornstarch with the sugar to retain the juice. Flavor with a little grated orange or lemon peel. Pour this into the bottom crust. Roll out top pie crust and cut into half-inch strips. Wet edge of bottom paste and put strips over pie in lattice shape. A strip may also be put around the edge, if desired.

MACAROON PUDDING.—Line a pan with $1\frac{1}{2}$ dozen macaroons (almond). Heat 1 pint milk. Mix $1\frac{1}{2}$ cups granulated sugar

OUR BABIES

No. 1 is Romaine Jacob, 2 years old, son of F. S. Buzzetti, second trick operator, Ackley, Iowa.

No. 2 shows Marion, 3 years old, and W. A., Jr., 6 years old, children of Conductor W. A. King, New Orleans division, Natchez, Miss.

No. 3 is Bob, 18 months old, son of R. L. Guensler, chief clerk to superintendent, Dubuque, Iowa.

No. 4 is Milton J., 6 months old, son of Joseph E. Reis, assistant cashier, agent's office, Evansville, Ind.

No. 5 is Kermeth M., 1 year 9 months old, son of Trucker Olean H. Bass, Storm Lake, Iowa.

No. 6 is Eugene, Jr., 17 months old, son of Section Foreman Eugene Whittington, Stovall, Miss.

No. 7 shows Engineer A. C. Stone of the St. Louis division, running between Centralia and Mounds, Ill., and Edward John, 9 months old, his grandson. Engineer Stone hopes to make an engineer of this sturdy boy.

No. 8 is Roderick L., 4 years old, son of S. E. Francis, assistant accountant, freight office, Clarksdale, Miss.

No. 9 is Karl W., 5 months old, son of W. F. Timms, car inspector, Wallace yard, Freeport, Ill.

No. 10 is Frank, Jr., 5 years old, son of I. F. Tullis, accountant, McComb, Miss.

No. 11 is David Anthony, Jr., 2 years 10 months old, son of D. A. Brown, boilermaker, Jackson, Tenn.

No. 12 is George Edward, Jr., 8 years old, son of G. E. Walkup, clerk, office of operating vice-president, Chicago.

No. 13 shows the six children of J. W. Schroeder, interchange clerk, Baton Rouge, La. Top row, left to right: Charles, 11; John, 9; Chris, 6. Bottom row: Garnet, 5; Shelby, 16 months, and Alvin, 3 years.

No. 14 is Robert B., 11 months old, son of H. O. Price, assistant timekeeper, Freeport, Ill., shops.

with beaten yolks of 3 eggs and contents of 1 envelope of acidulated gelatine (dissolved in a little cold water); add to milk and cook until it starts to boil (stirring constantly if double-boiler is not used). Remove from fire and fold in the beaten whites of the eggs. Pour this over the macaroons and put in a cool place to set. Cut in squares and serve with whipped cream.—FLORENCE MCSHANE, *Indiana division editor, Mattoon, Ill.*

GRAHAM CRACKER CAKE.—Cream $\frac{3}{4}$ cup sugar with scant $\frac{1}{2}$ cup of butter; add 2 whole eggs (beaten). Roll 24 graham or oatmeal crackers and sift through flour sifter with $\frac{1}{2}$ cup flour and 2 heaping teaspoonfuls of baking powder. Add the sifted ingredients alternately with 1 cup of milk. Bake for twenty minutes in moderate oven.

Frosting: Cream $\frac{1}{4}$ pound sweet butter with 2 cups confectioner's sugar, add 1 beaten egg, 1 square bitter chocolate (melted), and 3 teaspoonfuls vanilla.—MRS. H. M. SIDLER, *wife of contract secretary, chief engineer's office, Chicago.*

SALAD DRESSING.—Beat thoroughly 2 eggs, add $\frac{1}{2}$ cup sugar, $\frac{1}{4}$ cup vinegar, 1 tablespoon butter, $\frac{1}{4}$ teaspoon dry mustard, and $\frac{1}{4}$ teaspoon salt. Cook until thick. When cool, add $\frac{1}{2}$ cup cream, $\frac{1}{2}$ cup chili sauce, and 1 small onion, 1 green pepper, and 1 pimento, chopped fine.—MRS. A. V. DOWNING, *wife of valuation accountant, Fort Dodge, Iowa.*

DRIED FRUIT.—Wash dried fruit in warm water; cover with cold water and soak overnight. To one pound prunes add $\frac{3}{4}$ cup corn syrup and $\frac{1}{4}$ lemon, chopped fine. Let simmer gently for two hours.

To one-half pound apricots and one-half pound peaches, add 1 cup corn syrup and let simmer for $1\frac{1}{4}$ hours.

To one pound pears add 1 cup corn syrup and let simmer for 2 hours.

Fruit cooked in this manner will retain all the natural delicious flavors.—MRS. J. F. WILLIAMS, *stenographer to chief clerk, Tennessee division, Fulton, Ky.*

GOLDEN DRESSING FOR FRUIT SALADS.— $\frac{1}{4}$ cup each of pineapple, lemon and orange juice, $\frac{1}{2}$ cup sugar, small pinch salt, 2 eggs. Heat fruit juices together with sugar and salt, pour over the eggs which have previously been well beaten, and cook until thick, stirring constantly until done.—M. HARRIS, *Decatur freight office, Springfield division.*

PEAR SALAD.—Place half pears on lettuce leaves and serve with following dressing: Make dressing using yolk of 1 egg and about 1 cup of salad oil, salt and lemon to taste. To this add grated cheese, very finely chopped almonds and a small quantity of pimento. Pineapple may be substituted for pears, if desired.—MATTIE WATTS, *clerk to supervisor, Grand Junction, Tenn.*

MACAROONS.—Whites of 4 eggs, 1 cup sugar, pinch salt, vanilla, $\frac{3}{4}$ cup each of chopped nuts and chopped dates. Add the sale to the 4 egg whites and whip until dry and stiff, then fold in the sugar, vanilla, nuts and dates. Drop on buttered pans and bake in slow oven for 30 minutes.—LENNA LIGHTCAP, *stenographer to chief clerk, superintendent's office, Dubuque, Iowa.*

Graciousness

There is one virtue which no man or woman in the business world should neglect to cultivate. It is graciousness. A service rendered with graciousness is magnified to the person served until it seems—as indeed it is—a far greater service. Graciousness isn't toadyism; it isn't a fawning upon superiors and condescending to inferiors. The true graciousness is not an assumed

OUR BABIES

No. 15 is Beanita, 2 years old, daughter of William Gabbert, machinist, Indianapolis, Ind.

No. 16 shows Donald, 7 years old; Richard, 5; Charlotte, $3\frac{1}{2}$, and Marion, $1\frac{1}{2}$, children of Engineer F. E. Wing, Cedar Rapids, Iowa.

No. 17 is Betty Lou, 2 years old, daughter of F. D. Eller, foreman, mechanical department, Centralia, Ill.

No. 18 is Virginia Lee, 5 years old, daughter of Conductor A. T. West, East St. Louis, Ill.

No. 19 is Barbara, 4 years old, daughter of John Deutschman, car repair department, Harahan, La.

No. 20 is Mary Frances, 2 years old, daughter of Conductor W. P. Robertson, Louisiana division.

No. 21 shows Agent E. J. Doll, Onawa, Iowa, and his 10 weeks old daughter, Carolyn.

No. 22 is Jane Barton, 2 years old, daughter of Car Inspector J. H. Ragsdale, Martin, Tenn.

No. 23 is Gertrude Irene, 8 months 18 days old, daughter of Frank Kline, blacksmith helper, Wisconsin division.

No. 24 is Dorris Eileen, 8 months old, daughter of C. M. Cohan, draftsman, office of engineer of buildings, Chicago.

No. 25 is Delores June, 10 months old, daughter of H. L. Crowell, apprentice instructor, Waterloo, Iowa, shops.

No. 26 is Mary Belle, 2 years 7 months old, daughter of C. H. Masterson, city freight agent, Indianapolis, Ind.

No. 27 shows Andrew, $2\frac{1}{4}$ years old; Elinor, 1 year, and George, Jr., 4 years, children of George Strauss, chief clerk to superintendent, Champaign, Ill.

No. 28 is Carolyn, 2 months old, daughter of Trainmaster J. J. Hill, Tennessee division.

thing, put on and laid off like a garment. It is a trait of character, which grows as it is cultivated. It is courtesy, kindness, helpfulness, understanding. Be gracious, always—because it is an attribute of the gentleman and gentlewoman everywhere. And if that is not reason enough, then be gracious because it pays.—E. M. STATLER.

Merry Meals Mean Much

Meal time, parents and children can be an interesting combination, but they will not be, unless especially prepared for by the mother. Why not make it one of the pleasantest times of the day and teach the children to take their part in the conversation with sense and dignity?

This can be done best by making it the time to tell the pleasant things that each one has seen, heard, done or read. Enforce a rule that nothing disagreeable shall be talked over at meals. This is not good for digestion, we are told. No gossip, mention of horrible affairs or cross word should be allowed at the table.

Even little children can learn to talk about the picture they liked, the funny story the teacher told, the dog that wagged his tail at them on the way home and any little detail of cheery, happy days. Daddy could tell of the people he met, of anything he saw, made, or did in an unusual way,

and relate stories of "when I was a boy." Mother could tell about the people who had telephoned or had been to the door, the book she had read or heard about, and stories of when grandma was a girl.

In the morning, the occasion should be a merry one. Everybody would feel better and brighter if everybody learned to be the right kind of table talker. It is never too early to begin with the children. Even a baby will react to smiles or frowns, and good cheerful talk breeds kind, thoughtful deeds.—LYDIA LION ROBERTS.

FIRE A CALAMITY

A home fire is a calamity. It means personal danger and the loss of priceless articles while in progress and homelessness afterwards. Fourteen per cent of dwelling fires are from defective or unclean flues. Rubber or flexible metallic tubing as gas connections is hazardous. Repeated warnings have been given against the use of gasoline in the home. All cleaning with gasoline should be done by establishments in business for that purpose. Electric irons cause many electrical fires; 15 per cent of electrical fires are caused by flexible cords used as extensions; unauthorized changes of wiring by amateurs and the bridging of fuses are prolific causes of fires.—*Fire Prevention Bulletin.*

Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions February 27:

Name	Occupation	Years of Service	Date of Retirement
James M. Shires.....	Crossing Flagman, Jackson, Tenn.....	21	9/30/22
Tolbert L. Tucker.....	Switchman, Canton, Miss.....	23	10/31/22

HOUSE PLANS FOR OUR READERS

Concrete

The Chilworth, No. 6201 (Russell Barr Williamson, architect, Milwaukee), is an economical house for the man of moderate means.

This simple design makes an attractive, practical home. From the small entrance hall, one enters a spacious living room, with a comfortable dining room at the rear of the house. Three sets of French doors to the porch in the side wall of the dining room and living room give the effect of one large room, although the rooms are separated by the projecting fireplace.

The total width, slightly less than forty feet, requires a lot fifty feet wide. The house might be readily used on a narrower lot, if the porch is placed on the front or rear.

This design is an example of twenty-five plans appearing in an elaborate plan book published by the Portland Cement Association, 111 West Washington Street, Chicago. The plan book can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valu-

able data on that subject, including photographs of many attractive stucco houses, but not including plans, can be obtained free from the editor of the *Illinois Central Magazine*.

THE NEED TO PREVENT FIRES

Every man whose carelessness causes a fire makes every other man poorer. Every factory that burns makes jobs harder to get. Every house that burns helps raise rents. We are burning more factories and houses in America than we are building. What's the answer?—FRANKLIN H. WENTHWORTH, *Secretary of the National Fire Protection Association*.

For Buddy and Sis

Tennessee Towns

The following groups of words represent stations on our line in Tennessee. See how many you can guess correctly. The correct answers will appear in the May issue.

1. A material used in building and a railway car for carrying cattle.
2. A form of protection used at crossings.
3. The name of a straw used in making Easter bonnets.
4. A standard of weight.
5. An amphibious animal and one of a mixed race of Morocco.
6. A distinguished Confederate general and a collection of trees.
7. The author of the dispatch, "We have met the enemy and they are ours."
8. To deface and a kind of kitchenware.
9. An ancient capital of Egypt.
10. A carnivorous animal found in the jungles and the side of a coin opposite to the head.
11. To be unemployed and the opposite of civilized.
12. A place of worship and 2,000 pounds.
13. Something that is not old and to injure by fire.
14. A color worn on St. Patrick's day and land inclosed for pasture.

THE STORY OF BUSTER

By JOHN PRICE,

Supervisor of Signals, Kentucky Division

This is the story of Buster. Buster is just an ordinary Scotch terrier, but his heart is as big and his loyalty as great as if his pedigree contained a long list of blue-blooded ancestors. Buster's master is E. F. Oates, signal maintainer at Nortonville, Ky., located in Hopkins County, at the crossing of the Louisville & Nashville.

There is no stock law in Hopkins County or in the town of Nortonville, and as a consequence the livestock of this thriving mining town is permitted to roam at will upon the public thoroughfares and upon the railway right-of-way. That is, the stock would roam upon the right-of-way if it were not for the eternal vigilance of Buster. Buster's loyalty to his master urges him to see that the company for which his master works does not kill livestock, and it is therefore his self-appointed task to see that stock does not venture upon the tracks and station grounds.

All day long Buster reposes upon the station platform with a wary eye open to windward. When he sights an over-venturesome cow or hog headed toward the tracks, he is galvanized into action immediately and snaps and barks at the heels of the animal until it has retreated a safe distance away. He is very careful, however, not to bite the animals; he merely intends to frighten them away from the danger they are courting by walking on the tracks.

As a result of his efforts, it is a rare occasion that the company has to pay any damages for livestock killed in the vicinity of the station grounds at Nortonville.

During all of the six years that he has

E. F. Oates, Jr., 5 years old, son of Mr. and Mrs. E. F. Oates. Mr. Oates is signal maintainer at Nortonville, Ky. With Junior Oates is his dog, Buster.

BUDDY—This Will Be Settled Soon

By SAID

been at Nortonville, Buster has never failed in his task, except upon one occasion. That was when his master went to visit his old friend, the late C. E. Tracy, former supervisor of signals on the Iowa division. Buster was left in the care of some neighbors, but after the first day he missed his master and started out to hunt for him. He visited all the old familiar places and, not finding him, returned to his own home, where he lay down in front of the door to await his return.

Mr. Oates was gone ten days, and during that time Buster never moved from his waiting place. He even refused food, and if Mr. Oates had not returned when he did there is no doubt that Buster would have died. When his master returned, Buster's joy was unbounded, and he feebly wagged his tail. In a few days he was well enough to return to his position as self-appointed guardian of the right-of-way, and there he has remained ever since.

Juanita Has a Good Memory

Juanita Crunk, 3-year-old daughter of Mr. and Mrs. J. J. Crunk of Morgantown, Ind., can repeat the names of the books of the Bible, from Genesis to Revelations, and recite the Lord's Prayer, the Twenty-third Psalm, and dozens of songs and recitations. She is the youngest member of her class in the Morgantown Baptist Sunday School, and when she attends church she sings in the choir.

Juanita Crunk

Juanita's father is waterworks repairman on the Indiana division. Both her father and mother take pleasure in teaching her, and they are tremendously pleased with her splendid memory.

Such a remarkable memory in a little tot is so unusual that recently Juanita's picture appeared on the very front page of the *Indianapolis Times*, crowding over to the inside pages important news of world events. "She is a blonde, red-cheeked tot and lisps her recitations in a sweet treble," said the accompanying story.

The Crunks have one other child, Ronald, 12 years old. His 3-year-old sister is teaching him to repeat the names of the books of the Bible.

April, 1923

About Naming Buddy's Dog

DEAR BOYS AND GIRLS:

Here are some more suggestions for a name for Buddy's dog. Buddy is anxious to get the dog named, so he has set April 15 as the "deadline" for your suggestions. The "deadline" means that letters received after April 15 will be too late. So let us hear from you promptly. The prize winner will be announced in the May issue.

Lovingly,

AUNT NANCIE.

Nathan Stein, living at the West Side Y. M. C. A., Chicago, age 17, suggests "Nero." J. B. McRae, Cedars, Miss., age 4, suggests "Ku Klux" or "Dinkid." Louis James May, 205 Telemachus Street, New Orleans, La., age 10, suggests "Beans." Marion May, 205 Telemachus Street, New Orleans, La., age 8, suggests "Rags." Orpha Fogerty, 8023 St. Lawrence Avenue, Chicago, age 8, suggests "Copper." William O. Langer, 2439 Lexington Street, Chicago, age 8, suggests "General."

Letters From Our Boys and Girls

Box 223, Palestine, Ill., March 11, 1923.

DEAR AUNT NANCIE:

I am a girl 13 years old. My father is an engineer. His name is William Albert Bayless.

I am going to help Buddy name his dog. I think "Rover," "Fritz," "Trixie," "Sport," "Rip" and "Fido" are good. Please write back and tell me if Buddy likes the names I suggest or not. Write soon.

With love,

NELLIE BAYLESS.

Washington, Ind., March 15, 1923.

DEAR AUNT NANCIE:

I am a 10-year-old boy of Washington, Ind. I am trying to help you and Buddy get the dog's name. "Rover," "Spot," "Red," "Fritz" and "Raven" I think would be good names.

ROBERT STEVENS.

P. S.—My address is 511 E. Hebron Street. My dad is the superintendent of the B & O. Railroad.

7337 Vernon Avenue, Chicago, March 14, 1923.

DEAR AUNT NANCIE:

I think the name of "Pal" is a very good name, like Skeeze's dog's name.

Yours truly,

MARGUERITE FARLEY, 8 years old.

330 Gordon Street, Jackson, Tenn., March 10, 1923.

DEAR AUNT NANCIE:

I am a little girl ten years old and live in Jackson, Tenn. My daddy is a conductor between Jackson, Tenn., and Water Valley, Miss.

I would suggest that Buddy name his dog "Radio" because he broadcasts at night.

With love,

REBECCA FRANCES BRASHER, daughter of B. B. Brasher, conductor, Jackson district, Mississippi division.

Central City, Ky., Box 74, March 16, 1923.

AUNT NANCIE:

You asked in the *Illinois Central Magazine* to name Mr. Said's new dog. I have selected a few names which are the following: "Fido," "Waggles," "Topsy," "Rags," "Rover," "Prince," "Sport," "Spot," "Trixie," "Shep," "Muggins," "Tige," "Alec Treble,"

Eighty-one

"Strong Heart," "Bonnie Bell," "Queen," "Don," "Buster," "Dan," "Shrimp," "Jack," "Curley," "Jet," "Tabb," and "Freedom," and "Bob."

MARY LOUISE ANDERSON.

882 Mount Loretta Avenue, Dubuque, Iowa, March 13, 1923.

AUNT NANCIE:

In answer to your request for Buddy's dog, here are a few names: "Nancie Hanks," "Flip," "Pep," "Prince."

MARY K. HOFFMAN, age 11.

Urbana, Ill., March 6, 1923.

DEAR AUNT NANCIE:

I am a little girl 11 years old. I am going to try to give Buddy's dog a name. I selected "Sport," "Kaiser," "Towser" and "Barcus." If you want to write to me, address the letter to 708 West Church Street, Urbana, Ill.

With love,

LUCILE MILLS.

807 West 7th St., Hopkinsville, Ky.

DEAR AUNT NANCIE:

As Buddy and his little dog are great companions,

I have selected "Bobby" as a name for the little dog, so they can be called "Bobby and Buddy," and also as the dog has a bobbed tail.

My father is an operator and ticket agent at the Illinois Central depot. I am 10 years of age. Please write to me in a few days and tell me if the name is all right.

Yours,

MARTHA LE GATE.

Lerna, Ill., February 23, 1923.

DEAR AUNT NANCIE:

I am a little girl 7 years old and I am in the second grade. I like to go to school so I can read, sing, write and play games. We have swings and seesaws to play with at recess. On Saturday I like to go up to the depot. I think it is fun to write on the typewriter and sit at the window and watch the trains come and go. After school I like to go play with my playmates. We play school and play with our dolls. My doll has a sweater and cap. Her name is Dolly Dimple and she can go to sleep.

My papa's name is Mr. B. B. Knight and he is the Illinois Central agent.

Your little friend,

DOROTHY KNIGHT.

He Is a Staunch Advocate of Home Owning

Above is a picture of the residence of James L. Puig, inspector of stations and transfers, in Edgewood Park, a beautiful suburb of New Orleans. Although operating out of Chicago under the jurisdiction of C. G. Richmond, superintendent of station and transfers, Mr. Puig makes his home in New Orleans.

Entering the service of the Illinois Central on September 29, 1911, as notice clerk, local freight office, New Orleans, Mr. Puig held that position until 1914, when he was transferred to be tally checker, claim department. He held various positions in the claim department, finally being promoted to chief O. S. & D. clerk. It was while acting in this capacity that he gained the thorough knowledge of the handling of over and short freight which has proved so valuable in his present position as inspector.

In October, 1916, he was advanced to chief export clerk, a position he held until September, 1917, when he resigned to accept employment as clerk with J. L. East, then agent of the loss and damage bureau, Chicago. This position he occupied until October, 1918, when he was appointed agent of freight service, a position now known as inspector of stations and transfers.

Mr. Puig is another firm advocate of the slogan, "Own your own home." This axiom he carried into effect by building his own shortly after entering the service of the Illinois Central. He is decidedly a home man. Whenever the opportunity presents itself and his duties carry him in the vicinity of New Orleans, you will find him safely ensconced at the family fireside. He is the happy father of three children, and his interest centers around his family.

That Mardi Gras in New Orleans is a time of frolic and merrymaking is shown by the accompanying pictures of the children of some of our employees in their 1923 costumes.

No. 1 is Anita May, 7 years old, granddaughter of George A. Dougall, machinist, Government yard roundhouse, New Orleans, dressed as a "Hula" girl.

No. 2 shows a group of wild Indians and speedy cowboys, among whom are included the two sons of J. A. Mouton, embargo clerk, local office.

No. 3 shows Hazel, 9 years old, and Albert Leo, 4 years old, daughter and son of Albert Hopkins, engine inspector, locomotive department, New Orleans, as a geisha girl and a Yama.

No. 4 shows Joseph George, Jr., 4 years old, son of J. G. Tregle, bill clerk, local office, New Orleans, and his cousin, Dorothy Mayer, also 4, representing a policeman and an old-fashioned girl.

No. 5 shows James, son of J. L. Puig, inspector of station and transfers, as King Capdau, and his little schoolmate, Thelma Rainey, as Queen, in a school pageant staged by the pupils of Capdau public school, Edgewood Park, New Orleans.

No. 6 is Leah Cohen, 11 years old, cousin of Leon H. Marks, No. 9, as an old-fashioned girl.

No. 7 is Richard, 5 years old, son of Charles Barnes, team track clerk, Poydras yard, New Orleans, dressed as a Yama.

No. 8 is Helen Philebar, 2 years old, niece of Gustave Schilling, roundhouse foreman, New Orleans, in carnival costume.

No. 9 is Leon H., 8 years old, son of Seymour Marks, statistician, accounting department, local office, New Orleans, representing a mandarin. Leon wore this costume at the Purim Ball given by the Young Men's Hebrew Association on March 3 and succeeded in winning second prize for costume.

No. 10 is Rosemary Josephine, 15 months old, daughter of Joseph Werling, receiving clerk, out-bound warehouse, New Orleans, as a valentine.

No. 11 is Lauretania Barnes, 4 years old, sister of No. 7 above, dressed as a Yama.

Sports Over the System

Illinois Central League Suggested

"While Jack Frost is registering his last, if vigorous, kicks, we believe that the time has arrived when all who are interested in forming a baseball league should get together, so that the season of 1923 will be the most satisfactory and successful ever entered upon by the baseball enthusiasts of the Illinois Central System," writes a correspondent. "With no end of excellent material, as far as players are concerned, there remains but the efforts of those interested in the promotion of the great American game to formulate plans whereby properly equipped teams may engage in a regular schedule of games on specified dates. Those interested will please communicate with E. A. McCarthy, 63d Street General Offices, telephone Dorchester 4200, Local 29."

Baseball Prospects at New Orleans

The Commercial Baseball League of New Orleans, which operated so successfully last season, was reorganized for the season of 1923 at a meeting held February 1 at the office of the United Fruit Company. Application for admittance was presented by practically all of the large commercial houses of New Orleans. The organizers, however, with the object of making the league as representative as possible of the commercial interests, decided to admit only four teams, each to be composed of *bona fide* employees representing the four largest corporations in the city. The Illinois Central System was chosen as the most representative of the railway interests of New Orleans. Its team, with the Standard Oil Company, United Fruit Company and Dock Board teams, will compose the Commercial Baseball League.

The league was formally launched on February 21, the following officers being chosen: D. C. McLeese, president, United Fruit Company; J. P. Booth, vice-president, Standard Oil Company; O. E. Jahncke, secretary, United Fruit Company; J. Milton May, treasurer, Illinois Central System. The board of directors, composed of managers of the respective teams, includes A. Moos of the Standard Oil Company, Charles Barnes of the Illinois Central System, T. R. Spedden of the Dock Board and W. A. Eckert of the United Fruit Company. The season was officially opened on Satur-

day, March 31, at Bissant Park, the Illinois Centrals meeting the Standard Oils in the opener. A schedule of fifteen games has been mapped out to be played by each team.

The Illinois Centrals made active preparations to be in condition for the opening of the season. Manager Barnes had his candidates for the team out for extensive practice for several Saturdays. The team to carry the laurels of the Illinois Central through the season will be picked from the following candidates: L. Mohren, F. Churchill, C. Barnes, S. Natal, C. Eble, A. Jorda, A. Kitto, B. Berckes, George Dell, Tom Caldwell, Peter Martin, Ivor Throunk, L. Murray, H. Blackwell, Bob Sutherland.

To Play in League at Chicago

With the baseball season only a few weeks off, the All Star ball team of the Chicago General Offices is well under way for a most promising season. The All Star team will be composed of players who can make good and who can keep up their performance, the players to be selected from the General Offices both at 12th Street and at 63d Street. The All Stars will play in the Chicago Railroad Baseball League, composed of teams representing the general offices of ten transportation companies in Chicago. The season will open Saturday, May 12, and close Saturday, September 8. Any player who desires an opportunity to sign up with this club should communicate with A. H. Coates, secretary *pro tem*, 700 Central Station, Chicago. The tentative schedule of the league follows, each team to have a home diamond, yet to be chosen:

Date	Visiting Team	At
May 12	I. C.	C. & N. W.
May 19	A. T. & S. F.	I. C.
May 26	C. B. & Q.	I. C.
June 2	I. C.	Pullman Co.
June 9	I. C.	Am. Ry. Exp.
June 16	I. C.	Pac. Fruit Exp.
June 23	P. R. R.	I. C.
June 30	I. C.	Erie
July 7	B. & O. C. T.	I. C.
July 14	C. & N. W.	I. C.
July 21	I. C.	A. T. & S. F.
July 28	I. C.	C. B. & Q.
August 4	Pullman Co.	I. C.
August 11	Am. Ry. Exp.	I. C.
August 18	Pac. Fruit Exp.	I. C.
August 25	I. C.	P. R. R.
September 1	Erie	I. C.
September 8	I. C.	B. & O. C. T.

Indoor Baseball at New Orleans

A meeting of representatives of teams composing the Commercial Basketball League was held Thursday, March 1, at the sporting goods firm of Stickney and Williams at New Orleans to consider the advisability of forming a Commercial Indoor Baseball League. In view of the success attained by the basketball league, from both a financial and basketball standpoint, the proposal of an indoor baseball league was received with a great deal of enthusiasm. No definite action was taken, tentative plans being discussed for consideration at a meeting to be held at some future date, when the league will be formally organized.

From the present outlook, it is probable that the Illinois Central will enter a team in this league, as there is an abundance of indoor baseball material in and about the New Orleans terminal. The local office boasts of "Bizzy" Berckes of basketball and baseball fame, who holds the reputation of being one of the best indoor pitchers seen in these parts for the last five years. He will be ably supported by A. Oustalet and J. A. Mouton.

The following have signified their intention of playing and have announced as candidates for the team: B. Berckes, A. Oustalet, J. A. Mouton, H. W. Wilmuth, J. H. Smith, L. Pic, L. Mohren, C. Eble, Dan Voble, A. Kitto, Tom Caldwell, I. Throunk, J. Eichorn, B. Rucker, A. Walsdorf, W. Stumpf.

Baseball Stars From Water Valley

Water Valley shop and immediate vicinity can boast of four young men who have made good on the baseball diamond. All four have pitched for Water Valley in their early days of baseball.

"Little" Joe Edwards, born at Paris, Miss., is a pitcher—southpaw—now with the Cleveland Indians. Edwards is 6 feet 4 inches in height and weighs 190 pounds. He pitched for Mississippi College, Clinton, Miss., and played with a few semi-pro teams before joining the Cleveland Indians.

Jack Knight, born at Pittsboro, Miss., is a pitcher—right handed—now with the St. Louis Cardinals. Knight is 6 feet in height. He played with Galveston, Texas League, in 1922. Other engagements have been with Little Rock, Southern League, and with Millsaps College, Jackson, Miss. Knight's best feat was when he relieved Joe Edwards, now with the Cleveland Indians, in the eighth inning with the score tied 3 to 3 and won in the eighteenth inning, without allowing a run or hit in the last ten innings. Knight's present home address is Walcott, Ind.

Van ("Red") Hallman, born at Water

Valley, Miss., is a pitcher—right handed—now the property of Terre Haute, Ind. Hallman is 6 feet 2 inches in height. He pitched for Millsaps College, Jackson, Miss., and played with semi-pro teams in Mississippi, Louisiana, Kentucky and Missouri. His best feat was a no-hit, no-run game against Perryville, Mo., in 1921. In 1922 he won fourteen and lost five games. His home address is Water Valley, Miss.

Lloyd ("Monk") Bowles, born at Water Valley, Miss., is now signed with Hattiesburg, Miss., Cotton States League. He is a pitcher—right handed—5 feet 9 inches in height. He previously played independent ball and in 1922 was the property of Greenwood, Miss., Cotton States League. He pitched a 4-hit game against Meridian and a 4-hit game against Clarksdale in 1922. He won two and lost two games in 1922. His home address is Water Valley, Miss.

Hallman and Bowles, now employes of Water Valley shop, expect to report to their respective clubs soon.

No Beating the Herrin, Ill., Bowlers

The members of the Diamond Special bowling team from St. Louis were in Herrin, Ill., recently as guests of the Elks,

Upper left, J. A. Wales, machinist apprentice; upper right, R. E. Revere, machinist and magazine contributor; below, P. H. ("Pat") McGehee, head material handler—all of McComb, Miss., shops. They are, respectively, manager, recording secretary and pitcher and first baseman of the shops' 1923 baseball team.

trying to get revenge for the last drubbing they received. However, they were defeated again, this time by a score of 2,440 to 2,287. Those present were Traveling Passenger Agent M. J. Mulconner, H. J. Boston, F. J. Bock, O. J. Kuopp and W. J. McKane, from the office of William Smith, Jr., assistant general freight agent, St. Louis. "In spite of their defeat, they enjoyed the match, and all who participated had a good time. We welcome all Illinois Central employes to our home," writes our correspondent.

Trimmed Pennsylvania Bowlers

A team composed of players from the Illinois Central 63d Street Bowling League at Chicago met and defeated a Pennsylvania Railroad team March 5 by the following score:

Illinois Central				
Heimsath	198	179	232—	609
Turner	228	170	172—	570
Nelson	146	153	140—	439

Bockman	190	178	121—	489
Totals	834	816	734—	2,384

News of the 63d Street Bowlers

The bowlers at the 63d Street General Offices, Chicago, have completed their third round for this season, and four teams are tied for fourth place. The four teams tied are only five games from second place. The Panama Limited and the New Orleans Limited teams recently trimmed the leaders two out of three, thus cutting down their lead over the strong Diamond Specials.

At the end of the third round we find these fancy scores: Tersip, 254 and 267; Hulsberg, 265; Lind, Kempes, Heimsath and Calloway, 245. Hulsberg has high individual series, 664; Kempes is second, with 644; Tersip is third, with 636. Goodell's team, the Daylight Special, has high team game, 991, and high series, 2,813. Tersip's New Orleans Limited rolled second high series recently, having games of 806, 930 and 936, totaling 2,672.

The prize winners for high scores recently were: Merriman, 243; Bristol, 197; Lawshe, 188; Burgert, 226; Goodell, 244; Kempes, 228 and 245; McKenna, 210, Heimsath, 234 and 245; Calloway, 212 and 223; Rowe, 218; Flodin, 201; Breidenstein, 194; Turner and Kovats, 200. High 3-game series recently were: Kempes, 625 and 644;

Heimsath, 621 and 628; Calloway, 603 and 605; McKenna, 609.

The Panama Limited moved up to a tie for fourth place by trimming McCarthy's Freeport Peddlers three straight.

Standing of the Teams

Teams	Won	Lost	High Game	High Series	Average

Good Race in 12th Street League

The General Superintendent of Transportation team of the 12th Street General Office Bowling League at Chicago has won every game for a month, and it looks as if it will finish in first place. Its bowlers, Knodell, Silverberg, Butler, Walters, Leonard and Yore, have won thirty of their last thirty-three games. The General Freight team is three games behind in its schedule, having dropped games to the General Superintendent of Motive Power team and the Auditor of Disbursements team in the last month. Captain Koch of the General Freight team on March 15 crashed into the pins for games of 220, 237 and 186, a total of 643 pins, only twenty-six pins behind Rolff, who holds high series for the Illinois Central bowling leagues in Chicago.

The Auditor of Miscellaneous Accounts team has pulled away from the Bridge and Building team. The Bridge and Building team slipped badly when it allowed the Terminal Superintendent team to take two games from it. The General Superintendent of Motive Power team cannot boast of a player among the leading twenty, yet it is in fifth place.

The Land and Tax team's average pins per game should place it in eleventh place,

but instead it is in sixth place. When Enright of the Land and Tax team passed Knodell on March 7 in the fight for first place, it was the first time this year that Knodell lost the lead. Two months ago the Vice-President Purchasing team was fighting for third place, but since that time it has been slipping and is now in seventh place.

The Engineer Maintenance of Way team, last year's champion, is in eighth place, but should be higher, for it has three bowlers—Bernbach, Rolff and Breitzke—among the leading twenty. The Vice-President Accounting team is still sticking in ninth place, in spite of the fact that Captain O'Connor cannot place a full team on the alleys each week owing to lack of available bowlers. The Auditor of Disbursements team did its best work of the year when

it took two games from the General Freight team recently. The Officers team handed the Vice-President Purchasing team a big surprise on March 15 by winning two out of three games.

For some time the Chief Special Agent team has been winning one game a week, and after some very careful detective work the reason therefor has been discovered. Jack Sheahan, one of the cops and a crack bowler, threatens to pull a gun on the first one of his opponents who rings up three straight strikes, and the result is the boys have to be satisfied with doubles only, which gives Grace, star of the cops, a chance to break loose and win games.

As a result of a suggestion in last month's magazine that we hold an interwomen match between 12th Street and 63d Street representatives, a challenge was issued and accepted. The women from the Purchasing Department were scheduled to roll against the women from the office of the Auditor of Freight Receipts March 24 at 63d and Dorchester.—W. E. DuBois.

Appreciated Inter-City Bowling

F. J. Theobald, chief clerk to Superintendent J. M. Walsh of the Memphis division, was in charge of the Memphis bowlers whose invasion of Chicago was recorded in the March issue of this magazine. After his return to Memphis, Mr. Theobald wrote as follows to C. M. Said, *Illinois Central Magazine* cartoonist, who handled the Chicago arrangements:

"On account of the late hour we disbanded and the confusion after the games last Saturday night, we did not have the opportunity of expressing our appreciation to each individual bowler and the large assemblage of Chicago rooters. We take this means to say that every member of our party enjoyed every minute of our visit, as the hospitality of yourself and members of your team, as well as the visitors, could not have been surpassed. You could not have picked a more congenial or delightful bunch of fellows. The banquet was incomparable and was enjoyed most thoroughly.

"The keen enjoyment throughout the visit, the live and vibrant spirit of good fellowship and the enthusiasm, as I still think over them, prove a forceful exemplification of the truth and logic of a verse I have in mind: If your nose is close to the grindstone rough. And you hold it down there long enough, In time you'll say there's no such thing As brooks that babble and birds that sing. These three will all the world compose: Just you, and the stone, and your darned old nose.

"To get away from it is splendid, and the manner of getting away from it in this instance was a joy which comes at intervals indeed most rare."

Bailey	69	233	563	161

Bowling Teams at Dubuque, Iowa

Bowling teams have been organized in the local office and revising bureau at Dubuque, Iowa, composed of the following: T.

F. Callaghan, Milton McLean, Ralph Lassurance, Harold LeVan and Martin Fahey of the freight office; M. S. Bachman, J. J. Callaghan, LeRoy Moeller, Claude Crandall and Ted Regnier of the rate bureau.

Basketball Champions at Carbondale, Ill.

Undefeated by teams of neighboring towns, the Carbondale, Ill., Illinois Central basketball team placed a challenge to all basketeers of the Illinois Central System in the January number of the *Illinois Central Magazine*. The challenge was answered by teams from Memphis, Tenn., and East St. Louis, Ill.

"On Washington's Birthday, the tall lads hailing from Memphis invaded us with George's little hatchet, but failed to cut us down, although out-sizing the locals two to one. They left their scalps hanging in our tent along with the small end of a 24-21 score," writes our correspondent. "East St. Louis visited us the next week, all doped

up for leaving us at the ground floor, but instead we were on the forty-ninth, while they craned their necks from the sixteenth window trying to locate us. The smoke was too thick—score, 49-16."

With four local games cut and dried, the Carbondale boys compose the unvanquished team of the St. Louis division.

New Orleans Basketball Season Closes

The Illinois Central basketball team of New Orleans and the freshman team of Tulane University played February 1 as a preliminary game to the contest between the Marine Bank team of the Bankers' League and the United Fruit Company team of the Commercial League. The railroaders started off with a spurt and in the first five minutes of play caged two field goals through superior pass work and spectacular goal shooting by Berckes and Moore, forwards. This lead they were unable to retain, however, as the college boys forged up from the rear and won 24-8.

At another contest, this time between the Marine Bank team and the St. Mark team for the independent championship of the city, held March 5, the Illinois Central team also played a preliminary game, its opponent this time being the Woodward Wight team, runner-up to the United Fruit Company team in the Commercial Basketball League. This was a battle for blood, the railroaders having lost to this team in two league games by two and four points, respectively. In the first half the Illinois Centrals, playing a strictly defensive game, held their rivals to one lone foul goal, while they in turn scored two field goals.

The second half opened with both teams considerably strengthened by the addition of fresh players. The Woodward Wights managed to ring in a couple of field goals, only to have their slight lead overcome by the railroaders in the next few minutes of play. The score was in doubt from then on, neither side having any great advantage. The whistle blew with the railroaders ahead by a score of 8 to 7.

The Illinois Central basketball team of Carbondale, Ill., champion of the St. Louis division. Top row, left to right: H. C. Brewer, guard; L. Minton, manager; V. Hopper, center. Bottom row, left to right: C. Conatser, forward; N. Howard, captain and forward; D. Roberson, guard. The first three have had high school basketball experience, the fifth previously played in New York, and the fourth and sixth formerly were with the Southern Illinois Normal University team.

Radio Department

The Audion Receiving Set

The radio fan who desires to receive broadcast programs and messages from stations that are located more than fifty miles from his set will find it necessary to make use of a receiving set that is more selective in tuning and more sensitive in detecting than the ordinary crystal set. In addition it will be necessary to amplify, by the use of a local battery, the effect detected.

The audion receiving set shown in the illustration, which can be made at a total cost of only \$10, will enable one to hear broadcasting stations located within a radius of one thousand miles with a wave length range of 200 to 700 meters. It will be necessary to purchase all the parts used in the construction of this set, as they are of such a nature as to make them practically impossible of manufacture by the ordinary layman. In the construction of this set you will need the following parts:

- 1 variocoupler coil.
- 1 23-plate variable condenser (.0005 mfd.)
- 1 filament rheostat.
- 1 tube socket.
- 1 W.T. 501 "peanut" detector tube.
- 1 grid leak ($\frac{1}{2}$ megohm).
- 1 fixed condenser (.00025 mfd.).
- 6 switch points.
- 1 switch lever.
- 1 set "B" battery (22½ volt).
- 3 dry cells or one 6-volt storage battery.

The detector tube described in this article, which can be purchased for \$2, will work on a filament voltage of four to six volts, and a plate voltage of 16 to 22½ volts. It can be used on three dry cells or a regular 6-volt "A" battery.

If desired, the set can be assembled in a cabinet 6 inches by 6 inches by 18 inches. The hook-up is as shown on the picture plan. All connections that are not on binding posts should be soldered.

In operation, tuning is accomplished by means of the variable condenser and intensified by the variocoupler coil. The rheostat regulates the filament voltage on the tube. To operate, place the head set on the head and adjust the receivers to fit the ears. Throw the lightning switch up, connecting the antenna to the set. Rotate the dial on the variable condenser to the right

Radio

I called my love by radio,
In hopes that she would hear;
I asked her if she'd marry me,
And closed it, "Billy, Dear."

Oh, sad is my predicament—
Indeed, a sorry mess—
When I tuned in my receivers,
I heard forty answers, "Yes."

The audion receiving set

until the whistling noise is heard. Intensify this by rotating the rotor on the variocoupler to the right and by moving the switch lever over the contact points. When the reception is accomplished, turn the pointer on the rheostat to the left to increase the sound. If the reception is accompanied by noises or is too loud for the ears, turn the pointer to the right until the noises are diminished.

The method of adding amplification to this type of set will be described later.

A Word From the Iowa Division

A visit to Fort Dodge, Iowa, will disclose the fact that there is a decided and noticeable increase in the number of aerials in the city. It is amazing to note how many of them are on the housetops or in the back yards of Illinois Central employees. From such information as I can gather from the "bugs," there will be several more before the end of 1923.

I have a home-made set which I think a very good one. It is a single circuit regenerative, using a bank wound variocoupler. These two parts should be the best you can get. I made my own variocoupler. I use one tube WD 11.

E. R. McCullough

From January 27 to February 28 I heard thirty-five different stations, only four of them being in Iowa. Some of them were Los Angeles, Cal.; Schenectady, N. Y.; Detroit, Mich.; Winnipeg and Calgary, Canada; Atlanta, Ga.; Fort Worth, Texas; Denver, Colo.; Memphis, Tenn., and other nearby stations.

I had the pleasure of listening in on the violin solos rendered by Miss Annie Dixon and broadcast by the *Memphis Commercial Appeal* station WMC on the night of January 30, as well as the address made by W. B. Storey, president of the Santa Fe Railroad, before the Chamber of Commerce of Kansas City at its annual banquet on February 8 at Kansas City.

There is one important thing about a receiving set that so many overlook when making their own, and that is soldering all connections. This is necessary if you expect to get results. Another thing is to keep the switch points clean; be sure to keep dust from collecting on the plates of

your variable condenser. Some think they can get a set, hook on the aerial, ground and batteries and that it will need no further attention, outside of renewing the battery; but this is not the case. You will find that a little attention given to cleaning your machine will save you lots of worry and will also save the machine from being condemned as being no good. It will also keep some of those noises out of the 'phones and loud speaker.—E. R. McCULLOUGH, *signal maintainer, Iowa division.*

Radio Used When Wires Were Down

Due to the severe snowstorm of March 11 and 12, all of the wires were out of service, and only passenger and regular freight trains were operated. About 3 o'clock Monday afternoon, the 12th, a message was received from Chicago by radio announcing the arrival of train No. 12 at Chicago. The chief dispatcher called at a radio station operated by Kenneth Ridgway of Freeport and sent messages to the Chicago offices regarding conditions in this vicinity relative to the operation of trains. This is the first time in history that radio has been used for such purposes in Freeport. — THERESA JOHNSON, *office of superintendent, Freeport, Ill.*

Sang for the Radio Fans

Miss Margaret Smetacek, who is employed as a stenographer in the Chicago Terminal Improvement department at Chi-

Miss Margaret Smetacek

cago, entertained many of her friends on February 21 when she sang for the *Chicago Daily News* broadcasting station, WMAQ: Oh, Come With Me in the Summer Night.....

Who Knows.....Van der Stucken
The Nightingale.....Ball
Open Thy Blue Eyes.....Ward-Stephens
Mah Lindy Lou.....Massenet
Love's Old Sweet Song.....Strickland
The Star.....Molloy
Rogers

Miss Smetacek has done a great deal of concert work in the last few years and has been successful in winning the praise and favor of music critics. She gave a concert March 29 at the Fine Arts Recital Hall, Chicago, in the Young American Artists Series under the management of J. B. Hall.

Broadcasting Begun at Mattoon, Ill.

Tony and Sylvester Brumleve, sons of J. B. Brumleve, foreman of bridges and buildings, Mattoon, Ill., had the honor of being the first vocalists to take part at the new broadcasting station of Mattoon, the studio of which is located in the Lumpkin Building on South 17th Street. The name of the station is WQAL, and it is operated by the local telephone company, in charge of R. A. Lumpkin. There have been many excellent programs given since the station was opened, as Mattoon has many high-class musicians, and the two Brumleves, who have fine voices, have continued to appear on all programs on special calls from many cities for encores. Programs are rendered at 9 p. m. every Tuesday and Thursday evening. The station broadcasts on 360 meters and should be heard in the remote parts of the United States. Mr. Lumpkin invariably makes the announcement before each program and before each number on the program: "This is station WQAL, the Coles County Telephone and Telegraph Company, broadcasting from Mattoon, Ill., 'the buckle on the Corn Belt.'"

OFFICERS' RESERVE OPEN

Opportunity is still afforded during the present year for former officers of the world war to enroll in the Officers' Reserve Corps. The chance will be withdrawn, however, on November 11, next. The War Department is anxious to enroll as many as possible of former commissioned and non-commissioned officers in the reserve. Maximum peace-time obligation is fifteen days' annual training, and exemptions from this obligation may be obtained where circumstances warrant. Members of the reserve, of course, are not subject to the selective draft. Information may be obtained and applications filed at Sixth Corps Area headquarters, 1819 West Pershing Road, Chicago.

RADIO EXPERTS

Telford Arnold, 12 years old, son of W. L. Arnold, water works repairman, Louisville, Ky., with a crystal set he made.

Bert Richards, 14 years old, son of E. H. Richards, assistant ticket agent at Louisville, Ky., with a "pickle tube" set he made.

Ninety-one

Our Useful Station Names

THE first item in this department in the March issue, contributed by G. B. O., reported that the use of one of our station names in Louisiana had won a prize in a New Orleans newspaper story-telling contest. The example seems to have proved contagious, as witness the following additional clippings from the *New Orleans States*, sent in this time by H. A. M.:

A negro nurse in the Yazoo & Mississippi Valley coach was having a struggle with a white child which refused to be entertained and was crying. Nearing a station, the porter came to the coach door and called out: "Walker, Walker." The nurse immediately got up and began to walk back and forth with the child. The remedy was good. "Dat man sure must have some babies of his own. He knows," she said.—MRS. JACK LYNCH, 741 Union St., Baton Rouge, La.

While riding on the Illinois Central, the quiet of the coach was disturbed by the brakeman who came to the door and shouted: "Rayne, Rayne." An elderly lady passenger looked out the window and said: The idea! It's doing nothing of the sort."—MRS. A. KLEIN, 1111 Bartholomew.

Returning to New Orleans on the Illinois Central, the train stopped at Gulletts, La., and a young man stared long and longingly at the sign of the Gullett Gin Company. To the conductor he said: "I thought gin was against the law down here, too. Where do they sell the stuff?" When the conductor explained that it was a cotton gin, the fellow, crestfallen, hurried to the smoker.—W. L. LIGON, 4221 Freret St.

He Had a Claim

Tim O'Brien had unfortunately figured in one or two accidents, but this time he was one of the occupants of the car who were considered seriously injured, and was rushed off to the hospital to be operated on. He had partially recovered from the anesthetic and was looking round in dazed condition. As the nurse approached his bedside, he asked feebly:

"Where am I? What is this place?"

The nurse took his hand gently.

"You have been very badly injured in an automobile accident, but you will recover," she replied.

"Recover!" said Tim in a high-pitched voice, and tried to raise himself up. "Recover! How much?"

Economy and Efficiency

Recently a dusky son of Africa applied to Ticket Agent W. W. Fincher at Vicksburg, Miss., for a round-trip ticket to Greenville for his dead brother.

"Surely you're mistaken," said Mr. Fincher. "You mean you want a round-trip ticket for yourself."

"No sah, boss, it's jest as I sez. You see de corpse has lots ob kin folks up dar, and I figgers dat it's de cheapest to send him up and let 'em all look at him, den to have 'em all come down to de funeral."—S. F. L.

But Not Quite on Schedule

A certain traveling engineer had ordered lunch on the dining car. After waiting a considerable time and receiving nothing, he called his waiter to him and asked if his order had been sidetracked. The darky replied, "No, sah, boss, no, sah, she's on de rail—in de block now, sah."—A. R. S.

Colloquaciously Speaking

"Dis sho' am a desultory day," remarked Rufus Lee pleasantly, lifting his weather-beaten hat and bowing to the dusky Miss Johnson.

"Law, Misto Lee," replied that lofty lady. "Ah fin' it gubernatorially frigidity dis mo'nin'."

"Go 'long, Miss Johnsing," said the brave Mr. Lee, nonplussed. "Yo-all am so economical."—*American Legion Weekly*.

She Was No Aviator

A woman passenger walked up to the matron at Grand Central Station, Memphis, Tenn., and asked: "Can you tell me when I get a train?"

After looking at her ticket, the matron said: "Yes, you take the 8 o'clock Frisco to Birmingham, and change there to the Seaboard Air Line to your destination."

The woman became frightened and exclaimed: "Lord! If I have to travel by air line, I don't think I'll go!"—I. H. B.

Merely a Race

Old Brown had had a terrible morning. He could not walk, and he had engaged a man to pull him about in an invalid's chair. Twice they had nearly been crushed under a car, and once the invalid-chair man had almost dropped his charge into a river.

They halted at the top of a steep hill. At first Brown welcomed the halt. But at last he began to get restless.

"Why are you stopping here?" he asked nervously.

"It's all right, guv'nor," the attendant replied, unconcernedly. "I'm only waiting for my mate, with another old gent. We're going to 'ave a race down the 'ill."

The High Cost of Living

"Yes," said the specialist, as he stood at the bedside of the sick purchasing agent, "I can cure you."

"What will it cost?" asked the sick man faintly.

"Five hundred dollars."

"You'll have to shade your price a little. I have a better bid from the undertaker."

Going the Limit

An old squire in a rural court had made a ruling so palpably unfair that three young lawyers at once jumped to their feet and protested emphatically against such a miscarriage of justice. The squire immediately fined them five dollars each for contempt of court.

There was silence for a few minutes, then an older lawyer arose and walked slowly to the front of the room. He opened his wallet, and deposited a ten-dollar bill with the clerk.

"Your Honor," he addressed the judge, "I wish to state that I have twice as much contempt for this court as any man in this room."

He then picked up his hat and coat and made his way quietly out of the building.

Which Way?

A man who was asked to give a recommendation for a patent medicine, said:

"It is the best medicine I have ever tried. I bought half-a-dozen bottles for my mother-in-law. She was at death's door when she began taking it, and it pulled her through."

Hang This on the Line

Jones (phoning to Smith)—Come over tonight. My wife's gone and we're going to have a little penny ante game.

Smith—I can't come. I'm washing my B. V. D.'s.

Central (breaking in on the call)—I'm ringing them.—D. M.

April, 1923

Ruined for Further Use

A certain restaurant is notorious for its tough meat. A stranger entered one day and ordered a steak. When it was served he tried to cut it, but failed. He called the waiter and complained.

"I can't get my fork into this," he said. "It is as hard as a rock."

"I'm sorry, sir," said the waiter; "it's the best we've got, and, anyhow, I can't take it back."

"What do you mean? Why can't you take it back?"

"It's bent, sir."—*Pittsburgh Chronicle-Telegraph.*

Independent

An attorney in Los Angeles advertised for a chauffeur. Some twenty-odd responded and were being questioned as to qualifications and whether married or single.

Finally, turning to a negro applicant, the lawyer said: "How about it, George; are you married?"

Quickly the negro responded: "Naw sir, boss, naw sir. Ah makes mah own livin'."—*Judge.*

Helpful Wind

While on his recent visit to this country, Marshal Foch made a witty reply to a man who, when one of the guests at a dinner party in Denver, given by a party of Americans, took exception to French politeness.

"There is nothing in it but wind," he said with questionable taste.

"Neither is there anything but wind in a pneumatic tire," retorted the gallant Marshal, "yet it eases the jolts along life's highway wonderfully."—*The Argonaut.*

Practice and Preaching

"Why did you remove that 'Do it now' sign that hung over your desk?"

"I couldn't stand the way the bill collector looked at it when I told him to call again tomorrow."—*Boston Transcript.*

Before and After

"There goes a man who married his stenographer. They say she bosses him around something terrible."

"Well, it's his own fault. He knew that

she couldn't take dictation before he married her."

Soupspicious

"See here, landlord; I don't understand about this trousers button being in my soup."

"I don't either, sir. We employ only female help here."—*Ainad Temple Bulletin.*

Not a Partnership Affair

Sir Auckland Geddes, the British ambassador, said at a recent dinner:

"Young men rise easily from the ranks here in America because the American spirit is so democratic. In Europe now—

"In Europe one day a clerk remarked to his employer:

"I think we are going to have rain, sir."

"We?" snarled the employer. "We are going to have rain?" How long have you been a member of the firm?"—*Detroit Free Press.*

INKID SAYS—

ONE OF TWO THINGS
A JANE THINKS ABOUT
IS THE GUY SHE
MIGHT GO WITH NEXT

A New Commandment

A teacher in an elementary school had given lessons to an infants' class on the Ten Commandments. In order to test their memories, she asked:

"Can any little child give me a commandment containing only four words?"

A hand was raised immediately.

"Well?" asked the teacher.

"Keep off the grass," was the reply.

The Wonders of Arithmetic

During a recent coal shortage, a coal dealer in a town on the Yazoo & Mississippi Valley, after being out of coal for some time, received a car containing twenty-eight tons. Having seven unfilled orders for coal, he instructed his three negro wagon men to deliver the coal, dividing the twenty-eight tons equally among the seven.

The three darkies held a consultation to figure out how much coal should be delivered to each customer.

The first one admitted he knew how to divide and proceeded to solve the problem by means of long division as follows: Placing the figures 7 and 28 in the proper order, he found that 7 would go into 28 once; subtracting 7 from 28, he brought the remainder down, which left him 21; then, dividing 21 by 7, he obtained the following result:

$$\begin{array}{r} 7)28(13 \\ 7 \\ \hline 21 \\ 21 \\ \hline \end{array}$$

He then announced that each customer was entitled to 13 tons of coal.

The second one then attempted to check his figures by way of multiplication: Placing the 7 and 13 in order, with the 7 above, he multiplied the 7 by 1 and brought the 7 down. He then multiplied the 7 by the remaining 3, obtaining 21, which he placed below the 7; adding the result, he obtained 28, as follows:

$$\begin{array}{r} 7 \\ 13 \\ \hline 7 \\ 21 \\ \hline 28 \end{array}$$

The third one admitted that he didn't know much about division or multiplication, but he said he could prove or disprove the findings of his brethren by addition. He then wrote out a column of seven 13's, one above the other. Adding the second column (all the 3's) he obtained 21; then, adding the 1's in the first column to this result, he also obtained 28 as his figure, which made the decision of thirteen tons for each customer unanimous.—C. R. K.

HOUSE PLANS FOR OUR READERS

Southern Pine

It has been said that the two most beautiful words in the English language are "home" and "mother." The attractive house design shown this month is quietly suggestive of both words.

This design follows the lines of the Cali-

fornia bungalow type and has four commodious rooms, besides a breakfast room, bath, plenty of closets and two roomy porches. The arrangement of the interior is nicely suited to the requirements of a small family, with its convenient appointments and utilization of available space for those little details which add so much to happiness and comfort.

There are built-in features, such as cabinets in the kitchen, bookcases and an open fireplace in the living room and wall seats in the breakfast room. The rear chamber may be used for dining room or bedroom, as desired. This house can be built on a lot forty or fifty feet wide to best advantage, although its width of less than thirty feet makes it possible to use a smaller lot if one's space is limited.

The editor of this magazine will be glad to send a book of fifty different house plans, of which the one shown is an example, to any reader who is interested in home-building. The books are given without charge, by the courtesy of the Southern Pine Association of New Orleans. The American Wholesale Lumber Association also has offered its services to persons interested, in arranging for the co-operation of retail lumber dealers and advising with communities that desire to organize building and loan associations.

What Patrons Say of Our Service

Courtesy in Arranging a Trip

Frank F. Winans, 137 South LaSalle Street, Chicago, resident vice-president of the National City Company of New York, recently wrote as follows to President C. H. Markham:

"In view of the kicks and knocks the railroads are receiving from every quarter, I imagine it will be a pleasure to you to receive a few words of praise of the service rendered by your railroad.

"My wife's father, Mr. W. B. Conkey, died very suddenly on Monday of this week in St. Petersburg, Fla., and it was essential that she leave for there the next day with our children and the nurse. I called up the city ticket office and explained the emergency to your Mr. Randolph, as I realize the traffic south is very heavy at this time of year.

"He got busy at once and, to my surprise, finally worked out a drawing room straight through from Chicago to St. Petersburg. I cannot speak too highly of the service he rendered and his courtesy."

Personal Attention to a Lost Hat

Ned L. Woodward of Battier's Pharmacy, 209-211 Beale Avenue, Memphis, Tenn., recently wrote as follows to President C. H. Markham:

"Sometimes a man likes to hear the good things about his corporation as well as the knocks; so I have the pleasure to express my thanks and gratitude to one of your conductors as well as to your wonderful Illinois Central System.

"On March 3, 1923, my wife had the pleasure of riding your train No. 1 out of Louisville, Ky., with Conductor J. A. Numer in charge. Through an oversight, she left a valuable hat at Fulton when she changed coaches. She notified Mr. Numer, who was only too willing, she said, to telegraph for her hat to be taken care of and sent on to Memphis.

"The trouble and time that he took personally to see that it was delivered to my place of business was more than appreciated.

"So again I want to thank you, for myself and wife, for the courtesy Mr. Numer extended to us."

No Settlement for This Accident

H. C. Gilliland, agent at Auguilla, Miss., recently made the following report to all concerned:

"Please refer to the accident which occurred here February 28, 1923, when train No. 13, Conductor Mahoney and Engineman Rosson, struck an automobile on the public crossing south of the station.

"The car, a new coupe, was being driven by Mrs. I. D. Benson, who was fortunately not injured beyond being shaken up a little.

"This morning Doctor Benson, her husband, came down and asked me to please see and thank personally for him the engineman, Horace Rosson, for making such a wonderfully quick stop; to thank also Conductor Mahoney for his kindness to Mrs. Benson, and to thank my superiors for having such good, trusty, faithful men to operate passenger trains. He further requested that I say to you gentlemen that there must be no offer made as to the settlement of the damage to the car, as it was purely and simply Mrs. Benson's fault. He also thanked me kindly for offering to take Mrs. Benson home, and left the offices praising the Yazoo & Mississippi Valley Railroad and its employees."

Service in a Time of Sorrow

Howard B. Corson of the Murdock Corson Company, Villa Grove, Ill., recently addressed President C. H. Markham:

"I am writing you in regard to a favor shown me by your railroad.

"A few weeks ago I was riding on the Decatur to Mattoon branch of the Illinois Central, and I happened to ask the conductor about the time of the train's arrival at Sullivan. I was greatly surprised to receive a most courteous and well-explained answer from him.

"Ten days ago my wife died, and I transported her body over the Illinois Central from Tuscola to Effingham. We had to wait in Tuscola three hours for the 9:30 train that night. The train was late, running behind the fast train, No. 3. By taking the 9:30 train we would have had to transfer at Mattoon. The lateness of the 9:30 train made it impossible to get to Effingham for our connections there. However, we did not know this. To our great surprise, the station force at Tuscola informed us they had made arrangements with the dispatcher for the fast train, No. 3, to take us to Effingham. As this train does not stop regularly at Tuscola and as the arrangements showed interest in us, I felt like trying, in a measure to thank you personally and let you know what I thought

of the Illinois Central and the employees at Tuscola.

"These two instances so impressed me that I have a very warm feeling for the Illinois Central. I trust you may see fit to thank the night force at Tuscola for their thoughtfulness and courtesy to the traveling public. I have charge of my firm here and make it a point to recognize loyalty and service by encouraging words of praise. This letter can only, in a small way, express my true, sincere thanks for the aid I received in a time of deep sorrow."

Saw Instance of Courtesy

J. B. Jones, Ly Mar Hotel, Herrin, Ill., recently wrote as follows to J. V. Lanigan, general passenger agent at Chicago:

"I just wish to compliment you and the other officials of the Illinois Central for having, in my own estimation, the finest equipped railroad in the country. But getting back to the object of this letter—I was a passenger on the train leaving Carbon-

dale, Ill., at 11:35 o'clock Monday morning, March 5, in charge of Conductor W. E. Whalen. There happened to be some women and children en route who had purchased tickets to Carterville, but through the rush at ticket window the agent had given them the wrong tickets.

"This conductor surely handled the situation with very good judgment, and the courtesy and treatment he showed them was noticed by eight of us traveling men who use the Illinois Central every week.

"I happen to read your *Illinois Central Magazine* often, and I think this man should have a nice write-up in the favorable mention column, and I am surely going to watch for it.

"As to the other employees of your road, I think they cannot be compared with anywhere.

"I assure you of all the business I can throw your road in either passenger or freight, and I wish prosperity to the company in building and operating the new line from Edgewood to Metropolis."

Celebrates 70th Birthday in Our Service

Seventy years ago—March 13, 1853—C. H. Suffield, now a clerk in the office of the auditor of freight receipts at Chicago, was born in Clifden, Galway County, Ireland. He emigrated to Canada in 1873, where he began his railway career in the service of the Grand Trunk, which he served for seven

years. He then came to Chicago in 1880 and entered the service of the Chicago & North Western Railroad, with which company he held various positions of importance for several years.

Canada again called him, and he joined the service of the Canadian Pacific System for two years. In June, 1891, Mr. Suffield again returned to Chicago and was employed by the Illinois Central Railroad in the office of the auditor of freight receipts, in which office he has been employed for thirty-two consecutive years. He was chief interline clerk for a number of years and is still in active service.

On the occasion of his seventieth birthday he was presented with a shower of beautiful flowers, among which was a bouquet from his co-workers and friends, consisting of seventy roses.

Mr. Suffield is blessed in his ripe age by still having the companionship of his loving and devoted wife and mother of his family. His eldest son, William H. Suffield, is commercial agent for the Illinois Central in the Detroit and Toledo districts.

HOW SUCCESS COMES

The talent of success is nothing more than doing what you can do well, and doing well whatever you do without a thought of fame. If it comes at all, it will come because it is deserved, not because it is sought after.—LONGFELLOW.

C. H. Suffield

Maintenance of Way Department **Material Means Money** **Save It**

Track Jacks

Abuse, not use, sends the jack to the scrap heap.—Poor Richard III.

A track jack is a sturdy, substantial tool and rather hard to damage, which is fortunate, considering the service it is called upon to perform. As the name would imply, track jacks are primarily designed for raising track in surfacing or making other repairs, but they are frequently used also for other purposes requiring the use of a jack.

There are in use on the Illinois Central and Yazoo & Mississippi Valley approximately 7,500 track jacks, representing an average cost of \$10 each, or a total investment in track jacks of \$75,000. Track jacks commonly have a lifting power ranging from five to twenty tons, or, say, an average of ten tons. Thus the combined lifting power of the jacks in service is about 75,000 tons, or 150,000,000 pounds.

Last year 1,150 track jacks were purchased at a cost of \$10,557.50. In addition to the new jacks purchased, 374 jacks were repaired at Burnside shops, Chicago, and placed in service, making the total renewals for the year 1,524 jacks, or more than five for every working day.

The illustration shows an accumulation of track jacks at the Burnside reclamation plant. More than 300 disabled track jacks are shown in this photograph, yet they do not represent all of the damaged jacks re-

ceived each year, as the following tabulation will show:

Year	Received	Repaired	Scrapped
1920	398	264	134
1921	432	316	116
1922	442	374	68
	1,272	954	318

It will be noted that the jacks received as scrap in 1922 were sufficient to equip 110 gangs with four jacks each. An examination of several hundred jacks sent in to be scrapped or repaired shows that much of the damage was caused by abuse, the principal defects being as follows:

- Rack bars bent and teeth worn and damaged.
- Lever sockets broken and distorted.
- Bases bent, cracked and broken.
- Caps lost off rack bars.

Pawls badly worn due in most cases to fulcrum pins, trunnions and bearings being worn from corrosion and lack of oil.

Some jacks, of course, showed defects due to wear and other causes that could not be avoided, but a large percentage of the defects bore the stamp of carelessness.

Among the commonest forms of abuse to track jacks is that of using them to the extreme lift. While it is sometimes necessary, extreme lifts are rarely advisable, it being better practice to use blocking to obtain the desired height. This practice, of course, occurs most frequently when they are used for other than track work. Jacks should always have an unyielding foundation. If set on the ground, they should have a firm, level base to get the best results and avoid tipping and straining.

When they are used under track, the ballast usually provides a firm base, but where the foundation is soft and yielding, blocking or cribbing should be used to hold the jack firm.

A common practice that not only damages the jack but often results in mashed fingers is the careless use of a square-end lining bar in round sockets.

The Port of Missing Jacks - Burnside

Neatness and Cleanliness in Storekeeping

By R. J. GABLE,
Assistant Division Storekeeper, Clinton, Ill.

Without doubt, material piled and stored neatly in its proper location indicates that the person responsible has the proper idea at heart, and it goes without saying that this feature gives an attractive appearance as a reward for the efforts put forth. Neatness in the storehouse and surrounding properties keeps the place free from various odds and ends of material. This naturally

has a bearing on the proper care of material, as it indicates that the material is being continually picked up and put in its proper place.

Much has been said in previous articles as to the correct piling and storing of lumber. I firmly believe we should make frequent rounds of the lumber yard with a view to straightening up the various piles, also picking up loose pieces which become detached from piles and fall to the ground.

Correct method.

This makes for neatness and cleanliness, to say nothing of putting forth an attractive appearance.

If our material is in a neat condition at all times, we can serve our various departments in a more efficient manner, consuming less time in doing it. We can make up our stock books more accurately and swiftly, which expedites preparing and getting our monthly requisitions off promptly and on time. At a glance we can see if our stock of any number of thousands of items carried needs replenishing. In our many requests to advise others quickly if we are in a position to furnish certain material, we can accomplish this at once.

COMMUNICATIONS

A Few Words on the "Seat Hog"

TO THE EDITOR: We hear a great deal about the "road hog," the man who has no regard for the right of others, who seems to want to appropriate all the road to himself; but it is strange that we seldom see anything written about the "seat hog."

I was on the train not long ago and counted in the coach in which I was riding eighteen seats turned together and occupied by only eleven persons. In other words, those eleven persons were using up the seating capacity for thirty-six persons. All of the eleven had their feet on seats that were clean when they left New Orleans terminal, where the railway company spends a large amount of money cleaning up the trains for its patrons to ride in. In this same coach, I am sorry to say, I saw some persons riding on passes clutter up the floor around them with orange and apple

peelings, nut hulls, etc., and the conductor had to send the porter around to clean up.

It is a common thing to see one of these aforementioned "seat hogs" throw his grip, overcoat, etc., on one seat and then throw two other seats together, stretch himself out on them and let a woman stand and listen to him snore. In nine cases out of ten these "seat hogs" are the people who "knock" the service rendered by the Illinois Central. If I had not heard it with my own ears, I would not say so.

Some persons seem to forget their rearing when they get on a train. What would you think of a man who would go into his mother's parlor and put his dirty feet on the chairs?

I saw a flagman come near having an altercation with a man not so many weeks ago who resented being asked to give up one of the four seats which he was using while three women had to stand.

I could relate incidents, enough to fill your magazine, equally as ridiculous as those I have mentioned, which have come under my observation. But what's the use? Everyone who rides the trains knows that I have not exaggerated in my statements.—
A PASSENGER.

The Public Should Study the Railroads

TO THE EDITOR: I cannot see why the people, the business men, especially the farmers of this country, always complain about the railroads. If it isn't one thing, it is another.

Freight rates are too high; they can't get cars when they want them, and their products don't get over the road just as fast as they think they ought to; the railway man gets too much pay; freight rates ought to be cut.

But they want the railroad to have rolling stock enough to supply them just when they want it.

They do not stop to study how much money it takes to operate a system of railroad that has nine or ten thousand miles of track or how much freight cars, locomotives, passenger cars, rails, ties, bridges, stations, roadbed supplies and many other things cost new and to keep in repair. The railroads have got to make money to pay the interest on their investment.

The reason railroads are fought so much is because the public does not read and study enough or take the interest it should. It does not realize how much money it takes to operate the railroads.

But still when the people want service, they want it right now. The public and transportation system of this country have got to pull together to get out of this old rut.—J. B. ARVIN, *Train Baggage*man, St. Louis Division.

The Director General's Views

(Continued from page 16)

sylvania Railroad, the number is 140,000. If you add to this number of stockholders the bondholders, you have an aggregate of separate holders, corporate and individual, equaling perhaps the number of employes in the service, which is something more than 2,000,000.

Number of Small Investors Increased

It is an interesting fact that the number of small investors in railway securities has very substantially increased in the last few years. It is entirely possible that large holders of these securities, anticipating a depression of railway obligations, by reason of the political rather than economic consideration which this property is receiving from the state and federal governments, have unloaded on a more confiding and trusting general public.

The reprehensible acts in railway operation and manipulation occurred many years ago. The experience of the abuses has resulted in such legislation as effectively prevents a repetition of this wrongdoing. There is in this country a new set of owners, who have paid full value for their investment, and acts committed long ago, by persons for whom the present owners are not responsible, should permit, as to most of these matters, a plea of the statute of limitations.

Surely this army of investors is entitled to the rights granted by the Constitution, and *bona fide* railway investments should receive the same protection that is afforded each citizen in the ownership and enjoyment of his home, his farm, or the interest he has in the ordinary commercial or manufacturing property.

The clause in the Constitution so essential to the enjoyment of property rights, and the one upon which rests the stability of our form of government, is found in this familiar language:

"No person shall be deprived of life, liberty, or property without due process of law, nor shall private property be taken for public use without just compensation."

This provision of the Constitution is the great bulwark protecting the sacred rights of American citizenship, and any invasion of the rights which it protects will mark the disintegration of our form of government, and the destruction of those rights of liberty and property which, as a people, we have always been eager to defend.

The Supreme Court of the United States, in construing the protection of private rights in railway property, in the Minne-

sota Rate Cases, laid down these simple and easily understood rules:

"What the company (railroad) is entitled to demand, in order that it may have just compensation, is a fair return upon the reasonable value of the property at the time it is being used for the public."

Must Recognize Fair Value

And, in further explanation, the court said:

"It is clear that in ascertaining the present value we are not limited to the consideration of the amount of the actual investment. If that has been reckless or improvident, losses may be sustained which the community does not underwrite. As the company may not be protected in its actual investment, if the value of its property be plainly less, so the making of a just return for the use of the property involves the recognition of its fair value if it be more than its cost."

The provision of Section 15a of the Interstate Commerce Act, as amended by the Transportation Act, is drawn with great care, so that it conforms to the foregoing rules, which must be recognized by all good citizens as the law of the land.

The act also provides a plan of consolidation for the purpose of equalizing the earning capacity of the roads, contemplating a consolidation of all of the railway lines of the country into some twenty well-balanced systems. The fact that Great Britain, in the last year, under a somewhat similar statute, has consolidated all of its railway mileage, composed of some 120 independent companies, into four systems, suggests that perhaps a reasonable plan of consolidation is not impossible.

If such a plan could be perfected, it would remedy perhaps the most serious defect in the present system of government control, whereby, under a rigid schedule of rates, net earnings are inequitably distributed, roads favorably located enjoying excessive returns, while their less fortunate neighbors have a constant struggle to make both ends meet.

The rate and wage provisions in the Transportation Act effectively take from the carriers all authority over these important matters. The prudent exercise of these powers is essential to any sort of successful operation.

Agrees With Constitution and Courts

The taking over of these vast property interests, and the exercise of these great powers, cannot be accomplished without some responsibility on the part of the government, in the way of assurances to the owners of the property that they will receive, as stated by the Supreme Court: "A fair return upon the reasonable value of

the property at the time it is being used for the public."

Section 15a of the act, although most bitterly assailed by critics of this legislation, simply attempts to announce rules wholly consistent not only with the plain language of the Constitution but with the decisions of the courts.

In the fixing of rates, the commission is directed to:

"Prescribe just and reasonable rates * * * so that carriers as a whole (or as a whole in each of such rate groups or territories as the commission may from time to time designate) will, under honest, efficient and economical management and reasonable expenditures for maintenance of way, structures and equipment, earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation."

No Guaranty of Earnings

And, further, the law provides that for the two years beginning March 1, 1920, 5½ per cent on such value shall be taken as a fair return, permitting the carriers, in the discretion of the commission, to earn an additional one-half of 1 per cent, to be used in the construction of additions and betterments. Since the expiration of the two years provided for in the act, the Commission has held that a fair return upon the aggregate value of the railway property will be 5½ per cent, making no special allowance for additions and betterments. This reduces the former percentage from 6 to 5½ per cent. Provision is also made for the return to the government of excess earnings of any carrier over the amount which the act provides shall be deemed reasonable.

This provision, attempting to provide reasonable compensation for the owners of the property, is not in any wise a guaranty of earnings. At most, it is but a legislative expression of well recognized rules of the Constitution, as expounded by the highest courts not only of the nation but of the several states, and is a simple announcement of the rule which most reasonable men not only recognize but believe in, viz., that "private property cannot be taken for public use without just compensation."

Under the provisions of this act, the net return of the railroads has been as follows: For 1920 there was a deficit of .08 per cent; in 1921 the net earnings were 2.95 per cent, and in 1922 4 per cent (estimated). These returns, obtained from the Interstate Commerce Commission, are based upon what are known as book or investment values, but, as will be shown, the book value and the

tentative value placed upon the property of the carriers by the commission are so nearly identical that the figures above given are at least sufficient to determine that since the passage of this act the earnings have not in any wise reached the "fair return" prescribed by the act. The carriers have no way to recoup themselves for the very substantial difference between what they actually earned and the fair return fixed by Congress.

Value for Rate-Making Purposes

The determination of the value of the property held and used for a public purpose is one of very great importance, for on this valuation is determined the rate which the public pays and the return which the owners receive for the use of their property.

It must always be understood that the value upon which the act provides for a fair return is not the book or investment value, nor the stock and bond value, but is, as described in the act, "upon the aggregate value of the railway property of such carriers held and used in the service of transportation."

The Interstate Commerce Commission, under the provisions of the act, is required from time to time to fix this aggregate value. As of December 31, 1919, the Commission fixed this value at \$18,900,000,000, which, with the increase in investment during 1920 and 1921, makes this value, as of December 31, 1921, \$19,412,201,000.

The commission, in arriving at this value, had the advantage of the details of annual reports made since 1888, and the results of the physical valuation of all the railway property, which, under an act of Congress, has been in progress since 1913, an investigation in such detail as to have cost the carriers and the government about \$85,000,000. This inquiry is now so near completion that the commission, having access to its results, may determine with some accuracy what the final valuation will be.

This finding of the commission is, therefore, the only valuation made under the form and with the sanction of law, and must be taken as the basis upon which rates are fixed, until some new valuation is arrived at.

Why Book Value Is Not Taken

Other valuations, for the purposes of comparison, are as follows: What is known as the book or investment value, as of December 31, 1921, aggregates \$20,338,597,657. For obvious reasons, many roads having been constructed so long ago, when uniform systems of accounting were not in force, and many records having been destroyed or lost, this is not of controlling effect.

The stock and bond valuation, based upon

par of the outstanding obligations, is \$20,357,768,754. Some of these obligations are held by the railroads themselves. The Interstate Commerce Commission has found, upon investigation, that the net par amount of stock and bonds, not held by the railroads, but in the hands of the public, is \$16,993,930,263.

The Supreme Court of the United States holds that a fair return cannot be determined either by the amount of the investment in the property or the amount of obligations outstanding, but must be based upon a "fair return upon the reasonable value of the property at the time it is being used by the public," and that value, as fixed by the commission as of December 31, 1921, is in excess of \$19,000,000,000.

Frequent reference, in the public discussion of railway matters, is made to the fluctuating value of railway stock and bonds. These values, many of them speculative, are not and cannot in any sense be made the basis of rate making. Legislation depressing rates below a fair return on the property can easily destroy the entire value of outstanding railway investments.

An impartial consideration of the present rate situation should justify the conclusion that it is not in any wise the result of the Transportation Act, but is the direct result of economic conditions. It is an aftermath of the war, and, if there had been no provision such as 15a, the Interstate Commerce Commission, acting under the rule of the Constitution, guaranteeing to private property just compensation for its public use, would have had to fix rates as high as or even higher than the present schedule.

Why Rates Must Be Maintained

In reaching any sort of fair and impartial conclusion as to why it is necessary to maintain, at least for the present, the existing schedule of rates, you cannot ignore undisputed facts, summarized as follows: When the government took over the property, it was operated so as to return reasonable net earnings; when it was returned operating results exhibited a deficit, and, where the government has taken over the use and control of this property, the obligation so to control and use it as to produce reasonable compensation is unquestioned.

Surely this was what might be properly described as a profound disturbance in the financial condition of the property. A descent in three years from net earnings of nearly \$1,000,000,000 to a deficit of more than \$2,000,000 cannot be accomplished without very grave consequences. It presents a situation which calls for some patience and forbearance on the part of the public while the carriers are working back to normal conditions.

As we get farther from actual war conditions, operating costs are being reduced, and, as these expenses go down, corresponding decreases in rates must follow. The point I want to emphasize is that it is not the Transportation Act that has caused the increase in rates, but this increase is directly attributable to those abnormal conditions resulting not only from war but from the necessity on the part of the government, in carrying on the war, to take over and operate for a considerable period the transportation systems of the country.

Needed to Meet Operating Expenses

The very substantial raise in the schedule of rates made by the Interstate Commerce Commission immediately after the termination of the guaranty period succeeding federal control was necessary to take care of the increase in operating expenses in force during federal control. This increase has been and is now the cause of great dissatisfaction and protest, especially on the part of the agricultural interests, and not without reason from their standpoint.

During the continuance of the war, the abnormal demands at home and abroad for all products of the farm created a situation where unusual prices were readily obtained for all surplus products which the farmer had to sell. Almost immediately after the war, for reasons for which the railroads at least were not responsible, the price of farm products fell within a very short period to practically pre-war prices. Corresponding decreases were not made in other necessities of life, and the farmer found himself in the undesirable and unfair situation of having to sell his products at greatly reduced prices, while the commodities which he was obliged to buy remained at practically war standards.

Now, it is not fair to charge the railroads with this situation. The truth of it is, they are helpless. The present rates are fixed by the government, through the agency of the Interstate Commerce Commission. The present wages are approved or fixed by the government, through the Railroad Labor Board, and the carriers are between these upper and nether stones, continually grinding.

The relief from these conditions does not lie in new and drastic legislation, the effect of which will be to decrease the earnings and increase the expenses of railway operation. The solution of the present difficulties, if the government is to continue in control of this property, should be found through those governmental agencies having jurisdiction over wages and rates. The people, through the government, have assumed this authority, and, if a fair trial is

permitted, upon returning normal conditions, relief in the way of a reasonably lower standard of rates should be obtained.

Some Railroad Burdens

There is somewhat of an anomaly in the relations of the state and federal governments and the railway companies. The cost of the obligations and liabilities the government lays upon the railroads must be paid out of railway income. As the only thing the railroads have to sell is railway transportation, ordinarily increases in the cost of operation must be reflected in increased rates, which, in the final analysis, the public must pay.

The increase in the amount of taxes paid by the railroads, covering a period of ten years, is interesting. In 1911 the aggregate amount of taxes paid by Class I and II roads was \$108,309,512, or \$444 per mile. In 1921 the taxes had increased to \$286,213,871, or \$1,142 per mile.

Again, there is an insistent and in many instances a justified demand on the part of the public for expensive non-productive capital investments, such as track elevation in cities, separation of grades in the country, and building of expensive passenger terminals. For instance, in Iowa, as I recall it, there are about 7,500 surface crossings. To separate the grades at these points of crossing would cost about \$20,000 for each crossing, or a total of \$150,000,000. While an investment of this character would be of inestimable public advantage, but little pecuniary saving would be afforded the carriers. The interest charges and the cost of maintenance would greatly exceed any reduction in claims for personal injuries and the cost of watchmen or mechanical safety devices. In their existing financial condition, the carriers have no credit or earnings out of which this non-productive capital investment could be made.

Again, new and serious competitive conditions are confronting railway transportation, and the irony of the situation is expressed in the fact that the carriers, out of their earnings, are compelled to pay large sums in the creation and support of these highly competitive instrumentalities of transportation.

The capital expenditures for the Panama Canal, incurred by the government up to December 31, 1921, total \$355,734,673.75. A substantial contribution to this very great public expense was made by the property of the carriers, just the same as the property of any other tax-paying person or corporation, residents of this country.

In 1922, 10,884,910 tons of cargo passed through the canal. Ships engaged in coastwise service via the canal carried 2,562,527

tons of this total tonnage. Practically all of this coastwise tonnage would have been hauled by the transcontinental railroads except for the canal. The business passing through the canal is constantly increasing, and water competition in the matter of transportation will become, as time goes on, more and more pronounced.

Some Competition With Railroads

During the period of federal control the government inaugurated a water service on certain inland waterways, and, as a result, is now operating, under the direction of the War Department, lines of steamboats and self-propelling barges on the Mississippi and Warrior rivers. The cost of the investment of the government in this service, up to May 31, 1922, was \$13,988,221.71. The tariff rates charged by this government system of transportation are 20 per cent less than hauls for the same distance by the railroads. Of course, the railroads, in common with other tax-payers, made their involuntary contribution to this service.

Perhaps the most menacing source of competition, especially in less-than-carload freight shipments and comparatively short hauls for both freight and passengers, is the tremendous progress in the construction of good roads, and the unparalleled production and use in this country of gas power vehicles. Recent figures indicate that 84 per cent of the world's passenger cars and motor trucks, or a total of 12,357,376 of such vehicles, is owned and operated in the United States.

The federal government has appropriated, to aid in state construction of good roads, a total of \$350,000,000. Each state, in its various plans for good road construction and maintenance, requires the railroads to bear their proportion of this expense, and it is not unusual to see a highly improved public highway, built at public expense and furnishing a free right-of-way for freight and passenger traffic, paralleling a railroad, and carrying large amounts of competitive traffic, while the railroad is perhaps the largest contributor, in the way of taxes, to this improvement. Instead of getting its right-of-way free, as its competitors do, a railroad is obliged not only to purchase, construct, and maintain its own right-of-way, but to pay large taxes upon its value.

Of course, no one opposes canals, improved waterways, and good roads. They are all essentially public conveniences, necessary to a real and increasing national progress and prosperity, but the fact that these avenues of transportation are supported by substantial contributions from the earnings of the railroads is an element to

be considered in any equitable appraisal of the transportation question.

It is the consensus of opinion among railway experts that, if railroads are to keep abreast of our growing population and increasing tonnage, very large capital expenditures are absolutely necessary in the immediate future. These capital expenditures are required for additional power, freight and passenger equipment, double tracking, side and passing tracks, larger and more convenient terminals for the breaking and making up of freight trains, and there should be a modernizing of railway shops, in the way of installation of new and modern machinery. A railway expert, in describing the need for shop modernization, said:

"The present machinery in many railway shops and engine houses is estimated to be twenty years old, and there is what may be described as a serious deficiency in modern equipment, in standards, and in volume of shop capacity. The machinery should be modernized and capacity increased. This item alone requires a very substantial investment in the way of new capital."

A Joint Congressional Commission of Agricultural Inquiry, composed of ten members of Congress, representatives and senators, in referring, in a report made late in 1921, to the necessity for increased capital investment in railway property, said:

"While it is generally stated that a billion dollars a year ought to be provided to finance railway extensions, new equipment, and improvements, the actual experience since 1908 is that the property has increased on an average of only \$540,000,000 *per annum*. However, in view of the fact that prices of material and labor have increased, and that increased railway property investment has been restricted for several years, at least \$750,000,000 should be spent for several years for the foregoing purposes."

Unless railway credit is restored and strengthened by some definite and permanent plan of government regulation and support, it is difficult to determine how several billions of dollars, which in the next few years should be expended in improving and bringing the transportation up to a high standard of efficiency, is to be raised.

Against Government Ownership

It is undoubtedly true that government ownership of railroads, under present conditions, is more than a mere possibility. Private ownership is perhaps making its last stand. All over the world the doctrines of socialism, sovietism, and the exercise of governmental parental control and authority are making rapid strides. The conservative mind shrinks from the thought

of public ownership of this great industry, so essential to a prosperous national existence.

If railway ownership and operation are thrown into the maelstrom of politics, competition, especially in the way of good service, ceases; the incentive in the way of personal endeavor to succeed is gone; promotion in service would depend upon political pull rather than faithful performance of duties and controlling ability; wages and hours of service would be determined by resolutions in conventions, political or otherwise; extensions and capital investments would depend upon congressional action rather than commercial necessity, and the greatest and most efficient transportation system in the world would be deprived of that irresistible and invincible desire to succeed, born of personal ambition, which is always present in private enterprise, and wholly wanting in the ordinary routine of government service.

No greater mistake, in my judgment, could be made, nor a more expensive experiment be undertaken, than to have the government permanently take over and operate the great railway systems of this country.

Some Available Remedies

In any consideration of the transportation question, the marked difference between the railroads, as a public utility, and an ordinary private enterprise must be constantly kept in mind. Ordinarily in the public discussion of this question, or during political campaigns, this marked difference is lost sight of.

Private enterprise has the benefit of the full scope of individual initiative and the exercise of an unrestricted and discretionary judgment. Railway operation is limited by hard and fast rules not only of congressional legislation but the legislation of forty-eight states, acting independently, within their respective jurisdictions. Private enterprise can reduce operation, resort to new and more lucrative lines of business, or altogether quit if the venture is losing money. Railroads must operate and give what some commission orders is a reasonably sufficient service, and this service must be given whether they make or lose money. If the corporation fails to do this, a receiver, under the direction of a court, will ordinarily take charge of the situation.

Again, the result of a failure to give efficient transportation service is in the end borne by the commercial and agricultural interests, and, as a matter of self-protection, these interests should afford a prompt and generous co-operation in obtaining a high standard of railway operation.

If it is possible, the railway question

should be taken out of politics, and considered by the public as an economic proposition. The railroads cannot be successfully operated by resolutions or platforms of mass conventions.

Again, the railroads should have a reasonable period of repose, to enable them to recover from the disorganization incident to the war. Permanent plans for extended additions and betterments require not only some years in their execution but there must be definite assurances that necessary funds will be available to make payments as the work progresses. At this time railway credit is at a low ebb. There have been for some years no substantial offers of common stock. Whatever money has been raised has been by bond issues, and continued bond issues will destroy the market for and value of stock.

Give Present Act a Fair Trial

The present Transportation Act, while subject to changes that might be an improvement, presents a plan that is fair enough to be given a reasonable trial. Control and adjustment of rates is in the hands of the Interstate Commerce Commission; wages and working rules and conditions are under the jurisdiction of the Labor Board. These tribunals are composed of men who are intelligent and honorable, and are doing their best to bring about a reasonable adjustment of these two most vital issues. They have the time and opportunity to investigate these questions, which is not possible for members of a legislative body.

The return of a normal volume of tonnage, the restoration of reasonable prices, essential to reduce the cost of living to employees and the cost of maintenance to the railroads, will result in gradual and in many instances substantial reductions in operating expenses, with resulting reduction in rates for both freight and passenger service. The railroads have heretofore shown, when given a chance, great recuperative powers.

The progress which the carriers have made since the end of federal control, in the way of reducing operating expenses and a reasonable showing of net earnings, justifies an expression of confidence for the future. In 1921 there was a reduction of operating expenses from 1920 of \$267,952,190. In 1922 there was a further reduction from 1921 in these expenses of \$162,668,302. From an operating deficit in 1920 there were net earnings for 1921 of 2.95 per cent on the value of the property, and in 1922 these earnings increased to 4 per cent (estimated).

If the state legislatures would for a while quit legislating on this subject (for we now

have more railway law than is necessary) and if Congress would declare a legislative moratorium on the railway question for a reasonable period, say four or five years, the Interstate Commerce Commission and the Labor Board would satisfactorily work out a reasonable plan for readjustment in rates, which, coupled with reasonable reductions in the cost of labor and materials and supplies, would enable the railroads again to enjoy a moderate degree of prosperity, on a reduced schedule of rates that "will permit that free exchange of commodities essential to a prosperous and progressive commercial life."

Citizens Must Study Question

In submitting this paper, I have had only one end in view—that is a candid statement of the facts. If the transportation problem of this country is to be settled permanently and on a right basis, the facts as they exist must be the foundation of that settlement, rather than persuasive theories which for the moment may appeal to self-interest, but cannot be the subject of practical application.

I have no purpose or interest in espousing the railway cause, but, as a citizen, and, in a very limited way, a student of the subject, I have a profound interest in the correct determination of the most vital and outstanding problem that is now before this country for solution.

The condition of the interstate carriers at this time is critical. It is the duty of all citizens to give some intelligent consideration to this important question. It is a time for plain talking and straight thinking on this subject. The American people must face the proposition of giving the railroads sufficient support to enable them to continue under private ownership or accept, as the alternative, government ownership.

The carriers of the United States, if given a fair chance, under normal conditions, can and will give efficient and adequate service, at reasonable rates, lower than those that are to be found in any other country in the world.

Natural laws must have an opportunity to restore order out of the chaos of war. Miracles cannot be performed by legislation. You cannot make bricks without straw. The devastating effects of the greatest calamity in the history of civilization cannot be removed over night.

The painful and laborious struggle back to normal times and conditions calls for patience, patriotism, forbearance, and an abiding courage. Remember that, while the railroad is the dry horse of the nation, you cannot beat and starve your horse and have him haul the load.

NEWS OF THE DIVISIONS

GENERAL OFFICES

Office of Vice-President and General Manager

These smiling young women are seen enjoying the snow at Niagara Falls, Sunday, February 25. With the exception of Miss O'Reilly, who is secretary to the chief clerk to Judge W. S. Horton, they are all from the office of the vice-president and the general

manager at Chicago. They are, left to right: Misses Mabel Zimmerman, Mary Tully, Louise Bales, Olive O'Reilly, Florence Nelson, Gladys Carney, Gerda Johnson, Gertrude Talmadge, and Annabelle Doherty.

Randolph Street (Marion Pressler)

F. Schultz, stenographer, has been transferred from the terminal superintendent's office to the trainmaster's office at Randolph Street.

The beautiful watch which is given as a prize each year by the W. M. Hobbs Lodge, No. 4, B. of R. T., to the member selling the most tickets for its annual ball and card party, was won by Flagman W. P. LaGuess.

Brakeman E. F. Green, on train No. 1/62, going from Hawthorne to the U. S. Yards on February 6, discovered a broken wheel on IC-31763 at Packers Avenue and promptly reported it.

E. O. Guyton, trainmaster, recently addressed the following letter to Collector W. Hynes: "It is indeed gratifying to know that we have men in our employ who are at all times alert to their duties. We are very much pleased to know of the action taken by you on train No. 311 at South Chicago, March 9, when you no doubt saved the life of an 8-year-old girl who attempted to alight from the train as it approached the north end of the platform. By grasping her clothing and supporting her in mid-air until after the train had stopped, you prevented her from being injured."

Fordham Yard (D. O'Connell)

Some of the Illinois Central co-workers of, Miss Lucille Curley, stenographer, office of Terminal Freight Agent A. Frantz, Fordham, pleasantly surprised her with a linen shower at the home of Mrs. T. J. Reid, Thursday, March 15. Miss Curley is to become the bride of P. L. Nolan, Wednesday, April 25.

Another member of the Curley family, William E.

Curley, yardmaster at Fordham, surprised everybody last week by announcing his marriage to Miss Irene A. Hegarty of Auburn Park, which took place November 25, 1922. The young couple will reside at 7306 Evans Avenue.

Central Station (C. Y. Kenny)

His friends mourn the loss of Dining Service Superintendent Daenis of the Michigan Central, who passed away March 7 from a paralytic stroke.

Wildwood Yard (E. Hayes)

William Wasson, chief yard clerk at Wildwood, recently returned from a week's visit to New York, where he attended the 6-day bicycle race. He is an ardent bicycle racing fan.

ILLINOIS DIVISION

Iva Phipps

Office of Superintendent

Employees of the superintendent's office were greatly shocked to learn of the death of J. A. Carruthers of Champaign, husband of our chief file clerk, Minnie Vogt Carruthers. Mr. Carruthers became ill with a heavy cold Tuesday, March 6. It developed into quick pneumonia, and he died the following Saturday. The body was taken to Centralia, the home of Mrs. Carruthers, for burial. Mrs. Carruthers has been employed in the office of the superintendent as chief file clerk for more than four years, having come to Champaign when the division offices were moved here. Mr. Carruthers was the manager of the local Kresge store.

Chief Accountant and Mrs. E. F. Kremer are the proud parents of an 8-pound boy, born Saturday, March 3.

C. H. Behrman has been appointed supervisor at Effingham.

H. C. Hayes, formerly assistant engineer, has been placed in charge of construction work in connection with the grade reduction at Paxton. J. H. Davis of the chief engineer's office has taken the place made vacant by Mr. Hayes' appointment. Mr. Davis was formerly an instrumentman on the Illinois division.

E. T. Anderson, formerly signal maintenance fore-

New courthouse, New Orleans

One Hundred Seven

man, has been promoted to signal inspector, with headquarters at Chicago. R. O. Ringland succeeds Mr. Anderson at Champaign.

Guy Fox has been appointed signal testman at Champaign.

R. J. Truitt, chief timekeeper, has returned to work after an illness of several days.

Mr. and Mrs. J. P. Maddox have a new 8-pound boy at their home. Mr. Maddox is a dispatcher at Champaign.

Champaign Yard Office (Grayce Ferguson)

Assistant Yardmaster Menifee, who returned to work several days ago after an absence of more than a week, was obliged to stop again on account of not being well enough to work.

V. C. Shelly, assistant chief yard clerk, Champaign, has taken a position in the superintendent's office as timekeeper. Burnett Ely has taken the place vacated by Mr. Shelly.

We are sorry to hear of the death of Mrs. Gordon, wife of Switchman Robert Gordon. Death was due to pneumonia. Mrs. Gordon was the daughter of Engineer Baum.

Kankakee Freight Office (J. M. Purtil)

March, the "No Exception" campaign month, came in like a lion. In fact, it was a regular cyclone for Kankakee, for when we came to work on the morning of the first we were surprised to find eighteen carloads of merchandise from Chicago and Fordham—six from Chicago, our regular quota, and twelve from Fordham—for working, containing freight for eighteen different states. However, we were not discouraged; we buckled right into the cars and had them all cleaned up by the night of the second.

Melzer Thompson, engine foreman, who has been in the service for more than twenty years in Kankakee yard, is laid up on account of illness.

C. W. McKnight, agent at Paxton, recently made us a pleasant visit with a view to getting a few pointers on the arrangement of our office, so as to know what he wants when he gets his new freight office.

Yardmasters Damon and Brayton, Agent Purtil, Supervisor Gallagher and General Foreman Reideman had the pleasure of attending a meeting held in Superintendent Hevron's office by General Superintendent Patterson March 3. Mr. Patterson gave an interesting talk on the "Prevention of Accidents" and brought out many good points which, if followed by the employees, should eliminate all avoidable accidents.

Delivery Clerk Herman Michaels was recently called to Chicago as a witness in a robbery trial concerning a case of hosiery shipped from Kankakee May 18, 1918.

Gilman, Ill. (E. T. McCarthy)

District Surgeon and Mrs. D. W. Miller recently returned home after visiting a month in Havana, Cuba, and St. Petersburg, Fla. Dr. A. W. Fordyce acted as district surgeon during Doctor Miller's absence.

William Yaeger's gang is stringing two new telephone lines from Champaign to Gilman and from Gilman to Clinton.

A. J. Kerr, station baggageman, recently returned home after a three months' visit with relatives in the South.

Supervisor E. R. Fitzgerald has moved into his new office.

Patrick Scanlon, engineer on trains Nos. 502 and 505, is enjoying a three months' vacation.

Emmet Clark is filling L. L. Harville's place as second trick operator at the Gilman tower, Mr. Harville having taken the agency at Danforth.

INDIANA DIVISION

Florence McShahe

Secretary to Superintendent

Office of Superintendent, Mattoon, Ill. (Mary Reinschreiber)

Miss Mary Reinschreiber has succeeded Mrs. Zella MacNair Rose in the superintendent's office, the latter going into Trainmaster Keene's office.

The "No Exception" campaign is receiving the earnest attention of all concerned.

Office of Trainmaster, Mattoon, Ill. (Zella MacNair Rose)

Miss Essie Reams has taken a two months' leave of absence, being relieved by Zella MacNair Rose of the superintendent's office.

Brakeman and Mrs. A. Guess have returned from Florida, where they visited Mr. Guess' father and mother.

Office of Trainmaster, Palestine, Ill. (Blanche Pugh)

T. J. Jennings, local chairman of the B. of R. T., has reported for work, after being in Chicago several days on committee work.

Yard Clerk Hawkins is off duty on account of a severe attack of rheumatism.

Milo Youngmann, division gardener, is with us again, beautifying station grounds.

A severe windstorm passed over the Indianapolis-Effingham districts March 11, doing considerable damage to buildings and telegraph lines.

J. P. Hanrahan, local chairman of the O. R. C., has returned to Chicago to finish committee work.

Yard Clerk Hendricks, who has been off duty several days on account of sickness, has returned to work.

March being the month of "No Exceptions," everybody on the Indianapolis-Effingham districts is working hard to keep them down.

Local Chairman Conner of the B. of L. E. and Mrs. Conner are sojourning in Florida.

Office of Chief Dispatcher, Mattoon, Ill. (W. C. Scott)

Business is still good on our division, a great many vegetables now moving over the Indianapolis-Effingham districts.

All agents and operators are doing their very best to help Supervising Agent Walker win the "No Exception" campaign.

Chief Dispatcher Feigo reports a fine and interesting trip over the system in company with the chief dispatchers' committee, many interesting places being visited. They were accorded a hearty welcome by Governor Parker of Louisiana, who made their stay in Baton Rouge most pleasant.

On Sunday, March 11, about 10:30 p. m., a severe windstorm struck the entire division, paralyzing all telephone and telegraph service for several hours. Work trains started out of Mattoon in both directions about 7 a. m., and, due to the good work of District Foreman Berninger and Linemen Williams, Hester and Breyman, communication was soon restored to a great extent. Telephone and public service companies also suffered considerable trouble with their lines.

Operator and Mrs. H. A. Douglas are spending a sixty days' vacation in Florida.

Operator J. A. Lynch, while assisting a neighbor in removing the household goods from his burning home recently, slipped on the ice, fracturing his knee. He is now being treated in the Illinois Central Hospital at Chicago. Reports indicate that he is improving nicely, but it will be some time before he will be able to resume his duties as operator at Mattoon yard office.

W. A. McClure, agent at Bone Gap, Ill., was sick several days in March. He was relieved by Extra Agent Stinson.

Operator C. E. Mehringer, second trick, Indianapolis yard, is on special work handling embargoes. Operator P. J. Martin is relieving him.

Operator C. F. Cochran, Mattoon, Ill., on the night of March 12 was injured when he ran against a tree that had been blown down by the windstorm the previous night, a branch of the tree protruding in such a way as to strike him directly in the eye.

Accounting Department, Mattoon, Ill.
(Noriene Quinn)

Accountant Donald McLain attended the funerals of two children of Mr. and Mrs. Walter Easter of this city early in March. Mrs. Easter is a sister of Mr. McLain. Her son and daughter passed away within a few days of each other after an illness of scarlet fever.

E. V. Silbenthal of Springfield, Ill., spent a couple of days in March in the division offices, inspecting comptometers.

Office of Master Mechanic, Mattoon, Ill.
(Flora Adrian)

At a business meeting of the machinists, helpers and apprentices, local No. 4 of Mattoon adopted a sick benefit of \$5 a week and an additional 25 cents for each dependent child.

John Althaus, machinist at Mattoon shops, and Mrs. Althaus are the proud parents of twin boys born February 23. These make eleven children in this family.

C. W. Sprague, machinist at Mattoon shops, was married in Chicago February 10.

Stanley Steger, accountant in the storekeeper's office at Mattoon, has been transferred to the storekeeper's office at East St. Louis in the same capacity. Albert Hackleman has been transferred to Mattoon from East St. Louis.

W. O. Scherb has succeeded Roy Toler as clerk in the office of the master mechanic, the latter having resigned.

Agent's Office, Mattoon, Ill.
(W. P. Woolridge)

With the return to work of Agent M. Dorsey, after his leave of absence, A. Gorman, who was acting agent, goes back to his former position of chief clerk, and the acting chief clerk, R. E. Welch, resumes his former position as cashier. The transfer was made in time for all to get in a hand on the "No Exception" campaign.

Office of Roadmaster, Mattoon, Ill.
(Bonnie Snorgrass)

D. C. Wilcox, rodman, has resigned to accept a position as assistant to the city engineer at Muskogee, Okla. V. B. Olson, formerly rodman at Chicago, has accepted the position left vacant by Mr. Wilcox' resignation.

R. H. Wright, instrumentman, has returned home after having undergone an operation for the removal of his tonsils at the Illinois Central Hospital in Chicago.

H. H. Cordier, formerly road supervisor, with headquarters at Newton, Ill., has been forced to resign on account of ill health. Mr. Cordier entered the service of the Illinois Central Railroad in March, 1896, and for the last six years has been supervisor of the Mattoon district. He is succeeded by S. C. Jump, who has been assistant engineer at Dubuque, Iowa.

Agent's Office, Indianapolis, Ind.
(Margaret Clifford)

Miss Helen Wilson, formerly with the Long Island Railroad, Jamaica, N. Y., has taken a position in the local office.

Miss Olive Gibler, formerly in the trainmaster's office at Palestine, Ill., has accepted a position in the local office.

Trainmaster Vane held an interesting meeting with agents, conductors and station forces of the Indianapolis-Effingham districts at the local freight office at Indianapolis, Sunday, February 25. The "No Exception" campaign was the principal subject.

John Griffin, warehouseman, is still confined to the hospital.

Agent's Office, Evansville, Ind.
(A. W. Walling)

The J. C. Mendenhall Medicine Company of Evansville, Ind., recently shipped a carload of its cele-

The Mendenhall shipment

brated chill tonic to the Hessig-Ellis Drug Company, Memphis, Tenn. What is claimed to be the largest check ever drawn for one order of chill tonic was paid on February 18—\$11,589.19.

SPRINGFIELD DIVISION
Della Morrison Office of Superintendent

Superintendent's Office, Clinton, Ill.

Talk about surprises! Our office received one when we heard the following about one of our stenographers: Miss Helen C. Benson and Herbert M. Willmore were married Saturday afternoon, March 3, in Decatur by the Rev. R. E. Henry, pastor of the First Christian Church, thus stealing a march on their friends in Clinton. They were unattended and had kept their plans entirely secret. Mrs. Willmore, the daughter of Mr. and Mrs. E. G. Benson of Clinton, has been employed in the superintendent's office since August 3, 1918. Mr. Willmore is a son of Mr. and Mrs. R. G. Willmore of Creek Township. He is employed as a salesman for the Ford agency of Clinton.

R. E. Lewis, operator at Assumption, discovered a brake sticking on a car in train No. 172 on the morning of March 8. His prompt action in having the train stopped and correction made possibly avoided an accident. Mr. Lewis has been commended for this action.

Operator E. S. Coyle, Decatur Junction, has been commended for discovering brakes sticking on a car in train extra No. 2931 on March 5 and taking action to have the train stopped to avoid an accident.

Engineer W. A. Hoff has been commended for discovering a flat wheel in a freight train February 19 and reporting it, thereby possibly avoiding an accident.

Picking up storage coal is in progress at Clinton, and should be completed within the immediate future.

Yard engine No. 181 has been turned over to the Staley Manufacturing Plant at Decatur to be used during the period necessary to make repairs to the Staley Company engine. Engine No. 2328 has been

leased to the Lincoln Sand & Gravel Company at Lincoln.

The time of year is fast approaching when housecleaning seems general. Considerable has already been done in the way of decorating the office building. All concerned are anxious for spring to come, so that the alligators, which are at present confined in the basement of the passenger station, may be liberated in the pool in the park, where the little fellows enjoy the incoming and outgoing movement of trains.

Accounting Department, Clinton, Ill. (Ethel Jones)

A miscellaneous shower was given at the home of the Misses Esther and Ethel Jones Tuesday evening, March 13, in honor of a bride, Mrs. Herbert Willmore of the superintendent's office. The house was decorated in green and white, the favors and refreshments being of the same color. Mrs. Willmore received many beautiful and useful gifts. After indulging in cards and dancing, the party broke up at a late hour.

Lee Ely, accountant, was off duty for several days recently on account of sickness.

Trainmaster's Office, Clinton, Ill. (Clara Hoyt)

Misses Gladys and Faye Westerholt, stenographers at the Illinois Central station, entertained the young women clerks and stenographers at their home on Wednesday, March 7, with a card party. The affair was also a kitchen shower for Mrs. Herbert Willmore, who was formerly Miss Helen Benson, stenographer in the superintendent's office, a recent bride. Mrs. Willmore received many nice gifts. At the end of a delightful evening, light refreshments were served and small bouquets of fresia were given as favors.

Conductor and Mrs. R. I. Murray left March 1 for an extended visit with friends in the West. They will stop off at Sapulpa, Okla., and Trinidad, Colo., and in New Mexico.

On account of the sickness of trainmen at Amboy recently, it was necessary for the Springfield division to lend to the Wisconsin division fifteen brakemen, some of whom are still at Amboy.

A special train consisting of five cars was handled March 1 from St. Louis to Champaign for the accommodation of the University of Illinois band. The train was in charge of Conductor T. W. Johnson and Engineer Roy Hoyt.

Mrs. Amanda Davis, mother-in-law of Train Baggageman Thomas Duke, died at her home at Cisne, Ill., on March 11.

Oren Chandler, yard clerk, has been granted a 60-day leave of absence for to finish his high school course.

Brakeman Ashel Robb has been commended for discovering a hot box on train No. 18 while it was passing him at Toronto. He reported the discovery to the dispatcher, enabling him to stop the train at East Grand Avenue, where proper attention could be given the hot box.

Conductor B. L. Easley has been commended for the discovery of a broken rail 150 feet north of the south switch at Divernon, Ill., on March 1, reporting the discovery to the dispatcher and also calling the section foreman.

Conductor F. McMahon has been commended for discovering a broken rail at Chestnut, stopping his train and reporting it to the dispatcher, so that arrangements could be made to have repairs made.

Switch Tender H. Zimmerli has returned to work after being off for ten days visiting relatives.

Conductor A. F. Clause is working on local trains Nos. 595 and 596 between East Grand Avenue and East St. Louis in the place of Conductor W. E. Walsh, who is off account of sickness.

Conductor A. Chatam has taken the Clinton-Pana local with Sunday lie-over at Pana, and Conductor

William Baughman has taken the Centralia-Pana local, formerly held by Conductor Chatam.

Chief Dispatcher's Office, Clinton, Ill. (Gladys Westerholt)

The new telephone exchange at Clinton, with a total of eighty-four phones throughout Clinton yard, was put in service Monday, February 26. The operators are Mrs. Ferne M. Smith, Mrs. Vernetta Wasson and Miss Marion Huff. This exchange has been needed for some time, and it is of great help in the operation of Clinton terminal. The Chicago-Clinton telephone, known as No. 681, is now connected direct with the exchange, so that it is possible to reach any department at Clinton through a connection with this wire.

Miss Eva Gilliland, third trick operator at Maroa, who has been on a leave of absence for the last sixty days, has been granted an extension of thirty days on account of continued ill health.

H. N. Spurgin, agent at Waggoner, is taking a few days' leave of absence visiting friends in Pesotum.

E. H. Smith, first trick operator at Decatur, is off for a few days on account of sickness. Mr. Smith has been suffering with the flu.

S. W. Burt is the successful applicant for first trick operator-leverman at Kenney. This vacancy was caused when H. O. Williamson was promoted to train dispatcher.

C. E. Virden, agent at Glenarm, has returned to his work after an absence of about ten days. He was relieved by Russell T. Ward.

H. R. Allen recently worked as agent at Walker for a few days in the absence of R. W. Kinnison, who was called home on account of the serious illness of his father.

B. W. Tibury, operator in North yard, Clinton, attended the high school basketball tournament at Decatur. Mr. Tibury's two sons, Owen and Glenn, are members of the team from Weldon.

Along the Line

Oscar Dow, switchman at Springfield, is out of service on account of sickness.

John Neil, switchman at Springfield, has returned to service after being absent on account of the death of his mother-in-law, Mrs. Staley.

C. E. Henson, roundhouse foreman at Springfield, has returned to work after undergoing an operation in the Illinois Central Hospital for the removal of his tonsils.

Omar Yoder, son of Agent Yoder of Litchfield, has accepted a position as fireman and has been assigned to switch engine duty at Springfield.

Engineer Ed Summers of Springfield has returned to work after being absent on account of the death of his father-in-law, C. E. Burns of Quincy.

Policeman Lawrence, who formerly worked around the passenger station at Springfield, has again returned to work at the passenger station.

On account of extra state legislative meetings at Springfield, considerable business has developed, requiring extra sleepers to be used almost every day. Sixty-five delegations have been in Springfield in the last fifteen days to interview the governor on different matters, but mostly on the hard road proposition.

Friends of Frank Jamison, pensioned traveling freight agent, had been wondering about him, as he had not been to call on any of them all winter, but we are glad to report that Mr. Jamison showed up the first warm day.

Ticket Clerk James Moore of Springfield made a trip to Clinton the other day, this being his first trip away from work for about eleven years.

Clinton, Ill., Shops (Flora Drago)

Claire E. Gray, clerk to General Foreman F. J. Holsinger for the last eight months, has resigned

his position to accept a position in the advertising department of the Syrup of Pepsin Company at Monticello, Ill. William Smithers of this city will take the position formerly held by Mr. Gray.

Orville White, messenger boy in the master mechanic's office, has resigned his position and has gone into the shops as a pipefitter apprentice. Charles Walker has accepted the position as messenger boy.

Mrs. John McIntyre, wife of Traveling Engineer John McIntyre, passed away at her home at 1:30 p. m., Wednesday, March 7. She had been ill with pneumonia for about five days. The funeral was held at the Universalist Church at 2:30 p. m., Friday, March 9. The pallbearers were C. W. Shaw, Frank Gallagher, George Wilson, Charles Steger, Cash Abrell and Hobart Beatty. Mrs. McIntyre was superintendent of the Universalist Sunday School, a member of the G. of I. A. and a member of the board of trustees of the John Warner Library. She leaves to mourn her loss her husband and the following children: John, Jr., a brakeman on the Illinois Central; Lyle, a fireman; Walter and Merna, students in the Clinton High School. The esteem in which Mrs. McIntyre was held in Clinton was shown by the beautiful floral tributes and also the remarks made by Rev. Mr. Linton, pastor of the church she attended.

Freight House, Decatur, Ill.

(Helen Krafft)

Miss Frances Mahon, bill clerk at Decatur freight house, passed away in the Macon County Hospital February 8. Miss Mahon was employed as a bill clerk November 1, 1922, and during her short period of employment had made many friends.

Supervising Agent Plate held an O. S. & D. meeting in Decatur, Ill., February 27 to eliminate exceptions during March, the "No Exception" campaign month. Those who attended the meeting were W. E. Allison, A. J. Berry, F. P. Simcox, W. E. Partlow, A. C. Culp, T. R. Cox, C. W. Donaldson, A. H. Wallace, M. H. Brown, F. L. Giffin and Inspector Peters.

The third annual industrial banquet of the Transportation Club of Decatur was held Wednesday evening, February 28, at the Hotel Orlando. There were about three hundred and fifty persons present. Among the out-of-town guests representing the Illinois Central were William Haywood, general freight agent; L. V. Lanigan, general passenger agent; J. W. Rhodes, foreign freight agent, and R. P. DeCamp, assistant coal traffic manager, all of Chicago; J. F. Heicke, traveling freight agent, Bloomington, Ill.; R. E. Downing, storekeeper, and Agent C. W. Donaldson, Clinton, Ill.; J. J. Stevens, commercial agent, Peoria, Ill.; C. Z. Snell, traveling freight

Clinton, Ill., roundhouse and shops in 1892.

Master mechanic's office and storeroom at Clinton, Ill., in 1892. From left to right: H. Bartlett, storekeeper; L. E. Freelove assistant timekeeper; W. F. Gorman, timekeeper; Miss Anna Griffin, operator; W. B. McKenna, master mechanic.

These pictures of the old roundhouse and shops at Clinton, Ill., taken in 1892, were handed in by Engineer L. E. Freelove, who is assigned to passenger runs Nos. 536 and 523 between Springfield and Clinton. He started to work for this company at the oil house just back of where all the oil barrels are seen, and part of his work was to take care of the oil light at the extreme right of the picture, which was placed so as to throw light on the oil barrels.

agent, and Freight Agent M. H. Brown, Springfield, Ill.; F. P. Simcox, agent, Pana, Ill.; G. W. Rolland, agent, Moweaqua, Ill., and Roy Wolf, traveling freight agent, Mattoon, Ill.

Rantoul, Ill.
(M. Sheahan)

Time and conditions bring about the serious thought of systematizing work in order that it may be done in the most economical manner. For example, in organizing steel gangs the best possible men should be selected, those who are familiar with and adapted to the laying of rail. After a gang has once been organized, it should be kept at this work at all times, when possible, being moved from one division to another, if necessary, because as men become more familiar with the laying of rail personal injuries and train accidents decrease proportionately. There should be two or even three mechanical devices for unloading and loading rail in order that the best results may be obtained and the train service reduced to the fewest hours possible; slow progress is made when only one mechanical device is in use. Man power is going to be at a premium, and there can be devices perfected with which spikes can be pulled, ties adzed, spikes driven, bolts tightened and unbolted, etc. When devices of this kind are perfected, the cost of rail laying can be materially reduced.

R. E. Kornmeyer of Tomlinson is absent from his duty as agent on account of illness.

Yard Office, Clinton, Ill.
(Joe Swearingen)

Joe Daniel, yard clerk, is out of service on account of illness.

E. J. Foley, yard clerk, has returned to service after being absent several days.

C. E. Grant and John Reid entered the service of this company as switchmen March 11.

Yardmaster Emmitt has returned to work, after being absent on account of sickness.

Yard Clerk Ben Miller is again in service, after an absence of one month on account of sickness.

An additional yard clerk has been assigned to duties in the east yard at Clinton on account of the heavy business.

R. F. Smith, switchman, is out of service on account of sickness.

Road Department, Clinton, Ill.
(John Phillips)

On account of ill health, Section Foreman James Wood of Lodge, Ill., retired from active service on March 15. He entered the employ of the Illinois Central as a section laborer August 23, 1900, and on August 28 of the same year was made foreman. He was born in Indianapolis, Ind., October 15, 1854, and is now more than 68 years of age. It was his desire to remain in our employ until he reached the age of 70, but on advice received from his physician he decided to retire. All of his work with the Illinois Central was on the Havana district of the Springfield division at Lodge and Deland. Section Laborer Henry Buse, Burtonview, was promoted to foreman and given the Lodge section March 16.

Section Foreman David Coay has been placed in charge of Section N-1, Champaign, a position made vacant by the retirement of Section Foreman Thomas Hughes. Mr. Coay was formerly located at Monticello. Foreman Malin Taylor of Teheran, Ill., was transferred to Monticello March 15.

Freight Office, Springfield, Ill.
(Ann Merriman)

James R. Brown, recently retired, has been employed as crossing flagman for a great many years and has now reached the age of 74 years 11 months.

The ceiling in the freight office has been given

several coats of white paint and is now much lighter and cleaner looking.

Bruno Eggert, cashier, was absent from the office February 26 on account of sickness. This was the first time in nine years of service that Mr. Eggert was off duty on account of sickness.

