Few Americans realize how much work is needed to withdraw from circulation yearly the large number of bank-notes worn out by constant handling. Some idea of this may be gained by considering the fact that the average life of a \$5 note is only about ten months. In the vaults of the New York Federal Reserve Bank is constantly kept a supply of approximately \$500,000,000 to replace the worn money sent in by local banks. In a single bank of the Federal Reserve group 687,000,000 individual notes were counted, of which 166,000,000 notes, aggregating \$771,000,000, were canceled. The aggregate withdrawal forms a considerable percentage of the total amount of currency in circulation in the United States—\$4,500,000,000—and the machinery required involves constant watchfulness and unceasing energy.—*Current History*.

The Christmas Seal's Message of Health

*Idea of Anti-Tuberculosis Campaign Was Developed
by Delaware Woman in 1907; Some of Its Results*

CHRISTMAS seals have come to be almost as closely associated with that season of the year as Santa Claus, mistletoe and plum pudding. Packages that are wrapped with holly and red ribbon do not seem complete now without the little Christmas stickers. And why? Because every health seal that appears on letters, cards or bundles shows that its purchaser has given a helpful thought to somebody less fortunate. And Christmas is the season when everybody *feels* the spirit of doing for others.

The tiny seals are sold in order that everybody who buys may become a working partner in the campaign to stamp out tuberculosis. Each seal tells the story of a woman and her followers who had sufficient faith in their convictions to carry on a nation-wide crusade against the disease. That their work has been successful cannot be doubted when it is realized that in these years of selling seals the death rate in this country has been cut in half.

Fifteen years ago, a woman with a vision, Miss Emily P. Bissell of Wilmington, Del., conceived the idea of raising funds to help in the anti-tuberculosis work of her state. She had read in a magazine an article by Jacob Riis on the Christmas stamp sold in Denmark for the support of a children's hospital.

At the time Miss Bissell was secretary of the Delaware Red Cross Chapter. With but \$40 obtained from two friends as her capital, she won the official consent of her chapter and of the postoffice authorities to put a few thousand seals into circulation. Stores, newspapers and women's clubs supported her with great enthusiasm from the first. Through such generous and united effort, 300,000 (to her a number beyond all her dreams) were sold that first year, and \$1,000 was paid on a site for the first tuber-

culosis sanatorium in Delaware, known as Hope Farm.

From the beginning, all those interested in the movement realized that their task should be to spread knowledge of the disease, to teach the public that it might be prevented, and thereby to decrease its enormous death toll. From the very start then, the campaign to fight tuberculosis has been an educational campaign.

As a result of Miss Bissell's demonstration and earnest pleading, the American Red Cross decided to take up the enterprise on a nation-wide scale the next year, 1908. The parent organization was handicapped by lack of funds, and again Miss Bissell found the necessary backers who shared her faith. She personally undertook the task of writing to 4,000 newspaper editors throughout the country, asking them to publish the fact that orders for seals should be sent to national headquarters. The result was a veritable floor of orders.

Seal Design Changes Yearly

The seal design varies from year to year. The first year was a simple holly wreath surrounding a red cross with the greeting "Merry Christmas," done in red on a white background. The 1919 seal was the first to carry the double-barred cross, which specifically symbolizes the fight against tuberculosis and is the emblem of the National Tuberculosis Association and its 1,200 state and local agencies.

This year's seal, with the mother and child, is symbolic of the helpful guardianship of this cross over the children of our country. T. M. Cleland, artist of the seal, says: "To me the design means the sentiment and impressions of the protective function of the tuberculosis crusade. The protective love of the mother and the cross are symbols indicative of this impression."

To attempt to account for the great ac-

accomplishments that have been realized through Miss Bissell's initiative would be difficult. The tuberculosis death rate sixteen years ago was 200 per 100,000 in the registration area, and it is now but 100 per 100,000. This means the saving of 100,000 lives annually. From the economic standpoint this means the saving of \$10,000,000 a year to the nation.

Eight Elements in the Campaign

There are briefly summarized eight elements in the campaign to which Christmas seal sale money has been and is applied. These are (1) for increasing the number of hospitals and sanatoria for the treatment of tuberculosis from 100 (sixteen years ago) to nearly 700, with approximately 60,000 beds; (2) for establishing more than 550 clinics and dispensaries; (3) for obtaining at least 3,500 special tuberculosis nurses who instruct, in the home, mothers and their families; (4) for research work; (5) for statistical study; (6) for publicity in distributing during the last sixteen years approximately 1,000,000 pieces of printed matter; (7) for the Modern Health Crusade, which has enrolled nearly 8,000,000 school children who are learning daily health habits; (8) for obtaining more than 3,000 open-air schools and preventoria.

More than \$20,000,000 has been raised from the Christmas seal to spread information regarding tuberculosis and the most effective ways to combat the disease. Sanatoria and other institutions have been built, and today there are about 60,000 beds for tuberculosis patients. Estimating the original cost of a bed at \$1,500, these sanatoria are worth \$90,000,000.

Tuberculosis a Preventable Disease

Yet there are at present more than one million active cases of tuberculosis in this country. It is estimated, moreover, that there are this number of inactive cases. And yet tuberculosis is a preventable disease. If everybody can be taught to lead a healthy life through plenty of rest, fresh air, nourishing food and through watchfulness over the physical condition by having periodic physical examinations, there can be a still greater decrease.

More than a billion Christmas seals will be in circulation this year in December. A chance will be given everybody then to help carry on the work of Miss Bissell and share in making the dream of tuberculosis workers come true. Their efforts will not cease until they have conquered this disease.

COMMUNICATIONS

From Colonel Mason's Grandson

TO THE EDITOR: Somebody has been kind enough to send me a copy of your magazine with an article by C. J. Corliss upon my grandfather, Colonel Roswell B. Mason, the first chief engineer and general superintendent of the Illinois Central.

I read the article with deep interest, as I remember my grandfather well and recall with special vividness his intense interest in your railroad. All of his grandchildren went with him once on a trip over the lines to Cairo in an office car. I well recall, as we were not any farther from Chicago than Joliet, how he pointed out of the window and said that when he took his construction crew along this part of the route they frightened away great herds of wild deer.

It was a cause of distinct pride to me recently to find that both President Markham and Judge Dickinson still held my grandfather in remembrance and esteem. It is doubly pleasant to find him made the subject of so interesting an article in the *Illinois Central Magazine*.—JULIAN S. MASON, *New York Tribune, New York City.*

A Tribute to O. C. Kelly

TO THE EDITOR: O. C. Kelly is dead! The curtains of death were drawn when the mists of morning were giving away to purplish and golden shadows. It was a morning in August, 1922, when the soul of O. C. Kelly, one of the most popular conductors of the Vicksburg division of the Yazoo & Mississippi Valley, sped to its Maker. Mr. Kelly was well liked by the patrons, people at large and the officials and employes of the railroad. He had been in the employ of the Yazoo & Mississippi Valley for years.

The body was deposited in the beautiful cemetery at Rolling Fork, Miss. The mound of earth covering the coffin was carpeted with floral offerings testifying in a mute way to the regard in which he was held throughout the Delta section of Mississippi.

About O. C. Kelly's bier the birds carol at peace and the soft winds chant at rest. "Life's fitful fever o'er, he sleeps well."—S. L. B.

To acquire wealth is difficult, to preserve it more difficult, but to spend it wisely most difficult of all.—E. R. MAY.

Some Train Rules of 1857

(Continued from page 59)

in the employ of the Company, is required to assist him. When the Train is ready to proceed anew, the Whistle Signal for Wooding up shall be used to call in the men stationed out; under any other circumstances this Signal shall always be used to call them in.

69. The Conductor of a Freight Train has leisure on the Road to examine the Wheels, Brakes and Journals of his Cars, and can have no excuse for allowing the Journals to be neglected and to become heated on the Road; it will, therefore, always be presumed that the Conductor is inattentive in regard to his subordinates if they are neglected. He is expected to do his business promptly at the Stations, and to run with regularity when not interrupted by delays in the Trains, mindful that he is running his Train to do the business of the Road, and not merely to make time over it.

70. Great importance is attached to the Prompt Delivery of Letters, Way Bills and Despatches consigned to the care of a Conductor, and any neglect in this particular will be severely dealt with.

71. He will see that the doors of Freight Cars are always closed and locked before starting his Train, and he will keep the Brakemen at their posts. Whenever delay occurs at a Station, he is required to report the circumstances on the same day.

72. It will be his duty to make himself acquainted as far as practicable, with the condition of goods conveyed in the Train, and see that they are properly stored away, so that they receive no damage by transportation.

73. It is a very important part of his duty to attend strictly to the removal of empty Cars from Sidings, where they are not wanted, to the Stations where they are wanted. Timber Trucks and other Cars must be collected, when empty, and returned to the points where they are again to be loaded.

74. If from any cause it becomes necessary to leave a Car or freight in any shape where it does not belong, he shall note the facts on the back of the Way-bill and give notice to the Agent of the Station where left, and shall use all other means in his power to have the same forwarded to its proper destination with the least possible delay.

75. He will see that all Switches are left properly secured in their proper positions after he has passed or used them.

76. While waiting at Stations, he will do such switching as may be reasonably required by the Station Agent.

Regulations for the Engine-Man

77. He must not start his Train until directed by the Conductor, nor until the Whistle be sounded or the Bell be rung. He must invariably start with care, and observe that he has the whole of the Train; and he must run the Train as nearly to Time as possible, arriving at the Stations neither too soon nor too late.

78. He will be responsible that the Signals for starting and stopping made by the Conductor are attended to.

79. He must cause the Bell to be rung at least eighty rods before arriving at any public Road Crossing, and to be continued until he pass it, and the neglect of this precaution will subject him to immediate punishment.

80. He must sound the Whistle at such places only as shall be prescribed by the Superintendent, and not at Stations where the Train is not to stop.

81. He must pass by Stations where his Train does not stop at a much reduced rate of speed, and haul up when Trains are receiving or discharging Passengers.

82. When attached to a Train, he will be subject to the orders of the Conductor who has exclusive charge of the Train, and who will direct him when to start and when to stop.

83. When at Station, and not attached to a Train, he will be subject to the orders of the Station Agent.

84. When not on Road Duty, he will be governed by instructions he may receive from the Master of Engine Repairs.

85. Every Engine-man, in approaching a Road or Switch, should move at a moderate speed and see that the way is clear before he reaches it. If the Switch be not seen to be right, he should stop till he is sure, and a very good excuse will be required for running off at a Switch left on the wrong Track.

86. In running behind another Train, he must so run as to allow the Train in front of him to be at least one mile ahead, excepting when coming to Stations; and in approaching or in running round or entering a curve, particular caution must be used to avoid the possibility of running into the

leading Train. No excuse as to being deceived about the distance will be received for a neglect of this rule.

87. He is held responsible that his Engine is neat, clean and in good working order, before he leaves the Engine House, and that she is supplied with all the necessary tools and fixtures named in these Rules, and that there is a full supply of Wood, Water and Sand.

88. He must keep a good look-out as he moves forward for any Signals, either from the Repair men or from any other person, or for any indication of danger made to him, all of which he is responsible for seeing and immediately attending to; and he must obey any Signal, even if he should see reason to think such Signal unnecessary. The lives of the Passengers and property of the Company are entrusted to his care, and it is fully expected that he will not only attend to every Signal made to him, and to all his instructions, but also that he will, on all occasions, be vigilant and cautious himself, not trusting entirely to Signals or Rules for safety.

89. He must always run on the supposition that at any Station he may find a Train out of place, and he must have his Train well in hand in approaching a Switch or Station.

90. He will allow no person to ride on the Engine while it is hauling a Train, or on the Tender thereof, other than the proper Fireman, except the Conductor, Master Machinist, Master of Bridge and Track Repairs, and persons having authority by the instructions to extend this right to others.

91. Although the Conductor has charge of the Train, the Engine-man will not therefore be considered blameless if he run any unnecessary risk on the Road without all the prescribed precautions being observed which are necessary to perfect safety; nor will he be relieved from blame if he proceed in violation of the Instructions of the Road, even should the Conductor, from negligence or misapprehension, direct him to do so.

92. He shall not proceed after dark without the proper Lights on the front part of his Engine. If the proper Lantern of the Engine is out of order, he shall place in its stead two common White Lanterns, and on arriving at the Station, see that the large lantern is put in proper order before proceeding any further.

93. He must see that his Engine is pro-

vided with a pair of Jack-screws, an Axe, Hand Saw, Pinch Bar, Spike Hammers, Lanterns for front of Engine, two small White and one Red Lantern, Red Flag, and all tools, duplicates and fixtures necessary to meet casualties.

94. He is never to leave his Engine in steam without shutting the Throttle Valve, throwing the Engine out of gear, and putting on the Tender Brakes.

95. He will not be allowed (except in case of accident or sudden illness) to change his Engine on the journey, nor to leave his station without permission.

96. He is strictly forbidden throwing Wood and Waste, or allowing the same to be done from the Tender while the Train is in motion.

97. He is strictly enjoined to start and stop the Train slowly, and without a jerk, which is liable to snap the couplings and chains; and he is further warned to be careful not to shut off steam suddenly (except in case of danger) so as to cause a concussion of the Cars.

98. The utmost care must be exercised in pushing into Turn-outs, so as to avoid injuring the Cars or other property of the Company.

99. In bringing up the Train he must pay particular attention to the state of the weather and the condition of the Rails, as well as to the length of the Train, and these circumstances must have due weight in determining when to shut off steam. Stations must not be entered so rapidly as to require a violent application of the Brakes, or to make the sounding of the Whistle Signal necessary, and every instance of overshooting the Station will be reported.

100. Whenever he sees the Red Signal, or any other which he understands to be a Signal to stop, he is to bring his Engine to a stand close to the Signal, and on no account to pass it.

101. He must pass all bridges and trestlings at a speed not exceeding five miles per hour, reducing the speed to that rate before entering it.

102. In approaching a stopping place, he must not sound the Whistle as a Signal for the Brakemen to apply their Brakes, unless he thinks the Train will run by.

103. When Passenger Trains are behind time, he is at liberty to make it up, in whole or in part with the consent of the Conductor, when he can do so with safety,

provided that he run cautiously, and at moderate rates on the curves.

104. When a Conductor is disabled, the Engine-man will be held responsible for the safety of the Train until a proper person takes charge of it.

105. In Switching at Stations, the Whistle must only be used as a Signal in Starting, and one short blow of the Whistle as a Signal to Stop.

106. All regular Trains, (except Passenger Trains) before giving steam to start from a Station, will give two short, distinct blows of the Whistle.

107. All Engineers approaching Stations where they are required to whistle, will do it so as to denote their class, viz:—First class Trains shall give one long, continuous blow; second class Trains, two distinct blows.

Regulations for the Station Agent

108. He is responsible for the proper use and care of the Buildings and Property of the Company, and is answerable for the faithful and efficient discharge of the duties of all the Company's servants at his Station.

109. He must see that all his orders are duly executed, and that all Books and Returns are regularly written up and neatly kept.

110. He must see that all servants at the Stations behave respectfully and civilly to Passengers of every class.

111. He must inspect all Rooms and places in connection with the Station, and see that they are neat and clean.

112. He must be careful that all stores supplied for the Station are prudently and economically used, and that there is no waste of Oil, Fuel or Stationery.

113. He is not allowed to be Absent without leave from the Superintendent, except from illness, in which case he must immediately inform the Superintendent, and take care that some competent person is entrusted with the duties.

114. Car must never be allowed to stand on the Main Line, but must be placed on a Siding, and the wheels must be securely blocked.

115. Every exertion must be made for the expeditious dispatch of the Station duties, and for insuring punctuality in the Trains.

116. He is required to see that every article loaded in the Cars is entered in the Freight Forwarded Book and on the Way-bills; and also, that every article so en-

tered on the Way-bills is actually loaded in the Cars designated thereon.

117. He will have charge of the Switchmen and all other laborers at the Station. Switches must always be on the Main Track, except while immediately being used.

118. He will report immediately to the Superintendent whenever any Train leaves the Station before the time prescribed in the Time Table.

Rules for Various Officers

119. All Conductors and Engine-men before leaving a Station are required to compare and regulate their Time by the clock standard.

120. Every Conductor and Engine-man while on duty must have with him a copy of the Time Tables and Instructions.

121. In case of a Collision, it will be assumed as a rule, until very clearly proved to the contrary, that the Conductors and Engine-men of both Trains have neglected some of the many precautions, whether written or not, which are necessary to the safety of the Road.

122. All persons when at work upon the Track are required to give notice of any obstructions caused by their work, by exhibiting Red Flags or Red Lanterns, and at a sufficient distance from the obstruction, in both directions; and all Conductors, Engine-men, &c., are particularly enjoined to stop when such Signal is exhibited.

123. When the Engine-man shuts off the steam at Stations where the Train is to stop, thereupon the Brakemen must apply their Brakes, and using their judgment, endeavor to stop at the Station without the necessity of the Engine-man sounding his Whistle. Too much sounding of the Whistle impairs its value as a Signal of Danger.

124. Track Repairers must report any instance of neglect on the part of Engine-men to observe their Signals of Caution or Danger.

125. All the Switches on the Main Line having no Switch Tender, must be approached with great caution, having perfect command of the Train. No excuse will relieve a Conductor or an Engine-man from the responsibility of running off an Engine or Train in consequence of a Switch being wrong.

126. When an Engine is laid up for repairs, it is expected and required that the Engine-man and Fireman shall assist, to the best of their ability, in making the

necessary repairs, and to report themselves with the other Shop Hands to the Time keeper. A failure to do this will result in their not being allowed any Time.

127. No Engine-man is allowed to make any alterations or additions to his Engine or Tender without the consent of the Superintendent or Foreman of Repairs.

128. No Conductor or Engine-man is allowed to exchange Trains or Engines with-

out the consent of the Superintendent, Assistant Superintendent, or Master of Engine Repairs.

129. To avoid Collisions, no Engine or Car will be permitted to pass over the Road other than the regular Train, unless following immediately after an Engine carrying a Red Flag or Lantern and having a right to the Road, or by express orders from the Superintendent.

He Never Lost a Day's Pay in Fifty Years

Bissell J. Humphrey, special accountant in the office of the auditor of freight overcharge claims, entered the service of the Illinois Central as a messenger boy, September 19, 1872, and has been in continuous service ever since, more than fifty years.

Mr. Humphrey's record is truly remarkable in that he has lost not to exceed one month on account of sickness and has not lost a day's pay for any cause since he was employed. He has served the company in several capacities. For many years he was chief clerk to the auditor of freight receipts.

At the time he entered the service the general offices were located in a small room at Michigan Avenue and Lake Street; today they occupy the entire space at Central Station and a 9-story office building at 63d Street. The accounting department at that time was not considered important enough to have a separate organization, freight accounts being handled by the general freight agent and passenger accounts by the general passenger agent. Today the accounting department has approximately 1,300 employees and is in charge of a vice-president.

The road then consisted of approximately one thousand miles of single track as against more than eight thousand miles in the present Illinois Central System, and of this more than one thousand miles are double track, some parts having three, four, six and even eight tracks. Mr. Humphrey recalls distinctly when the Chicago terminals were double tracked and the criticism that followed on account of spending money for such work, the critics contending that the extra track was unnecessary and the money was wasted. Today he is watching the company start the electrification of these same terminals, which will cost many millions of dollars.

At 12 o'clock, noon, September 19, 1922, just fifty years from the date of Mr. Hum-

Bissell J. Humphrey

phrey's entry into the service, fellow employees gathered around him, and F. B. Sherwood, auditor of freight overcharge claims, representing officers and employees, made a congratulatory presentation speech and handed Mr. Humphrey a purse made up in the accounting department.

Mr. Humphrey is in the best of health and physical condition and will, no doubt, celebrate many more anniversaries with the Illinois Central. His fiftieth anniversary was the subject of articles in the Chicago newspapers.

There are two things needed in these days; first, for rich men to find out how poor men live; and second, for poor men to know how rich men work.—ATKINSON.

Conductor Ewing and Engineman Sherk comparing time before starting on their scheduled run of 104 miles in two hours and sixteen minutes, on the "Pennsylvania Limited," one of the Fast Trains of the Pennsylvania Railroad.

You may never run the Pennsylvania Limited—but you can own a Hamilton Watch

AND every Railroad Man who owns a Hamilton is equipped to time the Pennsylvania Limited or any other closely scheduled train. The Hamilton is the watch that Railroad men instinctively turn to. It is sturdy, dependable, and so consistent in accurate performance that it can always be counted upon to tell the truth when consulted.

Conductor L. F. Ewing and Engineman H. J. Sherk, of the Pennsylvania Limited, here shown, carry Hamiltons. They've been carrying them for a number of years. Both report their watches as being highly reliable and satisfactory.

Of course they do! Therein lies the value of the Hamilton Watch to all Railroad Men. Almost any watch may tell accurate time for a while, but the Hamilton does it day after day and year after year.

Ask your jeweler to show you the Hamilton No. 992—the 21 jewel "Railroad Timekeeper of America." The new and lower price of this model is \$48.50 for the movement alone. You'll find it a timepiece that will eliminate doubt and give you a real sense of time security.

We will be glad to send you our booklet "The Timekeeper." It contains valuable watch information and illustrates and describes the different Hamilton watches.

HAMILTON WATCH COMPANY, Lancaster, Penna., U. S. A.

Hamilton Watch

"The Railroad Timekeeper of America"

No Mystery About Naming Pullman Cars

*System Adopted Because Alphabet Was Too Short
and Numbers Conflicted With Those Used by Railroads*

A recent issue of *The Pullman News* explained the mystery about Pullman car names as follows:

WHO names the Pullman cars—and why—and how?

That has been the most absorbing topic of travelers' conversation for perhaps forty years. Revelation is at hand.

It is a settled belief in many parts of the United States that the credit—or blame—should rest with Mrs. Frank O. Lowden, who was Miss Florence Pullman. It is confidentially asserted that the daughter of the founder of the Pullman Company was launched on her career in nomenclature as a young girl, receiving \$1 for each car name. Other versions have it \$100 a car, while some solemn guesses have been as high as \$30,000 a year. As a matter of fact, she never had such a job or did any systematic car naming.

The first Pullman sleeping car was a remodeled Chicago & Alton day coach, No. 9, and it continued with its original designation, as did its twin, No. 19. It was then decided to letter the cars, A, B, etc., but there were but twenty-six to select from, so numbers were returned to. This brought a conflict with railway cars' numbers, and so each car received a definite baptismal name. In these days—the 70's—it was customary to name locomotives, as many travelers will recall; presidents of the roads and of the United States, governors of the states and other prominent men were so honored.

"Pioneer" Was First

Car A was really the first named car, since it was called the Pioneer. It was the first car built from top to bottom by George M. Pullman and cost more than \$20,000. It was hurriedly completed in 1865 so that it might form a part of the train that bore the body of Abraham Lincoln from Washington to Chicago and thence to its final resting place at Springfield. There can be no question as to the aptness of the name Pioneer, since this car led the march of progress into the waste lands of unimproved railway travel.

Generally speaking, parlor cars were sup-

posed to be given feminine names and also those of flowers and birds. But railroads often want them named after cities and towns on their lines, and this wish is often followed.

Sleeping cars have been named after rivers, lakes, cities, towns, countries, local historic figures, notables in the world's history, soldiers, poets, authors, battlefields and camps. The latest batch of names, for example, are those of prominent men and women of those days when existed "the glory that was Greece and the grandeur that was Rome." They were selected after much travail by Frank L. Wood, assistant to L. S. Hungerford, vice-president and general manager, who was particular to ascertain that the behavior of the ladies and gentlemen so honored was everything it should have been, irrespective of the customs of the age in which they lived.

Names That Stump Porters

Among these may be noted some that cause the porters some anguish, but otherwise worthy of adorning the side of palatial Pullmans, such as Antiphon, oldest of the famous ten Attic orators; Berosus, a Babylonian priest and historian; Demosthenes, greatest of Greek orators; Diogenes, well known bath tub owner; Hippocrates, father of medicine; Hesiod, a Greek poet who wrote on rural economy and morals of morality, and Simonides, a Greek iambic poet.

Some of the names of the old Pullman cars are interesting. They are a bit fanciful sometimes, not to say idealistic, such as Arcadia and Utopia, with Riviera as a picturesque added starter. Then there were the Patriarch and Puritan, ancient private cars, the Davy Crockett, a hunting car, and the Izaak Walton, consecrated to wealthy anglers.

When the Pennsylvania Limited, the first all-Pullman train, first started running between New York and Chicago in 1887, the especially built sleeping cars were named after countries, such as England, France, China, Germany and Spain. The dining cars were called for celebrated French chefs, Savarian, Aberlin, Magdelin and Val-

entin. Earlier noted dining cars were the Atlantic and Pacific, and in 1893 the America, marvel of the rococo period, was exhibited at the Columbian exposition at Chicago.

Recurring to some of the odd names of by-gone days, few of which have been bestowed on standard sleepers and parlor cars of today, one finds the Morning Star, and likewise that of the Evening and Twilight; and also the Lone Star. Then there was the Gem, Leo, Olive Branch, Wild Rose, Prairie Queen, Monte Cristo, Reindeer and Promontory. The derivation of all these names is easily understood with the possible exception of Promontory. Possibly, being indigenous to the days when there was but one Pullman, and that attached to the rear of the train, it stood out

like a headland, the Golden Gate, for instance.

[The editor of the *Southern Pacific Bulletin*, however, explains the origin of this name as follows: The car "Promontory" was undoubtedly named after Promontory, Utah, where the golden spike was driven May 10, 1869, joining the Central Pacific with the line from the east to form the first trans-continental railway route.]

FOLDER ADVERTISES MEMPHIS

A folder recently published by the Memphis Chamber of Commerce should aid materially in making new passenger business for the Illinois Central System. The beautiful folder pictures Memphis the wonder city that it is, and will no doubt create a desire in many readers to visit Memphis.

GASOLINE

Think You Can Spell?

Here is a mighty good one for you. How many words can you make? Five, ten, twenty or more? Be the best speller and win a cash prize.

Win \$100! Try It!

Household Magazine will give a prize of \$100.00 in cash to the person who sends in the largest list of correctly spelled words made out of the word "Gasoline," providing the list is accompanied by 25c to cover a one-year subscription to the Household Magazine. Every person who sends in a list of words with 25c to cover a one-year subscription to our big magazine—whether they win the \$100.00 cash prize or not—will receive a prize. See how many words you can make out of "Gasoline."

THE RULES ARE SIMPLE Anyone living in the United States may submit an answer, except no answers will be accepted from employees of the Capper Publications, residents of Topeka, or former cash prize winners in any Picture or Word Spelling Clubs conducted by the Capper Publications. Write as plainly as you can. Place your name and complete address at the top of the list. Number the words 1, 2, 3, etc. Make as many words as you can out of "Gasoline." A few of the words you can make are, "gas," "oil," "on," "line," "in," "goal," etc. Do not use more letters in the same word than there are in "Gasoline." Proper names, prefixes, suffixes, obsolete, and foreign words will not be counted. Words spelled alike, but with different meaning will be accepted as one word. Your list will not be accepted in this Spelling Club, unless it is accompanied by 25c to cover a one-year subscription to Household Magazine. In the event of a tie between two or more Club Members, each tying Club Member will receive a prize of the same value in all respects to that tied for. This Spelling Club closes Dec. 23, 1922, and as soon as your list of words with remittance is received, we will acknowledge the order, and the winner will be announced as soon after the closing date as the three judges can determine to the best of their ability who has submitted the largest list of correctly spelled words. Each participant agrees to accept the decision of the judges as final and conclusive. Webster's New International Dictionary will be used as authority.

When sending in your list of words and 25c, be sure to state to whom we are to send our big monthly magazine for one year.

Home Owners Are Owned by Their Homes

*The Possession of Property Stabilizes a Man and
Makes Him an Eager Supporter of Law and Order*

By JOHN H. PUELICHER,
First Vice-President,
American Bankers' Association

Excerpts from an address to the Colorado Bankers' Association.

WHY has life in America in many ways become far less stable and far less secure? Because there is a great stretching out of the vast mass of people in industrial labor and agriculture, seeking a fulfillment of a real democracy of living conditions. Men desire something that will stabilize their lives. To many people, there is nothing ahead but the daily grind, and they are willing to try any new measure or any new life, in the belief that it will change their present circumstances.

They have experimented in Russia. They have experimented in North Dakota and have not found a solution—merely unscrupulous masters.

You believe that with continued improvement the present system offers the best opportunity for all to gain that desired contentment and prosperity. So do I. I would not defend it for a moment if I thought there was any other system that could better serve the community at large, nor will I defend it if I am ever convinced that there is one that will better serve all the people. True, it is in need of constant reform. It has had the power, without, in the same measure, accepting the yoke of responsibility, and *noblesse oblige* should be its motto.

The Many Holders of Capital

Many who are the holders of capital in America today do not know that they are. They do not know that capital is the product of past labor used in further production—or, in other words, that anything available to increase one's power or influence is capital. The rude bow and arrow of the Indian was capital; a workman's tools are capital; a man who owns his home possesses capital; a man who has a savings account has capital. Does it not designate personal ownership, and is not personal ownership one of the greatest stabilizers in the world?

The most stable population of America has always been made up of the small home

or land owners. As the English colonists secured the right to hold property, they became established. That ownership brought a higher form of civilization, a desire to live happily as a community of individuals, each respecting the others and the rights of others. It brought greater contentment. It encouraged the people to work and develop their holdings, since the improvement and betterment of these would result in reward to the owners.

Today a man who owns his home or his farm is, in a measure, owned by his home or his farm. There are so many elements of respectability that come to him who finds permanent shelter for his loved ones. He probably worked hard to possess it, and when he has it he tries to make it attractive and hold on to it. It is a force for law, since a home owner desires protection by law. He acquires respect for the property of others. He wants good, sound government and desires to become an advocate of law and order. Ownership makes him vigilant. I think it was Gladstone who said, "Property always has one eye open."

Savings Account Is Necessary

But a man can seldom be a home owner or a farm owner or the owner of any of the stabilizers of life until he has been or is the owner of a savings account.

Do you know that out of every 1,000 people in Switzerland 554 are savings depositors? There are in Denmark 443, in Belgium 387, in France 346, in England 302, and in Italy 200 out of every 1,000, and yet in the United States we have but 99 savings depositors out of every 1,000 inhabitants? Almost 500 per cent more in Switzerland! Does that signify anything to the task the American banker has before him?

You know, too, that tenancy instead of ownership is growing among our farmers. In 1880, the farms which were operated by tenants constituted 25.6 per cent of the total number of farms in this country. By 1920 38 per cent, or practically four out of every ten farms, were operated in this way.

We cannot become stabilized unless we become a nation of owners. We cannot become a nation of owners until we are a

nation of savers. How are we to become savers? In the first place, we must know how to work. We must know how to save. We must know how to take care of our savings. We must know how to send those savings back into circulation. We must have a goal and a confidence that that goal can be reached because we understand the workings of economic law which govern our living and working and trading.

It all comes back to education. We have tried many laws and many amelioratives to rid our society of the poverty and ignorance about us. We have more or less accepted the saying, "The poor always ye have with you." Perhaps there is no panacea for poverty, for there will always be the few irredeemably lazy and the few more who become thoroughly discouraged and overwhelmed by misfortune, so that they either must or do give up the race; yet most of the "poverty," "borderline poverty" or "day by day existing and nothing more" (from among which group come so much misunderstanding and radical action) is due to a lack of knowledge of those things which would urge foresight—a lack of knowledge as to how to save today for a future need. As Euripedes said, "A bad beginning makes a bad ending."

If ignorance of money matters and of the use of financial institutions are among the greatest causes of the misfortune, lack of prosperity and misunderstanding among so large a mass of our people, does that not warn us of the need of education in these matters? It means giving the people a knowledge of economic law, so that they have a means of working, and acting and judging for themselves.

There is no safety in what may be told or sold to our people save in education. We do not wish to be leveled down in this country. Nor, on the other end of the scale, do we desire to tolerate the profiteer, but we do want to level up—up to a nation of substantial middle-class standards—owners of bank accounts and homes, attractive and well furnished; owners whose food is good and palatable, and includes some delicacies; whose clothing can have variety and be of good material; who can choose their recreation and their vocation; who can be intelligent citizens in a full democracy, and accept the educational and cultural opportunities of our country and the world, to give them not only power, but the enjoyment of the essential and eternal value of life.

NEWS OF THE DIVISIONS

AROUND CHICAGO

Office of Auditor of Freight Receipts

A pretty wedding took place, Saturday, September 30, when Miss Helen Kleuskens became the bride of John Spiek of West Pullman. The ceremony was performed in St. Catherine of Genoa Church at 5 p. m. Sincere congratulations and best wishes for their happiness were extended to them by their friends in this office.

INDIANA DIVISION

Superintendent's Office

Miss Naomi Bailey of the accounting office has returned from visit in New York.

There have been several changes in the division offices; Ben Winkleback, clerk in the accounting department, has accepted a position with the Central Illinois Public Service Company, Springfield, Ill. Dewey McLain of the roadmaster's office filled the vacancy in the accounting office; C. L. Rager of Bloomington, Ind., succeeded McLain; J. A. Cleavlin has been made supervisor's clerk at Bloomington, Ind.

DIVISION CORRESPONDENTS

Chicago Terminal—Heads of Departments.

Illinois—Mr. George Strauss, Assistant Chief Clerk to Superintendent, Champaign, Ill.

Indiana—Miss Florence McShane, Secretary to Superintendent, Mattoon, Ill.
Iowa—Mr. C. R. Briggs, Chief Clerk to Superintendent, Fort Dodge, Iowa.

Kentucky—Miss Anne Sweeney, Stenographer, Superintendent's Office, Louisville, Ky.

Louisiana—Miss Claire Pimm, Clerk, Superintendent's Office, McComb, Miss.

Memphis—Mrs. Collie P. Said, Acting Correspondent, Room 315, Grand Central Station, Memphis, Tenn.

Memphis Terminal—Mr. W. E. Gerber, B. & B. Clerk, Room 306, Grand Central Station, Memphis, Tenn.

Minnesota—Miss Lucille Sims, Secretary to Superintendent, Dubuque, Iowa.

Mississippi—Miss Kathleen Hadaway, Clerk, Superintendent's Office, Water Valley, Miss.

New Orleans—Mr. Thomas T. Treanor, Superintendent's Office, Vicksburg, Miss.

New Orleans Terminal—Miss Myrtle Biersoll, care of Superintendent, New Orleans, La.

Springfield—Miss Della Morrison, Stenographer, Superintendent's Office, Clinton, Ill.

St. Louis—Mr. J. W. Brown, Clerk, Superintendent's Office, Carbondale, Ill.

Tennessee—Mr. Rufus Kemp, Jr., Office of Trainmasters, Fulton, Ky.

Vicksburg—Mr. J. S. Terry, Train Dispatcher, Greenville, Miss.

Wisconsin—Mr. J. A. O'Neill, Superintendent's Office, Freeport, Ill.

C. L. Adams, clerk to Trainmaster Vane at Palestine, Ill., has resigned, and Miss Olive Gibler has accepted the position.

L. A. Lawrence is the new clerk to Supervisor T. J. Flynn at Palestine, Ill.

Miss Florence McShane of the superintendent's office has returned from a leave of absence; Miss Beatrice Crimmins, who substituted for Miss McShane, has returned to her studies at the University of Illinois.

Carl Schlicher, clerk in the superintendent's office, has resigned and will accept a position with the Big Four Railroad.

Chief Dispatcher's Office

The new siding just north of Delavan was opened for service October 12 and has been named "Horton." This will enable the dispatchers to handle the heavy business on the Peoria district much easier.

Business is still heavy on the Indiana division, and cars of all classes are very scarce. Our slogan: "Don't delay a single car."

While Dispatcher and Mrs. L. L. Bosley are enjoying a vacation, Dispatcher Klugh is the relief man.

Car Distributor Werth, also on vacation, is relieved by Operator Scott; Operator Crimmins is taking care of the night job in the chief dispatcher's office.

While Agent and Mrs. H. C. Warford of Merom, Ind., are spending a vacation in Indiana, Extra Agent Titus is acting as agent at Merom.

Mattoon Shops

C. R. Wood, chief clerk to Master Mechanic Bell, Mattoon shops, went to New Orleans recently to attend the national convention of the American Legion and its auxiliary.

C. W. Anderson, pensioned stationery engineer, is visiting in Oskaloosa, Iowa.

Miss Belle Shook, employe at Mattoon shops, is enjoying an extended trip through the West, visiting California and Portland, Ore.

ST. LOUIS DIVISION

E. B. J. Bush, formerly accountant in the division office, Carbondale, has accepted a position in Mr. Blaess' office, Chicago. Mr. Bush has been succeeded by E. H. Smith.

Miss Nellie Cressie has been given the position of clerk-stenographer in the local freight office at Carbondale, under Agent B. Runalls.

There were ten or twelve special trains run over the Illinois Central handling passengers to the American Legion meeting in New Orleans, La.

Big preparations have been made for a big Hallowe'en celebration in Carbondale. Carbondale has become famous throughout Southern Illinois for its elaborate Hallowe'en parades.

A. H. Ahl, accountant, is taking a course in higher accounting in the University of Chicago.

E. R. Nightingale, formerly chairman of the St. Louis division, has been transferred to Louisville, Ky., as a rodman.

Clyde Brooks, who has been working in the accounting department, division office, Carbondale, has re-entered the Southern Illinois Normal University to take up preparatory work for a medical course.

Elmer E. Wilkinson, bridge foreman on the St. Louis division, Carbondale district, was pensioned August 1.

E. E. Wilkinson

Mr. Wilkinson was born on a farm near Cleves, Ohio, April 27, 1861. His first railway work was for the Big Four at Cincinnati, Ohio, as an apprentice in the shops in 1887, where he stayed three years, after which he went to work in the bridge department of the Cincinnati Northern Railway, Van Wert, Ohio, for a short time. He returned to the Big Four and in

1882 came to Carbondale, Ill. In July, 1882, he went to work as bridge carpenter for the Carbondale & Shawneetown Railroad, which was later taken over by the Cairo Short Line, later a part of the St. Louis, Alton & Terre Haute Railroad, which in 1896 became a part of the Illinois Central. Since 1889 he has served as a bridge foreman continuously until retired, leaving the Illinois Central System after forty years' service.

MINNESOTA DIVISION

Albert Scheel, Illinois Central freight conductor, was instantly killed at Doris, Iowa, in a train wreck September 30. Mr. Scheel was pulling his train on the side track at Doris, and before his train had reached the clearing another freight coming from the same direction crashed into it. Mr. Scheel was in the caboose and was killed instantly.

Albert Robert Scheel was born at Masonville, Iowa, October 5, 1888. He came to Earlville at the age of 9 years, where he attended the public school for several years.

At the age of 21 he became an employee of the Illinois Central as a brakeman. After several years of faithful work, he was promoted to conductor on a freight train. This position he held for a few years, when he was called to the defense of his country in May, 1917. He served in Company C, 64th Infantry, 7th division. After one year of faithful service overseas he returned home and found that his former position as conductor had been held for him by the railroad, and he at once went back to work.

Mr. Scheel was an active member of the American Legion, belonging to the Becker Chapman Post of Waterloo and also Post No. 436 of Earlville. He was also a member of La Societe des 40 hommes et 8 chevaux (box car society), in whose activities he took an active part. One thing especially noticeable

PEOPLES GLOVE CO., P. O. Box 14, Decatur, Ill.

Here is the Orient mine, on the West Frankfort branch of our St. Louis division, which holds the world's record for hoisting coal, having loaded 164 railway cars in eight hours, or an average of more than twenty cars an hour.

operator at Central Station, Louisville, for the last nine years, died at her home on South Brook Street, Louisville, October 4, after a short illness. Funeral services were held for Mrs. Connaughton at St. Louis Bertrand Church, and burial was in Calvary Cemetery.

MISSISSIPPI DIVISION

Miss Lois Covington, stenographer to the assistant chief clerk, has been making a visit in Wisconsin.

Mrs. B. Burgess is still on the sick list, having been absent from her place in the accounting department for about fifteen days.

Frank White, chief clerk to the trainmasters at Fulton, Ky., has been granted a leave of absence to attend school in Bowling Green. He is succeeded by Mrs. W. R. Hales.

Gerard Grider has been given a place as stenographer in the road department, succeeding Rufus Kemp, Jr., who bid in a position as stenographer to the trainmasters.

The following, from a recent issue of the Jackson (Tenn.) *Sun* refers to the death of one of our pensioners of more than fifty years' service, whose record was given, with that of eleven others, in the August, 1921, issue of this magazine:

"In the death of Louis Kell, aged about 80, who passed away in McComb, Miss., Sunday, many of the older residents of Jackson recall that his passing takes away the last of the old engineers of the Mississippi Central Railroad who lived in this city. Mr. Kell for a number of years resided here, having his home on Baltimore Street. His run was between Water Valley, Miss., and Cairo, Ill. He was an excellent railway employe and a splendid, straightforward Christian gentleman. Many of the 'old-timers' here speak affectionately of him today. His body will be laid to rest in McComb, whence he had gone a number of years ago. He is survived by one sister, Mrs. John Ingram of this county, and among his nephews is Hewitt Pegues of Huntersville.

"The death of Mr. Kell recalled to the mind of W. A. ('Pat') Marks, president of the 'Old Settlers,' the races that were run of Sunday evenings by Mr. Kell, piloting a Mississippi Central passenger train, and Henry Witherspoon, operating an M. & O. train. The tracks were parallel for four or five miles north of Jackson, and the trains would pull into Jackson about the same time. Mr.

Marks remembers that of Sunday evenings as many as 3,000 persons have walked north of Jackson to witness the race between the two trains. The incident was a real sporting event in Jackson in those days, it is said."

TENNESSEE DIVISION

Pensioner J. D. Olinger has left for a visit to relatives and friends in St. Louis and Sedalia, Mo., Hoffman, Okla., and Fort Worth, Texas. He expects to be gone about three weeks.

Joe Strolin, one of our pensioners, now living in Chicago, is spending several days in Water Valley with old-time friends. Mr. Strolin expects to visit New Orleans before returning to Chicago.

Miss Christine Adams, file clerk, and Mrs.

Here we have Caller R. A. Yancy of Jackson, Tenn., and his famous old goose, Tom. Tom Goose and Arch are known to almost everybody from coast to coast who follows the shooting game. Mr. Yancy, one of the crack shots of the Jackson Gun Club, has an official average in the American Trap Shooters' Association of 96 per cent. He and Tom Goose make a hit wherever they go, and nothing is too good for them. Mr. Yancy, who is caller at Chester Street, Jackson, says he is crazy about three things, and they are the Illinois Central, Tom Goose and his gun, which he says is the finest gun in the world. Tom Goose follows Mr. Yancy wherever he goes, takes his stand at the traps and moves from peg to peg along with his master. Tom Goose is 14 years old, and Mr. Yancy says he is good for twenty years more.

The ILLINOIS WATCH
COMPANY

Springfield

Mississippi division offices, Water Valley, Miss.

Gladys Walker, tonnage clerk, superintendent's office, recently spent several days in Chicago.

Miss Annie Bell Anderson, clerk, superintendent's office, has returned to work after a month in Chicago and Fort Dodge, Iowa.

Miss Lillie Butler, daughter of Machinist G. W. Butler and formerly employed by this company as stenographer, has been appointed by the president and committee of the McKinney Lake Drainage District as secretary of that organization. Miss Butler for the past two years has been the efficient stenographer of the law firm of Montgomery & Dulaney of Tunica, and this appointment comes as a further recognition of her business ability.

Dispatcher D. Sizemore is away for a three weeks in Kentucky and Cincinnati, Ohio.

Dispatcher W. J. Tipler has returned from a ten days' trip over the system, having been appointed a member of a committee of dispatchers to make this trip.

NEW ORLEANS TERMINAL

J. E. Murphy, instrumentman in the engineer's office, is making an extended tour of the West, stopping over at Colorado Springs, Denver, Salt Lake City and El Paso.

W. H. Wood, Jr., former rodman on this division, has been promoted to instrumentman, stationed at Champaign, Ill.

Miss Esther Lucich, employed in the general agent's office, on September 2 became the bride of James J. McStravich.

On October 2 the stork paid a second visit to the home of Chief Yard Clerk A. J. Condon and left another little girl, Beatrice Lucille.

Here are H. E. Campbell, rodman in the engineer's office, and his bride, formerly Miss Clara Ellsworth, accountant, superintendent's

Mr. and Mrs. H. E. Campbell

Looking northeast from our 63d Street Office Building, Chicago, with our tracks in the foreground and Hyde Park High School at the upper right

office—a strictly Illinois Central couple. Mr. Campbell is a native of Chicago, having been employed by the Illinois Central at that point for several years. He came to New Orleans a few months ago, accepted a position in the engineer's office and lost his heart. A speedy romance was the result of Mr. Campbell's transfer to New Orleans, and the wedding day was set for October 27. A delightful trip over Illinois Central rails to Chicago has been planned, thence up through the Canadian forests to Winnipeg. Mrs. Campbell saw service at McComb, Miss., and in the local freight office, New Orleans Terminal.

Station Master's Department

Effective October 1, the Checker taxicabs replaced the Yellow taxicabs as official cabs at Union Station. The proprietors of the Checker Cab Company, Joseph M. Bistes and F. C. King, who have been connected with the taxi and transfer business for a long time, have promised to give the best of service at Union Station.

Euphrosine Street from South Rampart Street to Franklin Street was made a one-way street October 1. This action has greatly improved the handling of traffic by the express company, baggage room and milk platform.

G. W. Sallee, ticket agent, has returned from a trip west, stops having been made at San Francisco, Los Angeles, Salt Lake City, Denver and St. Louis. Mr. Sallee says he enjoyed the trip very much and put on about ten extra pounds.

MEMPHIS DIVISION

D. C. Clark, accountant, has just returned from a trip to Denver, Colo., where he was suddenly called by the serious illness of his wife. Mr. Clark reports his wife improving.

Miss Bessie Phipps, garnishment clerk, spent a most enjoyable visit in the West, having visited in Denver, Manitou and Colorado Springs, Colo.

Our congenial chief accountant, Joe N. Concklin, has just returned from a thirty days' leave of absence and reports enjoying a much needed rest. This is the first vacation Joe has had for the last five or six years.

We had the pleasure of a visit from H. H. Kiernan, formerly assistant chief clerk in the superintendent's office, now secretary to the president of the Peoria & Pekin Union Railroad. Harry spent his vacation in Memphis.

Train Dispatcher Vernon E. Pettit had the pleasure of accompanying a train dispatchers' committee over the Illinois Central System during the latter part of September. Mr. Pettit was complimentary in his comments on the cordiality of division officials whom they met on the trip. Mr. Pettit declares the trip was beneficial from an educational viewpoint, as well as a great pleasure.

H. C. Ferguson, assistant chief clerk in the superintendent's office, met an untimely death on September 24 while on his vacation. His body was found between the Illinois Central tracks near Harvey, Ill. He was laid to rest in Forrest Hill Cemetery, Memphis. Mr. Ferguson had been connected with the Illinois Central in various clerical capacities for the last seven years and was greatly liked by his fellow workers.

A. N. Covington, agent at Lyon, Miss., for the last seven years, died at a hospital in Memphis October 13, following an operation.

On September 27, Section Foreman J. H. Parker discovered a broken arch bar on the

KERITE INSULATED
WIRE & CABLE COMPANY
NEW YORK CHICAGO

north end of IC-27884, train No. 97. Cruger, Miss., the car having been set out for cotton loading. Mr. Parker notified the agent, and the car was repaired, thereby preventing a possible accident.

On October 6, IC-160269 and IC-29154, empty cars, were moved from Greenwood to Midway, Miss., by train No. 96. The cars were spotted to load by the Black Bayou Planting Company. Train No. 95 picked them up for return movement, one hour and twenty minutes after being placed for loading, and moved them back to Greenwood the same date, less than fourteen hours being consumed. This goes to show that our patrons are co-operating with our conductors during the present car shortage.

On September 25, Erie-106985 arrived at Tutwiler, Miss., at 8:05 a. m., loaded with bagging and cotton ties for a local cotton gin, was placed for unloading on arrival, made empty at 2 p. m., reloaded by the consignee with cotton seed, loading completed at 11 p. m., and car moved out at 8:05 a. m. the following morning. Twenty-four hours were consumed from the time the car arrived.

NEW ORLEANS DIVISION

The American Legion includes in its membership a large number of the boys on the New Orleans division, and almost every one of them was anxious to attend the fourth national convention in New Orleans during the week of October 16. Although business on the division was exceedingly heavy at that time, arrangements to relieve a goodly number were made, and our representation at the big event was of no mean proportion.

A very pretty wedding was celebrated in Vicksburg a few days since, when Operator J. V. Holliday, connected with the ticket office at Baton Rouge, La., and Miss Clara Russell of Vicksburg were married. Miss Russell is the daughter of Aubry Russell, a member of the special agent's forces. The newlyweds will make their home in Baton Rouge.

The appointment by Governor Lee M. Russell of Superintendent F. R. Mays to the post of levee commissioner for Warren County, Mississippi, is hailed with great satisfaction by the people of the community. As vast improvements in the Mississippi River levee system are under way, and in view of Mr. Mays' highly successful handling of the recent high water situation, the citizens feel confident that his assistance will be of no little value to his fellow commis-

sioners and the public at large. Apropos, it may be mentioned that the company has finally decided to erect a sea wall to protect its properties from high water at Vicksburg.

Milton F. Clark, veteran agent at Ethel, La., was recently married to a resident of Slaughter, La.

Engineer J. J. Mulvihill is laid up with a severely sprained ankle, but is improving gradually.

C. A. Rickett is relieving General Yardmaster F. C. Hattie, who is off on a well-earned vacation.

For Sale: Dauphin Park Residence Lots, All Clear and Improvements in and Paid. No Special Assessments.

Two 30x125 lots 87th Place \$750 each. Also lot 49½ ft. front 89th Street \$1000. Close to Illinois Central depot and Cottage Grove car. Built-up neighborhood. Owner F. Nicholson, 1407 Hollywood Ave., Chicago.

TOBACCO HABIT BANISHED

Let Us Help You Yes, positively banished almost before you know it. Pleasant, easy to take. Results quick, sure, lasting. No craving for tobacco in any form. Not a substitute. Contains no habit-forming drugs. Satisfactory results guaranteed in every case or money refunded. **Tobacco Redeemer** is an absolutely scientific and thoroughly dependable remedy for the treatment of the tobacco habit. Write for free booklet and positive proof.

THE FACTORY BEHIND THE WATCH

Plant of the Illinois Watch Company, Springfield, Illinois, also showing America's highest grade railroad watch, the "SANGAMO SPECIAL".

This Factory is Devoted Exclusively to the Manufacture of High-Grade Watches

Established in 1870

For more than 50 years, high-grade watches have been produced in this factory. The reputation established in these years for high-quality products, is in itself a guarantee.

Every Illinois-Springfield watch is fully guaranteed to be perfect in construction and to be a satisfactory timekeeper.

Hinkle C. Hays

Mr. Hays is a member of the law firm of Hays & Hays, Sullivan, Ind., district attorneys for the Illinois Central in Indiana. This firm was appointed district attorneys on February 1, 1915, the firm having been employed as local attorneys for Sullivan County previous to employment as district attorneys. It was also counsel for the Indiana & Illinois Railroad Company, which later became the Indianapolis Southern Railway, and which now is the Indiana division of the Illinois Central. Mr. Hays was born at Sullivan on November 12, 1890, and attended the public schools in that city, later attending Wabash College at Crawfordsville, Ind., from which he was graduated in June, 1912. At that time he became affiliated with the law firm of Hays & Hays, in which firm he is still an active partner. His father, the late John T. Hays, was a distinguished Indiana lawyer of the old school, and his brother, Will H. Hays, a member of the firm, is the former Postmaster General of the United States and present chief executive of the motion picture industry of the country.

The Nation Must Stand By Its Railroads

Nothing but Provision for Adequate Financial Return Can Avoid Future Troubles

In what has been acclaimed as one of the most important, timely and effective railway addresses of the year, President C. H. Markham of the Illinois Central System on November 9 told those in attendance at the annual dinner of the Railway Business Association in New York that nothing but adequate support of its railroads would ever free the United States from the danger of transportation shortages, such as we are now experiencing. Mr. Markham's address follows:

WE HAVE witnessed this year a remarkable change in conditions in the United States. The country recently was passing through one of the most profound business depressions in its history. It has emerged from this depression and has entered a period of activity in production and commerce such as those which always have followed its panics and depressions in the past. Foreign conditions affecting our export business are very unsatisfactory, and it is impossible to measure the influence they will exert. But our domestic commerce always has been many times as important as our foreign commerce, and in our own land almost every condition seems favorable to another era of expansion and prosperity.

At the very threshold of this new era, however, we are confronted with a shortage of railway transportation. The farmers have produced bumper crops. The railroads have moved more grain this year than ever before in history. Nevertheless, the farmers complain that, although their big corn crop has not all been harvested, they cannot get enough cars for even the grain that is ready for shipment. Lumber manufacturers

find themselves unable to ship the lumber they have produced and for which there is a demand. The coal mine operators cannot get anywhere near as many cars as they order. Manufacturers of iron and steel show that their output is being restricted because the railroads cannot deliver them enough fuel and raw materials. Road building and other construction concerns complain that their business is interfered with by the priority in the use of open-top cars being given to coal under an order of the Interstate Commerce Commission. Growers of fruit and vegetables say they are suffering large losses because they cannot get enough refrigerator cars.

Some of these complaints are exaggerated. Some are without justification. But they reflect a nation-wide condition, the existence of which cannot be questioned.

No Situation Like This in the Past

There have been other times when the service the railroads could render has been unequal to the demands. This was the case, for example, in 1906 and 1907 and in the war years. But in every past time when there was a shortage of transportation it was felt only after the revival and increase of business had been going on for some time and had carried production and commerce to higher levels than ever before. What we call "car shortages" always have represented inadequacy of all railway facilities. The "car shortage" of 1906 and 1907 did not come until toward the close of a 10-year period of industrial and commercial expansion during which the railroads had increased by two and one-half times the volume of freight carried by them. The

car shortages of the war years did not begin until when, in 1916, the railroads were handling 20 per cent more freight than in the previous record year.

The outstanding fact regarding the present shortage of transportation, the significant fact which challenges our attention, is that it has been met at the very beginning of a period of business revival. In this respect it creates a situation unprecedented in the history of the United States—a situation which should cause every farmer and business man, every railway regulating official, every public man, every wage worker, to pause and reflect seriously.

It is plain to every man who thinks that the wages labor can be paid, the income the farmer can get, the profits that can be derived from business, depend in the long run upon the total amount of production and commerce that can be carried on. If the necessities, comforts and luxuries each of our people has are to be increased, we must increase our total production and commerce more rapidly than our population. We have always done this in America. But nothing could be more obvious than that the increase in production and commerce which is vital to the welfare of all cannot be secured without a corresponding increase in transportation.

The Largest Car Shortage Ever Known

It is a historic fact that in this country within the last one hundred years production and commerce and the material welfare of the people have increased faster than they ever have in any other country in the world. It is also true, as every student knows, that this wonderful material progress has been made possible by the fact that until recently our railroads always were developed ahead of, and prepared the way for, the growth of population and industry. The conditions which now exist, therefore, mark a revolution in our affairs. Nothing less than a revolution has occurred when our railroads, whose surplus capacity has always in past periods of business activity made possible the vast increases which have occurred in our production and commerce, are found threatening to prove unequal, or actually proving unequal, to the demands made upon them at the very beginning of a period of business revival.

The railroads are now moving about as much freight weekly as in 1920, when the highest record was made. In spite of this

the "car shortage" recently reported has been the largest ever known, and the demands of shippers continue to increase. In past periods of business revival the increase in freight business has gone on until it has reached a point 35 to 150 per cent higher than ever before. We may well ask ourselves whether, with the railroads finding it difficult to surpass the freight carrying record of 1920, they can be expected within a few months or years to handle such an increase in tonnage as past experience shows would be only normal in a period of general revival.

Who can measure the losses which may be sustained by the country's people if the railroads prove unable to increase anywhere near as much as they have in past periods the amount of freight handled? Mr. Julius H. Barnes, president of the Chamber of Commerce of the United States, was head of the government's Grain Corporation during the war and has been in the grain exporting business for thirty years. In a recent address Mr. Barnes showed how inadequacy of transportation has so restricted the flow of grain from our farms to Europe that, in his opinion as an expert, the difference between the prices of grain on our farms and in foreign markets averages 10 cents a bushel more than it would if transportation conditions in this country enabled the grain to flow normally to market. He estimated that if similar transportation conditions continued throughout the crop year the loss due to them suffered by the farmers on grain alone would be \$400,000,000. He attributed the inadequacy of transportation to "an over-rigid system of government regulation over our railroads, which has extended over ten or twelve years." Apply similar reasoning to all the rest of the industry of the country, and you will get some idea as to why Secretary Hoover recently estimated that every period of shortage of transportation costs the country at least a billion dollars.

Why are we suffering from this shortage of transportation at the very beginning of a business revival? The correct answer must be given to this question, and the public must be convinced that it is correct. Without an informed public opinion the situation cannot be remedied.

Recent Strikes Partly to Blame

The situation is partly due to the coal strike and the shop employes' strike. The

long coal strike has imposed upon the railroads a demand for the movement during the fall and winter months of a vast tonnage of coal which should have been moved in the spring and summer. The shop employes' strike has delayed repairs to a large amount of equipment which was in bad order when it began and which would have been made ready for service if the strike had not occurred.

But it would be a serious mistake to assume that these strikes have caused the present shortage of transportation and that it will disappear when their effects have been removed. The causes of the present shortage of transportation and the still greater shortage there is reason for fearing go much deeper and farther back. During the last fifteen years the production and commerce of the country, in spite of occasional reverses, have grown as rapidly in proportion as in previous years. The increases in the freight offered the railroads conclusively prove this. But during this time the development of the facilities of the railroads has steadily and rapidly declined. The time has come at last when not only has the surplus capacity of the railroads been exhausted, but their development has fallen far behind that of other industries. These are the real causes of the present situation.

In the five years ending with June 30, 1907, the number of locomotives in service on the railroads of the United States increased 18,160. The end of this period coincided with the beginning of the period of restrictive regulation. Compare this with the increases that have occurred since then. In the five years ending with June 30, 1912, the increase in the number of locomotives in service was only 8,447; in the four and one-half years ending with December 31, 1916, it was only 4,558; and in the five years ending with 1921 the number of locomotives in service actually *decreased* 664. The locomotives retired were constantly being replaced with more powerful engines, and the increase in the total tractive power, or total pulling capacity, of the locomotives in service in the first five years of this period was 640,000,000 pounds. In the next five years it was only 338,000,000 pounds; in the next four and a half years 367,000,000 pounds; and in the five years ended with 1921 only 262,000,000 pounds.

Now, take freight cars. In the five years

ending with June 30, 1907, the number in service increased more than 480,000. In the next five years it increased less than 230,000; in the four and one-half years ended December 31, 1916, it increased only 114,000; and in the five years ended with 1921 the number of freight cars in service *declined* 13,621. The cars retired were constantly replaced with cars of larger capacity, and the increases in total capacity of the freight cars in service were as follows: Five years ended with 1907, 25,000,000 tons; five years ended with 1912, 16,000,000 tons; four and a half years ended with 1916, 12,000,000 tons; five years ended with 1921, 3,500,000 tons.

Dwindling Increase in Capacity

Comparison of the figures for the two 5-year periods farthest apart shows that the increase in the total tractive power of locomotives was almost 60 per cent less, and the increase in the total capacity of freight cars 85 per cent less, in the five years ended with 1921 than in the five years ended with 1907. Probably these statistics afford as good a measure as could be given of the decline in the expansion of the railroads which has occurred.

The decline in the amount and capacity of the equipment provided has been accompanied by a corresponding decline in other facilities provided. Construction of new lines, which formerly averaged about 5,000 miles a year, has dwindled until during the last five years more mileage has been abandoned than built. The enlargement of terminals, the construction of second and other additional main tracks, the improvement of stations, have been for years coming nearer and nearer to a standstill.

The fact that a decline in the expansion of the railroads has been occurring has been frequently stated and is generally known. I have given these statistics not so much to show there has been a decline as to make clear how much greater it has been than most people realize.

It should be evident to every well-informed person that the country must have a revival of the expansion of its means of transportation, or its production, commerce, wealth and the well-being of its people will never be able to increase again as in the past. Some advocate the development of other means of transportation, such as inland waterways, upon the theory that needed transportation can be obtained

more economically by other means than by railway development or that adequate development of the railroads has become impossible. In my opinion, it is easily demonstrable that the additional transportation needed can be obtained more economically by increasing the capacity of the railroads than in any other way. Furthermore, I say merely what every experienced railway officer will indorse when I add that if a reasonable amount of new capital can be raised by them, the capacity of our railroads can be increased just as easily and rapidly in future as it formerly was.

Unwise Regulation Wrecked Railroads

What is it that has caused this great and menacing decline in railway development? What must be done to revive their expansion? From time to time it is suggested that regulation should be abolished and the managements of the railroads given the same freedom of action as those of other concerns. I believe the railroads, because of their character and fundamental importance to all other business, should be operated under the supervision of agencies controlled by the public. But while I am a firm believer in the principle of regulation, I also believe that government regulation as it has been practiced for fifteen years is almost wholly responsible for the decline of railway development and for the existing shortage of transportation. For ten years before the war, regulation kept down the rates and reduced the net return of the railroads, although wages, prices and the returns earned in other lines of business were increasing. The policy of regulation was dictated chiefly by those who charged that the railroads were enormously over-capitalized and who argued that because they render an essential public service the net return they are allowed to earn should be especially restricted. Persons who had money to invest more and more avoided the railroads. The market value of their securities declined, and with it the capital they could raise to expand their facilities. After the country entered the war they were unable satisfactorily to meet the demands. When the government, after operating them two years, returned them to their owners, without having substantially enlarged their facilities, their expenses had been increased so much more than their rates and earnings that they were incur-

ring a large deficit, and the prices of their securities had sunk to new low levels.

When legislation for the return of the railroads to private operation was being considered by Congress there prevailed a strong public sentiment against government operation and in favor of the adoption of less repressive and more constructive regulation. Congress provided in the Transportation Act that the Interstate Commerce Commission should have authority to set aside rates made by state authorities which were discriminatory against interstate commerce or unreasonably unremunerative; that it should make a tentative valuation of the railroads and so fix the rates on this valuation as to enable the carriers, under economical and efficient management, to provide adequate transportation; and that for two years it should take $5\frac{1}{2}$ per cent upon the valuation as its measure of a fair return and might in its discretion allow $\frac{1}{2}$ of 1 per cent more to be earned.

Never Earned 6 Per Cent Return

The commission in 1920 granted advances in rates which it believed would be sufficient to cover the increases in operating expenses which had occurred and to enable the railroads to earn a return of 6 per cent upon the tentative valuation of \$18,900,000,000 made by it. But the country was just entering a period of business recession and depression. Railway traffic declined to the lowest level since 1915. In spite of the most drastic retrenchments, instead of 6 per cent the railroads earned and received in 1921 only $3\frac{1}{2}$ per cent—an amount barely equal to their fixed charges. Although a large part of the railroads were threatened with bankruptcy, there was raised throughout the country a demand for a general reduction of freight rates. Farmers, business men, politicians, all joined in it. Reductions of rates being manifestly impossible without reductions of wages, and the cost of living and wages in other industries having declined, the railroads applied to the Railroad Labor Board for general reductions of wages.

Thus for months, while the managements of the railroads were struggling desperately to reduce current expenses and even deferring maintenance work that needed to be done, controversies over both rates and wages raged at the same time. Among the results were large increases in the

(Continued on page 104)

Leader of the Railway Executives Is Dead

Thomas DeWitt Cuyler Was a Director of the Pennsylvania and Prominent in Policies of Management

THOMAS DEWITT CUYLER, director of the Pennsylvania Railroad Company and chairman of the Association of Railway Executives, was found dead November 2 in the office car of President Rea of the Pennsylvania in Broad Street Station, Philadelphia.

Mr. Cuyler was in Rochester, N. Y., the day before and was apparently in good health.

The office car arrived at Broad Street Station early November 2 and was placed on a side track. According to instructions, a porter called Mr. Cuyler at 8 a. m. He received no response and, becoming alarmed, summoned an attendant and a physician. The doctor pronounced Mr. Cuyler dead. Mr. Cuyler had been dead a little more than an hour, according to the opinion of the physician. Apoplexy was the exact cause of death, a number of physicians who later examined the body stated.

Mr. Cuyler's death came as a great shock to all the officials of the company. So far as is known, he had not complained of illness. He left Philadelphia October 31 for Rochester, where he spoke on "A Constructive Public Policy Toward the Railroads."

The body was taken to the Cuyler home at Haverford, a suburb. Mr. Cuyler is survived by his wife and four daughters.

A Leader Among Executives

Mr. Cuyler was a lawyer, but most of his time was taken up with railway and financial affairs. He came prominently before the country in the recent railway shop strike by virtue of his position as chairman of the railway executives. He took a firm stand against some of the demands of the strikers, especially that relating to seniority.

Mr. Cuyler was born in Philadelphia and was 68 years old. He was the son of the late Theodore Cuyler, at one time general counsel of the Pennsylvania Railroad. He was graduated from Yale in 1874 and was admitted to the bar in Philadelphia in 1876. He engaged in the general practice of law, making corporation law a specialty. Mr. Cuyler was counsel for many large financial and railway corporations in Pennsylvania and other states and was engaged in

Thomas DeWitt Cuyler

many of the most complicated and important railway reorganizations of the last twenty-five years.

Mr. Cuyler was elected a director of the Pennsylvania Railroad in 1899. He was also a director of the New York, New Haven & Hartford Railroad and the Santa Fe System and was on the directorate of many local organizations and financial institutions.

Retired With Rank of Colonel

Mr. Cuyler took an interest in military matters. He enlisted in the national guard of Pennsylvania in 1874, rose to the rank of judge-advocate general of the state and was on the retired roll of officers with the rank of colonel.

Mr. Cuyler was a member of many clubs in Philadelphia and also of the Union, Century, University and Lawyers' of New York, the Buffalo Club and the Chicago Club. He was also interested in music and was a director of the Metropolitan Opera Company of New York and of a similar organization in Philadelphia.

There are a lot of 8-hour men with 16-hour wives who ought to unionize their homes.—*The Watchman*.

Taming the Mississippi River's Floods

*Government Engineers Guide Current Near Our
Lines, Revetting Banks and Standardizing Levees*

The material for the following article was collected by the author on an inspection trip over the Third District of the Mississippi River Commission. In the party making the inspection trip were: Major R. P. Howell, officer in charge, Vicksburg; A. M. Todd, United States assistant engineer, Vicksburg; J. S. Allen, chief engineer, Lower Yazoo Levee District, Greenville; George C. Thomas, superintendent, United States Quarry, Searcy, Ark.; M. G. Morgan, district engineer, Yazoo & Mississippi Valley Railroad, Memphis, and Mr. Crowson.

By GEORGE M. CROWSON,
Editor, Illinois Central Magazine

THE most significant fact in connection with the 1922 high water in the valley of the Mississippi River between Rosedale and Vicksburg, Miss., is not that all previous high water records were broken, but that, with a higher stage in the river than ever before, there was not a single crevasse in the solid lines of levees which flank the river.

This is the view of Major R. P. Howell, Corps of Engineers, United States Army, officer in charge of the Third District of the Mississippi River Commission. The district extends from a point above Rosedale on the north to a point immediately south of Vicksburg. At Arkansas City the 1922

Members of the party, near Greenville. Left to right: Mr. Todd, Mr. Thomas, Mr. Morgan, Major Howell and Mr. Allen. Photograph taken by the author.

water was 1.8 feet higher on the Government gauge than in the previous record year of 1916. At Greenville the highest stage exceeded the 1916 stage by 1.5 feet. At Lake Providence the highest stage of the river was .7 foot above the 1916 record, and at Vicksburg the 1916 record was exceeded by .9 foot. At every point in the district a new record was established this year. And yet, despite the height of the water, there was not a single disastrous break in the levees.

A Busy Sector Last Spring

Readers of the *Illinois Central Magazine* will recall some description that was given last spring of the high water fight. In the Third District there was little sleep for the forces of the Government, the levee districts on each side of the river, and the Yazoo & Mississippi Valley Railroad, of the

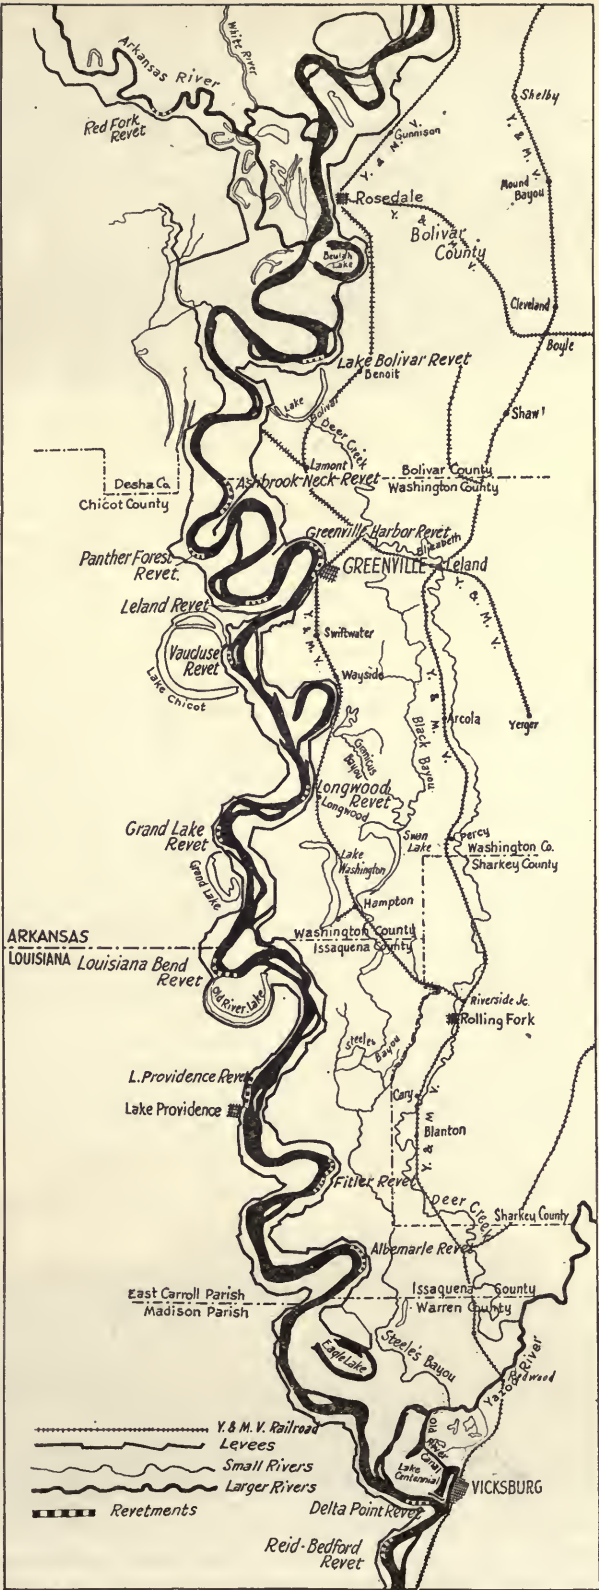

Riverton Landing, near Rosedale, Miss., in October, 1921. The caving bank threatened to cut under the store and take it into the river. This stretch has now been revetted.

Illinois Central System, which co-operated with the Government and the representatives of the levee districts. The angry old river tore off the end of Ashbrook Neck dike, which protects the neck of one of the three tortuous bends in the river above Greenville, and the story of the fight to hold the dike by sand-bagging is itself a thrilling story. There was a slide in the levee on the Arkansas side, near Fulton, and the flood fighters stopped it and held it safely, preventing the overflow of many miles of rich river bottom land. Numerous other crises developed, but in every instance the levees held.

Major Howell believes this record is a vindication of the work which is going on to control this most capricious of rivers. In the district over which he has jurisdiction approximately three-fourths of all the levees have now been brought to the grade and design specified by the Mississippi River Commission—the grade being three feet above the high water mark of 1912. It is Major Howell's belief that when the project is completed—when all the levees have been brought to Commission grade and section, when dangerous bends are protected by revetment of the banks, and dikes have been constructed to protect the necks within the bends from cutting through in flood stages—the fertile Mississippi Delta country will be forever assured against the most dangerous of floods. The flood control work will not be ended, for maintenance work will be necessary from time to time to maintain the effectiveness of the system, but the lowlands on the Mississippi side to the left, downstream, and on the Arkansas and Louisiana side to the right will be safe from the angry waters.

No more interesting story could be written than the story of the fight that has been made to hold the Mississippi River within its

Floating derrick transferring willow brush from log wagons, hauled by tractors, to barge, to be floated to site of bank revetment construction.

channel. It is a fight which began with the first settlers in the Delta country.

River Not Always Pleasant

The rich Delta country between Memphis and Vicksburg has been formed by the deposit of the richest sediment the river and its tributaries could find in their northern valleys. Ages ago the river began building the Mississippi Delta country, and for many centuries it held it, hidden by a wilderness of forest, awaiting the time when it should be discovered and claimed by those who could see its farming possibilities. As the settlement of the Delta country progressed, it was found that the kindly old river that had so graciously presented the settlers with the most fertile soil in the world had an unpleasant phase to her character. Periodically she rose out of her banks, swept everything before her, carving out new channels and cutting off

old, and fell again, leaving destruction in the wake of her waters.

The fight began with the efforts of individual planters to protect their homes. The first levees were crude lines of embankments, erected by the labor of negro slaves, each protecting the individual property to which it belonged. Only in a few cases were these levees connected with each other.

Time soon developed the weakness of the failure to co-operate, and levee districts composed of adjacent properties were the outgrowth of the agitation for a co-operative fight against the river. Then the Government stepped in, with its vast resources, joining the fight and putting up a share of the money for levee construction, in addition to bearing the whole cost of bank revetment and other channel control work. The Lower Yazoo Levee District, which, on the Mississippi side, corresponds closely to

Beginning the construction of willow mat to be used in repairing bank revetment at Cottonwood, Miss., season of 1921. Showing the method of handling willow brush from barge by locomotive crane.

Construction of willow mat in progress, Princeton, Miss., season of 1921. The mat as shown is 250 feet wide and 500 feet long. It was completed to a length of 1,000 feet. Upper bank has been graded. A connecting mat fills the "pocket" remaining between the mat and the low water line.

the Third District of the Mississippi River Commission, now contains 185 miles of continuous levees, 74 per cent of which have been brought to Commission grade and section. The corresponding district on the Arkansas-Louisiana side, the Upper Tensas Levee District, has a continuous stretch of 241 miles of levees, 176 miles of which are on the Mississippi River and 65 miles on

the Arkansas River. Of these, 75 per cent have been brought to Commission grade and section.

Helping Her Do What She Wants to Do

The lines which have been followed in the flood control work are well put by Cap'n Jim Marsh, a veteran river steamboatman, now the pilot of the United States Steamer *Control*, used for inspection trips and sur-

United States Towboat Issaquena, with tow of 100,000 square feet of reinforced concrete mat units and 500 tons of gravel. Concrete mat units have proved effective in paving upper bank in revetment work.

Completed bank revetment at Cottonwood, Miss. In the distance a hydraulic grader is preparing for an extension of revetment upstream, season of 1921.

veys of the Third District. Cap'n Jim, speaking of the obstinacy of the steamer which he pilots up and down the river, announces this as his controlling policy:

"I just find out what she wants to do, and then help her do it."

The flood control fight is a lot like Cap'n Jim's policy of piloting the Steamer *Control*. The engineers study the river to find out what she wants to do, and then, if possible, they help her do it. Sometimes she doesn't want to do what the engineers think it best for her to do, and then the fight is on.

A. M. Todd, United States assistant engineer in the Third District, and principal assistant to Major Howell, has been identified with the river fight for more than a quarter of a century. Since 1884 he has studied the river and her ways, and, take it from Captain Todd, it's a man's size job to keep the old river from doing what she starts out to do.

"There are twenty-five hours in the river's day, instead of twenty-four, and she is on the job at least three hundred and seventy-five days in the year," Captain Todd said. "Day and night she grinds away. She knows no union rules, and she never sleeps. We who have studied her for years love the old river—I guess we love her because of her very obstinacy—but when we make up our minds to make her behave, we have a real job on our hands."

Of first importance in the work of controlling the river, of course, are the construction and maintenance of levee lines. In that department of the work there has been wonderful advancement in the generation in which the fight has been carried on with a united front. Levees were formerly built exclusively by the labor of men and teams. Now machines do the major part of the work. Sometimes when a certain project is too large for the machines available to carry through to completion in a single season, teams are used. But the building of levees by hand has gone, considering the work as a whole.

This account is accompanied by the reproduction of a map which shows the levee lines flanking the river on either side in the Third District of the Mississippi River Commission, and a photograph of one of the latest types of levee-building machines also is reproduced. In addition to auxiliary machines, the Third District employs nine slack cable tower levee-building machines and two revolving type drag line

machines. These machines can place 75,000 cubic yards of dirt per month, and one has a record, operated by a single shift, of moving 100,000 cubic yards a month. The record for the machine operated by a double shift is 180,000 cubic yards in a single month.

One of the most important pieces of levee work going on this season is at Dennis, Miss., in the loop above Rosedale, at the northern end of the Third District. This project calls for the placement of 740,000 cubic yards of dirt. Four hundred thousand cubic yards are being placed by machinery; the balance, because of the shortness of the season, is being handled by teams. The new levee is made necessary by a further caving in of the bank which, while it has been arrested by bank revetment work, threatens to break the levee line.

Bringing Up Levees to the Standard

At Stopper Landing, Miss., which is between the stations of Benoit and Lamont, Miss., on the Yazoo & Mississippi Valley Railroad, an important stretch of levee is this season being brought to Commission grade and section, eliminating the danger in that section.

Another important point in levee work is the territory on the Arkansas side where the Fulton slide occurred in the 1922 high water, and which has already been mentioned. This point is immediately south of Arkansas City. The stretch of levee there is being brought to Commission grade and section.

Further important work is in progress at other points, on both sides of the river.

The second major phase of the flood control work is the protection of caving banks which threaten to break important levee lines. Perhaps the three most crucial points on the river in that respect are at Ashbrook Neck, already mentioned, where the river follows a channel nine miles long to travel about half a mile; at Grand Lake, on the Arkansas side, where further caving of the bank would break a levee line and force the river into the channel of Grand Lake, an old bed of the river, and at Fittler Bend, on the Mississippi side, where a break in the levee adjacent to the caving bank would let the river into Steele's Bayou and probably would change the whole course of the river between that point and Vicksburg.

If it were not for the necessity of main-

One of the types of machines used in levee construction on the Mississippi River—the revolving drag-line, Unit No. M.R.C. B-7. A stretch of completed levee enlargement also is shown.

taining the levees, it might be more convenient, and certainly less expensive, to let the river follow her own pleasures. But levee construction is costly, and frequently, such as in these cases, it is worth while to arrest the caving of the river banks.

How Revetment Work Is Carried On

There are two distinct phases in all revetment work on the river. (Revetment comes from the French word meaning a re-clothing.) In the first place, strong mats are built of willow shrubs, between 100 and 250 feet wide, and as long as the stretch to be revetted, and are sunk below the low water surface. This holds the lower bank for the superstructure of paving. Above the lower water line the banks, which have been graded down by the hydraulic method to a 4-to-1 slope, are covered with a superstructure of paving. In recent years reinforced concrete blocks have been used for this work and have proved successful.

No new revetment projects are under construction this summer in the Third District. The work consists exclusively of the repairing and enlargement of existing projects. Eighty per cent of the revetment work that was in effect last spring held the rush of high water and did not crumble with the recession of the floods.

Three willow mat building outfits are in use this season in the Third District and one concrete paving outfit. Pictures showing the progress of the revetment work accompany this article.

But, while machinery has been drafted into the fight against the river, the wily,

crafty old river smilingly goes her way. Sometimes she completely outguesses the engineers who have studied her for years, and almost overnight she cuts through a sandbar which she has spent years in building and tears away angrily at a section of bank that was believed to be out of danger.

It's a game of chess with the fighters. Certainly great progress has been made in penning the stream into a stable channel, but the river isn't going to submit to a "checkmate" tamely.

A MAN'S CREDIT RATING

"Nothing, in my opinion," a great banker once told me, "injures a man's credit rating more than having a reputation as a liar. Every banker is gun-shy of liars. We had a certain man come into our bank one day seeking a loan, and his account promised to be of such consequence that he appeared to be well worth while as a customer. He submitted a proposition which investigation proved to contain several ingeniously hidden bits of misrepresentation. These were brought to his attention, and he promptly agreed to remedy any defects in the proposed negotiation. But we did not enter into any deal with him. We did not wish to have him as a customer. You see, he had tried to fool us and failed that time, but sooner or later he would fool us."—*Nation's Business*.

A great many people fail because they're so dead sure they are going to. It would be a shame to disappoint them.—*The Watchman*.

Dynamiting Mosquitoes at Carbondale, Ill.

*Successful Fight Against Malaria Is Waged
by Draining the Swamps in That Vicinity*

For the 1921 season Carbondale, Ill., had 267 cases of malaria; for the 1922 season it had 32. The reason for this improvement, in which the Illinois Central System took an important part, is shown in the following article on "Shooting Mosquitoes With Dynamite," which has been prepared by our hospital department.

YEARS ago it was the custom to reach out and slap a mosquito when it made its presence manifest by biting. This was the retail method of mosquito annihilation, and it sufficed for those more primitive times. Today, with the tremendous speeding up of all activities which characterizes present-day civilization and advancement, the mosquito is being destroyed by being blown up with dynamite, millions thus being killed at one stroke. This is the wholesale method of mosquito destruction, and it is warranted by the tremendous economic losses occasioned by malaria. Work of this sort is in progress near Carbondale, Ill., headquarters of our St. Louis division.

Malaria originally meant a disease caused by breathing "bad air," but recent research has proved that the humble mosquito is the sole and active cause. A study of the mosquito reveals the fact that its breeding place generally is wet, marshy ground and pools of water in which the female mosquito

can lay the eggs. An accompanying illustration issued by the Essex County Mosquito Extermination Commission of New Jersey tells the story.

There are several varieties of mosquitoes, but only one of them carries malaria, and only the female of this species is the active agent. This variety is easily recognized by the peculiar position which it maintains when at rest, standing virtually "on its head," as an accompanying drawing illustrates.

Any enlarged drawing of the boring apparatus of the mosquito shows perfectly how this pest draws blood from its victim, at the same time inoculating the person bitten with the germs of malaria.

Four Ways to Fight Mosquitoes

Do not think that mosquitoes breed only in marshy ground. This furnishes breed-

The cause of malaria

ing places for two varieties only. Rain barrels, old tin cans containing water, shallow pools in the yard or roadway, in fact any standing water, even that found in artificial containers in the house, will also breed mosquitoes.

Now as to means of prevention against mosquitoes. Four methods have stood the test of time and have been found effective. They are: Screening, oiling, fishing and draining. Screening is a method known to all, but is often carelessly done, the mesh being sometimes too large to prevent entrance of the mosquito and the frame work of the screen often being loosely fitted in the window or door. Oiling is done on the surface of pools where the mosquito breeds, and it kills the pest effectually by stopping up with oil the breathing apparatus when the mosquito larvae come to the surface for air. Fishing is done by introducing the top minnow into the pool or body of water where mosquito breeding is going on, and the fish eats the immature mosquito. Draining is performed by emptying out the water from the pool. It includes anything from the simple spilling out of water contained in an old tin can to the emptying of the surface water covering several acres of marsh land by ditching.

What Malaria Costs

This may seem to the uninitiated observer as going to considerable trouble for such a small thing as the mosquito, but when the economic value of these measures is considered the wonderment is only as to why it had not been undertaken before. When Dr. L. O. Howard made the assertion that malaria cost the United States \$100,000,000 annually (and he is the Government entomologist and knows whereof he speaks), it was thought that the statement was considerably exaggerated; but the United States Public Health Service has since proved that the figures were 45 per cent too small. Let us take one state, give figures covering the economic loss from malaria and see what it comes to. For every death from malaria there are

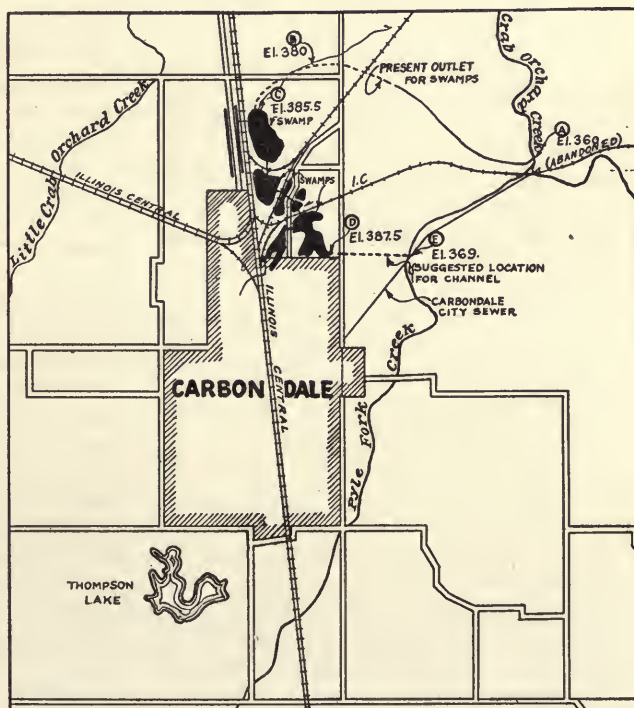

on an average two hundred cases of the disease. Figuring on that basis, we have the following:

127 deaths, each life valued at \$3,000	\$ 381,000
127 funerals at \$100 each.....	12,700
25,400 cases with wage loss at \$150 each	3,810,000
25,400 cases, medicines and doctor bills at \$10.....	254,000
Total	\$4,457,700

These figures are from a bulletin of the Illinois Department of Public Health.

Just look at the figures a moment and then let your mind dwell on the fact that all this loss is preventable; that, by the adoption of preventive measures which are now worked out and practiced in all civilized countries, this economic loss can be entirely done away with. This, however, can be done only by the co-operation of all the people, who must be brought to an understanding of the causes and prevention of malaria. For every dollar spent, one hundred will be saved, this amount to be expended in a community healthier and happier for the absence of disease.

No better example of such a campaign

Mosquito breeding places at Carbondale

could be given than that now being carried on at Carbondale.

This community of more than six thousand persons is in southern Illinois, on the Illinois Central, some three hundred miles south of Chicago. It is a meeting point for lines from St. Louis on the west and Paducah on the south, the main line running through the town south to Cairo.

Public spirited physicians of Carbondale reported the presence of malaria year after year, the cases numbering two to three hundred each year and occasioning death and absence from business among the citizenry. The matter was taken up with the state board of health, and Dr. Herbert Rawlings, director of state public health, sent the supervisor of state surveys, Engineer A. F. Dappert, to Carbondale for an extended survey of the conditions reported. The Government health service also sent Doctor Koogle for the same purpose. About this time Dr. W. A. Evans, chairman of the state board of public health advisors, was called in consultation with Doctor Rawlings, and a campaign of mosquito extermination was decided upon.

Meetings were held in Carbondale for the propagation and extension of anti-malarial measures, the Lions Club taking an active share in the work, as well as the Boy Scouts and other organizations.

It was decided to raise money for the campaign against mosquitoes, and further meetings were held, participated in by the state health authorities, the advisory board for the state, representatives from the International Health Board, the United States Public Health Service, the Illinois Central System and the physicians and citizenry of Carbondale.

Two major points for mosquito breeding were reported and a number of minor points. The map given herewith shows the general plan of the land in and around Carbondale and the two major points reported, the swamps to the north and Thompson Lake to the south.

Cleaned Up All Breeding Places

The town immediately started to clean up its standing water in cisterns, rain barrels, cans, pools and ditches, and a party of Illinois Central engineers was sent to make a survey of the swamps to the north of Carbondale, not far from the shops and roundhouse.

Thompson Lake was cleaned of its grass

and obstructed edges, cisterns were fished, Boy Scouts looked out for rain barrels and small pools as well as cans, ditches were cleaned and widened to promote the flow of water, and the campaign was considered well under way.

When it was decided that the swamps should be drained by ditching extending to the north, ways and methods of carrying on such ditching were considered. In consultation with the Government health service, state engineers and the Du Pont de Nemours Powder Company, the use of dynamite was decided upon by the Illinois Central engineers.

This plan was found to be adaptable to swamp conditions as met with in this region. W. B. Alford of the Du Pont company supervised the dynamite ditching and was present throughout the operations carried on by our engineers. As an example of the ground encountered and the results attained by exploding dynamite, two pictures are given herewith; these show clearly the character of the swampy soil, overgrown with rank reeds and cat-tails and covered by water, a place where hand labor would have worked with difficulty and where ditching machinery would have been impossible.

How the Dynamite Is Handled

The process of ditching by dynamite is of interest. In the first place, there is an impression that dynamite is used only to loosen the dirt ahead of a shovel. While this is true when it is used in small amounts, its use in larger amounts properly placed is directly productive of a completed ditch (all dirt removed), with sloping sides and sufficient depth to carry off all water from the surface to be drained.

The dynamite is planted in holes twelve to fifteen inches deep made by a cross-handled punch bar, the stick of dynamite being pushed into place with a wooden handle or rod and the hole tamped with water. These holes are placed fourteen to eighteen inches apart and along the line of the proposed ditch for a distance of several hundred feet, depending upon the character of the soil to be blasted. It is interesting to note that in some ditching done near Albany, Ga., it took five men three weeks to dig by hand a ditch which could have been done by dynamite in eight hours.

When the charges are placed, one stick of dynamite somewhere near the center of

Dynamiting Mosquitoes Carbondale, Ill.

No. 1, before the work started; No. 2, prospecting to set the dynamite; No. 3, making holes for the charges; No. 4, setting the wires; No. 5, setting off the charge; No. 6 and No. 7, views of the explosions; No. 8, the result, the completed ditch.

the line is capped and wired to connection with a battery or blasting machine. The wires are of sufficient length to allow the operator to retire to a safe distance. The entire charge is fired by propagation—that is, the force of the explosion in the one stick which is capped and connected to the blasting machine is sufficient to set off the entire line simultaneously, several hundred feet of charges being exploded and the same number of feet of ditching thus made.

When all is in readiness and all workers are in safe positions, the handle of the blasting machine is shoved home and a mighty convulsion shakes the ground, sending great fragments of dirt and mud three and four hundred feet in the air. When the smoke and dirt have cleared away, there lies a perfect ditch of the planned depth and width and ready to perform its work of draining away the breeding place of mankind's enemy, the mosquito. Pictures given herewith show very nicely the force of the explosion and the height to which fragments of dirt and mud are carried, the pictures having been taken on the scene of the Carbondale marshes by Engineer Dappert.

Fine Results of Carbondale Campaign

In a personal survey of the Carbondale marsh area recently made, the writer found

dry ground and drier reeds and cat-tails over almost the entire area, the ditching having proved effectual in draining off the water which formerly covered this ground to the depth of from one and one-half to three feet. A great work has been accomplished, and this statement is well proved by the following figures:

Number of cases of malaria in 1921.....	267
Number of cases in 1922.....	32

The pictures show the results of the ditching as done by dynamite, attention being called to the well-defined edges and freedom from vegetation.

The cost of upkeep of these ditches will be small, but it must be attended to, as the tendency will be for the territory to be overgrown with vegetation and the ditches to be filled from silt deposit, the latter factor being largely dependent upon the rainfall and flood water.

It is rare now for mosquitoes to be seen in Carbondale. Considering the figures showing the reduction in the number of cases of malaria, it is fair to assume that the next mosquito season will show a complete obliteration of malaria in the city.

Acknowledgment to Mr. Dappert and the Du Pont Powder Company is here made for illustrations which appear in connection with this article.

Before and after explosion of dynamite in swamp

A New Wrinkle in Sport in Mississippi

*John Borden of Glenwild Plantation, Near Grenada,
Introduces Polo as Attraction of the District Fair*

THIS is the kind of sport news they have been reading lately in North Mississippi:

"Glenwild started the game in business-like fashion with a neat combination that took the ball from the throw-in right into the Grasmere territory. Borden passed the ball over to Blair, and the latter socked it through for the first score. Within a minute of the start Grasmere got away for a couple of futile rushes which Rader intercepted and sent the ball up to Rodes. Pete sent it along to Borden, who took a healthy swing, and the ball shot like a bullet clear through the opposing team for a third of the length of the field for the second goal."

What do you make of it? It is neither baseball nor football, yet it is a sport that bids fair eventually to become as popular with Mississippians as either of the others named, judging from the enthusiastic reception it has had.

Polo was the daily feature of the North Mississippi Fair at Grenada October 23 to 27 inclusive. It was said to be the first time that the game had been played in that part of the South. Although few persons understood the rules and finer points, the first contest was enthusiastically received. And interest in the game grew with each succeeding day until nearly everyone in attendance became a polo fan.

Polo Introduced by John Borden

John Borden of Chicago and Glenwild Plantation, near Grenada, was responsible for the introduction of polo at the fair. He

John Borden at polo

is one of the most earnest supporters of that sport in America and is considered to be a player of exceptional ability. Arrangements with contestants and for the games were capably managed by Mr. Borden. He entertained the players and their wives during their stay in Mississippi at his palatial home just south of Grenada. Among those who participated were players from many parts of America and one from England.

The entire center field of the fairgrounds was marked off much like a football field for the polo games. The goals were at each end. Each player had two ponies, and changes were made after the game had progressed long enough for one mount to become tired.

Four teams—Grasmere, Chicago, Onwentsia and Glenwild, the latter representing Mr. Borden's plantation—matched their

A horse race at the North Mississippi Fair

skill at Grenada for the championship of Mississippi. The first contest was between Grasmere, champion of the Midwest, and Onwentsia. The former team was an easy winner. The second game, between Chicago and Glenwild, was won by the latter. On the third day of the fair, a consolation game was played between the two losing teams, Onwentsia and Chicago, and the players from the Windy City were victorious.

How Polo Is Played

In playing polo, both teams (four men composing each) assemble in the center of the field at the start of the game. A small white ball is thrown in their midst, and the game is on. After a short scrimmage for the possession of the ball, the white sphere can usually be seen to bounce out from among the ponies' feet, and the players wheel about in its wake. The long-handled mallets are wielded forcefully but never carelessly, for there were thirty-two legs of valuable ponies that might be in-

The champion Glenwild team

jured. The players strive to drive the ball free from the other contestants and then make a mad dash with it for the goal. When this is impossible, an effort is made to drive the ball to a teammate who is free from the other players, so that he can send it bounding over the open field to the goal.