The coal billing, which was formerly done at East Grand Avenue under the supervision of Yardmaster Clark, has now been transferred to the freight office, under the supervision of M. H. Brown, agent.

A meeting called by Agent Brown was held with the entire warehouse force in the interest of the "No Exception" campaign for March. Everyone agreed to do his best and keep exceptions down to the lowest possible minimum.

John Kiser's death on February 1 came as a great shock to all his fellow workers, as he had only a short illness. He was employed as a trucker in the warehouse for the last four years. His body was removed to Lincoln, Ill., for burial.

Pana, Ill.
(C. L. Antisdell)

Ray R. Proffitt, who has been day baggageman at Pana for the last ten years, has resigned to accept a position with the Byers Automobile Company of Pana. A. R. Simcox has been assigned to the position of baggageman.

Miss Nevah Howell, formerly manager of the Van Noy newsstand in the Pana passenger station, has resigned to accept a position with the *Pana Daily Record*.

Freight Office, Clinton, Ill.
(Anna Murphy)

Dale E. Long, demurrage clerk, has returned to work, after being absent on account of illness.

Curtis L. Burton, check clerk, and Miss Etta Connor of Decatur were married February 27. They will reside in Clinton.

Calvin Long, who has been employed as check clerk at Clinton, has accepted a position as bill clerk in the Decatur freight office.

Edward J. O'Brien, receiving clerk, has returned to work, after being absent on account of illness.

Decatur, Ill., Yard
(Fon Hale)

E. L. Hale, engine foreman, who has been off duty since February 14 with an attack of pneumonia, is now convalescent.

A new yard clerk position has been created and is being filled by Yard Clerk William Ryerson.

ST. LOUIS DIVISION

J. W. Brown

Office of Superintendent

Former Assistant Engineer A. A. Logue has been transferred to the chief engineer's office, Chicago, in connection with the new 12th Street station work. Mr. Logue's family will move to Chicago in the near future.

Tom King, B. & B. carpenter, noticed a brake beam dragging on one of our locals near Reeds Station, February 7, and made the necessary report, preventing, no doubt, a serious accident.

Leonard Charles and Miss Erma Bilderback were married at Murphysboro, Ill., February 23. Mr. Charles is a locomotive fireman on the St. Louis district. Mrs. Charles is the daughter of Mr. and Mrs. John W. Bilderback of Carbondale. They will reside in Carbondale.

Charles Johnson, material clerk, was taken to Holden Hospital, Carbondale, March 11, and operated on for appendicitis. He is rapidly recovering.

Ralph Gurley, yard clerk, Mounds, and Miss Elizabeth Brest of Ullin, Ill., were married at Anna, Ill.,

recently. Mrs. Gurley is a trained nurse. They will make their home at Mounds.

Consolidation of the three Franco coal mines in Williamson County, Illinois, with a capitalization of a million and a half dollars, was announced at Marion, Ill., February 27, by R. B. Mitchell of Marion, vice-president and general manager of the new corporation, known as the Cosgrove-Meehan Coal Company of Illinois. When fully equipped the mines will have a 2,000,000-ton capacity.

Mrs. P. Mainor died at her home at Granite City, Ill., March 7. She was the daughter of H. C. Larson, file clerk, and a sister of Harry Larson, supervisor's clerk, Carbondale.

The windstorm the night of March 11 did much damage to telephone lines and other property on the St. Louis division. It blew down the smoke stack at Big Muddy pumping station just before passenger train No. 23 reached that point. No serious damage resulted, however.

Mrs. W. Atwill arranged a pleasant and complete surprise birthday party for Superintendent Atwill the evening of March 13. There were several Illinois Central division officials present.

Freight Office, Mounds, Ill.

(T. A. Shaffer).

Weighmaster Ed Dunn and family have just returned from a visit with their son, Ralph, who now lives in California. Ralph was formerly an employe of the Illinois Central at Mounds.

Adelbert Matthis and Richard Schneider, clerks, spent a few days recently in New Orleans.

T. D. Walker, formerly clerk in General Foreman Keller's office at Cairo, has accepted a position as chief clerk to General Foreman Elsner at Mounds.

Freight Office, Herrin, Ill.

(H. L. Tygett)

John McEwin, traveling car agent, was in Herrin March 7 on special business. This is the first time "Jack" has been here for several months.

The new office quarters of Trainmaster D. H. Miller, recently appointed, have just been erected near the yard office at Herrin. The new furniture will be received in the near future.

Transportation Department, Centralia, Ill.

(Grayce Baysinger)

Switchman Harry Oberst, who is making an extended visit in Fresno, Calif., will be accompanied home by his mother, Mrs. Harriet Oberst, who will make her home at Centralia.

M. C. Shugrue, conductor on the Illinois division, who resides at Centralia, is improving slowly after an operation at St. Mary's Hospital, Centralia.

Chester Richardson, brakeman on the St. Louis division, was recently married and is spending his honeymoon at New Orleans.

Switchman A. J. Douglas has gone to the hospital at Chicago for further treatment on account of a fractured leg.

W. B. Wright, former conductor on the St. Louis division, who has been living at Carbondale for several years, has moved back to Centralia and has accepted a position as baggageman running south out of Centralia.

Howard Courts, former caller, has accepted a position as yard clerk at the yard office.

Brakeman S. L. Craver is in St. Mary's Hospital at Centralia on account of an injury sustained at Bois, Ill., March 12.

Frank Rickards has accepted a position as yard clerk.

Switchman H. F. Buda, who has been off duty on account of an injury, is able to be back at work.

Freight Office, Benton, Ill.

(W. D. Brotherton)

Switchman Charles F. ("Dutch") Settlemoir of Benton was nominated for city commissioner of Benton at an election held March 14.

WISCONSIN DIVISION

J. A. O'Neill

Office of Superintendent

Superintendent's Office, Freeport, Ill.

(Theresa Johnson)

G. S. Rought, trainmaster of the Freeport and Madison and Dodgeville districts, has been selected as a member of the board of examiners which will have charge of the re-examination of all the employes in the transportation department of the Illinois Central System, the re-examination to begin on April 1. The choosing of Trainmaster Rought as one of the members of the board of examiners is an honor of which the employes on the Wisconsin division are proud. Mr. Rought has been with the Illinois Central for thirty-three years. He began work for this company May 5, 1890, as a brakeman, later was promoted to conductor and in 1904 was promoted to assistant trainmaster, St. Louis division. In 1909 he was made trainmaster of the same division, and

Safety meeting of the bridge and building department held at Freeport, Ill., February 10.

on October 1, 1917, he was appointed trainmaster of the Wisconsin division.

Thomas J. Reardon of Freeport, a former employe of the Illinois Central, passed away Sunday, February 18. Mr. Reardon was a member of E. B. Carr Lodge No. 115 of the B. of R. T.

Accounting Department, Freeport, Ill. (Catherine Rodemeier)

Lillian Grace, telephone operator, has been visiting friends and relatives in New York.

Isabel Gugger, accountant, has returned to work after spending a week in St. Francis Hospital, where she received treatment for an infection in her right foot.

The grip has had its share of victims the last few weeks—C. H. Crowell, chief accountant; LeRoy DeGraff, assistant timekeeper; Frances Farnum, accountant; Marguerite Doyle, clerk to the trainmasters; Mable Lordan and Theresa Johnson, stenographers. They have all fully recovered and are back at their respective positions.

We are sorry to announce the death of Leander Roberts, father of Nicholas Wilkey, stenographer, who died February 25.

Road Department, Freeport, Ill. (Frances Manion)

Effective March 1, Instrumentman O. I. Van Arsdale assumed the duties of assistant engineer on the Minnesota division, in place of Assistant Engineer S. C. Jump, transferred to other duties. Rodman Rodeberg of the Minnesota division has succeeded Mr. Van Arsdale.

Favorable mention has been placed on the efficiency record of Section Foreman George Doelling, South Addison, for discovering a break beam down on ASD-632 while it was passing Swift in extra No. 1775 on February 12.

MINNESOTA DIVISION

Lucille Sims

Secretary to Superintendent

Mrs. L. E. McCabe, wife of the superintendent, has been spending a month in Los Angeles, Calif.

A daughter, Helen Orlina, arrived March 12, to gladden the home of Mr. and Mrs. Frank Saunders. Mr. Saunders is assistant accountant in the superintendent's office.

G. A. Saunders, chief accountant, has just returned from Rochester, Minn., where he was called by the illness of his mother.

With deep regret we announce the death of Miss Anna Brauhn, assistant tonnage clerk in the superintendent's office. Miss Brauhn entered the service October 1, 1918, and was in service until her death, February 23. She was born at Epworth, Iowa, but moved to Dubuque in her early childhood. She is survived by one sister, Ida. Another sister, Mrs. Lulu M. Thompson, preceded her in death one year ago. The funeral services were held Sunday afternoon, February 25, at the residence, 1091 West Fourteenth Street. Burial was in Linwood Cemetery. Miss Brauhn was a woman of fine character, whose quietness of manner and kindness gained for her many friends among the office employes.

The mother of J. L. Pixley, operator, died March 9, at Northwood, Iowa.

Mr. and Mrs. Floyd Belscamper are rejoicing over the arrival of a baby girl, born Sunday, March 11. The little miss is to be called Genevieve Mae.

Agent and Mrs. F. E. Conca of St. Ansgar are touring the New England states.

Mechanical Department, Waterloo, Iowa (Hazel Joyner)

Pensioner F. G. Wagner died at Waterloo March 13.

Pensioner W. D. Melsa passed away February 21.

He was formerly employed as engine dispatcher at Cedar Rapids, Iowa.

Mrs. B. P. Schou, wife of an Iowa division engineer, died recently.

Fireman J. H. McGrane has purchased a new home on Dawson Street.

Engineers E. S. Jessup and George Hackett have returned to work after leaves of absence on account of sickness.

Henry N. Seeley, general foreman, is the proud daddy of a baby boy, born March 6.

Tuesday evening, February 13, the shopcraft associations of Waterloo gave a "get acquainted" dance at the K. of P. Hall. A cordial invitation was extended to all.

Trainmaster's Office, Dubuque, Iowa (Marion Coffey)

Flagman W. J. Somerville has returned to work after being in the Chicago hospital for some time.

Train Baggage man and Mrs. S. A. Teeple are enjoying an extended visit at Hot Springs, Ark.

Freight Office, Dubuque, Iowa (Grace Phillips)

Miss Lucille Gehrig, comptometer operator, rate bureau, who had her tonsils removed at Mercy Hospital recently, has resumed her duties and is much improved in health.

Agent and Mrs. J. E. Allison have returned from a visit in Miami, Fla.

We give due credit to the painters for the splendid appearance of our office since it has been redecorated, and we do not think we will have any trouble in keeping up our reputation of having the most pleasant freight office on the division.

Maintenance of Way Department (H. E. Shelton)

Effective March 1, O. I. Van Arsdale was appointed assistant engineer on the Minnesota division, with headquarters at Dubuque, succeeding S. C. Jump, who was made supervisor at Newton, Ill.

R. L. Mainard of Atlanta, Ga., has been appointed rodman to succeed Roy Rodeberg, who has been promoted to instrumentman on the Wisconsin division.

James Costa, section laborer, who was injured recently while sweeping snow from switches, is on the road to recovery.

Ed Lynch has departed for an extended vacation in Florida and Cuba. Mr. Lynch is chief clerk to Roadmaster Rhoads.

Car Department, Dubuque, Iowa (Harold Hilbert)

Engineer W. A. Titus is making a tour through the West. He will meet Mrs. Titus at Los Angeles, Cal., where she has been spending the winter.

Richard Boughton, hostler, who underwent an operation for appendicitis recently at Mercy Hospital, is now convalescing at his home on Mount Loretta Avenue.

Clifford Massey and Evelyn Thopp were married by Justice Green on March 2 at Dubuque. Mrs. Massey is the niece of Section Foreman Finch, and Mr. Massey is oilhouse man. The newlyweds are residing with the groom's parents.

Henry Hickie, cinder pit man, lost his sister, Mrs. Theodore Childs of Galena, March 4.

Waterloo Terminal and Albert Lea District (Frank Hardy)

Conductor R. C. Walker, recently granted a leave of absence, has been making a tour of the West. He writes: "I expect to reach Waterloo about the middle or latter part of March. The fruit crop in California is showing up well. I got in touch with the Fruit Growers' Association, and I think the Illinois Central is going to get the bulk of the business, as they were satisfied with the good record we made

in 1922. Saw Hart Bankson, C. Crowley, J. Shan-wise, Bill Kane and many others at the Iowa Picnic the 22d."

Conductor W. D. Taylor, after a forced vacation, has returned to Waterloo. Mr. Taylor spent several days in Kentucky for the betterment of his health and says that it did wonders for him, especially the outing that he had while on a couple of fox-hunting trips.

Conductor H. T. Johnson has just returned from an extended trip in the North and Northwest.

F. A. Hunt, local chairman for the O. R. C. at Waterloo, is again in Chicago on committee work.

P. J. Olds, supervisor's clerk, Albert Lea district, located at Waterloo, recently returned from Chicago after spending a couple of days of interest at the Railway Equipment Show.

The Waterloo yard men are contemplating occupying new quarters, which will take the place of the old switchmen's shanty. Plans are now in progress for a large switchmen's shanty, with everything but a shower bath.

We extend our sincere sympathy to Conductor R. A. Rust in his bereavement through the death of his mother at Lisbon, Wis.

Road Supervisor G. W. Parker, Waterloo, Iowa, was a visitor at the Railway Equipment Show at Chicago. He was very much impressed with the many improvements that have been made in the line of roadway equipment.

Switchman H. F. Sutherland recently made an overland trip from Waterloo to Cedar Rapids, visiting several other cities of interest, covering several hundred miles with his motor car. On his return he said he was glad to get back to Waterloo, as the roads in several places were almost impassable.

Store Department, Waterloo, Iowa (W. E. Barnes)

The bins in the storehouse are being arranged in conformity with the new loose-leaf stock books which have recently been installed in all storehouses on the Illinois Central System. The aim is to have material come in order in the bins in accordance with the order in which it appears in the new stock book. The new arrangement will also admit more light.

C. W. Blaser, roadway stockkeeper, is now in the Chicago hospital; L. E. Gerholt, scrapman, is also in the hospital at Chicago; Martin Keiley, oilhouse man, is confined to his home with the grip.

George S. Wise, veteran employee of the Illinois Central, died at his home, 337 Vine Street, Waterloo, Iowa, March 9. He was born at Brownsville, Pa., March 15, 1852, the son of Mr. and Mrs. Freeman Wise. He came to Iowa in 1874.

Mr. Wise married Miss Mary P. Bond March 16, 1879, at Charles City. To this union three children were born, all of whom are living. Mrs. Wise died October 3, 1915, and Mr. Wise married Miss Nellie Barlow April 8, 1917, at Minneapolis. He had resided at 337 Vine Street ever since coming to Waterloo.

Mr. Wise was an employee of this company for nearly forty years, serving as bridgeman on the Minnesota division and later as supervisor of bridges and buildings. The last few years of his service with the company were as stockkeeper in the store department, Waterloo, Iowa, and in this capacity he was retired on pension in 1913.

Surviving, besides the widow, are two daughters, Mrs. H. E. Dunham of Minneapolis and Mrs. J. A.

Taylor of Des Moines, and a son, D. H. Wise, Washington, D. C. Two brothers also survive, E. F. Wise of Waterloo, who is spending the winter in California, and William Wise, a resident of California.

Mr. Wise was affiliated with Grace Methodist Episcopal Church and Waterloo Lodge, No. 105, A. F. & A. M. He also was a member of the Iowa Veteran Railway Men's Association.

Funeral services were held Monday afternoon, March 12, at the Grace Methodist Episcopal Church, with Dr. A. B. Curran officiating. Burial was in Fairview Cemetery, Waterloo.

Waterloo, Iowa, Yard (J. A. Joyner)

B. J. Stohr, yard checker, is the proud father of a baby girl.

J. A. Joyner, chief yard clerk, came to work the other morning in a new motor car he had purchased.

Yardmaster H. O. Dahl's article on yard operation which was published in the March issue of the *Illinois*

George S. Wise

Galena, Ill., from the west

"As per your request that appears from time to time in the magazine for pictures of interest, we are enclosing three pictures of one of the best engines (we think it is the best) that was ever placed on wheels," write Engineer E. J. Cherney and Fireman G. H. Perrigo of Waterloo, Iowa. "The name 'Old Reliable' surely applies to this engine in every respect, as she is always ready and on the job 100 per cent." The magazine is always glad to receive photographs of interest to its readers.

Central Magazine was republished by the Waterloo Evening Courier.

Yard Checker W. R. Baumgartner has been transferred to the Minnesota division as brakeman.

J. W. Murphy has been employed as yard checker at Waterloo in place of W. R. Baumgartner.

Gerald Knudson, son of an Iowa division conductor, has been employed as an extra caller at Waterloo yard.

Fred Meyers, caller at Waterloo yard, has again placed his motor car on the pavement for the summer, after a careful overhauling in his basement during the last winter, assisted by Fred A. Hunt, Jr., yard checker.

Jud Joyner announces an increase in the family—a new brother-in-law. His sister, Jessie L. Joyner, formerly employed in the Waterloo freight office, was married to Calvin M. Green on Sunday, March 11.

We are sorry to learn of the illness of Mrs. Susan Quinn, mother of Kathryn Quinn, who was formerly car record clerk at Waterloo yard.

Heavy snow on the night of March 11 partly demoralized freight service on the Minnesota division, on account of considerable wire trouble.

Cars handled in February, 1923, totaled 57,913, as compared with 46,445 for the same period in 1922.

Employees favorably commended for meritorious work recently include: Conductor W. A. Delaney, six inches broken out of wheel on car, car set out and repairs made; Agent I. L. Hobson, Winthrop, brake rod dragging, train stopped and rod taken down; Agent J. W. Benda, Peosta, pair of wheels sliding on car in passing train, train stopped and irregularity corrected; Agent L. R. Fear, Earlville, brake rigging dragging on car, train stopped and brake rigging removed; Operator E. C. Herrling, Charles City, wheels sliding under car, train stopped and matter remedied; Section Foreman William Charley, Scales Mount, flat wheel on car in passing train, train stopped and car set out; Signalman David Ames, East Dubuque, loose wheel on car, wheel tightened; Agent E. A. Hoester, Plainfield, brake beam wedged in frog at spring rail, had it removed; Section Laborer James Allendorf, East Dubuque, broken wheel on car in passing train, train stopped and car set out; Brakeman B. W. Trego, Delaware, broken arch bar on car, car set out. [Note: The magazine is glad to publish the names and actions of employees who do such commendable service for our railroad, particularly when the occasion is something outside of the regular line of duty of the employees.—EDITOR.]

One Hundred Sixteen

IOWA DIVISION

Emmett Coffey,

Chief Clerk to Roadmaster

Waterloo District
(Mary Christensen)

Foreman and Mrs. J. H. Furino of Cedar Falls were called to Chicago recently by the death of Mr. Furino's father.

Mr. and Mrs. William Hoyer of Ackley returned recently from an enjoyable trip in the West.

James Abbot of Fort Dodge has accepted a position as assistant track foreman at Webster City.

Mr. and Mrs. James Collura of Cedar Falls spent several days in Chicago recently, being called there by the death of a relative.

KENTUCKY DIVISION

Anne Sweeney,

Office of Superintendent

Office of Superintendent, Louisville, Ky.

Mrs. Guy M. Ashmore and two little sons, Guy, Jr., and Byron, have returned from a trip to New Or-

At Fort Dodge, Iowa: 1, M. A. Tracy, supervisor of signals; 2, P. E. O'Connell, track supervisor; 3, Emmett Coffey, chief clerk to roadmaster, Iowa division editor.

Illinois Central Magazine

The Watch that Times America's Fastest Trains

THERE is a "crack" train on every road that is scheduled to "a Mile a Minute" or better, and it's two to one that you'll find that train timed by a Hamilton Watch.

The Hamilton is the Railroad Timekeeper of America simply because it has been tried and proved by performance in railroad service.

The accuracy of the Hamilton is inherent—built in it—as is also that sturdiness which enables it to stand railroad usage.

And so it is that such trains as the Twentieth Century Limited, the Broadway Limited, the Chicago-Washington-New York Limited, the Santa Fe DeLuxe and the Olympian keep to their swift schedule on Hamilton time. Railroad men everywhere appreciate Hamilton accuracy, and no matter if your job is in the coach or engine cab of a "Flyer" or a branch line "Accommodation," the Hamilton is the watch that will keep you to schedule.

The Favorite Hamilton of Most Railroad Men is the "992"

This is a Sixteen Size, 21 Jewel Model, having a truly phenomenal record for accuracy. Ask to see it at your jeweler's. It will better than pass inspection on all railroads.

For other than time inspection service we recommend our No. 974 Movement. This model gives you Hamilton Quality at moderate price.

Hamilton Watch

"The Railroad Timekeeper of America"

HAMILTON WATCH COMPANY
LANCASTER, PENNA., U. S. A.

leans, where they attended the festivities in connection with the Mardi Gras.

R. D. Miller, chief accountant, has returned from an extended trip through Florida. Mr. Miller visited, while in St. Augustine, Mr. and Mrs. Eugene Crouse, both of whom were formerly employed in this office, and C. E. Combs, formerly traveling auditor for the Illinois Central.

B. M. Skees is working in this office as clerk, a position formerly held by Neal Sisk, who has accepted a position with the States Corporation at Central City, Ky., which is working on the new line between Dawson Springs and Central City.

Plans are under way to reorganize our baseball team. While no line-up has as yet been definitely decided on, we have joined the Inter-City League and expect to start playing April 15.

J. R. Blanchflower and L. A. Anderson, traveling auditors, were at Louisville recently checking L. & N. bills for the use of facilities at Henderson and Evansville. This is Mr. Blanchflower's first visit to Louisville since he returned from France.

Joseph E. Barry has been appointed secretary to Superintendent T. E. Hill.

Broadus Cunningham has returned to the office after an illness of several days.

Mechanical Department, Louisville, Ky.

(G. W. Shaughnessy)

"Safety First" meetings held at Louisville prove successful. The locomotive and car departments went through February and the first ten days of March with only one slight injury. Besides the regular safety meetings held with all employees, all foremen are constantly keeping "Safety First" before their men at all times.

The Association of Machinists sent out invitations for a big meeting Friday, March 16. The machinists here claim their local is the first 100 per cent local on the system.

Boiler Foreman J. W. Hughes has returned to work, after being off duty on account of an injury to his ankle.

Thomas A. Kilkelly, employed as a flagman at Louisville, was struck and fatally injured in front of his home at 8:20 p. m., March 14. Mr. Kilkelly was just leaving his home on 15th Street, near Maple Street, and had just stepped off the sidewalk to cross the street when a high-powered automobile came upon him without warning and struck him. He was picked up and taken to St. Mary and Elizabeth's Hospital, where he was attended by Company Surgeon F. T. Fort. Mr. Kilkelly died from his injuries about 10:30 p. m., two hours after being struck.

Mr. Kilkelly was first employed as fireman at Louisville, August 23, 1917, and resigned September 1, 1922, to accept a position as brakeman with the Pennsylvania Lines. He returned to the Illinois Central as a flagman in January, 1923.

He was a great lover and fancier of bull dogs, was the owner of several prize winners and spent most of his time off duty with his pets. He served one year with the 311th Cavalry in the World War. Mr. Kilkelly was a member of the B. of L. F. and Louisville Council No. 390, Knights of Columbus.

Funeral services were held at Sacred Heart Church, Louisville, Saturday, March 17. Mr. Kilkelly is survived by his mother and five brothers,

Thomas A. Kilkelly

Gus, William, James, Robert and Estill, all of Louisville.

Princeton, Ky.

(Sudie Cash)

C. L. Groom, formerly chief clerk to Chief Dispatcher Eaker, who is now at Danville, Ind., studying law, recently spent the spring vacation with his parents. He says he is doing fine and hopes ere long to be a full-fledged lawyer.

Traveling Engineer Joe Ryan, who has been on the sick list, is now out and able to be at his post of duty.

Operator G. R. Newman has been down with the flu, but is now on the road to recovery.

The rain and windstorm which visited this country Sunday night did considerable damage, blowing down houses, barns and the like. No very great damage was done at Princeton, however.

Miss Mabel Hoover, telephone message operator, who has been absent from duty on account of the illness of her mother, is back at work.

I. H. Stevens, traveling time inspector from Chicago, who is now connected with the Joseph E. Nelson Company, spent the week-end recently with relatives in the city.

Signal Department

(J. P. Price)

J. A. Sauer, signal testman on the Kentucky division, has been promoted to signal inspector, with headquarters at Memphis, and has left for Memphis to assume his new duties.

Signal Foreman C. C. Sauer has moved his outfit to Central City to take care of the signal work in connection with the construction of new main line, yard and terminal facilities at that point.

Signal Foreman A. M. Pfeiffer is located at Henderson, making repairs to the Henderson interlocker.

The States Corporation Company, contractor in charge of the yard and terminal work at Central City, has moved its equipment into Central City and has started the grading work for the new yard at that point. The change of main line through Central City will necessitate a new signal arrangement between Nelson and Mercer.

A. Guthrie & Company, contractors in charge of the grading work on the new main line between Central City and Dawson Springs, are moving their equipment into Midland, Madisonville and Charleston. About three miles of track have been laid on the old Providence grade out of Dawson Springs, and the new grade work will be started this month. This new line will, when completed, be protected by automatic block signals.

E. J. Davis, signal testman, is now engaged in making the annual tests on Style "K" automatic signals.

C. L. Bromley has returned to his position as signal maintainer at Princeton.

Bell Frymire has returned to his position as assistant signal maintainer at Grand Rivers.

Leighton Keys, who was relieving Mr. Frymire at Grand Rivers, has returned to Signal Gang No. 1.

J. C. Martin, who was engaged on the new construction work at Nortonville, has returned to his position as signal maintainer at Rockport.

Valley, Ky.

(Alice E. Meadows)

The following employees have been at Paducah Hospital: Miss Jennie Prichard, Dyersburg, Tenn.; Mrs. Buel Burgess, office of superintendent, Fulton, Ky.; Miss Geneva Thompson, daughter of section foreman, St. Charles, Ky., who was operated on for appendicitis.

A 9-pound boy was born March 2 to Mr. and Mrs. L. F. Lewis. Mr. Lewis is train baggageman at Louisville.

Miss Alice E. Meadows, the agent at Valley,

has resumed work at Valley, after a short leave of absence on account of illness, during which she was in the Illinois Central Hospital, Paducah, Ky.

Mrs. E. Murphy, agent at Pleasure Ridge Park, Ky., resumed work March 2, after spending a month at Odessa, Texas, with her daughter, Mrs. C. H. Combs, who was formerly agent at Valley, Ky.

Local Freight House, Louisville, Ky.

(John T. Higgins)

A meeting was held Sunday, February 18, to stimulate interest in the "No Exception" campaign during March. Representatives from all departments interested in the handling and billing of freight were present. Reports of former months issued by Mr. Richmond were read carefully for the close observance of all, and stress was laid on each item separately by explaining just what should have been done to avoid the occurrence of the exception registered against each shipment. Supervising Agent Thomas gave a short talk on the accomplishments of individuality coupled with team work.

Mr. and Mrs. John A. Bruckert are the proud parents of John A. Bruckert, Jr., born February 27.

Charles T. Goss, Thomas Myrick and William J. Mulloy recently succeeded to positions as check clerks. Mr. Goss was promoted from correction clerk and Mr. Myrick and Mr. Mulloy from laborers.

Other promotions bulletined were those of Michael Welch to correction clerk in the car record department, Martin Berger to assistant O. S. & D. clerk, Edward Dolan to review clerk.

New names appearing on our roster are those of George T. Olliver and George H. Mulhall, both employed as messengers.

TENNESSEE DIVISION

Rufus Kemp, Jr.

Office of Trainmaster

J. M. Hoar, assistant engineer, Fulton, Ky., has been ill for several weeks and is now in the Illinois Central Hospital at Paducah, Ky., where he hopes to recover at an early date.

J. W. Hillman, accountant in the superintendent's office at Fulton, has resigned his position and is now selling stock for the Piggly Wiggly Company.

Herbert Rankin, clerk in the superintendent's office at Fulton, has been granted a leave of absence and will take his wife to California on account of ill health.

Master Mechanic's Office, Jackson, Tenn.

(May Ransom)

A pretty wedding ceremony was read by Doctor Cox in the Second Baptist Church at Jackson, Tenn., on February 8, when Miss Louis Glisson became the bride of Fred H. Young. Mr. Young is employed in the accounting department at Jackson. The bride, who is the daughter of Mr. and Mrs. J. H. Glisson, is a pianist of ability, having had an art studio in Jackson for several months. After a 10-day visit to Jacksonville and Palm Beach, Fla., they are now residing in the McClish apartments on Poplar Street.

J. C. Staley, engineer, who was injured in a rear-end collision at Sharon, Tenn., January 28, is still confined to the Crook Sanatorium, but is reported to be getting along nicely.

That the close co-operation of the agent and the shipper will bring about the quick release of cars and the prompt loading of outgoing shipments is proved by the following: IC-92619, coal from Graham, Ky., to Henning, Tenn., arrived and was spotted for unloading at 11 a. m., March 8, was reloaded with logs

HOME FOR SALE

This 3-room cottage with full cement basement is located just three blocks from the Illinois Central depot at Hazel Crest and about four blocks from the new Markham Yards. The house is arranged so that another room can be added later. The lot is 50 feet wide, and the building is complete with pipeless hot air furnace, glazed front porch, bath, electric lights, etc. The property is a bargain at \$3,650, and reasonable terms can be made, if desired. Phone or write.

C. R. CRAIG, JR., & CO.

for Evansville, Ind., and was forwarded by extra No. 1850 north at 11 a. m., March 9. S. L. Thum was the consignee of the coal and also the shipper of the logs. He is one of our biggest shippers, and he never fails to co-operate with the transportation forces in releasing equipment.

A severe rain and wind storm swept over the entire Tennessee division from 8 to 9 p. m., March 10, disrupting all telegraph and telephone communication and causing more or less damage. The main part of the storm struck around Pinson, Tenn., just south of Jackson, demolishing a considerable number of houses and killing and injuring a number of citizens. Extra No. 1750, which was on the east siding at Pinson at the time, had about fourteen cars and the caboose blown from the track and turned over, slightly injuring Conductor Melson, who was in charge of the train, and Flagman Isreal and Engineer Johnston.

The body of J. B. Good was brought to Jackson, Tenn., January 23, from Hardy, Ark., where Mr. Good had been making his home for the last two years. The funeral was held at the Campbell Street Church, of which Mr. Good had been a member for a number of years, conducted by the Rev. J. T. Myers. Burial was in Hollywood Cemetery. Mr. Good was born at Westfield, Ohio, July 22, 1855. He was the son of the Rev. Joe Good, a Methodist minister of the Middle Ohio Conference. On October 5, 1875, he was married to Miss Olivia Rake of Columbus, Ohio. He was a locomotive engineer for forty years, thirty-one years of this time being spent in the service of the Illinois Central. He received his pension in 1921 and retired from active service, moving his family to Hardy, Ark. Besides his widow, he is survived by one son, Guy, one daughter, Mrs. Anita McKimm, and one grandson, Harry Good McKimm, all of Hardy, Ark. One brother, Joe Good of Lima, Ohio, also survives.

J. B. Good

MISSISSIPPI DIVISION

Kathleen Hadaway, Secretary to Superintendent

As has been the custom for several months, the young women employed in the division office at Water Valley were delightfully entertained at a "picnic lunch" on Saturday evening, March 10, Miss Corrine Ederington, clerk to the accountant, being the hostess on this occasion. After the "eats," a spirited game of "Michigan" was played, and the hours slipped quickly by. The next meeting was scheduled for St. Patrick's Day, March 17.

We are pleased to note the high standing of Miss Lola Bell Wiggs, clerk to the supervisor at Sardis, Miss., in the *Memphis Commercial Appeal's* automobile contest. Miss Wiggs has numerous friends who are working to place her name at the top of the list, and she wishes to assure them of her appreciation for the interest they have taken in getting votes for her.

One Hundred Twenty

Mechanical Department, Water Valley, Miss.

(L. B. Harley)

F. M. McClain, machinist, has been promoted to gang foreman, machine shop, to take the place of J. B. Cowan, appointed general foreman at Durant shops, vice S. J. Williams, former general foreman, resigned.

Traveling Engineer C. E. Sieber has been in the hospital at Paducah a few days this month for medical treatment.

Earl Truett, former accountant at Water Valley shop, has accepted a position with the McRae Lumber Company, Memphis, Tenn. We understand that he has been promoted from third clerk to first clerk, with an increase in pay, which was made effective March 1.

We have just completed installing eighteen improved type machines in Water Valley shops at an expense of \$55,000, relieving fourteen old type machines that have been in service for years. This improvement will be the means of increasing the efficiency and output of Water Valley shop.

Trainmen, Jackson and Water Valley Districts (Gertrude Turner)

Flagman W. R. Thetford has bought Special Agent Kimzey's home in Water Valley and is now occupying it.

Trainmaster and Mrs. Spangler are now domiciled in their new home on Panola Street and have been entertaining their uncle and aunt, Mr. and Mrs. F. S. Lathrop of Kansas City, Mo., and their sister, Miss Geneva Spangler of St. Joseph, Mo.

Flagman P. P. Porter has been transferred permanently to the Tennessee division.

We are glad to note Assistant Engineer J. T. Westbrook back at his post of duty after a severe attack of the flu.

Conductor J. W. Baker is confined to his home on account of illness. Conductor J. M. Azlin is filling Mr. Baker's run.

Train Baggageman Walter Tate is enjoying a two weeks' vacation at points in Florida.

Yard Clerk J. C. Ray has resigned and is now learning the duties of a flagman.

Flagman B. W. Lee has recently purchased a new motor car.

Road Department

(Mattie Watts—L. B. Wiggs)

Mrs. J. F. Watts was hostess Wednesday afternoon, March 7, at an enjoyable card party, when she entertained in special compliment to Mrs. C. E. Ulmer, a bride, whose marriage to C. E. Ulmer of Princeton, Ky., took place on February 20. As the guests arrived they were served fruit punch by Misses Emma Lou McClellan and Mattie Watts. Jonquils and other spring flowers were used in decorating the rooms in which the card tables were placed. Following the games, prizes were awarded. The first prize was won by Miss May Dunbar, the consolation prize was won by Mrs. G. H. Mitchell, and a beautiful hand-embroidered towel was presented to the guest of honor. Mrs. Watts received the guests gowned in blue crepe, while Mrs. Ulmer was wearing an afternoon gown of beige brocaded silk crepe. Mr. and Mrs. Ulmer will make their home in Princeton, where Mr. Ulmer is employed as telegraph operator for the Illinois Central.

Assistant Foreman C. H. Wilson of the Jackson district has been appointed foreman of the bucket fence gang to work on the Grenada district.

W. L. Greaver is the latest addition to the engineering force of this division, having been transferred to this point as chainman from the Kentucky division March 7.

Supervisor and Mrs. C. R. Wilkinson accompanied their son, Flagman Hansell Wilkinson, to the Chicago

Illinois Central Magazine

The Perfect Pen for All Railroad Employees Is the \$5.00 or \$7.00 Size Parker Duofold Pen.

With 25-Year Point and Over-size Ink Font

Beautiful as Chinese Lacquer

YES, once let your hand feel the perfect affinity of its balanced swing and classic symmetry and smoothness, and you'll get a thrill out of writing never known till Geo. S. Parker created the Duofold Pen.

Wall Street or Main Street—it's the reigning favorite—the badge of prosperity among America's "Go-Getters."

At \$7 it's the most economical pen on earth, for its native Iridium point is guaranteed for wear and mechanical perfection 25 years! It's a point as super-smooth as a polished jewel bearing and will make you a better writer or money back any time within thirty days.

Its lacquer-red barrel with smart black tips is not only handsomer than gold—but it flashes your eye a reminder not to leave your pen when you lay it down.

It's a pen you'll seldom have to fill, because its over-size font holds a long-distance ink supply.

On receipt of One Dollar we will ship prepaid on approval.

Deaf Can Hear Says Science

New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation.

They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitiveness from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, Suite 1305-Y, 220 W. 42nd St., New York, N. Y., for descriptive literature and request blank.—Adv.

hospital, March 2, where he underwent a minor operation on his nose.

To date there has been no motor car accident on the Mississippi division this year. We are very proud of this record, and everyone concerned seems to be working hard to keep our record up to 100 per cent.

Along the Line

(M. L. Hays)

At the annual convention of the Grand Lodge of Mississippi, A. F. & A. M., held on February 20 at Jackson, Miss., Dispatcher T. Q. Ellis of Water Valley was elected junior grand warden. This will, according to the usual custom, make him grand master of the Mississippi Masons in 1925.

Agent M. S. Terry, Batesville, who has been in one of the Memphis hospitals for an operation for appendicitis, has returned home much improved. Batesville station was handled during his absence by Extra Operator A. L. Robbins.

Miss Grace Tyler, formerly clerk at Pickens, Miss., has been transferred to Coffeeville, Miss., as clerk, being relieved at Pickens by Claude Lansdale.

Grenada District

(S. A. Law)

The village of Tillatoba, Miss., eighty-four miles south of Memphis, Tenn., with a population of less than two hundred and with the Illinois Central agent, J. L. Crawford, as mayor, recently voted to issue \$4,000 worth of bonds for a municipal waterworks. A short time ago a well 650 feet deep was put down, a 60-horsepower gasoline engine was installed and a cypress tank, with a capacity of 3,500 gallons, on top of a 60-foot steel tower, was built. They keep the waterworks going with a flat rate of \$1.50 a

1, J. L. Crawford, agent; 2, H. A. Dame, merchant; 3, Blacksmith Arbuckle. Taken at Tillatoba station.

Tillatoba, Miss., showing water tank, well house, church and blacksmith shop.

month from each family, and that gives a sinking fund to take care of incidental repairs. The writer believes this to be the smallest municipal water plant in the world. It is taken care of by the village blacksmith, who is shown in the picture with Agent Crawford and H. A. Dame, one of the influential citizens of this village. Previous to putting down this well, the citizens of Tillatoba had experienced a lot of trouble on account of their wells' going dry at certain seasons of the year. Mr. Crawford has been our agent at this point a number of years and is one of the foremost citizens of the community.

Harrison Moss, pensioned section hand, Hardy, Miss., is one of the oldest pensioners on our roll, having started his railway career in 1868. He

Uncle Harrison and Aunt Joe

worked practically all of the time on the Grenada district. He claims the distinction of never having been "cussed" by a white man, is in good health and is now enjoying his pension. Uncle Harrison and Aunt Joe, his wife, are well known characters around Hardy.

LOUISIANA DIVISION

Claire Pimm

Office of Superintendent

Road Department, McComb, Miss.

Lee W. King, employed as instrumentman in the assistant engineer's office, resigned February 15 to accept a position as city engineer at McComb, Miss. Rodman J. S. Murphy received a promotion to Mr. King's position, and Curtis Mayfield took Mr. Murphy's place. King Quillman is the new chainman.

Trainmaster's Office, McComb, Miss.

Trainmaster E. L. McLaurine has been appointed a member of the committee to examine employees on the transportation department rules.

Mechanical Department, McComb, Miss.

(Mildred Abbott)

W. R. ("Bill") Cullom, boiler-maker, and Miss Mollie Moore, daughter of Passenger Conductor Tom Moore, were married on March 10.

Freight Office, Jackson, Miss.

(C. H. Williams, Sr.)

On March 7 and 8, E. A. Barton of Chicago exhibited his famous motion picture reels on loss and damage, cause and effect, showing the campaign being waged against bad loading, packing and handling. Many Illinois Central employees, as well as employees of connecting lines, were entertained and instructed.

ed by these films, which have been making the rounds of our lines for exhibition at meetings of employees.

Mrs. Homer Hill has been given a 30-day leave of absence on account of ill health. Mrs. Katherine S. Gabe is temporarily employed as car record clerk in her absence.

Dispatcher's Office, McComb, Miss.

Operator A. K. Ellzey has been promoted to relief dispatcher. R. L. Spiars is the successful applicant for third trick operator at Mileston.

L. S. Thornhill has been employed as relief operator on the division. R. C. Lewis is the successful applicant for third trick operator at Crupp.

Operator Frank Hall, Orleans Junction, has been off duty on account of illness.

NEW ORLEANS TERMINAL

J. Milton May,

Care of Agent

Local Freight Office (Jesse W. Ford)

Alex Bachemin, assistant export clerk, suffered the loss of his brother, Arthur, who died Sunday, February 18.

Frank Valters, weigh clerk, outbound department, resigned March 1 to accept a position as wheelage clerk in the terminal superintendent's office. He has been succeeded by Joseph Wilhelm, formerly train checker.

Tom Caldwell, car record clerk, has been promoted to tonnage clerk, local office, vice Morris Schwartz, who has been transferred to settlement clerk, accounting department. Mr. Caldwell was succeeded by Alfred Freidenberg, formerly file clerk, miscellaneous department.

August Kuntz, delivery clerk, inbound warehouse, Poydras station, suffered the loss of his father on March 3.

Eugene Fourcade, delivery clerk, Levee yard depot, who is severely ill at home, has been temporarily relieved from duty. His position has been filled by the transfer of Erwin Hemelt, carder and sealer, outbound warehouse, Poydras station.

George Bastian, messenger, claim department, has been promoted to unloading clerk, inbound warehouse, Poydras station.

John Goetz, storekeeper, Poydras station, was confined to his home for ten days with a touch of the dengue fever. He has now fully recovered and is back at work.

Robert Svendsen, assistant notice clerk, has been advanced to adding machine operator and general clerk, cashier's office. He has been succeeded by E. Thorengrén.

Loretta Battle, abstract clerk, accounting department, was confined to her home for two weeks with a severe attack of grip and flu. She returned to the office on March 1 and is now fully recovered.

R. A. Cooper, paybill carrier, inbound department, has been promoted to file clerk, miscellaneous department.

Central Lodge, No. 450, Brotherhood of Railway Clerks, has announced its fifth grand annual dance, to take place Saturday evening, April 14, at the Knights of Columbus Auditorium. Dancing will begin at 8 o'clock and continue until midnight, two jazz orchestras being in attendance. Refreshments will be served, and a good time has been assured all who attend. J. A. Mouton is chairman of the arrangement committee. John Kramer is ex-officio chairman. The following compose this committee: Anna Ferrand, Edna Rice, C. J. Ricol, J. K. Butler, J. P. O'Connor, J. C. Koper, John Freeling, B. B. Berckes, A. J. Moore, I. F. Perret, O. F. Sawyer, J. W. Ford, Joseph Exnicious, A. V. Bertaut, Joseph

GENERAL OFFICE:
Railway Exchange Building,
CHICAGO

Werling, W. A. Delp, Ben Werling, C. C. DeLuhey, Joseph D'Hemmecourt, Eddie Ray, James Labarre, J. W. F. Thompson, Henry Reinhardt.

N. J. Thomas, assistant cashier, John Gaillard, per diem clerk, W. D. Stanley, telegraph operator, local office, Poydras station, E. L. Laiche, assistant foreman, Levee yard depot, and A. Allen, a former employe of the Illinois Central, now pensioned, have gone together in the construction of a hunting and fishing lodge. The building, which is now in course of construction, is located on Bayou Bienvenu, about two miles from Lake Borgne, near the site of Old Fort Bienvenu, built by the defenders of New Orleans to retard the advance of the British under General Pakenham during the War of 1812. This lodge is situated in the best fishing and hunting grounds along the Gulf Coast, and record catches and hunts may be looked for. Upon completion of the building, a justification will be held by the members, at which time the lodge will be christened Camp Cono.

Terminal Superintendent's Office (Myrtle Biersoll)

J. W. Jehle, accountant, has been seriously ill, confined to his home for the last three months. Reports indicate that he is convalescing rapidly. He was expected to report back to work about March 15.

H. E. Campbell, rodman, assistant engineer's office, Union Station, has been transferred to Vicksburg, Miss. Mrs. Campbell has accompanied her husband to Vicksburg, and they intend making that city their future home.

F. S. Lewis, chief clerk to the general storekeeper, Burnside storehouse, accompanied by Mrs. Lewis, spent February 21 and 22 in New Orleans. Mr. Lewis was making a tour of Southern Lines storehouses. While here, he and Mrs. Lewis were entertained by Division Storekeeper and Mrs. Fairchilds.

On April 7 the clerical employes of the New Orleans terminal will entertain their families and friends at a dance, to be held in the Knights of Columbus Auditorium. Refreshments will be served, and an abundance of music will be furnished by the Louisiana Novelty Jazz Orchestra. Many invitations have been issued and from all indications a good time is in store for all. A. V. Bertaut is chairman of the arrangement committee; August Kuntz, president; E. C. Harang, secretary-treasurer.

Road Department (S. S. Sterbenz)

Section Foremen D. W. Parker and J. T. Hainey have been confined to the Illinois Central Hospital, New Orleans, with severe cases of pneumonia. They are well on the road to recovery and are expected back to work in the next few days.

J. L. Parker, section foreman, was operated on at the Illinois Central Hospital on March 8. Reports indicate the operation was successful, and he will shortly be on the road to recovery.

Miss S. S. Sterbenz, stenographer, roadmaster's office, New Orleans, has been promoted to general clerk. She has been succeeded by B. T. Marshall.

W. James, bridge and building foreman, on a recent rabbit-hunting trip was accidentally shot by one of the members of his party. The accident occurred in the heart of the forest, necessitating a 6-mile trip by launch and automobile before medical aid could be reached. Mr. James was painfully but not seriously injured, and has now fully recovered and is back at work.

Export Freight Office, Stuyvesant Docks (Fred De Long)

E. D. Poncet, joint bill lading clerk, Stuyvesant docks, and Miss Anna Belle Rogers were married Saturday, February 24. This was decidedly an Illinois Central wedding, as Miss Rogers was employed

One Hundred Twenty-four

City Hall, Lafayette Square, New Orleans

as a clerk in the cashier's department at Stuyvesant docks.

Mechanical Department (W. W. Sadler)

Engine Inspector James Diggs died February 8. He had worked the night before and, upon returning home, had retired in the best of spirits. When Mrs. Diggs went to call him for work, he was found dead.

Traveling Engineer Jeff Harrell is still conducting his vigorous campaign of fuel saving. He is on the warpath now about black smoke and is advocating every means possible to save fuel.

Herbert Mang, timekeeper at Harahan, who is now in Oteen, N. C., on a leave of absence on account of ill health, is gradually recovering and expects to return to New Orleans shortly.

Louis Degering, file clerk, district foreman's office, has been promoted to coal clerk, vice T. J. Murphy, transferred to the locomotive department at Harahan.

Edward L. Newsham has been appointed stenographer, District Foreman Chapman's office, relieving E. M. St. John, who has been transferred to Superintendent Cousins' office.

MEMPHIS DIVISION

Mr. Collic P. Said

Secretary to Superintendent

F. F. Munson, train dispatcher, is on a leave of absence on account of ill health.

Tommy Long, formerly file clerk in the superintendent's office, left recently for Mobile, Ala. Tommy will pitch for the Mobile team of the Southern League this season.

Sympathy is extended Roadmaster C. A. Maynor and family in the death of Mr. Maynor's brother, Robert Maynor, at Chicago February 25. The body was taken to Jackson, Miss., for burial February 28.

A. L. Claypool, dispatcher, has resigned to enter the insurance business.

Conductor S. W. Helms has returned from a visit to New Orleans, having been called there by the death of his father.

Superintendent J. M. Walsh recently wrote as fol-

For Good Watch Repairing See Your Watch Inspector

lows to Conductor J. R. Hoke: "I am advised that, while on train No. 30, February 16, on the siding at Mound Bayou for an extra south, you discovered a very bad flat wheel on a car about twelve or fifteen cars ahead of the caboose, that you notified the dispatcher from Shelby and information was given the car inspector at Cleveland, at which point they were able to locate the bad wheel; the car was placed on the rip track, where a new wheel was applied. I am also advised that on two other occasions you have found broken rails, one north of Walls, Miss., and one just north of the depot at Merigold, and that you notified the dispatcher, so that immediate protection could be given. I want to thank you on behalf of the division officers for your alertness in these instances and to assure you that such service is keenly appreciated."

Agent E. V. Henderson of Parchman, Miss., wrote as follows on March 3 to A. A. Freiburger, chief dispatcher:

"Refer to my memo of March 1, having reference to the prompt release and movement of certain cars into which we loaded cotton for Tutwiler, Miss., on that date. In addition thereto, I would like to add this interesting fact: These cars mentioned in my memo of March 1 were moved from this station by train No. 588, Conductor Topp, at 5:50 p. m., March 1. As per our conversation on the wire last evening, second No. 597, Conductor Harper, brought the same cars back empty and placed them at the cotton platform at 11:30 a. m., today, March 3. They were loaded, billed and sealed and moved by train No. 598, Conductor Topp, at 2:15 this afternoon, making the second revenue loading for IC-38423, CB&Q-44055, IC-140485, PRR-557878 and AT&SF-27250 out of this station within forty-four hours and twenty minutes, moving in the two movements 429 bales of cotton. The most time that these cars were detained at this station was four hours, the two placements consuming only seven hours and forty-five minutes. The first detainment was four hours, including two hours loading, billing and sealing; the second detainment was three hours and forty-five minutes loading, billing and sealing, including lunch time. The balance was for movement, which was by local freight and very prompt.

"It might be interesting to know that we loaded 876 bales of flat cotton at this station from 1:50 p. m., March 1, to 1:50 p. m., March 3, no car being detained in actual loading time more than three hours, or for actual delay for movement more than four hours and ten minutes, this due to the fact that we have no freight train performance on this district except a local each direction daily."

Freight Office, Helena, Ark.
(Mrs. W. L. Stovall)

A son, W. A. Marshall, Jr., arrived at the home of our chief clerk on February 21. Judging from the number of beautiful presents he has received, he bids fair to become popular in this community.

One Hundred Twenty-six

recently joined the Clarksdale Municipal Band. They are J. C. Newman, demurrage clerk (melaphone), and W. C. Dennis, claim clerk (clarinet). If our employes continue to take up music, we will soon have a band of our own.

VICKSBURG DIVISION

H H Barlow

Office of Superintendent

H. Maynor, supervisor at Greenville, Miss., was called to Jackson, Miss., February 25 by the death of his brother, Robert Maynor, who was employed as extra gang foreman on the Illinois Central.

C. B. Catchings, formerly employed as assistant city engineer, Pine Bluff, Ark., has been transferred to this division as rodman.

The Greenville Chamber of Commerce entertained about three hundred guests at a banquet given Monday evening, March 12, at the Masonic Temple. The railroad was well represented by Colonel A. H. Egan, general superintendent; W. B. Ryan, assistant general freight agent, and T. L. Dubbs, superintendent.

Several of the agents, operators and clerks of the division have been incapacitated for a few days each on account of a touch of the flu, but we are glad all are now back at work regularly.

Two of our Shaw, Miss., clerks, O. F. Leroy and Mrs. H. S. McKeown, recently decided to consolidate their incomes on the next income tax report. Their friends wish the happy couple a long and prosperous married life.

The agency at Stoneville has been closed, and Mrs. L. E. Gibson has been transferred as permanent agent at Rena Lara.

J. W. Johnson, formerly of Indianapolis, Ind., has been transferred to the engineering department at Greenville as chairman.

R. L. Dillehay, division waterworks foreman; P. F. Rayer, division weed burner engineer, and Division Motor Car Repairman F. W. Moss have been in Chicago attending the American Railway Equipment Exposition.

toward extensive farming and trucking in this section, business in general is substantially increasing, and we railway folks anticipate a most favorable freight business for an indefinite period.

We want to congratulate our own Development Bureau, under the supervision of H. J. Schwietert, upon such a progressive move as sending a "dairy special" train over the system, especially into Natchez, March 10. This is conclusive proof that our system is vitally interested in general industrial development. The citizens of this territory, conversant with the significance of this move, are congratulating us in a large measure and manifesting their appreciation.

In keeping with my promise in the last issue, I shall refrain from writing any more hunting stories, for a while, at least. The hunting season has just closed, and I was in hope I could get permanent relief from the arduous task of having to expose some questionable experiences of my comrades; but they have trapped me again recently and forced me to join a party of "happy go lucky" fishermen. I could not resist, as our fishing season has just opened and my jealousies would not allow me to waive the opportunity to catch the first "whale." What a time! I am glad I went. Next month I'm going to write a "truthful" fish story, and it will be a "booster."

Vicksburg and Vicinity

Mrs. Felix Mahin, wife of Stockkeeper Mahin of the store department, lately underwent a serious operation at a local sanitarium and is still confined to her bed, though improving gradually. Miss Edna Mahin, her daughter, clerk in the superintendent's office, is constantly at her mother's bedside.

Bud Higdon, accountant in the superintendent's office, has been seriously ill with influenza, but is now able to return to work.

Engineering Department (R. H. Carter)

Extensive improvements along the waylands are under way south of Baton Rouge, La., principally in the rice and sugar country. A complete reconstruction of the ditching along the line, with banking to conform, is in process, which will prevent the softening of the roadway which sometimes occurs during bad weather, and the flooding of the rice fields. The work is under the supervision of Instrumentman E. D. McCune, assisted by A. T. Spengler, rodman, J. E. Sallis and Chainman Jack Page.

Instrumentman T. B. Greer, who has been on this division since 1918, has been transferred to Central City, Ky. He is succeeded by H. E. Campbell, formerly rodman on the New Orleans terminal.

G. S. Covert, rodman, has been added to the engineering department.

H. S. Lewis, rodman, is filling the position vacated by E. D. McCune, promoted to instrumentman.

Supply Department, Vicksburg, Miss.

(Mrs. A. H. Daniel)

Mrs. C. S. Roberts, wife of our division storekeeper, has been called to Dallas, Texas, by the serious illness of her father. Grave doubts are entertained for his recovery. To add to the anxiety of Mr. and Mrs. Roberts, their little daughter, Mary Susan, is also seriously ill.

F. S. Lewis, chief clerk to the general storekeeper, was a visitor to Vicksburg storehouse February 24. Mr. Lewis is making a business trip through the South, accompanied by his wife. Mrs. Lewis expressed herself as being very favorably impressed with Vicksburg.

R. R. Richardson and a party of friends, including J. F. Monger, general car foreman, are planning a fishing trip for the near future. They are making extensive preparations.

A spring scene on our lines in the South

BETTER SHOES BY MAIL

~ Guaranteed Quality and Fit ~

SEND ONLY \$1.00 WITH YOUR ORDER

If Thoroughly Pleased Send \$1 to \$1.25 a Month

If not thoroughly satisfied you merely return and we guarantee to refund your dollar also cost of return postage. We don't wish you to pay cash as we would like to have you experience our monthly payment system. It enables the man with an average income to buy the better quality which he knows is real economy in the end. We carry the finest men's and boys' clothing, furnishings and shoes and we will send our free catalog on request or with any order. Six months to pay on every article we sell.

Square French Toe Oxford

Most popular of latest square toe models, both for comfort & dress. 4 rows of stitching and neatly pinked vamp and tip. Cordovan shade

soft uppers and single oak sole Goodyear welt-sewed. A shoe to be proud of. "Wingfoot" rubber heels. **\$5.45**
Sizes 6 to 11, No. 8109,.....

8308

8409

Semi-Brogue

For comfort and dress the new square toe lasts are most popular. Above pattern in the Semi-Brogue with the full wing tip and very delicate perforations comes in a handsome dark cordovan shade that is most in demand. Finest workmanship, single heavy oak soles Goodyear Welt sewed and Goodyear Wingfoot rubber heels. Full leather trimmings. \$1 to \$2 below your dealer's prices. Sizes 6 to 12. No. 8309 **\$5.95**
Price

Our Idea:
"One Good Pair is Better Than Two 'Cheap' Pairs and Less Costly in the Long Run"

Genuine Kangaroo

Imported from Australia

The finest upper leather for dress shoes. Finer and softer than kid. Tough as hickory. Takes a polish like patent leather. Never scuffs or peels. Finest heavy single oak sole Goodyear welt-sewed. "Wingfoot" rubber heels. Full leather trimmings.

The Admiral "solid comfort" last shown on the right we consider the finest foot-fitting last ever produced. We guarantee both wonderful comfort and dressy appearance. The kangaroo leather in this last we have sold to thousands of men who could hardly believe that we offered the genuine article at this low price. Such shoes are generally sold in exclusive boot shops at \$12.00 to \$18.00 a pair. Let us prove what a wonderful dress and comfortable shoe the kangaroo is. We only ask the privilege of sending a pair. Sizes 6 to 11.

No. 8409 — Admiral. Only \$1 with order. Balance **\$7.45**
\$1.25 a Month.....

The Banker last to the left you will say is rightly named for it's the famous straight last of bankers and business men. Plain fine stitching with absolutely no perforation or fanciness. Dignified. Extremely dressy looking. Finest single oak sole Goodyear welt-sewed. Goodyear "Wingfoot" rubber heels. Genuine leather trimmings and finest shoe construction throughout. Sizes 6 to 11.

No. 8209 — Banker. Only \$1 with order. Balance **\$1.25**
a Month..... \$7.45

WE GUARANTEE FIT

Full Brogue

A very handsome full Brogue pattern with full Brogue perforation, pinked tip and vamp in a beautiful dark brown shade of fine quality calfskin. An oxford generally retailing at \$8.00. Single heavy oak soles Goodyear Welt sewed. Goodyear "Wingfoot" rubber heels, fine leather trimmings—a shoe to please the man who demands quality footwear. Sizes from 6 to 11. No. 8409 **\$6.45**

Colonel W. G. Arn

Colonel Arn, recently promoted to assistant chief engineer, Chicago Terminal Improvement, was born in Terre Haute, Ind., in 1877, attended grade and high school in Scottsboro, Ala., and was graduated from Rose Polytechnic Institute in 1897. He was in the service of the Louisville & Nashville Railroad for a number of years as rodman, masonry inspector, building inspector, assistant engineer on both maintenance and construction and division roadmaster. In March, 1907, he entered the service of the Illinois Central as assistant engineer in charge of construction of the terminals at Birmingham, Ala. He has served as assistant engineer of the Birmingham division, on construction work on the New Orleans terminal, at Louisville, in charge of reconstruction of the passenger terminal, in the general offices at Chicago and in charge of construction of the new passenger terminal and various subways at Memphis. In November, 1914, he was appointed roadmaster of the Indiana division. In June, 1916, he was promoted to assistant engineer, maintenance of way of the Illinois Central System, a position he held until his recent promotion, except for two years, from May, 1917, to June, 1919, during which he served in the United States army as captain, major and lieutenant-colonel of the 13th Engineers.

Women Rank Among Veterans in Service

Reminiscences of Seventeen Disclose Fact That Railroading Is No Longer So Exclusively a Man's Work

RAILROADING has always been considered largely a man's work. The actual operation of trains is too strenuous for women, and it is in only comparatively recent years that the doors of other branches of the service have been opened to them in any considerable number. The Illinois Central System, however, has its share of women who are veteran employes, and the *Illinois Central Magazine* is glad to be able to recount herewith some of their achievements and reminiscences.

Through the co-operation of its division editors, the magazine has obtained an interview with one woman veteran on each division. In each case the employe interviewed is among the group of women longest in service on that division, if not the dean of them all. These seventeen women will not give precedence to any male employe in their loyalty to the service; they have learned the game thoroughly and are doing their parts faithfully, and it is the belief of the magazine that their stories form an essential part of the history of the success of our railroad.

The interviews are arranged in order of length of service. First, we have, on the New Orleans terminal, with more than thirty-six years' service to her credit, Miss Arabella H. Blackadder, secretary to Foreign Freight Agent R. F. Reynolds.

In Service Continuously Since 1886

Born in Portsmouth, Va., of Scottish parentage, Miss Blackadder moved, when she was a little girl, with her parents to Selma, Ala., where the family remained only a short time, presently journeying to New Orleans where they established a permanent home. Miss Blackadder's father was a machinist and was employed in the shops of the Great Jackson Railroad. He later became a foreman on this road, which was in time absorbed by the Illinois Central.

Miss Blackadder was educated in the schools of New Orleans and was graduated from both the high and normal schools of that city, obtaining a teacher's certificate from the last-named institution. She preferred a commercial career to the life of a school-ma'am, however, and presently studied shorthand and typewriting. Her first and only position was obtained with the Louisville, New Orleans & Texas Railroad, which later became a part of the Yazoo & Mississippi Valley and in turn was merged with the Illinois Central System. She began railway work December 15, 1886, as a stenographer for R. F. Reynolds, who was then commercial agent for the L., N. O. & T. Except for a period from February 13, 1912, to March 1, 1917, when she was stenographer to the general freight agent, Miss Blackadder has been Mr. Reynolds' secretary continuously.

A remarkable fact is that Miss Blackadder has been absent from duty because of sickness only twice in thirty-six years—once when she was ill five weeks and the other time ten days. She has had, she says, thirty-four enjoyable vacations, thanks

Miss Blackadder

Mrs. Stansell

to the company's liberality in granting passes to employes. In 1895 she had a leave of absence for thirty days which she spent in Cuba, and on July 1, 1898, she obtained a leave of absence for three months and visited relatives in England and her parents' old home in Scotland.

The general freight office in 1886 was located at St. Charles and Union streets, opposite the old Louisiana State Lottery, famous in those days for the munificence of prizes given, but long ago forced to discontinue its operations. May 1, 1901, the general freight office was moved to the Union Station building, then newly completed. Miss Blackadder recalls that this event took place on the day President McKinley arrived in New Orleans from Chicago over the Illinois Central.

Many and interesting are the changes in railway methods, both in train operation and office system, which Miss Blackadder has seen during her long term of service. Miss Blackadder is a staunch believer in the superior merits of the Illinois Central and expects to continue a faithful and efficient member of the Illinois Central System "family" until she retires from an active business life—an eventuality which her many friends trust will take place a goodly number of years hence.

Ticket Agent Long in Service

Mrs. Leora Belle Stansell, ticket agent at Kenwood (47th Street) suburban station, Chicago, representing the Chicago terminal, is a close second to Miss Blackadder in length of service with the Illinois Central System, having approximately thirty-six years to her credit. She has been a ticket clerk and agent at stations on the Illinois Central suburban lines continuously for about twenty-two years, and she numbers her friends and acquaintances among patrons of the road by the thousands.

Mrs. Stansell is a native Illinoisan, born at Scottsville, Ill., May 27, 1860. She began her railway work as a clerk for the Illinois Central at Lincoln, Ill., in 1887 and remained there four years. In 1901 she came to Chicago and became a ticket clerk at the Oakland (39th Street) station. She recalls that the Illinois Central line at that time traversed a part of the lake shore on a trestle extending over the water. This was the case from the Randolph Street terminal southward past where Central Station now stands, all of the solid ground of Grant Park and eastward having been built since that time.

Mrs. Stansell remained at Oakland station until 1893, when she was transferred to Woodlawn (63d Street), where she spent the following two years as ticket clerk. She then went to Madison Park station as

Mrs. Addison

Mrs. Ryan

agent, serving there until she was assigned to her present position at Kenwood in 1896.

In the long period of her personal contact with the public, Mrs. Stansell has found that most patrons are responsive to kindly sympathy and courtesy. Her ready smile of greeting has made countless friends for the Illinois Central as well as for herself. As the years have passed, she has seen many wonderful changes in the suburban service along the lake shore and looks forward to seeing at least one more great progressive transformation when the steam lines which now transport passengers by the scores of thousands daily are converted to electric trains.

A Telegrapher Thirty-three Years

Mrs. Myttie R. Addison of the Louisiana division learned telegraphy when she was a young girl in her home town of Osyka, Miss., and began work as a clerk for the Illinois Central System in March, 1890. She was then Miss Myttie Redmond.

"That was before the days of telephones or semaphores," she says, "and train operation was very different from what it is now. I worked at Osyka station for three years, receiving a salary of \$40 a month—a large salary then, as I lived at home and had few expenses. When business was dull, I was sometimes laid off for several months. Once I was sent to Chatawa to relieve the agent there for three weeks, and I had a wonderful time staying at Captain and Mrs. Conway's home. Mrs. Conway wrote my mother she would take good care of me, and I really was entertained like a guest.

"J. M. Turner was superintendent then. I also worked at Independence, La., relieving the agent there for two months. In March, 1893, I resigned, and I was married to Mr. Addison in June of that year. My husband was operator at Osyka. Often when a relief operator was needed, the chief dispatcher would call on me, and I invariably went when I was called."

Later on, Mrs. Addison found it neces-

sary to take up railway work again as a permanent vocation, and she was given the night assignment at Osyka station. She held that position until the office was discontinued, which, as nearly as she can recall, was about 1903. She was then offered the position of day operator at Magnolia, Miss., and she served there until the office was discontinued also.

At Magnolia, Mrs. Addison's health became impaired, necessitating her being absent from duty often for weeks at a time. Meanwhile she was receiving a salary of \$55 per month and sending her son to college. Her salary was increased later through the efforts of the telegraphers' union, of which she was a member, and when the office at Magnolia was closed she was receiving \$67 monthly, plus 10 per cent commission on Western Union cash receipts. Mrs. Addison was transferred to Yazoo City about 1911 and has remained there since. She pays a tribute to the Illinois Central employes in the following words:

"In all the years of my work I have always been treated with the greatest consideration and respect by my associates on the railroad. I am very proud to say that I have what is called a perfect record for good work, never having had a demerit mark placed against my name."

Long on the Indiana Division

Mrs. Effie C. Ryan of the Indiana division, receiving clerk at Olney, Ill., has a service record that extends back to June 1, 1896, on which date she began working for the P., D. & E. Railway, which became a part of the present system on August 1, 1900.

Born near Bentonville, Ind., Effie Carver began railway work on the Pennsylvania May 1, 1882, at Ridgeville, Ind., where her father, L. B. Carver, was agent. She was employed about six years in that position. The family moved from Ridgeville to Olney, Ill., January 1, 1891.

"My time of service has been long," Mrs. Ryan says, "but the history of it is short. I have worked in only two offices. I have been very fortunate in always having had pleasant people to work with, and my work has always been interesting and enjoyable to me. I have always done the same kind of work, that of receiving clerk, but, of course, the manner of doing it has changed. Formerly we never used a pencil at all except for memoranda. Everything was written in ink, the freight bills, consignee's receipts, records and all.

"Way-bills were filed each month until the close, then sorted in station and way-bill order and copied in ink in a report book. The monthly report was made out

in ink from the book. Copies were made in 'flimsy' books with damp cloths and a press in some cases, but frequently records and reports were written out with a pen.

"We did not have through billing. Weekly settlements were made. Transfer sheets were large, and two or three were required for a day's business. These were ink-written also, and impression copies were taken. We had no carbon sheets except those used for train orders."

Mrs. Ryan also recalls that, in the old days, the stations were lighted with oil lamps in brackets on the walls, and there were no stated working hours. "We just worked until the work was done," she says. "We have now taken many a long step forward. If the old methods were in use now with the volume of work to be accomplished, it would simply be impossible to get our tasks done. Things have been systematized."

Station Agent on New Orleans Division

Mrs. Florence Watson Ross is the Yazoo & Mississippi Valley agent at Clinton, La., New Orleans division.

Mrs. Ross was born at Greensburg, La., and completed her education at Norvilla Institute there. She taught in the public schools of St. Helena, East Feliciana and East Baton Rouge parishes. In 1893 she married Charles F. Record, agent for the Yazoo & Mississippi Valley at Slaughter, La. Upon his death in 1896 she began railway work herself, and she has been actively engaged in that vocation since.

Her first position was at Lindsay, La., where she was paid \$25 a month. Much cotton was shipped from Lindsay in those days, the train crew loading and the agent billing each day's shipment according to a regular routine. Once, Mrs. Ross says, cars were not available for about a week. During the interval, she billed all the cotton received until the platform was covered with bales, her desk overflowing with bills, and bales and bills were still piling up in

Mrs. Ross

Miss Johann

the surrounding vicinity, so that no train crew alone could have straightened out the tangle. This was her first experience as an agent "up against it."

The conductor wired the superintendent and the latter wired an inquiry to Mrs. Ross, asking if she needed help.

Mrs. Ross characteristically replied, "No; give me the cars, and I will do the rest."

She did it without the loss of a bale, and she has been meeting like emergencies in a like efficient manner for considerably more than twenty-five years since. Seeing how she had made good under such conditions, the superintendent sent her to Martin, now Pattison, Miss., where she remained for five years. Many overflows of Little Bayou Pierre occurred while she was there. On one occasion Illinois Central trains were detoured, and the local force were kept busy day and night for several days.

Since 1901, Mrs. Ross has efficiently performed the duties of agent at Clinton, La. Her tact and judgment have enabled her to meet the difficult situations which arise in the relations of the railroad with the public. She has never sought to extenuate her business responsibilities by the fact that she is a woman, and she is not forgetful of the rights of the public, while endeavoring to be always mindful of the interests of the Illinois Central System.

While diligently discharging the duties of her railway position, Mrs. Ross has

found opportunity to engage in the affairs of the community. She manifests a lively interest in those movements which make for public welfare and advancement.

Manages Dining Room at Louisville

The Kentucky division veteran is the manager of the dining room at Central station, Louisville—Mrs. L. A. Mulheron, formerly Elizabeth Anna Hastings, who was born in the north of Ireland, in County Antrim. She is the daughter of Mr. and Mrs. William Hastings. Mrs. Mulheron spent her early childhood in Ireland and was educated in the national schools there. She attended Grace Hill Ladies' Finishing School for one year.

Mrs. Mulheron's birthplace is that part of Ireland where the renowned Belfast Irish linen is made. The manner in which linen is made is described by Mrs. Mulheron as exceedingly interesting, probably the most interesting part of the process being the finishing touch, when the exquisite web is spread on the bleaching greens. The Cully-backy bleaching greens, the most famous in Ireland, are said by Mrs. Mulheron to be very beautiful. They stretch away in undulating acres of green grass (the greenest in all the world) and form a background for the snowy linen, which is placed on the greens to bleach. At evening, when the sun sets far over the Irish hills, it lights up the greens, flecks with gold the white of the linen and makes a fairyland of color, white, green and gold tinged with coral.

In 1883, Mr. and Mrs. Hastings, with their family, sailed from Londonderry, Ireland, and landed in New York City. From there they went direct to Homer, Mich., where Mrs. Hastings had a nephew residing. On October 23, 1899, Elizabeth Hastings was married to J. L. Mulheron of Mitchell, Ontario, Canada. To this union one child, Marguerite, was born. Marguerite is now Mrs. L. O. DeWolfe. Mr. DeWolfe is ticket agent for the New York Central Lines at Quincy, Mich., and is local chairman of the Michigan division, Order of Railroad Telegraphers. Mrs. Mulheron has one grandson, Robert E. Lee DeWolfe, who is now 7 years of age. Mr. Mulheron died two and a half years after their marriage, and Mrs. Mulheron resided with her parents at Homer, Mich., until December 24, 1897, when she came to Chicago and took a position in the dining room at Central Station. W. B. Murray was at that time superintendent of dining service for the Illinois Central System.

On November 13, 1900, Mrs. Mulheron left Chicago to become manager of the diningroom in the new station at Decatur, Ill. That station was then one of the finest on the Illinois Central System. It was

Mrs. Mulheron and her grandson

Mrs. Hawks

Miss Fritz

dedicated with great ceremony, the railway general officers attending the dedication. Mrs. Mulheron has preserved a Decatur paper dated November 15, 1900, which describes in full the opening of the new station and the beautiful diningroom, showing plans and photographs.

Mrs. Mulheron remained at Decatur, Ill., until May 16, 1903, when, at the request of her superintendent, she went to Louisville, Ky., to be manager of the diningroom there, where she has since remained. She has served under W. B. Murray, F. M. Daw, W. C. Francis and the present superintendent, C. B. Dugan. During her stay she has had many and varied experiences, not the least of which was the fire on March 18, 1909, when the station was almost destroyed, and the flood of 1913, when there were twenty-seven inches of water in the dining room for ten days.

In spite of these experiences and the fact that she has a limited space in which to handle the crowds that throng Louisville, Mrs. Mulheron has made a success of the Louisville diningroom. She is conscientious, strictly attentive to her duties, and at all times watchful of the welfare of the public. Mrs. Mulheron is prominent in church circles in Louisville as a member of the Warren Memorial Presbyterian church.

Woman Is Agent at West Point, Miss.

Miss Fannie E. Johann of the Mississippi division, agent at West Point, Miss., was born at West Point. Her father, a native of Germany, had come to America when a young man. Her mother was an American of German parentage.

At the age of 15, after completing her common school education, Miss Johann began teaching in a country school, where she remained for four years. She did not like this work, however, and took a business course. March 1, 1898, she obtained employment with J. D. Evans, Illinois Central agent at West Point, to assist with

express and other routine work of the station.

May 25, 1900, she was given her first railway position as a clerk at Kosciusko, Miss. D. S. Comfort was agent at that point. She held this position until October 15, 1900, when she went back to West Point as operator-cashier, a position she retained until January, 1904, when she was promoted to agent. J. G. Neudorfer was superintendent of the Mississippi division at that time.

In June, 1918, the Southern Railway and Illinois Central System offices were consolidated at West Point, and Miss Johann was obliged to give up her position, as a man was desired for the consolidated agency. In August, 1918, she was transferred to Grenada, Miss., as cashier, and she was made agent at West, Miss., in December, 1918. She remained there until April 30, 1920, when she went back to West Point as agent, the Southern and Illinois Central having dissolved the consolidated offices there.

She Grew Up in Railway Life

When W. B. Barton entered the service of the Illinois Central System at Onawa, Iowa, in 1887 as station agent there, his daughter, Florence—now agent at Ulmer, Iowa, on the Iowa division—was not quite 5 years old. Mr. Barton served as agent at Onawa for more than thirty-three years and was pensioned in July, 1921. His daughter grew up in railway life, she says, as her home was above and her childhood playground in the vicinity of the station.

During her school days, she helped her father by collecting freight bills and assisting with other work outside of school hours and on Saturdays. When she finished school in 1901, she was given a clerkship with the railroad at \$20 a month. This position was abolished in the fall of 1903, but the young woman continued to assist her father with his clerical work, although she received no pay for it. Meanwhile she was studying telegraphy, and in the winter of 1905 she was assigned to Smithland, Iowa, to relieve the regular agent there for several months.

In June, 1906, she went to Cherokee, Iowa, as a ticket clerk, remaining there

Mrs. Hawks' home on the farm

until January, 1908. In March of that year she entered the telegraph service as second trick operator at Tara, Iowa, working there until May, 1909, when she was transferred to Council Bluffs to assume charge of the city ticket office at that point. In August, 1910, the office was closed, and Miss Barton re-entered the telegraph service, serving as operator at Tara, Sioux City, Webster City, Fort Dodge, Ackley, Parkersburg, Cherokee and Cedar Falls, coming finally to Ulmer, Iowa, in February, 1912, to become agent and operator, which position she still holds.

A year later she became Mrs. Hawks, but her husband was unable to win her away from railway work. In this regard, she says:

"The work I grew up in and have done so long has a very decided fascination for me, so much so that, although I changed my name, my husband has not succeeded in inducing me to change my job, up to the present time."

She also says: "I early learned habits of thrift, and one of my first investments was in Illinois Central stock, which I still proudly possess."

Clerk for Seven Different Agents

Miss Lucy Fritz of the Memphis division has been the clerk in the Yazoo & Mississippi Valley station at Lexington, Miss., since August 1, 1904. During her term of service, seven different men have held the position as agent at Lexington. At the time of each change, the retiring agent recommended Miss Fritz to the incoming agent, and she remained in her position.

C. Q. Magee was the agent at Lexington when Miss Fritz first entered the service, and his sister, Miss Ruth, had been acting as his clerk. At that time, Miss Fritz was employed in the postoffice.

August 1, 1904, Miss Magee became too ill to continue her duties as clerk in the station, and Mr. Magee asked Miss Fritz to substitute. She says that, although the work was entirely different from that at the postoffice, she was able to take hold readily and do a great deal of it unaided.

At the end of two weeks, Miss Magee returned to her position, but remained only one week, when her mother became so ill that the daughter gave up her position permanently to do the work at home. Miss Fritz was then given the position.

Soon after that Agent Magee was transferred to Ackerman, and R. Thompson became the agent at Lexington. Mr. Thompson left Lexington in May, 1905, and J. A. Antimark became the agent. The next year, E. F. Rhea took Mr. Antimark's place.

When Mr. Rhea was arranging to trans-

fer from his station at Robinsonville, Miss., he asked Superintendent Horn's permission to bring with him a young man from that town to be his clerk at Lexington. Superintendent Horn referred the communication to the retiring agent, Mr. Antimark, who highly commended Miss Fritz and suggested that no change be made in the clerkship at Lexington. So Miss Fritz was retained in her position.

Mr. Rhea was agent at Lexington until May, 1914, when W. H. Graves, Jr., took charge as relief agent until the arrival, June 15, of T. J. Trull, who had been appointed the regular agent.

Mr. Trull left Lexington in December, 1916, to accept the agency at Tunica, but he returned to Lexington in September, 1918. J. T. Rowe was the agent during Mr. Trull's absence.

Miss Fritz says that she has enjoyed her work under the direction of these men and that she becomes more interested in railway work every day.

In Railway Service More Than 17 Years

With the exception of four months of 1906, Miss Bertha Weil of the Memphis terminal, who is at present secretary to Agent J. P. Moews at Memphis, Tenn., has been continuously an employe of the Illinois Central System since December, 1905. Miss Weil is thoroughly conversant with all the working details in the office of agent at a big city terminal, having served as stenographer and secretary to three successive agents at Memphis.

She studied commercial stenography at one of the business colleges in Memphis, and her first position was obtained with the Illinois Central as stenographer for the assistant chief clerk to the local agent. That was before the extensive terminal improvements were made at Memphis and a long time prior to the construction of Grand Central Station.

Miss Weil was not very enthusiastic

Miss Weil

Mrs. Allison

about railway work at first, and after eight months' service voluntarily resigned her position. But the subtle lure of railroading had found lodgment in her heart, and after a short interval of four months she came back again to the transportation game, accepting a position as stenographer to E. P. Stovall, who was then local agent. Mr. Stovall was succeeded by Ben Herring, and Mr. Herring in the course of time was succeeded by Mr. Moews. Miss Weil remained as secretary to each succeeding incumbent of the office.

The routine of the agent's office has become second nature to her. She is familiar with all the "ins" and "outs" of the working system. "There's nothing interesting or unusual about my railway experience," she declares. "I've just worked along, a day at a time, until it has mounted up in a total of years, that's all."

Miss Weil relates an instance of an expression that puzzled her when she first came to work in a railway agent's office. The expression in question, common around the office at that time, was, "Punch this fellow." Miss Weil couldn't make that out, but she refused to humiliate herself by asking anybody. So she kept still and waited for enlightenment. Her patience was ultimately rewarded. She found out that it meant, translated from railway slang into plain English: "Look up the file which contains this person's correspondence and place his latest letter therein." There is a punching machine used in many offices to clip holes in letters, so that they may be conveniently filed, which probably explains the expression.

Has Good Record as Railway Clerk

The woman longest employed on the Springfield division is Mrs. Etta M. Allison of Assumption, Ill. Mrs. Allison was born at Forreston, Ill., and entered the service of the Illinois Central System as a clerk at Assumption in 1906, which position she still retains.

Mrs. Allison is a devoted worker in the church and prominent in social affairs, not only at Assumption, but in neighboring towns and communities.

Her duties as clerk have been performed in a highly satisfactory manner; in fact, her work has been commended favorably, not only by auditors of the company but by the express company as well. Mrs. Allison is untiring in her efforts to render efficient service and is universally liked, not only by her associates but by all with whom she comes in contact.

Office Work Puzzled Her at First

Miss Mayme Woy of the Illinois division, abstract clerk in Agent A. P. Gorman's

Miss Woy

Miss Blotkin

office at Champaign, Ill., has been making out abstracts in that office for more than sixteen years. Her first employment was in December, 1906, as an abstract clerk in the agent's office at Champaign, and she has dealt with abstract sheets almost every day since.

Miss Woy says that she lacked confidence in herself when she first started to work. Her first inspection of the abstract sheets, with the blank spaces for entry, sent her brain into a whirl, she says. Then she was shown one that had been filled out. That was almost too much for her. She says that if Agent George W. Manley, her cousin, had not soothed her excited nerves she would never have attempted the work.

The transfer work—a record of bills of goods that had been transferred from the Illinois Central to the other railroads at Champaign—also made her feel that she was absolutely useless in this world, she says. She learned a little each day, however, gradually gained confidence in herself and before long was doing the work without thinking of what a strain it was. She now says that if she could have concentrated more on the work at first and thought less of her inexperience she might have learned more rapidly.

The abstracts at that time were made out each day, but were held until the end of the month for balancing. That made the work extremely heavy at the close of each month. A check was made with the freight-received book and with the cash book. Miss Woy always made a trial balance at least once a week to safeguard herself. If she had made an error on her abstracts, it was much easier to make the correction then than it was to wait until the end of the month.

But it was not long before a new system was installed. The new abstract forms required a daily balance and had many more places for detailed entries. Miss Woy says that by this time she had become

thoroughly familiar with the old system and wondered if it would be possible to do away with it entirely. The new way didn't seem to take care of everything, she says, but time and experience with it showed that it made her work much easier and more accurate. She knew her work so well at that time that the new system was installed quickly and easily.

The new system also was a great aid to the auditors, Miss Woy says. Before it was in use the auditors had to check and recheck before they could finish their work. Many times an auditor had to stay in Champaign a whole week, she says.

The freight office was on University Avenue, at the railway crossing, when Miss Woy entered the service. Seven employees were crowded into the small room. In the spring of 1918 the office was moved to its present site on Taylor Street, just north of Main. Miss Woy says that long before the building was completed the office force went there to plan how and where things would be when the office was moved. When the fixtures were transferred the definite positions for them had been decided upon.

T. A. Proctor followed Mr. Manley as the agent at Champaign; then came C. G. Richmond, P. W. Wright and Mr. Gorman. Mr. Wright was the agent at Champaign for about eight years, and Mr. Gorman was his chief clerk.

A Veteran of Service at Cairo, Ill.

Miss Minnie Blotkin of the St. Louis division entered the service of the Illinois Central System at Cairo, Ill., December 10, 1906, when the offices were located in the old "Stone Depot," which was razed after 1912 and 1913 floods had undermined the building. When Miss Blotkin began work, weekly and Sunday office hours were from 7:15 a. m. until such time as the work for the day was completed (allowing one hour and a quarter for noon luncheon). Generally three or four nights' work each week was necessary.

Miss Blotkin entered the service as stenographer to Jacob Jones, who is now with the general freight department at Chicago. It was the duty of the stenographer, in addition to her regular stenographic routine, to check switching and LCL merchandise tonnage for the account of the Cotton Belt, take letters from the accountant, claim clerks and others who handled correspondence, work forwarded abstracts, make corrections on every shipment where an error even as small as 1 cent appeared.

During her first few months in service, Cairo station was still feeling the effects of the East St. Louis flood, and claims by the thousands were awaiting disposition;

this was where Miss Blotkin earned her experience in handling claims.

January 1, 1912, Miss Blotkin was appointed private secretary to the agent, the late John D. Ladd, a position she is now filling for his successor, F. M. Block. This is an important and responsible position, as matters pertaining to the commercial end of the business as well as general freight matters are handled through the office, the Illinois Central having no commercial representative at Cairo. Pay-rolls, station operation reports, all stenographic work, correspondence, bills, legal documents and other matters that reach the agent's office are handled by Miss Blotkin. Filing and giving the public attention on the telephone lines also devolve upon her. In the absence of the agent from his office, for any reason, she receives patrons and attends to their wants, unless a personal interview with the agent is desired.

Only Woman Telegrapher on Her Division

Miss M. V. McCray of the Vicksburg division entered railway service as an operator at Cleveland, Miss., December 17, 1907, and has held this one position for more than seventeen years.

When Miss McCray began her railway work, conditions were different from those of the present day, and she admits that she was handicapped by reason of her sex. Woman suffrage was a thing hardly dreamed of. Office girls were few, and women did not play an important part in railroading.

Miss McCray says she did not begin work with any idea of becoming president of the road, but that she undertook her work as a profession that would yield her a good livelihood. She admits that sometimes she likes her work better than at other times, but she feels that it all depends on the kind and amount of work.

"Miss Mary," as she is known generally on the division, has the distinction of being

Miss McCray

Miss Peck

the only woman in telegraph service on the Vicksburg division, a division on which some of the men have had trouble in holding their own. While on duty she is a strict adherent of "business first," which largely explains the efficiency she has attained. It is said that officials of high rank have had to wait until she had finished sending a train order or other urgent message. She is credited with never having made a mistake in transmitting a train order or telegram.

Wisconsin Division Claims Record

The Wisconsin division and Freeport station enjoy the distinction of having in the service the Illinois Central's first freight office woman chief clerk and, in the same person, the second freight office woman cashier, Miss Mary H. Peck, chief clerk to Agent J. J. Reilly, Freeport, Ill.

In January, 1908, Miss Peck, who had fitted herself for advancement, was selected to fill a vacancy as cashier in the freight office at Freeport. At that time there was but one other woman freight cashier on the system. Since then, however, the gentler sex has shown beyond any doubt that no mistake is made in entrusting the company's funds to the many women cashiers now in the service.

During the World War, at which time Freeport station force was crippled by its employes' entering military service, Miss Peck again demonstrated her ability in carrying on the general work of the station. She was rewarded by being appointed to fill a vacancy in the position of chief clerk, a position she now holds with credit. Her courteous treatment of the company's patrons has brought forth many compliments from the business men at Freeport.

Miss Peck's slogan is "System," and the care of records and stationery, as well as the general efficiency in the freight office at Freeport, would indicate that she is making a success of her slogan. She earned her promotion in the freight office by doing well the work assigned to her and by earnest application, fitting herself for better positions. She entered the service at Freeport as the agent's stenographer March 13, 1901; was promoted to abstract clerk in May, 1901; bill and rate clerk, August, 1906; cashier, January, 1908; chief clerk, July, 1918.

Completes Fifteen Years of Service

Miss May Ransom, who is correspondent for the *Illinois Central Magazine* at Jackson, Tenn., shops, and clerk in the office of Master Mechanic Grimes, is the woman longest employed on the Tennessee division, having entered the service on April 1, 1908. She has now completed her fif-

May, 1923

teenth year of employment on what she calls the "best railroad in the world."

Miss Ransom began her railway work as stenographer for General Foreman A. T. Franklin, a position she held with credit for three years, until the office of the master mechanic was located at Jackson, when she was transferred to that office.

It might be said that Miss Ransom has been a railroader all her life, as she is the daughter, the sister and the niece of Illinois Central conductors. Apparently she is pleased with the treatment she has received at the hands of our company, as she has received numerous offers of other positions, but says she does not care to leave.

Many changes in the shops at Jackson have been witnessed by Miss Ransom, among which are the erection of an up-to-date office building and storeroom, considered one of the best on the system; she also remembers the old roundhouse which has now been torn away and a new 20-stall roundhouse built and the old 70-foot turntable that has been replaced with an 85-foot table to accommodate the larger locomotives. In 1912 the machine shop was destroyed by fire and was replaced with a new building and all modern equipment.

Holds Record as a Traveler

Miss Emily R. Swatosh of the Minnesota division entered the employ of the Illinois Central System as a stenographer at Cedar Rapids, Iowa, June 1, 1910. She was appointed billing and O. S. & D. clerk in 1919 and transit rate clerk and inspector of damaged freight in 1920. In addition to being a rapid and accurate typist and an expert at taking dictation, she has acquired a wide knowledge of freight station operation, extending even to the highly technical and involved transit rate problems.

Miss Swatosh is considered one of the valued employes of the "Old Reliable," and she is more than that; as one of the lead-

Miss Ransom

Miss Swatosh

Thirteen

ers in the Business and Professional Woman's Club of Cedar Rapids, she has taken a prominent part in the civic work of that organization in the community; she is a member of the Newton Alliance—a distinct honor, as all who are familiar with that body and its founder, the Rev. James Fort Newton of Cedar Rapids, will attest; she is also an active member of the O. E. S.

During the great war Miss Swatosh was indefatigable in her efforts to aid the cause of our country, giving freely of her time, money and energies to the American volunteers, among whom her brother was one of the first to enlist.

Miss Swatosh is a woman of wonderful dynamic energy. She takes a keen interest in the affairs of the whole world—indeed, she is a sort of citizen of the world herself. With all her various activities, her railway work, her social, religious, civic and home affiliations, she finds opportunity to read good books and magazines and to keep up with the trend of the times. She has cosmopolitan tastes and has been a great traveler in our own and foreign lands. She

knows the United States from the Atlantic to the Pacific oceans. Her knowledge of continental and insular Europe is also very extensive, as well as her experiences in other parts of the eastern and western hemispheres.

Miss Swatosh has visited most of the great burying places where famous figures in the world's history sleep; these historic spots range from our own shrines of Washington and Lincoln to the tomb of Napoleon; from Arlington to Westminster Abbey and the mausoleums of the Cæsars along the Appian Way. She has visited most of the great art galleries, too—the Louvre, the Rizzi gallery and the wonderful collections of priceless treasures in France and Italy.

Miss Swatosh has viewed many of the great places which hold the memories of vanished glories, but she still loves best the simple pastoral charms of Iowa and the kindly smiles of old friends, to say nothing of the irresistible appeal of her work on the Illinois Central System, which she says is best of all.

Has 45-Year Record in Avoiding Accidents

After serving this company for more than forty-five years, Thomas Hughes, section foreman at Champaign, Ill., was retired on a pension February 28. He was born in Loughrea, Ireland, March 30, 1851, and is now just past 72 years of age. When 22 years old, he left his native land and, after

Thomas Hughes

his arrival in the United States, settled at Champaign. On April 26, 1873, he entered the employ of the Indianapolis, Bloomington & Western Railroad as a section laborer, working on the district between Urbana and Indianapolis, but on January 12, 1874, he left its employ to accept a position with the Western Union Telegraph and Telephone Company, which was then constructing a telegraph line between Chicago and Dubuque, Iowa. In December, 1874, he returned to the I., B. & W., and until January 1, 1878, his services were alternated between section work and farming. On the latter date he decided to give up his agricultural pursuits and follow railway work entirely.

His record of continuous service dates from January 1, 1878, on the Havana dis-

trict of the I., B. & W., now a portion of our Springfield division. He was a section laborer until December 1, 1885, and was then made a foreman at White Heath, Ill., a position he held until June 2, 1902, when he was transferred to Champaign in a similar capacity. He remained there as foreman until his retirement.

On December 31, 1878, he married Miss Beatrice Normandy, also a native of Ireland, the ceremony being performed by the Rev. Father Toner at St. Mary's Catholic Church, Champaign. Seven children were born to this union, three girls and four boys: Mrs. John Mullen, Champaign; Mrs. R. E. Mullen, Farmer City, Ill.; Mrs. W. E. Murphy, Odell, Ill.; John Hughes, manager of the Ideal Electric Construction Company, Champaign; P. H. Hughes, member of the Lilliard, Getman & Hughes Furniture Company, Champaign; Thomas E. Hughes, president of the Homer Electric Light & Power Company, Champaign; Joseph R. Hughes, Kokomo, Ind., representing the Manhattan Electric Company of Chicago. Mrs. Hughes died January 1, 1922, and since that time Mr. Hughes has been making his home with Mrs. Mullen.

One of the outstanding features of his long term of service is that no personal injuries were sustained either by himself or by men under his supervision, which indeed is an enviable record.

Survey of the American Railway Problem

President Markham Tells Legislators at Springfield, Ill., About Dangers Confronting Transportation

Upon the invitation of the Committee on Transportation Survey organized by the upper house of the Illinois General Assembly, President C. H. Markham of the Illinois Central System addressed the members of the committee and an interested audience in the senate chamber at Springfield, Ill., Tuesday, April 10. In introducing Mr. Markham, Senator Kessinger, chairman of the committee, outlined the purpose of the meeting as follows:

THE Committee on Transportation Survey grew out of a resolution introduced by Senator Searcy when this community was face to face with the crisis affecting the Chicago, Peoria & St. Louis Railroad, some 240 miles in length, serving more than 300,000 persons, fifty grain elevators, six coal mines and sixty-six towns and villages and cities. The agitation over the proposed, and I suppose now ultimate, abandonment of the Chicago, Peoria & St. Louis started this survey. This is not an investigation, and we don't bring anybody here for cross-examination. We are not holding any hearing except hearings in the senate chamber at Springfield, and we have no illusions about the ultimate results of the survey. We do hope that the educational campaign growing out of these hearings will at least arouse the public sentiment so that we can discuss and finally decide various railway, traction, waterway and hard road questions soberly, without prejudice and without misinformation.

Abandonment a Serious Thing

We do know that, regardless of many of the controversies of the past, when a community like our community in Kane County is face to face with an electric line's being abandoned and this community, where they have the Chicago, Peoria & St. Louis Railroad, face to face not with the question of rates or various controversies but face to face with having no railroad at all to serve these communities, we do know it is a serious thing. The truck has got a good part of the freight; the automobile, a good many of the passengers.

When the Chicago, Peoria & St. Louis Railroad was built, the McKinley line did not run between Springfield and Peoria; the Chicago & Alton at that time did not run between Springfield and Peoria, and, of course, the hard road at that time was not laid between Springfield and Peoria. This congestion of traffic and the coming

of the automobile, the hard road and the truck brought a great problem.

Our next hearing will be next week on trucks, busses and hard roads. The last subject we will consider will be the traction lines.

Today we are inviting the speaker, who is to address us, the only speaker today, not to talk about the Chicago, Peoria & St. Louis, but to talk as a railway man, which he has been all his life, about the railway problem in America as he sees it. Back in 1890 the oldest and most famous automobile manufacturer was working in a bicycle shop, a prominent hotel owner was hopping bells, America's steel king was stoking a blast furnace, an international banker was firing a locomotive, a president of the United States was running a printing press, a great merchant was carrying a pack on his back, a railway president was pounding a telegraph key, and the man who addresses us today, the president of the Illinois Central Railroad, Mr. Markham, had begun his railway work, not as a telegraph operator but as a section hand. And I think for some twelve years now he has been president of this great railway system, thus showing that in the land of opportunity there are still chances for men of industry.

Our Most Important Question

Mr. Markham said:

When I accepted Senator Kessinger's invitation I had supposed that what I was going to do was to come down here and talk to the Committee on Transportation and perhaps to a few other members of the legislature. I am delighted, however, to have the opportunity of talking to as large an audience as this, because I know that you are all vitally interested in what seems to me to be the most important question before the American people today, and that is the preservation of the railway transportation system of this country.

There is a good deal of talk being indulged in throughout the country, and much of it from high places, by persons who, if they don't know better, *ought* to know better, to the effect that the railway transportation system of this country has broken down. I want to say to you, as an officer of one of the principal transportation lines of the Middle West, that so far as the Illinois Central System is concerned the road not only has not broken down but is better

today than it has ever been in its history, and I believe that to be generally true of the railway systems of this country.

During the last six months of 1922, notwithstanding the coal strike that put upon the railroads a burden of transportation within a limited period that ought to have been spread over the previous five months, notwithstanding the strike of the shopmen on all the railroads of the United States, during that period the railroads handled within a fraction of 1 per cent of the peak load of business handled in 1920, which represented the high mark of railway transportation in this country. During the last three months, January, February and March, all previous records for the same period have been broken. Now I ask you if a broken-down railway transportation system would have been capable of making a record of that sort? We know it is not true that the railroads have broken down, and we don't believe that the people who are preaching that doctrine believe it is true.

What Radical Regulation Did

Now, I don't mean to be understood as claiming that everything about the railroads is just the way it should be. It is far from that. We are not equipped today to take as good care of the transportation requirements of the country as we ought to be; and I want to indulge your patience or ask you to indulge me in briefly outlining to you some of the reasons why the railroads are in the situation they are in today. The beginning of radical regulation of the railroads of this country began with the passage of the Hepburn Act in 1906. That was followed by the passage of the Mann-Elkins Act in 1910.

Now, I want to put before you a picture of what happened before the passage of those two restrictive laws and what happened afterward. For the five years prior to 1907 there were ordered for use by the railroads of the country 480,000 freight cars. During the next five years, ending with 1912, 230,000 freight cars were ordered; in the next four and a half years, 114,000, and for the five years ending with 1921 there was an actual decrease of 13,521 freight cars in use by the railroads of this country. Now, what does that mean? It means that, whatever the reasons may have been, whatever faults there may have been in the conduct of the railway managements of this country, when the process of regulation was undertaken it went too far, it went a great deal farther than it ought to have gone, and if it had not gone so far we would today have been supplied with more facilities than we have and probably would have been able to have taken ade-

quate care of the peak load of business whenever offered.

A Let-Down in Employee Morale

Then came the taking over by the government of the railroads in 1918. I have no criticism to make of the federal control of the railroads of this country. I was connected with the administration for nearly two years myself. I know that every man connected with the Railroad Administration did the very best that he could to serve the public and to protect the interests of the owners of the properties during that period. There are a lot of reasons for the trouble during and after federal control. There was a complete disorganization, for example, of the forces of the railroads, growing out of the demands for labor, growing out of the war requirements, growing out of the fact that our young men went across the sea in service. There was a let-down in the personnel of the roads. As an illustration of some of the things that happened, I remember well that early in January, 1918, when I was going to Washington at the call of Director-General McAdoo, the conductor came around in the morning to give up the checks for the tickets. I was sitting in the seat with the late lamented Roger Sullivan.

Mr. Sullivan said (the train being late): "I suppose we will get a rebate because of this delay."

The conductor was a man who looked to me as if he had been in the service thirty or forty years. I think he was the kind of man who, a month before that, in answer to a question of that sort, would have made an entirely different answer from the one that he did make.

What he said to Mr. Sullivan was this: "Oh, I don't know. You will have to ask McAdoo."

And then, as a second thought, it occurred to him that he ought to refer to Mr. Willard, who was the president of that road.

The Effects of Federal Control

That is just a little sample of the change that took place in the minds of the railway employees of the country when they found themselves in the employ of the government and away from all of the influences that surround the handling of men under private operation of these railroads. But, however that may have been, the government did not have an easy time in handling this situation. There were a lot of things it had to do. Advances in wages were necessary. Things were done in the way of standardizing wages perhaps that ought not to have been done; but that is behind us.

But what did happen as a result of fed-

eral control? That is the point I want to make in my discussion with you. The roads were returned to private ownership, in the first instance, with insufficient rates; and, in the second instance, with largely increased costs of labor and with influences surrounding their operation that we are just about getting away from. Because of the war conditions the equipment of the roads of the country was not properly maintained. It was not possible for the government to maintain them properly. War purposes made a demand for all of the essential elements that go into the repair of equipment, that go into the construction of new equipment, and to the extent that the government could get along with the tools it had it did make that effort. But, notwithstanding all that, the fact is that when the roads came back to their owners they were in a condition that took a considerable time for the private managers to overcome. As I see it, we have just about emerged from that situation, and we have reached the point where, if we are left alone in a reasonable way, perhaps not altogether, we will work this problem out and we will in the end be able to provide the people of this country with the quantity and the quality of transportation that are needed if the nation is to continue to grow and progress.

Take the present situation and recall the discussion about high rates. In November, 1921, corn, I recall, was worth about 39 or 40 cents a bushel. Today it is quoted at 79 cents a bushel. Other farm products have increased in the meantime, and today the farmer is not so much concerned with the rate itself as he is with getting the cars to move his stuff when he is ready to ship it; and that, I think, is true of the general business of the country, except as we hear from certain gentlemen prominent in political life who think that they are improving their political standing by appealing to the farmer and who are engaged constantly in calling his attention to the fact that freight rates are too high and ought to come down. We hear very little today about the freight rate itself. Again, I say that what the people of this country are concerned in now is not the measure of the freight rate but transportation when they want it.

Purposes of the Transportation Act

The Transportation Act is under attack from these same sources. Now, what is the Transportation Act? The Transportation Act was the law that became effective in March, 1920. It was passed in recognition of the fact that, as a product of the war and because of the conditions surrounding the return of the railroads to

private control from federal control, something constructive was necessary in order to permit the people of this country to enjoy the transportation that they must have. It provides a direction to the Interstate Commerce Commission to fix rates on a basis that will yield a fair return on the valuation of the roads. It also provides for a labor board, the thought being then that it was necessary, in order to provide the people with a continuous supply of transportation, to guard against interruptions which might interfere with that continuous supply.

One of the efforts that was made when the bill was under discussion was to provide against strikes, but there came a recognition of the fact that in this country such action would not do. The Congress might pass a law providing against strikes, but the later experience in the coal miners' strike was this: When Judge Anderson issued his famous injunction, the only result was that the officers issued no instructions, but the miners would not go back to work. As a practical question, I don't see any way to make effective in this country of ours a law that will prevent men from quitting work whenever the conditions surrounding that work do not please them.

Difficulty of Standardizing Pay

Now, in lieu of that, the undertaking was to provide ways and means of bringing the men and the managements together whenever disputes arose likely to interrupt transportation. I think myself the solution has worked fairly well. I don't agree with everything that the Labor Board has done. I think in some of its decisions it went a little farther afield than it ought to have gone—for example, in the matter of standardization of wages. I speak rather feelingly on that subject because we operate, as you know, in the Southern states, where negro labor predominates. Some of the roads that operate entirely in the Southern states are able to agree with their men under the law and to agree upon rates that are lower than we have to pay, because under the rulings of the board (and I am not criticising them) the majority in any craft controls the rates to be paid in that craft anywhere on the railroad. Now, the result of that is that we are not privileged to deal with our labor in the South to the same extent that other industries are, and we are, therefore, paying very much higher rates than they are paying. I have always thought, in that instance, that the Railroad Labor Board ought not to have established a standard of railway wages in all sections of the country. Living conditions are not the same in all sec-

tions. There are a thousand and one things in living conditions that militate against standardization. You have to pay men out in the desert more than you have to pay them in the city. In Chicago living costs are very much higher than in the small towns on our railroad in Iowa and Illinois and other states, and there ought to have been some way of taking note of those conditions and making differences in the rates between those different sections of the road.

No Guaranty to the Railroads

In attacking the Transportation Act and seeking its repeal, some of our Western senators, notably those recently elected, are representing to the people that there is a provision in the act guaranteeing to the railroads of the country 6 per cent on the valuation fixed by the Interstate Commerce Commission. They repeat that misstatement in season and out of season. I am afraid I would be insulting the intelligence of this audience to explain the matter, but it will take only a moment and there may possibly be someone here who doesn't understand it. There never has been a guaranty of 6 per cent to the railroads. For the first six months after federal control the government undertook to pay all the bills covering operating expenses and the general expenses of conducting these railroads, reserving to itself the authority to throw out any bill that did not in its opinion wisely represent a proper charge. After that time and for the first two years following March, 1920, what the Interstate Commerce Commission did was to undertake to fix rates on a basis that would yield 6 per cent. But the rates never did yield 6 per cent. For the entire year of 1920 there was less than one-tenth of 1 per cent return; for the entire year of 1921 there was about a 3 per cent return, and for 1922 there was about a 4.1 per cent return, instead of the 6 per cent.

Now, we are working on the 5½ per cent basis. It seems to some of us now, with the increase in business of the country, we are rapidly approaching the point where we will begin to earn the 5½ per cent. Then when we earn more than the allotted return the government requires us to turn one-half of the amount over to it to be used by the Interstate Commerce Commission in its discretion in supporting the weaker lines of the country. The suggestion is that the way to do it will be to lend the money at whatever rate the government fixes at the time to roads that cannot get their money from other sources. The other half of the excess over the allotted return is to be retained by the railroad earning it and set aside in a separate fund until the amount reaches an aggregate of

5 per cent of the total valuation of the road, drawing from it in the meantime, however, whenever necessary to pay dividends.

Now, these gentlemen are attacking the valuation feature of the act, and Senator Brookhart, the new senator from Iowa, is saying that the value of the railroads is about \$8,000,000,000 in excess of what it ought to be.

Now, let me explain to you something about the valuation reached by the commission. In 1913 Senator LaFollette was the author of what is known as the Valuation Act. That act required the Interstate Commerce Commission to find the original cost, the present value less depreciation and the value including other elements of the roads as of a certain date in 1914. The railroads and the government have spent since that time about \$85,000,000 collecting that information. The Interstate Commerce Commission found, after using the figures resulting from its investigation, that the roads were worth in 1920 \$18,900,000,000. Since that time, bringing the railroads up to date, investments have been made and certified to by the commission until the aggregate is about \$20,000,000,000.

Now, Senator Brookhart advances this very ingenious idea. He says that the value ought not to be based on any such finding as that, absolutely overlooking the fact that that basis results from the passage of a law the author of which is Senator LaFollette, whom no one ever suspected as being a friend of the railroads, the underlying reason for the passage of that law being to find that the railroads were overcapitalized and to use that information in fixing the rates of the railroads of the country.

Why Market Value Can't Be Taken

Now, notwithstanding all of that, Senator Brookhart proposes to find the value of the railroads by taking the market value of their securities at a time when the security market was at its lowest point. He has taken, for example, a period in 1921 (I think about September 12), that period also being taken by several others who are advancing the same arguments that he is for changing the valuation of the railroads. He takes the market value and, using that market value, finds that the roads are worth about \$8,000,000,000 less than the commission has found the value to be.

Now, let us take that same period and take the price of government bonds, of liberty bonds. They were selling at that time from 87 to 88 cents on the dollar,

(Continued on page 94)

With Rod and Reel Near Natchez, Miss.

*Our Local Freight Office There Yields What
the Author Terms "A Truthful Fishing Story"*

By R. K. HOLMAN,
Chief Clerk, Natchez, Miss.

THERE is an incentive in this story, and that is: Contentment, pleasure and recreation are essential to our life itself and the services we render our employers. Proper environment is an invaluable asset. This is supplied in abundance in a large circumference around ancient, historical Natchez. History records every item of interest applied to this grand old city in the course of many years back, but one must visit Natchez and tour her borders and territory to appreciate her attractions.

Unlike conditions in the "shivering" weather prevailing in the North, East and West at this writing (March 6), our grass is a beautiful mantle of green; our violets, roses, nasturtiums, narcissus, Easter and spider lilies, and many other flowers are gleaming in their beauty; our many varied song birds are chirping their merriment; our thousands of fig trees are bursting forth the costumes that covered Adam and Eve; our lithe serpents and alligators are stretching their bodies in our beautiful sunshine in relaxation from only about two months of mild winter confinement; our beautiful blue lakes and streams are literally alive with those envied specimens, such as black and striped bass, white and speckled perch, trout, etc., all of which are dancing in glee over the water's surface in wonderful appreciation of their abode in this section of the "Sunny South." Our soil, of the richest in the whole world, is beckoning her army of planters as her tender heart is already being pierced with cold steel. Our noted moss that gracefully drapes almost every tree is awakening with

Our entire fishing party in office regalia, taken on the steps of the freight office the day after the trip. Left to right, front row: V. A. Jehlen, J. H. Douglass, Karey Collins, R. K. Holman. Back row: John S. Hermann, Joseph B. Landreaux, Ernest D. Goza.

a beautiful tinge of green, supplanting the fading mantle of steel gray, winter's own.

Decided on a Fishing Trip

Classing our railroad as an industry, we are the only concern located on the famous Natchez Bluff directly adjoining the heart of the city. Our beautiful stucco and pressed brick passenger station, and our large freight warehouse and office building combined, together with all other departmental buildings, are located within two hundred feet of the edge of the great bluff that slants almost perpendicularly for hundreds of feet down to the Father of Waters, the mighty Mississippi. Parallel with our buildings for three blocks is a beautiful natural park, where from now until next December almost everyone here spends many pleasant hours each week. Our passenger patrons, owing to the proximity of our station, can readily view miles of territory and a large portion of industrial Natchez.

We workers in the freight office, located in the second story, are imbued with the spirit of pleasure and recreation every time we look out of our windows, either south or west; we see wonderful streams and lakes beckoning the rod and reel.

The members of our force, having become restive and needing some recuperation from heavy work occasioned by heavy freight business, and also lured by "the beckoning of the rod and reel," got their

South end view of the Yazoo & Mississippi Valley freight station and office. Little Robert Holman, champion junior fisherman, is shown in the foreground.

Our passenger station at Natchez. It is on a high bluff overlooking the Mississippi River, miles of Louisiana's level plantations and industrial Natchez.

heads together on March 2 and tactfully arranged a fishing expedition for the weekend. Those making up the party were Yazoo & Mississippi Valley employes, as follows: Vic Jehlen, cashier; Colonel Jimmie Douglass, rate clerk; Ernest Goza, special accountant; Josephus Landreaux, station accountant; John Hermann, yard clerk; Karey Collins, government student; Bob Holman, chief clerk, and a wonderful negro "chef" and camp keeper. Having fully equipped ourselves with camp regalia and fishing facilities and after selecting either Junks Lake or L'Argent Bayou (both beautiful streams and miles long) in preference to other noted fishing haunts such as Cross Bayou, Turtle Lake, Kimball's Bayou, Lake Bruin, Whitehall Lake, Lake St. John and many others, we loaded up in two cars and ferried across the Mississippi River into beautiful Louisiana, therein to take the marvelous pike road extending miles into the interior of the state.

Less Than an Hour to the First Stop

In less than an hour from the time of our departure, we were trying our luck on Junks Lake. We made every effort at some good catches, but failed; this was my first time there in failing to strike fine luck. The old rascals there that evening would not swallow even the choicest bait. We ran a nice fellow down, just for a test, and even tried to force a fine large live minnow down him, but he kept spitting it up. This was conclusive proof they were not striking or biting.

Our zealous efforts had by this time almost exhausted us, and our camp appetite had seized us. We asked the chef for aid. Oh, boy! You talk about a sumptuous meal? We had it. We can all assure you that we would not have exchanged that meal for the king's. When camp had been lifted for another move in quest of game, I took one disappointing look at Junks Lake in memory of those nice big bass and trout we landed there last season. (Incidentally, I hooked a trout there last year

that was so large and vicious that both Ernest Goza and I failed to land him.) We proceeded from there to L'Argent Bayou.

On our way up we traversed the shore of beautiful and large Lake St. John, which reminds me very much of Reelfoot Lake in West Tennessee, only not nearly so long but a much more open body of water. However, Reelfoot Lake has nothing on Lake St. John when it comes to an abundance of fine fish. This night was perfectly beautiful, enhanced by a wonderfully clear full moon, the latter about an hour high as we were riding on the banks of Lake St. John. The sky was perfectly clear, excepting a rippled hazy cloud bank that had temporarily settled on the low eastern horizon, shading the moon at intervals as it slowly drifted into oblivion. The moon was still red, as it is when full and rising, and it was shining directly on the crystal rippling waters of the lake. Words cannot adequately describe the astounding picture nature presented to us.

No Luck in First Attempts

About 9 o'clock that night we arrived at L'Argent. We immediately unpacked and pitched camp on the side of a bank or levee several feet high. We chose this spot on the side opposite the direction of the wind, as March breezes were beginning to blow. Right here is where the fun started. We began to inspect our personnel as to physical condition, as the more experienced ones already realized that this was going to be a hard night for all, more so for the "chef," who was also assigned the extra duties of keeping up a large bonfire throughout the night. Right off, upon examination, we discovered two liabilities; John and Karey were suffering from general exhaustion and debility. Karey soon recuperated temporarily after a cold bath taken in L'Argent. John did the same after a short rest.

A small portion of our Yazoo & Mississippi Valley freight yards proper, overlooking the Mississippi River, just below the bluff and west of freight station, Natchez.

Then we all, including Ed, the "chef," decided we would make some casts in hope the fish would strike (about 9 p. m., moonlight). We all fished most faithfully for about an hour, when all but me gave up in despair, as there was not a bite or strike. Someone then suggested hot coffee, as this and "Adam's ale" were the adopted beverages. Poor Ed now knew his real troubles were beginning. He, however, made haste in serving us all with as fine hot coffee as was ever drunk at camp. We then enjoyed a good many fine stories told us by our veteran, Colonel Jimmie. This part of our entertainment lasted well up into the night. By this time most of the boys (and Uncle Jimmie, too) were really exhausted, and all but Ed and me retired.

Little Luck in Night Fishing

I felt sure I could now put one over on them all; so I went to the lake with my rod and minnows, hoping that I would find a nice bass lurking around and induce him to give me a battle. After a while an extra large fellow raised himself at least two feet above the water on a strike, but not at my cast. I noticed that the lake was literally alive with strikes, which proved they were feeding. I cast quickly in the shadow of a cypress tree just ahead of where the big fellow rose, but he did not respond. I won't accept failure; so I decided I would cast up and down that side of the lake all night rather than not be able to take a fellow like this. I worked hard for a long time, but never could get a single strike; so I went back to the hole where my big fellow made his appearance.

Just as soon as I cast there I received a strike, and I could tell that a large one was taking my line. When he had taken about twenty feet, I attempted to hook him, but failed. This fellow gave me entertainment for some time, as he kept striking, but I could never land him. I can say he outwitted me, but had it been daylight I am sure he would never have escaped. I had to give up now; so I joined my comrades in slumberland.

A Rush to Get Started

We all enjoyed several hours of good sleep, our beds arranged close to the big log fire that Ed kept roaring all night. About dawn the next morning Ed woke us and announced: "First call for breakfast." Of course, we were not easily induced to abdicate from our beds, but that delicious odor of rich, wholesome, hot breakfast reaching our nostrils instilled immediate energy into our bodies, and we lost no time in making our complete toilet and preparation for what proved another sumptuous meal.

Breakfast over, every one lost no time in assembling his own fishing outfit with a determination to clean L'Argent of all its "treasures." It really reminded me of a race among school boys out swimming, seeing who could be the first to the water. Some located on one side of the lake, and some on the other, and all began casting. For an hour not a fish was caught. However, we then heard a splashing of water and looked just in time to see Josephus land a nice one. Some of the boys did not give him time to re-bait and make another cast before they pounced down on his location and tried to root him out, but Joe had the goods on them, as right off he cast again, and out came the nicest fish caught on this trip, a large speckled perch.

Colonel Jimmie crept up to me on the opposite bank and whispered, "Let's get us a boat and do some real fishing out there in those good holes and cypress tops." I had beforehand come to this same conclusion, but a strike I had just received was detaining and interesting me. Making no catch, however, I responded at once. We obtained a boat, loaded in and cast out into the channel. We carefully fished all down

Part of our fishing party. Left to right: Ernest Goza, Vic Jehlen, Karey Collins, Joe Landreaux. Taken at L'Argent.

Whitehall Lake in Louisiana, three miles from Natchez, in full view from the Natchez bluffs. This is the lake where R. K. Holman landed the 5-pound 18-inch trout last season.

Look out! Joe Landreaux has his rifle bead on you, just as he has on the accounts at Natchez. Taken at the upper end of beautiful Lake St. John in Louisiana, close to Natchez.

the lake for nearly half a mile, never once getting a single strike; still, the water's surface was a working mass of feeding fish. You could actually see them striking everywhere, rising far above the water's surface. We could not understand why they would not take our bait, as up to this date, right in this lake, every fisherman was making excellent catches with live minnow bait.

Good Results at Lake Inlet

I espied a small canal or inlet to the lake just below us and readily figured that there should be trout passing in and out there, feeding. An old negro passing on the bank told us that the water was pretty muddy today, which was the only reason he had to offer for their not biting. We rowed over close to this canal and landed. Colonel Jimmie quickly got into action and beat me to the first cast. Instantly a huge trout struck powerfully hard and actually took the hook, but the Colonel lost him while bringing him in, as he was too large for the tackle.

I followed with a cast right into the inlet to the lake. An extra large trout also took mine, and I hooked him well, but, owing to too much excitement on my part and misjudging this fellow's size, I attempted to land him entirely too soon and brought him out in a bad place on the bank, allowing him to flounce and tangle my line in the brush. He never ceased his ferocious fight and succeeded in freeing himself from my hook, then tangled, and leaped fully four feet back into the water. Colonel Jimmie scolded me severely for losing him. Of course, I didn't remind the Colonel of what he had just done. I admit that, had I played that big old trout as I should have done before attempting to hook him, I am certain he would have been my prize.

In a few moments Colonel Jimmie began battling with another strike, and at the same time I received a strike from what I knew to be a nice trout. Busy with my own interests, I could not watch Colonel Jimmie on the opposite side of the canal and see him land his, but while I was waiting for mine to take the line I heard a proud exclamation: "Ah boy! What you think of this fellow? Ain't he a beaut?" I took the chance to glance over and saw a nice trout dangling safely on his line. He was about a 1-pounder.

Played the Second One Properly

Immediately my treasure took my line and made straight for the outlet into the lake. As there was no obstruction, I allowed him plenty of line, and you should have heard it sing. I properly judged this fellow's size and found he was just right to give me a nice scrap; so I took my time and when I caught him napping I hooked him and later landed him. It was either a twin brother or a twin sister to the one proceeding to Colonel Jimmie's lair.

By this time several other Natchez fishing parties, drifting in boats, began to anchor close around us, but all related the same story: "They are not biting. We haven't had a strike all morning."

Some of these gentlemen have the reputation of being the best fishermen in this territory. Jim Metcalfe, financier of Natchez, accompanied by Leslie Carpenter, multimillionaire of New York (the latter's father and mother located here), is one of these "never fails," but he was having "no luck." After we had landed several nice trout, they were watching us on a few catches, and we invited them to our "hole" for a try. Right off, Metcalfe landed a nice trout also, and you should have seen his countenance change. This was his last, however, for it really seemed that the fish cared only for our brand of fresh minnow bait. Metcalfe and Carpenter became disgusted and pulled out for home, as did all the other parties, leaving Colonel Jimmie and me to our fate.

Colonel Jimmie Douglass proudly exhibits a portion of our limited catch at L'Argent. On the left string is the dim outline of the prize speckled perch caught by Joe Landreaux. On the right are trout.

As we two had to join the others of our crowd and get back home by noon, our time now was limited, but even though they were striking slowly

Taken at L'Argent, just as Colonel Jimmie and Bob Holman abandoned their boat. Reading left to right: Ed Harris, chef; Bob Holman, Colonel Jimmie Douglass.

now (mid-day was at hand) we continued to have some real sport and succeeded in landing a nice string of trout. You will note in one of the accompanying pictures our arrival, just as we had abandoned our boat. Part of our catch is also exhibited. We learned that part of our party had departed for home about an hour earlier. They had caught a few nice ones also, but no trout. After our appetites and thirst had been somewhat satisfied, we promptly loaded up, and in about an hour were back in good old Natchez with our loved ones, having gone through a wonderful experience that will be long remembered by us all.

Incidentally, I want to record a few catches we made last season. Vic Jehlen,

I and my son motored to Whitehall Lake, three miles from Natchez. We caught several nice fellows, including a trout weighing five pounds and measuring eighteen inches. I have to claim credit for landing this fellow, as he was a prize here last year. You may talk about sport, but just succeed in landing one of these proportions, and you will agree with me that it is "real sport." I could run my fist and arm down his mouth without touching the inside anywhere.

Ernest Goza, Karey Collins and I spent a week-end at Junks Lake, and the first day caught 170 trout, various perch and bass. We had them cleaned there and sent them back to Natchez that night, three large buckets of dressed fish on ice, as fine a bunch of real game fish as you ever saw.

Again, several of us railroaders, with my 9-year-old son Robert, spent six hours on Turtle Lake, making as fine a catch of trout, bass and perch as anyone would want. Little Robert is an expert for a kid, and on that day he was the champion, catching the largest fellow, a big fine trout. Robert battled with this fellow all alone and landed him safely while the rest of us were up the lake out of sight.

Another time I was the only railroader in a party of four, and this time we spent the day on Kimball's Lake or Bayou. I want to tell you that the string of extra large white and speckled perch we all caught that day would actually take the blues out of any living sportsman. They were grand, not a small fellow caught, all ranging from one to two and a half pounds each.

Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions March 20:

Name	Occupation	Years of Service	Date of Retirement
Felix Robinson.....	Laborer, Water Valley Shops.....	34	11/30/22
Joseph J. Moran.....	Engineman, Chicago Terminal.....	40	12/31/22
William C. Kean.....	Caller, East St. Louis Shops.....	25	1/31/23
Burrel A. Boydston.....	Engineman, Mississippi Division.....	39	1/31/23
Sam C. Harvey.....	Hostler, McComb Shops.....	39	1/31/23
Harvey H. Cordier.....	Track Supervisor, Newton, Ill.....	25	2/28/23
Patrick Foley.....	Crossing Flagman, Pana, Ill.....	31	3/31/23
William F. Barton.....	Agent-Operator, Dalton City, Ill.....	38	3/31/23
Thomas Hughes.....	Section Foreman, Champaign, Ill.....	45	2/28/23
George S. Down.....	Machinist, Waterloo Shops.....	15	10/31/22

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
Patrick Travers.....	Section Foreman, Wisconsin Division.....	2/26/23	17 years
James M. Shires.....	Crossing Flagman, Tennessee Division.....	12/ 8/22	3 months
John McGiles.....	Laborer, Illinois Division.....	3/ 5/23	9 years
Frank G. Wagner.....	Blacksmith Foreman, Waterloo Shops.....	3/16/23	4 months
Thomas J. Mercer.....	Engineman, Tennessee Division.....	3/12/23	4 years
Tom Burton.....	Laborer, New Orleans Division.....	2/23/23	2 years

Our Railroad's Interest in New Orleans

*Growth of Nation's Second Port Is Indissolubly
Linked With That of the Illinois Central System*

By W. M. RHETT,
General Foreign Agent

THE present as well as the future welfare of the port of New Orleans and that of the Illinois Central System are so bound together and interdependent that we may well consider them as identical and be justified in taking to ourselves satisfaction and pride in the rapid development of this gateway to the sea, which has been so marked in the last few years.

Not only has our steamship service increased, since the termination of the World War, to foreign countries previously served, but in addition we are now blessed with steamship lines to the east coast of South America, the Orient and the west coast of the United States and Canada which did not previously exist.

Had to Develop New Tonnage

New Orleans has always been, as it is today, the most important Gulf port, furnishing the principal channel through which Southern products move to European countries, the large bulk consisting of cotton, cottonseed products and forest products, which originate in territory local to the Southern ports.

While the tonnage of these commodities

W. M. Rhett

was recognized as a most valuable asset and a nucleus for the development of need-

Illinois Central System's Stuyvesant docks, New Orleans, looking up the river

ed steamship service, it soon became evident that in addition other and more competitive business had to be obtained to make New Orleans a great port. A ship, properly loaded, has all available space filled with cargo and is down to her marks in the water. Owing to the bulky nature of cotton, lumber, etc, a full cargo of those commodities does not utilize the full dead weight capacity of the ship; heavier goods, such as iron, steel and bulk grain, loaded with the lighter articles, are necessary to accomplish the desired result and increase the earnings.

It is only occasionally that the world's markets will permit of our exporting iron and steel to Europe, and consequently we directed our attention to obtaining a share of the enormous movement of grain and grain products from this country in that direction. Unfortunately, with the exception of Texas and Oklahoma, the section of the South tributary to New Orleans does not produce grain in exportable quantities. Therefore, to obtain this badly needed commodity, it was necessary to build elevators at New Orleans for handling grain from cars to ships and to reach out into the excess grain producing territory north of the Ohio and west of the Mississippi rivers, making differential rates sufficiently low to compete successfully with the long established routes through the North Atlantic ports. All of this has been done.

This not only helps our steamship friends and gives us profitable southbound business

but tends to balance our traffic by making available at New Orleans and adjacent points empty cars in which to load northbound shipments of imports and Southern products.

Must Load Ships Both Ways

To enable ships to make rates on exports competitive with routes through other ports, it is necessary that they should, as far as possible, be loaded in both directions. This is a difficult undertaking, particularly so in connection with European trade, as our tonnage to Europe far exceeds what we receive in return. With the exception of potash from Germany and France, used in large quantities for fertilizer, there is not much tonnage of imports from Europe destined to Southern territory.

It therefore became necessary for us to compete via New Orleans for imports to territory on and north of the Ohio and west of the Mississippi rivers to avoid the necessity of having most ships come to New Orleans with water ballast. To this end we maintain a European traffic office in London, with sub-agencies at the principal European ports, to arrange proper sailings and ocean rates and solicit westbound traffic. The result has been gratifying, and the outlook for the future is encouraging, particularly so if and when Europe becomes normal.

The foregoing outlines in brief our problems with respect to European traffic and what is being done to solve them. We now come to consider what is of even greater

Looking down the river at Stuyvesant docks

importance to us, our trade with the West Indies, South and Central America, Mexico, the Orient and the west coast of the United States and Canada.

We receive from the West Indies, South and Central America and Mexico a much greater tonnage than we ship to those countries, consisting mainly of tropical fruits, sugar, coffee, nitrate of soda, sisal, ores, oil, mahogany and flaxseed. To avoid ship mileage southbound, our vigorous efforts are directed to supplying from the sections we best serve exports of food products and manufactured articles as against shipments through the North Atlantic ports originating to a considerable extent in the territory farther east. This gives us, as well as our steamship connections, a better tonnage balance.

Our System Handles Much Business

Our Oriental cargo through New Orleans and the Panama Canal is mostly westbound, which is balanced to some extent by the imports of burlaps from Calcutta, and this inequality will be difficult to overcome, as our country sends the Orientals more than we receive from them. Some of the ships, to avoid empty mileage, return from the Orient around the Horn, loading cargoes of coffee at Brazilian ports for New Orleans, and others take Oriental rice to Cuba and Porto Rico.

A large business, both westbound and eastbound, is handled by coastwise ships between New Orleans and the west coast of North America, and of this we handle a liberal and increasing share originating at or destined to interior points on or reached by our system. This service has been opened within the last two years and has assumed large proportions.

As an indication of the magnitude and importance of the water-borne traffic of the port of New Orleans, here is a list of the sailings which were allocated for April:

To The United Kingdom.....	17
France	5
Belgium	4
Germany	7
Italy	4
Scandinavia	3
Holland	5

AN ACTIVE SOLICITOR

Niles, Miss., is a prepay station on the Vicksburg division. It boasts of a fertility of soil similar to that claimed on the banks of the historic river of Egypt of that name. Fred Mehlinger has been ticket agent at Niles for many years, and he is always on the job when an interline ticket can be sold via our lines. He solicits all tickets

Fred Mehlinger

that he sells, and as a constructive argument he cites our superb passenger trains, good connections, on-time schedules and courteous employees. When he learns that travelers are leaving from his part of the country, he gets in touch with them, and our lines generally get the longest possible haul.

Notwithstanding the fact that Niles is only a prepay station, Mr. Mehlinger's record of interline tickets for the last six months is as follows: September 30, one ticket to Detroit, Mich., via Chicago; November 22, one ticket to Chicago; November 26, one ticket to Louisville, Ky.; December 9, four and one-half tickets to Kansas City, Mo., via St. Louis; February 12, three tickets to Detroit, Mich., via Chicago.

NEW TIME IN USE AT CHICAGO

The Illinois Central issued new timetable for Chicago suburban service to conform to daylight saving time, which became effective April 29. Under the new schedules there will be 398 week-day suburban trains instead of the former service of 379. The new service will also provide facilities for golfers who attend the country clubs. The number of assigned train crews was not increased, and only one additional engine crew was necessary to provide the new schedules. Patronage of the suburban lines continues to be in keeping with the improvement in the service. During March, 1923, 2,273,261 passengers were transported, nearly as many as were carried during the entire year of 1883 (forty years ago), when 2,376,466 passengers were handled by our suburban trains. The average week-day traffic in March of this year was 79,759; compared with week-day average in March a year ago, 73,669, this shows a daily average increase of 6,090 passengers.

His Train Was Blown Over by a Cyclone

Engineer Gives Us Details About Storm That Laid Waste to Pinson, Tenn., and Upset Freight Cars

By A. F. JOHNSON,

Engineer, Water Valley, Miss.

MARCH 20, 1923.—I have thought for the last few days I would write a line to our magazine, but I haven't been able because my right shoulder is bruised until I cannot use my right arm.

I have served fifteen years on the Mississippi division as fireman and engineer. Recently I had been firing out of Water Valley on the Water Valley district. When the heavy rush came on the Tennessee division, I asked permission to go to the Birmingham district and was granted permission to go. I worked there as an engineer until March 11.

On that date I was running engine No. 1750, leaving Jackson, Tenn., about 6:20 p. m. and arriving at Pinson, Tenn., at 7 p. m., a trip of about ten miles. We had headed in on the east passing track to meet the Seminole Limited, No. 10, and to let M. & O. No. 1 pass. After meeting first No. 10 and finding out from the engineer on M. & O. No. 1 that second No. 10 was one hour and forty minutes late, I got off the engine and walked back to the caboose, which was seventeen car lengths from the engine and about four car lengths from the station, to confer with the conductor about getting away from Pinson.

I went into the caboose and was talking to Conductor Melson and Flagman Iseral when a cyclone came along and turned the caboose and fourteen cars, mostly loads, over down an embankment about ten feet high. This was the first time I had ever heard of a windstorm that would turn a loaded car or a car of any kind over. The trucks of the caboose went over with the caboose and were up in the air on the caboose as if they were put on there with man labor.

I was in the caboose with the conductor and flagman when the storm came. The conductor and myself were in the rear of the caboose. I was holding the rear door closed when the hail began to hit the top of the caboose; then the window glass was all knocked out by tree tops, limbs and lumber which had come from destroyed houses, and next came the part of the storm that carried the caboose and fourteen of the seventeen cars upside down over the embankment.

The conductor and I were both knocked unconscious for a few moments. When I

came to my senses I was under the water box. It was across by back and had knocked the breath out of me. When I managed to get up I was unable to stand for a short time. Conductor Melson had got up and started for the station to get some help. He and I both thought Flagman Iseral was under the caboose, so I started to the engine to see what had happened up ahead. About then it began to rain, and it was so dark I could not see anything except when the lightning flashed. I found tree tops, lumber, furniture and almost everything imaginable on the main track. It looked somewhat like leaves drifted up against a bank where it had drifted up against the train.

When I did get to the engine, I found all the windows on the right side broken out and the fireman and brakeman, both negroes, over in the left side of the cab. I told them the flagman was under the caboose, but he spoke up and said: "Here I am." He was underneath the fireman and brakeman. He had been blow out of the caboose and about 150 yards up in the field and had walked back to the engine, which had the only lights that could be seen in Pinson. The dynamo on the engine was still humming away.

The conductor received a lick over his right kidney that injured him some; the flagman had a lick in his right side that put him in the hospital for a few days. I received a cut over the right eye about two inches long and a bruised shoulder, my right one. The fireman and brakeman were not injured.

The cyclone came along about 8:05 p. m., and we didn't get a train to Jackson until 1:30 a. m. As soon after it happened as possible, messengers were started for Jackson and Henderson in automobiles. They did not get far when they discovered the roads were impassable. They borrowed mules and started on muleback, but soon had to leave them and walk to get the news to Jackson.

Nineteen persons were killed at and near Pinson and seventy-five injured; some of them with broken arms and broken legs did not get treatment until the next afternoon. In one instance a family farm home and everything was blown away; the only thing left was a little hay with which the injured were covered for warmth. The place around Pinson looked very much as if two twisters had hit it instead of one.

Engineers Dread Grade-Crossing Accidents

*Mental Intoxication of Motor Car Drivers Leads
to Situations That Often Terminate Fatally*

By CHARLES J. BARNETT,

Locomotive Engineer, Memphis, Tenn.

*Written for the National Safety News
and the Illinois Central Magazine.*

I CAN say without hesitation for myself, and I believe the majority of engineers will agree with me, that the ever-present possibility of a fatal highway crossing accident is the most trying part of an engineer's daily experience. Almost every engineer has a feeling of dread that some time or other one of those tragic experiences will befall him. I have known engineers whose locomotives have struck automobiles, and one or more persons were killed. These men never entirely recover from such an experience. The horror of that momentary glimpse of white, upturned faces in the instant before the crash, they tell me, is something that time cannot eradicate.

With engine No. 1100, I have pulled the Illinois Central's Panama Limited between Memphis and Canton, Miss., since that train was put in service November 16, 1916. The district is 188 miles in length, and the Panama makes one intermediate stop—at Grenada, Miss., 100 miles south of Memphis. There are heavy gradients and many curves on this run, and the danger of crossing accidents, I believe, is greater than where the view of enginemen and drivers of vehicles is less obstructed.

Has Struck Only One Automobile

Only once in my thirty-odd years of experience as an engineer have I struck an automobile. Then the driver ran just beyond one line of rail, lost his head, killed his engine, and jumped, in the nick of time. The car was unoccupied when we struck it.

I have had many close shaves when accidents seemed inevitable. It is hard to explain by any system of human reasoning the erratic actions of many persons who drive automobiles. It seems to me that no man possessing the faculty of reason would flirt with abrupt and painful death as many automobilists do. It is no mark of high courage or daring to race with a fast train and beat it to a grade crossing by a scant second or two. I am inclined to think it is a proof of near-imbecility. The sorrowful part of it is that so frequently other persons than the driver are involved—innocent children very often, and women or aged and infirm persons, who, though blameless, are helpless.

Driving a car at a rapid pace on a

A Maker of Records

Engineer Charles J. Barnett has made a remarkable performance record with engine No. 1100. In six and one-half years of pulling the Panama Limited, she has traveled a distance equivalent to about seventeen times around the earth. With Engineer Barnett at the throttle, she has an unbroken "on time" record. Not once has this engine failed to make schedule time, or better. Her performance with regard to miles covered without repairs is also very unusual. On the Illinois Central System locomotives are given a complete overhauling according to a schedule based upon mileage. The usual mileage between overhauls for different classes is as follows: Switching engines, 50,000 miles; freight engines, 90,000 miles; passenger engines, 125,000 miles. No. 1100 was in service from April 16, 1920, to February 16, 1923, without general repairs, and during that period she covered 179,300 miles.

smooth-running road is mentally intoxicating to some automobile drivers. The desire to show off, to give some visible demonstration of his prowess as a skillful and intrepid driver, takes possession of that kind of person—and what could be more thrilling as an exhibition of reckless daredevilry than to race and beat a fast train? A lot of accidents are the results of such thinking, or absence of thinking. Of course, when the driver is demoralized by a few drinks of a real intoxicant, his mental processes are all wrong.

The Recklessness of Many Motorists

Not long ago I read a report of accidents involving trains and automobiles that occurred in the months of April, May and June, last year. In that period there were 923 accidents of a serious character in which 406 persons were killed outright and 1,262 persons were injured. The report disclosed the following almost incredible facts:

In thirty cases drivers of cars actually disregarded closed crossing gates.

In seventy-seven cases watchmen were either ignored or run down by motorists.

In twenty-six cases the crossings were safeguarded by both audible and visible signals which were in perfect working order.

Eighty-three cases involved crossings protected by audible signals alone.

Fourteen cases involved crossings protected by visible signals alone.

In twelve cases automobiles struck trains which were actually blocking the crossings.

There was no reason for any of these accidents other than gross carelessness on the part of the driver of the automobile.

The Panama Limited with its minimum equipment weighs about a million and a half pounds, or, say, 700 tons. In busy seasons there is extra equipment, but 700 tons is a minimum. Launch that tremendous projectile at a speed of fifty or sixty miles an hour, and the force of the blow on an object struck, such as an automobile for example, is frightful to think about. It should be apparent to any reasonable mind that so great a weight, moving at high speed, cannot be brought to a stop at short notice.

Hard to Judge Speed of Train

Not one man in a hundred can judge accurately the speed of a fast-running train by observing its approach. Almost invariably he will underestimate its pace. A train moving at the speed of a mile a minute travels one-eighth of a mile in seven and a half seconds—and seven and one-half seconds is a mighty brief interval. The feather-brained automobilist, thinking him-

self a speed demon, races up to a crossing at thirty-five or forty miles an hour, and often finds when he arrives that the train has somehow miraculously crossed the intervening distance and is upon him. Then he loses his head. Such a person is worse than helpless in a crisis. He will always do the things he should not do and leave undone the things he should do. Then the tragedy happens.

Highway grade crossings to be made fool-proof must be carried over or under the railway tracks, but that is not possible in the present generation. The cost of grade separation throughout the country would run into billions of dollars, and, even if the public were willing to let the railroads charge rates to earn a return upon such an unproductive investment, the actual physical task could not be accomplished for a good many years. Some other remedy must be found.

The trouble lies in the mistaken idea of responsibility. The public must learn to accept its own responsibility in this matter.

The number of automobiles is steadily increasing every year. With the return of prosperity, railway traffic is growing by leaps and bounds. During the past half year on the Illinois Central System freight and passenger trains have followed one an-

In the photograph No. 1100 is shown standing on the roundhouse track at Canton, Miss. The train crew of the Panama Limited stands just in front of her great 75-inch drive-wheels. They are, left to right: Engineer Barnett; M. B. Carter, fireman; James C. Turner, conductor; John C. Avery, flagman.

Fireman Carter, who ranks as an engineer, has fifteen years of service on the Illinois Central System to his credit. On one occasion the automatic firebox door control was broken as the train was leaving Memphis, and he was compelled to open and close the firebox door by hand on the 188-mile run. It was a big task to keep up steam pressure under these conditions, but the Panama Limited reached Canton "on time."

Conductor Turner is one of the best-known conductors in the South. On March 16, 1923, he rounded out his forty-first year of service on the Illinois Central System, with a record of never having received a reprimand for dereliction of duty.

Flagman Avery, who ranks as a conductor, has been in the employ of the Illinois Central System for twenty-one years.

other like strings of ants. With so many trains the danger of crossing the tracks must necessarily be increased. Judgment and caution are the only safeguards. The man who takes a gambler's chance with death has no one to blame but himself if death calls his bluff.

No Choice for the Engineer

From my cab window I often see two or three automobiles speeding up to a crossing, coming from different ways. Each driver knows what I am going to do. I am going straight ahead on two narrow lines of rails, four feet eight and one-half inches apart. I cannot turn aside, and I am not supposed to stop and permit them to pass. They all know that. But I have no way of knowing what any one of them is thinking, or what he intends to do. One may race right up to the end of the ties and stop. I suppose he does that to give me a thrill. If so, he succeeds. Another may decide to chance it and cross. Maybe he gets across by reason of the shortness of his wheelbase and the fact that he isn't carrying a spare tire. Sometimes they flit up from the fireman's side, and I don't see them until No. 1100's pilot is nosing past their taillight.

The public and the railroads must get together on some basis of mutual understanding. The highway crossing problem can be solved by co-operation. An unobstructed view should be had wherever practicable.

The public must learn to take precautions. It is a small matter to bring an automobile to a stop, or nearly so, and make sure that the way is clear. Making sure is the main thing. There is no exception to this rule. Danger lurks at every railway crossing!

I would like to see railway employees throughout the country co-operate in the prevention of accidents campaign this summer. There are around 2,000,000 railway employees. I dare say that, all together, they are personally acquainted with all the automobile drivers in the country—that is, there isn't a driver of an automobile who doesn't know, in some way or another, a railroader. No one knows the danger of grade crossings more thoroughly than railway employees. Let them preach precaution during the campaign this summer, and the effect would be fairly wonderful. I regard the approaching campaign (this is written in April) as a challenge to the railway employees of the country.

One of the things that engineers can and should do to prevent crossing accidents is to sound an additional warning after the proper road crossing signal has been given. This applies especially to where either engineman observes an automobile approach-

ing a crossing on a road running parallel to the track. We should not take it for granted that the automobilist has heard the customary signal.

ENDS STOCK KILLING

W. B. Horn

The Mississippi division has been conducting a steady campaign to prevent the killing of stock.

Section Foreman W. B. Horn of Coldwater, Miss., has taken a live interest in this campaign. By constant effort he has succeeded in practically eliminating the killing of stock on his section. The station grounds at Coldwater, however, presented a problem which for a time seemed beyond control, even though there was an ordi-

nance prohibiting stock from running at large. In the morning and almost every time he would come in from work, he would find more or less stock on the station grounds. He finally took matters in his own hands and began taking up all stock he found running at large. He furthermore talked to the owners of the cattle, explaining the situation to them.

He went before a meeting of the city authorities and, after explaining the situation to them in detail, demanded that they take some action to prevent stock from running at large within the city limits. That he is a good talker, as well as a first-class section foreman, is evidenced by the fact that before the board adjourned it passed an ordinance imposing a fine of \$5 for the first offense, with an additional \$5 for each subsequent offense, up to \$25.

This was about November 5, and since that time there has not been a single head of stock seen on the Coldwater station grounds. Mr. Horn believes that success in this work is simply a case of having a few men who will keep in touch with the men of affairs in the town in which they live, going to them in the right way to protect the company's interest, just as they would the interest of a private citizen. He believes that other foremen can accomplish the same results.

Where Uncle Sam Is Curing Tuberculosis

New Sanatorium at Dawson Springs, Ky., Proves a Boon to the Ex-Service Men Needing Treatment

ON Washington's birthday, this year, the fine modern sanatorium, erected by the national government at a cost of more than two and one-half million dollars, near Dawson Springs, Ky., celebrated the first anniversary of its formal opening. This sanatorium, which is one of a dozen or more similar institutions built since the great war for the care and cure of disabled and afflicted ex-service men, is considered one of the most admirably located and excellently-equipped hospitals in the United States. It treats only patients afflicted with tuberculosis. Other diseases are sometimes handled by the staff of specialists in various branches of medical and surgical science, but the primary cause of disability is always the disease mentioned.

Patients in the three stages of tuberculosis are admitted; these stages are technically termed the minimal, or first phase; moderately advanced, or secondary; advanced, or dangerous. The first two stages are generally curable, and cures sometimes are effected in advanced cases. All the most modern methods of treatment are utilized here, and no expense or detail of painstaking care is spared to restore the patient to health. The principal remedial agencies employed in the treatment of tuberculosis subjects are, of course, pure air, sunshine, proper dietary and recreation. Medicines are used sparingly and then only to correct pathological conditions growing out of or aside from the patient's initial malady.

Now Treating 375 Patients

Since the sanatorium was opened, a little more than a year ago, about 1,100 patients have been treated. The number being cared

Road to the sanatorium

for at present is 375, or three-fourths of the full capacity with the existing units. The different phases of the disease are treated in separate wards, strictly isolated from one another. There are buildings allotted to groups of patients in the three classifications. These are described as follows: For minimal subjects, there are ambulant wards A, C, D, F and G; for moderately advanced subjects, semi-ambulant wards B and E; for advanced cases; infirmaries 1, 2, 3 and 4.

Other buildings which have been completed in the sanatorium plan up to this time are the administration building containing general and staff offices, dispensary, etc., dining and mess hall, with kitchen in connection, patients' recreation hall, chapel, senior officers' quarters, junior officers' quarters, nurses' quarters, attendants' quarters, laundry, power plant and storehouses. A completely stocked and equipped pharmacy is maintained, as well as a commissary and supply departments for the various classes of activities. The electrical, heating and power plant is thoroughly modern in every particular, and the water sys-

General view of the Dawson Springs sanatorium

A ward in the Dawson Springs sanatorium

tem is also complete, supplying all units with hot and cold pure water and providing adequate fire protection.

Vocational education is one of the activities regularly carried on at the institution. Patients who are in the minor stages of their affliction may attend classes and receive training in most of the commercial and clerical professions. Courses are taught in bookkeeping, stenography, banking, rapid calculation and modern languages.

Complete Staff Is Maintained

Major O. S. Deathridge of the Medical Reserve Corps, U. S. A., is in charge of Dawson Springs sanatorium at present. Major Carl Osterhaus is chief executive officer, and Captain L. H. Flancher is chief of the medical service. A staff of fourteen physicians and specialists assists in diagnostic and clinical work, and the services of twenty-five trained nurses are required in the various units. There are also male attendants in all the buildings. The total number of those needed to operate the institution is about 250. These include also engineers, electricians, plumbers, carpenters, painters, clerks, typists, cooks, waiters, janitors, laundresses, chauffeurs and laborers. A corps of teachers is also required for the vocational training classes.

All the buildings are of fireproof construction, built of hollow tile and stucco, with concrete floors. A system of excellent gravel roads and driveways has been built over the sanatorium tract and to Dawson Springs, about three miles distant. The buildings are picturesquely grouped around a level central plaza with concrete-paved drives and green lawn dotted with flowerbeds, on the top of a high hill. This point, with an altitude of about 600 feet above sea level, is one of the highest elevations in this part of Kentucky. It commands an

inviting view of the surrounding countryside.

The tract which constitutes the government property surrounding the sanatorium includes 3,000 acres of hill and valley land. Most of this land is virgin forest. The uplands are well adapted to fruit growing. Practically all fruits native to the temperate zone thrive in this locality. Peaches grown in this part of Kentucky are considered as fine as any in the world, and the various kinds of berries and grapes do well. It is planned to plant orchards, vineyards and berry fields on the tract in time and also to develop dairying to some extent. No very extensive industrial enterprises will be planned, however, as the patients cared for in the institution are not such as may engage in physical exertion with impunity. Treatment of tuberculosis includes only mild exercise and a maximum of rest in the sunshine and pure air.

Location Ideal for the Purpose

There is no more ideal spot for the purpose required than the one chosen. Here is a mild climate with no extremes of temperature in winter or summer. The air is

The sanatorium's chapel

pure and stimulating, filled with life-giving ozone. The water is exceptionally good. In Dawson Springs, three miles away, there are found mineral waters which are said to be the equal of, if not superior to, those at any of the famous spas of this country and Europe. Many remarkable cures are mentioned in cases of those blood and alimentary disorders which respond favorably to mineral salts and thermal baths. More than a score of hotels offer accommodations for visitors who come in great numbers during the summer months to quaff the rejuvenating waters, and there are half a dozen modern and scientifically arranged bathhouses.

Dawson Springs is on the main line of the Illinois Central System from Louisville to Memphis and enjoys the finest of through and local passenger train service.

Work of construction is now under way for a new branch line between Dawson Springs and Central City, traversing a territory, hitherto without railway facilities, which is especially rich in coal deposits. As a consequence of this fact, Dawson Springs is experiencing a well-defined boom this spring. A spirit of optimism and confidence prevails.

The government owns a tract north of Dawson Springs comprising about 400 acres, underlaid with coal of the best quality, which will be opened up in the near future. At the sanatorium this year expenditures of about \$100,000 will be made on improvements already decided upon. Among new buildings will be a recreation hall for the official staff and personnel. Improvements and additions also will be made to the officers' quarters.

New Station Planned for Champaign, Ill.

Plans have been completed by the Illinois Central System for building a new passenger station and elevating tracks, for the separation of grade crossings adjacent thereto, at Champaign, Ill. Work of construction will probably begin in the near future, as soon as the citizens of Champaign give the necessary legal sanction for the proposed improvements.

The new station will be one of the most modern and attractive terminal structures owned by the Illinois Central System in cities of Champaign's size. It will be located on the present site, between Main Street and University Avenue, and will conform to existing street levels. The building will be two stories in height, 45 feet wide and 228 feet long. Construction will be of concrete, faced with standard brick, trimmed with cut stone. The roof will be of tile. Two smaller buildings north of the main structure will house baggage and express departments and follow the general architectural lines in design.

The first floor of the main building will contain general and special waiting rooms, ticket offices, smoking and toilet rooms. The second floor will be occupied by railway division offices. The passenger platform will be canopied from Chester Street to a point one block north of the station.

Three foot passages will be provided in the vicinity of Main Street and a fourth near University Avenue. The tracks of the Clinton division will be on a level with the platform. Subways will be constructed at Springfield Avenue and Chester Street crossings, with driveways and sidewalks on each side.

Troubles are like pigs; the more you feed them by thinking about them, the faster they grow; and they soon will make hogs of themselves and fill the whole trough and swaggle everything you put in it; so don't feed them. Stop thinking that kind of thoughts, and they'll not bother you any more.—*Sifted Through.*

Giving Farmers the Truth About Railroads

*The Real Agricultural Leaders Are Reasonable
and Willing to Hear Both Sides of the Question*

The following article on "Educating Farmers About Railway Matters" is reprinted from the March 10 issue of the Railway Age. The author of this article is a graduate of the Wisconsin Agricultural College. He has managed a fruit farm and served for five years as a county agricultural agent in Indiana. He has been a potato raiser in Minnesota and a fruit broker in Fargo, N. D., where he now lives, and is an expert in agricultural research. Therefore, his views on the relations between the farmers and the railroads—a matter of vital importance—should be of great interest to railway officers.

By CLARKE A. RICHARDS

IT was a community meeting of farmers. The night was hot—the sultry air made the wearied farmers sleepy; they had worked hard in the fields all day.

But a spirit of loyalty had brought them out at the call of their local farm bureau secretary. For they were promised the treat of hearing one of their state officers speak on the need of organization—of sticking together.

But he was not getting his message over. The combination of heat, humidity and weariness was making the handicap altogether too great. In desperation, he turned to the old chestnut, the old reliable, the never failing, the one subject that always got 100 per cent interest of any group of farmers—namely, the condemnation of the railway octopus.

Immediately at the mention of the magic word "railroad" the lethargy was broken; an electric effect took hold of his audience—they were tense, eager, expectant. He had their undivided attention.

None questioned his statements. He got his message over. His enthusiastic audience agreed with him in his plea, "We must stick together to fight our common enemy—the railroads."

A Thing Happening Everywhere

This is a scene that is being enacted every day of the year in hundreds of instances. Take one state, for example—Indiana. There are about 1,000 townships, most of which are organized as units of the farm bureau. Each of these will average at least two or three meetings per month at which the farmers' ever increasing problems are frankly discussed. Multiply this number by the forty-eight states, with the addition of numerous gatherings of com-

munity clubs, livestock clubs, promotional clubs, radical political clubs—and one will realize how often the farmers are receiving their impressions regarding the modern American railroads from statements proved time and time again to be without basis and unsupported by facts.

Why are there dozens of cases where farmers will listen to and believe the wildest tirade delivered by some imported speaker—giving him their undivided attention, never questioning his data, his statements, his statistics—never asking him his authority—never requiring proof?

The American farmer is fair-minded. The reason he accepts one side of the question is because he thinks it is the only side. It is presented to him time and again, always with the same condemnation of the acts and motives of the railroads and every-one connected with them.

Matter Improperly Prepared

When the farmer does finally receive a word regarding the other side, it is in some legal, forbidding, uninteresting looking document—usually the day or week after some fiery orator has warned him that the railroads are using some underhand methods for spreading their obnoxious propaganda through booklets—after he has been warned, exhorted and begged not to read their untrue tracts.

But the new farm community leader is a man of the highest intelligence, an open-minded citizen who will admit that there are two sides to every argument. When he accepts the responsibilities of his office in his community organization, he assumes the obligation to co-operate with manufacturers, business men, and all others with whom the farmer comes in contact and with whom problems affecting both may be worked out.

The job of the American railroads at the present time is to get in touch with these broad-minded men, to let them get some insight into the other side of the problem, and to then seek a common ground on which to work it out.

First, who are these men?

Second, how best to get in touch with them?

With Whom to Get in Contact

Of course, the county agricultural agent is the acknowledged leader of farmer activities in his county. He is placed there and maintained through the co-operation of the

local county farm bureau, the county, state, and federal governments, with local organizations of business men and boards of education frequently co-operating in the work.

These men are chosen for their work because of special qualifications, which include good, sound judgment under trying conditions and the ability to use tact.

Many railroads have recognized that these young men can give their problem unbiased consideration. Accordingly, the railroads are frequently sending them letters and literature regarding the latest developments. This is good practice, but it is just scratching the surface.

Because these young men are paid co-operatively by funds from federal, state, county, farm bureau, and frequently other sources, it is patent that they cannot actively take part in this controversy. But they are good men with whom to keep in touch and to keep informed.

But the local community farm bureau chairman, his unit secretary, and one or two of the most progressive members should by all means receive enlightenment regarding the present day railway difficulties.

Real Farm Leaders Are Reasonable

Such is equally true of the leaders in the local livestock associations, the fruit growers' clubs, the shipping organizations, the community clubs, the farmer sections of the chambers of commerce, and the many other non-religious and non-political farmer organizations. Political farmer organizations are hopeless, and their organizers have been threatened a ride out of the county on a rail by a representative of at least one farm bureau in Indiana. They are so biased in their views that they are best let alone. It is a waste of endeavor to try to reason with their leaders. They are government ownership advocates. The other farm organizations should not be confused with these political organizations; they are more sane, less radical, and very little is heard in their meetings in favor of government ownership or other fantastic socialistic ideas. Their movements are far less selfish than those of the political organizations and they believe in "live and let live."

In other words, even though a vast majority of the farmers in a community might be so biased and bitter on the subject that their convictions cannot be readily changed, yet one or two of the key men—the open-minded—those open to conviction, are of more influence and value than all the others combined. They are the safety valves.

These are the men to look to for fair treatment. Until the present time, but one side of the problem and proposition has been put up to them, and they are whole-

heartedly pushing it. They are condemning the railroads for selfish, grasping and unfair tactics. They are in earnest. They are demanding more and even more government regulation of railroads. They are men whose support carries weight.

In one case at least, literature which has just been sent to a farm bureau office by one of the largest eastern railroads entitled, "Facts—Brookhart and Shipstead Answered With Facts," caught the attention of one of the most loyal of farm bureau boosters. He liked the open way in which the railway executives made their frank avowal that they were to challenge every misrepresentation in the future. He, like every farmer, admired a fighter. He even began to question the advisability of further government restrictions.

When he started discussing the situation, he was given an opportunity to read excerpts from two editorials which had appeared in a railway trade journal some months ago. This man also talked the matter over with one or two of the local business men. He left for home with a grave question in his mind. He was not exactly sure that the local unit of the farm bureau had exactly a fair attitude on the railway question.

At last, the railway companies had got their message to this key man—but by what a long, roundabout, slow method!

Why not send it to him directly? He is not the type of a man who will destroy it without consideration. There are not enough key men in any community so that the mailing list will be so large that the expense will be prohibitive.

How to Get Up a Mailing List

How get this mailing list? Ever ask the farm bureau agent? He is usually a level-headed, fair-minded young fellow who realizes that a goodly lump of his pay is coming from federal sources, no small part of which the railroads are paying in taxes, and that he can therefore give ten minutes of his time to jotting down a few names and addresses—especially as long as the railway company is not going to mention the source from which the names were obtained.

And do your traveling railway agricultural agents keep their eyes open for the names of real farm leaders whose good-will means more than that of dozens of their less progressive neighbors—the kind who do the thinking for the whole community club? The railway district agricultural agents can get this information from local bankers and business men, and very frequently they can secure it from the local farm bureau officials.

The local officers of the livestock shipping

association have close relations with the railroads: Ever write to them or to the heavier shippers of fruits, potatoes, local farmer fertilizer agents, limestone agents, farmer elevator managers, etc.? These are the men who more frequently pay freight bills and to whom the increased cost of freight is brought home more clearly. Your local freight office can be of material assistance in sending you a list of these key men.

Creation of Doubt Important

An instance has been given of one case where a doubt has been engendered in the mind of one loyal farm bureau leader. Will not this clear thinker be inclined to ask the next fiery orator who is condemning the railroads in a wholesale manner—on what grounds he bases his assertions, from where he obtained his data, for proof of the accuracy of his statements and statistics? In other words, the 100 per cent attitude of agreement in the audience stands a chance of being undermined with just a little current of doubt. He is beginning to show that he feels that after all there may be two sides to the question. Multiply this case by the thousands which are possible when other key men on your new mailing lists are given the same opportunity of receiving facts—and while the present enmity of the organized farmer may not be changed to friendship, it will at least be changed to a more healthy attitude—to that of fair-mindedly wanting to know both sides of the question.

Twenty years ago the federal government at Washington sent out legal looking documents called Farmers' Bulletins. The state experiment stations also published rather dry, forbidding appearing circulars and reports.

Today these same bulletins are published with covers and contents illustrated so profusely that the pictures almost tell the story. The popularity of the bulletins has grown by leaps and bounds in these twenty years.

Why not profit by their example? Or why go to the government for the example? Witness the promotional literature put out by any railroad. Is it a dry-looking, unillustrated pamphlet, or is it crammed with the most suggestive illustrations, such as realistic photographs of fruit that fairly stand out from the page and invite one to partake freely?

Then why publish unillustrated, dry tracts on the railway problem for the consumption of the farmer—especially when he is being exhorted not to read any of your literature, which, he has probably been warned, has been designed to undermine the effectiveness of his organization and

other such rot? Why not make the covers of these attractive—the farmer is accustomed to attractive looking farm journals. And why not profusely illustrate the interior—the farmer is used to adequately illustrated contents in his farm papers.

But on the other hand, why show that your literature is patently designed for the one and only purpose of discussing the railway problem in relation to the farmer? Why not include this in some form of literature which the farmer will treasure and keep on hand at all times because it contains something of value to him as a reference?

Why not publish a booklet on the proper way to prepare potatoes for shipping? If you have ever had the pleasure of accompanying a state car-lot inspector of potatoes, you will see that the cars are carelessly loaded, inadequately protected against freezing at the bottom, etc. The large potato growers—invariably progressive farmers and key men in their community—will appreciate such a booklet, make good use of it, read it through, not only the portion in regard to preparation of potatoes for shipment, but also the other good, sound facts you can get home to them about your mutual interest in the railway problem, more common sense solutions, and less half-cocked radical politician ideas.

This booklet idea will work with large poultry raisers, fruit growers, members of livestock shipping associations, farmers desiring a storage bin for agricultural limestone, members of farmer elevators—in fact every one of the most progressive farm leaders in any community.

Finding the Common Ground

Service is the common ground on which the farmer and the railway man can meet. Eliminate the demagogue who is running up and down each of the states with his tirade against the railroads, and you will find that the farmer is fully as interested in talking over the proposition of how members of the local livestock shipping association can load their stock into the cars at 5 o'clock in the afternoon to catch the cannonball freight, No. 70, instead of having to load in the heat of midday to catch No. 18 in order to get to market in time for their hogs to get a good fill of corn and water early in the morning to eliminate the drift. Constructive plans to increase the local service and use of the railroads are what the farmer is interested in if the outsider will give him a chance to think for himself once more.

And maybe if a few concise facts are presented to the best thinkers among the farmers, they will start thinking for themselves once more—to the benefit of us all.

Legion Post Lists 70 Charter Members

*R. V. Fletcher, General Solicitor, Urges Those at
First Meeting to Live Up to Ideals of Organization*

THE duties of citizenship formed the theme for an after-dinner talk delivered by R. V. Fletcher, general solicitor, at the first regular meeting of Illinois Central Post, American Legion, in Chicago, Friday evening, April 6. Dinner was served in the dining room at Central Station. R. A. Trovillion, assistant general freight agent, a member of the post, shared honors with Judge Fletcher on the speaking program.

Judge Fletcher took for his text the preamble to the constitution of the American Legion, which pledges every Legionnaire to uphold and defend the Constitution of the United States, maintain law and order, and combat autocracy of both classes and masses.

"The young men who went through the experience of the war can do nothing more worth while for their country than to live up to the noble phrasing of their solemn pledge," Judge Fletcher declared. His talk was in part as follows:

A Promise of Good Citizenship

"This beautiful and impressive preamble points backward to your sacred memories of comradeship, and forward to the solemn

duties of good American citizenship. Looking backward, you can doubtless recall both pleasant and unpleasant experiences. But it seems to me, as time passes, the memories of such of your war experiences as now recall disagreeable sensations will become fainter and fainter, and those memories which give you pleasure will grow more and more vivid. As age accumulates there will come to each of you a growing sense of what were your real responsibilities in that great struggle which has been perhaps the most important epoch in all history. You will come more and more to dwell upon those recollections which add to your self-respect and your consciousness of having performed with credit the almost superhuman task which was laid upon you. You will come to realize that you have a right to be proud of your participation in a world movement that put an end to privilege, wherever it was entrenched, and by privilege I mean that false theory of values that makes a man's position in the political and social world depend upon the accident of birth rather than the inherent worthiness of the individual. That sort of privilege, if not entirely exterminated, has received a

Commander F. K. McCarty

Adjutant T. C. Kiernan

Here are the officers of the Illinois Central Post of the American Legion at Chicago. From left to right, they are: Chaplain, W. J. Kurtzman, office of general freight agent; commander, F. K. McCarty, office of general superintendent of transportation; finance officer, L. Baker, office of general superintendent of transportation; sergeant-at-arms, L. J. Kiernan, office of vice-president and general manager; vice-commander, V. W. Oie, office of terminal superintendent; adjutant, T. C. Kiernan, office of vice-president and general manager.

mortal wound, and will soon pass entirely from the affairs of men. To that extent you have contributed immensely toward making not only your own country, but the world, a better place in which to live.

"But what of the future? Here, we find, lies your greatest task, and your greatest opportunity. Again, we find in the words of your preamble the best guide for your conduct. If we have uprooted and destroyed that form of privilege that is based on the accident of fortune, we must see to it that we do not enthrone that form of privilege, baser and lower, if possible, than the other, which is grounded upon brute force and ignorance, a so-called rule of the masses, which is not rule by the masses at all, but rule by a class least qualified in character and intelligence to govern. The experiment now going on before our very eyes in Russia is a warning which all of us should heed. It is your duty to uphold the ideals and principles of democracy—a social order based on the principle of equality as determined not by birth or occupation or chance, but upon the real worth of the individual.

A Civilian Army to Defend the Right

"It is a comforting thing to remember that if all the participants in the great war enroll, as they should do, in the American Legion, we will have here a civilian army four million strong, of the very flower of our manhood, pledged to maintain law and order, uphold the Constitution and defend the right. Against this host the sinister forces of anarchy and lawlessness will struggle in vain.

"We must keep faith with the living. It is a dastardly thing to break faith with the living. But it a far more dastardly thing to break faith with the dead. On battle-

fields overseas, and in army camps at home, many of your comrades have died for the sacred cause of liberty and democracy. With these you must keep faith."

Illinois Central Post has been launched with seventy charter members, all employes of the Illinois Central at Chicago. One of the objects adopted at the first regular meeting was to have a bronze tablet giving the names of all Illinois Central employes who were in the military or naval service of the Government during the war placed conspicuously in the new passenger terminal to be erected in accordance with plans for the Chicago terminal improvement.

Post Hopes to Encourage Athletics

The post also hopes to work up interest in a proposed track and field meet to be held at some convenient point and participated in by representatives from all parts of the system. The post's athletic committee will work in behalf of the project.

The organization of the post was effected at a special meeting held March 23, at which the following officers were elected: Commander, F. K. McCarty, office of general superintendent of transportation; vice-commander, V. W. Oie, office of terminal superintendent; adjutant, T. C. Kiernan, office of vice-president and general manager; finance officer, L. Baker, office of general superintendent of transportation; chaplain, W. J. Kurtzman, office of general freight agent; sergeant-at-arms, L. J. Kiernan, office of vice-president and general manager. The following named were elected additional members of the executive committee: J. H. Lagerstrom, office of engineer, bridges and buildings; J. H. Crew, office of valuation engineer, and S. Hoge, Jr., office of comptroller.

Chief Clerk Owns a 200-Acre Plantation

Purebred Cattle and Hogs Are Featured by Mr. and Mrs. H. E. Wardlaw on Farm Near McComb, Miss.

HUGH E. WARDLAW, chief clerk in the office of E. C. Roddie, master mechanic for the Illinois Central System at McComb, Miss., is a young man who has demonstrated the proposition that it is possible to be a successful farmer and an excellent railway man at the same time. Mr. Wardlaw is considered one of the most efficient men in his department of service with the Illinois Central, and he is the owner and operator of a 200-acre plantation, four miles south of McComb, which is in every way a going and profitable venture.

Purebred cattle and hogs are the principal features which are being pushed by Mr. Wardlaw in connection with his farm development at the present time. He has now a fine dairy herd of forty-five cows and heifers, all high grade Jersey stock. Five of his cows are registered animals, and he owns a fine registered bull. He has at present fifteen head of purebred Duroc Jersey hogs as a nucleus for his contemplated herd.

In addition to the growing of fine stock, Mr. Wardlaw does general farming, raising crops of cotton, corn, sorghum cane and potatoes. About 115 acres of his plantation are in cultivation, the work of tilling and harvesting being done by his negro tenants, who work on shares. Six families live on the plantation, furnishing about fifteen hands during the working season, as the children are often as competent for cotton-picking as the grown-ups.

Money in Sale of Milk and Cream

A substantial addition to the plantation income is realized from the sale of milk and cream. Sixteen cows are being milked at this time, yielding around thirty gallons of milk daily. This product is all sold in McComb, bringing in an average of \$8 a

Mr. and Mrs. H. E. Wardlaw

day. A cream separator has recently been installed on the farm, and the excess skim milk will be fed to calves and pigs.

One of Mr. Wardlaw's pet ideas is the scientific use of fertilizers for combating the boll weevil cotton pest. He says that by properly enriching the soil and forcing the root growth of the young cotton plant in the early part of the season the farmer can easily double the yield per acre as compared with unfertilized planting. Mr. Wardlaw uses about 300 pounds of commercial fertilizer to the acre. One-third of this is the best grade of Chilean nitrate of soda, and the balance is acid phosphate. He expects this year to obtain a minimum yield of half a bale an acre from eighty acres of cotton.

Mr. Wardlaw was born at Winder, a small town near Athens, Ga., on January 3, 1891. He came to McComb with his parents when he was a boy about 11 years old. He has worked for the Illinois Central more than fourteen years, three years of that time in the supply department and the rest as accountant and chief clerk in the mechanical department.

Wife Active in Managing Farm

He married Miss Mae Addie Magee, a McComb girl, to whom he gives due credit for much of the success that has attended the plantation undertaking. Mrs. Wardlaw takes an active part in managing the farm. They have two beautiful children, a boy 4 years old and a girl 2 years old.

When the Wardlaws bought their land, several years ago, it was an unfenced, virgin tract of cut-over pine land. It is now fenced and cross-fenced, equipped with a modern house, barns, concrete-floored dairy,

Mr. Wardlaw's home near McComb, Miss.

granaries, blacksmith shop, commissary store, and four commodious tenant houses. Modern machinery, such as wood-cutting machines and improved agricultural implements, is a part of the plantation equipment, and a new electric power and lighting plant will be installed this year.

Sells Firewood at Good Profit

A considerable source of income from the plantation has been derived from the wood-cutting. The pine trees are felled and worked up into firewood, which is readily disposed of at McComb at a good profit. At the same time, the land thus cleared is brought into cultivation. Sufficient feed for all the livestock has always been raised on the farm, year by year. Plenty of hay is grown for winter feeding, and there is an abundance of pasturage for the stock in summer. Native grasses, such as carpet grass, Sudan and Bermuda grasses, grow luxuriantly in this part of the state.

Mr. Wardlaw conducts a commissary store on the plantation, where he keeps a complete stock of things required for the operation of the farm and for the use of his tenant hands. Groceries, work clothes, shoes and various supplies are sold to the negro families at wholesale prices, effecting a saving to them and bringing good returns to their employer in keeping them contented and loyal. The work is done on a plan of equal shares for both, it being to the interest of the tenant to perform his tasks faithfully and well, so that his own reward is greater.

This year, Mr. Wardlaw says, will see the plantation on a sound footing, practically free from debt and in a flourishing condition. He and Mrs. Wardlaw have accomplished this desirable result through teamwork, patience, energy, economy and good management. Both Mr. and Mrs. Wardlaw were farm-bred, and both love the life on a plantation.

Hugh Evins, Jr., Mattie Lowel and their collie dog at the Wardlaw plantation

Mr. Wardlaw says that farming and rail-roading as combined professions make an ideal business. During his working hours in the mechanical department, he takes no thought of the plantation. Then when his day's work is done and he goes home, he leaves the routine and problems of the railroad behind him. Thus he brings a fresh and interested mind to both branches of his vocation.

WEALTH

Money getting in itself is not wealth. It has been well called unhealthy when it impoverishes the mind and dries up the sources of the spiritual mind; when it extinguishes the sense of beauty, art and poetry; when it blunts the moral senses and confuses the distinction between right and wrong; when it stifles out religious impulses and blots out all thoughts of God from the soul.—MARGARET OLIVE JORDAN.

Censure and criticism never hurt anybody—if true, they show a man his weak points, and forewarn him against failure and trouble.—GLADSTONE.

A group of the Wardlaw Jerseys

He Has Seen 41 Years of Suburban Service

William Huggett, Oldest Trainman on Chicago Duty, Recalls the Days Before the World's Fair

THE spirit of friendship between the trainmen and the patrons of the suburban service at Chicago probably is not excelled on any other part of the Illinois Central System. Although there are thousands of persons riding on the suburban trains daily, the conductors, collectors and flagmen are remembered, often by their names, and are many times cheerfully greeted as they pass through the coaches. Most of the conductors have been in the suburban service many years, and their names and faces are familiar to the older Chicago commuters. The collectors have not been in the service so long, but they share their part of the friendship. And the flagmen, the new blood in the suburban service, some of whom have been running only a year or two, are rapidly getting into the swing of the spirit. One can see them holding many friendly conversations on the rear platforms.

Nearly every passenger who surrenders a ticket has some remark to make to the man who handles the punch, and the latter always returns the greeting with a smile and a courteous reply. Such a spirit is making the suburban service extremely popular. The patrons appear to feel that the trainmen have a personal interest in the company.

His Forty-First Year in Service

William Huggett is the oldest trainman in point of service in the suburban service. He is now rounding out his forty-first year with the company, having started to work August 31, 1882, as a flagman. Mr. Huggett has been a conductor since September 20, 1890.

Many changes have been brought about in the Chicago suburban service since Mr. Huggett first started to work, he says. The efficiency that is attained today is marvelous compared to that of his early days. And yet many of the same cars and engines that were used when he was a flagman are still in the service. True, he says, they have made many trips to the shops, and have come out entirely rebuilt, but they are the same pieces of equipment. Engines Nos. 1401 to 1430 were in use when he first started work, he says.

When the South Chicago branch was completed, Mr. Huggett was a member of the crew of the first train that made a trip on the line. He was a flagman then.

William Huggett

Charles Hurd was then the superintendent of the suburban passenger service.

During the days before the World's Fair at Chicago a branch line from the main line of the Illinois Central ran up 67th Street to the Oakwood Cemetery. There used to be a train called the funeral special that left Randolph Street station at 2 p. m. daily, he says. Some days there were two or three funerals on that train at one time, and on many trips it carried as many as twelve coaches. This service was discontinued soon after the fair.

Plenty of Sunday Picnics Then

Suburban trains ran on a Sunday schedule then, the same as they do now, Mr. Huggett says, but in his early days the Sunday traffic was much heavier than it is now. There were many more picnics then, and crowds used to jam every train that made a run. The favorite picnic ground was near Kensington.

Mr. Huggett's first salary was \$45 a month, he says, and he had to work Sundays the same as any other day. The flagman's job then was to take care of all

the lamps on the train, cut and couple the bell cords between the coaches and couple the engine in addition to the present-day flagman's duties. The lamps all burned oil then.

After he had been in the service a little more than three months, Mr. Huggett was made baggageman. He served in that capacity until July 1, 1885, when he was promoted to collector. Five years later he became a conductor.

Mr. Huggett's first run as a conductor was on what was then known as the market

train, which ran from Kensington to the Stock Yards and back to Harvey. Many persons bought their meats at the Stock Yards in those days, he says. On the return trip, the baggage car would be full of choice cuts that had been purchased, and the baggageman took care of the loading and unloading for the patrons.

Mr. Huggett feels personally responsible for every passenger on his train, and there are very few tickets that escape his punch. He has hundreds of friends among the older commuters.

Opportunities for Economy in Telegraphing

By G. J. BUNTING,

Comptroller, Illinois Central System

Many of those connected with the railroad having occasion to send Western Union or Postal telegrams under the franks assigned to various officials do not know that this is not free service, but under our contracts with the telegraph companies we furnish freight and passenger transportation in exchange for telegraph service. The railroad is obligated to pay the war tax on all messages, and furthermore, in case the contract allowance is exceeded, the railroad pays the telegraph companies in some cases the full tariff rates and in others one-half.

In arriving at the amount of these payments, all messages are counted at full day fast telegraph rates, regardless of the time of day or night when sent or whether fast service or otherwise is given.

The cost of this service has been increased recently, and for the year ending March 31 the railroad will be obliged to pay approximately \$30,000 to the telegraph companies and \$20,000 to the government war taxes), making total cash payments for the year \$50,000, in addition to the cost of transportation furnished. If telegrams are sent for the next year at the same rate as in recent months, the cost to the railroad in cash will be nearly \$100,000.

Many telegrams are sent under franks when the matter could just as well be handled by mail. Each person before sending a telegram should ask himself this question: "Is it really necessary to telegraph?"

In case it is necessary to telegraph, close attention should be given to the wording. Examination of the message actually sent shows that most of them are unnecessarily long. In many cases twelve or fifteen words were used where the meaning could have been clearly expressed in ten or less. Remember that the day fast telegraph rates are based on a 10-word minimum, and when possible, that limit should always be

observed. Longer communications can usually be shortened considerably with just a little care. English is a wonderful language—there are so many ways to express a given meaning. When telegraphing, *pick out the shortest way*, not the *longest*. Here are some examples showing messages actually sent, compared with shorter forms which would undoubtedly have served the same purpose:

Message read: "From your letter 20th file 12-7 assume you want contents car stored. Have heretofore ordered stored our warehouse twelve."

Censored version: "Assume you want car stored. Will store in warehouse twelve."—Saving, thirteen words.

Message read: "See my personal letter and wire quick if meeting November 1 Grand Central Station to discuss damaged news print paper will be held. I expect to attend and will see you Monday. Answer this morning."

Censored version: "Will meeting be held November 1 concerning damaged news print paper? If so will see you Monday."—Saving, eighteen words.

Some Telegraph Don'ts

Don't use "Advise quick," "Wire me soon as possible" or similar expressions. If you use the telegraph, the other party knows you are in a hurry.

Don't add the sender's address after his name. Each numeral and initial is counted as a word. The address may be shown in the lower left-hand corner marked "Information."

Don't show the title of the sender. Each initial and word must be paid for.

Don't show the file number. Each numeral and initial is counted as a word. Use identification symbol in preference.

Don't use words such as "You," "I," "and," as they are usually unnecessary.

Don't let the telegram go until you are satisfied no unnecessary words are included.

Don't send the message at all if the mail will do as well.

Don't write in numerals, as "17th" (three words) should be "Seventeenth."

What can you do best? Figure that out. Search yourself for the answer. Then start developing that natural ability. Live it; eat it; sleep it; work it; play it, and you'll grow more and more skillful at it. That's just nine-tenths of the "luck" of self-made men.—JAKE SCHAEFER, *former world's billiard champion*.

Points Out the Abuse of Our Railroads

Los Angeles Banker Explains Situation in Simple Language in "The ABC's of Business"

The following is a chapter on "The Abuse of Our Railroads" from "The ABC's of Business," by Henry S. McKee, Los Angeles banker. Published by permission of The Macmillan Company. Copyrighted, 1922, by The Macmillan Company; all rights reserved.

By HENRY S. MCKEE

NOTHING could better serve to demonstrate the blindness of American business than its treatment of its own railway system. This system, perhaps two hundred thousand miles of line, with cars and locomotives, buildings, city terminals, and other appurtenances for its convenient use, cost and is valued at about twenty billion dollars. Its worth to us is many times that sum, in the sense that if we were suddenly deprived of it nothing else would have any value worth mentioning. If it should cease operating, the two or three million people who are living on a barren rock known as New York City would either perish or flee for their lives (on foot, for they could even get no gasoline) to the farms of our western states where their food is produced. Every other large city would also become a mass of empty buildings. Every industry would cease for lack of something which is now being hauled to it regularly by railroad. The farms would perish next for lack of clothing, tools, machinery, and supplies of city origin, now coming regularly by railroad. There would be a glut of food in one state and a famine in the next one.

Mistakes Made in Early Days

The business of building and managing these railroads was undertaken and is carried on by about two million men. A good many years ago, when the railway business was young and inexperienced, those men made the customary mistakes of ignorance, as all the rest of us regularly do. They abused the great power that had fallen into their hands. They tyrannized over the rest of us when we traveled or shipped goods. They unjustly discriminated by overcharging some of us and favoring others, and they seemed at one time to be making too much money, which displeased us because it was they who were getting it instead of ourselves. As to this latter objection, we did not seem to realize that the only reason they put their time and material into the building of roads was because there was money in doing it and that if we forbade

the profits no one would build more roads. Even the Government learned during the late war that the way to get a needed thing done quickly was to allow a profit in it. No one will work long at an unprofitable occupation. It is against public policy that anyone should. These observations are just matters of industrial evolution and economic law.

But for these various reasons we, as a nation, began to hate our railroads and proceeded to punish them, not merely by just and wholesome regulation, but also intemperately, in pure anger, like a child kicking its toys. There was nothing we needed so much as more railroads and better ones, but we so terrified the builders that progress in building was greatly impeded; in fact, it practically ceased. We also starved the roads we had, by excessive regulation at the hands of numerous commissioners of limited vision. We acted toward our railroads as though they were public enemies, merely intruding to exasperate and rob us, instead of realizing that they were our own children.

Errors in Treatment of Railroads

In spite of all this mistreatment, they grew up and today are fairly near a complete system in size, but horribly emaciated. We need better transportation service from them more than we need anything from anybody, and yet, until we recently enacted the new railway law, we had almost ruined them. We nearly lost the war because they broke down. They needed money to buy equipment and rails. We refused to lend it to them by buying bonds and stocks from them, because their credit was not good. We kept them poor and their credit bad by denying them enough earnings, and then refused to lend them the needed capital because they were so poor, and then abused them because, being too poor to borrow the money necessary to equip themselves properly, they were unable to move things as fast as we needed them moved.

This is also the approximate history of the method we have employed in providing ourselves with other indispensable services, such as telephones and street cars. In all these services the vitally important thing to American business is that the service shall be dependable, abundant, and quick. If it can be cheap, too, so much the better, but any cheapening of it that at all seriously impairs its speed and reliability will cost American business in indirect ways,

many times the amount so saved. To impair our transportation service is merely to close the throttle upon all industry.

Repairing the Industrial Plant

Probably we pay to the railroads in a year, for transportation, a total of five or six billion dollars, in the form of pieces of paper, spoken of as money. The only use they can make of this paper is to pass it back to us again, directly or indirectly, in exchange for things a railroad needs. In short, then, out of the forty or fifty billion dollars' worth of things which we produce every year (the railroads helping us to do it by doing all the hauling) we turn over about one-tenth, or say five billion dollars' worth, to the people who built and who operate the railroads, for them to use in moving the trains and keeping up the road, and to live on while doing so. It is just possible that, now we are preparing, under the new rate schedules, to give them more things than heretofore, they will be able after a while to run more and faster and more dependable trains, handling more goods in less time, and in consequence of this our entire industrial plant may find itself turning over so much more smoothly

and rapidly that its total annual output of goods may increase by even far more than we have now agreed to give the railroads. We are thus very wisely repairing our nation's entire industrial plant at its weakest point.

We violated an economic law when we refused the railroads earnings enough to keep themselves in good repair and good credit; rich enough to build into, and thus develop, new territory and provide themselves with enough cars and engines to transport speedily the freight and passengers of American business. By our past fifty years of railway policy we did to ourselves just about what, for illustration, a very vast factory, using an interior tramway, would have done to itself by destroying its own tramway just to spite the tramway boss. Our slogan has been millions for chewing gum and joy rides and vanities, but not one cent for transportation. We could have spared the money; for so high an authority as the Secretary of the Treasury has recently estimated that we are now spending for luxuries in one year a sum equal to about the total value of our entire railway system.

Kentucky Division Loses a Helpful Spirit

A pall of sorrow spread over the Kentucky division Sunday, March 4, when the news was carried from the hospital at Paducah of the death of "Daddy" Hughes, as he was known by all who knew him.

"Daddy" was one of those amiable characters who cleaned up ragged edges—he took pleasure in doing what the "other fellow" didn't want to do and would put his whole enthusiasm into doing the small and seemingly insignificant jobs. He will be sadly missed when locks won't work, or doors won't close, or panes are out!

Mr. and Mrs. W. F. Hughes

William F. Hughes was born February 2, 1857, in Virginia, but when he was 3 years old his parents moved to Grayson County, Kentucky, where he remained during his years in school. In 1878 he married a Grayson County girl, Miss Fannie Stinson.

In 1879, at the age of 22, he entered the service of the Illinois Central with a bridge gang. He remained in service some ten years, when he left to do private work.

He returned to the Illinois Central in May, 1897, as a carpenter with the gang at Paducah, Ky., and in that capacity he remained until his recent death. In 1903 he moved his family from Grayson County to Central City, Ky., where he purchased a nice home. He had since made a trip each week from Paducah to spend the week-end with his family.

Besides his widow, he is survived by three sons and one daughter: J. A., who is agent of this company at Marion, Ky.; C. D. and Edward T., in business at Central City; Mrs. Effie Wallace, Central City. Many flowers spoke in loving memory of him at the funeral at Central City.—M. W.

Our Pay Checks Are Signed Ten at a Time

*Machine in Use in Paymaster's Office Greatly
Simplifies Task That Comes Once a Month*

OUR pay checks are countersigned by a machine in the paymaster's office at Chicago that writes the counter signature on ten checks at one time. The capacity of the machine depends entirely upon the speed of the operator in writing his or her name. Six thousand five hundred is the largest number of checks countersigned with this machine in one hour. The average number is about 5,000 an hour.

In the days before the Signagraph machine was installed in the paymaster's office, an average of about 600 checks would be countersigned in an hour by hand. On a test, one person once countersigned 1,200 checks in one hour, but such speed could not be continued for any length of time, H. D. Warner, paymaster, says.

The pay checks come in sheets of five each. The name and amount is written on each check by hand in the office of the auditor of disbursements, and then the sheets containing five checks each are sent to the paymaster's office for the countersignatures.

It requires four persons for the operation of the Signagraph machine—one feeds two sheets into the machine at a time, another writes the countersignatures and two tear the checks apart and keep them in numerical order.

In determining the efficiency of the machine, it is necessary to take into account the fact that four persons are required to operate it. If each was signing by hand, the average total number of checks signed each hour would be about 2,400. The average number countersigned by the machine is more than twice that.

Mr. Warner says that not every one is able to write the countersignatures with the Signagraph. It requires a free and open hand. The initials and name are written without the pens' being lifted from the checks.

H. D. Warner, G. C. Lyon, Mrs. M. Mangerson, Miss Bessie Allen and Miss Minnie Anderson are the ones who countersign the pay checks. So many are issued each month that it is too trying on one person

Miss Minnie Anderson and Miss Bessie Allen are shown here operating the Signagraph machine in the paymaster's office. Miss Anderson is writing the countersignature with the dummy pen at the right, and Miss Allen is feeding the sheets of checks into the machine at the left.

to sign them all. Miss Anderson seems to have more endurance than any of the rest, he says, but Miss Allen is running her a close second. Mr. Warner says that his own handwriting is a little too cramped to operate the machine efficiently.

Mr. Lyon, chief clerk to Mr. Warner, holds the honor of having signed by hand

the largest number of checks in one hour. The Signagraph machine was first used in the paymaster's office about eight years ago.

It required a little more than thirteen hours to countersign the 67,950 pay checks that were issued April 1. If that number of checks had been signed by hand, it would have required more than 113 hours of work.

Business Man Pleads for the Railroads

As indicating the attitude of the more thoughtful business men of the country toward the railroads, here is the opinion of Joseph Ewing, general sales manager for Phillips-Jones Corporation, who took direct issue with the National Council of Traveling Salesmen's Associations, in reply to a letter from William G. Adams, managing director of the organization, soliciting him as an associate member of the council. Mr. Ewing came out in a flat-footed statement charging that efforts aimed to lower rail fares for salesmen is a step backward, and in line to bring about retarding of industrial and commercial rehabilitation.

All trade and business associations, Mr. Ewing said, should strive to aid the railroads, rather than curtail them in their efforts to become safely organized for the benefits of commerce, emphasizing that the National Council's endeavors, in his opinion, have been along the lines of misguided interference.

The railroads as a unit, he continued, are the largest employers of labor, and any trend toward curtailment of their income will mean that prosperity for the country at large will be retarded in direct or greater ratio.

The National Council, Mr. Ewing declared, could better serve the salesmen and country at large by striving to lower the wholesale prices of the lines the salesmen carry, for with such an adjustment, lower rail fares and rates would follow automatically.

Senators and Congressmen, in his opinion, should keep their fingers out of the affairs of business in general, and especially the railroads; and organized efforts inviting them to interfere means that no one will benefit and many will suffer.

"We employ more than 300 salesmen," Mr. Ewing said, "which in our line is a large figure, but any reduction in fares would not be reflected in the wholesale prices of our product. I mean this absolutely; not one penny's reduction, through reduced rail rates and the consequent saving, will be possible in our wholesale quotations.

"The saving is only a minimum one, in comparison with the volume of business booked by salesmen, and the benefits will be for those travelers who travel on a commission basis. The hurt that is done the railroads will be great, and regrettable for the reasons outlined."

Mr. Ewing's letter to Mr. Adams follows in full:

"Your bulletin of February 23, with application blank for associate membership, has just been received.

"Frankly, it is a miracle to my mind that men can be so constituted as to believe that interference in the earning power of an organization for their own especial benefit can bring prosperity to anyone. The railroads are the backbone of this great land, and unless the railroads are allowed to go ahead and run their own business, there is not a traveling salesman in the United States who will have a job worth considering.

"If the National Council of Traveling Salesmen's Associations would think more about bringing down the prices of the products which these traveling salesmen handle, the railroads would automatically be in a position to bring down their own costs.

"You cannot take a constructive step backward, and it strikes me that your whole program has been one of misguided interference. You will do a great deal better if you will get the Senators and Congressmen of the United States to keep their fingers out of the railroads for five years and let them get safely organized for the benefits of commerce than to help the many cooks spoil the porridge."

EXTRA LABOR COUNTS MOST

The men who have achieved success are the men who have worked, read, thought more than was absolutely necessary, who have not been content with knowledge sufficient for the present need, but who have sought additional knowledge and stored it away for the emergency reserve. It is the superfluous labor that equips a man for everything that counts most in life.—CUSHMAN K. DAVIS.

Heart Disease Fatal to Stuyvesant Fish

*Former Illinois Central President Stricken When
Entering National Park Bank, New York City*

THE sudden death in New York City, on April 11 last, of Stuyvesant Fish marked the passing of the only living ex-president of the Illinois Central System. Mr. Fish was executive head of this railroad from May 18, 1887, until November 7, 1906. His death was due to heart disease, the fatal attack occurring without warning as he entered the National Park Bank to attend a directors' meeting. Mr. Fish was chatting with Richard Delafield, chairman of the board of directors, as the two entered the building, when he was stricken and died almost instantly. He would have been 72 years of age if he had lived until June 24 next.

Mr. Fish became associated with the Illinois Central Railroad as a clerk in the New York office in 1871. He became secretary to the president of the road the following year. On March 16, 1877, he was elected a member of the board of directors and also treasurer and agent for the purchasing committee of the New Orleans, Jackson & Great Northern Railroad. He became secretary of the Chicago, St. Louis & New Orleans Railroad the same year and served in that capacity until 1882, when he was made vice-president of the Illinois Central System, which position he held until his election to the presidency of the road in 1887.

A Descendant of Noted Men

Mr. Fish was a lineal descendant of Peter Stuyvesant, one of the famous Dutch governors of New Amsterdam. Peter Stuyvesant was immortalized by Washington Irving as "Peter the Headstrong," in *Diedrich Knickerbocker's* droll and entertaining "History of New York." Hamilton Fish, secretary of state in President Grant's cabinet and later on governor of New York state, was Stuyvesant Fish's father.

Although Mr. Fish was of distinguished ancestry and an heir to great wealth, as a young man he was given stern training in the basic fundamentals of earning his own living. He was given an allowance of \$50 a month, and it is said that he walked daily to his work in the railway office from the family home at Garrison-on-the-Hudson, a distance of a mile and a quarter.

At the age of 25 he married Miss Marion Graves Anthon of New York, who was afterward long the leader of New York society. The magnificent ballroom in the Fish home on East 78th Street, New York City, was designed by Stanford White and was the

scene of many brilliant social affairs. Mr. Fish's own tastes were quiet, but he gave his wife every encouragement in the social life through which she maintained a sway over the exclusive circles of the city's socially elect.

Mr. Fish had a romantic career as a financier and railway magnate. He rose quickly in railway work. It is said that, during his time as head of the Illinois Central System, the greatest period of railway development so far known in this country was under way in the Middle West and that he contributed in no small measure to the permanent progress and prestige of the Illinois Central. Aside from his connection with this road, he held executive positions with other railroads at various times. He was president of the American Railway Association at one time and in his later life had wide affiliations with banking and insurance interests. He was always respected for his ability as a financier.

Left Illinois Central System in 1906

In 1906 Mr. Fish retired from the executive councils of the Illinois Central System and removed to New York, after having re-

Stuyvesant Fish

sided for nineteen years in Chicago. He was succeeded as president of this road by James T. Harahan, now deceased. Chicago railway officials pay a tribute of respect to Mr. Fish and unite in saying that he did a great deal toward advancing the development of transportation in the Mississippi Valley. Hale Holden, president of the Chicago, Burlington & Quincy Railroad, said: "He was one of the prominent figures in the history of American railroads." Similar sentiments were expressed by H. E. Byram, president of the Chicago, Milwaukee & St. Paul Railroad, and H. E. R. Wood, treasurer of the Chicago & Alton, himself a railway man for the last fifty years.

Jacob M. Dickinson, former secretary of war, was intimately acquainted with Mr. Fish for many years. "He was a notable figure," Mr. Dickinson said. "He sprang from a long line of distinguished men. His

grandfather was a colonel under General Washington in the Revolutionary War and was wounded at the battle of Yorktown. His greatest hobby, as I remember him, was flowers. He loved rare and beautiful flowers, and he gave much personal attention to the magnificent gardens he maintained on his country estates."

Mr. Fish owned a beautiful estate at Newport, "Crossways," which he recently sold. He also owned the family country place at Garrison-on-the-Hudson, across the river from West Point, and a palatial town house in the city. He was a trustee of the Mutual Life Insurance Company, the New York Life Insurance and Trust Company, a vice-president of the National Park Bank and a director in many other companies of a financial character. He remained active in the management of his affairs and regularly went to his office at 52 Wall Street up to the time of his death.

New Station Master Once Saved a Train

An Illinois Central hero is Edward E. O'Connor, who was appointed night station master at Grand Central Station, Memphis, Tenn., February 16. He served as night station master at the old Poplar Avenue Station for twelve years before Grand Central Station was erected. He entered the service July 1, 1902, as night station master at Poplar Avenue Station and continued his duties there until he was appointed supervisor of mails October 1, 1914, at the then completed Grand Central Station. He continued in this last service until his recent promotion.

Just a short time before he was to leave his post of duty at the old Poplar Avenue Station on the morning of October 6, 1905, he says that he received a warning over the wire that an engine had run wild from the roundhouse at Memphis and was running wide open on the north-bound track toward the station.

No. 2 was standing on the north-bound track at the station, crowded with passengers and in the direct path of the on-rushing wild engine.

The yardmaster at Iowa Street was the one who informed Mr. O'Connor of the wild engine, and Mr. O'Connor left the yardmaster talking as soon as he had the situation clearly in mind. He dropped the telephone and ran outside. The wild engine, one of the old 300 class, he says, had reached the foot of Beale Street hill and was running backward toward him at full speed.

About 300 feet from Mr. O'Connor there

E. E. O'Connor

was a cut-over from the north-bound to the south-bound track. He ran to it and threw the switch, and the wild engine thundered by him and across the south-bound track. Mr. O'Connor threw the switch back and walked to the station as if nothing had happened—he considered the act merely as one of his duties, he says.

The wild engine was stopped by a switching crew in the north yard. It had only a wood fire, and the steam gave out when it reached that point.

Mr. O'Connor is a member of an old family of Memphis. He was born and reared there. He served in the 4th Tennessee Infantry during the war with Spain, with six months of actual service in Cuba. He returned to his home in Memphis after he was mustered out, May 6, 1899, at Savannah, Ga.

Set your children an example of safety. If you expect them to come home from school alive and uninjured through the hazards of the streets, set them an example. It's up to you to be a safe daddy and set the pace. —CHARLES W. PRICE, formerly General Manager of the National Safety Council.

Twenty-Nine Years on Indiana Division

*"Charley" Ackerman Relates Experiences With
Infrequent Pay Days and Hazardous Work*

THE old-time patrons and employees of the Effingham-Indianapolis district of the Indiana division remember Conductor Charles Ackerman—"Charley," as he is affectionately known. Mr. Ackerman, after spending twenty-nine years of conscientious service on this division, retired and is now located at Effingham, but the railroad still holds its fascination for him.

"In 1884 I was employed as brakeman and line repairman on this division, then known as the Indiana and Illinois Southern Railroad," he said, in relating his experiences. "Train service consisted of two trains running between Riverton and Switz City, Ind., a distance of about forty miles. One of these was a mixed train, handling both freight and passengers, and the other was a coal train, depending on a small dinky engine for motive power, which hauled coal between Cass, Ind., and Switz City.

"My first trip was on the mixed train with a man by the name of Farnsworth, conductor, and Ed Hail, engineer, and we were doubling back to Dugger, Ind., for a train of coal from the old Dugger mine. Just outside of Switz City we crashed into the dinky engine, which was siphoning water out of a mudhole and had failed to protect the train by flagging. The impact hurled both engines from the track, and the shock of the collision flung me headlong from the rear of the car of coal I was riding, piling me amid the 'black diamonds' in the middle of the car. After inventory was taken of the crew, it was discovered that no one was seriously injured, although Farnsworth suffered a few slight cuts about his face and head. Hail had jumped from the cab before the engine collided and was uninjured.

Infrequent Paydays

"Mr. Lyons of Chicago was president of the railroad at that time, and P. H. Blue of Sullivan, Ind., was general manager. Paydays were seldom, and when those long-expected days rolled around we were often compelled to accept orders for provisions on the company store at Dugger instead of receiving cash for our services. My salary was \$45 a month, and sometimes the company was six months behind with its payroll. Whenever I was in need of money, it was necessary for me to lay off and go to the main office, where they would usually give me about two months' pay. Some years later William H. Alley of Chi-

Charles Ackerman

cago purchased the controlling interest in the railroad, after the old company had fallen into arrears with its payroll, and he paid the laborers off at 75 cents on the dollar.

"Railroading in those days was a trying and hazardous undertaking. We would leave home on our trip with not the least knowledge of when we would return, often remaining out for the entire week on account of washouts or high water. Our run was known as the tri-weekly, but I could never figure out whether that meant three times a week or try to be weekly.

"One incident is quite vivid in my memory of a trip to Switz City which was halted by the stringers of the bridge spanning Beehunter Creek having been washed away. The train crew, comprising Ed Hail as engineer and myself as conductor, along with the brakeman, stripped down to the skin and waded into the chilly water, floating back the stringers and placing them in their old positions in the bridge.

Lost a Train

"On another occasion we left Sullivan one afternoon, bound for Switz City, and went into the ditch, losing all of our train. We arrived in Switz City the following morning with nothing but the engine.

"In my estimation keeping the telegraph

lines in good condition in those days before substantial poles could be secured was almost as perilous and risky an enterprise as the more apparent one of railroading. The Wabash River with its early spring floods and grinding ice cakes caused me considerable worry in my position as line repairman. Ordinary poles, I soon discovered, would not serve for terminals to support the long stretch of wire across the river, because if the wire sagged low the floating ice cakes would cut it like a knife and if the wire was prevented from sagging during high waters the passing steamboats would tear it down. One time nine efforts were required before I could secure it again after the ice had snapped it off. Finally I hit upon a plan of using a tall tree on the west bank of the river for a terminal on that side and a similar one on the opposite bank, and this proved satisfactory, although it was necessary for the section men to cut down a tree for me to place there, as none grew near enough that was of sufficient height.

"In 1896, to keep up with the march of progress, the road was widened from narrow to standard gauge between Switz City and Palestine, Ill. I was conductor on the first standard train between these points, handling the freight, express, mail and pas-

senger business all by myself. Despite this improvement there was yet much to be desired. The rails were light, being classed as only 30-pound rail, and the ties, which had been of ample length for the narrow gauge track, were pitifully short for the new standard gauge of four feet eight and one-half inches. Practically all the depots from one end of the line to the other were renovated box cars, and frequently we used box cars for cabooses. I have seen passengers raise their umbrellas to prevent the rain from giving them a soaking in some of the coaches we used in those days.

"Another incident which happened some time after the widening of the gauge also is fresh in my memory. We left Effingham at 4:10 o'clock in the morning and about a mile outside of the city one of the coaches, containing thirteen passengers, struck a broken rail, causing derailment of the coach, which made a complete revolution down the embankment without killing a passenger although the coach was torn to pieces. Edgar Vane (present trainmaster at Palestine) was the brakeman on this train, and he carried the news back to Effingham, whereupon the Pennsylvania Railroad sent an engine and car to the scene of the wreck to carry those passengers back to the city who wished to return."

Paper Saving in Precept and in Practice

The following suggestion from an Iowa division employe came to the magazine most fittingly typewritten upon the back of a printed form.

The benefits derived from the practice of saving paper are manifold. The principal reason is to save money for your employer by the judicious use of stationery entrusted to you. By so doing you will find an added interest in your work and a personal satisfaction in knowing that you are doing a maximum amount of work with the minimum of expenditure.

In every office there are four or five large calendars which can be utilized if one will take a few minutes to cut them up into small squares when the old month is torn off. These can be used for scratch pads or message clips, thereby saving for other uses the regular printed message blank, Form 590.

Several months ago I copied a message for Mr. Williams en route to Waterloo. After I copied it I debated the advisability of delivering it, as the reverse side of the blank was a portion of an old Union Pacific calendar. It conveyed the information he

was looking for, and as I received no reprimand, I still continue the practice.

Envelopes can be used more than once if care is exercised in opening them. The old address is soon effaced with a little energy and an eraser.

Envelopes that can no longer be used for forwarding correspondence can be made to serve beyond their allotted span, as they are easily converted into scratch paper with a paperknife.

The backs of canceled tariffs, circulars and other forms too numerous to mention that have become obsolete can be utilized as outlined above.

The requests for annual passes were sent out from the superintendent's office recently in unsealed envelopes. I should like to see a check of returned requests to see how many were returned in their original containers. I reclaimed one in our office that had been relegated to the waste-basket.

Saving a sheet of paper seems of little consequence to the average employe, and there are too many who assume the attitude that "there is a lot more where that came from."

Printing is costly. Save paper.

Raises Purebred Chickens as a Sideline

*J. E. Gleaves, Chief Clerk to Master Mechanic at
Memphis, Tenn., Frequently Picks Up \$100 a Month*

TO the average person, chicken raising means a rooster and a few hens which are allowed to run around the back yard or the neighbor's flock that goes home at night only in time to roost after eating up the table scraps thrown out. But raising chickens can be made not only a pleasure but a profitable business if the proper attention is given them. This fact can be easily proved to anyone who has the pleasure of visiting the little chicken farm of J. E. Gleaves, chief clerk to the master mechanic, Memphis shops.

Mr. Gleaves began service with the Illinois Central System in December, 1912, as a clerk for the master mechanic at Paducah. He was transferred to Memphis in March, 1915, as a clerk in the master mechanic's office, and was promoted to assistant chief clerk in January, 1918. In April, 1918, he was promoted and transferred to East St. Louis as chief clerk, and remained in that capacity until June, 1920, when he was sent to Memphis to the position he now has.

Gathers a Hundred Eggs a Day

While you possibly would not class Mr. Gleaves' place as an egg farm, he is above the class termed "back lotters." It is not uncommon for him to get 100 eggs from his flock of 148 hens, which are divided into ten pens—forty-eight Single Comb Rhode Island Reds, having that deep red

Mr. Gleaves' prize-winning cockerel

color that appeals to the lover of that class of birds; forty Single Comb Barred Rocks, barred to the skin and just as pretty a lot as the writer has ever seen; and sixty Rose Comb White Wyandottes.

All the pens are headed by high-class male birds. One of the two principal pens of White Wyandottes, in which Mr. Gleaves is specializing, is headed by a cock that won a prize at the Tupelo, Miss., Poultry Show last December. Another pen has at its head a cockerel of Mr. Gleaves' own raising. This cockerel was included in two entries which Mr. Gleaves had in the Tri-State Fair held last September at Memphis. Both entries won prizes.

Mr. Gleaves believes in the laying qualities of his birds. He entered a pen of his White Wyandottes in the Tri-State National Egg Laying Contest, which started November 1, 1922, at the State Normal School, Normal, Tenn. During January, against entries from almost every state in the country and birds of every class, his

J. E. Gleaves' chicken yard at Memphis

Some of Mr. Gleaves' chickens. At top, Rhode Island Reds; center, Barred Plymouth Rocks; bottom, Mr. Gleaves with some of his White Wyandottes.

pen won a silver cup for the leading pen, any class; a blue ribbon for leading pen of White Wyandottes, and special ribbon for one hen laying twenty-five eggs and better. He is a member of the Tri-State Poultry Association and always ready to talk chickens and to show his place and birds to anyone interested.

Started Chicken Raising in 1920

Mr. Gleaves purchased his first chickens in the spring of 1920. He started with one Barred Rock hen with nine chicks, then purchased fifteen purebred White Wyandotte pullets and two cocks. Since that time he has relied upon his own ability to raise his chickens. He buys some purebred eggs for setting. One of his recent purchases was 145 purebred White Wyandotte eggs from John S. Martin of Port Dover, Ontario, Canada. Mr. Martin is known the world over for the fine purebred chickens he raises. The eggs cost Mr. Gleaves \$25 a setting of fifteen eggs.

During 1922, the third year of his experience as a chicken raiser, Mr. Gleaves had a total of 400 chickens at his place. He has since sold them, until he now has only 148. So far this year he has set 1,000 eggs of his own chickens, as well as the 145 eggs which he purchased from Mr. Martin.

Mr. Gleaves hatches his chickens by incubators. The young chicks are placed in

a broodhouse that is heated by a hard coal fire. After the baby chicks are 48 hours old he feeds them a specially prepared buttermilk starting food, and he keeps them on that alone until they are 5 days old. Then they are given small grain each morning and night in addition. The size of the grain is increased as the chicks grow older. When they reach the age of 3 weeks, they are fed a buttermilk growing mash instead of the buttermilk starting food. All of his feed contains buttermilk in some form or other. At the age of 6 months he feeds a buttermilk laying mash. The older chickens are also fed sprouted oats and occasionally cabbage and lettuce.

Mr. Gleaves' profit from his chickens is between \$50 and \$100 a month. His greatest income is from the sale of setting eggs, breeding stock and baby chicks, he says. Friers bring him as much as \$1.65 each; pullets, from \$2.50 to \$5; male birds, from \$5 to \$10. His baby chicks sell for from \$25 to \$35 a hundred.

His belief is that it costs no more to feed and care for purebred chickens than it does for the other kind and the returns are much more from the purebreds. With proper care and feed, the purebred chickens develop much faster than other chickens, Mr. Gleaves says.

EATING OURSELVES TO DEATH

Be moderate, always, in eating. When I went to medical college they used to teach us that we not only had to stuff and gorge ourselves, but that that was the proper procedure for our patients, and so the doctors, for years, practiced stuffing their patients and killing them via the food route. People who become sick shouldn't eat anything until the stage passes over, because food taken when a person is intensely suffering or has a high fever doesn't digest. It simply wastes and turns to poisons within the body. It intoxicates or poisons the individual and makes him worse instead of better. So, if there is any acute disease with pain or fever, it means that a person should stop eating until that acute disease is over. He should drink all the water he wants to in order to cool down and flush out the body, and he should have rest and fresh air, but not food. If that knowledge would sink in it would save hundreds of thousands of lives every year—lives that are snuffed out for lack of knowing and living up to that simple little knowledge.—R. L. ALSAKER, M. D.

Men who "have seen better days" usually didn't make the best use of them.—*The Watchman*.

Radio Department

Amplification for the Audion Receiving Set

In this article we show a method of adding two steps of audio-frequency amplification to the audion receiving set described in the April issue. The purpose of amplification is to increase the strength of the incoming signals after they have been rectified by the detector. In audio-frequency amplification this is accomplished by magnifying the variations in current in the telephone receiver circuit, thereby amplifying the sounds produced in the receivers.

In the construction of the amplifying unit you will need the following parts, which can be purchased at any radio store for about \$30:

- 2 audio-frequency amplifying transformers.
- 2 W. T. 11 amplifying tubes.
- 2 tube sockets.
- 2 W. T. 11 adapters.
- 2 filament rheostats.
- 3 telephone jacks (4 spring—2 way).
- 7 binding posts.
- 1 set "B" battery (22½ volt).
- 2 dry cells (1½ volt).
- 40 feet No. 14 tinned copper wire.

In assembling the unit it is best to lay out the parts on a table and make the connections as shown on the picture plan (Fig. 1). When the hook-up has been completed, the set can then be given a preliminary try-out to ascertain if it is working properly.

If desired, the unit can then be mounted in a cabinet about 6 by 6 by 20 inches.

In constructing the amplifier unit a few simple points to remember are as follows:

1. All connections not on binding posts should be soldered.
2. Mount all vacuum tubes in a vertical position.
3. Place all the amplifying transformers in such positions that the iron cores upon which they are wound will be at right angles to each preceding transformer.

The use of telephone jacks, as shown on the plan, is recommended, as the set can then be used either with one tube or with the amplifier using additional tubes. Inserting the telephone plug in the first jack breaks the contact with the amplifying transformer, and the detector tube alone is used. Removing the plug and inserting it in the second jack and additional vacuum tube is used as an amplifier. The third jack "cuts in" the detector and two stages of amplification. In assembling the parts, remember that vacuum tubes made for the purpose must be purchased. Amplifying tubes can be used as detector tubes, but detector tubes do not give good results for amplifying.

In operation, reception is accomplished with the detector unit as described in the April issue, and then amplified by the amplifier unit by inserting the telephone plug in each successive jack and regulating the filament rheostat until the reception reaches the desired intensity. If loud whistling noises are heard which drown out the signals, try reversing the primary wires running to the transformers, listening in after each change until the correct connection is found and the amplifier functions without unnecessary noises. If a loud speaker is used, it should be connected to the two end binding posts as shown. In Fig. 2 is shown the hook-up for this unit using the standard radio symbols.

So many inquiries have been received concerning the

cost of the audion receiving set described in the April issue that it is thought best to answer them all at once.

The cost of a headset was not included, as it was assumed that this was purchased for use in connection with the crystal set described in the March issue. It is a fact that the parts listed as necessary in the construction of the audion set can be purchased at a total cost of only \$10. This fact was verified by obtaining price quotations from radio supply houses located in Chicago and New York. Below will be found a list of the parts and cost as obtained from these quotations:

1 variocoupler coil	\$ 2.75
1 filament rheostat45
1 23-plate variable condenser (.0005mfd)	1.75
1 tube socket75
1 WT-501 "peanut" detector tube.....	2.00
1 grid leak ($\frac{1}{2}$ megohm).....	.20
1 fixed condenser (.00025mfd).....	.15
6 switch points15
1 switch lever10
1 set "B" battery (22 $\frac{1}{2}$ volt).....	1.10
3 dry cells60

Total cost\$10.00

A storage battery is not necessary, as the "peanut" tube described will work on the voltage output of the three dry cells. All of the radio magazines publish the advertisements of a number of radio supply companies from which you can purchase the parts at the prices listed above. The author has recently assisted in assembling a receiving set purchased from a Brooklyn firm, for a cost of \$10, on which stations have been heard within a radius of 1,300 miles.

Built His Own Radio Cabinet

Here are a description and photographs of a radio cabinet that I have made for my radio set.

This cabinet is not original with me, yet I have never seen one quite so handy and complete as mine is. This cabinet is twenty-four inches square, outside measurement, and forty-two inches high. I made

it from California redwood and used an extra dark mahogany stain. The redwood, being naturally red, makes a beautiful piece of furniture when properly finished. The wood must be thoroughly sandpapered; then stained, the maker being careful to rub the stain off immediately after applying it, as the wood is soft and takes the stain like a sponge.

The cabinet should then be sandpapered lightly with very fine sandpaper and given a coat of clear varnish, being sandpapered between every two coats. When it is properly finished, you have as fine a piece of furniture as you could wish. If care is taken to get the wood with a pretty grain, the cabinet will really be a thing of beauty.

The front doors are paneled, as well as the door that drops down for an arm rest like the door on a writing desk. The top of the cabinet is made in two doors which fold back and permit the operator to get into the working part of the machine. The upper half of the cabinet, on the back, is made into a door that folds back and permits of easy access to the working parts of the machine. One shelf is put in, half way between the bottom of the cabinet and the bottom that the instruments are placed on; this provides plenty of room for the A battery and also for the battery charger; the upper shelf is for the B batteries and a place to keep phones when not in use. This makes a complete outfit that can be closed up when not in use, out of the way of dust and inquisitive children.

I made this cabinet complete myself, but

L. L. Jones and his radio cabinet

Illinois Central Magazine

Mr. Jones' cabinet closed and open

I will say that it requires considerable patience. The hardest part to make is the paneled doors, as they are hard to get mortised properly, and the average fellow does not possess many up-to-date carpenter tools. I have seen cabinets similar to this one, but not nearly so handy or complete.

I also built my own set, or rather assembled it, using only standard parts of well-known, tested makes. I use one condenser, one coupler, with fourteen taps, a transformer, detector tube U. V. 200, one amplifier U. V. 201, a variable rheostat on the detector and a common one on the amplifier. With this set I cover the United States and Canada, hearing stations in California, New York and Canada very distinctly. I use a phone jack that takes three

phone plugs, and I use Frost phones, 2,000 ohms, which prove to be very satisfactory.

Photo No. 1 shows the cabinet closed, making a good-looking, dust-proof piece of furniture. Photo No. 2 shows the machine open ready for business; I folded the top door back to show how it worked, but the light was not right and did not show the door very plainly; it can be folded back or left down when in operation.

One picture shows the machine in operation, with yours truly at the steering wheel. The machine is just the right height to make it comfortable to operate when sitting in a chair, and the door that drops down in front makes a comfortable rest for the arms. I often operate it for four or five hours without tiring in the least.

I use an aerial of one wire 130 feet long and about thirty feet high.

I hope this meager description will be sufficient to enable anyone who may be interested in this kind of outfit to construct one, for they are well worth the effort. I hope the radio department of our magazine will grow, and I would like to see others give some of their schemes to make our sets better.—L. L. JONES, *ticket agent, Le Mars, Iowa.*

David Wark Griffith Has Nothing on Us

*Illinois Central System Is a Pioneer in Producing
and Exhibiting Motion Pictures for Employees*

THE Illinois Central System is the only railway system that has successfully produced its own motion pictures to help its employees understand their work more thoroughly, according to C. G. Richmond, superintendent of stations and transfers. The pictures the company now is exhibiting to the employees at various points on the system were made by the company itself to illustrate the proper as well as the improper way to handle freight, and the reports are that the employees who have seen them have gained much information.

The idea of motion pictures for visual instruction originated with L. W. Baldwin, former vice-president, Mr. Richmond says. In 1921 Mr. Baldwin expressed his belief to Mr. Richmond that motion pictures would be instructive to the employees and would in turn materially increase the efficiency of the system. Mr. Richmond immediately made plans for the production of the pictures.

E. A. Barton, inspector of stations and transfers, was assigned to the duty of arranging a scenario, and Mr. Richmond says that the successful pictures are largely due to the care and energy Mr. Barton put into the work. J. K. Melton, official Illinois Central System photographer, was assigned to do the camera work. The camera he used is of his own make. He bought the standard parts of a motion picture camera and fitted them together himself.

Ten months after the work started, the pictures were ready for exhibition.

The purpose of the motion pictures has broadened now to the extent that they are shown also to the employees of connecting lines. Mr. Richmond says that he hopes this practice will further decrease freight claims.

New Pictures to Be Made

Motion pictures of the proper and improper way of handling and loading livestock will be made this spring and summer, Mr. Richmond plans. Livestock claims constitute the bulk of the freight claims, and he hopes to cause a reduction in them by showing these pictures to the employees.

The motion pictures were first exhibited in June, 1922, as a special feature of the "No Exception" campaign. Mention of them was made in the August, 1922, issue of the *Illinois Central Magazine*. Mr. Richmond says that the pictures gave material

aid to that campaign, and he decided to continue the showing of them to the employees at many points on the system.

Shown Under Varying Conditions

Mr. Barton uses a portable projection machine and exhibits the pictures in freight houses, trainmen's halls, Y. M. C. A. lounging rooms and sometimes in motion picture theaters. He sends a notice to the point where he is to give the exhibition, so that as many employees as possible will be present to see the pictures. Many of the freight handlers and trainmen who are interested in pictures bring their families on the night of the showing. There have been times when the place where he showed the pictures was hardly large enough to accommodate the number of persons who attended. Employees sit tirelessly through the exhibitions on benches, boxes, barrels and anything else that will serve as a seat.

Agents at points where the pictures have been shown have written to Mr. Richmond that an immediate improvement in the handling of freight was noticed after the employees had seen the pictures. Conversations of the receiving clerks, checking clerks, delivery clerks, stowmen and truckers indicated that they really benefited by the demonstration, the agents say. Some

J. K. Melton taking the pictures

of the workers expressed the opinion that the motion pictures were worth more to them in bringing out clearly the proper and improper ways to handle freight than anything that previously had been said or shown to them.

One agent reported that on the day following the exhibition of the pictures at his station he heard a box car get a severe bump in the yards. Almost simultaneously with the rebound of the car, he said, the yardmaster came out of his office and shouted: "Hey, if you had been up to see the pictures last night you would have had a lesson as to what this kind of switching does."

How the Pictures Were Made

The pictures of damage to freight were ten months in the making.

One side and the roof of a box car were removed, so that the pictures would show clearly what was inside the car. Freight which had been unclaimed or had gone astray was collected, placed in this car and bulkheaded in the usual manner. A heavy wire screen of large mesh was placed over the open side of the car to keep the freight from falling out. Loaded coal cars were run on an empty switch track, and their brakes were set, so that they would act as a bumper for the test car as the pictures were being made. A switch engine then bumped the loaded box car into this string of coal cars at gradually increasing rates of speed, from three up to twenty miles an hour. A stop-watch which was started as the loaded car passed over a torpedo 132 feet from the string of coal cars enabled the men to determine the speed of the car at the time of the impact. In order to record the degree of impact shock at different rates of speed, a device that registers every jar was placed in the loaded box car. This instrument marked its record on a continuous roll of paper that is ruled off into four zones: safe, rough, violent and destructive.

The pictures show the test car moving down the track toward the string of coal cars, then the bump and the resulting shifting of the freight on the inside of the car. A close-up of the shock recorded shows the severity of the jar, then a close-up of the shifted freight shows the damage that was done. As the speed is increased, the pictures show clearly a corresponding increase in the damage done to the freight, until a high rate of speed causes such a jolt that the freight demolishes the braces and is seriously damaged.

Lessons the Pictures Give

Valuable "Do's" and "Don't's" in the handling of freight are illustrated in the pictures. It is shown that a freight hook

E. A. Barton showing the pictures

often causes a leak that spoils all the goods in a carton, and common negligencies on the part of employes that result in freight claims are illustrated. Graphs and pictures show realistically how a little damage at one point and a little more at other points accumulate until a staggering claim is presented when the goods are finally delivered to the consignee.

The Illinois Central also has motion pictures made expressly to educate the farmers in the communities along our lines in modern and scientific methods of farming. Poultry raising, dairying, soil treatment, packing produce for shipment and many other phases of farming are included. Agents of the development bureau exhibit these pictures at meetings, and they are proving very popular.

A motion picture on fuel economy teaches firemen the most economical methods of firing and stoking. J. W. Dodge and O. L. Lindrew exhibit these pictures in connection with their talks to the employes at various points on the system, and it is their belief that these pictures are gaining results in a greater saving of fuel.

Napoleon finally went to pieces through the failure of his one-man-power philosophy. He knew how to select great generals but he did not make them part of himself. He was too selfish to produce close co-operation. He held men at arm's length and tried to run everything by his colossal will power instead of by scientific co-operation.—MARDEN.

What Patrons Say of Our Service

Says Extra Service Saved a Life

Dr. D. D. Martin of Seward, Ill., recently wrote as follows to Superintendent J. F. Dignan of the Wisconsin division:

"The cold iron, glass and steel of rails and train, coupled with the annoying smoke, noise and smell, represent the average person's impression of a railroad. It is very seldom any of these people consider that these rails, powerful engines and cars are but instruments in the hands of men, used to convey the multitudes' wants and provide the necessary requirements of society *en masse*. Perhaps this is because people seldom think in terms of hundreds. Their imaginations are limited to articles of smaller dimensions and entirely too often, when in terms of persons, to the first person singular, alone.

"Occasionally, however, they are made to think how intimately they are related to those huge masses of iron.

"That has recently happened in our town. I believe I am speaking the people's voice at large in our community when I tell you I have now a warmer feeling toward the Illinois Central than I have ever experienced before.

"On March 14 of this year, by your permission, one of your through passenger trains stopped at a road crossing one mile west of the station to take on a passenger who was critically ill. She had but four days before become a mother and was at the time suffering from complications that jeopardized her life. She was conveyed to Freeport, Ill., and safely to a hospital. For seven days after that it appeared she could not live, but now she is slowly climbing back to health and strength.

"You did not know this mother; you have not seen the innocent babe you saved from orphanage—your orders were cold when executed, but they meant the saving of a human life, of a mother's life. Believe me, my dear sir, you are directly responsible for this, and we are grateful to you for the human touch you gave to the cold iron, glass and steel.

"Seems as if Bobby Burns was right, after all, when he said:

"'One little touch of nature
Makes the whole world kin.'

"You surely placed a wreath of the rarest roses over the memory of your road in the minds of the people here."

The Best Service He Finds

M. T. Healy, representing Andrew Cowan & Company, Inc., 421-423 West

Main Street, Louisville, Ky., recently wrote as follows to Superintendent C. R. Young of the Tennessee division:

"While on a trip from Fulton, Ky., to Dyersburg, Tenn., the writer's gladstone bag was taken from a train at Newbern, Tenn., by a person who had lost his bag; thinking mine was left in its place, he took it.

"I am writing this letter to ask you to thank, through your office, Mr. Walker, one of your agents at Dyersburg, and H. R. Paschal, Newbern, Tenn., another one of your agents. These gentlemen, through their prompt and courteous action, located the person who had taken my bag and held it for me at Newbern, until I could get there to get it.

"In making my territory, I use nine different railroads, but on none of them do I find the train crews as courteous and considerate of the passengers' comfort as on the Illinois Central Railroad."

Business Men Like Co-operation

The Business Men's Association of Odin, Ill., through its secretary, Paul R. Rippey, recently wrote as follows to L. E. Andrews, our agent at Odin:

"It has just been brought to the attention of the Odin Business Men's Association that during the coming summer you contemplate a number of improvements that will lend considerable to the appearance of your property through Odin and in the immediate vicinity of the station.

"We wish to say to you that this improvement is highly appreciated and desire to say that we are more than pleased to have this favor shown our village.

"The attitude shown by your railroad in going over this contemplated change with the village authorities has demonstrated the splendid spirit of co-operation which will, without doubt, lead to a continuation of the friendly feeling we hold toward the Illinois Central Railroad Company."

Appreciates Value of Teamwork

Percy George Cross, Bible evangelist, Charleston, W. Va., recently wrote as follows to President C. H. Markham:

"Just a letter of good will from a preacher of righteousness to a president of a railroad! As a student of law and achievement, allow me to congratulate you upon the evident good work that you have done and are doing.

"Our trails have crossed but not conflicted! I have preached at Clarksville,

Tenn., Deming and Lordsburg, N. M., in 'my wanderings oft' and know somewhat of the obstacles that you have overcome.

"My hearty good wish is for you that you may somehow get the spirit of teamwork into your road yet more, the kind of teamwork that impels to make a railroader say 'our road'! As an ex-locomotive fireman, I know somewhat the meaning of all this, and as a student I know the aching need of just this in the railway world. You seem to have gone further in this matter in your efforts than the majority of executives. That's to your credit!

"And amid it all, remember Matt. 6:33 and 2 Tim. 2:15, and you win then.

"R. V. Byrn, agent-operator, first-trick man, I guess, at this station of Mayfield, Ky., has been mighty nice to the writer in looking up routes and securing reservations. He delivered the goods, and that's what a road is built to do!"

Service Exactly as Advertised

C. L. Cole, The Dixieland Inn, Detroit, Mich., recently wrote as follows to President C. H. Markham:

"My wife and I recently arrived in Detroit from Tulsa, Okla.

"While in the Union Station, St. Louis, my wife left her fur neckpiece in the Fred Harvey Cafe.

"We left St. Louis over your road at 9 o'clock Tuesday morning, March 27, last, and about an hour out of St. Louis, en route to Chicago, we missed the fur. I reported the matter to your conductor, who wired back to the baggage agent at the next stop. This morning the fur was turned over to us at the Michigan Central station here in Detroit.

"In this connection I believe it my duty to express my sincere thanks and appreciation not only for the promptness with which the fur was returned but also for the courtesy and kindness extended us by your conductor and your baggage agent at Chicago.

"You certainly have lived up to the reputation for which you advertise your road, and it is a pleasure to travel via the Illinois Central.

"Mrs. Cole and I desire to thank you very kindly for the courtesy and service and hope you will extend our thanks along the line to all concerned."

Compliments Our Local Trains

E. E. Rice of Latham, Ill., which is on the Peoria district of the Indiana division, recently wrote as follows to President C. H. Markham:

"Being a frequent patron of your passenger trains, I cannot refrain from commend-

ing the delightful, neat, clean, sanitary condition of the passenger equipment on this division. As you know, we are not fortunate enough to have other than local trains, but I must say the quality of these is unsurpassed by any railroad, to my knowledge."

Returned Overcoat to Educator

J. N. Powers, chancellor of the University of Mississippi, University Postoffice, Miss., recently wrote as follows to George Royan, special agent, New Orleans:

"Permit me to express my very warm appreciation of your courtesy in returning my overcoat, which I left on train No. 3, Sunday, March 4. I really never expected to see this coat again, and its return is another evidence of the efficiency of your splendid railway system."

Calls Our Service Unequaled

L. E. Foster, secretary of the Hopkinsville, Ky., Chamber of Commerce, recently wrote as follows to C. L. Wadlington, our agent at Hopkinsville:

"Before I begin on the many duties that await me after almost a week's absence from the city, I want to take this opportunity of expressing again my personal gratitude, as well as that of the Hopkinsville Chamber of Commerce, for the most excellent service you rendered us through the Illinois Central Railroad on our booster trip to Louisville. It has been my pleasure to be on many booster trips of this character, and I want to say in all sincerity that the equipment and the service rendered on this trip have never been not only excellent but equaled in my opinion.

"Realizing that you had most to do in the arrangements, I want to recognize your service; also that of Mr. Fowler and the Illinois Central Railroad officials in general. Please accept for yourself and extend to them this expression of appreciation."

Pleased With Good Dining Service

J. P. Seiberling of the Seiberling Rubber Company, 1627 South Michigan Avenue, Chicago, recently wrote as follows to C. B. Dugan, superintendent of dining service:

"Recently my wife and I returned from Florida and had the pleasure of dining in one of your restaurant cars, of which a Mr. Reichard was steward.

"The service was so prompt and the waiters so attentive and courteous that our meals in the restaurant cars were exceedingly pleasant.

"Too often the public is served splendidly and satisfactorily and little recognition is made of it.

"I feel, however, that praise should be

given where praise is due, and even though I thanked Mr. Reichard for his service, I hope that bringing the matter to your attention will encourage the continuance of such service, and besides I want to assure you of my appreciation."

Where Special Service Can Be Found

Harry Goldman of Goldman & Viele, Inc., 201-203 West Court Avenue, Des Moines, Iowa, recently wrote as follows to W. H. Brill, general passenger agent at New Orleans:

"I would like to thank you for the way you have taken care of reservations for my family, now in Miami, Fla.; in regard to the spring and mattress. I know that when you ask a favor of the Illinois Central Railroad, regardless of what department it is, if it is within their bounds there is no question in my mind but what it would be granted, and I am just taking this opportunity of thanking you."

Saw Possibilities of the Delta

Louis L. Emmerson, secretary of state, Springfield, Ill., recently wrote as follows to President C. H. Markham:

"In company with W. M. Weidenhamer, general superintendent, Chicago, Milwaukee & St. Paul, Major John MacQueen of the West Chicago Stock Yards and James McCredie of Aurora, I have just returned from a little trip down to Honduras, the party going via New Orleans.

"From the time we left Chicago on the Illinois Central until our arrival in New Orleans, and during our stay there, we were treated most courteously and kindly by all of the officials of the Illinois Central Railroad. Of course, I understand that these favors came about because of the presence of Mr. Weidenhamer—a fellow officer—but as all of our party were recipients of these many kindnesses, I want to express our appreciation of them.

"I had gone to New Orleans many times over the Illinois Central, but had never had opportunity to make the trip via the Yazoo & Mississippi Valley. I happened to mention this fact to Colonel A. H. Egan, superintendent of the Yazoo & Mississippi Valley; so he made arrangements for us to make the trip on our return and met us in New Orleans with his office car. We made the trip to Vicksburg the first afternoon and on the following morning viewed the scenes of the siege of Vicksburg, leaving at noon, and, after a wonderful afternoon through the Mississippi Delta, reached Memphis in time to catch the Panama Limited for Chicago. The Delta is certainly a wonderful country, and its opportunities, it seems to me, are marvelous.

"I have written this rather lengthy letter to express to you personally my appreciation of the courtesies of Mr. Egan and the other officials of the Illinois Central and Yazoo & Mississippi Valley. It is not surprising that these railroads are so popular with the traveling public when officered by the class of men we were privileged to meet."

Had an Enjoyable Convention Trip

C. A. Comstock, Chicago, chairman of the transportation committee of the Chicago Laundrymen's Club, recently wrote to President C. H. Markham as follows:

"The writer has just returned from a trip to Decatur, Ill., attending the Illinois State Laundrymen's convention.

"The trip was made under the auspices of the Chicago Laundrymen's Club over your railway system—this arrangement having been made through A. U. Sawbridge, city passenger agent.

"This letter is simply to advise you that the service rendered was everything that could be expected. The equipment furnished—that is, two solid steel Pullmans, as well as one solid steel diner—with the co-operation of the members of the party, could not be improved upon.

"The attention given us individually by Mr. Sawbridge was wonderful. This gentleman certainly must be a great asset to the Illinois Central Railroad Company. He is a man who makes friends easily.

"In reference to your dining car service, the writer cannot refrain from paying a compliment to C. B. Dugan, superintendent of dining service. The writer has had the privilege in years past to make similar trips, but has never in all his experience in riding over the country on different railroads seen a dining car that was so beautifully decorated or set as the one on our recent trip to Decatur. There was nothing lacking.

"The dining service inspector, Mr. Cas- sel, was there, and he gave us his personal attention; the waiters and the meal in itself were wonderful. There was not a kick. Everyone handed out the highest praise to the Illinois Central Railroad.

"There was only one regrettable feature of the trip, and that was that we did not have as many as we anticipated. We had forty-five going down and thirty-three coming back. The trip back last night, coming by way of Champaign, hooking our cars on the regular train coming from the south, was also splendid.

"The writer, through your Decatur representative, got in touch with Mr. Dugan yesterday and advised him that we would have thirty-one in our party returning and

that when they arrived in Champaign they would be hungry. The arrangement Mr. Dugan made to take care of our party on the diner could not be improved upon. The service was splendid, the meals splendid, and there was nothing lacking.

"In conclusion the writer desires to say that you are operating a real railroad. We want to thank you and your attaches, especially those who assisted us on this trip, for the wonderful service.

"The position the writer was placed in as chairman of the transportation committee, of course, was one that can be criticized. The writer is happy to say, however, that he received a great deal of praise, as he was thoughtful enough to arrange our trip to Decatur over the Illinois Central Railroad.

"Rest assured if an opportunity ever arises in the future where through the writer's influence he can be instrumental in influencing a trip over your railroad, he will be very pleased to do so."

Restored \$300 Passenger Had Lost

W. E. Whaley, conductor of train No. 208, recently wrote as follows to W. Atwill, then superintendent of the St. Louis division:

"This morning my porter, George Nelson, found five \$20 bills in the aisle of sleeping car Oporto, and a few minutes later Sleeping Car Porter C. LaBraven found two \$100 bills on the floor near where the other money was found.

"The porters brought this money to me at or near Coulterville and left it with me. Leaving Belleville, I went to the sleeping cars to collect my checks. In section No. 9, I found a woman very nervous. On my inquiry as to what was the matter, she informed me that she had lost \$300. I inquired as to the denominations of the money and she described the money to me and also described how she came to lose it. I returned the \$300 to the owner, and she gave me \$10, \$5 for each of the porters, account of their being honest."

Conductor's Daughter Is Able Musician

Conductor and Mrs. John Trott, Mattoon, Ill., have an only daughter, Miss Eunice, who has shown much ability as a musician. She received her early training in elementary work in the Mattoon grade schools, after which she entered Millikin University at Decatur, Ill., from which she was graduated in 1920. She studied voice and piano at the Conservatory of Music at the same place. In 1921 she entered the Cincinnati Conservatory of Music for a special course in the study of public school music, as well as the study of piano and voice. In June of the present year she will be graduated in the study of public school music, when she will be qualified to take a position as supervisor of music in the public schools.

Miss Trott is a member of Mattoon's leading musical club, the Treble Clef. This club prepares its program for the year at the beginning of the season, assigning to each member numbers to be given on certain dates, and Miss Trott has made it a point to return to Mattoon to give her numbers whenever they were due.

At a recent meeting of the club, Miss Trott gave the members a surprise when she volunteered to render a vocal number which the one to whom it was assigned was unable to give at the specified time. The song, "Care Nome," a difficult one, could be attempted only by one who had had training and much study, and Miss Trott proved to those present that her vocal

qualifications are keeping pace with her reputation as a pianist. Miss Trott had not been heard as a vocalist before in Mattoon, although she had many times appeared in piano numbers.

Miss Eunice Trott

Hospital Department

To Kill Flies, Destroy Breeding Places

THERE are two kinds of evils in this world, the little ones and the big ones. Between the two, the little ones are the more dangerous because of their multiplicity. The biggest and most dangerous of the little evils is that common pest, the fly, the most efficient existing carrier of disease.

This being the joyous springtime and the sun beginning to spread his warmth more generously over the budding earth, the fly seizes the opportunity to multiply himself many-fold.

Just how "many-fold" he can multiply is pertinent and interesting. One careful investigator made the statement that millions of flies are produced from one female. To go into it a little deeper, if there are allowed 2,820 flies to the ounce, the total product of a single fly in forty days would be 810 pounds—which is going some.

This is the proper and logical time to suppress the fly, for by starting now it is possible to cut down those 810 pounds considerably.

The Fly a Carrier of Disease

But why all this dissertation on the humble, insignificant fly? Why not talk about something big and worth while? Because that same fly is the most dangerous carrier of disease and sickness which we have. Because that same fly can carry small-pox from Mrs. Jones' house right over to Mrs. Brown's house, fully eight or ten blocks away. Because that same fly can carry

typhoid fever from Wilkins' house to your wife and children, seated at a nicely spread table and eating a good meal.

There are fifteen or twenty dangerous disease which have been proved as spread by the fly; therefore, let's get rid of these pests and disease carriers.

*Eggs of house fly,
much enlarged*

Several ways have been suggested to get rid of flies, and campaigns for "swatting the fly" have been carried on for several years; screening has been practiced; fly paper has been used, and poisons as well; but the real method of getting rid of the fly is to go after his breeding place. To do this we must know where to look for the breeding places and what to do when we find them.

The life of the fly has four stages: first, the fly-blow (egg); second, the maggot (larva); third, the grub (pupa); fourth, the full-grown fly (imago). The time consumed in these changes is about ten days, hot weather lessening this time and cold weather increasing it.

Flies seek warmth and moisture; therefore, manure piles, garbage and refuse heaps, decaying paper or rags—in fact, any kind of filth—is just what a fly most likes.

Must Destroy Breeding Places

Now, knowing where the fly gets his start, the problem becomes simplified; in fact, it is reduced to one simple rule—destroy the breeding place. The carrying out of this rule is not so easy; yet, with the spread of this knowledge, from year to year persons are going to destroy breeding places, and the lessening in the number of flies will be noticeable.

The law says that a person who creates or maintains a nuisance is indictable under the common law. It has been decided in high court that a fly-breeding manure pile is a nuisance. Therefore, persons who fail to clean up their manure piles, refuse heaps, etc., can be held subject to the terms of the law. It has been found, however,

Larvae of house fly

that when such a person is informed of the trouble he is making for humanity at large by maintaining a fly-breeding place, such a person is usually willing and anxious to do everything in his power to abate the nuisance.

It is only by education of the public in general on such matters that amelioration of such conditions can be brought about, and state boards of health are busy printing information for the general public, to the very desirable end that the co-operation of the public may be obtained.