The ponies seem to know almost as much

Scenes of action in closing polo game at Grenada

Prize-winning Grenada County exhibit at North Mississippi Fair

about the game as their riders. They swerve, turn and stop suddenly at only slight commands from the players, and they would run until they dropped if they were not allowed to rest the alternate periods of the game while fresh mounts are used.

After a goal is made, the ball is brought back to the center of the field, and the play starts again.

Glenwild Won the Championship

The game that held the interest of the people was played at the close of the fourth day of the fair. Grasmere was determined to extend its championship domain farther south, and Glenwild bristled with anger at the intruder. By this time most of the crowd understood the game, and it was estimated that 12,000 spectators attended the fair that day. Although the polo game was the last thing on the program, no seats were left vacant after the last race had been run. Glenwild was the favorite, and the support it received from the grandstands was sufficient to instill the fighting spirit that wins in any game. Glenwild won by a score of 7 to 4 after one of the most brilliant polo games of which there is record. Mr. Borden played the best game of his career. He was in nearly every play and drove like a demon. One of his masterful strokes sent the ball more than 100 yards for a goal, while he sent through another from an extremely difficult angle.

The Glenwild team was presented with a championship cup by the North Mississippi Fair Association, and the Chicago team was presented with a consolation cup by the Glenwild Plantation.

Polo has apparently become an important sport in the minds of the people who saw the contests at Grenada, and it is expected to add impetus to horse raising there.

The average daily attendance at the fair this year was more than 9,000, it was estimated. The exhibits were more numerous than before and of an especially high quality. The Grenada County agricultural exhibit won first prize.

DON'T CHANGE TOO FAST

There are a great many things wrong with the world, and a lot of clever people are having the time of their lives telling you so. But in the course of two or three thousand years the world has achieved some big things, and we ought to go mighty slow about scrapping them. The idea that everything which Americans thought worth while twenty years ago is rotten to the core may prove to be more of a fad than of a permanent state of mind. It is worth while for some men to stand on guard and make the people who want to "sell" us their ready-made millenniums prove that what they offer is better than what we've got.—
The Weekly Review.

Progress in Our Terminal Electrification

Choice Is Made of Current to Be Used on Chicago Work; Some Further Details of the Plan

The Railway Age, after consultation with the Chicago Terminal Improvement department of the Illinois Central, printed in its issue of October 21 the following comprehensive and non-technical summary of the conclusions reached regarding the electrification of the Illinois Central's lines in and around Chicago:

THE proposed electrification of the Chicago terminals of the Illinois Central, involving heavy suburban traffic, freight transfers and interchanges, yard switching, and later the operation of through passenger trains, wholly within a terminal area, is a combination that has not been met heretofore in electrification problems. Considering the wide variation in the fundamental features of various important electrifications the final decision of the Illinois Central to use a 1,500-volt direct current with the overhead contact system, as announced in the *Railway Age* of October 7, after an extended investigation which has been characterized by its thoroughness, is highly important.

Territory Involved in Electrification

In addition to its own trains the Illinois Central handles with its locomotives all of the passenger and freight traffic of the Cleveland, Cincinnati, Chicago & St. Louis from Kankakee, Ill., to Chicago, a distance of fifty-four miles. The Michigan Central also has trackage rights over the Illinois Central from Kensington into the city by means of which it handles its trains into Chicago with its own power, although its freight house is located on the Illinois Central tracks and other facilities, including the main passenger terminal at Roosevelt Road, are owned by the Illinois Central. In addition to these trains the Illinois Central also handles five northbound and six southbound passenger trains of the Chicago, Lake Shore & South Bend between Kensington and the Randolph Street terminal. The St. Charles Air Line, running west from a connection with the Illinois Central at 16th Street, over which the Illinois Central operates west to Omaha, is not included in the electrification program.

According to the city ordinance covering

this project, all suburban trains on lines to the south are to be operated electrically by 1927, the freight service north of East Roosevelt Road must be electrified by 1930 and the entire freight service within the city limits by 1935. The through passenger service within the city limits may, with certain provisions, be operated electrically by 1940.

The electrification for suburban service will include all suburban tracks between the suburban terminal at Randolph Street and 16th Street; six tracks from 16th Street to 47th Street; four tracks from 47th Street to 67th; three tracks from 67th Street to Kensington; and two tracks from Kensington to Harvey; the branch from Kensington to Blue Island; two tracks from Harvey to Matteson, which may also be used for steam passenger service; and two tracks from 67th Street to South Chicago. The route mileage involved is: Chicago to Matteson, twenty-eight miles; South Chicago branch, four and

How to Save Carbon Paper

The question of caring for carbon paper has been one that has given us considerable trouble. The system in use in the office here for some time had been to shake the carbon out of the waybill, freight bill, etc., gathering and placing it in a large drawer for that purpose. It was removed from this drawer by the office boy for use in stuffing forms for the following day.

This system was not satisfactory, inasmuch as the carbon sheets frequently became mashed together, out of all shape and practically worthless. To correct this trouble and preserve the carbon, the suggestion was made that a large clothes hamper be placed at the bill desk and, in removing the carbon sheets from waybills, expense bills, etc., that they be shaken into this large hamper. This was done, and the improved condition of the used carbon has been very noticeable.

The large hamper cost \$2.50. We believe that the saving in carbon will amount to more than this each month.
—BEN HERRING, Agent, Birmingham, Ala.

one-half miles, and the Blue Island branch, four and four-tenths miles, with a total of approximately 125 track miles.

As early as 1881 the Illinois Central operated forty-four trains daily in suburban service between the old Central Station, then located at Randolph Street, and Grand Crossing, near 78th Street, a distance of eight and one-half miles, while fifteen of these trains were run on to Kensington, six and one-half miles farther, which was then the limit of the suburban zone. During the World's Fair in 1893, extensive suburban service was installed to handle the heavy traffic to and from the fair grounds, which were located adjacent to the Illinois Central tracks between 56th and 67th streets. With the rapid growth of population in the area served, the Illinois Central has continued to show a steady increase in business, the approximate number of revenue passengers handled each year since 1905 being given in the following table:

1905.....	13,100,000	1915.....	13,150,000
1906.....	13,800,000	1916.....	14,100,000
1907.....	13,600,000	1917.....	13,700,000
1908.....	11,950,000	1918.....	12,850,000
1909.....	12,150,000	1919.....	15,250,000
1910.....	13,750,000	1920.....	19,000,000
1911.....	13,335,000	1921.....	19,800,000
1912.....	13,750,000	1922.....	21,000,000
1913.....	13,550,000		—or more
1914.....	12,750,000		

It is important to note that these figures do not include the non-revenue employe traffic amounting to more than 3,000,000 passengers for 1921, or an average of something like 8,900 a day.

Of the some 73,000 passengers carried on ordinary week days, about 42,000 are carried between 6 and 9 o'clock in the morning and between 3 p. m. and 5:30 p. m. A count on a certain day showed 10,714 passengers departing from Randolph Street between 3 p. m. and 5:30 p. m., which together with 7,808 from Van Buren Street made a total of 18,522, or 124 passengers a minute. During fifteen minutes of the peak rush, from 4:30 p. m. to 4:45 p. m., there were 3,800 passengers, or 253 a minute. During the evening rush trains are operated out of Van Buren Street and through the yards on less than a 2-minute headway, the average for the full period of service from 3:30 a. m. to 12:45 p. m. being a train every seven and one-half minutes. The Illinois Central made a special effort to serve the public during the strike on the Chicago surface lines from September 1 to 6, 1922, during which period a record traffic of 157,517 passengers was handled in a single day. So

many of these people have continued to use the Illinois Central that it has been neces-

Lines to be electrified

sary to add ten trains to handle the business to the best advantage. The schedule at this time calls for 370 trains each weekday, with six or seven coaches in a train during the rush hours, and shorter trains at other times throughout the day. The loading and unloading of passengers is expedited considerably by elevating the station platforms at all suburban tracks level with the car platforms.

One factor that has contributed to the success of the Illinois Central suburban service is the separation of the express and local runs between Van Buren and Hyde Park (53d Street). The express trains make this run of five and one-half miles in eleven minutes, while the local trains, making more intermediate stops, require from eighteen to twenty-three minutes. The express trains to South Chicago make eight stops, covering the run of thirteen miles in a minimum of thirty-five minutes. The minimum running time to Matteson, a distance of twenty-nine miles, including eight stops, is fifty-nine minutes; and to Blue Island, eighteen and one-half miles, including eight stops, the minimum running time is forty-five minutes.

These schedules can be shortened by a higher acceleration rate, with the same running speed. A detailed study of the speeds of more than 800 trains showed that fifty miles per hour was the approximate maximum speed of the present steam equipment. While higher speeds were contemplated at first on the new work, estimates showed that added investment in equipment and the greater operating cost that would be required were out of proportion to the benefits derived. It was decided, therefore, to fix the balanced speed of the new electric equipment at fifty miles per hour and provide an acceleration under load of one and one-half miles per second and a braking rate of one and three-fourths miles per second. In other words, while the new equipment may not have a greater maximum speed than some of the present steam trains, it will start so much quicker that the trains will make the runs in considerably less time.

Switching Area Important Consideration

The electrification will include the extensive freight house and track layout just south of the Chicago River and extending south to East Roosevelt Road, which, including the additional electrified tracks just

south of East Roosevelt Road, aggregates forty miles of tracks, most of which are yard tracks. The switching service on all of the industry tracks in the terminal within the city limits will also be handled electrically.

Part of the Fordham Yard at Burnside and part of the Wildwood Yard south of Kensington are to be included in the electrification. At Markham Yard (the general classification yard which is not yet completed) all of the southbound receiving yard as well as enough of the northbound departure yard will be electrified to permit the picking up of northbound trains. Inspection for electric locomotives will be located at Markham Yard and also at a point in the neighborhood of 26th Street.

The ordinance concerning the project provides that nothing in the terms shall prevent other roads not electrically operated from entering the tracks of the Illinois Central south of East Roosevelt Road with steam locomotives for the purpose of interchange, or to prevent the Illinois Central from using steam locomotives for similar interchange of business to and from other lines not electrified until such time as these roads are required to electrify.

Valuable Territory Involved

The extensive track layout between Randolph Street and the Chicago River is located close to the great loop district of Chicago. Freight houses of the Illinois Central and the Cleveland, Cincinnati, Chicago & St. Louis are located in this area. Large coal yards and warehouses of private concerns are also served in this yard. The short haul of coal, fruit, and general merchandise from this yard to the main wholesale and retail districts offers a decided advantage. Ground in this territory is very valuable, and as the present tracks and freight houses cover almost all of the Illinois Central property there is not much room for further development under steam operation. However, with the introduction of electric propulsion it will be possible to house over many of these tracks with vast freight houses, cold storage warehouses for fruit, etc.

As soon as the Markham Yard is completed the main line steam freight service will terminate at this point. Therefore, there will be many through transfer trains to be handled electrically between Markham Yard and the Randolph Street freight

houses. Berry trains, banana specials, etc., will be handled through to Randolph Street intact. As high as 500 cars for the Illinois Central and 200 cars for the Michigan Central have been handled into and out of Randolph Street in one day.

Transfer trains will also be made up in

Markham Yard for delivery to other roads. In addition to the traffic of the Illinois Central that of the Michigan Central and the Big Four must be handled electrically over the terminal territory.

A large amount of track changes, depression and elevation is to be carried out before the actual construction of the electrification can be started. These consist principally of the depression of the tracks between 25th Street and 45th Street and their elevation between 44th Street and 51st Street. In the rearrangement of tracks, some industry tracks will be located on the extreme west side of the right-of-way, next to which all of the suburban tracks will be consolidated. The through passenger tracks will be just east of the suburban tracks and the freight tracks on the east side of the right-of-way. At certain places industry tracks will be served from the east side also.

Electrification to Meet Traffic Requirements

A commission was appointed in December, 1920, to make a thorough investigation of the different systems of electrification available. Practically all of the installations in the United States to date have been made to meet special operating problems in tunnels or on grades. The New York Central tracks in New York were electrified primarily to eliminate the smoke in the Park Avenue tunnel and the electrification covers through and suburban passenger service. This is a low-voltage direct current system with a third rail. The Norfolk & Western 11,000-volt single-phase alternating current electrification is principally for heavy freight service over mountain grades; it uses overhead contact wire. The New York, New Haven & Hartford uses an 11,000-volt single-phase alternating current system and is the only example of an electrification which handles through freight, switching, through passenger and heavy suburban passenger service. However, this installation extends to New Haven, a distance of seventy-two miles. An overhead contact wire is used in this installation. The Chicago, Milwaukee & St. Paul installation is a 3,000-volt direct current system with an overhead contact and handles through passenger and freight, but does not have a dense traffic or suburban services.

Three possible schemes were eliminated early in the study. On account of the extensive yards involved, a search was made

Engineering and Electrification

The report of the electrification commission of the Illinois Central recommending a 1,500-volt direct current with an overhead contact for the electrification of the Chicago terminals should not be construed as a solution for the problem of deciding the voltage for other projects. Many railroads and manufacturers have, no doubt, watched with interest the work of this electrification commission, composed of some of the best qualified men in the country, for a period of more than two years, in hopes that its deliberations would bear fruit in the form of conclusions of wide application to steam railroad electrification.

However, it should be understood that this commission, in the study of various electrifications of America and Europe, and in the preparation of detailed estimates of at least four distinct systems, had no intention of solving electrification problems in general but was concerned solely with the design of a plan of electrification to meet the needs of a particular situation.

In contrast to many other electrification projects, that confronting the Illinois Central is *not* required to meet any special operating necessity but rather represents a concession to the civic development of the city of Chicago. Therefore, the desired benefits of the proposed electrification lie within the city limits. As the Illinois Central lines operate through a comparatively level country and traverse several coal mining districts, reason would indicate that under such conditions steam locomotives will handle the traffic for years to come. Therefore, no consideration was given to the possibility of the electrification's being extended to adjacent divisions.

In conclusion it should be emphasized that the decision of the Illinois Central applies only to a short mileage terminal area handling a heavy suburban business, freight transfers and yard switching. This combination controlled the final decision, and any road confronted with circumstances that vary from this by a single factor must engineer its own investigations.

—*Railway Age*, October 21.

for some sort of a self-contained power unit. The storage battery locomotive had to be eliminated on account of the seemingly prohibitive operating charges. A locomotive embodying some form of the Diesel engine may be developed for freight and through passenger service, but a unit of this sort has not yet been built to meet the requirements of the present project. The 3-phase alternating current system, which requires a double overhead contact system, was eliminated from consideration on account of the complications in construction of the overhead system without any advantages over the single-phase.

Complete estimates of first cost, maintenance and operation were then compiled for the four remaining systems: (1) 750-volt direct current with third rail; (2) 1,500-volt direct current with overhead contact; (3) 3,000-volt direct current with overhead contact; and (4) 11,000-volt alternating current with overhead contact.

The 750-volt system was eliminated because of the extensive freight yard trackage involved where a third-rail was undesirable from a safety standpoint and also on account of the fact that this system would require a heavy and extensive overhead layout to provide continuous contact for switching locomotives on ladder tracks and in complicated yards. Considering the climatic conditions along the lake front it was also feared that snow would drift on the tracks in the depression to such an extent as to interfere with the operation of the third-rail. Moreover, the cost of the 750-volt system did not differ materially from that of some of the other systems considered.

The 3,000-volt system has not been thoroughly developed for multiple unit operation, and its use on the multiple unit system required additional complications not met with in the other systems considered. In converting the high voltage alternating current from the generating station into direct current for a 3,000-volt direct current system it would be necessary to use motor generators, which are more expensive and less efficient than synchronous converters which may be used on a 1,500-volt system. Due also to other causes the first cost and annual cost estimates were higher on the 3,000-volt direct current system.

The investigation, therefore, narrowed down to the 1,500-volt direct current and the 11,000-volt single-phase alternating current

systems. Although satisfactory means of eliminating the inductive interference of an alternating current system with the telegraph and telephone circuits have been devised, it was the opinion of the majority of the commission that the experimentation and the expense involved would be appreciable. At this point consideration was given to the fact that a growth of traffic in the terminal would require more rolling equipment rather than more track mileage and that there was no immediate prospect of the system's being extended to adjacent main line divisions. With this idea in mind it was considered that 1,500-volt direct current equipment, with its lower first cost, was better adapted to the future development of this particular project. In the final analysis between the 11,000-volt alternating current single-phase and the 1,500-volt direct current systems it was decided to adopt the latter.

Suburban Equipment Needed

The electrified suburban trains are to be made up of new all-steel coaches equipped with motors and connections for multiple unit control. Controllers will be located at each end of every car, thus eliminating the switching or turning of any equipment at terminals. None of the old coaches now in service is to be used.

In October, 1921, the Illinois Central placed in service twenty new all-steel suburban coaches which are now operated with steam but in which provisions were made for the electrical equipment to be installed later. These new cars have a seating capacity of eighty-four persons. Therefore, better service can be given with fewer cars than are now used, as the old coaches seat only fifty-six to sixty-five persons. These new cars were described in detail in the *Railway Age* for December 12, 1921. The 220 additional suburban coaches required for the new project will be designed along similar lines.

Eighty to 100-ton switching locomotives will be used in the various yards. On the through transfer between Randolph Street and Markham Yard it is the intention to use two locomotive units coupled. In this service under rated capacity the locomotives will operate at approximately twenty miles per hour.

The Illinois Central, as the owner of its own coal field and an advantageous power house site on the Calumet River near River-

dale, is peculiarly well fitted to build and operate its own power generation station. However, no decision has yet been reached on this point and the power may be purchased from a public utility company.

With the electrification the automatic signaling will be entirely rebuilt as a complete alternating current system. The existing direct current track circuits will be replaced with alternating current apparatus. Impedance bonds will be required at the ends of all circuits to isolate the track sections for the alternating current and to provide a continuation of the return propulsion circuit. The inclosed disc type of signals now used will be replaced with 3-color type light signals. Although some of these signals have already been replaced, the new program calls for an entirely new relocation of the greater part of the signals.

In conducting the investigation the late A. S. Baldwin, vice-president of the company, was chairman of the commission. With him was associated D. J. Brumley, chief engineer of the Chicago terminal. In the course of their investigations Mr. Baldwin and Hugh Pattison, electrical engineer for the commission, toured Italy, Switzerland, France and England to investigate electrification. It was upon his return to this country that Mr. Baldwin died. Mr. Brumley succeeded him as chairman of the commission, which included Bion J. Arnold of Chicago, George Gibbs and Cary T. Hutchinson of New York, consulting engineers, and W. M. Vandersluis, engineer-secretary. Having rendered the report covering the decision on the fundamental features of the electrification the function of the commission is now terminated.

A TIP ON SALESMANSHIP

The cracker-jack salesman always has a positive mind. He could not be a winner if he were negative. He does not wait for his prospect to say: "You can put me down for so and so. Yes, I'll take that." He uses his own positive mind to guide and bring to a focus the vacillating, almost-decided mind of the prospect, for he knows from experience that the temptation of most buyers is to hang off, to wait. Knowing the processes through which his prospect's mind is passing, he seizes upon the psychological moment to bring his mind to a decision and close up the deal.—*Success Magazine*.

December, 1922

SHE WORKED FOR US

Miss Rose MacDonald

Here is Miss Rose MacDonald, until recently one of the efficient and popular employees of the office of the auditor of freight receipts, Chicago. Miss MacDonald, having been attracted by the glare of the footlights, devoted her spare time to the serious study of dramatic art and was graduated from one of Chicago's leading schools. She then enrolled as a student in a dancing studio, where her dramatic training quickly asserted itself. Miss MacDonald made her professional debut at the Edgewater Beach Hotel on July 1 of this year. The dramatic critics of the Chicago press prophesied for this young and beautiful dancer a brilliant career. Her many friends in the big Illinois Central building at 63d and Dorchester wish her the success that has been won and can only be maintained by hard work. They sincerely trust that some day in the not distant future she will be greeted by the public as America's Pavlova.

Twenty-nine

With the American Legion at New Orleans

Illinois Central System Had Its Share in Success of Convention; Parade a Big Feature

By CYRIL E. TRUST,

Secretary to Chief Clerk to General Freight Agent, New Orleans; Member Joe Graham Post No. 119, American Legion

THE maneuvers incident to the capture of New Orleans by the buddies of the American Legion, October 16-20, 1922, had their inception back in Kansas City, Mo., during the convention held there in 1921. There it was doubtless whispered about, by someone conversant with the facts relating to the hospitality of this old Southern city, that it would be an ideal location for the Legion's next get-together meeting, or convention.

The folks of New Orleans first realized that this convention was about to take place in their midst when the decorators took the city and "Old Glory" began floating in the breeze, accompanied by numerous Legion insignia and other decorations.

Several days before the convention proper, Hanford McNider, national commander of the American Legion, arrived in New Orleans, accompanied by a battery of

What the Meeting Was Like

The advance of the Legion on New Orleans began Friday before convention week and continued almost without interruption until Monday night, resulting in the complete surrender of the city to the Legionaires. They came in special trains, special standard and tourist sleepers, coaches, automobiles and airplanes, and some even "hiked" it. Regardless of how they came, they found themselves in New Orleans, the Paris of America, and were all keyed up to meet and exchange reminiscences with their old buddies and join them in a week of entertainment and enjoyment. Imagine a city profusely decorated with the national colors, the main streets blanketed with red, white and blue electric light, the weather ideal, and about 25,000 buddies meeting together, imbued with the carnival spirit of New Orleans, and you will have some conception of what the Legion meeting was like.

stenographers, and shortly thereafter came the buddies of the Legion, the women of the

General view of our Pullman city at the Legion convention

The reviewing stand at the American Legion parade in New Orleans. Among those easily identified are Judge Kencsaw M. Landis, high commissioner of baseball (in gray coat), Samuel Gompers, president of the American Federation of Labor (at Judge Landis' right hand), and Colonel Hanford McNider, former commander of the American Legion (at Judge Landis' left hand).

Auxiliary and the travelers of the 40 and 8, the box car society.

Monday, the 16th, things began to take on an interesting aspect, as the various units began to arrive from all directions, usually parading from the various stations to their hotel headquarters, always preceded by a band. A program of amusements having been lined up for each day of the

convention, there was, of course, always something going on. Tuesday, the 17th, appeared to be a duplicate of the previous day, insofar as amusements, meetings, etc., were concerned, and gayety and good times appeared on every hand and at every turn one made.

Wednesday, the 18th, was declared a holiday in accordance with a proclamation

More of our Pullman city, showing information booth

issued by Mayor McShane, and in the afternoon a big parade was held.

The national colors were massed at the head of each division, following the marshal and staff, the Congressional Medal of Honor men constituting the color guard for the first division; the Distinguished Service Cross men, the color guard for the second division, and so on for each division of the parade. In most cases an ambulance was following each of the divisions. The parade took its formation at General Pershing Street and St. Charles Avenue and proceeded down St. Charles Avenue, around Lee Circle, down St. Charles Street, past the reviewing stand and the City Hall, to the lower side of Canal at St. Charles Street, to Broad and Canal Streets, where disbandment took place.

Bands took a prominent part in the parade, coming from all parts of the United States. All during the parade airplanes were operating in various formations over the entire route, at one time there being eight planes flying in a formation which practically made a letter "V."

Business Sessions on the Levee

While the various festivities were taking place, at the foot of Girod Street, on the levee, the meetings pertaining to the business part of the convention were being held.

The battleship Birmingham, one Eagle boat and six destroyers were on hand during the entire convention. The Birmingham made a side trip up the Mississippi River to Donaldsonville during the fair which was being held at that point.

At the aviation field at Peters Avenue and South Claiborne Avenue, one beheld a most wonderful sight in the various types of airplanes which made daily flights all over the city during the convention period.

Colonel C. R. Forbes, director of the United States Veterans Bureau, was in attendance at the convention as a guest of the American Legion and National Commander McNider.

October 19 was also devoted to a general good time, entertainments, meetings, etc.

The 20th was a memorable occasion, for on that day the buddies had an opportunity of getting in close touch with an officer of the United States Army beloved by all, as it was on that day that General John J. Pershing, better known as "Black Jack" Pershing, arrived in town and made a notable address to the boys who went into the World War.

The election of officers resulted as follows: Alvin M. Owsley of Texas, national commander; Edward J. Barrett of Wisconsin, first national vice-commander; Father F. R. O'Connor of Iowa, national chaplain. Other vice-commanders were elected as follows: Watson B. Miller of Washington, Earle Cocke of Macon, Ga., Dr. Robert O. Blood of New Hampshire, Charles B. Plummer of Casper, Wyo.

The rail lines handled the crowd in good shape. It was estimated that there came into the city in round figures about 35,000 Legionnaires, members of the Auxiliary and mothers, sisters and wives of the Legionnaires, not taking into consideration the number of persons in attendance at the convention who came by automobile, boat, airplane and on foot.

One of these latter cases is that of Herbert Manley of Worcester, Mass., who, accompanied by his dog, started from

How We Did Our Duty

The fourth annual convention of the American Legion, held in New Orleans October 16 to 20, was unquestionably the largest convention the city has ever been called upon to entertain.

A large percentage of the visiting Legionnaires was handled by the Illinois Central System. Figures for a 3-day period show a total of 10,171 Legionnaires handled into New Orleans.

Our parking facilities at Poydras Yards (fully described in former issues of the *Illinois Central Magazine*), which handled the Knights Templar, were used by the Legionnaires, who complimented the management highly for those excellent facilities and the thorough manner in which every detail was carried out. A directory card of Poydras Yard facilities was issued and given to each Legionnaire.

Approximately 125 cars were handled in the parking yard, which accommodated nearly four thousand Legionnaires. The dining car, barber shop, shower bath, laundry and clothes pressing facilities, as well as day and night lunch counter, made a "hit" with the Legionnaires and were used extensively.

A splendid record was made by the operating department of the Illinois Central System in handling the return movement, nineteen special trains leaving New Orleans Friday night between 7:45 p. m. and 12:30 a. m. These trains left without delay and arrived at Vicksburg and Memphis on schedule time.

Legion parade passing cenotaph at New Orleans

Worcester, Mass., in 1921, attended the convention in Kansas City, went West to the Pacific Coast, remained there for a while and then came to New Orleans for the recent convention, walking about eight thousand miles, and he is not tired of the walking yet.

To the memory of the buddies who made the supreme sacrifice, and who were at least present in spirit, a cenotaph was erected adjacent to the main entrance of the New Orleans Customs House on Canal Street.

The convention for 1923 went to San Francisco.

THE "LIFE" OF THE FIRM

I know young fellows who are wonderfully interesting in society; in introducing new plays, new games; who know how to entertain, how to make things lively. In fact, they are the "life" of the party wherever they go; but they don't amount to much in business. They are far from being the "life" of their firm. Now, I believe in developing one's personality, making it attractive; in increasing one's powers of pleasing and entertaining by mixing freely

with others; but don't run entirely to that sort of thing. There is more than one side to an attractive personality; and, after all, your job is the chief thing in your life. It will treat you the way you treat it. If you are not at all there in your work as well as in your play, if you are not the life of your job, your job won't have much for you.

—*Success Magazine.*

AGENT A BOOSTER FOR SAFETY

J. S. Berry, agent at Sturgis, Ky., told of the safety program of the Illinois Central System in an address before a meeting of the Kiwanis Club of that city October 13. He urged the co-operation of the club and told how persons other than those driving cars could help prevent accidents at railway crossings. He carefully explained the Careful Crossings Campaign and cited figures regarding it. Mr. Berry was the program leader of the meeting. The invitations he sent out announced that his subject would be "Stop, Look and Listen" and his slogan "Careful Crossing Campaign." The Sturgis *News-Democrat's* account of the meeting devoted more than half of its space to Mr. Berry's talk.

What a Railroad Means to City Growth

*Manufacturers Seeking Locations First Inquire
About the Possibility of Proper Transportation*

By **JOHN D. ADAMS,**
Industrial Commissioner,
Chamber of Commerce, Sioux City, Iowa

DISTRIBUTION is the chief concern of every city that hopes ever to be more than a country town and of every industry that hopes to get more than local business. Of the hundreds of inquiries from industries all over the continent asking for information concerning Sioux City as a possible location for a plant or branch house, the chief question is: "What are your railway facilities, and what territory can we cover from your city?"

The day is long past when a manufacturer could say: "My home is here; so I'm going to start my factory here." Now a manufacturer looks over the entire United States and selects a location easily accessible to raw material and where he can reach the greatest number of his prospective customers. In this selection the railroad plays a most important part, for railway connections are the most valuable asset any city can have in soliciting new industries. Bonuses, land grants, tax exemptions and other premiums offered are wasted unless the city giving them can offer, in addition, good railway facilities.

Railroads Can Make a City

On the other hand, railroads can make a city from a prairie. There have been instances in this country when a giant industrial center has grown up almost overnight merely because the railroads decided to extend their lines there. Old citizens of Kansas City tell how, long before that city was more than a landing on the Missouri River, Leavenworth, Kan., was a thriving town which showed signs of being a great city some day. Then came the railroads. The business interests of the Kansas town gave little or no attention to these, but the men of Kansas City had foresight enough to see what they could do with railroads. The results everyone knows.

A railway city has access to the world. Even a seaport must be backed by railroads in order to collect products for shipment. The manufacturer who builds a plant in a

John D. Adams

city away from railroads is as foolish as a man who would build an ice cream factory in Alaska.

Not only do the larger concerns seek from necessity a city with good railway facilities; they also seek locations close to the tracks. In the larger cities, many factories do an enormous local business in which shipments are made by truck; still they always build their plants on trackage. Railroads are essential to industries of all sizes. If they are not needed for distribution, then they are essential for the receipt of raw goods.

Sioux City Serves Seven States

A city's trade territory is that part of the surrounding territory which can be reached from it better than, or equally as well as, from any other city—or rather any other industrial center. In the case of Sioux City this territory covers parts of seven states in the most productive part of the United States. They are Iowa, Nebraska, North Dakota, South Dakota, Minnesota, Wyoming and Montana. The trade of Sioux City's

manufacturers is not confined to this region, but this is the city's real trade territory.

In this territory there are nearly 7,000 miles of railroads, every station on which is closer to Sioux City, from the standpoint of freight rates and time of shipment, than to any other city. It is upon this fact that Sioux City has been established as the center which it is. Without the railroads there could be but little in the way of manufacturing and jobbing in the city.

Now let's turn this around. Unless the farmer could market his livestock and crops by means of the railroads, where would your industrial centers be? There are in the Sioux City trade territory nearly two million people scattered over 213,304 square miles. These people farm 83,783,700 acres of land, which is nearly one-tenth of all the farm land in the United States. These farms are producing annually more than half a billion dollars' worth of livestock and more than six hundred million dollars' worth of farm crops. The value of these

products depends upon the farmers' ability to market them. This is done chiefly by railroad.

A railway official recently asked the question: "What part should a railroad play in the desirability of a city as a location for an industry?" My answer was that without a railroad there would be no desire on the part of a manufacturer to place his plant in a city. The very facts that the railroad is there and that it is a good line are the most important factors in determining the city's desirability as a location.

More and more are the big manufacturers of the East getting away from the congested location around the coast which was necessary before the coming of the railroad. By moving farther west on a direct line railroad, the manufacturer gets into the low land values, better working conditions for his men and easier distribution to the great western agricultural region. It is this region that the manufacturers are looking to for expansion, for the East has been worked until there are few new possibilities.

B. & B. Association Includes Our Employees

Five employees of the Illinois Central System attended the thirty-second convention of the American Railway Bridge and Building Association, October 17 to 19, inclusive, at the Gibson Hotel, Cincinnati, Ohio. This association is said to be one of the oldest railway maintenance of way associations in the country, and a convention is held each year. The association has 866 members.

C. R. Knowles, superintendent of water service of the Illinois Central, was president of the association, and Maro Johnson, assistant engineer, is a member of the board of direction. Those from our offices who attended the convention with them were: P. S. Aagaard, general building inspector; F. E. Taggart, assistant engineer of bridges; Peter Perry, system steel bridge foreman.

Other employees of the Illinois Central System who are members of the association are: H. J. Barkley, assistant supervisor of bridges; F. O. Draper, superintendent of bridges; C. Ettinger, supervisor, B. & B.; A. J. Howerton, inspector of bridges; William James, carpenter foreman; C. W. Lentz, supervisor of buildings; J. K. Melton, photographer; W. L. Ratliff, supervisor, B. & B.; M. A. Smith, general foreman, B. & B.; F. H. Soothill, building inspector; F.

L. Thompson, chief engineer; E. F. Wise, retired employee; and P. H. Carlson, supervisor, B. & B.

The Illinois Central System employees who attended the American Railway Bridge and Building Association convention October 17 to 19 at Cincinnati. From left to right: P. S. Aagaard, F. E. Taggart, Peter Perry, C. R. Knowles, Maro Johnson.

A Successful Negro School on Our Lines

*Southern University, Scotland, La., Has Enrollment
of 646 Boys and Girls in Literary and Trade Courses*

SOUTHERN University, a negro school on our lines at Scotland, La., near Baton Rouge, although the youngest of sixteen similar institutions of the South, ranks fifth in importance in that territory. There are 646 negro boys and girls enrolled there this year in literary and trade courses.

The school is maintained by Louisiana and the United States Government. The appropriation for the present school year was \$65,000 by the state and \$20,000 by the Government. The state legislature of 1920 appropriated \$280,000 for new buildings.

Southern University was first established in New Orleans in 1880, but it was not successfully operated until 1883. During the constitutional convention of 1879, P. B. S. Pinchback, T. T. Allain and Henry Demas sponsored the movement that resulted in the establishment of the institution for the education of the negroes of Louisiana. The general assembly of Louisiana secured the continued support of the institution in 1883 by an annual appropriation of \$10,000.

The first home of the school was a substantial 2-story brick building on Calliope Street, New Orleans. By 1885 the number of students had increased to such an extent that larger quarters were made necessary, and the state appropriated \$14,000 in 1896 for the purchase of ground and erection of two buildings on Magazine and Soniat streets. School was conducted at that location until March 9, 1914, when it was moved to its present site at Scotland. In 1907 the school had been recognized by the Government as a land-grant college, under the Morrill-Nelson Act, offering training in agriculture and mechanical education, and received an annual appropriation of \$20,000 from federal funds to carry on substantial training in the industrial arts.

Twenty-Two Buildings on the Campus

The ground purchased for the school at Scotland was a tract of 500 acres. Twenty acres were set aside for the campus, and the remainder was cultivated. Since that time, twenty-two buildings have been erected on the campus. Seven of them are brick structures and fifteen are frame.

Our station at Scotland, La.

The Administration Building, which dominates the campus, is a 3-story brick with steam heat, sanitary plumbing and drinking fountains, and provides space for the president's office, auditorium, library, twelve classrooms and a room for instruction in printing.

There are two large dormitories, one for boys and one for girls. These are 2-story brick buildings provided with all the modern conveniences, including separate lavatories for each room, steam heat, hot and cold water and shower baths.

A beautiful dining hall has recently been erected on the campus. It is a 2-story brick building with concrete foundation and basement, steam heat and electric lights. The first floor contains the dining room, with a seating capacity of 600, kitchens, pantries, storeroom and a dish-room with an electric dish-washer. The second floor contains rooms with baths for fifty girls and several instructors.

The Girls' Trade Building, where home economics courses are taught, is a 2-story brick building with steam heat and electric lights. The first floor contains classrooms, kitchen, dining room, model steam laundry and a model home, completely furnished, which serves as a practice home for the advanced classes. The second floor contains several classrooms for domestic art, domestic science, home economics, home-craft, an exhibit room, two music rooms and two guest chambers.

Where Boys Are Taught Trades

The Boys' Trade Building is a 2-story brick structure with steam heat and electric lights. The first floor contains classrooms for the blacksmiths, carpenters,

brickmasons and those taking courses in machinery. The second floor contains classrooms for tailoring, shoemaking, mechanical drawing and agriculture and a practice room for the band and orchestra.

A 1-story brick building for a laundry recently was erected alongside the Girls' Trades Building. The equipment in the plant is modern in every respect and capable of doing the laundry of all the students.

The fifteen frame buildings on the campus are teachers' cottages, the power plant and the president's home. The cottages are neat and comfortable little bungalows, and the president's home is a large, white 2-story residence. The latter is shaded on all sides by gigantic moss-covered oaks and pecan trees.

The campus is on a bluff that overlooks the Mississippi River.

The purpose of Southern University is to prepare young negro men and women to fit intelligently in their sphere of service to the state and for leadership in the communities in which they live. Some of the courses lead to definite trades and occupations, but the work of all the departments is so arranged that no student is allowed to complete a course until he has received thorough instruction in the literary branches. And great stress is laid upon proper conduct and the proper development of such habits as win for the students the commendation and approval of all with whom they come in contact.

How the School Is Organized

A grammar department is conducted by the university for students who have not had the advantage of a grammar education, but no student is allowed to enter this department unless he has completed the fifth grade work. When a student has

completed the grammar course, he is permitted to enter the high school course of the university. A teachers' training course is conducted for those who have a high school education or its equivalent. The university also offers a full college course to those prepared to enter it. The degree of Bachelor of Science is awarded to those who completed the 4-year college course.

The girls are instructed in dressmaking, millinery, foods, home furnishing and handicraft, laundering, child welfare, housecleaning, cooking and general home economics; the boys are instructed in agriculture, mechanics, printing, brickmasonry, plastering, carpentering, tailoring and shoemaking. These various courses are so arranged that the students study their trade courses one half of a day and their literary courses the other half. The literary courses include English, French, Spanish, geography, social science, natural science, chemistry, mathematics, history, psychology, penmanship and drawing.

Three hundred and sixty boys and girls have been graduated from Southern University, and not a one of them has had a charge of misconduct brought against him or her, says J. S. Clark, negro president of the university. The graduates are always in great demand, he says, and, so far as is known, none of them is out of employment at present. The class that is to be graduated this year is composed of sixty-five students, and they already are being offered positions.

Students Do Work Around Campus

Most of the work about the campus and buildings of the university is done by the students. That is part of their practical training. Many of the frame buildings were built by the students. They do all the

The campus of Southern University, Scotland, La.

President's home, Southern University

plumbing and electrical wiring, and the power plant is operated by them.

Those who are studying agriculture go out among the negro farmers of Louisiana at times and give instructions in scientific farming. And two days in February each year are set aside for a farmers' conference at the university. Farmers from all parts of the state visit the university those days to hear the lectures by white and negro farm experts.

J. S. Clark, A.B., A.M., Ph.D., negro president of Southern University, has the whole-hearted support of the white people as well as the negroes of Louisiana in his efforts to make the university rank among the highest of its kind. The school now has the reputation of being one of the cleanest and best-kept negro colleges of the South, and the students are noted for their courtesy, politeness and intelligence.

Off to a Good Start

Markham Heights is the name by which the newest subdivision at Harahan, being opened by the Harahan Realty Company, Inc., will be known. Much interest has centered about this tract of land during the last two weeks in view of the contest over a name for the subdivision. A \$50 prize had been offered the person or persons giving it a name which would be accepted by the company. The contest closed Friday.

Two men, George E. Cleveland of Hahnville, La., and H. E. Young of McComb City, Miss., will share the prize, for they both submitted the name of Markham Heights in honor of C. H. Markham, president of the Illinois Central System, whose shops are at Harahan.

Markham Heights is two squares above Harahan, the Orleans-Kenner line flanking it on one side and the Jefferson Highway on the other.—New Orleans (La.) *Times-Picayune*, November 12.

The Negro Blind Institute is also under the jurisdiction of Southern University. The building is a 1-story brick structure on the university grounds, but not on the campus. It contains a dormitory for boys and one for girls, classrooms, dining room, kitchen, pantry, storeroom and several living rooms for teachers and the family of the superintendent. This year is the first time that school has been conducted there for the blind. The building was completed last year and was used as a dormitory for boys who were attending the university.

Teachers' cottage, Southern University

Each student is charged only \$13.50 a month for his board, laundry and room rent. Tuition is free to negro residents of Louisiana, but there is a fee of \$2 for registration.

ANNIVERSARY FOR E. W. BROWN

November 9, 1922, completed the thirty-seventh year of continuous service for the Illinois Central System by E. W. Brown, agent at Rockford, Ill. The February, 1922, issue of the *Illinois Central Magazine* contained a story concerning the life of Mr. Brown and the splendid service he has rendered the company. Mr. Brown is president of the park board at Rockford and has done many things for the betterment of his home city as well as for the success of the Illinois Central System.

DON'T ACKNOWLEDGE FAILURE

As a rule—and a very good rule to follow—make up your mind that you will not acknowledge failure until the last effort has been made, and the last effort should not be made until you have been successful; therefore, ultimate failure should never be acknowledged, but, instead, hope on, hope ever, desire all for which you hope, and expect all which you desire. Do all this with increasing confidence in ultimate success.—

EDWARD B. WARMAN.

South Water Street Usages 40 Years Ago

Volume of Freight Was Much Smaller Than That at Present, and There Were Some Odd Customs

By **THOMAS RUSSELL**,
Foreman, In-Freight House,
South Water Street, Chicago

IT may be of interest to those now employed at South Water Street, Chicago, as well as to other employes of the Illinois Central System, to know of the methods used in the handling of freight in the early 80's.

The building now known as the in-freight house at that time handled the entire inbound and outbound business of the Illinois Central and Big Four railroads. Two tracks ran through the center of the building, the west track being used for outbound cars and the other for inbound cars. The capacity of each track was sixteen cars, making it necessary to switch both tracks several times a day. The outbound side of the house had sixteen doors for receiving goods, of which six were active doors, the others, commonly known as side doors, being used only on special occasions. These doors were manned by six receiving clerks, a number sufficient at that time to accept all business tendered. An average daily loading of sixty cars, or two hundred and fifty thousand pounds, was received.

Got Freight by Bob-Sled in Winter

In those days most of the outbound freight was delivered by wagons or one-horse drays, bob-sleds being used in the winter months. The method of handling freight necessitated receiving a part of a wagonload at five or six different doors, as each door received freight only for certain towns or districts, thus making the average delivery time for each wagon from four to five hours. The shipper presented a memorandum book, showing the name of the consignee, the destination and the items in the shipment, which the receiving clerk copied in his loading book, each item being checked and weighed as it was unloaded from the wagon; if found to be correct, it was receipted for. The packages were then placed in stalls assigned to the different towns or districts, later being checked and loaded by loading gangs. If an error were found, it was necessary to send a man to the office

of the shipper to correct it, as there were no telephones in use. The loading book was then passed to the office to be billed, waybills being written by hand.

Goods were marked by symbols, letters or numbers; the name and address of the consignee seldom were shown on packages. When a car was loaded it was locked and the destination shown in chalk on the side. Box cars averaged from twenty-six to twenty-eight feet in length and were equipped with end windows, link-and-pin couplings and hand brakes.

Merchandise Received in Afternoon

The greater part of the merchandise was not delivered until afternoon, which necessitated working from two to three hours overtime. Trains left the city at various hours throughout the day, the first one leaving as early as 10 a. m., making it necessary to load all freight for that train by that hour. Shipments received after train time remained on the floor until the following day. During the winter months the shippers furnished hay or straw to protect

Thomas Russell

Our South Water Street freight yards today

perishable goods from freezing, refrigerator cars being used only for dairy goods.

The inbound business of both the Illinois Central and Big Four railroads, which was handled on the east side of the building, consisted of approximately twenty to twenty-five cars a day. All freight was blind tallied as it was unloaded from the cars and placed in a nearby section. When each car was completely unloaded, the blind tally was sent to the agent's office, where it was checked against the waybills. If it was found to be correct, expense bills were made and notices sent to the consignees by mail or messenger.

There was no storage charge, and a great many merchants allowed their goods to remain in the freight house for weeks and months at a time, using the house for storage at their convenience.

Few Fruit Shipments From South

A few years later the house now known as Dock House No. 1 was built for the handling of bananas. This house was heated with stoves in the cold weather. The bananas were delivered to wagons through the west doorways of the building, four or five carloads being handled daily.

The team tracks handled the inbound and outbound carloads for the Illinois Central and Big Four railroads. As there were practically no belt line railroads operating, it was necessary to haul nearly all carloads to and from team tracks by wagon, the railroad furnishing help to load and unload cars.

The shipments of fruit and vegetables from the South were not very large in those days. Southern Illinois practically furnished South Water Street merchants

with their supply, which was delivered from the fruit platform in the early morning.

WHY MEN FAIL

There is a cause for everything! Nothing ever "just happened." If a man is promoted to a better job there is a cause. If a man loses his job there is also a cause.

There are many causes that lead to failure. Here is a list of the most common causes:

1. Finding fault with the other fellow, but never seeing our own.
 2. Doing as little as possible and trying to get as much as possible for it.
 3. Spending too much time showing up the other fellow's weak points and too little time correcting our own.
 4. Slandering those we do not like.
 5. Procrastination—putting off until tomorrow something that we should have done day before yesterday.
 6. Deceit—talking friendly to the other fellow's face and stabbing him in the back as soon as he turns around.
 7. False belief that we are smart enough to reap a harvest of pay before sowing a crop of honest service.
 8. Disloyalty to those who have trusted us.
 9. Egotism—the belief that we know it all and no one can teach us anything.
 10. Last, but not least, lack of the necessary training and education to enable us to stand at the head in our line of work.
- Look this list over and check yourself up by it. If none of these causes for failure applies to you, then you are to be congratulated, because you are a success!—*Napoleon Hill's Magazine.*

Stadium to Beautify Chicago Lake Front

*Structure Now in Progress of Building Will Link
Up With Proposed Illinois Central Developments*

The Chicago lake front development, now in progress, which calls for the electrification of the Illinois Central terminal and the building of a great new station at Roosevelt Road and Michigan Avenue by the Illinois Central System, also calls for the construction of a stadium just south of the Field Museum, already built in Grant Park just east of our tracks. Work on this stadium is now in progress. The following report on it was made by Clarence A. Bush in the October number of the Tri-Color Magazine, the official publication of the Illinois Athletic Club.

“WONDER what is going on at the stadium?” Some such query will be put up to you after the spring of 1924. That time is not so far away as it sounds, with 1923 almost upon us. You will get the query when you tell your mother, wife, sister, best girl, or some other man’s, that you would like to take her some place for a good time, but you have been everywhere and “there is no place to go around this town.”

Construction of our long-dreamed-of amphitheater in Grant Park is actually well under way. Commuters on the Illinois Central, by stretching their necks, can see the pile-driving machines yanking and puffing, but there is no structure visible from the distance.

Linn White, chief engineer of the South Park commissioners, reported the first week of October that the piles had been driven in the “made land” south of the Field Museum and that contractors were beginning to pour concrete foundations.

For the promotion of sports in Chicago the new arena will be one of the finest things that ever happened. With the great hippodrome in operation the Windy City should become the athletic capital, the Athens of the nation, if not of the modern world. To its advantages of a central location and unequaled railway transportation to every corner of North America is now being added the greatest equipment for athletic spectacles afforded by any municipality in the country.

In the year that the next Olympic games are held the stadium will be completed. At that time the place of the games for 1928 probably will be decided. Why should they not come to Chicago? With our new stadium we should be able to make an attractive offer.

Greater crowds will be able to witness national, sectional and local track and field meets, football games, military parades, public ceremonies, police games, historical pageants, round-ups and spectacles of every description. Attendance of 75,000 to 100,000

How the stadium will look—Field Museum in the background

people will make possible the staging of massive and impressive events greater than have ever been dreamed of before.

The east and west sides now building, to cost \$2,650,000, will seat 40,000 spectators, many more than Cubs Park, Comiskey Park or Stagg Field. The semi-circular south end, to cost \$1,500,000, according to Engineer White's estimate, will seat 35,000 more. Temporary stands can be erected at the open north end to bring the total capacity of the arena up to 100,000. That is more than our three big amusement centers combined would now hold.

In architectural elaboration the horse-shoe structure is to surpass Harvard Stadium and Yale Bowl. It will be larger than the old Roman Colosseum, one of the mightiest buildings of ancient times. The capacity of this Italian arena, in the days when Nero and his favorites turned thumbs up or down to decide the fate of gladiators, was only 87,000. It measured 607 feet by 512 feet, while the Grant Park emporium is to straddle 1,000 feet by 550 feet.

Architecture, said Ruskin, is the art which so disposes and adorns the edifices raised by man, for whatsoever uses, that the sight of them may contribute to his mental health, power and pleasure. The vision of the new stadium certainly measures up to this ideal.

How about transportation? That is one of the most important problems in handling stupendous crowds. It will offer no difficulties for the stadium. The location is within a 10-minute walk of the Loop. It will be reached by street cars, automobiles, suburban railroad trains, by lake boats, and by a short walk from the elevated. If the bus lines recently proposed go through, that will add another means. Roosevelt Road will be extended to the water, and there will be available the system of outer boulevards made by the fill which is extending Grant Park to Jackson Park.

Everybody will know where it is and how to get there. It will be easy of access to every part of the city and the surrounding district of the Middle West. The fact that an athletic event or other spectacle is to be staged in the stadium will stir the imagination of many who will come miles to see it when they would not be interested if it were held in a less conspicuous arena.

In architecture and color the stadium will harmonize with the Field Museum and to

the west of the museum with the projected Illinois Central terminal building. It will appear a great detail of one unified building plan.

These three structures will make a massive group of Chicago's show window on the lake front.

Along the stadium sides now building two long pavilions with ornate roofs will be supported by an array of Ionic columns, whatever they are. Dominating the south end there is designed an impressive central structure, buttressed with columns and elaborate architraves. This is intended for distinguished guests and judges of contests. Girdling the top of the semi-circular walls, and passing under the colonnade pavilions on the sides, will run a wide esplanade. Anyhow, that's the way the specifications read.

In the conception of the stadium the architects and the South Park commissioners apparently observed the advice that when we build public edifices we should think we build forever, "let it be not for present delight, not for present use alone, let it be such work as our descendants will thank us for," and let us think, as we lay concrete block on concrete block, "that a time is to come when these blocks will be held sacred."

At any rate, taxpayers on the South Side, against whom the commissioners have power to make levies, will soon be able to see where some of their tax money is going. The rest of us will be much obliged in 1924. Thereafter, when you sit in your chair at home or club and sigh, "All dressed up and no place to go," you can forget it and go to the stadium, for the chances are there will always be something doing, weather permitting.

NEVER VERY BUSY

About two years ago I went to call on a famous business executive and was informed that he was so busy that he was obliged to make appointments three and four weeks ahead. I immediately decided that if he were that kind of fellow he would eventually blow up. Sure enough, he did. Just recently he was forced to resign in the nick of time to make way for a better manager who might steer the concern away from the rocks. No great executive is ever very busy. He is able to delegate most of his work to others.—*Nation's Business*.

Do Well With What You Have, He Urges

*S. F. Lynch, New Orleans Division Chief Clerk, Says
There Is No Great Mystery to Good Railroading*

By **THOMAS TREANOR,**
New Orleans Division Editor

“**N**OT the imperative command from without, but the urge for co-operation and co-ordination from within—not waiting for inspiration or incentive from the best minds in the game, but utilizing the available knowledge and creative capacity of each individual for the betterment of service, is, in my opinion, the secret of successful division management—the whole solution of the mystery of railroading, if mystery there be.” Thus spoke Steve Lynch, when pinned down to his seat and asked about his business.

The superintendent's office of the New Orleans division at Vicksburg is a capacious and well-appointed place—a very busy office, indeed—and Mr. Lynch is chief clerk. He is yet a young man and impresses one as a person of distinct and forceful personality, with vision, imagination and the saving sense of humor. He is not a college graduate. Like thousands of others, he gained his first business knowledge as a grocery boy. If he had any particular talent for any special line of endeavor, circumstances or perhaps the prevailing system which prevents the boy from following a natural bent compelled him to go to work at an early age at the first thing that offered. He did not indulge in roseate dreams or romantic notions of a brilliant career; if he did, he keeps it secret. When a job in the railway office presented itself, he was glad to grab it, not because he disliked the grocery business, but because the railroad paid more money.

He Is a Native of Mississippi

“Destiny has played me false if she intended me for a merchant prince, for here I am in a railway office with a huge pile of unread mail before me, crying for attention,” he said. “And, speaking of mail, its volume seems to grow larger and larger every day—about 1 per cent per day. You know we measure everything in percentages, even the mail's accumulation.”

Mr. Lynch was born September 23, 1893, at Jackson, Miss., and entered the service

S. F. Lynch

of the Illinois Central at Jackson February 1, 1911, as car clerk and timekeeper. He was promoted to clerk to the general foreman, December 10, 1911, and was appointed chief clerk to the master mechanic at McComb, Miss., on January 1, 1914. He was promoted to chief clerk to the superintendent of the New Orleans division, July 1, 1918.

“Which one of those jobs served for your best interest? Which one was of most value as a preliminary training for your present position?” Mr. Lynch was asked.

“It would be difficult to say,” he replied. “However, I believe that the position of chief clerk at McComb, considering a 6-month period when all of the division offices there were in one, under the unit system, gave me the best and most general knowledge of railroading and general office operation. My present position affords many opportunities to learn something new, and I rarely pass a day without doing so.”

“How do you like the job of chief clerk

in a division office, judging from your present experience?" was the next query.

"I'm here to tell you that a chief clerk's position is no sinecure," Mr. Lynch replied. "It's work, hard work, but it has its compensations, for all that. It is comfort and satisfaction to know that one's work is appreciated. It is consoling and gratifying to have the confidence and respect of those under one's immediate supervision, as well as those detached from it, and I flatter myself that I have all this in some measure, and I hope I am deserving. I try never to lose sight of the human element in my associate workers. I endeavor to make the work fascinating, not tedious, and the office forces respond admirably.

"There is no friction here—everyone knows his work and does it with a will and a spirit of mutual helpfulness. Maybe if I had expended as much time and energy in another line, I might have made more money, but I don't believe that I would have had more satisfaction. I am one of those who believes that there is more to be got out of life than money."

Uses Judgment in Picking Employees

Mr. Lynch was asked about the selection of men for office service.

"I have no cut and dried method," he explained. "I seek the right man for the right place. I keep my eyes open and observe. I have read a good deal of the questionnaires of Edison and the psychological tests used by some corporations for the selection of men. I have never had the opportunity of applying such measures in this office, nor would I if I could, for I consider the first as a mere test of memory, and as for the second—well, I am not a psychologist. There is also an element of luck in picking men, but if anyone shows intelligence and ability I keep him in mind for better things, for it is a fact that competency is shattered and a condition of lethargy ensues when a man of marked capacity is kept in an inferior position.

"Sometimes the man without the proper qualifications gets on a job that is too heavy for him. Then I try to find a job for him in keeping with his measurement, for it is also a fact that if one of this type is kept on the wrong position he becomes more unfit as time progresses and falls a victim to worry and complaint, or else confines his efforts to 'getting by' and 'making the day.' However, we have been fortunate in finding

capable help, and with the system we have worked out we all manage to get along very smoothly."

"What is your idea of a workable office system, Mr. Lynch?"

"In an office of any size, I consider system most necessary. By that I mean not an endless chain of red tape, but by observation and experience arriving at the shortest and most thorough method of performing each operation, and seeing that such a method is followed from month to month. File systems should be simple, but adequate; records of all kinds, stationery stocks, etc., should be so located, indexed and cross-indexed as to insure their being accessible when needed, with a minimum loss of time. In short, have a specified place for everything.

Duty to Teach Subordinates

"Again, it is part of the chief clerk's job so to train his subordinates that they almost intuitively use the specified place. Anyone not familiar with such a procedure would be surprised to see how easily this can be accomplished, and the older and more experienced aid in many ways in training the newer ones. Clerical workers are quick to note the effect of the use of any particular idea or system and take readily to any new practice that tends to ease the load and lessen the confusion.

"We would all, I believe, be much benefited if something could be done to stimulate the interest of our clerks by inviting suggestions, exchanging ideas and considering their observations and experiences in the handling of any particular feature of their work. There are unquestionably many good practices or systems used in different offices on our great system which could be adapted to other offices with highly beneficial results, and we should all know of them."

Mr. Lynch was questioned about his cordial relations with the general public.

"I don't know of an operating office that should have more personal or telephone contact with the public in general than a superintendent's office," he replied. "Unfortunately, our patrons do not ordinarily appeal to the superintendent until they have failed to obtain what they desire through the agent or other local officer. Bear in mind, I say this without intent to reflect critically on any such officer, for the accommodation that he cannot grant is usually impossible, at least for the moment. How-

ever, a refusal causes the patron to fall into a rather unpleasant frame of mind. This condition affords an excellent opportunity for the exercise on our part of self-control, as well as the real honest-to-goodness practice of our slogan 'Courtesy and Efficient Service Always.' It is within the power of the chief clerk to make many friends or enemies for our company, and I feel sure that by the manifestation of personal interest and individual attention I have added a number to our already large list of friends and patrons.

"Practices of courtesy do not readily come to everyone employed by the railroad, who has his pro rata of trials and troubles, but they can be acquired with proper effort, and a superior has much to do with this.

Our superintendent, Mr. Mays, does not hesitate to lend a helping hand under any trying circumstance, making explanations that carry conviction and obtain results. From my personal knowledge, open ears and eyes under such an officer do wonders in properly directing the younger and less experienced."

Mr. Lynch is keenly interested in sports and diversions, and his services are ever in demand when any project having for its end healthy amusement is in contemplation. The hackneyed old adage, "All work and no play makes Jack a dull boy," has a direct appeal to him. He manages to get a good deal of fun out of life, if one judges from his cheery disposition and the way he handles his work.

AFTER FIFTY HAPPY YEARS TOGETHER

Mr. and Mrs. W. F. Widmann

Mr. and Mrs. W. F. Widmann of Waterloo, Iowa, celebrated their golden wedding anniversary October 29. Mr. Widmann is a machinist in the Illinois Central shops there. He entered the service of the company in 1870 and worked as a machinist in the shops at Waterloo until October 1, 1879, when he resigned. January 1, 1894, he again became a machinist there, where he has worked continuously since. More than

300 relatives and friends attended the reception that was given in honor of the wedding anniversary. Mr. and Mrs. Widmann both came to this country from Germany when they were young. Mr. Widmann arrived in 1867. Mr. and Mrs. Widmann have resided in Waterloo since their marriage fifty years ago. Both are hale and hearty and go about their work as if they were years younger.

A Governor Who Is a Successful Farmer

John M. Parker of Louisiana Has Valuable Livestock on Our Lines Near St. Francisville, La.

By **ELRIE ROBINSON,**
Editor, *The True Democrat,*
St. Francisville, La.

A VISITOR to the livestock department of any one of half a dozen of the larger Southern fairs, this fall, especially if he were an admirer of thoroughbred cattle and hogs, would have had his attention attracted by the exhibit of the Parker Stock Farm, for this institution ranked first among the prize-winners.

The Parker Stock Farm is about two miles from the Yazoo & Mississippi Valley station at St. Francisville, La. Incidentally, a portion of this particular line of the Illinois Central System which serves St. Francisville is the third oldest railroad in the United States. The Parker Stock Farm is owned by His Excellency (only he won't stand for being called that) John M. Parker, governor of Louisiana.

Back in 1913, after two successive overflows, Mr. Parker (then just plain John M.) decided to remove his planting operations from North Louisiana to the hills of West Feliciana Parish, a section most kindly endowed by nature and the greater portion secure from invasion by the mighty

Governor John M. Parker

Mississippi River. Accordingly he purchased 4,000 acres near St. Francisville and started upon the task of turning an old cotton plantation into a modern stock farm. Mr. Parker undertook little of the work himself, except in an advisory capacity, leaving the work of management to his partner and manager, J. Bob Daniel, a native of the parish and a man possessed of broad ideas and strong determination.

Project Not Taken Seriously

The announcement that John M. Parker was going into the fine-stock raising business with the expectation of making money was not regarded seriously in this section. The whole enterprise was looked upon as a whim of a rich man, and the prediction was freely made that the experiment would prove so costly that it would soon be abandoned.

But—that was nearly ten years ago. Today the Parker Stock Farm is regarded as a highly successful institution. More than that, it is looked upon as an object lesson and also as a demonstration farm. It cannot but be pleasing to Mr. Parker to realize

Governor Parker (on left), with some of his Toggenburg goats

that his ambition has been realized, that his judgment has been vindicated and that success has crowned his efforts. But most of all he enjoys the thrill that comes only to the pioneer, that of blazing the way to make easier the path of those who follow.

The preliminary work of the undertaking was one long, hard struggle. Everything was to be done. Barns had to be erected, fences had to be built, silos to be constructed, soils tested and built up, and a thousand and one other things attended to before the enterprise could even begin to grow.

Another feature of the business that took hard work and careful study was the selection and importation of the proper animals around which to build up the herds. Acclimatization and immunization against native diseases were processes that presented many difficulties, and it was some time before a satisfactory basis was established and the vision of the founder began to be revealed to his neighbors.

Farm Is Truly Successful Today

Today the Parker Stock Farm stands in the front rank of Southern livestock enterprises, and its animals are in great demand as breeding stock over a wide section of country; no fair of any importance is considered complete unless it contains a Parker exhibit, and breeders from many points come to St. Francisville to visit the Parker Farm in order to familiarize themselves with the latest approved methods for the successful conduct of their business.

There are two things which Governor Parker practices on his farm and preaches throughout the length and breadth of Louisiana, and they are to get rid of the cattle tick and to get rid of the scrub sire. The Parker Stock Farm was free of the Texas fever tick long before its neighbors had even considered the possibility of eliminating that curse to the cattle industry. As for the scrub sire, he has never been on the Parker Farm, but Governor Parker knows what a worthless animal he is and never misses an opportunity to encourage others to get rid of him.

The herds on the Parker Farm are beautiful to look upon. Well-bred, well-fed, con-

Elrie Robinson in his uniform as a captain of the American Red Cross during the recent war. The decoration on his breast is the Russian order of St. Stanislaus.

tented and fat, they bring joy to the heart of the lover of animals.

The cattle end of the business is devoted to Herefords and Holsteins and their grades. Breeders are shipped to many different sections of the country, and the grades are shipped to the packers. One of the experiments made here which begins to show suc-

Belle's Lad, 2-year-old Hereford bull, held by J. Bob Daniel, manager of the Parker Stock Farm

Parker's Fidessa King, junior champion at Louisiana State Fair

cess is the crossing of a Brahma bull with high-grade Hereford cows. This cross makes a fine type of beef animal.

Duroc Jersey Hogs Selected

The Duroc Jersey was selected as the best hog for this section of the country, and the Parker Farm boasts as fine a herd as it is possible to get together. The farm has one herd of twenty-five sows, direct descendants of such sires as Pathfinder, Great Orion's Sensation, Orion's Cherry King, Joe Orion 2d and Scissors. As with the cattle, hogs are produced for both breeders and packers. Of late years, boys' pig clubs have been in great vogue in Louisiana, and the Parker Farm has been a great help to the movement, furnishing pigs to school boys at purely nominal prices.

All the stock used on the farm is home-raised. High-grade jacks and Percheron and saddle stallions are kept on the place and these, bred to native mares, produce a good type of animal. Shetland ponies are also raised here, and the demand is about equal to the supply.

When it came to clearing up the old place, herds of Nubian and Toggenburg goats were turned loose to get rid of some of the undergrowth. These strains were selected because of their value as milkers, and there is a steady demand for the nannies on account of the value of their milk for babies.

The Parker Farm does not go in much for wool-growing, but has a large herd of Southdown sheep which are disposed of as breeding animals.

Farm Raises All Its Own Feed

Wild turkeys, wild geese and wild game chickens are raised on the place, not as a commercial proposition but for table use on the farm.

Every bit of feed used on the farm is

grown there. Corn, lespedeza hay, oats and potatoes are grown in great profusion. Large barns and silos are filled at the proper seasons, and there is always an abundance of wholesome feed on hand.

A saw-mill operated on the place saws from native cypress and pine logs all the lumber needed for the constantly expanding operations. A blacksmith shop and grist mill are also part of the equipment of this progressive place.

For several years past, Parker herds have been exhibited at fairs in Louisiana, but this year neighboring states were invaded, and with considerable success. This year exhibits were sent to the Tri-State Fair at Memphis, the Interstate Fair at Chattanooga and the Arkansas State Fair at Little Rock, as well as to our own Louisiana State Fair at Shreveport. At these four major fairs the Parker Stock Farm won in all 110 prizes, including ten championships, and purses aggregating \$1,188. It is estimated, as they used to say in the army, that the Parker Stock Farm has won enough ribbons and pennants to dress a first-class battleship and enough cups and trophies to stock a jewelry store.

One might think that the business of being governor would cause Mr. Parker to lose interest in the details of his big stock farm, but such is not the case. There are but three things (all of 'em grandchildren) which give the governor more pleasure than slipping away from the capital and spending a while with his animals. Arriving at the farm, he dons corduroy trousers (only he calls 'em "pants"), khaki shirt, boots and an old flop hat and is off on a walking excursion to all parts of the farm. He knows all the animals by name, their pedigrees and records, and is thoroughly fa-

Fancy Orion King, grand champion boar, Interstate Fair, Chattanooga, Tenn.

miliar with the operation of the big place in all its details. It takes a mighty good walker to keep up with the governor when he gets started out like this, and the governor finishes up fresher than many a younger man he takes with him.

An Interview That Was Earned

I'll never forget an experience I had with him along this line. He had just been nominated for governor and was up at the farm taking a rest from a strenuous campaign and seeking relief from the importunities of the job-hunters, when I went to interview him for a daily paper. He was just starting out on one of his hikes and invited me to accompany him. I had just returned from the war; I thought I was in pretty good hiking trim, and so I gladly accompanied him. That afternoon we covered a distance estimated by me as being fully equal to that from Neufchateau to Nancy, the governor-elect talking about his stock all the

Parker's Comanche, said to be the greatest Polled Hereford in the South

thought or not, but it is a matter of record that the Legislature shortly afterward enacted legislation of great benefit to the farmer.

One of the outstanding features of Governor Parker's administration is legislation which provides for building a new agricultural and mechanical college, which will cost more than five million dollars. Betterment of educational facilities for the farm youth is one of his hobbies, and he found the way to raise the necessary funds to build the new institution without adding to the property tax.

A GUIDEBOOK TO FLORIDA

The attractions of Florida and the desirability of reaching Florida by way of the Illinois Central System are well set out in an attractive booklet of descriptions and beautiful pictures of scenes along the route of the Seminole Limited, which has been issued by the passenger department. A feature of the booklet is the concise manner in which the principal points about each locality are summed up.

Sensation Lady, grand champion sow, Tri-State Fair, Memphis

while. Doggedly I kept on and finally pinned him down to the things which I and a great many other people wanted to know. He told me all. I started away, visions of a first-page story in my mind, when he called after me: "Now, young man, don't you dare print a word I've told you." And that was that.

Shortly after his inauguration, the governor let the Legislature lay off for a day and brought the whole bunch up to the stock farm for a barbecue. If you have never been fortunate enough to attend an old-fashioned West Feliciana barbecue, you have something to hope for. The whole affair was a success and must have proved illuminating to the members of the Legislature. I don't know whether the governor had given the psychology of the matter a

Tobacco—A Most Valuable Non-Essential

*Its Farm Value in the United States in 1920 Was
More Than \$300,000,000; We Carry Much of It*

By **B. T. BRECKENRIDGE,**
Assistant General Freight Agent,
Louisville, Ky.

THE Illinois Central System handles a substantial amount of the tobacco traffic of the country.

Tobacco—a weed of the Nightshade family—is non-essential, and yet it is an article of world-wide commerce, heralded in prose and verse as a medium of consolation, a curb to temper and a stimulant to thought.

Tobacco was raised and in general use by the American Indians long before the advent of the white man. It derived its name from the Indian word "tobaco," meaning tube or pipe in which the aborigine smoked his weed. Its generic name, "nicotiana," was given to it in honor of Jean Nicot, French ambassador to Spain, who sent to Paris in 1558 some seeds he obtained from a specimen brought to Spain from Mexico in that year by F. Fernandez.

In 1920, the last year of complete statistics, the United States produced 1,508,064,000

"My old pipe—truest of friends; companion of my reveries; master architect of my castles in the air—how much of life's pleasure I owe thee."

Our tobacco shed at Louisville, Ky.

pounds of tobacco, or nearly 50 per cent of the world's production. The farm value was \$318,359,000. A total of 497,000,000 pounds of tobacco was exported and 70,000 pounds imported.

More Than 50,000,000,000 Cigarettes

A total of 410,000,000 pounds was manufactured for chewing, smoking and snuff, in addition to which there were manufactured 8,700,238,092 cigars and more than 51,000,000,000 cigarettes.

As a source of revenue to the United States, the receipts for the fiscal year ended June 30, 1920, amounted to \$295,809,355.44, or 5.4 per cent of the total receipts from internal revenue sources.

The consumption of tobacco has increased from 76,000,000 pounds a year, in the decade following the Civil War, to nearly a

A typical Kentucky tobacco field

billion pounds. The average per capita consumption has increased from two to eight pounds. Suppose we put it in another way that will better enable us to understand the relative importance of tobacco to some of the other leading luxuries. The average amounts spent in 1920 by the people of the United States were as follows for the items shown:

Candy	\$9.50
Ice cream, soft drinks, etc.....	5.75
Cigars	4.90
Cigarettes	7.60
Tobacco and snuff.....	7.60

The production of tobacco is not confined to any particular state or territory, but it may be grown successfully in all latitudes

The light burley is distinctly a domestic manufacturing type, and very little of it is exported. It is the principal type of the United States in the manufacture of cigarettes.

The dark tobacco is exported to the extent of probably 80 per cent of the total production. It is unsuited for domestic manufacture except for snuff and a limited use as plug wrapper and some other small ways. The leaf is of heavy body, dark in color and rich in nicotine.

Harvesting and Selling Tobacco

Harvesting is accomplished by cutting the stalk just below the ground leaves. Burley stalks are split and put astride sticks, and the dark is stood on its top ends in the

The loose leaf auction floor

from southern Canada to Central America. However, the flavor and quality of the product are deeply influenced by variations in soil and climate. Each district produces a tobacco of certain well-known characteristics, and the type of leaf is further influenced by the methods of growing and curing.

A Story of Constant Care

I wish space permitted my telling you the story of tobacco raising. It is mighty interesting. It is a story of constant care and continuous effort, much more so than raising any of the other major agricultural products.

Generally speaking, Kentucky tobaccos are divided into two types: light burley and dark. The light burley is largely confined to the limestone soils of the eastern and the dark to the clay soils of the western part of the state. The two types are produced in nearly equal amounts.

field for a few hours to wilt. Then the tobacco is hung on sticks in the tobacco barns for curing.

Burley is all air dried. Dark is partly air cured and partly fired. After curing, the leaves are stripped from the stalks and separated into grades. The grower frequently makes as high as ten grades. Primarily there are three grades: leaf, lugs and trash. Leaf is subdivided into almost innumerable grades based on color, body, length of leaf, weight, condition, etc.

After grading, the leaves are made into small bundles, or "hands," by tying the butt ends of several leaves together with a single leaf.

The method of marketing has undergone changes in the last eight or ten years. Formerly most tobacco was prized (pressed in hogsheads) and brought to the market in that shape. Later there was introduced the method now used and known as the

On the Louisville breaks

"loose leaf auction." Here the tobacco in "hands" is piled on large flat baskets, each grade separately, and arranged on a floor open to inspection and accessible to the passing auctioneer and prospective buyer.

Growers May Sell Co-operatively

At present, however, there is a movement under way to organize the growers into a co-operative marketing association in the dark tobacco district, and if this materializes it will probably mean the passing of loose leaf floors and effect a radical departure in the method of marketing.

Shipping from primary markets is largely done in hogsheads with some few exceptions, such as casks or quarter hogsheads to Africa and a little in boxes. The hogsheads are not uniform in size, but range from 48 by 48 inches to 52 by 56 inches, although the larger sizes are rapidly disappearing. Hogsheads of burley usually weigh from 800 to 1,000 pounds; dark, 1,500 to 1,800 pounds.

The history of Kentucky mighty nearly begins with tobacco. In 1775 white pioneers migrating from Virginia and North Carolina located a permanent settlement at Boonesboro, Ky. Tobacco was one of their principal crops, and this was the beginning of the tobacco industry in Kentucky. As had been the custom in Virginia, tobacco became a medium of exchange. The surplus over home consumption was shipped by river to New Orleans for export. The industry has grown until Kentucky is now producing one-third of the entire production of the United States.

An Important Crop in Kentucky

Kentucky produced in 1920 467,500,000 pounds. Other states produced: North Carolina, 384,000,000; Virginia, 177,390,000; Tennessee, 85,000,000; Ohio, Wisconsin, South Carolina and Pennsylvania, about 60,000,000 pounds each. This year's crop for the United States is estimated at 1,352,-

Staves lifted for inspection

Staves replaced after auction

537,000 pounds; for Kentucky, 454,212,000 pounds.

In Kentucky tobacco is equal to about one-fourth the value of all crops grown in the state. The normal price is from 5 to 30 cents a pound, but in 1919 it went as high as 90 cents a pound. The superior return to the grower of tobacco over other crops is evidenced in the table shown below, taken from the report of the United States Department of Agriculture for 1920:

	Value of Crop per Acre	
	Kentucky	United States
Wheat	\$ 19.48	\$ 19.86
Oats	17.16	16.61
Corn	25.01	20.93
Cotton	25.14
Tobacco	127.50	168.05

Of course, it must be remembered in connection with the foregoing table that tobacco raising requires more attention and more technical work than most forms of agriculture. One man and a team can ordinarily cultivate about thirty acres, but can raise only about five acres of tobacco.

HUMILITY

It isn't well to have too much humility. The man who gets into the habit of refusing to take credit for the good work he does is likely to be surprised when he discovers that people accept his denials as the truth.—FORBES.

Division Surgeon Winner of War Medal

Dr. William B. Malone of Memphis Did Valuable Work in Hospitals Near the Front in France

Distinguished Service Medal Citation

William B. Malone, Major, Medical Corps, United States Army. For exceptionally meritorious and distinguished services as chief of surgical teams in hospital formations at the front through all the combat activities of the American Expeditionary Forces from the Cantigny offensive to the close of the Meuse-Argonne offensive. With rare technical skill and high professional attainments he rendered service of a most conspicuous nature in a position of great responsibility and at a time of gravest importance.

THE citation above, with the Distinguished Service Medal, was awarded last July to our division surgeon at Memphis. He served in the Medical Corps from May 18, 1917, until after the close of the World War.

Doctor Malone has been dressing injured fingers for the employes of the Illinois Central System since the last days of the link-and-pin couplers. That was back in 1897, when he was a medical student. He used to spend much time in the office of Dr. W. B. Rogers, our district surgeon at Memphis at that time, and he was allowed the practical experience of dressing fingers when the injury was not too serious. That was before he was employed by the Illinois Central System, and even before he had started practicing.

Fingers Injured in Coupling

When the automatic couplers began to be placed on the new cars, many fingers were mashed in trying to couple them to the old links and pins, he says. Every day someone came into the office with a badly bruised hand. Nine out of ten of the missing fingers on the hands of the older railway employes can be attributed to the experiences of those days, Doctor Malone says.

On January 1, 1904, Doctor Malone was appointed district surgeon at Memphis, and on July 1, 1911, he was appointed division surgeon.

When the United States declared war, Doctor Malone lost no time in making ar-

rangements to join the Medical Corps. He went to Washington and offered to organize a medical unit at Memphis for overseas service. He was commissioned a major and given authority to organize a unit consisting of twelve officers, twenty nurses and fifty enlisted men. The unit was known as Hospital Unit P and was mobilized November 12, 1917, at Camp Greenleaf.

Hospital Unit P sailed for Europe January 8, 1918, and went to Base Hospital No. 15 at Chaumont, France. The unit was turned over to that hospital, and Doctor Malone was assigned to a surgical team of the French army in Picardy.

Saw Service on Various Fronts

That part of the battle front was the most terrible that he witnessed, Doctor Malone says. Thousands of sights far beyond his description were brought before him, he says, and he helped patch up men who were mangled so badly that it was difficult to tell that they were human beings.

On August 1 of that year, Doctor Malone was transferred to the United States Army and was sent north of Chateau Thierry,

Dr. William B. Malone

where the Americans were hammering at the German lines. He remained there until the drive was completed and then went to Evacuation Hospital No. 9, just below the Argonne.

Evacuation Hospital No. 9 was the closest surgical hospital to the fighting line in the Argonne, and at least half of the evacuations passed through it for treatment. Hundreds of soldiers were lined up waiting for operations at that place, Doctor Malone says.

When Doctor Malone returned to this country, he resumed his practice at Memphis.

Dr. Malone's Medal

THE RIGHT YOUNG MAN

"A question I am often asked is this," says Doctor Steinmetz: "'Can you tell, by watching a young man, whether he will win out or not? And, if so, what is there about him that helps you to decide?'"

"I haven't given a great deal of thought to the matter; and there is only one thing that I can say about it with any particular conviction. If a young man goes at his work only as a means to an end—like getting a raise in salary, or making a million dollars—I am not much interested in him. I am interested in him if he seems to do his work for the work's sake! If he does it for the satisfaction he gets out of it, and with the idea of making the work itself accomplish more in the great scheme of things, he will advance.

"Work is like an engine on which the workman rides. The man who is absorbed in making his engine function better and more powerfully, travels with it."—MARY B. MULLETT in *American Magazine*.

TO SPEED MOTOR CAR HANDLING

The Illinois Central is planning to construct a modern platform at Memphis for the easy loading and unloading of automobiles, according to an announcement made by W. B. Ryan, assistant general freight agent. It will be equipped with all modern devices used for this class of work and be sufficiently large to accommodate any amount of business offered. Detailed plans are now being worked out, and the automobile receivers at Memphis will be invited to give their criticisms or suggestions before the work is actually started. This will be done to be sure that the proposed arrangements will adequately serve the automobile industry, says Mr. Ryan. Location of the platform will be made at a very convenient point.—Memphis (Tenn.) *Commercial-Appeal*.

ARE THE RAILROADS TO BLAME?

Transportation Shortage Hurts Farmers

*Over-Regulation by Government Agencies Blamed
by Chamber of Commerce Head for Present Troubles*

By JULIUS H. BARNES,
President,

Chamber of Commerce of the United States

*From an address made before the National
Conference of Business Papers at New York,
October 12.*

I WANT to mention the railway situation at this point. No man today can claim that a public facility such as the railroads, vested as it is with the public interest, touching every man's business and home, can be left entirely devoid of some public regulation. It is inconceivable that there should not be some public control of a facility in whose hands rests the power to make or unmake entire communities by a rate structure resting in its officials. That goes too far, but we can create an informed and fair public opinion which will recognize not only the justice of allowing a field of return for privately owned and operated facilities, and the wisdom, from the public's own standpoint, of allowing such adequate return if there is to be a constant improvement and expansion of their facilities.

You know that today the transportation facilities of this country are inadequate for the business now tendered them. I want to use as an illustration the grain trade of this country and show you how far-reaching this is in its effect. I speak of grain, not because I am provincial enough to believe that it is the major industry of this country, but because out of thirty years' experience in grain exporting I can qualify somewhat as a competent witness on that subject, and because you will lift the similarity out of grain into the lines of industry with which you are more familiar.

Farm in No State of Collapse

You will agree with me that if there is one single menace to the onward march of business activity and prosperity in this country it rests in the dissimilarity between the prices paid for farm products and the prices of those commodities which the farmers must buy.

I do not follow the full way with those who say that the farm is in a state of collapse. It is no such thing. Twenty cent

Julius H. Barnes

cotton and ten dollar hogs will take care of a large part of our farmers with a measure of prosperity, but the grain-raising country has suffered and the grain-raising country has today the sunrise of hope before it.

Yet this is the situation: From the first of September until the first of October, in the very height of the crop-moving period of this country, the main channel of export outlet for grain in America, from Buffalo to New York, was practically closed. For thirty days the four great trunk lines that serve that channel of movement contracted no grain for movement. The grain moved from the West until it had congested and exhausted the elevator facilities of Buffalo—18,000,000 bushels. As soon as the unloading facilities were thus exhausted, the lake carriers, reflecting the apprehension of their owners that the boats would be tied up with undischarged cargoes instead of being returned, made an advance in the lake rates, in thirty days, from 2 cents per

bushel for the carrying of grain from Chicago and Duluth to Buffalo to 6 cents.

The rail rate from Buffalo to New York, on the published tariff, is 9 cents, but as I explained to you practically no grain was moving. The route that was open—the Erie Canal—with totally inadequate facilities, advanced the rate to 13 cents per bushel, paralleling the railroad, which was supposed to carry it for 9.

From Buffalo to Montreal is a water route. It is equipped with the facilities of forty years ago. It can handle a vessel of 250 feet in length, when the lake carrier of today west of Buffalo is 600 feet in length. That means that the carriers that operate on this 40-year-old route are limited in number, and limited more in carrying capacity. Thirty days ago those carriers were operating on a tariff from Buffalo to Montreal of 6 to 7 cents per bushel. Last Saturday 15½ cents was paid for the carriage from Buffalo to Montreal. That is the pressure of grain west of Buffalo seeking an outlet to foreign markets.

Foreign Advances Poorly Reflected

The effect of the market rise in prices has been this: In thirty days the foreign price of wheat has advanced 25 cents per bushel, the foreign price of corn has advanced 20 cents per bushel, because those markets are inadequately supplied. The market price in America of wheat has advanced 10 cents per bushel and of corn 10 cents per bushel. That is, the spread between the ultimate foreign price and that which should be reflected back to our farms has widened from 10 to 15 cents per bushel because of the lack of adequate facilities to move the crop pressing on the market in the west.

I make this statement out of thirty years' experience as a grain exporter, watching the diversion of grain from route to route for a half cent per bushel economy of one route against another. As a member of a trade that has been content for years to lift grain from the western primary markets, like Duluth, Port William and Chicago, and deliver it to Hamburg and Rotterdam and Liverpool and London for a charge of 1 cent per bushel, I make this statement that we have today four billion bushels of grain in the West, the value of which to the farmer in every market in the West is at least 10 cents per bushel below a proper relation with the European consumer markets. You take 10 cents per bushel, assum-

ing this continues through the crop year—and it won't, thank goodness—and it would mean a loss in farm revenues of \$400,000,000.

Over-Regulation of Railroads Blamed

I don't need to tell you business men, familiar with business, what the loss of \$400,000,000 of enlarged spending power to the grain farmers alone would mean to other industries in this country.

That train of evil, that train of economic loss to a basic industry of this country, follows, I believe from an over-rigid system of Government regulation over our railroads, which has extended over ten or twelve years. By a process of control of revenues without any responsibility for operating costs we have destroyed the earning power of our railroads. We have thereby undermined their credit, and from neither source, of earnings nor of credit, have they been able to maintain their equipment in a proper expansion with the growth of this country.

I said that the Chamber of Commerce of the United States claimed some credit for having lightened this hand around the throat of industry in this country, and particularly the railway industry, from over-regulation. Today, with this situation, it is proposed by farm senators in Congress that at this coming session they are going to restore the authority of state commissions to control railway rates. Just follow that a moment, gentlemen—forty-eight individual state commissions with no responsibility for the operating results of systems which must operate as a whole (many of them national in character) are going to assume a control in the interest of their own states of the revenues from the evil effects of which we have just escaped. You can depend upon it that the Chamber of Commerce of the United States will stand against that, and I hope with the unanimity of business support behind it.

THE VALUE OF WORK

Thank God every morning when you get up that you have something to do that day which must be done, whether you like it or not. Being forced to work, and forced to do your best, will breed in you temperance and self-control, diligence and strength of will, cheerfulness and control, and a hundred virtues which the idle will never know.

—CHARLES KINGSLEY.

New Race Track Now in Use on Our Lines

Dade Park, Near Evansville, Ind., Is in Kentucky, Although It Is North of the Ohio River

By A. W. WALLING,
Chief Rate Clerk, Evansville, Ind.

SATURDAY, November 18, marked the close of the first running races held on the newly constructed course at Dade Park, Ky. In the construction of this track the Illinois Central played an important part.

A tract of land lying alongside our rails on McClain's Branch had long been covered with fields of corn, but the owner of the land, being a true Kentuckian, foresaw its value as a race course and the idea, born over night, was soon materialized.

The project was begun in the spring of 1922, and the construction of the track was rushed with remarkable rapidity. The Illinois Central played no little part in this construction, and much credit is due C. C. Kunz, agent at Evansville, Ind., for the prompt and efficient handling of all materials to the track. At least 200 cars of

Entrance to Dade Park track

lumber, cement, brick, sand, etc., were handled by this company in record time.

Dade Park was the name chosen for the new track, in honor of A. B. Dade, one of the most renowned starters in the country. The Green River Jockey Club was organized, and construction was pushed with all possible speed. Although located officially in Kentucky, the track is on the Indiana side of the Ohio River, this being due to the fact that the river changed its course years ago.

This track is considered by racing experts to be one of the largest and fastest tracks in the United States, the oval being one and one-eighth miles in length, with two chutes—a mile chute at right angles to the grandstand and a seven-eighths mile chute. These chutes eliminate starts on the turn of the track, and all starts can be seen clearly from any place in the plant.

The park has a steel and concrete fireproof grandstand accommodating 6,000 persons. The pari-mutuel betting stand and the concessions are located under the grandstand. A mezzanine floor for women overlooks the mutuel plant. The lawn fronting the stand is terraced to afford an unobstructed view of the entire track.

An attractive and commodi-

Scenes at the Dade Park track

The Dade Park track in use

ous paddock, with horsemen's office quarters, is located about three hundred yards from the grandstand. This building is constructed of brick and stucco. The jockeys' house is above the paddock.

A parking space is provided to accommodate 2,500 automobiles. Sixteen concrete stables, of thirty-two stalls each, afford ample accommodations for the horses. A large feed barn affords a sufficient supply of feed.

With everything completed and hundreds of thoroughbreds on the scene, the first harness races opened October 19. Some of the best horses in the world competed in

these races. Peter Manning, the world's fastest trotter, performed against time.

The running races opened November 8 and lasted until November 18. Fair weather blessed each day, and the races were declared by old-timers to be among the best ever held in this country. Huge crowds were present every day, and some of the world's best thoroughbreds delighted the hearts of racing enthusiasts.

As a whole, the owner of Dade Park, the Green River Jockey Club, Inc., of which Lee Baskett is president, can well boast of its achievement, and the Illinois Central, in helping build the park, can add another laurel to its list of notable accomplishments.

Development of Automatic Train Control

*Recent Order to Illinois Central and Other Roads a
Result of Experiments That Were Begun in 1888*

A recent order of the Interstate Commerce Commission requires the installation of an approved train control device on one passenger engine division of the Illinois Central in the territory between Chicago and Memphis. A committee consisting of general officers of the company representing the engineering, mechanical, operating and purchasing departments has been appointed to study the various devices now under development with a view of selecting one which will best meet service conditions.

AUTOMATIC train-stop or train-control devices have been defined by the Interstate Commerce Commission as systems or installations so arranged that their operation will automatically result in one or the other or both of the following conditions:

First, automatic train stop—the application of the brakes until the train has been brought to a stop.

Second, automatic speed control—application of the brakes when the speed of a train exceeds a prescribed rate and continued until the speed has been reduced to a predetermined and prescribed rate.

As a general explanation of the requirements of the commission, an automatic train-stop device shall be effective when the signal admitting the train to the block indicates stop and so far as possible when that signal fails to indicate existing danger conditions. An automatic train-control or speed-control device shall be effective when the train is not being properly controlled by the engineman. An automatic train-stop, train-control or speed-control device shall be operative at braking distance from the stop-signal location if signals are not overlapped or at the stop-signal location if an adequate overlap is provided.

Third Safety Device Called For

The two outstanding safety devices now used in the control and safe handling of trains are the automatic air brake and block signals, both of which have been developed to a high degree of efficiency after many years of experimentation, tests and actual service. It is now proposed to install and

develop a third safety device which will co-ordinate the two other devices, with the idea of eliminating accidents due to the failure of the human element.

Many inventions have been put forward in an attempt to accomplish this end. As far back as 1888 an installation was made on one of the eastern trunk lines. This device consisted of a glass tube connected to the train line air system and so located on the locomotive that when an attempt was made to pass a fixed signal in the stop position the tube was broken by an extra arm connected to the signal and extending toward the track, resulting in an emergency brake application. A passenger train on which this device was in service was automatically stopped in a tunnel, and the passengers were rescued only after considerable delay and discomfort. This resulted in the removal of this type of device, and no further installations of this character were made on steam roads.

First Official Action in 1906

In 1906 Congress directed the Interstate Commerce Commission to investigate and report on the use of, and necessity for, block signal systems and appliances for the automatic control of railway trains in the United States. This was followed up by the commission, which in its report recommended an investigation by official tests of automatic appliances for control of railway trains, with an appropriation to conduct such tests. In 1907 Congress appropriated \$50,000 to conduct this investigation. A special board, known as the Block Signal and Train Control Board, was appointed to carry on the work. For five years the board devoted its time to a study of the subject and to investigations and tests of various devices. The final report was made on June 29, 1912, in which it was recommended that eighteen devices merited further tests under operating conditions.

In 1913 Congress made a further appropriation of \$25,000 to cover the recommendations of the board. This work was assigned to the Division of Safety Appliances of the commission, later known as the Bu-

reau of Safety. This bureau continued the work until 1920.

In the Transportation Act of 1920 the Interstate Commerce Commission was authorized, after investigation, to order the carriers or any of them to install upon the whole or any part of their lines automatic train-stop or train-control devices or other safety devices which comply with the specifications and requirements prescribed by the commission.

The commission invited the co-operation of the American Railway Association in 1920, and as a result a joint committee on automatic train control, consisting of representatives of the signal section and the operating, engineering and mechanical divisions of that association, was appointed in November to co-operate with the Bureau of Safety.

This joint committee had the benefit derived from the study and report made on this subject by the automatic train control

committee of the United States Railroad Administration, which was appointed January 14, 1919, by the director general.

Intensified tests were made by the joint committee in co-operation with the Bureau of Safety of certain devices in service on steam railroads.

As a result of the information and data derived from years of study, the Interstate Commerce Commission deemed it opportune, in view of the development of the act, to issue order No. 13413, dated January 10, 1922, to forty-nine representative carriers to show cause why they should not install some approved system of train control on a full passenger engine division between designated points.

The hearing of the case was closed in Washington on April 15, and a decision rendered by the commission on June 13, 1922, wherein the designated carriers were given until January 1, 1925, to complete such installations.

Some Early Hardships on Western Lines

*Wash-Outs Were Common in Experience of George S. Myers,
and Chances Had to Be Taken in Order to Get Along*

By **GEORGE S. MYERS,**
Pensioned Passenger Conductor,
Iowa and Minnesota Divisions

I BEGAN work as a brakeman on the Dubuque & Sioux City Railroad in September, 1863. I worked there for three or four months, but, boy like, I wanted to see more of the world; so I resigned and went to Chicago, where I worked in several business places for some time. Fortunately or unfortunately, I met an old friend there one day who was a brakeman on the Rock Island, and he wanted a partner. I could not resist the lure of the rail; so I resigned my job and took a job braking with extra crews between Chicago and Rock Island. After a month or so our crews were laid off. I then went to Bloomington, Ill., and was employed by the Big Four between Chicago and Bloomington. O. Vaughn was trainmaster.

Father insisted I should return to the Dubuque & Sioux City Railroad, and although I had passed the age of 21 I did as he wanted me to and returned there to work as a brakeman, in which capacity I worked until the fall of 1866, when I was made a conductor. I got along very nicely, but in the fall of 1871 I resigned because the superintendent promoted a man around me to passenger service, saying that I was too young to be a passenger conductor. After that I engaged in farming for a while, but I finally returned to train service again on the Dubuque & Sioux City, because I wasn't satisfied anywhere else.

Very Nearly Got Into a Wreck

In those years we had some bad wash-outs. I remember on one occasion we had got as far west as Dyersville, where we found a bridge unsafe. Rain had been falling heavily all day. We could not go on west; so we turned our engine on the wye at Farley and started back to Dubuque. The caboose was full of passengers; so I rode on the engine to see that everything went along all right. Going into a big cut near Peosta we found about three feet of water over the track.

Our engineer, George Dumont, was an extremely careful man—almost too much

George S. Myers

so, we thought, because in those days you had to take a chance in order to get anywhere. We (the fireman and I) did not call his attention to the fact that the ties were floating for fear that he would quit and back up, and we felt sure we could go through. Finally we ran into a big bunch of ties and debris. George saw them

and would not go any farther; so we backed up to Epworth and tied up for the night.

The next morning things had cleared up to some extent, and we started out again. At Julien we met a section foreman who told us that sixteen bridges were gone between Julien and Rockdale. We then realized that George's carefulness had undoubtedly saved our lives. Had we attempted to go on, we would have run into these wash-outs. It developed that all the bridges between Cedar Falls, which was the end of the road at that time, and Dubuque were out. This taught me a lesson, and after that when we had a severe or extraordinary rain I tied up until the bridges had been inspected. At this particular time the road was out of commission for six weeks.

During 1867, 1868 and 1869 I ran between Dubuque and Iowa Falls daytime only. John Looby ran opposite me, and he has long years ago passed to the final terminal. In these days hand brakes were used, and engines had copper flues. Enginemen did not like to reverse engines, claiming it made the flues leak. The freight cars had hand brakes on one pair of trucks only. The brakemen had to be on top all the time, had to help wood up the engine at necessary points and also had to do many other things not known to the modern brakeman.

Started Work at \$28 a Month

My pay at the start was \$28 a month, twenty-four hours constituted a day's work,

and we got no extra pay for overtime—in fact, we didn't know what that word meant. The head brakeman had to go inside the water tanks and open a valve to take water. The water spouts were low, and one had to keep a careful look-out for them to avoid injury. The freight engines and cars were small, about twenty-seven tons making the largest cars, and fifteen or sixteen of them made a full train from Cedar Falls to Dubuque. An even one hundred freight cars, eight passenger cars and three combination mail cars constituted our rolling stock.

I was very fortunate during most of my railway life. No one was ever injured on my train except myself, and no one was ever killed. My caboose was never hit, and my engine never hit any other caboose.

On March 3, 1868, as we were going east, my engineer, James Wood, found some cattle on the track and called for brakes. My regular caboose was in the shop, and the car I had did not have any handholds beside the door. I stepped to the door to look out, grabbing for handholds, without thought, and fell out, breaking both bones in my right leg. This laid me up for seven months, but I was glad to come out of it with my own leg instead of a wooden leg.

There were no hospitals in those days; so I went to the home of T. W. Place, my brother-in-law, and Dr. G. W. Staples attended me. I got along pretty well for a number of years, but increasing age made me a cripple. October 1, 1909, I was pensioned. Doctor Owens, who was chief surgeon, called me to Chicago, as he wished personally to examine me. This he did, on account of my game leg. Otherwise, he declared, I was O. K.

On August 29, 1921, I lost my wife, the saddest, hardest blow of all, after forty-eight years of wedded happiness. I am now on my seventy-ninth year. My health is remarkably good; my sight and hearing, a little deficient. It is true life holds but little for me, but I am a Christian and will wait patiently until the good Lord calls me for my last trip.