How Diseases Are Transmitted

Many questions are asked as to just how the fly carries the poison of disease. It may not be amiss to explain that the "germs" are carried on the body or legs of the fly, swallowed and ejected as saliva or as dejecta, the latter commonly known as the "fly specks." This deposit may take place on the clean dish set out for the reception of good food, or it may be directly upon the surface of the food, reaching, in any event, the interior of man and there producing the disease.

The government, which has made many experiments on the killing of larvæ in manure piles, has reached the conclusion that a borax solution in a proportion of one pound of borax to ten gallons of water sprinkled on eight bushels of manure will destroy 95 per cent of the fly larvæ. It is to be noted, however, that this solution has no effect on mature flies. Paris green and hellebore have also been used.

Screening to exclude flies should be universally practiced. When this is combined with the use of the screen fly-swatter, the householder may feel reasonably safe. In dealing with the grocer, baker and butcher, one should see to it that products purchased

have been carefully protected from flies. By insisting upon fly protected fruits, vegetables, groceries and meats, the time when all such products will be adequately screened will be hastened.

Fly traps and sticky fly paper are both of value in catching adult flies and are to be used, for when you catch a fly which might have gone over to your neighbor's you are rendering a benefit to humanity just as great as that which your neighbor confers on you by also maintaining fly prevention measures.

TRULY A WHOPPER

"The Cyclops of them all" is what A. J. Moorshead, president of the Madison Coal Corporation, calls this old timer exhibited at the St. Louis World's Fair in 1904. It weighed fourteen tons and has a legitimate claim to the title of "biggest lump ever mined." Expert pick miners extracted it from the Divernon mine, near Springfield, Ill., at a spot close to the shaft bottom where office room was needed. The block measured 6 feet by 7 feet by 8 feet 2 inches. The cage was dismantled to get this monster up the 335-foot shaft.—*Coal Age*, March 22, 1923.

The valuable employee to us is the one who goes ahead with his work without being told. He is on the job every minute, doing his work, and wastes no time in useless conversation. He is looking out for our interests—naturally, we take care of his.—
JOHN WANAMAKER.

HOUSE PLANS FOR OUR READERS

Southern Pine

Building a home is one of the most fascinating undertakings in the world. The married couple that has not yet enjoyed the experience of home-planning and building has missed one of life's best blessings. Home-building is both an indoor and an outdoor sport. Spring is its chosen season. The urge is strongest of all when the birds are nesting.

The *Illinois Central Magazine* is strictly allied with the home-builders and home-owners. The editor will be glad to send to any prospective home-builder a book of fifty modern house plans free of charge upon request. These plans have been carefully chosen by the Southern Pine Association of New Orleans and are especially adapted to the requirements of those who are thinking of building a modest cottage or bungalow at relatively small cost. The plans are designed to give the utmost of beauty and convenience without sacrificing the essential factor of economy.

The plan shown this month is one of the fifty. It is a 5-room, modern cottage of charming lines and would be very suitable for a 50-foot lot. It has two bedrooms, large living and dining rooms, commodious kitchen, breakfast room, bath, inner hall, plenty of closet space—a housewife's delight—and two pleasant porches. The outside lines are colonial in effect. This cottage can be constructed at a reasonable figure.

The American Wholesale Lumber Asso-

ciation has announced that it will be glad to arrange with local retail lumber dealers for co-operation with prospective home-builders or with those who may desire to organize community building and loan associations.

Editorial

SAUCE FOR THE GANDER

A bill was introduced in the latest session of the Minnesota legislature to apply to proprietors of farms certain regulatory restrictions that have hitherto been confined to the sphere of transportation companies. The bill, which has been facetiously characterized as the "full farm crew law," provides that at least one farm hand shall be employed for every forty acres under cultivation and also embodies other stipulations and restrictions. It was sponsored by Representative F. E. Lamers of Dakota County, formerly vice-president of the Minnesota Farm Bureau Federation and a member of the conservative agricultural bloc in the legislature.

A "full train crew bill" was recently defeated by the Minnesota legislature after a rather bitter and stubborn contest. Many representatives from the agricultural districts favored the "full train crew bill," and it was to put the principle of the proposition directly up to them that the farm hand measure was introduced. The matter came dangerously near to going beyond the status of a jest at the very outset.

Contrary to the usual procedure, the bill was read in full when introduced. Representative Frank Starkey, a St. Paul labor leader, "called" the turn on those who had greeted the bill with great hilarity by moving that the rules be suspended and the measure adopted. There is no telling what might have happened if Speaker W. A. Nolan had not ruled that the motion was out of order. The bill was then referred to the committee on agriculture, with the idea of disposing of it by the usual asphyxiation process. Notwithstanding which, a further surprise was in store for the jesters: The agricultural committee presently reported the bill, recommending it for passage. The end is not yet.

The farm crew bill closely parallels the full train crew bill. In addition to the provision for one farm laborer for each forty acres, it requires that a man be employed for milking every six cows or "fraction thereof." It fixes farm wages at the figure paid skilled union labor in the Twin Cities and makes an 8-hour day and a 6-day week compulsory. Determination of the daily wage scale is provided for by averaging the current daily pay of members of the plumbers', carpenters', printers', plasterers' and

bricklayers' unions. Wives, sons and daughters of farmers, who work on the farm, must also receive compensation at the regular wage scale. Other features include bonds by farm hands to guarantee faithful performance of their duties and a compulsory cost-plus system of marketing products of the farm.

The object lesson to farmers, if such a measure should be enacted into law, would be highly instructive. It is just as fair to compel a farmer to employ one farm hand for every forty acres as it is to require a railroad to use certain complements of men in train operation. No one denies the right of the workingman to be protected against injustice. But the public certainly has no right to set the number of men an employer must engage to perform a specific task. Laws founded on selfishness cannot become a permanent part of our industrial code. Neither employer nor employee can make a contribution to the public weal by asking a selfish advantage. When the winds of adversity come, such a structure will fall, and great will be the fall thereof.

THE TOWER MAN

"Over at the interlocking switch tower, where three men work in shifts of eight hours each—Thorp Fitch, Peter Ubben and Fred Fissler—a record of passing trains is kept. At present, over the Illinois Central, an average of twenty-eight trains pass each twenty-four hours, and over the Minneapolis & St. Louis from fifteen to eighteen trains are recorded. The Minneapolis & St. Louis does a heavy business in coal from Illinois and southern Iowa to Minnesota and the Dakotas. The Illinois Central has many fast freight trains carrying packing-house products, fruits, vegetables, and other food shipments. Business generally appears to be good."—*Ackley (Iowa) Journal*.

The tower man has more opportunity for observing the visible movement of traffic volume than most persons connected with the operation of the railroad. He looks out from his glass-walled post upon the pulsing physical arteries that carry the life-blood of the nation. The tower man, it is true, may be concerned only about the duties he performs; he must accurately manipulate proper levers at the right time for safeguarding passing trains; a definite

weight of responsibility rests upon the reliability of his mental processes; human lives and valuable property are preserved from harm through the dependable and efficient functioning of his mind and hands.

Beyond that, the tower man is not called upon to exercise his powers of imagination. Surmise and speculation are not a part of his daily task. An interlocking switch tower is merely one of the mechanical details incident to the maintenance of train schedules and the expeditious dispatch of freight and passenger traffic. The tower's designation will probably be simply AY or BZ or CX or some similar combination of alphabetical symbols and its location remote from intimate human associations and contact. As he keeps his solitary vigil, however, the tower man is afforded opportunities for thinking. If he chooses, the tower man can view the world from a lengthened perspective.

The fact that two score or more trains pass by one certain crossing in twenty-four hours is, in itself, not remarkable. Time was when the sight of a railway train, with its puffing, clanking engine, was a spectacle to arrest attention. But nowadays railroads have overrun and crisscrossed the earth in all directions. Familiarity has engendered indifference.

So, the tower man as he phlegmatically notes the swift-speeding fast mail or limited, or the long line of plodding box-cars and oil-tanks and coal cars that clacket beneath his window, may merely decide that business appears to be good. "The primrose by the river's brim, a yellow primrose is, to him"—and nothing more. Yet there is more—to primrose and passing trains, as well.

Vestibuled trains freighted with mail and express and humanity destined to points far and near. Long strings of freight cars laden with the products of field, factory and mine. Wheat from the Northern plains, lumber from the pine forests of the West and South; fruit and vegetables from the temperate and torrid zones; livestock from the pasture slopes of a domain a thousand miles square; cotton and corn, butter and milk, eggs and meats, coal and potatoes, ironware, woodenware, tin, paper and steel.

All these combine to present a very vivid and definite picture of the gigantic, interwoven, interdependent structure we call national progress. The world calls us great. In a little less than a century and a half, this country has grown from a straggling group of colonial settlements along the Atlantic seaboard to a far-flung opulent empire whose richness surpasses "the glory that was Greece and the grandeur that was Rome." The great statue that holds aloft

the symbolic torch of freedom in the lower bay below Manhattan Island still carries a message to all men. America still remains a land of golden opportunity, the land of the free and home of the brave.

Our culture and our prosperity are due to a certain cause. We have been constructive. Our forefathers built on substantial foundations. Other countries characterize the American people as a nation of money-mad dollar-seekers. That is a base calumny. Americans dream dreams and see visions, and their dreams materialize into wondrous realities.

Not the least of the splendid achievements of American captains of industry has been the transportation system which has made our progress and prosperity possible. The railroads have been a tremendous factor in this marvelous tale of our history. The railroads have perhaps contributed most of all toward this thing we call civilization. Without them we would be a nation of primitives dwelling in isolated settlements, our resources undeveloped, our rich heritage untouched.

FACTS FOR FARMERS

A public demand for considerable reductions in railway freight rates continues with more or less clamor. In some quarters this demand is insistent, inspired by the insincere mouthings of demagogic political aspirants. It is noteworthy that the stock phrase "high freight rates" is heard less frequently in sections where no self-appointed, office-seeking champion of the people's rights is in evidence. In too many instances the public, without taking pains to ascertain the true conditions which modify or govern the transportation utility, forms hasty and ill-advised conclusions. The actual lack of intelligent understanding by the public of the fundamental facts of the transportation industry is appalling.

There is no reasonable excuse for such a state of affairs. The railroads are a public utility; all the processes of their operation and maintenance are subject to public scrutiny and investigation; their earnings, expenditures—in short, every detail of their business is under the strictest of regulatory supervision and direction. It is indefensible that the public which takes upon itself the responsibility of such supervisory regulation should not be broadly and wisely informed with regard to all the essential interrelated facts which have to do with transportation.

A widespread misconception prevails that freight rates are now at the highest level ever known and that any decline in schedules will come only after organized and bitter opposition from the carriers to drastic

coercive measures enacted into law. As a matter of actuality, the railroads themselves have, within the past few years, inaugurated voluntary reductions in rates on practically all of the so-called basic commodities. The farmers especially have been benefited by these concessions by the carriers. Yet there are many farmers who apparently are not aware that such concessions have been made.

The last great advance in freight rates became effective on August 26, 1920, after exhaustive hearings and deliberations conducted by the Interstate Commerce Commission, and ranged from 25 to 40 per cent increase on all commodities according to territorial classifications.

Certain grain rates to Gulf ports for export to European and other foreign countries were reduced in August and September, 1921. These reductions were as much as 27½ per cent in some instances, depending on point of origin. Export grain rates were further reduced and revised on January 1, 1922, and proportional adjustments have been made since that date. A comparison of export grain rates of August, 1920, and April, 1923, will show actual reductions which benefit the grower and shipper. These show:

	From Missouri River	From St. Louis	From Other Points
Wheat 192030	.23½	.20 to .31
192331½	.18	.15 to .22½
Corn 192039	.23½	.20 to .31
192330	.18	.15 to .22½

Voluntary reductions of rates on all products of farm, orchard and range were put into effect by the railroads on January 1, 1922. These new rates were to continue during the first six months of that year. They were later made permanent by ruling of the commission, effective from and after July 1, 1922, which was the date of expiration of the 6-month period.

Early in 1921, transcontinental roads made voluntary reductions of freight rates on lumber from the Pacific coast, in March and April, to be exact. September 8, 1921, lumber tariffs from Southwestern points also were reduced. Rates on hardwood lumber from the Southern Mississippi Valley were reduced after a hearing before the commission, but, while the Illinois Central System had favored certain adjustments for the benefit of shippers, it would not be fair to say that these specific reductions were voluntary. The recommendation of the commission applied only to rates on hardwood lumber from Southern points, but the Illinois Central System voluntarily made the same applicable to rates on pine lumber as well, effective March 13, 1922.

The Illinois Central System likewise took

the initiative in voluntarily reducing freight rates on agricultural limestone carried between points within Illinois. This reduction, amounting to 17 per cent of the existing rate, became effective September 21, 1921.

Average freight receipts for all Class I railroads, for each ton of freight transported one mile in 1922, amounted to 1.176 cents. This was about 8 per cent less than the average ton-mile rate in 1921. The saving to shippers from this reduction was something like \$336,000,000—that is, if the ported one mile, in 1922 amounted to 1.176 traffic of 1922 had been carried at the average rate of 1921, the cost to shippers would have been \$336,000,000 greater. Since the farmers received more than an 8 per cent reduction, the minimum for agricultural products being 10 per cent, their benefits were appreciably greater than any other class of shipper.

Figures prepared by the Northwestern National Bank of Minneapolis show enlightening comparisons between certain commodity rates and prices up to the beginning of this year. For wheat this statement shows that the price at Minneapolis in January, 1923, of \$1.24½ per bushel was 48 per cent above the January, 1913, price, while the average freight rate was only 45 per cent higher than in 1913. On beef cattle, the price of \$6.75 per hundredweight was 50 cents under the 1913 price, while freight rates were 12½ cents per hundredweight higher. On lambs, the price of \$14.25 was 90 per cent higher than in 1913, with an increase in freight rate of only 14½ cents a hundred pounds. On hogs there was an advance in price of \$1.09 per hundred pounds, while freight rates were only 15 cents per hundred pounds higher.

It would appear, therefore, in the light of sensible and fair-minded comparisons, that any urgent demand for freight rate reductions at present on the basis of prices for farm products is the result of faulty reasoning.

THE VALUE OF A DOLLAR

There are three ways in which to find the value of a dollar; one is to find out what you have to give in order to get a dollar; the second is to find out what you can get for a dollar; the third is to save it and see what you can do without and still keep the dollar.—*Exchange.*

If you start out in life with the sole idea of making money, you will fail. But if you make up your mind to give better service to the world than anybody else is giving, you will succeed. You can't help it.—E. J. SWEENEY.

PUBLIC OPINION

What the

World Thinks

LET THE RAILROADS ALONE

From the standpoint of the layman who has had an opportunity to observe at close range the problems of running the railroads, he would be almost willing to grant that the railway executives have proved themselves to be supermen in what they have accomplished since the roads were turned back to them by the government. The task confronting them on March, 1, 1920, was simply staggering. Physically and financially the roads were almost a wreck. Their rolling stock was in such battered condition that it was with difficulty that it hauled the grain crop of that year, and their finances were so shot to pieces that it did not seem possible they could obtain the money for the reconstruction necessary. But *The Commercial* pointed out at the time that the American railway operators who had performed such miracles in France during the war were back on the job in their own country ready to perform more miracles, and that is just about what they have done. In France, however, they were allowed to go where they pleased and do what they pleased, and expense was no object. At home, they have been treated as if they were in an enemy country and have had to fight every inch of the way as if they were seeking to devastate the territory instead of trying to build it up. These men, in these three intervening years, have been working just as patriotically for the preservation and welfare of their country as they did while in France building railroads to move and supply our armies.

Beyond the mere question of providing improved transportation, the industrial benefit which has come to the country at large is tremendous. Three years ago *The Commercial* insisted that, regardless of where the money was to come from, or whether the roads should remain under private ownership or otherwise, they would have to be put in condition to meet the needs of the country. The richest nation in the world could not stand by and watch its transportation system fall to pieces, all of which has been borne out. During 1922 the roads expended \$440,000,000 for new cars, locomotives and trackage. Approximately 70 per cent, or some \$300,000,000, of this was distributed in wages, increasing the buying power of the industrial workers by just that much. The entire sum has been put in circulation and has, therefore, formed

the basis of a considerable portion of our prosperity, for that sum has been turned over and over and it is impossible to estimate what its ultimate buying power has been. But, in addition to this, the railway executives have appropriated \$1,100,000,000 to be expended along the same lines as rapidly as the work can be done and the financing can be arranged.

Picture the reverse of this if the Brookharts and the La Follettes have their way. These hundreds of millions of dollars of required capital will be unobtainable, for capital cannot be induced to enter where there is doubt, not only of adequate return but of its own return. There would be no such expenditures. The roads would limp along as best they could with the rolling stock they now have. There would be no provision for expanding business of the country, and it would not be necessary, because business would cease to expand. Take \$440,000,000 out of the steel industry, with all its ramifications from obtaining the ore to the completed cars and locomotives, and our basic industry would sustain a serious blow. Take that same sum out of circulation, as it might be turned over and over, and it would mark the difference between boom times and depression, between prosperity and stagnation. If the railroads can be let alone by a demagogic Congress, and by power-intoxicated labor leaders, they will prosper and the country will prosper. Their interests are so interwoven that they cannot be told apart, and the sooner this is realized the better it will be.—*New York Commercial*.

HELPING THE FARMER

The officers of the Illinois Central Railroad are doing a wonderfully helpful service to the farmers along their lines, a service that is being appreciated not only by the farmers that are the beneficiaries, but by the business interests who reap a corresponding benefit in the added revenue produced by the better methods of farming advocated by the officials of the road.

The ad in last week's *Sentinel* told in detail of the work that is being done by the industrial department of the road. Experts in the various phases of agriculture are employed by the road, and the services of these men are given without money and without price. In the dairy field the Illinois Central Railroad has supplied expert but-

termakers, paying the salaries of these men for the first year to establish the business, and other like service of co-operation is gladly furnished where the local communities show a disposition to do their share.

Yazoo County could increase its wealth one hundred fold if it were to go into dairying and poultry, two industries for which Yazoo County is particularly well adapted.

Who will start the ball to rolling?—*Yazoo City (Miss.) Sentinel.*

RAILWAY SALARIES

C. H. Markham, president of the Illinois Central, in a letter to the *Des Moines Register*, refers again to the question of salaries paid to railway executives. This question has been discussed frequently, both pro and con. Mr. Markham goes over the ground again patiently and painstakingly, citing figures to show the exact number of executive, general and division officers and their compensation. This analysis discloses that 15,810 officers, during the last six months of 1922, were paid about 12-3 per cent of the operating expenses of the railroads, while nearly 58 per cent of operating expenses was required to pay employees below the grade of division officers. Mr. Markham concedes that a number of railway executives are paid salaries higher than the average, but he contends that these higher salaries are necessary, not alone because such executives carry heavy responsibilities, but because of the incentive they offer to ambitious young men in the railway ranks. If these salaries were to be reduced, he says, thousands of young men who are encouraged to strive for the higher places and the financial rewards that go with them would become discouraged and turn to other occupations. Mr. Markham believes such a policy would be most unwise and hurtful to the railway service.

Mr. Markham's contentions are supported by the list of railway executives and their salaries that the railway antagonists are citing. The antecedents of all these men have been traced, showing that almost without exception they have come up from the lower ranks of railway employment. Mr. Markham himself began his railway career as a section laborer. To recall the prizes that lure aspiring young men to the railway service and that make such large contribution to efficient operation would be disastrous to that service. That is the glory of America: the prizes it offers to the ambitious.

Appropos to this discussion is a news dispatch announcing the appointment of John J. Pelly as general manager of the Illinois Central System, succeeding A. E. Clift. Twenty-two years ago Mr. Pelly was a

country school teacher, and desiring to enter the railway service, he began at the very bottom, as a section hand. If no incentive is to be held out to ambitious men of that type, where are the railway executives of the future to come from?—*Sioux City (Iowa) Journal.*

A REAL RAILROAD

As we watch the shipments daily of twenty-five to thirty carloads of strawberries roll northward from this section, we are thankful that the facilities of such a railroad as the Illinois Central are accessible. Were this not so, it is highly probable that our biggest industry would suffer immeasurably.

Railroads are sharply criticised at times for various and sundry reasons. Like all big corporations, the common carriers come in for censure whenever it is possible for some kicker to get in a good-sized wallop. But after all is said and done—and a recapitulation is made, comparing conditions here with other sections—we think that the farmers and business men of this section of Louisiana should feel under great and lasting obligations to a railroad that is so efficiently and adequately taking care of their most important item, transportation.

Freight rates still remain high, gradually assuming pre-war normalcy. As the *Vindicator* stated three years ago—and we are glad to observe that the suggestion was evidently approved—freight rates can never be reduced by continued heckling of railroads. We realize that we are a mere spot on a great system of railroad extending from the Great Lakes to the Gulf, and, no matter what views we take, we are better off by assuming a co-operative spirit and assisting in every way the railroad to regain its great handicap resulting from the war period.

Tangipahoa Parish owes much to the Illinois Central Railroad. Our visitors from Tennessee, here to buy berries this season, declare that the strawberry industry of the Volunteer State could not thrive without the assistance of the Illinois Central. So it is in Louisiana, at least this part of the state. Other sections would delight in engaging in berry culture, but lack railway facilities. We do not appreciate that fact because we have never been face to face with it. The Illinois Central has always maintained superior service and expects a reasonable return for that service. It should get it without a kick.

Where would the strawberry industry be today without the double-track system of the Illinois Central? With thirty and thirty-five cars of fruit rolling northward daily, it is out of the question to say that

a single-track railroad could take care of such an industry in conjunction with its other business. Yet the old Eye See rarely misses a schedule with its excellent trains, and our fruit arrives in the great markets of the country in the very pink of condition.

The Illinois Central has been an important and potential factor in the upbuilding of Hammond and Tangipahoa Parish. And it has just started its efforts. Within ten years from now we can look back and recount a wonderful development as the result of co-operation.

Heckling the railroads, tantalizing them without just cause, comes of bad grace and is distinctly averse to the general trend of current events—that of “service above self”; “he profits most who serves best.” These are slogans of the Rotary Club, and they are applicable to what the Illinois Central is doing for this territory.—*Hammond (La.) Vindicator*.

RAILROADS AND THE PUBLIC

The great railway systems of this country have long recognized the value of friendly and supporting public opinion. This recognition has been even more marked since the government returned the railroads to their owners in 1920, and has prompted effort on the part of certain great railroads to enlist public opinion as an aid to development. The effort of the Illinois Central System along this line is especially notable, since it has been devoted to the presentation of facts that were designed to give the public intimate understanding of the purposes, plans and problems of railroads in general and their own servant system in particular.

The results of the Illinois Central's campaign have been equally notable. An exhibit of these is made in a finely printed booklet bearing the title “Public Relations,” and the methods employed in the campaign are revealed. The dominating purpose back of the work is outlined in one of the opening paragraphs in the booklet's editorial foreword:

The railroads cannot expand their facilities to meet the growing needs of a rapidly developing country unless they receive constructive treatment. However, the demand for constructive treatment must come from the public. Public opinion, that force which controls the destiny of the nation, must be crystallized into a desire that the railroads be permitted to earn a return that will enable them to give the full measure of service to the public.

And a closing paragraph says:

The sole purpose of the Illinois Central System's public relations effort has been to promote a closer and better relationship among the patrons, the employees and the management of the railroad by giving the patrons and the employees the facts in regard to any question in which the management believes they will be interested. This threefold relationship has never been upon a firmer basis than it is today.

Just how this was accomplished is shown

in the pages that follow. The thirty-one newspaper advertisements which were published by the system between September 1, 1920, and March 1, 1923, are reproduced. These afforded the reading public an insight into the workings of the railroad's business, gave the public, in fact, a close-up look at the company's books. One of the most informative advertisements was entitled “Illinois Central System Dollar: Where It Comes From and Where It Goes.” More than half of the booklet is devoted to reproductions of editorial comment from leading American newspapers on the public relations work of the railroad.

The work of the Illinois Central is thus shown to be exemplary, constructive and finely resultful. *The Journal* has commented before on this campaign, taking occasion to say that all great public-serving corporations would do well to emulate the example. In this connection credit has been given to the public utility corporations in Dallas or with headquarters in this city, and to the Texas & Pacific and Santa Fe railroads, for an intelligent use of advertising space as a means of establishing closer and more friendly relations with the people. In the near future such means will be generally employed, *The Journal* believes, because the fine results scored by the pioneers in this work will prove convincing.—*Dallas (Texas) Journal*.

ALL THEORY, NO FACTS

There is this for the people to keep in mind with reference to the hue and cry for government ownership of railroads:

Its proponents have nothing but theory to offer in support of their wild claims. It has failed every time it has been tried. If the proof of the pudding is in the eating, then as a practical proposition, government ownership or operation of railroads demonstrates its own futility.

Even public regulation of railroads, however sound in principle it may be, has yet to prove the highest success of its application. It is still on trial. And we should remember that regulation is not so large and difficult a task as ownership and operation.

It seems strange that even the ultra-radicals who are preaching this doctrine of state socialism would have the hardihood to attempt it in this country in face of the fact that our railroads privately owned and operated have so far surpassed the railroads of any other country, both in point of service and rates for the patron, as to leave no real basis of comparison. This is a fact, too, that our railroads achieved their greatest progress, did their largest building in an era before rigid government reg-

ulation. We are not opposing regulation. It is sound in principle. We are opposing the wrong application of the principle. Regulation, first, must be confined to the federal government. It must be unit and not multiple regulation. This agitation for a return to regulation of interstate lines by states as well as the federal government is thoroughly wrong and, we believe, is not proposed in good faith. How can any intelligent man believe in such a proposition? Why, then, do supposedly intelligent men propose it? In our judgment, because they are interested only in wrecking the present system of privately owned railroads and for the purpose of forcing confiscation, then government ownership. They know this would facilitate that disaster.

It will not do to let this un-American agitation go on unanswered. In face of results already achieved by communism, it is not safe to rest upon our laurels and assume that the concrete intelligence of Americans will somehow save the day. There is, in our judgment, just one thing that will save the day, and that is proper education of the masses as to the facts regarding public ownership and this systematic propaganda to bring it about. Get the truth to the people, then trust them, but not before. "Know the truth and the truth will make you free." We have no faith in the philosophy which leaves to luck such matters as these.—*Public Service Magazine, Chicago.*

ONE POINT TO CONSIDER

When the railroads are making a good profit we think of it as going to the officials of the roads, bankers and maybe a few others. The bulk of the earnings, however, goes to the hundreds of thousands of people, including many farmers, who own railway stocks and bonds. These people invest their savings in such securities in the hope of a good return with reasonable safety.

If the railroads are to meet the transportation needs of the country they must have new capital to develop their properties. This need is constant. Where is it to come from? In an address the other day a railway official said: "They cannot get it from a banker or a group of bankers. They must get it from people like yourselves who have money to invest. You are not going to invest your savings in a business that does not pay a reasonable return on your investment. There are too many other attractive investments, with no more risk involved."

If railway stocks and bonds don't pay, nobody is going to put money into them. So if we fail to permit the roads to make money, they must fail in their efforts to borrow money; and if they can't get new

capital from those who have money to invest, they can't continue to give the service needed by growing industries.

That seems clear enough. We mention it simply as one point that should be borne in mind in considering the railway problem.—*Daily Drovers Journal, Chicago.*

IF IT QUILTS

In an editorial the other day we made this statement: "If we fail to permit the railroads to make money, they must fail in their efforts to borrow money; and if they can't get new capital from those who have money to invest, they can't continue to give the service needed by growing industries."

The truth of that statement seems to be borne out by what is happening in the case of the Chicago, Peoria & St. Louis Railroad. Here is a road 230 miles long, entirely within Illinois, and serving thirty-five cities and villages in an agricultural territory having a population of more than 370,000 people. The road is in the hands of a receiver, who has been authorized to sell it for junk if he can't sell it for continued operation.

Look this road up on the map. Suppose your farm was in the vicinity of Palmyra, or Scottsville, or Modesto, in Macoupin County, and imagine how you would feel to lose your rail connection with market. It is a mighty serious proposition.

We don't know all the whys and wherefores, but it is evident that this road has not been making enough money. Possibly competition has been too stiff for it. Perhaps there has been mismanagement. Whatever the case may be, the point for all of us to consider is the seriousness of crippling our railway service.

It is true enough that freight rates are too high. They must come down or farmers' prices must come up. That is imperative. But we must also avoid going so far as to put our entire transportation system in jeopardy.

There are a good many things that we come to take for granted. Railway service is one of them. We appreciate its full value to us only when it fails us.—*Daily Drovers Journal, Chicago.*

SHIPSTEAD IN A HOLE

The Traffic Club of Chicago has at last been able to "get a rise" out of Henrik Shipstead, United States senator-elect from Minnesota. On January 5 the board of governors of the club wrote him calling attention to a report, in the *Chicago Tribune* of January 2, of a statement made by him with respect to freight rates, enclosing the news item referred to and an editorial from the same paper commenting thereon. Mr. Shipstead was asked either to affirm

or deny certain statements attributed to him, which were characterized as false. He made no reply. Last week the board of governors of the club wrote him again (see *Traffic World*, March 17, page 584), calling attention to his failure to reply and again to the misrepresentations in the remarks attributed to him. Now, under date of March 15, he replies as follows:

"I have your letter of March 12 calling my attention to a letter and enclosures of January 2, immediate answer to which was delayed, due to my illness at the time. Since then I find the answer was not made, which was an oversight. I can say for your information, that the newspaper report to which you refer is a garbled misstatement of my views expressed at the City Club in Washington. I have made it a rule not to deny misstatements by newspapers of what I say, but your letter is a courteous inquiry that deserves a reply and therefore I have taken great pleasure in complying with your request."

For a man who has not yet taken his seat in the Senate, Mr. Shipstead is more than prompt in adopting the easy plan of not denying what the newspapers quote him as saying, and in using the alibis of "illness" and "oversight." He says the report was "garbled," but he does not say in what respect. We do not know what the Traffic Club will think, but we should say that, since he regarded the club's query as important and courteous enough to demand a reply, in spite of his policy not to engage in controversies with the newspapers, he might have been courteous enough, on his part, to go into details as to the respects in which the newspaper misquoted him. He must have known that what the club was trying to find out was his ideas about the things he discussed. Merely to say that he was misquoted, without saying in what or to what extent, throws little light on the matter. Rather, his reply tends to confirm the opinion that he was talking about something he knew little about and does not know how to extricate himself.

At any rate, the Traffic Club of Chicago is to be congratulated for smoking him out. As the record stands now, he has said nothing on the subject, for he does not explain what he did say in asserting that he did not say what he was quoted as saying.—*Traffic World*, Chicago.

RAILROADS AND THE PUBLIC

A man well known to the people of Houston, and who has their respect and the respect of all who know him, is president of the Illinois Central Railroad. He is Charles H. Markham.

He is not only a railway man of dem-

onstrated ability of the highest order, but is a man blessed with an abundant supply of that most essential commodity called common sense.

Railroads must necessarily act through agents and managers, and it appears to the people very often that the managers have absorbed or imbibed some of the characteristics of the corporations which they manage.

They have always been too much inclined to hold aloof from the people on whom the roads depend for existence—indeed, by whom they were brought into existence—and talk about what the "railroad" has or has not done, when they are responsible for all the prosperity and adversity, the successes and the failures of the road.

They have, perhaps unintentionally, in large measure eliminated the personal element from the railway problem.

Mr. Markham does not do this. On the contrary, he puts out every month a publication, the matter in which is prepared by him, in which he takes the patrons of his road into his confidence.

He shows how many passengers have been carried, how many ton-miles of freight have been moved, what the receipts and expenses were, and goes into every detail which will inform the patrons of the road about everything they are interested in knowing, and that will bring about a better understanding between them and the road. That is common sense raised to the "n-th" degree.

The average citizen does not know how many employes any railroad has, nor what a passenger car or a locomotive or freight car or cabooses costs.

The public complains of increased freight and passenger tariffs, yet it has no, or at least but little, idea of the great increase in the cost of railway supplies and railway operation.

They ought to be advised upon all these matters, and that is the kind of information Mr. Markham gives the people who have made the Illinois Central Railroad one of the greatest systems in America.

In addition to his monthly publication, Mr. Markham puts advertisements in many papers carrying information of the same tenor as that carried by the magazine.

How his policy is looked upon by the press and commercial and trade journals is shown by the fact that it takes sixty-four pages about six by ten inches in size, in small type, to hold the editorials commending his action.

He does just what those vested with the management of every system of railroads ought to do—go to the people, advise them of all material facts relating to railway

operation, and let them know that the railroad wants their friendship, and do also what Mr. Markham does in the close of every statement he puts forth—invite constructive criticisms and suggestions.

In the conclusion of one of his statements to the patrons of his road, Mr. Markham phrases a thought which is worthy to be considered and acted upon by every railway manager:

"We take the position that we are but the trustees of a great investment which has been made in this agency of transportation, and that we are responsible to the whole public for our stewardship."—*Houston (Texas) Chronicle*.

MUSSOLINI ON CAPITALISM

Premier Mussolini's remarks in welcoming the second congress of international chambers of commerce ought to win some serious consideration in this country, and we especially commend them to those discontented communities of our West whose new leaders are preaching socialistic remedies.

Mussolini was once a socialist and an exile from Italy because of his opinions. But he lived and thought through that phase and it was in passionate conviction of the fallacy of Marxian doctrine that he inspired and organized the movement which saved Italy on the brink of the communist quicksand. Today from the seat of supreme authority, confronting the great dangers and difficulties of reconstruction, he announces his conviction that "a government desiring to uplift its people after a war crisis must give free play to private enterprise and forego any measure of state control or state paternalism."

Yet our own radicals, who call themselves progressives, are unitedly for more state control, more state paternalism. To them anyone who opposes further interference with free private initiative is an enemy of the people and a sinister reactionary. Relief for the farmer, the resumption of prosperity for the farmer, the betterment of labor, depends, according to these mistaken doctrinaires, upon more action by the government. But says Mussolini: "One of the greatest historical experiences, which has unfolded itself under our eyes, clearly demonstrated that all systems of associated economy which avoid free initiative and individual impulse fail more or less pitifully within a short lapse of time."

Experience—that is the key to Italy's wisdom at this time. It ought to be ours. America has accomplished the great progress and distributed prosperity under the regime of freedom. Not merely Italy, not merely Russia, but almost all the nations of

Europe have adopted state socialism in varying forms and degrees. This is a crushing weight upon their progress and restoration. Is the extension of state control going to advance the condition of the American farmer, as urged by his advisers? Is there reason to believe that what has been proved to be bad for Europe is going to be good for America?

Present day progressivism, self-styled, in our country is all for throwing overboard the principles which have energized America in the past. It demands more laws which shackle human freedom. It turns to the state for money, for supervision, for the performance of functions like transportation, mining, banking, warehousing, etc., which, whatever their defects, are better performed as private enterprises than the business of government is performed by politicians.

In a word, the radical progressivism of the farm-labor radicals is headed not forward but back into an old-world system the burden of which is weighing its peoples down under a bureaucratic machinery which is as costly as it is inefficient. If the American people give up their own freedom for such a system of state control they will deserve what they will suffer, not progressive prosperity, but progressive deterioration.

In this country during recent years the propaganda of socialism has spread among all classes until such terms as capitalism and individual liberty have become terms of reproach. But Mussolini, surveying Europe with its vast government machines, its state railroads, its state monopolies, its network of restrictive regulations, its huge army of state employes, declares: "I do not believe that the complex of forces known by the glorious name of capitalism is about to end, as seems to be believed by thinkers of social extremism." Certainly it will not end in America unless we are ready to barter our birthright for a mess of pottage.—*Chicago Tribune*.

COURTESY

Courtesy is the one medium of exchange that is always accepted at par by the people of every country on the globe. Courtesy radiates a spirit of good feeling and suggests that we are not working entirely for the material returns of work, but for the pleasure of friendly human association as well. Life is not too short, and we are never too busy to be courteous. Courtesy is the outward expression of an inward consideration for others, and is always an effective lubricant that smooths business and social relationships, eliminating friction.—*The Outlook*.

Mothers' Day—May 13

"It's a strange thing," said Tillie the Typist, "that some folks forget all about mother until Mothers' Day rolls around.

"Take my mother, for instance—and there are thousands like her. I shall always consider myself the luckiest individual under the skies to have been her daughter. Seen through her eyes, I am not a frail human being but one of her glorified dream children. Why, she thinks I am perfect. (Goodness knows, I wish I were!)

"When I am ill she carefully conceals her anxiety while she nurses me back to health. When I am tired or discouraged, her ready sympathy and cheer urge me to another effort. When someone has hurt me, she just gathers me to her bosom and, say, the ache isn't nearly so hard to bear. And when I am happy, she is happy, too.

"Why shouldn't the day go well when Mother wakes me in the morning with a smile and a loving kiss? And can she play a joke? You should have seen her on April Fool's day, having lured me out of bed to answer an imaginary telephone call!

"Her great green-gray eyes have lost some of the old-time sparkle, the heavy shining black coil of her hair is threaded with silver, and there's a bit of a stoop to the stately shoulders—but she is still the most beautiful person in the world!

"Mother's Day? Every day is her day. Mother comes next to God."

Helpful Hints

Do you shed tears when peeling onions? To prevent this, remove outer skin from the onion and soak in cold water for a few minutes before cutting.—J. MILTON MAY, *New Orleans terminal editor, New Orleans, La.*

When lemons have become dry from long standing, they may be restored to their original condition by boiling in water for several minutes. While the hardened peel is not rejuvenated, the juice is in no way impaired.

Rice makes an excellent thickening for soups made of tomatoes, asparagus, celery or onions.

To remove grease spots from silk, wet a lump of magnesia, rub on the spot, let it dry, and then brush the power off.

Fine granulated sugar makes the best cake. The sugar may be sifted several

times before using. Powdered sugar makes a dry cake.

The cogs of an egg beater should not be put in water.

To test fresh eggs, put the egg into a glass of cold water. If it is fresh it will sink.

Poached eggs will not spread if salt is added to the water before the eggs are dropped in.

One part of cornstarch to four parts of bread flour makes a good substitute for pastry flour.

To obtain a dark brown bread crust, brush over your loaves with milk or butter before baking.

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them.

Little Tom Keene, son of trainmaster, Mattoon, Ill., had been ill all day and had

gone to bed early. Next morning, on inquiry of the family as to how he was feeling, Tom replied: "I'm awful better to-day."—FLORENCE MCSHANE, *Indiana division editor*.

Florence, aged 3, bright as a dollar, blue-eyed, with a wealth of blonde curls, and kissable (yes, she many a time has squeezed my collar into squareness and rouged my cheek with impacts of childhood), rehearsed with me on different occasions until she could speak her part by heart. She as Juliet and I as Romeo went through our play as follows:

(Romeo) "Pretty little eyes."

(Juliet) "Full of sweet surprise."

(Romeo) "Tiny little nose."

(Juliet) "Red, red as a rose."

At our own rehearsal the other day she outdid Shakespeare by throwing a bouquet such as this:

(Romeo) "Pretty little eyes."

(Juliet) "Full of sweet surprise."

(Romeo) "Tiny little nose."

(Juliet) "Full of little sniff-sniffs."

Juliet had caught cold, while out on the balcony.—F. S. CERNY, *law department, Chicago*.

Tested Recipes

BUTTERSCOTCH PIE.—Put your pie crust on the outside of the pie plate and bake until light brown. This gives a deeper edge and prevents shrinkage. Mix together 1 cup brown sugar and 2 tablespoonfuls flour; stir in the yolks of 2 eggs; pour over this mixture 1 cup of hot water, and cook until thick. Then add 2 tablespoonfuls butter, speck of salt, and 1 teaspoonful vanilla, and remove from flame. Pour this mixture into the baked crust, cover with a meringue made by beating the whites of the 2 eggs with 4 tablespoonfuls sugar until stiff, and brown.—DELLA DRISCOLL, *stenographer, weighing and inspection department, Chicago, Ill.*

BAKED ICE CREAM.—Bake a square cake one-half to one inch thick, size depending on number of persons to be served, allowing a piece four inches square for each person. (Cake should be baked sufficiently in advance to allow it to be cold when wanted.) Place a piece of cake on a small plate, putting strawberries or other seasonable fruit on this. A few minutes before you are ready to serve, put ice cream the size of a small cup on each piece of cake on top of the fruit, cover entirely with meringue made from stiffly beaten whites of eggs and granulated sugar. On top of meringue place chopped raisins and cherries, sprinkle with powdered sugar, place in a very hot oven until brown, and serve

at once.—MRS. J. C. NEFT, *wife of division accountant, Fort Dodge, Iowa*.

SCALLOPED SWEET POTATOES.—Boil potatoes until done. When cool, slice lengthwise. Place a layer of potatoes in bottom of baking pan, then a layer of soft "C" sugar dotted with lumps of butter. Continue in this manner until pan is filled, the last layer to be sugar and butter. Bake until the sugar and butter form a syrup over the potatoes. Do not add any water.—MRS. JOHN TROTT, *wife of conductor, Mattoon, Ill.*

DATE CAKES.—Cream $\frac{1}{2}$ cup butter with 1 cup "C" sugar, then add 2 eggs (well beaten). Beat the mixture until light. Stir in 1 cup boiling water in which 1 teaspoon soda has been dissolved, add 1 package dates, cut fine, 1 cup nut meats, and $1\frac{1}{2}$ cups flour. Drop into muffin tins and bake in hot oven. When cool, cover tops of cakes with frosting made of powdered sugar, butter and a little hot water.—CATHERINE RODEMEIER, *accounting department, Wisconsin division*.

HAMBURGER HASH.—Get a pound of hamburger steak from your butcher. Flour it

No. 15 shows Marie, 3 years old, and Robert, 1 year old, children of E. F. Kremer, chief, accountant, superintendent's office, Champaign, Ill.

No. 16 shows Inguagio Willard, 2 years 7 months old, and Joseph Liberty, 4 years old, sons of P. Ugalano, section foreman, Manson, Iowa.

No. 17 is Dorothy M., 13 months old, daughter of Yard Inspector A. Gerth, Burnside shops.

No. 18 is Helen Marie, 5 years old, daughter of M. W. Storm, dispatcher, Mattoon, Ill.

No. 19 is Mary Evelyn, $5\frac{1}{2}$ months old, daughter of R. B. Cross, switchman, Baton Rouge, La.

No. 20 is Irma Eileen, 5 years old, daughter of Car Inspector Henry Livingston, Minonk, Ill.

No. 21 is Carry Mel, 5 years old, daughter of Ellis M. Oliver, bill clerk, freight office, Martin, Tenn.

No. 22 is Marjorie Louise, 6 months old, daughter of Conductor W. T. Vernon, McComb, Miss.

No. 23 is Mary Louise, $4\frac{1}{2}$ months old, daughter of F. J. Ardern, rodman, Freeport, Ill.

No. 24 is Mary Alyce, 3 years old, daughter of H. Culley, chief clerk to superintendent, Carbondale, Ill.

No. 25 shows Louise, age 6, Loretta, age 4, and Dorothy, age 10, children of G. W. Shaughnessy, timekeeper, district foreman's office, Louisville, Ky. Mr. Shaughnessy is also one of our Kentucky division correspondents.

No. 26 shows Margaret Thelma, $5\frac{1}{2}$ years old, and Mary Lee, 6 months old, children of Section Foreman L. E. Carrington, Glendora, Miss.

thoroughly by hand until every bit of the meat is covered with flour. Season with salt, pepper and onions (if liked), and brown in a skillet in which a tablespoonful of drippings has been heated. Serve on hot toast. If gravy is desired, add hot water to the hash before removing from the skillet.—Contributed by J. MILTON MAY, *New Orleans terminal editor.*

BAKED APPLE ROLL.—Sift 2 cups flour with 2 teaspoons baking powder and 1 teaspoon salt; add 2 tablespoons melted butter and $\frac{3}{4}$ cup milk. Roll out $\frac{1}{4}$ inch thick, spread over with sliced apples, sprinkle lightly with sugar and cinnamon. Roll up as for jelly roll. Slice one inch thick, set on end in baking pan well greased with butter, and pour over the little rolls a sauce made as follows: $\frac{3}{4}$ cup sugar, $\frac{1}{2}$ cup corn syrup, $1\frac{1}{2}$ tablespoons cornstarch, 2 cups cold water, 2 tablespoons butter, and a dash of nutmeg. Cook the sauce for five minutes. Bake until the apples are tender, and serve piping hot.—MRS. J. F. WILLIAMS, *stenographer to chief clerk, Tennessee division.*

BUTTERMILK PIE.—Bake pie crust on outside of pie tin until light brown. Mix together 1 egg (beaten), $\frac{3}{4}$ cup sugar, 1 cup chopped raisins, 1 tablespoon flour, 1 tea-

spoon butter, 1 cup buttermilk and 1 teaspoon vanilla. Cook in double boiler until thick. Pour this mixture into the baked crust and serve covered over with whipped cream.—MRS. R. H. WRIGHT, *wife of instrumentman, Mattoon, Ill.*

OATMEAL COOKIES.— $\frac{3}{4}$ cup shortening, 1 cup sugar, 2 eggs, sift 2 cups flour with 1 teaspoonful each of soda and cinnamon three times, 2 cups oatmeal, 2 cups chopped raisins, 1 cup chopped pecan or walnut meats, 1 cup cocoanut, 4 tablespoons sour milk. Mix in the order given, drop by spoonfuls on buttered baking sheet, and bake in medium hot oven.—FRANCES P. OTKEN, *secretary to chief clerk, superintendent's office, McComb, Miss.*

The Minister Expresses His Feelings

A certain agent on the Kentucky division tells this one on his wife:

"Mrs. ———, who prepared only a light breakfast each morning for her husband's departure on an early train, invited to have breakfast with them a minister who happened to be spending the night in the same apartment and who was going out on the same train. Desiring to express his appreciation, the minister remarked: 'Well, this makes a fellow *feel* as if he has had breakfast,' anyway."

Here are Mr. and Mrs. Joseph Kurth, Jr., and their nine children. The names of the children are: Cecelia, the oldest, age 15; Helen, Clarence, Harold, Edmund, Lawrence, Earl, Wilma, and Paul, who was 2 years old May 22, 1922. Since this picture was taken, a daughter, Mary Adeline, was born January 7, 1922, and died March 15, 1923. Mr. Kurth, who has been an employe since June 28, 1897, was recently promoted to general foreman at Waterloo, Iowa. The grandfather of these children, Joseph Kurth, has been in the service since 1892 and is now employed as machinist at Waterloo.

For Buddy and Sis

Buddy's Dog Selects His Own Name

DEAR BOYS AND GIRLS:

Have you ever puzzled over something until you had a deep furrow in your eyebrows and you were at a loss what to do? If you have had such an experience, you understand how Buddy has felt during the last few days. Buddy has been perplexed. You see, it was like this: Buddy received so many suggestions for a name for his dog, and they were all so appropriate, that it seemed a tremendous task to make a selection. He could not decide on any one name. Then he had a bright idea. Why not let the dog select his own name? So Buddy brought his playmate into Aunt Nancie's room and shook all the letters into a heap. "Go to it!" he ordered, and the dog did. He thrust his nose into that bundle of envelopes and brought out Allison Earle Lawler's letter suggesting that he be named "Jazz." Allison Earle is 8 years old, and his father is chief traveling auditor, Chicago. The picture of the lucky boy is shown on this page.

Buddy wants to thank all of our boys and girls for their interest and help in this matter. The names suggested were all good, and he wishes that he had a dog for each name. He thinks that your letters to Aunt Nancie are an excellent way of becoming acquainted. So do not stop writing just because Buddy's dog has been named. Aunt Nancie is always glad to hear from her boys and girls.

With love,

AUNT NANCIE.

Letters From Our Boys and Girls

26 East Douglas Street, Freeport, Ill.

DEAR AUNT NANCIE:

I am a boy 9 years old. I'm going to give Buddy's dog a name. I would call him "Pal" or these following names: "Snuggle," "Brownie," "King," "Rags," "Tricksy," "Sambo," "Tricks," "Nig,"

Allison Earle Lawler

"Gip," "Buster," "Bruno," "Kaiser," "Bumpus," and "Strongheart" and "Fido."

Yours sincerely,

FRED REED.

476 Miami Avenue, Freeport, Ill., April 15, 1923.

DEAR AUNT NANCIE:

Having read about Buddy's pet dog in the *Illinois Central Magazine*, I thought I would send you some of the names that I have selected. Here are some I suggest: "Trouble," "Buster," "Jack," "Snoodles," "Jiggs." My daddy is assistant night foreman at Freeport. We always love to read the *Illinois Central Magazine* when daddy brings it home, especially

BUDDY—Named at Last!

By SAID

TODAY IS THE DAY BUDDY FINDS A NAME FOR HIS DOG. LAST FEBRUARY SOMEBODY SENT BUDDY A DOG—AND NOT KNOWING WHAT TO NAME HIS COMPANION—BUDDY DECIDED TO LET HIS FRIENDS SUGGEST A NAME. MANY REPLIES WERE RECEIVED AND NOW WE FIND BUDDY AND HIS DOG—READY TO CHOOSE A NAME

EACH LETTER IN THAT ROOM HAS A NAME IN IT FOR YOU. GO IN THERE AND BRING ME ONE—REMEMBER GET JUST ONE

COME ON—DOGGIE—HURRY—GEE!! BUT I CAN HARDLY WAIT

JAZZ! SO THAT'S YOUR NAME!!

THANKS TO ALLISON LAWLER

the jokes. I hope Buddy finds a nice name for his little companion.

With love to both you and Buddy,
RAMONA RICHTER, 8 years old.

Centralia, Ill., March 12, 1923.

DEAR AUNT NANCIE:

I am a girl 11 years old. My father is an engineer on the Illinois Central R. R. I am going to try to give Buddy's dog a name. I think "Trix," "Rover," or "Fido" are good names.

Yours truly,

415 N. Locust St. MARJORIE E. BEEBE.

320 Lott Boulevard, Gibson City, Ill.
March 22, 1923.

DEAR AUNT NANCIE:

I am a little boy 7 years old. My father is section foreman at Gibson City. I am sending a name I think nice for Buddy's dog. I think the names "Spot," "Bob," "Slim" or "Snuggle" are good names.

With love,

WALTER POWELL.

7133 East End Avenue, Chicago, 4-2-23.

DEAR AUNT NANCIE:

I would suggest that you name Buddy's dog "Tut." I am six years old.

JACK LESSEL.

Redwood, Miss., March 23, 1923.

DEAR AUNT NANCIE:

I am a little boy 8 years old. I am going to try to give Buddy's dog a name. I think "Ponto" and "Whiskers." I go to school twenty-two miles on the train every day.

Your friend,

BOB ED ANDERSON.

Mattoon, Ill., April 1, 1923.

DEAR AUNT NANCIE:

Next September I will be old enough to go to school—right now I can count up to 115. Do you

Here are Mrs. W. A. Johns, wife of a section foreman on the Memphis terminal, and their twin sons, Elbert and Elmer, 6 months old. This is the second pair of twins born to Mr. and Mrs. Johns.

like to read Andy Gump and Min and Chester in the funnies I do all the time. Sometimes I ride on the trains—the one to Evansville is a bent one, goes in and out, in and out, lots of times. I wish you would name Buster's dog "Tag-a-long." Good-by.

TOM KEENE, age 5,
son of Trainmaster C. A. Keene, Mattoon, Ill.

Box 708, Hammond, La., March 15, 1923.

DEAR AUNT NANCIE:

I am 12 years old and am in the seventh grade. My father is the editor of the *Hammond Vindicator*, Hammond, La. My father takes the *Illinois Central Magazine* and I find it to be very interesting. In the March issue I saw where Buddy is trying to find a name for his dog, so I am sending in the names of "Pal," "Smut," "Sporty" and "Lucky."

Your friend,

ZULMA CAMPBELL.

605 West Pecan Street, Carbondale, Ill.
April 4, 1923.

DEAR AUNT NANCIE:

We think Buddy is a lucky little boy to have such a nice little dog given him and that Buddy's little dog is very lucky to have been given a nice little boy like Buddy. We suggest that a very good name for Buddy's little dog would be "Lucky." We hope Buddy will like this name and will choose it.

Yours very truly,

CHARLES, JR., and CURTIS LEE BATSON, ages 3 and 2.

Here are Violet, 3 years old; Margaret, 5, and Roberta, 7, daughters of Engine Foreman R. R. Fitzgerald, St. Louis division. Shown with them is Grandma Main, 74. These little girls are called "Three Aces" by their relatives and friends.

Junior Taylor, 202 Hileman & Gindt Building, Waterloo, Iowa, age 8, suggested "Chum" or "Pal." Charles Junior McCafferty, Carter, Miss., age 4, suggested "Bounce," "Carlo," "Trickey" and "Teddie." Clara Mae Young, 1209 East 52d Street, Chicago, age 8, suggested "Barney." Arline

Illinois Central Magazine

Bemisderfer, 650 East 90th Street, Chicago, age 9 years 10 months, suggested "Buttons."

Answers to April Puzzle

Tennessee towns: 1, Woodstock; 2, Gates; 3, Milan; 4, Troy; 5, Frogmoor; 6, Leewood; 7, Perry; 8, Martin; 9, Memphis; 10, Tiger Tail; 11, Idlewild; 12, Templeton; 13, Newburn; 14, Greenfield.

Illinois Towns

The following groups of words represent stations on our line in Illinois. See how many you can guess correctly. The correct answers will appear in the June issue.

1. Something a small boy throws and a place where water may be crossed on foot.
2. One of the seasons and an enclosed stretch of country.
3. An organ by means of which fish breathe under water and a member of the human family.
4. A make-believe battle and part of a window.
5. A kind of paper used for making copies and a low place between hills.
6. Something essential to a carving implement and a material used in making furniture.
7. An adjective applied to Western bronchos and part of a typical American breakfast.
8. A boy's name and a measure of weight.

9. The name of a Moorish palace at Granada, Spain.

10. To be at liberty and a haven for ships.

11. A color found in the national flag and a tract of land surrounded by water.

12. A harbinger of Spring and something that furnishes daylight.

13. A useful article found on the doorstep and something that a musician carries in his head.

14. An Egyptian lily.

15. A nickname for Irish potatoes and a beast of burden.

Gives Sons a Code to Live By

Hinkle C. Hays, district attorney for the Illinois Central System at Sullivan, Ind., whose photograph was used as a frontispiece for the December, 1922, issue of this magazine, has two sons—John T. and Charles E.—9 and 7 years old, respectively. The elder, in a recent conference with his father, suggested that he would like to have assembled a code of things a young man ought or ought not to do. He promised to tack such a letter up above his desk in his study, so that it would be a constant inspiration to him.

His father responded by preparing such a list of rules for him and his brother and having them printed on a card.

"I don't know that the rules are much good," says Mr. Hays, whose brother, Will

Here are pictures of three members of the Cherokee Boys' Band who are sons of Iowa division engineers. No. 1 is Prentis, son of Engineer C. P. Jones; No. 2 is Walter, age 8, and No. 3 is Orla, age 13, sons of Engineer "Stub" Waddell, Cherokee, Iowa.

H. Hays, is a former Postmaster General of the United States and at present head of the motion picture industry, "but I have been careful in compiling them not to ask the youngsters to do anything I did not try to do myself. For instance, I at no place requested them not to smoke. I could not do this consistently, because I smoke myself, although I hope they do not get the habit, and use my best efforts to that end.

"Incidentally, I am keeping a copy of the same rules on my own desk, as a reminder of my obligation to the two gentlemen to whom the letter is addressed."

The rules follow:

I want to submit the following twenty-six rules to you, and earnestly request that you follow them. If you do, you will not only be complying with your father's most earnest wishes, which will not be detrimental to your future welfare, but you will be so living as to reap the greatest rewards, throughout the future years, and in the hereafter. Therefore, as suggested, I most earnestly urge you to follow each of them. They are as follows:

Physical Rules

- 1—Keep your mouth shut when not talking, eating or drinking, and do not open it too much to talk.
- 2—Breathe deeply, and through your nostrils.
- 3—Stand erect and look any person, or anything else that may confront you, right in the eye.
- 4—See that your bowels move thoroughly and daily.
- 5—Drink lots of water.
- 6—Eat slowly and not too much.
- 7—Take plenty of exercise and be in the fresh air as much as possible, sleeping there always.
- 8—Don't drink intoxicating liquor of any kind. It damages the brain and body and benefits nothing.

Manners

- 1—Watch your table manners. They are an indication of a gentleman.
- 2—Mind quickly. It's the first principle of a real soldier.
- 3—Keep out of stores and other loafing places. Lounge-lizards, not men, have time to loaf.
- 4—Watch your companions. Bad company is a grave danger.
- 5—Watch your speech so as to prevent exaggeration, which is one form of falsehood, and falsehood is damnable.
- 6—Learn Barbara Fritchie by heart. It is a good way to begin to acquire ease in public speaking, which is most desirable.
- 7—To use bad language is not as nice as it is not to use bad language. Keep this in mind. If you think you have to swear, then use only such words that your mother would approve.
- 8—An education is a great advantage in life. You are being afforded a full chance to acquire a complete education. Overlook no opportunity to advance this. Speed up in school as much as possible.

Moral Rules

- 1—Never lie. Tell the exact truth, always, irrespective of consequences.
- 2—Go to church regularly. The habit, when once formed, becomes a great safeguard.
- 3—Pray daily, and read the Bible as much as possible. Prayer and the Bible are as valuable to life as they are essential to religion.
- 4—Keep your word. There can never be any conceivable excuse for a failure to do this. It is not possible to have a greater asset than reliability.
- 5—Be honest. Aside from moral dictates, from the most selfish standpoint, honesty is always the best policy.

- 6—Be patient. It leads to gentleness, and is most

desirable. Particularly should this govern your conduct toward good women. In addition, to be a gentleman is always best.

7—Be fair. It denotes real caliber.

8—Be industrious. Nothing is possible without industry.

9—Be loyal. Loyalty is the acid test of character.

10—Save part of all you make. There is absolutely no other way known to successfully and honorably get and stay ahead of the game. Irrespective of all else, a man is a failure, in the last analysis, who does not practice this.

I do not do all of these things, although I do the best I can to do them all. I recommend them to you, not only because I so practice them, but because I know they are sound. If you practice them conscientiously, doctors will play but little part in your existence, your citizenship and success will be vouched safe, and your hereafter assured. If you will just grasp these twenty-six little rules, and will live by them daily, then there is nothing else in life that your father can impart to you.

Show Promise as Musicians

The accompanying photograph shows Charles and Thomas Miller, aged 14 and 11, respectively, sons of Engineer and Mrs. Thomas Miller, 402 East Main Street, Clinton, Ill. They are the proud possessors of gold-plated saxophones. The first time they gave a public concert was just sixty days after receiving the saxophones.

Charles, the older of the brothers, is a freshman in the Clinton Community High School. Thomas is a student in the sixth grade of the Lincoln School. They have been heard at many of Clinton's social affairs, as well as in adjacent towns, and have filled three engagements of two nights each at the Clintonia Theater.

The boys received their first instruction

Charles and Thomas Miller

Illinois Central Magazine

on the saxophone from Brent Rohm, music instructor of Clinton, and it was at his suggestion that the boys went to Chicago, where they joined the Tom Brown Saxophone Band. They received ten private lessons from an instructor working under Tom Brown in Chicago and since then have received only band instruction from Mr. Brown. For the last year they have made weekly trips to Chicago for their lessons.

In July and August last year they appeared four times weekly with the band during the Pageant of Progress at the Municipal Pier in Chicago and also ap-

peared at Congress Hall in concert. They have already been engaged to play in concert in Chicago in June, July and August this year. They also play at St. Paul's Universalist church every Sunday night.

On February 20, 1923, the Rotary Club held an anniversary night in Clinton. A novel feature of the entertainment was the saxophone concert given by the boys. Their playing is described as skillful, sincere and impressive. As one Rotarian said, their musical ability "ought to have them making famous phonograph records in five years."

Veteran Envelopes Are Still in Service

The *Illinois Central Magazine* often publishes stories of mechanics and others who have used a tool or a set of tools for extremely long periods, of engineers with pet oil cans, battered and scarred with age, though still in use, and such like. And now comes H. A. Merrill, our agent at Doyle, La., with two paper envelopes, form No. 805, addressed permanently to the Car Accountant, Chicago, which he thinks should be awarded the palm for long service, but not yet pensioned, for they bid fair, judging from their present condition, to see several years more of usefulness.

One of them bears the office stamp of Bondville, Ill., January 9, 1902. On April 11, 1905, it shows handling at Colfax, Ill. It was at Enid, Miss., on August 17, 1911, and showed up at Mr. Merrill's station March 12, 1923. The second envelope received its christening stamp at Natchez, Miss., February 15, 1906, and seems to have been circulating about in the south. It paid Mr. Doyle a visit on September 12, 1922, and made a return call on March 12, 1923.

If these mute and inanimate pieces of paper could talk, what kind of tale could

they tell? What scenes could a clairvoyant visualize while handling them? One fact, however, is patent: They are certainly made of good paper.—T. T.

HELPING STORM VICTIMS

With clothing, food and shelter furnished by contributors throughout the northwest section of Mississippi and part of Tennessee, refugees made homeless by the cyclone which devastated Savage, Miss., two weeks ago are beginning to rebuild their town. The Yazoo & Mississippi Valley Railroad, whose workers established telephone lines six hours after they entered the ruined area and who have taken a lead in giving aid, is rebuilding the four railway structures wrecked. The station will be rebuilt at a cost of \$5,000, it was said. Three section houses, which had just been completed when the cyclone struck the town, are replaced. The railway employees in Memphis have sent fifteen sacks, filled with clothing of every sort, to the refugees, and charitable organizations have provided food, mattresses and some tents.—*Memphis (Tenn.) Press*, March 26.

HOUSE PLANS FOR OUR READERS

Concrete

The Reigate (No. 6101) is a city bungalow. This 6-room structure is one of the most popular plans that has been worked out by Robert L. Kane in his large practice in the Chicago suburbs. It is narrow enough to be placed upon a 35-foot lot, with plenty of air all around; there is absolutely no space wasted in the plan; its simple lines will insure economical construction, and the fire-resisting character of its concrete walls covered with Portland cement stucco and its fire-resistive roof of asbestos

will reduce maintenance to the lowest possible figure.

The roomy front porch, extending right across the home, can be screened or glazed if desired. From this we enter a small vestibule with a clothes closet and pass into a comfortable living room with a cheerful fireplace. In addition to the front window, the living room has windows at the side, so that direct sunlight can enter the room.

In the rear is the customary kitchen with pantry, and another chamber opens out of it. Steps lead down to a door and from there to the cellar.

This design is an example of twenty-five plans appearing in an elaborate plan book published by the Portland Cement Association, 111 West Washington Street, Chicago. The plan book can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valuable data on that subject, including photographs of many attractive stucco houses, but not including plans, can be had free from the editor of the *Illinois Central Magazine*.

FLOOR PLAN

A Train to Preach By

HERE is a conversation that took place a few nights ago in the Jacksonville yards:

Car Cleaner: Mr. Leach, I stayed last night and got that car on the Gospel Train.

Leach, foreman: What do you mean?

Car Cleaner: You knows, Boss, that car you give me on the Gospel Train.

Mr. Leach: What do you mean by the Gospel Train?

Car Cleaner: That train that goes out three times a week to Chicago (meaning the Floridan).

Mr. Leach: What makes you call it the Gospel Train?

Car Cleaner: Well, Boss, you know Mr. Bob (meaning Assistant Foreman R. G. Helton) preaches about dat dere train so much we just calls it the Gospel Train.—*Jacksonville, Fla., notes in the Pullman News for March.*

Dry Farming

Brown—"How do you raise potatoes in such a dry summer?"

Jones—"Planted onions among them. You see, the onions made their eyes water so they didn't mind the dry weather at all."—*Farm Life.*

Lots of Sympathy

An Irishman had a face that was "an offense to the landscape." Next to his homeliness, his poverty was the most conspicuous thing about him.

"How are ye, Pat?" a neighbor asked.

"Mighty bad," was the reply. "Sure 'tis starvation that's starin' me in the face."

"Is that so?" rejoined his friend. "Sure it can't be very pleasant for aither of yez."

That Was the Limit

"It's a hard life," said the traffic officer at a busy crossing.

"What's the trouble?" asked the genial old gentleman.

"I had to stop an actress just now for driving too fast. The look she gavé me was bad enough, but the way her Pome-

ranian yawned in my face was absolutely insulting."

Easy to Figure Out

Hubby, in no very good humor, was in the back yard mending the clothesline when the fat lady, who lived a block away, rounded the corner of the house.

"Is your wife at home, Mr. Jimson?" she asked.

"Do you suppose I'd be doing this if she wasn't?"—*Pittsburgh Chronicle-Telegraph.*

Reversing the Procedure

At a Christmas dinner in Washington a well-known professor was called upon to speak. In introducing him the host said to the guests:

"You have been giving your attention so far to a turkey stuffed with sage. You are now about to give your attention to a sage stuffed with turkey."—*Boston Transcript.*

A Most Fortunate Combination

During the Civil War an Irishman living near my father at Tracy City, Tenn., was very much afraid of the Yankees.

We lived between the lines and were visited sometimes by raiding parties of both armies. This Irishman had a pumpkin vine in his back yard, near the steps. A raiding party of Yankees came to town about dusk one night and went into his house. He ran out the back way as the Yankees came in the front. He fell down as he was going down the back steps. Thinking the Yankees would see him if he got up, he crawled in under the pumpkin vine. The Yankees,

SUSIE SEZ—

thinking he had gone down through the garden, followed, but could not find him.

In relating afterward how he outwitted the Yankees, he said he was saved "by the grace of God and the pumpkin vine."—P. S. L.

Stopped Train and Argument

Two negro employes of the Illinois Central were discussing the relative importance of their respective departments, one of them being employed in the signal department and the other in the water department. The champion of the signal department maintained that the signals were of first importance to the successful operation of trains and in maintaining the safety of employes and passengers. He had apparently made out a very strong case when the waterworks man clinched his own argument by saying: "Yeh, whut you say about de signals is true enough, but when a train come to a signal de engineer jus' say, 'Whoo, Whoo' and go on, but when he drive up to a watah tank and dey ain't no watah, dah he is!"—C. R. K.

She Knew Where He Was

"Ah, madam," said the pious visitor. "I am going about giving advice and consolation to unhappy wives. Do you know where your husband is every night?"

"Indeed, I do."

"Alas, madam. You think you do, but he may be here, there, anywhere."

"Well, if he gets out of the place where he is now he has to raise a granite slab that weighs at least a ton, and he couldn't even lift a scuttle of coal while he was alive."—*Detroit Free Press*.

Certainly Not in Our Line

A sarcastic would-be passenger approached the genial station master and asked, "What good are the figures on this time-table?"

The station master replied, "Well, sir, without those figures we wouldn't be able to tell how late this train is."—S. F. L.

A Narrow Escape

Some years ago, so it is said, a freight conductor on the Yazoo & Mississippi Valley was rather careless of his personal appearance. He let his clothes go to seed and wore luxuriant though shaggy whis-

What Mother Thinks

While I was walking down a crowded street the other day,
I heard a little urchin to another turn and say:

"Say, Chimmie, let me tell youse, I'd be happy as a clam,
If I only was the feller that me mud-der t'inks I am.

"She t'inks I am a wonder, an' she knows her little lad
Could never mix 'ith nuttin' dat was ugly, mean or bad;
Oh, lots o' times I sit and think how nice 'twould be, Gee whiz!
If a feller was de feller dat his mud-der t'inks he is."

My friend, be yours a life of toil or undiluted joy,
You still can learn a lesson from this small, unlettered boy;
Don't try to be an earth saint, with your eyes fixed on a star;
Just try to be the fellow that your mother thinks you are.

—*Selected.*

kers. One evening just about dark he was making an inspection of his train before pulling out. He came to an open box car and, peeking inside, found it full of tramps. A couple of husky bums grabbed him and pulled him in, saying: "Git in here, you hairy bum! First thing you know the conductor will come along and throw us all out."—T. T.

Standing By the Judge

Unable to agree, the jury had mean looks for one little runt of a fellow.

"No chance for an agreement?" demanded the judge.

"None, your honor. There's one man——"

"Tut, tut. Don't mention any names."

Then the judge proceeded to say that the

case was clear enough to justify a verdict in three minutes.

"For one man to defeat the ends of justice," he rumbled, "is reprehensible."

And he fixed his stern eye upon the runt.

The latter writhed under this.

"May I say a word?" he asked timidly.

"Yes."

"Your honor, I'm the only man that's with you." — *Pittsburgh Chronicle-Telegraph*.

One Way to Do It

Preparing for our examining board, a negro fireman said: "When I looked at the questions, I got on a mule and rid to my pa's, so I'd know when I was bawn."—S. F. L.

A Call for Isaac Newton

A new negro employe was watching the drops of oil ascending in the lubricator of a locomotive.

"For de lan's sake," he exclaimed in astonishment, "all de draps I ever seed drapped down—dis is de fust time I ever seed a drap drap up."—T. T.

A Penny Wise

"Abie, mein son, why for you go der shstairs up two at time?"

"To save mein shoes, fader."

"Vell, be careful you don't shplit your pantz."

Fair Play

"What a peculiar looking thing on your upper lip."

"My dear man, never knock a mustache when it's down."

The Formality of Banking

Bank Teller—"This check is all right, but you must be introduced. Can't you bring in your husband?"

Woman—"Who, Jack? Why, if Jack thought you wanted an introduction to me, he'd knock your block off!"

Her Uncle's Legacy

"I hear your uncle died and left all he had to an orphan asylum?" inquired Maria.

"Yes," replied Edith.

"What did he have?" questioned the first.

"Fifteen children," responded Edith.

Mean Thing

"Pretty hard luck for me," said Helen. "I bought a \$4 meal ticket for \$3.50. Just after I paid for it I dropped it on the sidewalk, and before I could pick it up a fellow with big nails in his shoes stepped on it and punched out \$2 worth of meals."

Others Could Do It, Too

Clarus—I hear Jones is going to bore an artesian well. Pretty expensive, what?

Opacus—Oh, no. All he has to do is sit and talk to it, and it won't cost him a cent. —*Columbia Jester*.

There's a Difference

When a plumber makes a mistake, he charges twice for it.

When a doctor makes a mistake, he buries it.

When a judge makes a mistake, it becomes a law of the land.

When an electrician makes a mistake, he blames it on the induction—nobody knows what that is.

When a preacher makes a mistake, nobody knows the difference.

When a compositor makes a mistake, the boss says, "The dampful otta know better."

But when an editor makes a mistake, GOOD NIGHT!—*Exchange*.

INKID SAYS—

Sports Over the System

All-Star Baseball Club Elects Officers

The following officers for the Illinois Central All-Star baseball team at Chicago were elected March 31: President, R. O. Fischer; vice-president, A. H. Coates; secretary, C. M. Said; treasurer, C. C. Haire.

A board of directors was also elected, consisting of W. G. Arn, J. R. Anderson, T. G. Taggart, H. L. Fairfield, A. D. Callo-way, S. M. Copp, Lee Robinson, W. Kelly, W. Larsen, S. F. Grear, J. T. McMahon, H. J. Deaney, B. C. Ellis and J. C. Johnson.

The All-Stars are members of the Chicago Railroad Baseball League. Saturday afternoon ball will be featured.

R. O. Fischer

Coates

Said

Haire

Yore

There are eighteen games in the schedule, and the opening game is set for May 12 with the Chicago & North Western team at the C. & N. W. ball park.

The All-Star players have had several try-outs under the team manager, E. J. Yore. Several of the All-Stars are former big leaguers. Culley, Kiernan and Stanley are players from the 1921 season of the Illinois Central General Office League. Culley is from the Mississippi Delta League and also was connected with the Little Rock team in the Southern Association. Barrowman, outfielder, was with the Hibbing, Minn., team of the Mesaba Range League. Heisler is a semi-pro player.

The appointment of Mr. Yore as manager of the All-Stars has been well accepted. Mr. Yore is well known in baseball circles in Chicago, having played semi-pro.

The season passes for the league games are already on the market. The pass sales

are encouraging and show that much interest is being displayed. These passes can be purchased in every office. Among the offices which have responded to the call 100 per cent are the vice-president and the general manager's office and the office of the manager of baggage and mail traffic.

Commercial Baseball League, New Orleans

Name	Won	Lost	Pct.
Illinois' Central Railroad..	3	0	1.000
United Fruit Company....	2	1	.666
Dock Board	1	2	.333
Standard Oil Company....	0	3	.000

Saturday, March 31, at Bissant Park, the Commercial Baseball League of New Orleans was formally opened, the Illinois Centrals meeting the Polarines, representing the Standard Oil Company, in the first game. This was a pitcher's battle between Mohren of the railroaders and Weber of the oil men, the Illinois Centrals emerging victors by a score of 3 to 1. The railway team displayed a championship article of ball, which marks it as possible winner in the Commercial League and a strong contender for the city amateur baseball championship.

The league was officially opened by Crawford H. Ellis, vice-president of the United Fruit Company, who delivered the first ball over the plate. Sam Morgan's jazz band

gave selections between innings and before and after the games.

The Unifruco team, representing the United Fruit Company, winner of last season's championship in the city series, was the next victim of the railroaders, being defeated on Saturday, April 7, by a score of 4 to 1. The Fruit Company boys, owing to the wildness of Sutherland, the Illinois Central pitcher, managed to squeeze one run across the plate in their half of the first inning. Their hopes were short-lived, however, as the railroaders came back with one run in the first inning, increasing their lead further by the addition of two tallies in the second. The Unifruco were unable to connect with Sutherland's curves and

were held to one lone tally during the seven innings. The Illinois Centrals further increased their lead by another run in the sixth. The pitching of Sutherland and the stick work of Natal, second baseman, were clearly the outstanding features of this contest. Churchill caught a good and heady game, and Sutherland's success is partly due to his work behind the bat.

Saturday, April 14, the Illinois Centrals clinched their hold on first place by defeating the strong Dock Board nine by a score of 4 to 1. Mohren again held the mound for the railroaders and pitched his usual good game. He was hit freely at times, however, and the winning of the game was in a large measure due to the superb work of Thorburn and Berckes in left and center fields. Jorda and Thorburn were also effective with the bat, getting a pair of hits apiece, one of which was for two bases. An outstanding feature of the game was the fielding of the entire Illinois Central team.

Shop Team Planned at Waterloo

All employees at Waterloo are enthusiastic over the baseball team that is being organized among the shopmen. "We have any amount of talent in the shop, and we

Here is the Illinois Central baseball team of Rockford, Ill., which won most of its games in 1922, defeating fast teams from the city factory league. Those in the picture are, bottom row, left to right: Yuccas, warehouse man, third base; Woods, operator, outfield; Burns, yard clerk, pitcher; Keough, engine foreman, first base (manager); Cheeseman, signal maintainer, catcher; Falzone, section man, outfield; Leach, switchman, short-stop (captain). Top row, left to right: Mullane, freight office, secretary; Young, warehouse man, second base; Doherty, engine foreman, outfield; Laferty, engineer, umpire; Kerlin, baggageman, outfield; Schreiber, freight office, property man.

are egotistic enough to believe that when our men get in shape they will be able to take the measure of any team representing the Illinois Central on any part of the system. Is there anyone in the mood of contradicting us this early in the season? If so, just drop a line to our master mechanic, who will pass it on to us," writes R. F. McLaren, our correspondent.

McComb Baseball Team a Winner

The baseball team of the McComb, Miss., shops played two games with Ponchatoula, La., one on April 1 and the other on April 7 and won both, the scores being 10 to 7 in the first and 3 to 2 in the second.

Inter-City Basketball at New Orleans

On Saturday, March 31, the basketball team representing the Memphis terminal was a guest of the Illinois Central team, New Orleans, in a basketball contest staged for the benefit of the candidacy of Miss Loretta Donnelly in the popularity contest. The boys from Memphis, in a clean and fast game, defeated the New Orleans team by a score of 24 to 13.

Daughter of Employe an Athlete

Olga Ford, 14-year-old daughter of Jesse Ford, receiving clerk, Levee yard depot, New Orleans, who is an enthusiastic athlete, recently competed in a track meet for high school girls held at Johnston, Miss. She captured first place in the 50-yard dash, which entitled her to enter the Pike County track meet at Magnolia, Miss., in which she was also successful, competing against representatives of six school districts.

63d Street Girls Win at Bowling

That paint and powder and other such drug store supplies mean nothing to girl bowlers was exhibited in the girls' bowling match held March 24 between representatives of the 12th Street and 63d Street offices at Chicago. They never stopped long enough to notice if the nose was reflecting the overhanging incandescent; they did not have enough time to waste any of the precious minutes on personal appearance, the main object being to dab spares and strikes on the score board instead of rouge on cheeks.

It was the first time that the two General Office buildings had sent out their feminine bowlers in a match, and the contest was such a suc-

The 63d Street bowling team. Left to right: Miss Jane Chamberlain, Miss Mary O'Neill, Miss Ann O'Neill, Miss Helen Speik and Miss Catherine Coyle.

cess that another was arranged—this time to be played on Thursday night, April 26.

The results March 24 were:

63d Street			
M. O'Neill	111	123	122
H. Speik	94	116	97
A. O'Neill	77	119	88
C. Coyle	122	109	120
J. Chamberlain	99	98	197
Totals	503	565	624
12th Street			
B. Moore	100	82	84
E. Anderson	95	99	98
A. Spreiter	111	109	150
J. Broderick	72	93	80
D. Mooney	172	166	138
Totals	550	549	550

The 12th Street girls took the first game from the South Siders and had a good lead on the second, but Misses Speik and A. O'Neill couldn't see it that way and ran their scores higher than the first attempt,

Miss Jane Chamberlain, on the left, and Miss Josephine Broderick, captains of the teams, ready to start the balls down the straight and narrow bath.

The 12th Street bowling team. Left to right: Miss Edith Anderson, Miss Betty Moore, Miss Anita Spreiter, Miss Dorothy Mooney and Miss Josephine Broderick.

giving the 63d Street girls the second game by twenty-four pins. The third game was a walkaway for the 63d Street representatives.

The whole event was a credit to the girls and interesting to the fifty or sixty spectators who witnessed the affair. One feature of good sportsmanship was outstanding: Whenever the 63d Street girls made a good score, the 12th Street bowlers joined in the applause, and vice versa. In closing the first successful match between the two offices, the winners gave a rousing cheer for the defeated squad.

W. Larsen of 12th Street assisted in keeping the scores, and Mr. Gieszke of 63d Street was the custodian of the foul line.

Places Shift in Bowling League

The General Superintendent of Transportation team of the 12th Street General Office Bowling League at Chicago still leads the league, although it has received some hard bumps the last month, dropping single games to the General Superintendent of Motive Power team, Terminal Superintendent team, Vice-President Accounting team and two games to the Maintenance of Way team.

The Auditor of Miscellaneous Accounts team, consisting of Bailey, Krubeck, Carney, Du Bois and Collier, has passed the General Freight team and is now in second place, as a result of winning twelve of the last fifteen games while the General Freight team was losing eight of the last fifteen games. The Bridge and Building team did its best work of the year when it beat the General Freight team three straight games, the only team in the league to perform that feat.

The Vice-President Purchasing team also won twelve of the last fifteen games, and as a result jumped from seventh place to fifth place. The General Superintendent of Motive Power team, which has had to contend with some of the strongest teams in the league, dropped back one place in the standing. The Land and Tax team has dropped from sixth to eighth place as a result of the loss of Enright, its star, who was out of town on company business. Enright was leading the league when he left town, but as he cannot qualify for the prize money his name has been dropped from the standing of the individuals.

The Maintenance of Way team has been doing some good work the last month, trimming several of the leaders. The Vice-President Accounting team is behind in its schedule and has dropped back to tenth place. The "Cops" won a game on April 5.

Knodell is leading the individuals and now has no real opposition. The fight for second place is a hot one between Koch and Rolff. Koch piled up 643 pins the other night and as a result passed Rolff by a fraction of a point. Larson and Block are having an interesting fight for fourth place, while "Happy" Rittmueller has moved up into sixth place.

Next month we will hope to give the final results of the second annual Railroad Bowling Tournament, in which there were entered 154 5-men teams, 348 2-men teams and 686 individuals. The C., B. & Q. Railroad again led with twenty-one teams entered. The C. & N. W. had fifteen teams, followed by the Illinois Central with thir-

He Went and Got It!

Some ten years ago one of the present-day big men of the General Motors Corporation was managing a little factory out on the Jersey meadows. One day returning from lunch, as he passed a building in the course of construction, a little gust of wind came along, lifted his straw hat and carried it up to the scaffold platform of the second floor.

This man never hesitated. He went up the ladder like an old-timer, reached for his hat, returned to his friends, and went his way as if nothing had happened. He didn't wait to see if some workman would get the hat for him or if a contrary wind would return it to him. He went after it and got it.

And that explains, perhaps, why today he is an important figure in one of the biggest of corporations. He has never waited for someone to get something for him.—CLIFFORD SLOAN.

teen teams. The Pennsylvania was right on our heels with twelve teams. The freight traffic team from St. Louis was the only out-of-town Illinois Central team to enter the tournament this year. We missed the Kankakee boys and are sorry the crack team from Herrin failed to enter the tournament.—W. E. DuBois.

YARDMASTER RETIRES

Garrett Hutton, yardmaster at Cedar Rapids, Iowa, was retired on pension on account of poor health, November 30, 1922. He entered our service May 1, 1902, and had been continuously employed ever since.

Mr. Hutton started railroading December 1, 1880, as a brakeman on the B., C. R. & N. between Cedar Rapids and Albert Lea, Minn. December 20, 1881, he was transferred into the yards at Cedar Rapids as engine foreman.

Those were the days when railroading was extremely dangerous, the days of the old link and pin; there were no automatic couplers on cars, no way to cut the cars apart except to go in between them and pull the pin, and in some cases there were

Garrett Hutton

three pins to pull. In making one cut and coupling cars together, it was necessary to go between the cars to couple them up, and it was a common occurrence for a man to lose a couple of fingers or a hand. But this danger has now been largely abolished by the automatic coupler.

Mr. Hutton resigned from the B., C. R. & N. May 1, 1902, to accept a position as yardmaster for the Illinois Central at Cedar Rapids. During all his years of railway service he never suffered an injury of any consequence.

Mr. Hutton was born March 7, 1861, at DeKalb, Ill. His mother died in 1864, and in 1867 he moved to Iowa with his father; they settled in Cedar Rapids, which has been his home ever since. When Mr. Hutton first went to Cedar Rapids it was a small village, and it is with much interest and enthusiasm that he tells of its development and growth. On June 26, 1885, he married Miss Anna Condon of Garryowen in the Cathedral at Dubuque. To this union four children were born: Mrs. Charles Adams, George Hutton, and the Misses Loretta and Edna Hutton, all of Cedar Rapids. Miss Edna Hutton is now employed as car clerk in the freight house at Cedar Rapids.

Die when I may, I want it said of me, by those who knew me best, that I always plucked a thistle and planted a flower when I thought a flower would grow.—LINCOLN.

Water

*When the tank is dry, we
know the worth of water.*
—Poor Richard III.

Regardless of all that has been said as to the cost of water, the popular conception that it is a thing of little value evidently remains firmly fixed in the minds of many, and they are either deaf or indifferent to the plea of conservation in its use.

Three-fourths of the earth's surface is covered with water; it is also present in abundant quantities in many places below the surface and is as free as the air in its natural state, in rivers and lakes and in the ground, but it requires engines, boilers, pumps, pipe-lines, wells, tanks and fuel and labor to bring it from its source to the point of use. Water, therefore, has a definite value when flowing from a tank spout, faucet or other opening and should be handled with the same economy as any other material.

Chicago has Lake Michigan at its doors, with an abundance of water free to all who

wish it, yet Chicago spends annually more than \$10,000,000 to deliver this water to its citizens.

The Illinois Central System's water bills for city water in 1922 totaled more than \$250,000. The cost of water purchased from Chicago alone amounted to more than \$60,000, while at New Orleans the cost of city water was \$18,000. The cost of water for freight locomotives was \$497,379.99, or nearly half a million dollars. Passenger engines used water costing \$164,417.60, while it cost \$114,254.03 to supply switch engines with water, a total expense for water for all purposes in excess of a million dollars.

These figures show conclusively that water forms a very important item in the expense of operating a railway system

and emphasize the necessity for preventing all unnecessary waste of water.

Water offers more opportunities for waste than any other commodity used on a railroad, as it is many times greater in volume and is handled by a greater number of persons than any other item.

Graphic exhibition of loss of water through various sized orifices, as made by water department, St. Louis, Mo.

some a trifle over 87 and some a trifle over 88, the range being about 1 per cent. Can it be said that there was water in government securities at that time? Of course, there was not. And I merely speak of it to show the unfairness of that contention for finding the value of the roads on that basis.

Take Illinois Central securities as an example. The difference between the market value of the Illinois Central securities on September 12, 1921, and the present time is represented by \$62,000,000. If you go back far enough and take 1906, when Illinois Central stock was selling at 175 as against the 113 or 114 today, and apply the same basis of values as to all the securities issued, you will find that our property today is worth \$222,000,000 less than it was in 1906. Anyone who knows, the road knows that such is not the fact, that it certainly is not worth any less today than it was in 1906, and yet that is the sort of thing that Senator Brookhart's method of arriving at the valuation would prove.

Effort to Bring Government Ownership

Now, what is the purpose behind all of this agitation about reducing railway rates and reducing the valuation? It has behind it the effort to bring about government control, government operation of these railroads. If we needed anything else other than our own experience under federal control and the impression that it left in the minds of everyone who had to use transportation, all in the world we have to do is to look at the record and the experience of other countries that have undertaken to manage, operate and control their railroads publicly. Why Canada, with 22,000 miles of railroad under state control, paid a deficit last year of some \$73,000,000 for the pleasure of operating its railroads. The people of Canada didn't do that because they wanted to. They did it because they were compelled to take these railroads over in order to operate them at all. There was such a tremendous scope of country covered by these lines and so many persons involved that there wasn't anything else for the government to do but to take the roads over, and I suppose the Canadians are making the best of it. Surely we, in this country, with all of the experience we have had with government operation and government control of anything that we know anything about, never will consent to the creation of a condition that will put the 265,000 miles of railroad in this coun-

try under government ownership and subject to all of the conditions that surround the handling of any large public questions under those conditions. I don't believe it. What would we lose in the amount of taxes? The Illinois Central Railroad paid in taxes in 1911 and 1912, ten years ago, a little more than \$3,000,000. In 1922 we paid \$12,500,000. The railroads of this country paid in 1910 \$97,000,000 in taxes; they paid last year more than \$300,000,000. Now, under government control the first thing that would happen would be that there would be no further payment of taxes by the railroads, and that deficit would have to be made up to the states and cities and the national government.

How to Maintain Private Control

So, to me it seems that government control of the railroads of this country is absolutely inconceivable, and yet here is the question that every American citizen has before him to consider. Every man who is interested in the welfare of this country must understand that transportation, transportation by rail, is as essential as light and air and water and that some way must be found to support these railroads. In my opinion some way must be found other than that of having the government handle them for you.

Now, what is necessary in order to maintain private control? The thing that is necessary is to see that these railroads are permitted to enjoy an income that will permit of their providing you with all of the transportation that you will need and when you need it. To do that they must have earnings above the cost of operating the railroads that will permit of their borrowing from time to time the new money that must be had to make the improvements that are required to keep the roads going. There isn't any way on earth that the thing can be done except through the payment of rates and fares.

What I am pleading for is for a continuation of the permission, if you please to call it that, of working under the Transportation Act until such time as we have been given an opportunity to see whether or not we can make it work in such a way as will enable us to meet the transportation requirements of the country. I do not agree with all of its provisions, but I do realize this: If any effort is made to change it, when we get through with it we will find on our hands something inevitably worse than we now have.

Present Ownership of the Railroads

I want to speak to you a moment on the question of who owns the railroads. There are about eight hundred thousand persons

in this country who own directly the stock of the railroads, and I have no doubt there is an equal number of persons who are owners of the bonds. In addition to that, you all know that the life insurance companies of the country and the savings banks are all large owners of railway securities. Now, a great many persons used to think (maybe some of them still think) that the railroads of the country are owned by somebody in Wall Street. I think you all know that that is not true. All that Wall Street does, all that the bankers in Wall Street do, is just exactly what the bankers in other sections of the country do when they sell securities. They buy the securities from whoever has them for sale, be it a railroad or anyone else, and they sell them throughout the country to the people who want to invest in them. They don't keep them. What they do is to take a commission for the sale of these securities. Sometimes they may take a little bit more than they ought to, but again, all business men know that that depends upon the credit of the man who is trying to borrow the money. The banker may not give as good terms to one man as he does to another because of the question of credit. A lot of things are involved in it. Now, take the Illinois Central. We recently put out an issue of some \$13,000,000 worth of bonds. How did we do it? We went to our bankers; we agreed upon a price. Then we went to the Interstate Commerce Commission, in conformity with the law, and we obtained its consent to the sale of these bonds to the bankers. In the meantime, the bankers had put them in the hands of bond salesmen all over the country, and even before the consent of the commission had been obtained, subject to our getting its consent, probably all of those bonds were sold.

They talk about the bankers' controlling these railroads. Speaking for the Illinois Central, I can say this: I never go to New York to our board of directors, on which there doesn't happen to be a single banker, to ask it for anything or about anything except money. There is no one down there who tells me what to do in the matter of operating the Illinois Central System, and all that I ever go there for, to talk about, is simply to obtain from the board of directors the necessary appropriations to do some of the work that we are trying to do in improving the transportation facilities of the road. And I imagine that nearly all of the other executive officers of the country are in the same position I am in.

The Farmers and Freight Rates

I talked to the farmers out at Manches-

ter, Iowa, a short time ago. I was invited out there by the Jones Mill Grange. It is relic of the old granger movement of the 70's. The members have their little hall, their monthly meetings, their lunches and all that sort of thing, and they asked me to come out there and talk to them about this railway question. I talked to them about freight rates. They were very much interested out there, of course, in the rates on corn and the rates on hogs, and they had been taught to believe that most of their troubles were due to the fact that freight rates were so high. Now, I put this proposition before them: I took the rate on hogs. I think the rate on hogs in 1913 was 18 cents a hundred pounds; at the time I was talking about it, the rate was 27½ cents a hundred pounds. At that particular time hogs were selling in Chicago at about \$7.75. The entire rate amounted to only about a quarter of a dollar per hundred pounds out of a price of \$7.75. Now, I said again, will anyone say that any reduction in that rate or any increase in that rate, any increase that has been made or any reduction that might be made, would render the growing of hogs profitable if it is now unprofitable? I took the rate on corn. The difference between the rate then in effect and the rate in 1913 was only 3 1/3 cents a bushel. I called their attention to the fact that a year before that corn had been quoted at 39 and 40 cents. At that particular time it was quoted at 64 cents. Today it is 78 and 79 cents. I pointed out to them that the daily fluctuations were more at times than the entire freight rate. What I was trying to show them was that it was not the freight rate that was hurting the farmer; it was the gross price, and it was the increase in the price of everything that he consumed as against the decrease in the price of the only thing that he produced.

A Comparison with Hard Roads

Now, I want to talk to you about the hard roads question. In the valuation of the railroads there are some, as I have already stated, who want to show that the railroads were overvalued, and I have made this comparison for them. I said: Take the line of the Illinois Central. We have a capitalization in the hands of the public representing about \$400,000,000. We have 6,200 miles of road—not of track but of road. We have 10,000 miles of tracks, main tracks, second tracks, yard tracks, tracks of all kinds. Now, you take your \$400,000,000 and divide it by 6,200, and you have a valuation of \$64,500 a mile. If you divide it by the 10,000 miles of track you have \$40,000 a mile. Then, I said, take our 75,000 freight cars and our 1,850 loco-

motives and our 1,700 passenger train cars, and take half prices on them, just half of the current prices, and you find a value of \$175,000,000. Take that from your \$400,000,000 and you have \$225,000,000 left, representing the right-of-way, bridges, signals, shop buildings, stations, Chicago terminal, New Orleans terminal and all the numerous holdings at cities and towns served by the Illinois Central System. That is about \$22,500 a mile. Then, I said, take the cost of a hard road. I am told here in Illinois that the average cost of our hard roads for this year is somewhere between \$26,000 to \$30,000 a mile. Now, will anyone say that the Illinois Central's 10,000 miles of tracks, exclusive of equipment, but including all of these wonderful expensive terminals—probably a hundred million dollars wouldn't cover the value of the Chicago terminals alone—is not worth more a mile than the average cost of building hard roads in this state? Of course, nobody will deny that, but the difficulty is that we can't get those illustrations before all the people. I am sure that every person within the sound of my voice will say that if the hard roads cost from \$26,000 to \$30,000 a mile, surely all the tracks of the Illinois Central System, with everything they include, are worth more than \$22,500 a mile. And yet that is a figure that compares with the results obtained by the Interstate Commerce Commission in finding the value that it found.

The Problem of Motor Trucks

I have been asked to talk to you a moment about the motor trucks. I haven't a word of criticism, myself, to make of the conditions under which the motor trucks of this country are being operated on your hard roads. I merely want to state some facts. Your roads are built from taxation collected from the railroads as well as from other taxpayers of the country. When you make the appropriations for the construction of these roads, in the first instance, you don't usually provide the money that is necessary to keep them in adequate repair. Certainly no one who has to do with this question, I believe, has ever thought for a moment that the people would permit the roads to be used in such manner as to be destroyed within very much less time than if they were devoted to the purposes that they were originally intended for. The motor truck is, in its larger use, of comparatively recent origin, and the difficulty about it, as I see it, is this: You can't afford to put the investment into these hard roads that will enable you to permit the trucks to use them at a price that the trucks can afford to pay if they are going to make the necessary contribution toward that increased cost. If

you are not prepared to build roads that the trucks can use, then you can't afford to permit them to continue their use under the conditions that now obtain.

I don't speak of the question of competition with the railroads, because so far as we are concerned on the Illinois Central and in this territory, the competition of the motor trucks in the carriage of freight is such a small item that we never could find it, and I am speaking of it more as a question that involves taxation in which we have the same interest as any other citizen has.

The motor truck has its place as a feeder to the railroads. It has its place in the carrying of goods in these wonderful terminals. I wish it would take away from the railroads, and as far as we are concerned it may, the great bulk of the short haul stuff. It costs us more to handle than we get out of it, and we would rather have the trucks take it; to the extent that they do take it, we believe they will prove to be a valuable adjunct to the railroads, but I do not believe they ought to be permitted to use the highways of the country under the conditions now existing.

Barge Line Still an Experiment

Take the waterways, another subject on which I have been asked to say a word. A great many of the advocates of the development of the waterways of this country are too often persons who do not care so much about knowledge of the question and the needs of transportation in developing a certain waterway as they do about obtaining the necessary appropriation of money to be spent in their community. So they say that it is necessary to develop the waterways of this country in order to provide the transportation that the "broken-down" railroads of the country can't provide.

Let me show you how perfectly silly that is. The annual tonnage of export and import freight handled through the ports of this country amounts to about a hundred million tons. Last year we handled from originating points, not transferred from railroad to railroad, a billion and a quarter tons. In other words, the total export and import tonnage amounted to less than 10 per cent of the total originated by the railroads of this country. And yet these people talk about going into the interior and improving some interior waterway for the purpose of relieving the general transportation situation. It would be perfectly silly and ludicrous if it were not in some instances a pretty serious question.

I haven't a word to say against the improvement of any waterway that ought to be improved, and when the waterways are improved I believe that the railroads as

well as other citizens of the country ought to be encouraged to use them. I speak, in that connection, of the Mississippi in particular. As a product of the war, an appropriation of about \$12,000,000 was made for the improvement of the Mississippi in respect to navigation, not for the improvement of the river itself, but in providing the instrumentalities of navigation, the barges and the tugs. That plan has been in operation now something more than four years. Notwithstanding the statements that have been put out, and I say this advisedly, the proposition has not yet been put on a paying basis. However, from the very beginning it has been the policy of the Illinois Central System to do everything that it could in the way of making connections, providing the necessary divisions of rates on through business and doing everything that was possible to facilitate the interchange of business with the barge line. We are doing this so that, when the experiment comes to an end and if it proves to be a failure (and I hope it will not prove to be a failure), no one can charge the Illinois Central System with having had a part in bringing about that failure. On the other hand, if it proves to be a success, then we want the right to claim the privilege of using the water route, just as others use it. If it is shown to be in fact a more efficient and a more economical means of transportation than the railroad, then what we want is the privilege of using it as an adjunct to the Illinois Central System. We are in the transportation business, and there isn't any reason why we can't do the job just as well as, and I believe better than, anyone else.

580 Importance of Good Public Relations

Just a word on the question of the relations between the railroads and the public. I believe that whatever misunderstanding on the part of the public toward the railroads exists today is almost altogether due to our failure to take the public into our confidence and to tell the public the things about the railroads that it ought to know. We of the Illinois Central have for some time been pursuing that policy, and I don't mind telling you that I think it has paid. Not only has it paid in promoting better understanding between the management of the road and the people it serves, but it has had this very essential effect: It has had a wonderful influence on the attitude of our employes not only toward the management of the company but also toward the people with whom they come in contact.

I am reminded of a little incident that occurred about two weeks ago. I was calling one Sunday, and the lady of the house where I called told me of something that

happened that had interested her very much. She called up one of our local stations to ask what time it was. It seems that the telephone people have a regulation under which their telephone operators are not permitted to give the time over the wire. She said a man answered the telephone, and she asked him if he would be kind enough to give her the time.

He said: "Certainly; it is sixteen minutes and five seconds and two ticks after four." "Well," she said, "that is very kind of you, very nice of you." "Well," he said, "that is all right, madam. I am simply doing what I think the management of this railroad wants me to do."

Now, that is an illustration of the effect of the sort of thing we have been talking about, and that is service to the public. It has gone down through the rank and file of our employes, and let me say in that connection I don't believe there is a railroad in the United States that has a more efficient, loyal, up-to-date, snappy lot of employes than the Illinois Central. They are always ready to serve. They are ready to serve the owners of the property, and they are ready to serve the patrons, knowing, as they do, that in serving the patrons of the road they are serving the owners.

Railway Employees Are Not Overpaid

Speaking of the employes brings me to the question of pay. We hear a good deal about the Labor Board and the high rates of pay which have been fixed. Now, so far as I am concerned, the Labor Board can't fix the rates of pay too high, provided they don't put them on a higher basis than the business will stand. I don't think you can compare the wages paid all of our railway men with the wages paid men in outside employment, but if you do you will find that our men are very greatly underpaid as compared with, shall we say, the coal miners or the painters and the plasterers and the carpenters and the building trades in Chicago. But when you take our trainmen, the engineers and firemen, conductors and brakemen, you will find that those men may receive pretty high rates of pay as measured by the case of people in some of the small towns; but when you take into consideration the hazard of their employment, the length of time that they are away from home, the hours that they have to work, on duty at any hour of the day or night regardless of weather conditions or whatever it may be, you will agree with my point of view that they are not overpaid. I only wish the business would stand paying them more, but there is a limit. Labor takes about 60 per cent of the cost of operation of the railroads, and there is a limit beyond which we can't go

and at the same time yield to the public the service that it is entitled to have at a price which it can afford to pay.

Railway Plans for the Future

One more word. At a meeting of all the executives in New York last week, at which I was present, we were told that this year we were going to be called upon to handle the greatest volume of traffic which we have ever handled in the history of the railroads of this country. We believe we are going to be able to do it, and we set for ourselves the task of making an average of thirty miles a day with our cars. I think the average last year was perhaps about twenty-five miles. I am not speaking of the Illinois Central now, because ours was very much higher than that. We also planned to increase car loading to thirty tons per car. The average for the last year was about twenty-eight tons. In the meantime, taking the roads as a whole, we have provided for improvements this year, in the way of equipment and other facilities for handling the business, \$1,100,000,000, and last year we spent \$440,000,000 for this purpose. That means, for the two years, about a billion and a half dollars. Now, to do that shows that the railway men of this country have faith in the fairness of the people of the country; that they appreciate the necessity of increasing transportation facilities and are willing to

go their full length to bring that about; that they have faith that there will be no unfavorable changes in the laws and that nothing will be done that will interfere with their being able to raise the very large sums of money that are necessary to make these improvements.

As far as I am concerned, I look forward to the future with great confidence. We operate through fourteen states, the legislatures of eight or ten of which have been in session just recently. As far as I know, there has not been a single law antagonistic to the interests of the railroads of the country passed recently in any one of those states. But demands are being made, for example, to reduce the length of trains. They talk of reducing the length of trains to a maximum of fifty cars. If the Illinois Central in 1922 had had only the carloads, which means length of train, which it had in 1914, it would have meant four million more train miles in 1922 than were made. Reducing the number of cars in a train means nothing but increasing the cost, and, after all, whatever increases the cost on the railroads, arising from unwise legislation, must go back to the people to pay.

I have talked longer than I intended. I am much obliged to you for your interest and much obliged to the committee for giving me the opportunity to be here.

Some Husky Lemons Grow Along Our Line

Near the tracks of the Illinois Central System at Frenier, La., there is one of the smallest lemon and orange orchards in the world; but when it comes to the specimens of fruit grown, that is different. There are only six trees in the orchard, three lemon trees and three orange trees. The land is pretty much a swamp on all sides, and its fertility seems peculiarly adapted to lemon growing. The trees are about 3 years old. The prize lemon grown this year, shown

in the accompanying illustration, weighs about three pounds and measures very close to five inches in diameter. Each lemon tree has borne about thirty-five lemons, which readily bring a quarter apiece, as they are somewhat larger than the average grapefruit. A total of \$35 worth of fruit has been sold from the six trees this season.

Doctor Jekyll vs. Mr. Hyde in Railroading

By A. C. FREIGO,
Chief Dispatcher, Indiana Division

RAILWAY work is hazardous, one of the most hazardous of employments that takes its toll from the pick of America's workmen, but to its hazards man himself contributes unnecessarily.

Work efficiently; do your bit as best you know how; be as valuable an employe as you possibly can and as much of a live wire as you safely know how to be; but under no circumstances take any chances, in order to get your work done in a hurry, that will shut you off your activities as an employe. Bear in mind the duty you owe to your employer, your family and yourself, which is bound up in your ability to remain an active employe and not become a helpless cripple, useless to industry and a burden to your family and friends. If you have no interest in yourself, at least show a desire to save your limbs and life, which are necessary to your dependents. Practice "Safety First."

The railroads do not want their employes maimed and killed; so let us adopt a broad policy that will insure satisfactory service under safe conditions. There is nothing mysterious in the safety movement; it is simply a common sense proposition, dealing with a particular form of conservation of the human body. The more thought and study one gives accident prevention, the more one is impressed with its simplicity and the necessity for education along purely common sense lines, so that every individual will learn to use ordinary precautions to prevent injury to himself as well as others. Let us work with our safety committees; give them our full support; when any wrong or irregularity has been remedied, give them credit; and when you have cause for complaint, make it decently but emphatically.

Study Accidents to Prevent New Ones

Defective appliances, dangerous track conditions and defective equipment should be reported to the proper officers at once, so that unnecessary hazard need not be assumed. Let every accident be studied carefully, to the end that another one of the same character may be prevented. Let everyone get right down to honest, fair-minded safety work and reduce our in-

juries and accidents to the minimum. Carelessness, thoughtlessness and negligence are three things to stop.

New employes require more or less intensive education and closer supervision to protect them from personal injury. Experience has demonstrated that when business increases, unless accidents are controlled by some successful system of prevention, accidents will increase, because of the fact that to handle the increased business new men must be employed. When new men are employed, accidents increase. Old-timer, never neglect to warn the new-timer when you see him violating a safety rule. You do not have to wear a safety button to do it. It is your duty and may be the means of saving some fellow from getting killed or injured.

An arm or leg finds no safe place between

A. C. Freigo

draw bars; switchmen at times are careless in working between bad order cars without proper flag protection, or jumping on the head end of engines while they are in motion. There are times when it is necessary for trainmen to get on and off while cars are in motion, but they know how, or they would not be trainmen. Certainly there is never a call for anyone else to do so. One would not be likely to jump out of a boat into deep water unless he could swim; it is just as foolish to get on or off a moving train unless you know how. We cannot learn how to board or alight from a moving train by being told, any more than we can learn to swim by reading books of instruction. Both are matters of instinct developed by training. It is better to be carried by or walk back or be left behind than to alight from or board a moving train at the risk of injury. What if it is slower? It is safer.

Money Can't Pay for Injury

Each year large sums of money are paid out on account of accidents, but, as large as these figures are, money is no compensation for the loss of relatives, friends and companions nor for the physical agony the injured person may endure. What safety committees can accomplish will not only reduce the expenditures of such large sums of money but will also supply more than all gold and silver can offer as a balm for silenced lips or missing smiles.

Men and women of today try to find out where they can obtain the best clothing, shoes, groceries and other necessities of life for the most reasonable prices. Naturally their attention is called to the merchant who advertises his goods. He makes a noise; he attracts their attention; hence he gets their patronage. So it is with safety. If you have anything good, talk about it, not only at the "Safety First" meetings, but in your everyday work. Live it, preach it, demonstrate it, and by your example someone else will get the habit.

American railway men as a whole deserve much praise for their regard for the property and lives committed to their care. The average shipper can commit his goods to the railroad with full confidence that they will

be transported safely and delivered promptly in good condition. The average passenger can board the train and feel much safer than if he walked or rode in an automobile, for the railroad is safer than the highway.

Doctor Jekyll and Mr. Hyde

Harmony is an incentive to safety. In our work, if we want safety, let us think safety, harmony and love. Often we dislike other persons and do not work in harmony. This is wrong; meet all with a smile and feeling of safety when you are working with them. You will gain their confidence, and you will be able to trust them to do their work in a safe manner. No train is safe when a brakeman dislikes the conductor, or vice versa. The man who is happy in his work is the man who will win. The man working on the railroad has more to make him optimistic and happy, I believe, than the man in any other occupation.

The story of Doctor Jekyll and Mr. Hyde is a good illustration of the typical attitude toward safety. These personalities exist in all of us.

Doctor Jekyll tells us to lead pure lives, shun dissipation and take proper rest when off duty.

Mr. Hyde says we live but once and we will be a long time dead.

Doctor Jekyll says that a signal improperly displayed, defective track conditions, defective equipment, irregularities of any kind should be reported to the proper officer.

Mr. Hyde says: "Take a chance this time."

Doctor Jekyll says: "Go back and flag, and be sure to go back far enough." Mr. Hyde says: "What's the use? There is nothing coming."

Doctor Jekyll warns us not to go between cars, push draw bars with our feet, jump on the footboard of engines moving toward us, to stay awake on duty, to look in both directions before going on tracks, to perform our duties carefully.

Mr. Hyde says: "I have been doing unsafe things a long time and never got hurt."

So it is with one's safety. It is a question as to whether Doctor Jekyll or Mr. Hyde is on the job.

A Good Workman Never Neglects Safety

By C. E. HORSLEY,
Assistant Roundhouse Foreman, Waterloo,
Iowa

My recollection is that the first organized railway movement I knew of to promote the great fundamental principles of "safety" was about 1912. At that time railway shop employees and other men engaged in dangerous vocations connected with the

railroads took up the idea of accident prevention with great enthusiasm. I was appointed on a committee to help put the movement into effect, I recall, and in the course of our activities in this regard we visited most of the big railway shops on the system where I was employed at that time. Safety methods in the shops were not systematized as they are today. It was

C. E. Horsley and his family. Mr. Horsley entered the service of the Illinois Central at Freeport, Ill., in 1898, as a machinist apprentice. In 1902 he left this company and spent about a year drifting about the country, being employed for a time by the Great Northern and Union Pacific railroads. He soon returned to the Illinois Central and worked for this road at Clinton, Ill., and at Burnside, Ill., shops until 1906, when he took a position with the Chicago, Milwaukee & St. Paul Railroad at Dubuque, Iowa. In 1917 he came back to the Illinois Central once more and has remained with this road since. He was made assistant roundhouse foreman at Waterloo, Iowa, in 1919. During his twenty-five years of shop and mechanical service, he has never been injured.

the duty of our committee to ascertain the methods in use, to make suggestions and to stimulate interest in the principles of accident prevention.

We found men in all cases anxious to co-operate in the movement. Representatives from the various departments were appointed, and meetings were regularly held. Reports were made to the general supervisory committee, which consisted of officials and foremen with authority to enforce orders that were issued.

Protective measures were introduced, such as safeguards of a mechanical nature, screens for open glass and many things before that time unknown. All defective tools were watched closely and either repaired or replaced at once. Employees were

"Safety First" badges, or buttons, to keep the idea constantly in mind, and the result was readily discernible in a falling off of personal injuries.

After all is said and done to prevent accidents, the final test is the carefulness of the individual. Where men are careless or indifferent, the likelihood that somebody will get hurt is always present. A man not only must be careful for his own safety but must think about the safety and well-being of others who are associated with him.

Most men are fairly careful, but the enthusiasm that originally attended the "Safety First" movement has become now less noticeable. The idea has grown so commonplace, I suppose, that men take it as a matter of fact and have lost interest in it. It is no longer new and novel. At the same time, it is just as important as it ever was. The man who is employed in a railway shop or at any other work where a moment's carelessness may result in loss of life or limb to himself or another cannot afford to relax his vigilance. He must think safety until it becomes second nature with him. Habits of carefulness are just as easily formed as habits of carelessness.

Men no longer wear buttons as reminders. But the danger of accidents still remains, and the good workman never forgets that fact. I would like to see more enthusiasm and interest in safety precautions displayed by railway shop workers. I speak more particularly of railway shop practice, since that is the line of work with which I am most familiar. Safety devices are in general use everywhere nowadays. I have no fault to find in that quarter. Accidents should be largely preventable, as a rule, under present conditions. The responsibility rests with the men themselves. Organization and co-operation will prevent accidents and personal injuries.

AN APPRECIATIVE HOBO

On extra No. 716 north, about 9 p. m., March 17, a negro hobo rider who had been put off of the train at Leland, Miss., Vicksburg division, and who had got on without the knowledge of the conductor, knocked on the caboose while the train was running about thirty miles an hour and notified Conductor S. S. Buck, who was in charge of this train, that a brake beam was down on SRDX-23826 and might cause an accident. The conductor stopped the train, went to this car and found a brake beam down. He put the brake beam up, and the train proceeded with only about fifteen minutes' delay.

The train crew had last inspected the train at Leland, twelve miles from the point where the crew was notified the brake beam

was down. The hobo rider claimed he was riding this car and had just heard the brake beam come down when he notified the crew. This car was forty cars from the engine.

"This goes to show that the Vicksburg division boys are always on the job, and outsiders, seeing the interest displayed,

have got to where they have formed the same habit," writes H. H. B., in reporting the incident.

Service is doing the things people want when they want 'em. The first thing one has to do to give service is to see with the other fellow's eyes.—SAMUEL MOODY.

NEWS OF THE DIVISIONS

GENERAL OFFICES

Office of Auditor of Freight Receipts

Several of our employes are buying homes south of here, in Avalon Park and Riverdale, one going out as far as 147th Street.

Miss Beatrice Peterson became Mrs. E. H. Nelson on March 22. The office force presented her with a beautiful chest of silverware.

Office of Assistant Secretary

Mrs. H. Talbert, whom most of us know as "Madaia," of the assistant secretary's office, paid the office a short visit recently. Mrs. Talbert is on a six months' leave of absence owing to poor health.

The Men's Bible Class of Avalon Park Methodist Episcopal Church, 81st Street and Dante Avenue, Chicago, gave a minstrel show on April 23. The entire cast was composed of members of the Bible

class, of whom nine members are employed in the various departments of the Illinois Central general offices at Chicago. The first scene of the performance was arranged to represent a dining car scene

A NEWS-GATHERER

J. W. Brown, our St. Louis division editor, was born and reared in Union County, Illinois. He finished public school, had three years' work at Southern Illinois Normal University, Carbondale, and was graduated from Valparaiso University, Indiana, in 1909. He entered the service of the Illinois Central in the mechanical department in 1913, and later worked in the maintenance of way and structures department. After service in the transportation department at Mounds, Ill., he was transferred to the division superintendent's office at Carbondale in 1915. He was in military service at Camp Funston, Kansas, doing field clerk work, in 1917, and returned to railway service at Carbondale in the latter part of 1918. He is now employed in the office of Superintendent J. W. Hevron at Carbondale.

Here we have Mrs. E. A. Barnes, wife of the secretary to the engineer, maintenance of way, Chicago, and her son, Everard Barnes, 2½ years old. Everard and his mother will leave Chicago May 5 to spend the summer with relatives at Nantes, France. Mrs. Barnes, whose home was at St. Nazaire, France, was married to Mr. Barnes while he was in service in France during the war.

Above is a view of the noon meeting held April 12 in the machine shop at Burnside shops, Chicago, under the auspices of the Railroad Y. M. C. A. The speaker is Dr. R. A. Allen, an industrial lecturer of the Y. M. C. A. In the last fifteen months Doctor Allen has given eight health lectures to groups of employees at Burnside.

on the Illinois Central. Its staging was made possible by the loan of several costumes used in the service by employees of the road. From the jokes and fun-making in general it was not a hard matter to observe that the Illinois Central service rendered the citizens of Avalon Park is greatly appreciated. The minstrels proved a success in every way. Owing to the great demand for a second performance, the show was repeated on the night of April 12 and again played to a large and appreciative audience. Among those who participated in the performance are the following Illinois Central employees: O. H. Hallmann and W. W. Alverstrom, general superintendent of transportation department; W. T. Riggs, purchasing department; R. B. Thomas and E. W. Ballard, building department; B. D. Johnston, valuation department; W. W. Badger, engineering department; H. E. Byrum, office of engineer auditor; C. H. Leyerle, road department.

CHICAGO TERMINAL

E. C. Harper

Chief Accountant

Office of Superintendent

W. J. Thomas, clerk, terminal superintendent's office, has been transferred to trainmaster's clerk at Harvey. Lawrence Marshall succeeded Mr. Thomas as clerk.

Glen Gardner, accountant, has been transferred from the terminal superintendent's office to the roadmaster's office as supervisor's clerk at Chicago.

Congratulations and best wishes are extended to Mrs. E. F. Bennett, formerly Miss LaVina Woolever, stenographer, terminal superintendent's office, who was married on December 28 last. Knowledge of the event has only recently become known.

Along the Line (C. Y. Kenny)

J. Huff, switchman at Randolph Street, was run over by a suburban engine about 9:30 a. m., March 16. Some switching was being done, and Mr. Huff

stepped over on another track, not noticing the suburban engine.

Joseph McAnnish, 24 years old, son of Conductor J. McAnnish, Illinois division, died at 11:55 p. m., March 18. The funeral service was held at St. Patrick's Church, Kankakee, at 9 a. m., March 22. He leaves a widow.

Suburban Passenger Service (Marion Pressler)

Mr. Heldenbrandt, custodian at 63d Street, has returned from a pleasant trip to points in Florida.

J. W. Dodge, Jr., general foreman, recently wrote the following letters to H. H. Evers, towerman:

"I have your letter of March 20 in regard to extra No. 1657 passing Harvey at 3:15 a. m., March 20, with about fifteen cars and brake sticking on a refrigerator car, causing it to become red hot. On behalf of the management, I wish to thank you for the interest you have taken in handling irregularities of this kind, which is very much appreciated."

"I have your letter of March 21 relative to extra No. 1636 north, by Harvey at 2:50 a. m., with brake rigging dragging. I am very pleased to note the interest you displayed in stopping the train and having the brake rigging repaired, thereby avoiding a possible derailment."

ILLINOIS DIVISION

Iva Phipps

Office of Superintendent

C. W. Davis, Champaign district trainmaster, has been made chairman of the committee to examine all employees on the system on the transportation department book of rules. Mr. Davis is being relieved by C. C. Chapman, formerly night chief dispatcher. E. C. Slingman is now night chief dispatcher.

Mrs. Kathryn L. Johnson, who has been employed at Champaign for more than eight years, has been transferred to a position as stenographer in Mr. Blaess' office, Chicago. Mr. Johnson is employed in Mr. Porterfield's office.

Mrs. Charlotte Carmack has accepted a position as stenographer in the accounting department.

Miss Lillian O'Brien, stenographer, has returned to work after an absence of more than a week due to illness.

Mr. and Mrs. C. S. Collier are the proud parents of a baby girl, Lois Anne. Mr. Collier is an instrumentman.

L. M. Sands, accountant, has been granted a 90-day leave of absence effective April 16.

Chief Gardener H. S. Moulder, Mrs. Moulder and their children, Robert, H. S., Jr., and Margaret Ann, taken at their home at Champaign, Ill.

Miss Emma Maher has accepted a position as stenographer to Trainmaster J. T. Stanford.

E. R. Purkheiser, formerly operator at Kankakee, has been appointed dispatcher at Champaign.

W. F. Woolard has been transferred from the Mississippi to the Illinois division as instrumentman.

Champaign Yard Office (Grayce Ferguson)

Ronald Childers and Paul Carothers have recently been employed as yard clerks at Champaign yard.

F. F. Wilson, first trick operator at Champaign yard, has just purchased a new home in O'Neil Court, South State Street.

Tom Toohey, yard clerk, who has been off duty for the last month on account of severe illness, is reported to be getting along well and rapidly regaining his strength.

Yard Clerk Roy Ford has purchased a new motor car.

INDIANA DIVISION

Florence McShane

Secretary to Superintendent

Office of Superintendent, Mattoon, Ill.

(Mary Reinschreiber)

Sunday afternoon, April 15, the Treble Clef Club gave its yearly open concert at the Methodist Church, to which the public was invited. The program consisted of vocal and piano solos and duets, quartets, double-quartets, 4-1 and 8-hand piano numbers and a xylophone number. Several persons connected with the Illinois Central, who are members of the club, took part as follows: William Bledsoe, son of Chief Dispatcher J. W. Bledsoe, played a xylophone number—"Second Hungarian Rhapsody," by Liszt. Miss Florence McShane, secretary to the superintendent, sang the obligato part in a double quartet consisting of four men and four women—"Inflammatus," by Rosinni. Miss Lorraine Anderson, daughter of Engineer R. R. Anderson, was one of the members of this double quartet. Miss Eunice Trott, daughter of Conductor J. Trott, gave a piano solo—"Barcarolle in A Minor," by Schubert.

Agent and Mrs. H. L. Young and children of Griffin, Ind., are contemplating a trip to Los Angeles in the near future.

O. E. Cowgill, formerly agent at Armstrong, Ind., has accepted the ticket agency at South Pekin, Ill. A. H. Brown has succeeded Agent Cowgill.

Effective April 16, second and third trick operators at Browns, Ill., in addition to the Illinois Central work, started doing the telegraphing for the Southern Railway.

Agent W. F. Barton of Dalton City, Ill., was pensioned April 1.

C. E. Mehringer, who has been on special work concerning embargoes at Indianapolis, Ind., resumed his old job as second trick operator at Wisconsin Street yard, Indianapolis, April 11.

Office of Trainmaster,
Palestine, Ill.
(Blanche Pugh)

W. T. Pemberton, agent

One Hundred Four

Paul Beall, engine foreman; Paul Stockover, switchman; William Eaton, engineer; yard engine No. 179, Mattoon, Ill.

at Bloomington, Ind., has been granted an extended leave of absence. He is being relieved by R. B. Smith, agent from Palestine, Ill., who is being relieved by Operator G. B. Calvert of that station.

The many friends of Agent R. B. Smith of Palestine, Ill., were surprised when he and Miss Lois L. Mace were married Wednesday, April 4, and immediately left on their honeymoon. They have been at home since April 15.

A daughter, Mary Louise, was born to Brakeman and Mrs. H. E. Garrard April 9.

Effective April 11, A. G. Welk has been appointed night yardmaster at Indianapolis.

Office of Trainmaster, Mattoon, Ill.

(Zella MacNair Rose)

The Illinois Central has delivered the Big Four Railroad at Mattoon 141 cars of strawberries since March 1, and the season is hardly started.

A. W. Philhower, better known as "Squirley," has a new motor car and is all set to go fishing.

Glen Foote, brakeman, went to the Wisconsin division during the slack business on the Indiana division. He likes it so well that Mrs. Foote has joined him, and they have decided to remain there.

Office of Roadmaster, Mattoon, Ill.

(Bonnie Snorgrass)

I. F. Loy, father of O. S. Loy, paint foreman, passed away at the home of his son in Mattoon, March 22, after an illness of several months, at the age of 58 years. Burial was at Effingham, Ill., Ill.

C. L. Rager, report clerk, was operated on at the Decatur and Macon Counties' Hospital at Decatur, Ill., April 2, for appendicitis. He is improving rapidly and expects to be able to resume work about May 1.

K. K. Cavins has accepted a position as rodman, V. B. Olson having resigned. Mr. Cavins worked for this company previously at Mattoon and also at Champaign, Ill., several years ago.

Edmond Strong has accepted the position as clerk to Supervisor Frank Murphy at Bloomington, Ind.

H. H. Cordier, formerly track supervisor at Newton, Ill., who was forced to retire on account of ill health, shows no sign of improvement and is confined to his bed constantly.

Here is Miss Catherine Stephenson, stenographer in the superintendent's office at Mattoon, Ill. Her toes are as nimble as her fingers. Miss Stephenson does classical dancing as a sideline.

Office of Chief Dispatcher, Mattoon, Ill.
(W. C. Scott)

Effective April 13, an additional telephone operator was employed in our office. This makes two shifts, which gives continuous service from 5 a. m. to 9 p. m. Miss Myrtle Flaherty, who formerly worked from 3 a. m. to 5 p. m., now has her hours from 5 a. m. to 1 p. m., and Miss Greta Crabtree, the new operator, has her hours from 1 p. m. to 9 p. m.

Dispatcher and Mrs. C. C. Ratcliffe are the proud parents of a fine baby girl born March 18. The young lady has been christened Mary Jane.

E. E. Boyer, agent at New Harmony, Ind., has taken a sixty days' leave of absence. He is being relieved by E. W. Minor, regular agent at Hidalgo, Ill., who in turn is being relieved by D. E. Cummins, extra operator.

Dispatcher O. A. Knight is the possessor of a new coupe and promises us all a ride when the weather is suitable.

J. R. McGowan, agent at Wheeler, Ill., is also driving a new motor car.

Accounting Office, Mattoon, Ill.
(Norieene Quinn)

Two of our force, Hugh Whisenand and Gene Watts, are the possessors of new automobiles.

Several of the accountants are somewhat distressed because the houses which they are occupying have been sold and it is up to them to get busy in a hurry and find other places in which to live.

Master Mechanic's Office, Mattoon, Ill.
(Flora Adrian)

Paul Gano, machinist apprentice at Mattoon shops, and Miss Ruth Andrews of this city, were quietly married in Sullivan, Ill., February 22. Both are well known in Mattoon.

Carmen of Local No. 5 had a get-together meeting on Tuesday, April 10. The officials of the division and all the foremen were invited, as well as members of the various crafts. Master Mechanic Bell was the principal speaker of the evening, and all the foremen made short talks, after which refreshments were served.

Material has just been received to cover the installation of an electric motor on the turntable at Indianapolis, Ind.

Some of the material is on the ground to take care of the hot-water washout system to be installed at Indianapolis, Ind., which will be a great benefit to the locomotives handled at that terminal.

A fish fry was held in the new meeting room at Indianapolis, Ind., shops on the evening of March 16, under the auspices of the shop organizations, for a general "get-together" purpose. Invitations were sent to the division and local officials, but owing to the conditions out on the line, on account of the high water, many of them were unable to be present. Tables were spread to accommodate about sixty-five persons, and they were well filled. After everyone present had well partaken of the fish and all that goes with it, short talks were made by the following, with H. T. Loughery, general foreman, acting as toastmaster: W. Ward, agent; W. L. Haehl, general yardmaster; W. J. Bryant, car foreman; S. J. Cromwell, engine inspector, president of the machinists; C. W. Hampton, machinist, secretary-treasurer of the

machinists; A. J. Shedelbower, storekeeper; John Resor, engine carpenter, president of the carmen; T. A. Merrick, air brake man, secretary-treasurer of the carmen. Everyone present enjoyed the affair thoroughly and had to admit that Mr. Resor, who had charge of the preparation of the fish, knew his business.

T. L. Conner, local chairman of the B. of L. E., and Mrs. Conner, have returned from a trip to southern Florida.

Agent's Office, Mattoon, Ill.
(W. P. Woolridge)

Receiving Clerk Neal Daugherty has returned from Olney, Ill., where he was called by the death of his brother.

Agent M. Dorsey's son, R. B. Dorsey of Phoenix, Ariz., is reported ill of pneumonia. Before going to Phoenix, Mr. Dorsey was platform foreman at Mattoon freight station.

Agent's Office, Evansville, Ind.
(A. W. Walling)

A happy romance culminated on April 25, when Miss Rita Stippler and Arthur F. Hupfer were married in St. Anthony's Church, Evansville, Ind. Mr. Hupfer is billing clerk in the local freight office. After the ceremony, a reception was held for the immediate family. In the evening about one hundred friends and relatives, including thirty charter members of "the Dumbell Club" (of which Mr. Hupfer is a member), were entertained by the Dumbell Quartet. Mr. and Mrs. Hupfer left on a late train for Niagara Falls, N. Y., and other eastern points for their honeymoon.

Mrs. Pansy Ogle, stenographer in the local freight office, is seriously ill at her home. Mrs. Ogle has been sick for two months, and her physicians are doubtful of her recovery.

Fritz Kunz, a brother of Agent C. C. Kunz of Evansville, Ind., who is making a lecture tour of the United States, stopped over in our city for a visit recently. The brothers had not seen each other for ten years. The visitor, who carries the degree of B.A., is a graduate of the University of Wisconsin. During his student years and since, he has traveled extensively, having twice circled the globe. Since 1913 he has been successively head of the Chief

Group at our Mattoon, Ill., shops. From left to right: S. E. LeGrande, gang foreman; W. M. Ballard, M. C. B. clerk; A. B. Roetker, gang foreman; A. Harris, wreckmaster; Thomas Rowe, mill foreman; M. Rardin, gang foreman; William Janes, gang foreman.

Buddhist College in Ceylon for three and a half years and an associate of Dr. Annie Besant, president of the Theosophical Society, in her educational and social work in India. Mr. Kunz spoke before the Chamber of Commerce at a noon luncheon, on the economic effect on America of home rule for India. In the evening he lectured to a large audience in the Vendome Hotel ballroom, on "Psychic Senses and Spirituality."

Agent's Office, Indianapolis, Ind.
(Margaret Clifford)

Joe Cannon, banana clerk, Indianapolis, Ind., is no longer riding the street cars, for he is the proud possessor of a new 4-door sedan.

Agent Ward's spare hours are spent at home "listening in" on the radio programs throughout the United States these days.

SPRINGFIELD DIVISION

Della Morrison Office of Superintendent

The Springfield division dedicated April 6 and 7 as clean-up days. All station grounds, parks and company buildings were gone over, and all obsolete material removed and disposed of. It was gratifying to receive the co-operation from the shipping public in this clean-up campaign, as our patrons assisted generously in rounding up all the grain doors around elevators and having them neatly piled, which has given the property a good appearance generally.

The new telephone exchange is now completed, and all telephones in the vicinity of Clinton may now be reached through the telephone exchange.

The division offices are being re-wired. When completed, all the wiring will be in conduits, which will assist materially in reducing fire risks and at the same time enhancing the appearance of the office rooms.

One of our oldest and most competent engineers, Walter Hays, is contemplating taking his pension on account of broken health. He will be greatly missed by all of the employees on the division.

Trainmaster's Office, Clinton, Ill.
(Faye Westerholt)

A student special was handled from Champaign to St. Louis, March 29, returning April 2 from St. Louis to Champaign, for the accommodation of students of the University of Illinois. The train was in charge of Conductor J. J. Millan and Engineer W. A. Hoff.

Conductors B. L. and D. P. Easley were called to Glenarm recently by the death of their father.

L. R. Langley, switchman in Clinton yards, suffered a painful injury recently when a large lump of coal fell off a coal car, striking him on the head and lacerating his face. Several stitches were required to close the wound.

Conductor C. L. Taylor of Clinton and Conductor J. L. Ford of Chicago, formerly of Clinton, have been in the employ of the Illinois Central twenty-four years this month. Both men entered the service at Clinton as brakemen on March 12, 1899. Mr. Taylor is now running the local passenger between Clinton and St. Louis, taking C. L. Freeman's place when the latter was pensioned some time ago. Mr. Ford is running the Diamond Special No. 17 and No. 18, between Chicago and St. Louis.

Miss Clara Hoyt, stenographer in the trainmaster's office, is taking a vacation, being relieved by her sister, Miss Mildred.

Conductor and Mrs. C. Cully have gone to Hot Springs, Ark., to enjoy a rest.

Brakeman Frank Rice has been granted a ninety days' leave of absence, which will be spent in making a trip to Los Angeles, Cal., and return via automobile.

One Hundred Six

Switch engine at Springfield, Ill., in 1896, with Engineer M. Hogan and Switchman H. McClain. Photograph by courtesy of Engineer L. E. Freelove, Springfield division.

Brakeman Thomas Duke has been granted ninety days' leave of absence. Mr. Duke expects to spend most of this leave on his farm in Wisconsin.

Wade and Noel Harris, brakemen, were called to Martin, Tenn., April 6, by the death of their sister.

Yard Office, Clinton, Ill.
(Joe Swearingen)

P. L. Bogardus, switchman, has returned to work after an absence of three weeks on account of sickness.

E. T. Gibson, formerly a switchman, has resigned from service and is now in charge of a cafe at Amboy, Ill.

Otto Sutton, formerly a switchman, has resigned from service and accepted a position with the Sinclair Oil Company at Clinton.

Yardmaster R. W. Clemons was out of service for several days the first part of April.

On account of the heavy business being handled through Clinton yard, a night chief yard clerk has been employed. William Goff is filling this position.

R. F. Smith, switchman, is out of service on account of illness.

Road Department, Clinton, Ill.
(John Phillips)

Extensive improvements are in progress on the Springfield division, consisting of three deep wells and a treating plant at Clinton; double track from West Junction to Salt Creek siding; a new 100-car capacity siding, an extension of water main and installation of new tank at Mount Pulaski; double track from East Grand Avenue to Spaulding and a modern passenger station at Vandalia, and extension of sidings at Hanson and Binney, all of which are greatly needed to handle the increased volume of business.

Rodman Jodie Buntin has been promoted to instrumentman, remaining in this capacity on this division.

Water Service Foreman and Mrs. Grimes attended a dinner at the Morrison Hotel, Chicago, on March 13, given by the water service department of the system, in honor of August Gustafson, pensioned foreman of the Iowa division. Previous to the dinner, the party visited the Municipal Pier, with Water Service Inspector C. E. Lakin as guide.

Chief Dispatcher's Office, Clinton, Ill.
(Gladys Westerholt)

Charles Sebring, third trick leverman at Starnes, resigned from service, effective March 16. Mr. Sebring will farm for himself.

Mr. and Mrs. O. S. Jackson are the parents of an 8-pound son, Walter Grason, born at the family home on Sunday, March 25. Mr. Jackson is extra dispatcher on this division.

F. L. Edwards, operator at East Junction, Clinton, resigned on March 27 and has gone to his home in Girard, Ill.

Illinois Central Magazine

C. B. Troxell is relieving J. R. Downs at Chestnut, while the latter is visiting his family in Anselmo, Neb.

C. K. Black resigned as ticket clerk at Lincoln, effective April 10. He will remain in Florida, where he has been for the last few months for the benefit of his health.

J. L. Simcox is the successful applicant for second trick operator at Kenney.

George Phillips, second trick operator in "CO" office, Clinton, was off duty, sick, a few days recently. R. O. Kelley of Patoka relieved him.

R. R. Hollis, dispatcher, representing the Northern Lines, joined a committee consisting of four dispatchers at Memphis, Monday, April 9, to visit the important terminals on the Illinois Central System. This trip is made in connection with an educational plan adopted by this company to enable employes in various departments to become more familiar with the operation in general. The committee consumed two weeks on this trip.

W. Burkam, agent at Lake Fork, has been commended for his prompt action in extinguishing a fire on the right-of-way south of Lake Fork station, thus preventing serious damage to our telegraph lines.

B. R. Fite is the successful applicant for third trick leverman at Starnes.

G. H. Wilson, while on duty at Assumption, noticed a wheel sliding on No. 3/172 as it was passing that station and promptly stopped the train. This no doubt avoided an accident, and Mr. Wilson has been commended.

Around Springfield, Ill.

The automobile belonging to James Ryan, water foreman, was stolen recently, but he has been lucky enough to get it back.

H. LaValley, switchman, has taken a leave of absence to go to Minneapolis on account of the illness of his mother-in-law.

N. B. Clark, yardmaster, has purchased a new motor car, a sedan.

C. Henson, foreman at Springfield, is out of service on account of ill health.

Jerry Daniels has been out of service recently with the "flu."

J. W. Gallagher, engineer, has taken thirty days' leave of absence, which time is being spent at Hot Springs, Ark., for the benefit of his health.

R. F. Blauvelt, engineer, has given up road work temporarily and has taken yard work on account of sickness.

Engine No. 73 is back in service again after being out sixty days for general repairs.

Henry Conrad, assistant yardmaster, has been out of service with the "flu."

Freight Office, Springfield, Ill.

(Ann Merriman)

H. L. Parkinson, O. S. & D. clerk, attended a meeting of the system Board of Adjustment at Chicago, March 26 and 27.

E. P. Clements, check clerk, who has been off duty on account of illness, has returned from Chicago, where he underwent an examination at the Illinois Central Hospital. His condition is slightly improved, but he is still unable to resume his duties as check clerk.

Courteous treatment extended our patrons is a good business getter. Here is an excerpt from a letter received from the Lincoln Sand & Gravel Company, Lincoln, Ill.: "We thank you for your letter of March 31, relative to incorrect weight assessed on a car of sand, and we wish to take this opportunity to thank you for your kind efforts in helping us get the matter straightened out."

On March 31 our team track had the appearance of circus day, caused by the arrival of fifteen carloads of automobiles consigned to a local dealer, loaded in coal cars covered with canvas. This attracted much attention.

Storehouse, Clinton, Ill.

(Esther Jones)

Dewey Griffin, stockkeeper in North Yards, has returned from the Illinois Central Hospital at Chicago after having his tonsils removed.

H. Wolff, traveling storekeeper of the Chicago & Alton Railroad, visited Clinton shops recently on A. R. A. matters.

Nelson Ropp, gang foreman, who was recently injured, is recovering rapidly, and has selected his convalescent period as an opportune time to embark upon the sea of matrimony. Miss Berna Dean Spencer of Kenney, Ill., is the young woman who has volunteered to act as captain of the ship.

A garage has recently been erected at Clinton shops to take care of our motor truck.

R. E. Downing, division storekeeper, is the proud possessor of a new motor car.

Shops, Clinton, Ill.

(Flora Drago)

With approximately a million miles to his credit, Engineer Frank Miller of the Clinton district of the Illinois Central is still going strong. On December 1, last year, he completed his forty-fifth year with our company, running between Clinton and Centralia. On this anniversary of his connection with the Illinois Central, Mr. Miller recalled that he had never lost a day through injury due to an accident. It is believed this record is without a parallel. Mr. Miller entered the service of the company at Clinton on December 1, 1878, and on March 17, 1885, was promoted to engineer. Of the firemen who were in the service during the time he was serving his apprenticeship as fireman there are only two left, Austin Hall and Henry Lynch, now veteran engineers. Mr. Miller saw much freight service before entering passenger service. He is now running Nos. 105 and 102 between Clinton and Centralia, a run he has held for the last eight years. He has seen many strange and unusual things and has had many odd and curious experiences in his career as an engineer. Although most of his associates of the 70's and even of the 80's have long since retired, Mr. Miller has no idea of giving up active duty. He is still in good condition physically, and not many runners have a greater annual mileage than this veteran.

James West, boiler inspector at Clinton shops, and Miss Clara Tuggle, also of Clinton, were married in St. Louis, March 27. They will reside in Clinton.

Frank E. Norton, engineer on the Springfield division, has been taking treatment in the Illinois Cen-

Elks' Club, Litchfield, Ill.

One Hundred Seven

tral Hospital at Chicago and is getting along nicely.

General Foreman's Office, Clinton, Ill.
(W. E. Smither)

Night Boilermaker James Brown has returned to work after being absent one week on account of sickness.

Hostler Charles Brown enjoyed a 10-day leave of absence the first part of April, which time was spent in Branson, Mo.

Alvin Duckworth, machinist, who has been ill with pneumonia, is much better and expects to return to work in the near future.

Freight Office, Clinton, Ill.
(Anna E. Murphy)

William H. Crum has resigned as foreman at the Illinois Central to accept a position as salesman with the O. L. Langellier Motor Company of this city. Mr. Crum has been succeeded by Charles W. Masterson.

On account of increased business at this office, a new position has been added. Melvin Bordner, bill clerk at the yard office, is the new clerk.

J. E. Black, sealer, has returned to work after being off several days because his wife fell from the steps at her home and broke her arm.

Mr. and Mrs. V. Hadley recently lost a child. Burial was in the cemetery at Bethany, Ill. Mr. Hadley is a check clerk at the Illinois Central freight office.

ST. LOUIS DIVISION
J. W. Brown Office of Superintendent

Chief Clerk Culley went to McClure on April 1, his mother's 79th birthday. There are three brothers and three sisters, and this was the first time they had all been home together for thirty-five years.

Mrs. Clara P. Pratt, secretary to District Attorney C. E. Feirich, Carbondale, died at Holden Hospital April 4. Mrs. Pratt had been a citizen of Carbondale for a number of years. She was buried in Oakland Cemetery.

Edith Cromeenes resigned her position as stenographer in the superintendent's office, April 7, to take the place made vacant in District Attorney Feirich's office by the death of Mrs. Clara P. Pratt. Helen Greif will take the position made vacant by the departure of Miss Cromeenes.

Ralph Sanders, clerk, local freight office, Carbondale, has gone to Christopher to take the position as cashier in the freight office made vacant by the resignation of Della Hoffman.

Raymond McMinn, formerly road supervisor's clerk, has accepted a position in the local freight office, Carbondale.

J. J. Greer, cashier, freight office, Carbondale, who has been on a leave of absence on account of illness, has returned to the service.

L. F. Otto, engineer on the Centralia district, died at Central City, March 8.

Charles Johnson, material clerk, who was operated on some time ago at Holden Hospital, Carbondale, is back at work.

Martin Vaughn, brakeman, who was injured some time ago, is able to be out on the streets again.

Clarence Miskell, accountant, advises that announcement has been made of his marriage to Miss May Belle Dickson, Marissa, Ill., to take place May 5. Miss Dickson, who is a highly educated young woman, is at present teaching in the DuQuoin schools.

The St. Louis "Browns" baseball team, with its Manager, Lee Fohl, passed through Carbondale on train No. 204, April 12, on its return trip from spring training.

Charles Miller, pensioned shop man, Centralia shop, died March 23.

Mechanical Department, Centralia, Ill.
(Thelma Gilpin)

R. O. Buckner has been awarded the position of chief clerk to the general foreman at Mounds. Mr. Buckner was formerly timekeeper in the car department at Centralia.

John Cochran, boiler inspector at Centralia, has been appointed assistant boiler foreman on the night shift.

Engineer J. M. Jones is in California on a 90-day leave of absence on the account of the health of his wife.

J. G. Warnecke, storekeeper at Centralia, was operated on for appendicitis at St. Mary's Hospital at Centralia on April 8. He is improving rapidly.

Mechanical Department, East St. Louis, Ill.
(G. H. Krause)

Train Nos. 211-611 and 212-612, known as the Franklin County Limited, made its first trip on the St. Louis division, between West Frankfort, Ill., and St. Louis, Mo., on April 2. The train consisted of seven cars, carrying about four hundred passengers. Mr. Patterson's office car, occupied by Mr. Patterson and his party, accompanied the train on this trip. This is a non-stop train, running on fast schedule.

Locomotive Timekeeper Vivian K. Boluss is the proud father of a baby girl.

Boiler Foreman L. A. Mitchel has resigned his position at East St. Louis shops and has accepted

Picture taken on March 31 at the farewell party given for Master Mechanic C. M. Starke by the foremen in the locomotive and car departments at Centralia, Ill.

a similar position with the C. & E. I. at Danville, Ill.

W. C. Becker of Mounds, Ill., has been appointed boiler foreman at East St. Louis shops, in place of L. A. Mitchell.

M. J. Cory, record writer at East St. Louis car shops, was recently favored with the second visit of the stork at his home, the new arrival being a baby girl.

Passenger Car Foreman W. J. Robinson of the Atlantic Street yards, St. Louis, Mo., has been granted a six months' leave of absence, effective April 1. Gang Foreman A. L. Marshall has been appointed to act in his place during his absence.

Locomotive Fireman J. W. Leuzinger was recently called to Kansas City, Mo., by the death of one of his relatives.

Locomotive Fireman C. F. Thomas, who was injured at Belleville, Ill., March 18, as a result of a fall from his engine while it was taking water, died at St. Elizabeth's Hospital, Belleville, March 25.

Switchman C. F. Settlemoir, Benton, Ill., has been on a close lookout for angle cocks and air hose. He has the credit of turning in twenty-five angle cocks and twenty-nine air hose in four days.

Conductor W. S. Aitkin has turned in four angle cocks and three air hose.

The yard engine crew in charge of Engine Foreman O. V. Carr, on Tuesday, March 27, discovered a switch frog torn up and ties badly damaged at the Franklin County Mine lead on the main track. Action was taken and section men were at work repairing the frog almost immediately after the discovery was made. The work was completed in time to prevent a delay to passenger trains Nos. 605 and 602. The damage was caused by a car that had a broken tie rod. The car was located and repairs made.

L. L. Roberts, car inspector at Zeigler, Ill., reports that Engine Foreman Sandy Douglas, Brakemen Bill Douis and George Campbell, Locomotive Engineer Luke Smith and Locomotive Fireman Al Shaftner picked up and turned over to him the following material: Sixteen angle cocks, sixteen air hose, one coupler complete, one coupler knuckle. Mr. Roberts thinks that this is a very good saving compared with the little time spent on the work by the crew.

Thaddeus T. Turner, agent at Pulaski, Ill., was born at Sailor Springs, Clay County, Illinois, March 26, 1880, and died at his home at Pulaski, March 24, 1923. He was the oldest of three sons born to Joseph and Frances Turner. He was married to Miss Julia Nation at Mount Vernon, Ill., on April 24, 1901. To this union was born one daughter, Miss Helen, now 13 years old, who, with Mrs. Turner and the two brothers, Clarence and Grover, of St. Louis, Mo., is left to mourn his loss.

After leaving school, Mr. Turner studied telegraphy, and for a while was employed by the L. & N. as agent, leaving that road to enter the service of the Illinois Central February 2, 1904, with which company he had been employed continuously as agent, and for the last seventeen years as agent at Pulaski. He was actively identified with the various activities of the village, serving as alderman, clerk and treasurer. He helped to organize the Citizens State Bank of Pulaski, of which institution he had been vice-president since its organization.

He united with the Ma-

T. T. Turner

sonic lodge at Pulaski, December 5, 1912, passed to the degree of Fellowcraft March 31, 1913, and was raised to the degree of Master Mason May 5, 1913. He served his lodge as master, clerk and treasurer. He united with the Christian Church of Pulaski in 1920. He stood high in the esteem of his employers, who have shown him many considerations in his years of ill health and faithful service. He was an active member of the Order of Railroad Telegraphers and took an important part in the deliberations of that order.

His body was laid to rest in the city cemetery at Mount Vernon.

WISCONSIN DIVISION

J. A. O'Neill Office of Superintendent

Freight Office, Freeport, Ill. (Mary H. Peck)

Recently some changes took place in the freight office force. E. Cahill, rate clerk, resigned to enter the employ of the Standard Oil Company. His place was filled by Randall Scheits, former O. S. & D. clerk, and the O. S. & D. clerk's position was given to Clarence Powers, formerly a train caller. Earl Green is leaving the freight office to accept one of the yard clerk positions at Wallace. His place will be filled temporarily by Donald R. Graybill, formerly under Agent Voight of Polo, Ill.

Several of the boys in the agent's office are taking a special La Salle extension course, fitting themselves for station agents and traffic work. So far, Randall Scheits, Louis Kracht and Francis Doyle have lined up on this course.

On April 7, after a lingering illness, Mrs. Anna Carey, 70 years of age, died. She was the mother of J. Carey, night clerk in the agent's office, and Mrs. Margaret Allen, night telephone operator, and grandmother of Charles Allen, clerk in the agent's office. Her death was caused by a complication of diseases.

A change has been made in the warehouse, freight office. George Kappes, record and seal clerk, has accepted a position as yard clerk at Wallace, his place being taken by T. J. Scannell.

Road Department, Freeport, Ill. (Frances Manion)

For their vigilance and watchfulness in discovering defective equipment, favorable mention has been placed on the efficiency records of the following employees: Section Foreman L. Ratalo, Rockford, Ill., found a brake beam dragging on GH&SA-14753, extra No. 1724, on February 16, and discovered a brake beam dragging on AT&SF-34514 on this same train while it was pulling out of Rockford siding; Signal Maintainer H. J. Stoetzel found a broken flange on IC-123094, in train No. 4/166, March 9, at LaSalle; Section Foreman S. M. Pierce discovered a brake beam dragging in extra No. 2918 at Eldena, on March 3.

During the recent high water on the Dodgeville district, it was discovered that the telegraph line used by the dispatchers was broken at point where the water was five feet over the track. As it was impossible to get to the wire on account of its being too cold to enter the water and no boats on hand, B. & B. Supervisor A. Payne got out an inch rope which he had for cleaning the track of driftwood as he passed over the district, made a loop in this rope the same as cowboys use for roping cattle, lassoed the telegraph pole, tightened the rope to the car and proceeded to the pole and made repairs to the wire in his usual casual manner.

Trainmaster's Office (M. V. Doyle)

S. H. Nelson, assistant general yardmaster at

Conductor C. L. Taylor, Engineer L. E. Freelove and crew at the Kenney, Ill., gravel pit in 1904. Photograph by courtesy of Engineer L. E. Freelove, Springfield division.

Freeport, has been appointed acting trainmaster during Mr. Rought's absence with the system board of examiners. Mr. Nelson has been in the service of the company since April 2, 1898.

J. R. Hannah, chief yard clerk, has returned from a visit in California.

Conductor R. F. Brooks, who spent the winter in Florida, has returned to service on the Freeport district.

Yard Clerk R. Rudiger has accepted a position as clerk in the freight house at Normal, Ill.

D. R. Graybill of Polo, Ill., has accepted a position as inspector of perishable freight in the office of the agent at Freeport.

Dixon, Ill. (Paul L. Reilly)

Work has just about been completed on the new \$200,000 addition to the Reynolds Wire Company of this city. Its capacity will be doubled, and the Illinois Central receives a good share of the business.

Since February we have been handling on an average four trains a week of gasoline from the C. & N. W., destined to Baton Rouge for export. Oil moves in solid trainloads, and the office force at Dixon is very busy on the days that we have these trains. It takes from fifteen to twenty minutes to handle the sixty bills through the office, and the train is forwarded via Illinois Central in from forty-five to fifty-five minutes after arrival in the C. & N. W. yards.

Cliff Gilman, son of our operator, is now an artist, drawing plows for the J. I. Case Company, this city.

The Illinois Central is filling in the lake in front of the freight office with ashes.

Ralph Cliffer, formerly employed as switchman at Dixon, is now employed by the Chandler Automobile Company of Rockford, selling motor cars.

Rockford, Ill. (D. M. Evans)

George Campbell has resigned his position as chief yard clerk and is now in the traffic department of the Northern Illinois Utilities Company of this city.

Paul Knapp of the warehouse force attended a convention at Springfield.

At Rockford, Ill. Left, H. R. Aufdenspring, assistant agent; right, D. M. Evans, warehouse foreman and magazine correspondent.

Joe Yuccas, formerly a pilot on a Lake Michigan steamer, is now employed at this station.

Howard Young has resigned from the signal department and has taken a position in the freight house.

W. Abraham, who served as yard clerk for some time, has been promoted to the billing department.

Edward Ray, assistant foreman at East Rockford, was passing around the cigars recently. He had stolen a march on his friends and got married. There are but four confirmed bachelors left at this station now.

Ben Schriber, chief bill clerk, and D. M. Evans, freight house foreman, made a freak election bet, in which Ben was the loser. Ben was a good sport and gamely per-

mitted a rope to be placed around his neck, after which he was led around the passenger station in payment of the bet.

Hugh Dove, warehouseman, has resigned to take charge of an Atlantic & Pacific store in this city.

Fred Stern, warehouseman, has rented three lots and expects to do considerable truck gardening this summer.

Shops, Freeport, Ill.

One of the most notable events of the Easter season was the bunco and dancing party sponsored by the Illinois Central Shopcrafts at Odd Fellows Temple, Freeport, Ill., Saturday evening, April 7. Upon entering the hall, everyone noticed the huge drum suspended from the center of the ceiling. At the hour of 10, in the midst of a circle two-step, countless balloons and buckets of confetti rained down upon the dancers from the suspended drum. In the basement bunco was played by those who did not care to dance. The balcony was filled by those who cared to watch the dancing.

These parties are growing in popularity and are being attended by shopmen and their families, not only from Freeport but also from other points on the Illinois Central System. Among the out-of-town guests April 7 were: W. B. McGrew, Champaign, Ill.; H. L. Crowell and Fred Follette, with a delegation from Waterloo, Iowa; George Turner, Burnside; W. O. Johnstone, with a delegation from Dubuque, Iowa; A. G. Wettergren, with a delegation from Fordham yards, Chicago.

The entertainment committee consisted of James Battice as chairman, John Wright, Ed Baldwin, Harley Schroeder and Ed Strohacker, ably assisted by their wives.

Mrs. E. E. Truitt, wife of Operator Truitt, passed away at her home at Independence, Iowa, on March 25, after a three days' illness. Mrs. Truitt leaves to mourn her loss her husband and three children.

Dispatcher L. W. Morton has returned to work, after spending a short vacation in Kansas City. Mr. Morton met Mrs. Morton there and accompanied her home. Mrs. Morton has been spending the winter months in Arizona on account of ill health.

H. A. Brown has been assigned second trick at Peosta; Operator J. D. Krumwide is doing extra work at Portage; Operator G. L. Hutchins of Du-

If You Want an Accurate Watch—Buy a HAMILTON

HAMILTON No. 992. 16 size, $\frac{3}{4}$ plate, 21 jewel movement, adjusted to heat, cold, isochronism and five positions. Will pass inspection on ALL RAILROADS.

ENGINEER STEVENSON of the Lackawanna, Conductor Mandaville of the Erie, Engineer Monk of the Erie and Conductor Landy of the Chicago and Northwestern are but four of the thousands of Railroad Men who keep to schedule on Hamilton time.

Wherever you find Railroad time inspection maintained, you'll find Hamiltons predominating; which is in itself a significant fact. It proves the Hamilton to be the favorite of Railroad Men who must have watches they can depend upon to tell true time.

Insist on owning a Hamilton. It is a watch built sturdy and strong, with timekeeping qualities that better the standards set for Railroad service. The Hamilton No. 992, here shown and described, is preferred by most Railroad Men. For other than time inspection service ask to see the Hamilton movement No. 974. This model gives you Hamilton quality at a lower price.

Write for a copy of our new timekeeper, which tells the story of the Hamilton Watch and gives much valuable information.

HAMILTON WATCH COMPANY

"The Railroad Timekeeper of America"

buque Junction has been granted a thirty days' leave of absence on account of illness.

recently pensioned, has been succeeded by C. A. Collins of Dubuque.

Freight Office, Waterloo, Iowa
(Mabel Ridpath)

Operator J. E. Davis has returned to work after spending three months with his family in southern California. While at San Diego he took an ocean voyage to Coronado Island, Old Mexico, and while on this trip saw one of the large fish of the Pacific, a whale. All on the ship were glad that the whale was headed west and that he kept going in that direction. Mr. Davis was awarded a position as third trick operator at Tia Juana on the San Diego & Arizona, during the racing season.

Miss Linna Gardner, claim clerk, has returned to work after an absence of ten days, during which time she was confined to her home with a case of measles.

Mechanical Department, Dubuque, Iowa
(Harold Hilbert)

Pensioned Engineer Pat Printy has returned from San Antonio, Texas, where he spent the winter months. Mr. Printy returned in time to enjoy some of our northern April winter weather.

Fireman Harmon Buckley is recuperating at his home on Locust Street after a severe attack of pneumonia.

Engineer A. D. Struhs is the proud father of a baby boy.

Several of the carmen and their wives attended the banquet and dance given by the shopmen's association at Freeport, Ill., April 7. The Carmen's Association of Dubuque held its annual banquet and dance at the home of Floyd Rinard on Bluff Street recently. Everyone in attendance reported an enjoyable evening.

Road Department, Dubuque, Iowa
(H. E. Shelton)

Assistant Engineer C. I. Van Arsdalen moved his household goods to Dubuque from Freeport recently and is now residing at Coventry Court.

R. L. Maynard, employed on this division as rodman, has been promoted to instrumentman and transferred to the construction department at Monee, Ill. Joseph R. Collins of Decatur, Ill., succeeds Mr. Maynard.

Supervisor J. Carey of Manchester, Iowa, was called to Freeport recently by the illness of his sister.

E. F. Lynch, chief clerk to Roadmaster Rhoads, has returned from a sojourn in the balmy Southland, the trip including Palm Beach, Jacksonville and Miami.

P. Nolan, pensioned section foreman, has moved from Apple River to Galena to make his home.

J. R. ("Buddy") McGuinness, assistant foreman in Dubuque yards, has been promoted to foreman, Section No. 12, East Dubuque.

Paul Gerlich, Jr., of Galena, Ill., has been appointed assistant foreman at Dubuque, succeeding J. R. McGuinness.

Foreman Owen Goodwin returned to work recently after being on the sick list for several days.

Mrs. H. W. Probus of Apple River, Ill., wife of Section Foreman Probus, underwent an operation in the Freeport Hospital recently.

Bridge Foreman A. E. Demander is again working after being confined in the Illinois Central Hospital, Chicago.

B. & B. Foreman W. C. Stewart,

Trainmaster's Office, Waterloo, Iowa
(Frank Hardy)

Russell Harold Fuller, son of Brakeman and Mrs. H. H. Fuller, died at his home, 324 South Barclay Street, Waterloo, April 9, of a complication of diseases. He had been ill for five months.

The many friends of Conductor G. Willier of the Albert Lea district will regret to learn that he is still confined to the Illinois Central Hospital, Chicago.

The following has been received from Brakeman A. E. Smith, who is spending the winter in St. Petersburg, Fla., on account of Mrs. Smith's health: "There has been a great amount of vegetables moving from here this winter, but not so much citrus fruit as there was last season. I saw Doctor Dowdall last week and had a nice visit with him. I also met J. A. Osborn the day he was starting for home. We are both enjoying our trip and hope to be back to work in the near future."

Master Mechanic's Office, Waterloo, Iowa
(Hazel Joyner)

We welcome our new roundhouse foreman, J. Kurth, who has succeeded H. H. Seeley, who was promoted to master mechanic at Centralia, Ill.

C. N. Hostetler, accountant, is now on the sick list.

Fireman R. L. Truax was injured at Peosta, April 7.

Melvin Turner, machinist helper, recently broke his arm while cranking his motor car.

A number of our employees attended the dance given at Freeport, Ill., April 7, by the shopmen of the Illinois Central.

Ray McLaren says that the next person who wants to know how much water he has in his radiator will have to look himself. Ray received a serious burn on the right side of his face by holding a

Group at roundhouse, Springfield, Ill., about 1896. Front row, left to right: Fireman F. Mather, Engineer J. W. Gallagher, Engineer S. F. Burt, Engineer L. O'Brien, Engineer L. P. Kurt. Back row, left to right: Fireman L. E. Free love, Fireman F. Beaty, Engineer T. B. Scott, Fireman Ned Porter. Photograph by courtesy of Engineer L. E. Free love, Springfield division.

match over the top of the radiator to see if there was any water in it. He found it exceedingly full of alcohol.

Shops, Waterloo, Iowa
(R. F. McLaren)

There have been so many weddings, births, etc., of late among the employes of the boiler shop that the men have become accustomed to looking for their regular issue of cigars every time they check in at the window. Four of the boilermakers who have recently come to the decision that two can live as cheaply as one are "Heavy" Geier, "Dude" Bisbey, Joe Wormuth and Don Kreiger.

George Schmidt, boiler maker helper, recently submitted to his second operation this winter at the Illinois Central Hospital in Chicago. Reports indicate he is doing nicely.

Freight Station, Dubuque, Iowa
(Grace Phillips)

Improvements now authorized and under construction at Dubuque include the erection of two banks, a church and a convent, also street improvements that will cost approximately \$2,350,000. Outside contracts which have also been closed cover shipments of 350 carloads of crushed stone, sand and gravel and lumber. Out of 300 carloads of lumber received during March, the Illinois Central handled 108. With all these improvements now under construction and in sight, the business conditions, as far as Dubuque is concerned, look favorable.

The unusual appearance of a large number of sea-gulls in the vicinity of the harbor one day recently attracted the attention of a great many passers-by.

The following from our department have been on the sick list, but are again back at work: Carolyn Stuber, telephone operator; Milton McLean, car clerk; Connie Cornelius, warehouseman; Pete Carney, caller; C. D. Collins, checker.

A large craft, known as the "Kiwaniis," which is now under construction at the Dubuque Boat & Boiler Works, will soon be ready for launching, after which it will be moved down stream to Cairo, Ill.

Since Theo Regnier has been relieved from the Tabernacle Chorus, he has been singing for the American Legion and also at the Elks' Club.

Fred Meyer, delivery clerk, and his family, are in Lavina, Mont., enjoying a month's sojourn.

J. E. Allison attended the expense meeting which was held in the general superintendent's office April 6, at which time the curtailing of expenses was discussed. Mr. Allison has spent a large portion of his time making trips in connection with the "No Exception" campaign.

Freight Office, Cedar Rapids, Iowa
(Josephine Doyle)

Miss Josephine Doyle, cashier's clerk and correspondent from Cedar Rapids, is slowly recovering from a serious operation undergone recently.

Miss Edna Hutton, car clerk, is confined to her home on account of illness.

Chief Clerk to Roadmaster

Waterloo District (Mary Christensen)

Nels Peterson, section foreman, Cedar Falls, has resigned to accept a position with the C. & M. & St. P. Railroad at Elgin, Ill.

Seward Lemley, trackman, Blairsburg, was called to Athalia, Ohio, recently by the death of his father.

John Erlewine, section foreman at Ackley, has been transferred to same position at Cedar Falls.

Arthur Abbott, formerly assistant foreman at Fort Dodge, has been promoted to section foreman at Austinville.

John Asikin, trackman, Council Bluffs, has been promoted to assistant foreman, Webster City.

James Abbott, assistant foreman, Webster City, has been promoted to section foreman, Cherokee.

Fort Dodge, Iowa (Ned Bracken)

Harry Coffey, caller, employed at Fort Dodge for the last seven years, has resigned to take a position as brakeman on the Waterloo district.

Homer Rhodes, engineer, Omaha district, has returned to Fort Dodge after spending the winter in California.

Roy Flynn, stockkeeper, Fort Dodge, has purchased a new coupe.

Cherokee, Iowa (Anna Donahue)

Patrick J. Toohey, for many years employed as section foreman at Fort Dodge, who resigned in

1919 to go farming in North Dakota, has again returned to the service and is located as section foreman at Cherokee.

W. E. Palmer, section foreman at Gaza, has resigned his position and moved to Bonnie, Ill. His place has been taken by S. Metsos.

P. Ugulano, section foreman at Manson, has returned to work after an extended absence due to the injury of his son.

C. Hanson, section foreman, LeMars, who has been on a leave of absence on account of illness, has returned to work.

Along the Line

M. F. Coffey, flagman, Omaha district, has returned to work after being absent several months on account of sickness.

J. T. Williams, agent, Correctionville, is absent from service on account of sickness.

Dorothy Dillon, agent, Sulphur Springs, has resigned her position.

Sympathy is extended to William Coyne, switchman at Fort Dodge, on account of the death of his father.

Agent O. A. Anderson has been commended for having made temporary repairs to a telegraph wire.

Brakeman R. Hoover has been given favorable mention for discovering brakes sticking on the wheels of a passing train, stopping the train and informing the crew.

Operator E. L. Wilson has been commended for discovering a brake beam down.

Operator J. C. Van Matre has been commended for discovering a brake beam down and causing repairs to be made.

Section Foreman G. Forsman has been commended for discovering a brake beam down.

Suitable mention has been made upon the record

F. W. Shaw, train baggageman on our line between Kankakee, Ill., and Bloomington, Ill., saw the picture of engine No. 1171 in the March issue of the Illinois Central Magazine and sent us this picture of what he calls the original engine No. 1171, with a group of employees, taken in 1903 on the turntable at Kankakee. Those in the picture whose names we have been able to learn are, from left to right, front row: 1, Jim Farre, hostler; 3, Carl Norden; 4, Dick Einfeldt, carpenter, now pensioned; 5, Mr. Redinsky, carpenter; 6, G. E. Patterson, then agent at Kankakee, now general superintendent of the Northern Lines; 7, Warren Woodruff, clerk to the roundhouse foreman, now pensioned; 8, John Clifford, section foreman; 9, Charles A. K. Axen, rip track foreman, now pensioned; 10, Robert Robinson; 11, T. Reimis; 14, Mr. Shaw, acting roundhouse foreman; 15, Joseph Francoer, roundhouse blacksmith; 16, Sam Bennett, coach cleaner, later pensioned and now deceased. F. W. Shaw, fireman, is on the engine just in front of the cab, and John Greenwood, engineer, now-pensioned, is in the cab.

THE ILLINOIS CENTRAL RAILROAD

Is now engaged in one of the largest undertakings of its kind in the Middle West, viz., the electrification of the suburban lines and the building of the new Markham Yards. This project will, of course, entail a tremendous expenditure of money and real estate values will go skyward when the results of this activity begin to be apparent.

HARVEY, ILLINOIS

Being the only market place of any importance within reach of this improvement and being located right in the center of this construction work, will also necessarily be the home of thousands of Illinois Central employees. Homes and home sites *are not plentiful now* and in a very short time it will be practically impossible to find anything desirable.

WE OWN OR CONTROL

A large number of choice homes in good residential districts that can be bought with a reasonable cash payment down and the balance in monthly installments. We also have vacant lots with all improvements in every part of the city that can be bought at prices lower than many dealers are asking for lots without any sewer, water, or gas. We are prepared to give you real estate service that will satisfy the most exacting and if you are interested in securing a home or some vacant lots on which to build later, just fill out the coupon below and mail it to us. We'll get in touch with you at once.

of Agent R. F. Wightman for discovering a brake beam dragging on a train and stopping the train so that repairs could be made.

KENTUCKY DIVISION

Anne Sweeney,

Office of Superintendent

Paducah, Ky.

(Jesse H. Hession)

On Thursday, April 5, Bert P. Griffith was married to Miss Lila John Mitchell at the home of the bride in Nashville, Tenn. After a honeymoon in Louisville, the couple returned to Paducah to reside on South 6th Street. Mr. Griffith is employed as a switchman in the Paducah terminal. During the war, Mr. Griffith was one of the first to answer the call. In April, 1917, he enlisted in the navy, where he served for four years on the Mayflower.

Frank Patterson Coburn, well-known conductor on the Kentucky division, died at his home in the Ellis Apartments, Paducah, March 28. Death was due to heart trouble. Conductor Coburn had been in the employ of this company for twenty-eight years, and at the time of his death was conductor on trains Nos. 801 and 822 between Paducah and Cairo. He was a prominent Mason and Shriner and at the time of his death was chief conductor of Wingo Division of the Order of Railway Conductors. He is survived by his widow, one son, Thomas P. Coburn of New Castle, Ind., and one daughter, Miss Gladys Coburn of New York City. Burial was at Metropolis, Ill.

Mechanical Department, Louisville, Ky.

(G. W. Shaughnessy)

Car Oiler R. F. Trompeter reports the arrival of a newcomer at his home April 3. Her name will be Alma Louise.

A supper and meeting held in Association Hall, Louisville, Tuesday evening, April 3, under the Auspices of the Association of Carmen, was largely attended by carmen, officers and others. Supper was served at 8 p. m., and credit is due to Car Inspector Warren Dobbins, who acted as chairman of the committee on arrangements. After the supper a talk was made by Supervising Agent W. S. Thomas on loss and damage to freight. Mr. Thomas explained to all the amount of money the company had to pay out last year for claims and told all how each one could help to eliminate this waste of money by paying closer attention to cars before they were placed for loading and making rigid inspection and proper repairs to all classes of cars. Mr. Thomas was followed by J. R. Reid and James Hyman, car foreman, who made short talks on the proper inspection of all cars to avoid claims, and Car Inspector J. J. Shaughnessy and Car Repairer Jake White made short addresses on the relation of the new association and the Illinois Central System.

Mechanical Department, Paducah, Ky.

(G. C. Barnes)

W. C. Scofield, who served as blacksmith foreman at the shops a number of years ago, was a welcome visitor one day recently. Since leaving Paducah Mr. Scofield has been in the service as blacksmith foreman, Chicago.

Labor Foreman J. D. Olsman returned to the service recently after a leave of absence in Florida.

While all of the shop employees regret the loss of Master Mechanic J. F. Walker as their supervising officer, they are overjoyed with his well-merited promotion.

The fuel demonstration cars, in charge of O. L. Lindrew, were recently at Paducah for a couple of days. Classes in fuel conservation were well attended by engineers, firemen and others concerned.

The new Illinois Central brass band is making rapid progress. It is reported that there are now twenty active members. Uniforms have been ordered, and some contracts have been made to furnish music for various occasions within the next two months.

R. E. McCarty, a prominent engineer on the Kentucky division, died at the Illinois Central Hospital April 5. Mr. McCarty had been on this all. He is survived by his widow, daughter and three division since July 20, 1895, and was well liked by sons, all of Paducah.

Engineer M. V. Rucker and family recently returned to Paducah from Florida, after a three months' leave of absence.

Princeton, Ky.

(Sudie Cash)

On April 3, T. T. Cunningham, interchange clerk at Hopkinsville freight house, and Miss Mildred Rich, also of Hopkinsville, were married in Louisville, Ky., Rev. Mr. Nicholson, pastor of the Christian Church of that city, officiating. Mr. Cunningham has been in the employ of the Illinois Central since 1915, with the exception of eighteen months, which he spent in France during the World War. Mrs. Cunningham is the daughter of Mrs. L. T. Rich of Hopkinsville. After spending a few days in Louisville, they returned to Hopkinsville.

Flagman Robert S. Towery, who was injured in an accident at Providence, March 15, is improving rapidly and will soon be able to resume his duties.

Operator "Buck" Crawford, formerly of Louisville, is now working with us at Princeton and will be an addition to our baseball club this season.

Train Dispatcher C. E. Gaddie, who has been at Norton's Infirmary, Louisville, for ten days, is doing nicely and will soon be able to be out again.

Operator G. R. Newman, who has been sick for the last several weeks, is back at work.

Office of Superintendent, Louisville, Ky.

Miss Katherine Dufficy, secretary to the roadmaster, has gone on a tour of Florida. While there, Miss Dufficy will visit Mr. and Mrs. Eugene Crouse, formerly of this city, at St. Augustine. She will also visit Miami and Key West. From Key West she will go to Cuba for a short visit before returning.

Supervisor of Signals J. P. Price, who had an interesting article on signals in the April issue of the magazine, which attracted a lot of notice, has been requested by the *Railway Signal Engineer* to be allowed to reproduce the article in its May issue.

W. M. Rice, instrumentman at Louisville, has been

Loading signal cases and fitting up new signals on the Kentucky division

transferred to Chicago, and F. T. Thompson has been appointed to take his place.

Local Freight Office, Louisville, Ky.
(John T. Higgins)

George Oliver, messenger, was injured recently while en route from the yard office to this office. He was riding a bicycle when he was struck by a motor car, which threw him to the ground and injured his foot and back, confining him to his home for a week.

The Louisville Railroad Relief Association, composed of railway employees, at its meeting April 12, re-elected its officers of the preceding year. In this list W. H. Bartlett, our agent, retained his office as director.

A merit and demerit system was put into effect at this station at the beginning of April. It affects the billing and expense clerks and the receiving and checking clerks.

Miss Nellie May DeLaney of this office and George Edward Sensbach are to be married June 27, preceding which time Miss DeLaney will be bridesmaid for one of her chums.

Again our artists come to the fore with a donation of their talent in several vaudeville acts on April 10 at Banner Hall, under the auspices of the Mount Zion Lodge entertainment committee. Miss Edna Hermann took the part of a nurse in a small sketch entitled "The Wake," a depiction of life in the tenement district of East Side, New York. Harry Schoenlaub played again the blackface comedian with the Dixie Trio and also appeared in another small sketch entitled "Bits from Joy-Land," accompanied by Miss Irene Hermann. Clifford Slider and his music makers furnished the syncopation. The entertainment closed with an act by John Nuxol and Herbert Nadel, the latter formerly a headliner on B. F. Keith's Metropolitan time. William Tillman Allen acted as usher at the performance.

April 8 to 14 was music week in Louisville, and throughout the entire week various musical programs were offered the public gratis to induce it to a higher appreciation of the art. The week was ushered in with special programs by the various churches throughout the city, followed through the week by performances given by the civic clubs, schools, teachers of music, choral clubs and ended with a program by the St. Louis Symphony Orchestra. Martin Berger was a soloist at Mr. Panther's Studio. Mr. Panther has had Martin under his tutelage for the last several months. Walter Miles, also a student of his, appeared with the Knights of Columbus Concert. Martin Berger and John Higgins also appeared in this concert, which was given during Music Week.

Signal Department
(J. P. Price)

Authority has now been received for the construction of new second main track and cut-off between Clarks River and the Tennessee River, a distance of 16.8 miles. This new track will be protected by new automatic block signals. The north end will terminate at the Tennessee River bridge. The switch governing the movements from double track to single track will be protected by interlocking signals operated from the Tennessee River drawbridge interlocker.

Assistant Engineer C. C. Harris and party have arrived at Paducah to take charge of the engineering work in connection with the construction of the new second main track and cut-off between Clarks River and the Tennessee River.

The construction of new yard and terminal facilities at Central City is progressing nicely. The States Corporation Company, which is handling this work, has received another new steam shovel, which has been placed at work at the north end of the new yard.

Signalman E. J. Davis has been promoted to the position of signal testman vacated by the promotion of J. A. Sauer.

Assistant Signal Maintainer B. M. Lusk of West Point was the successful applicant for the position of signal maintainer at Central City vacated by the promotion of E. J. Davis.

Signal Maintainer J. N. Sisk of Grand Rivers was the successful applicant for the position of signal maintainer at Paducah, vacated by the transfer of A. M. Pfeiffer.

Signal Gang No. 1 is now engaged in relocating signals at Beaver Dam on account of the construction of new passing track.

TENNESSEE DIVISION

Rufus Kemp, Jr.

Office of Trainmaster

James A. May of Union City, Tenn., has accepted temporary employment as stenographer-clerk in the superintendent's office at Fulton. Mr. May's father has been associated with the Mobile & Ohio Railroad at Union City for several years.

Floyd S. Irby, assistant file clerk at Fulton, has expressed his intention of resigning his position May 1 to enter the store of his father, who has dissolved partnership with the Irby-Redfearn Drug Company and purchased the stock of Charles B. Wiedemann, formerly the Gem Pharmacy, Fulton.

R. M. Walsh and Frank Flemings have accepted positions as yard clerks at Fulton, Ky.

E. E. Mount, clerk in the chief dispatcher's office, Fulton, has been granted a ninety days' leave of absence on account of ill health. His place will be filled by U. R. Jones, Trainmaster Ellington's clerk at Jackson, Tenn., who formerly worked in this capacity and also in the roadmaster's office.

Several changes were occasioned when Garnishment Clerk Herbert Rankin departed for California on April 1 on account of the ill health of his wife. He is succeeded by R. D. Benedict, who in turn is succeeded by Robert P. Witty. Extra Clerk J. E. Boone, Jr., will take the place of Mr. Witty.

Track Supervisor J. M. Jackson reports that Flagman W. R. Hales found a broken rail near Covington, March 13, reported it, and probably prevented a serious accident at this place.

Southern-134725 arrived at Crutchfield, Ky., March 7, train No. 91, at 2:40 p. m., partly loaded with merchandise. The car was made empty and sent north on train No. 92, at 4:07 p. m. the same date. There were 4,965 pounds of local freight unloaded from the car, checked directly out of the car to consignees, the car remaining at Crutchfield only one hour and twenty-seven minutes. Crutchfield is a 1-man station, G. L. Elsey being the agent; but evidently he uses both hands and his head, as this is an unusually good record.

The crew of extra No. 1734 south, March 21, consisting of Engineman J. D. Randolph, Brakeman Vester Webb and negro Fireman Robert Johnson, stopped the train and picked up two boxes of canned goods on the right-of-way one mile south of Mounds and brought it to the supervising agent's office at Fulton, Ky., for disposition. Investigation later developed that a merchandise car in a freight train had been pilfered at this location only a few nights prior to the finding of the merchandise, and the supposition is that this merchandise was stolen at that time.

Master Mechanic's Office, Jackson, Tenn.
(May Ransom)

Engineer S. C. Howell, who was injured at Samoset, Ala., on March 2, is able to leave the hospital and has gone to his home in Haleyville.

The youngster who came to Jackson, Tenn., on March 16 to make his home with Storekeeper and Mrs. J. C. Blackwell has been named James Allen Blackwell.

News has been received in Jackson of serious in-

One Hundred Eighteen

Here is an unusually clear picture of American Ditcher, RM-51718, rigged up for driving timbers in soft cuts and fills in the route of the Seminole Limited on the Birmingham district, near Corinth, Miss. Work engine No. 2364 is handling the ditcher, and Engineer H. Lindsey and Fireman John Lindgram may be seen in the cab.

jury received by Engineer C. P. Chandler. While installing a radio set on the roof of his residence in Memphis, Tenn., he fell to the concrete pavement below, breaking both arms and sustaining other painful injuries. Mr. Chandler was taken to the Baptist Hospital, where he is reported to be getting along nicely.

General Foreman A. R. Sykes has moved into his new bungalow, which he has just completed on Fairground Street.

MISSISSIPPI DIVISION

Kathleen Hadaway,

Secretary to Superintendent

The following employees have been given favorable mention for extraordinary work done by them in assisting in removing debris from the tracks at Sardis, on the night of March 15, when a cyclone struck that point: T. W. Merriwether, conductor; S. Bruso, flagman; Lon Raymond, train porter; S. A. Law, engineman; B. J. Wilbourn, fireman; M. P. Marshall, operator; A. I. Campbell, operator; H. D. Owens, agent; O. E. Hunt, section foreman; L. H. Carlisle, lineman; W. A. Sporman, station helper.

Station Clerk William Bell, Winona, has been appointed grand lecturer of the Masonic lodge of the Winona district. In addition to being the youngest lecturer in Mississippi, Mr. Bell is master of the Winona Masonic Lodge.

H. P. Crawford, cashier, Water Valley, has resigned to accept a position in Chicago. H. B. Tyler, former warehouse clerk, has been promoted to cashier. Earl Porter, former night clerk, has been promoted to warehouse clerk.

Grenada District
(S. A. Law)

Engineman Maurice Stack, who has been in the hospital for a serious operation, is back on his run.

Illinois Central Magazine

Mr. Stack was missed very much off his run, on account of the length of time he has held it.

Office of Trainmaster, Water Valley, Miss.
(G. Turner)

Conductor Hervey Halliwell and family are enjoying frequent short trips in their handsome new motor car.

Flagman H. B. Vanderberg recently made a short business trip to Spartanburg, S. C., and was accompanied home by his aunt, Mrs. Gilbert, who will make Water Valley her future home.

Flagman and Mrs. Lloyd Howard are receiving congratulations upon the arrival of a son.

Engine Foreman L. V. Sartain has returned from the Illinois Central Hospital at New Orleans, where he has been some time for treatment. He is much improved and hopes to be back at work in a short time. Mr. Sartain has many words of praise for the hospital, the attendants and the treatment received while in that institution.

Flagman A. C. Williamson has tendered his resignation, to take up work in other lines of business.

Rodman W. F. Woolard has been promoted to instrumentman on the Illinois division and left March 3 for Champaign, Ill. He is succeeded by W. T. Webb, who has been in the employ of the Missouri Pacific Railroad at Little Rock, Ark.

Lee Jones, engine foreman, and Mrs. W. F. Adams, wife of the yardmaster, have the sympathy of their friends in the loss of their father, F. H. Jones, who died at Coffeetown on April 7.

Home of Section Foreman J. S. Mills,
Elliott, Miss.

Here are Section Foreman J. S. Mills of Elliott, Miss., and his gang. Mr. Mills has been in the employ of the Illinois Central ten years, with neither a personal injury nor a motor car accident occurring under his jurisdiction.

May, 1923

The Perfect Pen for All Railroad Em- ployees Is the \$5.00 or \$7.00 Size Parker Duofold Pen.

*With 25-Year Point and Over-size
Ink Font*

Beautiful as Chinese Lacquer

YES, once let your hand feel the perfect affinity of its balanced swing and classic symmetry and smoothness, and you'll get a thrill out of writing never known till Geo. S. Parker created the Duofold Pen.

Wall Street or Main Street—it's the reigning favorite—the badge of prosperity among America's "Go-Getters."

At \$7 it's the most economical pen on earth, for its native Iridium point is guaranteed for wear and mechanical perfection 25 years! It's a point as super-smooth as a polished jewel bearing and will make you a better writer or money back any time within thirty days.

Its lacquer-red barrel with smart black tips is not only handsomer than gold—but it flashes your eye a reminder not to leave your pen when you lay it down.

It's a pen you'll seldom have to fill, because its over-size font holds a long-distance ink supply.

*On receipt of One Dollar we will ship
prepaid on approval.*

**Mechanical Department, Water Valley, Miss.
(L. B. Harley)**

Mrs. J. W. Harley, wife of Gang Foreman Harley of the machine shop, died at the family home in Water Valley Tuesday night, April 10, after a short illness. Funeral services were conducted by the Revs. Wasson and Scott at the First Methodist Church, and the body was laid to rest in Oak Hill Cemetery. Mrs. Harley was the mother of Miss Laura Belle Harley, secretary to the master mechanic at Water Valley.

**Enginemen, Water Valley and Jackson Districts
(J. A. Ramey)**

We are glad to report Engineman A. F. Johnson much improved from injuries received when the train he was handling was blown from the track at Pinson, Tenn., March 11.

Engineman and Mrs. L. E. King and son, Edward, have returned from a trip to Vicksburg, Gulfport, Biloxi, New Orleans and other places of interest.

Fireman Walter W. Milstead and Miss Annie May Kiihnl, daughter of John Kiihnl, car repairer, Water Valley, were married at the home of the bride's parents on March 3.

Mrs. E. W. Kennedy, wife of engineman, and three children are off for an extended visit to points in California. They will be joined later by Mr. Kennedy.

Engineman Frank S. Stewart has returned from Paducah Hospital much improved in health.

Engineman W. E. Sizemore is reported somewhat improved, but is still unable to leave the hospital at New Orleans, where he has been for some time.

Engineman P. J. Gaffney is on the sick list.

**Road Department, Water Valley, Miss.
(Mattie Watts—L. B. Wiggs)**

On the night of March 15, Sardis, Miss., was in the direct path of a cyclone. No loss of life was reported, but the damage to property will reach many thousands of dollars.

Coming up from the southwest, the storm began its career of damage at the south end of town, and it left a trail of wreck and ruin through the entire length of Sardis. The business section suffered most severely; scarcely a storehouse on Main Street but was more or less damaged. The pumping station of the Illinois Central was blown on the track and totally demolished, necessitating an hour's delay for the "accommodation" until the wreckage could be removed. Supervisor Wilkinson's office was completely wrecked. The new roof on the station was partly torn off. The employees of the railroad rallied nobly and rushed to the pump house to help remove the debris. Owing to their efforts, the trains suffered little delay. J. W. Walker, a young business man of Sardis, flagged train No. 131 and saved this train from running into a wrecked house that had blown on the track. Honorable mention is due

Here is J. W. Walker, a young man of Sardis, Miss., who on the night of March 15 walked in a heavy downpour of rain a sufficient distance north of where an oil mill and pump house had been blown over on the track by a cyclone to flag train No. 131. Mr. Walker is a good friend of the railway company, made so by the kind of service that has been rendered by the employees of the Grenada district.

One Hundred Twenty

Some of the damage caused by a cyclone which struck Sardis, Miss., March 15. At top, scene at pump house and supervisor's office; second picture, remains of a residence on one of the main streets; bottom, looking east from station to the business district.

also to the Rev. John A. Randolph, former chaplain, who was one of the first to appear on the scene.

Section Foreman and Mrs. Joe Tapper are receiving congratulations on the arrival of a fine daughter, Martha Nell, who was born on March 13.

Born to Mr. and Mrs. M. L. Woods, a daughter, Mary Pearl, March 27. Mr. Woods is chief clerk to the roadmaster.

Clerk G. C. McClamroch of the road department has the sympathy of employes in the loss of his father on March 27.

Section Foreman E. A. Williams, Springdale, Miss., was instantly killed Sunday, April 1, when an automobile in which he was riding was overturned about one mile south of Taylor. Mr. Williams entered the service as section foreman July 1, 1912. He is survived by his widow, a son and daughter, all of Springdale.

Section Foreman I. D. Holmes has received favorable mention for discovering a broken arch bar in train No. 231, near Starkville, March 23.

LOUISIANA DIVISION
Claire Pimm Office of Superintendent

Office of Superintendent, McComb, Miss.

Miss Vivian Johnson, clerk, and Marvin J. McCool, salesman, McCaskill Cash Register Company, with headquarters at Hattiesburg, Miss., were married in Magnolia, Miss., by Rev. Mr. Purser on March 31. J. P. Mayfield, clerk, has received a promotion to the position vacated by Miss Johnson.

Miss Louise Bridges, file clerk, and Albert D.

For Good Watch Repairing See Your Watch Inspector

Haley, erecting foreman, McComb shops, were married at the home of the bride's sister, Mrs. Alfred H. Jones, April 18, by Rev. Mr. Mayfield, pastor of the First Baptist Church. Mrs. Polly Ard Rivers, clerk to Supervisor Smith, Hammond, La., received a promotion to the position vacated by Miss Bridges.

Mrs. Maude Walker Lee, stenographer, accounting department, has resigned, effective April 9. Her place is being filled by Miss Cenie Hargrove, formerly employed by the Hattiesburg Grocery Company, Hattiesburg, Miss.

Mrs. M. J. McCool

F. E. Breasfield, accountant, resigned, effective April 9, to go in the lumber business. C. H. Douglass has received a promotion to the place vacated by Mr. Breasfield.

W. T. Evans, performance clerk, resigned, effective April 6, to enter the employ of the Southern Wholesale Drug Company. W. H. Wilkerson is the new employe on performance desk.

Miss Frances Otken, secretary to the chief clerk, attended the reunion of Confederate Veterans held in New Orleans the week of April 9.

Trainmaster's Office, McComb, Miss.

Walter W. Wicker, former yardmaster at Gwin and assistant trainmaster at Mounds, Ill., has been appointed acting trainmaster of the McComb district, in the absence of E. L. McLaurine, who is serving as a member of the committee to examine employes on the transportation department rules.

Dispatcher's Office, McComb, Ill.

Third Trick Dispatcher W. B. Romine has been ill in McComb City Hospital, but recent reports as to his condition are favorable.

K. A. Karney, traveling agent of the perishable freight service, and Mrs. Karney, chaperoned a party of Illinois Central employes at a dance given in Shopcraft Hall, Government Yard, New Orleans, April 10, for benefit of the Illinois Central candidate in the Working Girls' Popularity Contest.

Freight Office, Jackson, Miss.

Mrs. C. E. Swope of Chicago, formerly Miss Anne McNair, employed as a clerk in this office, was a recent visitor among her old co-workers.

Recent changes in the warehouse force resulted in a promotion for Lawrence Pridgen to warehouse foreman and W. M. Owen, Ralph Jefferson and Thomas Shannon to warehouse clerks.

L. C. Davis, clerk, has resumed his duties after a long illness.

Mrs. C. M. Quin of Vicksburg, Miss., formerly Miss Ola O'Quin, secretary to the chief clerk, was a recent visitor to the office.

with its circus. An active campaign was waged in Miss Donnelly's behalf under the supervision of her campaign committee, composed of the following: Joseph Flechas, chairman; A. D. Leopold, W. H. Delph, Fred DeLong, Dave Ernst, Tom Lee, Joseph Hodges and J. Milton May, campaign manager. A thorough canvass of the New Orleans terminal was made by the committee, and several entertainments were staged to further her candidacy. The contest closed on April 14. Miss Donnelly polled a total vote of 141,890, being defeated by a small margin by the candidate supported by the Southern Pacific Railroad.

James J. Nestor, waybill clerk, inbound department, has been promoted to inbound train checker, being succeeded by Tom Kelly, formerly through bill lading clerk.

Fernan F. Willoz, Jr., messenger, claim department, has been promoted to through bill lading clerk, inbound department.

W. Brunning, messenger, outbound warehouse No. 7. Poydras yard, has been promoted to car sealer in the same department.

Charles A. Breal has been assigned to the position of joint station clerk, Chalmette, La.

A. J. Sherlock, has been assigned to delivery clerk, inbound warehouse, Poydras yard.

R. A. Cooper, formerly file clerk, miscellaneous department, has been promoted to check clerk, inbound warehouse, Poydras yard. He has been succeeded by E. Burrage.

Frank Brightsen, for several years banana clerk, local freight office, has been re-elected general chairman, board of adjustment, Brotherhood of Railway Clerks, Illinois Central System.

Central Lodge No. 540, Brotherhood of Railway Clerks, held its fifth annual dance Saturday evening, April 14, at the Knights of Columbus Auditorium. Dancing was provided for by two jazz bands, and refreshments were served. J. A. Mouton was chairman of the arrangement committee, and John Kramer ex-officio chairman.

The members of Camp Cono, now in course of construction on Bayou Bienvenu, announce that their clubhouse or lodge will be completed on or about May 1, when a picnic will be held, at which the club will be formally opened.

Terminal Superintendent's Office (Myrtle Biersoll)

The clerical forces of the New Orleans terminal entertained their friends and families at a dance on Saturday evening, April 7, at the Knights of Columbus Auditorium. Refreshments were served and music in abundance provided for. A. V. Bertaut was chairman of the arrangement committee; August

Local Freight Office (Jesse W. Ford)

Miss Loretta Donnelly, expense bill clerk, inbound department, was chosen by popular vote as the candidate to represent the Illinois Central Railroad in the popularity contest staged by the Jerusalem Temple, New Orleans Shrine, in connection

*Royal Street and St. Anthony's Alley,
New Orleans*

Kuntz, president; E. C. Harang, secretary-treasurer.

Mechanical Department
(W. W. Sadler)

A. La Rocca, formerly employed as A. R. A. clerk, but out of service for several years, has been appointed file clerk, district foreman's office, effective April 1.

On Tuesday, April 10, at the Government yard assembly hall, a dance and bazaar was given under the auspices of the mechanical department for the benefit of the Illinois Central Railroad's candidate in the popularity contest. Music in abundance was provided for, refreshments served and merchandise of all descriptions disposed of. A. D. Leopold was chairman of the arrangement committee, being assisted by the following: Joseph Flechas, J. Milton May, W. H. Delph, Fred DeLong, Tom Lee, Dave Ernst, Joseph Hodges, A. J. Condon, J. S. Tallon, J. D. Ernst, J. A. Hoffstetter, A. T. Estel, W. Neeb, M. Katz, Albert Oustalet and Misses Loretta Donnelly, Myrtle Biersoll, Sadie Sterbenz, Estell Meyers, M. Moock, Loretta Battle, Anna Ferrand, Louise Rouyer, Irma Klien, B. Michel and Edna Rice.

On Thursday, April 12, the "flying squadron" of the campaign committee, popularity contest, visited the Illinois Central general offices and shops at McComb, Miss., in the interest of their candidate. Those making the trip were: A. D. Leopold, J. Milton May, Joseph Hodges and Misses Loretta Donnelly, Anna Ferrand, Louise Rouyer, Loretta Battle, May Sullivan and Loretta Small and Mr. and Mrs. Ed St. John.

MEMPHIS TERMINAL

William Gerber

B. & B. Clerk

Favorable mention has been extended Sam Wilkes, negro section laborer, Memphis terminal, who, while returning home at 6:30 p. m., March 15, observed a brake beam dragging on a train pulled by engine No. 1505, southbound with sixty or more cars. He caught the caboose to notify the train crew. After he caught the caboose, a pair of wheels got off the track, but on arriving at the fairgrounds switch the wheels were replaced on the track. The conductor then had the brake beam removed and proceeded. This occurred a short distance from the Southern Subway, and through the alertness of this employe a serious accident was probably averted on this subway.

Miss Mary McHugh, stenographer in Terminal Superintendent Bodamer's office, has been confined to her home for the last two weeks, suffering from a severe case of influenza.

C. J. Harrington, Jr., son of C. J. Harrington, roadmaster on the Memphis terminal, was seriously injured by an automobile on Tuesday, April 3. The employes on the Memphis terminal are glad to learn

Kenilworth Avenue, Memphis, Tenn.*

that he has recovered to such an extent as to be able to be removed to his home.

C. E. Barnes, general yardmaster, Memphis terminal, has recently returned after being confined to the hospital at Chicago, where he underwent an operation.

Mrs. Elliott Hooser, wife of Assistant General Yardmaster Hooser, was recently elected sponsor to the Confederate Reunion at New Orleans, La.

A pretty wedding ceremony was solemnized on March 14 at the home of Mr. and Mrs. J. A. Zanone, when their daughter, Inez, was married to R. B. Houston. Mr. Zanone is trainmaster on the Memphis terminal.

MEMPHIS DIVISION

Mrs. Collic P. Said

Secretary, to Superintendent

W. E. Dorrah, rodman, has been promoted to instrumentman at New Orleans. He is succeeded by T. E. Alford, formerly with the Illinois State Highway Department.

Resident Engineer E. O. Hebert is engaged in making surveys and estimates for curbing slides on the Memphis division. He is assisted by Chainman Herman.

I. H. Brown, formerly statistician in the office of Superintendent J. M. Walsh, has accepted a position in the accounting department.

Sympathy is extended to George Gibson, accountant, in the death of his brother, which occurred April 2.

J. Crahen, track supervisor, is ill with the "flu" at his home in Memphis.

O. D. Downs, formerly clerk at Shelby, Miss., has accepted a position as file clerk in the office of Superintendent Walsh, succeeding Wyatt Sherron, who resigned to enter service with the California Fruit Growers' Exchange.

The friends of F. B. Bell, Memphis division conductor, will regret to learn of his illness. Mr. Bell is now in the Illinois Central Hospital, Chicago.

The March "No Exception" campaign closed April 5 with the Memphis division leading the system. We had seventeen LCL exceptions, compared with forty-nine in March, 1922, and not a carload exception, as compared with six in March, 1922. All employees of Memphis division are proud of the record established, this being the third system "No Exception" campaign in which Memphis division has led with the least number of exceptions.

That Memphis division employees are always on the alert to see that passing trains are all right is evidenced by the following: On April 6, as extra No. 972 was passing Crenshaw, Section Foreman W. G. Lineham notified Conductor L. E. Millsap, who was in charge of the train, that a brake beam was loose at one end and dragging under CGW-27976. Conductor Millsap immediately stopped the train and had repairs made to the car, no doubt saving a bad derailment. Had Conductor Millsap not been on the

alert, he would not have seen Section Foreman Lineham signaling his train. It is such service as rendered by these two men that helps to make the Memphis division 100 per cent.

Freight Office, Clarksdale, Miss.
(Olga Kendrick—C. H. Skeahaw)

Mr. and Mrs. Gordon Dennis are receiving congratulations over the arrival of a fine boy, Gordon II. Mr. Dennis is check clerk in the warehouse here.

E. H. Ramay, accountant, has resigned and accepted a position with the Crescent Baking Company as bookkeeper.

W. M. Furlong, special cotton clerk, and J. C. Newman, demurrage clerk, who have been ill with the "flu" are back on their jobs.

Mrs. C. P. Said, division editor; Mary Lynch, supervising agent's clerk, and Birdie Carstarphen, roadmaster's clerk, paid the local freight office a short visit March 27, distributing general information in the interest of the magazine.

The Clarksdale Municipal Band, which includes a number of our employees, gave a delightful concert on the lawn at the Elks' Club, Sunday, April 8.

Supervisor's Office, Tutwiler, Miss.
(Clara Milligan)

The carpenter gang on the Tallahatchie district has completed the remodeling of the station building at Sumner, Miss., and no more attractive building is found on our system now.

Superintendent J. M. Walsh recently wrote Conductor E. A. Gilmer as follows: "I am advised that, while in charge of extra No. 986, April 2, you discovered a broken truck frame on CStPM&O-30226, stopped and set the car out at Crenshaw. This indicates very close inspection on your part, and I want to assure you that such service is appreciated."

Superintendent Walsh also wrote Conductor C. A. Kendall as follows: "I am pleased to note the interest you displayed in stopping a leak to prevent grain wasting from B&A-36284 at Glendora, Miss., April 5, while the car was moving in extra No. 989 south. I want to thank you for your alertness in this instance and to assure you that such service is appreciated."

VICKSBURG DIVISION

H H Barlow

Office of Superintendent

Rich Tig, negro section laborer, after being relieved from duty March 6, found eighteen inches of main line rail broken out, two miles south of Winterville. He lighted a torch and protected the break until he got a message to the foreman to come and bring a rail.

Supervisor Maynor, who suffered a broken arm in a recent motor car accident, is much improved, being able to be about again.

We are glad to note that Vicksburg division held at least a respectable place in the March "No Exception" campaign, having held on to third place with a clock-like regularity and bull-dog tenacity. All of the agents are still in earnest about the thing, and since the campaign has been extended another month we have every reason to believe that we are going to make somebody hustle for first place.

A. R. Bigleben, pensioned engineer, and Mrs. Bigleben have just returned from a delightful trip to Corpus Christi and Laredo, Texas. He reports a most pleasant time, but still thinks there is no system like the Illinois Central System.

C. A. McPheters, accounting department, superintendent's office, has been away from his desk for several days on account of sickness.

**ILLINOIS WATCH COMPANY
SPRINGFIELD, ILLINOIS**

The many friends of H. B. Tillotson, O. S. & D. clerk, local freight office, sympathize with him in the recent death of his little nephew, who lived in Texas.

Mrs. Mattie Witherspoon, wife of Conductor S. F. Witherspoon, died March 14 after a short illness at Greenville Sanitorium. She had undergone an operation, and reports were encouraging until the last few days of her illness. The funeral was conducted from the home on Main Street, and the beautiful floral offering was symbolical of a tribute of love from her host of friends. By special permission, all of the superintendent's office force who so desired were permitted to attend the funeral services. Mrs. Witherspoon was prominent in social, fraternal and religious circles and loved by all who knew her. She is survived by her husband and little daughter, Nancy.

H. S. Moulder, chief gardener, has transformed the grounds in front of the superintendent's office into a real flower garden, which is a great improvement. Everyone is taking a good deal of pride in our prospects of having the prettiest flowers in town.

Miss Ruth Norris, stenographer in the superintendent's office, has the sympathy of many friends in the recent death of her little niece, Christine Brasher, on March 16.

General Foreman W. H. Rode of Greenville, who has been under local treatment on account of trouble with his eyes, has returned from the Illinois Central Hospital in New Orleans and is now at the Illinois Central Hospital in Chicago. It has been decided that diseased tonsils are possibly the cause of his trouble. After they are removed, he is expected to return home within a few days. His many friends will be glad to learn he is much improved.

Robert Hardcastle, agent at Egremont, Miss., has resigned and will make his home in Central City, Ky. Mr. Hardcastle has been with the company for a number of years, having served as stenographer to the roadmaster's chief clerk and also as gravel inspector at Greenville.

Julius Diamond, negro trucker in the local freight office, died suddenly after a short illness at his home at Greenville March 19. He had been in the service of the company for some twenty-three years, seldom missing a day from work. Julius was a faithful employe as trucker and cooper, always found dependable and reliable. During his period of service he re-coopered many thousand dollars' worth of freight, and no doubt saved much in the way of claims for the company. He was saving and practiced thrift religiously, having owned some real estate and several thousand dollars in cash, practically all saved from his wages. He was 65 years of age. His body was taken to Canton, Miss., for burial.

Robert Hays, brakeman, detected a broken flange on IC-113205 while his train was pulling out of Cleveland, Miss., the morning of March 15, caused the train to stop and had the car set out. His attention to duty and close observance probably prevented an accident.

W. D. Hoff, car distributor, chief dispatcher's office, Greenville, has been granted a 60-day leave of absence on account of ill health. He is already much improved.

Hilda Janet, daughter of S. Simmons, chief clerk, superintendent's office, is much improved after an operation to remove her tonsils at the Kings Daughters Hospital, Greenville.

The following permanent transfers of agents on this division have been made: R. B. Simmons at Egremont, vice R. F. Hardcastle; G. R. Green at Elizabethtown, vice H. Harrison; E. D. Langston at Burdette, vice R. B. Simmons.

The Order of Railroad Telegraphers held a meeting in Leland, Miss., Sunday night, March 25, with twenty-five agents and operators present. Many of the regulars were absent on account of inclement

One Hundred Twenty-six

Beauregard House, Chartres Street, New Orleans

weather conditions," writes L. M. Elliott, agent at Rolling Fork.

"By special invitation, Superintendent Dubbs, Trainmaster Chandler and Supervising Agent Regan were present for an informal meeting before the regular session. The reason for asking the division officers to the meeting was because the interests of the railroad and those of members of the organization are necessarily so closely interwoven that to promote the welfare of one is to build up the other. To make friends for one is to make the work of the other more pleasant, avoiding accidents and damage to property, which are a constant drain upon the transportation department.

"Mr. Dubbs and Mr. Chandler both made talks and good impressions, particularly on the safety rules. They made it plain that it was for the safety of the lives of employes as well as for the property of the company that the various safety rules were in the book. Mr. Dubbs called attention to the fact that an agent-operator at a 1-man station was the most isolated man on the railroad, and he thought it a good idea to get together and exchange ideas on ways and means to do the detail work at stations. Every man in the room agreed with him on this, as frequently we find an agent doing his work in the old-fashioned roundabout way, just because the new ways have not occurred to him and he has not been with other agents to learn how they do them.

"The 'No Exception' campaign was not overlooked at all, and the fact was brought out that the Vicksburg division had always been well toward the front, if not actually setting the pace, in these and other campaigns. It was also observed that the other divisions had made such improvements that we would have to keep after new methods to hold the place where we belong. It was suggested that the present system of handling overs, shorts and damages was top heavy, in that it takes too much time and so many telegrams to get an exception file closed. On account of lack of time, these details were not gone into fully, but suggestions were asked for by the superintendent."

NEW ORLEANS DIVISION

Thomas Tienor

Office of Superintendent

Along the Line

T. R. Chadbourne, train baggageman running between New Orleans and Woodville, Miss., died recently at the Illinois Central Hospital, New Orleans, after a long and painful illness of several months. Mr. Chadbourne was a veteran in service and leaves behind him a record marked by capability, loyalty and devotion to duty.

L. F. Cato, agent at Allen, Miss., is receiving

Illinois Central Magazine

congratulations on the birth of his first child, a fine girl.

While switching at the Baton Rouge, La., coal chute, on April 1, Engine Foreman R. R. Terrell discovered a broken flange on an MK&T empty coal car. About eighteen inches of the flange were gone, and if Mr. Terrell, with his characteristic watchfulness and attention to business, had not discovered the defect, serious and costly damage might have resulted in the yards.

H. A. Merrill, agent at Doyle, La., writes that his little station is lively at present, business being heavy in strawberry and vegetable shipping. The neighborhood is full of buyers and sellers of these commodities, who make the station their headquarters for bargaining. Furthermore, the Standard Oil Company is erecting storage tanks for oil and gasoline, which will be distributed by trucks to customers between Baton Rouge and Hammond, La. Several cars of oil, gas and supplies have already been received, and it is expected that business in this line will soon assume extensive proportions.

Vicksburg and Vicinity

The outstanding topic of interest both in Vicksburg and on the whole division recently has been the change of superintendents. The outgoing superintendent, F. R. Mays, left with assurances of the highest esteem and best wishes of all employees and the public generally, who have a deep appreciation of the effective manner in which he performed his duties so long and faithfully. J. F. Walker, formerly master mechanic at Paducah, is welcomed as his worthy successor. Mr. Walker is busy familiarizing himself with the division and meeting the employes and patrons. Judging from the favorable impression he makes on everyone with whom he comes in contact, he will fully maintain the record made by Mr. Mays.

Roadmaster E. W. Brown, who is recovering from a long siege of complicated ailments, has returned to his office. While Mr. Brown is not yet well, he found the task of convalescence so intolerable that he decided to try hard work as a tonic and restorative. There is plenty of it to do under the present arduous weather conditions, as Jupiter Pluvius is working overtime.

Death claimed victims in the families of two of the employes in the superintendent's office in the last month. Mrs. Amelia C. Mahin, wife of Felix Mahin, stockkeeper of the store department, and mother of Miss Edna Mahin, accountant, superintendent's office, passed away March 17. Thomas J. Brown, Sr., father of Charles J. Brown, assistant chief accountant, died at Natchez, Miss., after a lingering illness.

Road Department (Ruth Arbour)

working under Supervisor R. D. Day, surprised their friends on the evening of March 29 by a quiet marriage. After the ceremony the newlyweds made a short bridal tour to New Orleans and upon returning resumed their respective positions.

A. T. Spengler, of the engineering department, who is looking after the extensive team gang work in connection with the ditching and embanking on the south end of the division, has moved his family to Baton Rouge, La., where they will remain until this special work is finished.

B. & B. Department (Mrs. V. King)

The recent period has been one of extremely excessive rainfall, the precipitation forcing the small rivers and streams out of their banks, with resultant washouts and other impediments to traffic. All available gangs have been in requisition to fight the trouble, and the division has been able to keep everything clear and trains running with a minimum of delay.

The station, section houses and other facilities at St. Rose have been given a new coat of paint by Paint Gang Foreman S. E. Hill and his men. Everything about St. Rose now looks refreshing to the eye. Mr. Hill, by the way, is one of our oldest foremen and holds an enviable record as a paint stinger.

Bridge Foremen L. C. Weems and S. E. Powell are busily driving bridges on the Natchez, Woodville and Clinton districts. Renewals are being made with a view of getting everything in first-class shape for the big business expected next fall. When the work is completed we will be able to handle our heaviest engines on all our branches.

Foreman M. R. Reed and his gang are actively engaged in installing pipe south of Baton Rouge, La., and improving the drainage generally. Foreman R. B. Callendar is looking after the drainage on the Natchez branch. Foreman R. E. Leighton has completed all new work on the Hammond district and is now renewing bridges on the Clinton district. Carpenter Foreman V. C. Williams is at work on additional facilities for handling vegetables at Centreville, Miss. The 1,200 feet of incline trestle at

Baton Rouge is being filled under the supervision of Foreman John Monroe. This job, when finished, will relieve Mr. Monroe of considerable repair work on trestles hitherto necessary on the Baton Rouge incline and substantially reduce the expenses of maintenance.

The handsome residence of Foreman R. B. Callendar at Hermanville, Miss., was destroyed by fire recently. Mr. Callendar announces his intention of rebuilding at once.

Mechanical Department, Vicksburg, Miss. (T. Howard)

Little Anna Elizabeth Cronin, granddaughter of Traveling Engineer Cronin, has been very ill, but is rapidly improving.

Chief Clerk M. L. Boulware made a trip to Baton Rouge recently to line up the clerical force at that point. He also went to New Orleans and visited Chief Clerk Leopold.

The river has fallen some recently, much to our relief, as we were beginning to think we would have to get the sand bags and pumps ready.

Erecting Shop Foreman Herbert Flanagan has a new motor car.

Our new boiler shop foreman, H. E. May, has brought his wife and three little children to Vicksburg from McComb.

Master Mechanic Christy's former chief clerk, John Howard, is a candidate for sheriff of Warren County.

The electrification of the car shop has been completed, and with the receipt of two new motors the old stationary engine that has been at Vicksburg shop for years will be set aside.

Our new superintendent, J. F. Walker, made his first official visit to the shops a few days ago. We know we are going to like Mr. Walker just fine.

Tool Room Foreman Harry Kay has been foreman of the grand jury recently.

A staff meeting was held in Mr. Christy's office April 3, foremen from the outside points being present. Everyone was benefited by the meeting.

Miss Ruby Billet visited friends and relatives in Vicksburg April 7 and 8. Miss Billet was formerly a clerk in Master Mechanic Christy's office and is now located at Memphis in the office of A. C. Palmer, supervisor of signals.

Strawberry buyers and shippers lined up on our station platform at Doyle, La., New Orleans division. A small shipment of strawberries is piled upon the platform. Left to right: H. A. Merrill, agent; H. Lott, Lee Holden, H. Miller, L. Wheat, L. Moore, W. H. Holden, shippers; S. J. Lott, secretary of strawberry growers' association; F. H. Purvis, inspector; Mr. Jeda and Mr. Cushion, buyers; H. McDonald, picker.

J. W. Kern, Jr.

Mr. Kern, recently promoted to district engineer of our Southern Lines, with headquarters at New Orleans, was born in Fairfax County, Virginia, July 26, 1887. He entered service with the Illinois Central Railroad in October, 1905. After serving in various capacities in the construction department, he was appointed resident engineer of construction in June, 1911, assistant engineer of maintenance in October, 1911, and supervisor of track in January, 1913. In May, 1917, he was commissioned second lieutenant of engineers, United States Army. He served overseas until April, 1919, returning with the rank of captain. He was appointed roadmaster of the Mississippi division in July, 1919; roadmaster of the St. Louis division in May, 1920, and district engineer of the Southern Lines, January 1, 1923.

Published monthly by the Illinois Central System in the interest of the system, its officers and employees, and the territory served by its lines.

Address all communications to: The Editor, Illinois Central Magazine, Room 818, Central Station, Chicago. Manuscripts, photographs, etc., will not be returned, except upon request. All contributions should be typewritten—double-spaced—and signed.

Brotherhood Official in Plea for Roads

*W. N. Doak, Vice-President of Trainmen, Appeals
to Business Men for Needed Financial Support*

W. N. Doak, vice-president of the Brotherhood of Railroad Trainmen, delivered the following address on "Financial Support for the Railroads" before the general session of the Chamber of Commerce of the United States at the Hippodrome Theater, New York City, May 10:

THE position of the Brotherhood of Railroad Trainmen is so generally understood on industrial and economic matters that it is useless for me to state it at this time. We have attempted by action, rather than by word, to demonstrate to the public our position on these various subjects; therefore the business men of the country are familiar with our activities. We believe in fair dealing, the literal observance, in letter and spirit, of contracts and contractual obligations, placing above all other considerations respect for law and order and rigid observance of contract. This position has not always been popular among some during the past years, but generally speaking it has been approved by the more sober and thoughtful people of the community. Regardless of whether it is politic, expedient or popular, this course will be followed with the abiding belief that these policies will always win in the long run.

Labor's interest in adequate financial support for the railroads must be apparent to all. Too often, however, labor is placed in an awkward position on this subject and frequently misunderstood, in general being misunderstood and misrepresented many times both by those within and without the labor movement. What could be of more importance to a working man than to know that his wages will be promptly and properly paid when due for services rendered? What of more interest to him than to know he is secure in his employment, that his wages will be fair, his conditions of em-

ployment good and wholesome, secure in his opportunity to lay away something for old age or sickness and assured of good treatment in his work? Added thereto is the pride that comes to every loyal employe in knowing that his employing company is prosperous. His interests are subordinate to none.

Finances the Determining Factor

Upon the financial stability of the railroad depends all of these desirable conditions. Evade it as you may, eventually the day of accounting comes when the finances of the line will be the determining factor. The man who believes that the railway employes are in any large number unmindful of the difficulties of railway operation is either misinformed or fails to understand human nature. The few railway employes who are not interested in the welfare of the property on which they are employed should seek other fields of endeavor. The representative of railway labor who seeks to wreck the railroads financially or otherwise is not a representative of the rank and file of labor and should be retired.

Based upon ill-advised action on the part of certain individuals, we have during the last few years been placed in a position of ostensible opposition to the railroads and industrial progress generally. It would be far better for sensible business men to weight such problems just as they do any other business question—from the standpoint of facts, disregarding theories. Instead of accepting for face value propaganda or rumors, they should tear the mask of selfishness, conceit and hypocrisy from these deceivers, subjecting them to the light of truth. Gentlemen of the Chamber, herein often lies a serious mistake on your part. Instead of getting the facts about the aims and activities of the legitimate labor organizations, especially the railway

organizations, and presenting them to the public, you have too often placed us in the same class as the undesirables. This is just as unfair as it would be to place all financial and industrial institutions on the unfair list because of business failures or mismanagements that occur occasionally.

May I not therefore repeat that the average railway employe is just as vitally interested in proper financial support for the railroads as any other citizen of this country. As proof of this statement, may we not make an appeal to you financial and business men of America to stabilize railway securities, stocks and bonds, freeing them from unnecessary speculation by putting them on as sound a basis as you would your own individual securities, waiting to see how much the railway employes will invest in the business from their earnings? Could you reasonably expect the railway employes to stand firmly behind the financial conditions of the railroads when, were they to seek your financial advice on investment, you would advise against investing in present railway securities?

We are so much interested in the financial welfare of our transportation industry that we are coming to you with an appeal for business justice. Let us learn to live and let live by treating the railroads fairly, by being fair to capital, fair to labor, by being fair to ourselves. Be not deceived into the belief that we can starve the railroads, speculate in them to the dangerous degree, wreck their credits, pay inadequate wages to management and employe, and expect a healthy transportation system. Such a system cannot adequately nor even half-heartedly handle the business of the country. Also do not forget when the transportation systems of this country break down, you certainly may expect a breakdown in the industrial fabric, and inevitable disaster will follow. It must be so apparent to anyone that our manner of dealing with the railroads is so wrong that a mere glance will convince one that a face-about change of program must be had.

Not Trying to Bankrupt Roads

Seemingly for the last ten or fifteen years every time the railway employes have been forced to seek relief from rising prices or other conditions by asking for increases in wages or better working conditions from the managements or have by legislation sought to mitigate dangerous conditions, they have been confronted with the solemn declaration from some quarters that we were trying to bankrupt the railroads. When the railroads have sought relief through rate increases, the employes assisting, they have been charged with collusion to rob the public. More often, however,

the so-called reformer has charged us both with being dangerous to society and suggested our annihilation. Unfortunately there are so many believing these rumors that the frightful execution has already begun, and unless it is stopped the transportation industry will be destroyed and the most efficient industrial organization on earth will be wiped out.

We have those who seek to receive transportation at the least cost, because the cheaper transportation, the greater profits accruing to their business. This is honest, but of course personal. It is legitimate, but for the benefit of one's self. It is fair, but not always considerate. There are others who attempt to make you believe that transportation corporations, because they are engaged in the public service, should be compelled to handle commodities at a rate that would provide for the shipment of any article to any place at a profit to the shipper. There are many cross hauls, reshipments, the use of cars for storage purposes and many other practices or requirements that the railroads must meet, all of which unquestionably contribute to their present day embarrassment. Furthermore, transportation lines must be operated regardless of profit or loss. They are not permitted to refuse freight offered for shipment irrespective of whether the tariff will pay the cost of transportation or not; they must operate their lines regardless of the volume of business—none of which is required in a private industry. Seemingly the farmer, the shipper, the merchant and all other classes of our citizenship reserve unto themselves the right to say what they please about the railroads. If objection is raised by anyone, that person becomes the subject of ridicule and public scorn. We have a Federal Government and forty-eight state governments that must say something about how railroads are run, as well as the exercise of police powers and the right to tax them. The reformer must have a theory, a ticket on which to ride into office; so he usually picks the railroads as the best plank for his platform. The best guaranty for his success is the imagined iniquities of the railroads and the alleged corruption of management and employes. He promises relief in the form of low transportation rates with special privileges to the masses. In most instances he leads the unsuspecting public to believe that he will rescue the poor down-trodden people from the political wilderness, and we usually find, often to our sorrow, that it was only a dream. Our railroads and their employes in my opinion are being mistreated in the manner of public handling, which should certainly cease.

These arteries of commerce must be placed on a strong financial basis, their employees must be properly compensated, their conditions of employment must be the best on account of the very nature of their employment, and a better understanding of the transportation business must be had by the public or the whole structure will collapse. If so, what must follow? We must have transportation under either private or public ownership. If we do not join hands in making private ownership a success, then the other step must be taken.

Dangers in Government Ownership

Now let us look soberly at both. We have always had private ownership, but now we are confronted with a deficit and bankruptcy is staring us in the face, from one cause or the other, principally caused by lack of understanding or indifference, superinduced by unfairness and our failure to meet an inevitable result in proper time and in a business way. Anyway, if we do not assist in bringing the transportation lines out of this chaotic condition, private ownership must cease and Federal operation begin. Of course we must admit that private ownership has failed before the last step is taken, this largely through the lack of financial ability to operate, which would certainly mean going into Federal ownership immediately facing a financial burden. These burdens on the people must be met by taxation, which means added governmental expenditures. Let us see what we are already paying now to run the different governments in the United States, or, as someone has so aptly put it, "what it costs to be governed." There are 2,000,000 office-holders already on the pay rolls of the country; every fifty-four of our population, including male and female, adult and minor, foreign born and native, must pay the salary and carry the burden of one office holder. Mr. William P. Helm, Jr., of this city submits the cost of maintaining the various governments in the United States as follows:

Cost of maintaining the Federal Government	\$4,666,671,954
Cost of maintaining 48 State Governments	1,008,540,232
Cost of maintaining 253 municipal governments in cities of more than 30,000 inhabitants	1,638,296,052
Cost of maintaining the municipal governments in all towns and cities of from 2,500 to 30,000 population.....	431,287,059
Cost of maintaining municipal governments in 12,905 incorporated communities of less than 2,500 inhabitants.....	123,147,687
Cost of maintaining county governments in the 48 states.....	592,068,972

Total cost of American Governments in 1921\$8,460,011,587

Add to this immense amount the more than 2,000,000 railway employees and we

would find that there would be 4,000,000 Government employees, with a probable total dependency on governmental pay of 20,000,000, or for every five of the population there would be one government dependent. This is to say nothing of the added costs and the political patronage to be handled by the Government. From the standpoint of those who do not look with favor on Government ownership, we should at least be alarmed at the enormity of adding so many to an already overstocked profession.

There are still other serious questions concerning this subject that should be considered, among which are the comparative efficiency of public and private industry, the desirability and comparability of service rendered, as well as many other things of vast importance, to say nothing of just how much farther we should or can go in the method of taxation before the nation itself begins to retrograde.

Some Other Serious Questions

Business men of America, who pride yourselves on being the best men in the world, the greatest financiers, and the most aggressive power for advancement, will you not stop, look and listen for once and see where we are going? Why not stop chasing shadows and look squarely at the substance of this aggravated situation? Change methods of taking sides with the railroads when the employees ask for increases in wages, etc., stop taking sides with the shippers when the railroads desire adequate

W. N. Doak

compensation; stop listening to idle gossip to the effect that the railroads and their employes have entered into a collusion to milk the public, and state emphatically that you are going to see that justice is done to this, the greatest of American industries, and that all parties have a square deal. Instead of spending money in partisan campaigns against either the railroads or their employes, look at this question in the right light and resolve that the resources of your splendid organization will from now henceforth be directed toward the dissemination of the truth on the railway situation and that you will assist in obtaining the needed relief necessary to make our people prosperous and more progressive.

Too Much Regulation Now

It would be so much better for all concerned were we to seek a solution of our problems by accurate methods and disregard so much speculation. For instance, the fallacy that has been so prevalent in this country that industrial relations could best be regulated by legislation or commissions. In each instance, however, this has been disproved. We are now beginning to see, or soon will do so, that the best methods of adjustment of industrial differences, whether they be financial or those pertaining to differences between employer and employe, are those of conference and open negotiations. We have been regulated to the breaking point by boards, commissions, referees and what not—all under the guise of public good—until we are awakening to the realization that we are apparently no longer capable of attending to our own affairs but must have some commission or board or other regulatory body to arrange and supervise our daily routine.

We are desirous of the return to prosperity and normalcy, yet we continue to regulate industry, transportation and every activity in an artificial manner. It would be so much more satisfactory, in my judgment, were we to turn our attention to decentralization, deflation and de-regulation and employ some real surgeons and physicians in lieu of the quacks who are squawking about the ills of business. In this you are the men to meet this financial situation. You men who financed this country and the allied countries during the war and fed the hungry of the world should be big enough, and I know you are, to finance the railroads to the proper and necessary extent and put them on the proper basis.

Does railroad labor believe in Federal ownership, control or operation? that is a question asked so many times by the general public. My answer is "No." None of these is desirable, nor should they be resorted to except as a last resort. Many of

the public have been told and many believe that the railway employes as a whole have indorsed Government ownership and tripartite control. It is true that a number of organizations at one time declared in favor of such a plan; however, ours did not, because we found it objectionable and, generally speaking, unsound, being purely an untried theory. The majority of railway employes want freedom of action and the right to deal with their employers through their regularly constituted committees and representatives rather than being governed by boards or commissions. They prefer meeting in conference, and, even if there might be an occasional disagreement or even a strike once in a while on some line, it speaks better for the industry and more good can be accomplished by handling matters, as of old, around the conference table. As we have understood, all of the plans so far advanced would, to a greater or lesser degree, take away from management and men the ultimate right to settle their problems at home and substitute a centralized plan, the operation of which in its finality would center in a governmental board. When this became apparent, we, as officers on behalf of the organization, disagreed and withdrew from any further co-operation in this direction. Since that time other organizations in engine, train and yard service, we understand, have declared in favor of the old plan of mediation, conciliation and arbitration for the adjustment of disputes, which, insofar as the one feature of the subject is concerned, is favorable to decentralization. As to other groups, I cannot say what their ultimate object will be.

Railroads as Business Barometers

Usually the greatest good comes through an era of prosperity on the railroads, and I sometimes believe they are the best of all business barometers. Usually when the railroads are prosperous and making money they are spending it in all directions, through wages, supplies, materials, improvements and betterments, thus making the business of the whole country good. It seems only fair that the commercial and business men, as well as professional and semi-professional men, would look with favor on helping the railroads out of their difficulties, and firmly is the belief entertained that a campaign of education along the line of stabilizing the railroads should be actively undertaken. In this campaign and during its progress from time to time as conditions arise, we should get before the public the best views of all the interests and elements that enter into the questions. It is neither impossible nor is it impracticable to put on a campaign of real education

Local Surgeon in Service Half a Century

*Dr. C. Z. Aud of Cecilia, Ky., Is One of Most
Prominent Physicians in His Native State*

THE Illinois Central System takes special pride in its veteran employees, the loyal, experienced, time-seasoned men whose length of service extends often beyond two-score years. These men are to be found in all departments of the railroad. They are the solid steel framework of this great, substantial, enduring railway structure. Through their dependable and devoted efforts, this railroad has been able to win and merit a reputation for excellence of service.

No list of Illinois Central seasoned veterans would be complete without mention of a man who is entitled to be called a patriarch in the Illinois Central "family," with more than fifty years of duty performance to his credit. That man is Dr. C. Z. Aud of Cecilia, Ky., dean of company surgeons on this railroad, and possibly the ranking railway surgeon of the country. Doctor Aud began his duties as a railway surgeon on April 4, 1871, and, although not so actively engaged in his profession as formerly, he is yet a member of this railroad's staff and attends personally to a considerable number of cases. He retains today his title as local surgeon at Cecilia.

Born in Kentucky 75 Years Ago

Charles Zachary Aud was born at Knottsville, Daviess County, Kentucky, April 18, 1848. His father before him was a physician and one of the pioneer settlers of western Kentucky. The son received his early education at St. Mary's College in Kentucky and at Notre Dame University in Indiana. He took up the study of medicine at the University of Louisville and was graduated with the degree of M. D. in 1868. He has subsequently taken post-graduate courses in schools and hospitals of the East, notably the Bellevue Medical College, New York; College of Physicians and Surgeons, New York, and the Polyclinic schools of New York and Chicago. On his return from New York in 1871, the medical department of the University of Louisville conferred upon him the degree of *Ad Eundem*.

Dr. Aud has the distinction of being the first male inhabitant of Cecilia, Ky. His location there was coincident with the construction of the original railway line from Elizabethtown to Paducah, called the E. & P., which was built in 1871. This road later on was known by other names. It was called the Louisville, Paducah & Southwestern, then the Newport News & Mississippi Valley, and later the Chesapeake, Ohio &

Southwestern, which was its designation when absorbed by the Illinois Central System in 1896. Doctor Aud was appointed local surgeon at Cecilia while the line was being constructed. He lived and kept his office in the station building there for a time.

Looking backward over the long traverse of more than half a century, Doctor Aud views the experiences of his busy life with the mellow and ripened philosophy of one who has done his stint in the service of his fellow men. When Doctor Aud began his practice, he rode on horseback, with his emergency remedies and instruments in his saddlebags. Over the primitive roads at all hours of the day and night, at the mercy of whatever weather conditions chance might bring, he was always ready to respond to the call of suffering or distress.

His Two Sons Are Doctors

Doctor Aud was married in his early manhood to Miss Lura Bayne, whose father, Captain Aaron Smith Bayne of the Federal Army, was killed at the Battle of Stone River. Five children were born to them, three daughters and two sons. The eldest daughter is the wife of Dr. H. R. Nusz, who is himself a prominent physician, for many years in practice at Central City, Ky., but

Dr. C. Z. Aud

now also a surgeon on the Illinois Central staff, located at Cecilia. The second daughter is the wife of Frank L. Habich, a conductor on the Louisville district of the Kentucky division. The third daughter, Miss Nannie, is at home, her father's devoted companion. The older of the two sons, Dr. Charles A., is a dentist, established at Owensboro, Ky., and the younger son and youngest of the family, Dr. F. Guy Aud, is an eminent surgeon at Louisville. The latter was commanding officer of Base Hospital No. 210 in France during the World War.

Dr. C. Z. Aud proudly declares that all his sons, sons-in-law and grandsons who were above the age of 18, together with himself, who was nearly three score and ten, were volunteers in the great war. He served as a member of the District Selective Service Board of Kentucky during the entire period, attending to the duties of that body at Louisville almost daily and returning to Cecilia each afternoon to look after his patients. This strenuous activity at high pressure at Doctor Aud's advanced age ultimately sapped his powers of endurance, and he was forced to adopt a more easy-going habit.

In the afternoon of a long and useful life, Doctor Aud is a man of charming personality, full of interesting reminiscences of his varied experiences. He vividly recalls the days when injuries were far more frequent on the railroad and treatment was often given under the most primitive and hastily improvised conditions. He has performed major operations on the railway right-of-way, by the light of flickering lamps, or in lonely little cabins far from the world of modern sanitation and surgical aids as we know them. A remarkable record is established in the fact that Doctor Aud says that he only recalls one instance of a fatality which resulted from an amputation performed under such conditions.

Kept Up with Development of Science

The work of the devoted country doctors and surgeons in those far-off days was hedged round with handicaps the modern surgeon cannot conceive of, but their accomplishments were of a high order. Doctor Aud has always kept pace with the best methods in scientific advancement. He is proud of the distinction of having been the first to introduce the use of the hypodermic syringe, the clinical thermometer and the X-ray in medical practice in Hardin County.

Doctor Aud has served under two chief surgeons of the Illinois Central System, Dr. W. E. Owens and Dr. G. G. Dowdall. He smilingly avers that he has been privileged to minister to all sorts and conditions of patients, from the president of the road to the lowliest employee. On one occasion, he

was called to prescribe for President Stuyvesant Fish when the latter was passing through Cecilia and was afflicted with a minor ailment.

Recently, Doctor Aud purchased a home in Louisville and established Mrs. Aud and Miss Nannie there. He insists, however, on spending a part of each week at Cecilia, where, as recently as May 11, he attended an employe of the railroad who had suffered a slight cut from a hatchet. Safety education and modern safety appliances have greatly reduced accidents, Doctor Aud declares. He can remember when the old-time link-and-pin couplings were used and there rarely passed a day when some man wasn't maimed in switching or train operation. There was no company hospital then where employes could go for scientific treatment. Doctor Aud speaks in high praise of the complete system of modern and well-equipped hospitals now maintained by this railroad.

His Work Valuable to State

Doctor Aud has held many responsible positions in his native state. He was health officer of Hardin County for twenty-eight years and served as a member of the State Board of Health under three governors. He was advisory counselor of the State Medical Society for about forty years. For many years he was physician and surgeon for the Cecilian College at Cecilia and also for the Bethlehem Academy, a school for young women near St. John, Ky. He organized and is now president of the State Bank of Cecilia, and is a director in the Union Bank and Trust Company, one of the prominent banks at Elizabethtown. He also owns considerable farming land in the county.

In his work in the State Health Service, Doctor Aud has been one of the foremost figures in the medical history of Kentucky since 1890. He was associated with Dr. J. N. McCormack, who for nearly forty years was secretary of the State Board of Health. Doctor Aud has contributed much to the advancement of public health education and the promotion of the highest standards of ethics and scientific methods in the practice of medicine. He was president of the Kentucky State Medical Association in 1906 and subsequently was made councilor to represent his district.

Doctor Aud has served as delegate representing the state association to national meetings of the American Medical Society, and in that capacity has met and formed close personal friendships with physicians and surgeons of national prominence. As a member of the State Board of Health he was largely responsible for many progressive and constructive health laws which are a part of the state code.

No. 285, the Queen of Memphis Terminal

*Engineer J. I. Wheeler Is Proud of His
Engine and Her Efficient Work in the Yards*

IT was raining the day a representative of the *Illinois Central Magazine* climbed into the cab of engine No. 285, north of track No. 8 shed, at Grand Central Station, Memphis, and grasped for the first time the capable hand of James I. Wheeler. No. 285 is a passenger switch engine, and Mr. Wheeler is her master and devoted admirer.

"Two-eighty-five is a good engine," he said. "She's one of the best engines in the world. Do you know what they call her at the roundhouse and in the yards? They call her 'The Queen of Memphis Terminal.'"

He said it smilingly but proudly—in the same way one speaks of somebody who is near and dear to him as having won deserved praise—and his hand, falling with the precision of long habit upon the throttle bar at his side, conveyed all the gentleness of a caress. Later on, while the big locomotive, obedient to the slightest touch of her driver, clattered over the switches and in and out of the maze of side-tracks, now pushing, now pulling long strings of passenger equipment, while the rain pattered and splashed on the cab roof, there came to the visitor perched on the fireman's seat an understanding of what Mr. Wheeler meant when he said No. 285 was a good engine.

The Personality of Locomotives

A locomotive is a living thing. It has an individuality, if not an actual personality. Engines are as different from one another as men are. One is steady, dependable, willing; another is fussy, impatient, nervous, capricious; yet another may be sulky, obstinate, given to fits of the megrims. There are said to be engines that run along smoothly and quietly for some time and then have a spell of hysterics. Mr. Wheeler meant that No. 285 had a gentle, kindly and tractable disposition. She isn't excitable; she doesn't prance and snort and lunge; she is sensible as well as sensitive; eager to respond to her master's bidding, she is not restive or headstrong. She's an obedient, good-natured engine.

"Oh," the reader may say, "that's all nonsense. It all depends upon the man with his hand on the throttle lever."

A great deal of it does, but not all. Engine and man must be friends; they must understand each other. Any engineer will vouch for that. The best engineer in the world cannot get perfect results with certain engines. They're outlaws, bad actors. There are cases on record of actual killers

J. I. Wheeler and Phil Mahoney

among them, locomotives with a mania for taking human life. At least one authenticated case is on record of an engine that committed suicide.

No. 285, placidly purring about Memphis terminal, has an affection for Mr. Wheeler. A stranger can see it. They are good pals. Time and again there were couplings to be made, coaches to be shunted into interminable pockets, rearranged, classified and reset. The procedure was invariably the same. Never a lunge and bump. Always a coupling was made as gently as a mother's kiss on the lips of her sleeping babe. No. 285 and Mr. Wheeler both know their business; they are examples of the co-operation for good service which is the rule and not the exception on the Illinois Central System.

Has Seen Twenty-five Years in Service

Mr. Wheeler was born on a farm about two miles south of Hernando, Miss., which is some twenty-five miles from Memphis. The farm where he was born has been in the Wheeler family for several generations. Mr. Wheeler's grandfather owned it and gave the right-of-way for the building of the Mississippi & Tennessee Railroad, which was constructed in 1856-57 from Memphis to within a few miles of Grenada, a distance of 100 miles. This line became a part of the Illinois Central System in 1889.

James Wheeler now owns part of the old home place near Hernando. His father and mother died two years ago, within four months of each other.

Mr. Wheeler was one of a family of nine brothers and seven sisters, nearly all of whom are residents of Mississippi and Tennessee within a short distance of Memphis. He entered the railway service as a fireman on the Illinois Central System twenty-five years ago last September. In the course of time he was promoted to engineer and served on various runs as regular and extra man for a number of years. About 1909 or 1910 he entered the switching service, and he was on night duty at the Poplar Street yard, North Memphis, for ten years.

Never Hurt in an Accident

Three years ago Mr. Wheeler's health became impaired, and he gave up his work for a few months. When he returned to duty he was assigned to passenger train switching on the Memphis terminal, where he made the acquaintance of "The Queen."

In his quarter of a century of railway service, Mr. Wheeler has never been hurt in an accident. He is considered one of the most careful and efficient enginemen in the service. The switching crew, which comprises Mr. Wheeler, Phil Mahoney, his fireman, also rated as an engineer, and the men who throw switches and make couplings, holds a fine record for efficiency.

The two enginemen work eight hours, from 7 a. m. until 3 p. m.

James Wheeler is in the prime of life, less than 50 years of age, clear of eye and steady of hand. He is remarkably gentle and equable of disposition; he is noted for his evenness of temper; nothing disturbs his serenity. Being signaled to slack ahead five times, or ten times, is all the same to him. The tenth time he comes back, he eases "The Queen" along as softly as the summer zephyrs that whisper to a rose. It is said that he's the same way every day in the week and every month in the year.

CAPITAL AND LABOR

I have no fears as to the ultimate outcome of the struggle between employers and wage workers. Ultimately those who have money will learn to give up, and those who have no money will learn to wake up. Employers will learn the lesson which the radicals are trying to teach, and the wage workers will learn the lesson which the employers are trying to teach. Those who have money will gradually learn that their safety and prosperity depend upon others' also being well off. Those who have not will learn that industry and thrift are the basis of all prosperity, and that we can all have more only as we produce more.—
ROGER W. BABSON.

Mr. Wheeler and engine No. 285, Memphis, Tenn.

Our Efficient New Orleans Coffee Service

*Rapid and Careful Handling of Shipments Makes
Illinois Central System Popular With Importers*

By JESSE W. FORD,

Receiving Clerk, Levee Depot, New Orleans

THE Illinois Central offers to its patrons, through its facilities at New Orleans, a coffee service that is efficient in handling traffic and prompt of movement when a shipment is received. On account of the central location of its terminals, the Illinois Central System affords the fastest service possible out of New Orleans for points north, northwest and northeast.

Shed No. 6, at the Levee depot, is used for this class of freight on account of its convenient location to the water terminals, being located only one block from the Mississippi River. It is also conveniently located near the principal coffee warehouses of the city, being only from one to eight blocks distant. This shed is ideally constructed for draymen, having a driveway through the center which affords excellent accommodation in inclement weather. This is important as the coffee bean is very susceptible to damage from moisture.

The system in effect at this shed has proved to be most economical for both the coffee importers and the coffee wharves at this port. As the coffee is unloaded from the ship, the importer furnishes the draymen with orders to move the coffee from

Employees, Shed No. 6. Reading from left to right: R. N. Hanning, receiving clerk; E. C. Luisch, office clerk; F. J. Kennedy, receiving clerk; A. A. Wagner, messenger; J. W. Ford, receiving clerk; J. J. Oakes, loading clerk; M. J. O'Brien, warehouse clerk; J. W. Heausler, loading clerk; Martin Guerco, sealer; H. J. Augustine, receiving clerk; W. Seagers, delivery clerk.

shipside to various railroads in the city for shipment. The draymen immediately haul these lots to the railroads. These lots are kept separate in the shed. When a carload of any one shipment is completed it is immediately loaded in cars for train movement.

System Gives Prompt Service

This system, after a number of years of practical experiments, has proved to be the best so far adopted at this port, as it enables the draymen to begin moving coffee from wharves as fast as it is discharged from the ships. Thus it will be seen that the wharves receive prompt service for the movement of coffee, and the importers prompt service as soon as the commodity is received at our warehouse.

The utmost care is taken, at this shed, in the proper loading of coffee; first class equipment is used, all cars are properly cleaned, protruding nails are carefully withdrawn, and the floors and sides are paper lined, so as to protect the coffee and prevent damage.