INVESTMENTS

There is no sure way of telling a good scheme from a bad one, when it is first launched. All you can do, if you don't want to lose your money, is to keep out of schemes altogether, and put your money

into going properties.—HERBERT N. CASSON in *Forbes Magazine*.

Your Job—and You

I don't care whether you are polishing jewels for the works of a watch, or operating an electric crane that lifts tons of steel as if the load were a few feathers, or making little girls' dresses, or sweeping the factory floor—you will get out of your job exactly what you put into it.

The reason my writings are being published more and more widely isn't because I have exceptional ability as a user of words or any remarkably original ideas to startle the world into taking notice. Not a bit of it. The real reason is because I love to write, love to pass on whatever of cheer finds its way into my own mind and heart; because I mean what I write. If I were insincere, if I should write this kind of stuff merely for the dollars and cents of it, folks would be quick to detect that insincerity between the lines—and they'd quit reading.

If you look upon your work as a means only of bringing you to the weekly wage envelope, the contents of that envelope are likely to remain the same week after week, month after month, year after year. If the job in hand is an opportunity for you to see just how well it can be done—if you look upon every task as a chance for you to add to your skill—if you glory in being looked upon as a reliable, earnest, conscientious workman—you are on the way to better things.

The organization for which you work is you, multiplied by hundreds or by thousands. The spirit of the shop is your spirit. The real heart of the business is your heart.

Climb! Study the business. Know all you possibly can about your particular work. Then observe the other fellow's work. Know why this is done one way and that another way. Put the best there is in you into everything you do. Genius, you know, has been defined as an infinite capacity for taking pains. Take pains. As the business grows, grow with it. Grow in ability. Grow in usefulness. Grow in determination to improve your work.

Man, you've got to grow! Things are humming along faster than ever in the history of the world. Opportunity knocks at the door of every man until it nearly wears its knuckles off. Opportunity is knocking at your door right now—the opportunity to make yourself a tremendous asset to the firm through your loyalty and interest and effort.

Grab hold and pull with the team!—
JEROME P. FLEISHMAN.

The Story of a Real Soldier of Fortune

Guy Molony, New Orleans Police Superintendent, Saw Service in South Africa, the Philippines, Central America and France

“ONE of the most pleasant jobs I ever had was at Stuyvesant Docks,” says Guy Molony, superintendent of police at New Orleans. “I thoroughly enjoyed my work and companions. Every one of the Illinois Central men I came in contact with was a good fellow.

“I was weighing grain there in 1914 and 1915, and I have regretted that my association with the Illinois Central System was not extended over a longer period. The work was tiring, and there was a lot of it; but it was a job that I could forget when I went home at night. I weighed more grain there under those pleasant circumstances than I ever hope to see again.”

Mr. Molony has been a soldier most of his life and is at present a lieutenant-colonel in the army reserve. He saw service as a lieutenant-colonel in France during the World War.

When he was but 16 years old he ran away from home, went to South Africa and joined the British army. England was having trouble with the Boers in 1900, and she was draining Missouri of its supply of mules for army use. The animals were shipped in great numbers to New Orleans, where they were placed on boats and sent to South Africa. Mr. Molony says that he saw shipload after shipload sail out of the harbor in New Orleans, and the thought came to him that this would be a good chance to see the world.

Seeing the World as a Mule Tender

He obtained a position as a caretaker of the mules on one of the boats and sailed for the war zone. The ship landed at Port Elizabeth, South Africa, where the mules were unloaded. Mr. Molony says that he followed the last one on shore and stayed there. No effort was made to force him to return, because he had not been paid and the company would be that much ahead if he stayed ashore. But the small amount of money did not appeal to him, he says. The air there was easy to breathe, and he wanted to see more of the country.

He went to the British army headquarters and became a British soldier. That

was his opportunity to travel in Africa, he says, and before he was out things were happening too quickly to mention in a diary.

He went through several battles against the Boers without a scratch and returned to the United States in 1902. The love of the army life had gained a hold on him, and he still realized that there was much of the world that he had not seen. It was not long before he joined the United States cavalry.

After two years of training in this country, he was sent to the Philippines to help quiet an insurrection. He was kept in service there for four years. The next year after he returned to America, he was in a party sent to Nicaragua with machine guns.

A Soldier of Fortune in Central America

The trouble in that Central American republic lasted only a short time after the United States soldiers arrived; but trouble broke out in Honduras after they had departed, and our soldiers were ordered back to Central America. General Bonillas had declared and was conducting a successful

Guy Molony

revolution when the United States soldiers stepped in to interfere. And he went right on conducting his revolution, regardless of the presence of the boys from up north, Mr. Molony recalls.

"We were licked properly in Honduras," Mr. Molony laughed. "General Bonillas drove us to our ship, and we set sail for the United States. When we landed, we got hold of a second-hand American gunboat, returned to Honduras and took the country."

Mr. Molony remained in Honduras as an instructor in artillery and machine gun practice at a military school in Tegucigalpa until 1914, when he returned to New Orleans and accepted a position weighing grain on the bin floor of the elevator at Stuyvesant Docks.

While he was working there he enlisted as a private in the Washington Artillery at New Orleans.

In 1915 he was made a second lieutenant, and in December of that year he was called into service across the river from New Orleans, where martial law had been declared. He left his work at the Stuyvesant Docks with a sad feeling, he says, and he praises highly the privileges that he was allowed there.

The next year he was sent to the Mexican border and became a first lieutenant. He was a captain in 1917, a major and then a lieutenant-colonel in 1918. The last two promotions came in rapid succession, and he was sent to France in July of that year. He was overseas until September, 1919.

When he returned to New Orleans, he and his brother went into partnership in the trucking business, and he remained in that until he was appointed superintendent of police by the new Commission Council of New Orleans.

A Suggested Program for Self-Education

By DR. FRANK CRANE

There is hardly a young man or young woman who reads these lines who cannot give himself or herself a good general education. All that is needed is a determined will, unflagging courage and self-discipline.

Every one of them wastes time enough in four years to secure advantages equivalent to a college course.

Here is a program. Follow it, or as much of it as you can. Put in an hour or two every day at it. And it will do you more good than a million dollars. Go to the library. Get books of primary instruction and study:

1. Some language, as Spanish or French.
2. History of English literature.
3. History of the United States. Some good book on the Constitution and Government, history of politics.
4. Textbooks on economics. (Read "Progress and Poverty.")
5. Ancient history. History of Greece. Of Rome. Of Europe in the Middle Ages. History of England.
6. Composition. Textbook on grammar and English construction. Practice writing daily.
7. The Bible, together with history of Jews and the life of Jesus.
8. Selections of classic literature, especially Greek and Roman. Selections from the French, German and English classics.

Use translations. Take these along during your vacations.

9. History of art. Frequent the museums. History of music. Hear as much good music as possible. History of architecture.

10. Read textbooks on botany, physics, zoology, entomology, chemistry, geology.

Ask your librarian or high school principal or Y. M. C. A. educational director, etc., for more detailed information.

Don't be discouraged that this list seems formidable. Attack in detail. Always have your book with you. Pursue your studies as a fad, a fancy. Get all you can out of it.

Get the habit. It is just as easy to get as the magazine or novel or movie habit.

Be intellectually curious. Seek to know everything. Keep your mind open, alert.

And it will mean money in your pocket, power in your personality, culture, the companionship of the best people, freedom from cults and mob manias, and altogether a richer and fuller life.—*Reprinted by special permission of Dr. FRANK CRANE.*

Let us commend to you the habit of rendering more service and better service than you are paid for, because it will do more than any other one thing to raise you to a position in which you will be indispensable to the business with which you are connected.—*Napoleon Hill's Magazine.*

Editorial

A HIGHLY IMPORTANT ADDRESS

When President C. H. Markham was invited to address the Railway Business Association at its annual dinner held in New York on November 9, the honor implied in the invitation was appreciated, since this meeting is generally regarded as one of the most important gatherings of business men of the year. This address was probably printed in full in more newspapers than any other address Mr. Markham ever made. Two examples of the widespread editorial comment made by the newspapers are printed in the Public Opinion department of this issue of the magazine, being the leading editorials which appeared in the *Louisville Courier-Journal* and the *Atlanta Constitution* of November 10. Mr. Markham's address in full will also be found in another part of this issue.

COURTESY IS APPRECIATED

It is sometimes discouraging to try to provide a smile and a cheery word for every occasion, when such efforts are met—as they frequently are—by suspicion or indifference; yet a sturdy continuance of courtesy is the thing that pays in the long run and earns for a public service institution, such as a railroad, a reputation that can be turned into cash for itself and for its employees.

Big business men know the value of courtesy, and they do not hesitate to express their appreciation of outstanding examples of thoughtful service. For instance, Henry B. Utley of Chicago, vice-president of the International Harvester Company, Inc., recently wrote like this to President C. H. Markham of the Illinois Central System:

"Prompted through some recent trips over your lines, I am writing to express my appreciation of the unusual courtesies extended by your road to its patrons—courtesies more pronounced, I am sure, than can be experienced on any other road in the land, or at least over any of the roads that I personally use with considerable frequency."

Mr. Utley himself gave an example of courtesy when he wrote that letter, for courtesy is thoughtfulness and good temper. Courtesy is the thing that makes life pleasant. We can't have too much of it on the Illinois Central System.

WHAT "ANTI-RAILROAD" MEANS

Suppose a candidate for high political office, such as governor or United States senator, were to make his antagonism to the farmers one of the principal issues of his campaign. Imagine him as favoring fixing the wages the farmers should pay their help and the prices they should receive for their products, with no provision whatever that prices be sufficient to cover the operating costs incurred as a result of fixed wages. Suppose, in short, that this candidate were to announce himself in favor of a policy which everyone who knows anything about the business of farming knows would drive practically every farmer in the country into bankruptcy, confiscate his property, and bring chaos and utter ruin to all classes of our population.

Such a candidate would be swamped under on election day—not alone by the votes of the farmers, but by the votes of all people possessed of the faculty of reason.

Our political processes are an interesting study. We have recently passed through a turbulent political campaign in which not one but many seekers of high political offices have based their campaigns principally upon their advocacy of a policy with respect to the railroads which is just as fallacious as the one outlined above, and which, if put into practice, would cause the utter ruin of farmers, business men, working people of all classes and trades, and of the country generally.

Every essential industry in the country, including agriculture, depends upon the ability of the railroads to render adequate service at all times. In recent years each recurrent period of business activity has found the railroads unable to furnish all the transportation required, and there have been widespread losses. If that condition

is to be corrected—and it must be corrected—the railroads must be enabled to earn a net operating income that will be sufficient to pay rentals of leased lines, interest on funded debt and dividends to stockholders, for unless they are enabled to do that they cannot hope to induce investors to provide the new capital required for constant expansion and improvement of the country's transportation machinery. It must be evident to every thinking person that such a constructive policy is not in the interest of any one class or group or faction alone; it is in the interest of every individual and in the interest of the country as a whole.

Why, then, do candidates for political office find it profitable to wage war upon the railroads, to advocate policies that every informed person knows will drive the roads into bankruptcy, confiscate their properties, and make the efficient functioning of the nation's transportation machinery impossible?

The first answer is that many persons are still blinded to reason by the prejudices which have been inherited from another generation. A decade or so ago the country was moved to a frenzy of anti-railway hatred by politicians and others who rose to power and influence on the storm they created, based upon the misdeeds of a few railway men. The history of American railroads is not unstained, any more than the history of any other great industry or the history of any great movement of any kind is unstained. Since history began, there have been men who have yielded to temptation. It is perfectly right and proper that effective safeguards should be erected about the conduct of the railroads to prevent the recurrence of abuses of power, and such safeguards have been erected. Is it the part of wisdom to allow the prejudices inherited from former times to move us to follow a course that can end only in our own destruction?

There is a second answer to the question, and that is that we as men and women identified with the operation of the railroads have neglected our opportunities to inform ourselves about the danger which threatens us and everything we hold dear if the destructive policies advocated by some politicians should be made effective, and consequently we have not fully utilized our opportunities to promote constructive treat-

ment of railway questions. We owe it to ourselves and our devotion to the progress and success of our calling to be ever mindful of the effect upon the railroads, and upon our communities, of the destructive policies which from time to time are espoused by vote seekers who prey upon the prejudices of unthinking people.

There is no reason to despair over the essential justice of government by public opinion, simply because of the effect it sometimes has of carrying into high offices those who ride upon the waves of prejudices and economic fallacies. As long as public opinion on railway questions can be dominated by misinformation, there will be politicians who will profit thereby. We can't cure the politicians, but we can educate the public, so that the politician who bases his campaign upon antagonism to the railroads will go to the same fate as one who would be foolish enough to base his campaign upon antagonism to farming or any other essential industry.

STANDARDS OF LIVING

The following figures have recently been given for average wages in various countries, using the dollar of the United States as a basis:

United States	\$30.32 a week
England	15.68 a week
Belgium	9.43 a week
France	8.69 a week
Japan	6.68 a week
Italy	4.86 a week
Germany	3.12 a week

While it is generally true, on account of lower levels of prices prevailing outside the United States, that these foreign wages mean more in their respective countries than they would in the United States, still it is equally true that the comparison, from the standpoint of the worker, is highly in favor of the United States. Our comparative level of prices is certainly not twice as high as England's, or four times as high as Japan's, or ten times as high as Germany's; and unless it is the workers of those countries are not as well off as we are. In army slang, the worker of the United States is "sitting on the world."

THE FASCISTI

Observers of world events are pointing to the lessons that are to be drawn from the recent victories of the Fascisti in Italy. George W. Hinman, writing in the Chicago *Herald & Examiner*, declares that class war-

fare has proved a two-edged sword, and that the losers in the economic upheaval that recently was brought to a climax in the overturn of the Italian government are those who could least afford to be defeated—the underpaid, the overtaxed, the oppressed, unemployed and impoverished.

According to Mr. Hinman, this scene in the great world drama had its setting in the end of the war. Communists, gaining power, took command of industrial institutions, but with the result that wrongs were not righted and grievances were not satisfactorily adjusted. Strikes spread rapidly, and soon the situation was chaotic. Starvation stalked, and many died. Out of the chaos came the Fascisti, a band of counter revolutionists, composed of members of the middle classes—those who opposed the industrial revolution.

Mr. Hinman's observations are summed up in these words:

"For the minority of a nation, even though an aggrieved minority, to draw sword or gun on all the rest of a nation—on its own way of earning a living and its whole sys-

tem of bread winning—is no longer a safe or sure way to victory."

The United States has not escaped the chaotic post-war reaction. We have had four years of readjustment, and in the way we have been traveling we have had to grope through the darkness of unrest and misunderstanding. We can, however, be truly thankful that we have kept ourselves committed to the principles which have made our country the world's economic leader, and in the turmoil and tumult, the confusion which is within and all about us, we have not swerved from the path.

Italy furnishes us one more example of the un wisdom of government based upon class consciousness. From it let us draw a warning of the danger that still threatens us. There are those who strive to incite class and group hatreds in America by preying upon human selfishness. They, not their victims, are to blame. Misguided labor representatives, politicians who would place the interests of one group or community above the interests of all whom they should serve—these are examples.

As a result of the failure of the city water supply at Effingham, Ill., the Illinois Central was recently forced to erect a temporary water station on the Little Wabash River, eight miles south of Effingham. Here are scenes showing work and the station in use. The work, which was completed November 7, was done by division and whole line waterworks forces under the direction of J. J. Sekinger, Illinois division supervisor of bridges and buildings; C. J. Scott, whole line waterworks foreman, and L. S. Meskimen, Illinois division waterworks foreman.

PUBLIC OPINION

What the

World Thinks

A PRESSING PROBLEM

The *Courier-Journal* publishes an address delivered in New York last night which should be read by everyone who has at heart his own and the public welfare.

The speaker was Charles H. Markham, president of the Illinois Central Railroad Company, and his subject was the existing railway problem, which is hardly more the problem of the railroads than it is the problem of the country and of every citizen of the country, who prospers as the country prospers.

No man is better qualified than Mr. Markham to define this problem, and certainly no man has defined it more intelligently, more comprehensively and more fairly than he has done in this luminous presentation of the case as it affects at once the railroads themselves, their employees and the public.

Let it be noted at the outset that Mr. Markham is not an opponent of public regulation of the railroads. "I believe," he says, "the railroads, because of their character and fundamental importance to all other business, should be operated under the supervision of agencies controlled by the public." But he does object to regulation based in erroneous conception of the railway situation—a conception which he frankly admits was partly due to the railroads' own faults. "I also believe," he adds, "that Government regulation as it has been practiced for fifteen years is almost wholly responsible for the decline of railway development and for the existing shortage of transportation."

And this decline and shortage, he holds, constitute a grave menace to the common welfare which demands the open-minded consideration of the American people, who in the end must be the arbiters of the policy of Governmental railway regulation as well as other Governmental policies.

The facts which Mr. Markham marshals as indicative of this menace are strongly impressive. He recalls that in the past periods of railway transportation shortage have come after years of general prosperity,

as a consequence of that prosperity, while we are suffering from the existing shortage at the beginning of a period of general prosperity—a shortage that is due to the inability of the railroads to increase their transportation facilities commensurately with the needs of business. Bad as the present situation is, hard as it is on the farmers, miners, manufacturers and all shippers of freight, what will it be if, as the indications are, the country is just starting on a revival of business, such as has preceded other transportation shortages, when the railroads were making normal increases of their equipment? "The outstanding fact regarding the present shortage of transportation," says Mr. Markham, "the significant fact which challenges our attention, is that it has been met at the very beginning of a period of business revival. In this respect it creates a situation unprecedented in the history of the United States—a situation which should cause every farmer and business man, every railway regulating official, every public man, every wage worker, to pause and reflect seriously."

While it is generally known that the railroads have fallen far behind in the necessary additions to their equipment, the figures which Mr. Markham cites on this point are alarming. The remedy for such an ominous condition is clearly suggested by the cause. The railroads have fallen so far behind because, as they have been regulated, they have been unable to earn as much as 4 per cent for their security holders, and consequently they cannot get capital to put into improvements. Money will not go to railroads as a free offering, and freight cars and locomotives cannot be built nor tracks maintained without money. Mr. Markham puts the whole case in a sentence when he says:

"The one thing, and the only thing, which ever will enable and cause the railroads to carry out a sufficient program of expansion will be to let them earn sufficient net return to raise the new capital required for that purpose."

All the remedies and regulations which have been tried or which may be proposed are worthless if they are not based on the principle that if the roads are to render adequate service they must be allowed to earn adequate net returns to pay the going rate and reasonable dividends on their bonds and stocks and to raise the new capital necessary to carry on a program of expansion.

Mr. Markham, in a good-tempered, broad-minded way, points out some of the obstacles to a fair solution of this serious problem—the misinformation and fallacies of a superficial understanding of the question, which have been carried into the regulative agencies created by the Government; the sins of omission and commission by the railroads; the duty of the public to acquire a true comprehension of the situation and the duty of the railroads to promote such a comprehension by unreserved candor in dealing with their employes and the public.

The *Courier-Journal* heartily commends the address as sound business and sound statesmanship.—Louisville (Ky.) *Courier-Journal*.

MR. MARKHAM'S ADDRESS

The address of President Charles H. Markham of the Illinois Central at the annual dinner of the Railway Business Association in New York yesterday evening is a remarkable analysis of the relationship between rail transportation and the public, with conclusions so eminently fair and reasonable, viewed from any angle of a subject that is clothed in entirely too much misunderstanding and prejudice, that it contributes very largely to a more concise understanding of the public responsibility in dealing with transportation problems.

As pointed out by Mr. Markham, the country today is face to face with the most acute car shortage in the country's history. It is particularly depressing now, when the country is beginning to emerge from a long period of agricultural depression due to closed foreign markets, for the very obvious reason that the balance of trade can be maintained only through the adequacy of transportation, and the product of the farm is available for cash to the producer only as that product can reach its ultimate markets.

Georgia has felt within the past season the menacing sequences of car shortage,

when great fields of perishables wasted for lack of transportation, and at many depots in the fruit and melon belts thousands of crates rotted, due to the inadequacy of rolling stock to move them.

In the corn belt and in the wheat belt, the same trouble—only to a much heavier degree—is being experienced, and the whole business fabric of the country today is being torn—at a moment when other conditions point to commercial and industrial rehabilitation—by the inability of the railroads to facilitate farm and commercial shipments..

The public has assumed, perhaps, that the recent shopmen's and coal miners' strikes have been responsible, and that the rail conditions will automatically adjust themselves now that these strikes are over.

Mr. Markham points out, conclusively, that while these strikes have aggravated rail inadequacy, the real and unmistakable reason is far more deeply rooted—a *decline in railway expansion and in railway development, due to a system of federal "regulation" that has yielded to the force of political demagoguery, and thus become a money "strangulation" rather than a reasonable and fair and progressive Government regulation.*

Business has expanded. This has been due to the natural order of things; and yet, despite the fundamental relationship of transportation to industry and the fact that commerce of every kind, agriculture of every branch, industry of every character, are all basically dependent upon transportation, the fact stands out with menacing boldness that, instead of commerce and industry expanding together, *a condition which could only mean a greater and firmer prosperity, the converse is true.*

While commerce has expanded, as best it could, with so great a handicap, transportation has declined to an even greater ratio—and as the situation stands today the momentum of that decline, unless quick action is taken to arrest it, must eventually pull commerce to its level. There is no other way to argue it.

Mr. Markham's address is remarkable in that—railway executive that he is—he stands firmly and immovably for the proper kind of Government regulation.

That is absolutely essential. The interlinking importance of rail facilities to every line of business, and business to rail development, makes the transportation line a quasi-public institution, and to that end

it should be operated under agencies controlled by the public. That does not mean, however, that so great an agency in general prosperity should be made the football of demagogic politicians, and that railroads shall be, through a wave of prejudice and passion, restricted from earning sufficient net return upon their investment to enable them to raise the new capital for the expansion so imperative to their own expansion, and correspondingly to public development.

If Government control arbitrarily fixes valuations to a point where net earnings on capital are cut down to below an attractive investment figure, the public will not absorb the rail securities, nor will the larger financial sources rescue the roads from the scrap piles. That has been seen and keenly felt here in Georgia, and prosperous communities have felt the sting of a federal policy of rail strangulation.

The point is, the public should get fixed in its mind that *its own interests are coincident with the interests of the transportation lines that serve it*, and that any reverses to one must of necessity be felt by the other. To that end a mutual helpfulness and co-operation should exist—with a wisdom of thought and action that should be just and fair to the roads and to the public.

Work

Let me but do my work from day to day,

In field or forest, at the desk or loom,

In roaring market place or tranquil room;

Let me but find it in my heart to say,
When vagrant wishes beckon me astray,

"This is my work; my blessing, not my doom;

Of all who live, I am the one by whom

This work can best be done in the right way."

Then shall I see it not too great, nor small,

To suit my spirit and to prove my power;

Then shall I cheerful greet the laboring hour,

And cheerful turn, when the long shadows fall

At eventide, to play and love and rest,

Because I know for me my work is best.

—HENRY VAN DYKE.

The Interstate Commerce Commission has taken this view of it. The valuation commission has taken this view of it. The public has taken this view of it—and it is refreshing to see from the most excellent address of one of America's greatest rail executives that the transportation officials take this view of it.

So, it seems a better day is dawning. After all of these years in which the demagogues have had full sway against the railroads, and for which the public has paid and is paying the penalty, the country now seems to be reaching a point where public sentiment is ready and willing to give the railroads a fair trial.

This, however, should and will be done only with the hand of the public carefully at the throttle so as promptly to check any effort to acquire greater privileges than they have a right to expect.

A "square deal" all 'round is all that is necessary to solve the problem.—Atlanta (Ga.) Constitution.

AN INTERESTING MAGAZINE

We never pick up the *Illinois Central Magazine* without marveling at the ability of the editors to publish a monthly that is as full of interest as any of the national magazines. Even though one is not a member of the great Illinois Central family, the magazine has so much of interest that its monthly visit is looked forward to and welcomed.

This is just one part of President C. H. Markham's policy of compelling interest of the employes in the great railway system of which they are a part. And if it can be definitely ascertained, we believe that it will be found that the *Illinois Central Magazine* is a large factor in maintaining the morale of the railway system's force of employes.

You can pick up any number and you will find numerous articles not only interesting but informing, giving one new and broader ideas of a subject concerning which one might think that he was tolerably well informed.

The employe of the Illinois Central System is missing something if he does not read the *Illinois Central Magazine* regularly. Our idea, though, is that if any employe is not interested in this very readable monthly there is something very much lacking in the mental make-up of that individual.

Tested Recipes

ROSE'S FRUIT CAKE.—1 lb. salt pork (little or no lean), 1 lb. brown sugar, 6 eggs (well beaten), 1 cup sour milk, $\frac{1}{4}$ teaspoon baking soda, $\frac{1}{2}$ lb. each of currants, raisins and nut meats, $\frac{1}{2}$ lb. lemon, orange and citron peel (mixed), 1 teaspoon each of cinnamon and cloves, 2 cups flour, 2 teaspoons baking powder. Run the pork and fruit and nuts through the food chopper. To the beaten eggs add the salt pork, brown sugar, flour sifted with baking powder and spices, sour milk in which soda has been dissolved, fruit and nuts. Bake in loaf pan.

BAKED PORK CHOPS.—Butter a casserole and slice a layer of potatoes over the bottom; season with salt and pepper and sprinkle with bits of butter; continue in this way until the dish is two-thirds full, and pour in enough milk to cover. Bake half an hour, then place over the top a layer of pork chops. Season with salt and pepper, cover and bake until the chops are done.

The following recipes were contributed by Mrs. J. Milton May, wife of the assistant chief clerk, Poydras freight station, New Orleans:

FLOATING ISLAND.—Beat whites of 2 eggs into froth. Place on fire in saucepan 2 cups sweet milk. When near boiling point add froth. Do not stir. When milk comes to boiling point froth will solidify and come to surface. Remove froth from milk with skimmer, placing in bowl. To the yolks of 2 eggs add sugar to taste, mixing well the while. Combine this mixture with milk used in cooking froth, adding 1 teaspoon flour dissolved in a little cold water. Place on slow fire, stirring slowly, until boiling point is reached and mixture thickens. Add teaspoon vanilla. Pour over froth, dotting islands with jelly. Place in refrigerator to cool.

BREAD PUDDING.—Cut 3 or more cupfuls of stale bread into half-inch cubes. Place in a pudding pan; moisten bread with warm water or sweetened milk if preferred. Add $\frac{1}{2}$ cup seedless raisins, scattering well

among cubes. In separate bowl mix yolks of 3 eggs, 1 teacup of sugar, 1 tablespoon butter, 1 cup sweet milk. Flavor to taste with vanilla. Pour this mixture over bread, stirring lightly. Bake 20 minutes in moderate oven. Cover with meringue (made by beating whites of eggs to stiff froth with $\frac{1}{4}$ cup sugar), and place in oven to brown.

How to Be Popular

A cold manner freezes like ice and gives an expression to the countenance, gloomy and hard, that nothing can efface. Like a cold handshake, it gives us a disagreeable chill. Cultivate courtesy, kindness and graciousness, and you will learn a secret that will attract people and make them indulgent even to your faults. Normal beings have little patience with those persons who are always "kicking." Give to the world a sour facial expression and disagreeable manner, and the harvest you reap will be bitterness, loneliness and loss of friends.

Foot Comfort

Sprinkling dry sulphur over soft corns will eventually remove them. A cold foot spray every morning and evening is helpful for tired, aching and swollen feet. Try the tonic effect of the full pressure of the cold water from the faucet upon the feet. Dry thoroughly. After the bath rub the feet with alcohol and dust with boric acid.

Household Hints for Home Makers

A letter sealed with white of an egg cannot be steamed open.

As soon as tongue is boiled tender, run cold water over it for a minute, so that the skin will slip off easily.

Bread will have a soft crust if it is wrapped in a clean cloth as soon as it comes from the oven.

Candles for table decoration will not drip if placed on ice for two hours before using.

Stuffed prunes are delicious and easily prepared. Wash prunes in warm water, dry, remove pits and place in warm oven until plump. Fill centers with marshmal-

lows. Or the centers may be filled with peanut butter which has been mixed with a teaspoonful or two of cream.

An experienced painter advises wiping up newly varnished floors with a soft cloth dipped in ice water. This may be done twenty-four hours after the varnish has dried.

Whites of eggs for frosting or cake mixture should not be beaten too long in advance of use, as the stiffly beaten whites liquefy on standing and cannot be beaten light again.

Cut flowers, particularly roses, will last a long time if treated in this way: Clip the end of each stem and place in water, removing all leaves and thorns below the water line in the vase. Repeat the clipping process and add fresh water frequently.

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them. Address EDITOR, HOME DIVISION.

Little Rosemary was to attend a children's party, but on the way home from school lost the envelope containing the invitation. Arriving home, she said: "I was

Home Ownership

A man who has spent most of his life in social work recently said that he had practically reached the conclusion that the most effective way of attacking modern problems would be to inaugurate a permanent, nationwide campaign for home ownership.

His idea is that the source of most of our present-day trouble is the lack of family stability.

The home owner does not desert his wife and children.

He does not suffer from wanderlust. He takes a strong interest in his community.

The purchase of his own home arouses his ambition, his thrift, and his industry.

Being permanently located, he is a better husband, a better father, a better citizen, and a better worker.

The more you think about this matter, the more you will be convinced that it is fundamental.

The strength of the small towns of this country is rooted in home ownership, and, without stretching the truth, it may be said that the unrest in the large cities is due to lack of home ownership.—*Oxford Ledger*.

going to Mazie's party tomorrow, but I 'spose I'll have to stay home now, 'cause I lost my specifications."

The children had a newly constructed teeter-totter, and all the neighbor children were invited into the yard to play. Shortly after, Betty rushed in and said: "Mamma, what you think—Evelyn's mother won't let her teeter on our totter."—Mrs. R., *Dubuque, Iowa*.

OUR BABIES

No. 1 is James Howard, 27 months old, son of E. F. Oates, signal maintainer, Nortonville, Ky.

No. 2 represents a full train crew: Marion William, 8 years old; William Hiram, 6; Willard Woodrow, 4; Jefferson Joshua, 3, and Herman Edward, 1, sons of Conductor W. M. Walker, Carbondale, Ill.

No. 3 is D. Terrell, Jr., 2 years old, son of D. Terrell Overby, instrumentman, Kentucky division.

No. 4 is Charles Everett, 15 months old, son of Mrs. Clarence W. Briest. Mrs. Briest, formerly Miss Mabel Stone, was employed in the telephone department at Central Station, Chicago, for eight years.

No. 5 is William R., Jr., son of W. R. Crockett, chief operator, Memphis, Tenn.

No. 6 is John Gilmer ("Jack"), 6 years old, son of J. R. Lessel, assistant engineer, bridge department, Chicago.

No. 7 is Henry Louis, 1 year old, son of Dispatcher William Vollenweider, Dubuque, Iowa.

No. 8 is Charles Edward, 13 months old, son of J. C. Blackwell, stockkeeper, Jackson.

No. 9 is Joseph, Jr., 17 months old, son of Brakeman J. H. Mulvaney, Indiana division.

No. 10 is Glenn R., 3 years old, son of Engineer P. A. Plowman, Wisconsin division.

No. 11 is Willard C., 3 years old, son of Zed H. Ratliff, locomotive engineer, Council Bluffs, Iowa.

No. 12 shows a roundup of the New Orleans division babies living at Natchez, Miss. Top row, left to right:

Thomas S., Jr., 4½ months old, son of Rate Clerk Thomas S. Bloodworth.

Helen Louise, 10 months old, daughter of Engineer Gus Day.

Elizabeth Howard, 2 years old, daughter of Ticket Clerk Bartlett L. Harper.

Bartlett Lewis, Jr., 4 years old, son of Ticket Clerk Bartlett L. Harper.

Walter A., Jr., 12 months old, son of Ticket Agent Walter A. Lowry.

John Newman, Jr., 18 months old, son of General Foreman John Fox.

Neal A., Jr., 18 months old, son of Chief Clerk Neal A. McLean.

Bottom row, left to right:

Ernest D., Jr., 6 months old, son of Station Accountant E. D. Goza.

Keary Catherine, 2 years 3 months old, daughter of Clerk W. K. Collins.

Kneeland, 4 years old, son of Division Special Accountant R. K. Holman.

Fred Cook, Jr., 3 years 2 months old, son of Car Inspector Fred C. Beacham.

No. 13 is Alice Imogene Ray, 3 years old.

daughter of operator at Nortonville, Ky. Alice and James, No. 1 above, are playmates.

No. 14 shows Newell, 10 years old; Edwin, 11 months; Wallace, Jr., 5 years, and Muriel, 8 years, children of Engineer J. W. Murphy, Vicksburg, Miss.

No. 15 is Kathryn Dean, 4½ years old, daughter of Supervising Agent T. D. Clark, Fulton, Ky.

No. 16 is Helen, 4 years old, daughter of Operator J. L. Pixley, Minnesota division.

No. 17 is Helen Alberta, 5 years old, daughter of C. J. Sawyer, section foreman, St. Gabriel, La.

No. 18 is Mary Alice, sister of William, No. 5 above.

No. 19 is Mary Jones, daughter of J. Hart, section foreman, Rolling Fork, Miss.

No. 20 is Lydia May, 1 year old, daughter of R. E. Friel, agent, Plato Center, Ill.

No. 21 is Virginia, 4 years old, daughter of Brakeman H. L. Corn, Indiana division.

No. 22 is Joanne, 2½ years old, daughter of H. E. File, clerk, office of operating vice-president, Chicago.

No. 23 is Gail Brodhead, 4 years old, granddaughter of Conductor H. L. Crammer, and Zip, her constant companion and play-fellow. Conductor Crammer has been in the service for twenty-six years on the Chicago terminal division.

No. 24 is Mary Lydia, 3 years old, daughter of Operator J. H. Blane, Woodstock, Tenn.

No. 25 shows Hazel, 4 years old, and Earl A., Jr., 6 months old, children of E. A. Truett, clerk, master mechanic's office, Water Valley, Miss.

No. 26 is Annie Lynn, 3 years old, daughter of C. B. Sauls, division storekeeper, McComb, Miss.

He Fathered the Postoffices on Wheels

October 27 was the one hundredth anniversary of the birth of George Buchanan Armstrong, founder of the railway mail service in the United States. He was born in County Armagh, Ireland, October 27, 1822. His parents emigrated to America in 1834. Twenty years later the man who was to revolutionize the United States mail service, came to Chicago as assistant postmaster.

In 1864 Mr. Armstrong proposed a scheme of a "postoffice on wheels" as a national enterprise. With the official sanction of Postmaster General Montgomery Blair, the scheme was given a tryout on the Chicago & Northwestern Railroad between Chicago

and Clinton, Iowa. It was not the first time such a car had been used, but its operation marked the beginning of the country-wide system.

Mr. Armstrong furnished the plans for the first complete railway postoffice cars, and when his system was extended to all other trunk lines he was appointed chief superintendent with headquarters in Washington. He died May 5, 1871.

In the vestibule of the Adams Street entrance of the Chicago postoffice there is a large bronze bust of Mr. Armstrong, which stands on a granite pedestal. It was erected as a memorial by the employes of the railway mail service.

Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions October 31:

Name	Occupation	Years of Service	Date of Retirement
William B. Curley.....	Engineman, Kentucky Division.....	43	7/31/1922
Ira D. Farrington.....	Conductor, Kentucky Division.....	20	7/31/1922
William G. Kruger.....	Conductor, St. Louis Division.....	27	9/30/1922
Eugene Hickie.....	Section Foreman, Galena, Ill.....	36	10/31/1922
Louis J. Richter.....	Machinist, Champaign, Ill.....	44	10/31/1922
William C. McConnell.....	Train Baggage-man, Springfield Division....	24	10/31/1922
William D. Youngblood.....	Section Foreman, Owens Wells, Miss.....	19	9/30/1922

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
Henry C. Collins.....	Section Foreman, Springfield Division....	9/21/22	10 years
Joseph H. Verran.....	Foreman, Burnside Shops.....	9/ 7/22	2 years
Thomas W. Place.....	Master Mechanic, Minnesota Division.....	10/ 9/22	21 years
Alexander McCall (Col.).....	Laborer, St. Louis Division.....	10/11/22	6 years
Louis H. Kell.....	Section Laborer, Louisiana Division.....	8/19/22	2 years
Scott Fox (Col.).....	Foreman, Louisiana Division.....	9/23/22	9 years

Five Veterans of the Memphis Terminal

Four Are Negro Roundhouse Workers; H.

L. Arnold Efficient in Nonconnah Shops

H L. ARNOLD, general car foreman at the Nonconnah shops, Memphis; Tandy Baker, negro hostler at the roundhouse in Memphis; John Williams, negro turntable operator at the roundhouse in Memphis; James Johnson, negro boiler-maker at the Nonconnah shops, and Tom Ellis, negro laborer at the roundhouse at Nonconnah shops, are the five oldest employes in point of service on the Memphis terminal division. Each of these men has been in the service for more than thirty-eight years, and one claims to have started working forty-seven years ago.

Mr. Arnold has helped to increase the efficiency of the car repair work at the Nonconnah shops since he was made the car foreman there in 1914. He entered the service as a section laborer in 1884. Baker started working as a brakeman at Water Valley in 1878. Williams was loading ties and bridge timber in 1880. Johnson began railway work as a laborer in 1875. Ellis entered the service in 1880.

Speeded Up Shop Efficiency

H. L. Arnold, general car foreman at the Nonconnah shops at Memphis, says that 500 men now are doing 50 per cent more work than 720 did when he first was made general car foreman there eight years ago.

When he became the general car foreman at the Nonconnah shops in 1914, 782 cars were waiting on the tracks to be repaired and rebuilt, and 200 of them had been there for a long time. The company had changed the foreman there three times within a year, but it seemed impossible to clear up the increasing amount of work, he says. Mr. Arnold had been there but four months when the work on the 200 delayed cars had been completed, 145 other cars put back into running condition and the present car shed built. The average rebuilds per month before he arrived had been from eighteen to twenty cars, but he increased the number to from eighty to ninety in spite of the fact that many of the men were being used to construct the shed. The record month at the Nonconnah shops during Mr. Arnold's experience was August, 1916, when 134 cars were rebuilt, in addition to all the heavy,

medium and light repair work. Mr. Arnold has been in the service of the company since November, 1884. His first work was as a laborer on a section at Tickfaw, La., where he remained for three years.

Became Car Repairer in 1887

The carpenter's trade appealed to Mr. Arnold, and in June, 1887, he accepted a position as a car repairer in the shops at McComb, Miss. For four years he helped build new cars, repair cars and remodel box cars into fruit cars; then he was transferred to the planing mill, where he operated a machine for about three years. At the end of that time he was made the mill foreman.

In 1900 Mr. Arnold was transferred to the roundhouse, where he repaired engine cabs; and the next year he was appointed lumber inspector between New Orleans, Louisville and Cairo. There were four inspectors then. Their duty was to inspect the lumber for shop use, then consign it to the various shops.

He returned to the shops at McComb as mill foreman in 1903 and found that many new machines had been installed as well as a slightly increased force.

Two years later, Mr. Arnold was elected mayor of McComb. He was appointed the general car foreman the same year. He served as mayor for seven years, during which time three new school houses were built there. He remained there as the general car foreman until 1914, when he was transferred to the Nonconnah shops.

Helped Take No. 4 Into Memphis

Tandy Baker, negro hostler at the roundhouse in Memphis, says that he was the fireman on No. 4 when it made its maiden trip from Canton, Miss., to Memphis in 1897. Prior to that time, No. 4 ran on the old main line by way of Jackson, Tenn.

Baker entered the service in November, 1878, as a brakeman at Water Valley, when he was 21 years old. He worked among the links and pins only three weeks and then became a fireman.

A fireman in those days did about all the

Veterans of the Memphis Terminal

James Johnson

H.L. Arnold

Tandy Baker

John Williams

work there was to be done on an engine, Baker says. He filled the boiler with water, loaded the wood on the tender, scraped the smoke stack, made the fire, polished the brass and cleaned the engine, inside and out. The latter was not so much of a job as it is today, he says. The wood burners kept fairly clean during a run. But that brass! It had to be polished, not merely wiped off, and there seemed to be hundreds of brass things on each engine, he says.

Business was falling off at the time, just after the yellow fever. The company reduced its force the next spring, and Baker lost his job. He was out of railway work until fall, when he again began firing out of Water Valley. He was in that service until April 1, 1894, when he was taken out of the service again.

For a year he did no railway work, and then he obtained a position as fireman at Memphis. Four months later he was transferred to Water Valley, and he stayed there until 1901, when he was sent back to Memphis and placed on a freight run to Canton, Miss.

In 1910 Baker was made hostler at the roundhouse in Memphis, and he has been in that service since.

Started His Service 42 Years Ago

John Williams, negro turntable operator at the roundhouse in Memphis, started his railway career forty-two years ago, when he was 21 years old, but he has not been continuously in the service. Swamp fever and rheumatism have forced him to stop work several times.

He started work in January, 1880, loading ties and bridge timber between Jackson, Tenn., and East Cairo. In the fall of the same year he was placed on a section at East Cairo.

The latter part of January, 1881, he says, high water ruined the right-of-way and nearly everything else at East Cairo. It was two months before good service was resumed.

When the gauge was narrowed to standard, John was sent to a section at Grand Junction, Tenn. This was soon after the damage done by the high water at East Cairo had been repaired, he says.

After two months at Grand Junction, he was sent to Bolivar, Tenn., and then to Jackson, Miss., to put down new steel. Later he went to Medina, Tenn., and had worked but three months when he had to

stop on account of having the fever. He was able to hunt and fish for food at times, but could not return to work until 1897, when he was given a job as brakeman between Memphis and Paducah.

On November 17, 1898, a link-and-pin coupler took away two fingers of his left hand and put an end to his braking. He was out of work then until July 10, 1902, when he became a laborer at the roundhouse in Memphis.

A year later, he became a hostler there. He remained in that work for eighteen years.

During the latter part of that service, his rheumatism became so severe that he was unable to keep up with the engines. It was difficult for him to climb in and out of the cabs.

He started operating the turntable in March, 1921.

Helped Coal Engines by Hand

Tom Ellis, negro laborer in the roundhouse at Nonconnah shops, entered railway service in 1880 at Memphis for the Mississippi & Tennessee Railroad and has been in that city since.

Tom's first work was as a section laborer in the yards. The Union Station in Memphis now stands on the ground that he stirred up many times in his younger days.

After about two years, he was transferred to roundhouse work. His chief duty was coaling engines, he says. It was all done by hand. Every shovelful was placed in the tender by the same method that it was taken out and fed to the fire, for there were no coal chutes then. In Tom's spare time he wiped engines and served as an assistant to the mechanics and boiler-makers.

In 1898 the duty of call boy also was added to his list, and it was not long until this work crowded out all the rest for him. He was made night call boy, and he continued in that service until May 20, 1914, when he was transferred to the new Nonconnah shops as a laborer in the roundhouse. Most of his time has been spent in wiping engines there since.

Used to Chop Up Engine Fuel

James Johnson, negro boilermaker at Nonconnah shops, began his railway career as a track laborer on the old Mississippi Central Railroad in 1875 on what was then known as the Chatawa section. His early days were spent on the old J. J. White plan-

tation, and when he reached the age of 15 he obtained his first railway job.

Johnson was one of those who labored strenuously during the levee overflows which affected that portion of Mississippi in 1876. He worked night and day, receiving only occasional rest, in an endeavor to keep the avenues of commerce free from interruption.

After the high water had receded in 1876, he obtained employment with Joe Beck, who was in those days furnishing the Mississippi Central with the wood that was being used as fuel for its locomotives. He relates that back in those days, when there were no coal-burning engines on the Mississippi Central, it was necessary to go out in the woods and chop down trees and then cut them into pieces small enough to be used in a locomotive. He says that on numerous

occasions while he was working in this capacity on one side of the right-of-way the other side would look to him like a zoo. Deer, panthers and bear would be constantly roaming the woods in search of food and water.

When coal began to be the fuel preferred for use in locomotives, the job of the wood-chopper became obsolete. March 1, 1878, Johnson got employment as a boilermaker helper at the McComb shops under F. B. Barclay, then the master mechanic at that point, now the superintendent of motive power at Memphis. Johnson worked continuously in that capacity until June 1, 1912, when he was transferred to Memphis as a boilermaker handyman. December 31, 1916, he was promoted to first-class boilermaker, in which position he has since been constantly employed.

Iowa Division Loses a Popular Conductor

S. A. Spinharney, veteran conductor of the Cherokee district, Iowa division, who died October 27, was born in 1862 in Sheboygan County, Wisconsin. He came to Iowa with his parents in 1869 and was married to Miss Sophia Bush in 1885. He farmed in Cherokee County for nine years and then started his railway career in 1894 as brakeman on the Illinois Central. He was promoted to conductor about five years later. He was promoted to his first regular passenger run about three years ago.

Paralysis was the cause of his death. He had a stroke of paralysis a year ago last February, but had almost completely recovered from it. He said he felt better the night of October 26 than he had in two years.

The funeral was held Monday, October 30, from the Immaculate Conception Church at Cherokee, burial being at Cherokee also. Solemn requiem high mass was sung by the Rev. Father Masterson of Cherokee, assisted by the Rev. Father Desmond of Fort Dodge and the Rev. Father Cooke of Marcus, Iowa.

Mr. Spinharney leaves a wife and eight children: Frank J., Barnum, Iowa; Mrs. W. C. Fuller, Mobridge, S. D.; Fred H., Omaha, Neb.; LeRoy J., Cherokee; Mrs. Charles Thoman, Cherokee; Mrs. Dewey Kennedy, Cherokee; Dorothy and Stephen, Cherokee.

There are also four brothers and six sis-

S. A. Spinharney

ters living: Mrs. Amelia Bush, Oakland, Cal.; Mrs. Laura Rogen and Mrs. Mattie Anderson, Fresno, Cal.; Mrs. Lucy Sailor, Los Angeles, Cal.; Mrs. Matthew Schuh, San Francisco, Cal.; Mrs. James Breen, Sioux Falls, S. D.; James H., Cherokee; Charles, Burns, Mont.; Edward, Oklahoma; Albert, Los Angeles, Cal.

The large number of friends who attended the funeral, many coming a long distance, was a tribute to him who had spent his whole life among people of this community and whose years of faithful and efficient service with the Illinois Central Railroad had won him a place in the hearts of all who had been privileged to know him.—L. J. S.

CONSULTING THE PUBLIC

The public is always right; conceal nothing from the people; take them into your confidence; ascertain the desires of the masses before putting into effect any radical changes. In other words, make the public feel that they are partners in the management of the system.—C. W. RICHARDS, in "Aero."

Not Anxious for a Tie

THE high-powered car was speeding toward a railway crossing when a train rounded the bend a mile away. The two men in the front seat, both racing fiends, began an argument as to whether or not they could beat the train to the crossing. The driver insisted he could easily make it; his companion insisted that the train would beat them by several minutes. The argument and the speed increased, and the train rolled swiftly on. Finally a passenger in the rear seat could stand it no longer. Frantically clutching the side of the car, he shouted: "I don't give a d— who wins this race, but I hope it ain't a tie."

Taking a Mean Advantage

Two young employes of a florist were recently startled by the appearance of the proprietor while they were engaged in a game of checkers in the back of the shop. Justly indignant, the proprietor roared:

"How is it that I hardly ever find you fellows at work when I come back here?"

"I know," volunteered one. "It's on account of those rubber heels you wear."—*Everybody's Magazine*.

Service in Spite of Everything

A passenger on one of our high-class passenger trains took a berth at Chicago and requested the porter to put him off at Centralia, remarking that he was hard to awaken; regardless of any protest he might make, he wanted the porter to make sure that he was put off at Centralia. The next morning, when the passengers were in the wash room of the sleeper, many miles south of Centralia, our friend from Chicago walked in and asked the porter why in the world he was not put off at Centralia as requested. The porter, a little worse for the experience, with his eyes and face badly swollen and scratched, exclaimed: "My

Gawd, boss, who do you suppose that man was I put off at Centralia?"—D. M.

English as She Is Spoke

Explaining that trickle means "run" and narrative means "tale," the teacher asked for a sentence containing both words, whereupon Billy offered the following:

"The big yellow dog trickled down the street with a tin can tied to his narrative."

—From J. M. M.

Rough Stuff in the Movies

The slang phrases used by motion picture cameramen and electricians give studio visitors a first impression that they have blundered into a chamber of horrors.

Laurette Taylor found her first few days' work before the camera marked by moments of involuntary shudders. Photographer George Barnes' technical language was responsible.

"Hit the baby," cried Barnes, and Miss Taylor's eye glanced in all directions for an infant about to be brutally swatted.

Before she could satisfy herself that there was no baby in the studio, Barnes cried: "Kick the twins! That other baby's sick; kill it!"

Here was not only assault and battery, but first degree murder. Miss Taylor shuddered.

But Mr. Barnes continued shouting his atrocious orders: "Bring up those two niggers. Kill the sun. Hit her with the glass reflector. Will the spotlight hit her as she walks by?"

Then it was explained to Miss Taylor that when the camera-man spoke of "the baby" he meant the small spotlight, that "the twins" were the twin arc lights, "the sun" was the sunlight arc, "the niggers" were the black shades used to keep the glare from the camera lens and that "hitting her" meant merely for the light to strike her.

Speaking About Loyalty

On a railroad a great deal is said about loyalty. It reminds the writer of the story of a carrier pigeon which never failed to return within a prescribed time. The owner of the pigeon often wagered with his friends regarding the time it would require for the bird to return from certain distances. On one occasion a friend offered to wager him that the bird could not return from a certain point within twelve hours. The wager was taken and the bird shipped to the pre-

scribed point. Relating the story, the owner of the bird said that his friend clipped its wings so that he might win the wager. Asked if he did not hate to lose the wager under such circumstances, he replied that he did not lose. His friends were astonished.

"Did the bird get back?" they asked.

"Yes," the owner replied, "but he had mighty sore feet."—D. M.

Safety, First, Last and Between Times

"Do you use the block system here?"

"No," replied the conductor. "We ain't got no use for the block system, stranger."

"Oh, I suppose then you use electric or pneumatic signaling?"

"No; no use for them, nuther."

"Then you have train dispatchers and give train orders by telegraph?"

"Nope."

"But when you stop between stations, you at least go back a hundred yards and flag the rear?"

"Nope."

"Then," said the passenger, angrily, "all I've got to say is that this road is run in a criminally reckless manner. Why, you're simply inviting collisions."

The conductor frowned and, taking out a plug of tobacco, snapped off a chew viciously.

"Stranger," he said, "if you don't like this line, say so, and I'll stop the train and you can git off and walk. I'm the president of the line and the sole owner. This is the Great Southern Central, and, stranger, don't you fergit it. She's seven miles and a half long. She runs from Paint Rock to Nola Chucky. This is the only train that travels on the Great Southern Central, and what you hear snortin' ahead is our only engine. We ain't never had a collision. What's more, we never will. Now, stranger, are you satisfied, or do you want to git out and walk?"—*Epworth Herald*, via W. MACM., Export and Import Department.

Every Man His Own Mechanic

A city man, driving his automobile along a little used country road, heard something rattle beneath his car, stopped, looked back and saw a bright metal object lying in the road a short distance behind. It was a plow-point, evidently lost by some farmer.

It was fully half an hour before the next car came along, and its occupant, seeing the first man flat on his back under his

vehicle by the roadside, stopped and asked what the trouble was.

The city man emerged and held up the plow-point.

"This blooming thing dropped off my car," he said, "and I've been hunting for half an hour to find out where it belongs."—*Everybody's Magazine*.

The Cow That Said, "Boo Hoo!"

Engineer D. G. P. of Clarksdale, Miss., sends us the following clipping:

"If the Soo Line Railroad intends to be fair to Anton Peterson of Hermansville, Mich., it will send him a check for \$100 for the loss of a cow. Anton filed a claim for that amount against the railroad, claiming to be a 'poor feller' who had not paid for the cow himself. He wrote:

"'Ay was sitting on my fence watching my blak kow eat the railroad grass and your big engine come down and kill my kow and hit my kow between the crossing and the telephone post and he cut the to legs off by the tails and his hed he lay on the odder side. I holler at the man what was makin the cars run but he don't stop, so I go back to my kow and he yust say boo hoo and he die in my arm.'"

INKID SAYS—

CLAIMS DEPARTMENT

\$5,500 Verdict Set Aside

The Rev. H. E. Baker of the Bethel Church, Emden, Ill., sustained an injury to his right arm in an automobile grade-crossing accident on the Illinois Central near Latham, Ill., October 2, 1920. In a suit filed by him for \$20,000 against the Illinois Central, he was awarded a verdict by a jury for \$5,500 in October, 1921. The railway company appealed the case, and the appellate court has recently set aside the verdict.

Rev. Mr. Baker, with his wife and three small children in the automobile, drove upon the railway track on a public highway in front of an approaching passenger train. It was contended, as is usual in all automobile grade-crossing accidents, that the crossing was dangerous and that the engineer failed to sound proper warning signals. The railroad contended that Rev. Mr. Baker failed to exercise the care required of one about to cross a railway track.

The railway company deeply sympathizes with Rev. Mr. Baker for the injuries sustained by him in this accident, but not until motorists stop their automobiles, look and listen before attempting to cross railway tracks will such accidents diminish.

Railway companies are anxious to prevent these numerous and distressing grade-crossing accidents. They have appealed to the public through the posting of notices and warnings and also with the assistance of the civic institutions. Almost every one is familiar with the extensive careful crossing campaign which was conducted last summer.

When the fact is impressed upon the public that all railway grade crossings are dangerous and that care should be exercised before attempting to drive an automobile over a grade crossing, these accidents will diminish—not until then.

Switchman Fails to Recover Damages

The Chicago & Alton Railroad Company has recently won an important personal injury suit in the United States District Court

at Peoria, Ill., obtaining a verdict of not guilty from a jury. The case was that of an employee who sued the Chicago & Alton for \$25,000 damages.

According to Parks C. Archer, general claim agent of the Chicago & Alton, this man claimed to have sustained a fracture of one of the vertebrae in his spine on July 18, 1920, which caused paralysis of his legs. He alleged that the hand-hold of a car pulled out, which caused him to fall to the ground. The accident occurred while he was employed under another name as a switchman on the Chicago terminals. There were no actual witnesses to the accident.

Mr. Archer says that a thorough examination by competent physicians failed to reveal any injuries and that the man left the Chicago & Alton hospital after remaining there about a month and then entered a different hospital under the care of another physician, in which hospital he remained about a year. He was later removed to a third hospital, where he remained about three months. After he left the Chicago & Alton hospital a suit was filed in the Circuit Court of Will County at Joliet, Ill., for \$50,000. This was in September, 1920.

When the case was reached for trial the following spring it was continued until the fall term of court, at which time it was dismissed. A new action was later started in April, 1921, in the Superior Court of Cook County. When this case was reached for trial in October, 1921, Mr. Archer says, the railway company introduced proof that the man had been injured on other railroads a number of times, but he denied having been injured before. After the case was on trial for four days, the attorneys representing the plaintiff took a non-suit and withdrew from the case.

Another firm of attorneys was then employed and a suit filed in the Federal Court at Peoria for \$25,000. This case came up for trial recently and after two weeks of trial, in which a large number of doctors testified on behalf of the Chicago & Alton that the man was not suffering from any

actual injuries but from a condition which existed in his mind, the jury found a verdict in favor of the Chicago & Alton.

Notwithstanding the fact that the man was brought into court on a wheel chair and carried or moved about on a stretcher, giving the appearance that he was totally disabled, the jury failed to award him damages.

This case is cited as illustrative of the expense and trouble railway companies, including the Illinois Central System, are occasionally put to in defending cases of this character.

Stock Killed on Right-of-Way

On February 23, 1922, W. D. Lancaster lost a cow killed near Sumner, Miss., which he valued at \$100. The claim agent tried to settle with him for \$35. He would not take it, but brought suit in the justice court and obtained judgment for \$75. The railroad appealed to the circuit court, where the case was tried November 9, the court giving a peremptory instruction for the company.

On January 2, 1922, O. E. Bradley lost an ox killed at Tutwiler, Miss., which he valued at \$90. The claim agent offered to pay him \$25. He would not take it, but brought suit in the justice court and obtained judgment for \$75, from which the railroad appealed to the circuit court, where the case was tried November 8, the trial judge giving a peremptory instruction for the railroad.

The history of these cases is the history of a good many stock suits brought against the company at various places during the year. The railroad for a long time, through its local officers and employes, has been doing everything which could be thought of to minimize the number of head of stock killed by trains. The railroad is not at fault if the stock gets on the track, and the law is well established that the railroad is liable only for negligently killing it. Yet most owners continue to believe that when an animal is killed, no matter what the circumstances, the railroad is clearly liable and ought to pay full value, if not an exaggerated one. When something less is offered, the owner usually feels that the company is trying to take advantage of him.

It is the policy of the company, in most cases, to offer to pay something on a loss rather than to have litigation, which usually

stirs up a good deal of ill feeling. In the two cases referred to the owners could have had a few dollars to apply on the loss. Now they get nothing, but will have to pay the costs in the justice court, the costs of appeal, the costs in the circuit court and presumably attorneys' fees.

Of course, the best solution of the stock problem is for the owners to keep their stock off the track; then it will not be killed, and there will be no claims or suits and no loss either to the owner or to the railroad.

Fell Down on Track and Suit, Too

Early in December, 1921, suit was brought in Yazoo County, Mississippi, against the Yazoo & Mississippi Valley by Harriet Laws, a negro woman, for \$3,000. She claimed that on the night of September 4, 1921, while walking over the Broadway crossing of the railroad in Yazoo City, she stumbled because of the defective condition of the crossing, and fell, sustaining serious, painful and permanent injuries which would incapacitate her for the rest of her life.

No notice had previously been given of this grievous affair, but an investigation was made. Harriet declined to make any statement concerning the matter, upon the advice of her lawyer, as she said, but it was readily found that she was treated about the time complained of by a negro doctor. He said he at first thought she suffered a fracture of the knee cap, but later concluded it was only badly bruised. However, he visited her several times and reported that she was confined to her bed.

This doctor admitted that her previous condition had not been of the best and that three or four accident companies with whom she carried insurance had canceled her policies.

Another negro practitioner was found who, while he knew nothing of her alleged railway accident, had known her as a chronic sufferer from various ailments and badly crippled for some time and that her insurance had been canceled because of these troubles. It was also readily ascertained that the crossing in question was smooth, in good repair and had not been worked upon since the date of the alleged injury.

The case was tried in October and all these things proved. Harriet's tale of woe

failed of its purpose, as the jury found the company not guilty.

Company Wins \$7,000 Fire Suit

Four frame residences and their contents were consumed by fire at Tchula, Miss., about 11:30 p. m., November 13, 1920. Two of them belonged to Ollie Freeman and one to Nona Ragland, both negroes, and one to W. P. Wallace. Suits were brought in Holmes County, Mississippi, by Ollie Freeman for \$7,000 for the burning of his two houses and by Nona Ragland for \$3,000 for the burning of her house.

The Freeman case was tried in October, 1922. The material question was whether a train had passed, with the engine throwing fire, a few minutes before the buildings were discovered in flames. The plaintiff introduced a white man who testified that a short time before the fire was discovered a long freight train had passed with an engine on each end and that one of these engines threw fire over everything adjacent to the track.

The defense showed by its records that no train had passed for more than two and one-half hours and that there was no train past at any time with an engine on each end. The jury returned a verdict for the railroad. The result of this case probably forecasts the result in the Ragland case, if it is ever tried, which is now unlikely.

It has frequently been found difficult to defend successfully a fire suit in Mississippi, as the law makes the railroad absolutely liable for all fires it sets out; hence, the only question to determine liability is whether the railroad was responsible for the fire. That is a question for the jury, and unless the railroad is able to show clearly that the fire started from some other cause the jury is inclined to find for the plaintiff.

For this reason and because it was known that the plaintiff would introduce testimony as to the passage of a train a few minutes before discovery of the fire and that the engine was throwing sparks, an offer of compromise was made of several hundred dollars, but fortunately the plaintiff and his attorneys declined it, and now the company will probably escape any expenditure except the cost of trial.

A few years ago a very large recovery was made in another county for a barn that was burned, since a witness testified that

a train had passed a few minutes before the fire broke out, although the railroad introduced the dispatcher's sheets, train registers and the time slips of all the employees on the district for that day to show that there was no such train as the one testified about.

For More Safety at Crossings

According to the latest reports, nineteen out of the forty-eight states in the Union have in effect state laws or orders of their public utilities commissions regarding the necessity to stop, look and listen at grade crossings. In addition, other states are reported as having the matter under consideration.

New Jersey is one of the most recent states to fall into line in this matter. Its Board of Public Utility Commissioners recently issued the following order:

"The Board of Public Utility Commissioners, after due hearing, hereby orders that 'All operators of auto busses subject to the jurisdiction of the Board of Public Utility Commissioners shall come to a full stop and shift their gear to neutral position before crossing the tracks of any railroad; such stop to be made not less than fifteen nor more than fifty feet from the nearest rail, the stopping point to be determined by the physical conditions at the crossing permitting a view of approaching trains from the near rail of the tracks before proceeding from stop position.'

"Failure to comply with this order shall be considered by the Board of sufficient cause to warrant the withdrawal of the Board's approval of the permit obtained from the respective municipalities to operate auto busses."

Teach Motorists Ways of Safety

According to the November 1 issue of *Ford News*, published at Dearborn, Mich., the superintendent of the Waterloo, Cedar Falls & Northern Railway, M. A. Welsh, writes from Waterloo, Iowa, suggesting that when a person buys an automobile the demonstrator who accompanies the customer should lay great stress on safety in driving and in crossing railroads. Mr. Welsh says that impressions made on the "new" automobilist will prove lasting. When a salesman has sold a car, it certainly would do no harm should he spend a few moments telling the purchaser of safe and unsafe practices.

For Buddy and Sis

A Letter From Santa Claus

Toyland, December 1, 1922.

DEAR BOYS AND GIRLS:

B-r-r-r! It's so cold here that I have to blow on my fingers to keep them warm as I write. The mail bag came in this morning, a few days late on account of the deep snow. Old Buster, the postman who drives the reindeer post, was delayed on the way. One of the reindeer, I think it was Prancer, went lame and had to be treated before they could come through. Buster has been on the mail route for twenty years, and the weather must be way, way below zero to prevent his bringing in the Christmas mail from my girls and boys. He has a long beard like mine, and twinkling blue eyes.

My wife and I had a busy morning opening and sorting your letters. I print below some of the letters which fell out of the bag when it was opened. Your Aunt Nancie sent them on to me. What do you think? One little boy sent me a flashlight, so that I would have no trouble in finding his home. Most of you were generous and asked for gifts for parents, brothers and sisters, and one dear little girl in Mississippi asked me to send a warm dress to a little cousin in Austria, who won't have a good Christmas because she is very poor.

Now, my dears, you must not feel any disappointment if I overlook one or two of the toys for which you asked. Sometimes my supply gets low and I cannot fill all the orders. Last Christmas one of my little girls pouted and wept all through Christmas morning because she did not get a doll house. I felt unhappy about this, as I had left her a doll and skates and a parasol and many other

pretty gifts. I know you don't want Santa to feel sad.

Have you been on the look-out for my Christmas Spirit? He ought to be working in your town about this time. He softens hard hearts and opens tight pocketbooks and makes people kind to one another. He travels faster than the wind, and he has a jolly round face. He even travels faster than an airplane. The next time you see someone's face light up with a sweet smile you will know that my Christmas Spirit is at work in your neighborhood.

Write me again next year.

With love,

SANTA CLAUS.

Some Letters to Santa

Water Valley, Miss., Nov. 13, 1922.

Dear Aunt Nancie: As you live near Santa Claus, please tell him that I want a saw like Daddy's and a hammer that will pull nails. I like to build houses, but I can't do good work without hammer and saw. I have a good wagon. I can take the bed off like a big wagon.—E. A. CLEVELAND, JR., age 7,

son of E. A. Cleveland, D. V. accountant, superintendent's office.

Dear Aunt Nancie: If you see Santa, please tell him I want a scout suit and a big set of building blocks and a hunter's knife and some fruit and some roman candles and a toy pistol with wooden bullets, and please bring me some books by Zane Grey. Your friend, MIKE TURNER, age 6, son of M. M. Turner, engineer, Water Valley, Miss.

Dear Santa Claus: Please bring me a bicycle for I am a good boy. And a gun, too. I am five years old now.—FRANK TULLIS, JR., son of assistant chief accountant, McComb, Miss.

New Orleans, La., Nov. 15, 1922.

Dear Santa Claus: I am writing you a little note to let you know what I want for Christmas. I would like to have a new barrel for my gun, a fountain pen, some apples, oranges, candies and nuts. I would like a pair of cuff buttons, some little dolls for my little sister, and a train for my little brother. Sincerely yours, LOUIS JAMES MAY, 205 South Telemachus Street, age 9.

P. S.—I send this letter with a kiss; if you like it, be sure to answer it.

New Orleans, La., Nov. 10, 1922.

Dear Santa: I am writing you to tell you what I would like to get for Christmas. I would like very much to get a fur, barette, and gloves. I hope you don't think I am asking too much. If so, do as you think best. Yours truly, ROSEMARY MASCARO, 320 South Cortez Street.

Something to Think About

Each of the following groups of words represents some part of a tree. Put on

your thinking caps and see whether you can guess the answers. The correct answers will appear in the January issue.

1. Something to take on a journey.
2. What a fan does at a football game.
3. What a lady does when she greets a gentleman friend.
4. The letter "t" prefixed to a head covering.
5. An ingredient from which sugar is produced.
6. An insect that collects honey and a place where cattle are raised.
7. Something found in every book.
8. Tableware.
9. Important parts of the human body.
10. What a good watchdog does.

WHAT THE FIRE SAID

By HARRIETTE YOUNG WARNER

Mrs. Warner, author of "The Story Song Book" for children, is the wife of H. D. Warner, paymaster, Chicago.

IT was the afternoon of the day before Christmas, and the snow was falling like soft, white feathers, making the prettiest street of Oakdale still prettier. In one of the many pleasant homes on this street a little boy lay stretched before a cheerful open fire. He should have been one of the happiest boys in the world, with this lovely home, and a dear father and mother, and a little sister, Polly.

But this day Billy Barnes—for that was his name—felt very sorry for himself, and as he lay there, scowling at the bright, dancing flames, he didn't hear them say to him:

"Billy Barnes, what right have you to be scowling on the day before Christmas? Don't you know this is the time to smile?"

Just then Mother called, "Come, Billy dear, please go to the store and get the Christmas candles."

"Oh, Mother, I don't want to go to the store. I don't want to think about Christmas without Inky," said Billy.

"But, dearie," said Mother, "how will it help bring Inky back to lie here and feel unhappy? Besides, think of Christmas eve without candles on our window sills! Why, we wouldn't know it was Christmas eve without the rows of little lights shining out into the darkness, 'to guide the little Christ child on his way,' as the old story says. Besides, it makes the house so pretty

—just like a picture inside, and, now that there's snow on the roof, just like a Christmas card outside.”

“Well, anyway, I feel just like crying, and I bet I'll never see Inky again,” said Billy. But he rose up slowly and went to get his coat and hat.

And now I must tell you who Inky is. Just a cunning little dog with a black shiny coat and long silky ears, and a wee feathery stump of a tail which quivered with joy whenever he saw anyone he loved. This pet of the household had disappeared from home, and for two days Billy and Polly had searched everywhere and questioned all the people they knew, but no one had seen Inky. And, oh, what if a big automobile had run over him, or a big dog had chased him, or the police had taken him!

Billy was feeling so badly over Inky, as he started for the store, that he just thought he would stop in front of a motion picture show and forget his troubles looking at the pictures. But something inside him seemed to tell him to hurry, and soon he was standing at the counter of the bright, warm store, buying the candles. As he started home again with his candles tucked under his arm, he passed an alley and thought he heard a little moan.

“It must be the wind, I guess,” said Billy to himself. “Cracky! But it's cold. I'd better hurry.”

Then he heard it again. “I suppose I ought to go and see what that is. Gee! Seems to me I am doing things I don't want to do all the time today.”

It was dark down the alley, and Billy's courage almost failed him. But he kept going, and, oh, how glad he was that he did. For there, behind an old barrel, lay a little dog, shaking with the cold and whining pitifully over a sore paw.

“Why, you poor little doggie,” said Billy. “How'd you happen to be here in all the dark and cold? I'll just take you home to be my doggie, 'cause I haven't any dog any more.”

He started to lift him up gently, and what do you suppose he found? Why, that it was his very own Inky—only so dirty that Billy hardly knew him. But do you think Billy minded the dirt? Not a bit. And as for Inky, he just wouldn't stop kissing Billy everywhere that his little red tongue could reach.

And now you may believe that Billy hur-

ried home, and, bursting into the house, cried: “Mother, just see what I found, because I forgot my own feelings and went for the candles. I think the Christmas candles lighted Inky to his home even before they were lighted, don't you?”

“Yes, indeed I do, dear,” said Billy's mother, as she kissed him and patted Inky.

And that night when Inky had been fed and bathed and his sore paw taken care of, what a happy boy lay with him on the hearth rug, while the Christmas candles blinked in rows upon the window sills and the sparkling fire seemed to say:

“Billy Barnes, didn't I tell you that you hadn't any right to be scowling the day before Christmas—that this is the time to smile?”

A PRIZE-WINNING DOG

Here we have Paul Craemer and his sheep dog, Dixie. Paul, who is a son of A. L. Craemer, of the office of auditor of freight receipts, recently carried off a \$50 camera and a \$10 savings bank account which Dixie had won in a dog show conducted by the *Chicago Herald & Examiner*. Paul lives at 6400 Dorchester Avenue, Chicago. Dixie is a female dog, I year old.

A Storehouse Needs Accounting Efficiency

By C. F. CLEMONS,
Accountant, Clinton Storehouse

WEBSTER'S definition of efficiency is: "Power to produce the effect intended."

The effect intended by the store department is to have the right material at the right place at the right time; that is the first and paramount issue. The next intention is to maintain a stock not too much but just enough. There are several more "intentions" the store department is striving for, such as uniform methods in handling, storing and reclaiming material, all of which have been handled through these columns at different times.

The intention I would like to treat of is accounting. The accounting intention is, in addition to the paramount issue, to place the material in use at the least possible expense or at actual cost and at the annual inventory to be close to a book balance.

In order to accomplish this, several forces may be dealt with, chief of which is co-operation; next is efficiency.

By efficiency I do not mean only the skill of a clerk in pricing the material or the ability of the man at the serving counter who handles the material and gets the tickets, sees that the correct information is shown and forwards it to the price clerk; we must have the assistance of every employe, especially the men who actually use the material.

To have assistance is to have efficiency. In order to have efficiency, or the power to produce the desired effect, it is necessary to educate employes to handle material as if it were their own by explaining the working of the store department and the reason for so handling material.

There is no storehouse with storage capacity to shelter all the material under its jurisdiction, which necessitates storing some of it—especially trucks and heavy material of similar nature—outside on plat-

forms and various other exposed places. All concerned, especially the users of materials, should caution their organizations that no material should be removed when stored in the open without first receiving a proper order for it, the order to be issued by the foreman in charge.

If material is used without being properly charged out, the matter is brought to light in the annual inventory, and at that time it is very difficult to explain. Assistance along this line should bring about better accounting for materials, and proper accounts should be charged for material when used.

Foremen and stockkeepers in charge of such material should constantly call this to the attention of all concerned with a view to training them along these lines, to see that the proper charge is obtained for materials used. If all concerned will lend a helping hand along these lines and give co-operation, it will no doubt bring about more efficient accounting for materials and supplies.

EVERY DECISION A GUESS

"I weigh the opinions of specialists, and then guess. In a business like this, that is not so difficult as you might suppose. Most of the executives in important positions have been associated with me for years. I have come to know their peculiarities. I know which man is inclined to be over-enthusiastic, and which is likely to be more conservative than he needs to be. I listen to their opinions, discounting them if necessary; but in the end by weighing the variety of opinions I arrive at my decision.

"Every decision is a guess. But guessing based on fact and experience is not the same as haphazard guessing. In executive positions requiring the oversight of work in new fields, a man's ability is pretty well measured by his ability to guess intelligently."—NEIL M. CLARK in *Success Magazine*.

HOUSE PLANS FOR OUR READERS

Southern Pine

One of the best things about the series of home plans that the *Illinois Central Magazine* has been publishing is the fact that the houses illustrated have actually been built and used. The designs have borne the test of time and are proved successful. There can be no doubt about the practicability of building them, and the scenes in which they are shown frequently give suggestions regarding the most effective sort of landscape gardening to employ in connection with each design.

This latter point is particularly true about the home we show herewith. The arrangement of trees and bushes is such that the house has an air of permanency, of having been there a long time, as well as of being a cozy place to live. The house itself is of the poular 5-room size, with two bedrooms, a hall, a breakfast room, a fireplace in the living room and plenty of closet space. The porch is inclosed just enough to give an air of privacy without being too exclusive.

This design is typical of the fifty to be found in the booklet of modern homes which is to be obtained free of charge from the magazine office, through the courtesy of the Southern Pine Association of New Orleans. In addition, the American Wholesale Lumber Association has offered to arrange

for the co-operation of lumber dealers and will give expert advice to communities desiring to organize building and loan associations to finance home building.

Our Part in the Mississippi State Fair

Illinois Central's Exhibit of Agricultural Suggestions Caused Much Comment and Did Much Good

The Mississippi State Chamber of Commerce was delighted with the splendid exhibit made by the Illinois Central System at the state fair at Jackson in October. R. H. Pate, field secretary of the chamber of commerce, for many years at the head of the farmers' institute work in his state, in which he gained a more extensive knowledge of agricultural development in all of its phases than, perhaps, any other man in the state, said:

IN reviewing from year to year the various agricultural and educational exhibits shown at the state fair, we believe that the climax was reached this year by the Illinois Central System in the superb exhibit which was made by its general development department, under the able management of H. J. Schwieter.

Since the primary purpose of fairs is to show the products and possibilities of a community or state, this exhibit was thorough. It was arranged so artistically that it was thronged with visitors from day to day and was pronounced generally as one of the best ever shown.

The products were gathered from the good agricultural lands along the lines of this great system and reflected the possibilities of these lands to yield that great variety of staple food and feed crops necessary to support and enrich this section of our country.

An Exhibit of Leguminous Crops

One of the outstanding features of the exhibit was the great variety of leguminous crops, which included all of the wonderful plants of this class—such as soy beans, velvet beans, burr clover, crimson clover, red clover, hairy vetch, lespedeza, white clover, alfalfa, melilotus, cow peas, peanuts, etc., which, when grown in rotation along with livestock, mean permanent soil fertility, out of which must come permanent agriculture, which is the basis of permanent prosperity.

The truck-growing division of the exhibit was especially attractive. Here were found a model hotbed and coldframe with seeds planted and sprouting. In part of the cold-

frame young tomato plants were transplanted, and in the other part cabbage seeds were coming up.

These frames were provided with the best soil for the purpose that it was possible to find around Jackson, and the models, which were made to represent in detail the full-sized frame, drew a great amount of comment. There was shown also a chart giving the comparative carlot shipments of truck from Yazoo & Mississippi Valley points in 1921 and 1922. This showed more than a 200 per cent increase and attracted a large number of people. Under this was a card showing that a thousand crates of tomatoes were made on one acre by F. A. Strong of Utica, Miss.

The sweet potato display consisted of a hamper of fancy Jerseys, from New Jersey, in the center, with a hamper of Nancy Halls on one side and a hamper of Porto Ricans on the other, both of which represented the average pack sent from Mississippi to market. This particular exhibit brought out the fact that while Mississippi-grown sweet potatoes are far superior to Jerseys in quality, much is yet to be learned regarding the pack.

Importance of Dairying Recognized

Those acquainted with the policy of the Illinois Central know the great importance of the dairy industry in its esteem and calculations and what immense wealth has been developed along its lines in dairying.

It will be recalled that, as a young man—young, indeed, when considering the great responsibility which even that early in life rested upon his shoulders—President Markham made a notable record in the West in developing the dairy industry along the line then under his administrative control and made an extensive section of country very wealthy.

Naturally, the exhibit covering the dairy industry made a fine showing. This exhibit was built around a model plan of a 70-acre farm, showing pastures and fields with the crops recommended for each. Large charts told of the growth of the creamery industry in the state from 1912 to 1921 and gave figures on butter imports for the last three

years as compared with the domestic output, showing conclusively that there is no danger of over-production.

A rough swinging stanchion of standard size occupied a prominent place in the front of the booth and attracted an unusual amount of attention. Several farmers expressed their intention of providing themselves with such equipment. In front of this was a table displaying the proportions of concentrates recommended for a home-mixed dairy feed. Along with these were found milk record sheet, scales and sanitary milk bucket. These bore catchy captions. In one front corner of the booth was found the latest equipment for handling chicks, and above this on placards were shown pertinent facts on culling and feeding the flock.

The Illinois Central exhibit as a whole was thoroughly educational in selection and

arrangement of products. It showed the definite aim of this great railway system in helping in every way within its power in the upbuilding of our good old state from an agricultural and industrial viewpoint.

A POOR BUSINESS BASIS

The great mistake is to believe that, in the world of practical business, trickery and underhand dealing will hasten the attainment of wealth and business leadership. Of course they may increase the profits of a single deal, but modern business is so based on mutual confidence and so quick to detect unreliability that crooked dealing will inevitably cripple you in the race for "big business." The dishonest business man of today is not only a knave but a suicidal fool.—HENRY LOUIS SMITH, President of Washington and Lee University.

Department

Material Means Money Save It

Lanterns

Lanterns are substitutes for daylight.
Waste not either.—Poor Richard III.

Forty new hand lanterns are furnished daily to supply the demand for lights of this kind on the Illinois Central System, these figures representing a daily average of the lanterns purchased during the last four years. During this period 48,331 lanterns were purchased at a cost of \$48,199.88, an average cost of nearly a dollar each. In addition to the lanterns purchased, Burnside shops reclaims and repairs about 1,000 lanterns yearly from those that have been discarded and shipped in as scrap.

The annual cost for lantern globes is almost as great as the cost for the lanterns themselves. According to figures for 1920, we use annually 2,376 red lantern globes, 10,200 white globes, 1,740 green globes and 900 yellow globes. The average cost of the colored globes is \$12 a dozen and of the white globes \$4 a dozen. It will be noted that the colored globes used in our hand lanterns cost as much each as the lantern itself, and it will no doubt be a surprise to some of us who have occasion to use hand lanterns to know that every broken globe entails a loss of from 35 cents to \$1 and that the cost each month for new globes is from \$600 to \$700.

The hand lantern is, of course, fragile, and it is to be expected that some lanterns and globes will be damaged and broken, but an annual cost of nearly \$20,000 seems to be an excessive item of expense to cover the ordinary loss and breakage.

It is a well-known fact that many of the lanterns purchased by the railway company are appropriated to other than railway uses. While efforts have been made to prevent this loss, the fact that only 1,000 lanterns are reclaimed each year out of 12,000 purchased shows that there is still a considerable loss unaccounted for.

Much of the loss through breakage of frames and globes can be prevented by taking better care of lanterns, especially when they are not in use. The average employe will take care of a lantern when it is in actual use and show a certain pride in keeping it in good condition. Some employes are inclined to grow careless in taking care of lanterns when they are not in use, however, and sometimes store them where they may be damaged by being thrown about or by contact with other objects. This is particularly true of extra globes. An excessive supply of additional globes on hand invites breakage, as provision is rarely made for storing them.

On the Scrap Heap

Sports Over the System

Equal Rights in Bowling

Following a precedent established by the girls at the 63d Street office building at Chicago, the maidens of the purchasing department office at 12th Street have started a bowling league of their own. Their teams are the Shamrocks and the Nightingales. The first game of the season was executed on Friday night, November 3, and the second game on the night of the 10th. All games are bowled at the alleys at 62d and Cottage Grove, Chicago, used by the 12th Street General Office Bowling League.

The results for the first game:

Nightingales—	1st	2d	3d	Total
Edith Anderson.....	21	51	77	149
Nina Berger.....	20	26	65	111
Dorothy Gerhart.....	53	41	61	155
Totals.....	90	118	203	451
Shamrocks—				
Betty Moore.....	71	49	79	199
Marguerite Berngen.....	81	63	75	219
Josephine Broderick..	70	95	53	218
Totals.....	222	207	207	636

These scores indicate the interest taken in the sport by the fairer sex, and it is rumored that a girls' league will spring up within a short time, which will be a new epoch in the history of sports on the Illinois Central at Chicago. Mr. Conn, captain of the men's team from the purchasing department, and W. Larsen of the same department have given the young women their undivided attention in order to make their teams a success. So has L. L. King, special representative of the purchasing department.

These Girls Can Handle Pins

The girls on the fifth floor, auditor of freight receipts department, 63d Street office building, Chicago, have been organized for bowling for the last two months. Led by the O'Neill sisters, the girls are improving right along. They are open to meet all comers in a team event. Mary O'Neill's average is 111 and Annie's is 123, for nine games. Annie has high game, with 144. They bowl at 4:45 p. m. every Thursday evening at the Dorchester Alleys.

The ninth floor girls' bowling league of the same building wishes to announce that

it will be pleased to receive challenges from any Illinois Central girls' bowling team or teams. Address all communications to Dorothy Alberts, secretary and treasurer, in care of A. F. R., 63d Street, Chicago. The teams are organized as follows:

Team 1, Pearl Hanson, captain, Dorothy Alberts, Laura

Babcock; team 2, Jane Chamberlain, captain, Elsie Kaiser, Anna Enright; team 3, Mary Catter, captain, Bertha Peterson, Amy Bauldorf; team 4, Helen Spiek, captain, Adele McClelland, Jessie Stewart; team 5, Abiline Laptis, captain; Bertha A. Peterson, Julia Lopeman; team 6, Ida Jensen, captain, Catherine Coyle, Kathryn Tracy.

Hope on the New Orleans Division

"The building up of renewed interest in sports on the New Orleans division through the organization of various clubs devoted to both outdoor and indoor athletics is recognized as a desirable factor for the promotion of a better fellowship among our employes, as well as an unfailing source of healthy amusement and relaxation," writes our division editor. "Big efforts in such a direction, cheerfully backed by the division management, will be made by the fans of every description in favor of their particular sports, and it is our intention to enter the field the coming season thoroughly organized, fully equipped, ambitious and eager for the fray. Just at present, aside from hunting and fishing, sports on the division are mostly confined to that indoor variety so humorously depicted by a well-known cartoonist in the daily papers."

Basketball Interests New Orleans

The Illinois Central basketball team of

the Local Office, New Orleans, has just been organized. It is engaged at present in practice work, preparatory to the opening of the season. Included in the schedule are two games to be played against the strong teams of St. Stanilaus College, Bay St. Louis, Miss., and St. Paul College, Covington, La. It is hoped that games can be arranged with teams representing other offices on the Illinois Central System.

The Local Office team will be composed of the following players: Bismark Berckes, captain and forward; Leslie Pic, forward; Tom Kelly, forward; Armand Kitto, center; Dan Vobell, guard J. M. May, guard and manager.

"Bizzy" Berckes, captain of the basketball team, has attained considerable notice as an athlete. In his school days he was champion all-around athlete of the New Orleans public schools, having to his credit some seventy-five gold, silver and bronze medals, besides several cups. He is also one of the star baseball players on the Local Office team, holding down the initial sack with no mean ability.

Three Teams Top 12th Street League

Three teams are tied for first place in the 12th Street General Office Bowling League at Chicago, but the General Freight team, with an average of 810 pins a game, is the real leader, thanks to the good work of Sebastian, Koch and Tremblay. The Auditor of Miscellaneous Accounts team, with an average of 803 pins a game, is entitled to second place; Collier, Krubeck, Bailey and Du Bois do the heavy work for that team. The Vice-President Purchasing team has succeeded in holding to a tie for first place, due largely to the good work of Larsen.

The General Superintendent of Transportation and Engineer of Bridges and Buildings teams are tied for fourth place, but the General Superintendent of Transportation team has had to beat some of the strongest teams in the league to hold that position. It did its best work when it took two out of three from the General Freight team. The Engineer Maintenance of Way team upset 941 pins for high game, and its 2,703 is also high series, the best our league has done in two years.

The Chief Special Agent team reports it has removed the corners from the balls by rolling them down the gutters, and as a result it succeeded in beating the strong Land and Tax team in one game.

It is reported that Memphis intends to send three teams to Chicago to play fifteen of the leading bowlers from 12th Street. The 12th Street boys will be only too glad to have the Southerners come and will gladly give them a return match. Cartoonist C. M. Said is handling the arrangements.

Knodel is still leading the league, but Bernbach is gaining on him after a slow start. Enright, as usual, is in third place, while Larsen has passed a bunch of bowlers and has stepped into fourth place. Sebastian has slipped a little, but still is fifth.

Rolff furnished all kinds of excitement on November 9 when he upset pins for games of 224, 210 and 235, an average of 223, which, I believe, beats any score that the 63d Street Bowling League can boast of. It beats Leonard's high series of last year by twenty-six pins. It also raised Rolff from twenty-first place to seventh.

Below are team and individual standings after the games rolled November 9:

Team--	Won	Lost	Percent- age	High Game	High Series	Average

Some Big Scores in 63d Street League

The 63d Street General Office Bowling League at Chicago has now completed its first round.

"Bobbie" Goodell has rushed his Daylight Specials to the top by winning three

straight from the strong Diamond Specials. His crew had games of 991, 902 and 920, Kempes being high man on the team with 607 pins. "Lefty Lou" Heimsath has been going well the last six games, having averaged 205 for them. Recently he turned in 631, which is high series for the league. "Charlie" Lind knocked off high game by getting 245.

The prize winners for high games Friday, November 3, were: Heimsath, 230; Ruhn, 199; Flodin, 216, and McKenna, 235. Winners Friday, November 10, were: Heimsath, 230; Powers, 205; Lind, 236, and Calloway, 234.

Captain Calloway's Panama Limited ran out of coal and got bumped by the Freeport Peddler for three straight, placing the Panama Limited at the bottom of the list for the league.

Below is the standing of teams and individuals up to November 17:

Team—	Won	Lost	Per- cent—	High Game	High Series	Aver- age

New De Luxe Train to Florida Scheduled

The Floridan, a new *de luxe* all-Pullman train, will be put into operation December 5 on the Illinois Central System and connecting lines between Chicago, St. Louis and Florida. It will leave these terminals on the Northern Lines each Tuesday, Thursday and Saturday thereafter and will travel the same route as does the Seminole Limited. The Seminole Limited will continue to run daily.

The schedule of the Floridan is such that it will make faster time between Chicago, St. Louis and Florida than any other train.

1 baggage-club car	Chicago-Jacksonville
1 dining car	Chicago-Jacksonville
1 10-section, 1-drawing-room, 2-compartment sleeper	Chicago-Jacksonville
1 12-section drawing-room sleeper	Chicago-St. Petersburg
1 12-section drawing-room sleeper.....	St. Louis-Jacksonville
1 6-compartment-observation sleeper	Chicago-Jacksonville

Beginning January 2 the 10-section, 1-drawing-room, 2-compartment sleeper will be operated from Chicago through to Miami, Fla. It will arrive there at 11:30 a. m. the second day after it leaves Chicago. The northbound train will leave Miami at 6:40 p. m. on Monday, Wednesday and Friday.

Effective January 2, the Floridan will arrive in Jacksonville at 9:10 p. m. The night train of the Florida East Coast Railroad will leave Jacksonville at 10 p. m.

It will leave Chicago at 12:01 p. m. and St. Louis at 4:04 p. m., and will arrive in Jacksonville at 8:50 p. m. the following day, in time to make connections with all night trains for southern Florida. The northbound train will leave Jacksonville at 9 a. m. on Tuesday, Thursday and Saturday and will arrive in Chicago at 4:10 p. m. and St. Louis at 4:45 p. m. the next day. The first northbound train will leave Jacksonville December 7.

The Floridan will carry only Pullman passengers. Its equipment will be:

The Floridan will continue through the first part of April. The punctual on-time arrivals of the Seminole Limited will also be a feature of the Floridan.

The passenger department has issued a bulletin announcing the new train and requests that all possible publicity be given the one-night-on-the-road service from Chicago and St. Louis to Jacksonville, as well as the convenience afforded by the through Pullmans to St. Petersburg and Miami.

Succeeds in Keeping 'Em Out of Hospitals

General Car Foreman F. M. Fuller of Waterloo shops not only believes that accidents and injuries can be prevented but also practices what he believes. In addition to instructing new employes as to the methods of preventing injuries, he suggests the thought: "The folks want you home tonight; the company wants you here tomorrow, and the hospital does not want you at all."

The pictures appearing with this article introduce Mr. Fuller's foremen and employes. The foremen are taught and in turn teach their employes:

To comply with the proper use of the blue flag;

Not to cross tracks without first ascertaining whether engines or cars are approaching;

Not to use defective tools;

To report a careless workman to the foreman and any defective tools that they may find;

The proper way to hold cut chisels, so that if they miss the chisel they will hit the palms of their hands with the hammer, in place of striking themselves on the back of the hand, which would result in the breaking of bones in the back of the hand;

To use emery or sand paper on their hammers, so that the face of the hammer does not get smooth, allowing it to glance off chisels or nails;

Not to throw boards on the ground with nails protruding, to be stepped on by themselves or fellow workmen;

When working on top of cars to be careful not to walk off the roof backward;

Not to cut off rivets so that the head could fly off, striking a fellow workman, as a preventive to eye injury;

To wear goggles on this kind of work to prevent small pieces of steel from flying in their eyes;

To keep their fingers and feet from under heavy material they might be handling.

Here are Frank M. Fuller, general car foreman at Waterloo, and his foremen, who are impressing on their men the absolute necessity of accident and injury prevention. No. 1 is Mr. Fuller; No. 2, James Moore, wrecking foreman; No. 3, Frank Reynolds, mill foreman; No. 4, Louis Gunstead, labor foreman; No. 5, George F. Shannon, reclamation foreman; No. 6, Roy L. Jackson, cab foreman; No. 7, Gus Hein, gang foreman; No. 8, Frank Beener, gang foreman.

Here are some of the men from Mr. Fuller's department. Left to right, top row: Roy L. Jackson, Charles Smith, William Robinson, Matt Schuack, Maurice Kirby, William Wolf, Harry Bartlett, Bert Jones, Frank Munger. Left to right, second row: George McCowen, Gus Albright, W. W. Wagner, Otto Templine, Ira Hahn, James Chapin. Left to right, bottom row: Art Wolf, Raymond Daniel, Ray Truesdell, George Kalus, Jim Efantis, John Schuack.

"At Waterloo," Mr. Fuller reports, "we have a stationary scaffold to keep the men from using ladders for scaffolding, as ladders are very dangerous for scaffolding."

The interest displayed by Mr. Fuller and his foremen in the prevention of accidents and injuries is reflected by the absence of injuries in his department.

P. E. Odell Joins Staff of the G., M. & N.

P. E. Odell left the service of the transportation department of the Illinois Central on October 31 to accept a position as vice-president and general manager of the Gulf, Mobile & Northern Railroad. At the time he left the service of the Illinois Central he was doing special work in Mr. Porterfield's office.

Mr. Odell entered the service of this company in 1913 as a dispatcher at Carbondale. A short time later he was promoted to chief dispatcher, a position in which he remained about two years. He was then trainmaster at Mattoon for about three years, after which he left the service, until 1921, when he was employed in office of the general superintendent of transportation.

Mr. Odell has been in railway work almost continuously since 1886. His first position was that of station keeper, and since that time he has been employed by several different railroads as switchman, operator, agent, dispatcher, chief dispatcher, trainmaster and master of transportation. At one time he was in complete charge of the private railroad of the Florentine Marble Company of Vermont.

P. E. Odell

HOUSE PLANS FOR OUR READERS

Concrete

Where grounds are narrow and the house to be built is not too symmetrical, most pleasing results are obtained by setting the house well back from the street and as close to one property line as convenience will permit.

Colonial style houses, such as the one shown here, call for as much air space about them as possible. The width of this house is thirty-one feet, and it could be placed on a 40-foot lot, although a wider lot is preferable. As designed, it should face south or east.

To provide generous space in all rooms has been the main idea of the architect of this design, the Shalford. Even the vestibule is roomy and has a good coat closet. Double French doors give access to the sun porch, from which there is an exit through the rear entry. The entry accommodates the refrigerator, and easy passage to the kitchen allows using the sun porch for breakfast or tea. Considerable thought has been given toward making the kitchen a

pleasant place for work the year around. Double doors prevent cooking odors from circulating through the rest of the house. A built-in buffet is a feature of the dining room.

On the second floor one can judge that the sleeping quarters are of ample size by the fact that but two bedrooms are provided. Closets are equally spacious. There are two linen closets in the hall, where a door opens on the sleeping porch. Where an additional bedroom is wanted, the larger of the two rooms can easily be divided.

Colonial details can be successfully executed in the modern type of concrete block construction. Good texture and warm buff tint harmonize well with either red or green concrete-tile roof. Such construction reduces insurance and exterior upkeep costs and makes the home entirely fire-safe.

This design is taken from a group of twenty-five plans appearing in an elaborate plan book called "Concrete Houses" published by the Portland Cement Association.

FIRST FLOOR PLAN

111 West Washington Street, Chicago, Ill. Through the co-operation of this association we are enabled to publish plans of these portland cement stucco houses each month and to offer our readers this house plan service. The plan book, "Concrete Houses," can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valuable data on that subject, including photographs of many attractive stucco houses, but not including plans, can be obtained free of charge upon application to the editor.

SECOND FLOOR PLAN

Maybe There Were Several Watches

TO THE EDITOR: I am an old employe of the Illinois Central, having served on the New Orleans, Jackson & Great Northern and the Illinois Central from 1870 to 1902, and it affords me great pleasure to read your magazine, which I get regularly.

In your November issue I see that you have made a mistake in the name of the boy who found that broken rail [story on page 84 about two brothers of John Marsalis, machinist]. I found that rail and flagged the train October 6, 1870. Mr. Geary, now retired, was the engineer on that train. T. S. Williams, superintendent of the road, was following on a special. He took my name and afterward sent me a telegram to meet his car at the station. There I met H. S. McComb, who presented me with a gold watch inscribed: "From H. S. McComb, president of the N. O., J. & G. N. R. R., to James W. Kinabrew, as a token of regard for your noble effort in saving a train, October 6, 1870." An annual pass accompanied this gift. In 1876 I went to braking on this road, was soon promoted to freight conductor and in 1890 was promoted to the passenger department.

In 1900 I was the conductor of the train which was held up by the well-known train robber, C. Barnes. At that time I was shot and my watch was taken from me. Later the dead body of Barnes was found in the swamp, and my watch was found on his person.

Today I wear that watch with pride, a souvenir of a laudable act. In 1902 I severed by connection with railway life. Now I live a life of retirement and leisure at 1705 Peters Avenue, New Orleans.—JAMES W. KINABREW.

Conservation on Our Lines in the South

TO THE EDITOR: Out of the war, in the process of regeneration of people and countries and the world, has come an invaluable precept—not to empires, not to republics, but to the individual—conservation. It is written in black type in the minds of all who happened to be of earning age during that beautiful, extravagant period which we thought could last forever and which took wages, dividends and savings on an endless disappearing belt. The memory is a green

persimmon to us. It puckers our whole system, and we bring together the wrinkles in our brows, narrow our eyes in sympathy with the awakening and its astringency.

"Never again"—that comes out easily. "Let's save" is moralizing but constructive. During the optimistic period when any product would sell, the farmers of the South would think nothing of cheap products. As a result, half their crops were wasted. This refers to the growers of vegetables. The men who send to the North those appetizing green things so early in the spring have made excellent livings sending North half their crop. The other half hardly will do for the long journey, and so it is wasted.

Minds run more smoothly now than four years ago. They are receptive and thoughtful. It still requires a mind to crystalize and present a case, but the prophet has more honor in his country, and is treated kindlier than a half decade ago. The Illinois Central System has a man who saw a solution to the problem, a saving to the people, prosperity to the region, and he was willing to back his views. In short, he had sincerity.

He found it possible to save nearly the entire crop by canning the part left at home. To do this meant getting factories located and running, meant inducing the growers to co-operate and the bankers to lend a hand. All this had to be done in a time limited and exacting. It was done. This idea was started little more than three months ago. Today it is closed—with the vegetable growing season—for the year.

Along a short stretch of the road, perhaps fifty miles long, where most of the vegetables come from, the bankers are smiling and the growers have a new outlook. They have saved this year on an embryonic enterprise close to \$40,000. Remember, this money would have been in the ditch but for this man and this idea. The future? In one town alone next year there will be a plant capable of saving considerably more than \$100,000 each season. There will be at least six to eight plants of varying size started.

Is the idea popular? The growers are buying stock in the factories. They are planning more acreage, carefully and thoughtfully. The bankers are taking stock also. "Regardless of dividends, it will do more good to our community than any enterprise we have"—thus one conservative

bank president holds it. "Our vegetables are assured of profit every season, with canning factories to help out"—this from a noted grower and shipper. "We will make this region as noted for its canned goods as for its fresh vegetables"—from the president of a canning company that sends its goods to every state in the Union and to foreign ports. "Here is \$600 that would have rotted," said a grower. "I have \$230 that I was going to plow up in the form of cabbage," said another.

This is the practical working of conservation. It happened 'way down South on the Illinois Central, where winter comes lightly and springtime comes early. Regardless of the railroad's part, regardless of any one person, the country is more prosperous down there. There is a wider vision of the future and a satisfaction born of a more stable business, fostered by a part of that great railroad which is great because it receives the time and imagination of good men and their loyalty and originality.—EMPLOYEE.

EFFECTIVE SPEECH

You must develop the habit of quickly, almost instantly, marshaling in your mind the facts you want to communicate before you open your mouth—laying out a program, as it were. What you have to say may take only sixty seconds to deliver—may take only five seconds to organize—but the preliminary organization is essential, because it gives you a center to work around. Then, when you are talking, you must adhere to this outline—and depend on your tone of voice—your emphasis—your inflections to hold the interest of your listeners in what you are saying. Men who consistently use this plan can in less than ten seconds make a mental outline of the points they want to bring out, which will take from fifteen to twenty minutes to cover in the spoken word. And the wonderful part of this method is the fact that once the habit of forming or organizing thoughts before delivering them is adopted, interruptions and comments do not in any way disturb or confuse. The preliminary organization of thoughts is nothing more or less than the application of forethought to speech. And by dint of practice and habit-forming it becomes second nature and stands you in good stead, no matter what emergency may arise.—IRVING ALLEN.

Traffic Department

Exportation of Grain and Grain Products

By HUGH HARDIN,
Commercial Agent, Kansas City, Mo.

THE growth of our export trade in grain and grain products, as well as other commodities, is the effect of improved transportation facilities.

When the caravan was the principal means of transportation, the only commodities commanding a wide market were rare and expensive articles such as precious metals, ivory, spices, costly woods, etc. When transportation was expensive and dangerous, commerce catered to few, while the great mass of people by necessity depended entirely upon those commodities produced in their own or nearby localities. Such staple commodities as wheat, wheat flour and corn, which now constitute some of the principal articles of international trade, were of little importance in the world until a comparatively recent date.

In the United States the movement from a large percentage of the grain area necessitates a rail haul of from 500 to 1,500 miles to the port of export. Before steam was used as the motive power of both land and water transportation, grain and its products could not be exported, and our foreign commerce was confined principally to commodities produced in those regions near the sea.

World Demand for Our Products

With the methods of communication and marvelous transportation facilities we now have, the law of supply and demand has become world-wide in its scope; the price of grain and its products is not contingent entirely on the production and consumption in our country, but depends largely on whether the surplus in all grain-growing countries is sufficient to meet the demand of the world's consumption.

I do not believe the majority of the people of the United States realize the importance of a world market in its relation to grain and grain products. The world market is comparatively a stable market and is essential to the farmer who cannot vary his production to meet current needs.

We have, each year, a surplus of grain in excess of requirements of home consumption. The amount is subject to considerable fluctuation, as the farmer plans for a year or two ahead, with the result that an acreage that produces enough in a poor season produces a large surplus in good years. This variation is beyond control, and agriculture, more than any other industry, needs the world market with all the facilities necessary to move the surplus to regions where it can be consumed.

There is a possibility of the elimination of our export grain surplus by the growing needs of home consumption. There is a gradual increase in population and in per capita consumption, against which our per capita production is falling off.

Per Capita Consumption Increased

According to statistics published by the Department of Agriculture, the per capita consumption has increased from three and eight-tenths bushels in 1850 to six bushels today.

However, the prices prevailing during the recent war, closely followed by production expansion, are convincing evidence that we have not reached our capacity production. With more general use of fertilizers and better methods of farming, it is reasonable to assume that this country will raise a surplus for export some years to come, providing the prices paid the grower justify the increased production cost.

I will deal directly in this article with only our principal exports from the cereal family—wheat, wheat flour and corn—and briefly with the part that Kansas plays in the production of wheat and wheat flour.

Export of Wheat Fluctuates

The wheat crop, as a whole, has much to do with the prosperity of our nation, because grain enters into the foreign trade to a greater extent than any other crop except cotton. While we unfailingly have a surplus of wheat each year, the amount marketed abroad shows great fluctuation, due to changing crop conditions, difference

in prices and international demand. The total United States crop during 1921 was 794,893,000 bushels. From this amount, 279,948,601 bushels were exported, principally to the United Kingdom, Italy, France, The Netherlands and Belgium. The 1922 crop is estimated at 810,000,000 bushels, with a surplus for export, according to the most reliable estimates, ranging from 224,000,000 to 275,000,000 bushels. The exports for the first nine months of this year were 126,129,965 bushels.

The exportation of wheat is mostly in the hands of large grain dealers, who control lines of elevators found in every large producing section. Kansas City alone has forty-one public and private elevators, with a total capacity of 27,080,000 bushels. The total capacity of the terminal, country and mill elevators in Kansas is 54,624,000 bushels.

Following the harvest, the farmers haul their grain to the market, where they either sell to the elevator company or place it in storage, awaiting higher prices. Whatever method is employed by the farmer in disposing of his grain, that portion for export eventually comes into the possession of either the large mills or the grain dealers located in the primary markets and is then exported as wheat or flour, as the case may be.

Kansas a Great State for Wheat

Kansas not only ranks first in the amount of wheat produced each year, but also raises the finest milling wheat in the world. The average yearly production is approximately 100,000,000 bushels. The Kansas wheat crop for 1921 was 128,504,000 bushels, and the crop for 1922 is estimated at 117,000,000 bushels.

No reliable figures are available as to the amount of the Kansas crop which is exported as wheat, although it is estimated that approximately 30 to 35 per cent goes into the export trade. This will vary somewhat with the size of the wheat crop and quality. In years when there is much low quality wheat in Kansas, larger portions of it have to seek an outlet through the export trade, as this is where much of the wheat of low milling quality is disposed of.

The export trade at the southwestern markets up to the time this article was written, early November, has been very unsatisfactory, due principally to an unusual Canadian crop and the car shortage. Euro-

pean buyers also have been slow about anticipating their future requirements, apparently having been impressed by the large surpluses and low prices in America. This is regardless of the fact that the principal buyers have only fair crops in their own country and small reserves on hand and afloat.

From all information available, it seems thus far that the principal buyers have taken only moderate quantities, and they are fairly sure to be in the market practically the remainder of the season. These are the estimates of most of the recent summaries of the foreign situation and as reflected in the views of many exporters.

Growth of Flour Milling Slow

The wheat flour milling industry has long been one of the most important in the United States. The growth of the industry, however, has been comparatively slow for many years. During 1899 the mills produced a little more than 100,000,000 barrels; at present they are producing from 125,000,000 to 130,000,000 barrels. About 110,000,000 barrels, or one barrel per capita, are consumed annually by the people of the United States. The remaining portion is exported to all parts of the world. The principal markets for our surplus flour are the United Kingdom, Germany, The Netherlands and Cuba. Our total exports of wheat flour last year were 16,800,000 barrels, 5,700,000 barrels less than the average from 1918 to 1920, but equal to more than the average for the years from 1904 through 1913. The exports of wheat flour from the United States during the first nine months of this year were 10,458,370 barrels.

Kansas stands second in the United States in the flour milling industry (exceeded only by Minnesota), with a total daily capacity of 90,000 barrels, exclusive of Kansas City. On the average, Kansas mills grind from 45 to 50 per cent of the Kansas wheat crop, which, for the year ending June 30, 1921, was a production of 12,375,216 barrels. Kansas City mills produced, in the calendar year of 1921, 3,965,769 barrels, with a total daily capacity of 22,250 barrels at the present time.

Export Heaviest in the Fall

No figures are available as to the percentage of flour produced by the mills in Kansas and Kansas City that goes for export. However, it is of considerable volume, and the movement lasts practically throughout the

entire year. The heaviest movement usually is during August, September and October. The export trade is of vital importance to the millers in this country, as the American mills produce considerably more flour than is needed for home consumption, and the foreign markets are necessary to take care of the surplus output.

The export flour trade has been unsatisfactory over the period of the last two seasons. The gradual falling off of export flour business was directly due to the economic conditions abroad, which immensely stimulated home milling by the foreigner at the expense of the American millers' trade. However, as conditions abroad become more normal, the result should be an improvement in our flour trade, as the area of wheat bread consumption is steadily expanding and is limited only by the lack of purchasing power. Once wheat bread is introduced to a people, they rarely return to and are never satisfied with the coarser bread stuffs.

Corn that is shipped for export comes principally from Illinois, Nebraska and Iowa. The chief markets for our corn and corn products are the United Kingdom, The Netherlands, Germany and Denmark. Large quantities are also exported to Canada, Cuba and Mexico. In 1921, 122,954,505 bushels were exported, 58,582,806 bushels of which, or 45 per cent of the export surplus, were shipped to Canada.

However, the greater part of the movement to Canada covers corn shipped in transit through Canada for export via Montreal, as according to the statistics published by the Dominion of Canada the total consumption in Canada amounted to only 12,000,000 bushels.

Corn is the principal food for our livestock, 85 per cent of the total crop being used for this purpose. A very small percentage is exported. For example, the total yield for 1921 was 3,081,251,000 bushels, and out of this amount only 129,054,505 bushels were exported. The percentage this year will be considerably higher, as estimates indicate the total crop at slightly less than 3,000,000,000 bushels. During the first nine months of this year 14,207,000 bushels were exported, indicating that our corn exports for 1922 will exceed those of any year since 1900, when the total was 190,386,000 bushels exported.

As New Orleans is the principal Gulf outlet for export grain and products from the Southwest, the importance of this traffic to the Illinois Central System cannot be overestimated. Through our connections at important gateways, such as East St. Louis, Paducah, Memphis, etc., with the principal grain-carrying lines of the Southwest and our fine terminal facilities at New Orleans, the Illinois Central System is in position to and does render service second to none on this class of traffic.

Colonel Arn Joins Terminal Improvement

Colonel W. G. Arn was appointed assistant chief engineer of the Chicago terminal improvement department November 16. He was formerly assistant engineer, maintenance of way.

With the exception of two years that he served in the United States Army during the World War, Mr. Arn has been in the service continuously since March, 1907. At that time he was assistant engineer in charge of the construction of the Birmingham terminal. The next year he was appointed assistant engineer of what was then known as the Birmingham division.

In August, 1909, Mr. Arn was the assistant engineer in charge of the construction of the Poydras terminal at New Orleans, and in September of the same year he was in charge of the reconstruction of the pas-

senger terminal at Louisville. He was transferred to the general offices in Chicago as assistant engineer in charge of special work in June, 1910, and in August, 1912, he was placed in charge of the construction of the Grand Central Station at Memphis.

In November, 1914, Mr. Arn was appointed roadmaster of the Indiana division. He remained in that position until June, 1916, when he was made assistant engineer, maintenance of way.

A leave of absence was granted Mr. Arn in May, 1917, when he joined the 13th Engineers of the United States Army. He served in France until June, 1919, and now has the rank of lieutenant-colonel in the army reserve. He returned to his position in the maintenance of way department after his service in the army.

Prosperous Railroads Needed

(Continued from page 8)

number of locomotives and cars in bad order, less expansion of facilities than for many years, reductions of rates made by the railroads voluntarily or under orders of the Interstate Commerce Commission which on the basis of the business handled in 1921 amounted to \$400,000,000 a year, and reductions in wages authorized by the Railroad Labor Board which resulted in the shop employees' strike.

Reductions of rates were advocated on the ground that they were essential to a revival of general business. Without now arguing the question whether they were desirable or not, it is notable that general business began to revive before any reductions of rates were made. Within the last six months the freight business handled by the railroads has increased 30 per cent, and the net return earned by the carriers as a whole this year has been somewhat larger than last year, having averaged 4 per cent upon their valuation. Owing to this, to the relatively large advance which has occurred in the market prices of railway securities and to the prospective demands of a still heavier traffic, the railroads thus far this year have ordered more cars and locomotives and begun more improvements of other kinds to enable them to handle more business than they have for several years. To the middle of October orders for locomotives this year had totaled 1,792, for freight cars 122,953 and for passenger cars 1,467.

Railroads Must Make Money

Clearly it is essential to the welfare of the country that railroads should as rapidly as practicable put their existing facilities in good condition and that they should for some years rapidly improve and expand their properties. What is necessary to insure that this will be done? Those charged with the responsibility of managing railroads can make but one answer. The one thing and the only thing which ever will enable and cause the railroads to carry out a sufficient program of expansion will be to let them earn sufficient net return to raise the new capital required for that purpose.

Various plans are proposed for solving or helping solve the railway problem. Formerly one of the policies most persistently enforced for this purpose was that of com-

PELLING unrestricted competition and breaking up every consolidation of railroads which tended even remotely to interfere with competition. At present one of the policies widely advocated and contemplated by the Transportation Act is that of bringing about even more extensive consolidations than those formerly prohibited.

The point cannot be too strongly emphasized that no policy ever will do any good which is not based mainly on the principle that if the railroads are to render good and adequate service they must be allowed to earn a sufficient net return to pay the going rate of interest and reasonable dividends on their existing bonds and stocks and also on such amounts of additional bonds and stocks as they must issue and sell if they are to raise the new capital required to carry out a program of expansion. For years theorists have discussed and reached conclusions highly satisfactory to themselves regarding the net return which concerns rendering a public service ought to be allowed to earn. Their views have prevailed in our policy of regulation. The result, as I have shown, is that in fifteen years the increase in the tractive power of locomotives has declined 50 per cent and the increase in the capacity of freight cars 80 per cent, while the effect upon the increase in other facilities has been similar. The question is not what interest and dividends railroads *ought* to pay. It is what they *must* pay to get capital. That question always has and always will be determined, not by theorists, but by cold facts regarding the interest and dividends the owners of capital can get in the innumerable lines of business which compete for their favor as investors. During recent years the railroads have not been able to meet the competition of other concerns for new capital by offering relatively as high rates for it. Therefore, they have not got their share of it. That is almost the sole reason why railway expansion has declined.

Fair Return Set at 5¾ Per Cent

The Interstate Commerce Commission having, after two years more of investigation, again held reasonable the valuation placed by it upon the railroads in 1920, has held it would be fair and in the public interest for them to earn in future an average annual net return of 5¾ per cent on this valuation. In view of past experience in the railway business and of present economic

conditions, it is impossible to comprehend how any reasoning mind could conclude that the earning by the railroads of any smaller average return than 5¾ per cent over a period of years would enable them to raise the large amounts of new capital which, in the interest of the entire producing, commercial and consuming public, they should raise and invest.

It is a fact, however, which we must not minimize or disregard that a strong and widespread propaganda is being carried on to secure legislation to reduce the net return of the railroads to a much lower basis than that which the commission has held reasonable. It has been proposed in bills introduced in Congress to restore to the states the same authority to regulate rates that they had before the Transportation Act was passed. This would remand the railroads again to the rule of forty-nine masters. It would result in the states' again making state rates lower than the corresponding interstate rates. It would destroy the ability of the Interstate Commerce Commission so to regulate rates as to enable the railroads to earn adequate net returns.

In addition, the valuation made by the Interstate Commerce Commission is being attacked by certain labor and political leaders on the ground that it is from \$5,000,000,000 to \$7,000,000,000 too large.

The passage of the valuation act, under whose provisions the Interstate Commerce Commission collected and compiled the information upon which the valuation was based, was obtained nine years ago chiefly by men who claimed that the railroads as a whole were grossly over-capitalized. Basing its estimate mainly upon the wages and prices of materials which prevailed in 1914, the commission, after eight years' work in carrying out the valuation law, has found that the value of the railroads as a whole, while less than the investment shown by their books, is more than \$2,000,000,000 greater than the amount of their securities actually outstanding in the hands of the public. The commission is composed of eleven men who have been appointed by three different Presidents from nine different states. Only one of them ever was a railway officer, and five of them have been members of state commissions. Nothing could be more unreasonable than to assume that such men would be disposed unduly to favor the railroads or that, after their

years of study of the problem, they would be less able to make an intelligent valuation than politicians and labor leaders who have no responsibility for the results of railway regulation and who seek to promote their own selfish interests by carrying on propaganda against the railroads.

Propaganda Against Esch-Cummins Act

Nevertheless, it would be unwise to ignore the fact that many persons, especially railway employes and farmers in the Middle West who are suffering from adverse conditions, are believing and being influenced by this propaganda. Its avowed purpose is to bring about changes in federal regulation by which the valuation would be scaled down billions of dollars and the net return of the railroads correspondingly restricted. The attack is directed chiefly against the rate-making provisions of the Esch-Cummins Act. The most important of these provisions now in effect is that which directs the Interstate Commerce Commission in fixing rates to consider the need of the country for adequate transportation. Therefore, the principal thing Congress would do by repealing the rate-making provisions would be to say in effect to the commission that it should not in future consider the need of the country for adequate transportation.

Plainly those who advocate this policy ignore the fact that the greatest present menace to the prosperity of the country is that it has not adequate means of transportation. No more deadly blow to railway credit, to the ability of the railroads to expand their properties, to the nation's good faith and prosperity, could be struck than by legislation such as they propose. It would tend to stop such increases of the capacity of the railroads as are now being made and to cause a chronic shortage of transportation which would seriously hinder all increase of production and commerce as long as it lasted. Only men who ignore the present transportation situation, who are mad with prejudice against the railroads or who are bent upon the destruction of private ownership could advocate such a policy. It is probably significant that almost every leading advocate of this policy has been, or is now, an avowed advocate of government ownership of railroads and other socialistic policies.

The practical value of every law depends on the way it is administered. Nobody

would claim that the Transportation Act is a perfect law or that it has been administered with perfect fairness and wisdom. There are many, however, of whom I am one, who believe it is the best law for the regulation of railroads ever passed, that it has not yet been given a fair trial, and that any changes which might be made in it now, after it has been tried only three years under constantly abnormal conditions, would be much more likely to make it a worse law than a better one. There is no doubt, however, that further attempts will be made to obtain changes in it and especially in its most important provisions—those relating to the settlement of labor controversies and those relating to rate-making.

Public Won't Support Strikes

The principal lesson taught by the outlaw switchmen's strike two years ago and the recent shopmen's strike seems plain enough. Both, after doing much harm, proved failures. They plainly indicate that, having established an impartial tribunal to pass on labor controversies, the public will always be so strongly against railway employes who strike that most strikes will in future be foredoomed to failure from the start. The public and the railroads long since decided it would be best for all concerned for differences between the railroads and their employes which could not be settled by direct negotiations to be settled by arbitration. Labor leaders have been hostile to arbitration. There are indications, however, that railway labor leaders who are not infected with radical hostility to the entire present industrial and social system, but who are simply striving to promote the best interests of members of their unions under the present industrial system, are losing confidence in strikes, and especially in strikes on a huge scale, as means for promoting the welfare of labor. When the railroads were returned to private operation sixteen railway labor unions were working together under an alliance which almost constituted "one big union" of all railway employes. Since then, owing to various causes, the sixteen labor unions have almost entirely ceased to act in unison. The railroads have insisted upon the desirability from the standpoint of all concerned of national negotiations with labor being abandoned and of individual railroads or groups of railroads dealing with their own

employes according to their local conditions and needs. The only nation-wide railway strike in history having proved a failure, there has been a great increase of sentiment among employes themselves in favor of the policy that railroads have stood for, and there is good reason to believe that the danger of extensive strikes has been greatly reduced.

The principle of arbitration of railway labor controversies that cannot be settled by direct negotiations is absolutely sound and should and must be maintained. The public should, and in the long run will, refuse to tolerate such private wars and interferences with service in an industry whose efficient and uninterrupted operation is essential to its welfare. While the railroads are now handling practically as large a business as they ever did, the shop employes' strike has caused much economic waste, and has given the public some idea of the much greater loss and suffering that would be caused by a strike which actually did interrupt all railway service. The public should and will, if necessary to its protection, adopt and enforce legislation for compulsory arbitration of railway labor disputes. If it does not seem probable that this will be done in the near future, this is because the shop employes' strike was so soon won by the railroads with the aid of public sentiment that the danger of great national railway strikes has been reduced.

Must Appeal to Employes and Public

With respect to the valuation law and the rate-making provisions of the Transportation Act, there seems real danger that they will be changed for the worse unless the public can be given a better understanding of the railway situation and of what must be done to improve it if it is not to be allowed to restrict the growth of production and commerce until it brings a great disaster upon the nation. That disaster must be avoided; and therefore adoption of the policy that would cause it must be prevented.

In concluding my remarks I wish to emphasize as strongly as I can the duty that those responsible for the management of the railroads owe to their security owners and to the nation to make much greater efforts than they ever have to give railway employes and the public a better understanding of railway management, of the railway situation and of the railway problem.

Most of the troubles of mankind are due to lack of understanding or to misunderstanding. Most of the employes of the railroads are good citizens who do their duty as they see it and who desire to contribute their share toward their country's progress and prosperity. I have an abiding faith, based upon long experience as a railway officer, that, if the managements of the railroads will not only treat the employes fairly but will also get to them the facts about the railway business which they are entitled to know and appeal to and rely upon their intelligence and good sense, a large majority of railway employes will respond in what they say and do in the same spirit. We have too long allowed irresponsible and reckless propaganda to be disseminated among our employes without doing enough to combat it and to set the owners and managements right before the employes. The labor conditions of which we have complained so much have been partly due to our own sins of commission and of omission. It is time we recognized the fact that if we are to get a good understanding with the employes we must present to them the information about their and our business on which a good understanding can be based; and that if we are to expect them to give the most loyal and efficient service we must say and do the things which will show them why it is to their own interest to give such service.

Why Facts Must Be Spread

I have, besides, an abiding faith in the fairness and good sense of the American public. We should never have had the unfair and harmful policy of regulation we have had for fifteen years if there had not been abuses in the railway business which the managements themselves ought to have corrected. Furthermore, we should not have seen this policy persisted in year after year if the railway managements had not failed to use legitimate means which were available for presenting to the public the simple facts which demonstrate that, in spite of some abuses, the railroads of this country have been as honestly, as economically and as public spiritedly developed and managed as any large industry in the world. The public does not and never did desire to confiscate any investment which has been honestly and sanely made. Certainly, it never deliberately decided to adopt and carry out a policy of government regu-

lation with the intent and expectation that it should not only be unfair to investors but in addition should so reduce the development of the railroads that it would finally bring to a stop the progress of the country's production and commerce. Our farmers, business men and workingmen would not give a moment's hearing to demagogues and enemies of social order who propose to solve the railway problem by scaling down the valuation billions of dollars and thus confiscating billions of dollars of legitimate investment if they knew more of the facts about the railway business and in consequence understood the significance and purpose of such reckless and wholly unprincipled proposals. That the public has so often been misled regarding railway matters in the past and that so large a part of it is being misled regarding them now is largely due to the failure of the railroads frankly and persistently to present their case to the public. We have relied too long on presenting our case mainly to legislative committees, commissions and courts. In the long run public sentiment always has determined, and it always will determine, what lawmakers, commissions and courts will do; and until we do what is necessary to make the public understand the railway situation and the railway problem we shall never long have a sound policy of regulation.

Since a sound and enduring solution of the railway problem is so essential to the welfare of all of us, the railroads ought in this work of educating public opinion to be given the co-operation and support of public men, of the press and of leaders in all the walks of life. The Railway Business Association has been a leader in presenting the facts about the railway situation to the public and in striving for fairer and sounder regulation; and I would consider myself remiss in the performance of a duty if I did not express on this occasion the debt of appreciation and gratitude that I believe the railroads and the people of the country owe to the officers and members of this organization for the work along this line that they have done. Our railway problem is not merely the problem of railway owners and managers. It is the problem of every line of business and every class of people. Unfair and unwise regulation in the past has seriously harmed the owners of railway securities, who have seen honest and legitimate investments greatly depreciated in value over a period of years or actually

wiped out. But it has also done much harm to investors and workers in other industries; and a renewal and continuance of the past policy of regulation, by preventing a revival of the expansion of the railroads, will restrict the increase of all business, and bring a creeping paralysis upon all production and commerce that will cause losses many, many times greater to other industries, to our farmers and to our working

class, than to the owners of the railroads. Therefore, the duty—the selfish duty, if you please—of helping create an intelligent public sentiment regarding regulation of railroads rests upon our agricultural leaders, our business leaders, our public men and our newspapers as much as upon railway managers; and all will suffer in the disaster that will result if such a public sentiment is not created.

What Patrons Say of Our Service

A Tribute to Illinois Central Courtesy

President C. H. Markham recently received the following letter from Henry B. Utley, vice-president of the International Harvester Company, Inc., 606 South Michigan Avenue, Chicago:

"Prompted through some recent trips over your lines, I am writing to express my appreciation of the unusual courtesies extended by your road to its patrons—courtesies more pronounced, I am sure, than can be experienced on any other road in the land, or at least over any of the roads that I personally use with considerable frequency.

"American people, as you are well aware, are prone to criticise. Especially is this true of those patronizing the railroad; and this habit of the traveling public is my chief reason for wishing to acknowledge through this letter my full appreciation of what I regard as railway service at least fully equal to the best in the land."

Witnessed a Pleasing Incident

Robert R. Grace, 131 Garfield Street, Decatur, Ill., recently wrote as follows to President C. H. Markham:

"While waiting in your Union Station, Mattoon, Ill., I witnessed one of the most pleasing incidents I have ever seen. Your train due here at 1:10 p. m. has, to my idea, the most efficient train crew on your line or any other road.

"When this train was letting its passengers off, an old crippled lady was carried off by the train crew. After getting in an invalid chair, she began thanking the crew for their kindness. The conductor, after such an exhibit of kindness, gave the old woman a hearty handshake and bade her good-by.

"This crew practiced the last word in

efficiency and loyalty. We all wonder why the Illinois Central is such a big organization. How could it help but progress with such a display of courtesy to the traveling public?"

Personal Attention Appreciated

W. H. Brill, general passenger agent at New Orleans, recently received the following letter from H. Van R. Chase, manager of operations of the New Orleans Association of Commerce:

"I want to express to you my very great appreciation for the most excellent service rendered by your company in seeing that my mother, who is not used to traveling, was taken care of on her arrival on the Michigan Central train and placed on the Panama for New Orleans.

"She said everyone was so kind to her and did everything to make her comfortable. You know this means a great deal to a woman 72 years old who has never taken a long trip or ever slept in a sleeper.

"I personally want to express to you my great appreciation."

Service Liked by U. S. Engineers

President C. H. Markham recently received the following letter from Charles D. Jewell, first lieutenant, C. E., commanding Engineer Training Company No. 6, Camp Travis, Texas:

"Engineer Training Company No. 6 thanks you cordially for the excellent service rendered on your line from Chicago to New Orleans during the days of October 2 and 3. Your agents gave prompt and efficient assistance all along the line. We commend especially your dining car service from Memphis to New Orleans. Mr. J. F. Vezina, in charge of diner No. 3994, left nothing undone to add to the pleasure of the trip."

Hallowe'en a Big Event at Carbondale, Ill.

*Thousands Crowd City to See Annual Parade and
Take Part in Merrymaking That Accompanies It*

THOUSANDS of persons in Southern Illinois crowded into our trains going toward Carbondale the afternoon and evening of October 31 to participate in the annual celebration of Hallowe'en by that city. Carbondale had extended a general invitation to everyone to enjoy its "Mardi Gras" festival that night, and a crowd estimated at 20,000 visitors thronged the business district.

An announcement that Carbondale was to celebrate was all that was necessary to attract such a large number of persons, for that little city has established a reputation for its observance of Hallowe'en that is seldom equaled by celebrations of any kind in even larger cities. Carbondale has celebrated the occasion for the last fifteen years. At first only a few persons masqueraded and strolled along the streets; then a parade was planned in 1912 to make the evening merrier. Those who attended the celebration that year were so generous in their praise and advertised the festival to such an extent that the next Hallowe'en found Carbondale flooded with visitors. Since then it has become an established fact that a visit to Carbondale on the evening of October 31 means a jolly good time. And the celebration has increased in importance each year.

Legion Post Handled Arrangements

Arrangements this year were under the direction of Donald Forsythe Post No. 514 of the American Legion, and many workers lent their earnest efforts and joined the spirit of the occasion to make the evening a complete success.

Darkness had hardly begun to settle over Carbondale on the Hallowe'en just past when fearsome things began to prowl the streets. Witches, imps, pigmies, monsters and hideous ghosts flitted here and there; and then druids, kings, paupers, princesses, monks and clowns could be seen mingling in the spirit of mischievous make-believe. There were slender girls in the flush of youth and beauty masqueraded to defy recognition by the gallants who vainly pursued. Joy reigned supreme as the weirdly costumed

figures danced about the city, and laughter and song mingled to make the occasion one long to be remembered. The streets and sidewalks were packed with funmakers.

After three hours of unrestrained fun of this sort, the blare of trumpets sounded above the noise in the streets, and the multitude was forced back to the sidewalks and curbstones. Numerous brilliant flares of red could be seen in the distance. The parade was approaching with hundreds of fusees adding splendor to many floats.

Heralds robed in flaming scarlet and mounted on jet black horses moved slowly up the street as the crowd gave way. Then came the guards of honor for the queen of the celebration, who followed in a beautiful golden chariot drawn by four great, iron-gray horses. Miss Mary YOUNGBLOOD was the queen of the night.

Parade a Mile and a Half Long

Twenty-six symbolical floats, hundreds of masqueraders, two bands and many advertising floats followed in the wake of her majesty. The parade was estimated as a mile and a half long.

First in line was the American Legion float. A soldier in full field equipment was kneeling before the figure of Liberty. Then came a dainty float carrying two little tots, the children of Carbondale soldiers who served in the World War.

On a float representing the spirit of Hallowe'en witches and other wild figures watched a forked-tail imp stir the fire under a kettle of brew. The float was a mass of trampled corn stalks.

Education was represented by a stately young woman holding a light high over a thick book.

The great orchards of southern Illinois were depicted by a tree of apples mounted on a roomy float, with workers busy at a cider press.

Two young women in Egyptian poses before small pyramids represented that part of southern Illinois known as "Egypt."

The coal industry had a float showing miners in their garb of toil, with pit mule and car.

The various church organizations and

women's clubs of Carbondale entered floats.

A miniature caboose mounted on a truck was the contribution of W. A. Wing Lodge No. 549 of the Brotherhood of Railroad Trainmen, Illinois Central employees.

Several phases of high school life were shown in the float of the Community High School of Carbondale.

The rural schools had one float showing their condition in former years and another showing the modern rural school. The dunce cap and teacher with an extended ruler in the first float caused many ripples of laughter. It was awarded first prize in the comical float contest.

Andy Gump was there and received many

rousing cheers. He sat on a float with his political followers at a mimic rally and was kept busy doffing his broad-brimmed hat to the thousands of admirers along the line of march. This float received the prize for having the most comical cartoon character of the parade.

After the parade had passed, the gap in the street closed and the masqueraders continued their joyous round. The celebration lasted until 2:30 a. m., when No. 4 carried away the last of those who had come to Carbondale for the celebration.

The Carbondale merchants responded to the spirit of the occasion and decorated their display windows with various scenes of Hallowe'en.

Some Illinois Central Friends in Louisiana

The following contribution, dated October 15 and signed "Citizen," pays a well-deserved tribute to a community that has always been a good friend of the Illinois Central System.

I would suggest that you include in the next issue of your magazine for meritorious conduct the name of Mrs. J. H. McMahon, wife of J. H. McMahon, extra gang foreman, Hammond district, Louisiana division. On her return from squirrel hunting yesterday evening near her place at Napton, La., she found a joint with all the bolts broken out of one end. As it was a very cool evening and the rails were creeping as a consequence, the rail was in a dangerous condition to run over that night. On her arrival at Hammond Mrs. McMahon reported the matter to her husband. Mr. Chumley, our roadmaster, came along at that time and immediately dispatched a gang to repair the defective joint.

Mrs. McMahon's keen perception of danger in this case and her solicitude for others are in keeping with the environment in which she has been reared. From childhood she has lived on the shore of Lake Pontchartrain. Her father, Mr. Slosser, came here as a timber cutter when this country was a dense cypress forest; he was attracted to the rich soil on the lake shore and purchased a tract of land on the lake front. He cleared an acre and planted it to cabbage. The returns on it were so satisfactory that he cleared a large place and soon became independent.

In those days there was no railroad here,

and he shipped his freight to and from New Orleans by schooner. Later the Illinois Central, that great railroad which helps everybody it touches and every country through which it runs, was built through this marsh country, a most remarkable piece of engineering skill and daring. The roadbed has settled so much that in some places the gravel is thirty-three feet deep under the track. Mrs. McMahon's father and mother enjoyed the distinction of riding the first passenger train that passed through this country to New Orleans.

Mr. Slosser's success and the coming of the Illinois Central encouraged others to settle on the lake, and soon there was a prosperous colony of Germans settled here. They continued to prosper until that terrible storm in 1915 pretty nearly wiped them off the map. Twenty-nine persons were drowned in that flood, and many of those whose lives were spared moved away.

A most remarkable thing about this destructive storm was the comparatively small damage to the cattle. After the water subsided these sturdy cattle, after having been washed for miles into the swamp, came marching back to their accustomed range, and now this is getting to be a stock country, there being several herds along the lake. Mr. and Mrs. McMahon, who have acquired the Slosser place, have a splendid herd, and as they do not have to feed or house the herd through the winter they are making a handsome profit.

Mrs. McMahon is the youngest daughter

of the Slosser family. Her life on the lake, with its frequent tropical storms and other dangers incident to pioneering in a wild country, has instilled in her nature a contempt for danger. She often goes hunting alone, and deer or squirrels, which abound in this country, stand a poor showing under her unerring aim.

An incident which took place on a train not many years ago gives emphasis to the splendid character of the colony of twenty families which formerly inhabited this lake front. It also furnishes an unparalleled example of co-operation between a community and the railroad which serves it. Mrs. McMahon was on the train from New Orleans. We were having a gale off the lake that day, accompanied by a heavy rain. Captain Louis McLaurine, that chivalric and courteous gentleman and worthy descendant of that famous family of McLaurines which added luster and honor to itself and Mississippi, was the conductor in charge of the train. He had his train stop in front of Mrs. McMahon's house, which was half a mile south of the station where she was to have got off.

When she alighted she turned to thank him for his courtesy.

He said: "Go on; you have paid me a thousand times for this favor."

He then turned to me and said: "I used to run on a local freight down here, and when we would roll up to one of these freight platforms to take on freight these people would meet the train with dinner for the entire crew. They would load the freight while we ate, and I have never known one of them to sue this railway company for a dollar."

If there is another community of twenty families living for seventy-five years adjacent to the Illinois Central or any other

railroad which can boast of a record of this kind, I think it would be of interest to the readers of the *Illinois Central Magazine* to hear of it.

A CRIME AGAINST CHILDREN

A girl writes us that she was allowed to grow to womanhood without an education, because her father, though he could afford to keep her at school, thought it a better bargain to keep her at work. Now she says she must pass through life constantly humiliated by her ignorance, because she does not have the education that other girls about her have.

There is no greater wrong parents can do their children than to deprive them of a good education, of a good start in life. Every child has a right to be well born and well started in life; so started that he will have a fair chance in the great competitive game, and not be perpetually handicapped by the lack of education, poor health, an under-developed body, or some other preventable mental or physical defect which seriously jeopardizes his success in life.

To rob a child of the advantages his Creator has designed for him is a double crime—a crime against God and against the child.—*Success Magazine*.

SUCCESS

Men fail largely for three reasons:

First, they cannot analyze themselves correctly, nor are their parents or teachers able to do so.

Second, men do not form logical plans of procedure.

Third, they lack self-confidence and continuity of purpose.

Rivet these things accurately for a man and success is inevitable.—H. HIRAM HERTEL in *Forbes Magazine*.

NEWS OF THE DIVISIONS

AROUND CHICAGO

Office of Auditor of Freight Receipts

Cupid entered the record division and took the heart of Miss Anna McNamara, who has been in the service of the Illinois Central for eleven years and has now resigned in order to cook square meals for Thomas Coyne of the local freight office at South Water Street. On October 31 Miss McNamara was presented with elaborate and beautiful gifts, including a beautiful floor lamp, a dozen iridescent sherbet glasses, a dozen iridescent goblets, an electric iron, a large

linen table cloth, with napkins to match, a pyrex casserole and a pyrex baking dish. On finding all this laid out on her desk and the lamp lighted, Miss McNamara said she thought it was all a dream. On November 9 her girl friends from the A. F. R. division surprised Anna with a shower at which she received more beautiful gifts, every one of which she will find useful in her new bungalow in Avalon Park. Mr. and Mrs. Coyne will be at home at 8253 Blackstone Avenue after December 1.

H. H. Vale is receiving the congratulations

of his many friends on the arrival of a son, Harold H. Vale, Jr., at his home, August 25. His department sent Mrs. Vale a beautiful bouquet as an expression of good wishes.

ILLINOIS DIVISION

Miss Marie Lowry, daughter of Thomas Lawry, 301 West Green Street, Champaign, became the bride of Harold F. Mooney, son of Mr. and Mrs. Dan Mooney of Villa Grove, on Wednesday, November 1, at Holy Cross Church, the Rev. William F. Frawley, pastor of the church, officiating. The bridesmaid was Miss Adelaide Lowry, sister of the bride, and Wilbur Mooney, brother of the groom, was best man. Both Mr. and Mrs. Mooney are graduates of Champaign High School and attended the University of Illinois. At present Mr. Mooney is employed as an accountant for the Illinois Central. After the ceremony a 3-course breakfast was served at the home of the bride, with the immediate families as the only guests, after which Mr. and Mrs. Mooney left for New York City. They will be at home to their friends after December 1 in the Dodson Apartments, 408 North State Street, Champaign.

Miss Billy Friend has resumed her duties as file clerk after an enforced vacation of almost a month caused by an operation for appendicitis.

A NEWS-GATHERER

Here is Miss Anne Rose Sweeney, our Kentucky division editor. Miss Sweeney was employed October 1, 1915, as stenographer in the superintendent's office at Louisville, a position she still holds. She was born at Owensburg, Ind., and at the age of 3 moved with her parents to New Albany, Ind., where she has lived since. She was educated in the public schools and high school at New Albany and the New Albany Business College. In 1913-1914 she attended Indiana University and was a member of the Delta Zeta sorority.

OUR DIVISION EDITORS

Chicago Terminal—Mr. E. C. Harper, Chief Accountant, Room 205, Central Station, Chicago.

Illinois—Mr. George Strauss, Assistant Chief Clerk to Superintendent, Champaign, Ill.

Indiana—Miss Florence McShane, Secretary to Superintendent, Mattoon, Ill.

Iowa—Mr. Emmett Coffey, Chief Clerk to Roadmaster, Fort Dodge, Iowa.

Kentucky—Miss Anne Sweeney, Stenographer, Superintendent's Office, Louisville, Ky.

Louisiana—Miss Claire Pimm, Clerk, Superintendent's Office, McComb, Miss.

Memphis—Mrs. Collie P. Said, Secretary to Superintendent, Room 315, Grand Central Station, Memphis, Tenn.

Memphis Terminal—Mr. William Gerber, B. & B. Clerk, Room 306, Grand Central Station, Memphis, Tenn.

Minnesota—Miss Lucille Sims, Secretary to Superintendent, Dubuque, Iowa.

Mississippi—Miss Kathleen Hadaway, Secretary to Superintendent, Water Valley, Miss.

New Orleans—Mr. Thomas Treanor, Superintendent's Office, Vicksburg, Miss.

New Orleans Terminal—Miss Myrtle Biersoll, Care of Superintendent, New Orleans, La.

Springfield—Miss Della Morrison, Stenographer, Superintendent's Office, Clinton, Ill.

St. Louis—Mr. J. W. Brown, Clerk, Superintendent's Office, Carbondale, Ill.

Tennessee—Mr. Rufus Kemp, Jr., Office of Trainmasters, Fulton, Ky.

Vicksburg—Mr. J. S. Terry, Train Dispatcher, Greenville, Miss.

Wisconsin—Mr. J. A. O'Neill, Assistant Chief Clerk to Superintendent, Freeport, Ill.

Mr. and Mrs. M. A. Sheahan announce the arrival of a fine 7-pound boy October 31. Instrumentman Sheahan hasn't announced any plans for the newcomer's future, but we imagine as soon as the boy finds out all about "Santa Claus" he'll be started at the more serious business of learning the technique of railroading in the Illinois Central way.

Miss Margaret Baker now answers the stenographer's buzzer in Roadmaster Downs' office in place of Miss Viola Monahan, who has handed in her resignation as a preparatory step to carrying out matrimonial plans involving the roadmaster's chief clerk, Thomas E. Neary.

The boys on the division tightened their belts October 29 and set up new records of 1,648 loads and 127 empties moved to the Chicago terminal out of Champaign and 559 loads and 31 empties moved out of Clinton.

Superintendent Hevron and City Passenger and Ticket Agent Knapp piloted the Michigan football special to Ann Arbor, October 27. Coach Zuppke and his team were accompanied by a large delegation of rooters, who report the Illinois Central service highly satisfactory. Other excursions have been run

to the Wisconsin and Chicago games with Illinois. Large crowds signified their intention to take advantage of the Illinois Central service at those times.

INDIANA DIVISION **Accounting Department** (Miss Norienne Quinn)

Joe Eddington has returned from the Illinois Central Hospital, Chicago. He was confined there several days on account of an infection in his mouth.

Mrs. M. P. Fortner of Agent Gorman's office, Mattoon, has filled the vacancy left by the departure of Miss Cora Burch, who accepted a position in the superintendent's office formerly held by Carlton Schlicher.

Trainmaster's Office, Mattoon (Miss Essie Reams)

Trainmaster Keene has a new baby girl at his home, Mary Jane, born October 18.

R. H. Browning was appointed general yardmaster at Evansville, Ind., September 20; Glen P. Brock was appointed assistant yardmaster July 27.

Chief Dispatcher's Office (W. C. Scott)

Business is still good on the Indiana division. A heavy coal movement through Evansville averages more than 100 cars daily.

A new telephone switchboard has been installed, which will soon be in operation.

This will improve the service greatly, with a great saving of time to all using the phones.

Operator Virgil Haynes has been assigned to the second trick at Palestine, Ill.

Dispatcher M. W. Storm has returned to work after attending the funeral of his father-in-law.

Chief Dispatcher Freigo, who is having a vacation, is relieved by Dispatcher J. W. Bledsoe; Dispatcher C. C. Ratcliff from the Southern Lines relieves Mr. Bledsoe.

Mattoon Shops (Miss Flora Adrian)

Engineer and Mrs. W. E. Delay and son of Palestine, Ill., have returned from Jacksonville and Miami, Fla., where they have been spending several weeks.

Mrs. C. P. Wilson and daughter, the family of Engineer C. P. Wilson of Palestine, will depart soon for Rio Grande, N. M., on account of sickness.

Mrs. E. A. West and son, the family of Engineer E. A. West of Palestine, Ill., are leaving for Jacksonville, Fla., on account of sickness.

W. C. Powers, night roundhouse foreman, is visiting in Tucson, Ariz., on account of his health.

Mrs. Sullivan, daughter of Mill Foreman T. C. Rowe, Mattoon, passed away at the home of her father November 8.

J. Vandeverter, pensioned bolt machine man, Mrs. Vandeverter, George P. Clark,

Top, left: Electric wigway crossing signal at First Street, South, Onarga, Ill., replacing hand-operated crossing gates. Below, left: Similar equipment at First Street, North, Onarga. At right: Gang which installed the new signals at Onarga. Top row, left to right: E. H. Brown, George Ringo, Guy Fox; middle row: Alpha Rose, Arthur Cohea, Charles Hildebrandt; front row: Leo Reynolds, Kenneth James, James Bright. Photographs from S. C. Hoffman, supervisor of signals, Illinois division.

pensioned machinist, and Mrs. Clark have returned from Niagara Falls and other points of interest in the East.

Agent's Office, Mattoon (W. P. Wooldridge)

Chief Clerk R. E. Welch was off several days recently on account of the death of his sister, Mrs. Mary Sullivan.

Miss Josephine Gustafson has taken a position as stenographer in the agent's office left vacant by Miss Sylvia Armstrong. The last report from Miss Armstrong was that she was holding a good position in Los Angeles, Cal.

Clarence B. Crane has been employed as extra clerk in the Mattoon freight office.

M. Dorsey, agent, now on a six months' leave of absence, was a caller at the Mattoon freight office recently, having just arrived from a trip east, visiting New York City, Philadelphia, Baltimore, Washington, D. C., and other points of interest. Mr. Dorsey left for a trip west, which will include points in the states of Oregon, Washington and California.

David Kindleberger is a new yard clerk employed at Mattoon freight house.

The following rapid handling of cars has been reported by Conductor Hamilton on locals Nos. 293 and 294 between Mattoon and Decatur: IC-95524, company ties, out Mattoon, No. 294, 9/27, 7:45 a. m.; car set out Dalton City; 294 dropped note to section foreman north of Dalton City, who promptly came in and unloaded them; 293 picked up empty and arrived Mattoon 6:40 p. m. No. 293, 9/28, out Decatur 2:15 p. m., had B&O-88372 with fourteen crossing planks for Suffren; 293 stopped at Suffren, where gang was laying rail and had men unload the plank; took car to Bethany, spotted to lower elevator; they loaded car, and 294 moved car out 9/29, arriving Decatur 2:15 p. m.

Charles W. Anderson, for many years stationary engineer at our Mattoon, Ill., shops, passed away October 28 at the age of 81 years 10 months. Mr. Anderson was born in Knox County, Ohio, January 28, 1841. At the age of 14 he came to Illinois with his brother, James, and settled on a farm near Trilla, Ill. After a few years, he came to Mattoon, working at various things until January, 1881, when he went to work for the Illinois Central (then known as the P., D. & E.) as stationary engineer. There he worked until he was pensioned in 1915, making thirty-four years' continuous service. He was married on Christmas Day, 1864, to Miss Elizabeth Payne, who died in September, 1903. To them were born four children, two of whom are living. Mr. Anderson was married again in May, 1905, to Miss Mary Elizabeth Masteller of Oskaloosa, Iowa. Mr. Anderson was a favorite with all with whom he came in contact. His gentle and pleasing manner won him many friends, and he will long be remembered by those who

C. W. Anderson

saw him from day to day in the stationary engine room, and also those who visited with him after he was pensioned, while he made little trips on his annual pass, which he seemed to enjoy very much.

SPRINGFIELD DIVISION **Superintendent's Office**

Twelve thousand tons of coal which had been unloaded in the east yard at Clinton in order to conserve coal-carrying equipment was discovered on fire recently. The prompt action of the road department in changing tracks and getting the fire cut off by the use of clam shell was responsible for preventing a considerable loss.

On account of the severe and continued drought the water supply on the Springfield division has been seriously menaced, and the necessity of handling additional trains for water has made traffic much more dense.

In October, 1922, the Springfield division reached its peak in ton miles, with 17,000,000. The present indications are that November business will be equally as heavy as that of October.

A. B. Gage has been appointed chief clerk at the Decatur freight office, vice Z. C. Snell, assigned to other duties.

R. Fulk has been assigned to the position of accountant in the Decatur freight office.

M. Harris has been assigned to the position of cashier in the Decatur freight office.

Miss Eva Gilliland, third trick operator at Maroa, has taken a leave of absence for ninety days on account of ill health.

Trainmaster's Office (Miss Clara Hoyt)

Conductor M. J. Kennedy reported for work November 13, after an absence of three months on account of illness, and has taken the runs he formerly had between Clinton, Springfield and St. Louis.

When Conductor J. L. Ford recently enjoyed a two weeks' vacation, Conductor J. J. Milan filled his place on trains Nos. 17 and 18 between Chicago and St. Louis.

Z. C. Snell, who was formerly chief clerk to Freight Agent Morgan at Decatur, has been appointed traveling freight and passenger agent with headquarters at Springfield, Ill., vice L. T. Hoyer, resigned.

Art Clause, popular conductor on the Springfield district, and Miss Eva Hitt were married in Peoria November 6. They will reside in Clinton.

Conductor Burkhart, who was filling the vacancy left by Conductor M. J. Kennedy, has relieved Conductor Lovell on runs Nos. 517 and 518 between Clinton, Springfield and East St. Louis.

Brakemen H. R. Davidson, D. P. Easley and F. B. Dyer were promoted to conductors Sunday, October 29.

Conductor F. D. Crum, who had been in the service of this company for the last ten years, passed away November 2 and was buried at Clinton, Sunday, November 5.

Night Yardmaster Ed Miller, Decatur, has been appointed general yardmaster, vice H. Kippenhan, assigned to other duties.

J. E. Ryan, yard foreman, Decatur, has been appointed night yardmaster to fill the vacancy left by Mr. Miller.

Fon Hale has been appointed chief yard clerk at Decatur, a position recently created.

William Ryerson, yard clerk at Decatur, has accepted a similar position in Clinton yard.

A. L. Phares, yard clerk at Clinton, has

Hamilton Watch

"The Watch of Railroad Accuracy"

A Christmas Gift Worth While

TAKE advantage of your first Christmas shopping trip to visit your jeweler and see the Hamilton Watches. You will naturally be seeking gifts worthy the name for those who are near and dear to you—and frankly, can you think of any gift more sensible, more practical and more useful than a Hamilton Watch?

Every one needs accurate time. Once a luxury, accuracy of time is today a necessity—not only to Railroad Men, but to every man and woman, boy and girl. Furthermore, a Hamilton Watch is a gift that will last, and be appreciated for its accuracy and performance for many years to come.

There is a Hamilton for every member of the family. Your jeweler will be glad to show them to you and explain the various movements. You will be particularly interested in the following:

The No. 992
16-size
Railroad Timekeeper
of America

Movement Only
\$48.50

A fine gift for the family
to give to Father.
(Other 16-size movements
at \$25.00 and upward)

The No. 986
"Milady's Watch of
Accuracy"

In Gold Filled Engraved
Case, \$46.00

A beautiful wrist watch
and an ideal gift for
Wife or Daughter.

The No. 914
12-size, 17 jewel, 3
position, adjusted move-
ment, permanent case,
\$62.00

An excellent gift for a
young man. Engraved
or plain case, fancy or
plain dial. A fine time-
keeper.

Engineer William E. Loco, of the Chicago and North-western, has three sons, all of whom he has presented with Hamiltons. Engineer Loco knew full well that he gave not only a gift but a timekeeper which, by its sturdiness and dependability, would teach the value of these qualities.

Select a Hamilton, then, for THE Christmas gift—and you will make no mistake. We will be glad to send our New Timekeeper to you free of charge—it will help you to make your choice and gives much valuable watch information.

HAMILTON WATCH COMPANY
DEPARTMENT A
LANCASTER, PA., U. S. A.

accepted a position as billing clerk in the Springfield yard.

E. R. Evey, refrigeration clerk at Clinton, has taken up work in the office of Mr. McPike, Chicago, and Foreman William Crum has filled the vacancy left by Mr. Evey.

Road Department

(John Phillips)

Jodie Buntin has accepted a position as rodman on the Springfield division. Mr. Buntin has been working on construction work at Monee, Ill.

Signal Maintenance Foreman F. W. Yeager has been promoted to signal inspector with headquarters at Memphis, Tenn. Traveling Signal Maintainer F. W. Lynch has been assigned to the position of signal maintenance foreman with headquarters at Clinton.

Little Eleanor Russell, daughter of Roadmaster Russell, is recovering from a broken arm received from a fall recently.

Mr. and Mrs. Ben Lowe are the parents of a daughter born November 1. Mr. Lowe is employed as a clerk in the office of Signal Supervisor Weld.

Band Leader Forrest M. Shumaker directed the high school band at a carnival held in the Y. M. C. A. Building, Clinton, November 10. Mr. Shumaker is employed as clerk in the roadmaster's office.

A son was born to Mr. and Mrs. B. J. McAboy November 13. Mr. McAboy is employed as motor car repairman at Clinton.

Dispatcher's Office

(Gladys Westerholt)

Assistant Chief Dispatcher W. W. Huff recently spent a few days at Ramsey hunting and had excellent luck.

A. L. Vallow left November 15 for an extended visit in the South, including Jacksonville, St. Augustine, Key West and other points of interest. Mr. Vallow, who has been dispatcher at Clinton for the last fourteen years, has resigned from the service and will take up his residence at Los Angeles, Cal. Mr. Vallow's health has not been of the best for the last two years.

Dispatcher O. C. Harwood is the proud possessor of a new touring car.

F. E. Guill has accepted a permanent position as agent at New Holland, vice W. H. Rooker, who has accepted a permanent position as second trick operator at Pawnee Junction.

L. E. Ratliffe has accepted a position as agent at Spaulding, vice J. S. Vaughn, who has accepted the position of third trick operator at Pawnee Junction.

L. T. Mowen has accepted a position as third trick operator at Macon.

R. W. Kinnison has accepted a position as agent at Walker, Ill.

Clinton Shops

The old type steam engine that furnished power for the machine shop in the past has been retired and a motor applied. This gives the shop a much more modern appearance and has done away with the long steam line from the power house, thus greatly decreasing the cost of machine shop operation. A considerable saving will also be noted in the amount of coal used.

Fred Howard, machinist, has been transferred to engine inspector, night shift.

A portion of what was formerly a commissary building at Clinton shops has been

rebuilt to be used as a committee room. The building has been entirely redecorated, steam heat and electric lights have been installed, as well as suitable benches, chairs and tables sufficient to accommodate a large number of employees. This building will be of great assistance when meetings are in progress by the various shop crafts and when schools of instruction are held by traveling engineers and shop foremen. Among other important meetings already scheduled are mass meetings on fuel conservation and safety for all employees.

While Erecting Foreman Charles C. Carrol was away on his vacation, Machinist Frank Schock acted as foreman.

On account of recent rains the reservoir that for some time has been nearly empty is fast filling up. The rains have been greatly appreciated by officers of the Springfield division, as the problem of water supply was becoming the subject of considerable worry.

Traveling Engineers Charles Zanies and John McIntyre have been holding progressive examinations for 1, 2 and 3-year firemen. These meetings are as much schools of instruction as they are examinations.

A new turret lathe has been installed in the machine shop. This is one of the newest type machines. Everett Huffman, veteran machinist, has been placed in charge of the machine.

The fire fighting force of the shops has been reorganized, several new men having been placed on the team. Practice drills are being held.

Train Baggageman William C. McConnell was retired from active service October 15 on account of having reached the age of 70 years.

Mr. McConnell, who was born at New Castle, Monroe County, Ohio, October 15, 1852, went to Missouri and located at Hannibal in 1865. Then in 1892 he came to Illinois and entered service on the Jacksonville South-eastern Railroad out of Jacksonville, Ill., being employed by that railroad four years. In 1896 he was employed as brakeman for the St. Louis, Peoria & Northern Railroad and was working for that railroad when the Illinois Central purchased it and took over the operation in 1899.

W. C. McConnell

Mr. McConnell was promoted to conductor in 1900 and continued in that capacity until 1919, when he took a position as train baggage and expressman on runs between Springfield, Clinton and St. Louis.

He was in that service up until the time of his retirement.

Mr. McConnell was generally known by his fellow workers as "Mack," and they looked forward to a meeting with him on account of his jovial disposition, as they knew he would probably have a good story to relate to them.

Mr. and Mrs. McConnell reside at Springfield at present, but it is their intention to

move to Chicago in the near future, to be near their only daughter. In the retirement of Mr. McConnell the Springfield division loses one of its most loyal and efficient employees.

ST. LOUIS DIVISION

Mrs. Blanche Greer Estes died in Holden Hospital, Carbondale, Ill., October 28. She was the daughter of J. J. Greer, cashier, Carbondale freight office. Just three weeks prior to her death she was married to Leon Estes of Salem, Ill. She was buried at Oakland Cemetery, Carbondale.

J. P. Reid, Carbondale, has been employed as messenger in the superintendent's office, relieving Max Robertson, who entered school at the Southern Illinois Normal University, Carbondale.

Vivian Hooper, clerk in the car distributor's office, has just returned from a leave of absence on account of ill health.

Charles Gardiner, clerk in Roadmaster Kern's office, has returned to work after being absent for a number of days on account of the illness of his father at Grand Tower, Ill.

R. A. Trammell has been awarded the newly created position of stenographer-clerk in Roadmaster Kern's office. Mr. Trammell was formerly employed on the freight train performance work in the accounting department.

Earl Schuchardt, Golconda, Ill., is working temporarily in the accounting department.

Carbondale had a big celebration Armistice Day, and in connection with this the Southern Illinois Normal University had its annual Homecoming. These events brought many visitors to Carbondale. This is to be a big day for Carbondale in the future.

Eunice Rentfro, clerk in Roadmaster Kern's office, has been off several days on account of sickness.

R. D. Estes, switchman at Centralia, died at St. Mary's Hospital, Centralia, November 3.

The payroll of the Madison Coal Corporation, amounting to \$35,000, was stolen the morning of November 14, immediately after being delivered by the Illinois Central.

J. J. Greer, cashier in the freight office at Carbondale, has been absent from duty for several days on account of sickness.

W. C. Martin, millman, Carbondale shops, was found dead October 24 on a public highway near the coal chute at Carbondale. Death apparently was due to heart trouble. Mr. Martin had been in the service of this company continuously since December 20, 1910. Burial was at Oakland Cemetery, Carbondale.

Mrs. H. C. Larson, wife of Clerk H. C. Larson, superintendent's office, has been in Holden Hospital, Carbondale, for the last three weeks, having undergone an operation. She has recently been taken back to her home on Illinois Avenue, Carbondale.

Fred Casebeere is working temporarily in the car distributor's office.

The division office force enjoyed a weiner roast and a general good time at the home of Miss Florence Sill the night of November 9. Miss Sill is stenographer for Chief Clerk Culley.

WISCONSIN DIVISION

A pretty wedding ceremony took place at St. Mary's Catholic Church, Freeport, Ill., November 4, when Miss Pearl Griffith was

**Railway
Employees
Eyes are
Exposed to
Wind, Dust
and Alkali
Poisons**

The Rush of Air, created by the swiftly-moving train, is heavily laden with coal-smoke, gas and dust, and it is a wonder that trainmen retain their normal Eye-sight as long as they do.

Murine Eye Remedy is a Convenient and Pleasant Lotion and should be applied following other ablutions.

"An Ounce of Prevention is Worth a Pound of Cure."

Druggists supply Murine at 60c per bottle.

The Murine Eye Remedy Co., Chicago, will mail Book of the Eye Free upon request.

622 to 630 East Main St.
LOUISVILLE, KY.

united in marriage to George T. Cox. The ceremony was performed and the nuptial mass was read by the Rev. T. F. Leydon, pastor of that church. Following the ceremony a wedding breakfast was served at the Cox residence, South Liberty Avenue. Later in the day Mr. and Mrs. Cox left for a wedding trip. They will be at home after December 1 at 715 South Liberty Avenue. The bride is a daughter of Mr. and Mrs. William H. Griffith of Bangor, Wis. She came to Freeport five years ago to make her home. Mr. Cox is a son of Mrs. P. E. Cox and is a native of Freeport. For the last seventeen years he has been employed as a dispatcher for the Illinois Central Railroad. During the war period he served in the army with the signal corps, being overseas for about eighteen months.

The girls of the division offices at Freeport held a dinner party at Brewster Grill, Tuesday evening, November 14, in the form of a shower for Miss Frances Lavell, stenographer in the accounting department, superintendent's office, who was married November 28 to John McGowan, operator and ticket agent at Amboy, Ill. A 5-course dinner was served. The table decorations were yellow and white, the centerpiece being a large market basket, prettily decorated with yellow crepe paper and containing many useful and beautiful gifts.

On train Extra 1724, west, November 4, Brakeman J. W. Adams found a broken wheel on IC-30217, an empty stock car, at Broadview. If this broken wheel had not been found, it probably would have caused a derailment or a damaged rail. Brakeman Adams has been commended by Superintendent A. M. Umshier of the Chicago terminal for his good work.

MINNESOTA DIVISION

Miss Grace McDonald and Frank Schneider were married November 4 at St. Mary's Church, Dubuque, Iowa. Miss McDonald has been an accountant in the superintendent's office, Dubuque, for the last five years. Mr. Schneider is a traveling salesman for the Schroeder Kliene Grocery Company. After December 1, Mr. and Mrs. Schneider will be at home to their friends at 1160 Gilmore Street, Dubuque.

James Ahern has accepted a position as accountant in the superintendent's office, Dubuque.

Miss Helen Cornwell, formerly employed by the American Express Company at Dubuque, has accepted a position as stenographer in the road department at Dubuque.

Miss Ruth Vogt has resigned her position as comptometer operator with the revising bureau at Dubuque. Miss Vogt was succeeded by Miss Lucille Gehrig.

Daniel Hogan, formerly chief clerk of the roadmaster, died October 30 after a lingering illness. Mr. Hogan at the time of his death was cashier for the International Harvester Company.

Yardmaster and Mrs. H. A. Clancy attended the American Legion Convention at New Orleans, October 16 to 20. Mr. Clancy is post commander of the American Legion at Dubuque.

Mr. and Mrs. J. C. Donahue are the proud parents of a baby boy. Mr. Donahue is assistant yardmaster at Dubuque.

Miss Gertrude Schmitt, formerly bill clerk in the Waterloo freight office, and Charles W. Williams, formerly chief clerk to the agent at Waterloo, but now employed by the

E. P. & S. W. Railroad at El Paso, Texas, were married at that place on October 19. The newlyweds will reside in El Paso.

IOWA DIVISION

Section Foreman and Mrs. J. Sins of Alta, Iowa, are the proud parents of a daughter born November 2.

The many friends of Conductor I. L. Anderson will be pleased to know that he is rapidly recovering from his recent illness and hopes to be able to return to work in the near future.

Sympathy has been extended to J. C. Neft, division accountant, on account of the death of his 16-year-old son, Francis, who passed away on October 14, after a brief illness from infantile paralysis.

John Blanchard, demurrage clerk in the local freight office, Omaha, was married October 14 to Miss Ethel Cooper of Council Bluffs. Saturday evening, October 21, the office force gave them a surprise party and presented them with an electric grill for a wedding present.

F. R. Croghan of the Western Weighing and Inspection Bureau, Omaha, was married November 7 to Miss Mary Jane Allen of Omaha.

T. J. Cochran, agent at Richards, Iowa, is absent from service on account of sickness. He has received attention in the Illinois Central Hospital at Chicago.

E. W. Cooper, agent at Parkersburg, has been absent from service on account of sickness.

Pensioned Engineer F. B. Rugg recently renewed acquaintances in Fort Dodge. Mr. Rugg is now a resident of California.

Mrs. O. L. Martin has been acting as relief clerk in the division offices during the vacation time of various clerks.

Work in the gravel pit at Cherokee has been suspended for the season, and Steam Shovel Engineer A. C. Fry, who has been in charge of steam shovel X-49, is taking a well-deserved rest and vacation in Ohio.

KENTUCKY DIVISION Freight House, Louisville

A. H. Morton, chief clerk, revising bureau, was appointed as one of the chairmen by the officers of the Welfare League to assist them in their annual canvass of Louisville for funds to defray the expenses necessary for the upkeep of the twenty-nine charitable institutions located in this city. The funds solicited by this organization are equally divided among these institutions. The goal sets for this year was \$409,000. Mr. Morton was appointed to solicit Illinois Central employees alone.

James M. Ballard, Jr., was born to Mr. and Mrs. James M. Ballard, November 6. Mr. Ballard is first bill clerk, local freight office.

Richard Queen, mail messenger, acted as usher at the Centre-Washington and Lee football game Armistice Day, November 11, at Eclipse Park.

Celestine Zeller, clerk in the accounting department, finds that raising chickens as a hobby during his spare hours is a worthwhile pastime. At present he is interested in raising capons along with his other flock of fowls. This is a new field to him, but his progressiveness speaks well for the success of his enterprise. He reports that after a rooster has been caponized and has grown to maturity, its actions when placed with a flock of chicks are the same as those

of a brooding hen. This permits the hen to be taken from the chicks and returned to laying eggs again. It also tends to give the meat of the capon a tenderness not to be found in the meat of other roosters.

After suffering from a broken nose received during a football game, John Cassell has again returned to his duties as storage clerk.

Sid A. Fisher, clerk, inbound freight house, has resigned to engage in the transfer business.

William Eifler has been employed as messenger at the local freight house.

Princeton, Ky.

The wedding of Miss Lucy Howard, clerk in the chief dispatcher's office at Princeton, and Leonard Groom, assistant chief clerk to the dispatcher, was solemnized at the home of the bride in Princeton, November 1, at high noon, before an improvised altar of ferns and chrysanthemums, the Rev. O. M. Shultz officiating. Miss Hallie Owen and Little Groom, twin brother of the bridegroom, were the only attendants. Immediately preceding the ceremony a delightful musical program was given by Miss Marlon Waggener, clerk to the supervisor of bridges and buildings at Princeton. Immediately after the ceremony Mr. and Mrs. Groom left for an extended wedding trip through the South, including points in Florida. On their return they will reside at Princeton.

Paducah, Ky.

A baby girl was born to Mr. and Mrs. David Whitis October 31 at their home, Paducah, Ky. Mr. Whitis is yard clerk at that point.

General Yardmaster W. H. Wilson is confined to his home by illness.

Miss Ruby Dunlap, general yardmaster's clerk at Paducah, is having an extended trip through the West.

Valley, Ky.

Although some small places on the Illinois Central System may be considered as "off the map," we notice that Cupid does not forget them. During the vacation of the regular agent at Valley, Charles Tilford Decker, son of Wilson Decker, agent at Stephensburg, who relieved the agent at Valley, became engaged to Miss Bessie Amelia Bailey. Announcement of the engagement says that the wedding will take place some time during the winter months.

Walter Scheible, agent-operator, formerly of Tip Top, Ky., has purchased property near

PEOPLES GLOVE CO., P. O. Box 14, Decatur, Ill.

Derrick outfit unloading signal foundations and signal cases at the Paducah, Ky., yard. Derrick Foreman Joseph McCarthy, Signal Supervisor J. P. Price and Signal Foreman C. C. Sauer are standing on the derrick.

Valley, Ky., on the Dixie Highway, and with his family has moved to that point.

John Tuck, conductor, Central City, Ky., is in Louisville, Ky., taking special medical treatment.

Dr. Samuel S. Foss, local surgeon at Valley, Ky., has returned from an extended trip to points in the East.

Roundhouse, Louisville

Clean engines and cars get a boost from autoists at Louisville. The following remark was overheard by an employe of the Illinois Central at 14th and Broadway, Louisville, while several automobiles were waiting to let train No. 103 by one night in July: "We cannot see how the Illinois Central keeps its engines and cars so clean. They are cleaner than those of any other road in Louisville." This is a pretty good boost for our trains, as automobilists are usually complaining about being delayed by trains instead of paying them compliments.

Miss Louise Simpson and P. E. Browne, oil house man, were married November 8. The wedding ceremony was performed at St. William's Church, Louisville, Ky.

Signal Department

Signal work in connection with the extension of double track between Clarks River and Island Creek and between Eddyville and Kuttawa has now been completed.

The rearrangement of automatic signals between Princeton, Ky., and Scottsburg, Ky., on account of the extension of double track, is progressing nicely, and it is expected that this work will be completed about December 1. Automatic signals between Princeton and Scottsburg are now working under the new double-track arrangement.

Signal Maintainer C. L. Bromley of Princeton, Ky., has been appointed temporary signal foreman in charge of signal work between Princeton and Scottsburg, Ky.

Authority has been received for the installation of automatic electric block signals

between Fox Run and Graham, Ky., a distance of 15.5 miles. This installation will comprise thirty-two automatic signals of the three-position, upper-quadrant, semaphore type, four semi-automatic, high-voltage signals, and one semi-automatic dwarf signal. Extensive changes will be made in the interlocking plant at Nortonville, Ky., on account of working the new automatic signals through the interlocking. The new signals will be equipped with electric lamps controlled by the approach lighting circuit. Material is now being received for this work, and it is expected that the new signals will be placed in service about January 1.

When the new automatic signals are placed in service between Fox Run and Graham, Ky., the entire main line of the Louisville and Paducah districts of the Kentucky division, a distance of 225 miles, will then be protected by automatic electric block signals. This will then give the Kentucky division the protection of 464 automatic signals, eleven interlocking plants and forty-four crossing bells.

Signal Maintainer A. M. Pfeiffer of Paducah, Ky., has been appointed signal foreman and placed in charge of the installation of new automatic signals between Fox Run and Graham, Ky. Edgar Bell is relieving Mr. Pfeiffer as signal maintainer at Paducah.

Bell Frymire, assistant signal maintainer, is relieving C. L. Bromley as signal maintainer at Princeton, Ky.

J. C. Martin, signal maintainer at Rockport, Ky., has been transferred to construction work. He will have charge of the wiring of the new automatic signals between Fox Run and Graham, Ky. C. L. Dean is relieving Mr. Martin as signal maintainer at Rockport.

F. W. Partridge, signal inspector, formerly assigned to the Kentucky division, has been transferred to the Yazoo & Mississippi Valley and the Tennessee division. W. H. Claus of

"A real symbol of service!"

Galena Service

There is no word in the dictionary of modern business so generally used nor so greatly abused, as the word "service."

Literally, it means much—or should mean much—to the customer. Practically, it often means little or nothing, except perhaps a catchy term for salesmen's use.

SERVICE, to the Galena-Signal Oil Company, is a pledge of honor, a duty—a sacred trust. *Service to the customer* is the one dominant aim of our organization. In no field of commercial or industrial activity is the word more faithfully or conscientiously exemplified than in the workings of "Galena Service," through the installation and delivery of efficient and economical lubrication to the railroads.

On representative roads in every section of the country Galena Service is giving daily demonstrations of its value as a cooperative force in attaining improved operating conditions through elimination of lubrication difficulties. It is giving practical proof of its ability to deliver maximum mileage, keep equipment in running order, reduce fuel consumption, time losses and the repairs of bearing parts, and bring down the actual cost of lubrication to the lowest point ever reached in railroad operation.

*"When Galena Service goes in—
Lubrication troubles go out!"*

Galena-Signal Oil Company

New York

Franklin, Pa.

Chicago

and offices in principal cities

the Chicago office has been appointed signal inspector and assigned to the Kentucky division, succeeding Mr. Partridge.

TENNESSEE DIVISION

Jackson, Tenn.

Engineer C. W. Steelman and daughter, Miss Mabel, have been at Hot Springs, Ark., for several weeks.

Engineer J. B. Tucker, who was injured at Dora, Ala., on August 6, when his engine was struck by Frisco No. 33, is able to be back at his post of duty.

Mr. and Mrs. C. B. Thompson and small son "Billie" visited Jackson recently. Mr. Thompson, who was formerly foreman at Jackson, is now located at Birmingham.

Birmingham, Ala.

J. S. Salter, night rate clerk, launched out on the sea of matrimony October 15. The bride is a resident of Macon, Ga. The usual custom was observed by his fellow clerks in presenting him with a remembrance of the event.

Fulton, Ky.

Rodman W. E. Johnson of the engineering department has taken the last step in the effort to prove that two can live as cheaply as one. The bride is from Boonville, Miss. After an extended trip through the South, the couple returned to Fulton to live.

The dredge boat that has been digging the canal in the Mayfield Creek Drainage District, which left our tracks at Boaz, Ky., is still pegging away and expects to complete the work by the time winter sets in. The canal has made a great change for the better in the vicinity of Boaz and Viola, Ky.

Fulton has a party of engineers working on the preliminaries for a modern sewer system. This will greatly improve the health

John G. Williams, Kentucky division bridge foreman, who lives at Rockport, Ky., is one of the keenest sportsmen on the system, and his close friends declare his dogs stand high in his affection, especially at this season of the year. Mr. Williams is raising thoroughbred bird dogs, and the pictures show him with several of his valuable pack. He has refused \$150 for the one wearing the collar—but sells her daughters for \$45 each.

conditions in this city, and will be welcomed by the citizens.

Messenger Harry Fields Dezonias has been on the sick list for several days, but is now back at work. His work was attended to in his absence by Murray Boaz, who has had considerable experience on this job.

Our beloved assistant chief clerk at Ful-

Herc is a float which participated in the parade of the North Mississippi Fair Association, held in Grenada, Miss., recently. This float represented our Careful Crossing Campaign and was got up by S. B. Cowan and J. A. Denton, valued employees of the Illinois Central at Grenada. The float was commented upon favorably by all observers, and the picture was one of four selected by the Memphis Commercial-Appeal to appear in its Sunday issue, October 29. Photograph by courtesy of J. L. Scott, claim agent at Grenada.

ton, R. C. Pickering, was sorely distressed when the pictures of the Tennessee division babies first began to be published, because he was not able to help out. He endeavored to get his big brother, Roy, who has twin daughters, to let him have one of them, but of course "Double Papa" (as he is generally known) would not listen to this. However, R. C. is now submitting a picture of "Rastus," his prize bird-dog, with which he intends to corner the quail market this season. It looks as if he has the proper equipment, judging from the picture.

Rastus

Conductor R. L. Scott of the Cairo district has been highly commended for the action taken by him while checking his train, Extra 1738 north, out of Frogmoor yards, October 27, when he noticed that IC-24456, box car containing ties, was stenciled with 49,600 pounds tare weight. Thinking this was more than the car actually weighed,

he looked up the weight and found that car actually weighed 39,600, or a difference of five tons. He reported the matter to Trainmaster Hill for correction, advising that the car had been erroneously stenciled at McComb on October 22. Interest of this kind is highly appreciated by all concerned.

Traveling Engineer J. L. Harrington is the proud father of a 9-pound son, born at the Civic League Hospital, Jackson, Tenn., Oc-

tober 24. Mother and son are getting along nicely.

Hugh Mason, caller at Jackson, and Miss Mary Collins of Jackson were married at the bride's home in Jackson, October 3.

MISSISSIPPI DIVISION

Ed X. Humphries, engineman, died November 11. Mr. Humphries was born February 20, 1874, and entered the service of the Illinois Central as a helper in the machine shop at Water Valley, Miss., in June, 1891. He served his apprenticeship and was employed as a fireman November 3, 1895. He was promoted to engineman September 11, 1899. For some time Mr. Humphries' health had been failing, and he spent several months in the Illinois Central Hospital in New Orleans. He had returned to work recently. November 10, the day before his death, he made his usual trip on the local run out of Canton. He was stricken with paralysis early in the morning on November 11 and died within a short time. Engineer Humphries was one of the Mississippi division's best employes

and numbered his friends by the score. He leaves a wife and four children to mourn his loss.

Mrs. Wallace J. Sherwood, wife of Clerk Sherwood at Grenada, Miss., passed away Sunday afternoon, November 5, at the home of her husband's parents in Grenada, after a somewhat protracted illness. Funeral services were held at the residence Monday afternoon, after which the body was placed on train No. 4 and carried back to her former home in Evansville, Ind.

The many friends of Operator Q. B. Gray of Water Valley will regret to learn of the continued illness of his wife.

Baggageman Walter Tate, who has been in Havana, Cuba, for the last two months, writes interestingly of the country and customs and has sent back some beautiful views with the remark: "Think of my living in a dreamland like this with hotel rates only \$2.50 per day!"

Traveling Engineer and Mrs. C. E. Sieber left November 14 for Oklahoma. Mr. Sieber returned in a few days, but Mrs. Sieber will

Here are the Louisiana division telephone operators at McComb, Miss. No. 1, Edna Es-the, first trick operator, entered the service April 13, 1918; No. 2, Ellen Rueff, second trick operator, entered the service May 20, 1918; No. 3, Louise Wilhemsen, third trick operator, entered the service May 10, 1918; No. 4, Eschol Bostick, relief operator, entered the service September 11, 1920; No. 5, Norma Miller, relief operator, entered the service April 19, 1921.

remain indefinitely in the hope that the climate will restore her to her usual good health.

An event of more than passing importance, one that may reach far into the future and that may prove to be one of the happy milestones in the life of Grenada County, took place in Grenada Wednesday morning, November 8, when the home for indigent old negroes provided by the Grenada County Colored Relief Society was formally opened. There were present, besides a number of the more prominent colored citizens, J. T. Thomas and Professor Rundle. Professor Rundle made a brief talk which showed that he was heartily interested in the home and society. Mr. Thomas was really the prime mover toward organizing the Grenada County Colored Relief Society, and indeed it has been from his purse that a very great part of the money has come to start the society to moving and that has led to the home. Mr. Thomas made a talk which showed that, while running banks and doing big things in a financial way, he realizes that there are even bigger things than these for the good man and the good citizen to do.

October 27, discovered a broken flange on Frisco-85759, in train No. 98. The train was stopped and the car set out, thereby avoiding an accident.

Due to the extreme shortage of all classes of equipment, a campaign has been conducted for the last three or four months on the Memphis division to expedite the handling of cars, as well as to educate the shippers to load all cars to maximum capacity. Some good results have been obtained, as evidenced by ten empty flat cars out Nonconnah at 9:30 a. m., November 9, placed at Greeneriver Spur for loading at 1 p. m., loaded and ready for movement at 5 p. m., picked up by through freight extra north, brought to Memphis the same night and placed at a lumber mill early the next morning.

Traveling Auditor R. H. Lee recently wrote to A. A. Freiburger, chief dispatcher, as follows: "Just to show you that everybody is on the job around Inverness, Miss., in regard to moving cars promptly, how does this stand up? IC-160284 and IC-160474 left here last night at 6 p. m. on train No. 597 empty for Bowles Spur, two miles south of here, and were loaded with cotton for Greenwood, Miss., and were on their way to Greenwood at 8 a. m. today. The first car had sixty-five bales and the second had seventy bales. At Inverness, six cars were placed yesterday morning and left here this morning loaded with cotton to full capacity."

NEW ORLEANS DIVISION

Hearty co-operation, remarkable endurance and facility of adaptability in the individual were pointedly illustrated the other day when Brakeman J. A. Leach stepped into the breach and relieved the fireman on engine No. 1608, who was suddenly stricken by a violent illness which wholly incapacitated him for duty. Train No. 72, with Conductor R. B. Cooper in charge, was just beginning to make the hardest pull on the division when the fireman fell out. It would have taken at least five hours to get another fireman, thus creating a delay of probably longer duration, but Mr. Leach was equal to the emergency. He volunteered to fire the engine and at the same time attend to the brakes. It was hard work, but Mr. Leach succeeded admirably, and No. 72 rolled into Vicksburg on time.

Some time previously a similar predicament arose on train No. 54 between Litcher and Baton Rouge, La., when the fireman, unable to handle the job through a sudden attack, was relieved by Brakeman W. J. Carney and Flagman V. F. Summers alternately. That they got the train to Baton Rouge on time goes without saying, and it is needless to add that the management is highly appreciative of such good work.

The former Miss Maud Parr, operator, is now Mrs. C. A. Skinner.

Miss Aurelia Curran, clerk in Superintendent F. R. Mays' office, is down with dengue fever.

Almost every month the superintendent's office at Vicksburg has to chronicle the inroads made on its numbers by matrimony. This time it was Miss Sarah Sullivan, stenographer-clerk to Supervisor of Signals A. C. Palmer, who became the bride of Charles George, a prominent business man of Port Arthur, Texas, where Mr. and Mrs. George will make their future home.

Honor these Seals

A NATION-WIDE movement is carrying on a warfare against the scourge of Consumption. In saving over 100,000 lives last year, it actually *cut the death rate from tuberculosis in half.*

Each year these organizations sell Tuberculosis Christmas Seals. The proceeds from these sales are devoted to the work of caring for and curing tuberculosis patients and to educational and other work to prevent the dread disease.

Buy these Seals and urge your friends to buy and use them. To do this is both Charity and Patriotism.

ILLINOIS CENTRAL MAGAZINE

Chicago, December 23, 1922

To All Officers and Employes
of the Illinois Central System:

At the close of another year of pleasant and fruitful association in the operation of the Illinois Central System, I thank you sincerely for the faithful co-operation and loyal support which you have rendered throughout the year. Turning from the perspective of the old year, with its problems and its accomplishments, to face a New Year of new tasks, let us stand united and confident, our hearts warmed by the spirit of service.

With all good wishes for a Happy Christmas and a New Year fraught with Health, Happiness and Prosperity, not only for all of you but also for all of those whom we may have the privilege of serving, I am, most sincerely,

Your co-worker,

C. H. Mosher

C. E. Stailey

Mr. Stailey, assistant general freight agent at Memphis, Tenn., was born at Greeley, Kan., January 14, 1882. He was graduated from the public school at that point and attended the National Business College at Kansas City, completing a business course. He accepted a position as stenographer and clerk with the Kansas City Southern Railway general foreman's office November 15, 1901, and was promoted to chief clerk in May, 1903. He resigned March 1, 1914, to go into an industrial line. His entry into the service of the Illinois Central was in the commercial office at Kansas City, Mo., April 6, 1906, as a stenographer and clerk. He was transferred to the Memphis general freight office July 21, 1909, as quotation clerk, was promoted to traveling freight agent at Little Rock Ark., July 17, 1911, was transferred to Oklahoma City, Okla., May 15, opening our office at that point, was promoted to division freight agent at Omaha, Neb., February 1, 1918, and was transferred to Kansas City, Mo., as commercial agent, March 1, 1920. He was promoted to assistant general freight agent at Memphis, December 15, 1921.

Track Improvement Going on Near Chicago

Illinois Central Reduces Grades Between Matteson and Kankakee Under a Heavy Traffic

(From the Railway Age)

WHEN it became evident early last spring that the mines in southern Illinois would be closed by a strike on April 1, the management of the Illinois Central decided to take advantage of the expected lull in traffic to reduce the grades and construct additional main tracks between the south limits of the Chicago suburban zone at Matteson, Ill., and Kankakee, twenty-five miles farther south. While the decline in traffic lasted only for a short time, owing to the movement of large quantities of coal into Chicago from the non-union fields in Kentucky, this work has been pushed actively throughout the season and is now nearing completion. It involves a total expenditure in the neighborhood of two and a half million dollars and when finished will afford marked relief in that section of the line, which now constitutes the throat of the Illinois Central System.

Except for a secondary line extending west through northern Illinois to Omaha, it is over this line that all Illinois Central business enters and leaves the city. It not only carries all of the traffic of this road between Chicago and southern points, including a heavy tonnage of coal from southern Illinois, but also a considerable traffic from the St. Louis line, which connects with the New Orleans line at Gilman, about twenty-five miles below Kankakee. The traffic is further enlarged at Kankakee by the business of the Big Four,

which is handled between that point and Chicago by the Illinois Central. This traffic has increased rapidly in recent years. It averaged about thirty-two passenger and fifty-eight freight trains a day during the period of construction.

Adverse Grades an Obstacle

While ample facilities are available for handling the traffic as well as the heavy suburban business between Matteson and Chicago in the presence of a long stretch of practically level track, increasing from four to eight tracks in the direction of the city, the conditions were not so favorable in the twenty-seven miles between Kankakee and Matteson. In the first place, traffic over this section was confined to two tracks, except for a distance of

Cut looking south from South Bridge, Monee

Looking north from North Bridge, Monee

eleven miles between Tucker, four miles north of Kankakee, and Peotone, where a third track was laid three years ago. The grades were also adverse over this section, especially for northbound tonnage. Almost immediately upon leaving Kankakee, a 0.4 per cent grade extended for about two and one-half miles to Tucker. Beyond this point more favorable grades were encountered until near Monee, where a 0.425 per cent grade extended for nearly two miles to the top of the hill, 160 feet above Kankakee. This summit constituted a similarly formidable obstacle to trains proceeding southbound, as it was approached by long 0.4 per cent grades. Added to these obstacles were grade crossings with the Elgin, Joliet & Eastern and the Michigan Central at Matteson.

To improve conditions and give greater capacity, it was decided to extend the four-track system from Matteson south for about seven miles to Monee. As a third track was already in service between Peotone and Tucker, it was decided to continue this track north to the end of the 4-track section at Monee and to Kankakee on the south and to install interlocking plants at intermediate stations to permit the diversion of trains from one track to another. It was also decided to reduce the two and one-half miles of 0.4 per cent grade between Kankakee and Tucker to 0.3 per cent and to reduce the 0.425 per cent grade approaching Monee from the south to 0.3 per cent. As this involved heavy excavation through Monee, a large amount of material was available beyond that required for the new tracks and it was further decided to separate the grade crossings at Matteson by carrying the Illinois Central tracks overhead.

Because of the distance between the two points at which it was decided to reduce grades, the size of the entire project, the necessity of conducting all work under traffic, and the premium placed on speed, the work was divided between two units, each under the supervision of an assistant engineer reporting to an engineer in charge. The larger of the two was the Monee-Matteson unit, the most spectacular feature of which was the work undertaken in the vicinity of Monee. As before stated, the problem at Monee consisted of reducing about three miles of 0.425 per cent grades to a maximum of 0.3 per cent. To accomplish this and to provide the additional trackage planned necessitated making a cut directly through Monee which ran twenty feet deep for about a mile, averaged about one hundred feet in width at subgrade and involved in the neighborhood of 700,000 cubic yards of excavation. The total excavation within the limits of grade reduction was 1,000,000 cubic yards.

Monee Cut a Big Problem

The proportions of the work suggested the advisability of using a dragline outfit, which was accordingly installed, together with two steam shovels. In order to provide for traffic during the progress of the work, the first step undertaken was that of making a cut thirty feet wide at the bottom for the entire length of the cut on the east side. To do this the steam shovels removed the approaches at each end, after which the dragline completed the remainder of the heavy excavation in this first cut, utilizing the adjacent main line tracks for loading. One track was built west of the mains, using the southbound main and new track for traffic. After this cut was completed, two main tracks were

laid in the bottom and the dragline returned to the south end of the heavy work, where it began working north, removing the rest of the cut to full width as it went.

The dragline proved particularly efficient in this work. Equipped with a 5-yard bucket operated from a 75-foot boom, this machine cut a section for the full depth of the cut and sixty feet wide at the bottom. It handled about 3,200 cubic yards per day of two shifts, the excavated material, which was heavy clay, being carried to the dump by four contractors' trains, each containing fifteen air-dump cars of twelve yards capacity. These trains were loaded on a temporary track laid along the top of the west slope and were hauled over the main tracks under the supervision of Illinois Central conductors to Matteson and to the Markham yard at Harvey, three miles north of Matteson.

On account of the long haul (reaching a maximum of twelve miles and averaging six miles) and the necessity of operating over the main line, the trains constituted the limiting factor in the work, the dragline itself being capable of handling half again as much material.

Before beginning the work at Monee it was necessary to move two elevators to new positions across the track (no small task in itself in the face of traffic), and two viaducts have been built to carry highways over the tracks. The work at this point also required the moving of the station to a new location and the building of

Dragline at work, Monee

several industry buildings. Another problem which arose by reason of the reduction of the grade at Monee involved two water supply reservoirs at the south end of the cut. The smaller of the two reservoirs, constituting the original source of water at this point, encroached upon the new roadbed, because of which it was decided to drain it. This was done by excavating a ditch in the cut sufficient to carry all water to the larger reservoir, which was located some distance down hill.

The Problem at Matteson

As stated before, it was decided to utilize the material obtained from the Monee cut to separate grades at Matteson. To do this as well as to extend the four tracks through the town from the north required extensive changes in the existing lay-out at that point. Approaching Matteson from the south were two main line tracks, which extended through the town, crossing consecutively the two tracks of the E., J. & E.,

Looking north in shovel cut from South Reservoir, Monee

a street and a crossing shared by the Michigan Central, and a street adjacent to it, beyond which it merged into the 4-track section which crossed the Lincoln Highway, about half a mile distant. Leaving the main line on the east side, about a mile south of Matteson, was a track which also crossed the E., J. & E. and then continued north to within a short distance of the Michigan Central crossing, where it turned east to form a transfer connection with the Michigan Central. Leading off from this switch lead, in turn, at Richton, about a mile south of Matteson, was a yard of four tracks running parallel with the switch lead and providing northbound interchange facilities with the E., J. & E., with which it connected through a single-track lead. To the south of the E., J. & E. crossing and to the west of the main line were three

of the future fourth main track and establishing a new switch lead, which was extended north to a point just beyond Richton station, where it became the west track of a 9-track yard extending as far north as the E., J. & E. crossing, and built to accommodate both north and southbound interchange business with this line, thus replacing the existing interchange yard on either side of the main line, which encroached on the space required for the new work.

To prepare the lay-out still further for the permanent work, the transfer lead into the Michigan Central yard, situated just beyond the E., J. & E. crossing, was taken up and a new transfer track established north of the Michigan Central crossing by laying a track some distance east of the toe of the new slope and extending it north

Elgin, Joliet & Eastern crossing, looking northeast

tracks which served as a southbound interchange yard with the E., J. & E.

In addition, in the short distance between the E., J. & E. crossing and the Michigan Central crossing was a lead extending from the switching lead to a yard of the Michigan Central. The Matteson freight and passenger station, a frame structure adjoining the switching lead on the east, was also located in this area. Extending for about half a mile north of the Michigan Central crossing on the west side of the Illinois Central main line were the two tracks devoted to suburban service, together with the suburban station and turntable.

Rearrangement of Facilities Necessary

The first step in the construction program at this point consisted of converting the through switch lead into a third track, moving the station at Richton from the east side of the track to a location west

to a connection with the main line beyond the Lincoln Highway, this work requiring the removal of the pumping facilities for the suburban water supply from the east side of the main line to a new location on the west. At the same time the combination freight and passenger station was dismantled, the passenger section being moved west of the grade separation work, where it was established at street level, and the freight station being moved north of the Michigan Central crossing in the vicinity of the new transfer track, just mentioned, an elevator later being installed to afford communication with the elevated tracks.

This done, the suburban tracks on the west were swung out of the way, through traffic was routed over two temporary tracks established west of the existing roadbed, the old main tracks were torn up, and a trestle was built to carry a single track over the entire length of the work with its deck three feet below the final grade.

Elevation trestle looking north from Lincoln Highway, west side, Matteson

Earth was then hauled from the Monee cut over the newly laid eastbound tracks and dumped at the rate of about 350 cars a day continuously until a grade for three tracks was completed, when two tracks were opened to through traffic.

Much Concrete Work Involved

As the filling was being placed the concrete work was being pushed to completion. This involved the placing of about 12,500 yards of concrete and consisted of building extensions to several culverts, a 2-span crossing over the two tracks of the E., J. & E., a street opening about 700 feet north, a 4-span crossing over the Michigan Central and the adjacent street and a second crossing over the Lincoln Highway.

Both road crossings were built to give a 21½-foot clearance, which clearance was secured at the Michigan Central crossing by lowering the track of this road four feet. These crossings consist of reinforced concrete abutments and intermediate columns

topped, in the case of the Michigan Central, by reinforced slabs and, in the case of the E., J. & E., by concrete encased I-beams. Of the two structures, the Michigan Central was much the larger, requiring about 2,500 cubic yards of concrete and consisting of a 4-span structure designed to afford access from the street level to the passenger platform on the new grade by interior stairways.

Concrete Mixing in Central Plant

Except for the extension of culverts, where hand mixers were used, and the construction of the Lincoln Highway subway, about 1,000 feet north of the Michigan Central crossing, where a half-yard steam mixer was employed, this concrete was all mixed and placed from a central plant situated between the Illinois Central main line and the Michigan Central yard. This plant consisted of a steam-operated 1-yard batch mixer, a tractor crane for unloading

Second North Street, Monee, looking south

aggregate from the cars, a stiff-leg derrick for filling the mixer bins from the storage piles and a system of tracks over which 1-yard hopper cars were hauled to their destination by gasoline tractors, there to be hoisted to a point from which the concrete could be spouted into the forms or where, in the case of the slab construction carried on near the plant, the buckets could be picked up bodily by the tractor crane and emptied directly.

With the completion of the grade separation work at this point, which involved 750,000 yards of fill, the remaining work at Matteson consists only of removing the tracks which were laid temporarily for use by suburban and through service and building a 4-track suburban yard south of the E., J. & E. crossing, so that suburban trains may enter Matteson on the main line tracks and proceed down into the yard on a 1½ per cent grade.

As before mentioned, the work eliminated the necessity for interlocking towers at the Michigan Central and the Elgin, Joliet & Eastern crossings as well as watchmen at all street crossings. This separation of grades was not accomplished without increasing the gradients considerably on both sides of the work. The new grade of 0.425 per cent on the north, however, does not exceed the ruling grade over the district, while the grade on the south approach is so short that it presents no obstacle to traffic, which approaches it from Monee on a descending grade.