The coffee is loaded in cars in what is called a pyramidal shape—that is, the sacks are piled high in the center and low at each side, so as to keep as much of the coffee away from the sides of the car as possible. The coffee is also loaded eighteen inches from the doorway of the car, with two tiers across to the door, to form a brace and prevent the sacks from falling against the doors. The car doors are covered on each end with tar paper, to prevent rain or snow from beating into the doorway. All sacks having holes sufficiently large to

Wagon loaded with coffee sacks

Interior, shed No. 6

allow coffee to sift out are properly re-sewed to prevent loss in transit.

Coffee received over the wharves at New Orleans and drayed to Shed No. 6, Levee depot, for shipment is forwarded to various points in the North, West and Middle West, from whence it is redistributed to all parts of the United States. The principal points of shipment are: Memphis, Tenn., Louisville, Ky., Cincinnati, Ohio, St. Louis, Mo., Chicago, Ill., Keokuk, Iowa, Des Moines, Iowa, Waterloo, Iowa, Sioux City, Iowa, Omaha, Neb., Kansas City, Mo., Denver, Colo., Milwaukee, Wis., St. Paul, Minn., and Minneapolis, Minn.

Coffee Business Heavy at New Orleans

Some idea of the volume of business handled at our coffee warehouse can be

H. M. Wilson

Coffee for shed No. 6

gained from the following figures on coffee obtained from the United States custom house at New Orleans.

Imports, Green Coffee, Port of New Orleans
1919—356,608,477 lbs., or 2,701,579 sacks
1920—380,293,791 lbs., or 2,881,013 sacks
1921—333,556,770 lbs., or 2,526,945 sacks

Present indications, from figures available, are that the coffee imports at the port

Interior of loaded car

of New Orleans for 1922 will equal, if not exceed, those of 1921.

The Illinois Central employs at all times an efficient force of clerks at Levee depot to handle the business offered, and these men are willing and anxious to serve the public in the most courteous manner possible. On account of their long service in the handling of coffee, they are competent to serve the coffee trade.

The efficient service afforded in the handling of coffee at this port by the Illinois Central is due to the close personal attention given to it by J. W. Cousins, terminal superintendent, and C. T. Seiler, local freight agent.

Henry M. Wilder, who has been in the service for many years, twenty-five of which he has been assigned to the handling of coffee, is the foreman in charge at Levee depot, and it is his custom to serve the public in the most courteous and efficient manner.

The following are the clerks employed at Shed No. 6: Gus W. Heausler and Joseph J. Oakes, loading clerks; M. J. O'Brien, warehouse clerk; H. J. Augustine, Jesse W. Ford, F. J. Kennerdy and R. N. Hanning, receiving clerks.

Scale Tickets

With the use of automatic scales, an evil has developed which is of great importance both to the shipper and the railroad. Often when figures are printed on the tickets, the pasted copy is illegible, due to improper printing or because the carbon becomes blurred.

After a car reaches its destination, having traveled over several divisions, and the waybill has been handled a number of times, it is sometimes impossible to read the figures on the scale tickets, and often the point at which the car was weighed is obscured.

Weight is the basis from which practically all revenue is derived, and weight tickets should be legible from a revenue standpoint, if from no other. It has been the experience of the writer that an excessive weight creates dissatisfaction and ill feeling among our patrons; on the other hand, the company itself can lose thousands of dollars annually by illegible scale tickets.

Mr. Weighmaster, in the interest of correct weights, satisfied patrons and proper amount of revenue for the Illinois Central System, make your scale tickets legible!—A. W. WALLING, chief rate clerk, Evansville, Ind.

Shops Set Record in Overhauling Engine

Workers at Memphis Require Just Eight Days to Get No. 1150 Back on Its Run

MEMPHIS shops completely overhauled engine No. 1150 in only eight days during the first part of March and established a record for such a job on the Illinois Central System, according to W. F. Lauer, general foreman of the Memphis shops. Burnside shops held the former record when a similar piece of work was turned out in ten days. The men at Memphis clipped two whole days off that record. The actual man hours required to overhaul No. 1150 at Memphis numbered 7,395, plus forty minutes.

When it was announced that engine No. 1150, in service on trains Nos. 9 and 10 between Jackson, Tenn., and Birmingham, Ala., was to be shopped for a thorough overhauling, Mr. Lauer says that he asked that the work be done in the Memphis shops. He knew that it was an important piece of work, and he was anxious for his shops to get it. He estimated that the work could be done there in twelve days.

Engine No. 1150 was delivered to Memphis shops March 1, and at 6 a. m. March 8 it had been completely overhauled and

tested out. That was four days less time than the work was expected to require.

Rapid Work in Overhauling

On March 1, No. 1150 was put in the back shop for a general overhauling. At 7 o'clock that morning there were eight machinists and helpers assigned for day work and four for the night shift. G. V. Glenn of the drop pit was in charge of the night shift. The day shift in charge of W. N. Wilson.

All wheels were dropped, cylinders and valves were bored out, fire-box and all flues removed in thirty-seven hours. On March 3 the new fire-box and flues were replaced and the back section of the frame was removed and placed. New shoes and wedges were applied all around, the frame was squared, shoes and wedges chipped and laid off in seven hours by B. J. Hart, and not one of them pulled.

On March 4 the engine was wheeled again and the cab put back in place. On the sixth day, E. P. Wilkes, the valve man, was going well. On the morning of the eighth day, at 10:30 o'clock, she was taken

Here are the men who had charge of the work of overhauling engine No. 1150 in record time at the Memphis shops. From left to right, first row: W. D. McNulty, assistant boiler foreman; J. V. Smith, tank foreman; J. P. Swanton, tool foreman; J. B. Temple, demonstrating foreman; W. N. Wilson, erecting foreman; A. M. Jackson, erecting foreman; E. X. Johnson, labor foreman; A. F. Jones, blacksmith foreman. Second row: W. F. Lauer, general foreman; R. O. Lewman, pipe foreman; G. R. Wilcox, fitting shop foreman; G. S. Gaden, roundhouse foreman; W. G. Stallings, boiler foreman; J. A. Elliott, machine shop foreman; J. W. Hough, assistant boiler foreman. Third row: F. R. Payne, drop pit foreman; W. W. Teasley, machine foreman; J. W. Chism, paint foreman; J. S. Scanlon, assistant roundhouse foreman; E. R. Christmas, demonstrating foreman.

Engine No. 1150 at Jackson, Tenn., with Engineer J. R. Gaffney and Fireman E. L. Garner

to the roundhouse. On the ninth day, at 7 a. m., Engineer Dave Barnett had her for break-in. On the tenth day she left Memphis on train No. 106 and was assigned to her regular run.

"There was not a mishap of any kind, not a man hurt, and every foreman will tell you all the men on this job hit the ball all the time," writes our correspondent.

The Work That Was Done

Here is what was done to engine No. 1150:

Engine stripped complete; lagging and jacket removed from fire-box and boiler; back sections of frame cut loose and removed, so that new fire-box could be applied; tires turned; wheels quartered; all new crank pins; new hub liners; new crown brasses; new driving boxes; all new driving box liners; new shoes and wedges; new pistons and rods; new valve bushings; cylinders bored, new rod brasses and bush-

ings; motion work bushings new; cross-heads overhauled; guides planed; engine truck overhauled; trailer truck overhauled; all cab valves and fittings overhauled; pumps overhauled; units overhauled; new bull rings and valve stems applied; new style steam pipe casing flanges and glands applied; new style guide yoke braces applied; spring rigging and brake rigging overhauled; pops overhauled; valves set and engine tank overhauled.

A total of 298 men, both skilled and unskilled, worked at various times on the engine. The machine shop work required 3,208½ man hours; the pipe tin and paint work, 640 man hours; the boiler and tank work, 2,684 man hours; the blacksmith work, 573 man hours; the roundhouse work, 290 man hours and ten minutes.

The men at the Memphis shops say that they are ready for the opportunity to regain their record if some other shop takes it away from them.

Engineer of No. 1150 Is a Popular Veteran

When a photograph was taken of engine No. 1150 to illustrate the preceding article, Engineers J. B. Tucker and D. L. Boone of the Tennessee division expressed a desire to tell what they knew about the efficient and popular pilot of No. 1150, Engineer John R. Gaffney. Engineers Tucker and Boone run opposite Engineer Gaffney on trains Nos. 9 and 10—the Seminole Limited—between Jackson, Tenn., and Birmingham, Ala. Here is what they wrote:

John Rampoli Gaffney is one of the most highly honored engineers on what is known as the "Scissor Bill Line." On the Birmingham district of the Tennessee division he ranks first not only in efficiency, skill and neatness, but also in seniority.

John Rampoli Gaffney entered the service of the Illinois Central on October 22, 1883. His forty years of arduous toil have not in any way impaired his youthful vigor. One of the most hair-raising episodes of his career occurred in his earlier days, when he unwillingly played a spectacular part with a crazy man who captured an Illinois Central engine and forced him, at the point of a revolver, to fire the engine. John Rampoli ran the engine for about twenty miles north of Jackson, Tenn., and almost back to Jackson before giving it up. A raised tank valve and an old style water pump were the only things that saved the day for the boiler. John Rampoli's photograph was placed in the *Police Gazette* after this epi-

sode, but to this day he insists that the photograph was not a good likeness of him.

John Rampoli Gaffney has since the Chicago World's Fair been sailing under a *nom de plume*; he is known far and wide as "Hogan." This was conferred on him in honor of Engineer Matthew Hogan, who established a speed record on New York Central engine No. 999.

This pleasant and optimistic bunch of good fellowship, "Hogan" Gaffney, always carries with him a smile, and there is no room in his make-up for a frown. He takes the greatest pleasure in tracing his Celtic ancestry back to the days of Brian Boru, who, tradition says, at one time ate a whole "shape" and half a lamb. "Hogan" can converse freely in the Celtic tongue and also is very fluent with the Italian language, which he uses on frequent occasions in conversation with the sons of Sunny Italy.

In his younger days, "Hogan" was very proficient with the violin, but never did he try to follow in the footsteps of those who play classical music. Instead, he specialized in that kind which made the puncheon floor weave to the footsteps of sure-enough dancers, long before the terpsichorean art had been dragged down in the dust by a "Saddy" night on the Barbary Coast. He wielded a fiddling bow to the following numbers that still remain in the minds of men of his age and youthful environments:

such soul-stirring tunes as "Billy in the Low Grounds," "Devil's Dream," "Fisher's Hornpipe," "Arkansas Traveler," "Old White Mule," "Money Musk," "Eighth of January" and many others which have left our minds in the flight of years.

"Hogan" Gaffney hauled all the steel used in the construction of the great Brush Creek bridge, one of the scenic effects of the Birmingham district, and he was the first man to run an engine over that structure. He was likewise the first man to pull a train into Birmingham over that connecting link which binds the great North and Northwest to that land of opportunity and promise, the South.

The Seminole in her meanderings brushes against the foothills of Red Mountain before she reaches Birmingham, and often and anon the deep-toned clarion notes of the whistle of No. 1150 break the silence of the mountain fastness. Brother Gaffney is so well known that when the miner and his family, in their humble hut, are eating their frugal meal in peace, the head of the family will turn to the others and say: "There goes John 'Hogan,' making a noble run."

We will say, with all of our hearts, that we wish for brother "Hogan" many more happy days and prosperity, and, while we have no octogenarians in our engine service, we believe he has the best chance of any man here to fill that exalted position.

Midnight and noon on Michigan Avenue, Chicago. Photographs taken by C. R. Knowles, our superintendent of water service, from a window in his office.

Is This a Record Illinois Central Family?

*Mrs. Wall of McComb, Miss., Has Six Sons
in Service, and Daughter Is Married to Employee*

WHAT is the largest family of employees on the Illinois Central System? The Wall family, on the Louisiana division, does not claim the record, but it does believe it is the largest 100 per cent Illinois Central family. There have been eight men in the family, and every one has been an Illinois Central employee. The seven members now living are still in the service.

The founder of this 100 per cent Illinois Central family was Charles N. Wall, who died in January, 1900, after five years of faithful service in the car department at McComb shops. Mr. Wall was born in 1857 at Gillsburg, Miss. Being the son of a farmer, he naturally took up farming, but in January, 1895, he entered railway service. In 1880 he had married Miss Frances Newman of Osyka, Miss. His death left his widow with seven children—six boys and one girl—ranging in ages from 18 years to 4 months.

Charles E. Wall was looked upon by his widowed mother to become the head of the family in his father's place. He found his first employment as a fireman on a logging road operating out of South McComb, and while there he was promoted to engineman. On March 8, 1911, he entered the service of the Illinois Central as switchman, and he is now an engine foreman in our yards at McComb.

Dewitt J. Wall is the second son. He also found employment with the logging road, first as a fireman and then as an engineman, and in October, 1913, he followed his brother to the Illinois Central as a switchman. He is also now an engine foreman in the McComb yards.

The third son, Lee H. Wall, entered the Illinois Central service May 25, 1918, as a brakeman. He was transferred to switchman April 15, 1919, and he still holds that position in the McComb yards.

Homer M. Wall, the fourth

Charles N. Wall

son, entered the service of the Illinois Central System July 4, 1908, as a caller. In May, 1911, he was promoted to yard clerk; on August 10, 1911, to telegrapher; on October 18, 1916, to car distributor, and on February 28, 1918, to dispatcher.

Fred A. Wall, the fifth son, became a member of the Illinois Central System family July 1, 1917, but he was with the company only two months when he gave up his job to enter military service. He returned to the railroad in August, 1919, and on January 24, 1920, he was transferred to switchman, which position he still holds.

The Wall family. Top row, left to right: C. E. Wall, Mrs. Frances Wall, D. J. Wall and Mrs. Milton H. Barnes. Bottom row, left to right: L. H. Wall, H. M. Wall, F. A. Wall and G. V. Wall.

The youngest son, Gordon V. Wall, found employment as a messenger April 23, 1915, when 15 years old. On December 12, 1916, he was promoted to file clerk, superintendent's office; on January 20, 1918, he was transferred to yard clerk, and on August 12, 1920, to switchman.

Milton H. Barnes

The only daughter, Miss Alice, was married to Milton H. Barnes, who entered the service of the Illinois Central January 1, 1901, as machinist helper at McComb. In August, 1903, he was transferred to fireman, and on February 17, 1907, he was promoted to engineer.

Although the present men of the family are all young men, they have given the Illinois Central System about seventy-six years of service, which makes about eighty-one years for the entire family, including the five years the father was in the service.

The seven men of the family now living are all located at McComb. Every one is a loyal, enthusiastic Illinois Central man, and a hard worker.

MORE VETERAN ENVELOPES

The article about veteran envelopes still in service that appeared on page 83 of the May issue of the *Illinois Central Magazine* prompted George L. Bicks, agent at Ospur, Ill., to send us three old-timers of form 805 similar to the one illustrated in the magazine. Each of the envelopes Mr. Bicks sent in has been turned inside out and re-addressed. One of them was addressed originally to "General Superintendent of Transportation, Chicago," and the address on the inside of the others was "Car Accountant, Chicago." Since being reversed, all three envelopes have been permanently addressed to "Chief Dispatcher, Clinton, Ill."

One of the envelopes bears the station stamp of Maroa, Ill., April 19, 1899. It also shows handling at Osyka, Miss., July 1, 1902; La Center, Ky., March 18, 1904; Woodward, Ala., December 27, 1910, and Ospur, Ill., May 8, 1923. Another bears the station stamps of Knoxville, Miss., April 22, 1899; Coahoma, Miss., July 12, 1908; Belleville, Wis., September 4, 1908; Buffalo Hart, Ill., July 13, 1910; Glen Carbon, Ill., August 19, 1912; and Ospur, Ill., May 1, 1923. The third envelope was stamped at Lanes, Ill., August 10, 1899, and Ospur, Ill., May 8, 1923.

The three envelopes are still in fairly good condition, and have been returned to Agent Bicks for further use.

Care and Attention Give Engine a Record

By TOM TREANOR,

New Orleans Division Editor

What can be done with care and attention has been amply demonstrated on the New Orleans division by Engineer J. R. Tusson with engine No. 1044. This engine was recently sent to the Vicksburg shops for general repairs, and its condition was remarkably good, considering the fact that it has made 194,000 miles since it was overhauled at Burnside shops some time ago. The cylinder packing, valve chambers, cylinders, shoes and wedges were in first-class condition, which occasioned much appreciative and complimentary comment. Not a single failure is recorded against the engine.

Engineer Tusson was requested to explain how he did so well with No. 1044.

"I ran this engine most of the time since it was last overhauled," he said. "It always did fine work up to the very minute it was placed in the shop for general repairs. The engine has been on the most difficult run on the Yazoo & Mississippi Valley—that is, on trains Nos. 12 and 15, a straight run of

235 miles, with a regular train of eight cars. I have never shut off the steam until nearly stopped, nor have I let the engine drift down any of the hills with the throttle shut off. I have had but one set of cylinder packing put in, and the valve rings have never been changed. Since the engine was last overhauled neither a piston nor a valve stem was ever packed. Oil cups on piston rods and valve stems should be on all engines; and as to oil, I have made an average of fifty miles to a pint. Percentage? I figure engine No. 1044 is in the neighborhood of 100."

Master Mechanic G. C. Christy and Traveling Engineer Jerry Cronin both say that No. 1044 has made one of the best records of any engine of a similar class and size in the United States.

Some will not learn because they think they know enough already; others will not learn because they are afraid they are showing their ignorance by asking questions. It does not pay to belong to either class.—*Ohio Extension News.*

Spent Nearly 50 Years in Railway Work

Luther Backus of Dixon, Ill., Retired on Pension in 1917, Celebrates His Golden Wedding

FEW of the large number of Illinois Central employees who are now retired from active service on pension have a finer record than Luther Backus of Dixon, Ill., former station agent there, who was retired from active duty on November 1, 1917. Mr. Backus came very near to rounding out a full half-century of railway work before he knocked off to enjoy the well-earned ease which comes after years of diligent and loyal service. Counting approximately forty-seven years spent as a clerk and station agent for the Illinois Central and about two years in the same capacity for the Chicago & North Western, he has forty-nine years of railway work to his credit.

Mr. Backus began his service with the Illinois Central Railroad as clerk and cashier in the local freight office at Dixon, Ill., on November 2, 1868. He held that position for eleven and a half years, resigning in the spring of 1880 to take a similar position with the C. & N. W. at Dixon. After about nine and a half months, he was made station agent for the latter road at Nachusa, Ill. A little more than a year later he resigned and engaged in the coal business at North Dixon. In connection with that vocation he handled the small Illinois Central station at North Dixon.

Only One Dakota at That Time

In 1883, having disposed of his coal business, he had an opportunity to take charge of the railway station at Huron, Dakota, for the North Western. The two Dakotas, as now divided, were all one territory at that time. He went to Huron and lined up things to assume his duties, then returned to Dixon to arrange for moving his family to their new home. At this time he was offered the station agency at Le Mars, Iowa, by the Illinois Central, which position he accepted. He spent four years or so at Le Mars, then was transferred to Sioux Falls, S. D., where he remained about two years. After that, he went to Chicago and was chief clerk at the old Water Street

Luther Backus

freight office for almost a year. On July 16, 1890, he returned to Dixon as station agent, to remain there until his retirement, more than twenty-seven years later.

Mr. Backus has a flawless service record. During his long term as local representative of this railroad at a busy point in central Illinois, he has been known for his dependability, his loyalty to the Illinois Central, his devotion to duty and unfailing endeavor to give the public good service all the time. He has many friends. More than once

he has proved his fine loyalty to the company he served, too, in his tireless efforts to make the Illinois Central's prestige paramount to every other consideration.

"In 1868, when I began railway work," he says, "I recall that there was a young man about my own age who had charge of the stationery department at Amboy, in the office of Superintendent John C. Jacobs. This young man's name was John M. Egan, and he afterward left Amboy and rose to fill many high executive positions with various railroads. I have just heard of his death at Amboy, on May 9. His father, I believe, was a construction engineer and had charge of masonry construction when the Illinois Central Railroad was originally built through northern Illinois. Evidence of his work may still be seen in the arch which supports the joint switching tracks of the Illinois Central and Chicago & North Western near Rock River in Dixon, as he built that arch.

"John M. Egan was a brother of Colonel A. H. Egan, general superintendent of the Yazoo & Mississippi Valley Railroad at Memphis, and an uncle of J. M. Egan, who was recently promoted to the chairmanship of the car service division of the American Railway Association from the general superintendency of our Southern Lines.

"A. E. Clift was superintendent of what was called the Freeport division during the later days of my work. Mr. Clift was the best superintendent in the United States in my opinion, and I am very glad to hear that

he is now vice-president in charge of operation for our road. J. F. Tucker, who is now dead, was general freight agent in those days. The older men are fast passing away. It gives us who knew them so well a feeling of loneliness to hear that they are no longer with us."

Celebrated Golden Wedding Recently

Mr. Backus was born at Grand Detour, Ill., March 6, 1848. His wife, who is still his beloved helpmate and companion, was born in the same village December 8, 1850. They were married at Dixon March 23, 1873. The occasion of the fiftieth anniversary of their marriage was celebrated with a family gathering last March 23 at the family home, 802 South Peoria Avenue, Dixon.

Mr. and Mrs. Backus have two sons, Claude, who is now in the Orient in charge of export sales for the Simmons Company of Kenosha, Wis., and Carl C., who is gen-

eral superintendent of the same company. It was planned to have five generations of the immediate family present at the celebration of Mr. and Mrs. Backus' golden wedding anniversary in March, but the severe storm which overspread the Middle West at the time prevented the attendance of Mrs. Backus' mother, who lives at Mount Morris and who is now 97 years old. Four generations were in attendance, however, in the persons of Mr. and Mrs. Backus, their son Carl, their granddaughter, Mrs. Craddock of Chicago, and their great grandson, the little Craddock boy.

In America every man's future depends upon himself alone. Where a rail splitter can become a Lincoln and a messenger boy a Carnegie is certainly a Land of Opportunity, and that land is this country—your country if you are worthy of it, no matter where you were born.—OSCAR S. STRAUS.

Our Monthly Roll of Honor

Below is a list of employees retired at the meeting of the Board of Pensions, April 24:

Name	Occupation	Years of Service	Date of Retirement
Harry G. Coltart.....	Ticket Agent, Memphis, Tenn.	22	1/31/23
Charley Selmon	Station Porter, Harriston, Miss.	18	3/31/23
Jefferson D. Dickson.....	Engineman, New Orleans Division.....	36	2/28/23
Phoenix Simpson	Cooper, Baton Rouge, La.	21	4/30/23
Andrew Vargo	Laborer, Burnside Shops	25	3/31/23
Frank B. Palmer	Towerman, Chicago Terminal	25	1/31/23
Allen P. Howard	Foreman (B&B), Kentucky Division.....	31	1/31/23
Benjamin G. Boyd.....	Agent-Operator, Water Valley, Ky.	17	1/31/23
Thomas C. Eagan.....	Switchman, Chicago Terminal	28	2/28/23
Nicholas Brickel	Carpenter, Burnside Shops	27	2/28/23
William H. Riedell	Conductor, Iowa Division	30	2/28/23
Edwin M. Coe	Engineman, Louisiana Division	44	2/28/23
James Wood	Section Foreman, Monticello, Ill.	23	3/31/23
Jerome Sprague	Engineman, Minnesota Division	39	3/31/23
Charles E. Edwards	Engineman, Minnesota Division	33	3/31/23
James Broadbent	Machinist, Burnside Shops	54	4/30/23
Martin DeYoung	Janitor, Burnside Shops	23	4/30/23
George Gebhardt	Crossing Flagman, Monee, Ill.	36	4/30/23
Richard Johnson	Lamp Tender, Carbondale, Ill.	30	4/30/23
Andrew Southerland	Lampman, Mounds, Ill.	32	4/30/23
Albert C. Wilcox	Chief Accountant, Mattoon, Ill.	43	4/30/23
Caleb Flint	Section Laborer, Webster City, Iowa.....	20	4/30/23

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
George S. Wise.....	Stockkeeper, Waterloo, Ia.	3/ 9/23	10 years
Charles Miller	Blacksmith Foreman, St. Louis Div.....	3/23/23	15 years
August Skadell	Laborer, Burnside Shops	3/28/23	12 years
Edward Fulton	Fireman-Engineer, Indiana Division.....	3/25/23	2 years
William R. Hays.....	Engineman, St. Louis Division.....	4/14/23	2 years
Edward H. Groff.....	Clerk, Iowa Division	4/17/23	5 months

How Employes Can Halt Misinformation

Most of Those Attacking the Railroads Are Unable to Answer When Courageously Questioned

The following statement of the duty of railway employes to refute misstatements about the railroads and assist in the formulation of an enlightened public opinion on the railway question is by a man of wide experience and keen observation. Mr. Weber was for a number of years a Chicago newspaper editor. His publication is noted for its straightforward treatment of business problems.

By **GEORGE W. WEBER,**

Editor, Weber's Weekly, Chicago

MANY things are left undone and many more fail in the doing for no other reason than that the would-be doer doesn't know exactly where or how to begin. Doubt begets irresolution, and irresolution inaction, which often is ascribed to unwillingness or a determination not to do. Thus, the well-intentioned employe may fail to his own and his employer's hurt because he doesn't know just what to do in certain matters.

It is not more than fair to the average employe of a railroad to assume that he knows that the concern he works for is regulated as to the character and rates of its service by federal or state commissions. It is also no more than reasonable to suppose that he knows that if his company be harshly regulated it will impair its power to be liberal to him as a worker. I say the average employe knows this, for if he doesn't he should know it and should govern himself accordingly.

However, I am not equally sure that the average railway employe, even if he knows all that I have indicated, has formulated in his mind just exactly what he can do to protect himself against that sort of regulation that may regulate him out of his job, or into lower pay, or prevent his promotion.

I have often thought I would like to be an employe of a railroad simply because of the opportunities such a position offers one to do something outside of the ordinary—beyond the blueprint—for his own good in more ways than one.

Nearly all of the ruinous regulation that is demanded for railroads is prompted by agitators. There are two general classes of agitators. The first is made up of those who are seeking office. The second class is composed of those who would like to overthrow the American system of government. In their speeches and writings they constantly make statements which are not true and which the properly informed railway em-

ploye knows are not true. If such statements are made at a meeting it would be quite in order for the railway employe to ask the speaker where to find the authority upon which he bases his statements. Because such speakers are not more frequently questioned as to their authority for reckless statements made by them, they have grown more and more careless in what they say.

The revolutionist agitator does not attempt to deal with facts. He seeks to prejudice the minds of his listeners and make them believe that our system of government is wrong and that workers should revolt against it. He should be made to answer as to when and how far the experiments of communism at different times and places, past and present, have worked out and are working out. The ordinary Radical speaker is ignorant of the facts concerning the propaganda he tries to impress upon his hearers. He thinks he doesn't need to know much because he talks to those even less informed than himself. Ask him where there is less communism than in America and where there is better pay for all sorts of workers.

Another resource for the railway employe who would set things right for him-

George W. Weber

Illinois Central Magazine

self and his fellows is the public press. Except newspapers that are operated for the purpose of misleading the public, editors are glad to get letters from their readers. Many newspapers print the extravagant statements of the railway baiters just because the statements are sensationally exaggerated. They put the statements in quotation marks to make sure that the reader will know that the newspaper does not indorse them. Such news matter too often goes unchallenged. In newspaper offices—and I have handled such copy in all kinds of newspapers — the conscience is quieted with the reservation that “we will print contradictions if they come in.” The trouble is that correction fails because what is the business of so many is attended to

by none. Nothing has a more salutary effect upon an editor than a hundred or so letters addressed to his paper in protest against exaggerated and untruthful statements in the columns of his paper. The editor naturally doesn't want to do otherwise than please the greatest possible number of his readers.

Among the hosts of railway employes are thousands who have the gift of writing and oratory. The first should use their pens; the second, their speech. Those who do not aspire either to write or to speak can always have a mouthful of justifiable response to those who talk or write without thinking and who have too much to say about things upon which they are either uninformed or misinformed.

Reunion Held as Planned Three Years Ago

Three years ago ten girls employed in the comptometer department in the office of the auditor of disbursements at Central Station, Chicago, entered into an agreement to hold a meeting May 6, 1923, on the mezzanine floor of the Sherman Hotel in Chicago.

Nine of them assembled at 7:30 p. m., May 6, as agreed upon. They were: Miss Jane Sykes, Miss Irene Frana, Mrs. Fred Nickel, Miss Ita Bateman, Mrs. James Bell, Miss Rose Novak, Miss Mamie Angrave, Miss Gertrude Huber and Miss Myrtle Loeffel. Mrs. Frank Schell, the tenth member, now living in Minneapolis, telegraphed that she would be unable to attend. Only four of those present, Miss Sykes, Miss Angrave, Miss Huber and Miss Loeffel, are now employes of the company. Miss Frana left the service a short time after the agreement was drawn up. Mrs. Nickel, formerly Miss Hayek, resigned about two years and a half ago and married. She now has an 18-month-old daughter. Miss Bateman has been out of the service about a year. Mrs. Bell, formerly Miss Bilek, left the service about a month after she signed the agreement to meet with the other girls. She married and now has a 2-year-old son. Miss Novak resigned about two years ago and at present is living on a farm at Cary, Ill.

After the exchange of greetings at the Sherman Hotel, the party went to the Blackhawk Cafe, where the members enjoyed a delicious dinner. Miss

Loeffel presided at the dinner and called upon each to give an account of herself during the last three years. The talks that followed brought all the news and gossip up to date. Among the matters discussed was the approaching marriage of Miss Bateman, which will take place June 6.

The meeting was of so much interest that another agreement was signed by all present. The date for the next meeting is May 6, 1926.

There's a great deal of good that can be done in the world if we are not too careful as to who gets the credit.

May 6 these nine young women dined, gossiped and exchanged experiences. Three years ago they worked together in the office of the auditor of disbursements at Chicago. They are: From left to right, back row: Mrs. James Bell, Mrs. Fred Nickel, Miss Irene Frana, Miss Myrtle Loeffel and Miss Rose Novak. Front row: Miss Gertrude Huber, Miss Mamie Angrave, Miss Ita Bateman and Miss Jane Sykes.

The Patrons' Interest in Railway Success

General Superintendent W. S. Williams Shows the Aurelia, Iowa, Community Club Need for Co-operation

W. S. Williams, general superintendent of our Western Lines, on April 27 addressed the Aurelia Community Club of Aurelia, Iowa, taking as his subject "Railway Progress." Mr. Williams sought to impress upon his hearers the community of interest between transportation companies and the people they serve, and reports of the meeting indicate that his remarks were well received. He said, in part:

PROGRESS is achieved through co-operative action. A group of men, working together in a common cause, can accomplish far more than the same number of men can accomplish working at the same task as individuals, each pursuing his own course. The acceptance of this fundamental principle is the foundation of everything that our civilization represents.

You have recognized this principle in the formation of the Aurelia Community Club. You are endeavoring to co-ordinate your aims and actions in such a way as to promote the welfare of this community, confident in the belief that your individual well-being is dependent upon the well-being of the community. You have common ends to serve, and, very sensibly, you have joined forces in serving them.

It has always been my opinion that there ought to be more of such co-operative action as this between the railroads and their patrons. There are still some persons who seem to believe that the welfare of the railroads and the welfare of their patrons are opposed—that one can profit only at the expense of the other. Nothing could be farther from the truth. The fortunes of the railroads and the fortunes of all other human enterprises represented by what we call farming, business and industry are indissolubly linked together. Prosperity for one means prosperity for the other, and economic ruin for one would mean economic ruin for the other.

Good Service in Cherokee County

Let me illustrate that by referring to your own county—Cherokee County. Cherokee County is one of the richest, most productive, most advanced farming communities in the United States. It is the leading agricultural country in the leading agricultural state of the Union. Several things help to make that leadership possible: Fertile soil, good climate, abundant rainfall, a citizenship educated in improved farming methods. All of these things are

of greatest importance. However, there are many other spots in the United States that are blessed with soils as fertile as any in this county, that have ideal climatic conditions, that have plenty of rainfall, but that are not so prosperous, not so far advanced as Cherokee County. Why? Because those districts have not the railway service that you have here. I will even take the position that adequate, efficient railway service is the most important essential in bringing about farming prosperity. I believe you will agree with me in that, after a little sober reflection.

A farmer can raise thousands of bushels of grain or hundreds of head of livestock, but if he had no way of shipping those products to market they would be practically worthless; their value would be entirely governed by the market for local consumption; the high position that Cherokee County occupies in agriculture would be quickly lost if everything produced in the county had to be sold entirely within the borders of the county. The railroads, then, represent a service that is vital to the farming industry. Agriculture requires adequate, efficient transportation, and farm operators ought to be greatly concerned about anything that is done to weaken the railroads, to make them less efficient, less able to give adequate service at all times and under all conditions.

Railroads Work For Efficiency

The railroads are themselves working toward the same objective. The Illinois Central System is anxious to keep itself well equipped to handle the utmost demands that are made upon it for transportation service. That is the desire of every worthwhile railway management in the country. It isn't a case of philanthropy. It's good business practice. In times past some railway managements took the position that they could prosper at the expense of service to their patrons, but they found out differently. Railroads cannot earn profits without giving real service, any more than real service can continue to be rendered indefinitely by a business institution that is not permitted to earn a fair profit.

I believe you will agree with me that, with this common end in view, it is the worst kind of folly for railroads and their patrons to go pulling apart, instead of working together.

The railroads and their patrons represent

a great partnership of interest. Here in Cherokee County, the partnership is between the Illinois Central System and the citizens of Cherokee County. We are working together. Our railroad is endeavoring to give you a service that is essential to the conduct of your business, and you are endeavoring to give the railroad that fair treatment which will permit it to grow and develop, not alone for the profit of the owners of property, but in order that your increased requirements for transportation can be taken care of adequately and efficiently.

There are some partners who cannot get along except by trying to force each other to live up to their obligations of partnership, but I do not think that is true of the partnership between the railroad that I represent and the community you represent. It is not the attitude I take toward my associates when I want to get things done, and it is not the attitude you adopt toward your associates when you want to get things done. It is much better to work in amity and harmony than in ill-feeling and discord.

Farmers' Prosperity Important

The prosperity of practically all business in this country is greatly affected by the prosperity and purchasing power of our farming population. We are all interested in seeing the farmer prosper because his prosperity means good times for everyone else, including the railroads. A railroad like the Illinois Central System, which serves a great farming territory throughout the Middle West and the Mississippi Valley, is naturally very much interested in doing everything it can do to assure agricultural prosperity.

There are certain persons who claim to be speaking for the farmers of America who are declaring that reductions of freight rates by the railroads are essential to the prosperity of the farmers. These individuals claim that the one thing, above everything else, that has made hard times for the farmers in the last two years is the general increase in railway freight rates that came about as a result of the war, and they claim that if rates were only put back on a pre-war basis the farmers' troubles would be over to a very large degree.

Now, that does not coincide at all with my belief. I think the farmers, and all other classes of our population, too, ought to be given the benefits of the lowest freight and passenger rates that economic conditions will justify, but I do not think that rate reductions, as such, will restore farming prosperity or that reductions in rates without corresponding reductions in the costs of operating the railroads would be beneficial to the farmers of the country.

In fact, I believe reductions in rates without reducing expenses hurt the farmers more than help them.

To clarify this point, let us consider for a moment which is more important to the farmers of the country—that they have lower railway rates or improved railway service. The farmer would like to have both, but this may be a case of where we can't eat our cake and have it, too. Which will be better for the country—that rates be reduced at the impairment of railway service, or that railway service be strengthened by continuing in effect the present schedule of rates?

Cost of Transportation Shortages

The one man in this country who probably has the biggest vision of our commercial life is Mr. Herbert Hoover, Secretary of Commerce. In his annual report to the President, for 1922, Mr. Hoover declared that shortages of transportation ("car shortages," as they are most generally called—although the shortage extends to other facilities than merely freight cars) constitute a tax upon the country exceeding the cost of running our Government. This is a staggering thing to contemplate, but I am sure your own experience with transportation shortages will bear witness to the fact that the resulting losses are serious to the farmers alone.

Take the shortage that existed in 1920, which is far enough behind us now that we can look back upon it and estimate its effects. There were scores of farmers here in Cherokee County who were unable to get cars when they wanted to ship their grain in 1920, when prices were right and other conditions were favorable, and who had to hold that grain and sell it on a declining market. I know that many of the farmers who were caught in that predicament were inclined to blame the railroads for the shortage of cars. But were the railroads to blame? Were they to blame for the shortage that existed last year, or the shortage that there will be this year unless they expand their facilities very rapidly during the next few months?

For a great many years the railroads of the country have been practically at a standstill as regards adding cars and locomotives, building additional trackage, reducing grades, expanding their shops and making other additions and betterments to their properties. The business of the country has grown by leaps and bounds. Now, it must be self-evident that the amount of business that can be carried on by the people of the United States is regulated by the amount of traffic that the railroads can carry. If the business capacity of the country expands more rapidly than the rail-

roads expand, we have a shortage of transportation, and that is what has happened in this country. I do not need to bring in figures to support that statement, because every person in this audience knows it is true. Many of you know it by costly experience.

Decline of Railway Net Earnings

As for the cause of this arrested expansion on the part of the railroads, we need only to look at the figures on railway net earnings. Beginning with about 1917, the net earnings of the railroads began to decline. In 1916 the net operating income earned by the railroads (that is, what they had left after paying operating expenses, taxes and rents for the use of equipment and jointly-used facilities, but before paying rents for the use of leased lines or interest on their bonds and other indebtedness) amounted to 6.16 per cent upon their investment. In 1917 this dropped off to 5.26 on investment. The next two years were government-control years, during which the federal government undertook to guarantee to the railroads a return based upon their altogether inadequate earnings just prior to the war, but the net operating income which the railroads *actually earned* in those years was 3.51 per cent upon their investment in 1918 and 2.46 per cent upon their investment in 1919. The next year was partly under government control, partly under private operation with a government guaranty, and partly under private operation without any guaranty whatever. In 1920 the net operating income that the railroads *actually earned* was about nine-hundredths of 1 per cent. There has been no guaranty of earnings whatever for more than two years now. In 1921 (without a guaranty of any kind) the railroads realized a net operating income of 3.08 upon their investment, and the estimated net operating income for 1922 (also with no guaranty whatever) was about 4.05 per cent upon the railway investment. As I said before, net operating income does not mean income available for dividends—it is what the railroads have left before they pay rentals on leased lines or interest on indebtedness, before a cent is paid in dividends, and before a cent is put back into the properties in the way of improvements.

The railroads have only two ways to obtain the money which they expend for new equipment and improved facilities. Either they must realize surplus earnings, or they must borrow it. Not being able to realize surplus earnings, they are forced into borrowing the money. These borrowings come largely from small investors. There are about 800,000 stockholders in the railroads of the country, and it is estimated

that there are about the same number of bondholders—the bondholders being those who have lent their money to the railroads for the purpose of making expenditures for improvements. In borrowing money, the railroads must compete with many different forms of investments—farm and city mortgages, industrial stocks and bonds, government and municipal loans, and so on. Before a person invests in any of these forms of securities, he quite naturally tries to find out, either by personal investigation or by accepting the advice of bankers or other financial advisors, what the opportunity is for earning a fair return on his money and of getting the principal back when it comes due.

Railroads Don't Attract Investors

The reason that the railroads have not been able to keep pace with the expansion of business by enlarging and extending their plants is that their earnings have been altogether insufficient to attract investors away from other forms of investment. An investor is no more altruistic than anyone else; no matter how much the railroads need to expand their facilities, there is no one who is going to lend his money to the railroads unless he has the assurance that the investment is sound. And with railway earnings constantly declining, there has not been very much about the railway situation that promises well for investors. Recognizing this, the managements of the railroads have found themselves barred from making the improvements in their plants that should have been made.

The way to overcome this situation that is causing losses that run into billions of dollars is *not* by still further curtailing railway earnings by reducing rates. It is by permitting the railroads to realize earnings that will attract investors, even if the present scale of rates have to be kept in effect. That is why I say that a reduction in rates to the farmers of the country would do them more harm than good—for a reduction at this time, without further reductions in the costs of operating the railroads, would eliminate railway earnings altogether and still further blight the market for railway securities.

The lesson we should have learned in the last few years with respect to the railroads is that we must pursue a railway policy of "live and let live." We cannot kill off railway growth and expect to have strong railroads.

There are some self-appointed spokesmen for the railroads, including one United States Senator from this state, who claim that the present levels of rates are caused by the attempts of the railroads to realize

a return upon a valuation of their properties which these alleged spokesmen claim to be excessive. These men claim that if the so-called "water" were squeezed out of the valuation of the railroads, the railroads could earn a fair return upon the value of their properties and relieve the farmers and the rest of the country from paying rates which they say are exorbitant and oppressive. I would like to have you examine the facts about this situation and see for yourself just how much truth there is in these reckless charges.

Here Are the Official Figures

We have the official figures showing the revenues and expenses of the railroads for the first ten months of 1922, so I am going to make use of them. During that period, the railroads realized a net operating income at the annual rate of about 3.97 per cent upon their tentative valuation as determined by the Interstate Commerce Commission for rate-making purposes (the valuation which these railway critics claim to be excessive). What this rate of return meant to the payer of railway rates in that period can be expressed in this way: Out of every dollar that the railroads took in during the period referred to, they paid out 79.6 cents for operating expenses, 5.6 cents for taxes, 1.4 cents for equipment and joint facility rents, and had left a net operating income of 13.4 cents. Now, about 11.3 cents of this net operating income was required to pay fixed charges (that is, rents of leased lines and interest on debt), leaving about 2.1 cents available for dividends.

Suppose the tentative valuation established by the Interstate Commerce Commission were reduced by one-third (which would be about what some of these agitators are claiming should be done). That would have made it possible for the railroads to have taken in about 95½ cents instead of a dollar, and still realized the same *rate of return*. In other words, rates could have been reduced about 4½ per cent. That is a very small reduction for the average person. During 1922 freight rates were reduced on all commodities from 10 to 33 1/3 per cent without satisfying the railway critics, so it is hardly possible that they would be satisfied with a meager reduction of about 4½ per cent. On the other hand, however, cutting 4½ cents off the railway dollar for the period we are considering would have cut off the 2.1 cents which the railroads had available for dividends and would have left them unable to pay all their fixed charges—all of which are just as necessary to have paid as operating expenses or taxes.

The charge that there is "water" in the

tentative valuation of railway property as established by the Interstate Commerce Commission is without any foundation at all. Some of the railway critics have gone so far as to say that this tentative valuation was determined by accepting, with very little alteration, the claims of the railroads themselves as to the value of their properties. Commissioner Hall answered this criticism a year ago when he emphatically declared that the railroads' investment figures were *not* taken as the basis for the tentative valuation, but that the Commission computed the tentative valuation upon the basis of information assembled by its own bureaus, largely in the process of valuing railway property under the authority of the LaFollette valuation act of 1913.

For a great many years there have been critics of the railroads who have contended that there is "water" in the capitalization of the railroads. That charge has been true with respect to a few railroads, but for the railroads as a whole and for the great majority of the railroads individually it is untrue. The valuation act of 1913 was sponsored by Senator LaFollette, who believed that a physical appraisal of railway property values would show over-capitalization. The work of valuation has now been going on for nearly ten years, and the Interstate Commerce Commission has made tentative reports on the value of a good many railway properties. Its work is pretty far along on a good many other properties. In arriving at values, it has taken actual elements of values, not the claims of the railroads, and pre-war values have been the basis. The railroads believe that the Commission has been too strict in most cases rather than too liberal. The Transportation Act of 1920 required that the Commission establish a tentative valuation as a basis for making rates, and this was done. This tentative valuation was something over \$2,000,000,000 more than the capitalization of the roads as of that time, and now those who advocated a valuation of railway property, hoping it would show the railroads as being over-capitalized, are confounded by the fact that it has shown them, as a whole, to be under-capitalized.

Can't Judge by Stock Prices

In arguing that the railroads were over-valued by the Commission in its 1920 rate case, the railway critics point to the market prices of railway stocks and bonds. As all of you know, the stocks and bonds of a great many railroads are selling far below par. It should be borne in mind, however, that the railway stock and bond market is not an accurate index of railway property values. The market is affected by legislation, regulation and other conditions. In

1920, at the end of federal control (which is the time that a good many of the critics refer to), the railroads were impoverished. The government had let the properties run down, and operating expenses had increased out of all proportion to increase in income from rates. The railway securities market was severely affected by this situation. Since then there has been material improvement. The railroads have been struggling back to solvency. The market prices of railway stocks and bonds have increased somewhat. Do you believe that the railroads are worth any more today, share for share and bond for bond, than they were two years ago? Do you believe that rates should be constantly adjusted to conform with fluctuations in the market? I do not think so. Rates need to be stabilized. Business men and farmers should know in advance what rates are going to be charged on their products.

Figures on Illinois Central System

In connection with this charge of over-capitalization, take the case of the Illinois Central System. You will be interested in some figures that I have here. The engineers working under the Interstate Commerce Commission have given the Illinois Central System a tentative valuation of \$371,465,157, as of June 30, 1915. This tentative figure (which is subject to revision) is much too low. The addition of omitted property and the correction of errors, we believe, will give us a substantial increase in the final report. However, let us compare this figure as it stands with the capitalization of the property. Between the date of valuation, June 30, 1915, and December 31, 1921, we actually put into the property \$107,641,155, bringing the figure up to \$479,106,313. On the other hand, the par value of our stocks and bonds outstanding as of December 31, 1921, was \$388,097,672, or \$91,008,640 less than this preliminary valuation, which we believe is wholly inadequate. This is certainly conclusive proof that there is no "water" in the securities of the Illinois Central System.

We operate 6,200 miles of line, or first main track, but when we count up second, third and fourth main tracks, passing tracks, yard tracks and the like, we have about 10,000 miles of trackage. This gives an approximate capitalization per mile of line of \$62,600, or about \$38,800 per mile of track. But capitalization must cover more than just roadbed, ties and rails. We have 75,000 freight cars, 1,800 locomotives and 1,700 passenger cars. Take our freight cars at \$1,000 each, about half what a new car costs today; our locomotives at \$30,000 each, which is about half what we are paying now; our passenger cars at \$15,000

each (we paid \$34,800 for the latest steel cars we purchased)—and we have a total valuation of rolling equipment of \$154,500,000. Reducing our capitalization base by this amount, we have an approximate capitalization per mile of track of \$23,350. This does not take into account bridges, signals, telephone and telegraph lines, land, buildings, such as shops, roundhouses, stations, and so on.

Terminal Properties Valuable

One of the big items of value to a railroad is terminal property. The Illinois Central System owns extensive terminal properties in Chicago, New Orleans, Birmingham, Memphis, Louisville, Indianapolis and other cities. If we had to go into those cities today and procure the properties that we now have there, it would doubtless cost a sum of money that would be prohibitory. Some persons believe that our terminal properties in Chicago alone are worth \$100,000,000. The Illinois Central System owns 1,415 acres of land within the city limits of Chicago, of which 114 acres lie north of Roosevelt Road and border on the great Loop district. Needless to say, that land is very valuable.

In order to get a comparison, take the cost of building a mile of hard-surfaced road. A short time ago it was announced that the State of Illinois had received nearly 400 bids for the construction of 195 miles of hard-surfaced roads, only fifteen miles of which involved heavy grading, and with only twelve light bridges being included. The average cost was \$25,518 a mile. According to the director of public works and buildings, this is the lowest cost thus far established in the state's highway-building program, and this, of course, does not take into consideration at all the cost of the land on which the roads are to be built nor the cost of the grading and bridge work which has been done. Any fair-minded person will have to agree that since it costs the State of Illinois more than \$25,000 a mile to build an ordinary hard-surfaced road, under these conditions, an average capitalization of \$23,350 for each mile of track, including far more than merely the roadway, shows that the Illinois Central System, instead of being over-capitalized, is considerably under-capitalized.

The other reckless charges that are made against the railroads by agitators who are trying to foment distrust and unrest are just as unreasonable and unfounded as these charges of over-capitalization and over-valuation. My purpose in discussing these particular charges at some length is to give you a basis upon which to judge these reckless accusations when they come to you.

The railroads are absolutely in the hands of the public. Their affairs are regulated or supervised by federal and state commissions, Congress and the state legislatures, and the United States Railroad Labor Board. If the railroads are to be permitted to prosper and expand to take care of the growing needs of their patrons, they must be given the sort of treatment that will make prosperity and expansion possible.

Holiday From Oppression Needed

One thing that the railroads need is a holiday from oppressive legislation and unnecessary investigation. A short time ago there were three investigations of the railroads going on at the same time, all of national scope. Railway officers were kept on the jump between Washington and Chicago, living like commuters, and great armies of clerks and other employes were kept working in feverish haste to prepare the data that the investigating bodies wanted. At the same time, critics of the railroads were trying to push destructive legislative measures through Congress and the state legislatures, and the railroads, in self-defense, had to give their attention to trying to defeat these measures. I tell you, there must be a let-up to that sort of thing if we are to have efficient railway systems in this country. Give the railway officers and employes a chance to show what they can do about running their business. They haven't had a fair show for many years.

All this comes down to the question of the need for a public opinion in this country that will treat railway questions constructively. The railroads need friends—among business men, among farmers, among manufacturers and industry owners and managers, among wage earners, among all other classes of our population. They need friends who will stand up for them and defend them when they are right, and who will give them constructive criticism when they are wrong. That is all the railroads are asking. That friendship is not alone to their interest; it is to the interest of every person who needs adequate transportation service.

One trouble in the past is that the friends of the railroads have left the education and crystallization of public opinion to railway men. They have taken the position that the success or failure of the railroads was of no particular concern to them. That is not true. Take farming as an example. The railroads represent an investment of around \$20,000,000,000. Destroy that investment, however, and you would destroy every other form of business in the country. The farm property of the country is valued around \$78,000,000,000. By destroying the railroads, you would destroy an ag-

ricultural valuation nearly four times the railway valuation.

I would like to urge upon you as members of an organization that is interested in doing everything it can for the advancement of your community interests that you be friendly to the railroad that serves you with transportation. Not only that, but that you pass the word down the line to everyone with whom you come in contact that the railroads need constructive, not destructive, criticism, that they need understanding, not misrepresentation. If you will do that, you will help in a big way to make it possible for the railroads to take care of your needs in the years to come.

In the last fifteen years the public has accepted without question the assumption, based on a false premise, that the railroads hold a "public-be-damned" attitude of mind and policy. Believing this to be true, which it is not and has not been during the period mentioned, the public itself has adopted a sort of "the railroads-be-damned" regulative policy. That view has led to incalculable harm to all concerned. When the public comes to understand that the railroads are not selfish and unscrupulous profiteering enterprises upon which it is proper and right to levy reprisals, but a great, necessary and utilitarian public service, a bulwark of and for the nation's welfare and prosperity, then and only then will public and carrier join hands in mutual striving for that unity of interest and purpose which brings progress and prosperity to all.

A PROMISE IS A DEBT

It is a debt of honor. Don't forget that. A promise should be just as sacred as your note. Your good faith or your lack of it is a part of your character. You can't escape that. What you promise should be backed up with your last dollar, if necessary, unless you can honestly break your promise with the consent of the other party. The man of sterling character does not make promises lightly, because to him a promise is as binding as an oath. When he makes a promise he will keep it, no matter what it costs him.—*Success Magazine*.

SUPPLY AND DEMAND

The natural law of supply and demand should not be interfered with by the Government or by any administrator of the laws, except in cases of turpitude, and this applies to all business transactions. There are already too many man-made laws, and perhaps too many attempts to apply them, which are calculated to interrupt and hinder progress and industrial prosperity.—E. H. GARY.

How Grace Hinkle Young Saved the Train

*A True Story of a Little Kentucky Heroine
and How She Noticed the Track Was Gone*

IT WAS early in the morning of a cold rainy day in March. The rain had fallen steadily during the night, filling the creeks and branches with a volume of water far beyond their limited capacity to handle. The watercourses, which the day before had been tiny rivulets, had overnight become raging torrents, overflowing their banks, and rushing riverward with an ever increasing volume and power. The La Center valley, lying at the base of the foothills in the southwestern part of Kentucky, was being slowly inundated by the water which swept down upon it from the surrounding hills. The East Cairo line of the Kentucky division, traversing the southern portion of the valley over a long deep fill interspersed with many bridges, was the only highway above the high water. Humphrey's Creek, draining the southern portion of the valley, crossed the fill through one of these openings, a ballast deck timber bridge noted on the records of the Kentucky division as bridge JP-245-1.

It was at this bridge that the mighty volume of water, reaching its maximum power, lapped and washed with an unceasing, resistless fury. The giant timbers of the bridge were strong and resisted all the efforts of the water to dislodge them, but in the soft dirt of the filled embankment behind the bulkheads the mighty pressure of the water was slowly undermining the track. When the first faint rays of the early dawn filtered through the clouds that overhung the valley the work of destruction had been accomplished, and in the dirt embankment there now appeared an ever-

Grace Hinkle Young and her brothers

widening opening through which the released waters rushed madly to their work of further destruction in the valley below. Over this opening the heavy steel rails of the track hung suspended in midair. The weight of the first train would cause them to collapse and fall into the swirling, turbulent waters of the creek below.

Thus the stage was set for the disaster that now seemed inevitable. Death, Sorrow and Destruction stood in the wings off stage, awaiting the cue that would bring them into this drama of real life. Their entrance was to be timed with the downward plunge of a heavy train into that awful chasm. But it was not thus to be. God, who works in a mysterious way his wonders to perform and who sometimes

Bridge where wash-out occurred

Home of Grace Hinkle Young

acts in a way that surpasses our feeble understanding, chose at that moment to intervene through the medium of a little 5-year-old girl.

In a little cabin on top of a slight elevation overlooking the railroad, little Grace Hinkle Young opened her eyes at the first rays of dawn and looked out upon a vast sea of water. The waters of Humphrey's Creek, by now out of its banks, had spread out and covered the surrounding lowlands. Everywhere, as far as the eye could see, was water.

To little Grace the railroad had been a great mystery. It was one of her pleasures to sit at the window of the little cabin and watch the long trains rushing cityward over the two bands of shining steel. Sometimes she waved her little hand at the figures she saw on the moving trains, and sometimes they waved in return.

Now, as she looked toward the railroad, she was filled with alarm. There was no railroad to be seen. It had mysteriously vanished during the night. Whether it was the wonderment of this or her intuition that told her that something was wrong, no one knows. Anyway, Grace decided that somebody should be notified about the matter. So, slipping out of the house in her little bare feet, she rushed through the puddles of water toward the barn, where her father was feeding the stock. Arriving there she breathlessly exclaimed: "Oh, Daddy! Look! The railroad is gone!"

George Young is a man of action. As he looked he saw the great hole that had been washed in the embankment, and he realized the danger. Even as he looked he heard the long, far-off whistle of an approaching train. There was only one thing to do. That was to stop the train before it reached the wash-out.

To get to the railroad it was necessary to cross the creek, but George Young did not hesitate. Through the rushing waters of the swollen creek he swam, and he climbed the steep embankment on the other side. Once on top of the fill he ran toward the approaching train, waving his hat as he ran.

Work extra No. 1691, in charge of Conductor Jerry Corbett and Engineer Reese Engle, had left Paducah before daylight in order to arrive at East Cairo in time to begin work at 11 o'clock. The train was slowly making its way up the steep grade of Kevil hill. Soon it would reach the top of the grade and drop over into the La Center valley. The Kentucky sun rose slowly out of the hills behind them, casting the shadow of the long train in a fantastic figure on the track ahead. The train reached the top of the grade and slowly gathered momentum as it rushed swiftly down the other side of the hill into the valley.

Engineer Engle, with one hand on the throttle, reached over his head and turned off the electric headlight. In the dim light of the mist ahead he slowly made out the figure of a man running on the track toward the train and waving his hat frantically. Quickly he applied the automatic air, and the heavy train came to a grinding stop within a few scant feet of the yawning hole in the track ahead.

When the members of the train crew realized that they had been saved from the awful fate that awaited them, they were profuse in their expressions of thankfulness; but George Young, as modest as he was brave, said: "Do not thank me. You were saved only through the mercy of God and the act of my little girl." When the embankment had been repaired, the train proceeded on its way, and George Young returned to his home and to his little daughter, thinking that was the end of the incident.

But the men of the railroad had not forgotten, nor were they ungrateful. Several days later a special train stopped opposite the little cabin home of Grace Hinkle Young, and several men alighted and made their way to the house. It was an unusual thing for a train to stop on this part of the railroad, and Mr. Young, who was working in the field, ran to the house. As he arrived he was just in time to see the spokesman of the men presenting little Grace with a gold wrist watch and \$50 in gold.

Where embankment was washed away at the bridge—hole now filled with earth, gravel and rip-rap.

Urges Employes to Cultivate the Public

*E. T. Howson of Railway Age Compliments Illinois
Central at Dinner of Its American Legion Post*

“**C**ARRY the story of the railroads to the public,” E. T. Howson of the editorial staff of the *Railway Age* told the members of Illinois Central Post No. 241 of the American Legion in an after-dinner talk May 4 in the dining room of Central Station at Chicago. “You men are in a position either to know the facts about the railway situation or to know where to go to get the information,” he continued. “Any time you hear someone take a shot at the railroads, it is your duty, not only to the Illinois Central System, but to the railroads in general, to correct any misstatement that is made. That, to my mind, is the only way that the greatly needed sound public opinion regarding the railroads can be formed.”

Mr. Howson paid a high tribute to the Illinois Central System and to its employes.

“An organization like the Illinois Central Post of the American Legion that draws together men from the various departments is sure to result in better co-operation among the employes. It is this spirit that makes the Illinois Central System one of the foremost railroads of today,” he said.

“You can see this wonderful loyalty to the company all over the Illinois Central System. I have noticed that every man

connected with the Illinois Central System with whom I have come into contact has been chock-full of praise for the superiority of the Illinois Central System and the service it renders. And it's not an effort for them to do this. They believe in their railroad.”

As an illustration of the spirit of co-operation among the employes of the Illinois Central System, Mr. Howson told of a friend who was visiting various offices in Central Station at Chicago soon after the publication of the “Public Relations” booklet. In five different offices this booklet was offered to Mr. Howson's friend with the suggestion that he take it along, look it over and see what the Illinois Central System was doing.

“That incident impressed my friend,” Mr. Howson said, “and I'm sure that it made a life-long friend of him for the Illinois Central System.”

Colonel W. G. Arn, assistant chief engineer of the Chicago Terminal Improvement, shared honors with Mr. Howson on the speaking program. He reviewed the purposes and ideals of the American Legion organization and told of the great good that it was accomplishing. He classed it as one of the most important organizations in the country.

C. M. Said, secretary and press representative of the Illinois Central All-Star

Dinner of Illinois Central Post, American Legion

Baseball Club at Chicago, announced that the team that afternoon had won its first practice game of the season, 6 to 2, from the B. & O. team. Mr. Said also announced that a game would be played July 4 with an American Legion baseball team at Kankakee. The proceeds will be turned over to the Illinois Central Post No. 241. Arrangements are being made with C. M. Starke, master mechanic at Paducah, to have the Illinois Central band from the shops there furnish music at this game. It is hoped to make the affair truly an "All-Illinois Central" outing.

F. K. McCarty, commander of the post, set September 1 as the date for a system field meet to be held under the auspices of

the Illinois Central Post. Both men and women are to participate.

About fifty persons attended the dinner and meeting. A copy of the national constitution and by-laws of the American Legion was at each place, as well as a pamphlet entitled, "Why I Should Join the American Legion." The menu consisted of fruit cocktail, consomme, celery, radishes, olives, baked Delaware shad, tenderloin steak, new potatoes, cauliflower, tomato salad, strawberry shortcake, ice cream and coffee.

Committees of the post have been named as follows: memorial tablet, R. A. Trovillion, J. M. Dorsey and H. J. Deaney; athletic, V. W. Oie, W. E. Noceto and B. B. Crutchfield; social, F. Lang, L. Kiernan and A. Walter.

A New Way to Heed the Call of Spring

The following article, "The Call of Spring," written by L. A. Lawrence, clerk to Supervisor T. J. Flynn of Palestine, Ill., appeared in the Palestine Register of April 15, a day or so after three stowaways (girls ranging from 15 to 19 years old) were found in a coal car in the yards.

In the olden times it was deemed quite proper for youth to heed the siren call of Spring and, clad in gleaming armor and mounted on a snow-white charger, fare forth into the world to seek Romance and Adventure.

In these humdrum days of delicatessen stores and steam laundries, the casual observer mourns the death of Adventure with all her mystic glamor; but, inspired with hope, she still exists. For proof beyond doubt, let these few facts be presented.

Three venturesome maidens, having become bored with the quiet, uneventful life of the neighboring town of Linton and feeling with quickened pulses the eternal call of Spring, embarked on the smiling sea of Adventure by clambering aboard a coal car partly loaded with crushed stone, A No. 1, and, giving the helm of their prosaic ship of dreams into the firm hand of Destiny, waited with expectant hearts to see what Romance held in store for them.

It is the highest pinnacle of golden optimism to select such a steed in quest of Adventure as a swaying, jerking, groaning, coal car upholstered with crushed stone with forbidding, jagged corners. Yet where would our old world be without the rosy tinted spectacles of Youth? These damsels saw nothing before them but Romance, beckoning them with welcoming fingers, and what cared they for trifling inconveniences? But to return to the story.

After they had grown accustomed to

their strange craft with its inhospitable cargo, an agent of Destiny in the form of an Illinois Central freight train appeared upon the scene and, little suspecting the part it was playing, proceeded to take their ship in tow. The whole world lay before them, ready to be conquered.

The train pursued a westerly course along the gentle rolling landscape of southwestern Indiana; but, strange to relate, each familiar landmark had been clothed with a brighter radiance by the magic wand of Adventure, and it seemed as if they were already in a strange world much more beautiful than that to which they had been accustomed. Night had long since fallen, but the soft Spring moon touched everything in sight with the splendor of her fairy moonbeams and filled the sleeping world with glory; yet she painted the landscape with silver-tipped brushes in vain, for the seekers of Romance had drifted to the Isle of Dreams.

On through the sable shadows rumbled their strange craft, until at last, after many halts and fresh startings, it swung into an unfamiliar harbor and anchored in the chilly quietness of Palestine yards. Yet the weary voyagers awoke not from the slumbers until the bustle of a busy world shattered all the roseate air-castles which they built with so much care in that land where those who visit fain would stay.

There, in the Palestine yards, the stowaways were discovered, and their dream of fame and fortune ended, scarce having begun. Firmly believing that Adventure and Romance are only waiting to be searched for, the errant maidens returned homeward not at all convinced that this disappointment completed their quests for those twin goddesses.

Engineer Is Collector of Filipino Curios

*Albert Livingston of Waterloo, Iowa, Recipient of
Many Gifts From Daughter Who Lived in Orient*

ALBERT ("MOSE") LIVINGSTON of 114 South Barclay Street, Waterloo, Iowa, was born in Indiana and has lived in Iowa for the last forty-five years, but he has what is undoubtedly one of the finest private collections of Filipino curios to be found in this country. Mr. Livingston, who is now an Illinois Central engineer in yard service at Waterloo, Iowa, has been in our service more than thirty-six years; he has had little time for touring in this country, to say nothing of the Far East, and so he has had to do his souvenir-gathering by proxy.

That proxy is his daughter, Iris, now Mrs. A. D. Wise, who saw three years of teaching service in the Philippines and who is now farming with her husband near Wichita, Kan. Mrs. Wise is a graduate of the Iowa State Teachers' College at Cedar Falls, and Mr. Wise is a graduate of the Kansas State Agricultural College at Manhattan. Mr. Wise had spent five years in the Philippines teaching agriculture prior to his marriage to Miss Livingston in 1918. Miss Livingston herself had spent three years on the faculty of the Iowa State Teachers' College and had been government home demonstration agent at Wichita, Kan., in 1917.

Mr. and Mrs. Albert Livingston

With this equipment of teaching experience Mr. and Mrs. Wise responded to the call for teachers in the Philippines shortly after their marriage. For three years they taught together in a trade school, Mr. Wise as principal and Mrs. Wise as teacher of home economics and English. In the course of this time, the daughter of Mr. and Mrs. Livingston became thoroughly acquainted with the natives she taught; she studied and observed carefully the odd things in the Islands of interest to most visiting Ameri-

Some of Mr. and Mrs. Livingston's Filipino curios

Mrs. Wise in three poses. At the left, in a Balintawak costume, black apron draped over a pale blue skirt, scarf of blue and yellow silk. In center, in American dress, photograph taken in front of the high school. At the right, as an Igorrote girl; this dress is made of bright-colored cloth of rather thin material. The bamboo stick she is holding is the "music stick" referred to in the accompanying article.

cans and, of course, she dutifully sent her parents almost as many curios as she collected for herself. And that is how "Mose" Livingston, Illinois Central veteran engineer, came to be a collector of Filipino souvenirs.

Mr. and Mrs. Wise returned to this country May 14, 1922, and are now practicing in Kansas what they preached in the Philippines.

Among the articles from the Philippines treasured by Mr. and Mrs. Livingston are the following:

A silver-headed, finely carved cane of black wood, similar to ebony, the head made of old Spanish coins carved to show scenes in the Philippines, and the shaft bearing Mr. Livingston's initials and the name of the islands.

A Negrito bow and arrow, the bow six feet long and requiring the use of the feet in shooting, the arrow three feet long of bamboo, iron-tipped and with feathers.

A nut bowl and mallet, made in the trade school by pupils of Mr. Wise, the material used being a naturally red wood similar to that used in finishing the finer houses in Manila.

Several baskets of exquisite workmanship, made by the natives.

A native woven rain hat, flat, round and waterproof.

Betel nuts—nuts about the size of a hickory nut, enclosed in soft fiber coverings; these nuts are chewed by the natives to make their teeth red.

A clay stove.

An Igorrote gee-string (which, with a hat and a spear, makes up the costume of these former head-hunters)—a ribbon of cloth about three yards long and a foot

Igorrotes in the Mountain Province.

wide; his particular sample was hand woven at the Easter School at Baguio.

A small woven Igorrote hat to accompany the gee-string; this hat is made to be worn on the back of the head. Mr. Livingston's has boar's tusks and buttons on the side as decorations.

Two money bags with brass handles.

An olive fork made of old silver coins, the carving at the top showing a native with spear, shield, gee-string and hat.

A small hand-ax used by the Igorrotes.

A hand-carved wooden spoon, showing the Madonna and Child.

A doll dressed in Filipino costume.

A quilt of blue and white stripes, made on a hand loom, the widths sewed together about every twenty inches.

A native pipe, bought by Mrs. Wise from a man who was using it; the cleaner, which is attached to the pipe by a chain, was put through a hole in the lobe of the smoker's ear when not in use.

A Filipino girl's dress of bright reds and yellows, about the size of a small rug, to be worn wrapped about the body.

A cane made from the tail of a stingaree fish; this cane is about two feet long and has a Spanish silver top. It was sent to

The old and the new in travel in the Philippines. Being ferried over the Abra River on a balsa. The ox attached to the cart had been taken off the raft before the picture was snapped.

Bamboo band serenading at Christmas. There is a candle in the lantern at night. Notice the sizes of the bamboo reeds. The boy on the right is playing a triangle.

Mr. Livingston in a special bamboo case woven by Mrs. Wise's cook.

A split bamboo "music stick"; this stick makes a musical sound when struck, and Mrs. Wise wrote that the Igorrotes used it

Market place in Baguio, where dogs are sold every Sunday. On the hill, indicated by the cross, is Mirador, a Jesuit conservatory.

The teachers' camp in the mountains in the summer, dining hall on the left and social hall on the right.

to beat against the wrists to drive evil spirits away and to lighten burdens.

A palm-leaf rain coat (shown in the foreground of the accompanying picture of the curios) to be tied around the neck in connection with the rain hat mentioned above.

A small hand-carved wooden bowl.

A cigar ten inches long, of a type in common use in the Islands.

A woven cigarette case.

Mango seeds.

Hand-made combs of split bamboo.

Beads carved from cocoanut shells.

A child's slippers, red, with carabao leather soles.

Some samples of coral, hard and soft; of thin shells, used in place of window glass; of native ear-rings and buttons; of Filipino drawn-work; of finely carved toothpicks, one with an end fashioned to represent a peacock's tail.

Mrs. Wise also picked up for her parents

some slippers and chopsticks in Japan, and some fine needle-work in China. These she obtained while on her way to and from the Islands.

Life in the Philippines was particularly enjoyable to Mrs. Wise in April and May, the hottest months, when the teachers' institutes were held at a camp in the mountains near the summer capital. Mr. and Mrs. Wise ordinarily lived in a wooden house with windows of thin shells, closed only in the rainy season or at times of hard wind. This was at San Fernando, on the China Sea. They had a house boy—at least, he looked like a boy—who was about 30 years old and who had several children. They bought their household supplies every day and used them as fast as they got them. Mrs. Wise found the roads of crushed coral in the Islands better than those in Iowa.

Mr. Livingston himself has been a collector of some note in other lines. For

Camp John Hay in the Mountain Province

about forty years he has been gathering up foreign coins, ores, stones, Indian relics and the like, until now he has a collection of curios in these lines that stands comparison well with his collection of Filipino things.

Mr. Livingston was born in Indiana and came to Iowa in 1878. He fired for the Illinois Central at Waterloo from 1883 to 1886. In 1884 he was married to Miss Estella Streeter at Plainfield, Iowa. Their only child is Mrs. Wise. October 15, 1889, Mr. Livingston began his present continuous service with the Illinois Central. He was made an engineer in 1897 and handled trains Nos. 12 and 15 in passenger service between Waterloo and Fort Dodge, Iowa, until something more than a year ago, when his health broke down. He was

Mr. and Mrs. Wise's cook, Eusebio, returning from market with the day's provisions.

Coaling the liner Shinyo Maru at Nagasaki, Japan.

Thirty-eight

in the hospital for a time. He is now occupied in day switching work, which gives him short hours and allows him to be home nights.

TEACHES TRANSPORTATION

Wayne E. Butterbaugh, associate professor of transportation of Syracuse University, formerly an Illinois Central employe, has been appointed director of education of the department of traffic management of La Salle Extension University, Chicago, according to an announcement by William Bethke, education director of that university. Mr. Butterbaugh joined the La Salle faculty staff May 1.

Mr. Butterbaugh is a practical railway man, having received his experience with the Illinois Central, Northern Pacific, Southern Pacific, Canadian Pacific, and Pere Marquette railroads. He attended the University of Wisconsin and is a graduate of the Wharton School of Finance, University of Pennsylvania, where he studied with Dean Emory R. Johnson, Dr. G. G. Huebner, Dr. T. W. Van Metre, and other nationally recognized authorities on transportation. During the war he was with the United States Shipping Board and Emergency Fleet Corporation, and later with the Adjutant General's department.

W. E. Butterbaugh

La Salle Extension University reports that about one thousand employes of the Illinois Central System are enrolled in that institution for special study in traffic management, interstate commerce, station management, law, business administration and other courses.

A CURE FOR DISCONTENT

There are two kinds of discontent in the world: the discontent that works, and the discontent that wrings its hands. The first gets what it wants, and the second loses what it has. There's no cure for the first but success; and there's no cure at all for the second.—GORDON GRAHAM.

'Tis a wise man who remarked that the smartest fellow is not the one who is quickest to see through a thing, but the fellow who is quickest to see a thing through—*The Night Watchman*.

Illinois Central Magazine

Firm With a 75-Year History on Our Lines

*Gullett Gin Company, Gulletts, La., Located
on Present Site in 1869, Has a Modern Plant*

SIXTY-SEVEN miles north of New Orleans, at Gulletts, La., on the Louisiana division of the Illinois Central, stands the plant of the Gullett Gin Company, a landmark in Southern industries. The business was originally founded at Aberdeen, Miss., by Benjamin David Gullett, who came from New England. This was probably as early as 1848 or 1849. One account shows that the Gullett cotton gin was being sold in Texas from wagons as early as 1849, and it is probable that the first machine bearing the name was manufactured a few years prior to that date. On account of an abundance of lumber in the locality, Mr. Gullett located where the present factory now stands in 1869. The railway station there was named for him.

Mr. Gullett and his sons carried on the business until 1883. Mr. Gullett was more an inventor than a business man, and his affairs became so involved that a change in financing the concern became urgent. At that time A. Baldwin was one of the leading business men of New Orleans, one of the organizers of the New Orleans National Bank and the founder of the hardware firm of A. Baldwin & Company. Through this hardware firm Mr. Gullett met its founder and shortly afterward disposed of his interest in the gin manufacturing to Mr. Baldwin, who proceeded at once to organize a new firm for carrying on the business.

Present Company Organized in 1883

Thus the Gullett Gin Company was organized July 11, 1883, and incorporated under the laws of Louisiana, Mr. Baldwin being its first president. The second president was John H. Hanna, who was also one of the original incorporators and for many years was so largely interested in the steamboat business at New Orleans. When Mr. Baldwin, Sr., retired from business, his

E. H. Bostick

son, A. Baldwin, Jr., became president of the Gullett Gin Company and took his father's place in the many other businesses in which he had been interested, among them the New Orleans National Bank. The Baldwins are still interested in the Gullett Gin Company, Gustav B. Baldwin, son of the company's first president, being vice-president.

E. H. Bostick is now president and general manager. He started with the Gullett Gin Company in 1886 in its accounting department and has been with it ever since. His long years of service in every department have made his experience valuable. He knows every detail of the work, both

View of warehouses, showing our track and our cars

The general office

manufacturing and sales. During the last quarter of a century there have been wonderful changes in the cotton ginning industry. The business has been entirely revolutionized from the sale of gins, feeders, condensers, later on single box presses and double box presses, then elevators, lint flues and many accessions which facilitate the handling of cotton at the gin. Mr. Bostick has worked along with all these changes.

Efficient Management Shown

The first superintendent of the Gullett Gin Company, the man in charge of the mechanical end of the work, was John E. King, a native of Columbus, Ga., who had there been associated with Israel Brown, who afterward founded the Brown Cotton Gin Company at New London, Conn. Mr. King left Columbus, Ga., and joined his old friend, Mr. Brown, at New London. Desiring to live again in the South, however, he joined forces with the Gullett Gin Company at its reorganization and remained with the firm until his death.

He was succeeded as superintendent by T. E. Johnston, who is in charge of the business today. For years Mr. Johnston was connected with Smith Sons & Company, Avondale, Ala., and afterward was with the Continental Company, after it took over the Smith works.

A. S. Cartwright, secretary of the enterprise, started with the company in 1903 in the Memphis office as stenographer, and since then has risen rapidly.

One of the first impressions made on the visitor to the Gullett Gin Company is the neatness and system with which everything is conducted. On the east side of the railroad stands the office building, a large,

2-story structure with plenty of room and light. Around it is a beautiful lawn, with shrubbery and flower pots to make the outlook a delight from every window. About this busy place there is no hurry. Everybody works, but in a quiet and systematic way, which is the keynote in the conduct of all the various departments.

South of the office the lumber yards are

G. B. Baldwin

The planing and framing shop

located, with all modern appliances for handling lumber, including a modern dry kiln and lumber drying sheds. These yards contain something like three million feet of lumber, ready or being made ready for use in the main woodworking shop across the way.

Across the Illinois Central tracks from the office and lumber yards the main factories, storage plants, etc., are located, covering some twenty acres. Admission is through the entrance lodge, where the employees' time is automatically recorded when they enter and leave each day.

In line with the entrance gate stands the power house, a model structure in which the latest equipment is installed for operating the departments and lighting the plant. Individual motors are used on the machines in the various buildings or connections are made by overhead shafting for economical use of power. A huge dust-collecting system brings to the boiler room for fuel all sawdust and shavings from the plants. Just outside is a water tower holding 135,000 gallons of water, supplied by artesian well pressure without the aid of pumps. The

well has a pressure of forty-five pounds to the square inch at the surface and flows 450 gallons a minute. The power house has two modern high pressure boilers, equipped with steel casings, pipes for feeding sawdust direct to the furnaces, duplicate sets of boiler feed-pumps and a suitable feed-water heater. In the engine room are three high-speed engines of the automatic type coupled directly to electrical generators. Here, too, is the switchboard from which electrical energy is distributed to the departments. A modern fire pump is part of this equipment, which insures adequate fire protection all over the plant.

Modern Machinery Handles Lumber

The woodworking department is one of the most interesting places in this vast network of industry. It is a marvel of light, space, order, system and efficiency. In common with all the other buildings of this big plant, the woodworking building is of one story, with no stairways and plenty of room. Into this building all lumber passes from the lumber yard and dry kiln.

The lumber is first dressed and then manufactured into all the sizes and shapes

Yard with 3,000,000 feet of lumber

needed in the business. Next it passes through the latest types of tenoning, mortising, sandpapering and other machines to prepare it for framing into the various types of machines made by the company. Further on in this building the framing of gins is found under way, as is also the department known as the breasting department, where the ribs are fitted to these machines. At the north end of the building saw blocks are manufactured on special machines, and interchangeable saw cylinders are set up and trained to the company's standard gauge. In this end also brush sticks are made on automatic machines, and the entire process of brush making is carried on. Building and balancing a modern high-class gin brush is an item of much interest.

In the erecting shop, next at hand, gins, feeders, condensers and elevators are built and prepared for the finishing department. Near by is the sheet metal department, where lint and dust flues, rain proofs, steel pneumatic elevator chutes, elevator piping and elbows are made. Here, too, is the material building, in which the raw material is kept, and next is the paint and finishing shop, where the machines get their last touches. These departments form the north end of the factory proper and are in somewhat the shape of a large letter "H," with the material building attached to the cross bar of the letter. The departments

can be closed from one another by fireproof doors.

Well Equipped for Machine Work

Near by are the machine shops, in a fine building well equipped with the latest and best equipment which money can buy.

In the saw corner the gin saw is made that has done much toward making the Gullett reputation for "fine sample." Saws are cut out from the finest English crucible steel, and no detail of manufacture is overlooked that is necessary to insure a perfect saw. This is one of the most interesting departments of the plant.

Adjoining the machine shops on the south is a small but finely built and equipped forge shop. The bins adjacent to this shop for storage of unmachined castings are of concrete and form an excellent arrangement for the furtherance of an effective machine shop routine. Here, too, are splendid facilities for handling coke, pig iron and sand, also large core oven storage, tumbling and grinding rooms. In the foundry a moulding floor is found which for size, light and general excellent arrangement is not surpassed anywhere in the South.

Proceeding southward down the yards a bit and looking back, one is struck with the fine location of the company's iron departments and realizes how easily therefrom the lighter work is sent by industrial tracks up to the erecting shops and the heavier press parts south to the racks and plat-

Part of the woodworking machinery

Interior of the machine shop

forms adjoining the press building and warehouses.

Plant Builds Cotton Presses, Too

South of the foundry is built the press erecting shop. The cotton press shares importance with the cotton gin itself, but in its making heavy material is needed. This part of the plant has been well located, so as to save double handling of heavy parts entering into the making of cotton presses. All the large sills and press lumber are sent direct from the planing department over industrial tracks to this shop. Here the press parts are all assembled and passed finished to the warehouses adjoining. A visitor usually notes the fine platforms and concrete racks on which are carried such heavy parts as hydraulic rams, steam trampers, center columns, etc., so that they may be loaded directly in the cars without further handling.

The warehousing system of the Gullett Company is arranged with the same eye to economy and efficiency as are all the manufacturing departments. All manufactured goods are brought down to the receiving shed attached to the north end of warehouse No. 2 over the industrial tracks, either from the iron department at the front or from the finishing building and wood-working section in the rear.

One is immediately struck with the large size, light and ventilation of the two warehouses, each three hundred feet long by one hundred feet wide, with large covered plat-

forms in front and to the north. Here the company can carry a large stock of ginning machinery, ready for prompt movement. The loading facilities make it possible to load ten cars at one time without confusion and with expedition. There are no elevators, everything being on the car level.

Company Has Been Financially Sound

The outstanding idea of the Gullett Gin Company through its half century of business has been to produce not so much in volume as in character and quality. In building the new factory plant in 1915, during a lull in business, the company did not so much intend to increase the output of machines as to be equipped for making better machines. The firm's policy has been conservative.

The company has always been fortunate in having strong financial backing. Its first president, the elder Mr. Baldwin, was always a stalwart figure in New Orleans financial affairs. The younger Mr. Baldwin held the same high place in finance as his father. Mr. Hanna, at one time president, was a man of large wealth. This fact has always given the company ample capital to operate on. When the new plant was erected the entire expense was paid out of accumulated surplus, no debt being incurred.

In the selling end of the Gullett Gin Company, the same high efficiency is maintained as in all other departments. At present the company maintains three sales offices, each office in charge of a competent manager.

Defends Railroads in Letter to an Editor

*Instrumentman Robert F. Leeper Points Out
Errors in Statement Made by Church Paper*

ROBERT F. Leeper, instrumentman on the Markham Yard project at Homewood, Ill., recently defended the railroads from unjust criticism in a letter addressed to the editor of the *St. Louis Christian Advocate* commenting upon an editorial that had been published in the church paper. A copy of his letter reached President Markham, who wrote to Mr. Leeper expressing a wish that a good many of our employes would follow his example of helping to run down unjust criticism and put the railroads in the right light before the public.

Replying to a letter from the editor of the *Illinois Central Magazine*, Mr. Leeper writes that it was not his purpose to have his letter printed and that he does not desire any publicity for himself, but he adds that if his example will encourage other employes of the Illinois Central System to rise in defense of the railroads when they are unjustly attacked we have his permission to use it. The letter to the *Christian Advocate* follows, omitting salutation and signature:

"As a reader of your esteemed weekly for a number of years, I wish to protest, as politely as I may, against certain unfair statements regarding the railroads which have from time to time appeared in your editorial column.

Resents Attacks Upon the Railroads

"I am a subordinate employe in the engineering department of the Illinois Central whose employment and advancement depend largely upon the ability of this and other roads to make extensions and improvements that are so sorely needed, and I resent the attempt now being made by a group of labor leaders and 'progressive' legislators to discredit and cripple the nation's railway system.

"I refer at this time to a paragraph headed 'The Railroad Situation' which appeared on page 2 of your April 11 issue, wherein you repeat, at least by implication, statements you have made previously to the effect that, under the Transportation Act of 1920 now in effect, the government pays to the railroads a sum sufficient to raise their income to a level of 6 per cent upon an 'agreed' valuation of their properties.

"Although this statement is being widely circulated, by reading the Transportation Act you can easily ascertain that no such guaranty exists; the act merely instructs the Interstate Commerce Commis-

Robert F. Leeper

sion to fix rates such that the return of the roads as a whole will reach this level. However, this 6 per cent standard expired March 1, 1922, and the Commission has since fixed 5 $\frac{3}{4}$ per cent as a fair return. The value upon which the return is based is not an 'agreed' value, but the value determined by the Commission after an elaborate survey of the properties of the carriers. This valuation by a disinterested government bureau has, on the whole, failed to show the presence of any appreciable amount of 'water' in railway securities in the hands of the public, and the figures are still subject to revision upward.

No 6 Per Cent Return Realized

"Coming back to the 6 per cent return, the rates fixed by the Interstate Commerce Commission have never enabled the railroads to reach this level. In 1920 they incurred a deficit of 0.08 per cent, in 1921 they earned only 3.28 per cent, and in 1922 the figure was 4.14 per cent. (You may easily verify these figures by consulting the reports of the Interstate Commerce Commission.)

"Your statement that the efficiency of the railroads is below par because of the shopmen's strike will not bear investigation. The roads, with very few exceptions, are

now handling more traffic than ever before at this period of the year. During the week ending April 14, 1923, they loaded 946,759 cars of freight as compared with 700,165 during the corresponding week in 1922 (when there was no shopmen's strike), an increase of over 35 per cent, which speaks for itself."

Mr. Leeper is a native of Piedmont, Mo. He was graduated from the University of Arkansas in civil engineering in June, 1921,

whereupon he entered the service of the Illinois Central System as rodman at New Orleans. Prior to that time he had experience as rodman and draftsman with the American Bauxite Company, Bauxite, Ark., and in the valuation departments of the Missouri Pacific and Frisco railroads. January 2, 1922, he was transferred to Jackson, Miss., as rodman, and since February 28, 1922, he has been on the Markham Yard project at Homewood.

Two Popular Centralia, Ill., Employees Die

The Illinois Central System lost two valuable employees in the recent deaths of Conductor Van Smith and Engineer John G. Heyduck, both of Centralia, Ill. Both men were in service between Centralia and Cairo, and each had worked for the company for more than thirty years. Engineer

Van Smith

Heyduck had pulled the Panama Limited for a little more than three years.

Conductor Smith died April 23 at the Illinois Central Hospital in Chicago after an illness of two weeks. His last run was April 2 on No. 8 from Cairo to Centralia. He remained at his home in Centralia after that until April 17, when he was taken to the hospital in Chicago. Mrs. Smith accompanied him to Chicago and remained at his side until his death.

Mr. Smith entered the service of the company August 4, 1892, as a brakeman between Centralia and Mounds. He became a freight conductor November 18, 1894, and was promoted to passenger conductor in 1906.

Mr. Smith had been a church worker since his boyhood. At the time of his death he was a member of the official board of the Methodist Church at Centralia.

Three children and his widow survive. The children are: Miss Ruby, who is a clerk in the yard office at Centralia; Harold, who was formerly employed in the shops there; and Raymond. All of the children are living at the home in Centralia.

Burial was April 26 at Centralia under the auspices of the Order of Railway Conductors.

Engineer Heyduck died May 7 at his home in Centralia after an illness of a little more than two weeks. He made his last run on No. 8 April 20. It was only the sec-

ond time he had made his run after the retirement of Conductor Smith.

Mr. Heyduck entered the service January 1, 1888, as a fireman, and after three years he became an engineer. For several years he was engineer on trains Nos. 73 and 54 between Cairo and Centralia. Then he was extra passenger engineer for a while. When William Hayes, former engineer on the Panama Limited between Centralia and Cairo, was pensioned in 1920, Mr. Heyduck was given that run.

He had always been a prominent church worker at Centralia. For a number of years he was on the board of governors of the Christian Church. He was a deacon and had been a trustee for four years.

Five children and his widow mourn his death. The children are: Lieutenant Lawrence E., who is stationed at Fort Hoyle, Md.; Dr. John C., who is a practicing dentist at Centralia; Ralph W.; Harold G., who is a bill clerk in the yard office at Centralia; and Miss Ruby M. The two older sons, Lawrence and John, are married, and the other children live at the family home. Two brothers, who were employes of the Illinois Central about twenty years ago, and a sister also survive: George Heyduck, a former engineer, is now living in North Yakima, Wash.; Albert Heyduck, a former conductor, resides in Centralia; and Mrs. Annie Meisenheimer lives in Centralia.

Burial was May 9 at Centralia under the joint auspices of the Knights Templar and the Brotherhood of Locomotive Engineers, of which he was a faithful member.

John G. Heyduck

Conductor Smith and Engineer Heyduck made frequent runs together on the Panama Limited. They had been closely associated for years and were the best of friends. Both men were held in the highest regard.

Mounds, Ill., Y. M. C. A. Is Haven for Sleep

*About 400 Employees Are Served Every Day,
Dormitory Facilities Being Crowded Steadily*

THE Illinois Central Railroad Y. M. C. A. at Mounds, Ill., is serving, in one form or another, an average of about four hundred of our employes every day. Many of the employes get their 8-hour rest at Mounds, and they say that they don't know what they would do if it were not for the Y. M. C. A. there.

Providing sleeping quarters for the men is the biggest problem confronting the association at Mounds. There are eighty-five beds, but few days pass when there are fewer than a hundred men there seeking a place to rest. There have been times when as many as three men got their rest on the same bed during a 24-hour period. As soon as one was called, the sheets were changed and the bed rented to another man. Every available space has a bed in it. It has been necessary to put two beds in rooms that ordinarily would hold only one. And still more beds are needed. J. C. Mench, general secretary, says that he could easily use 150 beds if he had the space to put them in.

Crowded for Sleeping Room

The rush on the Y. M. C. A. at Mounds for sleeping quarters started in March, 1922. At that time the assembly room was turned into a dormitory, but even that proved to be insufficient. Two old buffet cars were then parked at one end of the building, and additional beds were placed in them.

During August, 1922, 3,697 men slept at the Y. M. C. A. at Mounds. During the

J. C. Mench

same period 4,340 baths were taken there. August, 1922, was the busiest month in the history of the association at Mounds.

Since the assembly room has been used for sleeping quarters no social or religious

Forty-six
Illinois Central Magazine

Northwest corner of Mounds Y. M. C. A. building

meeting has been held in the building at Mounds. But that work has not, by any means, been dropped. There have been meetings with the churches, shop meetings and other meetings in co-operation with the company.

There is not space enough about the Y. M. C. A. building at Mounds for the outdoor activities that are offered by other Y. M. C. A. organizations on the system, but the association at Mounds has leased an 8½-acre plot of ground from the company for the benefit of its members. It is called the Illinois Central Railroad Y. M. C. A. Park, and lies just south of Mounds. This is the third summer for the park. There is a bandstand on which the Mounds band gives a concert once a week during the summer months. The park is open to the public on those occasions. Last year the merchants of Mounds subscribed to the support of the band.

Amusement Offered to Members

There are many good books by standard authors in the library of the Y. M. C. A. at Mounds. Some of them are technical, and some are late fiction. Most of the books are for entertainment. On the tables in the library and lobby are the latest magazines and newspapers.

The association keeps sets of dominoes, checkers and chessmen for its members, and they are kept busy most all the time. Mr. Mench says that he is contemplating the purchase of a small motion picture projector for outdoor evening entertainment this summer.

The 1922 report of the association at Mounds shows that 137,020 men used the building, 32,533 beds were provided, 37,776 baths were taken, and 976 books were drawn from the library. During the year

249 men attended the six meetings in the building, 403 men attended the nineteen shop meetings, 427 attended the two meetings held with churches, 395 attended the six meetings in co-operation with the company, and 350 men attended the two socials. There were forty-four visits to the sick made during the year.

The report for January, February, March and April of this year shows a total attendance of 46,545, with 6,969 baths, 216 books drawn from the library, 12,605 beds used and sixteen visits to the sick.

The membership of the Y. M. C. A. at Mounds averages about a thousand.

George E. Chance, chief telegraph oper-

G. E. Chance

ator at Mounds, is president of the Railroad Y. M. C. A. He was elected to this office October 12, 1915, and has done much toward building up the membership of the association. The board of directors include: O. C. Walker, recording secretary; Luther Hodge, treasurer; John W. Sawyer, S. A. Shifley, C. F. Melton and E. G. Britton.

Mr. Mench became the general secretary at Mounds October 3, 1910. He has been prominent in church and Sunday school work since he was 18 years old. His first Y. M. C. A. work was as temporary secretary of the Y. M. C. A. at Alton, Ill., during the vacation seasons of 1908 and 1909. K. A. Shumaker, state secretary of the Y. M. C. A., appointed him general secretary at Mounds. When he first reported there for duty, there were only twelve beds, three showers and three tubs. The membership was only 408.

U. S. Jenkins, night secretary, took that

Reading room of the Mounds Y. M. C. A.

position November 17, 1912. Fred Boger, associate secretary, entered Y. M. C. A. work at Mounds August 15, 1919. Goah C. Potts became an associate secretary at Mounds October 19, 1919. J. L. Mench, son of the general secretary, has grown up in the work with his father. In December, 1919, he was given a position as assistant secretary.

JOHN M. EGAN DIES

John M. Egan, brother of Colonel A. H. Egan, general superintendent of the Yazoo & Mississippi Valley Railroad at Memphis, and an uncle of J. M. Egan, formerly general superintendent of our Southern Lines and now with the car service division of the American Railway Association, died May 9 of heart disease while attending the graduation exercises of the rural schools at Dixon, Ill. Mr. Egan addressed the graduating class, and was stricken shortly after he returned to his seat on the platform. He was 75 years old. The *Illinois Central Magazine* for April made mention of the observance of Mr. and Mrs. John M. Egan's golden wedding anniversary January 20 at Amboy, Ill., and included a record of Mr. Egan's fifty-two years of railway activities that brought him into international prominence. Besides his widow, two daughters and three sons mourn his death. They are: Miss Josephine Egan of Amboy; Mrs. J. S. Stokes of Philadelphia; John M. Egan, civil engineer and contractor of Anderson, Ind.; Frank Egan, president of the Italian Commercial Corporation and president of the board of directors of the Lincoln Trust Company of New York, and Louis Egan, president of the Union Electric Light & Power Company of St. Louis and of the St. Louis Gas Company. Burial was in the family lot in a St. Paul, Minn., cemetery, according to the wishes of Mr. Egan.

The Sullivans and the Louisiana Division

Father and Son Have Held Posts as Section Foreman at Chatawa, Miss., Since Early Days

SULLIVAN is a family name which runs far back through the history of the Louisiana division of the Illinois Central System, back into the days when it was a part of the New Orleans, Jackson & Great Northern Railroad. For twenty-five years Patrick Sullivan, the father of three sons who also became Illinois Central men, was section foreman at Chatawa, Miss., and that work is now being carried on by the only living son, Michael J. Sullivan. With the exception of a short period of time, this father and son have been the only section foremen we have had at Chatawa.

The father, Patrick Sullivan, went to work for the New Orleans, Jackson & Great Northern Railroad as a section foreman in 1867. His first job was that of foreman in the old Government Yard at New Orleans, the maintenance of which he had in charge for two years. In 1869 he was transferred to Frenier, La., to take charge of the section there and act as general foreman over the stretch of track from Manchac to La Branch. After serving in several other assignments, he was sent to Chatawa as foreman, and he remained there, as before stated, for a quarter of a century.

When Mr. Sullivan had charge of the

Pat Sullivan

Frenier section it was a hard stretch of track to keep up. Thousands of cars of Chatawa gravel were unloaded, only to settle down and spread out as if the track foundation were a bottomless pit. In addition to his section work at Chatawa, he had charge of the gravel pit, where he loaded more than 100 cars of gravel a day. The loading was entirely by hand. He also furnished hundreds of cars of wood for the engines and the shops at McComb, for that was in the days when wood was used for fuel.

A story which Foreman Patrick Sullivan liked to tell until he gave up trying to get his listeners to believe it, ran like this: Some time in the early '70s a pine tree twenty inches in diameter was found lying across the track at Magnolia, Miss. An

Mike Sullivan and his house in Chatawa, Miss.

engine and a cut of sixteen cars ran over this tree without derailing a car; at the points where the wheels passed over the tree it was cut almost in two. Foreman Sullivan had charge of removing the tree from the track. He told the story for many years afterward and always insisted upon its truth, until one day when those who heard it burst into laughter, whereupon he declared that he would never tell the story again. And he never did.

James A. Sullivan

The eldest son was James A. Sullivan. When he was 15 years old, James went to work for the railroad as agent and operator at Chatawa, and from that position he rose through the ranks of the service to chief dispatcher on the Louisiana division. At one time he was superintendent of the Yazoo district, between Gwin and Jackson. He died in the service in 1890. Everyone connected with the transportation department held him in the highest esteem, and on the day of his funeral a special train carried the funeral party from McComb to Chatawa.

Major Sullivan

The second son, J. J. Sullivan, was a timber, wood and gravel contractor for the railroad. He was also a practical trackman. He died in the service of the company in 1917. His son, Major James Sullivan, is now signal maintainer at Canton, Miss.

The youngest son, Michael J. Sullivan, has worked in various branches of the transportation and maintenance departments, as telegrapher, station agent, pump-er and trackman.

If the man who is always telling what he would do if he were president would try to figure out what the president would do if he were he, the man would at least have the advantage of concentrating on his own problem, which, after all, is really the important thing for him.—*Exchange.*

TERMINAL ISSUES A BOOK

Superintendent A. M. Umshler's office at Chicago has issued a bound volume of information and statistics giving a synopsis of the operation of the Chicago terminal division for 1922. It is said that the Chicago terminal division is the only division in the entire system that has issued a complete book of this kind. The book consists of 140 hectographed pages, bound in imitation leather. The title, "Synopsis, Chicago Terminal Operation, 1922," is in gold letters on the cover. The book is being distributed among the officials and employees of the terminal.

The introduction is a concise history of the Chicago terminal. The information and statistics contained in the book have been divided into sections as follows: Freight, Passenger, Mechanical, Maintenance of Way, Chicago Freight Station, Miscellaneous Freight Stations and Miscellaneous Statistics. General remarks are at the beginning of each section. In addition to the outline of the operation of the terminal during 1922, the book contains statistics of operation during 1921, so that comparisons can be made.

A table of contents facilitates the finding of any desired information.

As stated in the preface, the purpose of the volume is to encourage efficiency, to give employees ready information for comparisons with current operation and assist in bringing about even a better performance on the Chicago terminal.

A similar volume was compiled last year by the Chicago Terminal division, but it contained only statistics and was not so complete as this year's book.

WRITE UP WATER SERVICE

Two trade magazines, *Railway Engineering and Maintenance* for May and the *Railway Age* for May 5, contain articles about the water service organization of the Illinois Central System. Both magazines give credit to the Illinois Central System for having probably the oldest water service department of any large railway system. The longer article, which was in the engineering and maintenance magazine, was written by David A. Steel.

The hen, we are told, enjoys a higher standing than the duck because she advertises her value to the community more. Likewise, she keeps on scratching, regardless of how much corn there is in sight. Here are two lessons which, now that we are struggling upward to prosperity again, we may well keep in mind.—BARRON COLLIER.

Overseas Service With the 29th Division

Employee Writes His Recollections of Happenings in France Just Five Short Years Ago

By T. L. WIGINGTON,

B. & B. Department, Vicksburg Division

MANY of the peace-loving people of the country have already put the dim lights on the happenings, hardships and horrors of the late world war, and it remains only for the historian to make a few strokes with his pen; then we will call it history. There will be one class, however, which will not forget so easily—the boys who took a part in the fray. The lads who fought beneath the shadows of the big guns and held the line when things looked gloomy have gone through an assortment of experiences which come only once in a lifetime.

I cannot help but feel that an all-wise Providence had a hand in bringing me safely over some of my war experiences, as I saw actual service with the 29th Division on the front near the Swiss border, the Argonne Forest, at Metz, Verdun, the Malleville Woods and the Bois de Consenvoye.

We first went into the trenches near Belfort. The area into which we moved was a so-called "quiet" sector at the southeastern end of the long battle-line which stretched from Switzerland to the North Sea. It was this same line which had been penetrated by detachments of Uhlans in the early days of the war. In fact, units of our division were later stationed in the little village which, on the Sunday preceding the opening of the war, was first invaded by the Germans, where the first French soldiers were killed.

July 28, 1918, will be an unforgettable date in my mind, and I will ever recall my "hair raising" introduction and first experience of "no man's land." I was with a scout platoon and was one of the first twelve to go over the top in a raiding party, all of whom returned alive, with one wounded.

Shelled While in Training

After leaving the trenches near Belfort, we were located at Montreux Chateau for a rest and training. Some of us assembled in the cellars, where most of the French civilians congregated, although there were others who stayed in the open fields. Just after midnight of Friday, September 13, a terrific bombardment by long range guns was begun, in the course of which the enemy made a direct hit in the center of one of the barracks occupied by part of my company. Seven men of the company were

T. L. Wigington

instantly killed, and fifty-four were injured, thirty of whom had to be taken to a hospital in the rear of the camp. Other companies also suffered heavily. It was the first time Montreux Chateau had ever been shelled by artillery, and consequently a shadow of gloom and despair was cast over the inhabitants, for they well knew the fate of their less fortunate neighbors in other towns. It was thought that the shelling came from Altkirch, a stronghold of the enemy about twelve kilometers distant. General Upton, after having viewed the wreckage, spoke with grave determination, assuring us that an opportunity would come to give the Boche hell, which we did in due time, with full measure.

Our next move was to the west, in and around Verdun. The citadel proper, in which the memorable conference was held, has forty-five labyrinths cut into the very summit of the hill on which Verdun is situated; it consists of a multitude of case-ments or underground chambers several stories in height, affording accommodations

for a very considerable number of troops and a large supply of ammunition. Its strength is amply demonstrated by the fact that it was not injured even during the fury of the German attack in 1918. When practically the whole city was destroyed, the huge walls of earth and stone resisted the heaviest German shells.

Germans Prepared for Attack

It is sometimes claimed that our attack of October 8, east of the Meuse, was a surprise attack. This is not entirely true. It was as much a surprise as was possible in a sector occupying the central part of a great battle-line from which had been launched within so short a period both the St. Mihiel and the Meuse-Argonne operations. The Germans had but slight confidence in the Austro-Hungarian division on our front. On the night of October 4 and 5, they moved in the 228th division and 15th division, with the idea of placing the Austro-Hungarians behind natural obstacles and of putting in two good divisions on the vulnerable part of the front. They also relieved the 61st K. U. K. (Kaiserlich und Koenigen) with the 35th Fusiliers.

To say that "war is hell" is only admitting that Sherman was correct, and he covered every inch of the ground in that phrase. We boys did have a tough time, yet no one made complaints and all were in good spirits. A heavy bombardment had been raging almost all night, and our nerves were cramped with the tense waiting and suspense.

Suddenly the bombardment ceased and a strange silence ensued. Zero hour had arrived. "Up and at it! Let's go!" was shouted all down the line, while over the bank madly dashed the first and fourth platoons of my company, the second and third being held in reserve.

At 11 a. m., October 10, after a 30-minute barrage, we went over the top for the third time, with an attack against the northern edge of the Bois de Chimes and the Bois de Reine. We were meeting some very stubborn resistance in this sector from the enemy machine-gunners, who were pouring into our ranks a deadly fire. It took some courageous and daring work to clean out their nests, but in most cases the obstacles were battered by force from our path. This operation caused us heavy losses in both killed and wounded, but immediately we organized the position by connecting up our lines in shell holes, which when straightened held against counter-attacks.

Division Had Heavy Losses

The operation netted us 462 prisoners from the 102d Saxon regiment, eleven field-pieces, and three combat wagons filled with range finders and other technical instru-

ments. A summary of our losses from October 8 to October 30, compiled by our medical department, was as follows:

Killed in action	405
Died of wounds	61
Severely wounded	792
Slightly wounded	1,683
Gassed	1,663
Psycho	95
Sick and injured	869
Total	5,578

We received an order on November 10 relieving the 29th (better known as the Blue and Gray) Division from duty with the First Army, Fifth Corps, assigning us to the Second American army, which was developing and advancing in the direction of Metz. Field Order No. 27 was issued directing the movement of our division the following day to the vicinity of Dienlonard.

However, these orders were never executed, as the suspension of hostilities had been ordered for 11 a. m., November 11. Messengers were promptly dispatched recalling troops who had begun the advance march. It was great to think it was all over and that we would soon be home again. There were many tears of joy, mingled with the chorus of the song that was on everyone's lips—"Where Do We Go From Here?"

A summery scene. Superintendent H. J. Roth of the Indiana division and T. L. Connors, local chairman for the Brotherhood of Locomotive Engineers, Indianapolis-Effingham districts.

Why Our Railroad Keeps Up a Cemetery

So-Called "Soulless Corporation" Maintains in Good Condition Plot It Acquired on Right-of-Way

APPROXIMATELY half a mile south of a point called Jenkins Switch, on the Havana district of the Springfield division, there lies upon the south side of the Illinois Central Railroad Company's property a small cemetery. It is situated upon a small knoll entirely surrounded by a clump of large trees.

In the beginning, this cemetery was on ground owned by Anderson Bowles. It was a portion of his farm and seemingly a community cemetery, being known as the Bowles Cemetery.

At the time the railroad was built through that country, owing to topographical conditions it was necessary to request permission to pass through this cemetery. After obtaining permission to do this, the railway company prevailed upon the heirs of the persons buried there to move the bodies from that point to other cemeteries. Most of the bodies were moved and placed in cemeteries at Clinton, Kenney, and other points in the neighborhood. However, there was one neglected grave which lay directly in the path where the track was to be placed. Owing to the inability of the company to locate any heirs and the fact that the company did not desire to disturb the grave, it was necessary to lay the track at that point on an oblique curve in order to miss it. However, after considerable expense and time, the company located one of the heirs and prevailed upon him to remove the body, paying him \$500 for so doing. He removed the body from the grave; but, instead of placing it in some other cemetery, he placed it in a box and and buried it at the extreme south side of the right-of-way. This is the only grave in the cemetery at the present time without a headstone.

Railroad Now Maintains Cemetery

Little or no care was taken of the ceme-

Taking care of the cemetery. Our track in background

The Bowles cemetery

tery by relatives of the persons buried there for a number of years after the railroad ran through it, and it got into a dilapidated condition.

The Illinois Central Railroad Company, however, has for a number of years maintained this cemetery at its own expense, raising the headstones, placing stones around each grave, keeping the grass mowed, and whitewashing the trees, headstones and stones around each grave. Each year prior to Decoration Day, Division Gardener Noah McMahon places flowers and plants upon each grave. He takes care of them throughout the summer, mowing the grass, trimming the trees and keeping the cemetery in first-class condition, being assisted in his endeavors by Road Supervisor M. Doyle and his section foremen.

Inscriptions Date Back to 1816

Extensive maintenance of this plot was begun at the beginning of G. E. Patterson's administration as superintendent of the Springfield division, his plans being followed out later by J. W. Hevron and C. W. Shaw. Superintendent Shaw takes a personal interest in his efforts to see that this cemetery is kept in first-class condition, making frequent trips, in company with Mr. McMahon and Mr. Doyle, to make an inspection of it and to see what further improvement can be made.

Division Gardener McMahon and Road Supervisor Doyle take a personal interest in their work and pride themselves on the condition the cemetery is in at the present time and has been in for some years past.

Although age-worn to some extent, the headstones can be read by diligent effort, and the inscriptions are as follows:

"Lewis Martin, died December 31, 1816, aged about 60 years."

"Mary, wife of Lewis Martin, died November 25, 1817, aged about 62 years."

"Thomas Beavin, born October 15, 1798,

died October 29, 1847, aged 49 years 14 days."

"Nancy J., wife of Thomas Beavin, born August 1, 1799, died March 22, 1845, aged 45 years 7 months 18 days."

"William M., son of Thomas and Nancy Beavin, born August 31, 1834, died January 26, 1837, aged 2 years 4 months 26 days."

"Here lies Rachael Ely, wife of Solomon Ely, died January 21, 1847, aged 46 years 11 months 10 days."

"Abimelech C., son of S. and R. Ely, died March 22, 1839, aged 23 months 12 days."

"Infant son of S. and R. Ely, still born." One bearing no marker.

"Mary, wife of S. A. Troxel, died August 30, 1858, aged 37 years 3 months 14 days."

With the exception of the latter head-

stone, all of them are similar in character, being flat stones with plain inscriptions. The last mentioned seems to have been erected at a date considerably later than the others.

In an endeavor to obtain a complete history of the cemetery, Superintendent Shaw has put forth diligent and strenuous effort trying to locate anyone who had the remotest acquaintance with incidents relative to this cemetery or the persons buried therein. Records of the courthouse at Clinton have been searched; numerous letters and communications have been sent out following up every clew advanced, some of these letters going to the far end of the country; however, it was of no avail, as very little information can be obtained.

The attitude of the railroad, through its officers, in the care of this cemetery seems to remove the idea that corporations are soulless.

She Entertains Banquets in Spare Time

An Illinois Central employe with an unusual sideline occupation is Miss Genevieve Andrews, who spends her days typing in and "pepping" up the local treasurer's office at Chicago, and who spends her evenings exhibiting her talent as a piano monologist at Chicago's many banquets.

Miss Andrews, who is a native of Mattoon, Ill., took a gold medal in piano at St. Mary-of-the-Woods College, Terre Haute, Ind., and also studied at Chicago Musical College under Rudolph Reuter and Walton Pyre. She has had considerable road experience as an entertainer. She traveled her first two years with a concert company consisting of a Chicago Grand Opera soprano, a Welsh tenor, a Swiss violinist, and herself as solo pianist, accompanist and reader. On this tour she played mostly for lodges and churches.

The third year she traveled for the Radcliffe Chautauqua out of Washington, D. C. Her manager died and she returned to Chicago and took a temporary position with the Illinois Central, which became permanent when she received a contract to do banquet and convention work for private clubs and at loop hotels.

Miss Andrews has covered practically all the cities in the East, as far north as Bangor, Me., south to Miami, Fla., and New Orleans, and west to Kansas City, Mo., and Omaha, Neb. Her contracts were for forty weeks with one-night stands, excepting Sunday, so she covered a great deal of territory.

Last winter she appeared at the Edgewater Beach, Auditorium, La Salle, Sherman and Congress hotels, the Midway Club,

Miss Genevieve Andrews

the Hamilton Club, the City Club, and various other private clubs, as well as at a great many convention banquets at the hotels.

The man with brains, health and a willingness to work doesn't have to fret about "luck." Leave luck for the "lame ducks"—they need it.—WILL ROGERS.

Our System an Asset to Memphis' Growth

Line Through City Completed in 1896; Monthly Payroll for 4,100 Employees Now Exceeds \$500,000

By **WILLIAM GERBER**,
Memphis Terminal Editor

UP until 1889 the Illinois Central System was not operated through the city of Memphis. The nearest points touched by that railroad were Fulton, Ky., on the north a distance of 120 miles, and Grenada, Miss., on the south a distance of 100 miles. The main line at that time diverted its course from Fulton to Jackson, Tenn., then to Grenada, Miss., thence to New Orleans. Realizing that the geographical position of Memphis was such as to give possibilities of future expansion, the management of the Illinois Central System in 1889 purchased the Mississippi & Tennessee Railroad, from Grenada, Miss., to Memphis. The object was to operate a direct line from Chicago through Memphis to New Orleans. This idea came into being in 1896, when the Illinois Central System acquired the Chesapeake, Ohio & Southwestern Railroad into Memphis from Fulton, Ky., thereby opening a gateway through Memphis to the South.

At the time the Illinois Central came to Memphis the population of that city was approximately 90,000. There were few important industries. The city limits on the south at that time were Trigg Avenue, and the country south of Trigg Avenue consisted of woods and cotton patches.

The facilities at Memphis for the handling of railway business were crude. The north yard in existence at that time accommodated 575 cars. These were small cars of 30-ton capacity and 35-foot length. At a later date the Iowa Avenue yard was constructed, which was known in those days as the "farm". This yard had twenty-two tracks and would hold 990 cars. It was the impression at that time that the "farm" was as big a yard as any city could well

The Illinois Central at and near Memphis

hope for, and a common expression was that the "farm" would never be filled.

Early Traffic at Memphis Was Small

The master mechanic's office was located at the north yard and also a small repair shop and an eight-stall roundhouse of primitive pattern. Where the Memphis shops are now located there was a four-stall roundhouse. The LCL business was then conducted at Beale Street, at which point was located the freight depot, freight offices and team track. About sixty cars could be handled at the Beale Street

The Memphis waterfront

The heart of Memphis

freighthouse, and it was seldom that the tracks were filled. Very little perishable merchandise passed through Memphis in those days owing to inadequate facilities; icing of cars was accomplished by tying a rope around a cake of ice and pulling it to the top of cars to be thrown into the bunkers.

For some time after the Illinois Central came into Memphis, means were being perfected for the systematic handling of business and expansion of its service, to invite industrial expansion essential to the ultimate upbuilding of the city. Facilities and trackage were inadequate, and the company immediately began an elaborate program for the improvement of its property.

During 1905 the business of the Illinois Central System at Memphis increased enough to warrant the construction of what is now known as the Memphis & State Line Railroad. The purpose in view was to eliminate the traffic of freight trains over the crowded city streets, at that time unprotected by grade separations, as well as to invite the establishment of new industrial enterprises. The Memphis & State Line leaves the main line at Woodstock and continues its course through Leewood and Aulon to Nonconnah yards. All freight trains leaving or entering the city traverse the edge of the corporate limits and do not interfere with pedestrians and vehicle traffic in the city streets.

Coincident with the construction of the Memphis & State Line, the Illinois Central began the development of Nonconnah yard and the industrial tracks along what is now known as Railroad Avenue. Nonconnah yard today is one of the principal

classification yards on the Illinois Central System. Trains are operated into Nonconnah from north and south and classified at this yard, so that the through loading is handled to destination without switching. At present the yard has a capacity of 6,700 cars and is handling approximately 4,600 cars a day. This yard is equipped with the most modern mechanical facilities to be found anywhere in the United States. It has freight car repair shops capable of repairing 20,000 cars a month. The round-house and locomotive repair shops handle sixty engines a day. There is a modern icing plant with facilities for icing forty-four cars of perishable freight at a time. This plant has a manufacturing capacity of 150 tons of ice a day and storage capacity of 6,500 tons. At the south yards, located at McLemore Avenue, shop facilities are available for handling sixty-five engines

Grand Central Station, Memphis

a day in addition to those handled at Nonconnah.

In conjunction with these improvements the Illinois Central has vigorously promulgated the principles of safety. In the last fifteen years it has constructed at Memphis 3,822 feet of concrete viaducts and subways and 1,300 feet of overhead bridges. In the construction of the Horn Lake subway, which winds its way under the Nonconnah yard, and the erection of the McLemore Avenue viaduct over the south yard, the Illinois Central has given to the city of Memphis two features which safeguard the lives of the people. The Horn Lake subway gave safe ingress from the country districts into Memphis; the McLemore Avenue viaduct not only eliminated a dangerous hazard, but also connected the western and eastern sections of the city.

In the construction of trackage along Railroad Avenue bounded on the west by the Mississippi River, crossing the Yazoo & Mississippi Valley and Illinois Central tracks, and extending to within a short distance of the Memphis & State Line Railroad, the Illinois Central System has created one of the largest industrial centers in this section.

The inbound and outbound freighthouses at Memphis now accommodate 350 cars a day, and the average freight receipts a month are \$1,250,000.

New Station Built in 1914

In 1914 the Illinois Central System erected the magnificent eight-story Grand Central Station at the corner of Calhoun and Main streets. This building serves as a passenger station and railway office building.

Memphis has great industrial institutions employing thousands of persons. The population has increased to approximately 200,000, and instead of the few industries which existed in 1900 the city now has two hundred along the tracks of the Illinois Central System alone. The greatest increase in population has been in the section of the city south of Trigg Avenue traversed by the Illinois Central System.

The eight trunk line railroads entering the city employ about 8,300 persons. Of this number the Illinois Central employs 4,100, or almost 50 per cent. About 16,000 residents of Memphis receive a livelihood from this railroad in wages amounting to \$533,183 a month. The Illinois Central System pays annually to Memphis about \$1,300,000 for taxes and material and supplies purchased from local concerns.

Memphis has the largest gravity switching yard in the country at Nonconnah.

Memphis is the greatest inland cotton market in the world, handling about a million bales of cotton a year. It is the largest hardwood lumber market in the world, with a total output of a billion feet a year. It is the largest drug market in the South. It is the fifth largest grocery jobbing market in the United States.

Memphis possesses the largest cotton warehouse in the world, and it is situated beside the tracks of the Illinois Central. This city is the world's largest producer of cotton seed products. It is also the largest mule market in the South.

ENGINEERING STUDENT

William G. Blades, son of H. W. Blades, agent, Princeton, Ky., entered the College of Engineering, State University, Lexington, Ky., in 1919 at the age of 18, and he has worked for the Illinois Central with various engineering parties since that time between each school period. He was commissioned second lieutenant of the University Cadets in 1920. He is a member of the American Society of Civil Engineers, of which he was elected vice-president in 1921, and he also is a member of the American Association of Engineers and the Triangle Fraternity. He expects to complete his course in engineering in 1923.

Profit in Stock Feeding at Aurelia, Iowa

Community Ships Out About Eighty Cars a Month During Three Seasons of the Year

LIVESTOCK feeding is a big business at Aurelia, Iowa, a town of about 800 population on our line just east of Cherokee, Iowa. About eighty cars of stock are shipped out of there each month during late fall, winter and spring. In 1922 735 cars of fat hogs and cattle were loaded and sent to Chicago and Sioux City. The shipments so far this year indicate that even more cars will be shipped during 1923. Between January 1 and May 15 328 cars of livestock were shipped.

Hogs that have been raised within a radius of a dozen miles of Aurelia constitute the bulk of the shipments. Probably 70 per cent of the cars are loaded with hogs.

Most of the cattle shipped out of there are not raised in that neighborhood. The land about Aurelia is too valuable in other productive qualities for it to be turned into pasture for growing cattle. The farmers buy cattle that have been pastured in Nebraska, North Dakota and South Dakota, fatten them with the grain that the land has produced and then place them on the market. This system has proved to be most profitable for all the farmers concerned. The farmers of Nebraska, North Dakota and South Dakota find that they fare better by allowing their cattle to graze during the spring and summer and then selling them in the fall when the grass begins to give out. To hold to their cattle longer than that would mean the purchase of feed, and in the end their profits would not be large as they would have been if

Agent E. W. Hill

In the spring and summer the feeders full-grown cattle. After the cattle have about Aurelia concentrate their efforts on the production of grain. Then in the fall they go either to the market in Sioux City or to the fields in Nebraska, North Dakota and South Dakota, where they purchase cattle that have been on pasture all summer. Most of the farmers about Aurelia say that they get better results by feeding been fed from ninety days to six months, they are placed on the market.