Tucker Unit Also Interesting

The Kankakee-Tucker work was carried on contemporaneously with that between Monee and Matteson. As stated before, this work consisted of reducing about two and five-tenths miles of 0.4 per cent grade to 0.3 per cent, and extending a third track from Kankakee to connect with the existing third track at Tucker. This required several changes in the lay-out at Kankakee, consisting essentially of making a 3-track connection with the Big Four yard, about four blocks to the east, converting the west track of the existing yard into a new third main track and moving this yard east, as well as moving the track scale to a new location and effecting other minor yard improvements.

The grade reduction work itself began about a mile north of Kankakee, at Bradley, and involved shovel work carried on in three stages. A cut thirty feet wide at the bottom was first carried through to Tucker on the east side of the existing roadbed, the earth being carried back to form the grade for the new third track grade between Kankakee and Bradley, a track-laying gang following behind the shovel with

two permanent tracks. Upon the completion of this cut, through traffic was turned on these tracks, the old main line was taken up, and a second cut was carried through for the new third track. Following this, a third cut was then made to make room for a fourth track. This cut gradually increased to a maximum depth of ten feet and produced 225,000 cubic yards of excavation. Since this was 100,000 cubic yards in excess of that required for the new third track on the east of the existing main line, the remainder was deposited along the west side between Kankakee and Peotone to provide for a future main track.

Interlocking Towers Installed

This work, while lighter than that at Monee, was not without its problems, the most interesting of which was the encountering of a water pocket about 1,900 feet long in the underlying rock when making the first cut. For a time this pocket presented a serious obstacle to the progress of the work, but it was completely drained by widening the cut ten feet and establishing a ditch along the toe of the east slope. The excavation from the cut was handled by two contractors' trains averaging fifteen cars apiece. As on the Monee work, these trains were in charge of Illinois Central conductors, owing to the necessity at times of operating them upon or across the main operated tracks.

In addition to increasing the number of main line tracks and as a means of increasing their capacity still further, four interlocking plants were installed, one each at Tucker, Manteno, Peotone and Monee, the latter at the end of the new 4-track section. For this purpose an old station was appropriated at Tucker, while at Manteno, Peotone and Monee new towers were built which are of brick construction, fully equipped with heating facilities and modern interlocking mechanism. These plants afford the means of diverting trains from one track to another at will. Passing tracks 4,000 feet long were located at all stations, and at Tucker, Manteno, Peotone and Monee, besides the interlocking plants mentioned, there were also located an additional 2,600 feet of passing tracks for use by local freight trains, thus providing the means of keeping them off the main line while doing switching service at these points. No. 18 frogs are installed at all facing cross-overs between main tracks, and all tracks are laid with 90-pound rail.

Although the track work, as well as the grading and concrete work, was contracted originally, the track work was finally done by company forces, it having developed

Shovel in cut, Monee

early in the progress of the work that delays both to through traffic and the construction work itself could be avoided only by having company forces take over the track work. The grading was begun on April 15, within three weeks after the contracts were let, and the work has been pushed forward without interruption since that time, with the result that all traffic has been carried on the new grade for several weeks.

The New Work Aids Traffic

The completion of the work will aid greatly from an operating standpoint. Aside from expediting the movement of trains, it enables the company to take ad-

vantage of an unusual and fortunate traffic condition at Kankakee. As mentioned in the early part of this article, the Illinois Central handles the Big Four business from Kankakee to Chicago. As the ruling grade between Kankakee and Matteson has now been reduced below that between Kankakee and Champaign, the southern end of the district, it is now possible to load trains out of Champaign for the ruling grade south of Kankakee and fill them out at Kankakee with full tonnage for Chicago. The train rating over

the section north of Kankakee has been increased from 3,800 to 4,400 tons.

Three contractors were engaged in the work. M. L. Windham, Centralia, Ill., handled the grading between Kankakee and Tucker. The Walsh Construction Company, Davenport, Iowa, handled that between Peotone and Matteson. The Bates & Rogers Construction Company, Chicago, placed all of the concrete involved in the latter unit. This project has been carried on under the direction of F. L. Thompson, chief engineer of the Illinois Central, and F. W. Armistead, assistant to the chief engineer, with T. H. Robertson as construction engineer in immediate charge.

Red Cross Lauds Illinois Central Response

The following letter dated December 12 was addressed to Vice-President M. P. Blauvelt by Melva Gartin-Funk, director, Sixth Annual Roll Call Organization, Chicago Chapter, American Red Cross:

"Your letter of December 6 to Mr. Marquis Eaton, chairman, Chicago Chapter, American Red Cross, enclosing check for \$1,460.49, the generous contribution of the employes of the Illinois Central Railroad Company, received. We accept this donation most gratefully, and we extend to you our sincerest thanks.

"There is an alarming tendency on the part of the public, we fear, to become less and less interested in the care and comfort of the disabled American soldier, but many of our business houses, clubs, organizations, etc., have evinced a genuine interest by substantial support such as you have given us.

"Assistance from these various sources will enable the Red Cross to continue in its advisory and helpful capacity to the man

awaiting compensation and hospitalization adjustments, etc. It stands preeminently as the connecting link between the incapacitated man and the government.

"Owing to the fact that we were unable to carry out our plans for a brief campaign, November 12 and 13 (constant rain prevented execution of it), we are especially grateful to you for this form of assistance, i. e., enrolling this tremendous number of members in the Red Cross. Your membership enrollment is, in fact, the largest we have received in Chicago, up to date.

"By this liberal contribution, you have said in so many words, 'We at least have not forgotten'—and the Red Cross will not forget the kind spirit in which the enrollment was taken."

Money in the hands of those who did not earn it is a very dangerous thing, mainly because it gives its holders too much time in which to conjure up new ways of giving themselves thrills.—*The Watchman*.

Spanish Moss Beautiful and Useful, Too

Tree Decoration in the South Is Now Being Extensively Bought for Stuffing Cushions and the Like

MANY travelers on the Illinois Central System have admired the beautiful Spanish moss that grows on trees along our lines in the South. It hangs from the branches of the trees in such a way that it leaves the impression that it was put there for decorative purposes instead of being a natural growth. The moss lends a dreamy, restful, pleasing effect to the picture one's eye records, and it leaves an impression that is lasting.

But in these modern days, even nature's work of beauty does not escape being commercialized. Spanish moss is not an exception. It has been placed on the market in the last few years, and the industry is growing rapidly.

Some of the moss completes its apparent purpose in the world, as much of it is gathered and sold for decorative purposes. In many cases it hangs on the wall, or wherever it may have been placed, until its beauty has faded. It could do no more than that in its natural state, for when its vitality begins to wane the wind tears it loose from the tree, and it falls to the ground.

Used to Stuff Cushions

But part of the crop of moss that is gathered and sold serves an entirely different purpose. It goes toward making the life of man more comfortable. Furniture manufacturers use it to stuff their products, cushion makers use it to stuff their cushions with, and automobile manufacturers make seats for their machines out of it.

The increase in the popularity of Spanish moss for furniture, cushions and seats is due to the fact that there is a scarcity of the hair that is used for those purposes, it is said. The price of hair has risen to such a degree that it is too expensive to use, according to some, and Spanish moss serves the purpose equally as well. It has as much life and durability as hair, the moss dealers say.

One of the economical features of the industry is that the moss is not cultivated. Spanish moss grows unaided on the trees of the swamps and along the streams. Growing moss can be found only in these places. Bits of it are found far from swampy places, and some can be seen dangling from wires along the roadside; but in such cases the moss will be found to be dead strands that have been carried by the wind.

Spanish moss feeds from the bark of the trees, and thrives only in damp swamp air. The roots of the moss do not penetrate the wood of the tree. Its food is the surplus water that is taken up by the trees from the damp ground.

Moss Grows on Various Trees

The Spanish moss is not particular in the kind of tree it chooses to grow on, but the moss gatherers find that the better grade

Spanish moss on trees

Spanish moss drying

of moss grows on cypress trees. There is usually a difference in the grade of moss on the various trees. Spring and summer are the only seasons it does its growing. There is a tiny blue blossom in the spring, then minute seeds mature and are carried by the wind to other trees, where they lodge in the bark. In this way the moss spreads to all the trees.

The gathering of the moss is done by hand, mainly by persons who live in and on the edge of the swamps. They wade out into the water, climb the trees, pull the moss off and stuff it in the large sacks they carry with them. Some of the gatherers wear special equipment to aid them in climbing the trees, while others stand in the water and twist the moss off with long poles. They wear no boots as a usual thing, although the swamps are infested with snakes and alligators. If all the moss is gathered from a tree, the supply on that tree the next year will be plentiful.

When the gatherers have filled their sacks, they emerge from the swamps and either sell the moss direct to a dealer or cure it themselves and then sell it. These persons gather moss only when there are no fishes to be caught or trapping to be done. Their livelihood comes mostly from the sale of fish and pelts. They can earn much more money in that way than by gathering moss. One lucky day in fishing or trapping means more money to them than a month of moss gathering.

Fall and Winter the Harvest Seasons

Those who are more experienced in the moss industry say that the fall and winter are the best seasons for gathering. The

moss is more sturdy then because it has stopped growing. If it is gathered during the spring and summer, the young sprouts are so tender that they break off easily.

After the moss is gathered, it is piled in a stack about two feet high, sprinkled with water and left in the open to cure. It is kept damp by sprinkling twice a week, and once every two weeks the moss is turned over with pitchforks. At the end of six or eight weeks it has cured and turned black. Then the strands of the cured moss are strung on wires to dry.

The dry moss is gathered from the wires and run through a gin to get rid of trash, sticks and dead moss. It first goes through large cogwheels, where the sticks are crushed. As the moss comes out on the other side of the wheels, it is caught in spikes that are on a revolving drum and thrown away from the waste matter. After the ginning process, nothing is left but good healthy moss. The gin tears the tender pieces and drops them with the trash.

The moss is then graded and made into from 100- to 200-pound bales. There are four grades: 2x, a poor quality of gray moss that has not been cured and is usually used for decorative purposes; 3x, a mixed moss that is slightly better; 4x, a good grade of black moss that has been well cured; and 5x, the best grade of black hair moss. The 5x moss is the grade that is becoming so very popular at this time.

When the gatherers sell their moss direct to the dealers without curing it, they are paid 40 cents a hundred pounds. The two grades of cured gray moss, 2x and 3x, bring

from 2 cents to 3¼ cents a pound, and the cured black moss, 4x and 5x, from 4 cents to 5 cents a pound. Gray moss is that which has dried on the trees or the ground.

The places of most recent development of the moss industry on our lines are Strader and Manchac, La., near Ponchatoula.

Many bales are shipped from these points over the Illinois Central to manufacturers of the North. At present, the demand for moss is greater than the supply, although this is the best part of the year to pick it. Most of the pickers are making more money doing other things.

Fighting a Snow Blockade in the Early 80's

By WILLIAM CAMP,
Pensioned Engineer, Chicago

A few words about a snow blockade on the Iowa division of the Illinois Central System.

The last three months of 1880 and the first three months of 1881 were severe. On October 15, 1880, there were two trains stuck in the snow between Waterloo and Fort Dodge. The company would get the road clear for eight or ten days, and then it would be blocked again.

The master mechanic fitted up a snow plow on a flat car. I was running a Baldwin Mogul at the time—they were considered jumbos. About the middle of January, 1881, the master mechanic, Tom Place, sent the call boy to me with orders to report at his office. He told me to take the snow plow and go west, not saying anything about my freezing up with the country.

After a good deal of hard work we got to Cherokee. The company started a passenger train for Sioux City, but it did not get there; it stopped in a big cut five miles west of Marcus. We found it there, engine dead, train abandoned.

We had a caboose, with a conductor and two brakemen. My partner was Tom Denison, fireman. We also had O. W. Parker, superintendent, and F. W. Quenby, assistant, with the section men from Marcus. We got within two car lengths of the passenger train when the men got to shoveling snow, which was blowing in faster than they could throw it out. We were there to stay and did for seven days and nights.

Mr. Parker and the men walked back to Marcus that night. Mr. Quenby stayed in the caboose until the next day, when he started for the East, having got enough of the West. We were short of coal.

E. T. Jeffries, general manager of the road at the time, was out on the line. He stopped with his car at Marcus. It looked bad for grub, but we got word to Mr. Jeffries, and he got a train out with a lot of baked beans and corn bread, also a lot of water, as we could not drink snow water. He did not forget to send me a package of smoking tobacco and a piece of navy plug.

William Camp entered the service in 1867 as a fireman at Waterloo. The same year he was promoted to engineer, and he served in that capacity until 1884. He was out of the service of the company then until 1891, when he returned as an engineer. He was pensioned on March 31, 1904, at the age of 66. Now, at the age of 84, he is living at 5803 Harper Avenue, Chicago.

They sent us out thirty bushels of corn to burn in the engine, and it took a 6-horse team to get it to the engine, for there were eighteen inches of snow on the level and all the while it was snowing like the devil. We had no trouble in keeping plenty of water for the engine. We melted snow in the tank, and we were blessed with a tight engine equipped with a non-sifting Mack injector that would take up the water at a 10-pound boiler pressure.

It cleared up after we had been there seven days. Mr. Parker came out with a gang of snow shovelers and dug me out as well as the passenger train. I coupled on the passenger train and took it back to Marcus. In the meantime the engineer and fireman took charge of the passenger engine. We took out the whistle and filled it up with hot water from my engine tank. Mr. Parker also brought a car of coal; so we were fixed for fuel.

I thought they would let up on me a little, but as the road was blocked more or less to Sioux City, I worked on the line and went into Sioux City on April 15, 1881, with the road clean after six months from the time the road was first blocked. I saw Mr. Jeffries after I got there, and he said I was worth several dollars; so I'm getting it now in installments—pension.

A PENSIONER HELPS OUT

Superintendent J. F. Dignan of the Wisconsin division reports that Pensioner J. D. Richards discovered a brake beam down on a car in train No. 172, at El Paso, Ill., recently, flagged the train and had the car repaired, avoiding a more serious accident.

Co-operation Is Necessary for Progress

Chairman McChord of the Interstate Commerce Commission Makes Strong Appeal for Constructive Harmony

The following address on "Co-operation" was made by C. C. McChord, chairman of the Interstate Commerce Commission, before the recent convention of the National Association of Railway and Utilities Commissioners at Detroit, Mich.

ACCORDING to the Standard Dictionary's definition, to co-operate is to operate together or jointly for a common object or to a common end or result. Co-operation is, therefore, potentially as broad in scope as the bounds of human relations. That its activities are not commensurate with its opportunities is no doubt largely due to selfishness, which is a very human attribute, but is in many instances more directly due, I think, to under-valuation. My present interest is in respect of its application in the field of transportation. There it may and should be practiced between carrier and carrier, between carrier and shipper, among carrier, shipper and the regulating authorities, and among the regulating authorities themselves, state and federal. It is rooted in the spirit of mutual forbearance, sometimes called the spirit of give and take, in which neither side seeks an unfair advantage.

It is no mere flourish of rhetoric to say that the comprehensive statutes which now provide for the regulation and control of the most important functions of our extensive railway systems are distinctly traceable to the absence of any such spirit in the earlier stages of development of those essential utilities. Had the promoters steadfastly recognized the real relations in which those transportation projects stood and will always stand to the welfare of the whole people and consistently observed a due regard for the paramount rights and interests of the public the properties were built to serve, there would have been no wrongs to restrain and therefore no restraining statutes. Unhappily, that policy did not prevail, and abuses of the great power in the hands of railway operators eventually stimulated an exertion of the mightier power of sovereignty resident in the people.

No Regulation for Fifty Years

From the appearance of the pioneer line until 1887, something like fifty years, our railway corporations were practically unregulated, and entirely so as regards the federal government. A few states had passed regulatory statutes previous to 1887,

C. C. McChord

but those laws were not comprehensive and related for the most part to the manner of incorporation and prescribed limitations to charter powers. During the era of growth of the nation, and especially the Middle West, after the end of the Civil War, railroads were built in all parts of the country. Communities were anxious for railway connection with the outside world, real estate speculators joined with railway speculators, and for a quarter of a century after 1865 there was a veritable fever of excitement attendant upon railway building. States, counties, townships and municipalities voted bonds in aid of railroads, until in 1900 more than 235,000 miles of railway main lines criss-crossed the entire country, with the exception of the unpopulated regions of the great West. From the outset, while recognized as common carriers, these utilities nevertheless were regarded as private enterprises rather than as public

highways, privately owned and operated but with their first duty to the public.

It was natural and inevitable under the circumstances that railway builders and owners should become impatient of restraint and acquire the point of view that the properties were built and maintained primarily and ultimately for the profit of their owners and operators. The Grange agitation in the Middle West, which had its birth in the belief that the railroads were exacting too much and giving too little, culminated in the Act to Regulate Commerce of 1887. That act, while it purported to confer corrective powers upon the commission it created, did little more than define the duties to the public of common carriers by railroad which were already in the fundamental law of the land. The law stood, however, like a sign post, pointing the way of duty to the railroads. If at that time the owners had accepted in good faith, in spirit as well as in letter, the indicated way of right conduct, much would have been spared them and the country. In that law an Interstate Commerce Commission was provided for which could do little more than investigate and report. The law was practically without penalties, so that no carrier felt bound to obey, in any real sense, any finding or order of the commission. The design of the law was chiefly to destroy the power of carriers to give unjust preferences to any shipper or community. The underlying thought of the act was to prevent undue discrimination between patrons of the railroads entitled to equal treatment. For years railway companies had paid rebates where they wished and by various arbitrary practices had injured or ruined individuals and communities. After the law was passed there was no apparent cessation from the practices that had preceded its passage. As a matter of fact, the law was openly flouted by shippers and carriers alike. I think it accurate to say that no period in railway history in this country was characterized by more abuses than that from 1887 to 1906. Ruinous discriminations continued, and the attendant evils of speculation and manipulation for selfish personal ends were not abated. It seemed as if that period saw the culmination of all that preceded it in a riotous disregard of all those principles which the law declared and common honesty embraced.

Real Regulation Began in 1906

Then the amendatory law of 1906 was passed, with such penalties for deviations from published rates and for giving preferences that the railroads were required to turn about face because of the mandate

of Congress that in the future they and the shipper must play fair. Even then the carriers were loath to give up the power they had long possessed. It was but human, perhaps, that they should yield only to compulsion—the slow-moving but irresistible power of the whole public.

Not until 1906 did the carriers begin to perceive that the great public is bound to have its way when fully aroused, but not even with that enactment or with the ensuing amendment of 1910 did they acquiesce fully in government regulation. The fact that benefits to the carriers themselves flowed from the restraints imposed, in that unfair methods in pursuit of business were brought under the ban, failed to reconcile those trained in the old school. Many of them regarded the regulatory enactments as invasions of the sacred rights of private property. Even today we occasionally hear the complaint that there is too much regulation and too little freedom for individual action. At all events, beginning with the motives which inspired the flagrant wrongs of the earlier period, down through successive lessons of experience and consequent enlargements of the law, and ending for the present with the occasional rebellious spirit, the responsibility rests with the failure to appreciate the ultimate advantages of an honest cooperation between those who require and those who supply transportation.

Carriers Not Altogether to Blame

While none of the wrongs done to individuals and communities are to be condoned, I should feel that I had been unfair did I not follow the indictment with a word or two by way of extenuation in some cases. Our years of intimate contact with the concrete relations of carriers and shippers have brought to our knowledge, as I doubt not has been revealed to you, the fact that the ruinous discriminations did not always originate in the will or mere self-interest of the carriers themselves. Often they were dictated by big shippers in position to demand such concessions upon pain of withdrawal of volumes of traffic which the carriers could ill afford to lose. Here the carrier, as well as the former victim of the discrimination, has become the beneficiary of the powers now vested in our commission and in the state commissions. Speaking of our own law, with which I am more familiar, our control now goes so far that neither shipper nor carrier need again be faced with such an evil dilemma.

It is true that the interstate commerce act has grown from an acorn to a mighty oak and that the state regulatory statutes

have become a forest of sturdy hickories. My message to the carriers is that all these enactments together need not be deplored or feared. They were not framed and placed on the statute books to work harm, but to achieve good for all concerned. At least, if any provision there be which may be found unjust, a manifested carrier spirit of a square deal for everybody will inspire its repeal or its consignment to the realm of the innocuous. It is not to be imagined that any regulatory body in this country has any other desire than to see our railroads wax strong and become prosperous and efficient transportation agencies. It is not necessary, it is not desirable, that in the consideration of grievances the parties and the tribunal shall forever stand at arm's length and justice be done by compulsion. Our own commission would prefer, and I am sure that every state commission would prefer, the co-operative assistance of every carrier to reach the right solution of every problem. It is not an idle dream; it is a very real possibility. Granted, its universal realization is likely to be very remote, but each successive instance would be a stride toward the goal.

Shipper Must Do His Part

It is not to be overlooked that in this consummation, so devoutly to be wished, the shipper has his part to play. In its very nature, co-operation is not one-sided. While co-operation does not necessarily mean compromise, since in a given case one party may be wholly right and the other wholly wrong, it does mean getting together in a mutually honest effort to ascertain and concede what is right. Gladstone once said: "Men cannot co-operate successfully for any purpose if the sole bond between them is selfishness." No conscientious shipper will ask what is not fair, and no conscientious carrier will withhold what is. There can be no real co-operation without common honesty on both sides. While I realize that there are dishonest individuals here and there, I firmly believe that the great majority could be persuaded to meet the carriers half way in such a program. In the face of the obvious fact that transportation and the public welfare are necessary to each other, why, as a matter of common sense, should not the mutually dependent shipper and carrier pull together for the good of both?

There is likewise room for beneficial co-operation in sundry ways between carriers themselves, where a contrary attitude is too often manifest. In that connection I may point out an object lesson in what amounts to practical co-operation in a very important particular, although involuntary on the

part of the carriers, which insures obvious and permanent benefits, and not merely to the public.

Readjustment After the War

Soon after our entry into the world war it became apparent that, as vital factors in the conduct of our share of the military enterprise, the various railroads must co-ordinate their services in the movement of troops and the munitions of war and in all other incidental transportation. This, unfortunately, they failed to accomplish among themselves; and the futility of their several efforts is again traceable to a prevalent unwillingness to subordinate individual interests to the general good. December 5, 1917, our commission transmitted to the Congress a special report, in which it was urged that unification in the operation of the railroads was indispensable to their fullest utilization for the national defense and welfare. The upshot was that in the same month the President, by appropriate proclamation, took the railroads over bodily, and throughout the remainder of the war and until the end of February, 1920, they were operated as an amalgamated arm of the government.

After four long and weary years the war was brought to a successful conclusion by the allied governments, and on our part it was found necessary to make various provisions incident to the termination of federal control. The war itself, with its appalling destruction of human life and of property, left not only sorrow, suffering and want in its train, but a generally deranged economic situation. Values had lost their old relationships. National debts had expanded into figures beyond any real conception. The old-time channels of trade and commerce had been given over to the abnormal and demoralizing demands of war. The cost of living for individuals, for industries, and for carriers had reached unprecedented levels. Reconstruction and a return to the arts of peace were complicated by conditions that only time could adjust. In that situation the Transportation Act, 1920, was framed and placed upon the statute books.

One of the outstanding features of that act, and one that I think is not generally fully appreciated, is that relating to car service. Under the present provisions the carriers are required to furnish safe and adequate car service and to establish, observe and enforce just and reasonable rules, regulations and practices with respect to car service. Particular provision is also made with respect to the distribution of cars among coal mines; and thereby vicious discriminations practiced in former times

have been curbed. The use, control, supply, movement, distribution, exchange, interchange, and return of locomotives, cars, and other vehicles used in the transportation of property are subject to our supervision and regulation. Whenever in the opinion of the commission there is a shortage of equipment, congestion of traffic or other emergency requiring immediate action in any part of the country, it has authority, either upon complaint or upon its own motion, to suspend for such time as may be determined the operation of any or all established rules, regulations or practices relating to car service; to make such just and reasonable directions with respect to car service during the emergency, without reference to ownership of the motive power and other equipment and to require such joint use of terminals as will best promote the service in the interest of the public and the commerce of the people, upon appropriate terms; and to relieve against inadequate transportation service by particular carriers by prescribing the handling and routing of traffic. The long and short of it is that these provisions have in effect recreated the essence or substance of federal control in respect of co-ordinated operation. The result is practically what the commission sought to have accomplished in the light of the car-supply investigation in 1916. Co-operative efforts among railroads is now definitely provided for. For all practical purposes it is equivalent to unification of lines, as far as the ultimate purpose of railroads is concerned, namely, the movement of traffic. Not only so, but it is in no wise inconsistent with the proposed voluntary consolidation of the railway properties of the continental United States into a limited number of systems.

Another Angle of Co-operation

On the subject of co-operation between the carriers and their employes I shall say little. I have always believed and still believe that these groups, also necessary to one another, can avoid their almost traditional strife and discord if each will decently recognize the rights and the burdens of the other and meet on a fair middle ground.

I turn now to the matter of co-operation among the regulatory bodies. This is not the first occasion on which I have spoken upon that phase of the subject. At the opening of the twentieth annual convention of this association in the city of Washington, in October, 1908, as president of the association and then being a member of the Kentucky commission, I strongly advocated a close co-operation among the federal and state commissions in the dis-

charge of their respective duties. I reminded the convention that the necessity for co-operative and concerted action among the respective authorities in every phase of the regulation of railroads had been advocated and approved at each convention since the organization of the association in 1889. In that connection I quoted two eminent authorities in hearty support of that course. The first was Judge Thomas M. Cooley, first chairman of the Interstate Commerce Commission and first president of this association. The second was Judge Martin A. Knapp, then and for a long period of time chairman of the Interstate Commerce Commission.

It is regrettable that prompt and consistent action along these lines was not taken sooner. Sporadic instances were for a long time the only responses to what was self-evidently a sound doctrine. At length the Congress has spoken on the subject by the incorporation into our act of a provision which contemplates and invites such co-operation in cases in which intrastate and interstate schedules appear to come into collision or may adversely affect each other, to be carried out through the medium of conferences or joint hearings; and in that connection we are authorized to avail ourselves of the co-operation, services, records and facilities of the state authorities in the enforcement of any provision of our act. Supplementing and rounding out this legislative declaration of a definite policy, the Supreme Court of the United States also has spoken on the subject in no uncertain terms.

Example of Harmonious Action

Because the subject matter of the general rate increase case of 1920, known as Ex Parte 74, was of interest and concern alike to interstate and intrastate shippers and to the federal and state regulating authorities, a committee representing the several state commissions sat with us throughout the hearing and participated in the ensuing conference in which, with their concurrence, our conclusions were reached. The hope and the purpose of the joint hearing were to bring about harmonious action among our commission and the state commissions, in keeping with the spirit of the amended act. The fact that the program was successful only in part has not been considered cause for discouragement. It was the first time we all undertook to work together in an effort so to adjust interstate and intrastate schedules as to put both classes of commerce on an equal footing and at the same time do equal justice to the carriers which handle both. We have since taken a most advanced step.

May 3, 1922, a joint committee composed of five members of the Interstate Commerce Commission and eight representatives of the state commissions, sitting at Washington, reported a tentative plan of co-operation through conferences and joint hearings. While experience probably will dictate some changes, such satisfactory progress has been made as to insure its ultimate success.

It is not to be supposed, of course, that we will always be of one mind in all cases, but differences can be composed where otherwise maladjustments would result; and with the right spirit behind it, aided and encouraged by experience, this co-operative effort will produce satisfactory results in steadily increasing numbers.

Can Co-operate in Express Case

A great opportunity for the practical application of the co-operative plan—one readily adaptable to a completely successful issue—presents itself at this time. The Interstate Commerce Commission has entered upon a nation-wide investigation of the interstate express rates and charges. In that connection we have invited all the state commissions, through their Washington representative, to co-operate with us, not only in respect of the interstate rates but also in respect of all the intrastate rates. The express rates are founded upon a system designed for uniform application throughout the country, both interstate and intrastate. That they should be restored to a complete symmetry no one will deny, and the case peculiarly lends itself to a full justification of our co-operative plan. We hope to receive the necessary co-operation and to achieve a final result that will be above reproach.

To my mind, just as co-ordination among the railroads was necessary to meet the requirements of the war period, so concerted action in those matters wherein our duties run parallel is at all times essential to a properly effective discharge of those duties. Discriminating differences in intrastate and interstate rates are just as vicious as purely intrastate or purely interstate maladjustments. Within the realm of commerce there should be no state lines, and the building up of symmetrical rate structures for the use of interstate and intrastate shippers can best be accomplished, beyond question, by harmony of purpose and action among the respective regulatory bodies. I have an abiding faith in the potentialities of unselfishly co-operative effort, and I doubt not that the acquiescence of the state commissions in the co-operative plan rests upon the same belief.

There can be no conflict of authority in

harmonious action along the lines laid down in the plan; and for the development and effectual application of the plan we need no statutory authority or assistance. The fact is, we are doing by voluntary co-operative action more than either the Congress or the state legislatures could compel us to do. Dealing with a common subject, with but one justifiable end in view, we shall rightly be adjudged failures if the products of our labors are in discord. Unrest and hostility are abroad in the land and should be quieted or curbed, not stimulated by official example. It is incumbent upon all of us to bear in mind that, as the destinies of the railroads are largely in our hands and with our enormous territorial area well nigh our national existence is dependent upon transportation by railroad, ours is a serious responsibility. How dare we work at cross purposes? The rectification of harmful inequalities between intrastate and interstate rates should be as much the concern and the duty of the state commissions as our own. It is your right to call upon us for collaboration and assistance, and we shall not hesitate to call upon you. Within those spheres wherein our interests are mutual, we should be virtually one regulating body, not an aggregation of bodies without co-ordination. Unity of action can, of course, come only from unity of purpose, and that purpose must undeviatingly comprehend the good of the whole. We have laid the foundation. Our co-operative plan announces our purpose and marks the beginning of an epoch in railway regulation.

How to Keep "Living Jewels" in Your Home

*Fish Fancier Has His Choice of an Alphabet
Full of Beautiful and Interesting Subjects*

By MARCUS MULLEN,

A. R. A. Clerk at Fordham Yards

I HAVE read at different times in our magazine of various employes of the Illinois Central who raise chickens, dogs and alligators as a hobby, and I want to include the story of my fishes in that list.

Years ago the Germans discovered that many of the different varieties of fishes the world over thrive and do extremely well in captivity or in aquariums. In following up their discoveries they found that the fishes from the tropical countries were the ones best adapted to this, for the reason that aquariums, while subjected to almost any natural rise or fall in temperature, are not so likely to go to low extremes, because we do not as a rule allow our living rooms to get very cold. While fishes from tropical countries can stand almost any natural rise, fishes from the temperate zones cannot. In some cases the latter require ice to keep the temperature down. Water freezes over the goldfishes in the Washington Park lakes at Chicago, but they would suffocate if the temperature went too high.

An Alphabet Full of Fishes

There are several hundred varieties of fishes from the tropical countries. Alphabetically arranged, their names extend from the *Acanthopthalmus Kuhlii*, native fishes of the waters of East India, about three inches in length, of a peaceful nature, which lay their eggs on plants or rocks, to *Xiphophorus Helleri*, beautiful fishes from the Mexican waters, of an extremely peaceful nature, which produce their young alive.

Now, right away, I dare say, some of my readers are going to say: "This is some

Marcus Mullen

fish story—think of fishes being born alive!" Well, that doubt is not surprising, for not one person in five hundred knows that to be a fact. The chances are that if one ever heard it he forgot it. But there are yet stranger things than these. There are nest building fishes that build nests out of bubbles which the male fish makes all by himself. After the female has laid the eggs, the male watches very closely and jealously. Should any of the eggs be jarred out of the nest, he picks them up in his mouth and blows them back up into the nest. All told, there are four different breeding groups—egg droppers, egg layers, nest builders and live bearing.

Suggestions for the Beginner

All four of these varieties have specimens which are easy to raise and easy to keep, though it must be understood that the temperature of the aquariums must be kept up to at least 70 degrees. Having had four years' experience, and having paid for some of my knowledge dearly, I say again that proper temperature is most essential. The easiest of these to raise and the most popular ones are the live bearing, and of these there are about forty varieties.

The paradise fish

To anyone wishing to try this hobby, I suggest the Helli, Guppy, Poecilia blue, the three kinds of Platypoecilia, the red, black and spotted, and the Heterandria Formosa, or mosquito fish, the very smallest of all aquarium fishes, the male adult being only three-fourths of an inch long and the female one inch.

The Guppy, whose scientific name is *Lebistes Reticulatus*, grows to an inch and one-half and is called the rainbow fish on account of his multitude of colors. Some of them actually have all the colors of a rainbow, and their rate of reproduction will be a joy.

The Helli, or Mexican swordtail, are so called because in the male the tail fin at the bottom grows out in a long green or yellow swordlike tail edged with black; a bright red stripe runs the length of their bodies. There are several species of these. The Guppies, Helli and all live-bearing fish are natives of America.

Decidedly interesting are the nest builders, of which the *Macropodus Viridi-Auratus*, commonly called paradise fish, from China, is the most common and beautiful. These fishes are most hardy, having been known to live for eight years, but, contrary to their name, they have no angelic nature or disposition. One male is known to have killed three females before finding one to suit his fancy as a bride and mother of his offspring. Two males will fight like two dogs. They circle around each other and occasionally strike until, as has happened, they both get a good hold at the same time and then hang on exactly as bull-dogs do. Put them in with other fishes, and they use the same tactics. They bite the fins

A Student of Fish

Marcus Mullen has been a fish fancier for several years and at present has nearly 300 specimens in his apartment at 63d Street and Blackstone Avenue. He knows the technical name as well as the disposition and natural environment of each fish. Tending to them and studying their habits is most interesting, he says. Mr. Mullen entered the Illinois Central service in 1912 as a gateman at the 63d Street station. He was there about ten months and was then made a clerk in the loss and damage bureau for eight months. He spent two years at South Water Street and two years as a valuation clerk. He was out of the service then until 1921, when he accepted his present position as American Railway Association clerk at Fordham yards.

Part of Mr. Mullen's equipment

and tails off the other fishes and eventually kill them. But if you put a number of them together they get along fairly well, for one will not allow another one to get behind him.

Male Fish Guards the Young

In reproduction the male secretes a sort of bubble, or rather great quantities of them, until he has built a nest sometimes as large as your hand and peaked up like a hay-stack. After building the nest, instead of courting the female, he drives her under the nest. As the female spawns, or lays, the eggs, being lighter than water, rise into the nest. It is then necessary to take the female away, as the male will kill her or any other fish in his vigilance or ferocity in guarding the nest. The eggs hatch in about thirty-six to forty-eight hours, and he shows the same solicitude for the young. If any of them fall out or stray away from the nest, he immediately gobbles them up, carries them back and blows them up into the nest. He takes care of them in this manner for eight or ten days, when it is necessary to remove him, for he will break the fast he has maintained during the period of fatherly duty and devour the very youngsters he has so zealously guarded.

The Guarini, both spotted and striped, the

Cichlosoma nigrofasciatum

Mexican swordtails

Polyacanthus Dayi and *Cupanus* and the *Betta Rubra* are other nest builders. Included in the egg droppers are the *Danio* and *Barbus*, both varieties being a splendid aquarium fish on account of their great activity. They are never still a moment.

Of the *Danios*, the *Danio Rerio*, or zebra fish from Ceylon, is the most beautiful. These fishes average in length about one and one-half inches and have brilliant blue stripes running the entire length of their bodies. They reproduce by dropping their eggs among the gravel and rocks. As they are particularly fond of their own eggs, we have to use our ingenuity to keep them from beating us to them. If the bottom of the tank is covered with small marbles, the eggs drop between the marbles and are saved. These eggs take from three to five days to hatch, and the young require particular care and attention. Other *Danios* are the *Danio Malabaricus*, *Danio Albolineatus* and *Danio Anali-Punctatus*.

Of the *Barbs*, the three most popular are the *Barbus Conchonius* from East India, the *Barbus Vittatus* from Eastern Asia and the *Barbus Semi-Fasciatus* from West Africa. The *Barbs* are all very active, and all have a truly golden cast. They are particularly hardy, which makes them a desirable aquarium fish. The breeding habits are similar to those of the *Danios*.

Among egg layers are some of our most beautiful fishes. They range in variety from the *Kriefftius Adspersus*, a mud minnow from Australia, to the wonder fish of all, the beautiful *Pterophyllum Scalare*, or half-moon, of the Amazon River. The latter is so beautiful and rare that one pair sold in Chicago about a year ago for \$75. The *Cichlasoma Nigrofasciata* of South America are extremely pugnacious—even ferocious—and can only be kept alone, while the half-moon, in addition to being so alluring and rare, is very gentle in its habits and will even become so trustful as to eat out of one's hand.

The home for the fish is important. The larger the aquarium, or tank, the better. I say this advisedly, for you can get a tank so big that it can become a white elephant on your hands. Any size from a 10x10x18 to a 14x16x18 can be made into a beautiful parlor asset, for, as one writer has so justly described them, fishes are "living jewels" for the home.

Aquarium Not Hard to Keep

Contrary to a common belief, the water in a balanced tank does not have to be changed daily, weekly or yearly. I have had one set up for more than two years

More of Mr. Mullen's equipment

and two now that have both been up more than a year each. Of course water must be added for evaporation and for siphoning. When the dirt at the bottom is siphoned off some water is lost, but some fanciers strain this water back into the tank.

In setting up a tank a liberal supply of gravel should be used, which previously should have been well cleaned and washed. It should be spread over the bottom, with the back side higher than the front so that any dirt or sediment that needs to be siphoned off can easily be reached. The tank should be planted generously with such oxygen developing plants as are procurable, preferably *Sagittaria* or *Vallisneria*, and some few decorative plants, as

Ludwigia and *Myriophyllum*. The latter also serves as a good hiding place for the young from their cannibalistic parents. One of the best top plants is *Anacharis*.

The very young fishes should be fed powdered prepared fish feed, powdered yolk of egg, graham or soda cracker dust, oatmeal broth and young daphnia, or water fleas, also called ditch fleas, and cyclops, an other ditch inhabitant.

The larger fish should have prepared fish feeds, shredded and dried shrimp, ditch fleas, raw beef, scraped oatmeal, chopped earthworms and vermicelli.

And last but not least, to all beginners: More fish are killed through kindness by overfeeding than ever starved.

Springfield Division Baby State Champion

Mary Agnes Zimmerli, 53 months old, daughter of Mr. and Mrs. Henry Zimmerli of Clinton, Ill., scored the high record of 99.5 per cent perfect in the seventh annual state fair better babies' conference at Springfield September 23. Mr. Zimmerli is private secretary to Superintendent C. W. Shaw of the Springfield division, and it is needless to say that "Zimmie" is one of the proudest fathers in Illinois today.

Mary Agnes, who is just a little past 4 years old, was entered in the better babies contest in DeWitt County early in August, at which time she was awarded first prize, showing the high percentage of 99.3 per cent perfect. She was presented with a silver loving cup which was donated personally by Len Small, governor of Illinois, and was also given the honor of representing DeWitt County at the state fair at Springfield, September 16 to 23, with all expenses paid.

At the state fair Mary Agnes again showed her colors. Among 922 children present to compete for the honor of being called the most perfect baby, she was pronounced the best in physical and mental development. Examinations were conducted by Drs. Bartelme, C. D. McKinney, J. Leslie Lambert, B. F. Steely and P. L. Taylor, all of whom are noted authorities in the state. The loss of one-half of 1 per cent was due to the fact that her legs were a quarter inch short of the assigned standard.

Mary Agnes held first place at the state fair and was awarded first prize, a \$100 savings account in her own name. The proud mother was presented with a \$100 John Bunn watch, the latter donated by the Illinois Watch Company of Springfield.

In further recognition of the victory, Mary Agnes and her mother were appointed as delegates to represent Illinois

at the thirteenth annual meeting of the American Child Hygiene Association at Washington, D. C., October 12 to 14.

Mary Agnes is a lovable child and is a great favorite among the Illinois Central employes on the Springfield division, who congratulated "Zim" on having the best baby in the state, as she shattered all previous records for scoring.

Clemenceau a Patron of Illinois Central

*Distinguished French Visitor Made Trip
to Springfield and St. Louis Over Our Line*

By G. G. TRUESDALE,
Assistant General Passenger Agent

THE Illinois Central recently enjoyed the distinction of being one of three American railroads over which M. Georges Clemenceau, war premier of France, traveled during his tour in the United States, when he made an appeal for a sympathetic understanding on the part of the American people of his country's situation as the result of the World War.

The "Tiger" left Chicago the morning of Thanksgiving Day on the Daylight Special for Springfield and St. Louis, traveling in Charles Schwab's private car, "Bethlehem." He was accompanied by his advisor, Col. Stephen Bonsol, his secretary, M. LeFevre, and attendants. A party of fifteen newspaper correspondents and photographers representing the leading American and French dailies and press associations, who had been with him since the beginning of his tour, also made the trip.

The party stopped at Springfield for an hour and a half, which had been previously arranged at the express request of M. Clemenceau, to enable "the Grand Old Man of France" to pay tribute to the memory of Abraham Lincoln by placing a wreath on the tomb of the martyred president.

Taken to Lincoln Home

M. Clemenceau was met upon his arrival at Springfield by a large crowd, which gave him a rousing welcome. Prior to the

ceremony at the tomb of Lincoln, Clemenceau was escorted through crowded streets to the Lincoln home. He was taken through the rooms, was seated in Lincoln's armchair, and was presented with a pen made from the flooring of Lincoln's bed-room, with which he signed the visitor's register. From the home the party proceeded to Oak Ridge cemetery and directly to the monument. Former United States Senator Lawrence Y. Sherman presided over the ceremonies at the tomb.

The following is the report given by the Chicago *Tribune* of the Frenchman's remarks at the Lincoln shrine:

Honors Principles of Lincoln

"After these very appropriate and moving words which have been spoken here, I hardly dare say more—I could not. Nobody felt more than I the feeling which pressed all human hearts when your president was murdered. I was but a young man, but I remember the great demonstration that was staged in Paris, which manifested the feeling which we people of France had for the now immortal Lincoln, just as all the people of the world who love liberty had for him.

"Today, as I stand at his tomb, I remember his words spoken at Gettysburg: 'We do not consecrate these dead. We ask them to consecrate us.'"

"I honor today your valiant men who died on the fields of France for the same principles, the same inspiration, the same

M. Clemenceau, in center, leaving Central Station, Chicago, on our Daylight Special the morning of Thanksgiving Day

M. Clemenceau, a little to the right of the center of the picture, at the tomb of Lincoln at Springfield, Ill.

love of liberty for which Lincoln, the great American, laid down his life at the gun shot of the murderer.

"We do not try to equal him, but to go behind him in the path which he made for us. We people in France honor Americans and love America, but we know how to discern among them those who are true, who have courage and faith and patience and the qualities which made your Lincoln the man whom the world honored and loved and who has inspired all the world to love the many.

"And I, who come here as a private citizen with no thought of politics, come to this tomb to find a new strength, a new courage, to carry me through the difficulties which follow all public action, and for his help in private life, in the sacrifice we must all make if we are to live up to his ideals of courage and faith, of good for the many.

"I come not as the representative of a country or a political party, but as a man before this man, and with all my heart I am profoundly grateful for the privilege, profoundly stirred by the inspiration of standing at his tomb."

His mission having been fulfilled, the former premier was at the station in ample time to permit leaving at 4:30 p. m. in the

Illinois Central special train which was to carry him to St. Louis.

Spent the Night at Litchfield

In order that M. Clemenceau might escape all callers and get a complete rest overnight to recuperate from his fatigue, which was beginning to manifest itself as the result of his strenuous speaking tour, it was decided to side-track the special train just outside of Litchfield, Ill., for the night, and the north siding was chosen.

The plans of the St. Louis reception committee demanded that the "Tiger's" special train arrive at Union Station promptly at 8:35 a. m. Thanks to the combined efforts of Superintendent Shaw, Trainmaster Walker, Conductor Millan, Engineer Hoyt, Flagman Irvine and Fireman Storey, and the others intrusted with proper handling of the train, it arrived at Tower 1, St. Louis Union Station yards, at 8:34 a. m., where the engine, which was to carry the train to the Forest Park Station, St. Louis, was attached.

A short time prior to his departure from Chicago M. Clemenceau graciously consented to pose for an Illinois Central photographer with Conductor Patrick Haley and Trainman Ed B. Taylor, who were to conduct his train as far as Springfield.

M. Clemenceau and his party were ac-

accompanied on their trip over the Illinois Central by C. E. McCullough, division passenger agent, Pennsylvania System, Baltimore, who had charge of the arrangements for M. Clemenceau's American tour; E. H. Baker, supervisor of passenger service employees, Illinois Central System, and the writer.

M. Clemenceau's vigor is remarkable, considering his years. Although more than 81 years old, he has the appearance of a man in his sixties. His eye is keen, and he walks with a firm deliberate step, which seems to be indicative of his character.

The ex-premier has a daily routine from which he rarely ever deviates. His custom is to retire about 7 o'clock in the evening, and at 3 o'clock in the morning he arises and partakes of a hearty breakfast, consisting of from four to six eggs and a cup of black coffee. From then until dawn seems to be his favorite time for work, and it is then that he prepares his speeches.

It is said that during the war, when the "Tiger" threw his heart and soul and every ounce of his energy into the cause of France, this daily routine was suspended, for he worked night and day with remarkable endurance, visiting even the front line trenches in all sorts of weather, giving inspiration to his countrymen.

M. Clemenceau is gifted with a keen memory, and commenting on this faculty one of the newspaper representatives in the party related an interesting incident which took place after M. Clemenceau's address in Boston. During the informal reception which followed on old lady came forward to shake the "Tiger's" hand and remarked to him that she had been one of his students when he taught school for a short time during his residence in New York. The old gentleman not only remembered her but recalled her name—and he had not seen her for more than fifty-seven years.

Faithful "Red Caps" Get a Word of Praise

Sandy W. Trice, chief usher at Central Station, Chicago, recently wrote as follows to A. M. Loeb, president, National Council of Traveling Salesmen, Hotel Cadillac, Broadway and 43d Street, New York City:

"I am writing this to express to you how gratifying it was to me to read an editorial in the Chicago *Evening Post* of November 9 showing what you had to say relative to the splendid type of service rendered by the 'red caps' throughout this country to the traveling public.

"I am quite sure that it will be keenly appreciated by every 'red cap' who may read it. Since it comes from a man of your type and standing, with such broad experience and knowledge of their worth, I shall see to it that it is put up in our ushers' room, so that it may from time to time be read by all of them, as an incentive for them to become more efficient and courteous to the traveling public.

"In our weekly talk to the 'red caps,' we try to impress upon them their position to the traveling public—that they should at all times render efficient and courteous service.

"We shall endeavor to see to it that this particular group of 'red caps' will measure up to all that you have said in your statement. We appreciate the fact that, for a 'red cap' to be efficient, he must be to some degree intelligent."

The editorial which appeared in the Chicago *Evening Post* read as follows:

THE USEFUL "RED CAP"

It is pleasant to find an appreciative public recognition of a body of workers whose services are at the command of all travelers, but who are seldom thought of after the travelers leave the railway stations. These are the attendants known as the "red caps." Mr. Loeb, president of the National Council of Traveling Salesmen's Associations, speaking as he says for more than 700,000 members, lately made this statement:

The traveling salesman, by the nature of his calling, which requires almost daily contact with railway conditions and personnel, is in a position to know and appreciate the splendid type of service rendered by the official corps of "red caps," their willingness, courtesy and honesty; he is equally alive to the menace of the irresponsible public porter, and as an experienced traveler he avoids intrusting his errands to these itinerant men and boys, whose responsibility and whose fees demanded are not subject to any satisfactory regulation or control.

Travelers see these "red caps" when they enter the stations in all cities of any size, see them on the platform when they step from trains, and transfer their hand baggage to them sure that the property is in safe hands and that all instructions will be carefully followed. The traveler does not stop to ask or to wonder who is responsible for them, who employs them or if they are remunerated by the railway companies. Because of their uniforms he recognizes them as official attendants and because of the convenience of their service he bestows tips for it with far more willingness than he feels in remunerating the train porter for running a whisk broom over his coat. It is real service that the "red cap" gives.

Women with young children or with heavy satchels find the "red caps" a great dependence when transferring themselves from the trains to taxis. The cap is anxiously looked for and its owner eagerly welcomed by such travelers. The "red cap," in short, has become an institution that the public cannot dispense with, and it is right that his usefulness should be recognized.

Faith and Fair Play Are All-Important Now

President Markham, in Louisville Address, Says Better Understanding by Public Will Help Solve Problem

Address by C. H. Markham, president, Illinois Central System, before the Kentucky Manufacturers Association, The Seelbach, Louisville, Ky., December 12, 1922.

OUR railway problem is one of varying aspects. Just now its most important aspect is the necessity for raising new capital to finance the expansion that is needed to keep pace with what we all feel to be a permanent revival in the nation's business conditions.

Our railroads exist to provide transportation service. They were called into existence nearly a hundred years ago by a nation that was just breaking out of its swaddling clothes on the Atlantic coast—a nation which now numbers more than a hundred million people and which has wide territorial interests and manifold and intermingled processes of trade and industry that could not be maintained by any other form of communication. The groups vitally interested in the success of the railroads today are three, although the second and third are included in the first. These groups are: First, the 110,000,000 people of the United States, to whom the maintenance of railway transportation means the maintenance of the present form of civilization; second, the close to 2,000,000 railway workers of the country; and, third, the 800,000 stockholders and the almost equal number of bondholders of the railroads.

An Essential Service

The railway business is not a business in the ordinary sense of the term. It is a service—a vitally necessary service—that must be maintained at all costs. It cannot shut down in slack times or expand rapidly and boost its prices in times of prosperity. Its plant must be maintained at a high standard at all times, and the methods by which the nation finances this undertaking and the justice according to which the burdens and the returns are distributed are wholly secondary matters. I trust that you will bear this in mind—that the maintenance of efficient transportation is the main thing and that the agitations we have for a higher return on the railway investment, higher wages or lower rates are purely temporary matters, merely the attempts of this group or that to increase its own return or to lower its own assessment for the upkeep of the transportation plant.

All three of the groups I have mentioned

benefit by the existence of the railroads. The public benefits by service; the bondholders and stockholders, by interest and dividends, if any are paid; the employees, by wages. Into the maintenance of the railroads the public places its money, by payment of rates; the investors place their money, by purchase of the stocks and bonds that finance railway building or expansion; and the employees place their work, by providing the service on the lines that the investors have built. The public must not be forced to pay too much for service; the stockholders must not be asked to invest without some hope of adequate return; and the employees must not be called upon to work for wages that are too meager—although all must be made to realize that the maintenance of the service is the big thing, so vitally necessary that any or all of these groups may be called upon for at least temporary sacrifices in its behalf.

Tardy Justice to Investor

I do not believe that we are ever likely to turn government regulation into government ownership of our railroads, and so we are likely to have with us for a long, long time the railway investor—the stockholder and the bondholder, the builder and the lender, the dividend-drawer and the interest-receiver, the owner and the mortgagee. We have heard a great deal from time to time about the needs of the railway patron and the needs of the railway employe, but it is only of late that attention has been paid to the needs of the railway investor. Since the beginning of restrictive regulation with the passage of the Hepburn Act in 1906 the patrons have worked their will with the roads; in more recent years the employees have influenced legislation for their own uses; but it was not until 1920 that the part of the railway investor was taken in the passage of the present Transportation Act. It was the first effort on the part of the nation to see that the stockholder, the keystone of the railway arch, got his due; and it is to the ultimate best interests of the country that this recent attempt to do justice to the stockholder be kept in force.

The Transportation Act of 1920 was made a law for the purpose of restoring the confidence of investors in the railroads, so that the railroads could keep pace with the growth of the country. I do not believe that our law-makers today will forward the prosperity of the country by amending the

Transportation Act until it has had a fair chance, under normal conditions of business, to prove its worth. I would, however, make one exception. I believe that there should be contact between the Interstate Commerce Commission and the Railroad Labor Board. President Harding referred to this in his message to the Congress December 8. He recommended the creation of a labor division in the Interstate Commerce Commission, made up from its membership, to hear and decide disputes relating to wages and working conditions. He said, if this plan were adopted, it would be necessary to increase the membership of the commission by four members, and suggested that one of these should come from each of the four rate-making territories. I believe that the President's recommendation is worthy of the most serious consideration.

Why Fair Return Is Needed

Unfair and unwise regulation in the past has seriously harmed the owners of railway securities, who have seen honest and legitimate investments greatly depreciated in value over a period of years or actually wiped out. That unfortunate situation is having a tragic reflection today on the whole prosperity of the nation. It has been estimated that every shortage of railway transportation costs the country a billion dollars, and we are going through a shortage today that is especially acute because it is being experienced right at the beginning of a revival of prosperity, instead of toward the end of a boom, as in previous cases. Railway service has been affected by the shopmen's strike and the coal miners' strike, but the underlying cause of the shortage of transportation is the fact that the railroads have not been permitted to earn a rate of return that would attract the necessary capital to equip them for the needs of advancing business. They have not been able to keep pace with the growth of the country's demand for their service. The railroads can never attract the billions of dollars of new capital that they now so urgently need until they are allowed to earn a fair return upon the money invested in them. That fact ought to be clear, and every American ought to know it. It is not a matter of what the railroads *ought* to earn; it is a matter of what they *have* to earn in order to compete in the open market for new capital.

As manufacturers and business men, you gentlemen know how you have to go about it in order to get new capital into your enterprises by adding stock or by raising a loan. You have to show how prosperous

your business is, how much you made last year and the year before and how much you are likely to make in the coming years. You have to show the prospective investor that he can make at least as much money with the minimum of risk in your business as he can make in any other business that is competing for his investment.

The railroads as a whole have not been able to make this necessary showing, and as a result capital has not flowed into them in anything like the volume needed.

"But," you might say, "are not railway stockholders guaranteed a fair return by the Transportation Act of 1920?"

No Guaranty of Earnings

I have heard that question before. Ten days ago I was out in Iowa to talk at a meeting of farmers. Out there many seemed to think that the government was pledged to see that the railroads got 6 per cent; something of the sort had been urged with telling effect in the political campaign just ended. I was astonished at the number of persons who seemed to think that the railroads had such a guaranty.

There is, as a matter of fact, no such guaranty. The Interstate Commerce Commission, in compliance with the terms of the act, attempted to set rates that would yield a 6 per cent net railway operating income on the tentative valuation determined by the commission. It is a matter of record that this attempt has failed; the rates were put into effect in a time of business depression and have since been reduced, so that the railroads have done well to make 3.47 per cent for the first two years of experiment. It took most of this to pay bond interest and rents of facilities. In the face of a business revival, the rates begin to promise slightly more at present, but there is no certainty that the rate of return will be maintained, and there is certainly no way by which the railroads can make up the difference between the 3.47 per cent which they actually earned and the 6 per cent which they were expected to earn for the first two years of operation under the Transportation Act.

The Group That Suffers

In the face of that, we have to meet the present agitation to do away with certain provisions of the Transportation Act, including the one I have just mentioned, as being too favorable to the railway stockholders and too expensive to the railway patrons, particularly the farmers. The Transportation Act of 1920 encourages the railway stockholder to look for a fair return, but he hasn't had it yet.

The railroads have lost few employes because wages are too low and few shipments because rates are too high. As I

have shown you, the railway investor is the factor needing attention; his money is subject to many more attractive temptations, and who should blame him if he takes it elsewhere? The railway employee would go into other lines if more money were offered him; the shipper would turn to other forms of transportation if they were available and the rates and service were more attractive; and certainly the railway investor cannot be called upon to show more loyalty to the railroads than the employees and the shippers. As a matter of fact, the investment group is the one of the three groups I have mentioned which has suffered the most by reason of railway regulation in the interest of the other groups; and the best thing the American public can do for its railway ills right now is to show consideration for the prospective railway investor.

Of course, some persons will be telling you that the stockholders are not entitled to a fair return on their investment because the railroads have issued "watered" stock and are trying to collect on a value that does not exist. Our law-makers of an earlier day were worried about that very same bugaboo, and so they set up machinery, under the authority of the Interstate Commerce Commission, to find out about it. That process of valuation of the railroads of the country has been in progress for many years. Stocks or bonds or earning capacity, including good will, have *not* been considered in this valuation. The factors taken into consideration have been: Cost of reproduction in 1913 to 1916, cost of reproduction less depreciation, original cost, other valuations and elements of value.

Valuation Shows No "Water"

When a tentative valuation was needed for rate-making purposes in 1920, the commission carefully weighed the facts already at hand and set the tentative valuation of the railroads at \$18,900,000,000, which was almost \$2,000,000,000 in excess of the net capitalization of all the railroads outstanding in the hands of the public at the end of 1919. In other words, on the face of the commission's estimate at that time—an estimate which is being corroborated by the final valuations being served upon individual railroads—the railroads are worth at least \$2,000,000,000 more than the net face value of all their stocks and bonds outstanding in the hands of the public. The average railway stock today is selling at much less than par, and that means that the current market value of the properties is so much less than what they are really worth that railway securities would be the best buy on the market, were it not for the fact that earnings have been so unfortunately restricted in the past.

The Illinois Central System was recently served with a preliminary engineering survey of its valuation as of June 30, 1915, seven and one-half years ago. At that time, the Interstate Commerce Commission's valuation engineers estimated, the property was worth about \$371,500,000. Now that estimate was too low, as we hope to show the commission, but even taking that estimate as it stands and adding the \$108,000,000 put into the property between that time and the end of 1921, we would have had a valuation at the end of 1921 that totaled close to \$480,000,000, or more than \$90,000,000 in excess of the Illinois Central System's capital stock and funded debt in the hands of the public. A margin of \$90,000,000 on a valuation of \$480,000,000 is a pretty safe margin—certainly safe enough to prove that you won't find "water" in the securities of the Illinois Central System.

Now, I speak about the Illinois Central System because that is the railway property with which I am best acquainted, but I believe you will find, by a comparison of other valuations and capitalizations as announced from time to time, that the Interstate Commerce Commission did not over-value the railroads when in 1920 it placed a tentative valuation upon them that was \$2,000,000,000 in excess of the outstanding capitalization.

Illinois Central Capitalization

It is easy to show the reasonableness of our Illinois Central capitalization. The Illinois Central System operates about 6,200 miles of line; but when we count up

Mr. Markham's Addresses

In the last month President Markham has delivered addresses on railway subjects upon the following occasions:

December 2—Meeting of Delaware County, Iowa, farmers at Manchester, under the auspices of Jones Mill Grange.

December 7—Eighteenth annual National Rivers and Harbors Congress, Washington, D. C.

December 12—Annual meeting of Kentucky Manufacturers Association, Louisville.

December 14—Dinner given in honor of Mr. Markham by Kankakee (Ill.) Chamber of Commerce.

Upon each occasion Mr. Markham spoke of the problems confronting the railroads of the country and of the need for a constructive treatment of these problems by the public. His Louisville address has been selected for reproduction in this number.

second, third and fourth tracks, side tracks, passing tracks, yard tracks and the like, we have more than 10,000 miles of track. Our capitalization is about \$387,000,000. That is \$62,400 for each mile of line or \$38,700 for each mile of track. But capitalization covers much more than just the right-of-way, the ballast, the ties and the rails. On the Illinois Central System we have 75,000 freight cars, 1,800 locomotives and 1,700 passenger cars. Take our freight cars at a value of \$1,000 each, which is half what a new car costs today; it is not an unjust value of our cars, because our equipment was acquired largely in recent years and has been kept in first-class condition. Take our locomotives at \$30,000 each, which is nearly half what we are paying now. Take our passenger cars at \$15,000 each; we paid \$34,800 each for the last steel cars we purchased; most of our passenger cars are modern steel cars, and they have been kept in good condition. These estimates would give us \$75,000,000 worth of freight cars, \$54,000,000 worth of locomotives and about \$25,500,000 worth of passenger cars. This is a value of \$154,500,000 for rolling equipment alone, nearly half of the total capitalization of the system. When we subtract this from the previous capitalized value we had for a mile of track—\$38,700—we have left a capitalized value of \$23,250 a mile. And this does not take into consideration the cost of bridges, signals, telephone and telegraph lines, which are so closely connected with the track, or of the buildings, land, roundhouses, shops and stations. The value of our terminal properties at Chicago, Memphis, New Orleans, Louisville and other cities runs into large figures.

So we see that even the low estimate of \$23,250 is much too high to represent the actual capitalization of a mile of track on the Illinois Central System. A good comparison to make, in order to bring this figure home, is to think of the cost of building a mile of hard-surfaced highway. I don't believe you will find that many hard roads are being built for \$23,250 a mile. A good estimate for Kentucky hard roads, I understand, is \$25,000 a mile. Bearing this comparison in mind, I do not believe that you will find anything to criticize in the capitalization of a railroad that does not greatly exceed this comparatively low amount.

Cost of Building New Line

In this connection, you might be interested in learning what it is costing the Illinois Central to expand its facilities in Kentucky today. The construction of our new line from Central City to Dawson Springs—a distance of slightly more than

twenty-five miles—will cost us very close to \$60,000 a mile. The construction of second track from Princeton to Scottsburg, three miles and a half, cost us \$38,000 a mile; from Paducah to Clarks, nearly three miles, \$42,000 a mile. A spur from Sturgis to Bell Mine, three miles and a half, cost us \$40,000 a mile, even when we used second-hand rails in its construction.

Put Case Up to Public

In order to get anything done in regard to the railway situation or to prevent things from being done which are actually harmful, we must give the public a clearer understanding of the railway situation and of the public's vital stake in railway welfare. I believe that railway managers can do nothing more fundamentally important than to take the public fully into their confidence. I have no doubt of the inherent justice of American public opinion, and I believe I can trace 99 per cent of our present railway ills to public misunderstanding of our true railway situation.

This addition of understanding is something which the railway executives themselves can help attend to, and it is their duty, as I see it, to do so—for one reason because they are to be blamed for some of the past misunderstanding, and for another reason because they are responsible to the owners of the roads, the stockholders, for the prosperity of their properties, and this prosperity can never be restored without the active support of the public.

Regulation by Public Opinion

As you know, everything depends upon the public, because the public has asserted its primary interest in transportation by seizing the reins of regulation that so largely guide railway policies today. It cannot be said that railway managements asked for public regulation of the railroads, but they have it, and they must make the best of it; and I, for one, do not believe that it is altogether an unmixed evil. The railroads are public utilities, common carriers, servants of the people, and I believe it is fitting that the people should have much to say regarding the way they are run—just as I believe equally firmly, on the other hand, that any nation which does not look forward to government ownership of transportation (and our nation certainly does not) should be careful to set a limit beyond which regulation may not go, a limit that will clearly separate helpful guidance from actual confiscation.

As I said, the public rules the railroads. The public assumed this responsibility without understanding; it has, in many instances (as it threatens to do today), asserted this authority in acts which have been directly contrary to its own ultimate

best interests. If we are to have fair and helpful treatment of the railroads, we must have an enlightened public opinion regarding the railroads; development of this public opinion is fundamental to our solution of the railway problem.

Don't think that I talk this way only to gatherings similar to this. I talk about it in railway executives' meetings, to boards of directors, wherever there is a chance to say a good word for a real policy of proper public relations. Inasmuch as the success or failure of the whole investment in the railroads depends directly upon what the public says and does, I do not believe that efforts can be spent in a better way than in acquainting the public with the real facts about the railroads.

Wipe Out Old Enmities

And while you are adding understanding, you must subtract enmity. There is no denying that the railroads have been disliked in the past. There have been two main angles to this dislike. The first has been the general public disapproval of big business and some of its former methods, a disapproval which certainly was not tempered by the misconception placed upon Commodore Vanderbilt's often-quoted remark about "damning the public." Now it has but recently been explained by Melville E. Stone, former head of the Associated Press, that Commodore Vanderbilt's remark was made to an obstreperous newspaper reporter who insisted upon interviewing him while he was eating, the reporter insisting that the curiosity of the public would not wait; but for one person who knows this true version of the affair, there are a thousand who believe that the Commodore was expressing the attitude of big business, including railroads, when he said: "The public be damned!" On the face of it, it looks like a challenge, and the anti-railroad agitators of today are as fond of rolling that exclamation on their tongues as any railroad-baiting agitator of the decades past.

Damage Caused by Agitators

These agitators themselves have been the second great cause of public enmity to the railroads. Public suspicion of big business, a perfectly natural thing, has been fanned into flame by office seekers, not only in the past but even today. The railway question should be purely an economic one, but in too many cases it has been made a partisan issue. The railroads command but few votes, while their patrons are legion; and it requires no deep thought by office seekers to decide what attitude toward the railroads is likely to be the popular one. Needless to say, their efforts in many cases have turned passive suspicion into active hos-

tility; wild promises of restrictive regulation, particularly in the direction of lower rates, have been indulged in and many, many times have elected men to office. In some campaigns, it has merely been a question of which candidate could show the most opposition to the railroads.

This condition of which I speak is largely past, although we still have some evidences of it today. The folly of such an attitude, I thought, had been clearly shown by its unfortunate effect on our railroads; and that is why I cannot understand its sporadic reappearances today. The only assumption I can take in this regard is that some of our people either are not interested in having adequate transportation or else are sorely deceived as to the ways to get it. The public must realize that this is the time for a new deal all around.

There are some who are now proposing a return to state control of intrastate rates. They are demanding that railway investors should not be promised or encouraged to expect any reasonable return for the money invested in the development of the railroads. I could give you figures without end to show into what a serious condition this state of mind in the past has driven our railroads today—how the capacity-of-equipment increase has progressively declined, how investors have turned to almost any security except those offered by the railroads, how even the meager return that has been yielded in recent years has been obtained at the sacrifice or postponement of badly needed expenditures for repairs and replacements, until today we find ourselves in a new era of business with a railway plant that would not have been sufficient for even the relatively smaller business increases of the past. Our present shortage of transportation is sufficient evidence of what mistaken railway regulation, inspired by enmity, has done to our national railway plant. It is imperative that we remedy this condition.

Faith Needed for Solution

A proper solution of the railway problem will also require confidence and faith—faith in the future of our country, faith in the destiny of our railroads, faith in the ability of our railway managers. The United States from time to time has taken steps backward, but its general course has been ahead. The railroads of recent years have abandoned more miles of line each year than they have built. Hampered by restrictive regulations, our railway managers of today have been unable to display the genius that spread the iron trails all over the country in the earlier days.

But these adverse railway conditions, let us hope, are only temporary. They are not

to be taken as indications that the day of the railroad is past. From time to time, as new means of transportation are invented or old ones are enlarged, the railroads may come to rely upon them as auxiliaries, but I do not believe that the supremacy of the railroads will be seriously challenged within the lifetime of any of us here tonight. Our country is too big and our highways too soft for motor trucks to be widely successful; the waterways, while perhaps valuable in their sphere, can't serve enough communities; the airplane needs development in safety and capacity. For many, many years to come we must rely upon our railroads as our most important and most vitally necessary agencies of transportation, and in them we must place our faith.

Our country, as at present constituted, was built upon a foundation of railroading. The country's prosperity and the prosperity of its railroads must keep pace. If we have faith in the prosperity of our country—and we could not otherwise be true Americans—we must likewise have faith in our railroads. With fair treatment, there is no physical limit to the service that the railroads can give.

Railway Managers Capable

The destiny of our railroads, in so far as their direction (under regulation) is concerned, lies in the hands of typical Amer-

ican men of business—men who for the most part have worked their way up from the ranks and therefore have a personal interest in the welfare of public, employe and owner alike. There are some who believe that the old days of railway achievement are past, that the withering hands of animosity and over-regulation have removed the romance and prosperity from the railroads; but I am not one of those. I believe that the opportunities for the railroads and those who follow the railway business as a calling are as good today as they ever were. I believe that we have men as executives of the railroads today who are as capable as any who ever headed a railway company, and I look to the American people to see that they get the opportunity to play the part they should in the country's welfare.

As I said, we must take this railway problem, add something to it that it hasn't had, take away from it something it has had a great deal too much of, divide the fruits of the service more efficiently and then multiply the result as often as the country needs railway expansion. Let us add understanding—there are no secrets to keep. Let us take away enmity, which has colored so much of our railway regulation in the past. Let us divide the financial benefits of the railroads so as to bring into railway expansion the new capital so vitally needed.

Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions December 1:

Name	Occupation	Years of Service	Date of Retirement
James W. Jones.....	Agent-Operator, Wheeler, Ill.....	17	10/31/22
Oscar A. Schwarze.....	Toolroom Man, Freeport, Ill.....	17	7/31/22
Joseph Parker.....	Section Laborer, Mason, Ill.....	20	8/31/22
Car W. Gabel.....	Foreman, Burnside Shops.....	27	11/30/22
Robert M. Griffith.....	Engineman, Wisconsin Division.....	35	11/30/22
Frank G. Wagner.....	Foreman Blacksmith, Waterloo, Iowa....	36	11/30/22
Carl Roelofsen.....	Carpenter, Burnside Shops.....	19	11/30/22
John Bolt.....	Carpenter, Burnside Shops.....	20	10/31/22

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
William M. Adrian.....	Boilermaker, Minnesota Division.....	10/22/22	8 months
Harrison Jackson (Col.).....	Laborer, (B&B), New Orleans Term'l.....	10/18/22	1 year
Charles W. Anderson.....	Stationary Engineer, Indiana Division.....	10/28/22	8 years
Jacob M. Gaines.....	Section Foreman, Indiana Division.....	11/ 5/22	4 months
Bernard H. Trumbull.....	Commercial Agent, Traffic Department.....	11/ 7/22	9 years
Michael English.....	Crossing Flagman, Illinois Division.....	11/16/22	13 years
Albin Johnson.....	Coal Chute Operator, Wisconsin Div'n.....	10/23/22	4 years
Julius Kahle, Sr.....	Car Inspector, St. Louis Division.....	11/21/22	18 years
Frank A. Rugg.....	Engineman, Illinois Division.....	11/21/22	17 years
Loth Landberg.....	Section Laborer, Minnesota Division.....	11/ 7/22	14 years

Engine No. 1104 Has Maintenance Record

Engineer C. F. Rieger Has Driven His Big Locomotive 127,000 Miles Without Needing Repairs

ENGINE No. 1104 has made the round trip between Freeport, Ill., and Chicago every day since the early part of September, 1919, without receiving even light repairs, according to C. F. Rieger of Freeport, Ill., the engineer who has driven the engine during that time. It has pulled trains Nos. 28 and 15 for a total of more than 127,000 miles.

"A thorough report of all work that was to be done after each trip is what has enabled No. 1104 to make such a good record," Mr. Rieger says. "Every time I arrive at the roundhouse after a run, I inspect all the parts that it is possible for me to inspect, and note on the work slip each thing that should have attention, no matter how insignificant it may seem. The roundhouse force has always been able to do what was needed to be done to the engine before it was to go out on its trip; but if the work had not been reported each time, it would have accumulated so rapidly that No. 1104 would have had to be held for repairs. The roundhouse forces at Freeport and Chicago have given the best of attention to No. 1104, and their co-operation has made the record possible."

Studies Locomotive Carefully

When Mr. Rieger alights from his engine at the roundhouse, he walks around it like a father looking for a tiny scratch on his child. His alert ears during the trip have told him what to inspect first. If he notes that the "music" is going wrong while running, his knowledge of an engine informs him what the trouble is, and he looks for that the first thing. He sees that the wedges are kept up and the rods are keyed up so that the engine will not pound. A pound will drive an engine to the shops quicker than anything else, he says.

No. 1104 was completely overhauled in the shops at Freeport before it was turned over to Mr. Rieger in 1919 for the run between Freeport and Chicago. He says that the efficient work done at Freeport under the direction of W. J. Ormsby, master mechanic, is largely responsible for the record the engine has made. Since that time, its schedule has been as follows: Leave Freeport on No. 28 at 2:05 p. m., arrive Chicago at 5:45 p. m., leave Chicago on No. 15 at 12:40 a. m. and arrive at Freeport at 3:53 a. m. Mr. Rieger is on No. 1104 two days and off one.

Mr. Rieger has many friends in railway

C. F. Rieger

circles. He has been railroading since January 10, 1882, and all but two years of that time have been spent in the service of the Illinois Central. His pleasing personality has clinched the friendship of nearly every railway man he has met during those years. His broad, sincere smile and hearty handshake assure one that Mr. Rieger is indeed glad to form the new acquaintance, and he is a friend from the very beginning. The roundhouse forces are always glad to see him pull in from a run, because he never fails to extend a cheerful greeting and tell them the latest news of their friends scattered along his run.

Became a Fireman in 1886

Mr. Rieger's first railway work was as a laborer on an Illinois Central section at Galena, Ill., a town from which many employes of the Illinois Central came. He worked two years and then entered the service of another railroad. His position with the other railroad was section work, but he remained only two years.

In the first part of January, 1886, Mr. Rieger met George Johnston, an engineer for the Illinois Central, on the street in

Galena. The two men had been friends for a long time.

"I thought you were doing section work," was Mr. Johnston's greeting.

"I was, but I quit and am out of work just now," Mr. Rieger replied.

"I need you as my fireman," the engineer said, and Mr. Rieger accepted. Those were the days when engineers hired and fired their own firemen, and there were many mighty good engine crews on the system, Mr. Rieger says.

Mr. Rieger started firing for Mr. Johnston January 11, 1886. The first day he was given instructions in oiling, cleaning, packing pistons and valve stems, setting up wedges and keying up rods. The firemen did all of that work as well as shoveling coal in those days. The cleaning of an engine was not a small job. Wood burners had not been replaced by coal-burning engines very long, and there were still a few of the wood burners in operation on the Southern Lines. The engines were beautified with brass rods and trimmings, and the brass had to be kept shining.

Made a Passenger Engineer in 1909

Mr. Rieger was with Mr. Johnston for three years and became a passenger fireman. His run was between Amboy and Dubuque. In November, 1892, he was promoted to freight engineer and began work between Freeport and Dubuque. He was transferred to the run between Freeport and Chicago in 1902, and in 1909 he was made a passenger engineer on the same run. He has continued in that service since.

At one time Mr. Rieger's four brothers

were employed by the Illinois Central as well as himself, but at present he is the only one of the family in the company's employ. He speaks in highest praise of the Illinois Central. He says his family comes first, and then he is for the Illinois Central.

There are a few little incidents in his daily life that prove that he has a great love for the system and is always on the lookout for things that he might do for its welfare.

Mr. Rieger went to his grocer in Freeport one day to buy a sack of flour. When he stepped into the store, the grocer introduced him to a traveling man who was there.

"This fellow represents the flour you just asked for," the grocer said.

"He does? How do you ship your flour to Freeport?" Mr. Rieger asked.

When he was informed that the flour was not shipped by way of the Illinois Central, Mr. Rieger told the grocer that he would not buy it. Then the engineer told the traveling man how the flour could be shipped to Freeport over the Illinois Central. The route that he explained proved to be just as good as the one that had been used, and the traveling man said that he intended to ship the flour to Freeport on the Illinois Central in the future. Mr. Rieger bade the two men a cheerful good-day and walked out of the store with a sack of flour.

Active in Soliciting Business

On another occasion, Mr. Rieger learned from a new acquaintance that he was con-

Engineer Rieger and No. 1104

templating a trip to California. The conversation developed the fact that the Illinois Central had not been considered in planning the route, but when the ticket was bought it was over the Illinois Central to New Orleans and another line to California. Mr. Rieger fixed that.

Mr. Rieger says that he never occupies a seat in a well-filled coach when he is riding on a pass. There are plenty of trunks and boxes to sit on in the baggage car, he says. He doesn't want any passenger to get off of an Illinois Central train and spread the news that he was unable to have a seat. It is bad publicity, he says; but when an employee who is riding on a

pass gives his seat to a paying passenger, the incident is long remembered.

September 1, 1922, Mr. Rieger was appointed police and fire commissioner of Freeport by Mayor Stephen. It was the first time that a laboring man had been placed on that board. Mr. Rieger says that the laboring men of Freeport recommended him to the mayor. There are only three members on the board, which acts as a court in the affairs of the firemen and policemen.

Mr. Rieger says that engine No. 1104 is still running good, but that it is beginning to show signs of wear and will have to go in for another overhauling before long.

W. B. Ryan Heads Memphis Traffic Club

By WILLIAM GERBER,
Memphis Terminal Editor

As the climax to a campaign which was attended by all the enthusiasm and excitement of a hotly contested political battle, W. B. Ryan, assistant general freight agent of the Illinois Central System at Memphis, Tenn., was elected president of the Memphis Traffic Club on November 18 last.

The Memphis Traffic Club is an organization with nearly 500 members and includes railway officials, traffic managers of industrial concerns, as well as many high officials in various industries and banking institutions in the territory.

The election of officers conducted by the traffic club at this time far surpassed in interest taken that of any civic club or other organization of its kind held in this city in a long time. The nominees were divided into tickets, one known as the "Red" and the other as the "Blue" ticket. Owing to the fact that Mr. Ryan had rendered such splendid service in this organization, holding the office of treasurer for two years, he was nominated for president on the "Blue" ticket. Headquarters were opened by each ticket in conspicuous locations in the heart of the city, and advertisements and placards of a very elaborate nature were distributed, just as if a great political campaign was in progress. The election was held in the banquet hall of the Gayoso Hotel and was terminated with an elaborate dinner and cabaret performance. Many high railway officials of various lines were present from other cities.

R. J. Carmichael, assistant general passenger agent for the Illinois Central System at Memphis, was the candidate for first vice-president on the "Red" ticket.

"With much regret," he writes, "I must admit that I was defeated at the polls on Saturday night, November 18, at the hour

the Traffic Club's election took place. While I only lost by a few votes, yet in a measure I was handicapped at the start.

"I am the only passenger traffic department representative who was ever mentioned on a Traffic Club ticket here. Ninety-eight per cent of the members are freight men or men associated with the traffic departments of industrial concerns. Naturally their support leaned toward freight department men, thus causing me to be in the minority when support was needed."

LOOKS A LITTLE BIT COOL FOR NOVEMBER

Some of those who participated in the pageant, "Garden of Roses," which was produced November 17 at McComb, Miss., under the direction of Mrs. Donohoo and Mrs. Wilkinson. There were 300 in the entire cast, and about 75 per cent of them were from Illinois Central families. Other views of those taking part are shown herewith.

There Are Fairies at McComb, Miss.

Above are shown Elizabeth, Catherine and Amelia McCarthy, nieces of Nick Salmon, engine foreman, who took part in the pageant at McComb, Miss., November 17.

Four of this group of dancers in the pageant are daughters of Illinois Central employees. They are: 1, Martha Cotton, daughter of Charlie Cotton, engineer; 7, Kathleen Chumley, daughter of C. M. Chumley, roadmaster; 11, Dorothy Day, daughter of George Day, flagman; and 12, Edith Caulfield, daughter of Van Caulfield, engineer. The others in the picture are: 2, Miss Stewart; 3, Ida M. Birdsong; 4, Miss Case; 5, Johanna Heidenreich; 6, Jean Kramer; 8, Nellie K. Holmes; 9, Jane Kramer, and 10, Laverne Holmes.

Marianna McLaurine, daughter of E. L. McLaurine, was queen of the fairies at the pageant. Her picture is No. 1 at the left. The others are: 2, Maude Butler, niece of F. M. Cook, accountant in the superintendent's office; 3, Ida Margaret Birdsong, niece of Michael Harrell of the chief dispatcher's office; and 4, Clyde Travis, son of S. T. Travis, working foreman. Maude Butler was entrance Cupid, and Ida Margaret Birdsong was dancing Cupid.

Memphis Likes Our "Thank You" Stamps

By J. P. MOEWS,
Agent, Memphis, Tenn.

The "Thank You" stamp is bringing comments favorable to our lines. The stamp, which was recently put in use, reads as follows:

"Thank you for routing this shipment via our line and hope our service was entirely satisfactory and that you will continue to specify IC-Y&MV routing when placing orders for future shipments."

Since the beginning of the plan at Memphis of enclosing a slip with this wording with all freight bills mailed to consignees, some firms have written letters commending the idea.

It seems to be a surprise to shippers to learn that a railroad appreciates their business enough to thank them for it. One of our patrons wrote a letter commenting on this courtesy, declaring that this is another incident showing the progressiveness of the Illinois Central and Yazoo & Mississippi Valley railroads. He assured us that he at all times favored our companies, wherever possible.

Another firm wrote in substance: "We received in the morning's mail something we have never seen or heard of before as

coming from a railroad." The writer said he appreciated the Illinois Central System sentiment and service and wanted to assure us that ours was his favorite line and he at all times gave our lines preference.

In addition to these letters, many personal comments have been made. This goes to show that the public is human and that it appreciates our appreciation of its business. I believe that every station, regardless of size, should arrange to use these rubber stamps, placing them on a neat piece of paper and sending them to the consignees whenever possible. The publicity and comments received at Memphis can surely be had at other points.

GETTING IN THE CLEAR

An original mind has creative power which is more than equivalent to a vast store of knowledge, for it can conjure out of the unknown and produce upon demand that which is required without reference to authorities, while the possessor of a memorizing brain stands helpless unless the precise information wanted happens to be upon the tablets of his memory. While a memorizing brain is earning a living, an original mind will win a fortune.—J. HAMILTON MCCORMICK.

Division Official Makes a Hobby of Radio

John Price, Kentucky Supervisor of Signals, Perfects Inventions and Builds Sets in Spare Time

THE novelty of picking concerts, market reports, etc., out of the air appeals to young and old alike. Few persons realize the debt of gratitude that is due to the unknown amateurs who have spent their time and money on experiments that finally resulted in the great achievement of universal radio broadcasting.

The great pioneers of science and invention owe a debt of gratitude to the unknown amateurs. Strangely enough, the thousands of these experimenters are the most fruitful sources of lesser but invaluable improvements in every line of scientific industry—particularly so in the field of radio.

It is in this class of amateurs that we would place John Price, our supervisor of signals on the Kentucky division. Mr. Price began experimenting with radio when he was a boy of 14, built his first complete transmitting set when he was 16 years old, brought out his first invention when he was 22, his second invention at the age of 27, and today, at 28 years of age, has perfected his greatest achievement—the elimination of static in certain types of radio receiving sets.

Can Eliminate Static Interference

This is no small achievement when you consider the fact that static has been the bugbear of radio fans ever since the first radio set was placed in service. Mr. Price has been experimenting with various devices during the past four years in an effort

Supervisor Price illustrating the use of a plate condenser shunted across the connections of a loop antenna for the elimination of static. The sketch shows only the beginning of the circuit. The rest of the circuit is the same as that generally used in the ordinary receiving set.

to eliminate static and now claims that he has perfected a device that will eliminate static interference in the ordinary receiving set.

Mr. Price builds his own radio sets. In the last year he has constructed and assembled six different types of receiving sets.

His latest sets he calls a "universal receiver," as it is so adapted that it is possible to receive both telegraph and telephone signals. During the last two months he has heard radio telegraph stations in Scotland, England, Germany and France, in addition to hearing nearly all of the broadcasting stations in the United States.

He uses two types of antennae, the loop type and the flat top "T"-type with counterpoise. In the flat top he uses four wires, each 125 feet long and sixty feet from the ground and each pointing in a different direction. With the loop type of aerial he

Supervisor Price testing out his sixth radio set

uses a 43-plate condenser shunted across the loop connections, then a radio-frequency amplifier, detector and 2-stage audio-frequency amplifier. The high frequency oscillations are received by the loop and are amplified by the first two. Then follow rectification by the detector tube and finally audio-frequency amplification. Mr. Price claims that with this arrangement static interference is entirely eliminated and that the signals that come in are loud and strong.

Can Obtain Any Wave Length

In the "universal receiver" he uses honeycomb coils instead of the regular tuning coil, or variometer. By using the proper combination of coils he is able to obtain any desired wave length. Slight adjustments on the primary and tickler coils of the honeycomb set result in very fine tuning.

Mr. Price says that the selectivity of a tuned plate circuit cannot be compared with

Interior view of radio room at Central Station, Louisville, Ky., showing "universal receiver" radio set constructed by John Price, supervisor of signals, Kentucky division.

Superintendent T. E. Hill of the Kentucky division "tuning in" on "WGY"

that of a honeycomb circuit that is carefully tuned. When the primary is tuned to the same wave as the secondary, it is very hard to make the tube oscillate, and it is usually possible to put the tickler coupling to maximum and with the primary coupling very loose get very sharp tuning and very strong regeneration, something that cannot be obtained from the ordinary variometer receiving set.

Mr. Price builds his radio sets for the pleasure of experimenting only and does not attempt to sell them for profit. Usually, in making a new set he uses all the parts of the old set, with the new parts added to get some desired effect.

In addition to being a radio fan, Mr. Price has two other hobbies. They are perfect signal performance and educational meetings. In the last year he has conducted several educational meetings among the employes of the signal department on the Kentucky division, and the results are being reflected in the improved performance of the automatic signals on the division. Mr. Price lives in Louisville, Ky., is a member of the American Radio Relay League, the American Railway Association, and is unmarried.

In addition to his inventions in the radio field, Mr. Price is the inventor of a special form of switch box lug used in automatic signal work and an adjustable switch stand tip used to obtain adjustment on switch lamps.

ST. LOUIS DIVISION CHANGES

Superintendent W. Atwill of the St. Louis division recently announced the following appointments, effective October 1: F. E. Hatch was appointed trainmaster, Centralia district (Irvington to Villa Ridge) and Murphysboro district (Texas Junction to Gale Junction) with headquarters at Carbondale, Ill. J. D. White was appointed trainmaster, Madison to Wilderman, including Carondelet district, with headquarters at East St. Louis, Ill. E. D. Holcomb was appointed trainmaster, St. Louis district (Wilderman to Carbondale), Sand Ridge Branch, Carbondale district and Eldorado district west of DuQuoin, with headquarters at Carbondale, Ill. D. H. Miller was appointed trainmaster, Eldorado district east of DuQuoin, West Frankfort branch, Zeigler district, Johnston City district and Dew Main branch, with headquarters at Herrin, Ill.

Becomes Superintendent on the G., M. & N.

Effective Monday, December 18, J. J. Hoeksema assumed the position of terminal superintendent of the Gulf, Mobile & Northern Railroad at Mobile, Ala. Mr. Hoeksema's appointment to this high position came as a surprise to his Illinois Central friends. Up to the time of this appointment he was doing special work for J. F. Porterfield.

Mr. Hoeksema's railway activities extend over a period of fourteen years. He entered railway service at Mitchell, S. D., on the Chicago, Milwaukee & St. Paul as a switchman. Two years later he left the Milwaukee while serving as yardmaster at the same point and entered the Illinois Central service as a brakeman. For the last twelve years he has occupied positions as conductor, yardmaster and car agent. Up until December, 1921, he was serving as traveling car agent out of Mr. Porterfield's office. In December Mr. Porterfield placed him in charge of experiments with the impact register. The December, 1921, issue of this magazine carried an article by Mr. Hoeksema on this machine.

Mr. Hoeksema makes the second Illinois Central man to receive the call of more responsibility on the G., M. & N. in the last two months. The first was Paul E. Odell,

who was appointed vice-president and general manager of the G. M. & N. October 31.

Mississippi Students Originate "Dad's Day"

*Young Men Arrange Regular Annual Date When
Parents Are Entertained at A. & M. College*

By C. H. WILLIAMS,
Freight Office, Jackson, Miss.

IN the broad expanse of territory reached directly by the rails of the Illinois Central System, there are many institutions of learning. From the modest county agricultural high school to the nationally or internationally famous universities, they dot the land. This is as it should be. Education and development go hand in hand, and it would be of little avail to develop our transportation facilities if we did not at the same time educate the rising generation to operate them or to furnish them with tonnage. From the schools and colleges each year there swarm multitudes of young men and women who must take their rightful places in our industrial life if we are to maintain our commercial prestige.

There is, however, more in the life and teachings of these schools than merely the commercial idea. The principles of religious thought, of political economy, of the wonders and possibilities of Mother Nature, all are inculcated during these school days. Athletics have their seasonal activities. School life is by no means, in these days, a dreary round of lessons only. It is small wonder then that from time to time some school or college develops an idea, modern in its conception, which would hardly have been dreamed of in the days of the little old red schoolhouse.

How "Dad's Day" Was Developed

On the Aberdeen branch of the Illinois Central, at Starkville, Miss., there is located a technical college which ranks with the best in the United States. The Mississippi Agricultural and Mechanical Col-

lege, with its splendid endowment and state and government support, its magnificent and modern technical buildings, its broad acres devoted to experiment and investigation in agriculture, takes front rank among schools in all that makes schools worth while. Its student body comprises fifteen hundred young men from all walks of life, representing almost every creed and many nationalities.

It remained for Mississippi A. & M. College to stage a performance, if you may call it that, in 1921 which was duplicated in 1922 and which will become an annual feature of college life at Starkville. This is "Dad's Day," one of the greatest festivals ever proposed by college boys and carried by them to successful completion.

A few students at A. & M. one day in 1921 conceived the idea that it would be not only kindly but helpful to invite their fathers to visit the college during the active school year and to see for themselves just how their boys were housed, fed, educated and entertained. These boys knew that they were making good use of their time, that they were faithfully carrying out the promises which they had made to those at home when they left for college, and they sincerely desired that their "home folks" might see how they lived and studied. They also desired to furnish some typical college entertainment for their dads after they had made the journey to the school. Perhaps it was in fear and trembling of their big school-boy idea that they broached the subject to the college authorities, but if they had any doubts as to the attitude of the president and faculty these doubts were

Lee Hall, administration building, Mississippi A. & M. College, Starkville, Miss.

New Engineering Building, Mississippi A. & M. College

dispelled at once. Not only did the boys receive permission to issue the invitations and prepare the entertainment but the authorities assisted them in every possible way and gave official recognition and support to the plan.

Life of the College Exhibited

It was decided to hold "Dad's Day" late in November, when the college work was in full swing and when it was not yet too late to entertain the Dads with a genuine football game. The invitations were issued, and although the time was short and it was an event without precedent, 225 dads journeyed to Starkville and were entertained for two days with military displays, college pranks, athletic events, debates, exhibits of mechanical and agricultural progress. It was an education as well as a relaxation for the parents, as they were given an opportunity to see the study rooms in action and to inspect every detail of the college buildings. The entertainment was voted a success, and every dad begged that it be repeated.

This year "Dad's Day" was celebrated again on Saturday, November 25, while the preceding day was devoted to exhibitions of progress. Five hundred and forty dads and mothers came to the college for these

two days. They were royally entertained, fed, housed and sent home happy. Many of the visitors were employes of the Illinois Central, whose sons are students at A. & M. College, and many of these same students will eventually enter the service of the Illinois Central System or go into business along its lines.

Idea Believed to Be Original

The idea itself, so far as I know, of "Dad's Own Day" is original with A. & M. students. There may have been other times and places when small groups of parents came to some college as an investigating committee or on a sight-seeing trip, but I believe this is the first time that an entire college was ever turned over to its students for two days in the middle of a semester that they might prove to their fathers that their college was as splendid in every way as they believed it to be. The idea was born in loving hearts; the boys wanted to show dad that they were proud of him, and they wanted to entertain him. It is such exhibitions of heart and mind that make some colleges strong in morale, although they be not the largest or the most heavily endowed. It is because the idea is so novel, so sincerely lovable, so wonderfully carried out, that it seems worth while to write of

New Chemistry Building, Mississippi A. & M. College

it to the world at large as reached by our magazine. It might not be out of place for other colleges to adopt this plan, to install such an annual celebration as "Dad's Day," which is a really, truly "play-day" with many sensible and educational features included.

There cannot be too close a comradeship between the boy and his father, too sincere a relationship not only of blood but of heart and mind. When a boy is willing to exhibit himself to his father as he really is while

at school and is sufficiently proud of that same father to want to introduce him to all of the other boys, it seems to me that we have the ideal relationship between father and son.

Whether any other institution follows the example of A. & M. College or not, it is certain that "Dad's Day" has become an annual affair at Starkville and that no dad who has ever attended one of these delightful college celebrations will willingly miss another.

The Attractions of Miami, Fla., Analyzed

Miss Florence McShane, our Indiana division editor, recently asked Passenger Conductor E. W. Bromley to write for the magazine his impressions of the trip he and Mrs. Bromley recently made in Florida. Shortly afterward Miss McShane received a letter from Mrs. Bromley, and here we have the views of both Mr. and Mrs. Bromley on one city which our passenger department advertises as being worth a trip to Florida—naturally over Illinois Central System rails.

When one thinks of Southern cities, one imagines a quiet and restful atmosphere, but not so Miami—everyone is on the alert; everybody is smiling, happy and busy. Everywhere one looks buildings are going up: 10- and 12-story buildings are climbing skyward; just a few more years and this city will be a Chicago of the South.

And, of the beautiful palms and foliage, words are too feeble to express their great attractiveness and beauty! There are three species of palms—date, cocoanut and royal. The cocoanut, to a Northerner, is a constant source of delight as he gazes upon the huge bunch of cocoanuts, from the size of an apple to the full-grown nut, but the most wonderful palm is the royal. As you drive about, you will see avenues of these, and at a distance they have the appearance of concrete posts with a bunch of ferns at the top.

There are many beautiful estates at Miami, among which is the home of William Jennings Bryan, who has kept the original forest surrounding his place. Close by is the home of his daughter, Mrs. Moore. Mr. Cooper, the "Tanlac" man, has one of the largest, and he keeps hundreds of men employed keeping the grounds and golf links in shape. The largest estate is Mr. Deering's. Visitors are allowed to drive through only on Sundays.

Some quaint churches are erected in quiet spots, surrounded by beautiful palms and vines. Just to enter these sacred

places, amid the quiet and beauty of nature, fills one with a reverence for the Being who created life and beauty.

But the thing that impressed us most was that great and mighty Atlantic! When one stands upon the shore and sees the movement and hears the roar of those white-capped waves, as they gradually come in from afar and break at one's feet, one may well exclaim: "God is in the heavens, and all is well!"

When one is tired and worn with the cares of life that beset, I can imagine nothing so soothing as a quiet spot and the murmur of the waves lulling one to rest. One feels, "Begone, dull care"—life starts anew.

A few Seminole Indians live in the Everglades. They do not care for civilization in its full sense. One time, so the legend runs, an Indian maid sat on a log, making coquettish eyes at her lover (as maidens were ever wont to do), and he, looking at her, said: "How pretty you are!"

She blushing replied: "My, am I?"

Hence, the name of this Southern City.

There is an intoxication (of joy) in the air down there that changes one's views, and he wonders if he is quite as sane as when in the North. Everything is looked at with a different viewpoint, and you see visions and dream dreams of wealth and happiness to come. Let us pray that they may all come true.

Their slogan is "Miami while you live—heaven when you die!"

THE GENIUS

All the genius I have lies just in this: When I have a subject in hand, I study it profoundly. Day and night it is before me. I explore it in all its bearings; my mind becomes pervaded with it. Then the effort which I make the people are pleased to call the fruit of genius. It is the fruit of labor and thought.—ALEXANDER HAMILTON.

Our London Office Is in Historic Setting

Located on Leadenhall Street, a Famous Business Thoroughfare; Bombs From German Zeppelins Fell Near, During the War

By DONALD ROSE,
European Traffic Manager

THE London office of the Illinois Central was first opened in May, 1904, at 153 Leadenhall Street, one of the best known business thoroughfares in London. The office is within three minutes' walk of the Baltic Exchange, the leading shipping center in London. It is also within three minutes of the Royal Exchange, the home of the famous Lloyds Insurance, and the same distance from the Bank of England.

The location of our office in one of the finest office buildings in London, with quarters specially arranged for us in the plan of the building, was made possible by our holding a 6-year lease when the owner decided, in 1912, to tear down the old building and erect a modern structure. We declined to surrender our lease or move unless provisions were made for our office on the ground floor in the new building.

By direction of the United States Railroad Administration our office, with all other American railway offices in Europe, was closed in June, 1918. On re-opening in May, 1920, we took temporary quarters in Princess Street, since our former office had been leased by a Japanese bank. In January, 1922, however, this office was again obtained, and we are now located on the same site where we opened up in 1904.

Germans Bombed Near Office

In 1914, when the war began, we had a good map of the Illinois Central System on the large window. Throughout the war, as is well known, the Germans bombed London with Zeppelins and aeroplanes, coming over sometimes as often as three or four times in one week. The only day raid was at noon in June, 1917, and one of the most destructive bombs was dropped on the street within one hundred feet of our office. Every window in the block was broken, and the largest piece found of our window was one about five inches square. As ample warning was given of the Germans' approach, all occupants of offices hastened to the cellars until the "all clear" signal was given after a suspense of two hours. No one was killed in our vicinity.

In addition to being one of the busiest streets in London Leadenhall Street has an interesting history.

Donald Rose

Leadenhall Street is so called from "Leaden Hall," a large and ponderous looking mansion inhabited about 1309 by Sir Hugh Neville and afterward the residence of the late De Bohuns, earls of Hereford. In 1408 it was purchased by Whittington, lord mayor of London, who presented it to the corporation, and in 1445 Sir Simon Eyres, citizen and draper, established here "of his own charges" a public granary of square stone, with a chapel at the east end. In this chapel a few years afterward was founded a fraternity of sixty priests, besides other brethren and sisters, whose duty it was to perform divine service every market day for the edification of the persons who frequented Leadenhall Street.

A Desolate Place in the Plague

Defoe, speaking of the desolation of this populous part of London during the plague, observes: "The great streets within the city, such as Leadenhall Street, Bishopsgate Street, Cornhill and even the Exchange itself, had grass growing in them in several places. Neither cart nor coach was seen in the streets from morning to evening except some country carts bringing beans or peas, hay and straw to the market, and of these but very few compared to what was usual. As for coaches, they were

scarce used but to carry sick people to the pest houses and to other hospitals, and some few to carry physicians to such places as they thought fit to venture to visit."

It was at the King's Head Tavern, which stood until recently on the north side of Leadenhall Street, that the conspirators in Sir John Fenwicke's plot in the reign of William the Third were accustomed to hold their meetings.

On the north side of Leadenhall Street, on the site of what was once a cemetery of the Priory of the Holy Trinity, stood the interesting church of St. Catherine Cree, so called from its having been dedicated to St. Catherine, an Egyptian virgin, the word "Cree," or "Christ," having been added in order to distinguish it from the other churches in London dedicated to the same Saint. The original structure, which was of great antiquity, was pulled down and rebuilt in 1107. With the exception of the tower, it was again rebuilt, as it now stands, in 1629—according to some accounts under the direction of the great architect, Inigo Jones. The interior of the church presents a singular appearance from the strange mixture of Gothic and Corinthian architecture.

In Leadenhall Street, opposite the East India House, in 1803, was found the most magnificent Roman tessellated pavement yet discovered in London. It lay only nine and one-half feet below the street, but the third side had been cut away for a sewer. It appeared to have been a floor of a room more than twenty feet square. In the center was Bacchus upon a tiger, encircled with three borders (inflections of serpents, cornucopiae, and squares diagonally concaved), with drink cups and plates at the angles. Surrounding the whole was a square border of a bandau of oak and lozenge figures and true lovers knots and a 5-foot outer margin of plain red tiles. The pavement was broken in being taken up, but the pieces were preserved in the library of the East India Company.

A curious old English crypt was found in the garden at No. 153, which is our number. London history reports that a monastery was located on our site.

Lovers of Dickens will be interested to know that Captain Cuttle of *Dombey and Son* was said to have had a branch store on the site, and Dickens frequently visited the character who is represented by Captain Cuttle.

Our London office, 153 Leadenhall Street, with Mr. Rose inside window

This Man Proves His Faith by His Works

An Illinois Central Employee Offers Plan for Saving; Has Obtained Business for the Company

By A ROAD DEPARTMENT EMPLOYEE

AS I write this, I am reminded of an article I read in a newspaper recently to the effect that there were 1,300,000 persons out of employment in Great Britain, one of the best governed countries in the world. Starvation is facing many other nations, while we stand out as an example of possibly the only country at the present time enjoying real prosperity. Every one of our citizens who desires employment has it, and we are even confronted by a shortage of labor.

I thank God for the blessing of being an employe of the Illinois Central System, the best in the world. I challenge any man to find an employe working for him who would not rather work for the Illinois Central than for any other railroad. When all employes of the Illinois Central become interested to such an extent that they are worried over waste, we are going to pile up a dividend for this railroad which we have not heard of before. Co-operation is what we need. We have some, a good deal, but we need more of it.

Now, I am not going to offer any advice, for I am not capable of doing so; neither am I writing this letter for notoriety, and consequently I am not going to sign my name to it. However, I will say that if any reader has a better plan than the one I am going to offer for reducing waste, I will follow the lead and be glad to do so.

What General Saving Would Mean

The Illinois Central has approximately 60,000 employes. If each employe would save for the company next year the small amount of \$20, all of us would save for the company \$1,200,000, and there is not an employe working for the Illinois Central who cannot save his share. I would be ashamed to admit that I could not save for the company that amount or even more. There are many ways in which this can be done—economizing in time; saving and protecting property; boosting, instead of knocking the business; soliciting business, both passenger and freight, when it is opportune to do so; and, finally, by judicious application of material.

I am now going to speak of the \$20 money that can be saved in the road department, for I am a member of that department:

1—As to economy in time. If a track laborer who gets 28½ cents an hour loses ten minutes a day for three hundred days

in a year, the loss to the company is \$14.25. We can save that by making it up, if we lose it, and most of us do.

2—We can save a lot of time and lawsuits by protecting the company's property from loss by fire and taking care of it otherwise to prevent loss.

3—By boosting the railroad for which we work, we will command the respect of the public and get business for the road. No man has any respect for an employe he hears continually knocking the railroad that he works for, but you might be surprised to know how much business one can get for the company if one never loses an opportunity to try to obtain it. An employe need not be timid about asking business men for their support, for they like to see employes looking out for their employer's interests.

Personal Experience in Solicitation

If you will pardon a personal reference, I will tell you about a little experience the writer had soliciting business two days for the Illinois Central, after working hours. I got six carloads of freight for the Illinois Central, and instead of meeting with rebuffs, as some might expect, I had the opposite experience. The first man I approached was Mr. Morris, a large stockholder and manager of the Yazoo Cooperage Company of Yazoo City, Miss. I was in my overalls, just as I had been at work. He looked at me in surprise, but gave me for the company two cars of freight which he was shipping into Canada and routed them as far as he could over the Illinois Central. He furthermore said some very nice things about the Illinois Central and has never lost an opportunity since to speak to me when we meet.

Mr. Brister of the Yazoo Grocery Company gave me a car of flour which he had shipped from Missouri, and not long after that he offered me a lucrative position in his wholesale grocery store. Mr. Stout of the Producers Oil Mill, MacGraw-Curran Saw Mill and Lumber Company, also Lyon Brothers of Belzoni, gave me a car each.

It was in the lobby of the Grunewald Hotel in New Orleans one day last summer, I met a man who was connected with a large manufacturing company in the east. After talking with him a while, I asked if he could not give some of his business to the Illinois Central. He asked me who I was, and when I told him I was a laboring man he expressed some surprise and re-

marked that it was rather unusual to see a laboring man soliciting business for a railway company. He then told me that his business was a long way off, but that he sometimes rode on our trains; so I asked if he would not use them as often as was convenient in the future.

I was in a barber shop in New Orleans recently and heard a man boosting the Illinois Central and its officials. I do not know his name, but learned that he was an engineer, that he "has the best engine on the road, his master mechanic does everything just right, the Illinois Central is the best railroad in the world, and he never expects to work for any other." That was about the substance of his conversation, and I thought it a mighty good example for the rest of us to follow.

Another Possibility of Saving

I believe that by closer inspection and by using good judgment we can save 150,000 cross-ties for this company in the next year, or about 10 per cent of what we generally use. By so doing we can save ten per cent of the time necessary to put them in the track. I was on a train of a certain railroad not long ago in company with another foreman, and we were looking as we passed along at some work being done. I remarked that if all the new ties being put down were taking the place of rotten ones, I did not see how the trains had got over the tracks. The foreman was familiar with conditions before the ties were removed, and he said that in his judgment they were taking out too many ties. These foremen could probably save that company \$50 a day by using better judgment.

This criticism is not intended as a knock on the Illinois Central, as my observations are not confined to this railroad, but as a matter of fact, in any business so colossal as a great railway system there is great waste in the aggregate. These are the things that we should look after, and the man in overalls has the greatest opportunity to help his boss and his company.

But someone may say that our wages and working conditions are not what they should be; so why should I be concerned about the Illinois Central System? It is not my purpose to discuss that subject at all, except to say that inefficiency and disloyalty do not constitute the road to success and, furthermore, that we have our railway officials, the United States Railroad Labor Board and our brotherhood officials to settle those troubles for us. Let them do the arguing, and let us do the work.

Talking of co-operation is a good thing, but nothing brings better results than to turn the light on what a fellow is doing, make a comparative report and send it out

to everyone concerned. Have a daily record kept of the cost of each section. If another gang besides the regular section gang works on a section, let the report show on what section that gang worked that day; at the end of the year, or monthly if you please, make a comparative report of what it costs to keep up every section on a division, and I believe you will see an improvement. Every man will be thrown on his own initiative, and his manhood will assert itself.

HE'S NOW A JUDGE

P. J. Nelson, our local attorney at Dubuque, Iowa, was chosen judge of the Dubuque County district court at the November 7 election. Mr. Nelson was born in Jackson County, Iowa, February 18, 1862. He received his early education in the rural schools of Jackson County. He then entered what is now known as Campion College at Prairie Du Chien, Wis., and after completing his studies at this college he entered college at Watertown, Neb., a preparatory school for Notre Dame. He then entered Notre Dame University to study law and was graduated there in 1888. He was admitted to the bar in Indiana in 1888 and in Iowa in 1889. On January 1, 1913, he was appointed local attorney for the company at Dubuque by Judge Blewett Lee.

If you don't think co-operation is necessary, think how little use one-half of a pair of scissors would be.—*The Night Watchman*.

Home Builders Along Our Southern Lines

*These Illinois Central Employees Have Found
Owning Their Own Domiciles Worth While*

IN 1897—twenty-five years ago—a young man and his wife moved from East Mississippi to Jackson, Miss., the state capital. The young man got a position in the road department of the Illinois Central Railroad. He was soon promoted to section foreman. As a result of hard work and strict attention to duty, this young man—L. B. Agnew—was given supervision over all the tracks in the Jackson yard of the Illinois Central.

Mr. and Mrs. Agnew realized that to do something, to be something in the city in which they lived, they must own their own home. They bought the lot and, by thrift, saved enough to enable them to go to the Building & Loan Association of Jackson and borrow enough to help them build their

home. With a monthly payment of only \$22.73—less than they were paying rent—the home was paid out many years ago.

After eighteen years of continuous service for the Illinois Central, Mr. Agnew died July 29, 1915. The home was not paid out, but Mrs. Agnew shouldered the burden, carried on, paid out the home, reared the family. The young men are making good in various capacities in Jackson.

And then, not so many years ago, M. M. Johnson, a young man from South Mississippi, came to Jackson. The only work he could find was as a helper in the Illinois Central roundhouse. Then he made a step to the American Railway Express office at the Union Station. He was then placed in the ticket office at the Union Station.

The Agnew home

The Johnson home

No. 1, M. M. Johnson; No. 2, Master Roy Johnson; No. 3, Mrs. Ruby Johnson; No. 4, Mrs. L. B. Agnew.

Then, when Mr. Johnson and Miss Ruby Agnew married, Mother Agnew saw to it that they started in to own their own home. They did as mother did—came to her old association and had the secretary, W. O. Rea, work out a plan which, with \$30 a month paid to the association, they would be debt free and own their own home in sixty-one months.

So the two photographs of these happy homes shown herewith prove what thrift will do.

Ask Mr. Johnson what is "the easy way" to own your own home. If you can get it out of him, it will be: 1. A hard-working, honest, steady, industrious husband; 2. A thrifty, economical, loving wife, willing to make the necessary sacrifices.

This double header is always on time with the monthly payment to the Building & Loan Association, besides laying by a little sum each month in the association's investment shares for the education of the children and a fund to protect and care for themselves in their old age. They feel that they are following out the best plan of thrift.

Home owning is popular among employees of the Mississippi division. Here is the testimony of H. G. Bernreuter, bridge and building foreman, Aberdeen district, living at Kosciusko, Miss.:

I began work for the Illinois Central in 1901 in the bridge and building department, working as flagman, fireman and engineer on a pile driver. I was then promoted to assistant foreman and have been a bridge and building foreman on the Aberdeen district since 1906.

I came to the Mississippi division from a

Home of H. G. Bernreuter, Kosciusko, Miss.

farm near Greenville, Ill., in 1901, intending to go back some day, but I married "the sweetest girl in Mississippi," and the officials of the Illinois Central treated me with such kindness and my connection with it became so pleasant that I found it more difficult as the years went by to carry out my intention of returning to my old home in Illinois.

Having lived in Kosciusko ten years and having so many friends there, I decided to build there the home I had planned on so long. As there were eight in the family, besides my wife's mother, we decided to build a large house. It contains nine large rooms and, in addition, a sleeping porch, halls, baths, etc. The total cost was \$7,000.

I wish to say in this connection that if employes of the Illinois Central or any other road will save their money and build homes, there will be less strife, for the man who figures on having a home and has six children hasn't any time to quit work.

Shown herewith also is the home of J. S. DeMarchi, engineman, Water Valley, Miss.

Mr. DeMarchi began work for the Illinois

Home of J. S. DeMarchi, Water Valley, Miss.

Central in 1889 as a fireman. He was promoted to engineman in 1895 and has been in continuous service since that date. He is now on local freight service between Water Valley and Durant, having his lay-over at Water Valley on Sundays. Mr. DeMarchi is an employe who loves his home and family, and with this in mind he purchased a second-hand residence in Water Valley and had it remodeled under the supervision of himself and Mrs. DeMarchi to suit their own ideas. This home is now one of the prettiest in Water Valley. Mr. DeMarchi has a wife and one son.

Renewed Interest Shown in Mattoon Shops

By W. A. PAXTON,
Machinist, Mattoon, Ill., Shops

A great forward impulse for efficient work has come to the mechanical department of the Indiana division with the important additions to equipment which have recently been installed. The new machines give great added power to the thirty-five machinists who receive and handle from thirty to thirty-five engines daily. The new appliances include an 18-inch engine lathe, a milling machine, a turret lathe, a 600-ton hydraulic wheel press and a boring mill. The air and injector room has also been equipped with new lathes. All are electrically driven, a wonderful improvement on the old-time motive motor of steam. The new devices replace an obsolete hydraulic wheel press that has been in active use for forty years and a boring mill that has seen nearly a third of a century of use. Work is made easier, and from now on all the work will be done in the shops.

The local organization of the Illinois Central System Association has been installed, with effective organizations among the six shopcrafts, including the machinists, the

boilermakers, the blacksmiths, sheet metal workers, electrical workers and the carmen, each of which has its local officers. The machinists have the following officers. C. W. Sprague, president; C. F. Adams, secretary and treasurer; G. F. Troxall, general chairman, with W. A. Paxton, G. F. Troxall and C. F. Leach as trustees. The grievance committee includes W. L. Reams, W. A. Paxton and G. F. Troxall.

From monthly dues of 75 cents for each man in the service, a fund is being accumulated which will give benefits in the event of illness or death. Forty cents of the dues is kept for the local treasury, and 35 cents goes to headquarters. The members of the working force of the Illinois Central are one great family; the interest of the system in its members is continuous. It is appreciated and felt. Nowhere is the appreciation keener or more alive than in Mattoon.

Some employes are more anxious to be profit-sharers than profit-earners. — *The Watchman.*

He Saw Our First Train Arrive in Kankakee

*Dr. Benjamin F. Uran Was 5 Years Old
When Operation Began on Line From Chicago*

THERE is now living in Kankakee, Ill., a man who distinctly remembers the first train which reached Kankakee over the newly constructed line of the Illinois Central Railroad in the late summer of 1853. This man, Dr. Benjamin Franklin Uran, was then a boy 5 years old.

"It was a tremendous occasion for me," he says, "that first sight of a railway train. It made an impression upon my childish mind which remains indelibly clear and vivid to this day. It was in the early morning of a day in late August or early September. The train could be heard approaching from a long way off. There was a prodigious clanking and jangling and puffing, vastly different from the smoothly gliding, almost noiseless perfection of movement one observes in the modern limited passenger trains which come and go through Kankakee scarcely noticed at all hours of the day and night. I remember that my father held me on his shoulder so that I might get a better view of the wonderful locomotive belching smoke and steam. It is my impression that my mother also had never seen a train before, but my father had—he had actually ridden on trains back in the East."

Doctor Uran Born in 1848

Doctor Uran's mother came to Fort Dearborn (on the site of what is now Chicago) in the spring of 1829. Afterward, with Doctor Uran's father, the family settled in Kankakee County, where Benjamin was born January 26, 1848. The land upon which the city of Kankakee now stands originally was owned by Francois Bourbonnais, who obtained it from the Government after the removal of the Indian owners. Bourbonnais was a French-Canadian. He owned two sections in the valley which was then covered by a noble forest of oak trees. His wife, Catische, a full-blood Pottawatomie Indian, also owned a section of land, and their children, who were numerous, likewise owned tracts in the valley.

The Pottawatomie tribe once occupied the rich valleys of the Kankakee, Fox, Desplaines and Rock rivers. By the great treaty of Camp Tippecanoe, in 1832, the tribe was paid \$100,000 in cash for its holdings and given a vast country comprising about 11,000,000 acres in western Iowa.

Doctor Uran recalls when big parties of these Indians would return to the valleys in the spring to camp and spend many

weeks on the old familiar hunting grounds they had formerly occupied.

"They would come driving their ponies in single file, with their dunnage tied to a sort of drag attached by long poles. When the withes or thongs which formed a breast harness on the ponies cut into the flesh, it was deemed the work of evil spirits, and the squaws would beat the poor animals cruelly to exorcise these bad spirits."

As time went by the country became more thickly settled, and the Indians gradually ceased their annual migrations.

Indian Influences on Road's History

The early history of the Illinois Central Railroad was more or less intimately associated with Indian influences. A number of the station names on the line preserve the ancient nomenclature of famous Indian characters. Manteno (Man-de-no) was the name of a daughter of the elder Francois Bourbonnais and his wife Catische. Peotone (Pe-o-ton), Gilman and Onarga (On-ar-ga) were sons of the old Frenchman. Monee (Mo-nee) was the daughter of Francois Bourbonnais, Junior. Ashkum (Ash-kum) was the name of a chief who married a sister of Catische.

There is perhaps no person now living

Dr. Benjamin F. Uran

who has a greater knowledge of the unwritten history of Indian tribal customs and leaders in Kankakee and Iroquois counties than Doctor Uran. When a boy he ranged over the valleys and ridges where these peoples had lived. He speaks familiarly of the sites of their villages and long-forgotten battle-grounds. One of the latter lies on a plain about ten miles west of Kankakee. Here was fought a bloody engagement between the Pottawatomies and an invading host of Iroquois from the north somewhere about the year 1816. The Iroquois force was practically annihilated, according to traditional accounts.

Recalls Indian Burial Ground

Doctor Uran himself has traversed many times the ridge where braves who fell in that battle lie buried. The graves were once marked by cedar posts inscribed with red paint. A remarkable fact, Doctor Uran says, was that some of those posts were still to be seen when he was a boy, with their vivid markings intact. Doctor Uran questions whether any paint of this day would endure through the weather ravages of nearly half a century.

Doctor Uran relates an incident connected with the death of Shau-wa-nas-see, a chief of the Pottawatomies, who died near Kankakee in the year 1838. As the end drew nigh, the old Indian called his people about him and asked that, when he had passed out on the long trail, his mortal remains should not be buried underground. This wish was respected, and the body was placed sitting in a structure built of split logs 4 by 4 feet in lateral dimensions and 4½ feet high. The feathered regalia of the dead chief bedecked him, his rifle stood at his shoulder, his bow and quiver of arrows lay across his knees.

Various stories are told of what afterward became of the bones of Shauwanassee, but Doctor Uran declares that the true tale is as follows: The skeleton was taken to Chicago in the '50's and was mounted on wires. For many years it hung in the office of Professor Daniel Brainerd, a famous surgeon of those days. Dr. C. W. Knott, of Kankakee, who studied in Chicago, often declared that he had pored over his anatomy texts under the brooding shadow of the Indian chief's hovering spirit.

Line Built to Kankakee in 1853

The Illinois Central line was built as far as Kankakee in the autumn of 1853. The following year the bridge across the Kankakee was completed and the line was opened to the south. Doctor Uran says that some prejudice was exhibited toward the railroad, which was constructed prin-

cipally with British capital, by settlers because of the native antipathy toward anything English in those days.

Today Doctor Uran is hale and hearty at the age of seventy-four years. He is still active in the practice of his profession. For relaxation, he sometimes delivers an address on the early history of Kankakee and Iroquois counties, upon which he is a recognized authority. Last March he spoke before the Chicago Historical Society on this subject.

[Doctor Uran reports that the woman for whom the village of Monee was named was a daughter of the junior Bourbonnais. In an article in the *Illinois Central Magazine* for October, 1922, District Attorney Drennan referred to a letter purporting to have been written by a granddaughter of Monee, in which it was declared that Monee's father was a Frenchman named Lefevre and her mother an Ottawa Indian.—THE EDITOR.]

OPENING THE CAIRO BRIDGE

M. J. Howley of Cairo, Ill., recently called our attention to the fact that the Cairo (Ill.) *Bulletin* recently carried the following item in a department headed "Cairo in 1889":

"On the morning of October 29, the great Illinois Central bridge was formally opened for traffic. Many Illinois Central officials from various parts of the country were present to witness the structure tested and to make the first trip over it. Among these were President Fish and Vice-President Harriman. The local officials were represented by J. W. Wenger, commercial agent, and J. H. Jones, ticket agent. Nine mogul engines coupled together were sent over together to East Cairo, Ky., where a tenth engine was added, and all were then brought back to the Illinois side. Among the engineers in charge of these engines were M. S. Egan and J. J. O'Connell. Among our Cairo friends who were passengers on the first train were Captain John F. Rector, John Greaney and Byron L. Ellis.

"The measurement of the bridge was given as 10,560 feet; of the Illinois approach, 5,327 feet; of the Kentucky approach, 4,594 feet—a total length of 20,481 feet, or nearly four miles."

One who is witty reasons quickly. Children who have developed reasoning powers to but a slight extent are frequently humorous, but seldom witty. Wit is the offspring of reason; humor subsists upon wit borrowed or original.—J. HAMILTON McCORMICK.

They Find Happiness on an Acre of Ground

The LeGrandes at Mattoon, Ill., Prove That Problem of High Cost of Living Can Be Solved

STANLEY E. LEGRANDE, a foreman in the shops at Mattoon, Ill., is firmly convinced that he and his wife, with the hearty co-operation of their only child, Aubrey, a boy of 17, have solved the problem of the high cost of living and in a most pleasant and agreeable manner.

Three years ago Mr. LeGrande, then a mill machine operator (having since been promoted to the foremanship), decided with his wife that the real solution of providing ample food at a minimum cost lay in the home production of a major proportion of their table supplies. Accordingly, they sold their house in the city and purchased a home with an acre of ground on Western Avenue, Mattoon's most beautiful suburban drive and asphalt road, bordered on each side for a mile beyond the city limits with large maple trees. Being only a quarter of a mile from the city limits, the LeGrandes have all the advantages and none of the disadvantages of living in the city, having electric lights, city water, city telephone, etc., and yet paying "country taxes," a most desirable feature. Both Mr. LeGrande and

Aubrey, a senior in the high school, come home for the noon hour, a part of the time driving the car but more often riding their bicycles.

As soon as they were comfortably established in their new home, the LeGrandes fenced one portion of their ground for poultry and livestock—

Ornaments to any yard

Mr. and Mrs. LeGrande and Aubrey

chickens, ducks, hogs, a cow—another portion for garden products, and another for berries, small fruits, etc. Their fruit trees they planted in the yard.

They immediately set out strawberries, gooseberries, raspberries, rhubarb, sage, horseradish, etc., as well as a number of fruit trees. Their chickens are White Plymouth Rocks; they bought twelve hens and a rooster in March and raised more chickens than they could possibly use that summer. In the fall they selected and segregated thirty of their finest pullets and fed them specially for egg production, feeding cracked corn and a prepared egg mash, with one hot meal a day and warming the drinking water during the most severe weather. The pullets were kept in warm, light quarters, and during the coldest weather, when eggs were retailing at from 60 to 70 cents a dozen, those thirty pullets laid from twenty-two to twenty-six eggs a day. The income from the extra eggs was no small item. The chickens kept for table use and also the white Pekin ducks (for the same purpose) were fed corn exclusively.

For the winter's meat, two shoats were purchased and fattened. The hams and bacon were cured and enough lard made for a year. The rest of the pork was used "fresh." A by-product of the butchering was a year's supply of fine white soap.

The garden has been one of the chief

sources of benefit, as well as pleasure. Aside from the plowing and harrowing, Mr. LeGrande and Aubrey have done all the work outside of shop and schoolhouse. Last year, in the fall, they stored for winter use fourteen bushels of potatoes, seven bushels of sweet potatoes, four bushels of large white onions and a barrel of dried popcorn, besides having had all summer all the tomatoes, beans, lima beans, chard, corn, lettuce, beets, cucumbers, radishes, etc., the family could use. In addition to this, Mrs. LeGrande canned two hundred quarts of vegetables, fruits, pickles, etc., all of which, except the blackberries, were produced on their acre. This, however, included the fruit from three peach trees that were on the place when they bought it.

Last but not least of their money-saving factors is their cow, a full-blooded black Jersey. She supplies the table with all the rich cream and milk the family can use, besides which Mrs. LeGrande makes all their butter and cheese.

Of course, the feed for chickens, ducks, hogs and cow is an expense, but, by buying in large quantities, the cost has been reduced to a minimum and is really a negligible amount, when compared with the benefits derived.

Every member of the family has worked in earnest co-operation with the others to produce results, and results have been achieved. Through it all, the LeGrandes have enjoyed life to the full and are more enthusiastic over their plan every year.

Their Golden Wedding on Christmas Day

Mr. and Mrs. John J. Egger

On Christmas Day Mr. and Mrs. John J. Egger celebrated their golden wedding anniversary at their home, 729 South Elm Street, Centralia, Ill. Mr. Egger has been on the Illinois Central pension roll since July 31, 1917, when he retired after a service with the company of 52 years 11 months. His length of service is surpassed by only one other living pensioner.

Christmas Day was the occasion for a

family reunion at the Egger home, with six children and seven grandchildren joining the happy celebrants. Two of the children are members of the Illinois Central System family. Mrs. Louise Burke of Chicago, an extra agent on the Chicago terminal division, has been in the service five years. Her brother, Arthur T. Egger of Centralia, a baggageman, has been in the service more than twenty-five years. An-

other brother, Walter P. Egger of Enderlin, N. D., learned the machinist's trade in our shops at Centralia. The other members of the Egger family are Mrs. J. P. Garvey of Minneapolis, Mrs. A. B. Kaney of Centralia and Harold J. Egger of Chicago.

Mr. Egger was 15 years old when he entered the service of the Illinois Central as an apprentice boilermaker on September 1, 1864. The preceding spring he had come

to this country from his home in Switzerland, an orphan, to make his own way in the world. For eight or ten years previous to his retirement he worked as a boiler inspector.

Readers of the *Illinois Central Magazine* will recall mention in the August, 1921, number of Mr. Egger in connection with eleven other pensioners of the Illinois Central who had seen fifty years of service.

Engineer's Stepson Is Star in Athletics

Wilfred Bahr has made a name for himself in athletics at Indiana university during the three years that he has been in school there. He is the stepson of George Rogers, engineer on the Evansville district of the Illinois Central, whose home is at Evansville, Ind.

The football season having closed November 25, basketball is absorbing all the attention of the fans at Indiana now, and young Bahr, who is captain and playing his last year on the varsity team, is expected to lead his quintet through a successful season. Bahr first opened the eyes of the basketball fans at Bloomington, Ind., in 1920, when he played on the freshman team. He was one of the best men on that team, and on more than one occasion the freshmen trimmed the regular varsity team. Because of his exceptional playing throughout the year, he was elected captain of the freshman team.

His first year on the varsity team was none the less flashy, and in almost every game he was one of the outstanding players. As a reward for his fine spirit and high-class playing, he was unanimously elected captain of the varsity for this year. Bahr knows basketball, is an expert dribbler, an accurate passer and can shoot baskets with his eyes shut. In the first game this year, against the Indiana Dental College team, he demonstrated that he is a man to be feared by opposing teams. He scored four field goals and shot seven foul goals for a total of fifteen out of twenty-eight points.

In his sophomore year, Bahr also won a letter in football and played a good game at end in most of the games. He did not play football this season because he wanted to be in his best physical condition and not be crippled for basketball as he was at the beginning of the basketball season last year. He is a member of the Sigma Nu Fraternity.

"Stock in Indiana University's basketball quintet," says a Bloomington paper, "took a big jump with the entry of Wilfred Bahr of Evansville as a regular member of the team and his sensational showing in his

Wilfred Bahr at football and basketball

first game of varsity basketball. The downstate lad was everywhere in the game, quick as lightning and with an eye for the basket which marks him as a 100 per cent acquisition to Coach Levis' five."

Even during his early high school days he starred on the Central High School quintet at Evansville. He is an all-around athlete, participating in football and other sports, as well as in basketball. He was graduated from Central High School in 1918 and is considered one of the best basketball men ever turned out there.

The citizen who devotes his energies wholly in private affairs, refusing to take part in public affairs, pluming himself on his own business, is blind to the fact that his own business is made possible by the prosperity of all.—HERBERT SPENCER.

Served for More Than Third of a Century

Five Veterans on New Orleans Terminal Division Have Records for Long Employment

FIVE employes on the New Orleans terminal division of the Illinois Central System started their railway careers there in the 80's and have been in the service there almost continuously since. Their records range from thirty-five to forty-three years of service.

J. A. Nuss, switchman, started working as a flagman for the Chicago, St. Louis & New Orleans Railroad, predecessor of the Illinois Central, January 22, 1880. F. R. Maloney, fire inspector, became a freight handler at the Levee depot of the C., St. L. & N. O. in November, 1881. J. W. Turner, chief cotton clerk, began handling cotton for the Louisville, New Orleans & Texas Railroad, predecessor of the Yazoo & Mississippi Valley, August 15, 1884. C. T. Seiler, agent at New Orleans, entered the service as a messenger for the Illinois Central agent at the Cotton Centennial Exposition in New Orleans in 1885. T. P. McDonnall, assistant foreman at Stuyvesant docks, started working for the company October 16, 1887.

Started as Switch Engine Flagman

J. A. Nuss, switchman at New Orleans, has been in service at our southern terminal for forty-three years. He started working in the yards at New Orleans as a flagman on a switch engine January 22, 1880.

The Chicago, St. Louis & New Orleans Railroad, predecessor of the Illinois Central, then owned the old Levee yard and the present government yard at New Orleans. Three engines handled the work between the two yards. The Hercules, the largest of the three, was run by John Prendigrest. It was considered a wonderfully large engine at that time, Mr. Nuss says, but it couldn't compare very well with the smallest of our engines of today. The Ajax, with Dick Ford as the engineer, was next in importance, but it could not pull as many cars as the Hercules. John Cousins, father of J. W. Cousins, our superintendent of the New Orleans terminal division, was the engineer on the Nellie Grant, the baby engine of the three. The latter engine was named for former President Grant's daughter. The tender of each of these three engines would not hold more than one barrel of coal, Mr. Nuss says, and the water tanks were over the boilers.

Mr. Nuss was a flagman for three or four years and then became a switchman. He has been in that work since.

Has Seen Banana Business Develop

F. R. Maloney, fire inspector at New Orleans, has watched our banana business develop from its infancy. He says that the fruit shed which was built by the Illinois Central on the river at Thalia Street was the first that was built by any railroad in his knowledge. It was built for the protection of the ripe bananas that were received from the tropics for distribution throughout North America. The shed was ten feet wide and sixty feet long, he says.

Mr. Maloney entered the service as a freight handler at the levee depot in New Orleans in November, 1881. Most of the freight was cotton, he says, and it was shipped on flat cars. The cotton came direct from the gins, was distributed to the presses of New Orleans and then shipped to many parts of the world. The capacity of the largest cars at that time was 24,000 pounds.

Large hogsheads of brown sugar were shipped down the river by steamboat to New Orleans in those years. It was sold at the levee and then shipped by rail to the refineries of the East and North. Such large containers are not used at present, Mr. Maloney says. In his early days the hogsheads would hold from 1,200 to 1,800 pounds of sugar. Molasses and rice were also shipped to New Orleans in great quantities. There were only two outbound warehouses and two inbound warehouses there then, and during the summer months one of the outbound warehouses was closed on account of a lack of business.

Mr. Maloney worked as a freight handler for about two years and was then made a car sealer. Three years later he became a stock agent.

Heavy Traffic at New Orleans

The Illinois Central received a tremendous amount of livestock at New Orleans from Texas for shipment to St. Louis and Chicago. There were never less than three solid trainloads each day, Mr. Maloney says. He was the overseer of the receiving, watering and feeding. There was a stock pen at the Levee yards, one at the government yards and one on the site of the park in front of the New Orleans Union Station. Mr. Maloney says that all the pens frequently would be full, and trainloads of stock would be waiting on the tracks.

Banana shipments began to increase

F. R. Maloney

J. A. Nuss

greatly in the early 90's, and at the same time there appeared an increase in losses from cars. Mr. Maloney was appointed banana car inspector. He says that he was probably the first banana car inspector in the United States. Thefts from the cars began to decrease after his appointment.

During the Boer War, England purchased many horses and mules in this country, and most of them passed through New Orleans. Mr. Maloney was placed in charge of receiving these shipments. About 200,000 horses and mules were shipped to South Africa from New Orleans during the two years. Stock pens were erected on every available space in the city, he says. From 1,000 to 1,200 head were placed on each ship.

Mr. Maloney was placed in charge of fire protection at New Orleans after that, and he has been the fire inspector since. Four of his sons have worked for the Illinois Central, and one is now the fireman on a terminal engine.

Has Handled Cotton 38 Years

J. W. Turner, chief cotton clerk at Stuyvesant docks, has handled cotton for the Illinois Central System and its predecessors for more than thirty-eight years. He entered the service of the L., N. O. & T., now the Yazoo & Mississippi Valley, as a cotton clerk on August 15, 1884. His previous experience had been in the employ of various steamboat companies.

Mr. Turner says that he could see that the railroads were rapidly taking the business away from the steamboats, and he decided to make his future secure by obtaining a position with a railroad.

When the Illinois Central took charge of the L., N. O. & T., the compressed cotton was handled at the Levee yards and the uncompressed was handled at the government yard. But business soon increased so rapidly that a more concentrated handling of the cotton business was needed. Stuyvesant docks were then built, and the cotton office was moved there in 1904.

Mr. Turner has been in charge of an average of about 600,000 bales of cotton a year. He has been out of the office on account of sickness only four days during all the years of his service, and he has not lost a day's salary.

Agent at New Orleans a Veteran

C. T. Seiler, agent at New Orleans, proved to the Illinois Central System that he was a reliable young man during the Cotton Centennial Exposition in New Orleans in 1885, and he has been in the employ of the company since that time. He became the messenger for the Illinois Central agent at the exposition and his em-

ployer noticed the great interest he took in his daily work. When the exposition was over, young Seiler was given a position in the local agent's office at New Orleans. He was recommended to the agent as being dependable.

Mr. Seiler was a messenger in the agent's office for three years; then he was promoted to notice delivery clerk. During the succeeding years he held nearly every position in the agent's office, and he retained the knowledge that he gained in each stage of his rise to success. He billed freight, was a statistician, sat at the abstract and export desks, was a receiving and loading clerk at the warehouse and was chief clerk for thirteen years to J. W. Cousins, when he was the agent at New Orleans. The latter position fitted Mr. Seiler to become the agent when Mr. Cousins was appointed the terminal superintendent February 1, 1918.

Began as Laborer in the Yards

T. P. McDonnall, assistant foreman at Stuyvesant docks, entered the service of the company October 16, 1887, as a laborer at the old Levee yards in New Orleans.

At that time freight cars were transferred from the Levee yard to the government yard over a track through St. Joseph Street. When the Illinois Central first came into possession of the property in New Orleans, only twenty-five cars to the train were allowed to be pulled through St. Joseph Street, and a few years later the maximum number was reduced to fifteen. This condition continued until February, 1921, Mr. McDonnall says, when the Belt Line was completed around New Orleans. At present the maximum number of cars to the train on the Belt is ninety.

Mr. McDonnall continued as a laborer at the Levee yard for two years, then was given a position checking cotton at the cotton shed there. After three years he was transferred to the Southport wharf, and he was made the foreman there a year later.

Mr. McDonnall had been at the Southport wharf four years when he was transferred to Stuyvesant docks as the assistant foreman. He has been in that position since.

KNOWLEDGE

He who knows not that he knows not is a fool—shun him.

He who knows that he knows not is simple—teach him.

He who knows, but knows not that he knows, is asleep—wake him.

He who knows, and knows that he knows, is wise—follow him.—*Arabian Proverb.*

Finds Cuba a Good Place for a Vacation

*Mississippi Division Train Baggageman Writes
of Experiences in Our Neighboring Country*

By WALTER TATE,

Train Baggageman, Mississippi Division

AS I have just returned from a seven weeks' vacation spent in southern Florida and in Cuba, the nearest foreign country which does not touch our boundaries, it has occurred to me that possibly my experiences might be of interest to fellow employees.

Southern Florida is almost too well known to mention, although the trip to Key West over the Florida East Coast Railroad, with its marvelous construction, jumping from islet to islet from Miami to Key West, is worthy of note. It seems strange to go to sea on a train; at times one is actually out of sight of land, at least from the car windows.

From Key West to Havana is only a short steamer trip of little more than a night. Havana is quite Americanized, with its wonderful harbor filled with vessels from all parts of the world. However, the greatest interest for me lay in the interior cities, which are still in many ways primitive and where English is not usually spoken. For instance, while I was in Santiago de Cuba I met only three persons who spoke English. Santiago, a city of 70,000, is the eastern terminal of the Cuban Railroad, 860 miles from Havana. I drove over the battlefields of the Spanish-American War to San Juan Hill, and there visited the monument erected to the memory of Hamilton Fish, son of Stuyvesant Fish, former president of the Illinois Central Railroad, who fell there in battle. From Santiago I also went deep-sea and shark fishing out on the Caribbean, sleeping on the open deck under

Walter Tate and Cuban sleeping car

the clear tropical skies and roughing it with the small Cuban crew.

The general headquarters of the Cuban Railroad are located in Camaguey, in central Cuba. There are now only two American train employees and two American engineers on the railroad. The express service is operated by the Wells-Fargo Company. The coaches are small but up-to-date and beautifully finished in native mahogany. First-class fare is 5 cents and second class 2 cents per mile. Everyone smokes in the first-class car. Dogs and fighting cocks are allowed. The engines are oil-burners, equipped with electric lights. They have a great deal of brass and copper work, which is kept clean and highly polished. The "buffet boy" peddles beer, rum, lottery tickets, etc., on the train.

I found everything reasonable and many things much cheaper than in the United States. First-class hotel rooms, large and well furnished, cost about half as much as at home, and many other living expenses are cheaper.

This was my second visit to Cuba this year, and it was much more enjoyable than the first, as I had become more familiar

Long Key Bridge, Florida East Coast Railroad, longest in the world. The island is artificial and anchored on a coral reef for convenience of employees.

Morro Castle, seen from steamer

View over Santiago de Cuba

Native thatched huts, Cuba

Residences, new quarter, Havana

Cristo cemetery, Camaquey, Cuba

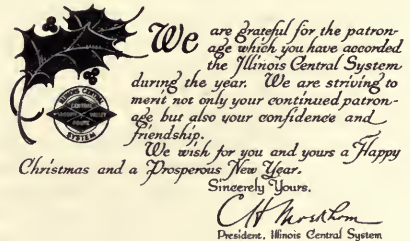

with the customs and of course met many friends from my previous visit. Also I was more familiar with the language, having learned enough to order "eats and drinks" satisfactorily and to recognize the Spanish numerals and values.

Cuba is a most wonderful and interesting country. Outside of Havana, Americans are rare and are shown much attention. However, in Santiago there seems to be a dislike for us, which I presume was brought about by the siege of Santiago in the Spanish-American War, when so many Cubans were killed by American troops. In several instances, when trying to ask natives there if they spoke English, I was answered: "D— Americano."

In spite of these experiences, which seemed to be purely local, I found Cuba a wonderful land for a visit, with its wealth of tropical verdure and its many fruits which are not exported. The customs are so different from ours that they arouse our interest continually.

The general officers of the Cuban Railroad are all former American railway men, and I cannot speak too highly of their courtesy and kindness. Needless to say, the railroad is excellently managed.

CARDS OF GREETING

Christmas greeting cards bearing the design shown above carried the best wishes of the Illinois Central System to its patrons at the 1922 holiday season. The cards were printed in three colors, red, green and black. Two hundred thousand of them were distributed. Some were given to conductors for distribution to the passengers on their trains December 23 and 24, and each department received a supply.

TWO APPOINTMENTS

Effective November 16, J. L. Weeks was appointed traveling freight agent at Memphis, Tenn., vice A. M. Owen, Jr., transferred to Baton Rouge, La. Effective November 16, Mr. Owen was appointed traveling freight and passenger agent at Baton Rouge, La., vice O. F. Redd, resigned.

Ups and Downs of an Old-Time Tallowpot

'Tis Said That Honest Confession Is Good for the Soul; Engineer Bolian Tells on Himself

By E. J. BOLIAN,
Engineer, New Orleans Division

IT might not be amiss to say a few words, through the magazine, concerning the blunders one will make at the commencement of his railway career, especially in the transportation department. It may be amusing to the readers, particularly railway men, to know that the following has been the experience of the writer:

I entered the service of the Louisville, New Orleans & Texas, now the Yazoo & Mississippi Valley, in December, 1889, as a machinist helper. In a short time I was sent out on a cane run as fireman—not because I had any experience, but, as I afterward concluded, because of the friendship that existed between my brother, who was an engineer, and the general foreman.

As the years rolled by, experience taught me that it is wrong to place a young fellow on an engine as fireman with friendship or relationship serving as his only qualification. It places him in an awkward position and antagonizes the main-spring of the transportation works—the engineer.

No Steam to Waste on Whistling

On this cane run of which I have spoken was an engineer named Louis Corey, a jovial fellow. However, his disposition was soon changed, and I can see now that the fault was not all his own. If automobiles had been in existence at the time, he would have had to buy a Klaxon and ride the pilot approaching public crossings to give warnings—because, poor man, he could not spare the steam to do so.

The first few days I kept the engine cold enough to freeze the flame in the headlight; but ambition was my middle name (and I carried it with pride), and so by the time I was on the engine a week I had regained the friendship of my engineer, because I could then keep the old mill hotter than—well, to make the story short, I did not have to use the blower again. I might add that if I had been one week longer catching on the method of firing the engine would have been shopped for a new blower valve.

The day came when I measured up to the standard of efficiency, and, as I was a young man and like all others, mischievous, there was nothing that could stop me from having a little fun.

One day we stopped at La Place, La., to

E. J. Bolian

take water and to get the orders. In those days the engineer had to sign the train order; so my engineer told me to drop a little oil on the links and pins after I got water. The automatic coupler was unknown at that time. I took the can, went back and dropped the oil—not a little, as he said, but a lot. We didn't have spring cans, either. If I

had the money that was paid out for oil wasted by those old-time cans oiling around and moving the can from one oil hole to another I believe I could retire from the business. A trail would be left on the ground that would—well, as I am only an engineer and not a statistician, I will get back to oiling instructions, with which I am more familiar.

Had to Have More Oil

When I was about half over the train the engineer came out of the telegraph office and called to me, saying, "Let's go."

I answered him by saying, "Bring the other can—I'm only half way."

What he said to me when I got back to the engine would not be at all proper for our magazine; of course, I didn't mind his harshness—I was only having a little fun in my own way—but when he started that mill grinding it didn't take long to realize just how he felt about the matter, because when I got my back straightened up again we were at St. Peter (Reserve, La., now), which was our destination.

After we spent a little while at St. Peter, my engineer cooled down. He saw a young woman with whom he was acquainted standing at the station. She called him and at the same time held up a package. Of course, he was overjoyed and said to me, "Kid, look out for her." Not the woman—Oh no! He meant the engine.

By the way do you know why they always use the feminine gender when speaking of a locomotive? Because it takes a man to handle it, of course.

I started in to do the switching, and as I was pulling out a cut of empty cane cars the engine reached the place where he was

standing talking to the woman. He handed me the package, instructing me to put it in his seat-box. I took it, and when I reached a safe distance tore the paper to make an observation of the contents. What do you suppose it was? A fine sweet potato pie! Now, if there was anything in those days that suited me better, I had not heard of it. I told the conductor, who was as hungry as I was (it's second nature with them), and he told me to run down to the end of the siding; and in about as short a time as it takes to tell about it, that was the end of the pie.

Discovered Loss of His Pie

We tied up at St. Peter that night, took our meals and slept on the train. At supper my engineer did not mention his pie and I didn't dare to. He was in such a hurry to get to a dance that night that it's a wonder that he remembered to eat his supper; but it must have been that he dreamed that night about his pie, because at the breakfast table next morning he let it be known that he had explored his seat-box in search of his pie—and lo, he could not detect even a smell of it. The flagman laughed outright and was blamed for the disappearance. I was not questioned, because my mouth was so arranged that a casual observer could see I wasn't able to eat a crumb. I had satisfied my appetite with some half-ripe persimmons.

That evening we had to go to New Orleans because something was wrong with the tallow pipe. We had two oil cups in the cab. When we wanted to give valves and cylinders some oil, the engineer would shut the steam off, let the engine drift, open up those cups, pour in some oil, then shut the cups and open the throttle. At New Orleans they failed to get the pipes open; so they put a three-quarter globe valve at each steam chest, and when the engineer wanted the valves to have an oil bath it was up to me to get out on the steam chest and, when he would shut off steam, open those valves and give her some oil. He made me do that bathing so often that I began harboring the idea that he was imposing on good nature. (What I meant by good nature is that I probably saved his life by eating that pie; it made me sick—no doubt it would have killed him).

Using an Empty Oil Can

One Saturday night, going south, he made me go out on the steam chest so often to give her oil that I decided to practice economy and went out only with empty cans, not knowing at the time that he could tell that the valves were not getting oil. Nearing New Orleans (in fact, just south of Carrollton Avenue) the valves started jerking.

He put his hand on the side of the reverse lever, and it pinched the finger on which he used to display a little band of gold to let the girls know that his wild ways had been tamed. He talked a whole lot, but his conversation was one-sided and was certainly not to be heard in church. Then he decided to demonstrate his ability as an engineer by saying, "Give me that can." He shut off the steam and went out with the can—a can that was as empty as a lubricator is after a hundred mile run. He didn't do any better than I did; the only difference was that he went out with an empty can and didn't know it, and I went out with an empty can and did know it. While he was out on the steam chest I reached up and sounded the whistle. I was delighted with my new trick. My heart beat so fast that all the starch was knocked out of my overall jacket.

About that time my engineer had made a round trip to and from the steam chest, and if he was not madder than a wet hen, then I am telling them stronger now than I did in those days. He said to me, very forcibly: "Kid, economy is all right when applied properly. If you ever try to economize on an oil can again in the way that caused me to lose my religion, it will be a waste of time and money for you to buy a new cap. You can get your own meaning out of this."

Experience has taught me that cutting an engine short on lubrication is false economy. Lots of good things can be learned from books, but practical experience is what counts.

Carondelet and Canal streets, New Orleans

Makes Friends of Our Kankakee Patrons

Elwin H. Abell, Ticket Agent, Conducts His Business in a Manner That Draws Much Praise

THE individual who stands behind the grated window and sells tickets to the traveling public has it in his power to make a host of cordial friends for the railroad he represents. Many of them do that. Among the ticket sellers of the Illinois Central System there are a great many who are not the cold-blooded, crusty curmudgeons whom some critics of the railroads enjoy describing, but who are very human persons, with a sympathetic regard for the viewpoint of the other fellow. An example of this kind is Elwin H. Abell.

Mr. Abell has been ticket agent for the Illinois Central at the station office in Kankakee, Ill., for about seven years, and he was a ticket clerk there for five years before that. He is one of a goodly host of Illinois Central System employees who daily come into intimate contact with the patrons of the road, who make friends instead of enemies, and whose influence for promoting friendly relations between public and railroad cannot be overestimated. The bread of good feeling that they cast upon the waters returns after many days, and keeps on returning.

A goodfellowship dinner was given December 14 by the Chamber of Commerce of Kankakee in honor of President Markham. In the course of an introductory talk, the Rev. Dr. David Creighton, toastmaster, referred to the deserved popularity and record for excellent service of Ticket Agent Abell and paid a tribute to his personal character and habitual courtesy.

Entered Our Service in 1906

Mr. Abell entered the service of the Illinois Central at Kankakee as a freight clerk May 4, 1906, without previous railway experience. In August of the same year he became baggageman, which position he held until he took on the duties of ticket clerk about three years afterward. Since March 1, 1915, he has been ticket agent at Kankakee.

As a ticket seller Mr. Abell has succeeded in giving the public something besides the transportation it buys. He is uniformly approachable. He radiates cheery good humor. A stranger instantly feels at ease in his presence. Those who know him well say that "he is that way all the time." He has no "off hours." Petty annoyances, critical patrons, impatient and testy travelers—none of these disturb his serene equanimity. He probably has his private opinion of a discourteous and disagreeable

Elwin H. Abell

patron, but it is said that he has never been known to express it. He conceals it behind a smiling face.

Performance of duty is the consideration which remains uppermost in Mr. Abell's mind, and his idea of duty performance is to render real service to the best of his ability. The traveler doesn't have to ask for it. Mr. Abell has had a dozen years of experience selling tickets and a good many more years on top of that studying the well-known but highly erratic human race, and he's wise to what the traveling public is up against. He knows all the problems and anxieties and seemingly terrifying difficulties that confront an inexperienced traveler.

Patrons Rely Upon Him

The people of Kankakee have come to rely upon Mr. Abell. They know they can come to him for advice or information about traveling and get it, accurately and courteously. When he sells a ticket to a distant point on another railroad, he makes out a simple and understandable schedule of train connections along the route, or he may arrange a list of different routings

which are optional with the traveler. Then he will look after sleeping-car reservations, checking of baggage and other details which sometimes bewilder and appall the unsophisticated traveler.

Aged or infirm persons, women and children, the timid and undecided, find their difficulties are not so formidable when they tell their troubles to Mr. Abell. He is an animated bureau of information, and

it is free-running. The public doesn't need to use dental forceps to extract information, and yet he doesn't annoy people with attentions.

The Illinois Central System has many friends at Kankakee because everybody likes Mr. Abell, who is a visible and personal manifestation of the spirit of courteous and efficient service which the Illinois Central System stands for.

How Our Engines Looked in Service in 1854

By W. O. MOODY,
Mechanical Engineer

Here is the oldest photograph of any of the earlier types of locomotives which were in service on this system. While photographs are in existence of some of the early power of about this same period, these photographs were taken at a much later date and represent the engines as rebuilt to accommodate later standards. This photograph undoubtedly represents engine No. 24 as it was received on this road in January, 1854.

The information on this older power is meager, and the following is about the only data available: Cylinders, $14\frac{1}{2}$ inches by 22 inches; drivers, 60 inches over tires; weight of engine, 56,000 pounds; builder, Rogers Locomotive Works; number changed to 150 in June, 1886.

As a part of the description of this type we find the pressure recorded as 110 pounds to the square inch. Figured on the basis of 110 pounds boiler pressure, the tractive effort of No. 24 would be 7,287 pounds.

A number of engines acquired during 1854 and 1855 had similar dimensions and weights as No. 24 and were probably of the same design. These numbers were 23, 25 and 26, 28 to 30, 32, 33 and 38 to 58 inclusive. Most of them were retired in the early 80's.

The father of George and Clarence Howard of the Commonwealth Steel Company ran No. 11, an engine of this type, between Centralia and Wapella, Ill., during the 60's. The man standing in the gangway of No. 24 in this photograph is the father of C. A. Seley, formerly mechanical engineer of the Rock Island Railroad.

A payroll of Centralia shops for May, 1857, gives the wages of passenger engineers as \$70 a month and of firemen as \$35.

Man grows rich by the use of his faculties, by the union of thought with nature. Property is an intellectual production. The game requires coolness, right reasoning, promptness, and patience in the players.—
EMERSON.

Engine No. 24

Editorial

"GOOD WILL TOWARD MEN"

Nineteen hundred and twenty-two years ago this Christmas, in a village called Bethlehem, there was born a Child whose mission was to bring to the world a light to guide those who grope in darkness. Not with pomp and panoply He came, but humbly, as one of the lowly, and they wrapped Him in swaddling clothes and laid him in a manger.

The message He brought to the children of men was exemplified by the short, tragic life He lived; not tragic in the sense of sordid suffering, but rather in the sense of grandeur and steadfastness of purpose. The lessons He taught were eternal principles—Service and Sacrifice.

"On Earth Peace, Good Will Toward Men."

His message has lost no jot or tittle of its potency through the swinging march of centuries. It has endured and will endure through the borderless gulfs of eternity. Whenever mankind has neglected or strayed aside from the Way of Right, they who wandered have paid to the uttermost farthing, and paying, they have remembered.

Christmas time is a time of good cheer. On the anniversary of the Master's coming to earth, the spirit of His teaching enfolds us like a shining garment. Christmas is a period when the doors of the heart swing wide. That inner shrine which lies deep in the breast of every human being is made manifest to the world. It is a shrine where kind thoughts dwell. Bleak indeed is the prospect for him whose soul is unresponsive to the stirring call of Christmas. He is to be pitied who feels no answering thrill when eyes are bright and cheeks are flushed with the blithesome lure of the season. And the greater joys of this annual season of good cheer arise from mutual sharing. "He who Joy would win must share it; Happiness was born a twin." The way to happiness is easy. It is achieved by making others happy.

At this gladsome holiday season, when our country has ample cause for rejoicing by reason of national peace and a fair degree of prosperity, the officers and employees of the Illinois Central System, with its far-flung lines of steel which bind the chill Northland to the sunlit fields of Dixie, join in the general feeling of gratification and

well-being. We have labored together in amicable teamwork in 1922. May that relationship continue in even greater measure in the future. Mutual amenity, community of thought and singleness of objective bring power irresistible. Unity of purpose and action on the part of the officers and employees of the Illinois Central System, in 1923 as in 1922, will insure us all the fair rewards of health, success, happiness.

"Good Will Toward Men."

America needs now as much as ever before the spirit and the letter of that saving thought. Each one of us can find opportunities to give a little here or there, in word or deed, and in giving we shall receive many fold in return.

In the New Year there will be problems; there will be days when everything seems to go wrong. Life is a mixture of sunshine and storm, but irks and ills are only to test the stoutness of our fiber. The steel cable that bears no stress or strain may just as well be a straw rope.

Let us help one another. When we share our brother's burden, his load is thrice lightened. Let us be quick to serve, slow to seek reprisals. Let us cultivate "the soft answer that turneth away wrath."

Look for the virtues in others rather than their faults. Charity is kind, enduring much. Labor is the noblest thing under the sun. Earth's greatest hero is he who bears, in patience and cheerfully, his lot, whatever it may be, and falters not. Let us be grateful. Gratitude to the Supreme Master of the Universe opens gates to storehouses of rich blessings.

THE NEW YEAR

We want this to be an expression of our sincere hope, on the part of the *Illinois Central Magazine*, that 1923 will be a happy and prosperous year for all the members of the Illinois Central System family; that it will bring them joy in their work, happiness in their homes and pleasure in the communities in which they live.

The interest that has been manifested in the magazine by the members of our family and the co-operation that has been tendered so heartily on every hand, have been a never-failing inspiration to those of us who have been the recipients of these manifold manifestations of the good-will which

marks our relationships one with another within the Illinois Central System family. For such interest and co-operation we are deeply grateful. To it we willingly ascribe any success which our meager efforts may have earned.

The magazine is rounding out its fourteenth year as a journal which aspires to reflect as accurately as possible the human interest, the ideals and aspirations, the fun, the joys, the successes of the life of the family of men and women who are associated together in the work of this railway system. It is our most earnest desire that in the coming year the magazine may measure up to the ideals we hold for it. To that end we invite the continued interest and co-operation of the family of which we are proud to be a part.

GOVERNMENT OWNERSHIP

Premier Mussolini of Italy is a reformed socialist. His stand on government ownership therefore is of special interest. He is quoted as saying: "We are done with government railways, government employment agencies, government insurance. We leave to the state its police powers, to protect honest citizens from robbers and criminals; we leave it the control of the schools, to train our coming generations; we leave it the army, to protect the territories of the fatherland inviolate, and we leave it the control of foreign policy."

OUR RADICALS

The story is told of an old Missouri farmer who blamed all things unsatisfactory upon "the dad-bummed gov'ment." If the cut-worm destroyed his corn, or rain fell upon his unshocked wheat, or the cows broke through the fence and devoured and trampled out his corn, the political administration then in power was blamed, with many rich and decorative expletives, for his loss. His heart was filled with suspicion, and he firmly believed that all his troubles, which were many, were caused by the Republicans or the Democrats, according to which party controlled the administration of affairs of state at the time.

Upon such superstitions are political changes in the life of a self-governing people usually based. The unrest created by unbalanced economic conditions is productive of political upheavals—regardless of how much real effect the administration of state affairs may have in making or unmaking the conditions complained of. It is true elsewhere as in the United States. The wave of popular unrest that has followed a

costly and devastating war has caused kaleidoscopic changes in governments throughout the world.

A group of ardent politicians which acclaims itself the spokesman of our Nation's so-called radical thought is endeavoring to interpret into legislative enactment something of the disquiet which exists within American shores. The new Congress promises to be the tournament square for a joust of the surging ideas born of ungoverned thought and uncontrolled passion. The red-tinted banner of the political nonconformists will doubtless be set up against the railroads from the very beginning of the struggle. These dissenters in governmental affairs differ from the Missouri farmer only in that they blame the major share of the country's wrongs upon the railroads instead of the administration—which is, if anything, even less sensible. At any rate, the railroads are in for a season of attack, and the continued welfare of the public demands that they defend themselves from their accusers. The position which the railroads take with respect to the impending struggle will mean a great deal to the properties, to those who depend upon the railroads to furnish uninterrupted transportation, and to the country.

NO SOVIETISM HERE

This from Russia:

"Just as last year Russia experienced its food crisis, Russia this winter is experiencing an industrial crisis. The most serious efforts are being made to save the mines and factories from collapse. From a source close to the minister of war it is learned that M. Trotsky's plan, which is to make industry go at any price, includes the placing of Russia on short rations for as long as a period of ten years, if necessary. He favors the greatest sacrifices in order to restore the pre-war status of the mines and factories should foreign capital remain aloof."

That term, "short rations," which has such an unpleasant sound in American ears, seems to be inevitably connected with the outcome of experiments such as Russia has been making. We must not Russianize this country.

Yet we have agitators who make appeals to laboring men on this very basis, holding up the example of Russia as an example worth following. Harry Lauder, the genial Scotch comedian, hit off these agitators at a recent dinner of the Chicago Rotary Club when he called them "weeds in the garden of industry" and urged that they be pulled up, roots and all.

PUBLIC OPINION

What the

World Thinks

RAILWAYS NATIONAL

The Interstate Commerce Commission's annual report states that the effect of the railway rate reduction last July is obscured by the abnormal traffic conditions, and that the net earnings of the railroads are "clearly inadequate." Neither condition is the fault of the railroads. The reduced rates "no longer interfere with the free flow of commerce," but the railroads are falling short of earning profits equal to mortgage interest on any but the highest class of bonds. Neither the commission nor the railroads should be blamed for these unsatisfactory results. Those who charge the railroads with inefficiency should be shamed into silence by the fact that up to November 18 more cars were loaded with grain than in any other similar period. The total was 2,161,522, an increase over last year of 112,583. The coal loadings show a similar record. Up to November 25, including all classes, loadings have totaled 39,514,599 cars, compared with 35,942,733 in 1921.

Such facts as these cannot be denied by the critics of the railroads. It has been their way to say that the railroads should find their profits in the increase of their business. This is at a maximum, but the profits are lacking. If the railroads cannot grow, the country must either stop its growth or find new ways of moving freight. In the report of the commission, how foolish appears the law regarding the division of profits above those allowed by statute! Among 692 reporting carriers, seven reported an excess of \$50,475, and remitted to the commission one-half, to be placed in the general contingent fund. What business man would expect the railroads to earn a surplus over 6 per cent for the sake of keeping half of it? What better inducement to slackness could there be than a forced limitation of earnings and division of profits?

The railroads are practically under a \$20,000,000,000 bond to fight it out on the present lines. The farmers think that forty-eight state rates would be better for them than a national rate. For the National Association of Owners of Railway Securities Mr. S. Davies Warfield submits that the general welfare and the Federal Constitution alike require that commerce between the states should be treated as an

indivisible whole, subject to a single national regulation. The association is even willing to provide a pool of equipment, for service on any railroad anywhere, thus averaging facilities which no single railroad can provide, for extraordinary necessities. At present freight cars are interchanged regardless of ownership, and each railroad finds profit in using as many cars as possible belonging to other owners. —New York Times.

MUST HAVE ADEQUATE REVENUES

The following extract from a recent decision of the Utah Public Utilities Commission indicates that the commission recognizes the principle that revenues cannot be kept down to a point of confiscation and at the same time permit a normal growth of the utility and insure efficient service to the public. The case was *in re* Mountain States Telephone & Telegraph Company, and the commission said in part:

A plea has been made that applicant, having got along thus far and realized a return in the neighborhood of 4 per cent, with an additional amount for depreciation, should continue to operate without increased rates. (This rate of return upon the property as a whole is plainly confiscatory.) It is obviously our duty to grant sufficient revenues to satisfy the demands of law and equity. It is not optional with the commission as to what rates shall be. This principle of regulation is too well known to require lengthy discussion.

Again, this company is a public utility, and not a private enterprise. It cannot fix rates as it pleases, nor can it, in boom times, charge excess rates sufficient to tide over a period of depression. Under regulation, there are no profits realized by utilities from rates, as that term is generally known. Without regulation, rates would undoubtedly have been much higher in the past and would have reached their peak some years ago. Rates based upon the theory that revenues accruing shall yield only a fair return obviously make it impossible to require a utility to bear the full burden of depressed times.

Some witnesses testified that they opposed any increase in rates.

We are in accord with the Oregon commission in the case above cited. In discussing a similar line of testimony, that commission said:

"A score of witnesses were put forward to say that they opposed any increase in rates. This was not necessary. Every man of reason knows that no one wants to pay more for service. The witnesses are not more averse to paying higher rates than this commission is to ordering them paid."

Again, telephone companies must grow on an ever-increasing scale in order to meet the demands of the public for service. Under the theory that only a fair return is permitted upon the property used and useful in giving public service, the utility must make extensions out of new capital; unless money representing the investment in the property already made is earning a reasonable rate of return, commensurate with the going rate for money invested in property

of approximately like risk, new money cannot be obtained. To illustrate: When new equipment is installed and extensions are made, the company must obtain the same outside of the returns from the rate payer for service for the money to pay the cost of installation. In securing money for such purposes, it must be remembered that the prospective investor will not give up his money unless the earnings of the property already in operation are sufficient to induce him to invest. This, it is that revenues cannot be expected to be kept down to the point of confiscation and the same time permit the normal growth of the utility and insure efficient and sufficient service to the public.

While the foregoing is a fundamental concept of the regulation, we have repeated it here because it appears to be frequently overlooked by objectors.

NOT SO HEARTLESS

Those who preach to us that the rights of labor and the rights of capital are essentially inimical are simply demagogues. There is, of course, the supreme right to which we must all submit. There will always be conflict as to the vindication of what definitely and in justice may be ours, but here and there is a gleam full of hope that this supreme right, which, after all, is the voice of God, is receiving a hearing.

During the strike the following fact occurred and is vouched for. A president of a large railway system was making a journey to a distant city for the purpose of tracing certain former employes who had quit the service in 1912, and, in so doing, had forfeited their pension rights. Ten years after the president of the railroad was trying to secure the names of all of these men so that he might restore them the pension which they had lost by going on strike.

There may not be anything about this fact peculiarly arresting, but the journey was taken at a time when all the energy of the railway official was directed to the settling of the strike and to the conservation of his property. Every official of the railroad was worked to the limit of endurance. In this emergency there surged up in the mind of this man, who is the executive head of sixty thousand employes, the thought that his road had been too drastic twelve years before. Without stressing the incident too much, at a minimum, it does spell more hope in industrial relations.—*The New World* (Chicago).

RAILWAY DIVIDENDS

According to the financial columns of the daily papers, the leading gum and candy and tobacco companies are paying dividends of from 8 to 12 per cent on their stock and vastly more on the value of their property.

The railroads are paying about 3 per cent on the value of their property. Yet the

whole country is clamoring for a cut in freight rates. Does this mean that the country wants its financiers to sell out the railroads and go into the candy and tobacco business?

It might be well for the country to do a little thinking before it proceeds to wreck the railroads.—Dubuque (Iowa) *Times-Journal*.

THE AUTO'S DEATH TOLL

Estimating proportionately for only 18 per cent (that being the proportion of our population not within the official death registration area), we find that 12,400 of our fellow countrymen were killed by automobile accidents last year in the United States.

This means somebody is killed in this way every forty-two minutes.

Maybe some comparisons will help us to "get" just how serious this is.

An older generation can recall the awful battles of our Civil War: Bull Run, Shiloh, Antietam, Chickamauga, the Wilderness and Gettysburg. What awful memories these magic words conjure up!

Yet fewer soldiers died on either side in all those awful struggles than were killed last year by motor vehicles in America!

Waterloo was one of the epoch-making slaughter pens of all history, yet fewer men from all the combatant armies died on the field of Waterloo than were killed by automobiles in peace-loving America last year!

In the Great War—the most awful war of all history—we lost 48,909 of our boys. That was awful! Yet, every four years in time of profound peace we kill as many on the highways of our country as we lost on the battlefields of France, Flanders and Italy?

In five years, deaths by automobile have increased 50 per cent in this country. And the rate goes on increasing. This daily, hourly tragedy must be ended, somehow, some way.—Memphis (Tenn.) *Press*.

POOR RAILWAY SERVICE

Kansas is complaining because, the public utility commission says, there are 400 elevators in the state closed on account of lack of cars to move grain. Kansas wants the railroads to get busy, order more cars and equipment, if there is such shortage, and move the grain tied up in the bins and elevators of the state.

The situation leads to the question: Why the lack of service? Why the lack of equipment? And the answer is that the railroads are where they were ten years ago. Some roads, of course, are in fair

shape, but the average road—and most of them traverse Kansas—are away behind the needs of the cities, towns and countryside.

Before a railroad can get capital these days it has to apply to a bureau of the government. This bureau makes a thorough investigation of the road's finances and prospects, and on the result its decision depends. One bureau of the government tells the railroads how much they shall pay out for labor. Another one designates how much they shall receive for their services. The government says they are entitled to a reasonable return on their invested capital—a return that would not satisfy the average investor in industrial paper.

Because of these restrictions; because the return is so small, railway paper has no attraction for the average investor. There are hundreds of industrial stocks and bonds more attractive. The investor with \$50,000 and desirous of living on the interest, or earnings, isn't looking for any railway paper. This investor goes in for some industrial not handicapped as is the railroad. Under present conditions the investor looks upon railway paper as something not even safe, let alone attractive from an investment standpoint.

Kansas is blaming the railroads which operate through the state. It might carry its investigation beyond the railroads. It might ask Kansas people just how much money they have invested in railroads and how much they would invest, under the circumstances. The investigation would probably reveal that Kansas people would not invest in railway paper, but would much rather have government, state, county, municipal and school bonds and other non-taxable paper—or paper on which the earnings are not limited; or paper in industries which are not controlled by the government as to their wage outlay and their charge for service.—Waterloo (Iowa) Tribune.

THE RAILWAY PROBLEM

The railway "problem" continues to agitate the public mind, and well it might. It would be still better if it agitated it to the point of bringing the solution. A Chicago newspaper recently devoted one entire section to a symposium of opinions on this subject.

It is our opinion that the solution will be very simple, as the problem is very simple, when once the problem is considered strictly upon its merits, divested of all extraneous interests and considerations; when once the railroads are dealt with as

common carriers and not as common prey; as prime public servants and not as private or public footfalls; as a great, essential industry and not as a hobgoblin in the hands of demagogues with which to fool the weak and rile the envious. Treat the railroads as other legitimate business interests are treated, and their problem is solved.

Abolish public regulation of railroads? By no means. But correct it, perfect it, make it what it should be and what it was intended to be. Hold it to the fundamental basis that, as our well-known proposition puts it, *the power to regulate involves the obligation to protect*. Public regulation came to correct abuses, not to inflict them. When the Government assumed the right to regulate the railroads, as other public utilities, it thereby took upon itself the obligation to protect them, to safeguard them in their right to earn a fair return upon a fair value of their property. This is inherent in any business. If, however, this power passes to another body, as it passed from the railroads to the Government when the Government took from the railroads the right of self-regulation, then it is incumbent upon that body to exercise that power for the common good of the business to be regulated and the public to be served. Otherwise adequate service becomes impossible. Obviously, if the railroads had all this time been regulated with the one object of having them earn such a return as would enable them to meet the ever-increasing demands for transportation, we should not today be confronted with so serious a railway problem. We have made a fundamental mistake. First, we should never have lost sight of the fact that railroads are economic in character and therefore any railway problem is an economic problem and it is fundamental that you cannot solve an economic problem politically.

Let those who lead, who mold public opinion and command popular followings, be true to their trust and treat this matter honestly as they know it should be treated, and refrain always from saying or doing anything calculated to poison people's minds, to foment feeling or arouse or stimulate prejudice, and it will help a lot.—*Public Service Management* (Chicago).

A NEGLIGENT RAILROAD

Last Sunday morning Frank Napps, a resident of Crystal Springs, started to journey afoot from Jackson to his home town.

Mr. Napps picked the Illinois Central tracks for his homeward path, despite the fact that there is a good dirt road from here

to Crystal Springs, for the free use of all who desire to travel thereon. The railway tracks are private property, not built for pedestrian traffic, but mighty few folks seem to know it.

It is true, as everybody who has tried it will testify, that a 25-mile journey afoot is rather tiresome, especially when one is accustomed to riding trains and automobiles.

Being somewhat weary when he neared Terry, Mr. Napps sat himself down by the side of the track to read. The nature of the literature he carried is not known. It was lost in the excitement that followed. Probably it was the last issue of *Vardaman's Weekly*, explaining the result of the senatorial primary, or something equally dull and tedious. At any rate, Mr. Napps took a nap—no pun intended—and was slumbering peacefully when No. 1, the southbound limited, came along and bumped him off the track and down an embankment.

The train crew, of course, thought Mr. Napps had been killed. That's what usually happens to people who go to sleep on railway tracks. The wounded man was picked up and carried to Crystal Springs, where, fortunately, it was found that he had been only slightly injured.

It is expected, of course that Mr. Napps, who was caught napping will eventually sue the railway company for damages. They always do. No doubt his bill of complaint, framed by a professional damage suit lawyer, will contend that it is the duty of the railroad to provide comfortable beds, with box springs, mattresses, sheets and blankets, for weary wanderers who may be strolling along the right-of-way; that these beds should be placed at stated intervals along the road, not more than a half-mile apart, properly sheltered and bearing signs giving notice that they are for free occupancy; that inasmuch as the Illinois Central has been grossly, maliciously and criminally negligent in that it has failed to provide these accommodations, the napping Mr. Napps is entitled to at least \$50,000 damages.

At any rate, there have been damage verdicts returned in this state on grounds of action equally trivial. It won't cost Mr. Napps anything to find out whether or not he can Robin Hood the railroad. There are lots of lawyers who are willing to take the case and stand sponsor for court costs.—*Jackson (Miss.) News.*

GROWTH OF COAL OUTPUT

From 1910 to 1920 the American output of coal increased 30 per cent more than the total output for the one hundred years from 1800 to 1900. During the 19th century, so far as figures of output are available, there

were produced from American mines 4,500,000,000 tons of coal. From 1910 to 1920 the American mines put out 5,700,000,000 tons, which indicates that growth of industrial and transportation activities.—*Pittsburgh (Pa.) Labor World.*

KANSAS RAIL INTERESTS

Senator Capper of Kansas tells the senate that the transportation issue before this country today is not that the railroads cannot afford to make rate reductions, but that they cannot afford not to make them. The senator urges repeal of the rate-making provisions of the Esch-Cummins act and restoration of state control over rates.

From this we are convinced that Senator Capper represents his state most accurately on the railway transportation issue. Kansas is almost exclusively an agricultural state. Capper reasons entirely and solely from the standpoint of his farmer constituents. They own farms, and sell farm produce. Their capital is invested in farms, farming machinery, live stock, and farming appurtenances. Probably not 1 per cent of their wealth is in railway securities.

In such circumstances their only interest in railroads is as a means of getting their products to market. The quicker and more cheaply they can move their goods over the railroads to market the greater their profits. It is natural that they should demand cheap freight rates. If only the railroads give service the Kansans do not care whether the railroads earn dividends. As long as the railroads are able to give service the Kansans do not even care whether the railroads earn enough for maintenance and advisable improvements.

That is the attitude which Senator Capper represents. He fails, and we believe his constituents fail, to recognize that railroads cannot and will not continue to operate without a profit any more than farms will continue to operate without a profit. That is what Kansans and other groups of people in other sections of the country who are constantly denouncing the railroads must understand before we can hope to obtain the sort of transportation the country requires for its greatest prosperity.—*Chicago (Ill.) Tribune.*

Concentrate the sun's rays on a small spot, and it will burn a hole in a hickory plank. Spread these sun rays over a world, and the ocean will be filled with ice and the land covered with snow. Concentration cooks the cake. Spreading over too much territory freezes the cream.—*The Silent Partner.*

The New Year and Thrift

Christmas would not be Christmas without Santa Claus, and the New Year would not be the New Year without good resolutions. Along this line, the following article has been contributed by one of the secretaries in Vice-President Blauvelt's office.

As the beginning of the new year is the time to make good resolutions, why not start out 1923 with a system of saving?

Not knowing just how to invest one's money often keeps one from saving. No doubt some of us make a visit to the bank one or twice a month and deposit a certain portion of our pay checks, but most of us do not. When our method of saving is to make deposits in a savings account in some bank, we are likely to find it inconvenient to visit the bank on pay day and keep putting it off until the money we had planned to save has dwindled away. But if we would only make up our minds to save a little each month and consult a reliable bond house or the bond department of a bank as to a good investment and then arrange to pay for it on the installment plan, we would have to keep up the payments, before long would have the total amount of the investment paid in full, and would receive a much larger rate of interest than if the money had simply been deposited in a savings account.

Or, if we think it would be inconvenient to follow the above plan, why not follow the easier method and buy stock in our own company? Surely there is no company in which we would rather own stock than in our own Illinois Central. In buying Illinois Central stock the payments are handled in practically the same way as they were for the Liberty Bonds; that is, a certain amount is deducted from the payroll. One may pay as low as \$5 a month, and during the period covering the purchase of a share of stock interest is paid on deposits at the rate of 4 per cent per annum. Upon payment in full of the purchase price, the company issues a certificate of stock in favor of the employee and pays quarterly dividends at the rate of 7 per cent per annum on the par value thereof, namely, \$100. It may seem inconvenient to meet the installments at some periods, but we all remember that during the war when we subscribed for the Liberty Bonds we managed

to keep up the payments. In most cases that was the first attempt at saving.

It has been the experience of the writer that the only sure way to save is under a contract, or, in other words, to buy on the partial payment plan. Some of us who decide to purchase a bond or mortgage will let the matter drift along until we happen to hear of an investment house and, not being told of one right away, will lose interest and forget the resolution to begin the new year with a system of saving. Much care should be taken in the selection of a bank or more especially an investment house, and one should never open an account until thoroughly satisfied that the firm with whom he is contemplating doing business is absolutely reliable.

Tested Recipes

MISS OLIVE DRAPER, *tonnage clerk, Springfield division, contributes the first two of the following recipes, with the comment, "Very good; have tried them":*

COCOA DOUGHNUTS.—1 egg, $\frac{1}{2}$ cup sugar, $\frac{1}{2}$ cup milk, $\frac{1}{4}$ teaspoonful salt, $\frac{1}{4}$ teaspoonful cinnamon, 2 cups flour, $\frac{1}{4}$ cup breakfast cocoa, 2 teaspoonfuls baking powder. Mix in order given, sifting the baking powder and cocoa with the flour. Roll to one-third inch thickness, cut and fry.

MACARONI SALAD.— $\frac{1}{2}$ package macaroni, 1 tablespoon salt, $\frac{1}{2}$ can pimentos, 12 small sweet pickles, 1 cup chopped celery, 1 cup chopped nut meats, 1 pint mayonnaise, $\frac{1}{2}$ dozen hard boiled eggs. Break macaroni into long pieces, cover with water, add the salt, and boil until done; then turn into colander to drain. Cut pimentos, pickles, and four of the eggs into small pieces, add the chopped celery and nuts, and fold into the macaroni and mayonnaise, being careful not to break the macaroni sticks. Garnish dish with lettuce leaves and decorate top of salad with the remaining eggs, sliced, and pimento strips.

Here is a practical recipe which enables the housekeeper to dispose of left-over chicken or roast meat—contributed by MISS FRANCES P. OTKEN, secretary to chief clerk, McComb, Mississippi:

MEAT LOAF.—Grind through the meat chopper any left-over chicken, roast meat or fresh meat. To every 2 cups of the meat mixture add 1 cup of rolled bread or

cracker crumbs, 2 tablespoonfuls of melted lard, 1 egg, 1 teaspoonful Worcestershire sauce, 1 tablespoonful minced parsley, 1 tablespoonful flour, salt and pepper to taste. Moisten mixture with a little hot water, roll into a loaf, put into a well greased pan and bake in a moderate oven until loaf is nicely browned.

PERSIMMON PUDDING.—Pour 2 quarts of sweet milk over 1 quart of persimmons (seeded); mash thoroughly and press through colander; add 1½ pints of sugar, 1 teaspoon of baking soda, 3 eggs (yolks and white beaten together), piece of butter the size of an egg, and 1 quart of flour. Mix well and put in baking dish or thick granite pan. Bake 3 hours. (This appears to be a very large quantity, but it can be put in glass jars and canned the same as any fruit and kept indefinitely. Serve with whipped cream). — *MISS ANNE ROSE SWEENEY, Kentucky Division Editor.*

FRUIT CAKE.—2 cups light brown sugar, 2 cups water, ½ cup fat, 2 teaspoons cinnamon, 1 teaspoon cloves, 1 teaspoon nutmeg, 2 cups currants, 1 cup raisins, 3 cups flour, 2 teaspoonfuls soda, ½ teaspoonful salt, 1 cup nut meats. Mix the sugar, water, fat, cinnamon, cloves, nutmeg, currants and raisins. Boil gently, stirring frequently, for 5 minutes. Cool and add the flour which has been mixed and sifted with the soda and salt. Add the nuts, mix well. Pour into two square cake pans which have been lined with waxed paper. Bake in a moderate oven for 40 minutes. If loaf cake pans are used, bake the cake for one hour. — *MISS LUCILLE M. SIMS, Minnesota Division Editor.*

APPLE SPONGE.—Take 8 tart apples, peel, slice and cook with ½ cupful of sugar and 3 cupfuls of water, until tender but still firm. Drain, saving the juice. Put the cooked apples into a baking pan about 9 inches in diameter, and pour over them a batter made of ½ cupful of sugar, ½ cupful of butter, 3 eggs, ½ cupful of milk, 2 cupfuls of flour and 1 heaping teaspoonful baking powder. Make this batter just as you would for cake. Bake in a moderate oven about 30 minutes. For a sauce take the juice of the apples and add to it 1 cupful of sugar and 1 tablespoonful of butter, and flavor to taste with nutmeg. Cook for several minutes, remove from the fire and pour over the stiffly beaten white of an egg. Do not add the sauce until served. This dish is best when served warm. — *MISS KATE NARTON, secretary to agent, local office, New Orleans, La.*

CHOCOLATE PECAN FUDGE.—Put 3 cups sugar, 3 tablespoonsof cocoa, 1 cup milk and lump of butter the size of an egg into a

saucepan and let boil until the mixture forms a soft ball when tested in cold water. Remove from fire, add 1 tablespoonful vanilla, and beat vigorously until creamy. Add ½ cup chopped pecans, and pour into buttered pan. When cool, mark in squares. — *MRS. S. VALLAS, wife of S. VALLAS, clerk, accounting department, local office, New Orleans, La.*

OUR BABIES

No 1 is J. Philip, 6 years old, son of Dispatcher of T. J. Russell, Dubuque, Iowa.

No. 2 shows Dorothy Evelyn, 8 years old, and Otis Roy, 10 years old, daughter and son of Roy Kyle, chief clerk to station master, Memphis, Tenn.

No. 3 is Marion Lucien, 2½ months old, son of M. E. Dupont, assistant extra gang foreman, La Place, La.

No. 4 is Frederick Mays, 6 months old, son of M. R. Sullivan, flagman, New Orleans division.

No. 5 is Harry, Jr., 1 year old, son of Mrs. Harry Ose. Mrs. Ose, formerly Miss Bertha Behrens, was employed for several years as secretary to the general passenger agent at Chicago. Junior's aunt, Mrs. Ida Behrens Springle, is employed at stenographer in the office of the auditor of miscellaneous accounts, Chicago.

No. 6 is Ralph, 6 months old, son of Richard Kingsburg, locomotive crane operator, Fort Dodge, Iowa.

No. 7 is Frank A., Jr., 4 years 11 months old, son of Frank A. Redican, chief clerk to roadmaster, Freeport, Ill.

No. 8 is Hugh Alford, 2 years old, son of R. B. Stuart, agent, Prichard, Miss.

No. 9 is Harry G., Jr., 4 years old, son of Harry G. Devinney, chief clerk to roadmaster, Louisville, Ky.

No. 10 is Robert Quinn, 2 years old, son of Harry Argo, ticket clerk, Martin, Tenn.

No. 11 is Roy Francis, 5 years 7 months old, son of W. H. Rinehart, chief clerk to local freight agent, Indianapolis, Ind.

No. 12 is James Eugene, 1 year old, son of J. A. Parnell, accountant, superintendent's office, McComb, Miss.

No. 13 shows Charles, 3 years old, and Robert, 2 years old, sons of Conductor W. W. Kenney, Illinois division. Mrs. Kenney was formerly employed as stenographer for W. J. Leahy, Fordham yard, for several years.

No. 14 is Herschel Dewey, 10 months old, son of Dewey King, ice inspector, Mounds, Ill.

No. 15 is Betty Adeline, 5 years old, sister of J. Philip, No. 1 above.

No. 16 shows Dorothy, 5 years old, and Berdena, 3

The Aim of the Home

To have every home
Economically sound,
Mechanically convenient,
Physically healthful,
Morally wholesome,
Mentally stimulating,
Artistically satisfying,
Socially responsible,
Spiritually inspiring,
Founded upon mutual
affection and respect.

—*JULIET LITA BANE, State Leader in
Home Economics Extension, Illinois.*

years old, daughters of S. B. Eilders, car inspector, Wallace yard, Freeport, Ill.

No. 17 is Mary Elizabeth Marion, 13 months old, granddaughter of C. T. Seiler, freight agent, New Orleans, La.

No. 18 is Doris Irene, 1½ years old, daughter of Operator E. J. Postma, Ackley, Iowa.

No. 19 is Gladys Corinne, 9 months old, daughter of Flagman L. D. Howard, Mississippi division.

No. 20 is Joan, 4 months old, daughter of E. R. Walters, clerk, freight house, Kankakee, Ill.

No. 21 is Geraldine Elizabeth, 18 months old, daughter of J. R. Murchison, agent, Gates, Tenn.

No. 22 is Norma Louise, 2 years 10 months old, daughter of Otto F. Schmidt, stowman, freight depot, Indianapolis, Ind.

No. 23 is Natalie Leggett, 16 months old, daughter of F. E. Brasfield, accountant, McComb, Miss.

No. 24 is Martha Isabelle, 2 years old, daughter of W. R. Walker, car repairer, East St. Louis, Ill.

No. 25 is Bertha Marie, 3 years old, daughter of Section Foreman William Woolsey, Blairsburg, Iowa, and granddaughter of A. L. Woolsey, section foreman, Fort Dodge, Iowa.

No. 26 is Jean Lois, 4½ months old, daughter of C. K. Drake, solicitor, passenger department, Chicago. Before her marriage, Mrs. Drake, then Miss Margaret L. Hart, was secretary to Local Treasurer Otto F. Nau, Chicago, for three and a half years.

No. 27 shows Grace Louise and James Reuben, children of J. W. Holloway, agent, Dickerson, Miss.

No. 28 is Elizabeth, 2 years old, daughter of B. P. Brevard, instrumentman, Fulton, Ky.

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them. Address EDITOR, HOME DIVISION.

Our *Louisiana Division Editor*, MISS CLAIRE PIMM, contributes the first and second of the following sayings:

Jack, who is 3 and very smart for his age, was asked to sing. He complied cheerfully, but became confused toward the end of the song; so his mother said, "Jack, excuse yourself and start over." Jack turned to the audience of eight and said, "Excuse me and start over."

W. T., Jr., is 5 years old and has a habit of asking his father for numerous things off and on. His father invariably replies that he will get them for him when the oil well comes in. The other day he wanted to go barefoot, and his mother told him that he would have to wait until daddy came and ask him about it. "Oh, well," said the boy, "daddy will tell me I can when the oil well comes in."

Little Milton, 4 years old, was invited to spend the day at his uncle's home. Seated at the dinner table, he noticed his uncle wearing a khaki shirt and inquired whether it was a hunting shirt. Upon being informed that his uncle had been a soldier in the recent world war, he remarked, "How could you be a soldier? You weren't killed." —J. MILTON MAY, *New Orleans Terminal Editor*.

Aunt Jane was very fond of baby Jane Lee, and baby Jane knew it—knew it so well that when she wanted anything and could not get it from her mother and father, she knew she could get it from Aunt Jane. It was near Christmas, and baby Jane wanted a Kiddie Kar, but mother and daddy thought she was too small. So when she asked "Daddy, will Tantie Caus bwing me a kitty tart?" daddy told her that he thought not. But baby Jane shook her curly head confidently and said, "With the help of Dod and Auntie Jane I ist knows I will det a kitty tart." And of course she did.—MISS ANNE ROSE SWEENEY, *Kentucky Division Editor*.

For Buddy and Sis

A Word From Aunt Nancie

DEAR BOYS AND GIRLS:

How would you like to live in a camp car? That is where William Robert and Bessie Jewel Morris live. William Robert is 4 years old and knows several signals.

William Robert and Bessie Jewel Morris

He also knows how to ride a "bike," and enjoys it, as you will see by the broad smile on his face in the accompanying picture. William Robert says there is nothing like living on cars and that he is sure an Illinois Central boy. Bessie Jewel, his sister, is 18 months old and too young yet to express her opinion of this style of living, but she wears a look of contentment as she surveys the world from in front of her home on wheels. The children's father is Leslie Morris, extra gang foreman on the St. Louis division at Freeburg, Ill.

I hope that all of you were happy with your Christmas presents and that you had a pleasant holiday. It will soon be school time again. I suppose you are thinking about New Year's resolutions. We turn over a new leaf in the book of life on January first. Isn't it fine to think of covering up all the blots and mistakes of last year and starting out with a clean page? Think of all the good resolutions one can make! When you read Morris Kemper's letter on our page, you will see that he noticed the elevators in a department store

and says that if anybody got under one of the elevators he would get mashed. This reminds me of the slogan of the Illinois Central—Safety First. We might make a resolution to be careful not to get hurt during the coming year. Of if you make a resolution to save, you might save time, save Mother steps, save pennies, and many other things. If you resolve to help someone just a little each day—and even a sweet smile helps sometimes—you will be like a ray of sunshine, welcomed everywhere.

Don't forget to make a resolution to write to
Your loving

AUNT NANCIE.

An Uncle, Too, If You Need One

Mattoon, Ill., Dec. 12, 1922.

DEAR AUNT NANCIE:

I wish there was an "Uncle Somebody" to write to. I went on the train with Mama the other day to Decatur to look at Christmas things. There was a man Santa Claus and a woman Santa Claus. I talked to the man Santa—told him to send my little sister a doll that said "Mama." There was a water mill in one store there that I liked. I hope I get one like it for Xmas. We rode up and down on the elevator lots of times. If anybody gets under one of the elevators, they would get mashed.

I will write you another letter some time.
Good-by.

MORRIS KEMPER, JR., son of M. E.

KEMPER, chief clerk to superintendent, Indiana division.

DEAR MORRIS:

There is an "Uncle Somebody" to write to. It is Uncle Milt, who drew the Santa

Stick to Your Job

Diamonds are only chunks of coal,
That stuck to their jobs, you see.
If they'd petered out as most of us do,
Where would the diamonds be?
It isn't the fact of making a start;
It's the sticking that counts, I'll say.
It's the fellow who knows not the
meaning of fail,
But hammers and hammers away.
Whenever you think you have come
to the end
And you're beaten as bad as can be,
Remember that diamonds are chunks
of coal
That stuck to their jobs, you see.
—MINNIE RICHARD SMITH.

Claus picture for you in last month's magazine. He would like to hear from you, I am sure.

I hope that Santa was able to get a water mill for you. Write and tell me about it. Or, better still, send your letter to Uncle Milt, in care of the magazine.

With love,

AUNT NANCIE.

Can You Figure It Out?

Select one letter from the third word in each line (except the last line) and spell out a name that is familiar to all of you.

Found in ink but not in glue,
Found in lace but not in shoe.
Found in light but not in dark,
Found in island but not in park.
Found in nail but not in tack,
Found in house but not in shack.
Found in night but not in day,
Found in trust but not in pay.
Found in cat but not in dog,
Found in tree but not in log.
Found in near but not in far,
Found in train but not in car.
Found in Arab but not in sheik,
Found in Latin but not in Greek.
Found in limb but not in hand,
My whole is the best road in the land.

Answers to December Puzzle

Parts of a tree: 1, Trunk; 2, Roots; 3, Boughs; 4, Twig; 5, Sap; 6, Branch; 7, Leaves; 8, Forks; 9, Limbs; 10, Bark.

Nuts to Crack

1. What nut is used to describe Oriental eyes?
2. What nut is found in a dairy?
3. What nut is found in every home?
4. What nut suggests a popular beverage?
5. What nut bears a girl's name?
6. What nut forms a part of the human body?
7. What nut is found at the seashore?
8. What nut is a country in South America?
9. What nut might be expected to grunt?

10. After what nut was a United States President nicknamed?

11. What nut is found in a vegetable garden?

The correct answers will appear in the February issue.

Wee Folks

Up the airy mountain, down the rocky glen!
We dare not go a-hunting for fear of little men.

Wee folk, good folk, trooping all together,
Green jacket, red cap and white owl's feather.

Down along the rocky shore, some make their home.

They live on crispy pancakes of yellow-tide foam—

Some in the reeds of the black mountain lake,

With frogs for their watch dogs, all night awake.

Up the airy mountain, down the rocky glen!
We dare not go a-hunting for fear of little men.

Wee folk, good folk, trooping all together,
Green jacket, red cap and white owl's feather.

—Selected.

EDUCATION

Sitxy years ago America was the fourth nation in the world in terms of education. Then it slipped to fifth, sixth, seventh, eighth, and finally ninth place. Prussia has one man in a thousand who cannot read or write. Denmark, Switzerland and Holland have one man out of four thousand who cannot read or write. We have seven men in every hundred who have acknowledged that they can do neither, and in the industrial centers, among the foreign-born, twenty out of every hundred are illiterate. We are still riding in an ox cart as far as rural education is concerned, while physically we are riding in a palace car.—NEWELL DWIGHT HILLIS.

Sports Over the System

Athletic Contest at Burnside

The 5-event athletic contest conducted by the Railroad Y. M. C. A. at Burnside shops, Chicago, came to a successful close November 28, after more than 136 men had competed. The five events were: 50-yard dash, running broad jump, standing broad jump, 12-pound shot put, pull-up (chinning).

The events were staged each noon from October 27 to November 28, and great interest was manifested by the large crowds of men who came out to watch the contests. The men on the locomotive side turned out in somewhat greater numbers than those on the car side, but the competition was keen and the enthusiasm displayed was in keeping.

When the scores were made known November 29 in the Y. M. C. A. office it was found that F. Hinke had first place. He was presented with a gold watch furnished by the Hamilton Watch Company and Benjamin Busch, local watch inspector for the Illinois Central. Mr. Busch furnished the 26-year case, and the Hamilton Watch Company furnished the No. 992 special railway movement. Edward Spiller won second prize, a gold medal, and F. Summers, a negro employee, got third place, with a silver medal. All of these winners were from the machine shop, and they worked hard and consistently for the honors they received.

Others who should be mentioned for their activities and accomplishments in this contest include Mr. Mason, for instance, who finished fourth and did excellent work, although about fifteen to twenty years the senior of the boys who generally took part, and Mr. Schuster of the paint shop, who showed superior skill in putting the shot, although he did not compete in all the other events. Edward O'Brien and Russell Moreton rendered efficient service by acting as judges and starters, and a number of others assisted in making the event a success.