Livestock Feeding Principal Business

Livestock feeding has been the principal business with the farmers about Aurelia as long as the older residents can remember. It used to be, they say, that there was never a bit of grain shipped out of Aurelia. It was all fed to cattle. More than twenty years ago the farmers there

the cattle had been sold from the pastures. On the other hand the farmers about Aurelia find that they obtain more returns from their grain if they feed it to cattle. The profits they make from the fattened cattle are much more than they would have been if they had sold their grain.

A general view of Aurelia, Iowa

Our station at Aurelia, Iowa

were feeding hundreds of cattle and hogs. Then there was a gradual slump until about eight or ten years ago, when the lowest level of shipments was reached. Since that time there has been a gradual increase, until now the business is getting back to where it was two decades ago. During 1922 140 cars of grain were shipped out of Aurelia. That is less than the number of cars of grain shipped out a few years previous. As the livestock shipments increase, the grain shipments decrease.

Handle Herds of Close to 100

Few farmers near Aurelia feed more than 100 cattle at a time, but there are many there who are feeding almost that number. Some of them are feeding from one to five carloads of cattle the year around. During the winter months, of course, they feed more than they do in the summer. Nearly every farmer in that neighborhood is feeding some livestock. As a rule the farmers feed hogs at the same

time that they are feeding cattle. The hogs prevent waste by eating the feed that the cattle are unable to pick up from the ground. In addition to this, the hogs are given just enough grain to keep them growing and in good health until they are about ready for the market. Then they are fattened as quickly as possible and shipped.

The success of the livestock feeding business at Aurelia has established for the farmers their a splendid standing with the banks. The shippers of good standing are able to borrow cash from the banks for the purchase of full-grown feeders because the bankers consider the business to be sound, with very slight risk. Almost in every case the farmer realizes a profit on his undertaking. During the recent trying times, the banks were hard pressed, but they were able to supply the needs of their patrons. As a result, Aurelia rapidly is climbing back to prosperity.

Feeding Steadily the Last Eight Years

A. C. Will is probably a typical shipper

Cattle on farm of A. C. Will, Aurelia, Iowa

of Aurelia. He feeds cattle the entire year. During the summer he feeds only about twenty cattle, and in the fall he increases the number to about one hundred. After he has fed them about ninety days, he watches the market and ships them to Chicago as soon as conditions are favorable. He then buys more cattle and starts feeding them. His feeding yards have had cattle in them continuously for eight years.

Each fall Mr. Will goes to Nebraska, North Dakota or South Dakota, where he buys Herefords, Shorthorns and other good grades of cattle that have been on the pastures. He prefers 3-year-olds, he says. When his cattle arrive at Aurelia, he turns them into his cornfield and lets them eat to their hearts' content. Later he puts them into his feeding yards and feeds them shelled corn, molasses feeds and clover hay.

Mr. Will makes all of his shipments to Chicago. A commission company receives the cattle there, pays the freight charges, places the cattle on the market, deducts a commission and returns the balance of the money received for the sale of the cattle to Mr. Will.

Our Agent There More Than 20 Years

Since October, 1922, Mr. Will has shipped twelve carloads of livestock from Aurelia. After each shipment, he has bought more cattle for feeding. Some of his purchases were made on the market at Sioux City. In February Mr. Will shipped two carloads of cattle that averaged 1,678 pounds per head. They were the heaviest cattle that had been shipped from Aurelia for a number of years, he says. They were loaded sixteen to the car, while the average loading is from eighteen to twenty. Mr. Will fed 20,000 bushels of corn and 1,000 bushels of oats to his livestock last winter. It required two men to do the feeding.

E. W. Hill, our agent at Aurelia, has been familiar with the livestock feeding in

The Aurelia Consolidated School

the neighborhood of Aurelia for more than twenty years. He became the agent there September 2, 1902. A short time after he began his duties as agent there, he says, the largest shipments of livestock in one day was made. Twenty-seven cars were loaded between 4 p. m. and 4 a. m., and he did all the billing and sealing by himself, he says. The temperature was 32 degrees below zero while he was working.

Mr. Hill entered the service of the Illinois Central in April, 1900, as agent at Matlock, Iowa, on the Sioux Falls district. Previous to that time he had been in railway work for a little more than ten years. He was transferred from Matlock to Aurelia and he has continued his service in the latter place.

THE MAN WHO WORKS

Remember, my son, you have to work. Whether you handle a pick or a pen, a wheelbarrow or a set of books, digging ditches or editing a paper, ringing an auction bell or writing funny things, you must work. If you look around you will see the men who are the most able to live the rest of their days without work are the men who work the hardest. Don't be afraid of killing yourself with overwork. It is beyond your power to do that on the sunny side of 30. They die sometimes, but it is because they quit at 6 p. m. and don't go home until 2 a. m. It's the internal that kills, my son. The work gives you an appetite for your meals; it lends solidity to your slumbers; it gives you a perfect and grateful appreciation of a holiday.

There are young men who do not work, but the world is not proud of them. It does not know their names even; it simply speaks of them as "old So-and-So's boy." Nobody likes them; the great busy world does not know they are there. So find out what you want to be and do, and take off your coat and make a dust in the world. The busier you are, the less harm you will be apt to get into, the sweeter will be your sleep, the brighter and happier your holidays, and the better satisfied will the world be with you.

—"BOB" BURDETTE.

Hogs on farm of A. C. Will, Aurelia, Iowa

Remembers Days Before Our Line Existed

*Villa Ridge, Ill., Resident Helped to Build
Railroad and Saw the First Train Pass By*

A. B. ROBERSON, one of the oldest and most respected citizens of Villa Ridge, Ill., on our line near Mounds, Ill., helped to clear the land and construct the original main line of the Illinois Central Railroad at that point. Mr. Roberson was 88 years old April 24. He has lived in and near Villa Ridge since he was 8 years old.

"Folks in our neighborhood gave no thought to railroads before 1850," Mr. Roberson says. "In fact, my father was probably the only one around there who had seen the cars, and had that privilege only once a few years before in North Carolina, where he lived before moving to Illinois.

"We didn't give the railroads a thought because, in the first place, we didn't believe that they would ever reach that far into the interior of the country and, in the second place, we didn't consider ourselves in need of rail transportation.

The Simple Life in Earlier Days

"Folks didn't live for profit in those days. Few produced very much more than was necessary for the comfort of the family. Nearly everyone did sell a little timber, corn and potatoes, but it was just enough to buy food during the times there were no crops.

"Each family made its own clothing and shoes. When a man killed a beef, he either tanned the hide himself or turned it over to a tanner in his neighborhood and received half of the leather. It was seldom that anything was bought from the outside of our neighborhood, and strangers with news and new ideas from other parts of the country were a rare thing. We lived in our own honest, humble and happy way, and were contented.

"Along about 1850, I believe it was, a body of surveyors stopped at the edge of our farm in Alexander County for the night. That county since has been divided, and the land now is in Pulaski County. We knew one of the men, Charlie Howell, and he told us that they were surveying a strip of land along the third principal meridian preparatory to building a railroad. It was to be known as the Illinois Central Railroad, he said.

"Charlie Howell was aflame with enthusiasm about the new project, and he spent much time in telling us of the wonders the new railroad would bring about. But we couldn't see that it would change our life in the least. In fact, the folks in those days

A. B. Roberson

were pretty slow to take up with new ideas. If a man came in with something new and made a success of it, then others would adopt his methods and work along the same lines. In describing the cars to us, Charlie said that they had some kind of horn on them that could be heard for miles. That was the interesting feature of the proposed railroad to us.

"Later we heard that construction on the railroad was to start, and several of us younger men looked up the man in charge to get a job. I was just about 18 years old then. My father had just died, and the support of the family rested upon my hands.

Couldn't Stand Up Under the Work

"Thomas Atherton had the contract for clearing a strip of land of its timber between where Villa Ridge and Pulaski now stand. He gave me a job at \$1 a day. That was mighty good pay then. We cut the timber with axes and burned most of it. The oak logs were saved to make ties for the railroad. There were no sawmills then, and consequently no demand for the rest of the timber.

"It took about three weeks to clear the land, and then we started filling in a grade

just about half way between the two stations. It was low, swampy land that was often overflowed; it required a fill of about four feet. All the dirt was hauled in wheelbarrows. It was summer time then, and the frequent rains made the work even more difficult. Thomas Roach had the contract for the grading.

"In about a month the grade in that section was completed, and then the laying of the ties and rails began. I got a job laying the ties, but I didn't stand up under the strenuous work very long. Two men were required to carry one of those heavy oak ties up the embankment and place it.

"Mr. Roach saw that I was just about burned out on the work and called me to him one day. 'Roberson,' he said, 'my horse got away last night and went wandering along toward the north. I wish you would go find him and bring him back to me.'

"To this day, I don't know whether or not that horse really did get away. I scoured the woods for two days and was unable to find him. Then I returned to the place where I had left work, and I found that all the work had been completed. I believed then, and still believe, that Mr. Roach sent me out so that I wouldn't break down completely. He gave me a check to cover all the time I was working and looking for

his horse. After that I went back to the farm.

Saw the First Train Go Through

"We were all anxious to see the first train go through, and it wasn't very many days before our curiosity was satisfied. I was working in the field when I heard a terrible rumbling noise. It was different from anything I had ever heard, and I hardly knew what to make of it at first. Then I heard what our friend Charlie Howell, the surveyor, had described as a horn. I was about a mile from the railway track, but I ran down with two or three other boys and got there in time to see the cars pass.

"When the neighbors learned that I had seen the first cars, they asked me how they looked and if they were painted. 'Fine as a clock,' I told them. And they were, too.

"I was anxious to have a ride on the new cars, and in a few days I planned a trip with some of the members of the family. We went to Centralia to visit an aunt.

"We didn't think that the railroad would change our lives in the least, but it has. It has turned things completely around, and it all has been for the better."

Mr. Roberson now has retired from an active business life, but he has a splendid little garden at his home in Villa Ridge that keeps his muscles pliable.

Faithful to Duty for More Than 40 Years

William F. Callies, flagman at the Lafayette Street crossing, Waterloo, Iowa, has worked continuously for the Illinois Central since 1882. His first work was as a laborer on what was then the Fort Dodge and Dubuque division. G. T. Morgan was the roadmaster then.

In 1883 Mr. Callies became an engine

caller. He continued in that service, first as night caller, then as day caller, for about twenty-five years. At that time, he says, the enginemen had to live within two miles of the roundhouse, and he had to walk on all of his calls. He carried a small book with him in which the man called had to enter his name and the time he was called.

Mr. Callies was placed at the Lafayette Street crossing as a flagman in 1908, and Pat O'Toole was made the flagman at the Sycamore Street crossing at the same time. In 1915 the company built a tower between Lafayette and Sycamore streets, and Mr. Callies was given the position as flagman and gate operator on those streets. He has continued in that position since.

Mr. Callies says that he has never had a vacation during his service and he has never been the cause of a serious accident.

When he first entered the service the passenger station at Waterloo was the building that is now used as the yard office. It is between Iowa and East 4th streets. At that time there were sixteen stalls in the old brick roundhouse. The turntable had to be pushed around by hand, and the engines were fired with wood and waste.

W. F. Callies and his headquarters

What Patrons Say of Our Service

No Blame on the Crossing Watchman

The following communication to the editor of the *Mayfield (Ky.) Messenger* was signed by Tudor G. Jones of Mayfield and was published in the *Messenger's* issue of April 17:

"As you stated in *The Messenger* Tuesday evening, I had a narrow escape from being run over by train No. 101 Monday night.

"So that blame will not be placed for this where it is not due, I would like to have you publish the fact that Billy Mac, the watchman at the crossing, was right on his job, waving the green light to stop me. I was thinking of something else, and somehow thought that this light meant come on, instead of stop, and did not realize that there was any danger until I saw the glare of the headlight of the train shining on the track.

"Please publish this letter, as I do not want people to think that any blame for this near accident should be placed on the crossing watchman."

Mr. Jones is manager of the Mayfield Planing Mills and a frequent patron of our railroad. "Billy Mac is right on the job," wrote J. Brooks Webb, clerk to supervisor W. Holt at Paducah, Ky., in sending in the clipping," and his good work saved the company a very bad accident, besides giving the public the very best service. If the traveling public would only 'watch the watchman' it would save lots of accidents."

Traveling Man Likes Service

Jerome E. Hayman, 1026 Hoe Avenue, Bronx, New York City, recently wrote as follows to C. B. Dugan, superintendent of dining service:

"This is just a line to express my appreciation for your service and good food.

"It is so seldom that a traveling man is made welcome and buys good wholesome food on trains or in dining rooms in general that when he does I think he should send a word of praise to those responsible.

"I think your organization should be complimented for having such an intelligent, efficient and courteous gentleman in charge. I am referring to Mr. I. Heilbronner and his force (car No. 3984, between New Orleans and Memphis).

"Please accept my best wishes for future good service."

An Appreciation from Denver, Colo.

Arthur H. Bosworth of Bosworth, Chanut & Company, Seventeenth and Califor-

nia streets, Denver, Colo, recently wrote as follows to B. O. Farling, passenger agent, Central Station, Chicago:

"Several days ago I received a letter from Mrs. Bosworth, in which she expressed the greatest appreciation of your courtesy to her when she caught the Floridan for Jacksonville. I am sure she would never think of traveling by any other road than the Illinois Central, if that road is available for her destination. It was very kind, indeed, to hold the train, and more than kind of you to take the trouble to go over to the Union Station and assist her to your station. It is hard for a lady to travel with children, and you did her a very great favor, for which I thank you most sincerely.

"If I can ever reciprocate, please call on me."

Pleased in Spite of Delay to Train

D. W. Henderson of the H. E. Lesan Advertising Agency, 440 Fourth Avenue, New York City, recently wrote as follows to President C. H. Markham:

"The matter about which I am writing is the Illinois Central, Panama Limited. I always believe that when a product, service or institution is worthy of praise, that praise should be given freely, because it might encourage those in charge to keep up the good work.

"I took the Panama Limited for New Orleans on a business trip on Tuesday, April 3, and, having traveled on every first-class train in the country, I was surprised to see so many little touches designed for the travelers' comfort.

"The journey south was very pleasant until we landed a few miles below Jackson, Miss., and were stopped with the news that the tracks some miles farther south had been completely washed out. The train crew showed the utmost courtesy in every way, and everyone went out of his way to answer the usual foolish questions which nervous passengers are able to think up.

"We were finally backed up to Jackson, and thence across to Vicksburg. The engine was then switched around to the head end, and orders were about to be given to proceed when it was learned that the tracks had been washed out a few minutes before down below Roxie, Miss.

"The local people at Vicksburg, as well as the train crew, came to the front in great shape and made every effort in the world to calm the fears of the passengers and to do everything they could for their

comfort. I had a number of men waiting for me in New Orleans that morning, and I was very anxious to get a wire through explaining the delay. There was no Western Union service down in the yards at Vicksburg, but after I explained my troubles one of the dispatchers volunteered to call up the city office for me and have a messenger come to the yards to pick up the message.

"We were later sent down to Roxie, just below Vicksburg, about 2 o'clock that afternoon, and we stayed in the latter place until about 7 o'clock the next morning. In the meantime, train and bridge crews worked all day and all night repairing the breaks and temporarily fixing the rails, so that the several trains which were stalled could proceed.

"All through this tiresome wait, the dining car people, porters, conductors, and even the engineer, waited on the crowd and sold everybody completely on the service and safety of the Illinois Central.

"Owing to the 16-hour law it was necessary to change crews, and a freight conductor was given the job of flagman on the Panama Limited. When off duty and not busy with his regular job, he entertained everybody with a history of Vicksburg and the Mississippi Valley south, with a good many native stories and yarns thrown in, which added a lot of good humor to what he had to say.

"Of course, we were about twenty-five hours late in reaching New Orleans, but by the time we got there everybody was singing the praises of the road and its management.

"I suppose you get plenty of letters like this, but I didn't think it would hurt to add one more, particularly in these days when a certain portion of the public is doing everything it can to discredit railroads and railway management."

Courteous Work at Cedar Falls, Iowa

Prof. J. H. Hart, director of extension, Iowa State Teachers' College, Cedar Falls, Iowa, recently wrote as follows to J. V. Lanigan, general passenger agent at Chicago:

"I desire, on behalf of the seventy-five or more extension instructors who have occasion at one time or another to travel on the Illinois Central Railroad, to express our very great appreciation of the uniform courtesy, consideration and kindness of your local employe, A. M. Garrick [of the Cedar Falls ticket office].

"I have had occasion a number of times to file complaints with passenger agents concerning some deficiency of service. I want, in this instance, to record one entry at least on the credit side. I think too often

we confine our remarks to those which are negative. Mr. Garrick is entitled to such recognition as we can give him. I am very glad, indeed, to take this method of calling to the attention of his superiors his very admirable courtesy and service."

Found Our Service Praised in Florida

Engineer T. L. Connors, local chairman for the Brotherhood of Locomotive Engineers on the Indianapolis and Effingham districts of the Indiana division, who with Mrs. Connors recently spent several weeks in Florida, wrote H. J. Roth, superintendent, as follows:

"We had a very pleasant trip down here and every one we came in contact with treated us nicely.

"I made it a point to inquire of many tourists as to how they were treated and how they liked our trains into Jacksonville, and every one gave the same expression: 'It could not be beat!' I did not hear a single complaint from any person, which was very gratifying, too, as it is an easy matter to 'boost' for a railroad which has service so near 100 per cent that no one has any complaint to make. It is something of which to be justly proud."

Courtesy in Funeral Arrangements

T. W. McCoy, president of the Merchants' National Bank of Vicksburg, Miss., recently wrote as follows to President C. H. Markham:

"I was called to Golconda, Ill., my old home, recently on account of the death of my father, and I cannot pass this by without calling your attention to the apparent good results of the work that you started years ago on your system in the way of giving efficient service to the public and, especially, lessons in courtesy.

"While I was there G. Raymond Wallace, who is agent for the Illinois Central in Golconda (a very small town), extended every courtesy to our family, which has lived there for two generations. He, of course, had to handle telegrams, express matter, and all that kind of thing, and he did it most graciously and efficiently. In addition to this, he had one of the trains handled so that some of our friends were able to get in.

"In a small town like that it was very difficult to get accommodations going to the cemetery and I was very much gratified when Jerry Green, one of your conductors on the Illinois Central, who knew my father only casually, called and took some of us out to the cemetery in his car.

"Acts like these ought not to go unnoticed and as a director in another railroad I want to congratulate you on bringing this sort of spirit into your organization."

Editorial

SEIZING OUR OPPORTUNITIES

The opportunities awaiting the ambitious young man in railway service never were greater than they are in this day. There are some who say that railroading, by reason of the growing scope of regulatory authority, has lost its flavor of romance and adventure. We have little patience with them. An adventurous, romantic spirit creates its own environment and atmosphere—finds opportunities where others see only restriction and the dull round of duties mechanically performed. The ability to rise beyond the narrow confines of dreary routine lies within the individual, and his job is just what he makes of it, nothing more or less.

We know of no calling more fraught with romance than that of performing a Nation's transportation service. Our fault is that sometimes we allow ourselves to be so immersed in the waters of our imperfect imagination that we cannot grasp the vision of the vastness of the machinery of which we are a part. The worker performing the humblest task on the railroad, however disconnected it may seem to be from the operation of trains, is doing his part to keep the wheels of a nation's industries humming their tune of prosperity. His is a vital part of the task of moving trainloads of grains from country elevators to the mills, coal from the mines to the doors of industries, raw materials from forest, field and plain to the factory siding, carrying food from producers and dealers to the consumers.

Another generation of railway men laid the foundations for great empires; ours is the task of erecting upon their foundations the superstructures of industrial prosperity. We have no wish to detract from the glory that belongs to that other generation; we do want to point out that the part we play in the gigantic drama of transportation service is not a lesser role, but one fully as important, just as full of opportunities for the young man whose efforts are guided by an accurate conception of his relation to the play.

The future of the country depends upon its railroads. The future of the railroads depends upon the cultivation and crystallization of a public opinion on railway questions that will permit the railroads to prosper. To every young man in railway service there is afforded the opportunity of familiarizing himself with railway questions and

exerting his influence in behalf of a constructive public sentiment. Such opportunities are unlimited. Misstatements of facts about the railroads are the breeding places of suspicion and distrust. We should be no less diligent in eradicating them than we are in wiping out the breeding places of disease-bearing insects.

The *Illinois Central Magazine* prints this month an article about Instrumentman Robert F. Leeper of Homewood, Ill., who knows something about the valuation of railroads and the workings of the Transportation Act, and who properly resented some misstatements on the subject in a church paper to which he is a subscriber. He wrote the editor a polite, friendly letter, which we are printing.

We believe railway employees will do well to take a leaf out of Mr. Leeper's book. Incidentally, we are always glad to have articles for the magazine telling of what our officers and employees are doing to build up the kind of public sentiment toward the railroads that makes for progress.

WHY STOP WITH RAILROADS?

A good many advocates of government ownership of the railroads do not feel consciously Socialistic, but if they will follow out the logic of their arguments for this one step they will find it hard to stop without openly advocating the abolition of all private property rights—and if that is not practically Socialism, what is? The same arguments in favor of wiping out competition and duplication of effort among the railroads might be applied with equal force to similar conditions existing at present among many other enterprises—for example, banks, stores, theaters, hotels, motor car factories and even the very newspapers which are loudest in their advocacy of government in business.

Edwin Selvin, who edits and publishes the *Business Chronicle of the Pacific Northwest* at Seattle, Wash., applies this principle to farming when he writes:

"Once upon a time some well-meaning idiot introduced the London sparrow into New York. Gotham still curses him. Another genial Mr. Meanwell introduced the rabbit into Australia. It has cost Australians millions of dollars to construct rabbit-proof fences of wire to keep out from their crops the pest thus brought about.

"The idea was that the balance of nature

was upset by Mr. Man's well-meaning but imbecile efforts to rectify nature's plan. But the balance of economics can just as easily, more easily and with as great results, be upset.

"There is talk of Government taking over railroads. Which is something like introducing the rabbit or the sparrow. For why stop at railroads? Why not farms? It is true that the railroads are a public utility and in the nature of public service, but long before railroads were ever heard of this theory obtained as to farms. It was thought, and is thought, in many countries past and present, that no man should have an infeasible right to land as an owner. Even in this individualistic country the law recognizes the right of eminent domain. That is to say that if the state requires any private land it may preempt it. For the argument was that, as without land the people could not get food, therefore the farmer was a public utility, and the land with which he operated another public utility.

"Which is Henry George's theory. Open the road to these Socialistic 'betterments' and that road is extremely liable to be crowded with sparrows and rabbits."

MAKING GOOD

We all have something to sell. It may be work we do with our hands, ideas, or products of farm, range, orchard, mill, or mine. Every individual is a salesman whether aware of it or not. Making good, as we call it, is merely the act of successfully disposing of our wares. The merchandise we offer in life's marketplace may be eight hours' labor with a shovel or trowel; it may be work performed with delicately adjusted instruments of science in laboratory, mill, machine-shop, or store; it may be service with voice, pen, hand, or eye. But a great deal depends upon the sales methods of the vendor.

The good salesman "creates value in the mind of the buyer as regards the article offered." That phrase was coined by one of the cleverest experts on salescraft in the United States, and it is an apt one. It does not mean that the article is lacking in value and the customer is deluded. It means that a good salesman convinces the prospective buyer that the value is there which really exists. A good salesman gives something besides the article he sells. Maybe it is courtesy, a word, a smile, or the touch of human sympathy that makes the whole world kin. Maybe it is a suggestion, a constructive idea, something that adds to the well-being of the customer. It helps to make up what the world defines as service.

The good workman—and the term applies to all classes of human enterprises

and endeavor—is one who takes pride in whatever he is doing. He loves his task and its accomplishment for its own sake, and something of that spiritual quality is incorporated in the product of his mind or hands. The best sales organization in the world cannot successfully market goods which have been produced by careless, indifferent, uninterested or discontented workmen. When the worker puts his heart into his production, he builds quality. That is the true meaning of "making good." That is selling service.

It is the privilege of every individual to do some one thing well. It is a man's God-given right to do the thing he likes best to do. If he isn't doing it, he is deprived of his rightful heritage. The square peg cannot be made to fit the round hole. The man who is misplaced and therefore is not doing his best cannot gain his rightful place by being disgruntled, discouraged, resentful or fault-finding. He only shuts the door upon his own development.

What a man has to sell is worth its true value. He is entitled to no more, and if his sales methods are sound he will not be forced to take less. Let's be fair and use an honest yardstick. What would we pay ourselves for what we're doing if we were the employer?

THE TRANSPORTATION INSTITUTE

The National Transportation Institute, which began functioning the latter part of April, was organized "for the purpose of accumulating, organizing and furnishing the people at large full, complete, impartial and unbiased information about transportation." A complete survey of every phase of transportation is to be made, and the facts and the conclusions drawn therefrom are to be disseminated among the public.

The members of the institute are representatives of diverse, yet converging, interests—agriculture, industry, finance and transportation. Each of these interests contributes an equal amount toward the support of the organization, and no individual interest has a dominating influence. The facts obtained by the members of the institute are to be studied and discussed by the entire body.

The idea of the need for such an organization as the National Transportation Institute was the outgrowth of the work of the Joint Congressional Commission of Agricultural Inquiry. While making an investigation of the relationship of transportation to agriculture and industry, this body found it practically impossible to obtain some of the information it needed. However, it did find that when facts of any particular situation could be ascertained it was comparatively easy for the members

representing diverse interests to agree upon the conclusions to be drawn from these facts.

A sound public opinion regarding transportation matters should result from the work of the National Transportation Institute. Since the facts obtained by the members of the institute are studied and discussed by the entire body, the conclusions drawn therefrom cannot be challenged by the public. The information would, in all cases, be reliable. The organization will perform a valuable function by disseminating correct information with the authority that will cause it to be accepted by the public.

No industry has been investigated and scrutinized so much by public officials as the railway business, and there is no other large industry regarding which so much information is available for those who seek it. The presence of misinformation about the railroads is chiefly due to persons who have deliberately misstated the facts and persons who have ignorantly repeated the misstatements. However, there is a great deal of information about the railroads that such an organization as the National Transportation Institute can collect and make more available. Whether or not it will likewise be misstated by some persons remains to be seen.

The agricultural, industrial, financial and transportation interests must remain well represented, and each interest must continue to contribute an equal amount toward the support of the organization if the National Transportation Institute is to accomplish things that cannot be accomplished by existing organizations. If most of the support comes from any one of the interests, the information and conclusions given by the institute will be discounted by some persons to a great extent as these same persons now discount the information that is compiled by organizations and persons representing the railroads. As long as the farmers' and business men's organizations give their full support to the National Transportation Institute, the railroads might well do likewise. The railroads have everything to gain and nothing to lose by having the facts regarding them more thoroughly investigated and more widely disseminated.

The National Transportation Institute is sound in theory, and it should aid materially in solving the country's transportation problem.

THE DOCTRINE OF FAIR PLAY

The American Farm Bureau Federation has assembled material of a comprehensive and detailed nature on the subject of the Transportation Act of 1920, and has com-

plied this information in a handbook purporting to assist those who desire intelligently to discuss the transportation law either as favoring its provisions or in opposition thereto. Arguments are presented for and against the measure by leaders of opinion on opposing sides. The opinions quoted are not advanced as expressing the views of the American Farm Bureau Federation, but merely as representing the most accurate and fair statements of facts from divergent viewpoints.

The Transportation Act has been condemned on at least three major counts by radical political leaders, who are admittedly opposed to further railway development under the system of private ownership. These grounds are: (a) on the assumption that the rate-determining provisions serve as a "guaranty" of excessive earnings; (b) accepting the hypothesis that railway property valuations are unduly inflated, that rates imposed are exorbitant in order to earn a fair return upon such inflated values, and (c) that the Transportation Act subverts the various state regulatory bodies into mere onlookers without power to enforce measures which seem necessary to the best interests of their patrons.

There is an old saying that, "although figures will not lie, liars will figure." The term is too short and ugly a characterization for all those who find it advisable or expedient to criticise the Transportation Act. There are some who are, perhaps, honest though misguided in their antagonistic attitudes toward this law, which is the most constructive in its provisions of any railway legislation.

The facts are that freight rates are in no sense a guaranty. Senator Cummins of Iowa, one of the authors of the Transportation Act, is responsible for the statement that the law in question is not in any manner to be blamed for rates which now prevail. They are wholly due to increased operating costs, which in the last decade have more than doubled. Actual earnings of the railroads conclusively establish that no guaranty exists. In 1920, the net operating income of all the railroads was less than one-third of 1 per cent, and during 1921 and the first two months of 1922 it was about 3 3-10 per cent. With no obligations whatever on the government's or anybody else's part to make up the difference, the assumption of a "guaranty" is unwarranted.

Railway valuations were determined in the same way a farm, or any other piece of property would be appraised. Stocks, bonds and other securities were not considered. Railway properties in the United States comprise about 265,000 miles of main lines, about 2,500,000 freight cars, 70,000 loco-

motives, and several hundred thousand passenger, mail, baggage and other cars; also included are land, right-of-way, road-bed, bridges, second and side tracks, switching yards, stations, terminals, shops, round-houses and other buildings, signal and water systems, and an infinite quantity and variety of necessary equipment. The United States Supreme Court has ruled that this property is worth, for rate-making purposes, what it would cost to reproduce it, less reasonable deductions for depreciation.

With regard to regulation by the states, it should be plain that the founders of our republic drew up the national Constitution with the idea of providing a code national in scope. If a thing is national, federal authority properly extends to the whole of it. Railway transportation long ago became a national utility, and properly should be regulated as such. And it is, or should be, self-evident that a nation-wide industry may not be left to the selfish, narrow and often hostile jurisdiction of forty-eight regulatory agencies and escape being subjected to ill-advised, conflicting and discriminatory restrictions. Such restrictions would be fatal to efficient service.

Some political aspirants, now as always, use the railroads and railway rates as objects of scorn and invective. This class of politician can survive only by the exploitation of some real or imaginary tremendous issue. He must have a butt upon which to vent his gaseous zeal, or he is lost. Our country's history is speckled with these stupendous vital issues, politically manufactured in most instances of superheated air, and as a rule as evanescent as any other thin mist. Political adventurers seek votes. Vote-getting by flaunting some supreme issue is their sole method of procedure. Railroads are considered legitimate prey by them.

Facts, to a large extent, are the least concern of a demagogue. Half-truths, distorted statistics, plausibly stated fabrications are his stock in trade. He is aware that a lot of people accept as true the things they are emphatically told. He understands that proofs of his wild assertions are rarely asked, and if he is brought to task he relies upon his adroitness and cunning to evade the point. Actually, in the past, the public has been prone to accept political mouthings as oracular, provided they were oratorically up to standard.

It would seem that a new order of things is evolving. The action of the American Farm Bureau Federation in seeking to present fair statements for both sides of the question at issue is a long step in the right direction. It is to be hoped that this spirit of frank and honest investigation, and desire to ascertain and weigh all the facts

without prejudice, will become more widespread and pronounced. It is the way of constructive broad-mindedness, which is the only true means for permanent progress.

AN EXPERIMENT FAILS

A deficit of 1,258,000,000 lire last year in the operation of its state-owned railway system of 10,000 miles has made the Italian Government decide to turn the system over to private lessees for operation. Premier Mussolini is reported to be considering bids and making attractive proposals to prospective operators. The prospective lessee of the main line from Genoa to Rome, for instance, has only to prove that he is competent to operate it and has sufficient capital to pay operating expenses. Profits up to 7 per cent are to be his; if he makes between 7 and 10 per cent he is to divide the surplus over 7 per cent with the Government; if he makes more than 10 per cent he must reduce rates.

The chief trouble with the Italian railroads has been an increase in the number of employes from 150,000 to 228,000 under government ownership, the surplus employes being principally political appointees. Premier Mussolini is said to have discharged 30,000 employes in the face of national unemployment, to be considering the discharge of 10,000 more, and still to have no hope of earning any return on the investment of about three and a half billion dollars even with much more drastic economies. One effect of government operation was that the entire operating personnel hustled out and worked politically against any government which refused its demands for more pay and less work.

There is some food for thought in the Italian experience and in the announced program of Mussolini to restore private ownership and operation of railroads. Italy has had government control long enough to try out the system as thoroughly as anyone could possibly want it tried out. And no one is satisfied with the result.

The Italian premier is a former Socialist. He formerly believed in governmental ownership and operation of railroads. As one of the leading editors of the nation he fought brilliantly in behalf of the principles of Socialism. Fortunately, his experience has brought him wisdom, and he is the sort of statesman who had the courage to change views which he now realizes were unsound.

The Italian example leads us to wonder whether it would not be a salutary experiment to turn American railroads over to some of the more or less prominent critics of the present administration and let them have a fling at it. We wonder whether Brookhart, for example, could make the

railroads pay operating expenses, taxes and a return upon valuation that would be attractive enough to prospective investors to enable him to keep the machinery going.

On the other hand, of course, we could not afford to make the experiment. But that doesn't keep us from speculating, in our minds, as to the kind of railway executives Brookhart and his political bed-fellows would make.

CONTENTMENT

The poet Holmes—that bumptious, pedantic, but altogether lovable old Autocrat of the Breakfast Table—wrote a charming set of verses on contentment, beginning thus:

“Little I ask, my wants are few; I only wish a hut of stone (a very plain brown stone will do) that I may call my own.”

Then he goes on specifically to enumerate life's choicest luxuries as being requisite to the contented man. As an example of genial satire the verses are exquisitely conceived and written. The seeker after contentment really desires just about everything desirable on earth before he gets through, including tapestries, carved tables of priceless wood, vases, art treasures and “of books, some fifty score, the rest upon an upper floor,” where there are “red morocco's gilded gleam and vellum rich as country cream.”

Desires are cumulative. The more one gets the more one wants, and after a while the things that satisfied earlier desires cease to serve. That being true, the things we consider indispensable to happiness are multiplied as we progress.

Our trouble is due to looking outward instead of inward for happiness. Money, luxuries, the gifts of fortune, ease, comforts are not guaranties of happiness. He who is happiest may be least endowed with apparent blessings. There is the story of a certain king who sent his ministers forth to find a happy man. If such an individual should be discovered, the king's envoys were to bring back his shirt. Ultimately a happy man was found, but he didn't own even a shirt. His contentment was a state of mind.

At a session of a committee of the House of Representatives to hear the Plumb Plan presented, shortly after the close of the war, the following question was put to a leader of the American Federation of Labor by the chairman of the committee:

“Has there ever been a time in this country or any other, since history began, when the workingman was better paid, better housed, better fed, or afforded better opportunities for schooling and recreation than he is at this moment in this country?”

After a little deliberation and somewhat

reluctantly, perhaps, but with fairness and sincerity, the representative of labor replied that there had never been such a time.

However, the average workingman is far from being contented. Why is it? Certain glibly phrased reasons have become stock phrases with some labor leaders—“oppression; the grim clutch of capitalistic fingers at the aching throat of labor,” and similar perfervid tommyrot. The high cost of living, is of course, standardized by usage. Yet all of these do not touch the heart of the matter. Looking outward instead of inward for the mystic talisman which brings happiness to its possessor is responsible for unhappiness. Since possession of the treasures of the earth in nowise insures tranquility of soul, why seek them? It is a matter of relativity. Others have fine houses, jewels, motor cars, rich food and raiment; is it unseemly that we should desire them? Not at all. But what shall it profit a man to gain the whole world if in gaining it he fails to find true contentment?

The laborer is worthy of his hire. He who toils with hands or mind for another should be paid a fair wage. There is no question about that. The contested point is as to what constitutes a fair wage. Business must obey definite economic laws. No matter what the living requirements of the wage earner, he cannot rightfully ask more than his fair share of the value of the service produced by the industrial structure of which he is a part. Not all workers receive a fair share, it is true. Generally speaking, most workers do receive a fair share.

What, then, is the answer to this question of human weal? Boiled down, it is simple enough—community of interests. Employer and employe must meet on a common ground of confidence, understanding and good will. The employer must feel as well as say: “These are my associates in business; we are mutually allied in a great undertaking; their well-being is my concern.” The employe, on his part, must become a part of the intimate mechanism of the concern for which he works; he must know that its prosperity is in a direct way his own prosperity; he must take pride in his work and find joy in accomplishment.

Contentment, after all, is best when it comes from a consciousness of duty performed, of honest achievement, the fruition of sincere, unselfish endeavor.

A man should never be ashamed to own that he has been in the wrong; it is but saying, in other words, that he is wiser today than he was yesterday.—WILLIAM PENN.

PUBLIC OPINION

What the

World Thinks

THE RAILWAY LOSS

The human mind is incapable of comprehending many of the discoveries of science without comparing the unknown with the known. An atom is a very small unit; it was once supposed to be the most minute unit in nature; today science tells us that each atom is really a universe, in which planets are encircling a central "sun," as distant therefrom, compared to size, as is our earth's distance from its sun. Now you understand how small is the electron as it travels around its orbit in an atom.

If so, your scientific mind will be ready to comprehend how big is the loss sustained by the government in running the railroads during the World War. Accountants tell us that the net loss was \$1,800,000,000, but these figures do not mean much to laymen. It was approximately a hundred millions loss a month—counting eighteen months as the period of the management—or about \$3,000,000 a day. How easy it is to be a great railway magnate if one need not count the \$1,000,000 lost before lunch and the \$2,000,000 after lunch.

Another way to get the clear comprehension is to assume that the management had enough silver dollars to throw one into the ocean every minute, and keep that up day and night, until the entire \$1,800,000,000 had been cast into the sea. And suppose the measure of time could be taken backward through history, how far would the sum carry us? By the time we had cast away a little over half the amount we would hear the angels sing their Christmas greetings to the shepherds, but we would keep on going back, back, and the rise of Rome would pass us like a way station. Alexander would conquer the world and die, and still we would throw a dollar a minute of the \$1,800,000,000 into the sea. We would be still at the job when King Tutankhamen was reigning in Egypt, 1358 B. C., and even when he was born we would have between 150 and 200 coins left to throw away—a dollar a minute.

For \$1,800,000,000, at \$1 a minute, means 3,424 years and twenty-four days. Yet in the face of such a loss, in less than two years, we hear folks still-wishing the government would confiscate the railroads of America and turn them over to the management of the trainmen and shopmen, and the United States treasury would guarantee to make good whatever was lost by inexperi-

enced management, and by the grafting of unpatriotic theorists. We hear it advocated in Congress, but still more upon the stump and among Socialists.—"*Capital Keynotes*," *Washington* (D. C.) *Star*.

FREIGHT RATES

How would you like to make your living hauling stuff at a price of a cent and a fifth a mile for each ton? For instance, to haul five tons of coal or furniture for 6 cents a mile? That's what the railroads did last year. They received an average of less than a cent and a fifth a mile for carrying the average ton of freight. It shows a tremendous economy, compared with the cost of most of the other things we do in civilization. Big volume of business is the reason.

The next time you hear a man howling his head off about freight rates, just bear the figures above in mind. Hauling a whole ton a whole mile for a little more than a cent is the lowest freight rate on earth. Railway lines in other nations do not even closely approach it.

The plain truth of the matter is that the average complaint about freight rates comes from the man who knows little or nothing about the exact principles that enter into rate making. He is almost invariably a man with a selfish purpose to serve, or some special advantage he is seeking to gain.—*Jackson* (Miss.) *Daily News*.

RAILWAY LEGISLATION

No one can explain why railroading is not a business just as much as banking, manufacturing and merchandising.

No one can explain why railroads should not be run as any other business by trained men, instead of forty-nine state and federal commissions and by forty-nine state and federal legislatures.

In the present Congress there have been introduced no less than 134 bills dealing with the railroads. A few of these may have merit and may be necessary and constructive.

But the larger number, instead of aiming to help the railroads to render better service to the public, would hamper them and be destructive of their efficiency.

In the next Congress an additional flood of "persecution bills" is expected, some of them more radical than any now on the docket, and there will then be more nu-

merous and more urgent backers for such legislation.

Should the worst measures be passed the damage to the nation would be great. The railroads cannot be harmed without detriment to all the other industries of the country. But the millions of owners of the railway systems—that is, the shareholders—are not likely to tolerate efforts to impair their property rights. The wise and fair-minded business man of the country will doubtless join the stockholders in making a sturdy fight against the anti-railroad bolshevism.—*Dubuque (Ia.) Times-Journal.*

ITALY'S LESSON

Advocates of government ownership and operation of railroads should find food for thought in Premier Mussolini's determination to lease the 10,000 miles of state-owned railroads in Italy to private capital. It would be difficult to find a more effective argument against government ownership and operation than the report on the Italian railroads which has led to this decision.

Last year the roads showed a deficit of 1,258,000,000 lire. The number of employes under state operation has risen from 150,000 to 228,000 in the last ten years. In the same period the efficiency of the railway service has declined steadily.

The chief trouble has been the injection of politics into the railway business. The roads have been used as a vast field of political patronage. Thousands upon thousands of persons have been added to the railway pay rolls to settle political obligations. Demoralization of morale and efficiency, and terrific increase of overhead costs have been the inevitable result. The same development is visible on the French state railroads.

On one such line in north Africa, for instance, there is one train a day across a stretch of desert. At one point where an almost untraveled highway crosses this railroad may be found a comfortable cottage and garden occupied by a Frenchman with a large family. When the daily train comes meandering

across the desert, the Frenchman or his wife sallies forth from the cottage and toots his whistle and waves his "stop" signal at the crossing for the protection of the motor car or camel or donkey which might materialize on the highway, but seldom does. The state pays for that formality and the upkeep of that family.

Such is the natural tendency of state operation of railroads. Americans know its possibilities from our brief war experience. The lesson is brought home more forcefully by the developments in Italy. That demonstration is worth pondering.—*Chicago Tribune.*

GIVE RAILROADS A CHANCE

The people of the United States should awaken to the importance of railway prosperity and what it would mean to hamper the companies in the effort they are making to meet the transportation requirements of the country. Unless there is a very pronounced expression of public sentiment, an

GREAT MYSTERY—WHO GOT THE LETTER?

ONCE THERE WAS A SMALL GROUP OF LIBERAL SOULS WHO THOUGHT ALL THAT WAS NEEDED TO RUN THE RAILROADS WAS A FEW THOUGHTS—

BUT, SAD TO RELATE, THEIR TRANSPORTATION SYSTEM FAILED TO THRIVE UNDER THE TREATMENT AND FINALLY COLLAPSED—

WHEREUPON THEY DISPATCHED URGENT APPEALS TO AMERICA FOR EXPERT TALENT TO REHABILITATE THEIR RAILWAY SYSTEMS—

AND THE STRANGE THING ABOUT IT IS THAT NEITHER SENATOR LA FOLLETTE NOR SENATOR BROOKHART EVER GOT THE MESSAGE.

Darling in the Chicago Evening Post.

effort will be made by agitators to revamp the Esch-Cummins law at the next session of Congress. When changes are deemed advisable they at least should be made in a spirit of fairness and a desire to be helpful, and not dictated by short-sighted economists appealing to prejudice and ignorance of facts.

The railroads of the country are spending \$1,500,000,000 on new equipment and improvements. That money is going into the pay envelopes of workers in shops, factories and a wide variety of industries. It is contributing very materially to the general prosperity of the nation at present and is paving the way for greater industrial activity in the future. The business of the country is limited to the volume the railroads can handle. The managers are spending large sums to put their properties in shape to serve the people adequately and are entitled to considerate treatment.

A very large percentage of the money the railroads are expending has been borrowed in the expectation that they will be permitted to earn enough to pay expenses and a fair return on investment. Railway officials who have the courage and foresight to plan for the future of the territory they serve should have co-operation. There is a basic industry; in fact, the railroads are the arteries through which flows the life blood of all business. They should be permitted to succeed and to attract for expansion and betterments the capital success can command, in order that all business may function to the best advantage.—*Indianapolis (Ind.) Star*.

WHERE IT PAID TO REVERSE

... For a good many years the average railroad in this country was run on a public-be-damned basis. There were exceptions, of course, but the rule held. Aided and abetted by unscrupulous politicians and keen lawyers, and backed by the barrels of money at their disposal, the transportation systems of this country set up and maintained a sort of extra government of their own which in time became tinged with tyranny.

Not only did they successfully control legislation in many states and at Washington, but they ignored public interests whenever these did not run parallel to their own gainful desires or aims.

Mr. Vanderbilt's casual frankness brought the simmering boil to a head, though many years were to pass before the public had its innings. Vast wealth, ability, graft and crooked politicians combined to give the railroads marked advantage in the struggle. With that lack of foresight which is common among tyrants, they counted themselves secure and continued to treat the

public about as they pleased. Then came financial panics many of the water-logged systems could not weather, and railway receiverships wrought marked change in the situation.

A few men with vision saw that the first need for straightening out the mess was a changed attitude on the part of the public; that the public had been damned too long, and that reverse gear in this regard was the safe and sane procedure.

One of these men, president of a mid-West railroad, gained national note by personally issuing a statement the day after a disastrous wreck on his system, to the effect that the accident was due to negligence on the part of the engineer, and that every claim for death or injuries would be promptly settled out of court on that basis. He was agreeably surprised to find that the total cost of this wreck was less than he had anticipated, and those of his confreres who held up their hands in horror at such rashness on his part got their first inkling of what might be gained from co-operating with the public rather than cussing it.

Other instances, of differing nature, which followed close on the heels of this, indicated the wisdom of such a policy and within the last few years such a marked change has been effected. That no one was much surprised the other day when an Arkansas newspaper of standing voluntarily fought the tax commissioners of its county and succeeded in lowering the tax assessment on railway property in that jurisdiction. Twenty years ago that newspaper would have done all it could to double the assessment and regarded every move in that direction as a service to the public.

These recent years have witnessed a growing measure of co-operation between the public and the railroads, though it cannot yet be said the two interests resemble turtle doves in their relationship. It is true, however, that a radical change in feeling has been engendered, especially in certain parts of the country, and that the common people and the common carriers today apparently are on the road to a mutual understanding which, when finally effected, will mean much to both parties.

This, of course, is a matter of the highest importance to the welfare and progress of the commercial and social interests of the nation. Transportation is far more than the life of trade, though without it trade as we now know it could not be carried on. Nothing is so important to the commercial life of the nation as efficient railway service which, at all times, supplies promptly the transportation facilities reasonably demanded by the public. The amount of business than can be done by producers, manu-

facturers and distributors is primarily governed by the amount and quality of transportation they can obtain.

It is equally obvious that the railroads cannot expand their facilities for meeting the growing needs of rapidly developing trade unless they receive fair treatment. Furthermore, such treatment must be based on favorable public opinion. This is the force that controls the destiny of the nation, and until it favors co-operation with the transportation systems, they cannot hope to secure the full fruits of their labors and investment.

We always have maintained that such co-operation depends chiefly for its development on frank and fair treatment of the public by the railroads; that their former attitude properly places the burden of proof on their shoulders. We always have believed the public is ready at least to meet corporate interests half way if honestly dealt with. However unthinking the average man may be, any appeal to his spirit of fair play is apt to bring a profitable result. And at least one railroad system in this country has, within a few years, proved the rightness of these views.

If C. H. Markham, president of the Illinois Central, had not risen to his high position from the ranks of section hands, he might not have appreciated the possibilities of the policy of "public relations" he established a few years ago, and the results of which are sufficiently evident by this time to make it a matter of more than sectional interest.

The Illinois Central ranks among the major railway systems of the country, operating some 6,000 miles of track in fourteen states. In times past it shared much the same sort of public disrespect and distrust as previously fell to the lot of every transportation system and as still obtains in the case of some. Yet, in less than three years Mr. Markham's policy of taking the public into his confidence and laying the cards on the table has brought about a marked change in the attitude of the patrons and beneficiaries of that road.

The process has been direct and simple. It rests primarily on Mr. Markham's expressed belief that railway success, like any other brand, depends first on a cordial relation between those who serve and those served. When the railroads were returned to their owners by the government in 1920, he instituted an advertising campaign, and since that time a series of "editorial" advertisements, each signed by him and dealing with certain phases of the transportation problem, has been printed regularly in nearly five hundred daily and weekly newspapers published along the lines of his

system. The purpose of this, as stated, was "to promote a closer and better relationship among the patrons, employes and management of the railroad by giving them the facts in regard to any question in which the management believes they will be interested."

In a recent interview Mr. Markham said the results of this policy have far exceeded his expectations, and it is a fact that today the average person living in Illinois Central territory has a changed feeling toward that railroad. Just how much this changed feeling has to do with continuance of 7 per cent dividends during the recent slump and increase of surplus more than \$10,000,000 in the last three years is a matter which must be left to conjecture. However, it is safe to say that in the business of railroading, as in any other business, fair dealing ordinarily means a profitable return to all parties concerned.

One other phase of this matter strikes us as worthy of consideration. While we are not sponsoring Mr. Markham's figures and statements, though we have no reason to doubt either their accuracy or fairness, we cannot help wondering how far organized labor would benefit itself by a like attitude toward the public. If this powerful force were to pursue a policy of laying its cards face up on the table, the public might find itself in a position to form a just opinion as to where the blame lies for many costly and disturbing situations in the economic world.

The only way to judge as to the fairness of a deal is to see both hands.—*Philadelphia (Pa.) North American.*

PLAY THE GAME

The ancient philosophers, the modern teachers have all given us a lot of very good advice, but these three words, "Play the Game!"—these three words form a slogan that packs a lot of sound sense. Business is nothing more, nothing less, than a game. You either win or you lose. When you win it is almost always because you like the game. What you like you play well. When you lose, ninety-nine times out of a hundred you lose because you do not like the game and therefore do not play the game well.

You never saw a champion in any game who did not consider his game the greatest game in the world.

That's why he is a champion.

The moment you feel that the thing you are doing is not the best thing for you to do—the moment you do not like your work, that moment you are slipping into the suds.—*The Silent Partner.*

The Home Division

Nan Carter

Laughing Wrinkles Away

When someone asked the famous singer, Adelina Patti, then getting along in years, how she managed to preserve her wonderfully youthful appearance, she said: "Whenever I have felt a wrinkle coming I have laughed it away, and my advice to the woman who wants to remain young is: 'Be happy, don't worry, but walk.'"

Darwin said: "Every mental state has a corresponding physical expression." In other words, the body is the mind objectified, and it must correspond with that which lives in the mind.

Every thought, every motion, every motive echoes its image in our bodies, so that the thought you habitually hold in mind will tend to express itself in your face, in your manner, in your general appearance, in your life.—*Selected.*

Tested Recipes

MAYONNAISE DRESSING.—3 eggs, 1 cup vinegar, $\frac{1}{2}$ cup sugar, 1 tablespoon butter. Beat the eggs, then add vinegar, sugar and butter, place on stove, stirring constantly until it begins to bubble up; then remove from fire. When cool, add $\frac{1}{2}$ cup of cream (if too thick), 1 tablespoon of mustard, salt and pepper to taste. This should make one pint.—*DELLA MORRISON, Springfield division editor.*

NUT PUDDING.—Mix together 1 cupful soft bread crumbs, 2 cupfuls scalded milk, 1 tablespoonful shortening, 1 cupful chopped nuts, $\frac{1}{2}$ teaspoonful salt, 2 egg yolks, $\frac{3}{4}$ cupful sugar, juice and grated rind of 1 lemon. When well blended, add 1 cupful chopped seeded raisins and mix thoroughly, then fold in 2 stiffly beaten egg whites. Pour into buttered individual molds; bake 20 to 30 minutes; serve hot with cream.—*J. MILTON MAY, New Orleans terminal editor.*

HONEYCOMB PUDDING.— $\frac{1}{2}$ cup sugar, 4 eggs, 1 cup molasses, 1 teaspoon soda, 2 tablespoons melted butter, $\frac{1}{2}$ cup milk, $\frac{1}{2}$ cup flour, $\frac{1}{2}$ teaspoon salt. First put sugar into mixing bowl, add yolks of the eggs and mix well. Then add one-half the molasses. Mix the soda with the other half cup molasses and add this to the ingredients in the bowl; stir well and add melted butter. Add milk and flour alternately, then the salt, and lastly fold in the whites of eggs stiffly

beaten. Pour into buttered baking dish and bake in moderate oven about 30 minutes. Serve hot with sauce.

Sauce.—1 cup sugar, $\frac{1}{4}$ cup butter, 1 teaspoon vanilla, $\frac{1}{2}$ teaspoon nutmeg and 7 tablespoons boiling water. Cream butter and sugar thoroughly, place in double boiler, then add the 7 tablespoons boiling water and stir briskly; lastly add vanilla and nutmeg.—*MRS. J. W. JOHNSON, mother of NABEL JOHNSON, tonnage clerk, Iowa division.*

APPLE, NUT AND CELERY SALAD.—Pour over one package of lemon jello 2 cups boiling water and stir until dissolved. When cool, add 1 cup diced apples, 1 cup walnut meats cut in small pieces, and 1 cup celery diced. Pour contents into six or eight molds

No. 2 shows Orol Lee, 1 year old, and Emma Grace, 3 years old, children of Conductor A. C. Kindred, Centralia, Ill.

No. 3 is Elizabeth, 6 years old, daughter of M. G. Guerard, station accountant, Memphis, Tenn.

No. 4 is Geneva June, 1 year 8 months old, daughter of John Bensley, section foreman, Le Mars, Ia.

No. 5 is Norma Jean, 2 years old, daughter of Richey Prichard, chief timekeeper, Kentucky division. Norma Jean's mother was formerly comptometer operator in the office of the superintendent, Louisville, Ky.

No. 6 is Dorothy Margaret, 13 months old, daughter of O. Friedrich, conductor, Illinois division.

No. 7 is Mary E., 1 year 4 months old, daughter of Conductor William Powell, Illinois division, granddaughter of Flagman J. T. Hitz and great-granddaughter of Passenger Conductor F. A. Hitz.

No. 8 is Katherine Juanita, 4 years old, daughter of Section Foreman S. A. Wildblood, Laurel Hill, La.

No. 9 is Iva Ruth, 19 months old, daughter of A. C. Zaedow, hostler, Freeport, Ill.

No. 10 is Emeline, 8 years old, daughter of S. J. Cromwell, engine inspector, Indianapolis, Ind.

No. 11 is Dorothea, 2 years old, daughter of Adolph Feisner, boilermaker, Waterloo, Iowa.

No. 12 shows Eulalie, 6 years old, and Emily, 3 years old, daughters of J. E. Schneider, chief dispatcher, McComb, Miss.

No. 13 shows Rosemary, 5 years old, and Frances, 6 years old, daughters of G. S. Fredrikson, claim agent, Chicago terminal. Mrs. Frederikson and Chubby, the family pet, are also shown in the picture.

and set in a cool place. Serve on lettuce leaf with salad dressing mixed with whipped cream. Garnish with pimento cut in strips.—*MRS. E. L. FRANCOIS, wife of agent, Fort Dodge, Iowa.*

CHOCOLATE ICE BOX CAKE.—2 dozen lady fingers, 2 cakes sweet chocolate, 2½ tablespoons boiling water, 2 tablespoons powdered sugar, 4 eggs, 1 teaspoon vanilla, ½ pint whipping cream. Line a pan with separated lady fingers. Melt chocolate in a pan, add hot water and sugar, then add yolks of 4 eggs, beat and cook until moderately thick. Fold in 4 whites of eggs, stiffly beaten, and add vanilla. Put a layer of the chocolate filling over the lady fingers in the pan, then a layer of lady fingers, etc. Let stand in ice box 24 hours. Serve with whipped cream.—*LOU OSBORNE MORRIS, substitute clerk, Mattoon, Ill.*

PRUNE PUDDING.—Mash 2 cups of cold stewed prunes from which the stones and juice have been removed. (The longer the prunes are cooked the less sugar they require). Add ½ cup of sugar and beat this mixture into the whipped whites of 3 eggs. Bake in a moderate oven a few minutes. Serve immediately with whipped cream.—*FRANCES P. OTKEN, secretary to chief clerk, superintendent's office, McComb, Miss.*

EGG SALAD.—Line a salad bowl with crisp lettuce leaves. Slice 12 hard boiled eggs and a few cold potatoes into it. Then sprinkle with sweet pickles, chopped fine, and pour over all a dressing made as follows: Work smoothly together the yolks of 4 raw eggs, 1 tablespoon salt, 1 teaspoon each of sugar, mustard and white pepper, the juice of 1 lemon, 3 tablespoons vinegar, and 2 tablespoons of oil or melted butter. Stir quickly for a few minutes over the fire, adding a cupful of rich cream. When cold, pour over the salad.—*MRS. FRED DE LONG, wife of accountant, Stuyvesant Docks, New Orleans, La.*

VEAL LOAF.—3 lbs. veal and 1 lb. fresh pork (meat ground as for sausage), 4 hard boiled eggs (peeled), 1 cup cracker or bread crumbs (rolled not too fine), 2 eggs slightly beaten together, 1 onion about size of an egg, slightly cooked in ¼ cup of butter (do not let either brown), salt, black and red pepper to taste. To make loaf, prepare as above. Add seasoning to eggs, then add crumbs and meat, mixing thoroughly. Form into loaf and make opening lengthwise, lay in hard boiled eggs, close meat to cover, forming long roll. Cover with strips of bacon or fat pork and a little water to baste, and bake slowly about 30 minutes. Good to eat as well as pleasing to the eye. Serve

cold.—*MRS. VIRGIL KING, New Orleans division.*

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies, so that we may print them.

Woodrow Wilson Perkins, age 8, talking to his mother, says that he doesn't know which he wants to be when he grows up—an engineer like Ward Anderson or a dancer like Isaiah Crumb (a negro).—*C. O. PERKINS, section foreman, Learned, Miss.*

FLORENCE MCSHANE, our Indiana division editor, sends us the three following:

Miss Norienne Quinn's little niece Eileen from Chicago was visiting in Mattoon at her grandmother's home. Some unexpected company arrived one day, and there was a little distress as to where they were all to sleep. Eileen listened to the low-toned family conversation deciding where all should be comfortably placed for the night, and, wanting to be sure that her Uncle John was going to be taken care of, she asked where he was to sleep. She was jokingly told that

he would probably have to sleep in the bathtub. At a neighborhood gathering that evening, during a lull in conversation, Eileen announced: "My Uncle John has to sleep in the bathtub tonight!"

Isabel Rose, little daughter of Mrs. Zella Rose, clerk in the trainmaster's office at Mattoon, one night recently attended a home talent play with her mother. Isabel had lent her dog to the performers, and he was to appear in the second act. Naturally she was somewhat excited waiting to see how "Buster" would do. Turning to her mother, she remarked, "Mother, I feel just like I had a little boy in this play tonight!"

A passenger sends us the following true story concerning a little girl on Conductor J. W. Knight's train recently. She, with her mother and dad, was coming from Decatur, Ill., to Mattoon, Ill., a distance of forty-three miles. When Conductor Knight appeared to collect the tickets, glancing at the little girl, he asked how old she was, and was informed by the father, "A little past 4." Conductor Knight seemed to be suspicious, and he kept glancing back as he proceeded down the aisle doing his work. When he had moved a short distance away, the little girl, in a clear voice that had distinct carrying qualities, said: "Dad, you know I'll be 6 next Thursday. What's the use lying for 34 cents?" Conductor Knight, overhearing, retraced his steps and, during the laughter of the passengers, including the father, collected the 34 cents due the Illinois Central.

Already Done

The blushing bride-elect was rehearsing the ceremony that was about to take place. "I shall expect you to give me away, dad," she said to her fond parent.

The latter looked up nervously from his paper. "I'm afraid," he murmured, "I've done it already. I told Herbert this morning that you had a disposition like your mother!"

Teacher—Take this sentence: "Let the cow be taken out into the lot." What mood?

Pupil—The cow.—*Texas Scalper.*

Speaker—Do you know that the time is coming when women will receive men's wages?

Melancholy Voice from Rear of the House—Yes; Saturday night.—*Whirlwind.*

Homes and Community

The home is the unit around which any community must be built. Wherever there is a plentitude of homes, there you will find a prosperous, contented, and happy people.

No great city was ever constructed upon an itinerant population. There must be a nucleus of homes upon which to build. Nobody can have a real abiding interest in a community who is not anchored to that community. A man will fight for his home, but he can very readily find another place in which to live.

A community that makes it easy for an individual to own his home need have no qualms upon the approach of the census taker. Every community has in it hundreds of houses that are not and never will be homes. It requires the element of possession and a lot of living to make a home. Where there are homes there are likely to be children, and where there are children there must of necessity be growth.

It is the ambition of every man to own some small fraction of the surface of the earth. Because some men try to hog it all does not alter the instinct which is inherent in every normal human being. In the heart of every man there is a dream of the time when he can sit at his ease beneath his own vine and fig tree. It is good to own a little piece of land—even if it is nothing more than a lot in a cemetery.

A man who owns his own home is a kindlier neighbor and a better citizen. He has a very direct and personal interest in the well-being of the community in which he lives. He stands for good government because it is only a good government that can give him protection for his property. He wants churches and schools in order that his children may be educated and trained. He is interested in the beautification of his city and the improvement of his streets, because these things tend to enhance the value and the beauty of his own holdings. He becomes rooted in the soil of that community and a part and parcel thereof.

A city that makes it easy for a man to own his own home is on the high road to prosperity. A city that would encourage home building with financial assistance to responsible prospects would soon be a community of homes. One property owner is worth ten finely dressed strangers who are here today and gone tomorrow. Birds of passage seldom build nests. It takes a lot of living to make a home. A city of plenty of small homes is a delightful community. There are too few of them.—*Charlotte (N. C.) Observer.*

Every man is a busy bee when he finds the work he likes. He is called "lazy" only when he hangs back on a job that does not arouse his interest. Get friendly with your task, and the hours will be short.—**GEORGE ADE.**

HOUSE PLANS FOR OUR READERS

Concrete

The Morgan Park, No. 5202, (Dean and Dean, architects, Chicago) was designed in the western style for the residential suburbs of Duluth. The heavy overhang of the roof, so typical of western design, gives an air of warmth, security and comfort to the home.

The roomy bedrooms have cross ventilation, and the placing of the closets between

the two rooms helps to prevent the passage of sound between them. Downstairs there is an entrance hall which can be entered direct from both kitchen and living room. The living room is 13 feet by 14 feet 5 inches and has a corner fireplace for which the architects have designed a handsome brick mantel. It opens through archways into dining room and hall.

The kitchen is well supplied with closets and has a pantry and rear entry under a lean-to roof at the back. Those who do not require pantries could make this into an open, screened porch. The front porch can easily be screened or glazed.

The house is twenty-four feet wide and should be built upon a lot not less than thirty-five feet in width, facing south or west.

This design is an example of twenty-five plans appearing in an elaborate plan book published by the Portland Cement Association, 111 West Wash-

ington Street, Chicago. The plan book can be had from the editor for 50 cents a copy. Through the courtesy of the Portland Cement Association we are able to offer our readers free of charge a handsomely illustrated booklet called "A Plain Talk on Beautiful Homes" that will interest anyone who is planning to build.

Sports Over the System

Baseball Activity at Kankakee, Ill.

Earl Walters, reassigning clerk at Kankakee, Ill., has been appointed manager of the American Legion Baseball Club at Kankakee. The first game was scheduled for Sunday, May 13, at Kankakee against the American Legion Club of Champaign. The Kankakee team was also scheduled to play the Illinois Central team of Champaign at Kankakee on May 27. The Illinois Central All-Stars of Chicago will be met at Kankakee on July 4, which will be a general picnic day for Illinois Central employees.

Inter-City League, Louisville, Ky.

Clubs—	Won	Lost	Pct.
I. C. Railroad.....	2	0	1.000
Bourne & Bond.....	2	0	1.000
Transylvania.....	1	0	1.000
St. Matthews.....	0	2	.000
Louisville Woolen Mills.....	0	2	.000
Schuster Bros.	0	1	.000

Above is shown the standing at the close of play Saturday, May 12.

The Illinois Central baseball team got off to a flying start in the Inter-City League on May 5, the opening day, by defeating the Louisville Woolen Mills team by a score of 13 to 0. This game was featured by the pitching of Fireman R. E. ("Bob") Crawford, who struck out twelve men in six innings, allowing but two hits, and who then gave way to Baggage-man C. L. Monaghan, who allowed but one hit during the remaining three innings. In this game the Illinois Central boys showed that they have some

real sluggers in their outfit, Laffey, Murphy, Bossmeyer and McDonald each turning in extra base wallops when men were on the bags.

The second game of the season, with the St. Matthews team, ended in a 3 to 2 verdict for the Illinois Central boys. Again Crawford demonstrated that he is the "class" of the amateur pitchers in the city by letting the hard-hitting "Saints" down with three hits.

Manager Cunningham of the accounting department has a formidable looking aggregation, and the team that wins the pennant will have to finish ahead of the railroaders.

A Louisiana Division Affair

There was once a ball team from McComb
Which strayed far away from its home.
It met with defeat,
But Revenge is still Sweet,
And our turn may be next when we roam.

The King of France marched up the hill—but you know the sad story, how he marched 'em down again. The King of Swat—he said his men were Swatters from Swatville (McGuire of McComb, Miss., it was who said it)—entrained his men in most modern fashion on board Illinois Central No. 4 on a certain day (to be exact, Saturday, May 12, 1923, a date to be remembered) and proceeded northward to the capital city of Mississippi, intent upon exhibiting his wrecking crew to the team from the local freight agency of Jackson. Later

Here is the baseball team of the local freight office, Jackson, Miss. Standing, left to right: R. W. Pridgen, supervisor; Montie Harmon, rate clerk; Lee H. Cotten, bill clerk; J. L. Morgan, agent; E. A. McGowen, accountant; R. W. Barrett, accountant; W. B. Shotwell, interchange clerk. Sitting, left to right: F. E. Britt, rate clerk; L. B. Carter, O. S. & D. clerk; W. G. Shotwell, demurrage clerk; James Elliott, claim clerk; A. C. Simmons, express clerk; J. W. Kennedy, warehouse clerk.

The McComb, Miss., office baseball team. Left to right, standing: Bentley, c; Harper, sub; Mayfield, ss; Dodds, rf; Wilmot, 3b; Parnell, 1b; B. Rivers, p. Sitting: Simmons, 2b; Streibich, cf; Smith, lf; Captain McGuire, manager.

in the day he marched back again, not quite so Swatty.

It was a great game—strictly an Illinois Central affair.

Preceding the game letters had passed between Captain McGuire of McComb and Captain Shotwell of Jackson—each captain so polite, but so positive that he headed the only champion baseball team on the Louisiana division. How carefully they urged each other to be discreet, cautious, ethical; how gently they warned each other of the impending sting of defeat—this was more amusing, if possible, than the game itself.

It would not be fair to single out one or more individual players as heroes at the expense of the other heroic sufferers. Suffice to refer as examples to "Sheik" Bill Kennedy, maimed, but still beautiful in victory, and to Rivers, who, with his glasses, looked like Meadows but did not pitch "that-away," slim, sinuous and sorrowful in defeat.

Captain McGuire had much pitching timber, strictly 1-by-6, long and slender, winding up like Waterbury watches while Jackson players stole bases as smoothly as the proverbial "culled gemman" purloins chickens.

The score—oh, yes—Jackson won, 9 to 7. But there is always a chance to reverse the present situation. The Jackson team has been invited to visit McComb in the near future. There, amid the tooting of whistles and the roar of machinery, Captain McGuire will seek to drown the memory of the noise made by the Jackson rooters at the first clash.

Every day we play better and better.

Beware, Cap McGuire, how you write your next letter.

You gave us good practice,
You're a fine bunch of clouters,
But it is only the victors
Who can join with the shouters.

—C. H. WILLIAMS, local correspondent,
freight office, Jackson, Miss.

Our Champaign, Ill., Team a Winner

The Illinois Central baseball team of Champaign, Ill., won its first game of the season May 10 when it defeated the Urbana and Champaign Railway, Gas and Electric Company baseball team 2 to 0. It was a cold day at Champaign, but it was a good game. Numb fingers may have caused the four errors that were made. Lennie High, manager of the Illinois Central team, drove in the two winning runs in the sixth inning when, with the bases full, he lined a hot one into short right field. Honn and Nelson scored. Nelson, Kline and Honn produced a thriller when they pulled off a double play at a time when a double play was sorely needed. The line-up for the Illinois Central team was: Thompson, 3b; Honn, 1b; Nelson, 2b; Kline, ss; High, cf; Martin, rf; Hart, lf; Watson, c; Schaele, p.

A New Orleans Baseball Star

The accompanying photograph is that of Bismark B. Berckes, star first baseman and center fielder of the Illinois Central team, Commercial Baseball League, New Orleans. "Bizzy" has gained a reputation in and around the city as an amateur and semi-professional baseball player. In 1921 his batting averaged .285, while last season he batted to an average of .485. In the fall of 1922, he

played semi-pro ball with the Peppermints, winners of the city championship, reaching the high batting average of .515. He is a consistent player, both fielder and hitter, and is a tower of strength to the Illinois Central team. Berckes during his school days ranked as one of the best all-around athletes in the city and in the South. Some of the achievements he made on the track still stand as records. He is employed as a claim investigator, local freight office.

Our Employees on Princeton, Ky., Team

The Princeton, Ky., baseball team, composed mostly of our Illinois Central boys, defeated the Sturgis, Ky., team May 6, by a score of 7 to 1, but was defeated May 13 by Sturgis, 2 to 0, on the Sturgis grounds. Karl Hosbach, formerly yard clerk at Princeton, now of the Henderson freight house, played with the Princeton team May 13, filling his regular place as shortstop.

Baseball Activities at McComb, Miss.

A baseball team has been organized among the employees in the superintendent's office, with W. T. McGuire, chief clerk, as manager, and Ernest Smith as captain.

The McComb shops baseball team played a tie game of fifteen innings with the Bogalusa, La., team April 13. In the seventh inning the score stood 12 to 7 in favor of Bogalusa. Our old reliable pitcher, Pat McGehee, relieved Jones and held the Bogalusa batters hitless for the remainder of the game. On April 22 Bogalusa was defeated by a score of 7 to 2. Buck Jones struck out eleven men, allowing only two hits. The feature of this game was the hitting of Leroy Jones and the fielding of Mac Middleton. On May 4 our team had its first defeat of the season. Bogalusa won by a score of 2 to 1.

The McComb shops baseball club recently entered in its line-up, as captain and first baseman, Richard B. Ching. Making his debut in 1916, Mr. Ching played with Spring Hill College. In the season of 1917 he was with Jacksonville in the South Atlantic League. The season of 1918 he was sold to Pittsburgh, Pa., of the National League, and was farmed out the latter part of the season to Mobile of the Southern League, later being transferred to the Louisiana State League at New Iberia. In 1922 he pitched with the St. Petersburg, Fla., club. Baseball fans of the Southern League recall

Here is the McComb shops baseball team which has been making other teams sit up and take notice. Left to right, front row: Shaw, boilermaker helper, catcher; Goodsir, boilermaker helper, pitcher, formerly of San Antonio Texas League; Harrison, boilermaker helper, left field, formerly of the Cotton States League; Middleton, welder helper, third base; Brown, machinist apprentice, shortstop. Second row, left to right: Buck Jones, molder, pitcher, formerly of the Cotton States League; Van May, molder, catcher. Third row, left to right: Wales, machinist helper apprentice, manager; Estess, machinist helper, second base; Ching, machinist helper, captain and first base, formerly of the Southern League; McGehee, lead material handler, pitcher, formerly of the American League; Leroy Jones, machinist helper, center field, formerly of Louisiana State University; Cullom, blacksmith welder, right field; Revere, machinist, secretary.

Fair bowlers of the 63d Street offices at Chicago. Top row, left to right: Laura Babcock, Pearl Hanson, Elsie Kaiser, Bertha Peterson, Helen Turner, Mary Cotter, Nettie McLaughlin. Center row, left to right: Clara Stiles, Dorothy Alberts, Helen Spiek, Julia Lopeman, Amy Baldorf, Jane Chamberlain, Pauline Hoag. Front row, left to right: Eileen Hayes, Margaret Taylor, Susanna Lang, Catharine Coyle, Ida Jensen, Catharine Tracy.

the 3-hit game which Mr. Ching pitched for Mobile against Birmingham, April 21, 1921, and also a 1-hit game pitched by him, score 1 to 0 in favor of Mobile. His batting average this season is .650.

Baseball at Vicksburg, Miss.

The Yazoo & Mississippi Valley office team, consisting of players from the superintendent's, freight agent's and division storekeeper's offices, was scheduled to open the season at Vicksburg on May 12. It is one of the strongest baseball clubs in the city, and the railway fans expect a great deal from it. The Alabama & Vicksburg Railroad team was its opponent in the opening game. The Yazoo & Mississippi Valley team includes: (superintendent's office) D. P. Waring, Sylvester Thompson, Homer Smith, W. T. McDuff, S. F. Lynch; (agent's office) Adam Werling, Carl Walters, Dell Swett; (storekeeper's office) Jack Roberts.

Ladies' Bowling League Closes Season

The final wind-up of all activities for the season of the 63d Street Ladies' Bowling League, at Chicago, took place Thursday evening, May 10, when a dinner and theater party was held by twenty-four girls from the 63d Street office. Reservations had been made at the Blackhawk Restaurant for the occasion, and the dinner was followed by a trip to the Central Theater, where a performance of "Up the Ladder" was enjoyed. Plans for the perfecting of a bowling league for next year were discussed and met with approval. The girls greatly enjoyed their attempts at bowling last season and look forward to a year of improved scores and keen competition. It is hoped that more girls throughout the entire building will

interest themselves in the sport next year and help form a Ladies' Bowling League of which the 63d Street building may be prouder than ever.

Commercial Baseball League, New Orleans

Name	Won	Lost	Percentage
Illinois Central Railroad.....	6	0	1.000
Dock Board	4	2	.666
United Fruit Company	3	4	.428
Standard Oil Company	0	7	.000

The Illinois Central baseball team of New Orleans earned its fourth consecutive victory of the Commercial Baseball League season on Saturday, April 21, defeating the Polarine team of the Standard Oil Company by a score of 5 to 4. The oil men were counted upon as easy victims by the railroaders, but the Polarines held them scoreless until the sixth inning. Woods' pitching was effectual, the Illinois Centrals being unable to fathom his delivery. Dell of the railroaders, while not hit freely, was wild at times, walking five men, which, coupled with errors, gave the Standard Oil Company a lead of four runs. In the sixth inning the railroaders seemed to reach Woods' delivery, and he was nicked for a total of seven hits, netting four runs and evening the score. He was relieved by Landry, who allowed the Illinois Centrals to squeeze over another run before he could stem the tide of their onslaught. Dell was relieved in the sixth by Mohren, who during the two innings that he pitched allowed only six men to face him, five of whom struck out.

Saturday, April 28, the Illinois Centrals further clinched their hold on first place by defeating the strong Unifruco in what was declared to be the best exhibition of amateur baseball witnessed at New Orleans this

season. This game was a pitchers' battle between Mohren of the railroaders and Bendix of the United Fruit Company, the former getting a shade the better of the contest. Both teams were playing air-tight ball. Mohren's delivery was effective, only one hit being made off him, and that in the last inning. In the last half of the ninth, Aby Jorda, shortstop of the railroaders, succeeded in reaching one of Bendix' curves, driving it over the left field fence for a home run, and winning the game for the Illinois Centrals by a score of 1 to 0.

The Illinois Centrals, on Saturday, May 12, again met and defeated the Polarines, this time by the overwhelming score of 17 to 1, proving conclusively their ability to beat the tailenders of the league. This game was a slug-fest, the railroaders hitting the ball at will. Mohren started to pitch for the Illinois Centrals and, as usual, was effective. He was relieved in the fourth by Barnes, who pitched the rest of the game. The Standard Oil team used three pitchers in its effort to stem the tide of victory, but to no avail. Churchill and Dell were the stars of this contest, their work at the bat being a feature.

12th Street Bowlers End Season

On May 3 the 12th Street General Office Bowling League at Chicago finished its schedule, with the General Superintendent of Transportation team in first place, with an average of 806 pins a game—the only team to average more than 800. Captain Knodell of that team also finished in first place among the individuals, with an average of 180, and he was well backed by the rest of the team—Silverberg, Butler, Walters, Leonard and Yore—and their picture appears in this issue of the magazine. They lost but seventeen games of the ninety rolled and lost but one series during the year, when the Auditor of Miscellaneous Accounts team beat them two out of three.

The Auditor of Miscellaneous Accounts

team finished in second place, six games behind the leaders. It was in the thick of the fight from the start of the season and had the reputation of being the best balanced team in the league; one thing is sure—it was the noisiest team on the alleys. Collier was its leading bowler.

The General Freight team started out to win ninety straight games, and for a time was unbeatable; but the pace proved too hot, and it dropped back to a tie with the General Superintendent of Transportation team until it met that team, lost two of the three games and part of its pep, and finished in third place. Koch, its star bowler, did fine work all year. He had the honor of shooting high game when he upset 258 pins.

The Bridge and Building team never dropped below fifth place at any time during the season; it finished fourth. Block, Dishinger and Stone were its best bowlers. Rolff, Bernbach and Breitzke kept the Engineer of Maintenance of Way team up in the race, and it finished in fifth place, with but two games to spare over the General Superintendent of Motive Power team, Purchasing Department team and Land and Tax team, which were tied for sixth place. The Auditor of Disbursements team finished with an average of .500, forty-five games won and forty-five lost. The Vice-President Accounting team started out in eleventh place and finished tenth.

The Chicago Terminal Improvement team lost thirteen of the first fifteen games, braced and finished in eleventh place. The Terminal Superintendent team, in the league for the first time, did better than was expected and finished tied with the Vice-President and General Manager team, with the Chief Engineer team but four games behind. The Officers team was seven games below fourteenth place and seven games above last place. The square ball artists, the "Cop," finished last in all features of the game. They started out with

Here is the champion bowling team of the 12th Street General Office Bowling League at Chicago. From left to right, back row: R. W. Leonard, C. M. Knodell, captain, and C. E. Butler, Jr.; front row: E. J. Yore, A. F. Walter and R. Silverberg.

an average of 613 pins a game and finished with an average of 668, showing that they were taking the corners off the ball before the end of the season.

Rolf's 669 pins were good for high series, a mark that has not been equaled the last two years in either the 63d Street or the 12th Street league. The General Freight team shot high game when it dropped 977 pins in the pits. The Engineer Maintenance of Way team upset 2,703 pins for high series.

The league, as usual, was a big success, thanks largely to the efforts of W. P. Enright and our efficient secretary, Gus Rolf. —W. E. Du Bois.

63d Street Bowling Season Ends

The 63d Street General Office Bowling League of Chicago finished its season April 20, completing a schedule of eighty-four games. In this number of games there was not a postponed series. Few leagues go through a season without postponed games. No doubt this proves that the boys at 63d Street are interested in the game.

The Daylight Special team, representing the office of the auditor of passenger receipts, finished in first place in team standing for the third straight year.

L. Calloway was the winner in the individual race, averaging 193 for the season. E. Tersip was second, with 184; L. Heimsath, third, with 182. E. Tersip won the prize for high individual game, with 267. O. Hulsberg was second, with 265. J. Kovats and L. Calloway tied for third, with 257 each. O. Hulsberg captured high 3-game series, with games of 178, 221 and 265, totaling 664. P. Kempes was second, with 645; L. Calloway, third, with 644.

The New Orleans Limited team won first prize for high team series by rolling a total of 2,814. The Daylight Special was second, with 2,813; the Diamond Special, third, with 2,742. The Daylight Special won first prize for high team game, with 991. The Seminole Limited was second, with 985; the Diamond Special, third, with 980. The Hawkeye Limited team had a total of 2,701, which was third high series until the Diamond Special team on the last night rolled 2,742.

Below is the standing of teams and individuals for the season of 1922-23:

Team Standing					
Teams—	Won	Lost	High Game	High Series	Average
Daylight Special.....	52	32	991	2,813	850

Women Show Interest in Bowling

The women bowlers from the 12th Street General Offices at Chicago are carrying their heads high, for they recently beat the 63d Street team three straight games on the Woodlawn Recreation Bowling alleys, and as a result have won four of the six games rolled against that team.

The women are talking of starting a league of their own next fall to be composed of teams from 12th Street and 63d Street. From what they have done in the special match games, it seems they should have no trouble getting a league started. Perhaps some day we will read about the crack Illinois Central teams of women who walked off with most of the prize money at the bowling tournaments for women.

The 12th Street Shamrocks, representing the Purchasing Department, will have a good team for next year. The Auditor of Disbursements has enough good women bowlers in his office to place two teams in the league. The 63d Street offices should be able to place at least five teams in the league. Mr. Larsen is handling the 12th Street bowlers, and Mr. Nelson has his eye on the 63d Street bowlers.

Scores of the latest match between 12th Street and 63d Street women:

Winners in Inter-Railroad Bowling

Five of the Illinois Central 5-man bowling teams landed in the money in the second annual American Railway Bowling Association tournament, held at Chicago between April 7 and April 22. Eight 2-men teams also won, and ten individuals took home part of the prize money.

The Panama Limited was again high among the Illinois Central teams. In the doubles Challup and Hengels did the best work for us, and in the singles C. Lind proved a star, landing in a tie for third place, with 626 pins for his share, which was good for \$27.50.

Below are the official standing of teams and individuals, the figures at the left being their rank in the tournament:

The 5-Man Teams

9. Panama Limited	2,705
17. Diamond Special	2,678
24. Daylight Special	2,645
27. Seminole Limited	2,633
31. Special Service	2,607

The 2-Man Teams

34. J. Challup-T. Hengels	1,115
36. E. Tersip-H. Theim	1,113
42. F. Stone-M. Block	1,106
44. P. Smith-J. Breidenstein	1,104
48. C. Miller-C. Lind	1,097
55. H. Coble-C. Riley	1,088

—W. E. D.

Success is a matter of quality, not quantity. It is not what you do, but how well you do it that counts. Do everything, even the smallest things, as well as you can possibly do them, and your progress is assured. No power on earth can keep a third-class man up or a first-class man down.—ROGER W. BABSON.

June, 1923

COMMUNICATIONS

Agents, Keep Posted on Traffic!

TO THE EDITOR: I would like to say a few words to agents in regard to keeping posted on traffic matters. The traveling freight and passenger agent in your territory is the traffic department representative. He has a considerable territory to look after, and he has to depend on you to keep him posted.

Your daily papers are the greatest source of information. Watch them and clip items of interest. You will often find items of praise and sometimes items criticising your company. The traffic department wants both kinds of items sent in so that its representatives can investigate the criticism. If any new industry is to be located in your city, as a rule the newspapers are the first to find it out. You should watch the columns of your papers and clip and send to the traffic representative in your territory any item of interest.

I remember that a few years ago I saw an item in our home paper, copied from a paper in another territory, which told of a very large increase in the business of one of our competitors. I took the first train to that city and found that, on account of a fancied grievance, a certain industry located on our rails had diverted all its business, but our agent did not consider this of enough importance to say anything about it.

When visiting cities that have daily papers, I make it a rule to purchase a copy of the paper, and I seldom pick up a paper that has not some item of interest to the railroads. I am sure that if you will make a practice of looking your paper over each day you will often find items of interest. A great many items are of interest to the operating department, and these should be watched also and sent to the proper officer.

—M. J. HANLEY, *traveling freight and passenger agent, Freeport, Ill.*

The Honesty of Old Julius Diamond

TO THE EDITOR: Although I am not a member of your family, kindly allow me to give expression to a feeling of appreciation for the services, and much regret over the death, of an old and faithful darcy who served your line so long.

I have just learned that Julius Diamond died at Greenville recently. Old Julius, as he was known to all, had been employed as one of the laborers in the freight sheds at Greenville, as I recall, for about twenty-five years.

I have always considered him one of the best I ever knew among his race. Although Old Julius, to my knowledge, had many

Eighty-seven

an opportunity to steal while re-coopering broken boxes of freight and doing other work incident to freight handling, I never knew of a single instance where he ever took a thing that was not his own. Old Julius, in his unassuming way, went about his duties with a loyalty and energy that impressed me very much.

A thing that I never knew of another one of his race was this: When he saw another laborer committing a theft, he generally found me and quietly pointed out just where to place my hands on the thief and the missing goods. In this way I generally detected any petty thievery in the freight sheds and left the impression among the others that I was a good "mind-reader"

or had other ways of knowing whenever they were stealing. While we were handling great volumes of less-than-carload freight, it was recognized that fewer robberies occurred at Greenville than at other jobbing centers, and for this Old Julius deserved all the credit. I made it a point that he should never be known in any case of petty thievery trials, as he always placed me in position to have the absolute proof without bringing him into the case.

Old Julius had a black skin, but there are few persons with better records for honesty and loyalty than he had. Old Julius fought the good fight and has won the victory.—
A. H. DAVIS, *Winnfield, La., formerly agent at Greenville, Miss.*

Railway Employes Need Safe Investments

By G. J. BUNTING,
Comptroller, Illinois Central System

It has been said, probably with more or less truth as a basis, that among the classes of persons susceptible to the wiles of the crafty salesman of "blue sky" securities, one of the most susceptible and easily sold is the class known as "railway men." Millions of dollars are lost each year by workers who confidently invest their savings in what prove to be spurious securities, in many cases absolutely worthless.

I understand that in some states the situation has become so serious in this respect that reputable bankers and investment bond houses are now vigorously carrying on publicity campaigns of education, suggesting that no investments should be made without at least consulting your own personal banker. As a matter of fact, a great many daily newspapers and responsible magazines now conduct special departments where inquiries are answered as to proposed investments. This, in itself, is a safeguard against "blue sky" securities offered as investments to the general public, if advantage is taken of such sources of information and advice.

An analysis of the situation from time to time has shown that wage earners, especially those connected with the railroads, have proved to be a particularly fertile field for the operations of those whose principal business is that of selling speculative, spurious or worthless stocks, and sometimes bonds. This brings to mind how easy it is to get mechanical workers to invest their savings in companies being promoted to develop and sell patented specialties to be used by the railroads; like a great many oil wells, if they do not prove to be failures, they at least do not merit the amount of capital that the gullible invest therein. I have in mind cases of this kind where the worker's attention is directed to the fact

that the device has been submitted to the Interstate Commerce Commission or to some other commission, without, however, in any way indicating whether or not the device is acceptable or has been approved.

A great many workers could have avoided the loss of their savings, invested in some worthless security or in a company proposing to develop an invented device, if they had consulted their banker or a responsible security investment house. Bitterness sometimes is engendered in the heart of a worker against "capital," so called, because of such losses; but if he had used the same degree of precaution in investing his money in stocks or bonds as he would in buying an automobile, sewing machine or some other personal article, a different situation might have resulted. People are prone to accept the word of a salesman (whose principal object is to obtain the commission on the sale) without further investigation and without using that good American horse sense which they would use if buying a set of tools or an automobile.

There is an old saying that "a word to the wise is sufficient," and any man who desires to invest his money in a field with which he is unfamiliar, as may be the case with respect to stocks and bonds, should first consult those who deal in such matters day after day and have the advantage of knowing the real facts surrounding each and every such investment. When a man is sick he does not consult a lawyer—he consults a doctor. Similarly, when he desires to make an investment he should consult his banker or some reliable investment house. If every man with savings to invest gave as careful consideration as to whom he should consult about investing his money as he uses with reference as to whom he should consult in sickness, millions now lost by bad investments would have been saved.

Monkey Wrenches

*Use a monkey wrench right,
And 'twill keep the bolts tight.*
—POOR RICHARD III.

One of the many important things—if not the most important of all—in maintaining a railroad in good physical condition is keeping nuts and bolts tight on track, machinery and equipment. It therefore follows that one of the most frequent operations on a railroad is that of turning a nut on a bolt.

Special wrenches, such as track and other open and solid wrenches, socket wrenches and other wrenches of special design are furnished for many purposes and are useful for the particular service for which they are designed, but when it comes to general use the monkey wrench is the “old reliable” of the tool box.

While the monkey wrench is not a handsome tool, it is undoubtedly a popular one, and its use is universal. No tool kit is complete without one or more of these useful if humble appliances; every section foreman, car repairer, bridgeman, machinist, signal maintainer, water service repairman, engineer, pumper—in fact, every maintenance man in every department and every employe who has anything to do with machines or structures requiring the use of bolts and nuts—would feel at a loss if a monkey wrench were not available when a nut worked loose or repairs of any kind were necessary.

The wide use of the monkey wrench, which has made it one of the most familiar tools, proves the truth of the old adage, “Familiarity breeds contempt,” for the scrap pile proves conclusively that the monkey wrench does not receive care in keeping with its value.

The average monkey wrench represents an expenditure of approximately a dollar. Thus, one wrench does not involve any great loss if it is damaged or destroyed, but in the aggregate it is a different matter. The Illinois Central system has in use some 45,000 or 50,000 monkey wrenches and spends about \$7,400 a year in the purchase of more than 7,000 new ones.

The most common form of abuse to which a monkey wrench is subjected is that of being used as a hammer, which damages not only the wrench but very often the object it strikes. A piece of pipe is frequently placed over the handle of the wrench to give additional leverage. This is certainly effective, for if the pipe is long enough something has to give; the result is that the nut moves, the wrench breaks or the jaws of the wrench are distorted. If a piece of pipe is not handy, sometimes a hammer is used on the handle of the wrench. Either practice helps the wrench to reach the scrap pile.

Another practice which distorts the jaws of the wrench, damages the corners of the nut and very often skins the knuckles of the one handling the wrench is placing the wrench on the nut backward. This practice is, of course, necessary at times when the nut is difficult to reach, but as a general rule it is bad practice.

Monkey wrenches not only are abused through improper use but frequently are improperly cared for. They do not require much care, but allowing them to become rusty and dirty and leaving them where they may be appropriated (to use a polite word) are factors in increasing their cost.

Adversity is sometimes hard upon a man; but for one man who can stand prosperity, they are a hundred who will stand adversity.—CARLYLE.

For Buddy and Sis

Something to Do This Summer

DEAR BOYS AND GIRLS:

Vacation time will soon be here. Are you glad? Then our boys and girls will have more time to play and rest and build up their bodies for another school year.

I know that you will have fine times this summer. Perhaps you will go to grandma's farm or to the seashore or to another city for a visit with your cousins. Aunt Nancie wants you to use your eyes and ears, for she has a plan in mind for a contest for our boys and girls. Aunt Nancie will give a prize to the boy or girl sending her the best letter telling about his or her vacation and accompanied by an original drawing of something that the writer has seen. The picture may be of birds or animals or a scene at the seashore or in the country or a drawing of your little friends, or anything that may please you. The letters and drawings must be sent to Aunt Nancie before August 15. I am telling you about this contest in advance of vacation time, so that you can be on the look-out for things to write about.

Martha Le Gate, who has a letter in this issue, also wrote Aunt Nancie a nice letter in March telling about herself. She says she has dark hair and eyes, weighs 60 pounds and is 55 inches in height. Martha is 10 years old. She goes to school at the West Side School and is in the fifth grade. She plays tag, bear, sometimes hopscotch and other games. When she plays bear, they have one girl for the bear, who runs after the rest, and if she catches one of them that one has to be the bear.

If enough of our boys and girls like the idea, perhaps we can form a little club such as Martha suggests in her letter.

Alvis Horn, 8 years old, daughter of Extra Gang Foreman W. K. Horn, Clinton, Ill., is coming into prominence as a violinist. She has within the last year taken part in several recitals at Springfield, and, considering her age, she performed in an exceptional manner. Alvis, a student in the Ursuline Academy, Springfield, started taking violin lessons at the age of 5.

The accompanying picture shows James J. Reber, 6 years old, son of O. Reber, roundhouse foreman, Kentucky division, with some of his prize chickens.

Did I tell you that a family of pigeons have taken possession of the window ledge in the office next door? The other day I heard a great racket, and when I went into the room adjoining I found that one of the pigeon family had slipped through the open window and was flying around the room. The bird flew at the clock and perched there. By and by one of the boys coaxed it down and put it out on the window ledge again, where the other birds scolded the naughty pigeon and made it so unhappy that it flew away.

Lovingly yours,
AUNT NANCIE.

A Letter From Martha Le Gate

807 West 7th St., Hopkinsville, Ky.,

May 9, 1923.

DEAR AUNT NANCIE:

As you asked us not to quit writing to you, I will write a few lines. I certainly am glad that Buddy's dog got named. Give three cheers to them from me. I hope you got my last letter telling you about myself.

I guess we all wish that you would give us another contest. I know I do. It doesn't matter if I don't win the prize. I love contests. I am sure other children do, too. When daddy brings the *Illinois Central Magazine* home, the first thing I do, I find "For Buddy and Sis" to see the lovely stories and pictures, also the puzzles and things. I can hardly wait till I get the June number.

I wish we could form a little club. I belong to a little club named the "S. S. Club."

What are you going to do vacation? I'm sure I don't know what I will do. (Get sick, I guess. It's what I do nearly every summer.) I sure wish I could travel all summer. I have just come from a trip to Louisville. Our school is out in June. A long time yet. I sure do dread the final examinations.

I cannot think of anything else, hardly, to write. Wish I could see you. Tell everybody good-by, including Jazz and Buddy.

With love,

MARTHA LE GATE

P. S. Please write to me very soon.

Illinois Central Magazine

Answers to May Puzzle

Illinois towns: 1, Rockford. 2, Springfield. 3, Gilman. 4, Champaign. 5, Carbondale. 6, Edgewood. 7, Buckingham. 8, Benton. 9, Alhambra. 10, Freeport. 11, Blue Island. 12, Robinson. 13, Mattoon. 14, Lotus. 15, Murphysboro.

Kentucky Towns

The following groups of words represent stations on our lines in Kentucky. See how many you can guess correctly. The correct answers will appear in the July issue.

1. A king of France and the French word for town.
2. One of the true primary colors and a small elevation of earth.
3. One of the points of the compass and to look upon.
4. A rodent quadruped of amphibious habits and a barrier across a watercourse.
5. The name of a president of the United States.
6. The name of a famous resort located in Switzerland.
7. A tract of land situated between hills or mountains.
8. The top of a mountain.
9. The one-tenth of a cent and a collection of trees.

10. The color of pure snow and to move swiftly.

11. A domesticated animal and the name of a subdivision of a railroad.

12. A small elevation of earth and that part of the body between the shoulder and the hip.

13. The name of a famous frontiersman and explorer of Kentucky.

14. The name of an evergreen tree and a high steep bank.

15. A Greek word signifying "I have found it."

16. The son of a king and 2,000 pounds.

17. The name of a famous race run annually in Kentucky.

18. A famous

Isabel Rose, daughter of Mrs. Zella MacNair Rose, clerk to trainmaster, Mattoon, Ill.

gambling resort located in Europe.

19. The name given to a North American animal now almost extinct.

20. A name applied to the care of God for his creatures.

Spring Gardening

If I planted these articles in my garden, what would come up?

1. A very precise girl—primrose.

2. A mercenary mother's advice—marigold.

3. A lover's parting adjuration—forget-me-not.

4. A symbol of victory—flag.

5. A winter sport—snowball.

The Flowers on a Lark

When the bachelor-buttons the lady's slipper—

(Come Johnny-jump-up from her feet!)
And Sweet William calls through the trumpet flower:

"You're a Daisy, Marguerite!"
When the cowslips up and the buttercup breaks,

And the milk-weeds, to give the mushroom—

When the puff-ball smokes the Indian pipe,
And the fox-gloves his hands in the gloom—

When the giddy cocks-comb the maiden's hair,

And the fire-flies around on a "spark,"
Then the naughty lark-spurs on the flowers
To go on a meadow-lark!

—Selected.

THE OTHER FELLOW

Who is the other fellow? Is he not a mere reflection of ourselves? And don't you think, therefore, that it even pays to be fair with him?

For a long time I have noticed the people who have taken advantage of others, or of their city, or of their country. Considering results at long range, all these years mighty few have really got away with it.

Whenever you short-change, even to the smallest degree, the other fellow, you are simply cheating yourself, your family and your friends.—ALBERT B. LORD.

Here is Melvin Brown, son of General Yardmaster R. H. Browning, Evansville, Ind. Melvin is taking saxophone lessons and already plays well. He is an all-around boy, a devotee of various sports, a true baseball fan, a rooter for the basketball team, and when it comes to swimming, he plays second only to his dad.

Radio Department

Variometer Tuned Plate and Grid Circuits

In Fig. 1 is shown the picture plan for a regenerative set using a variocoupler and two variometers—one in the plate circuit and one in the grid circuit. This type of hook-up is popular with the radio fans, as the use of the variocoupler and the variometer tuned plate and grid circuits results in sharper tuning, making it possible to reduce interference and tune out undesired stations. The two variometers may be used in connection with any type of regenerative set by changing the hook-up to correspond with the picture plan (Fig. 1). They may be purchased complete or unassembled.

If you desire to assemble your own variometers, you should purchase the necessary parts at any radio store. The forms are so mounted that the smaller one, called the rotor, is placed inside the larger one, called the stator. Each coil is wound with forty or fifty turns of No. 20 double cotton-covered wire and connected in series. That is, the inside end of the rotor coil is connected to the inside end of the stator coil and the two outside ends connected to the binding posts as shown.

A variable condenser may be used in the grid circuit instead of the variometer, if desired, and other variable condensers may be used as shown by the dotted lines in Fig. 2. In using variable condensers, remember that a variable condenser used in the antenna circuit in series reduces the wave length and a variable condenser used in shunt across an inductance, as shown by the dotted line around the variocoupler, increases the wave length.

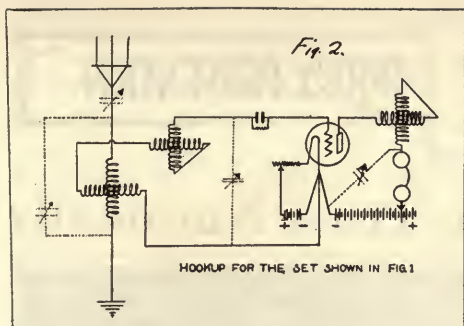

This arrangement of two variometers—one in the plate circuit and one in the grid circuit—provides a method of sharper tuning than the variable condenser for varying the wave length in tuning to stations whose wave lengths fall between the taps on the secondary of the loose coupler, thereby making it possible to hold and increase the strength of the signals from the station desired and to eliminate undesired stations.

There are two methods of

tuning this type of set. In tuning for transmitting stations that usually come in very loudly, set the plate variometer at zero. Next adjust the primary circuit of the variocoupler to the desired wave length. At the same time, the secondary circuit is tuned by moving the switch lever over the contact points and by rotating the grid variometer slowly in order to keep the primary and secondary circuits in tune while tuning in the signals. The plate variometer may be slowly rotated in order to amplify the signals by means of regeneration, until the signals or voice begin to break. Then rotate the variocoupler about 20 degrees to the left in order to reduce the possibility of interference from other stations which may start transmitting.

If the signals are too weak to be heard without regeneration, set the variocoupler at 180 degrees. Next adjust the primary circuit to the wave length of the signals desired. Then, with the switch lever of the secondary circuit set on the third contact post from the bottom, rotate the grid variometer and the plate variometer each through a complete turn. The two variometers should be revolved at the same time, one following the other, in such a way that maximum regeneration is maintained

throughout the complete revolutions of the two instruments.

Signals picked up in this manner are rarely loud enough to permit of loosening the variocoupler to any extent. However, readjusting the variocoupler even the slightest degree will reduce interference.

Uses Various Kinds of Antennæ

"I am submitting a rough sketch of the radio set which I built and am now using," writes C. E. Okey, first trick operator, Gibson City, Ill. "It is known as the tuned radio and detector circuit, only part of which is original with me. This circuit is not complex; anyone with a little study and experimenting can make it work. I am using two stages of radio-frequency in connection with the receiver and the output into a magnavox (loud speaker).

"The advantage is that with this hook-up an inside antenna or a loop aerial is used. I am able to get very good signals using twenty feet of telephone wire laid on the floor and can pick up radio waves without any kind of aerial attachment at all. I find it works very well on a loop aerial of eight turns of wire on a frame two feet square. I constructed this sensitive receiver to avoid the use of an outside aerial during the summer months while our old friend 'static' is with us.

"I am going into the detail of the construction of this set, but any of the readers who are interested in a set of this kind—one that is the very latest in radio and, to my mind, the most efficient of any yet discovered—may write me, and I will give the details of its construction. The approximate cost of this

outfit is \$50, and anyone wanting to use a loud speaker in connection with this set can easily add a 1- or 2-stage amplifier at a small cost. I use a standard 6-volt battery for the A and also the 6-volt tubes, but the circuit will work as well, if not better, with the WD11 tube as detector and the UV 201A as a radio-frequency amplifier.

"I have been employed as agent and operator on the Illinois division for ten years and take pleasure in reading the magazine

Mr. Okey's hook-up

every month, and especially since the radio page has made its appearance.

"I have been an amateur almost from the beginning of radio, as I served two years during the World War in the Naval Radio, and stood watch at the big Naval Radio station at Boston, Mass., ten months during that time. I also served as instructor in radio at Harvard."

Bert Richards and his Suwanee combination orchestra. Standing, from left to right: Bert Richards, Robert Studer, Robert Thorp, King Waller, Charles Forcht, Patrick McDermott. Sitting, from left to right: Misses Elizabeth Schott, La Clair Streckfus, Violet Doerhoefer and Naoma Forcht. Bert Richards is 14 years of age and is the son of E. A. Richards, assistant ticket agent at Louisville, Ky. In addition to being an accomplished musician, he is an ardent radio fan. This orchestra plays regularly for WHAS, the radiophone broadcasting station of the Courier-Journal and the Times at Louisville.

His Safety Suggestion Tried Nationally

A BOOSTER for accident and injury prevention is General Car Foreman W. J. McCloskey of Centralia, Ill. He recently wrote to the president of the American Railway Association's safety section, suggesting that safety signs be placed at all public gasoline filling stations. This suggestion was accepted and acted upon.

Mr. McCloskey entered the service as car repairer August 26, 1910, at Freeport, shops, was made gang foreman in August, 1914, general car foreman April 1, 1916, and was transferred to Centralia on November 27, 1919, as general car foreman. He is a hard worker in the interest of safety.

His letter to R. H. Aishton, president of the safety section of the American Railway Association, follows:

"In an endeavor to assist you and your organization in its campaign against grade-crossing accidents, I beg leave to offer the suggestion of placing permanent crossing warning signs at all public gasoline filling stations in the United States.

"My thought is that careless drivers' attention will be called to these signs while they are securing gasoline or oil."

In reply, Secretary J. C. Caviston wrote:

"Referring to your letter of April 12, addressed to the president of the association, relative to displaying posters at gasoline filling stations.

"Your suggestion is an excellent one. We have made arrangements with the Standard Oil Company of New York to do this at the stations they supply, and will take up with other companies promptly."

Concerning the campaign for safety at grade crossings this summer, Mr. McCloskey writes for the *Illinois Central Magazine* as follows:

"Illinois Central employees and their families can perform a great service to their company, and country as well, by operating their automobiles over grade crossings in compliance with the law of the land and the rules of our company.

"There is not a transportation officer who would not mark up an engineer's record for failure to stop at a block signal set against him, and I feel that, if we are to get results from the stop signs at grade crossings, it will be necessary for the state to fine and also revoke drivers' licenses

W. J. McCloskey

for their failure to comply with the law covering grade crossings.

"Officers and employes can also assist in the education of the public in this respect by bringing this subject before public meetings, school entertainments, farmers' community meetings, etc., and by handling the matter in the same way they did in the solicitation of freight and passenger business—that is, by going direct to their friends and business associates.

"Mr. Markham and all the other officers would be filled with remorse if one of their employes was killed or injured on a grade crossing on this or any other railroad, and all who read these lines can assist in preventing such a condition as this by observing the rules and talking this over with their friends and members of their own families who drive cars.

"We gaze with awe and wonder, admiring the nerve of an aviator who loops the loop and does the 'maple leaf,' but he is not to be compared with the 'gas bug' who

attempts to beat the Hawkeye, Panama or Seminole to the crossing.

"Let us all do our bit in assisting our management and the American Railway

Association's safety section in eliminating this public menace which is fast becoming a strong competitor of cancer and tuberculosis."

Goes 27 Years Without Personal Injury

M. C. Monk, now employed as car inspector at West Point, Miss., was born October 24, 1879, at Union Point, Ga. At the age of ten years he entered the service of the Georgia Pacific Railroad in the Atlanta yards as switch lamp tender, a position he held for two years, during which time he continued at school. After leaving this service and devoting full time to school work, he again took up railway work, this time with the Illinois Central, in 1896 as car repairer at West Point, Miss., under Master Mechanic William Hassman. He was promoted to car inspector at the same point in 1900, in which capacity he has served continuously since.

During Mr. Monk's twenty-seven years' service with this company he has been absent from duty only five days, and, although engaged in hazardous work, has never received a personal injury. He boasts that during his entire lifetime he has never ridden a horse or touched a drop of whisky. He has a genial disposition, and his friends are numbered by his acquaintances.

Mr. Monk is a loyal, efficient employe, never losing an opportunity to protect the railroad's interests, which has been demonstrated in many instances. A train accident has never occurred due to defective equipment where he was the last inspector

M. C. Monk

to make inspection. I also have in mind two instances where accidents were averted by his alertness while off duty. Once he was standing near the railroad and discovered a broken arch bar under a tank car loaded with gasoline. Again, while asleep at home (his home being located about fifty yards from the track), he was awakened by a passing train doing some switching; discovering by sound a slewed truck, he notified the conductor. In each instance the cars were promptly set out.

Mr. Monk's parents now reside at Cherokee, Ala., where his father is employed by the Southern Railroad.—W. H. PETTY, trainmaster, Durant, Miss.

TICKET SALE EXTENDED

The ticket office facilities in the Illinois Central suburban station at Randolph Street and Michigan Boulevard, Chicago, have been expanded effective, May 14, to include an office for the sale of through railway and Pullman tickets to all points reached via the Illinois Central, Michigan Central and Big Four. This new service is furnished largely for the convenience of Illinois Central commuters, many of whom are business men having headquarters in the northern portion of the Loop district. The same complete facilities for the purchase of through railway and Pullman tickets are available at the Randolph Street through ticket office as at similar through ticket offices at Central Station, 43d Street, 53d Street and 63d Street, Chicago. The office is in charge of C. O. Nash.

Safety First in Verse

The signal maintainers on the Illinois division have become very active in the prevention of accidents, according to S. C. Hofmann, supervisor of signals. The following was written recently by Signal Maintainer R. R. Louder of Monee, Ill.:

D is for Driver who lets his car run fast.
E is for Excuses made when a passenger train is passed.
A is for the Ambulance that picks up the scraps.
T is for Tears shed with many mishaps.
H is for the little Hearse for those who meet the worst.
It all spells D-E-A-T-H for those who don't stick close to Safety First.

Home of M. C. Monk, West Point, Miss.

Joining the Procession

SEVERAL railway officers were telling stories. A representative of the passenger department related the one about the Chinese laundryman whose place of business was located between two restaurants. One of the restaurant men hung out the sign, "Open All Night." The next day the other restaurant man came out with, "We Never Close." It was too much for the Chinese, and the third day he displayed his sign, "Me, Too."

"The Chink must have been working for the railroad," commented one of the officers from the executive department. "We've got a lot of 'me, too' birds on the railroad."

He Was Willing

A Western governor had lost one of his colonels, and there was an unseemly scramble for the office, despite the fact that the colonel's body was awaiting burial. One of the ambitious candidates went so far as to call upon the executive and ask: "Governor, have you any objections to my taking Colonel Smith's place?"

"No," the governor replied complacently. "I have no objections if the undertaker is willing."—*The Country Gentleman.*

The Perfect Family

"They're very unusual people."

"That so?"

"Yes, indeed. Even the neighbors are satisfied with the way they are bringing up their children."

Bad Water

During the recent A. R. E. A. convention in Chicago, several Illinois Central System water service foremen were discussing the quality of boiler waters at various points on the system, particularly with regard to the foaming of locomotives through the use of certain waters. Several instances had been cited when Henry Brannan of the Memphis division capped the climax by relating an incident which he claims occurred from the use of the water formerly used as a locomotive supply at Ruleville, Miss.

According to his story, several years ago the Hagenbeck-Wallace Circus was being handled over the Yazoo & Mississippi Valley en route to Greenwood, Miss. The train was made up with one of the elephant cars next to the engine, and when a stop was made at Ruleville for water the elephant put his trunk through the open end window of the car and also filled up with the Ruleville water. All went well until the circus people attempted to march the elephant in the parade, when it was found that the elephant foamed so badly that they had to set him out in an alley.

The meeting adjourned with honors in favor of the Memphis division.—C. R. K.

No Discouraging a Radio Bug

A radio enthusiast was "listening in" when the announcement came that the next selection would be "Three o'Clock in the Morning." He closed his machine, set his alarm clock for 3 a. m., and retired.

Probably Correct, at That

A cow was killed on the railway right-of-way. The section foreman was called in to make out a report of the stock killed. He came to this question: "Disposition of carcass?" After a few minutes' thought, he could only think of these words: "Kind and gentle."

Perfectly Reproduced

Up at our boarding house there are two children, a boy and a girl. The boy is the living photograph of his father, and the girl is the very phonograph of her mother. —*Ohio Sun Dial.*

The Fisherman

Behold the fisherman!

He riseth up early in the morning and disturbeth the whole household.

Mighty are his preparations.

He goeth forth full of hope, and when the day is far spent he returneth, smelling

of strong drink and the truth is not in him.
—Selected.

Too Dense for Him

Jones had planted a young tree on his front lawn. Several days later, on returning home late from a stag party at which the wine flowed freely, he entered his yard and ran into the tree; on regaining his balance, he made a second attempt and hit the tree again; the third attempt to reach his door met with the same result. Finally, worn out, he took off his coat, sat down and said resignedly: "Until my head clears up, it's no use trying to get out of this dense forest I've wandered into."—F. MCS.

Heads I Win—Tails You Lose

A fellow with an overload of hooch skinned his face while crossing a railway track. He lost no time in looking up a notorious damage suit lawyer.

"I'll take your case on a contingent fee," said the lawyer.

"And what's a contingent fee?"

"I'll tell you. If I don't win your suit, I get nothing. If I do win it, you get nothing."

He got the case.—T. T.

Pat and His Annual Pass

After boarding train No. 120 at Decatur, Ill., I located myself in the smoker and noticed just across the aisle an old gentleman, whose general appearance indicated that he represented that type of track laborer who was the pioneer section man and, in fact, the man who furnished the labor that built our railroads. The old gentleman was enjoying a smoke from a much worn short-stemmed clay pipe.

When the conductor called for tickets, Pat handed him an annual pass, which the conductor looked at very carefully. Then the conductor, with a smile, said to Pat, "I would like to know what right you have with an annual pass."

Pat turned his face to one side and, with his Old Country brogue, replied: "Look here, sor; if I haven't the right to that pass there never was a mon on earth

that did have the right, for it took me just forty-seven years to get that, sor, and I am going to prove my right by using it just whenever I please."

The conductor smiled and left the car, but in a short time returned and said, "Pat, I forgot to ask you where you were going."

Pat replied, "Sure, sor, I am going until I get tired, and then I will get off and come back."

Scenting an opportunity of hearing some genuine Irish wit, I mentioned to Pat that it must be a great and generous railway company that would think so kindly of its old, broken-down employes by giving them a pension and at the same time providing them with annual passes, good to travel over the entire system.

At this point Pat took his pass from his pocket and said: "Look here, sor; do you know that I think more of that little card than I do of the money that is sent me each month for pension? I would say to you, sor, there is genuine recognition in that card, sor, for it places me on an equal footing with the president of the road, sor. The only difference is that the president has an office car, and I would have no use for that. I can say, sor, that I do think well of this great railway company, and many is the time that I am enjoying the privilege of riding over the very track, sor, that I helped to build a great many years ago."—J. H. L.

New Typewriter Oil

The new stenographer determined to make a good impression. She turned up half an hour early and began tidying up the room. When that was done she discovered her typewriter was in a shocking condition, found a bottle and gave it a thorough oiling. Then she oiled all the other typewriters in the office. There is nothing, she thought, like making one's self indis-

Chasing Some Trouble on the Iowa Division, I.C.R.R.

Drawing by E. R. McCullough, signal maintainer, Iowa division, called to our attention by R. D. Ashley, signal inspector, Chicago.

pensable! Her chief arrived. He looked around with an air of satisfaction and crossed to the mantelpiece. Then his smile changed to a frown.

"Miss Smith," he said, "have you seen my cough mixture?"—*San Francisco Examiner*.

"One Good Turn—"

"Hoo is it, Jeemes, that you mak' sic an enairmous profit aff yer potatoes? Yer price is lower than any ither in the toon and ye mak' extra reductions for yer friends."

"Weel, ye see, I knock aff twa shillin's a ton because a customer is a freend o' mine, and then I jist tak' twa hunert-weight aff the ton because I'm a freend o' his."—J. M. M.

This Isn't Said of Us

The train, as usual, crawled along—you know the line—and then stopped dead.

"Conductor," shouted a jovial passenger, "may I get out and pick some flowers?"

"Afraid you won't find many about here," said the conductor, good humoredly.

"Oh, there'll be plenty of time," commented the jovial one. "I've brought along a packet of seeds."

Why the Train Waited

This occurred at Vicksburg, Miss., recently as train No. 12 was almost ready to pull out.

A belated passenger, a negro woman, hurried into the baggage room with a crate full of poodle dogs and had it checked. While a porter was carrying the crate to the train the bottom fell out, and the frightened animals scattered in every direction. The woman, seeing the dispersion of her pets, set up a wail that would have awakened the dead. The passengers piled out of the coaches to find out the trouble.

"Save my sweet babies," she cried in grief. "Save my darlin' little poodle dawgs!"

The response was general; everybody seemed willing to help the poor woman in her distress. The baggage agent, the porters, the passengers and the police started after them. Trainmaster F. H. Anderson, despite his considerable avoirdupois, joined in the chase and succeeded in capturing one under the baggage car. The rest were soon rounded up, biting viciously at their rescuers.

In the meantime, the crate had been repaired, and the poodles were safely nailed up again and put in the baggage car. The hysterical woman was profuse in her thanks and invoked many blessing on the heads of those who so cheerfully came to her assistance.

"I never saw a woman in distress that I wouldn't take the shirt off my back to help her!" exclaimed one fellow dramatically, as he boarded the train. Many believed he meant it.—T. T.

The Honesty Which Is Policy

"Yessuh, I's done proved dat honesty is de best policy, after all."

"How?"

"You remembers dat dawg dat I took?"

"Shore, I remembers."

"Well, suh, I tries fo' two whole days to sell dat dawg and nobody offers more'n a dollar. So, like an honest man, I goes to de lady dat owned him an' she gives me \$3.50 for him."

Saving the Bait

One Sunday after church a negro pastor of a small Southern town saw the deacon of the church take a coin from his pocket and substitute it for a larger coin on the "plate."

The parson asked, "What's yo' doin', Rastus?"

The deacon answered, "I'se takin' out my 50-cent piece dat I'se stahted de collection wid fo' five years."

SUSIE SEZ—

in this country. We could do it when our national life was threatened by war; then why can we not do so when it is threatened by a great industrial crisis, such as will come unless railway credit and finances are stabilized?

Our great trouble lies in the unfortunate fact that there are too many well-meaning agencies, causing duplications and acting at cross purposes, trying to handle the railway situation. What is needed more than anything else is a properly organized, well-balanced, fair-minded group of men, selected on account of their proved worth and ability to do things and accomplish real purposes, to whom would be entrusted the problem of reorganizing and re-financing the roads. We would have no financial difficulties were this problem undertaken and carried out in the broader sense by the re-establishment of credit, which cannot be done with securities in their present unstable condition. Right here let me again stress the point that all semblance of partisanship, bias and preconceived ideas would have to be excluded; practical men must go into this question with only one purpose in view, and that the good of the country by the rehabilitation of the transportation lines, at the bottom of which seem to rest the principal financial difficulties. Capital, labor, management and the public should be treated fairly, but neither should have the advantage over the other or the whole.