Basketball League at New Orleans

The Commercial Basketball League of New Orleans was formally organized on Friday, Dec. 1, at a meeting held at the sporting goods firm of Stickney & Williams. This league is composed of six teams representing the large commercial enterprises

of New Orleans. The players are bona fide employees of the firms they represent.

A schedule of ten games has been arranged, triple headers being played each Wednesday night on the court of the local Y. M. C. A. This league is expected to bring out some of the best amateur material in New Orleans, as the weight and class are not limited. A silver cup and a basketball have been offered as trophies by Stickney & Williams.

The Illinois Central quintet, which has gained a reputation in and about New Orleans, has entered the league. Play was formally opened Wednesday, Dec. 13, when the Illinois Central team was scheduled to meet the strong team of the New Orleans Public Service Corporation.

A great deal of time has been devoted to training during the last several weeks, and the Illinois Central team is in fine condition. In a recent work-out the Woodward-Wight company's team, a strong contender in the league, was defeated by a score of 14 to 4. Through the courtesy of the Young Men's Hebrew Association, the use of the gymnasium has been extended to our team for practice purposes.

The team which will carry the Illinois Central colors in the Commercial League will be selected from the following: "Bizzy" Berckes (captain) forward; Leslie Pic, forward; Frank Moore, forward; Dan Voebel, center; Tom Kelly, center; A. Rittenberg, guard; J. M. May, guard (manager); A. Walsdorf, guard; Ivor Throunk, forward; Tom Call, center.

Memphis Bowlers Accept Challenge

A new feature in sports on the Illinois Central will be found in the proposed Memphis-Chicago bowling tournament, which will probably be held in Chicago on Saturday, February 3, and Sunday, February 4. There will be fifteen players on each side, making a total of three teams each.

C. M. Said, our cartoonist, is handling the Chicago arrangements.

F. J. Theobald, chief clerk to Superintendent Walsh, is handling the Memphis end of the meet. There are several good bowlers in the Memphis offices and shops, and there should be little difficulty in enlisting their ability for this event.

This tournament will be in no way con-

nected with the Illinois Central General Office leagues of Chicago, but the various teams at Chicago will be looked over for the required number of bowlers to represent the Chicago side.

Standings Change in Bowling League

After looking over the present figures in the 12th Street General Office Bowling League at Chicago and comparing them with the standing of the league last month, one is led to believe that the General Freight team will have an easy time winning the flag this year, for it won all but two of its games in the last month, dropping one to the Officers team while using several substitutes and losing the other to the Auditor of Miscellaneous Accounts team.

The General Superintendent of Transportation team, after losing two out of three to the Auditor of Miscellaneous Accounts team, braced and has lost only three games in a month. The team advanced from fourth place to a tie for second place with the Bridge and Building team, which advanced from fifth place and which lost only one series when the Chief Engineer team took two out of three. The Auditor of Miscellaneous Accounts team dropped from second to a tie for fourth place as a result of allowing some of the so-called "easy teams" to beat it and dropping two to the General Freight team.

The Vice-President Purchasing team had the pennant bee buzzing in its bonnet until the General Freight team trimmed it three straight and it dropped back to a tie for fourth place. The Maintenance of Way team is still in sixth place, but would be higher if Bernbach could be present each week.

The General Superintendent of Motive Power team is making them all sit up and take notice, for it jumped from thirteenth place to seventh place, the biggest change made by any team in the league. The Terminal Superintendent team moved into eighth place, and the Auditor of Disbursements team also moved up one place, but should be higher, for the bowlers have been going after the pins in great form.

Last year the Land and Tax team had an average of more than 800. Its average this year

shows that it misses Enright, Coble and Riley. The Vice-President Accounting team and Chief Engineer team are tied for eleventh place and also tied on average pins per game. Last month the Chicago Terminal Improvement team was in last place, but now it is tied for thirteenth place with the Vice-President and General Manager team.

The Officers team has won eight games, most of them from the leaders, who hold it too cheaply, with disastrous results. The Chief Special Agent team is resting easily in last place.

Below are team and individual standings after the games rolled December 14:

THE FIVE GREAT "M's"

Hugh Chalmers, president of the Chalmers Motor Company, says: "Five great 'M's' go to make up the problem of every business man in this country today. They are Money, Material, Machinery, Markets and Men—and the biggest figure in the problem is Men. Really valuable men, high-priced men, are the hardest things to get of all the things we manufacturers need. Men in the mass are the cheapest things in the market. There are too many \$1,000 men and too few who are worth \$10,000 a year."—*Golden Rule Magazine*.

They Took Eggs and Ham

A PARTY of Illinois Central officers recently had occasion to visit a small southern town and arrived in time to breakfast at the hotel. In the party were C. G. Richmond, E. F. McPike and J. R. Breidenstein, Chicago, and J. L. Sheppard, Memphis. According to Mr. Sheppard, Mr. Richmond essayed to order the meal.

"Have you any cereals?" he asked the negro waiter who had escorted them to a table.

The darcy was dumbfounded at the foreign expression. Mr. McPike offered his assistance.

"Have you any oatmeal, corn flakes, grape nuts?" inquired the superintendent of perishable freight service.

The only reply from the colored servitor was a gasp.

"Boy, have you any breakfast food?" asked Mr. McPike.

This was getting down to terms, and the descendant of Ham replied:

"Yas, suh, boss, yas suh! Ham an' eggs."

But Surely It Wasn't

The kindergarten had been studying the wind all week—its power, effects, etc.—until the subject had been pretty well exhausted.

To stimulate interest, the teacher said, in her most enthusiastic manner: "Children, we were going to Baton Rouge to witness the football game yesterday afternoon. As the train approached one of the stations something came softly in and kissed me on the cheek. What do you think it was?"

A pretty little girl in the rear shouted: "I know! It was the conductor, because when he took my ticket he told me I was a very pretty girl and kissed me, too."

—C. E. G.

Wild Enough

A great many years ago the Illinois Central ran only a few passenger trains each way a day on the Clinton district, all the freight trains carried passengers, and ex-

tras were called "wild" trains. At a certain station on this district the agent had to make a mail train at 4:30 a. m.

An Irishman named McCarthy, who lived several miles in the country, came into the station all out of breath, just after the train had gone, asked the agent about the train and was told it had just left. He then asked the agent when he could catch the next train and was told there were no more trains that day. Then the agent happened to think and said, "You might catch a 'wild' train, Mike."

"What's that?" asked Mike.

The agent replied, "You might catch a 'wild' train."

"The tameest of thim is woild enuff for me," said Mike.

A Dealer in Futures

Some time ago a young man went to a great store in Chicago to apply for a position, and was fortunate enough to be shown into the office of the merchant prince himself, to whom he stated the object of his call.

The merchant was favorably impressed

Times Have Changed

The blacksmith shop sells gasoline,

The village drugstore now

Sells lipsticks to the village queen

Who used to milk the cow.

Amusement still the village has—

Instead of checkers, now it's jazz.

The farmer used to pound a nag,

Upon its bony thighs,

But now-a-days to plow or drag

The farmers tractorize;

And every night to town they go

To see the moving-picture show.

And Mother! Mother used to wear

A black alpaca dress

All out of style, and didn't care,

But now she's more or less

In style—in fact it seems, by jing,

The style is less, if anything.

The good old days have passed away;

The good old times are gone.

The farmer of the present day

Is still up at the dawn,

But not to go to work—instead,

Because he hasn't gone to bed.

—The Crescent.

with his appearance and address, and after asking him a few questions relative to his business experience, promised him a place in his employ. But the caller, who evidently had expected to be more rigorously catechized, thought it best to volunteer additional information.

"If you wish," he began, "to know something of my antecedents——"

"I don't care to know anything about your antecedents, young man," interrupted the merchant, with a smile. "If your subsequents are all right, you'll do. You may report to Mr. Smith next Monday."—*Everybody's Magazine*.

Chance to Profit

Rafferty, of the Old Sod, and MacPherson, a Scot, were miners together. One day Rafferty accidentally emptied his pipe on a keg of powder, and when he came down it was on the installment plan. Mac's grief was genuine, but finally he dried his tears and went off to notify Mrs. Rafferty.

"Is this the Widow Rafferty?" he asked when a woman appeared at the door.

"'Tis Mrs. Rafferty I am, but no Widow Rafferty," she snapped.

A businesslike gleam came into MacPherson's eye.

"An' how much will ye bet?" he demanded.—*American Legion Weekly*.

Pigs Is Pigs

A woman got on the train at a small town with a kitten in a box.

"You can't carry a dog on the car," explained the conductor politely.

"But this isn't a dog," protested the woman. "This is a cat."

"It doesn't make any difference," returned the conductor. "The rules of this company must be obeyed."

"But," again protested the woman, "that man over there has a large mud turtle."

"That's different," explained the conductor. "Mud turtles are insects, while cats are dogs."—C. E. G.

Popular Lies

I'm crazy about you.

I'll drop in and pay you back next week.

I shall never love another.

How sweet you look!

Wasn't it too bad you were not at home?

I never in my life did so badly.

I told her just what I thought of her.

My wife and I never have a cross word.
No, darling, I never kissed another.

—TAG.

The Joke's on Her

"I woke up in the night and found my wife going through my pockets."

"What did you do?"

"I turned over in bed and laughed."—*Wheeler's Magazine*.

Do You Know That—

Puget Sound does not come from an organ?

Muscle Shoals is not a wrestler?

There is no wood in club sandwiches?

Rebecca did not go to the well with a baseball player when she went with a pitcher?

The Mexican border does not pay rent?

Rex Beach is not a bathing beach?

The Kentucky Derby is not a hat?

And I did not originate one of these sayings?—G. T. M.

INKID SAYS—

New Scale Is Installed at Centralia Yard

*Conforms to Interstate Commerce Commission's
Requirements for Uncoupled Motion Weighing*

IN order to conform to the Interstate Commerce Commission requirements for uncoupled motion weighing and to facilitate the movement of cars through our Centralia, Ill., yard, it was decided to abandon the present method of coupled motion weighing before cars are placed in the receiving yard and to locate a scale on the hump, so that cars may be weighed and classified in one operation.

Taking into consideration the special features which would be required in the scale when located on the hump, a special study was instituted to make a comparison of the present type scales in use on the Illinois Central System as compared with other types of scales being manufactured, some of which were in service on foreign lines.

Knife Edge Scale in General Use

The type of scale now in general use on the Illinois Central System is what is known as the knife edge scale, which consists of a structural steel bridge supported on eight transverse levers and four longitudinal levers; it is commonly called a four section scale. These levers are supported on cast iron stands provided with compensating bearing blocks and knife edge bearings. There is no actual connection of one lever to the other, the only connection being through the contact of the knife edge in the upper lever upon the bearing block in the lower lever. These knife edges become rounded through use, and there is a tendency for misplacement on account of vibration. The capacity of this type of scale in common use is 150 tons.

In order to eliminate as much as possible the wear on these bearings, a dead track is provided over the scale for the passage of locomotives and cars which are not to be weighed.

The dead track is supported on transverse structural steel beams supported on the side walls of the scale pit. The center line of the dead track is one foot four inches from the center line of the live track.

Due to the large amount of traffic handled through Centralia, it was decided that the use of a knife edge bearing scale, which would, of necessity, require a dead track, would greatly hamper the rapid movement of cars over the hump.

New Plate Fulcrum Scale Chosen

It was therefore necessary to use a type of scale designed without knife edge bearings and which would be of sufficient

strength to permit eliminating the dead track and withstand the heavy traffic of all cars and switch engines passing over the live rails. To meet these requirements it was decided to use a plate fulcrum scale.

The plate fulcrum scale differs from the knife edge scale in that it is of such design that there is no dead track required. This scale consists of a structural bridge supported on four transverse levers and two longitudinal levers and is commonly called a two-section scale.

The load of one lever is transmitted to the other through small flexible columns, or plates, which form the fulcrum and from which it obtained the name of "plate fulcrum."

These plate fulcrums maintain the constant relation of one lever to the other irrespective of vibration or load.

In a great many scale installations, the weighing of cars is made subservient to the operation of the yard. However, a well defined track or yard operation has been instituted at Centralia for a number of years. The classification of cars is very heavy, amounting to more than two thousand in a 24-hour day. It was therefore necessary to put in a scale installation that would not interfere with or retard the operation of the yard.

The capacity of the scale is 200 tons, and the length of the live rail is sixty-two feet.

The patents for this scale are owned by Fairbanks, Morse & Company.

Scale Has Mechanical Hump

The scale facilities at Centralia are located at the present hump between Yards "A" and "B" and are equipped with a mechanical hump which can be raised and lowered to compensate for the change in car resistances caused by temperature changes.

The track scale has been located just above the apex of the original hump, so that after passing over the scale the cars would receive the same momentum as heretofore to carry them in the classification yard.

The design of the scale facilities was based upon handling six cars a minute over the scale. In determining the distance and elevation of the mechanical hump above the scale, in order to permit the proper interval between cars so that one car would not foul the scale before the other car had passed off, calculations of intervals took into account the following items:

Speed of approach to hump ranging from one to three miles an hour;
Variable car resistances due to summer and winter temperatures;
Weight of light and heavily loaded cars;
Variable length of wheel bases of cars from twenty-seven feet to forty-four feet.

Scale Installed on 1 Per Cent Grade

In order to meet all of the foregoing conditions and at the same time allow the cars a sufficient length of time on the scale, it was decided to locate the mechanical hump sixty feet from the scale proper, which places the center line of the mechanical hump 116.5 feet from the center line of the scale and at an elevation of 2.16 feet above the center line elevation of the scale with the mechanical hump in the minimum position. In the maximum or winter position, the elevation will be 2.451 feet. In order to maintain a uniform rate of speed for cars while passing over the scale, the scale has been installed on a 1 per cent grade.

The Centralia plate fulcrum scale installation is unique in that it is the first plate fulcrum scale to be installed with a Streiter Amet automatic recording device. The use of this type was desired in order to have a substantiating record of car weights which could not be tampered with, and it was thought the company would experience considerable trouble in maintaining competent weighmasters for hand weighing.

The scale and hump pits are of reinforced concrete construction and supported on creosoted piling. The scale house and hump foreman's office are of frame construction, with large plate glass windows; being located on the side of the hump embankment, they were constructed on concrete foundations which provide a basement utilized for hot water heating plant, storage of coal and toilet facilities. Heat is provided in the scale pit and furnished from the scale house plant.

Work on Scale Begun June 10

The driving of pile foundations for these facilities was started on June 9. The contractor started laying water supply lines on July 10 and shortly afterward began work on the pit and buildings, which were completed by the contractor on September 30.

Installations of the mechanical portions of the hump and scale were made by machinists furnished by Fairbanks, Morse & Company, and the structural steel portions were installed by company bridge gangs. Installation was started on September 1 and completed October 14. Immediately after the installation of the scale, heating work was installed by the heating contractor and electrical work was installed by company forces.

Tests on the scale were started October 12 with two test cars and an engine. Two adjustments only were required to make the scale weigh within twenty pounds under a load of 200,000 pounds—spot weighing. An 8-pound weight on the rail caused a movement of the weigh beam, which indicates the sensitiveness of this scale.

Motion weighing with cars going over the hump was started on the 13th and showed results within 500 pounds of spot weight. Further adjustments were made to correct this discrepancy, and the facility was placed in service at noon on October 28.

The new scale and its installation cost more than \$80,000.

A VETERAN OPERATOR

Mrs. M. R. Addison, the oldest woman operator on the Louisiana division, entered the service in March, 1890, as an operator at Magnolia, Miss. In 1916 she was transferred to operator at Yazoo City, a position which she has been holding ever since.

HAVE AN IDEAL—AIM AT IT

Aim for the highest, never speculate, never endorse beyond your surplus cash fund; make the firm's interest yours; concentrate; put your eggs in one basket, and watch that basket; keep expenditures always within revenues; lastly, do not be impatient, for as Emerson says, "No one can cheat you out of ultimate success but yourself."—ANDREW CARNEGIE.

Accident Prevention in a Schoolroom Song

THERE is a man in Illinois who is entitled to some kind of service medal for saving lives. He has adopted a unique plan for conserving life that exemplifies the ancient adage that "an ounce of prevention is worth a pound of cure." The man is D. Walter Potts, superintendent of schools at East St. Louis, Illinois, and the plan he is putting into practical operation is the inculcation into the receptive minds of pupils in all the schools over which he has supervision of simple and fundamental precautions which make for the greatest measure of safety from the commoner forms of accidents.

In this connection, Mr. Potts has written a song called "Safety First," which has been set to music and is daily sung in all classrooms in the public schools of East St. Louis. The song is arranged for male, female, or mixed voices, so that it can be readily adapted to the requirements of any schoolroom.

"Realizing the power of rhythm and song, and knowing how readily children participate in any activity where these two factors are present," Mr. Potts says, "I composed the song for use in public and parochial schools, at meetings of civic organizations and, in fact, at any gathering where people are assembled together."

"In East St. Louis we sing this song in all classrooms, and we find the children ready to sing it immediately after the opening of school, before or after noon intermissions and before afternoon dismissals."

"We have 11,132 pupils enrolled in East St. Louis public schools. We have a first-class motion picture machine in our high school auditorium, and the words of the

D. Walter Potts

song 'Safety First' have been placed on slides for use when persons of all ages are assembled in the auditorium."

The words of Mr. Potts' song are as follows:

1

In the streets we should not walk, Safety First,
Safety First,
Many dangers there do stalk, Safety First, Safety First,
But when forced to use the street, walk on left side,
be discreet,
Fewer hazards you will meet, Safety First, Safety First,
Fewer hazards you will meet, Safety First.

2

We must stop and look and listen, Safety First,
Safety First,
As if done by intuition, Safety First, Safety First,
Then when crossings we are near, will be able all to hear,
Danger signals front and rear, Safety First, Safety First,
Danger signals front and rear, Safety First.

3

Crossing streets at intersections, Safety First, Safety First,
Lessens the hazard for pedestrians, Safety First, Safety First,
Look to the left and then the right, utilize the sense of sight,

A Good Thing to Remember!

When you take a walk
and

When you take a fliv,
Take another thing—a
look—

and

Do your best to live.
A person can prevent
the worst

By memorizing

"Safety First."

—C. E. G.

Eliminate potential fright, Safety First, Safety First,
Eliminate potential fright, Safety First.

4

To the driver's information, Safety First, Safety First,
Of the car and its operation, Safety First, Safety
First,

Should be added zealous care, for all traffic every-
where,

And of accidents beware, Safety First, Safety First,
And of accidents beware, Safety First.

5

All must learn the regulations, Safety First, Safety
First,

Governing motor transportation, Safety First, Safety
First.

Then with universal heed, to the greatest danger,
speed,

We shall all adopt one creed, Safety First, Safety
First.

We shall all adopt one creed, Safety First.

6

All must give consideration, Safety First, Safety
First,

Resulting in a declaration, Safety First, Safety First,
That the rights of all mankind shall be constantly in
mind,

The Golden Rule applied sublime! Safety First,
Safety First,

The Golden Rule applied sublime! Safety First.

War Memorial Dedicated at Vicksburg

Four former Illinois Central System employees' names are on the final muster roll of honored dead which appears on the recently unveiled Vicksburg-Warren County (Mississippi) soldiers' memorial, a picture of which is shown herewith.

The men who were once in the service of this company and who gave their lives for their country were: William Carey Crouch, trainman; Charles Henry Rogers, yard clerk; Sam Nelson and Tony Pichetto, employed in the car department. Crouch, it is said, was associated with the government transportation department while in France.

Captain Will Percy, who delivered an ad-

dress on the occasion of unveiling the memorial, is the son of Leroy Percy, former United States senator from Mississippi. With his father, Captain Percy is associated in the law firm of Percy and Percy, local attorneys representing the Yazoo & Mississippi Valley at Greenville, Miss.

The memorial bears the names of fifty-one officers and privates, sixteen of whom were negro soldiers.

The inscription reads:

"Vicksburg-Warren County Memorial. Let Us Hold in Honored Memory Those Who Died for Their Country in the World War, 1917-1918. Roll of Honor. That Their Names May Live With Their Valor."

New soldiers' memorial at Vicksburg, Miss.

Traffic Department

Simplification of Freight Tariffs Sought

By R. A. TROVILLION,
Assistant General Freight Agent, Chicago

AN agent recently told me that he supposed freight tariffs are complicated because the general freight agents assume agents are as capable rate men as those who make the tariffs, and he then explained how very little time an agent has to familiarize himself with rates and classifications.

This shows the necessity for simplification of freight tariffs, although in view of the many changes in rates in the last five years it is not an easy problem to solve.

In our efforts toward simplification it is necessary to bear in mind the rules of the Interstate Commerce Commission and the various state commissions, which must be observed in the compilation of our tariffs.

Simple Tariff Gets Business

The Chicago General Freight Office has given much thought and time to the question of uniformity of rules, station indices, minimum weights and other details that go to make up a tariff. We have long realized that a comprehensive and simple tariff is an excellent solicitor for the railroad issuing it. A shipper routing a competitive car is naturally going to use the tariff which expresses the rate in the simplest form, rather than a tariff containing explanatory footnotes, exceptions and leaving room for doubt as to the application of the rate.

We point with pride to the fact that for the twelve months ending December 1, 1922, we have issued 179 tariffs and 353 supplements, containing 5,181 pages of rates, with practically no criticism from the Interstate Commerce Commission.

In May, 1922, when the Interstate Commerce Commission issued its decision in Docket 13293 (Reduced Rates, 1922) ordering a 10 per cent reduction in rates, seventy-seven tariffs issued by this office were affected. The order became effective July 1, on three days' notice, and, because of the short time allowed the carriers to comply with it, the commission authorized the issuance of so-called "blanket" supplements containing tables by which the old rates could be reduced.

Knowing the inconvenience of this form

of tariff to shippers and agents, our tariff men worked day and night during June, and as a result we had issued, effective July 1, 1922, sixty-nine tariffs or supplements, containing 1,228 pages of specific rates, which left only eight tariffs to be included in our "blanket" supplement.

Made a Record in Revision

These sixty-nine issues represented 70 per cent of our total tariff pages affected by the order, and, so far as we have been able to learn, this is the best record made by any road except those having comparatively few tariffs to issue.

The various freight associations are constantly striving for simplification of individual and agency tariffs.

The Central Freight Association roads have, within the last year, organized a Tariff Simplification Committee consisting of representatives of eleven C. F. A. roads. These men meet once each month, analyze tariffs and suggest changes to make them less complex. Considerable progress has been made by this committee, and no doubt roads in other territories will follow their example.

We invite criticism and suggestions from shippers, outside representatives and agents in connection with our tariffs. We want them also to call attention to our errors.

While we take every precaution to prevent errors in our issues, they are bound to creep in. Laymen observe mistakes when they are not looking for them; yet these same errors are overlooked by trained men who compile the tariffs and read the proofs.

The Perils of Proof-Reading

William Morris, English poet and publisher, who established the Kelmscott Press in 1890 at Hammersmith, which he made famous by the publication of *de luxe* editions of "The Beowulf" and of Chaucer, planned an issue of the Bible which would be the supreme achievement of the printers' craft. Every detail—paper, type, binding—was given special care.

When the text had been set up and the proof read, the proofs were hung up in the workshop, and a prize of one shilling was offered for every error discovered. A good many shillings were won, and the errors were corrected and new proofs displayed with a prize of one pound for each error

found. For the third time the process was repeated, this time the prize being five pounds.

Then several teams read the entire Bible backward. This method, breaking up all association with the sense, comparing each letter and space and punctuation mark with the original "copy," was supposed to insure perfection.

Finally, when no errors could be found, they went to press and found—when it was too late—an error confronting them on the title page!

An eminent psychologist says mistakes of this kind are due to the fact that the

proof-reader gets too interested in the subject matter—that his attention wanders from the ink marks to the sense. Perhaps some of our tariff errors are attributable to this cause.

From the foregoing it will be seen that the making of tariffs is a highly specialized work, and their simplification must of necessity require much study. However, the vast amount of work already done in this direction encourages us in the belief that the accomplishment of the desired end is not in the far distant future, and when that time comes freight tariffs will be easy of interpretation.

Northern Lines Meeting Discusses Fuel

A meeting of the General Fuel Conservation Committee was held in the Rose Room of the Great Northern Hotel, Chicago, Tuesday, December 12. This meeting was called to discuss ways and means for substantial improvement in our fuel consumption in all classes of service. It was attended by eighty persons. In addition to the general committee, there were representatives from almost all classes of service from each of the Northern Line divisions—superintendents, trainmasters, master mechanics, traveling engineers, roadmasters, instructing firemen, supervisors, chief dispatchers, general yardmasters, conductors, engineers, firemen and chief yard clerks.

Much interest was taken in the discussion at this meeting, and many good points were developed. The principal causes for increased fuel consumption on the St. Louis and Springfield divisions were reported to have been the kinds of coal and water used the last three months.

The new mine, No. 12, at Herrin, of the Madison Coal Corporation, which is now under development, is producing coal that is unsatisfactory, as it contains a considerable amount of slate and refuse that has been shattered as a result of the use of an excessive amount of powder in shooting it down. This refuse has not been removed by the mine. It is expected, however, that this condition will improve as the entries of this mine are further developed, as this will enable better care to be exercised in the picking out of the refuse particles.

On account of the increased demand for the coal from Herrin mines Nos. 8 and 9, the St. Louis division has had less of this better coal and more of the No. 12 coal, which also contains a seam of dirt, which zig-zags through the coal in such a manner as to be difficult to remove. As soon as

the coal is shot down, this dirt mixes with the coal, resulting in decreased heating efficiency.

The committee will take this matter in hand at once and will handle it with the Madison Coal Corporation for an immediate improvement. It was thought that by placing more pickers at the mine it would be possible to remove much of this objectionable refuse.

The recent shortage of water on the St. Louis, Springfield, Illinois and Indiana divisions has necessitated the running of water trains, which further increased the volume of freight business on the line of road and which aggravated the delayed conditions that the trains were already suffering. This caused an extra consumption of fuel. The water hauled has been rather unsatisfactory, in many instances, due to its foaming properties, and there has been an occasional temporary shortage of the anti-foaming compound. This feature, however, will be corrected at once. Requisitions will be made for this compound promptly and approved without delay.

The "19" train order was considered, and it was apparent that the increased use of it was favored by all present to reduce the delays and extra fuel consumption incident to the use of the "31" train order.

The mechanical inspection of cars at junction points was considered. It was reported that there were many more foreign cars on our line than usual and that their condition, generally speaking, was not as good as ours.

It was suggested that our water facilities be looked into, for the reason that at several points where we depend upon the city supply for our locomotives we have been cut off when the supply of water began to diminish, necessitating the hauling of water from elsewhere for locomotive use.

New Orleans Welding Plant Saves Money

By G. A. FOX,

Accountant, New Orleans Storehouse

The Illinois Central System is now maintaining and operating, in connection with the store department, roadway welding plants at several points which have attracted wide interest, due not only to the new method of reclaiming track material but also to the remarkable saving made in this class of material.

At New Orleans the work, which consists mostly of repairing worn-out frogs and switch points, has developed to such an extent that the scrap trains now carry an extra flat car to collect material to be repaired. As the train moves about, the frogs are classified by the track supervisor. Those that are not too badly worn at the point or that have only one wing broken are placed on the extra flat car. At the plant the frogs are unloaded on long ramps and are placed side by side, so as to be easily accessible for inspection.

One welder and helper do all the work. The shop equipment consists of cutting and welding apparatus, a forge, an air riveting hammer, a portable air grinder and overhead trolley. First, the frogs are inspected

Frog before and after welding

and broken wings are replaced by good ones from another frog of similar size and pattern of rail. Rivets on the base plates are then renewed and tightened up all around. Worn down points and wings are then built up to the former size with a welding torch. After cooling, the frog is brushed off with a steel wire brush and painted black. The date and number of the frog are then stamped with steel letters on the guard wing for future observation in service. After the ends are painted yellow, to designate that it is a repaired frog, it is ready for service. Switch points are repaired in much the same manner.

Main line and ground throw switch-stands are being so successfully repaired that it is difficult at first to distinguish them from new material. Owing to their few movable parts, they are easily repaired. Throw levers are riveted and then welded to the staff. Shoulders on notches in the base are then built up to proper size. Targets are removed, straightened out and replaced. After the old paint is burned off a new coat is applied, and the switch stand is again ready for service.

The cutting torch has also been indispensable to the bridge and building department in cutting shapes and structural steel, both in place and on the ground.

Location of the plant at New Orleans is

Method of handling frog to be repaired

Eighty-eight

Illinois Central Magazine

Switch stands before and after welding

ideal, as it draws on both the Yazoo & Mississippi Valley and Illinois Central main lines, including the New Orleans terminal, for second-hand material. It is equally as

Repairing switch material

well situated for distribution of the repaired material. Records are kept showing the exact cost of repairing the various items, and monthly statements are prepared showing the savings effected by using the repaired articles instead of new ones. At this point this saving runs approximately \$500 a month, or \$6,000 a year.

Indiana Division Loses a Popular Surgeon

In the death of Dr. J. T. McDonald at West Baden, Ind., November 14, the employees of the Indiana division of the Illinois Central lost a good friend. Many are those whom the doctor helped not only by administering to their physical ailments but also by being a real friend in various ways. Below is an editorial taken from the Mattoon *Daily Journal Gazette* which expresses the feeling of Indiana division employees:

"In the death of Dr. J. T. McDonald, Mattoon has suffered a severe loss, second only to the loss that this community suffered in the passing of Dr. C. B. Fry. Doctor McDonald practiced medicine because he wanted to minister to the suffering, not because he wanted to accumulate money. We doubt not that had Doctor McDonald been a man of wealth he would have almost completely confined his practice to those persons who could not afford to pay for service. Apparently he had no desire for money; all he wanted was enough to live on, enough to give him greater opportunities for study and to extend his work of charity. He was a generous, considerate, capable, kind, charitable man, whose untimely death is mourned in many homes in this community."

Doctor McDonald was born in St. Louis, Mo., November 15, 1861. When a small child, he came with his parents to Shelbyville, Ill. There he attended the public school and grew to manhood. He was graduated from the College of Physicians and Surgeons in St. Louis March 23, 1898, and began practicing his profession in Taylorville, Ill. In

Dr. J. T. McDonald

1901 he took a post-graduate course in the New York Post-Graduate Medical School. In 1902 he came to Mattoon to practice medicine. In 1907 he took a post-graduate course in the Illinois School of Electro Therapeutics and a course in the Post-Graduate Medical School and Hospital of Chicago, while in 1914 he took a course in the University of Vienna.

He suffered a slight stroke of paralysis December 5, 1921, and another October 7, 1922. On November 7 he went to West Baden for the benefit of his health; there he suffered the third stroke November 14, passing away November 16. Doctor McDonald is survived by one sister, Mrs. M. J. Casey, and one brother, Dave McDonald, both residing in Mattoon.

The man who cannot control himself cannot control anyone else. Consider the foremen, the superintendents and the managers you know who are most successful. Study them and you will find that their success in properly handling men comes from their ability to properly handle themselves.—JAMES K. SLEE, Vice-President of the Three-in-One Oil Company.

HOUSE PLANS FOR OUR READERS

Southern Pine

Winter evenings offer ample time for deliberate study of house plans, and many employes who hope to build homes in the spring gather their families about them in warm living rooms, while the wind is howling outside, to discuss home needs and desires. The children listen to their parents' discussion of the practical and economical side of home-building, and occasionally the younger minds offer suggestions that are helpful. It requires the ideas of the whole family to plan a home that will be perfectly satisfactory, and careful consideration should be made before a final decision is reached.

The *Illinois Central Magazine* has been trying to aid its readers, who may be planning to build homes, to select a plan that will just suit. The pictures and plans of practical houses have been published in each issue for several months. The plans are of houses that have actually been built, and they have been different each time.

The picture and plan presented herewith are of a 5-room home with plenty of closet, porch and hall room. This design is typical of the fifty to be found in a booklet of modern homes which can be obtained free of charge from the magazine office, through the courtesy of the Southern Pine Association of New Orleans. In addition, the American Wholesale Lumber Association has offered to arrange for the co-operation of lumber dealers and will give expert advice to communities desiring to organize

building and loan associations to finance home-building.

Many of the booklets have been sent out to employes. Hardly a day passes that the magazine office does not receive letters from employes asking for the booklets.

CLAIMS DEPARTMENT

Took the Engine Crew's Word

Mose Davis, a negro, sued the Yazoo & Mississippi Valley Railroad at Cleveland, Miss., for \$300 on account of damage to a horse which, it was claimed, was struck by a train. The plaintiff and another negro testified that the train chased the horse along the track, overtaking the animal, and that the engine struck the horse, breaking the horse's leg.

The testimony of the engineer and fireman was that, as the train approached, the horse started running along the track ahead of the train; that they slowed down and blew the stock alarm; that the engine did not overtake the animal or strike it, but that the horse finally jumped off the track and, in doing so, struck one of its hind legs against the rail of the track, breaking its leg. The jury accepted the story of the engineer and fireman and returned a verdict for the railroad.

Hunter Archer was the engineer; Arthur Bridges, the fireman.

Accidents at Crossings

The accident at Bovina a few days ago and the heavy toll of precious human lives which it collected—the lives of little, innocent, happy children—but calls to our attention once more the fact that no one, no matter how clever a driver he or she may be, can approach with too much caution a railway crossing, the very existence of which is a direct and ever-present signal of danger. The more obscure a crossing is, the less easy to see the track on either side, the more caution should be exercised, and when the track is plainly visible on both sides, do not cross until you have made sure the way is clear and safety is assured.

Do not fool yourself into the belief that you are taking a sporting chance—a true sport does not take a chance, especially an uncertain one, where the lives of others, perhaps women and children, are involved. And another thing—a true sport does not take an uncertain chance with his own life unless he has no other alternative. What would you think of the fellow who took his little trusting child by the hand and deliberately stood in the path of an approaching

mad dog, a poisonous rattlesnake or a maniac armed with a pistol?

The people in the car which you are driving are trusting not only your expert efficiency but your honor and your power to control your mind as well as your hand.

The railway companies use every known device within the ken of the human brain, their railroads are equipped with every invention known to science to guard against such accidents, yet they are called upon yearly to pay out vast sums of money to appease the victimized families where some precious life has paid the penalty of another reckless automobile driver.

In one such instance, where an accident of this kind lost the lives of several people, the engineer, who was absolutely free from blame, was, nevertheless, unable ever afterward to make a run because of his shattered nerves; this, too, in spite of the fact that he knew no other profession and had a large family dependent upon him.

"Use Precaution" is a good motto to guard against danger.—Utica (Miss.) *Leader*.

Arizona Makes Crossings Safer

The Arizona Corporation Commission, in line with the action of other state public utility commissions, recently issued the following:

"General Order No. 87-A, To All Operators of Motor Vehicles Transporting Persons or Property for Compensation:

"Effective at once, all individuals and companies engaged in the transportation of persons and property for compensation within the State of Arizona are required to stop each and every motor vehicle engaged in such transportation service before crossing over any steam railroad, such stop to be made not less than fifty feet nor more than seventy-five feet from the nearest rail of the railroad over which the highway crosses, except where such crossing is a guarded crossing protected by gates or a flag controlled by or operated by an employee of such railroad.

"After making the stop herein required, the driver or operator of the motor vehicle shall carefully look in each direction for approaching cars or trains and shall not start his vehicle until it is ascertained that

no cars or trains are approaching the crossing in either direction."

More Rhyme Than Reason

Here is a poetical claim for damages that has been going the rounds of the newspapers. As it happened, it was not filed with the Illinois Central System.

"My mule got on the railway track, and got knocked off one day, and every time she hears a train, she tries to run away. I started to the field one day and told the boy to fetcher; she jerked him down and ran away, and it took me all day to ketcher. I rented a little swaybacked mule from a neighbor living near, and when I hitched him to the plow he kicked off all the gear.

"Of course, it set me back some to have her bruised and maimed; and I haven't heard a word from you about the damage claimed. The engineer was running his train just as fast as—well; anyhow, he never blowed the whistle and he never rang the bell. It struck her right at planting time and made my crop all late; I couldn't get a mule to plow and had to sit and wait.

"When I filed my claim for damages, I thought for sure she'd die; it bruised her on the hip and breast and cut her neck and eye. Please write at once and let me know what you think I can do, for I need a little dough right now to sorter help me through."

Helps the Claims Department

J. P. Murphy, our agent at Yazoo City, Miss, was born in Yazoo City, Miss., April 17, 1892. He received his education in St. Clara's Academy and the Yazoo City High School. He entered the service of the Yazoo & Mississippi Valley Railroad as warehouse clerk in January, 1911, and worked through the local freight office as abstract clerk, bill clerk and chief clerk, until he was appointed agent in April, 1916, a position he is now filling.

He was married October 26, 1920, to Miss Louise Stubblefield of Yazoo City. In November, 1921, Joe, Jr., was born. Mr. Murphy's principal business now, outside of the railroad, is trying to raise Joe, Jr., to be as large a man as he is.

Mr. Murphy is connected with the Chamber of Commerce as a member of the transportation committee and is a member of the Yazoo City Gun Club, where he spends some of his leisure moments breaking clay pigeons. He is one of the best known and best liked men in Yazoo County.

Mr. Murphy is always able to find time to assist the claims department; in fact, he feels that any part of the railroad's business is his business. His help in preventing

J. P. Murphy

claims and keeping claimants from going into litigation and his good judgment in looking after such matters have saved many hundreds of dollars for the company.
—H. W. H.

ENTERS SERVICE OF C. & O.

M. Welsh, former chief special agent of the Illinois Central System, was appointed chief special agent of the Chesapeake & Ohio Railway Company, with offices at Richmond, Va., October 15. Mr. Welsh was in the service of the Illinois Central between 1893 and 1914. He first started to work as a patrolman and special officer in the Chicago terminal and was transferred to the general roundhouse police department the next year. In 1898 he was appointed chief special agent of the Western Lines, with headquarters at Waterloo, Iowa, and served in that capacity until 1905, when he was promoted to chief special agent of the Illinois Central, Yazoo & Mississippi Valley and Indianapolis Southern. He served as freight inspector for the Illinois Central from 1910 to 1914, and then became the chief special agent of the Seaboard Air Line Railway and the Old Bay Line Steamship Company, with offices at Norfolk, Va. He remained in the latter service until his recent appointment. Mr. Welsh is the father of Maurice A. Welsh of Waterloo, Iowa, superintendent of the Waterloo, Cedar Falls & Northern Railway Company.

HOUSE PLANS FOR OUR READERS

Concrete

It is just as important for a home to have personality as for its owners. This 5-room bungalow, the Malvern, designed in the style of the eastern Pennsylvania cottage, not only expresses a personality of its own but indicates genuine comfort, too.

The large gable gives a size and character to the front that is not often possessed by flatter roofed suburban bungalows. The graceful wood columns of the front porch, with the good architectural proportions of the cornice, will give an air of dignity to this house that is hard to duplicate. The architects desire to have this house set low in the ground by grading up with excavated material around the front and sides, so that the front porch is almost level with the street. This helps to produce the snug effect that adds to the charm of the English and French country cottages.

The living room, which is entered from the porch through folding French doors, has a fireplace and triple window set into a square bay, large enough to place a davenport in. The fireplace is on an inside wall to insure maximum conservation of heat, and the cellar flue is in the same stack. The architects have designed a white pine mantel with brick linings and hearth that will greatly enhance the appearance and comfort of the room. The dining room just beyond is connected by folding doors.

Those who prefer one big living room

FLOOR PLAN

will find that by combining the dining and living rooms shown here, omitting the dividing partition, they will have a fine room more than twenty-six feet long by more than twelve feet wide.

The front bedroom has cross ventilation, and between this and the rear bedroom is the bathroom. They are shut off from the living room by a closed lobby, and from

this stairs go into the attic, which is shown unfurnished.

The cellar contains laundry, fuel and boiler room, storage closet and space for a work bench.

The width of the building is twenty-five feet, and it could stand on a lot thirty-five feet or wider. It is designed for a western or southern frontage. If placed on a lot facing north or east, the plan should be reversed.

This design is taken from a group of twenty-five plans appearing in an elaborate plan book called "Concrete Houses" pub-

lished by the Portland Cement Association, 111 West Washington Street, Chicago, Ill. Through the co-operation of this association we are enabled to publish plans of these portland cement stucco houses each month and to offer our readers this house plan service. The plan book, "Concrete Houses," can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valuable data on that subject, including photographs of many attractive stucco houses, but not including plans, can be obtained free of charge upon application to the editor.

Importance of Knowing One's Own Duty

By H. E. BRAGG,

Chief Clerk to Superintendent,

Passenger Service, Chicago Terminal

As I was reading President C. H. Markham's article appearing in the *Railway Review* of November 11, one particular item impressed me very forcibly. It was that portion of a paragraph reading as follows: "A very large majority of the employees of the railroads are good citizens who do their duty as they see it and who desire to contribute their share to their country's progress and prosperity."

The thought struck me that any employee would profit from reading it, and yet again I wondered how many of the railway employees really know what their duty is.

Myself a railway worker, having been with the Illinois Central twelve years in different capacities in the operating department, I have had an opportunity to observe the different types of fellow employees engaged in railway work. Coming in close contact with many of them, I found in most cases they were interested in the work assigned to them, but confined their efforts to that particular assignment, thereby making it a sort of daily mechanical routine. Most of them apparently were not interested in conditions outside of their assignment, possibly because in some cases they had not been given an opportunity to familiarize themselves with the work of other positions, and in other cases because they lacked ambition to obtain information other than that connected with their regular job. Consoling themselves with the thought that their duty was being performed by them (as Mr. Markham puts it) "as they saw it" and not having been educated otherwise, they went along from day to day, not realizing that they were lacking in many ways—not particularly in failure to perform their work properly or in fail-

ure to give an honest day's work for what pay they received, but because they did not interest themselves in the work of others working with them, to know whether they could be of any assistance or broaden their own knowledge and at the same time make it possible to increase efficiency in the department as a whole. This co-operation, I think, is essential in each and every department of any business.

I have observed instances which would lead one to think that some particular department of the service was entirely foreign to the rest of the organization. Had duty been considered in the same light as I see it, the department would be a part of, instead of a part in, the organization.

Duty to an employer, to my mind, should be the first consideration of every employee, as it is through the employer that he is enabled to gain a livelihood, and the employer's success necessarily depends upon the employee's ability and willingness to do what is right by his employer.

The success of both is dependent upon each other; therefore, the desire to succeed should be uppermost in the mind of all regardless of the capacity in which employed.

Duty to the employer again should be considered by the employee when it becomes necessary to decide as between the employer and certain factions attempting to poison the minds of the employees by propaganda spread to disrupt an organization that it has possibly taken years of effort and much expense to build up, to establish efficiency and reciprocal confidence, all of which are essential to business success.

If an employee will consider duty from every angle, he will without doubt find many ways to better his own situation, pave the way for advancement and at the same time assist his employer to operate his business successfully.

Material Means Money

Save It

Treated Timber

Causing timber to decay through abuse is to imitate a parasite.

—Poor Richard III

The Illinois Central uses annually more than 40,000,000 feet of lumber, approximately 4,750,000 feet of which are treated to prevent decay. The cost of the untreated timber is more than \$1,400,000, and 700,000 gallons of creosote oil are used in the treatment of the timber, at a cost of about \$100,000 for oil alone, making the total cost of all timber, including treatment, \$1,600,000, the cost for treated timber alone being nearly \$400,000 a year.

The figures above represent the timber used by our own forces and do not include timber used by contractors or ties and piling.

The purpose of treating the timber is to prevent decay and extend its life. The treatment consists of impregnating the timber with a preservative, which is usually creosote oil. The efficiency of the treatment depends upon the depth of penetration of the oil and the extent to which the untreated portion of the wood is scaled against decay by the treatment.

Cutting, sawing or damaging the treated timber in such a way that the untreated portion of the timber is exposed destroys the effect of the treatment and is an expensive waste of material.

Creosoted material should not be bruised

or handled in a manner likely to cause damage or mistreated with bars, picks, cant or lug hooks in such a manner as to penetrate the treatment. If grab hooks or cant hooks are used, every effort should be made to avoid damage to the timber. It is, of course, sometimes necessary to cut and frame treated timber after treatment, but extreme care should be exercised to see that the work is done in a careful manner and with as little damage to the treatment as possible. Hot creosote oil should be applied to the cut portion in every case. Treated timber should never be used for temporary work, such as forms, shoring trenches, staging or other purposes where untreated timber will answer, as the cost of treatment practically doubles the cost of timber.

AN EXCHANGE OF IDEAS

Business knowledge was never so cheap or so priceless as it is today. Business men are exchanging information frankly and freely, giving and taking from the common store. The "hows" and "whys" of buying, selling, manufacturing—the "rights" and "wrongs" of credits, collections, advertising, correspondence—the "do's" and "don'ts" of custom-service, finance management—all these are now within the reach of any individual who has common sense and industry and a real desire to know.—W. C. HOLMAN.

Creosoted timber at the treating plant, Grenada, Miss.

Many Experiences in 44 Years of Service

*W. B. Curley, Kentucky Division Engineer,
Held Speed Record and Was in Wrecks*

By **GEORGE W. SHAUGHNESSY**,
District Foreman's Office, Louisville, Ky.

WILLIAM B. CURLEY, engineer on the Kentucky division, was recently pensioned after nearly forty-four years of service.

Mr. Curley was born September 19, 1857, in Altamont, Garnett County, Md. His father, Thomas Curley, an old railway man, served as section foreman on various roads for many years and died in 1892.

Mr. Curley was educated in Ohio County, Kentucky, and at the Catholic Brothers' School in Louisville. He began work on the railroad at the age of 15 years, driving a cart. He next carried water and then worked on the section and in various positions until August, 1878, when he began work on the Paducah & Elizabethtown Railroad as brakeman, a place in which he served eleven months.

Following this he served as fireman two years and ten months and was then given an engine on the Paducah & Elizabethtown, now the Kentucky division of the Illinois Central, remaining until 1883, when he had an accident at Fox Run, Ky. He left the service and took a position on the Louisville & Nashville as engineer. In 1884 he returned to the Chesapeake, Ohio & Southwestern, now the Illinois Central, as an engineer on freight and passenger runs. His last runs before being pensioned were trains Nos. 101 and 102 between Louisville and Paducah, runs which he held for nineteen years and six months. In 1894, at the time of the strike, he had been on a vacation. He came back and took an engine, not knowing of the strike. Someone threw a switch, and the engine was thrown on the side and cars piled up.

Set Speed Record for Freight

Mr. Curley was always considered one of the Illinois Central's best engineers. On May 9, 1896, with thirteen loaded freight cars and engine No. 603, he made a record run from Central City to Louisville—127 miles in three hours and thirty minutes—which up to 1900 had not been equaled.

Mr. Curley's most serious accident in his long service on the road was on engine No. 1040, train No. 101, July 20, 1913, when the engine turned over and tumbled down a 12-foot embankment, landing in a wheat field. The engine, tender and baggage car turned over, and all the coaches left the

William B. Curley

rails. The wreck was caused when some boys put a spike between the rail joints. The Central City *Argus* of July 22 had the following to say of Mr. Curley: "When they were removing him from the wreck, Engineer Curley showed himself to be one of the gamest men on record, insisting that the passengers be given first aid. As he was carried from the wreck he made his bearers stop twice so that he could view the scene, remarking that it was 'some spill.' He also asked someone to hunt for his watch."

Another wreck previous to this one happened at what was known as Shegog Curve, west of Central City. Mr. Curley ran the engine's nose about six feet into the mud, one of the most remarkable wrecks in railway history. The engine ran straight down an embankment into a ditch, taking an entire rail out of the track, but the train went on by, bumping over the ties where the rail was missing and climbing back on the next rail. The entire train passed the point where the engine lay in the ditch. Engineer Curley was slightly hurt, but insisted upon completing his run with one arm in a sling.

Praised for Careful Running

Mr. Curley was always a careful runner

and has in his possession numerous letters commending him for careful running. Among these letters, which Mr. Curley prizes very highly, is one from Vice-President L. W. Baldwin, written while he was general superintendent, reading as follows: "My Dear Mr. Curley—Your stopping train No. 101 north of Grand Rivers Saturday, September 11, to avoid hitting a cow was noticed by me with a great deal of pleasure, and I wish to thank you for the interest manifested. If all of our men will display the the same amount of interest that you did in this case, our payments for the killing of stock will soon reach a minimum."

When Mr. Curley made application for pension he claimed continuous service for only 37 10/12 years, on account of being out of service during 1883, but in appreciation of Mr. Curley's exceptional record the company allowed him pension for all the time from 1878. He is now in good health and has the best wishes of all that he may enjoy the rest for many years to come. His is the largest pension allowance of any engineer pensioned at Louisville, Ky.

Mr. Curley is a member of H. Graves Di-

vision No. 485, B. of L. E., of Louisville, Ky., serving as secretary and treasurer for the last thirty-four years; he is also a member of the Knights of Columbus and the Elks. He is a good-natured, jolly man, always with a smile, a man of honor and one who is well liked by the community.

Mr. Curley has been married twice. His first wife was Miss Dooley of Elizabethtown, daughter of J. Dooley, section foreman for the L. & N. His first wife died in April, 1905, and he married Mrs. Sallie Linton White in November, 1914. They now reside at his old home, 1531 Garland Avenue, Louisville.

A LUCKY FINDER

Miss Elizabeth Burkie, employed in the office of the general superintendent of transportation at Chicago, found \$2,000 worth of first mortgage gold bonds in a downtown Chicago store December 5. The owner was located through a lost and found advertisement in a Chicago newspaper, and Miss Burkie received a reward of \$100 for the return of the bonds.

Memphis Division Has Christmas Booklet

Cover design, Memphis division Christmas booklet

Employees of the Memphis division of the Yazoo & Mississippi Valley Railroad of the Illinois Central System gave their friends a surprise this Christmas by sending out, as Christmas cards, booklets giving information about the division and carrying the pictures of seventy-seven of the officers and employes at the Memphis headquarters. The cover of the booklet, which bore the design shown herewith, was printed in red and green. Information about the division was given as shown on the page next after this, and then came the pictures of the employes, as reproduced on succeeding pages of this issue of the magazine. Inside the back cover was printed the diagram of the division's lines. Much of the work of getting up the booklet was handled by Joe Concklin, division accountant, assisted by F. J. Theobald, chief clerk to Superintendent J. M. Walsh. Mr. Concklin will be remembered by our readers who saw his story regarding Isaiah Smith, coal-saver, in the November, 1921, issue of this magazine.

The employer first learns to respect, then to honor and finally to love the executive who is strict, but just; firm but kind; and this is the executive who will draw out of his men the very best there is in them.—*The Watchman.*

MEMPHIS DIVISION

THE Memphis Division of the Yazoo & Mississippi Valley Railroad extends southward from Memphis, Tenn., to Cleveland, Yazoo City, Gwin, Grenada, Durant and Charleston, Miss., and is also the main source of transportation for the important business centers of Clarksdale, Miss., Greenwood, Miss., and Helena, Ark.

It comprises 535 miles of main track and 145 miles of side track, divided into twelve operating districts. It serves the states of Tennessee, Mississippi and Arkansas. Three thousand employes are required in its operations; the average monthly payroll being \$350,000.

The principal commodities handled are lumber, logs, cotton and cottonseed products. In addition to the business originating on the division, all through business between Chicago and New Orleans moves over the "Low Grade Line" between Memphis and Gwin. This last item alone amounts to 2,000,000,000 gross ton miles a year.

Daily operations consist of 38 regular passenger trains, 23 local freight trains, 16 through freight trains, 7 switch engines and 81 stations. Normal monthly business amounts to 85,000 passenger train miles, 385,000 passenger car miles, 115,000 freight train miles, 240,000,000 gross ton miles and 1,750 switch engine hours.

During the last two years, a total of \$1,750,000 has been spent for improvements, and the Memphis Division now ranks as one of the largest and most important links of the Illinois Central System.

What Patrons Say of Our Service

Calls Our Service the Best

Miss Louise Graham, writing from the Joint City Ticket Office, St. Charles and Gravier streets, New Orleans, recently gave President C. H. Markham the following information:

"After traveling about the United States for a number of years, including all trans-continental lines, I cannot refrain from saying that the best service I have ever experienced was on your Panama Limited leaving Chicago yesterday. My intention was to come to New Orleans via another line, but Collver & Miller, booking agents in Cleveland, persuaded me to use the Illinois Central. May I speak particularly of the courteous maid, Anna Maupin, and Neal, the porter. I think I particularly appreciate all this because I am accustomed to making frequent trips over other lines. For fifteen years I have been on the editorial staff of the *Cleveland News* and am en route to the tropics. I stopped in this office to express my appreciation, and one of the young men graciously agreed to type this for me."

Saw No Room for Improvement

Henry Coffin, who is addressed in care of the Canadian Pacific Railway Company, Kingston, Ontario, Canada, recently wrote as follows to President C. H. Markham:

"Some weeks ago, while on a trip to the South, I traveled via your line from Chicago to New Orleans and return, and, although I have traveled extensively in America, I have yet to find a road where courtesy, efficiency and comfort are more in evidence. Your dining car service is unequaled; food, good and splendidly served; sleeping cars, well kept and elegantly furnished; in fact, I could see no room for improvement.

"I wish particularly to mention the extreme courtesy shown by Conductor Ashton and his men upon whose train I came into New Orleans.

"I wish further to say that should I or any friend travel South at any future date we will not forget the Illinois Central."

Praises Rapid Movement of Car

A. D. Wicks, assistant sales manager of the Finkbine Lumber Trustees, Jackson, Miss., recently wrote as follows, addressing Agent J. L. Morgan of Jackson, Tenn., Yardmaster R. W. Hardin of Jackson and

Agent S. B. Morris of Benton, Ill., as well as the Davis Lumber Company of Benton, Ill., and various officials of the Gulf & Ship Island Railroad:

"Car Wabash-7667.

"We feel that all of you will be interested in the movement of the car above. We occasionally have cause to complain because of slow movement, and we do not hesitate to do it. Then, again, we have what we consider very unusual service, and in a case of this kind we do not mind handing out a few bouquets.

"The car above was consigned to the Davis Lumber Company, Benton, Ill. It left D'Lo, Miss., about 2:30 p. m., November 11, and the car arrived at its destination and was set out on the siding at Benton, Ill., about the noon hour of November 13. This is certainly wonderful service, and we want to thank everyone who had anything to do with the movement."

Likes Service on the Floridan

D. M. Compton, president of the Quaker Manufacturing Company, Chicago, Ill., recently wrote to President C. H. Markham:

"I have just completed a round trip to Jacksonville on your new train, the Floridan, and want to express my appreciation of your service. It was the most comfortable long-distance ride I ever experienced. The equipment was excellent, and the courtesy of the trainmen particularly noteworthy. I would mention especially a Mr. Carruthers, a north-bound conductor, and Mr. Simpson, dining car steward, whose names I happened to learn.

"Passengers are prone to complain when the service is bad, and I feel it only fair that you should be congratulated when you make an especial effort to render good service as you have on your new train."

The Floridan's maiden trip through Mattoon, Ill.

McComb Employes Teach in Trade School

*Illinois Central Shop Foremen Co-operate
in Extension Work Offered to Citizens*

Opportunity

They do me wrong who say I come
no more,
When once I knock and fail to find
you in;
For every day I stand outside your
door,
And bid you wake and rise to fight
and win.

By R. E. REVERE,
Machinist, McComb, Miss.

THE McComb, Miss., School Board and Superintendent Joseph E. Gibson of the city schools indorse the sentiment

of this poem by operating in a practical way a free trade extension school. They believe that no man because he is grown and working for himself need surrender his ambition to get ahead in his trade.

Accordingly they are setting up for the second season a trade extension school that is financed by the federal and state Vocational Education Board, together with the city of McComb. It is being operated as a part of the McComb schools.

There is no tuition charge, and any man employed in any of the trades is eligible to attend the school. Last session a similar school was operated for twenty-four weeks, twelve weeks before and twelve weeks after

Above are employes of the Illinois Central who are instructors in the trade extension school at McComb. They are: 1, Albert Andrews, car foreman; 2, W. D. Lyon, assistant machine shop foreman; 3, R. E. Martin, assistant boiler foreman; 4, Edwin Wennerlund, machinist and electric welder; 5, Eddie Bowen, machine shop foreman; 6, O. C. Hughes, assistant general car foreman.

Christmas. In the school last year ninety-six men were enrolled, almost all of them being employed in the Illinois Central shops. The instructors were all foremen in the shops. These foremen reported a distinct improvement in the efficiency of the men who attended the school, the men being instructed in trades connected with railway work. The courses for the first eight weeks this year were as follows:

Monday and Wednesday evenings: Shop Mathematics, W. D. Lyon, Instructor; A. R. A. Rules, O. C. Hughes, Instructor; Machine Shop Practice, Edwin Wennerlund, Instructor.

Tuesday and Friday evenings: Air Brakes, Eddie Bowen, Instructor; Car Shop Sketches, Albert Andrews, Instructor; Heavy Sheet Metal Layout and Boiler Work, R. E. Martin, Instructor.

Being convinced of the value of this trade extension school, the railway officials at McComb are giving to Superintendent Gibson their hearty co-operation and support in making the trade school a success. The officials particularly interested are: T. J. Quigley, superintendent, Louisiana division; E. C. Roddie, master mechanic; R. R. Royal, general foreman; R. M. McEwen, car foreman.

McComb schools for a number of years have been noted for leadership in vocational education. Part-time co-operative classes were in operation up to and through the period of war. These classes were between the McComb High School and the Illinois Central shops, giving the boy who wanted to learn a trade in the shop a chance to go to school one week and work one week

for a period of five years. These classes were discontinued only when they were rendered impractical by shop rules promulgated during the period of government control of the railroads.

McComb's future as a vocational education center was made secure last year by the princely gift of William McColgan, his brother and sister of \$400,000 to the city of McComb for the establishment of a trade high school. Mr. McColgan was formerly employed as blacksmith in the shops at McComb. He says that he wants the youth of McComb to have opportunities which were not afforded him, such as that of a trade education.

DIFFERENCES IN JUDGMENT

"Take two persons of your acquaintance, two business men, for example," says Doctor Casamajor. "One is always making mistakes; the other succeeds because of his keen judgment. The difference between them is simply that the successful man compares the impressions his brain has received in previous business experiences and chooses the reasoned reaction. The other one has been unobserving; so he hasn't accumulated as many impressions, or memories; and he does not compare those he has. So his judgment is poor. As nearly as we can explain it, that accounts for very many of the striking differences in intelligence. One man uses his equipment; the other one doesn't."—From "You Can't Judge a Man's Mind by the Size of His Hat," by KEENE SUMNER in *American Magazine*.

NEWS OF THE DIVISIONS

AROUND CHICAGO

Randolph Street Offices (Marion Pressler)

File Clerk Frank Davis of the Randolph Street office has taken considerable interest in the engagement of the Hagenback-Wallace Circus at the Coliseum at Chicago under the auspices of the "Boy Builders." Frank is a loyal worker for the cause and there will be nothing left undone, so far as he is concerned, to make it a success.

Station Master's Department (C. Y. Kenney)

J. C. Horton, switchman in the coach yard, was stricken suddenly with appendicitis, Sunday, December 3. He was rushed to the Illinois Central Hospital, where he was operated on. His condition is now favorable.

Suburban Passenger Service (A. E. Johnson)

Woodlawn Division, No. 327, O. R. C., has elected the following officers for 1923: Chief Conductor, J. One Hundred Eight

J. Tierney; Assistant Chief Conductor, D. O. Campbell; Secretary and Treasurer, H. B. Darling; Inside Sentinel, E. H. Cahill; Outside Sentinel, W. S. Harvey; Senior Conductor, G. W. Comer; Junior Conductor, H. Buckbinder; Trustees, C. W. Hollingsworth, W. W. Kenney, A. F. Pomeroy. Local Committee of Adjustment: W. P. McElroy, chairman; A. B. Springer, vice-chairman; W. W. Kenney, secretary.

On January 14, 1923, the degree team of Woodlawn Division, No. 327, O. R. C., will go to Pittsburgh, Pa., to initiate about five hundred members. This will be one of the largest classes ever received into the order. This team enjoys the distinction of being listed among the best in the country and receives requests from all over the country to participate in initiations.

Signal Department (O. M. Kaplan)

John Hermansen, employed as signal foreman on the Chicago terminal since September, 1911, died at Mercy Hospital, Chicago, on October 20, after a short illness. Mr. Hermansen was 63 years of age

on September 22. He is survived by his wife. Mr. Hermansen is missed by all who knew him. A man of high character, with kindness for all and a sense of good humor, he was liked and admired wherever he went. His faithful service to the Illinois Central is not unappreciated by the officers under whom he worked, and the many employes who worked with Mr. Hermansen will never forget him nor his kindness.

South Water Street
Station

John Hermansen

Sympathy is extended to John G. Sullivan because of the death of his little son, 2½ years of age, who died on November 27. This little one drank some liniment which had been accidentally left within his reach and died within a few hours.

A local sleuth, John Walsh of the claim department, broadcasted the startling information about the second week in November that Thomas Coyne, who has been posing as a confirmed bachelor, was not, so to speak, confirmed at all, and had all arrangements made to be married on November 27. The news was found to be correct, and the wedding

A NEWS-GATHERER

Here is Rufus Kemp, Jr., our Tennessee division editor. Mr. Kemp was employed as secretary to the roadmaster at Fulton in October, 1920, and is now trainmaster's clerk at Fulton. He was born in Kentucky, but was reared in Illinois, where he received his education, finishing high school and business college and acquiring several years' experience in clerical work. He was made division editor in April, 1921. To date he has never failed to submit something to the magazine from the Tennessee division each month, as well as to originate interesting articles and bulletins in all the efficiency campaigns on the division.

took place on that date. Mr. Coyne has now returned to his duties after a honeymoon in St. Louis, Mo. Mrs. Coyne was formerly Miss Anna McNamara, who was employed at 63d Street. Their many friends extend their good wishes.

Baggage and Mail Traffic Department

F. A. Barr, traveling agent, baggage and mail traffic department, was called to his home in Blountsville, Ind., because of the illness of his mother, but before his arrival, on Thanksgiving Day, she passed away after an illness of only forty-eight hours. Mrs. Barr was 82 years of age.

ILLINOIS DIVISION

Yard Department, Springfield, Ill.
(William P. Herman)

N. B. Clark, general yardmaster at Springfield, is off duty on account of a severe cold.

Charles Meador, yard clerk at Springfield, passed out the cigars the other day for a 10-pound boy. Mother and son are doing nicely.

K. Nardness, switchman at Springfield, has been

at the Illinois Central Hospital in Chicago for treatment.

Clinton Shops (C. E. Gray)

An improvement at the Clinton shops is the installation of a new 600-ton wheel press. This press takes the place of the old 300-ton press formerly in service.

The new yards at Vandalia, Ill., were formally opened for service Monday, December 11. Mechanical facilities, newly installed, include sand house, cinder pit and coal chute. Switch engine No. 139 has been assigned to service in these yards, with Engineer Fisher Wright and Fireman G. R. Shellabarger in charge.

On Friday evening, December 1, an interesting meeting of all shop employees was held at the Commercial Club rooms. About 250 or 300 employees attended. The principal speakers of the evening were: G. E. Patterson, acting general superintendent of the Northern Lines; C. W. Shaw, division superintendent, and Mr. Fleck, general chairman of the carmen's association. Among other speakers were: W. A. Golze, trainmaster; Frank Walker, trainmaster; M. Sheehan, trainmaster; Roy Downing, division storekeeper; Bert Overy, Roy Lane, Homer Gray and George Crawford. The meeting was in the nature of a "get-together-and-get-acquainted" gathering.

Examinations are being held by our master mechanic, H. L. Needham, and Traveling Engineers C. L. Zanies and John McIntyre for fourteen firemen to become engineers on the Springfield division.

Two new repair tracks are being added to the north yards at Clinton. When completed they will have a capacity of thirty-five cars each.

The death of C. C. Catlin, 68 years old, prominent Illinois Central engineer, occurred at his home in Springfield, Ill., at 1 o'clock Monday morning, December 11, following an illness of one week with pneumonia. Mr. Catlin took a leave of absence from his duties two weeks ago and went to Beardstown, Ill., with a party of friends for a few days' hunting. He contracted a heavy cold which developed into pneumonia. Mr. Catlin was a veteran engineer on the Springfield division. He was formerly an engineer on the Peoria Northern line, between Springfield and St. Louis, and came to the Illinois Central in the capacity of engineer when this company took over the Peoria Northern line in 1898. He had been in continuous service since that time. He is survived by his widow, two sons and one daughter, at home. Funeral services were held Wednesday afternoon, December 13, in Springfield.

Clinton Terminal (Anna E. Murphy)

Seal Clerk William Grier, who has been ill for the past month, is improving slowly. J. E. Black is working in Mr. Grier's place.

Curtis Borton, who has been very ill with pneumonia for several weeks, is still confined to his bed, but is improving slowly.

L. P. Young, employed at the freight house for several years, has accepted a position as assistant baggage man.

Edward J. O'Brien has accepted a position as receiving clerk.

Dispatcher's Office (Gladys Westerholt)

C. E. Virden has accepted the position as agent at Glenarm, vice E. E. Guill, who has accepted the position as agent at New Holland, vice W. H. Rooker, who will be second trick operator at Pawnee Junction, Ill.

H. C. Moyer, first trick operator at East Grand Avenue, has been called to Los Angeles, Cal., by the serious illness of his brother.

The telegraph department is making some improvements in the station at Clinton, installing a new telephone exchange.

One Hundred Ten

Mrs. Eva Gilliland, second trick operator at Maroa, has taken a 90-day leave of absence on account of ill health.

Road Department (W. E. Russell)

Section Foreman Orin Stewart, formerly foreman of the Springfield yards, has been transferred to the Illinois division. He is in charge of an extra gang on new work near Kankakee. C. P. Storey, of Fairman, Ill., was given Mr. Stewart's position at Springfield.

Signal Maintainer J. H. Goddard has been promoted to the position of traveling signal maintainer, with headquarters at Clinton, filling vacancy caused by the promotion of Traveling Signal Maintainer Lynch to signal maintenance foreman. Signalman H. C. Rule was appointed signal maintainer at Mount Pulaski, filling a vacancy due to Mr. Goddard's promotion.

M. Huber, a Chicago contractor, is doing grading work in connection with construction of new repair tracks at Clinton. He is using two of his clam shells on the job.

B. & B. Supervisor S. C. Draper was called to Fairfield, Iowa, the early part of December on account of the death of a relative.

Roadmaster W. E. Russell was called to Benton Harbor, Mich., December 12, on account of the death of his grandmother, Mrs. Cynthia Fridley. Mrs. Fridley was 92 years of age.

INDIANA DIVISION Office of Superintendent, Mattoon, Ill. (Zella MacNair Rose)

Our division has made the biggest percentage of reductions in exceptions in November of any division on the Northern Lines.

D. E. Cummings is relieving agent O. R. Marriott, Dieterich, Ill. The latter is to be married in the near future.

Accounting Office, Mattoon, Ill. (Noriene Quinn)

A delightful Christmas party was given on the evening of December 20 in the parlors of the Mattoon Business Women's Club by Miss Cora Burch, clerk in the superintendent's office, for the young women of the division office. The rooms were beautifully decorated, and a real Christmas atmosphere prevailed. A program was enjoyed early in the evening: Piano solos by Misses Victoria Gustafson and Bonnie Snorgrass; violin solo by Miss Myrtle Flayhart; solo dance by Miss Catherine Stephenson; vocal solo by Miss Florence McShane; dancing was also indulged in. A feature of the evening was the appearance of Old St. Nick, who was given a hearty welcome when he distributed many beautiful gifts from the large Christmas tree. Refreshments were served by the hostess, assisted by Mrs. Zella MacNair Rose, and everybody had a good time.

Office of Trainmaster, Mattoon, Ill. (Essie Reams)

On November 18 announcements were received of the wedding of J. O. Noe, switchman, Mattoon yard, to Miss Bess Toothaker of Mattoon. The young couple had gone to Louisville, Ky., formerly the home of the groom, and had been married on August 10. However, the secret had been well kept, and the news came as a complete surprise to their many friends.

A baby boy, James Riley, was born to Mr. and Mrs. B. Morris at their home, 901 South 17th Street, Mattoon, Ill., November 23. Mr. Morris is a conductor on the Peoria-Mattoon district.

Mrs. Margaret Philhower died at the home of her son, A. W. Philhower, the morning of December 10. Mr. Philhower is a switchman in the Mattoon yard.

Yardmaster O. E. Haettinger of Mattoon spent his vacation in November hunting and bought him a valuable dog thereof, named George. A few days

Illinois Central Magazine

after returning home, George was ungrateful enough to run away, causing several days of anxiety in the Haettinger household. However, the lost was found, and peace now reigns where once was turmoil.

**Office of Trainmaster,
Palestine, Ill.**
(Olive M. Gihler)

Engineer W. E. Delay, after spending several months in Florida for his health, reported for duty December 5, very much improved in health.

C. G. Stucker has resumed his former position as second trick operator at Palestine, Ill. Mr. Stucker's many friends welcome his return to Palestine.

The new siding at Dugger, Ind., has just recently been completed and is being used. The new track is a wonderful improvement, having been very badly needed.

Agent J. J. O'Neill at Bloomfield, Ind., has returned to work after two weeks' illness.

A recent wedding which came as a complete surprise to his fellow workers was that of David L. Saunders to Miss Flossie Hilderbrandt, which took place at the home of Engineer Ed Depoister November 23. The Rev. Robert F. Bristol of the First Christian Church, Palestine, Ill., performed the ceremony. Mr. Saunders is night foreman at the roundhouse in Palestine and has been employed in that capacity for the last three years. The newlyweds have returned from their honeymoon, which took them to Waterloo, Iowa, Chicago and into the eastern part of Indiana, where they visited relatives. They are now at home in East Palestine.

The marriage of Miss Jamina Cross and H. N. McNary took place November 11 at the M. E. Church, Sullivan, Ind., the Rev. Sumwalt performing the ceremony. Mrs. McNary is a daughter of Mr. and Mrs. Alex Cross, well-known farmers residing near Dugger, Ind. Mr. McNary, employed as a brakeman, is a son of Engineer Thomas N. McNary, both being well known on the Effingham-Indianapolis district. Mr. and Mrs. McNary have gone to housekeeping at Palestine.

The new freight house at Bloomington, Ind., will be completed January 1. It is a great improvement over the old one, as it gives much more roomy quarters.

Office of Master Mechanic
(Flora Adrian)

Mrs. Edward McShane, mother of Boilermaker Joe McShane of Indianapolis, Ind., and Miss Florence McShane, secretary to Superintendent Roth, passed away at her home in Mattoon October 22 after an illness of about six months.

J. F. Ryan, son of Engineer J. P. Ryan at New Harmony, Ind., has gone to St. Petersburg, Fla., for his health.

Road Department
(Bonnie Snorgrass)

Lon Sylvester, section foreman at Bloomington, has resigned and is succeeded by Harry Dunbar of Indianapolis.

Pensioned Section Foreman Jacob M. Gaines passed away at his home in Mattoon, Ill., on November 5 at the age of 58 years.

O. E. Haettinger

C. L. Rager has been awarded the new position of report clerk in Roadmaster O'Rourke's office. Mr. Rager was formerly material clerk in this office and previous to that time was clerk to Supervisor Murphy at Bloomington. E. E. Batson, clerk to the supervisor of bridges and buildings, is new material clerk in the roadmaster's office, the position made vacant by the promotion of Mr. Rager, and P. R. Courtney, formerly Supervisor Crane's clerk, succeeds Mr. Batson.

Glenn Henderson has accepted a position as clerk to Supervisor Murphy at Bloomington, Ind.

Office of Chief Dispatcher
(W. C. Scott)

The new telephone switchboard has been installed, and Miss Myrtle Flaharety is the new operator. This saves considerable time for all persons using the phones.

On the night of November 19 the apartment house in which Dispatcher Whitesitt resided burned, destroying almost all of his household property. He was very lucky in having it covered by insurance.

Operator C. D. Stucker, Palestine, Ill., has been reinstated and is back on his old job at that place.

Dispatchers Storm and Evans attended the Knight Templars school of instruction at Carbondale, Ill., December 6. A fine time was reported.

Owing to a slight decrease in business, the second operator on days in "Q" office has been taken off. Operator Douglas going back to the Mattoon yard office.

Office of Agent, Mattoon, Ill.
(W. P. Wooldridge)

Born to Agent and Mrs. A. Gorman a baby girl, November 19—Helen Marie.

G. W. Cunningham ("Billy"), grandson of Switchman G. W. Cunningham and Clerk W. P. Wooldridge, paid a visit to the office November 21. He is only 3 weeks old, but some buster!

Office of Agent, Evansville, Ind.
(A. W. Walling)

P. H. Sheedy, yardmaster at Evansville, has returned for duty after an absence of several months on account of ill health. Mr. Sheedy has been in the service more than 33 years.

Mrs. C. C. Kunz, wife of the agent at Evansville, and daughter, Margaret, who is employed as extension clerk in the local office, have returned from New York after a three weeks' visit with relatives.

J. H. Cobb, machinist in the local shops for a number of years, has been transferred to Mattoon, Ill.

C. H. Munson, veteran engineer of the Indiana division, was accidentally struck by a United States

Dubuque, Iowa, from top of 4th Street bluff

Saturday, December 9, Prof. E. E. King and his class in railway engineering from the University of Illinois visited our interlocking plant at Champaign, Ill., where an endeavor was made to explain this type of interlocking to them by actual operation. A skeleton lever unit which we use in our own educational meetings was used to explain the locking and indication features. Here is a picture of Professor King and his class at the interlocking tower. Professor King is at the left.

mail truck at 6:15 p. m., Saturday, December 2. Mr. Munson, whose residence is directly opposite the shops at Evansville, had quit work for the day and was returning to the shops for a package he had forgotten when struck by the truck. He was rendered unconscious, and, although hurried to St. Mary's Hospital, died within thirty minutes after the accident. Mr. Munson served in various capacities on the Illinois Central, working as bridge construction foreman, as machinist and as locomotive engineer. The body was taken to Mattoon, Ill., his former home.

Office of Agent, Indianapolis, Ind. (Margaret Clifford)

George H. Comstock, for eleven years clerk in the local office, left the service recently on account of ill health.

The local office bowling "league" of girls and men is showing so well that there will be challenges issued soon—providing drug stores keep a good supply of liniment in stock.

The remodeling of the freight office and new platforms and driveways in connection with the taking over of the Lake Erie & Western is now completed. The change adds greatly to our facilities and is much appreciated by patrons of both roads.

Decatur, Ill., Freight Office (Helen Krafft)

The position of O. S. & D. clerk has been accepted by Sam Roucher.

E. A. Perry, who was employed as flagman at this station until forced to leave by sickness, died in the home of his daughter, Mrs. Duffy, on October 24. The body was taken to DeKalb, Ill., his former home, for burial. Mr. Perry was a Civil War veteran. One of the interesting incidents of his life was being present at the Ford Theater the night President Abraham Lincoln was assassinated.

ST. LOUIS DIVISION

C. Gurley, Balcom, Ill., died at his home in Balcom the night of November 25. He was the father of Dispatcher Ray Gurley and Miss Augusta Gurley, stenographer, both now working in Superintendent Atwill's office, Carbondale. Mr. Gurley was buried at Balcom November 27.

Eunice Rentfro, stenographer-clerk in Roadmaster Kern's office, Carbondale, has resigned. Mrs. Rentfro

has filled several positions in Superintendent Atwill's office.

L. E. Bryant of Centralia, Ill., has been awarded the position of freight train performance clerk in Division Accountant Foley's office. Mr. Bryant has moved his family to Carbondale.

Miss Ethel Harris, switchboard operator, division office, was off duty a few days recently on account of sickness.

Mrs. Lynn, wife of Engineer E. H. Lynn, died in Holden Hospital, Carbondale, December 3. She was buried in Oakland cemetery, Carbondale.

The Floridan made its first trip through Carbondale on December 5. Needless to say, it was right on the dot.

H. B. Atkins, extra dispatcher, Carbondale, is working on the Illinois division, temporarily, as dispatcher.

D. C. Moss, assistant account, division office, Carbondale, played the leading role in a home talent play, "The Cameo Girl," recently given in the Barth Theater, Carbondale. "Mossie" is a whirlwind on the stage and from all appearances has missed his calling by working as an accountant.

Several passing and yard tracks are being constructed in the vicinity of Makanda and Carbondale, Ill., by Contractor M. L. Windham.

Leo B. Sturgeon, vice-consul, Yokohama, Japan, is visiting the family of Dispatcher C. S. Scott, Carbondale. Mr. Sturgeon is a cousin of Mrs. Scott.

The passenger station, Carbondale, has just been given a coat of paint, which adds very materially to its appearance.

C. M. Brooks ("Brooksie"), who has been working at the division office for several years, is soon to take unto himself a bride. The lucky girl is Miss Fay Chambers, Centralia. She is now teaching in the schools at Centralia.

Julius Kahle, Sr., Centralia shops pensioner, died November 21.

Engineer B. H. Middleton and Fireman Fred Baggott have recently been active in picking up angle cocks and air hose around Herrin yards, Herrin, Ill.

Pensioner W. G. Kruger died at Centralia, December 8. Mr. Kruger was a pensioned conductor.

Engineer Harry Lemmon, East St. Louis, recently discovered IC-91248 off center and he took necessary initial steps to have the trouble corrected.

Agent R. J. Hooks, Olive Branch, Ill., recently observed a brake beam down on NP-45054 and took

"My Hamilton Times the Chicago, Washington, New York Limited"

BACK of the powerful 5200-type locomotive, speeding this fast Baltimore and Ohio train, is the clear eye and steady hand of Engineer H. W. Fauver—and the Hamilton Watch he has carried for fifteen years.

It is significant that wherever you find fast limited trains, you will find Hamilton Watches keeping them to schedule. The Hamilton is not only as accurate as a watch can be, but it is also dependable, sturdy, and sure.

The favorite of Most Railroad Men is the Hamilton No. 992, which can be purchased from any jeweler at \$48.50 for the movement alone.

If you want accurate time with doubt eliminated, invest in a Hamilton. It will render you hourly dividends of true time—and prove cheapest in the end.

We will gladly send our New "Time-keeper" to any Railroad Man writing for it. It tells the story of the Hamilton Watch, and gives much valuable information.

HAMILTON WATCH COMPANY

LANCASTER, PA., U. S. A.

Hamilton Watch

"The Railroad Timekeeper of America"

the necessary measures to have the trouble corrected.

Mechanical Department, Centralia District
(Thelma C. Gilpin)

At Centralia Shops there has been recently installed a total of \$41,000 worth of new and up-to-date machinery, relieving obsolete machines which had been in service for a number of years. This new machinery will greatly facilitate repairs and output.

Engine 2932, a 2-10-2 type engine, has been permanently transferred to Centralia for service in the yard on account of the increased business.

Master Mechanic C. M. Starke was called to Oelwein, Iowa, on November 21 by the illness and death of his grandmother, Mrs. M. S. Morgan. He took her body to Water Valley, Miss., for burial.

W. J. McCloskey, general car foreman at Centralia, left on December 12 on a week's inspection tour of the Memphis, McComb and New Orleans car departments, making an investigation of conditions at these points with the view of improving the car department at Centralia.

Saybert L. Loomis, clerk in the master mechanic's office, returned to Centralia on December 7 after being in the Illinois Central Hospital in Chicago for ten months. He is still unable to resume work and will spend the next few months in Florida.

E. J. Ellis, engine lister at Centralia roundhouse, is spending December in Florida and Cuba.

A hunting party consisting of C. A. Schaffer, general tool inspector; W. J. McCloskey, general car foreman; W. L. Becker, chief clerk to the master mechanic; A. F. Jenkins, chief accountant at Centralia, and B. F. Correll, car foreman, opened the quail season November 10 in Centralia by getting the limit allowed by the game laws of Illinois. Everybody was ready at 6 a. m. and left for George Correll's farm, about fourteen miles southeast of Centralia. Mr. Correll had the dogs ready and knew where nearly all the coveys were located. The day was ideal, and everyone enjoyed himself thoroughly—at least up until 2 p. m., when everyone counted up and found he had the limit for the day. It was then decided to hunt squirrels. Car Foreman Correll, being an old hunter, decided to climb the trees. While he was up in the thick bushes, one of the hunters mistook him for a gray squirrel and "cut loose," putting several holes in his anatomy. Immediately after the report of the gun the whole party knew that a mistake had been made. They got Correll out of the bushes and made an examination. Fortunately Mr. Schaffer had brought some first aid supplies from Chicago. After these were adminis-

tered, Mr. Becker took the victim to the company surgeon's office, where his injuries were dressed. Mr. Correll reported for work November 12 no worse for the damage. This is an annual hunt participated in by the above-mentioned nimrods and is looked forward to by each man as "reunion day."

Freight Office, Benton, Ill.

(W. D. Brotherton)

A baby girl, Doris June, was born to Mr. and Mrs. Archie P. Hodge, November 13, at their home at Benton, Ill. Mr. Hodge is chief yard clerk at Benton.

Miss Eva Goss and Hallie R. Lewis were married November 26. Miss Goss is a daughter of Section Foreman O. M. Goss at West Frankfort, Ill. Mr. Lewis is employed as yard clerk at Benton.

On account of the severe and continued drought, the Central Illinois Public Service Company cut out furnishing water to our engines at Benton, claiming that the Illinois Central uses approximately one-third of the water furnished at Benton.

Conductor W. S. Aiken and daughter, Athelda, 2 years old, had a serious accident November 22, when he lost control of the automobile he was driving and ran into a telephone pole. Both were thrown out of the car, the child falling on her head. She was taken to Moore's Hospital in an unconscious condition, and attending physicians were several hours in reviving her. After regaining consciousness, she was taken to the home of her parents, since when she has completely recovered.

Mr. and Mrs. Roy Morris are the proud parents of a baby boy, born November 29. Mr. Morris is employed as freight checker at Benton.

Miss Emma Taylor and John R. Underhill were married December 1. The bride is a daughter of General Yardmaster T. L. Taylor at Brookport. The groom is employed as roundhouse clerk at Benton and is a son of Engineer Mark Underhill.

Agent's Office, Herrin, Ill.

(H. L. Tygett)

Superintendent Atwill was the guest of the Herrin Rotary Club November 13. The matter of a water supply for Herrin and other southern Illinois towns was discussed.

On November 25 Herrin defeated Marion in a football game, giving Marion one of the best trimmings of the season. This was in connection with the first homecoming celebration by Herrin High School. Enthusiasm was high, and the game was seen by the largest crowd that ever attended a football game in Herrin.

Section Foreman Charles Martin, Rosiview, Ill., and his gang

Dam in Cedar River, Cedar Falls, Iowa

WISCONSIN DIVISION

Superintendent's Office, Freeport, Ill.

Miss Frances Lavell, daughter of Mr. and Mrs. James Lavell, 603 South Carroll Avenue, Freeport, and John McGowan, son of Mr. and Mrs. Martin McGowan of Amboy, Ill., were married recently at St. Mary's church, the Rev. Father Leydon officiating. The couple was unattended, and immediately after the ceremony went to the home of the bride, where a wedding breakfast was served to about fifty guests. Mr. and Mrs. McGowan left on an extended honeymoon trip to visit Chicago, New York, Philadelphia, Baltimore and Washington. On their return, they will make their home at Amboy, where Mr. McGowan is employed as an operator by the Illinois Central. The bride has been a resident of Freeport practically all of her life, attending St. Mary's Parochial School and being graduated from Freeport High School. For the last four years she has been employed in the office of the superintendent of the Wisconsin division at Freeport.

After thirty-five years' continuous service as locomotive engineer for the Illinois Central, Robert M. Griffith, 1005 West Stephenson Street, Freeport, was retired from that position. He came to the Illinois Central from the C., B. & Q. in 1888 and since

Coal conservation sign, Rockford, Ill.

GIVEN

We have a wonderful new system of teaching note music by mail and to the first pupils in each locality we will give free a \$20.00 superb Violin, Tenor Banjo, Ukulele, Hawaiian Guitar, Banjo, Guitar, Banjo-Ukulele, Mandolin, Banjo-Mandolin or Cornet absolutely free. A very small charge for lessons your only expense. Pay nothing if you do not learn to play. We also teach Piano and Organ. Complete outfit free. Write at once, no obligation.

SLINGERLAND SCHOOL OF MUSIC

1815 Orchard St., Dept. 187 Chicago, Ill.

One Hundred Fifteen

*Home of Conductor T. A. Pnewski,
Freeport, Ill.*

that time has been located in Freeport. Thirty-four of those years have been in the passenger service between Chicago and Freeport.

Mr. Griffith had been an engineer for forty-six years, except for the loss of a day or so in changing from the Michigan Central to the C., B. & Q. and from the "Q" to the Illinois Central.

He was born in St. Joseph, Mich., in 1855. After attending the public schools in Niles, Mich., he entered the preparatory department of Albion College. For several years he was engaged in various sorts of office work. In 1872 he became assistant ticket agent in the office of the Michigan Central at Chicago, where he remained for three years, until he gave up his position to become a locomotive fireman. From that position he was soon promoted to engineer. After nine years' service in that capacity he took a similar position with the C., B. & Q., which he left for the Illinois Central.

While Mr. Griffith has not reached the age limit prescribed for the retirement of the Illinois Central engineers, his long and faithful service was appreciated by the officials and he will be retired on the pension which the company gives to its old employees.

Mr. Griffith will dispose of his home on Stephenson Street to his son, Dr. E. L. Griffith. He will remain in Freeport for the present, although his future plans are indefinite. He says he will be here until he hears the call of the northern Wisconsin woods next spring.

Freeport Shops

The local chapter of the Red Cross wishes to thank the Illinois Central employees at Freeport shops, through the *Illinois Central Magazine*, for the hearty co-operation it received during its recent drive for funds for the Red Cross. The employees at these shops were very liberal in their donations and are to be complimented for the interest displayed in this worthy cause.

Roy Munson, air brake foreman, was called to his home at Evansville, Ind., Saturday night, December 2. His father was fatally injured in an automobile accident.

Daniel M. Reilly, general foreman at Amboy, is confined in hospital at Springfield, Ill. During his absence J. H. Rosenbaum is acting general foreman at Amboy.

Oscar A. Schwarze, tool room man at Freeport shops, who has been off duty for the last several months on account of ill health, has been notified that he is to be placed on the pension roll.

Nearly all the new machines ordered for Freeport shops have been received and are being installed and put in use. The large 2,500-pound steam hammer has been installed in the blacksmith shop. Blacksmith Foreman J. J. Sweeney is very proud of his new pet hammer.

MINNESOTA DIVISION

Superintendent's Office, Dubuque, Iowa

Saturday evening, December 9, the members of the

division office force entertained at a dancing party in the ball room of the Paris Hotel. One of the features of the evening was a prize waltz. E. C. Russell, chief dispatcher, was judged the best waltzer; his partner was Miss Angie Hauptert, accountant. Everyone in attendance reported an enjoyable evening.

Mrs. Hazel Driscoll has accepted a position as accountant in the superintendent's office, Dubuque.

Our sympathy is extended to Miss Hilda Blichman, stenographer in the superintendent's office, Dubuque, in the recent loss of her mother, who passed away November 27. Funeral services were held at the home, and burial was in Linwood cemetery. Rev. Mr. Atchison conducted the funeral services.

Agent's Office, Dubuque

(Grace Phillips)

Misses Hazel Ryan and Ramona Gartner have accepted positions as stenographers in the freight office at Dubuque.

Miss Frances Pierce has resigned her position and accepted one in Clinton, Iowa, where she will make her permanent residence.

Road Department, Dubuque

(H. E. Shelton)

Supervisor J. W. Sims was severely injured at Galena, Ill., November 14, when a piece of tile struck him and knocked him down, cutting his left arm. Mr. Sims has been confined to Mercy Hospital for the last two weeks. S. C. Jump is relieving Mr. Sims during his absence, and A. P. Cunningham is located at Dubuque temporarily during Mr. Jump's absence.

Section Foreman E. Hickie was retired on a pension November 30. He was succeeded by Foreman Rosenthal of Section 10. Foreman O. Goodwin succeeded Mr. Rosenthal.

Cedar Rapids, Iowa

(Josephine Doyle)

Conductor Lighthart of Train No. 472 suffered pain-

Dr. F. W. Porterfield, division surgeon at Waterloo, Iowa, a supporter of the first-aid instruction being given in the Illinois Central's Waterloo shops.

ful injuries from a fall received at Manchester the night of December 6. Conductor Brown of Waterloo is on relief during his convalescence.

No doubt radio fans of the system have learned the newly adopted slogan of Cedar Rapids—"Cereal City of the World."

Phil Adrian, boiler inspector, who is retiring from service, was presented with a watch chain and charm by our local roundhouse employees on the occasion of his final trip to Cedar Rapids, December 4. Mr. Mueller, foreman, in behalf of the force, made the presentation speech in his own inimitable way. Mr. Adrian was a familiar figure at our freight house, and his retirement will be noted by all.

Bowling has become very popular with the girls in the office, and we know that before long we can challenge any similar team on the system.

Business is ever on the increase, due to the untiring efforts of our freight agent, S. Kerr.

Trainmaster's Office, Dubuque (Marion Coffey)

E. S. Tompkins, train baggageman, died in a Chicago hospital, Monday, November 27. The funeral was held Thursday, November 30, at Amboy, Ill.

L. E. Metzger, Wisconsin division flagman, has been commended for discovering and reporting a broken rail one and one-half miles east of Nora, while on train No. 12, November 16. Mr. Metzger's action no doubt prevented a serious accident.

Conductor H. Smith has been called to Pittsburgh, Pa., by the death of his mother.

Miss Kathryn Quinn and Floyd J. Mabb were married at 9 a. m., December 2, at St. Joseph's church, Waterloo, Iowa. The honeymoon was spent in Des Moines, Iowa, and they will be at home to their friends after January 1. Mr. Mabb is a switchman at Waterloo for this company, and Mrs. Mabb is our efficient car record clerk in the yard office at that point.

KENTUCKY DIVISION

Local Freight Office, Louisville, Ky. (John A. Higgins)

James Ballard, first bill clerk, was recently detained at his home for several days on account of the serious illness of his son, James, Jr. The boy has now improved, and Mr. Ballard has returned to work.

Clifford Slider has been absent from the office for several days, occasioned by an operation to remove his tonsils. He is getting along very nicely and is expected to return to the office in a short time.

The radio broadcasting station, "WHAS," of the Louisville Times and Courier-Journal has had among its performers Harry G. Schoenlaub and Clifford Slider. Mr. Schoenlaub has a pleasant baritone which, coupled with the accompaniment of Mr. Slider on the piano, proved an entertaining number. It will be remembered that these two boys are the composers of "She Rolls 'Em Down," "My Dream of Heaven and You," "Swanee River Blues" and many other songs equally as good. Mr. Slider also performed with a local opera company which sang "Pagliacci" for "WHAS." Albert G. Crowder, formerly a clerk in the local freight office, Louisville, sang with the opera company.

The management of this company, being conversant with the fact that statements alone are insufficient to incite everyone to the proper pitch necessary to bring about curtailment of the claims that have been taking money from the company's coffers, conceived the idea of putting into pictures the proper and improper manners of handling freight. This, the management realized, would gain attention more readily and make a more lasting impression. The interest exhibited in the recent display of motion pictures at this office on the night of November 21 proves the contentions well founded. It gives a bright outlook for the "No Exception" campaign that is being waged at the present time. The space available to accommodate the crowd on this night was

January, 1923

Nu-Way

STRETCH

Suspenders and Garters

Sold and guaranteed by leading dealers. Millions wear them. No rubber. Lots of comfort and easy stretch from Phosphor Bronze Springs. Year's guarantee. Suspenders, 75c; Garters, 50c; Hose Supporters, 25c.

ACCEPT NO SUBSTITUTES! Nu-way name on buckles. Send direct, giving name of dealer if he hasn't them.

Iowa State Teachers College, Cedar Falls, Iowa

almost too small. The following were among those present: C. O. Cecil, trainmaster; C. H. Mullinix, chief dispatcher; W. S. Thomas, supervising agent; W. H. Bartlett, agent, Louisville; E. M. Shaughnessy, chief clerk to agent; E. A. Barton, inspector; G. M. Ashmore, assistant chief clerk to superintendent; I. B. Atcher, clerk, superintendent's office; F. L. Tullis, chief clerk to assistant general freight agent; N. Mucklebauer, clerk, assistant general freight agent; S. M. Spear, commercial agent; A. W. Gross, chief clerk to commercial agent; A. J. Mason, ticket agent; D. S. Herndon, general yardmaster; H. L. Ash, assistant general yardmaster, and a large percentage of employes from various departments. All lines entering Louisville were invited to attend, and each road sent a good delegation. The same pictures were also shown at Central City, Princeton and Paducah, with the same good results as at Louisville.

Paducah, Ky.
(J. H. Hessian)

Appearing in the cast of balladists with the Al G. Field's Minstrels this season is Algie Elam, formerly employed as yard clerk at Paducah. Algie made good with the show at the start. This is his first professional engagement, and he is scoring a big success. At the three engagements of the minstrels at the Arcade theatre, December 5 and 6, he sang "That's How I Believe In You" and "My Wild Irish Rose." In his stay in the city he was entertained by a number of his friends with a supper after the evening performances and on Wednesday was a guest at the Lions Club luncheon at the Palmer hotel. On Wednesday night, Algie, Jack Richards and Billy Church of the minstrels sang several numbers at the *Evening Sun's* radio broadcasting station.

There was born to Mr. and Mrs. Thomas P. Ward on December 3 a son, Thomas Ralph. Mr. Ward is conductor on the Paducah district.

Pensioned Conductor I. D. Farrington died at the Illinois Central hospital at Paducah, December 5. Mr. Farrington was retired on pension July 31, 1922, on account of ill health.

Valley, Ky.

Wilbur C. Lewis, baggageman, Louisville, and Miss Hetti Rea Tucker of Leitchfield, Ky., were married November 21 and are making their home in Louisville.

Miss Alice E. Meadows, agent, Valley, Ky., is off duty on account of illness.

Mechanical Department, Louisville, Ky.
(G. W. Shaughnessy)

The Associated Shopcrafts of Louisville held the formal opening of their new lodge room and meeting hall at Louisville, Wednesday evening, December 6, from 8 to 11 p. m. The new hall is at 1304 West Kentucky Street, a former dwelling which the company owns. It was remodeled and newly papered and first-class electric fixtures were installed. It makes a neat and attractive meeting hall, with an ante-room and a room in rear which can be used as

a kitchen, so that the men can use it to good advantage when they desire to have a supper or lunch. The main hall is about 16 by 32 feet, making a nice meeting room, and is papered in blue with a light ceiling. This is a hall any association can be proud to meet in. It will be open at any time for employes.

The formal opening was planned under the auspices of the Association of Carmen, but was an open meeting for all shopcrafts. Invitations were extended to Mr. Walker, master mechanic, and all foremen and clerks at Louisville and out-of-town chairmen of the carmen.