Employees Respect Managements

In passing let me set at rest any thought that the managements of the railroads are held in disdain by the railway employees or that there is any great friction between the two. The most cordial relations exist and the most wholesome respect and good will is entertained one for the other. In most instances the operating officers of the various lines are promoted employees who have come up through the ranks. There is today, insofar as we are concerned, no trouble of any kind with the management, neither is there any friction; so you may be assured that industrial peace is everywhere apparent insofar as the railroads and the transportation employees are concerned. This, then, seems to be the time when we can and should discuss the general subject. When we are so free from any questions of dispute between the two, we should act. I am firmly of the belief that were a movement started actively now we could depend upon the almost unanimous support of the employees to such a movement. We are all tired of strife. Let us then have peace, peace by

right, not by might nor through temporary advantage, but by justice, and justice can never be administered unless it is based on right.

I understand your body has taken up the transportation problems in a systematic way with the object in view of studying the whole question. Committees have been selected and are now planning and studying this subject. This is very commendable and is almost certain of good results. Caution should be taken against haste in outlining the final decision. Just so the plan is completed before the Congress convenes, provided legislation is necessary which is doubtful to any extent—seemingly this is all that would be necessary, the thought being to do the job while at it. The committee of which I am a member is proceeding very carefully and cautiously. It has been my good pleasure to work with the Chamber in the past, and I know what a wonderful influence it has, and for that reason when the program is completed it should have the very best thought and mature judgment possible. The Chamber, it is understood, has pretty generally covered the field of thought in the selection of committees, has adopted a most liberal policy in the ascertainment of its ground work, and in this seemingly the best judgment has been exercised, which coincides with my views as to the proper methods to be employed in arriving at an ultimate solution.

The further thought desired expressed is in connection with the amount of money and energy expended in presenting to the public not so much the virtues of any particular group or interest in the transportation business, but rather that expended in setting forth the shortcomings of either one or the other. For example, if the amount of time, money and printer's ink wasted by the railroads and the employees in telling of the mean things the other was capable of doing, to which could be added the efforts of other bodies and organizations in taking sides with either of them, had been put into the railway business we would be far along the road in the adjustment of our difficulties. The sooner we realize that we can be each other's best friends and most helpful aids or that we can be the most harmful enemies, the better off we will be. In days gone by, supposedly, we have been at each other's throats so much, while in reality it has been so little, that people generally think what we have said about each other is true.

Need More Work for General Good

Encourage us to respect each other, to work together and railroad together for the general good. Teach us to spend less time and finances in preparing for war between ourselves and to devote it to our mutual

good, which becomes the general good. Set before us the example of mutual good will and wholesome regard by treating us both alike, fairly, firmly and justly. The railroads are all right, and the employes are likewise. What we need is help to rid the industry of the Reds on one hand and the Bourbons on the other. It would be soon accomplished if encouragement was not given by the public to those harmful elements. No better place could be suggested in which to start this movement than in your Chamber, with its many branches extending to every section of the country.

We were to spend less time in agitating the public mind toward the enactment of compulsory arbitration laws and other stringent regulations of the railroads and more time in educating the public to an appreciation of the fact that the railroads and their employes need sympathetic assistance in their efforts to furnish transportation, we would be a quarter of a century advanced in less time than we could imagine. It is not meant by this that the railroads and their employes should be turned loose to do absolutely as they please. However, it is believed by many that if they were given the opportunity they would do a far better job than is now being done, hampered as they are by present restrictions. All should be broad enough, however, to admit the mistakes already made and show a willingness to rectify them for the future.

A word should be said as to salaries and wages paid by the railroads as compared with other industries, for the reason that it may have some bearing on the trend of thought of a great many in discussing the financial problems of the railroads. Name any other industry or corporation, in which so much is invested, where the responsibilities are as great as those of a president or other high operating official of a large railway system, and compare its officers' salaries with the salaries of these railway officials for the proof of the reasonableness of railway salaries. Consider the skill required, the hazards of employment, the discipline, the physical requirements, length of industrial life and responsibilities, in connection with the wages paid railway employes in comparison with the same conditions and wages of employes in any other industry, and you will readily see that railway employes are not overpaid. Usually in considering this phase of the subject the aggregate amount of wages and salaries paid is considered without regard to the vast number employed or the magnitude of the industry. When we consider that the railroads carry virtually all the raw materials and finished products of industry and in addition thereto transport the peo-

ple from place to place, we begin to see that no other industry is comparable. This of course, points again to the effect that proper and adequate railway finances have on the general welfare of the country at large.

Farmers Have Been Misled

The farmers and rural inhabitants have been greatly misinformed with regard to railroads and more especially as to railway finances. The average rural inhabitant has been importuned to believe that the railroads are gigantic monstrosities, that the railway employes are the reddest of the Reds, and that these two are taking away from the farmer everything he possesses. We might retaliate by claiming that during the last few years we have had sufficient cause to believe there were others, especially when purchasing from the markets. The 8-hour day was held up to the farmer as a gigantic steal on the part of the railway employes. They were told that farmers could not get an 8-hour day and that the railway men should not have one. Large sums were spent in miseducating rural people along these lines which could have been more beneficially spent in telling these people of the danger incident to the railway business and the urgent importance of having shorter hours for the men who operate trains. It seemingly would have been the wiser thing to have spent the amount that was spent by both the railroads and the employes in the 8-hour movement in educating the people that it was right in principle and that the public should meet this obligation in the spirit of fairness. This was not done, however, and as the matter now stands there are a great many of the public who believe the bad things that each side said about the other; therefore we are all reaping the harvest of ill-advised sowing. These questions should have been determined on the basis of justice, and when the proper conclusion had been reached it should have been presented to the public by the parties jointly. A great deal of good can be accomplished by the railroads and their employes going to the rural communities with a joint appeal for fair dealing for the transportation industry. Just why we have not done this is a mystery, answerable only in one way, that outside interference has driven the employer and employe farther apart instead of closer together. It should be made known to the rural inhabitants that the railroads and their employes must live; and the false theory should be exploded that they are robbing the farmer. Do this and you will have gone a long way in your campaign of education, and incidentally will have

done much to assist in financial readjustments.

Importance of the Press

The press of the country can be a most potent factor in bringing about a proper adjustment and stabilization of railway finances. Unfortunately it has been too often used in an extreme partisan way. It has been used both for and against the railroads and the employes on general principles. It would have been so much better had the power of this agency been used in stating nothing but the whole truth for all these years during which this partisan agitation has been going on. Were we to agree that henceforth all the railway problems would be passed upon fairly and seek the aid of the press of our country in presenting these facts to the public, how great an influence we would bring to this program. It is worth while to start a movement of this character at the earliest possible time, and I firmly believe we will have the strong support of the public press. Imagine if you will on tomorrow morning and again tomorrow evening all the leading newspapers in the United States carrying headlines announcing that the railway owners, the railway managements and railway employes, assisted and supported by the business organizations of the country as represented through the Chamber of Commerce of the United States, had agreed that a plan of reorganization and refinancing was necessary and that it was the purpose of these interests to see that railway securities were stabilized, that railway employes were to have proper wage adjustments immediately and that the aid of the public press, the Congress and all the people was urgently requested to make this movement effective. You would see a revelation in the turn of public sentiment toward these problems.

It is worth trying—who will start the movement?

The best cure for so-called radicalism is effectively to remove the cause, just as the best cure for disease is to starve the germs causing the trouble. The Reds have been furnished more food by the way the railway situation has been handled than by any other one thing in this country. It has been well known for years that the radicals of this country and of Canada have had as a slogan, "Capture the railway operatives, and we will dominate the general situation." They obtained the aid of some of the workers in Canada and caused considerable embarrassment a few years ago. A wave of outlaw strikes spread over the United States in 1920 among the railway men, which were checked only by the most stringent methods being adopted by the leaders in the regular organizations. What

was the watchword of these people? "One Big Union, one for all, all for one. We will free the railway workers and take over the properties." No sooner had this been suppressed than the legitimate organizations were held up to public ridicule to the extent of being called Reds when they protested against wage injustices. Of course, you may see what has happened and judge the future accordingly. Now it would seem that the things that should appeal to the average man are to remove both the financial and industrial shortcomings and place the railroads and the employes on a proper basis and suppress all the agitators' propaganda. It can be done and should be handled at once.

A Chance for the Banker

None are so close to the people of America as our bankers. Not even the family physician or our private attorney can approach the nearness with which the banker approaches the pulse of the people. He is the one man above all others who should sense the dangers ahead of us in the transportation industry, and we may safely assume that he does. It seemingly would be most commendable were the organized bankers to take an active part in readjustment of railway securities and in placing this industry on a sound financial basis. It appears that it would be a wonderful thing were a group of investment bankers to be assembled and entrusted with the duty of freeing the railroads from speculation and any semblance of watered stock, even were it necessary to retire a large amount of stocks and bonds outstanding and to re-issue in lieu thereof sound securities at the proper value instead of the larger amount at varying values. Just how much legislation, authority or red tape it would take to assure the success of such a project is questionable. By this suggestion is meant that through a re-issuance of securities the real value would be known and not a speculative or theoretical value. This would put the securities of the railroads on the market and insure their soundness. Even if this result were not obtained, it would at least set at rest the charge of overcapitalization and watered stocks that has been generally indulged in during the last quarter of a century. What is urgently needed is financial confidence in railway investments such as could be readily recommended by our bankers to widows, orphans and insurance beneficiaries. A plan looking to this end, in my judgment, should be undertaken or at least properly considered.

Considerable has been said regarding the great number of bills that are being introduced from time to time in Congress and the state legislatures affecting the rail-

roads, many of which are introduced at the solicitation of railway employees and others at the solicitation of the railroads themselves, having as their object the limiting or restricting of the activities of railway employees or others. This we may reasonably expect to continue unless and until a more thorough understanding is had by all parties concerned and unsafe conditions of employment and many other ills are disposed of through mutual negotiation and understanding. Legislation is generally expensive and a burden upon the railroads, as well as others, which could to a great extent be eliminated if the financial conditions of the railroads were on a sound basis and many subjects that are now dealt with by legislative bodies were handled in a business-like manner. Right here, may I add, is a field in which a great work can be done, and it is hoped that the importance of a movement of this kind will be approached by the parties at interest at the earliest practicable time.

In conclusion may I again thank you for your patience and the cordial manner in which I have been received, with the hopes that what has been said will be taken in the spirit in which it was given—that of one who desires to be helpful and hopes to see the railroads of this country placed upon the best financial basis possible that will be adequate to take care of the needs of the country and at the same time deal justly with all.

Empty hours lead to an empty head and an empty head leads to empty pockets.—*The Watchman.*

THE STEADY GRIND

The fellow who knows how to grind gets there in the end.

Some people are always looking for sky-rockets. They believe human affairs are guided by the genius of luck. They believe in a Santa Claus for grownups. They believe in waking up some morning and finding themselves wealthy, famous and powerful. But the chariots of fire never appear. The golden lands that lie at the end of the rainbow are never reached. Across their firmament the meteors of great success never flash.

If there is anything that a well-balanced man of more than thirty ought to know, it is that genius is generally nothing but hard work disguised in fancy clothes.

It's the steady grind day after day in the face of ups and downs that makes a fellow's dreams come true.

Constant application, persistency and dogged determination are the qualities that win at last.

Shaking dice with fate is a fool's game. History records the victories of no man who was not a day laborer in life's harvest field.

Good luck is the rarest flower that blooms, and it blossoms mostly in the gardens of imagination.

If your rival is a steady grinder, look out for him.—*Selected.*

The best place to build an enduring monument to one's self is not in the graveyard at the journey's end, but in the hearts of our fellow mortals.—*The Watchman.*

NEWS OF THE DIVISIONS

GENERAL OFFICES

General Freight Office

James Fort Forsyth, grandson of Colonel Robert Forsyth, deceased, formerly general freight agent of the Illinois Central, is back in Chicago after six years at North Muskegon, Mich. Mr. Forsyth is the son of Wallace Forsyth, the youngest of Colonel Forsyth's four sons, and is president and general manager of the Forsyth Publishers' News and Feature Service. Forsyth, Ill., a town developed by Colonel Robert Forsyth and named for him, is served by the lines of the Illinois Central. It is about ten miles from Decatur, Ill.

Office of Auditor of Freight Receipts

E. R. Reha, chief clerk to the auditor of freight receipts, took a trip to Cuba last winter. On his return he mentioned first of all "the unusual comfort derived from the excellent equipment and the spirit of courtesy pervading the service of the Seminole Limited, giving the passenger that feeling of being at home.

One Hundred Two

"It was like a summer's day when our train reached St. Augustine," he wrote, "the oldest city in the United States, where I looked with interest at the quaint old houses, the narrow streets and the beautiful beach. I also took a trip on the ocean and visited old Fort Marion, with the maiden-hair ferns clinging to its walls.

"I saw also the 'Fountain of Youth' and the drinking of several cups of it does make one feel like a new-born babe. I visited large orange groves before whose entrance stand as sentinels large trees laden with hanging moss; there are acres of pecan trees and what seem like miles of fruit trees of every description. I saw lemons that weighed in excess of two pounds.

"We came to Palm Beach, noted for its wonderful beach and
Illinois Central Magazine

E. R. Reha

many handsome hotels. At Miami, known as the Los Angeles of the south, I basked in the sun at a temperature of 75 degrees.

"On the way from Miami to Key West, I passed immense orchards, where grow the orange, grapefruit, coconut, lime, lemon, banana, etc. Here is the largest tomato farm in the country, where millions of tomatoes are gathered for shipment to Northern markets.

"The train passes over the Keys, a most wonderful piece of engineering, where miles of concrete construction connect Key West with the main land.

"At Key West we had the choice of a trip by sea-plane or boat to reach Havana, Cuba, ninety miles away. I took the boat trip and saw many 'sea pets' on the way, such as sharks, flying fish, etc., and landed in Havana in time for dinner and a sight-seeing trip by night to the many places of interest, including the famous Casino."

Office of Assistant to the President

Miss Edith Dahlgren, secretary to H. B. Hull, assistant to the president, resigned May 15 to be married June 9 to C. A. Douros of Chicago. Friends of Miss Dahlgren in her own and other general offices held a luncheon-shower for her Monday, May 14, in the dining room of Central Station. The table was decorated with red roses and narcissus, and dainty cards, artistically lettered by C. B. Medin, *Illinois Central Magazine* staff artist, marked the places of the guests. After the luncheon Miss Dahlgren was presented with several handsome and useful gifts, and the group adjourned to Grant Park to have pictures taken. Miss Dahlgren and Mr. Douros will be mar-

ried at the home of the bride's sister, Mrs. Joseph Askounis, 1550 North La Salle Street, Chicago, and will make their home at 4303 North Lincoln Street, Chicago. Miss Dahlgren entered the service of the Illinois Central System September 1, 1910, and has worked for Mr. Hull continuously since July, 1911. Her sister, Mrs. Askounis, was formerly employed in the claims and law departments of the Illinois Central.

CHICAGO TERMINAL

E. C. Harper

Chief Accountant

Randolph Street Station

(H. E. Bragg)

Mrs. Marion (Quinlan) Pressler's death on April 10 was a great shock to all fellow employees at Randolph Street and other points on the Chicago terminal where she had been employed. Mrs. Pressler entered the service of the Illinois Central at Burnside October 13, 1909, as stenographer and was transferred September 1, 1911, to Randolph Street, where she was employed at the time of her death. Funeral services were held in Lain's Undertaking Chapel, Thursday, April 12. Local employees of the passenger service department and several employees from Burnside attended the funeral. Burial was in Oakwoods Cemetery.

Joe Keating, night chief clerk at Randolph Street, mourns the loss of his wife, who passed away April 27 after a long illness. Funeral services were held at his home April 30. The body was taken to Mount

Party at luncheon-shower for Miss Edith Dahlgren at Chicago May 14. Left to right: Miss Jean Collar, general freight department; Mrs. Lucy Rymko, office of assistant to the president; Miss Florence Stevens, law department; Miss Belle Ross, office of assistant to the president; Miss Olive O'Reilly, law department; Miss Nan Carter, law department, Home Division editor of the *Illinois Central Magazine*; Miss Catherine McGuire and Miss Dahlgren, office of assistant to the president; Mrs. Ada Howe, accounting department; Miss Nellie Hartley, law department; Miss Helen Cullen and Mrs. Lena Bovaro, office of assistant to the president.

Mrs. Frances Griffin Hergenrother, employed as stenographer in the office of the engineer, maintenance of way, recently resigned her position to take care of her home and hubby. On her last day in the service, while Frances was out of the office at the lunch hour, her friends decorated her desk with useful articles of kitchen equipment. The accompanying picture shows the gifts which she received and some of the young women who arranged the "10-cent" shower. Left to right (standing) they are Theresa Christmann, Anna Kopcha, Mrs. B. J. Ross, Meta Sharp, Phyllis Schuler, Mary Balderson and Marie Lynn. Mrs. Hergenrother is seated in the center of the group.

Greenwood for burial. Mrs. Keating is well remembered by a great many friends and fellow workers of Mr. Keating.

Charles O. Brussow, chief clerk, was called away by the death of his mother on May 3 at Allegan, Mich. Mrs. Brussow is well remembered by fellow workers of Mr. Brussow.

Central Station (C. Y. Kenny)

Baggageman S. E. Brennenam of the Illinois division has returned to work after being off duty since December 27 with typhoid fever.

ILLINOIS DIVISION

Iva Phipps

Office of Superintendent

Work is under way on the track elevation at Champaign, under the supervision of O. T. Dunn, assistant engineer in charge of the new station work.

W. L. Phillips, instrumentman, is confined to the Illinois Central Hospital at Chicago with an infection of his eyes. Reports are that he is getting along nicely.

B. W. Harrington, secretary to Superintendent F. R. Mays, now comes to work in a new 4-door sedan.

To show what can be done by train crews in keeping trespassers from trains, Conductor Wildman and Brakemen Stevens and Egan on extra No. 2980 north from Centralia, May 6, put forty-two negroes off their train at Odin, the first station north of Centralia.

Thomas O'Byrne, timekeeper in Superintendent Mays' office, was absent from duty Wednesday, May 10, on account of the serious illness of his mother, who was taken to St. Mary's Hospital, where she underwent an operation. She is reported as doing well.

Superintendent Mays, accompanied by Trainmaster Stanford, Roadmaster Downs and Water Service Foreman Meskimen, made a "get acquainted" trip over the Bloomington-Pontiac district May 4.

The following Illinois division representatives visited Hot Springs, Ark., during April: Pete Wells, A. B. Benard, J. J. Carroll, Dr. B. F. Flanigan, Doctor Ennis, E. M. Winslow, J. P. Burns, J. Clancy, W. Rosenbaum, J. Schlacks, N. Schilling, Dennis Ryan, William Clark, Mr. and Mrs. Thomas Murphy, Mr. and Mrs. J. P. Mallon, Mr. and Mrs. J. J. Ryan, Mr. and Mrs. H. B. Jacks, Mr. and Mrs. Fred Englett, Mr. and Mrs. William Weatherhead, Mr. and Mrs. C. H. Draper, Mr. and Mrs. J. Daugherty, Mr. and Mrs. William Axen.

Freight Station, Kankakee, Ill. (J. M. Purtill)

Superintendent F. R. Mays and Trainmaster J. T. Stanford made the office force a pleasant visit on May 1, and on May 8 accompanied General Superintendent G. E. Patterson to Kankakee, where Mr. Patterson renewed old acquaintances. The party departed on No. 1 for Champaign.

Mr. Puig and Mr. McGowan of Mr. Richmond's office checked the Kankakee freight office and warehouse on May 3 and 4 and found one or two minor exceptions, which were merely oversights in the records. The freight in the warehouse checked OK with the billing in the

cashier's case, every shipment being covered with a proper freight bill or over-report.

George Wulff, section foreman at Kankakee, has resigned to accept a position as city street commissioner under a new administration.

John F. McCarthy, bill clerk, is no longer riding the street cars, for he is the proud possessor of a new 4-door sedan.

Arthur Cryer, collector in the agent's office, has accepted a position as switchman in the Kankakee yards.

Mr. and Mrs. Arthur Cryer are the proud parents of an 8-pound son, Edward Arthur, born March 31.

Office of Supervising Agent (H. Kabbes)

The March "No Exception" campaign was a wonderful success on the Illinois division. Out of eighty stations, seventy stations checked 100 per cent, ten stations and train crews being responsible for seventy-eight exceptions charged against LCL shipments, compared with the same month last year, when 123 exceptions were charged, showing a decrease of 45, or 36½ per cent. In March, 1921, the Illinois division was responsible for 189 exceptions on LCL shipments.

This would indicate that exceptions have been given considerable attention by all concerned in the handling of station work, and this wonderful success was accomplished by the proper checking and handling of LCL freight by station forces and local train crews.

Only three exceptions were charged for the month of March against carload shipments on the Illinois division, the following commodities being responsible: ice, stone, tile.

Out of 1,829 cars of grain loaded during March on the Illinois division, not a single exception was issued against carload shipments of grain. All agents and

Illinois Central Magazine

Get-together meeting of shopmen, Champaign, Ill., May 7

others having to do with inspection of grain cars before loading are to be congratulated on this accomplishment.

Shops, Champaign, Ill.

The get-together meeting of the Associated Shop Crafts of Champaign, Ill., held in the Illinois Central

Labor Hall on Monday, May 7, was a great success. More than fifty guests were present from Mattoon, Ill., as well as many from Chicago, Burnside, Kankakee, Clinton, Centralia, Freeport and other points on the system. The committee in charge included Clarence Baum, machinist; Edward Coffey, machinist; Thomas Fogerty, machinist; Charles Blake, carmen. W. M. Graham, local chairman of Machinists, Helpers and Apprentices of the Illinois division, acted as chairman of the evening. Owing to conferences in Chicago, a number of officials who were on the program for talks were unable to be present. A fine cafeteria lunch was served during the evening consisting of numerous varieties of sandwiches, ice cream, pickles, soft drinks and plenty of cigars. A general good time was reported by all present, and an invitation was extended to a similar meeting at Mattoon in the near future. The program included: Selection by Illinois Central Orchestra, Clarence Baum, leader; toe dance, Elizabeth Miebach, accompanied by Mrs. Miebach; Russian dance, Lucile Coffey and Marion Geherke, accompanied by Mrs. Miebach; Selection by Illinois Central Orchestra; talk, A. G. Fleck, general chairman of the Carmen's Association, Freeport, Ill.; Oriental dance, Frank Houser Mattoon, Ill.; talk, A. Wettergren, Chicago, general secretary-treasurer of the Carmen's Association; selection by Illinois Central Orchestra; "Our Association," J. J. Dauphin, Chicago, general chairman of the Machinist, Helpers and Apprentices; "Courtesy," A. R. Dori, Chicago, general chairman of the Sheet Metal Workers; Irish jig, Frank Cleary, Kankakee, Ill.; "Co-operation," George Turner, Chicago, general secretary-treasurer of the Boiler Makers; Hungarian National Hymn, Frank Chanitos, Mattoon, Ill.; talk, J. R. McGrew, general chairman of the Electrical Workers, Champaign; talk, George Brotherstow, Centralia, district chairman of the Machinists; talk, W. H. Donley, general foreman, Illinois Central Shops, Champaign. Others called upon for impromptu talks were Mr. Sprague, Mr. Wallace, Mr. Paxton and Mr. Walker of Mattoon and Carl Kagann, George Brosher and Clarence Baum of Champaign.

Snapped at Hot Springs, Ark. At left, Engineer L. L. McHugh, formerly of the Chicago district of the Illinois division, now in service with the Chesapeake & Ohio; at right, Engineer Pete Wells of the Illinois division, now on runs with Nos. 17, 18, 19 and 20.

INDIANA DIVISION

Florence McShahe

Secretary to Superintendent

On the Line
(G. H. Danver)

W. C. Johnson, general foreman at Evansville, Ind., and Mrs. Johnson departed May 4 for Cherokee,

One Hundred Five

Iowa, to attend the funeral of Mrs. Johnson's sister, who died suddenly.

Dr. and Mrs. P. S. Griffith of Houston, Texas, were guests of Traveling Engineer Danver and family recently. Doctor Griffith is a successful oil operator of the southwestern states and has the record of never having drilled a dry hole for oil. He believes that Illinois is a wonderful prospect, and he may develop a field near Newton, Ill., at some future date. His method of location is by geology and chemical instruments.

Office of Superintendent, Mattoon, Ill.
(Essie Reams)

Miss Essie Reams has returned to work after a two months' leave of absence, relieving Miss Mary Rein-schreiber, who substituted for her.

On April 15, the stork left a son weighing 7½ pounds at the home of N. R. Rigg, clerk at Robinson, Ill. The little one will answer to the name of Nil Rudolph.

Donald McLain of the accounting office has let the contract for a new 6-room modern bungalow.

Agent R. M. Dalrymple of Oblong, Ill., accompanied the body of his uncle, R. B. Dalrymple, who passed away May 4, to Pittsfield, Pa., where burial was made.

Office of Roadmaster, Mattoon, Ill.
(Bonnie Snorgrass)

Fred Jackson, formerly section man on the Peoria district, has been awarded the position of assistant division gardener. The premises are showing a decidedly improved appearance from day to day.

C. L. Rager has resumed work after a month's absence on account of illness.

Lon Sylvester has entered the Illinois Central Hospital at Chicago.

The following persons were among those who attended the funeral of H. H. Cordier (formerly supervisor on Mattoon district) at Mattoon, Ill., April 29: From Mattoon district—Miss Blanche Skelton, Fred Gammill, Walter Rarden, Elmer Scott, Harry Greeson, Horace Coble, William Fulfer, George Fulfer, Noah Aten, Oscar Chapman, Earl Mullen, Robert Allen, John Allen, Phillip Resch, Winfield Koontz, Ed Fegrenbacher, Henry Spiker, Lemuel Clark, William McLaughlin, Raymond Nicholas, Lee Jackson, Sherman Harper, George Kurtz, Ed Grenninger, D. W. Sanders, Alonzo Harris, Harry Huchel, Victor Gaede,

Employees of the Revising Bureau, Indianapolis, Ind., standing, left to right: Joseph Sauer, Ralph Miller. Sitting, left to right: Earl Hensley, Frances Watson, William Turner.

Ralph Voight, Mimrod Mathews, Albert Gaede, Oliver Marshall, John Yates, R. E. McKibben, Lee Jones, Herbert Hoover, M. Snodgrass, John Jones, L. J. Reynolds, Robert Gardner, Mr. Kenny, J. D. Beloit, John Sills, Allie Stallings, A. C. Krietemeyer, William Salwaechter, August Krietemeyer, S. L. Taylor, Nicholas Nagle, John Land, Mr. and Mrs. Henry Bowers, Charles Hazelton, Elmer Wolfe and Forrest Davidson represented the Effingham district.

Office of Chief Dispatcher, Mattoon, Ill.
(W. C. Scott)

On May 5 Superintendent Roth, Chief Dispatcher Freigo and Supervising Agent Walker, in company with Local Chairman Richards of the telegraphers, met in Chicago and distributed the money awarded the operators by General Manager Pelley, which amounted to from 2 to 7 cents per hour, this being a general restoration of reductions made last January.

The automobile bug has been busy lately. New cars are being driven by Dispatchers M. W. Storm, P. G. Evans and L. L. Bosley, Car Distributor Werth and Supervising Agent Walker.

Operator and Mrs. Clyde Martindale of Warrensburg, Ill., are the proud parents of a son, Jack Edward, born April 20.

Car Distributor and Mrs. E. H. Werth have purchased a new home on Marshall Avenue.

Agent E. W. Miner of Hildalgo, Ill., has been assigned the agency at Dalton City, Ill., vice W. F. Barton, retired. Operator H. A. Douglas has accepted the Hildalgo agency.

Operator E. E. Randall, third trick "Q" office, Mattoon, has been off a few days on account of the serious illness of his grandfather; Operator Kirk has been the relief operator.

Business is still very good on the Indiana division, especially on the Indianapolis - Effingham districts, where considerable perishable freight is moving.

Many agents and operators are asking for vacations. As relief

Illinois Central Magazine

Why our magazine is popular on the Indiana division. This picture was taken at Indianapolis, Ind. From left to right we see: J. A. Prendergast of J. F. Porterfield's office, Chicago; Florence McShane, our Indiana division editor; W. H. Rinehart, chief clerk to agent; Margaret Clifford, correspondent for magazine; W. Ward, agent, Indianapolis.

men are very scarce, difficulty is being experienced in relieving the men. A good relief agent on some other division who is not getting regular work could get regular work at the present time on this division by taking the matter up with the division officers in the proper manner.

Anyone having good pointers regarding golf should tender them to our superintendent and chief dispatcher, who are entered in the coming contests at the Mattoon Country Club.

Operators W. C. Scott and E. E. Randall from "Q" office, Mattoon, spent the day recently in Chicago attending the White Sox-Browns game. While there, they called on the boys in "X" office, visiting old friends and making some new ones.

Operator J. A. Lynch has returned from the Illinois Central Hospital at Chicago, very much improved. Mr. Lynch received a fractured knee several months ago when he fell on the ice while assisting a neighbor to carry out furniture from a burning home.

Office of Trainmaster, Mattoon, Ill. (Zella MacNair Rose)

On April 20 the Indianapolis, Ind., boosters were handled from Decatur, Ill., to Mattoon, where they were delivered to the Big Four Railroad. Their praises for the service from Decatur to Mattoon, also for the work of the Mattoon yard force, were lavish.

On April 20 fifty empty U. T. L. tanks were received from the Big Four Railroad at Mattoon, Ill., for Whiting, Ind. They left Mattoon on the Illinois division for Whiting, via Wildwood.

Conductor Don Butler of the New Harmony branch and Mrs. Butler have returned from a month's sojourn in southern California. Previous to joining Mr. Butler, Mrs. Butler spent three months in Tucson, Ariz., for the benefit of her health. They enjoyed California immensely, but Conductor Butler says it felt good to get back to Illinois Central rails again.

Mrs. B. E. Warren, wife of a brakeman, left May 4 for a month's stay in Storm Lake, Iowa.

Chief Yard Clerk John Wood has placed the honor button on Bill Severns, chief caller, as the fastest man on foot under load around Mattoon yard office. Bill looked out of the north window of the yard office one day recently and saw a lot of smoke around the windows and some coming from under the shanty. At that instant the city fire whistle was blowing; so he grabbed the fire extinguisher and lost no time in getting outside, when he discovered, to his chagrin, that the supposed smoke was dust which the maintenance of way men were raising, as they had decided to do a thorough job of cleaning up.

On May 13 Rubin & Cherry's circus train was handled from Evansville, Ind., to Peoria, Ill., being delivered to our line coming from Henderson, Ky.

Office of Trainmaster, Palestine, Ill. (Blanche Pugh)

Mrs. J. O. Lee, wife of a brakeman, has about fully recovered

from injuries sustained in an automobile accident April 15 at Indianapolis.

While flagging the crossing at Sullivan, Ind., May 11, Brakeman C. U. Foote was injured when he was struck by an automobile driven by Clem Allenbaugh of Sullivan.

Carl Jones, son of Engineer D. L. Jones, has accepted a position as machinist apprentice at Palestine shops.

W. T. Pemberton, agent at Bloomington, Ind., is visiting his parents and other relatives in Los Angeles, Calif.

A switch is being constructed to the Central Ice Company's plant, near the roundhouse. This switch will be used for icing refrigerator cars on through trains. The icing can be done with little delay to the trains, and this will speed up shipments of fruits and vegetables from the South en route to Eastern markets.

The *Palestine Weekly Register* recently had the following to say, under the heading of "Improving Railway Property":

"Gardener Milo Youngman has taken over the city's

Young women in Agent W. Ward's office, Indianapolis, Ind., with Agent Ward and Chief Clerk Rinehart. From left to right, back row: Mary Moriarty, Eleanor Stuckwish, Helen Summers, Alma Hall, Louise Boersig, Frances Watson, Loretta Mock, Helen Wilson, Margaret Clifford, Olive Gibling. Front row, left to right: W. H. Rinehart, Ida Pollock, Irma Irrgang, Sadie Gold, Helen Semensky, Mabel Swearingen, W. Ward.

Men employed in the local freight office, Indianapolis, Ind. Top row, left to right: Lewis Ward, Clarence Riegar, Ray Benson, Ray Hasenstab, Hubert Kempe, William Nugent, Charles Lindsay, Ed Houseman. Second row, left to right: Emil Schmoll, Frank Arn, Oce Wall, James Young, Hugh Weaver, John Price, John Robinson, Paul Hulse. Bottom row, left to right: George Metford, William Rinehart, Paul Stiner. H. C. Noel, Ed Schneider and P. O. Apples were not present at time the picture was taken.

lot opposite the Illinois Central depot and is making a beauty spot of the plot instead of the eyesore it has been for several years. The lot belongs to the village and was at one time occupied by the municipal light and water plant. This was discontinued some years ago, and the building had fallen into decay. The accumulation of brick and stone from the foundation, which cluttered the lot, made it an unsightly, desolate-looking place and a poor recommendation for Palestine to travelers on passing trains.

"Through the efforts of local officials of the Illinois Central the village board has granted the railroad the privilege of making a flower garden of the plot. The village removed the rubbish from the ground and filled and leveled it with dirt taken from the excavations on the Grand Prairie and Pike streets pavement projects. The railway company then hauled two carloads of clay to the lot and scattered it over the ground so as to hold the moisture for growing plants.

"Gardener Youngman then planted a row of fine young maples at the rear of the lot, together with several kinds of shrubbery. The rest of the plot was then seeded down with grass. Posts will be placed around the lot close enough together to prevent driving through the grounds. Little more can be done to the property this year, but next spring the lot will be laid out and planted with flower beds, with a mould or ridge in the center with "Palestine" conspicuously displayed with growing plants, commanding the attention and commendation of the traveling public."

On Sunday afternoon, April 29, the body of Henry Cordier, track supervisor on the Mattoon district of the Indiana division, was laid away in Dodge Grove Cemetery, Mattoon, Ill., after funeral services were conducted at the Methodist Episcopal Church by the Rev. C. F. Buker.

In the death of Mr. Cordier, the Illinois Central lost a man of staunch loyalty and one who, before he became too ill to work, was a capable and efficient track supervisor. His heart was in his work, as was evidenced by the many attempts he made to return to it after he first became ill. On October 15, 1921, he decided to enter the Illinois Central Hospital at Chicago to take treatment for Bright's disease. After several months spent there, he returned home and resumed work April 1, 1922, but was able to remain only one day. That evening he was taken to the sanitarium at Olney, Ill., where he remained for several weeks. He then worked from October 1 until the first part of 1923, when he became seriously ill and had to give up. At that time the Pension Department granted him a pension. He gradually grew worse. On April 27 he passed away at his home in Mattoon, having received but one pay check as a pensioner.

Mr. Cordier was 52 years old. He was born in Calhoun, Ill., where he lived until five years ago. At that time he, with his family, moved to Newton, Ill., where he made his home until just about a year ago, when he took up his residence at Mattoon. For many years, he was in charge of the Mattoon district of the Indiana division, covering the territory between Mattoon and Evansville, Ind., where he made many friends, among the employes and people living along the line. He had the respect of the officers and the love and trust of the men under him. As one remarked, "If Henry Cordier had an enemy, I never heard of him." He was always welcome around the division offices, as he was one of those cheerful persons everybody is always glad to see.

He is survived by his widow; a daughter, Esther Nadine; a son, Robert Lee; his mother, Mrs. Caroline Cordier of Chicago; two brothers, Frank of Rockford, Wash.; and Ira of Crivitz, Wis.; four sisters, Mrs. Clara Hotchkiss of Pueblo, Colo., Mrs. Veva Jena of Chicago, Mrs. E. Williamson of Calhoun and Mrs. Anna Shelton of South Bend, Ind. He

Left, H. H. Cordier; right, Illinois Central emblem in flowers at his funeral

was affiliated with the Masonic lodge of Parkersburg and with the Modern Woodmen of Calhoun.

Among the many floral pieces that bespoke the loving thoughts of Mr. Cordier's many friends was one which was most appropriate. Many delicate flowers were woven into the Illinois Central emblem—a silent token from his co-workers on the road he had so faithfully served.

Office of Master Mechanic, Mattoon, Ill. (Flora Adrian)

A party consisting of Division Storekeeper A. E. Walters, General Car Foreman C. C. Powers, Paint Foreman G. M. Hosmer, H. L. Lemmon, clerk in the master mechanic's office, and Orman Walters (son of the division storekeeper) attended the annual fish fry given by the Illinois Central officials and employes at Clinton, Ill., May 7.

G. E. Leach, clerk in the office of the master mechanic, has accepted a position in Chicago with the Illinois Central.

Chief Clerk Clarence Wood is taking a ninety days' leave of absence. Clarence Plummer of Master Mechanic Bell's office is acting chief clerk.

A. D. Bullock, timekeeper in the office of the master mechanic, has accepted a position with the store department of the Illinois Central in Chicago.

On May 7, fifty-six of the Mattoon shopcraft members left in a special car on train No. 2 for Champaign, Ill., where they were the guests of the shopcrafts at that point. The evening was spent together in good fellowship, ice cream being served and cigars passed around. Talks were made by the chairmen. The Mattoon boys did their duty: Fred Hosmer, painter apprentice (who is adept in female impersonations of Oriental dances), did an Egyptian dance; Frank Chontos sang a Hungarian song; C. W. Sprague, W. A. Paxton and J. H. Sorenson made talks. All came home on train No. 9 well satisfied with the evening's pleasure. The Mattoon shopcraft members are decidedly in favor of these get-together meetings, and they suggest Mattoon be the next meeting place. They wish to thank the officials for the special car to Champaign, the committee at Champaign for the invitation extended and the courtesy shown the Mattoon people.

Henry Lemmon, clerk in Master Mechanic Bell's office, recently held the lucky number given by the Redmen's Lodge during their carnival which entitled him to a Ford car.

Agent's Office, Evansville, Ind. (A. W. Walling)

Miss Margaret Kunz, daughter of Agent C. C. Kunz, took a short leave of absence May 19. On Wednesday, June 6, Miss Kunz will be married to Marion H. Kraft, lumber broker of Evansville. Im-

mediately after the ceremony, they will leave for a short Western bridal tour.

Complimenting Miss Kunz, Mrs. Valeda Rothert recently entertained the girls of the local office. After a delightful evening at cards, Miss Kunz was presented with a gift of silver. The color scheme carried out was in pink and white, bridal designs being used in the decorations and refreshments.

Mrs. Pansy Ogle, who has been seriously ill for the last three months, is improving slowly.

Wesley Carter was appointed night yardmaster at Evansville May 10.

Yard Clerk and Mrs. A. F. Boutwell announce the birth of a son, Sunday, April 29.

Agent's Office, Indianapolis, Ind.

(Margaret Clifford)

Miss Alma Hall, formerly with the Monon Railroad, has accepted a position in the local office.

James Young, from the live stock agency of the Pennsylvania System, has taken a position in the O. S. & D. department.

Mr. and Mrs. George A. Mock, the parents of Miss Loretta Mock of the local office, held an informal reception April 27 in celebration of their silver wedding anniversary.

Some local talent was exhibited recently when Miss Helen Semensky took the part of "Dolly Dimples" in one of St. Cecelia's Dramatic Clubs' plays.

Now that the Moriarty family has grown up, it became necessary for them to buy a larger home, which is located in the northeastern part of the city. This will mean that Mary will have to get up earlier to maintain her "on time" schedule at our office.

H. C. Noel and P. O. Apple, cashiers, have purchased new coupes.

On Wednesday, April 25, the Indianapolis office had the pleasure of a visit from the Indiana division editor of the *Illinois Central Magazine*, Miss Florence McShane of Mattoon, Ill. The young women of the local office entertained by giving a "spread" at the noon hour. After a get-acquainted session, Miss McShane urged all to furnish material—articles, items, pictures, tips, etc.—for the magazine. Pictures were taken of our guest and the office force.

Daughters of Trainmaster E. N. Vane, Palestine, Ill., Indiana division: Left to right, Pauline, Beulah (Mrs. L. I. Lawler) and Helen.

June, 1923

Agent's Office, Mattoon, Ill.

(A. Gorman)

Bill Clerk William P. Woolridge has taken a several weeks' leave of absence on account of poor health. He has gone to Martinsville, Ind., for treatment. His position is being filled by Francis Sullivan, extra clerk.

Agent M. Dorsey has received word from his son, Blaine, who has been seriously ill, that he has fully recovered and is again at work. Blaine works for the Arizona Eastern Railroad at Phoenix, Ariz.

Chief Clerk Tony Gorman has purchased a residence at 921 Marshall Avenue.

Rate Clerk Dewey Woolen has purchased a residence at 1501 Edgar Avenue.

Frank Gorman, formerly employed as rate clerk in this office, but now employed as ticket clerk at Central Station, Chicago, was a visitor May 1.

E. T. Wall, checker, has returned to work after a thirty days' absence.

Harvey Sparks, employed as night clerk for the last five years, tendered his resignation to take effect June 1. It is Harvey's intention to go in business for himself.

SPRINGFIELD DIVISION

Della Morrison

Office of Superintendent

Miss Olive Draper and George Sheean were married at St. Louis, Mo., Wednesday, April 25. Mrs. Sheean is the daughter of S. C. Draper, supervisor of bridges and buildings, and is employed as a tonnage clerk in the superintendent's office. Mr. Sheean is an engineer on the Clinton district of the Springfield division. For the present they will make their home with Mr. and Mrs. Draper until their new modern bungalow in the 400 block on West Clay Street is completed.

Mrs. Helen Willmore and Miss Della Morrison entertained the young women of the station building at a miscellaneous shower in the latter's home Tuesday evening, May 9, in honor of the recent bride, Mrs. Sheean. There were eighteen present, and all reported an enjoyable evening. Mrs. Sheean received many beautiful and useful gifts.

O. D. Moore was called to Toledo, Ill., May 8 by the death of a relative.

Accountant R. Warrick is the owner of a new sedan.

Mrs. M. A. Hamm, wife of the manager of the Van Noy Company at Clinton, who has been seriously ill for the last few weeks, is much improved and has returned home from the hospital.

Trainmaster's Office, Clinton, Ill.

(Clara Hoyt)

A special train carrying members of the Illinois State Dental Association was handled from Chicago to Decatur, where a dental clinic was held from May 7 to May 10.

Conductors J. W. Potter and R. H. Watts and Brakeman J. E. Shepard attended the Kentucky Derby at Louisville, May 19.

C. M. Ruddell, yardmaster at Springfield, and Mrs. Ruddell are visiting friends in Washington, D. C.

A special train was handled May 1 for the accommodation of the members of the Parent Teachers' Association, from Chicago to Decatur, where a convention was held from May 1 to May 3.

Brakeman E. L. Jones has been commended for discovering a pair of angle bars broken at the heel of switch points at the north end of the siding at Sandoval, Ill., April 25. The section foreman was notified and repairs made immediately.

Brakeman and Mrs. Fred Brunner have left on an extended trip in the West. They will visit friends in Angus, Neb.

Four Springfield division brakemen have been lent to the Wisconsin division at Amboy on account of increased business.

A special train carrying inmates from the State

'One Hundred Nine

Hospital at Kankakee to the State Hospital at East Alton was handled May 1. The train was in charge of Engineer J. J. Bell and Conductor A. Flood over the Springfield division.

Many persons took advantage of the reduced rate excursion special from Springfield to Chicago May 12. The Decatur sleeper and one coach were taken in the train at Clinton. The train was in charge of Engineer J. C. O'Neil and Conductor J. J. Milan.

Chief Dispatcher's Office, Clinton, Ill.

(Gladys Westerholt)

The committee of dispatchers which toured the system arrived in Clinton at 1 p. m., April 16, and left at 4:30 p. m. for Champaign. While here the dispatchers visited the yards, roundhouse and other places of interest.

R. T. Ward recently relieved F. D. Plummer at Seymour for a few days.

Agent Swindle of Penfield was called to Memphis, Tenn., recently by the serious illness of his father.

Eva Gilliland, second trick operator at Maroa, has returned to work after an absence of about four months on account of ill health.

L. C. Grandfield recently relieved E. M. Williamson in "CO" office, Clinton, for a few days.

C. B. Troxell was called away recently by the death of his father. Morrison Gardner relieved him.

R. R. Hollis, train dispatcher, was called to Macomb, Ill., May 3 by the death of his brother, D. W. Hollis. D. W. Hollis was one of the instructors in the schools of Macomb and was prominent in state educational work. His death was due to his being overcome by gas fumes while working on his automobile in a closed garage.

R. W. Kinnison is the successful applicant for second trick operator at Macon.

J. R. Downs is working at Kenney in place of R. F. Deveney, who is the new ticket clerk at Lincoln.

E. H. Smith, operator at Decatur, was off several days recently on account of having his teeth pulled. He was relieved by G. S. Phillips of "CO" office, Clinton, who was relieved by L. C. Grandfield.

W. Stone, Marine, was off duty a few weeks recently looking after O. R. T. business.

Road Department, Clinton, Ill.

(Geraldine Reynolds)

On account of the large amount of construction work recently authorized, our engineering department has been increased by two rodmen, W. J. Higgins and W. C. Putzier, the former from Chicago and the latter from Oelwein, Iowa.

Claim Agent J. R. Mann has moved his family from Clinton to Decatur.

Section Foreman William Marshall, Clinton, was given a two weeks' leave of absence the last half of April to look after business interests at Salem, Mo.

R. L. Frazier, grading contractor, of La Center, Ky., has been awarded the contract for grading in connection with the extension of the westbound main, Clinton, and additional siding at Mount Pulaski.

Shops, Clinton, Ill.

(Flora Drago)

B. L. Barmer, formerly residing in Paducah, Ky., has accepted a position as wrecking foreman at Clinton.

J. E. Stokes, boilermaker foreman, has resumed

This is our freight house force at Decatur, Ill., sixteen years ago. Left to right, standing: Oscar Eggler, warehouse foreman; Ray Smith, Henry Grebe, Carl McCluskey, William Bright, Dan Petticord. Seated, left to right: James Munson, Harry Jones, Fred Travis, George Baker. Those who are still in the employ of the Illinois Central are Mr. Eggler, warehouse foreman; Mr. Smith, now check clerk, and Mr. Travis, now outbound rate clerk. The photograph, which is the property of Mr. Smith, was sent in by Helen Kraft, our local correspondent.

his duties after being confined to his home for three weeks on account of serious illness.

Titus Hinchcliff of Hinchcliff, Miss., arrived in Clinton on the morning of May 12 for an extended visit with relatives and friends. Mr. Hinchcliff is a pensioned engineer.

Mrs. C. L. Zaneis, wife of Traveling Engineer Zaneis, and Mr. and Mrs. James Pursley have returned to Clinton from a trip to Los Angeles, Calif., and other points. Mr. Pursley is machinist helper in the shops.

General Foreman's Office, Clinton, Ill.

(W. E. Smither)

The machine shop has been improved wonderfully by its new coat of whitewash.

John Stokes, boilermaker foreman, has returned to work after being absent two weeks on account of illness. Mr. Stokes has been in service at Clinton shops for thirty-seven years.

Master Mechanic Needham has returned from Detroit, having driven through in his new motor car.

Night Foreman Hess is the proud owner of a new coupe.

Clinton shops' supervisory force held its fifth annual fish fry on the evening of May 7 at Weldon Springs. Sixty hungry fish-eaters were present, the most notable being Mr. Menefee and Mr. Needham, who surpassed all records for the storing of fish. Mr. Walters and Mr. Powers of Mattoon and Mr. Caldwell of the Texas Oil Company, Chicago, were among the out-of-town guests. They did their share in helping stow away the good eats. Mr. Barlow, Mr. Bell and Jake Khrel were the cooks, and their work was proclaimed most satisfactory. About one hundred pounds of channel cat were prepared for the feast. The feature of the evening was the excitement caused by a small boy who came along with a 5-pound bass that he had just caught in Weldon Springs Lake. Mr. West being so interested that he deserted the festive board for the lake in an attempt to duplicate the boy's luck, but, without success. After the hungry men had been fed and the cigars were going good, fish stories, both old and new, were

told and enlarged to meet their tellers' ideas of what good fish stories should be.

Freight Office, Clinton, Ill.
(Anna E. Murphy)

Harlan, son of Agent and Mrs. Donaldson, who was injured recently while playing at school, has fully recovered and has returned to school.

Edward Williams, stowman, is suffering with a fractured foot, caused when a large cog wheel fell on him. He is able to be up and around on crutches.

The single spot system is being used at this station and is proving successful in reducing the number of exceptions.

Foreman Charles Masterson is the proud owner of a new touring car.

Freight Department, Decatur, Ill.
(Helen Kraftt)

Miss Mildred Hoyt of Clinton, Ill., has accepted a position in the freight office as bill clerk.

Clarence Bass, check clerk at Decatur, who has been in the Illinois Central Hospital at Chicago, has returned to his home, but is not able to resume work.

Ed Vest and family were called to Louisville, Ky., recently by the serious illness of Mr. Vest's mother.

Freight Office, Springfield, Ill.
(Ann Merriman)

William Janssen, chief clerk, who has been absent from the office for some time, has been serving on a jury.

E. P. Clements, check clerk, who has been off duty for the last two months, is still confined to his home and remains in a critical condition.

L. E. Durham, check clerk, who has been off duty on account of illness, has returned from Chicago, where he has been taking treatment in the Illinois Central Hospital. He is getting along nicely.

F. L. Carroll has resigned as check clerk and has been succeeded by A. F. Bertrang, formerly clerk at Mount Pulaski.

We have been successful in having our train No. 58, which is scheduled to leave East St. Louis at 2 a. m., set up to 11:30 p. m. in order to handle the strawberry business from points in Arkansas and Tennessee. Our handling in this manner got the strawberry business, which amounts to approximately fifty to sixty cars a year.

The material is now on the ground and work has been started on a walk long needed between Fifth and Seventh streets in front of the passenger station. The improvement will consist of a base of 12-inch macadam and a concrete surface. This will avoid the removing of planks and repairing of the track two or three times a year, as in the past.

Store Department, Clinton, Ill.
(Esther Jones)

Harry Miller, ticket clerk, attended the state convention of the Knights of Columbus at Quincy, Ill., May 9 and 10.

Miss Ella Hickman, invoice clerk, has returned to service after having received treatment in the Illinois Central Hospital.

Yard Office, Clinton, Ill.
(Joe Swearingen)

Orin Chandler, yard clerk, who has been on ninety days' leave of absence to attend school, has returned to service.

R. F. Smith, switchman, has returned to service after being absent for the last two months on account of illness.

Don Magill, yard clerk, is taking thirty days' leave of absence. His time is being spent in Denver, Colo., visiting his sister.

Ray English, yardmaster, has returned to work after an absence of ten days.

Yard Office, Decatur, Ill.
(Fon Hale)

E. L. Hale, engine foreman, suffered a torn muscle

in his right leg while working in the north yard the evening of May 11 and will be out of service for some time.

Ed Palmer, extra engine foreman, is the owner of a new coupe.

Rantoul, Ill.

James Grady, veteran Illinois Central engineer and pioneer citizen of Rantoul, Champaign County, Illinois, died Wednesday, April 18. His was a most pleasing and attractive personality. From one end of the division to the other, his friends were shocked at the news of his sudden death, for, although there were periods of acute suffering during the last few years for him, he had borne the pain with patient silence and a happy outlook on life.

The funeral services were held at St. Malachy's Catholic Church, Rantoul, at 9:30 a. m., Saturday, April 21, 1923. Railway men from every branch of the service were there to pay their last tribute to him. All Rantoul paused in its labors to honor the man who had made that city his home for so many years and who was one of its most prominent and best loved citizens. Trains were stopped during the funeral services and were not put into motion again until the body was laid in Holy Sepulchre Cemetery, east of Rantoul.

Forty-seven years ago, when he was a robust lad of 15, "Jim" began his life's work with the Illinois Central. His first position was that of a laborer on the Pesotum, Ill., section. Although he was young, he was more robust and stronger than the ordinary lad, and he labored as a section hand for three years. In the winter of 1879 he helped lay track near Bloomington, Chatsworth, Kempton Junction and Pontiac. When the work was completed, April 1, 1880, he returned to the section at Pesotum.

About a year later a temporary section foreman was needed at Paxton, and Mr. Grady was sent there. He had charge of the gang of workmen there about eight months and then was placed in charge of the Rantoul section. In January, 1887, when the Illinois Central purchased the narrow-gauge Havana, Rantoul & Eastern Railroad, or "Short Line," he was given a position as fireman on the line. He fired for four months and was then made a brakeman. He kept this place until August 1, 1887.

About this time the Illinois Central decided to make the road a standard gauge. Because of his wide and varied experience, Mr. Grady supervised the laying of the steel and the installation of switches. In December, 1890, he was promoted to supervisor of trains and tracks on that division.

Later he was sent to New Orleans as road supervisor between that city and Vicksburg. The intense heat of that country was too much for him,

Mr. and Mrs. James Grady

One Hundred Eleven

High water, Clinton, Ill., shops, March 25, 1913

and he requested that he be sent back to Rantoul. His request was granted, and he returned to his old position as fireman. He kept this appointment for seven years.

November 25, 1900, he was promoted to engineer. He kept this position on the "Short Line" until his death. Out of those years since 1900, he was a first freight engineer for fourteen years, then a passenger engineer for five years, and the last few years he had spent back on the freight engine. He preferred the latter work because he could spend more time at his home in Rantoul.

Mr. Grady was born in Martinsburg, Va., on July 31, 1861. Out of a life of a little less than sixty-two years, he gave forty-seven years to work on the Illinois Central Railroad, and during this period he missed only one pay day. Although he started as a section hand, he died an engineer. During his career as fireman and engineer, he had many narrow escapes from death, but he escaped with only a few minor injuries.

Besides his widow, he leaves two daughters and three sons. All three of the sons are in railway work: James P. Grady lives in Chicago and is employed by the Illinois Central as yardmaster at Wildwood; E. H. is a brakeman on the New York Central at Danville, Ill.; W. P. is a machinist on the Chicago & Alton at Bloomington, Ill.

ST. LOUIS DIVISION

J. W. Brown

Office of Superintendent

There were 100 freight trains run into Mounds on April 18.

Claim Agent W. R. Clemans recently purchased a home on South Illinois Avenue, Carbondale. He moved into the property on April 17.

Little Miss Anna O'Rourke, daughter of Roadmaster G. M. O'Rourke, was operated on for appendicitis, April 28, at Holden Hospital, Carbondale. She is rapidly improving.

There was a peak business handled through Mounds yard April 30.

Miss S. E. Patterson, accountant, resigned recently to make her home in New Orleans. Clerk J. W. Burnett, New Athens, is now on the position held by Miss Patterson.

Mother's Day was appropriately observed in Carbondale, May 13. Many railway employees made it a point to attend the service at some of the churches in memory of mother.

Clerk George Rountree has been awarded the newly created clerical position at Tamara station.

The American Legion, Carbondale, put on a motion picture, "A Man Without a Country," May 16 for the benefit of the "Mosquito Campaign" which is being

One Hundred Twelve

conducted by Carbondale and vicinity. On May 30 the Legion also showed "Flashes of Action." Both of these pictures are Legion Film Service pictures.

Our freight train performance clerk, F. D. Roberson, recently purchased a roadster, and Accountant H. E. Goetz purchased a touring car.

Charles Johnson recently purchased a piece of property on Normal Avenue, Carbondale, and when through with it he will have a nice kella-toned residence. Mr. Johnson is material clerk for Supervisor of Signals E. E. Goddard.

Transportation Department, Centralia, Ill.

(Grayce Baysinger)

Dewey Garren, who was formerly employed as switchman at Centralia, died at the Illinois Central Hospital at Chicago, April 15, of tuberculosis.

Miss Hazel Erwin, record clerk at Centralia, recently gave a week-end party at her home in Marion, Ill., for the girls from the master mechanic's and trainmaster's office. Those attending were Misses Hilda Fernald, Ann Carpenter, Honey Buehler, Flossie Quillman and Thelma Gilpin and Mrs. Lena Conners.

W. R. Triem, assistant division engineer, Logansport, Ind., and E. G. Gordon, assistant road foreman of engines, Fort Wayne, Ind., both of the Pennsylvania System, were visitors at Centralia terminal April 17 to inspect reports covering the handling of cars through this terminal. These men expressed their appreciation of the courtesy extended them and assured us that our operation was far ahead of terminals which they had previously visited.

Brakeman J. E. Jackson met with a painful accident April 26 while flagging on one of the express trains. While standing on the step of the caboose, looking for a hot box, he accidentally stepped off the bottom step while the train was moving at the rate of about 55 miles an hour. Mr. Jackson was taken to St. Mary's Hospital at Centralia, where he is improving slowly.

Flagman C. A. Thompson left for the hospital at Chicago, May 5, for treatment on account of ear trouble.

Joe Chandler, clerk in the trainmaster's office, who is on a leave of absence on account of poor health, writes from Denver, Colo., that he is improving rapidly, but expects to remain in Denver for some time.

Mechanical Department, East St. Louis, Ill.

(G. H. Krause)

B. M. Hatfield, machinist at East St. Louis, while on his way to the relay depot, noticed a Southern box car in a train with air set and wheels locked. He released the air and notified the conductor. Action on the part of this employe probably averted an accident and probable serious damage.

Adam A. Wehring, record writer in the general car foreman's office, East St. Louis, and Miss Ethel

Illinois Central Magazine

Quigley of Vergennes, Ill., were married at Murphysboro, Ill., April 14.

H. J. Dodge, MCB clerk in the general car foreman's office, has returned to work after a week's illness caused by poison ivy.

John Dudick, laborer in the car department at East St. Louis, died at his home May 1.

Fireman E. W. Ingersoll was at Carbondale recently for an examination, preparatory for promotion to engineer.

C. Cisne, operator at Ziegler, discovered a brake rigging dragging on a car in extra No. 1771, May 7, while it was passing the yard office, but was unsuccessful in directing the crews' attention to this before the rigging caught on a switch frog, damaging it slightly, but causing no derailment. The timely action of Section Foreman Bittie avoided trouble for passenger train No. 924.

Mr. and Mrs. W. S. Huls were visitors at East St. Louis recently, at which time Mr. Huls had conferred upon him degrees in the Mississippi Valley Consistory.

Freight Office, Benton, Ill. (W. D. Brotherton)

During April, Brakemen E. W. Doley and John Cowell picked up and turned in to George Pearce, car inspector at Benton, sixty-eight air hose, thirty-seven angle cocks, eleven hose connections, two knuckles, one brake wheel, one pin lifter and one knuckle lock.

Switchman Charles F. Settlemoir of Benton has assumed his duties as commissioner at Benton, having been sworn into office Monday evening, May 7, as commissioner in charge of accounts.

The Franklin County Special was stopped at Belleville Saturday, May 5, by special arrangement, to enable the Benton Township High School track team to participate in the high school track meet held at Lebanon, Ill.

William R. Hays, for thirty-three years an en-

L. F. Otto, St. Louis division engineer, who died March 8. Mr. Otto entered the service at Centralia as a fireman in 1897, continuing in that capacity until his promotion February 23, 1903, to locomotive engineer.

gineer on the Illinois Central, died April 14, after an illness of more than a year. Mr. Hays, who had lived in Centralia, Ill., twenty-five years, was retired from active service about a year ago. He was sixty-five years old.

Mr. Hays' first railway experience was with the Union Pacific Railroad. In 1892 he entered the service of the Illinois Central as an engineer and worked for that company until his health made retirement necessary.

During the twenty-five years that Mr. Hays lived in Centralia he made a large circle of warm friends. He was a quiet, home-loving man and a member of the Presbyterian Church.

Mr. Hays leaves his widow, three children: Fred Hafer of San Francisco, Mrs. Lela Freidlein of Fall City, Neb., and Mrs. Maxine Bostwick of Centralia. A sister, Mrs. Emma Leary of New York, and two brothers, Herbert Hays of Leadore, Idaho, and J. D. Hays of Elkville, Ill., also mourn his death.

Burial was April 18 at Mounds, Ill.

Shops, Centralia, Ill. (Thelma Gilpin)

The Oxweld Railroad Service Company is installing an acetylene generating plant for the entire Centralia Shops, which will make it much more convenient in handling the oxy-acetylene welding. This work was done by M. E. Keith, installation engineer, who expected to have the plant completed about May 18.

An additional tank for the wash-out system has been installed at the power house. This now makes a total of three tanks used for this purpose.

T. F. Hays, gang foreman, was operated on recently for appendicitis in Riverview Hospital, Paducah, Ky. He is getting along as well as can be expected.

The valuable hunting dogs belonging to General Car Foreman McCloskey and Chief Accountant Jenkins died on May 7 of acute distemper. This is a real loss to the hunters in the mechanical department.

Air Brake Foreman Joe Lipsey is taking a 90-day leave of absence, due to ill health.

Wrecker Foreman Schneider has purchased a new home on South Poplar Street, Centralia.

The clerks in the master mechanic's office were very much surprised to learn of the engagement of O. H. Gaertner, accountant, and Miss Ruby Smith. Miss Smith is employed as record clerk in Trainmaster Gibbs' office.

O. B. Murphy, timekeeper at Mounds, is the proud father of an 8¼-pound baby girl, born May 12.

Misses Anne Carpenter, Honey Buehler and Thelma Gilpin attended the Derby at Louisville, Ky., on May 19.

Miss Floss Quillman, stenographer, was ill at her

Group of shopmen, East St. Louis, Ill., with engine No. 1053

Employees at Herrin, Ill. At crane, left to right: Carl Jones, clerk to timekeeper; Charles Griffin, engine watchman; Rolla Craig, laborer; Lester Chancey, call boy; R. E. Carter, general foreman; Tim Trigg, laborer; John Reed, crane operator, sitting in window. In second picture, left to right: H. E. Montgany, car repairer; L. E. Rushing, car repairer; Ed Coleman, car foreman. These three men have been in the car department for the last six years.

home in Pinckneyville for several days, but is now able to be back at work.

L. J. Stasik, clerk in the master mechanic's office, was accidentally shot in the foot by his cousin, who was testing a new revolver. The injury was not serious, and after a few days' absence Mr. Stasik was able to limp back to work.

Engineer Fred Erskine, on combination Nos. 5, 6, 9 and 10, has been in the Chicago Hospital for about three weeks. However, he is improving rapidly.

Engineer Harry Turner has been in the hospital in Chicago to have his tonsils removed.

WISCONSIN DIVISION

J. A. O'Neill

Office of Superintendent

Superintendent's Office, Freeport, Ill.
(Theresa Johnson)

Conductor M. R. White of Rockford, the courteous and efficient captain of the milk train, was out pleasure riding with his family recently when he heard of a person who was arranging to go to some point in the Southwest over another line. Conductor White immediately steered his craft from the paths of pleasure into the business channel and after a short interview sold a round trip ticket over our line to New Orleans.

On April 30 Brakemen A. H. Fiedler and Clifford McFadden, standing on the passenger platform at Freeport, made an inspection of train No. 155 pulling out of Freeport yards. In making this inspection they discovered a broken arch on F4DDM&S-7694; an arch bar was broken badly and about ready to collapse. These men were given favorable

One Hundred Fourteen

mention for this discovery, as neither was on duty at time they discovered this broken arch bar.

A family reunion and informal reception celebrated the golden wedding anniversary of Pensioned Engineer and Mrs. W. A. Ropps, 837 Liberty Avenue, May 3. Dinner was served for the assembled family, and many friends called. Presents of gold and silver were among the gifts. As a veteran of the Civil War and of forty-one years' service on the Illinois Central, Mr. Ropps has had a long career of interesting service. At the age of 18 he enlisted in the army, and he served in the army of the Cumberland for three years. Until he was discharged in 1865, he missed only three days of active service.

After farming for a short time he began braking on the Illinois Central in 1867. Later he went firing and was soon promoted from fireman to engineer. When he started service the old wood-burning engines had copper fire-boxes and were mere toys compared with the modern giants of today.

Entrusted with the first mogul in Freeport, No. 231, Mr. Ropps ran what was then considered a gigantic locomotive until that engine met a spectacular end in the Mississippi. One day when Mr. Ropps was off duty because of his wife's illness, a young engineer took out the new mogul. At Dubuque the drawbridge was open, and, unable to stop the engine in time, the engineer plunged with it and three coal cars into the Mississippi. Men who had witnessed the accident rescued the engineer.

For fourteen years Mr. Ropps served as inspector of engines in the Illinois Central shops, and in 1909 he was pensioned. During the last several years he has not been able to walk, but he is otherwise in good health.

Road Department, Freeport, Ill. (Frances Manion)

Waterworks Foreman and Mrs. S. E. Ifert have returned from Miamisburg, Ohio, where they were called by the death of Mr. Ifert's mother on April 27.

Section Foreman F. Allen of Sciota Mills has been confined to St. Francis' Hospital, Freeport, for several weeks, but is gradually improving.

Favorable mention has been placed on the efficiency records of the following employees for discovering defective equipment: Section Foreman L. E. Boots of Seward, Ill., discovered a brake beam dragging on IC-32810 at Seward on March 13; Section Foreman F. Merlo found a break beam dragging on CCC&StL-80924, train No. 152, on March 31 at Amboy, Ill., and stopped the train.

Supervisor Peters is very proud of the showing made by the South Amboy district in not having any stock killed during the first four months of 1923.

To date no personal injury has occurred in the waterworks department this year. Waterworks Foreman S. E. Ifert and his men hope to keep up the good work.

La Salle, Ill. (J. M. Egan)

Operator Phil Bechely was an enthusiastic candidate in the class of seventy-six taken into the Knights of Columbus at La Salle, May 13.

A. J. Finlen of the local freight office reported

Illinois Central Magazine

A NEWS-GATHERER

J. A. O'Neill, our Wisconsin division editor, is a native of Milwaukee, Wis. He entered the service of the Illinois Central at Madison, Wis., April 2, 1911, as a yard clerk. In 1914 he was made ticket clerk at Madison. September 1, 1918, he was transferred to Freeport, Ill., to work in the accounting department. February 1, 1920, he was appointed assistant chief clerk to the superintendent and division editor of the Illinois Central Magazine. Previous to entering the service of the Illinois Central, Mr. O'Neill was employed for two years by the Chicago & North Western as a yard clerk at Madison, and for three years by the Chicago, Milwaukee & St. Paul at Madison as a switchman and brakeman.

the arrival of a new 9-pound railway man at his home, May 8.

A large crowd attended the banquet given by the Illinois Valley Manufacturers' Club in the Kaskaskia Hotel, La Salle, May 15. President C. H. Markham was the principal speaker and made a decided impression on the assembly.

The summer season opened at Starved Rock State Park May 13, and a large crowd was in evidence the entire day.

MINNESOTA DIVISION

Lucille Sims

Secretary to Superintendent

The marriage of Miss Hilda Blichman and Walter Doran was solemnized Wednesday evening, May 16, at the home of the bride's father, John Blichman. The Rev. H. Atchison of St. Luke's Church officiated. After spending their honeymoon in the East, Mr. and Mrs. Doran will be at home to their friends at No. 4, Arno Apartments. Mrs. Doran was formerly employed as a stenographer in the super-

intendent's office, and Mr. Doran is chief clerk to the freight agent of the Chicago, Milwaukee & St. Paul Railroad.

C. J. Cooney, timekeeper, recently underwent an operation for appendicitis at Mercy Hospital, Dubuque, Iowa.

On Thursday, May 3, Mrs. B. Triller entertained the girls of the division offices at a farewell dinner in honor of her sister, Miss Hilda Blichman. Bridge was the diversion of the evening. Prizes were won by the Misses Lenna Lightcap, Ethyl McNamara and Margaret Walsh.

Mrs. Frank Schneider and Miss Lenna Lightcap entertained the girls of the division offices at the former's home, May 7, in honor of Miss Hilda Blichman, a bride of this month. The guests played Michigan, honors being awarded to Misses Margaret Walsh, Hilda Blichman and Gerry Sims. Miss Blichman was presented with a set of goblets and sherbets. At the end of the evening a 2-course luncheon was served. Table decorations were in pink and white, miniature brides and grooms being the favors.

Waterloo Storehouse (Evelyn Decker)

W. E. Barnes, former stockkeeper, is now engaged in the fruit and confectionery business at 1005 East Fourth Street, opposite the Illinois Central shops. L. D. Massey, foreman, has succeeded Mr. Barnes. F. R. Bickenbach, stockkeeper, has been appointed to succeed Mr. Massey; A. G. Robbins, clerk, has succeeded Mr. Bickenbach, and W. E. Burch, clerk, has been appointed to succeed Mr. Robbins.

Robert Bickenbach, clerk, has resigned his position in Storekeeper E. S. Shapland's office and is moving to Lansing, Mich. Oscar Dybsjord, clerk, has been appointed to take his place.

Frank Kido, recently injured in an automobile accident, is rapidly improving and will soon be able to resume his duties at Waterloo storehouse.

R. C. Empey has been employed as clerk in Mr. Shapland's office.

Freight Office, Cedar Rapids, Iowa (Josephine Doyle)

William Mueller, foreman of the machinery department, has returned from Chicago, where he underwent an operation. We are pleased to report he is steadily improving. During his absence F. H. Meyers of Waterloo was in charge of the department.

The marriage of Miss Mildred George, stenographer in our local freight office, and Gilbert Zimmerman took place Easter Saturday. The Rev. A. M. Jayne of St. Paul's M. E. Church performed the ceremony. Mrs. Zimmerman has been in the employ of the Illinois Central for the last three years. Mr. Zimmerman, formerly of Chicago, is now connected with the Penick & Ford, Ltd., in this city.

Miss Edna Hutton, car clerk, is again on duty after having been confined to her home on account of illness.

Engineer F. Wing submitted to an operation in Chicago some time ago. Reports are that his condition is favorable.

Waterloo, Iowa, Yard (Frank Hardy)

With the advent of warmer weather, a full shift of car icers has been employed at Waterloo in anticipation of a heavy icing season. With the discontinuance of heaters for the protection of perishable freight during the winter comes the necessity for ice to protect the perishable freight. A day shift is now employed at the Illinois Central icing platform, Waterloo, to take care of all cars. When the heavy fruit business makes its appearance, a night shift will also be employed, which is necessary to take care of icing cars during the 24-hour shift.

The storing of coal, which is now in progress on the entire system, is well under way at Waterloo. The program for Waterloo calls for the unloading into storage of 35,000 tons of coal, representing

approximately 620 cars of coal, which are being unloaded at the rate of fifteen cars a day. This means the additional employment of a number of men for some time.

Brakeman P. H. Finger had the misfortune a few days ago to cut his hand on a lamp chimney while cleaning lamps in a caboose at Waterloo preparatory to the departure of train No. 52.

Night Yardmaster Joyce has been taking up fishing but without much success to date.

Freight House, Dubuque, Iowa

(Grace Phillips)

The following changes have been made in this office during the month: Ralph Lassance, formerly employed as messenger, is now night clerk; Matt Cain, car clerk, has been transferred to the Revising Bureau; Frank Cahill has accepted a position as car clerk; Mona Gardner has been promoted to assistant bill clerk; Miss Roberta Broell, stenographer, has been transferred to the superintendent's office; Miss Arda Conklin has accepted a position in the agent's office; Theo Regnier, formerly rate clerk in the Revising Bureau, has accepted a position in the same capacity in F. B. Sherwood's office, Chicago.

James Callaghan, seal clerk, is now in the Illinois Central Hospital at Chicago recovering from an operation.

Frank J. Enright, who for a number of years was employed as rate clerk at the freight office, Dubuque, passed away at his residence in Chicago, May 4.

LeRoy Moeller, rate clerk, visited relatives at St. Anagar, Iowa, recently. He reports the onion crop progressing rapidly.

Brakeman F. J. Wolfe, Minnesota Division

A. F. Johnston, conductor on the Omaha district, and M. F. Muir, flagman on the Omaha district, have returned to duty after spending the winter in California and Louisiana.

The interior of the station at Euclis, Iowa, is being repainted and the living rooms decorated. When this work is completed the building will compare favorably with any on the Omaha district.

Waterloo District
(Mary Christensen)

Glen Shafter, formerly assistant foreman at Iowa Falls, has been promoted to foreman, Section W 7, Iowa Falls.

Nick Komparakis, trackman, Fort Dodge, has been promoted to assistant foreman at Fort Dodge.

W. E. Palmer, trackman, Webster City, has been promoted to assistant foreman at Iowa Falls.

F. M. Attaway, extra gang foreman, has been called to New Orleans by the serious illness of his wife.

Sympathy is extended to T. D. O'Connell, switchman, Fort Dodge, on account of the death of his father.

Cherokee, Iowa
(Anna Donahue)

Mrs. L. Harrison, wife of Brakeman Harrison, was called to Iowa City, Iowa, recently by the serious illness of her sister, who is attending school.

Machinist George Bong was recently married to Miss Ida Cline of Alta, Iowa. They are now on their wedding trip to Chicago and other points East.

Machinist Reuland has been transferred from the Waterloo shops to the Cherokee shops.

Two hundred shopercraftsmen of Cherokee and their families enjoyed one of the most wholesome, happy evenings in the history of their organization recently when they met at the K. P. hall for a big banquet and program. Tom Demond, chairman, deserves unlimited praise for the preparation of the entertainment.

The program consisted of several readings, piano and saxophone duets, Scottish sword dance and Highland fling, the classic dances of Scotland being given by little Miss Isabelle Warrander. A Belgian dance was given by the Byne brothers. Mr. and Mrs. Derst of Aurelia, Misses Paulson and Powell of Cherokee and Orville Demond were among those who appeared on the program.

At 9:30 p. m., the committee in charge of the dining room and kitchen spread tables and prepared a bounteous 2-course luncheon. George Sleezer, chairman of the refreshment committee, did everything in a splendid manner. A picture of the entire group was taken by Ray Wall prior to the feed. The waiters dressed in white uniforms, consisting of aprons and jackets, caps and black bow neckties, were a picture in themselves. The waiters were Mrs. George Sleezer, Fred Halbauer, Arthur Mongan, George Bong, Ray Huff and Boyd Perrin. The menu consisted of potato salad, cheese, sandwiches, pie *a la mode*, coffee, cake and lemonade.

Dancing formed the principal diversion after the

IOWA DIVISION

Emmett Coffey,

Chief Clerk to Roadmaster

T. J. Sloan, conductor on the Omaha district, has been absent from service on account of sickness.

Get-together meeting of shopmen, Cherokee, Iowa

"eats" had been devoured, and visiting carried many through until a late hour. The little tots had the time of their lives making merry on goodies when they were turned loose to rummage for themselves.

This is the first time that an entertainment of such a nature was ever attempted in Cherokee, and those present desire that another be prepared each year in the future. Co-operation among the craftsmen is brought about through the process, and a deeper and truer interest is created through the good fellowship.

All crafts were represented. A picnic is planned to be held during the summer.

Sioux City, Iowa (G. C. Miller)

Edward H. Groff died on April 18 after a long illness. Mr. Groff was born at Fairfield, Iowa, April 3, 1859, and entered the employ of the Illinois Central, November 1, 1894, as a stenographer for Commercial Agent B. E. Nichols. He was later transferred to the local freight office as cashier. In 1906 he became sub-agent for the Illinois Central at the Sioux City stock yards, a position he held until October 1, 1921, when he was transferred in order to do lighter work on account of failing health. He occupied a position as abstract clerk until December 1, 1922, when he was retired on pension, after completing twenty-seven years and eleven months of faithful service. Mr. Groff will be remembered, especially by the older employees, for his cheerfulness, helpfulness and fidelity to duty. Besides the widow, Mr. Groff is survived by four sons and two daughters.

A meeting of all freight house employees of the Illinois Central was held at the Sioux City freight office April 28, the purpose of this meeting being the organization of a savings club to be composed of all of the employees at the Illinois Central freight station at Sioux City. The purpose of this club is to encourage the employees to save a small definite amount, in excess of what they are already saving, toward some objective. The following officers for this club were elected: W. L. Graham, chairman; A. S. Olson, treasurer; Miss Esther Franzen, secretary. All employees have joined. Cards are issued to each member on which are set forth the amount to be saved each pay day and for what purpose. Each member has an individual bank book. All money, however, is deposited in one bank, deposits being handled by the treasurer. This splendid idea originated with our local agent, F. Austin, and is well worthy of emulation by the entire Illinois Central System, as we all know that the habits of thrift are conducive to the betterment of the individual and, in turn, the company for which we work.

Fort Dodge, Iowa (Ned Bracken)

W. J. Kearney, formerly agent at Rock Rapids, has accepted the position as city passenger and ticket agent at Fort Dodge, made vacant by the resignation of M. J. Oleson.

Agnes Mahoney, bridge and building supervisor's clerk, has resumed service after being absent on account of illness.

M. J. Townsend, chief dispatcher at Fort Dodge, is the proud possessor of a long distance radio outfit. Mike hears them all, although Frank Weihe, switchman, Fort Dodge, is one lap ahead of him.

LeMars, Iowa

The following clipping recently appeared in the *LeMars (Iowa) Globe Post*:

"Otto E. Bensley, who has charge of the railroad crossing in Central Avenue, had the opportunity Tuesday noon to save an aged man from being run over by the 12:20 train. The man's name is unknown. Bensley states that from appearance the man was about 70 years old.

Otto E. Bensley

"The old gentleman was going north on the east side of the street. Otto saw him coming and gave him a warning not to cross. According to eye-witnesses, the old man could not help seeing the train. Bensley had to stay in the street until the train was close enough so auto drivers could see it. He then rushed across the tracks in front of the train and jerked the man from the track as the train went by."

The train in question was C., St. P., M. & O. No. 204.

KENTUCKY DIVISION

Anne Sweeney,

Office of Superintendent

Office of Superintendent

Sunday, May 13, a special train was run from Paducah to Louisville to enable people throughout Kentucky to hear Billy Sunday, who is holding revival meetings in the Auditorium at Louisville.

A son, John Michael, was born to Mr. and Mrs. Harry G. Devinney on April 29. Mr. Devinney is chief clerk to the roadmaster at Louisville.

C. J. Carney, assistant engineer, was promoted to assistant roadmaster at Louisville, effective May 1. R. C. Williams of Chicago was appointed assistant engineer to succeed Mr. Carney.

Louisville had a hard time to hold her attention to things material during May. What with the new ball park, the Parkway, the Kentucky Derby on Saturday, the 19th, and Billy Sunday, it was difficult to keep to business.

The Illinois Central Athletic Association gave a moonlight excursion on the steamer "America" May 23.

J. H. Starks probably prevented a serious accident on April 17, on extra No. 2951, when he noticed a brake rigging down on extra No. 2949, which was on the siding at Calvert, Ky. He promptly signaled the engineer to stop and assisted in removing the defective brake rigging.

Princeton, Ky. (Sudie Cash)

Conductor D. B. Osborne and Mrs. Katherine G. Booth were married April 17 in the parlors of the Princeton Hotel, Rev. Mr. Abbott of Hopkinsville officiating. After the ceremony Mr. and Mrs. Osborne left for a short visit to New Orleans. They are now at home to their friends at the Princeton Hotel.

Miss Ruby Dearing of the general foreman's office has been ill for some time with inflammatory rheumatism. While she is not yet able to work, she is on the road to recovery.

General Foreman W. J. McGuirk was called to Louisville recently by the serious illness and death of his mother.

Dispatcher C. E. Gaddie, who has been at Norton's Infirmary in Louisville for some time, is now at home, but is not yet able to return to his work.

H. J. Hunsaker, clerk to the supervisor, left May 15 for an extended visit in Texas and neighboring states.

A son, J. L. Small, Jr., was born to Claim Agent and Mrs. Small at Princeton March 7.

Local Freight Office, 12th and Rowan Streets (J. T. Higgins)

Several promotions, due to the resignations of four

One Hundred Seventeen

of our clerks, will be completed shortly. Daniel Buehle, formerly assistant cashier, is now connected with the Dosch Chemical Company as traffic manager. Andrew Thome, assistant accountant, resigned to enter the sales department of the Ford Motor Company. James Ballard, first bill clerk, has entered the contractors' ranks. He is now working with his father. Richard Cummings, receiving clerk, has returned to Chicago to resume his position with the Interstate Commerce Commission. Joseph Brown succeeds to assistant cashier. William Gramig was the successful applicant for first bill clerk. Other vacancies have not been officially filled.

The merit and demerit system now in effect at this station has proved its worth. Figures compiled to date show a decrease of approximately 50 per cent in exceptions credited to individuals, compared with last month.

James O'Leary has been added to our roster as messenger.

Klinger Thomas, reconsigning clerk, went to the Paducah Hospital on May 17 to have an operation performed on his tonsils.

Signal Department (J. P. Price)

Authority has been received for the installation of automatic crossing bell protection at the crossing of the Woodville road at Heath, Ky., and the Cane Run road at Louisville, Ky.

A. Guthrie & Company, contractors on the new main line at Madisonville, Ky., have started construction work out of Madisonville and are now moving about 6,000 yards of dirt a day. A vast amount of construction equipment has been received and distributed between Central City and Dawson Springs, and the construction of the new line is now well under way.

The construction of new yard and terminal facilities at Central City is progressing nicely. The grade for the temporary main line around the Brick Yard cut is about completed, and a considerable amount of new grade is now in place for the new shop yards. Temporary falsework for the new fill across Brownie hollow is now being placed, and the work of making the fill will be started in a few days. The grade for the permanent main line across the hollow at Mile 123 is practically complete.

Home of G. M. Ashmore, assistant chief clerk to the superintendent, Kentucky division, located on 35th Street, near Broadway, Louisville, Ky. On the steps are G. M., Jr., 5 years old, and Medard Kirk, a nephew of Mr. Ashmore and son of Jayson Kirk, formerly star pitcher for the Louisville "Colonels," now playing with the Indianapolis team.

ities at Central City is progressing nicely. The grade for the temporary main line around the Brick Yard cut is about completed, and a considerable amount of new grade is now in place for the new shop yards. Temporary falsework for the new fill across Brownie hollow is now being placed, and the work of making the fill will be started in a few days. The grade for the permanent main line across the hollow at Mile 123 is practically complete.

Signal gang No. 1, in charge of Foreman C. C. Sauer, is now located at Riney, on the Louisville district, installing new standard bootleg wires and shunt circuits between Cecilia and West Point.

Signal gang No. 2, in charge of Foreman A. M. Pfeiffer, is now engaged in making repairs to the Sturgis interlocker at the crossing of the West Kentucky Railroad.

Signalman S. A. Sauer was the successful applicant for signal maintainer at Rockport, vice J. C. Martin, transferred to construction work.

Signalman H. D. Bromley was the successful applicant for signal maintainer at Grand Rivers, succeeding Signal Maintainer J. N. Sisk, transferred to Paducah.

Assistant Signal Maintainer Dennie Jones, who was relieving Signal Maintainer Martin at Rockport, has now returned to his regular position at Dawson Springs.

Left to right, Flagman Marvin Peters and Conductor John Kennedy, Louisville district, Kentucky division.

Superintendent C. R. Young wrote J. B. Heflin, operator, Covington, Tenn., the following letter under date of April 24:

"My attention has been called to the interest manifested by you recently in connection with hazard of fire at Covington, when the depot was set on fire by lightning. Your alertness and presence of mind possibly saved the depot from destruction, and I wish to express my personal appreciation, as well as the appreciation of the management, for the interest manifested by you."

CGW-3365, empty, was set out at Fowlkes, Tenn., by extra No. 1607 at 8:12 a. m., April 10. The car was placed by section men at 8:15 a. m. and loaded with 35,000 pounds of scrap rail for Paducah, Ky. It was billed and ready for movement at 8:45 a. m. and

Illinois Central Magazine

For 24 Years I've Timed My Trains with a Hamilton

BACK of the spotless record held by Engineer A. C. Baldwin, of the Erie Railroad, stands the integrity of the man and the accuracy of his watch—a Hamilton.

Since 1899 a Hamilton has been with Engineer Baldwin at the throttle, accurately timing hundreds—yes, thousands—of trains.

It is by reason of such service that railroad men choose the Hamilton. Its reputation is built upon the solid foundation of accuracy plus faithful performance. Insist on owning a Hamilton and be rid of doubts about your time.

Ask to see the Hamilton No. 992

This 21-jewel movement will pass inspection on any railroad and is the favorite of most railroad men. For other than time inspection service, ask for the Hamilton No. 974, which gives you Hamilton quality at a lower price.

We will gladly send you a copy of our new "Timekeeper" if you write for it.

HAMILTON WATCH COMPANY
LANCASTER, PENNA.
U. S. A.

Hamilton Watch

"The Railroad Timekeeper of America"

was picked up and moved north by extra No. 1652 at 9:50 a. m. the same date. The car remained at Fowlkes only an hour and thirty-eight minutes. This is considered an excellent record.

R. V. Thomas, agent at Trimble, Tenn., died April 16. He was born at Springfield, Tenn., March 13, 1875, and entered the service of the Illinois Central on July 1, 1898, as agent-operator at Trimble. He was promoted to agent July 27, 1903, serving in that capacity for twenty years, until his death. He was always alert and on the job, attending strictly to his duties and always pleasant to patrons, giving the company loyal, efficient service. Mr. Thomas' health began to fail a few years ago, and he gradually declined until it was necessary to go to Chicago to the hospital for a thorough examination. This examination developed that he was suffering from an inoperative cancer for which no cure has been discovered. The widow, Mrs. Mable Thomas, who is a clerk and acting agent at Trimble, survives him.

A&WP-30003, a coal car, was placed at the plant of the Haynes Walker Mill, Paden, Miss., at 2 p. m., April 9, was loaded by them with dressed pine lumber for Meodesha, Kan., and bill of lading signed 4:30 p. m. the same date. The milling company consumed only two hours and thirty minutes loading the car. We appreciate such co-operation from our patrons.

T. Brown and party, including several elderly women from Chicago, New York and points in

A. F. Johnson, engineer of train shown below

the East, used our Seminole Limited returning from Miami, Fla., April 29. They expressed their pleasure and appreciation of the courteous, efficient service the Illinois Central gave them, stating that they had used other roads going south, but would never use any-thing but the Seminole Route again.

Eugene Bailey, merchant, Americus, Ga., recently complimented highly the service rendered him by Illinois Central employes on the Seminole Limited while en route to Chicago and Northern points.

Assistant Engineer J. M. Hoar, who has been ill for some time, has been spending a few days in New Braunfels, Texas, en route Los Angeles, Cal. Mr. Hoar is going west in an attempt to improve his health.

Miss Jimmie Pritchard, clerk, agent's office, Dyersburg, Tenn., has returned to work after several months' illness.

J. W. Hillman, clerk, accounting department, is in the Paducah Hospital, having undergone an operation for appendicitis. It is reported that he is doing nicely.

Strawberries are beginning to move in this section, and everything possible is being done to aid their movement and thereby prevent claims.

Shops, Jackson, Tenn.

(May Ransom)

Master Mechanic L. Grimes and Chief Accountant H. O. Voegeli, together with Superintendent C. R. Young and Chief Clerk B. F. Evans, met with the representatives of the Frisco and Central of Georgia at Birmingham on May 2 to decide upon an equitable division of certain expenses in which the three railroads are interested.

Death has visited the home of two Illinois Central employes recently. Mrs. W. H. Nourse, wife of Engineer W. H. Nourse and mother of Conductor H. L. Nourse, was taken away after an illness of only a few hours on May 3. Mrs. S. F. Richardson, wife of one of our pensioned conductors, passed away at her home on Highland Avenue, on May 4, after a lingering illness of many weeks.

The *Jackson Daily Sun* of May 6 had the following to say:

"The Association of Machinists, Helpers and Apprentices of the Illinois Central met last night at the Y. M. C. A. for a banquet and social meeting, which was a marked success from start to finish. Officers of the company were present, as was a large number of the membership of the association.

"A delightful menu was served, and this was followed by various talks along lines of interest to railway men, by the officials of the Illinois Central, who were especially invited guests, and members of the association.

"A great deal of enthusiasm over the organization was expressed in the various talks, and the consensus of opinion was that the organization was proving a great benefit to the members and was destined to render a greater service to the members and the com-

Train blown over by cyclone at Pinson, Tenn., March 11

pany as it grew stronger in its organization. The keynote of the meeting seemed to be co-operation, showing that the employees were trying to render the greatest possible service to the company, and the officials showing that they were ready to co-operate with the men.

"The entire affair was very informal, and was of such a nature that a better and closer understanding will be sure to result from the session."

MISSISSIPPI DIVISION

Kathleen Hadaway,

Secretary to Superintendent

Miss Annie Bell Anderson, the efficient time-keeper in the superintendent's office at Water Valley, has been selected as sponsor from the Curtis E. Pass Post No. 37 of the American Legion to the state convention at Biloxi, Miss., August 20 to 22 inclusive. Miss Anderson was selected in a novel way which attested to her popularity among her large number of friends in the city. The American Legion presented a musical revue on April 27, the cast consisting entirely of home talent. The audience was in-

vited to select by vote some one of the girls in the play as sponsor. This was done by having each person in attendance write on a card the name of the one he wished to vote for and leave it at the door as he passed out. Miss Anderson's part in the play was that of pianist in the orchestra.

R. C. Jarnigan, agent at Starkville, Miss., has recently been selected president of the Chamber of Commerce of that city.

L. F. Powell, operator, has returned from a two weeks' fishing trip near Wilson, La., his former home.

Road Department

(Mattie Watts—G. McCune)

Section Foreman J. B. Carlisle of West Point, Miss., took charge of the Springdale, Miss., section on May 1. He was succeeded at West Point by Section Foreman J. H. Youngblood, formerly of Ackerman, Miss.

T. H. Harper, clerk to Supervisor G. H. Peacock at Grenada, Miss., has been transferred permanently to the Louisiana division. He is succeeded by Miss Nellie Johns of Water Valley, Miss.

L. B. Harley, correspondent for the mechanical department of the Mississippi division, sends us the accompanying picture of negro pensioners of our Water Valley, Miss., shops. They are, left to right: Bob Davis, pensioned car oiler, in service forty-eight years; Dick Perry, pensioned laborer, in service thirty-one years; Anthony Carr, pensioned machinist helper, in service thirty-three years; Felix Robinson, pensioned laborer, in service fifty-three years; Tom Fox, pensioned blacksmith helper, in service twenty-seven years.

Enginemen, Water Valley and Jackson Districts (J. A. Ramey)

Engineman F. S. Storms and Miss Nellie Lee Aycock of Winfield, Ala., were quietly married at that point on Wednesday, April 18.

Engineman A. T. Smith has been in the hospital at Paducah, Ky., for the last several weeks.

Engineman W. E. Sizemore has returned from the hospital at New Orleans much improved in health.

Engineman W. R. Ruffin has been selected to attend the International Fuel Association meeting in Cleveland, Ohio, May 21, 22 and 23. Mr. Ruffin was selected as the engineman to represent the Southern Lines of the Illinois Central. He has been in service on the Mississippi division since 1888 and is at present employed on passenger runs Nos. 5, 6, 23 and 24 between Jackson, Tenn., and Water Valley. "Billy" Ruffin is considered one of the most careful and efficient enginemen on the division and entirely worthy of the honor conferred upon him.

Engineman and Mrs. P. Ohlson have been called to Elkhart, Ind., by the serious illness of Mrs. Ohlson's mother.

Enginemen C. J. Allen, F. C. Shine, W. F. Hobson and A. F. Johnson have returned from Haleyville, Ala., where they were temporarily at work on the Birmingham district of the Tennessee division.

Engineman E. Kennedy left May 8 for Los Angeles, Cal., to join the members of his family, who have been out West several months. They will return the latter part of June.

Engineman A. F. Johnson has moved his family to Crowder, Miss., at which point he has a farm.

Office of Trainmaster, Water Valley, Miss. (G. Turner)

Flagman and Mrs. W. B. Williamson have moved from Jackson, Tenn., to Water Valley to reside permanently.

Conductor and Mrs. D. H. Johnson are on an extended trip to Parsons, Kan., to visit relatives.

Division Gardener Burros has recently filled the window boxes of the station building with their annual supply of flowers, and the prospects are bright

One Hundred Twenty-two

for some unusually pretty floral displays this summer.

Trainmaster and Mrs. N. W. Spangler are entertaining Mr. Spangler's brother and wife, Mr. and Mrs. H. L. Spangler of St. Joseph, Mo.

Road Department (L. B. Wiggs)

S. B. Cowan, motor car repairman at Grenada, Miss., and Miss Rosa Mae Carter of Sardis, Miss., were married on March 18. They are at home to their friends at Grenada.

The new office of Supervisor Wilkinson at Sardis has almost been completed.

Waterworks Foreman Harel of Grenada has the sincere sympathy of his many friends in the death of his brother at Rockport, Ky., April 9.

Durwart Felton, son of Section Foreman Z. Felton, is at home at Como, Miss., for the summer. He has been attending the Montgomery County Agricultural School.

For Good Watch Repairing See Your Watch Inspector

Chicago terminal. Signal Foreman White is acting as signal supervisor.

Road Department

An intermediate passing track at Independence, La., is under construction.

On account of ill health, Section Foreman S. A. Fant of Johnston, Miss., resigned effective May 1. Sid Howell is acting as foreman of section No. 24, Canton district.

Yard Office, McComb, Miss.

Yard Clerk J. S. Kelley is in the Illinois Central Hospital at New Orleans. Recent reports as to his condition are favorable.

Office of Trainmaster, McComb, Miss.

Miss Ouida Barnes, daughter of Conductor L. E. Barnes, will sail early in June for Europe.

Switchman and Mrs. Robert Rueff are receiving congratulations on the arrival of a son, Robert Harper, Jr., April 22.

J. Umshler, assistant general yardmaster, Fordham yards, Chicago, and Harold Berry, general yardmaster, Wildwood, Chicago, recently spent a day at McComb, the guests of Trainmaster Wicker.

Local Freight Office, Jackson, Miss.

(C. H. Williams)

Ray E. Barrett, accountant, and Miss Mary Butler were married at Jackson, Miss., April 26.

Mrs. Homer Hill, car record clerk, is on duty again after an extended leave of absence on account of illness.

J. B. Terry, lumber clerk, has been appointed traveling freight agent, with headquarters at Hattiesburg.

An interesting meeting of division correspondents was held in the agent's office at Jackson, May 12. Eight were present from various local points. After a business session at which much enthusiasm was manifested, the meeting adjourned to the Pantaze Cafe, where an informal luncheon was served.

Local Freight Office, Hammond, La.

A shortage of strawberry pickers has been an alarming situation during the last few days with the berry growers. Hundreds of crates of berries were left in the fields on account of shortage of help.

Flora, Miss.

Sam Page, agent, and Miss Wilmuth Perry were married at the home of the bride's parents in Yazoo City, Miss., April 22.

Wash Bryant, pensioned porter, from the force of habit still meets the trains with as much regularity as when he was on the payroll. He is as polite as can be and never loses an opportunity to do some helpful thing as he goes about the town every day distributing the *Commercial Appeal*. Old Wash began work as a porter in 1887, and during that time, it is understood, he never missed the mail a single time; in other words, he made 45,480 trips on time.

Ticket Office, Jackson, Miss.

(J. G. Moore)

Miss Ella Ransom, matron, recently attended the National Conference of Social Workers held in Washington, D. C.

William Langley, formerly employed by the Gulf & Ship Island, has accepted a position as relief clerk, ticket and baggage office.

W. B. McIntyre and H. H. Clinker, former yard clerks, have accepted positions as baggage clerks.

Harry Stringer, caller, was injured in an accident at Jackson yards, May 2. He is receiving treatment in the Jackson Sanitarium. Recent reports as to his condition were favorable.

Repairs have been completed on the negro waiting room.

E. S. McMaster recently resigned to accept a posi-

One Hundred Twenty-four

tion with the Southern Weighing Inspection Bureau, Jackson.

Mechanical Department, McComb, Miss.

(Mildred Abbott)

The \$60,000 mechanical coal chute recently installed at McComb was favorably tested out May 8. This will effect a considerable saving at McComb in the handling of coal.

D. Q. Cunningham, master mechanic of the Missouri Pacific, with headquarters at Little Rock, Ark., recently spent a day at McComb shops.

B. H. Gray, general superintendent of motive power of the G. M. & N., spent a day in McComb recently in the interest of his engine, No. 104, which is being overhauled in the shops.

Foremen C. V. Miller and J. C. Lyons, Machinists M. D. McKinnon and A. G. Mogan, Welder Jim Boyd and Helper Apprentice Claude Blair spent several days recently on a fishing trip. They report the fish as biting well.

Pat McGehee, pitcher, McComb shop team, is on duty again after a severe illness. He received treatment in the Illinois Central Hospital at New Orleans.

Foreman and Mrs. C. V. Miller have the sympathy of their friends in the loss of their son, Charles, who died at McComb on May 10.

NEW ORLEANS TERMINAL

J. Milton May,

Care of Agent

Local Freight Office

(Jesse W. Ford)

H. P. Vasterling, car disposal clerk, car department, who was confined to his home for ten days, seriously ill, is now back at work, fully recovered.

H. Phillips, clerk in the outbound warehouse, Poydras yard, has been promoted to inspector.

P. J. Brady, delivery clerk, inbound warehouse, has been assigned to assistant foreman, outbound warehouse, Poydras station.

Clarence Garvey, clerk, has been promoted to car record clerk, car department, local freight office.

Charles A. Breal and Edward Bernard, clerks, inbound warehouse, Poydras station, have been assigned to yard clerks for the joint agent at Chalmette, La.

Joseph Fein, check clerk, inbound warehouse, Poydras station, has been promoted to delivery clerk in the same department.

A. C. Freidenberg, formerly car record clerk, car

In the French Quarter, New Orleans

department, has been transferred to check clerk, inbound warehouse, Poydras station.

Export Department, Stuyvesant Docks
(Fred De Long)

Andrew Gras, stationer, suffered the loss of his mother on April 20.

Miss Jenny Walsh, statistician, has been promoted to export bookkeeper. She has been succeeded by John Seigneaux, formerly timekeeper.

Miss Irma McCubbin, expense bill clerk, has been promoted to stenographer, accounting department, vice Miss Julia McAllister, who resigned to accept a position with the Memphis Cold Storage Company, Memphis, Tenn.

Road Department
(Sadie Sterbenz)

Invitations have been issued for the wedding of Henry V. Lambou, clerk, roadmaster's office. He will be married on June 12 in New Orleans.

Terminal Superintendent's Office
(Myrtle Biersoll)

Thomas Maroney, for a number of years janitor and a well-known figure about Union Station, has been granted an indefinite leave of absence, owing to failing eye-sight.

On Saturday, June 16, a dance and bazaar will be given by the clerical forces, New Orleans terminal, for the benefit of J. W. Jehle, formerly accountant, terminal superintendent's office. Mr. Jehle, who entered the service of the Illinois Central on March 16, 1906, has been granted a 90-day leave of absence on account of continued ill health. He is now at Covington, La., convalescing. The dance will be held in the Knights of Columbus auditorium, and a cordial invitation has been extended to all visiting employees to attend. The following persons compose the committees in charge of the affair. Thomas J. Lee, director general; J. W. Cousins, honorary chairman, arrangement committee; C. T. Beven, honorary chairman, floor committee; J. E. Rogan, honorary chairman, reception committee; W. J. Mora, honorary chairman, refreshment committee; W. A. Delph, chairman, arrangement committee; Joseph Exnicious, chairman, floor committee; C. C.

MEMPHIS DIVISION

Mrs. Collie P. Said Secretary, to Superintendent

Freight Office, Helena, Ark. (Mrs. W. L. Stovall)

We are reminded that spring is here, as Agent William McLaurin is beautifying the flower garden. This spot was one of the most beautiful in Helena last year, due to Mr. McLaurin's untiring efforts and the hearty co-operation of the Twentieth Century Club.

Freight Office, Clarksdale, Miss. (C. H. Skeahan—Olga Kendrick)

Mr. and Mrs. C. R. Crittenden have moved to Clarksdale from Corinth, Miss. Mr. Crittenden is the new accountant in the local freight office.

Mrs. E. D. Gelston, formerly stenographer to the agent, now living in New Orleans, paid a pleasant visit to the office at Clarksdale recently.

V. S. Adkins, claim agent, is erecting a new home on Catalpa Street, Oakhurst Addition. Mr. Adkins contemplates moving his family to Clarksdale upon completion of the new house.

Gordon Dennis, check clerk in the warehouse, has

A group of the boys at Levee yard, New Orleans. Left to right: Thomas Johnson, yardmaster; C. T. Beven, trainmaster, New Orleans terminal; A. M. Escude, engine foreman; E. W. Artus, helper; William Krail, helper.

One Hundred Twenty-six

Miss Bessie E. Phipps, garnishment and pass clerk, and paymaster in the office of Superintendent J. M. Walsh of the Memphis division, has been in service since October, 1918. She is greatly admired by a host of friends for her sunny disposition and the fact that she is courteous and accommodating at all times. She is a sister of Conductor Bob Phipps of Jackson, Miss.

resigned and accepted a position on the city police force.

Supervisors' Office, Tutwiler, Miss. (Clara Milligan)

Division Gardener W. Dorsey has distributed flowers and shrubs to all section foremen. These plants have been set out, giving the homes a brighter and more cheerful appearance. The parks on the division have also been improved.

Rodney Dubard, flagman, is again at work, after a week's illness, due to an injury received while working at Gwin, Miss., recently.

Greenwood, Miss. (R. V. Barber)

Raymond W. Brown, chief clerk to Agent J. W. Arrington, has been forced to ask for a year's leave of absence and go West on account of ill health. Mr. and Mrs. Brown left on April 25 for El Paso, Texas. A purse of \$552.50 was made up by employees at this station and presented to Mr. Brown as an expression of good will and fellowship.

VICKSBURG DIVISION

H. H. Barlow Office of Superintendent

E. H. Kenney, third trick operator at Cleveland, Miss., recently departed for various points in the West on an indefinite leave of absence to improve his health. He is relieved by H. W. Crout, extra agent.

J. W. Champion, formerly warehouse clerk at Cleveland, has been promoted to the agency at Skene, Miss. He is relieved by A. K. Whitmer.

Agent and Mrs. T. A. Noel of Greenville, Miss., left recently for Rochester, Minn. Mrs. Noel has been in ill health for some time and is entering Mayo Brothers Sanatorium for treatment.

J. F. Barber, ticket agent at Greenville, attended the Grand Chapter, Order of Eastern Star, held at Greenville, May 7, 8 and 9. Delegates from all over the state attended the meeting, and Mr. Barber, as Worthy Patron of the local chapter, had a busy time arranging the various entertainments for the visitors.

J. M. Mize, car inspector, formerly of the Columbus & Greenville Railroad, Greenville, and John Schlottman, machinist, formerly of Vicksburg, have recently been employed in our mechanical department at Greenville.

Mr. and Mrs. F. F. Thompson recently lost their only child, Gretchen, 13 years old. The little girl was spending a week-end on Lake Bolivar with school friends, and while she was out boat riding early Saturday morning, April 14, the boat was accidentally overturned and she was drowned. Several railway employees from Greenville volunteered their services in helping locate and recover the body. Professor Fox of the Delta Pine and Land Company,

Illinois Central Magazine

Scott, Miss., deserves praise for efficient service in helping recover the body. Funeral services were held from the Methodist Church, and burial was in the Greenville cemetery.

W. E. Regan, supervising agent, is now comfortably located in his new home, purchased recently, on Starling Street, Greenville.

J. R. Shoffner has been filling the position of car distributor since W. D. Hoff has been granted a leave of absence.

Conductor S. S. Buck, Sr., was found dead in his bed Friday morning, May 11, at Cleveland, Miss., by a call boy who was calling a crew for its daily run. Mr. Buck was born in Gibson County, Tennessee, and had served on this division as a conductor for seventeen years, having entered service July 25, 1906. He is survived by his widow and three children.

Ticket Agent J. F. Barber of Greenville has moved out to his new 2-story home on his plantation, near Metcalf, and is boasting of the finest sleeping porch in this part of the country.

NEW ORLEANS DIVISION

Thomas Treanor Office of Superintendent

Vicksburg and Vicinity

John Garvey, pensioned engineer, and Mrs. Garvey celebrated their golden wedding some days ago. They kept open house the entire day and received a large number of well-wishing friends, including many of Mr. Garvey's old companions and fellow workers of the days gone by. Mr. Garvey is in splendid health, still vigorous and energetic, and keeps in close touch with the system which he served so long.

Road Department

Near Ingleside, Miss., south of Vicksburg, there

Ford Runs 57 Miles on Gallon of Gasoline

A new automatic vaporizer and de-carbonizer, which in actual test has increased the power and mileage of Fords from 25 to 50 per cent and at the same time removes every particle of carbon from the cylinders is the proud achievement of John A. Stransky, 3836 South Main Street, Pukwana, South Dakota. A remarkable feature of this simple and inexpensive device is that its action is governed entirely by the motor. It is slipped between the carburetor and intake manifold and can be installed by anyone in five minutes without drilling or tapping. With it attached, Ford cars have made from 40 to 57 miles on one gallon of gasoline. Mr. Stransky wants to place a few of these devices on cars in this territory and has a very liberal offer to make to anyone who is able to handle the business which is sure to be created wherever this marvelous little device is demonstrated. If you want to try one entirely at his risk send him your name and address today.—Adv.

is a section of the main line which is in continual danger of destruction, during the occasional periods of bad weather, from a stream near by which frequently develops a fresbet. To obviate this trouble, the course of the stream is being diverted from the vicinity of the tracks. Supervisor J. M. Harper and Assistant Engineer H. R. Davis are directing the work, which is being done by a contractor, John Noble, with improved ditching machines.

The ditching and embanking project south of Baton Rouge is progressing admirably. The engineers in charge, E. D. McCune and A. D. Spengler, have the work well in hand. Upward of three hundred teams are in use on the work.

The road department is glad to announce that the damage resulting from the recent heavy rains has been almost fully repaired. Supervisor C. M. Godard, however, is still engaged in removing the enormous slide north of Stanton, Miss., which humped the track in an astonishing manner.

The section foremen and their families all along the line have made a great start toward beautifying the section grounds. Shrubbery and flowers, shade trees, pecan and fruit trees are in a flourishing condition. Great interest is shown by all employees in this laudable work, and in a short while we expect our section lands to compare favorably in attractiveness with any on the system.

B. & B. Department (C. W. Legg)

Foreman V. C. Williams and his gang have made many necessary improvements at the Vicksburg freight house. The office has been completely renovated and a new set of office furniture installed.

Division Gardener John Dinkins reports that the parks and gardens which suffered so disastrously in the cold weather are again in good shape. Many of the more tender plants which were killed or injured by the sleet and snow have been replaced, and some rare new plants have been planted.

Along the Line

Engineer H. S. France, who has been on the sick list for the last four months, has recovered sufficiently to resume work.

Engineer D. M. Freeman, who received painful injuries in February, is back on his engine.

Natchez, Miss. (R. K. Holman)

The division friends of T. C. Cunningham, who was recently assigned to the Natchez yards as switchman, will regret to learn that he is off duty indefinitely on account of a fracture of the foot received while performing his duties in the yard. He is getting along nicely.

It is very gratifying to all of the employees at this station to view our station buildings and grounds, as Foreman Sam Hill has just completed painting all of the buildings with the usual colors, which has certainly made a decided improvement in the appearance of the entire place.

Our gardeners also have been busy here recently, planting beautiful flower beds and touching up the parks in general. Of course these all go in harmony, especially at this time of the year. This work has made an impression on the general public of Natchez, due to the fact that the citizens have just begun a general "clean up and paint up campaign" in Natchez.

With some the dominating fads of sporting at this station have been hunting and fishing, but here comes a radical change from our previous indulgences. Ernest Goza has been telling tales around the office for some time now about something new to us. This is what he calls "bull-frog grabbing"—something like the way they grab live fish here during the spring months, only for this they use an instrument made of a fishing cane and a grab hook, something similar to a frog gig. It is my understanding that a man has to be an expert marksman to direct his weapon with lightning speed so as to grab a frog before he

B&O-251328, loaded by the W. W. Gary Lumber Company, Percy, Miss., contained 34,219 feet of lumber weighing 142,000 pounds.

is warned and can escape. Ernest says military discipline and drill are necessary to the success of one of these hunts. One man has to take the water in hip boots (neck deep, if necessary) and throw out a dragnet all along about ten feet from the bank. Another man marches along the bank at the water's edge with a spotlight. This advance guard spots the frog sitting, and at the signal that the game is sighted an auxiliary force of sharpshooters or grabbers is called into action to make the capture. From all evidence, Ernest is reputed to be a champion at this final phase of the hunt. I understand that they do not confine themselves to frog grabbing exclusively, but they have been grabbing even large snakes, such as water moccasins and the like, and trout that get mixed up and confused in the glare of their headlights. In fact, Ernest claims to have caught about a 2- or 3-pound trout the other night by grabbing him with this patented instrument when the fish was several feet under the water.

Mechanical Department, Vicksburg, Miss. (Thelma Howard)

Mrs. R. J. Melon attended the Eastern Star Convention in Greenville recently.

Foreman Robinson narrowly escaped a serious accident in his new motor car recently.

Foreman Bank's wife was called to her home in Ohio recently by the serious illness of her mother. We are glad to know her mother is much improved now.

Foreman Johnson has been getting his fishing lines and poles ready for the outdoor season.

Machinist J. D. McCarron has moved into his new residence on Dabney Avenue.

Foreman Schlottman has a new motor car. The old one has made its mileage and has been retired.

Samuel Barnes died recently. Sympathy has been extended to his sons, who work for the Yazoo & Mississippi Valley at Vicksburg.

Employees from Vicksburg, including Mike O'Keefe and Leo Koestler, made a trip to Clarksdale, Miss., recently for the ball game between Vicksburg and Clarksdale.

Electrician J. D. Johnson was married at his home town, Oxford, Miss., recently.

The Association of Carmen, Helpers and Apprentices met in the council room a few nights ago for a general good time. The wives, mothers, sisters and sweethearts were present; there was good music and plenty of "eats," and everybody reports a good time. Mr. Christy made a talk.

The Corliss 300-horsepower engine that has operated the machinery of the Yazoo & Mississippi Valley shops for the last twenty years has been removed on account of the electrification of the shops.

The clock from the master mechanic's office is undergoing repairs and is greatly missed by everyone, the timekeeper in particular.

The re-examination car was at Vicksburg recently. Doctor Lambert and Doctor Curry enjoyed a long drive through the National Military Park.

Illinois Central System Discusses Valuation of the Railroads

Under the terms of the Valuation Act, introduced and sponsored by Senator Robert M. LaFollette of Wisconsin and enacted into law by the Congress in 1913, the Interstate Commerce Commission has been engaged about nine years in compiling data to determine the value of the properties owned by the railroads and used in the service of transportation. The Government and the railroads together have already expended upon this work about \$88,000,000.

Using the information on railway value compiled by its Bureau of Valuation, the Interstate Commerce Commission in 1920 placed, for rate-making purposes, a tentative valuation of \$18,900,000,000 upon the railway properties of the country. Although this country probably never will go back to the low level of costs existing prior to the war, this tentative valuation was based upon pre-war costs, which since then have practically doubled. Subsequent net additions to the railway properties have been taken by the Commission at cost less depreciation, and the present tentative valuation is around \$20,000,000,000, which is about \$2,000,000,000 in excess of the outstanding railway capitalization.

Valuation and capitalization of railway properties are sometimes confused in public discussions. Some railroads are over-capitalized; on the other hand, many railroads are capitalized at much less than a fair value of their properties.

Take the Illinois Central System as an example. The aggregate par value of our securities outstanding as of December 31, 1922, was \$406,868,141. On that date we owned about 75,000 freight cars, 1,850 locomotives and 1,700 passenger train cars. Taking \$1,000 as the average value of our freight cars, which is less than half what a new car costs today; taking \$30,000 as the average value of our locomotives, which is nearly half what we are paying now, and taking our passenger train cars at \$15,000, less than half the present price (most of our passenger cars are modern steel cars), the following is a conservative estimate of the value of our equipment alone:

Freight cars	\$ 75,000,000
Locomotives	55,500,000
Passenger train cars.....	25,500,000
	<hr/> \$156,000,000

Subtracting this from our capitalization gives only \$250,868,141 as representing the value of our roadway, with its right-of-way, ballast, ties and rails, bridges, signals, telephone and telegraph lines and other roadway properties, and even including our buildings, land, roundhouses, shops, freight and passenger stations and the like. The value of our terminal properties at Chicago and other important cities runs into large figures. For example, we own 1,415 acres lying within the city limits of Chicago, 114 acres bordering on Michigan Avenue and the great Loop district. The Illinois Central System owns about 6,200 miles of road, but, counting additional main line trackage, passing tracks and yard tracks, we have about 10,000 miles of track. If the \$250,868,141 referred to above covered the value of track alone (excluding all other properties used in the service of the public), it would represent only about \$25,087 for each mile of track. It costs around \$25,000 a mile to build ordinary hard-surfaced highways with only light grading and bridge construction involved and without including the cost of acquiring the roadway. Will any reasonably minded person deny that the Illinois Central System's track, with its right-of-way, ballast, ties, rails, heavy bridges, signals, telephone and telegraph lines and other appurtenances, is worth more per mile than it costs to build a mile of hard road with only light grading and bridge construction involved and without including the cost of acquiring the land?

There are some who are trying to make it appear that the Interstate Commerce Commission's tentative valuation of the railroads is excessive and a burden upon those who pay freight and passenger rates. They overlook the fact that out of every dollar received by the railroads in 1922 about 86 cents went to pay the actual costs of the service rendered to the public (costs upon which the valuation can have no conceivable effect), and only about 14 cents remained out of which to pay interest on indebtedness, rentals of leased lines, dividends and the cost of enlargements and improvements.

Constructive criticism and suggestions are invited.

C. H. MARKHAM,
President, Illinois Central System.

J. R. HEAD,
of Kansas, who
lives in a small
town of 631 peo-
ple. He has
made as high as
\$69.50 in one
day, selling
Comer All-
Weather Coats.

E. A. SWEET,
an electrical en-
gineer, is mak-
ing from \$600 to
\$1,200 a month
and works only
about four hours
a day.

W. S. COOPER,
of Ohio, who
finds it easy to
earn over \$500 a
month selling
Comer All-
Weather Coats.

Will You Give Me a Chance to Pay You \$100 a Week?

I want to make an offer whereby you can earn from \$100 to \$1,000 a month, cash. You can be your own boss. You can work just as many hours a day as you please. You can start when you want to and quit when you want to. You don't need experience and you get your money in cash every day when you earn it.

These Are Facts

Does that sound too good to be true? If it does, then let me tell you what J. R. Head did in a small town in Kansas. Head lives in a town of 631 people. He was sick, broke, out of a job. He accepted my offer. I gave him the same chance I am now offering you. At this new work he has made as high as \$69.50 for one day's work. If that isn't enough, then let me tell you about E. A. Sweet of Michigan. He was an electrical engineer and didn't know anything about selling. In his

first month's spare time he earned \$243. Inside of six months he was making between \$600 and \$1,200 a month.

W. J. McCrary is another man I want to tell you about. His regular job paid him \$2.00 a day, but this wonderful new work has enabled him to make \$9,000 a year. Yes, and right this very minute you are being offered the same proposition that has made these men so successful. Do you want it? Do you want to earn \$40.00 a day?

A Clean, High-Grade Dignified Business

Have you ever heard of Comer All-Weather Coats? They are advertised in all the leading magazines. Think of a single coat that can be worn all year round. A good-looking, stylish coat that's good for summer or winter—that keeps out wind, rain or snow, a coat that everybody should have, made of fine materials for men, women and children, and sells for less than the price of an ordinary coat. Now, Comer Coats are not sold in stores. All our orders come through our own representatives. Within the next few months we will pay representatives more than three hundred thousand dollars for sending us orders.

And now I am offering you the chance to become our representative in your territory and get your share of that money. All you do is to take orders. We do the rest. We deliver. We collect and you get your money the same day you take the order.

You can see how simple it is. We furnish you with a complete outfit and tell you how to get the business in your territory. We help you to get started. If you only send us three average orders a day, which you can get in an hour or so in the evening, you will make \$100 a week.

Maybe You Are Worth \$1,000 a Month

Well, here is your chance to find out, for this is the same proposition that enabled George Garon to make a clear profit of \$40.00 in his first day's work—the same proposi-

tion that gave R. W. Krieger \$20.00 net profit in a half hour. It is the same opportunity that gave A. B. Spencer \$625 cash for one month's spare time.

I need 500 men and women, and I need them right away. If you mail the coupon at the bottom of this ad I will show you the easiest, quickest, simplest plan for making money that you ever heard of. I will send you a complete outfit. I will send you a beautiful style book and samples of cloth. I will tell you where to go, what to say, and how to succeed. Inside of thirty days you can have hundreds of dollars in cash. All you need do today is write your name down below, cut out the coupon and mail it to me at once. You take no risk, you invest no money, and this may be the one outstanding opportunity of your life to earn more money than you ever thought possible.

Find Out Now!

Remember, it doesn't cost you a penny. You don't agree to anything, and you will have a chance without waiting—without delay and without investment—to go right out and make big money. Do it. Don't wait. Mail the coupon now.