The meeting was largely attended by the carmen, machinists, boilermakers and blacksmiths; all foremen were present. Out-of-town visitors were Mr. Brann of Paducah and Mr. Fleck of Freeport.

The meeting was opened by an address of welcome and introduction of visitors by Chairman W. P. Marks of the Carmen's Association, after he read a letter from Mr. Walker regretting his inability to attend the opening.

Mr. Marks was followed by addresses and talks

Belgian hares belonging to George Imhoff, engineer, Cairo, Ill.

A Worth-While New Year's Resolution is the Easiest to Stick to

Simply resolve that the next time you want a watch for yourself, some jewelry or silver for Birthday or Wedding Gifts, or a fine clock for the house, you'll go to your Local Watch Inspector for it. He's a Gift Counselor and can take better care of you than anyone else. His name on this list is your guarantee.

by the foremen, Mr. Braun, and representatives of the carmen, machinists and boilermakers and Mr. Fleck. The intentions of the association were explained to the men. The new men, as well as the old ones who have returned, voiced the opinion that they were working for the best railroad in the United States, the Illinois Central, and that these meetings would result in better efforts of the men and make the railroad better.

Following the talks and addresses, cigars and a buffet luncheon were served under the supervision of our derrick foreman, Mr. Morris, who saw that everyone was plentifully supplied.

Much credit is due the committee of carmen which arranged the meeting, but the boilermakers and machinists claim they will be heard from later.

Princeton, Ky. (Miss Sudie Cash)

Chief Dispatcher J. H. Eaker, who has been sick for several days, is able to be out again.

Switchman and Mrs. E. H. Layman were called to Louisville recently by the illness of Mr. Layman's father.

Miss Hallie Owen and Estella Goodwin, W. O. Quirey and Paul Stewart of the freight house and some of their friends have been enjoying several 'possum hunts this fall. They always come back with "big game."

Charles E. McNeil, who has been seriously ill in the hospital at Louisville, returned to his home on December 15, very much improved. Mr. McNeil is conductor on the Evansville district.

Office of Superintendent, Louisville

Albert Irvin Dugan, Jr., was born to Mr. and Mrs. A. I. Dugan December 5. Mrs. Dugan was formerly Mrs. Nancy McGregor, utility clerk in the office of the superintendent.

Walter F. Conrad, Jr., was born to Mr. and Mrs. Walter F. Conrad December 4. Mr. Conrad is accountant in the superintendent's office, Louisville.

T. E. Hill, superintendent, attended the Gridiron club dinner, Washington, D. C., December 9. Mr. Hill was the guest of Arthur Krock, editor of the Louisville *Times* and *Courier-Journal*. President C. H. Markham also attended this dinner.

Miss Josephine Metz, comptometer operator, who recently underwent an operation on her nose, has returned to the office.

Mrs. Laura Banes, widow of the late A. W. Banes and mother of C. J. Banes, chief clerk to the superintendent, died at her home, 1523 East Elm street, New Albany, Ind., Wednesday, December 6, of a complication of diseases. She is survived by one son, C. J. Banes, and one daughter, Miss Mabel Z. Banes, formerly employed as file clerk in the office of the superintendent. Burial was in Fairview cemetery.

Guy Ashmore, assistant chief clerk to the superintendent, has purchased a bungalow on 35th Street, near Broadway, Louisville, and with his family has moved into the new home.

Harry G. Devinney, chief clerk to the roadmaster, Louisville, has purchased a bungalow in Shawnee Terrace, Louisville.

Signal Department (J. P. Price)

A new second arm has been installed on southward absolute signal "A" at Paducah yard to permit tonnage trains to enter the yard. This arm is of the automatic semaphore type working in two positions. This work was carried out by Signal Foreman S. A. Sauer.

Changes in the automatic signals between Paducah and Clarks, Eddyville and Kuttawa and Princeton and Scottsburg, on account of the construction of new second track, have now been completed.

Signalmen C. L. Bromley and H. D. Bromley have been transferred to the Illinois division to assist in interlocking plant construction at Kankakee.

Signal Foreman C. C. Sauer has completed the work of installing semi-automatic operation for the new rail locks on the Cumberland and Tennessee River drawbridges. These rail locks are now operated by an electro-pneumatic machine controlled by a lever in the interlocking machine in each tower. Interlocking signal protection is also provided for the operation of the drawbridges.

The installation of new automatic signals between Fox Run and Graham, Ky., is progressing nicely, and it is expected that the new signals will be placed in service about January 1. The interlocking changes

Fire protection test at our Stuyvesant docks, New Orleans, La. The six fire streams shown are throwing 1,800 gallons of water a minute.

will also be completed about the same time. A lot of new material for this work was received during December. Signal Foreman A. M. Pfeiffer is in charge of this work and is rushing it to completion with his usual vigor and energy. Signalman J. C. Martin is in charge of the automatic signal wiring.

Signalmen C. L. Dean, Albert Hagan and Roy Coursey have been transferred to Nortonville to assist on the work of installing the new automatic signals between Fox Run and Graham.

Leighton Keys has been appointed temporary signal maintainer at Rockport, in place of Signalman C. L. Dean, transferred to Nortonville.

Lionel Goodman has been appointed assistant signal maintainer at Grand Rivers, in place of Bell Frymire, who is relieving C. L. Bromley, signal maintainer at Princeton, Ky.

E. F. Oates, signal maintainer at Nortonville, is assisting J. C. Martin on the circuit wiring of the new automatic signals between Fox Run and Graham, Ky.

Signalman E. J. Davis of Central City has been adjusting and focusing switch and signal lights on the division the last month. As a result of this work a nice improvement has been shown in the condition of these lights.

Signal Maintainer J. M. Robinson of West Point and Signal Supervisor J. P. Price have been working on an improvement for their adjustable switch stand tip. They have announced that their improvement is now completed and that the device will be placed on the market as soon as the patent is obtained.

Signal Maintainer Edgar Wilson of Vine Grove, Ky., has been awarded the signal department performance prize for 1922 on account of making the highest average on automatic signal performance and for having the best signal and switch lights during the year. This prize, which consists of a new Type "K" volt-ammeter, enclosed in a handsome walnut box, will be presented to Mr. Wilson at the educational meeting to be held in January.

TENNESSEE DIVISION

Conductor H. L. Nourse, on the Cairo district, Tennessee division, has been commended for his alertness in discovering a difference in the stenciled weight of IC-117548 being handled into Mounds in Local No. 92, of which he was in charge. The car was stenciled 33,200 pounds on one side and 43,200 pounds on the other. The proper authorities were immediately notified, in order that the error might be corrected, which probably prevented a claim.

That the "Home Division" of our magazine is an aid to matrimony has surely been proved on the Tennessee division. J. Faulkner Williams, terminal checker at Fulton, had been courting the stenographer to the chief clerk, Miss Vernita Tribble, for some time; but when she began to submit her "delectable recipes" and suggestions to the "Home Division" she again exemplified "the way to a man's heart." Wednesday evening, November 29, attended

PEOPLES GLOVE COMPANY

P. O. Box 14

Decatur, Ill.

by the groom's brother, Thomas Williams, and Miss Etha Roberts, they were married at the Methodist parsonage by the Rev. R. W. Hood. The happy couple left immediately on train No. 1 for New Orleans, where they spent a very enjoyable week "honeymooning."

The raising of the mile bridge north of Wickliffe, Ky., on the Cairo district, has clothed the north end of the Tennessee division with a very busy appearance; and it is not all appearance. The bridge, which is 4,000 feet long, is being raised thirty-eight inches to get it above the highest known water of the Mississippi and Ohio rivers. This work entails the use of ten bridge gangs of about twenty men each, three derrick-pile drivers, two American ditchers, five work trains and four section gangs, as well as six operators to take care of the trains on the single track. The work is being pushed at the rate of twenty-four hours a day, as the crews are divided and are working twelve hours each. Temporary connections have been put in south of Wickliffe and at Fillmore which permit the elimination of traffic over the bridge and cause a single track operation for about two miles.

The Birmingham district established a record by furnishing seventy-five carloads of lumber in one day recently.

Freight Office, Birmingham, Ala. (Ben Herring)

The forces of the Illinois Central and Central of Georgia freight house were treated to an instructive and entertaining demonstration and talk by Ed Barton of Mr. Richmond's office, Chicago. Mr. Barton exhibited cinematograph pictures as to the proper ways to load freight so as to avoid damage caused by shifting. The pictures of the test car showing damage caused by rough handling were interesting to the large audience.

Business at Birmingham is holding up exceptionally well, especially outbound carload traffic, notwithstanding that in December business usually drops off. The prospects for this business to continue for some time are very bright, as all the large industries are running to capacity.

MISSISSIPPI DIVISION

On November 9 R. T. Hamilton was married to Miss Lallah Kimbrough of Grenada, Miss., at the home of the bride's parents. Shortly after the ceremony the happy couple caught the northbound train for Memphis, Nashville and other points. Upon their return they will reside in Grenada, at which point Mr. Hamilton is the efficient night operator.

Sympathy is extended to Conductor H. W. Caldwell, Grenada district, in the loss of his wife, which occurred in a Memphis hospital November 23.

Miss Lalla Cathey, daughter of Conductor R. F. Cathey, died at the home of her parents in Jackson, Tenn., November 15, after a short illness. She was 20 years of age.

We have the following births to report: To Mr. and Mrs. H. B. Tyler, on November 14, a son. Mr. Tyler is warehouse clerk at Water Valley. To Mr. and Mrs. D. H. Johnson, on November 14, a son. Mr. Johnson is a conductor on the Water Valley district.

As an example of prompt handling of cars, here is the following: On November 29, Erie-73684, salt, was placed at Tillatoba, Miss., for unloading at 8 a. m. It was released at 11 a. m., placed for loading blocks for Memphis and loaded and billed at 2:10 p. m. same date.

LOUISIANA DIVISION

Superintendent's Office, McComb, Miss.

Mrs. D. T. Robinson, performance clerk, tendered her resignation on December 1 on account of going to Selma, Ala., to live. She has been an Illinois Central employee since 1918, at which time she entered the service as pass clerk.

The new comptometer operator is Clyde Robertson, coming to us from Independence, La.

Here is a picture of R. B. Humphreys, switchman, Memphis terminal. The ducks in the picture were killed by him while hunting on Southern Lakes, in Arkansas, several miles west of Memphis.

Several members of the force have been enjoying Saturday afternoon hunts in the surrounding woods, with some luck.

Miss Una Holmes has accepted a position as chief performance clerk, in place of Miss Mary Browne, who has become a member of the tonnage force.

Chief Dispatcher's Office

Chief Dispatcher Schneider has enjoyed several successful hunts in Louisiana swamps within the last month.

Dispatchers Wall and Holliday also went hunting near Holmesville recently.

L. E. Davis, fourth trick operator, McComb, has accepted the position of third trick in the New Orleans telegraph office.

John Kennon, third trick operator, Nogan, has accepted the position of fourth trick at New Orleans.

Night Chief Dispatcher West has been ill; however, he is back on the job again.

Transportation Department (W. E. McNeill)

Conductor J. A. Ashton, well known figure on trains Nos. 24 and 1, between New Orleans and Canton, has been ill in the Illinois Central hospital at New Orleans for some time. He has greatly improved, however, and will soon be able to resume his duties. Conductor Henry Erickson is filling his place.

Robert McCormick, former call boy, has accepted a position as brakeman on the Louisiana division.

Conductor C. P. Cook is in the Illinois Central hospital at New Orleans, having undergone a serious operation. His condition at present is somewhat improved.

The transportation department employees of this division, as well as those of the Memphis division, who run into Gwin, are now enjoying the benefits and conveniences of the new hotel at Gwin, which fills a long felt need at this point and is thoroughly equipped to accommodate all employees.

A continuous train order office has recently been installed at Crupp, the first station south of Yazoo

THE FACTORY BEHIND THE WATCH

Plant of the Illinois Watch Company, Springfield, Illinois, also showing America's highest grade railroad watch, the "SANGAMO SPECIAL".

This Factory is Devoted Exclusively to the Manufacture of High-Grade Watches

Established in 1870

For more than 50 years, high-grade watches have been produced in this factory. The reputation established in these years for high-quality products, is in itself a guarantee.

Every Illinois-Springfield watch is fully guaranteed to be perfect in construction and to be a satisfactory timekeeper.

ILLINOIS WATCH COMPANY
SPRINGFIELD, ILLINOIS

City. This is another sign of progress and good business on the Louisiana division.

On Sunday, December 3, McComb City Division 367, O. R. C., and Olive Broas Division No. 29, Ladies' Auxiliary to O. R. C., held their annual installation of officers jointly for the coming year. After the installation a banquet was thoroughly enjoyed by all.

Miss Virgie Price, daughter of Conductor J. B. Price, McComb, and Leonard Graves, son of Engineer Wess Graves, were married recently in Little Rock, Ark. While the marriage was expected, the early date was a surprise to their numerous friends.

Road Department

E. A. Watts of Jackson has accepted the position as clerk to the supervisors which was vacated by Miss Roberta Darville, who accepted the position of performance clerk in the superintendent's office.

An addition, as well as a rearrangement, of the ticket office in the negro waiting room at Jackson is under construction.

Work has been begun on the 300-ton coal chute at McComb. This includes sanding facilities, two double Robertson cinder conveyors, three pen stocks, and necessary track facilities for each structure. The approximate cost is \$70,000.

A large fruit shed near the compress at Jackson is under construction.

An addition to the platform at Osyka is being made which will be covered and used for a packing shed in fruit season, as well as a cotton platform.

The forces have been busy adding to and rearranging the depot at Ponchatoula, changing the type of construction from wood to stucco at an approximate cost of \$20,000.

Painting campaign on Illinois Central main line shows all depots and section houses in the race.

Earl V. Sheppard, section foreman, Yazoo City, died at Lexington, Miss., November 12. Mr. Sheppard, who was born in 1874, entered the service in June, 1903, as a laborer and was promoted to section foreman in 1905. Although he had been on the sick list for some time, his somewhat sudden death was a shock to his numerous friends.

Mechanical Department

Engineer A. M. Stewart is recuperating after being

Here is Miss Doris Robertson, daughter of Conductor W. P. Robertson, whose marriage to O. R. Diamond of Shreveport, La., was secretly performed at Magnolia, Miss., on October 17, the fact being kept from their numerous friends until December 4. Mr. Diamond is connected with the Standard Oil Company at Shreveport.

Here are the home and children of B. B. Wall, assistant car foreman, Jackson, Miss. Mr. Wall entered the service as a car repairer at McComb, Miss., in July, 1912, and was later transferred to Jackson with a promotion to assistant car foreman.

extremely ill for several weeks in the Illinois Central hospital at New Orleans.

Engineer Clarence Strader is on a leave of absence, spending the greater part of his time in New Orleans.

Hazelhurst, Miss., enjoyed a trade day celebration on November 25, which was made interesting by numerous aerial stunts performed by Aviator Irving.

Agent C. E. Elarton, Osyka, Miss., has resumed his duties at that station after a leave of absence for several weeks. His place was filled by W. W. Hollingsworth.

W. H. Allen, agent at Independence, enjoyed a week-end hunt with Chief Dispatcher Schneider recently.

General Foreman's Office, Asylum (Miss Edna Cordts)

Paul O. Christy, machinist, roundhouse shops, Asylum, and Mrs. Olive Bullock, Rolling Fork, Miss., were married at Rolling Fork on November 19. After spending several days with Mr. Christy's brother, who is chief clerk to General Car Foreman Arnold at Memphis, the newlyweds returned to Jackson, Miss., where they will make their home.

Freight Office, Jackson (C. H. Williams, Sr.)

Mrs. Alma Hill is welcomed to the office after a long leave of absence due to illness.

The death of little Miss Dorothy Britt, sister of Clerk Fred Britt, due to accident at school, is sincerely deplored.

Several of the force, our agrarian members, may be found at odd moments, after hours, grouped together in an earnest discussion of fall plowing and "cover crops." Many are interested in agriculture.

NEW ORLEANS TERMINAL Local Freight Office (Jesse W. Ford)

Joseph Sacco, notice clerk, and Miss Jennie Scio, both natives of New Orleans, were married on November 16 at the Church of St. Peter and Paul. A short honeymoon was spent visiting relatives of the bride at Greenwood, Miss.

Arthur E. Tracy, belt clerk, was a patient at the Illinois Central Hospital, New Orleans, recently, where he was operated upon for tonsillitis. He has now fully recovered and is back at his old job on the belt desk.

The sympathy of the employees of the local office is extended to Eugene Fourcade, delivery clerk at Levee yard depot, in his recent bereavement. Mr. Fourcade suffered the loss of his mother several weeks ago.

J. A. Mouton, embargo clerk, is the proud father of a nine-pound baby boy, born Sunday, December 10.

Export Freight Office, Stuyvesant Docks (Fred De Long)

Andrew W. Gras, freight inspector, and P. J.

McNiff, loading clerk, have entered the ranks of the benedicts. They were quietly married several weeks ago.

H. R. Meausler, car sealer, fruit wharf, was operated upon recently at the Illinois Central hospital. He has now fully recovered and is back on the job.

A. E. Scaife, agent at Stuyvesant docks, and Mrs. Scaife, returned recently from a sojourn of several weeks in New York City, where they were the guests of their daughter and grandchild. They report a very pleasant trip.

The news has just leaked out that John S. Seiler, son of Agent Seiler, local office, was married on

Continental Casualty Company H.G.B. ALEXANDER **Chicago**
President

Union Station, New Orleans

November 1. The boys are offering their congratulations.

E. M. Blanchard, cashier, who was recently operated upon for tonsillitis, has now fully recovered.

Yard Office
(A. J. Condon)

Thomas O'Hara, chief yard clerk, Levee yard, has resigned from the service to accept a position as traffic manager with the General Box Company. He has been succeeded by E. L. McCrary.

MEMPHIS DIVISION
Superintendent's Office

The tonnage desk in the accounting department seems to be the center of Cupid's activities, as again he has entered their ranks, this time taking Miss Myra Morris, who surprised her many friends on November 29 with a quiet but beautiful wedding at the First Baptist church. The happy groom is Leon

Pedretty, who is engaged in the real estate business in Memphis.

We are glad to see the smiling face of Tommy Long, our old file clerk, again within our ranks. Tommy believes in the old adage that "two can live as cheaply as one." To prove that fact, he married Miss Elsie Rose Mazzoni, November 15, at Louisville.

The many friends of Conductor V. R. Byrd will regret to learn of his illness in the Illinois Central hospital, Chicago. Reports from Mr. Byrd are very encouraging, and it is hoped he will soon be among us, fully restored to health.

Conductor H. E. Frederick, who has been on leave of absence for the last six months on account of ill health, is reported improving. However, it will be several months before Conductor Frederick will be able to resume his duties.

C. M. Coburn, accountant, resigned December 1 to accept a position with the Paducah Cooperage Company, Paducah, Ky. Mr. Coburn writes he now has a "Ford" and is endeavoring to ride off that feeling of "Memphis homesickness" which has threatened to overwhelm him lately.

"Bob" Kernodle, our genial report clerk in the office of Roadmaster Maynor, resigned his position on December 1 to try his luck at selling cigars and candy for the Lew Hardy Company, Memphis. His position has been filled by Miss Birdie Carstarphen, clerk in the office of the supervisor of bridges and buildings.

That Memphis division employees are always on the alert not only to protect the interests of the company but to lend a helping hand to others is evidenced by the report given in by Engineer F. F. Wright. While on Extra No. 948, November 27, going into Tchula, Fireman John O'Neal discovered the roof of a house on the east side of the track, just off the right-of-way, on fire. Prompt action on the part of

"Last Month I Made \$876 in My Spare Time"

*The Amazing Story of Carl Rowe
Who Rose From an Income of \$50 a Week
To \$1,000 a Month*

My name is Rowe—Carl Rowe. I live in a small city in New York State.

I am going to tell you an amazing story about myself. It may seem too strange to believe, but you can easily verify everything I have to say.

Two years ago I was a baker. I was struggling along, trying to make the money in my pay envelope meet the increasing expenses of our family. There was no prospect for the future.

Today, just two years later, I am a successful business man. I have plenty of money for all the things we need and want. Last month I made \$876 during my spare time, and was able to put \$200 a week in my savings account.

I am going to tell you how it happened.

Please remember that two years ago I had no surplus cash. I was in the same fix as nine out of ten other men. Expenses were constantly mounting and my salary, although it had increased, could not keep pace with the cost of living. My wife had to do without things that I knew she ought to have. We wanted an automobile, but we couldn't afford it. We wanted to buy our own home, but we couldn't afford that.

It made me desperate to think what might happen if I became sick or lost my job. I worried about it, and so did my wife. We were living from hand to mouth, and we didn't know what calamity and hardships might be lurking just around the corner.

And yet—today—I own our nine-room house. I have an automobile. I have money for books, the theatre, or any other pleasures that I may want. I have the cash today to educate my son and send him through college.

Here is how it happened. One day in glancing through a magazine I read an advertisement. The advertisement said that any man could make from a hundred to three hundred dollars a month during his spare time.

I didn't believe it. I knew that I had worked hard eight hours a day for \$50.00 a week, and I figured that no man could make that much during a couple of hours a day spare time.

But as I read that ad I found that it pointed to men who had made that much and more. In the last paragraph the advertiser offered to send a book without cost. I still doubted. But I thought it was worth a two-cent stamp, so I tore out the coupon and put it in my pocket and next day on my way home from work I mailed it.

When I look back to that day and realize how close I came to passing up that ad, it sends cold chills down my spine. If the book had cost me a thousand dollars instead of a two-cent stamp, it would still have been cheap. All that I have today—an automobile, my home, an established business, a con-

tented family—all these are due to the things I learned by reading that little eight-page booklet.

There is no secret to my success. I have succeeded beyond any dream I may have had two years ago, and I consider myself an average man. I believe that I would be criminally selfish if I did not tell other people how I made my success.

All the work I have done has been pleasant and easy, and withal, amazingly simple. I am the representative in this territory for a raincoat manufacturer. The booklet that

I read was one issued by that company. It tells any man or woman just what it told me. It offers to anyone the same opportunity that was offered to me. It will give to anyone the same success that it has brought to me.

The Comer Manufacturing Company are one of the largest manufacturers of high-grade raincoats on the market; but they do not sell through stores. They sell their coats through local representatives. The local representative does not have to buy a stock. All he does is to take orders for Comer raincoats and he gets his profit the same day the order is taken. Fully half my customers come to my house to give me their orders.

My business is growing bigger every month. I don't know how great it will grow, but there are very few business men in this city whose net profit is greater than mine, and I can see only unlimited opportunity in the future.

If you are interested in increasing your income from \$100 to \$1,000 a month and can devote all your time or only an hour or so a day to this same proposition in your territory, write The Comer Manufacturing Company at Dayton, Ohio. Simply sign the attached coupon and they will send you the eight-page booklet referred to by Mr. Rowe and full details of their remarkable proposition.

Cut Out and Mail

The Comer Mfg. Co., Dept. Y-66, Dayton, Ohio.

Gentlemen: Please send me, without obligation on my part, copy of your booklet and full details of your proposition.

Name.....

Address.....

In the French Quarter, New Orleans

this fireman in getting a ladder and putting out the fire probably saved the whole east side of the town from loss, as a heavy wind was blowing from the west and the fire was gaining rapidly.

Ray Brown, chief clerk in the office of Agent R. Smith, Greenwood, Miss., is reported as being seriously ill at his home in Greenwood.

NEW ORLEANS DIVISION

Superintendent F. R. Mays, Roadmaster E. W. Brown, Supervising Agent A. S. Hurt and Accountant C. J. Brown were all ill of dengue fever the last few weeks. Each suffered a severe attack of the disease, which has been prevalent in Vicksburg and vicinity.

John Anderson, formerly accountant in the superintendent's office at McComb, Miss., has accepted a position as timekeeper on the New Orleans division and is now on the job.

The winter season for vegetables is now on, and large shipments from the Rio Grande Valley are being received from the Gulf Coast Lines at Baton Rouge, La., for forwarding on our lines to points north and east. Notwithstanding the report of a short crop, the business shows but little decrease under last year.

The immense sugar cane crop in Louisiana is also being handled with the usual healthy co-operation of the planters and the company. The yield promises to measure up favorably with last year, and no effort is spared for an expeditious and satisfactory movement.

J. B. Wilson has been appointed watch inspector for A. Graves and Company, Vicksburg, succeeding A. Burton, resigned.

Division headquarters announce this month the marriage of A. G. Wellons, traveling auditor, and Miss Roberts of Brandon, Miss. Mr. and Mrs. Wellons will live in Vicksburg.

First ground for the Brunswick levee extension, Warren county, Miss., was broken on December 11. This levee will close the gap in the levee on the east bank of the Mississippi between the Tennessee line and the mouth of the Yazoo canal at Vicksburg, thereby reclaiming 250,000 acres of arable land in the vicinity of the Yazoo & Mississippi Valley lines. Approximately \$1,500,000 will be expended on the work. The event was celebrated by a big barbecue.

One Hundred Twenty-eight

Superintendent F. R. Mays, who is a levee commissioner for Warren county, was on the committee of arrangement and was prominently identified with the great success of the big affair.

The death of H. G. Morris, for years ticket agent at Selma, Miss., occurred recently. He leaves a widow, who has assumed charge of the station.

Natchez, Miss.
(R. K. Holman)

Sympathy has been extended to Engineer Ward B. Anderson, who recently suffered the loss of his wife. "Mrs. Ada," as all of the railway boys lovingly called her, was an estimable woman, fine of character, sweet and gentle of disposition. Her genuine and cheery welcome to her hospitable home will be sadly missed by all who were privileged to call her friend.

Our agent at Natchez, Major R. L. Montgomery, who recently assisted the Natchez Red Cross in raising its quota of the annual roll call, reported to the Red Cross that the Yazoo & Mississippi Valley employees subscribed 100 per cent on the drive.

Neal A. McLean, who has been in the service at Natchez for several years, resigned his position as chief clerk recently, accepting a position as traffic manager with the National Box Company at Natchez.

R. K. Holman, for more than two years division special accountant, has succeeded Mr. McLean.

Our Natchez Yazoo & Mississippi Valley Club, noted for its success in duck, quail and miscellaneous game hunting, has been handicapped and greatly disappointed the present season in the absence of favorable cold weather. We hope "Old Sol" will abdicate for a while in favor of "Jack Frost" and afford us the privilege of entertaining our division friends at any time they feel disposed to pay us a visit and enjoy a hunt, as they are always welcome.

Victor A. Jehlen, cashier at Natchez, so far has the record here of best spotter of wild ducks. Recently, while out duck hunting in company with your correspondent and others and while journeying through the woods to what was supposed to be a lake, "Vic," in the lead, suddenly threw up his hand for silence.

Asked what he saw, he rejoined: "Look at that big mallard yonder in the edge of the lake."

We gave him the privilege of bagging the duck, and after he had proceeded about fifty yards on his "all fours," with gun leveled, he finally gave up in despair and shouted, "Come on." When we arrived where he had silently crawled to, we failed to locate any sign of duck or water. The hard part of it was we continued walking until long past dark without locating either duck or lake. The trouble was, the lake used to be there, but it had dried up.

\$100 Brings 9^{FT} x 12^{FT} Congoleum Rug and 3 Small Rugs to Match—

All Four only

\$15.95

Less than the Price of One

The price of the famous Congoleum Gold Seal Art Rug is just as well known, absolutely as standard, as sugar, salt or flour used to be.

Go anywhere, look everywhere, in stores, catalogs, magazines and newspapers—and once more refresh your memory of the actual universal standard price of a full size Gold Seal Congoleum Art Rug.

Here we bring you not one rug alone, but four—and all four for less than the regular price of one. A full room size, 9 foot by 12 foot, Congoleum Rug and three small companion Congoleum Rugs to match—each small rug 18 x 36 inches.

30 Days Free Trial

We'll send all four rugs on trial for 30 days. We want you and urge you to put them down on the floor and use them for a whole month—free of expense and without promise or obligation of any kind.

We guarantee that if you would rather return the rugs after making this kind of a trial, just say so and send them back. We will refund to you every penny of transportation charges, both going and coming.

Pay Little by Little Take a Full Year

And that's not all! No matter who you are, or where you live—regardless of your circumstances—we'll send all four rugs immediately, without waiting, red tape or bother, for just a dollar pinned to the coupon.

And we'll wait a year for the balance of the money. If you keep your rugs after making a 30 day's trial, you can pay little by little, almost as you please, taking a full year. That's the way we sell everything.

The Most Famous of All Congoleum Patterns

Congoleum Gold Seal Art Rugs are rapidly becoming the national floor covering—universally used in the kitchen, bathroom and dining room in good homes.

They lay flat from the very first moment without fastening. They never curl or kick up at edges or corners. No need to tack them down. Dirt cannot accumulate underneath.

Less work. Congoleum floors mean less worry and no back breaking drudgery. Dirt, ashes, grit, dust or mud cannot "grind into" Congoleum Rugs, because the surface is hard and does not absorb. A damp rag keeps a Gold Seal Congoleum Art Rug clean and doesn't hurt it.

Waterproof. These rugs are guaranteed waterproof. There is no burlap in Gold Seal Congoleum Art Rugs for water to rot. The surface is hard and smooth and wear resisting.

This stunning pattern is a superb tile design that looks exactly like the finest mosaic tile that you have ever seen, in lovely robins' egg blue and stone gray colorings. Such a rug in your kitchen will change the appearance of the whole room. In the dining room it gives an effect impossibly beautiful to describe. For a bedroom it is the most appropriate pattern imaginable. For the bathroom it is absolutely ideal.

This Offer Ends in 30 Days Send Your Dollar NOW

We cannot hold this offer open long. We make it for quick action to prove to you our ability to sell you similar bargains in all kinds of house furnishings from cellar to garret, on the same wonderful terms.

Clip the Coupon and pin a Dollar to it.

E. L. Crugar

Mr. Crugar, recently appointed engineer of construction, entered railway service in 1900 with the Chicago & Alton Railroad as chainman on relocation work. He was subsequently rodman and instrumentman at various places until 1902. From 1902 to 1906 he was with the Louisville & Nashville Railroad on location and construction of the Knoxville, LaFollette & Jellico Railroad as office assistant, resident engineer on construction and assistant engineer of the Knoxville division. From 1906 to 1914 he was with the Chicago & Alton as office assistant, assistant engineer on construction work, real estate engineer and assistant chief engineer. He entered the service of the Illinois Central System in 1914 as assistant engineer in the construction department and was appointed district engineer of the Southern Lines in December, 1916. He was appointed engineer of construction January 1, 1923.

They Recall the Lincoln of Illinois Days

Vaspasian Warner and George D. Chafee, Local Attorneys for Our Railroad, Relate Experiences in His Life

AT Clinton, Ill., there is still living a man who knew Abraham Lincoln in the flesh, who can recall intimate pictures of the great American in the days when Mr. Lincoln was an obscure, circuit-riding, country lawyer, who in memory hears again the very tones of Mr. Lincoln's voice—stilled now for upward of three-score years by the bullet of an assassin. Colonel Vaspasian Warner, now nearly eighty-one years of age, himself a member of the distinguished profession of the law, is the man.

"My earliest recollection of Mr. Lincoln," Colonel Warner said to a representative of the *Illinois Central Magazine*, "was when I was a boy about 15 or 16 years old. My parents lived about a block south of the courthouse square here in Clinton, and a block east of our home stood what was called Bennett's Tavern, a popular stopping place for lawyers and others who came to attend sessions of circuit court.

"I remember one day seeing a tall, ungainly man in a frock coat and linen pants, wearing a stovepipe hat, walking between two immaculately attired lawyers. Mr. Lincoln's coat sleeves appeared too short and his pants legs didn't quite reach his shoe tops; his whole appearance was awkward and uncouth; but his companions seemed eagerly attentive to whatever it was he was saying. I thought it an odd thing that gentlemen of such elegance should be interested in such a person.

Lincoln's Friends at Clinton

"Judge David Davis was the circuit judge in those days. He held court at Clinton once or twice a year. Judge Davis afterward had a distinguished career as an associate justice of the United States Supreme Court and as United States senator from Illinois. The state's attorney was a man named Ward H. Lamon. The latter was

over fond of intoxicating liquor. On one occasion when, boylike, I was loitering at the tavern listening to the talk, Judge Davis, Mr. Lincoln and Prosecutor Lamon were sitting talking in the cool of the evening. Lamon presently suggested that he get some whisky and they repair to a room where they could talk in greater comfort. Judge Davis objected.

"'You know you got drunk last week, Ward,' he said, 'and I had to adjourn court until you got sobered up.'

"Lamon protested that this time he would remain within the bounds of decency and moderation. But the judge was obdurate.

"Mr. Lincoln interposed finally. 'Your honor,' he remarked in his droll way, 'I

Tablet at Shelbyville courthouse

move you that Mr. Lamon be granted one more trial."

"Judge Davis laughingly consented, and the thirsty man proceeded to obtain a pitcher full of corn whisky. The three then took their way to an inner room of the tavern.

A Club Safer Than a Fist

"Mr. Lincoln did not drink, although it was almost the universal custom among men in public life of that day. There is an amusing story about Ward Lamon in later years. After Mr. Lincoln became President, he appointed Lamon marshal of the District of Columbia. A certain individual of more or less dangerous reputation made threats against the marshal's life. One day the two met on Pennsylvania Avenue, in Washington, and the threatener made a move toward his hip pocket. Lamon struck him a terrific blow under the jaw and actually broke the fellow's neck, killing him instantly.

"In a panic, he sought the President, told him the circumstances and begged for protection. Mr. Lincoln looked grave. 'Well, Ward,' he said at last, 'I'll stand by you—but hereafter, when you have occasion to hit a man, don't use your fist. Get a club.'"

Colonel Warner relates an incident when Stephen A. Douglas spoke in Clinton at a Democratic rally. Someone wrote to Mr. Lincoln at Springfield and suggested that he ought to attend the meeting. He did so, but arrived late and came up on the stand behind the fiery Douglas, who did not know of his presence. The "Little Giant" handled Mr. Lincoln without gloves during the course of his speech. At the close, there were loud cries of "Lincoln! Lincoln! Speech! Speech."

Mr. Lincoln stood up and said tactfully that it was Mr. Douglas' meeting and he had no moral right to interfere, but that he would be glad to make a few remarks later, over at the courthouse. Afterward these two powerful figures campaigned together, denouncing each other's policies and opinions without reservation, but in their private relations they remained faithful

Six

Colonel Vespasian Warner

friends until Douglas died soon after Lincoln became President.

There was a man named Robert Lewis in Clinton who discovered a deed to some land in the Missouri Ozarks among his father's papers after the latter's death. Lewis decided to locate on his Ozark farm and accordingly went thither. The story goes that he found a log cabin on the property occupied by an old man, some dogs and a squirrel rifle.

A Good Proof of Title

"Who owns this place?" Lewis asked.

"I do," said the squatter.

Lewis produced his deed and suggested that there might be a legal question involved. Whereupon the other took down his rifle from its pegs and remarked: "Well, h'ars my title—now, you git."

Lewis returned to Clinton saying that he bowed to the squatter's proof of title.

After the Civil War, some men from DeWitt County, Illinois, bought a quantity of cotton at Memphis, and while the civil

authorities consented to its being shipped north, the military rules would not permit its shipment. Lawrence Weldon of Clinton, a friend of Mr. Lincoln, was sent to Washington to obtain a presidential order rescinding the rule.

The President listened to Weldon's plea. "Do you remember Bob Lewis' Ozark land?" he asked. "Well, Bob had the civil rights, but the militia had proof of title. This seems to be a similar case." So the cotton never came North.

Lawrence Weldon's son, Lincoln Weldon, was born when Mr. Lincoln was an unknown and struggling lawyer. Weldon named the boy after the man who was destined to undying fame. Colonel Warner thinks that, probably, Lincoln Weldon was the first child to be honored by the name of the martyred President.

When Lincoln and McClellan Met

Mr. Lincoln was at one time attorney for the Illinois Central in several counties. Colonel Warner tells the following story:

"There was a case in Judge Davis' court at Clinton wherein the railroad was being sued on some count or other. When the case was called, Mr. Lincoln rose and asked for a continuance for one day. He said: 'One of our witnesses is the chief engineer of the company. His name is George B. McClellan. He can't be here until tomorrow. Further deponent saith not.'

"Judge Davis granted the continuance. The following day there met for the first time those two men—one of whom was to be President of the United States and the other commander-in-chief of the Army of the Potomac, all in the short space of half a dozen years."

Lincoln's droll humor was well known in

the '50's. There is a story of a certain country doctor who had won distinction in his profession. His name was Winn. When anybody got sick, if Doctor Winn couldn't save him, he was beyond help, according to popular opinion.

Sick Until Judgment Was Paid

One Tom Hutchin got into a legal controversy with the doctor and sued him. Judgment was rendered for \$150 in Hutchin's favor—a tremendous sum, the price of a farm, in those days. A feud resulted. Presently, however, Hutchin fell ill. The community was amazed to hear that Doctor Winn had been called. One day Mr. Lincoln was driving with a companion in his buggy along the country road. Doctor Winn, astride his nag with pills and panaceas in saddle bags behind him, hove in sight. Mr. Lincoln stopped his equipage and hailed the physician.

"I hear our friend Tom Hutchin is down sick," he said.

"Yes, he's sick," the doctor assented.

"Who is attending him?" Lincoln asked with elaborate innocence.

"I am," returned the other curtly.

"Ah," murmured Lincoln. "Is he likely to recover, you think?"

"I think so," said Doctor Winn.

"When—do you reckon?"

Doctor Winn eyed his questioner shrewdly. "Why," he said, "I reckon he'll recover about the time that judgment is paid off."

Tradition has it that Lincoln's roar of appreciation could have been heard half a mile away.

Colonel Warner a Native of Illinois

Colonel Warner was born April 23, 1842, in Farmer City, Illinois. From the age of 3 months, he has spent practically all of

Boulder marking site of Lincoln-Thornton debate, Shelbyville, Ill.

his 80-odd years of life in Clinton. He enlisted in the Union army in 1861 when he was 19, serving until the end of the war. He was promoted to lieutenant and later commissioned captain by President Lincoln. He served under Grant in the Fort Donelson campaign and was wounded at Shiloh and other major engagements. One of his treasured possessions is a dispatch received by him at Oxford, Miss., where he was provost-marshal for a time, written in a quaint running scrawl and signed "U. S. Grant, Major General."

Colonel Warner says that on one occasion General Grant detailed a troop from Fort Donelson to scout into Confederate territory as far as Clarksville, Tenn. He thinks that President Markham of the Illinois Central System must have been there at the time, probably about a year old. He confesses that he didn't see him nor very many other Southern gentlemen on that visit, as nobody seemed desirous of entertaining Yankee company.

Later, Colonel Warner was brevetted major by President Lincoln and still later appointed judge advocate general of Illinois with the rank of colonel. He served as a member of the national House of Representatives for ten years, from 1895 to 1905. He was appointed commissioner of pensions by President Roosevelt, serving in that capacity for four years and an additional nine months under President Taft, resigning to return to his law practice at Clinton.

Graduated From Harvard in 1868

Colonel Warner served in Indian campaigns on the western plains after the Civil War, under General Grenville Dodge. He resigned from the army in the fall of 1866 and entered Harvard University law school, from which he was graduated in 1868. He began the practice of law at Clinton as a partner of Clifton H. Moore, now deceased. Colonel Warner has been local attorney at Clinton for the Illinois Central Railroad for many years.

Shelbyville, the county seat of Shelby County, Illinois, is another place which is full of living memories of Lincoln when he rode the circuits as an itinerant lawyer. The old inn still stands on the east side of the courthouse in Shelbyville where Mr. Lincoln stopped when he came to the town during court sessions twice a year. A bronze tablet at the southwest corner of the county edifice records Mr. Lincoln's pilgrimages to that spot on his rounds. There will be unveiled, at Shelbyville, this coming 12th day of February, a monument in the form of a massive granite boulder, marking the exact place where Mr. Lincoln and Anthony Thornton met on June 15,

1856, in a joint debate upon the subject of slavery in the Louisiana Territory.

The stone which will serve as an enduring reminder of that day was selected by George D. Chafee of Shelbyville, who has lived there since April, 1861, and has an intimate knowledge of the early history of the county in connection with the great Emancipator. Mr. Chafee tells many interesting stories of Lincoln's droll wit which always so astutely covered any point at issue more succinctly than polished phrases or rounded paragraphs could have done.

Some Logic That Lincoln Claimed

On one occasion when the profundities of logic were under discussion, Mr. Lincoln is credited with having said: "I make no claims to proficiency in the fine shades of logic, but I can readily distinguish the difference between a chestnut horse and a horse chestnut."

There are two original letters written by Mr. Lincoln to Dr. J. B. Herrick, whose son, J. T. Herrick, is a prominent banker at Shelbyville and who now owns the letters. They relate to certain matters in which Mr. Lincoln was interested at the time he was a member of Congress and are self-explanatory. Following are verbatim copies:

"Washington, January 19, 1849.

"Dr. J. B. Herrick.

"Dear Doctor:

"Your letter from Chicago recommending William M. Black for register of the land office at Vandalia, is received. Two others, both good men, have applied for the same office before. I have made no pledge, but if the matter falls into my hands I shall, when the time comes, try to do right in view of all the lights then before me. I do not feel authorized to advise anyone what course to pursue.

"Yours truly,

"A. Lincoln."

"Springfield, June 3, 1849.

"Dr. J. B. Herrick.

"Dear Sir:

"It is now certain that either Mr. Butterfield or I will be commissioner of the general land office. If you are willing to give me the preference, please write me to that effect at Washington, whither I am going. There is not a moment of time to be lost.

"Yours truly,

"A. Lincoln."

Mr. Lincoln failed to secure the appointment, however, it turned out, and history does not record whether or not Doctor Herrick indorsed his aspirations in that regard.

KEY TO PORTRAITS IN LINCOLN-THORNTON PAINTING

Reproduced by permission of the painter, Robert Marshall Root

ington. It was on this visit that a fellow-traveler on the stage coach took occasion to criticize Lincoln's lack of conviviality. This person, whose name has been lost to history but who was described as a typical Kentuckian of the time, after some conversation with the future President, produced a flask and offered the usual invitation. Mr. Lincoln politely explained that he never drank. The other presently proffered a cigar, which was declined with the acknowledgment by Mr. Lincoln that he never smoked. Finally the Kentuckian produced some chewing tobacco, which likewise failed to meet with favor. The Kentuckian snorted disgustedly.

"Well, stranger," he said, "I don't want to offend you, but my experience has taught me that a man who has no vices also has—d few virtues."

When the Lincoln-Thornton debate was held at Shelbyville, probably nine-tenths of the people there were of pro-slavery opinion, it is said. The population was largely composed of former Kentuckians, Virginians and Tennesseans who had come North and settled in the early days. But if three-fourths of his audience were against him at the beginning of the discussion, tradition says that at the close of the debate three-fourths of those present were won by the force and clarity of his argument. Thornton was also a Kentuckian and a lawyer, and he and Mr. Lincoln were warm friends all their lives.

George D. Chafee has been local attorney for the Illinois Central Railroad at Shelbyville since 1868. He is now nearing his 84th

birthday, having been born July 2, 1839. In recent years he has not been active in the practice of his profession, choosing rather to take his ease in the kindly quietude of life's afternoon. He still keeps his office, climbing daily the old familiar stairs, deep-furrowed with the contact of his footsteps that have traversed them for more than forty years.

Mr. Chafee was born in Rutland County, Vermont, and came to Shelbyville about the time the guns were sounding that fired on Fort Sumter. He was one of the electors who chose President Rutherford B. Hayes in 1876. He has represented Shelby County in both branches of the state legislature, as a member of the lower house in 1880 and as state senator in 1904.

September 18, 1922, there was unveiled

George D. Chafee

at Charleston, Coles County, Illinois, a memorial marker commemorating the fourth of the great Lincoln-Douglas debates which took place September 18, 1858. The marker is placed in one corner of the courthouse grounds.

The *Mattoon Daily Journal-Gazette* gave a very interesting account of the ceremonies, which were conducted under the auspices of the Mattoon and Charleston chapters of the D. A. R., the Sally Lincoln chapter of Charleston and the Edward Coles chapter of Mattoon.

Henry R. Rathbone of Chicago and the Rev. Doctor William E. Barton of Oak Park were the speakers.

Views on Lincoln and Douglas

Mr. Rathbone said of Stephen A. Douglas: "He was a debater of singular skill. His mind was fertile in resources. He was a master of logic. None perceived more quickly than he the strength or the weakness of an argument and none excelled him in the use of sophistry and fallacy. Where he could not elucidate a point to his own advantage, he would fatally becloud it for his opponent. He spoke with extraordinary readiness. His speech was terse, rigorous, pointed—he rarely used a simile. He was destitute of humor. In the field of American politics, his knowledge was comprehensive, minute. He was by nature an orator. He could lead a crowd almost irresistibly to his own conclusions. He was, in short, an able, audacious, almost unconquerable opponent in public discussion.

"Mr. Lincoln was calm and philosophic. He would not argue from a false premise, or deceive others or be himself deceived by a false conclusion. He had given anxious thought to the problems of free government and to the destiny of the republic. He had marked out for himself a path of duty and he walked in it fearlessly. His mental processes were slower and more profound than those of Douglas. He did not seek to say merely the thing which was best for that day's debate, but the thing which would stand the test of time and square itself with eternal truth and justice. He wished nothing to appear white unless it was white. He had an abundant sense of humor and employed it in illustration of his argument—not wholly for the sake of exciting merriment. He had the wonderful aptness of Franklin in this regard. He could teach a great truth with the

Inn at Shelbyville where Lincoln stayed

felicitous brevity of an Aesop fable. His words did not flow in an impetuous torrent as did those of Douglas, but were deliberately chosen, conclusive."

Doctor Barton said in part:

"Lincoln and Douglas both spent the night of September 17, 1858, in Mattoon. Both drove over to Charleston the following morning, each one at the head of a great procession.

"It was on the occasion of the Charleston debate that Mr. Lincoln made his famous reply: 'I do not understand that because I do not want a negro woman for a slave, I must necessarily want her for a wife.' This was in answer to Douglas' declaration that Lincoln believed in social equality of the white and black races."

Seven Lincoln-Douglas Debates

There were seven debates in which Mr. Lincoln and Mr. Douglas participated that year. They were held at the following places in Illinois: At Ottawa, August 21; Freeport, August 27; Jonesboro, September 15; Charleston, September 18; Galesburg, October 7; Quincy, October 13; Alton, October 15.

Two years later, these two tremendous figures, champions on opposing sides of a question which involved the sacrifice of a million lives and the expenditure of a great nation's material and economic reserve strength before its ultimate settlement, were opposing candidates for the highest office in the land.

Mr. Lincoln was elected—and the man who had been his bitterest political rival through those troubled years, but who remained to the end a true and faithful friend, held his successful adversary's hat as they stood under the shadow of the great dome of the national capitol and Mr. Lincoln stood forward to deliver his inaugural address.

Abraham Lincoln's Views on Americanism

*Little-Known Address Made at Springfield
Points Our Sole Danger as Being Within*

The following is from an address which Abraham Lincoln, then only 28 years old, delivered in 1837 before the Young Men's Lyceum at Springfield, Ill. The very fact that it is among the least known of Lincoln's public utterances has prompted the editors to select it for publication upon this anniversary occasion.*

IN the great journal of things happening under the sun, we, the American people, find our account running the date of the nineteenth century of the Christian era. We find ourselves in the peaceful possession of the fairest portion of the earth as regards extent of territory, fertility of soil, and salubrity of climate. We find ourselves under the government of a system of political institutions conducting more essentially to the ends of civil and religious liberty than any of which the history of former times tells us.

We, when mounting the stage of existence, found ourselves the legal inheritors of these fundamental blessings. We toiled not in the acquirement or establishment of them; they are a legacy, bequeathed to us by a once hardy, brave and patriotic, but now lamented and departed, race of our ancestors.

Theirs was the task (and nobly they performed it) to possess themselves, and through themselves us, of this goodly land, and to uprear upon its hills and its valleys a political edifice of liberty and equal rights; 'tis ours only to transmit these—the former unprofaned by the foot of an invader, the latter undecayed by the lapse of time and untorn by usurpation—to the latest generation that fate shall permit the world to know. This task gratitude to our fathers, justice to ourselves, duty to posterity and love for our species in general, all imperatively require us faithfully to perform.

How, then, shall we perform it? At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some transatlantic military giant to step the ocean and crush us at a blow? Never! All the armies of Europe, Asia and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years.

At what point is the approach of danger to be expected? I answer, if it ever reaches us it must spring up amongst us; it cannot come from abroad. If destruction be our lot we must ourselves be its author and finisher. As a nation of free men we must live through all time, or die by suicide. * * *

I know the American people are much attached to their government; I know they would suffer much for its sake; I know they would endure evils long and patiently before they would ever think of exchanging it for another—yet, notwithstanding all this, if the laws be continually disregarded and despised, if their rights to be secure in their persons and property are held by no better tenure than the caprice of a mob, the alienation of their affections from the government is the natural consequence, and to that sooner or later it must come.

Here, then, is one point from which danger must be expected. The question recurs, "How shall we fortify against it?"

The answer is simple. Let every American, every lover of liberty, every well-wisher to his posterity swear by the blood of the Revolution never to violate in the least particular the laws of the country, and never to tolerate their violation by others. As the patriots of '76 did to the support of the Declaration of Independence, and so to the support of the Constitution and laws, let every American pledge his life, his property and his sacred honor—let every man remember that to violate the law is to trample on the blood of his father, and to tear the charter of his own and his children's liberty.

Let reverence for the laws be breathed by every American mother to the lisping babe that rattles on her lap; let it be taught in schools, in seminaries and in colleges; let it be written in primers, in spelling books and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice. And, in short, let it become the political religion of the nation; and let the old and the young, the rich and the poor, the grave and the gay of all sexes and tongues and colors sacrifice unceasingly upon its altars.

They [the Revolutionary fathers] were pillars of the temple of liberty; and now that they have crumbled away that temple must fall unless we, their descendants,

supply their places with other pillars, hewn from the solid quarry of sober reason. Passion has helped us, but can do so no more. It will in future be our enemy. Reason—cold, calculating, unimpassioned reason—must furnish all the materials for our future support and defense. Let those materials be molded into general intelligence, sound morality, and, in particular, a reverence for the Constitution and laws; and that we improved to the last, that we

revered his name to the last, that we remained free to the last, that during his long sleep we permitted no hostile foot to pass over or desecrate his resting place, shall be that which, to learn, the last trumpet shall awaken our Washington.

Upon this let the proud fabric of freedom rest, as the rock of its basis; and, as truly as it has been said of the only greater institution, "the gates of hell shall not prevail against it."

What Lincoln Meant to One Immigrant

By J. H. LORD,

District Passenger Agent, Springfield, Ill.

About ten years ago a rough-appearing man came to my office to seek advice about his wife and five children whom he desired to bring to this city from their homes in Wales. He had not yet reached middle age. The children were all young. He had not seen them for a year, because he had only funds enough to pay his way to Illinois. He was working in one of the mines near this city and had now saved enough money for his family's passage. I undertook to arrange everything for their transportation from Wales to Springfield. In his anxiety, he frequently came to my office. Sometimes it would be necessary for him to wait, and

I noticed he would take from his pocket a soiled little book in which he soon became absorbed.

One day I asked him what the book was. It was a life of Lincoln. And then he told me this story.

"One Christmas I was looking for small gifts, and I went into a shop in Wales where there were books for sale. I saw the word 'Lincoln' on the cover of this book, and I asked the shopkeeper whether it was about the American Lincoln. He told me it was, and I bought it for 2 shillings. I read it through before I went to bed that night, and when I finished it I said I would not rest until I reached Springfield, Ill.

"I carried the book with me to work and

1823—Opportunity—1923

down in the pits. At the noon hour, with only the flickering light of my lamp, I read this book over and over. It has never been away from me. When I had saved enough I came to this country, and I did not stop until I reached Springfield. Within an hour after I arrived here, I was at Lincoln's tomb. I knelt in the open and thanked God that I was in America. I have now saved enough to bring my family, and this is to be our home, and our children will grow up to know Lincoln and to guide their footsteps after his."

The family reached New York in safety.

Illinois Central representatives took charge of them, and they came through to Springfield with scarcely an incident. The husband and father was at the station, and I think the meeting was the most affecting sight I have ever witnessed at a station.

This man worked for several years in the mines about Springfield and then went to Missoula, Mont., to become a storekeeper for a mining company.

I have no doubt the experience of this man is not at all unusual among the better class and the more intelligent of the European aliens who seek refuge in this country.

Travelers "Treated" at Centreville, Miss.

By NORA P. RING, Stenographer,
Superintendent's Office, Vicksburg, Miss.

Yazoo & Mississippi Valley trains Nos. 30 and 31 stop for dinner and No. 12 for supper at Centreville, Miss. The hotel there is conducted by Mr. and Mrs. Harry Peck, who have become famous with the traveling public for the excellent cuisine of their establishment. Anyone who has ever eaten one of their meals, served in home style, always remembers it with pleasure.

When the passenger trains pulled into Centreville on Christmas day and made the usual stop for dinner, one of the surprises of their lives awaited the passengers, who through necessity or otherwise were forced to absent themselves from home and fire-side on that happy day.

The diners, upon entering the hotel, which is a short distance from the station, found the gracious host and his wife ready to receive them. They were ushered into the dining-room, where the following menu was spread for their delectation: Turkey with oysters, chicken, cranberry sauce, creamed potatoes, tomatoes, lettuce, salads, hot biscuits, fruit cakes, layer cakes and ice cream. And all this served in home fashion—verily a real Christmas feast.

The guests were invited to partake of this delightful repast, and after they did justice to it the surprise was sprung. The meal was served free of charge. It was on the house! It was Mr. and Mrs. Peck's Christmas offering to the patrons of the Yazoo & Mississippi Valley.

Not content with this unique action, the hosts had provided a sextet of negro sing-

Mr. and Mrs. Harry Peck and their dining room, Centreville, Miss.

ers, who rendered selections appropriate to the occasion.

The generous thoughtfulness of Mr. and Mrs. Peck and their substantial Christmas gift were highly appreciated by those who

were so fortunate as to enjoy their hospitality, and the passengers resumed their journey with sincere wishes for the long life and prosperity of their generous friends.

How "Mike" Kennedy Made His Last Run

The *Illinois State Journal* of January 5 had this to say:

"Michael J. Kennedy, Sr., veteran Illinois Central Railroad conductor, who was in the passenger service on the Springfield division for twenty-four years, will make his last run over the line tomorrow morning.

"Mr. Kennedy, who was familiarly known by his host of friends as 'Mike,' will not give the highball to his engineer as the big engine puffs away from Union station, nor will he call the stations as the train progresses eastward.

For 'Mike' Kennedy is dead.

"As he lived for many years, riding the crowded passenger trains, he will be for a brief space in death. A special Illinois Central train will leave the city at 8 o'clock to carry his remains to Clinton and then to Decatur, where the funeral will be held at 11 o'clock. Interment will be made there.

"Mr. Kennedy died at St. John's Hospital. He had been ill for a number of months and unable to work, but he could not resist the call of the work he had followed so long, and last Sunday he reported to take his run. He became fatigued soon and had to leave his train at Clinton and return home. He entered the hospital soon after and death followed Wednesday, January 3."

The following Illinois Central employees and friends served as pallbearers: W. E. Walsh, John Lovell and Joseph Lordan, conductors; J. R. Irvine and R. M. Heaton, flagmen; William McConnell, pensioned baggageman; J. W. Gallagher, engineer, and Thomas Corrigan, conductor on the C. P. & St. L.

Mr. Kennedy was born on August 7, 1859, at Decatur, Ill., and entered the service of the St. Louis, Peoria & Northern Railway Company on June 5, 1898. The Illinois Central Railroad Company purchased the St. Louis, Peoria & Northern in December, 1899, and since that time Mr.

Kennedy had served the Illinois Central faithfully as conductor.

During his entire service with the Illinois Central he had a clear record, one that few railway employees establish while in service. In the death of "Mike," the railway company loses a valuable employee and the employees lose a true friend.

AN IMPERTINENT TRUCK

About 8:30 a. m., Thursday, January 4, a 3-ton truck belonging to the Louisville Builders Supply Company, loaded with heavy cement blocks and pipe, which had been parked at Seventh and Main Streets, Louisville, Ky., headed west, turned the corner "of its own accord" and proceeded down 7th Street Hill, without chauffeur, and parked itself in the women's waiting room of Central Station—that is, as much as could get in through the window.

There was a loud crash of broken glass and splitting timbers as the truck smashed through the window, taking the sash with it. Fortunately, there was no one in the waiting room, and the only damage was to the truck and the window.

Mr. J. Kennedy

Where the truck stopped

Making Springfield, Ill., a Lincoln Shrine

*City Planning and Zoning Commission Bears
in Mind the Importance of Its Work*

By A. L. BOWEN,
Chairman, Springfield City Planning
and Zoning Commission

WHEN the City Planning and Zoning Commission of Springfield, Ill., was casting about for a consultant, John Nolen, a distinguished city planner of Cambridge, Mass., came to discuss this matter with us. Addressing the annual meeting of the Chamber of Commerce, he made this statement: "There are only two cities in the United States toward which every American turns his eyes and to which the whole civilized world pays homage—Washington, the national capital, where rests the body of George Washington, and Springfield, where rests the body of Abraham Lincoln. No other American city belongs in this exclusive circle. These are the shrines of the nation."

This simple statement by a modest New Englander revealed to our own people the magnitude, the grandeur and the sublimity of the heritage that is Springfield's. He appreciated our importance on the map of the world as no other man in this city appreciated it. The people of Springfield must realize that there is a responsibility upon them to make their city what it should be to fulfill the expectations of mankind.

Through the instrumentality of the City Planning and Zoning Commission and other agencies, Springfield expects to rise to its obligations, and there is developing a pretentious but practical scheme for making Springfield worthy of its Lincoln heritage. It is hoped to secure the co-operation of Sangamon County, central Illinois and the state itself. I believe that they are already in line to follow Springfield's lead and that whatever is done will be done with a view to creating such a memorial as will be a fitting acknowledgment of the value we place upon the Lincoln heritage.

Plan to Cover Fifty Years

The Planning and Zoning Commission has been in existence one year. It has employed Myron H. West as its consultant. Mr. West and his corps of specialists will be able to submit plans in May for the development of this city through the next fifty years. In laying out the city for this period, consideration is being taken of the tomb of Lincoln and his home as objectives which must be given the places of greatest prominence. The plans will call for unifica-

tion of railroads and a union station which will form a part of the picture.

But whatever Springfield does will be done for the purpose of working its plans into a greater plan which will include those points in central Illinois which Lincoln immortalized. Among these is Old Salem, at Petersburg, thirty miles north of Springfield. The state has purchased this site as a state park and has been rebuilding the town as it was in the days when Lincoln lived there. It is proposed to connect Springfield and his tomb with Old Salem by means of a great boulevard properly landscaped.

Springfield is going to put herself in order, so that she may be the setting for this priceless jewel. The hundreds of thousands who are going to pass through our avenues in the next generation to visit the capital of Illinois and pay respects at the home and tomb of Lincoln must carry away the impression from what they see of us that we are worthy of our eminence in history and current affairs.

I think the people of Springfield are nearer than they ever have been to a clear understanding of this fact of their responsibility and that they are ready to make the supreme effort that it calls for.

The Interest of Central Illinois

Lincoln belonged to Springfield first as her citizen, but he traveled central Illinois as a lawyer and as a political campaigner. It is significant that every town, hamlet and city in which he stopped, even if it were only once, holds that contact in reverence.

Recently, through the efforts of various societies, tablets have been set up to mark his more important stopping points, but these are not sufficient. No community is going to be satisfied with the little that has been done. Every one of them is prepared to magnify to the fullest possible extent the association which Lincoln had with it.

Thus there is growing through all this great section of Illinois, which we call "central" and which was the scene of the formative acts in the life of Lincoln, a greater and greater interest and reverence for his memory. It is encroaching upon Springfield and demanding what is properly its portion of the story and honor in this heritage.

It will be willing to do its part in the

creation of the memorial that we hope some day will be the fitting testimonial of our unbounded love and worshipful esteem. Many ideas have been advanced. All of the memorials that have been suggested take on the form of a public service, and I believe that it is as it should be. The new memorial at Washington is a marvel of beauty in stone and marble and setting. It typifies the man and character as lines, proportions and symmetry can, but it serves the public only as an object of beauty—a

mission, of course, that we cannot idly dismiss from our thoughts. The Lincoln ideal, however, was service to mankind, and the memorial that we who live in this territory made sacred by his presence are to erect must be a service memorial.

It has been urged also that this country be created into a district to be known as the District of Lincoln. Within its boundaries every place and every scene associated with him shall be marked in some manner that will serve mankind.

The Winter-Time Appetite of Alligators

The following correspondence is self-explanatory, if nothing else. Agent R. Smith of Greenwood, Miss., wrote as follows to L. S. Bradley, agent at Belzoni, Miss., under date of December 7:

I noticed a few months ago a piece in the *Illinois Central Magazine* where you had raised a couple of alligators.

I have a young one about 3 months old that I am trying to raise, but can't get it to eat anything. I wish you would please write me fully what and when to feed it and how it should be cared for.

Mr. Bradley responded as follows under date of December 11:

I have your letter of recent date, asking about how to rear a baby alligator.

I note how anxious you are about the welfare of this delicate infant and know that you are spending sleepless nights pondering over the doubtful outcome of its fight for existence. I am surprised that you did not consult the "How to Keep Well" columns of some of our well-known daily papers, instead of writing me. After thinking the matter over and remembering that a railway agent must be able to answer all questions propounded to him, no matter on what subject, I will endeavor in my feeble way to direct you in the best method of rearing an alligator.

You know I have been in the railway game a good many years and have met all kinds and conditions of men and women during the past thirty-five years as an agent, and I should be able to give you good parental advice in this, your new venture. During my career as agent I have been asked by anxious mothers what was best to do for colicky babies, if I thought that a piece of asafoetida tied around a child's neck on a yarn string was an infallible remedy to keep the child from contracting the whooping cough or measles, if sulphur and lard well rubbed in the skin would cure the 7-year itch, if catnip tea would cure a baby afflicted with the hives.

I have been called upon to advise the best method of treating a cow with the hollow horn, a mule with the botts; to tell when the 3:30 train was due, to assist old maids to find husbands, to tell who would be next Democratic candidate for President, whether or not we would soon communicate with Mars via the radio route, whether or not the present Congress would lease Muscle Shoals to Henry Ford, what the outcome of the meeting at Lausanne would be, when the Irish in Ireland would settle down and quit fighting, what Congress was going to do about the Ku Klux Klan, whether or not Constantinople would be returned to the Turks and what I thought about the repeal of the Volstead Act, and thousands of other questions, to which I was supposed to give correct replies.

I must confess that your request is the first time I have ever been called upon to act as wet nurse to a baby alligator. Knowing the sleepless nights you have spent over this little foundling, I will endeavor to give you the benefit of my experience. Having reared two of these little fellows from early infancy to sturdy youth, I feel that my experience might be of some benefit to you.

Do not be uneasy about his appetite. It is just natural for him to fast through the winter. Even an old-timer will not eat the most dainty food during his period of fasting. I cannot explain whether it is a religious rite of theirs or not, keeping Lent for four or five months at a time, or whether it is just one of their fads to reduce weight. At any rate, they will not eat during winter time. Around the first of April, 1923, he will likely develop an appetite for fresh meat or fish, of which you may give him as much as he will eat. During cold weather let him have a place where he can get in the ground and keep warm. An alligator is as easily damaged by cold as a sweet potato; so be careful. He will want a damp place to stay, but not under water.

Memphis Division Chief Clerk an Organizer

F. J. Theobald Applies the Experience He Has Gained in His Twenty-two Years of Service

By COLLIE P. SAID,
Memphis Division Editor

F. J. THEOBALD, chief clerk to Superintendent J. M. Walsh of the Memphis division, has been in the employ of this company for twenty-two years, having entered the service as a car repairer at Paducah, Ky., March 1, 1900. After serving in the mechanical department, he was appointed time-keeper in the car department at Paducah in January, 1902. This was his first clerical experience. He later served as chief clerk and chief accountant. On February 1, 1909, he was appointed chief clerk to the master mechanic at East St. Louis, Ill., a position he held until May 5, 1914, at which time he was transferred to Memphis, Tenn., as chief clerk to the master mechanic. In May, 1919, he was promoted to his present position.

Although the greatest part of his railway experience has been in the mechanical department, he does his present work well and finds that the knowledge he acquired along mechanical lines is of great help in handling his present duties.

Because of his long experience, Mr. Theobald is well versed in every department of office operation and is a great believer in "system." Although he came to his present position at a time when business conditions were greatly disturbed throughout the country as a result of the World War and the office force was depleted because many of its experienced men answered their country's call, he quickly organized the force, aiding and assisting the force in every way possible, until today the office stands second to none on the system.

Blessed with an even temper, Mr. Theobald is courteous and accommodating at all times. He is very popular, not only with the patrons of the company, but also with all employees on the division. He is a member of the Elks Club and is associated with several civic organizations in the city.

Being a great lover of sports, he never misses an opportunity of either hunting or fishing, and when not on duty, unless at home with his wife and four charming children, he can be found on the banks of some stream with hook and line or else with gun and dog in the heart of the canebrake after game. Bowling also is another sport of which he is extremely fond, and as a

F. J. Theobald

crack bowler he has built up an enviable reputation among his fellow players.

PUNCTUALITY IS DESIRABLE

We have found, by careful analysis, that a man who makes appointments that he does not keep, or even the man who is habitually late with appointments, lacks the foundation upon which to build confidence. Men will not trust such a man. Unconsciously they will shun him. If a man is late with an appointment once he will be forgiven, probably, but the thing fixes itself in the mind of the one who had to wait. If the same thing happens a second time, confidence will be considerably shaken, and if it happens a third time confidence will be practically withheld from that time on. Show up late for your appointments, if you choose, since that is your privilege, but just remember that little by little this practice will remove the foundation upon which those whom you disappoint in this way have built their confidence in you, and without this confidence you cannot accomplish very much.—*Napoleon Hill's Magazine.*

Money and Men Make Ideal Partnership

*President Markham, Speaking to Shop Workers
at Burnside, Says Each Depends on the Other*

President C. H. Markham addressed more than 2,000 employes at the Burnside shops, Chicago, Friday noon, January 12. Mr. Markham spoke from an improvised platform to a multitude of employes who had gathered in the planing mill to pass their noon-hour period. The machinery had been silenced when the noon whistle blew. As the men gathered about the platform a quartet of employes sang some tuneful melodies that were very much enjoyed. Shop Superintendent L. A. North, in a few words, introduced President Markham. Mr. Markham declared that his long experience as a workman in the railway ranks makes him sympathetic with the aspirations of the employes for those things which mean greater contentment in their work and greater opportunities for happiness in their home life. "I have worked long hours," he said. "I have done work that was just as hard as that done by any man in the sound of my voice. And whatever success you may feel that I have had, whatever credit you may attach to the position I hold, did not come to me in a day, or a week, or a month, or a year. It took many years." Following is a report of what Mr. Markham said, in part:

THERE are two important factors entering into the operation of a railroad. These are money and men. I do not like to call them capital and labor, because those terms have been too greatly abused by misuse. At any rate, we have the owner and the worker, the dividend earner and the wage earner. One puts up the money that supplies the equipment and facilities, the other puts up the labor that operates the machinery supplied by the other. They are partners in the transportation business.

Each of these partners in the transportation business is just as necessary as the other. A railroad, to be successful, must have an abundance of the material facilities that are supplied with the funds contributed by the one partner, and it also must have the human facilities supplied by the other—the loyal, conscientious, efficient work of its officers and employes. It cannot succeed unless it has both.

Each of the partners has certain rights and certain duties. One cannot pursue a course that hurts the other without, in the end hurting himself. If the owner does not take a fair attitude on questions affecting the welfare of the employe, he suffers

by creating an antagonistic, hostile spirit that injures the property and impairs the ability of the road to serve its patrons satisfactorily. If the employe does not take a fair attitude on questions affecting the welfare of the owner, he suffers by impairing the efficiency of the organization of which he is a part and retarding the development of the railroad.

Railroad's Prosperity Important

Having a prosperous railroad in good condition is of vital importance to both partners—to the owner and to the employe—to the one who supplies the capital and to the one who supplies the human energy. A railroad that is not prosperous, not in good condition, is not in a position to pay a fair return to either the investor or the employe. In an unprosperous, ill-kept condition, it cannot long continue to do either.

Many changes have taken place in the industrial world in the last ten years. Living costs have increased materially. Rents and retail prices of fuel, clothing, food, and so on, have shot up, and these economic changes have resulted in substantial changes in the railway industry. In view of these changed conditions, consider how the two partners in the transportation business have fared.

You men are familiar with the increased rates of pay which shopmen have received during the past ten years. In addition, the standard working day in railway shops has been shortened from nine and ten to eight hours, safety devices and practices have lessened the hazard of injury, shopmen are given brighter, more cheerful surroundings in which to work, and they have better tools to work with. Most of the other railway occupations have fared equally well. I believe this is as it should be. It is my opinion that railway employes who give their best service to the company, loyally and efficiently, ought to be well paid and ought to have working conditions that promote safety, contentment and satisfaction in their work. They should have the best wages and working conditions that economic conditions will justify.

The other partner has not fared so well. There are about 14,000 holders of Illinois Central stock, of whom a considerable number are also employes of the company. The average ownership per stockholder is about eighty shares. Ten years ago eighty shares of Illinois Central stock yielded a return

of \$560 a year, and only the same return is now being realized, despite the fact that the owner, like the employe, has to meet the higher cost of living.

No Increase in One Partner's Return

While one partner has been profiting by higher wages and better working conditions, the other partner, who is just as necessary to the railroad, has been content with accepting a return upon his investment that has not increased, but the actual buying power of which, on the other hand, has been almost constantly declining. Even at that, the Illinois Central stockholder is much better off than the stockholders of many other railroads, some of which are considered to be highly prosperous roads, for during this period of change a number of railroads have been passing their dividends altogether and some others have reduced their dividend payments substantially.

The great danger that lies in this inequality between the partners in the transportation business is that many investors have been discouraged by the meager returns that the railroads have been earning and have been driven to other markets. A prosperous railroad must constantly be adding to its equipment and facilities, for the volume of business offered the railroads is constantly growing and there must be a growth in the railway machinery to take care of the increased business that must be moved. When a railroad is unable to increase its facilities in keeping with the growth of business, everybody connected with transportation suffers. The shipper suffers because he cannot get promptly all the transportation service that he requires for the proper conduct of his business, the owner suffers because the railroad is deprived of possible earnings, and the employe suffers because the railroad, being deprived of needed revenues, is not in so good a position to pay good wages and grant good working conditions.

It is the function of the management of a railroad to take the funds supplied by the owners of the property and the human energy supplied by the officers and employes, and turn out transportation service that will be satisfactory to the patrons of the railroad. In that position, the management represents three groups: It represents the owners—the employers; it represents the officers and employes of the organization, and it represents the patrons—the public. It must be duly considerate of the welfare of all three groups.

Must Take All Into Consideration

There are times when you men may think of the management of the Illinois Central System as representing the owners, espe-

cially when you are unable to obtain everything you would like to have in the way of wages and working conditions. However, that is only partly true. The managing officers of this railroad do represent the owners of the property, but they also represent you and the public. While the management might like to grant all your requests for better wages and improved working conditions, it must be mindful also of the other two groups which it represents. Better wages and better working conditions must be made possible by more economical operation, or else they result in depriving the owner—the other partner—of his share of reward, or in increasing the rates which the public must pay for transportation service. Concessions granted at the expense of either the owner or the public would in the end militate against the employe.

Instead of thinking of us as representing the owners of the property of which we are all employes, I would like to have you think of me and our other officers as your co-workers. We are all associated together in one big enterprise—that of furnishing to the public a fundamental, essential service. What is for the welfare of one is for the welfare of all, and we should put forth a united front in the operation of the railroad. I like to think about the members of our organization as being united in a common enterprise, working for the welfare of each other.

Proper Organization Is Valuable

Most of the trouble that has come up in the past between the managements and employes of the railroads of the country has been due to misunderstanding. We have let outsiders come in and create a gulf between us, and that gulf has been filled with suspicion and distrust. I am not blaming the employes for that; in fact, I think the managing officers of the railroads have been most at fault for not taking the initiative in closing up the gap. For a railroad to be successful, there must be a unity of spirit and purpose in the organization that can come only through mutual understanding and good will. The management must understand and be in sympathy with the aims and aspirations of the employes, and the employes must understand and be in sympathy with the aims and aspirations of the management.

I want to tell you frankly that I believe in the fundamental principles of labor organization. I have not hesitated to make this same statement to the public. Labor organizations that are directed along proper lines can be instruments of good, for the employes, for the owners, for the management, and for the public. However, any-

President Markham speaking at Burnside

thing that has in it the power to do good also possesses, if wrongfully directed, the power to do harm. This applies to labor organizations. In the past, labor organizations have often been injured by poor leadership. A labor organization ought to inspire good craftsmanship. It ought to be of real service to the member who wants to get ahead in life, as well as to the member who is content to stay where he is. It ought to foster, not thwart, ambition. An organization that does not do these things is not a constructive, progressive organization.

When there are questions relating to wages and working conditions to be adjusted, a representative of the group of men affected and a representative of the management ought to sit down together and thresh out the merits of the question and reach an amicable settlement, instead of calling in an outsider and running the risk of widening the breach.

There was the shopmen's strike last summer. One of the stated causes of that strike was the practice of some railroads in contracting their shop plants to outsiders. That question did not involve the Illinois Central System in any way. The practice was not being resorted to on this railroad, and our management had nothing whatever to do about the practice on the few railroads that had contracted their shop plants to outsiders. There is no reason, therefore, why trouble should have arisen between our shop employes and our management over a question which in no way affected either. It is my opinion that no trouble would have arisen if the representatives of our management and the representatives of our shopmen had been able to deal with each other, without interference from outsiders.

The management of the Illinois Central

System wants to co-operate with the employes, to work closely with them, to help them in every way it can. I have faith in our employes, faith in their honesty and integrity and their fairness, and I want them to have faith in the management—the kind of faith that is the product of mutual understanding.

Belief in American Institutions

There are some people who are afraid that our country will be destroyed by sovietism, bolshevism, or some of the other false creeds that are making a wreck of some European countries. I do not share that fear. I believe the great majority of our workers are loyal American citizens, who believe in American institutions, who respect property rights and believe in the principles that have made the United States the great country that it is today. Railway employes are pre-eminently fair at heart. The square deal is one of the fundamental principles that they will defend to the last line of entrenchments. When they are in possession of the true facts on any question, they can be depended upon to stand on the side of right and justice. It is this characteristic American spirit of fair play and the square deal that has steered us safely through the storms that have beset us in the past, and in it I place my faith to steer us through future storms.

There are some leaders in the railway labor organizations who are engaged in misrepresenting the railroads to their employes and to the public. I want to take one instance of this misrepresentation and show you how utterly false it is, so that you will have a basis upon which to judge such untrue accusations when they are made to you.

The charge that I am going to discuss is the one that probably has been made against the railroads with the greatest frequency in the past—that is, that the rail-

roads of the country are vastly over-capitalized. "Watered" stock, say the agitators, is responsible for low wages to employees and high rates to the public. I am going to talk about the Illinois Central System, because that is the one railroad with which I am thoroughly familiar and because it is the railroad in which you are most greatly interested.

Illinois Central Capitalization

The capitalization of the Illinois Central System—that is, the total par value of all stocks and bonds outstanding in the hands of the public—is about \$388,000,000. The Illinois Central System operates about 6,200 miles of line, or first track, but when we include second, third and fourth tracks, side tracks, passing tracks, yard tracks and the like, we have more than 10,000 miles of track. Our capitalization, therefore, is approximately \$62,580 for each mile of line operated, or about \$38,000 for each mile of track.

However, capitalization covers a great deal more than just the right-of-way, the ballast, the ties and the rails. On the Illinois Central System we have 75,000 freight cars, 1,800 locomotives and 1,700 passenger cars. Take our freight cars at \$1,000 each, which is about half what a new car costs now; take our locomotives at \$30,000 each, which is a little more than half the present cost of a locomotive; take our passenger cars at \$15,000 each, or considerably less than half what we paid for the last steel cars we purchased. There we have \$75,000,000 worth of freight cars, \$54,000,000 worth of locomotives, and \$25,000,000 worth of passenger cars—a total value of \$154,500,000 for rolling equipment alone. When we subtract this from our capitalization, we have left \$233,500,000, or about \$23,350 for each mile of track. Even this does not take into consideration the cost of bridges, signals, telephone and telegraph lines, buildings, land, roundhouses, shops and shop machinery, stations, and so on.

One of the big items of value to a railroad is terminal property. The Illinois Central System owns extensive terminal properties in Chicago, New Orleans, Birmingham, Memphis, Louisville, Indianapolis and in many other cities. If we had to go into those cities today and procure the properties we now have there, it probably would cost so much as to be prohibitory. You men are familiar with our terminal properties here in Chicago. Some persons believe that they alone are worth \$100,000,000. They may be worth a great deal more. The Illinois Central System owns 1,415 acres of land within the city limits of Chicago, of which 114 acres lie north of Roosevelt Road and border on the

great Loop district. The value of this land today can hardly be estimated. Our terminal properties in many other cities are also very valuable. These values are included in the \$23,350 capitalization per mile of track that we have already arrived at.

The Cost of Present Road Building

In order to get a comparison, take the cost of building a mile of hard-surfaced road. Just a few days ago it was announced that the State of Illinois had received nearly 400 bids for the construction of 195 miles of hard-surfaced roads, only fifteen miles of which involved heavy grading, and with only twelve light bridges being included. The average cost was \$25,518 a mile. According to the director of public works and buildings, this is the lowest cost thus far established in the state's highway-building program, and this, of course, does not take into consideration at all the cost of the land on which the roads are to be built nor the cost of the grading and bridge work which already has been done.

I am sure that any fair-minded person will agree that since it costs the State of Illinois more than \$25,000 a mile to build an ordinary hard-surfaced road, under those conditions, an average capitalization of \$23,350 for each mile of track, including far more than merely roadway, shows clearly that the Illinois Central System, instead of being over-capitalized, is considerably under-capitalized. The charge of "watered" stock, as it applies to the Illinois Central System, is wholly untrue, and I believe you will find similar conditions on many other railroads.

Among the things that have helped the Illinois Central System are these: It has a superior geographical location in the heart of the great Mississippi Valley; it follows a policy of keeping well supplied with equipment and facilities and of keeping its equipment and facilities in good repair; it furnishes its officers and employees good tools with which to do good work. All of these are highly important. But, in my opinion, the most important factor is that it has 60,000 officers and employees who would rather work for the Illinois Central System than for any other railroad in the world—who are giving to the Illinois Central System the best, most loyal, most efficient service of which they are capable. Let us preserve that spirit, and the Illinois Central System will continue to occupy a place in the front ranks of the railroads of the country.

Work of Each One Is Important

We are all fellow workers on the Illinois Central System. Each of us has his par-

ticular part to play, and our success collectively, as an organization, depends upon how each and every one of us performs the task that is his part. Do not think that your particular job, whatever it may be, is of little importance to the railroad. Remember always that the strongest chain that can be forged is only just as strong as its weakest link. The efficiency of a great trip-hammer that delivers a blow of many tons may depend, as you very well know, upon a tiny set-screw, a drop of oil, or a strand of packing in a valve. Never lose sight of the fact that, no matter what your particular task may be in the great, intricate, often complex machinery of the railroad, it is an important task. The spike

that holds a rail to the tie or the bolt in a fishplate is just as essential to the safety and comfort of the traveling public as the locomotive that pulls the speedy limited train.

It has been a deep pleasure to meet with you in this intimate, personal way, and to have had the opportunity to talk to you as your fellow employee.

In closing, I want to thank each one of you for the loyal and efficient service you have given during the year that has just ended. I congratulate you upon the record you have made for performance of duty in 1922, and I want to give you every assurance of the appreciation and esteem of the company.

Burnside Shops Melting-Pot of Nations

Much has been said and written about the melting-pot of America.

The Illinois Central System has found that the melting-pot does melt. In proof of which it offers the example shown in the big Burnside shops, Chicago. Here representatives of nearly all the principal nationalities of Europe labor side by side in amity. The descendants of Vikings and Goths and Franks meet and mingle with the descendants of Angles and Saxons, Latins and Greeks.

The predominating modern races in the Burnside shops are probably Hungarians, Swedes, Poles and Italians, in the order named. There are, however, many Germans, Swiss, Greeks, Russians, French, Danes, Lithuanians, Bulgarians, Rumanians, Norwegians, Bohemians, and not a few Russian Jews.

During the great war a spirit of enthusiastic and loyal patriotism was seen in the Burnside shops. When the first Liberty Loan drives were launched, foremen and committees of workers in all departments of the shops arranged suitable displays of flags and slogans high up among the great steel girders that support the roofs. Dozens of these patriotic mottoes may still be seen in the different buildings, and Old Glory still hangs from many a beam, silently reminding those below that American faith and American liberty are not for a day or a year, but for all time.

One of the striking mottoes is still to be seen in the tool room of the machine shop, where it was placed more than five years ago. It was originally a group arrangement, with the central placard, which is about 2½ by 4 feet, flanked on the one hand by a likeness of President Wilson and on the other by a picture of General Per-

shing and Uncle Sam, with an American flag underneath.

The motto reads:

"High in the skies of America

Are the Stars that will never fall.

As long as they shine let them be the sign
That America stands for all."

Other mottoes that may be seen are:

"One country, one flag, with liberty and justice for all."

"Old Glory, long may it wave, o'er the land of the free and home of the brave."

A big flag hangs in the passenger car department, with a row of allied flags suspended below and the motto: "Old Glory Above All."

Most of the departments still display their service flags bearing stars for those who went from the department to serve their country in the army or navy.

At Burnside shops

Chatawa, Miss., Academy Dates From 1874

*St. Mary of the Pines, Conducted by Sisters
of Notre Dame, Now Has 110 Boarding Pupils*

HIGH on the knob of a hill that rises from the banks of the beautiful Tangipahoa River at Catawa, Miss., stands St. Mary of the Pines Academy. It is a girls' boarding school founded in 1874 by the Sisters of Notre Dame, and it draws its name from the pine-wooded hills upon which it is set and which surround it on every side.

Chatawa is ninety-two miles north of New Orleans on the main line of the Illinois Central. Like a great many of the towns and rivers of that portion of Mississippi and Louisiana, its name is of Indian origin, signifying, so it is said, "The Place of Sparkling Waters." The waters of the Tangipahoa River more than justify the name of the town. In the late afternoon of early spring, when wild violets, honeysuckle and tiny blue daisies transform the banks of the stream into gardens of gorgeous hues, one can stand on the rocks above the Tangipahoa and catch the glint of millions of diamonds in the sparkling waters. The current is swift, and as the water glides about and over the stones which break its surface, there is a pleasant gurgling sound that one, dreaming, can well imagine to be the laughter of an Indian maiden.

First School Opened in 1869

St. Mary of the Pines lies to the east of the town and station of Chatawa, across the river. In 1869 the Redemptorist Fathers established there a school in which to educate young men for the priesthood of their order. In that year they erected a chapel and a brick building, modest in appearance but of adequate size, to serve as their residence and school house. These buildings still stand as the center of the academy plant, the brick building being used now as the residence for the community.

In 1873 five members of the order of the Sisters of Notre Dame came to Chatawa and established, at a distance of about half a mile from the school conducted by the Redemptorist Fathers, a day-school for the children of the vicinity. One of the original members of that party of five still lives in the community of St. Mary of the Pines—Sister Beatrix, 85 years of age.

Then came the scare of the yellow fever. At both Magnolia and Osyka, to the north and south of Chatawa, the plague claimed

its victims, but such are the healthful properties of the climate on the pine-wooded hills that surround Chatawa that it is said not a single person died of the fever there. At any rate, the yellow fever scare hurt the prospects of the school for young men which the Redemptorist Fathers conducted, and their property was offered for sale. By that time the school which the Sisters of Notre Dame had been conducting not far away had already outgrown its quarters, and in 1879 the order purchased the property that had been established by the Redemptorist Fathers ten years previously.

Superior of 1879 Still Active

It was in 1879 that Mother Apollinaire took charge of the school as sister superior. It was then known as St. Mary's Institute. Mother Apollinaire is still a member of the community, active in all the affairs of the school and taking a hearty interest in the welfare of the thousands of women who have been students at the academy.

In 1884 a third building was added to the school and was occupied by the boarding pupils as a dormitory, while part of it was used for class rooms. In 1908 a new building, consisting of class rooms and an assembly hall, was added, and between 1912 and 1916 a power house, which furnishes steam for heating and electricity for lighting, and Newman Hall—named for Cardinal Newman—were added to the school buildings. Newman Hall consists of an assembly hall, dormitories and sleeping porches. The property comprises about 300 acres, part of which is in cultivation, but the greater part being devoted to the beautiful pine woods native to southern Mississippi.

In 1911 Sister Charissia took charge of the school, succeeding Mother Apollinaire as sister superior, and in 1922 she in turn was succeeded by Mother Magdalen, the present head of the academy. Sister Cecilea is secretary of the academy. During the forty-four years of its existence, the school has had only three executives, two of whom are at present members of the community.

School Has prospered

Originally, St. Mary's Institute was merely a grammar school, accepting pupils for the first to eighth grades. Later a high school department was added, and now, in addition, there are departments for instruction in music, art, commercial work and

home economics. The high school is fully accredited by the state.

At present the school has 110 boarding pupils, ranging in ages from eight to twenty, in addition to the children of the neighborhood who are enrolled as day pupils. It draws principally from the states of Mississippi, Louisiana and Alabama for its boarding pupils, although there have also been pupils from numerous other states. Among the present boarding pupils are three Spanish girls from British Honduras.

The Aim of the Academy

The school has, throughout its existence, maintained a high standard of training. Its announced purpose is as follows:

"The aim of the religious is to educate mentally, morally and physically the pupils committed to their care; to build their characters and impress their hearts and consciences with the truths of Christianity. Convinced that true intellectual development cannot be separated from the training of the heart, the moral culture of the pupils receives the most solicitous care. They are

taught to practice self-control, punctuality and obedience from a sense of duty, rather than through fear of reproof."

Although all pupils are required to attend Sunday service, non-Catholics are admitted to the school and are exempted from doctrinal studies.

As the name indicates, the Order of the Sisters of Notre Dame is of French origin. It now conducts 369 schools in this country alone.

One of the interesting spots on the school property is a small replica of the world-famous grotto of Lourdes in southern France, which stands before the conservatory, in the broad lawn that stretches its carpet of green down from the row of school buildings. The rocks of the shrine are covered with moss, against which the kneeling figure of little Bernadette, gazing on the vision of the Immaculate Conception, in white, stands out in bold relief. Surrounding the grotto are moss-covered stones which serve as seats for those who study the figures and reflect upon the significance of the story they represent.

Vicksburg Employes Like to Own Homes

Many of Them Say That Buying Can Be Accomplished as Simply as Paying the Rent

W. W. FINCHER, ticket clerk and operator for the Yazoo & Mississippi Valley at Vicksburg, Miss., is paying less money each month toward owning his home than he formerly paid for the rental of a 4-room apartment. For nearly two years before he decided to buy a home, Mr. Fincher was paying \$35 a month rent for the apartment. November 21, 1922, he paid \$400 cash on his home and made arrangements for monthly payments of \$45. Without delay, he rented half of his home for about one-half of the amount of his monthly payments. The result is that he now owns his home and is paying only in the neighborhood of \$25 a month, while he formerly paid \$35 for rent.

Mr. Fincher had wanted a home from the very beginning of his married life in 1917, but he was not able to have exactly what he wanted until last year. He was a ticket clerk at Baton Rouge when he married, and his position did not warrant his buying a home there at that time. The next year he was temporarily transferred to Natchez as ticket clerk and operator and still had to smother his desire for a home of his own. But later on in the same year he was made ticket clerk and operator at Vicksburg. That was a steady job, and his ambition for a home came upon him in full force. But when he investigated, no home could be bought for less than a cash payment of \$1,000 to start. He didn't have that much money on hand, and he did not feel the necessity of placing such a burden upon himself at that time.

Got Plenty of Renting Experience

So he contented himself with a 2-room furnished apartment at \$20 a month. His plan was to make that serve as a home until he found a suitable house to buy.

Time slipped by and property seemed to be getting higher all the time, but the desire for a home never waned. He was saving money all the time and soon had enough to buy a few pieces of furniture. This was done, and he moved into a 3-room apartment with the new furniture. He paid the same amount of rent for this 3-room apartment that he had paid for the 2-room furnished apartment; but, like property, rent began to increase, and it was not long before he moved into a 4-room apartment that rented for \$35 a month.

During all this time, Mr. Fincher had been adding to his furniture and talking

to real estate men regarding the purchase of a home. On November 1, 1922, one of the men he had talked to came to him with information about the house he now owns. It was just what he wanted, and he lost no time in making arrangements for the purchase.

Mr. Fincher smiles when he recalls the many times he has moved from one apartment to another. There will be no more of that as long as he is in Vicksburg, he feels. He has made \$200 worth of improvements on his home, and now has a place just like he wants. And Mrs. Fincher is contented, too.

Pays Only \$10 More Than Rent

G. D. Tombs, assistant division storekeeper, is another good example of thrift at Vicksburg. He now pays \$35 a month toward owning the house that he formerly rented for \$25 a month. His monthly payments are just \$10 a month more than he used to pay for rent, and they take up three \$100 notes against the property each year. From the standpoint of his expenditures, that extra \$10 he pays each month, or \$120

What This Country Needs

What this country needs is not a new birth of freedom, but the old-fashioned \$2.00 lower berth.

What this country needs isn't more liberty, but less people who take liberties with our liberty.

What this country needs is not a job for every man, but a real man for every job.

What this country needs isn't to get more taxes from the people, but for the people to get more from the taxes.

What this country needs is not more miles of territory, but more miles to the gallon.

What this country needs is more tractors and less detractors.

What this country needs isn't more young men making speed, but more young men planting spuds.

What this country needs is more paint on the old place and less paint on the young face.

What this country needs isn't a lower rate of interest on money, but a higher interest in work.

What this country needs is to follow the footsteps of the fathers instead of the footsteps of the dancing master.—St. Paul (Minn.) *Crescent*.

Employees' homes at Vicksburg, Miss.: 1, George H. Foster, engineer, 2522 Washington Street; 2, Miss Lorena Martin, stenographer, 2732 Washington Street; 3, Miss Louise Bankstone, clerk, 1011 Clay Street; 4, W. W. Fincher, ticket clerk and operator, 1205 Farmer Street; 5, C. W. Legg, B. & B. clerk, 1015 Adams Street; 6, Zeb Clark, conductor, 2419 Drummond Street; 7, W. H. Dupre, draftsman, 2731 Washington Street; 8, Jerry Cronin, traveling engineer, 602 Fairground Street. Reference is made in the story to W. W. Fincher's home, No. 4 on this page.

a year, returns him \$300 each twelve months.

Mr. Tombs attributes his ability to own his home to his wife. It is through her careful planning and economizing that it has become possible. When the home was bought two and one-half years ago, they found that it would take \$35 each month to pay all expenses, such as insurance, interest, taxes and a payment on the house. From the beginning, that much was put aside each month, and Mrs. Tombs regulated the other expenses of the home accordingly.

The first payment Mr. Tombs made on the home was \$500, and he arranged to take up only two of the \$100 notes the first two years, so that he would be able to make needed repairs to the property. Arrangements were also made at that time for the taking up of any additional number of the \$100 notes at any interest period.

Mr. Tombs says that by all means a young married man should start paying on a home of his own. He doesn't advise an expensive piece of property, because, he says, the obligations will cause unnecessary worry and sacrifices.

Paid Cash for Home in 1918

The wage earner should plan to put away a definite amount of his earnings each month and should never squander any extra money he might make, says Charles Ehlbert, clerk in the freight office at Vicksburg. He has followed that rule, and today he owns his own home as well as a nice bank account.

Mr. Ehlbert was married in 1911. Both he and his wife had the thrift habit, and they saved some of the earnings, even if it was only a small amount. Each little addition to the savings account didn't increase it much, but after a few were put away the total amount was appreciable.

There was a definite reason for this saving—Mr. and Mrs. Ehlbert wanted a home. Little by little their bank account grew, and in 1918, when they had an opportunity to buy a home that suited them perfectly, they had the money to pay cash for it.

They moved from their apartment into their own home in March, 1918. There was ground enough for a small garden and plenty of room for a few chickens. At first there were only four chickens, while now there are seventy-five that keep Mr. and Mrs. Ehlbert in eggs and meat. Last year the chickens earned \$75, more than enough to pay for their feed. And the garden supplies all the vegetables for the table during the summer months.

Although the home is paid for, Mr. and Mrs. Ehlbert are still thrifty. A small

amount of his wages is put into a savings account each month in Mrs. Ehlbert's name. The expenses for the house are pro-rated, and the amount to take care of that is placed in the bank each month in Mr. Ehlbert's name. Then when a bill for the expenses of the house is presented, the money for payment is in the bank.

Mr. Ehlbert says that his home costs him

Keeping Young

Goethe finished his immortal "Faust" after he was 60. The vital force was lying there, dormant, unapplied, unused. The power of the persistent assertion of the youthfulness within the man lay ineffective.

When a man consents within his own inward self to the notion that he himself has passed the dead line, that he has lost his grip, then he is already an old man.

Youth is not a time of life; it is a state of mind. It is not a matter of ripe cheeks, red lips and supple knees; it is a temper of the will, a quality of the imagination, a vigor of the emotions. It is the freshness of the deep springs of life, says a bulletin of the American Iron and Steel Association.

Youth means a temperamental predominance of courage over timidity, of the appetite for adventure over the love of ease. This often exists in a man of 50 more than in a boy of 20.

Nobody grows old by merely living a number of years. People grow old only by deserting their ideals.

Years wrinkle the skin; but to give up enthusiasm wrinkles the soul.

Worry, doubt, self-distress, fear and despair—these are the long, long years that bow the heart and turn the greening spirit back to dust.

Whether 60 or 16, there is in every human being's heart that lure of wonder, the sweet amazement at the stars and at starlike things and thoughts, the undaunted challenge of events, the unfailing, childlike appetite for what next, and the joy of the game of living. You are as young as your faith, as old as your doubts; as young as your self-confidence, as old as your fear; as young as your hope, as old as your despair.

In the central place of your heart is an ever-green tree; its name is Love. So long as it flourishes you are young. When it dies, you are old. In the central place of your heart is a wireless station. So long as it receives messages of beauty, hope, cheer, grandeur, courage and power from God and from your fellow men, so long are you young.—Selected.

approximately \$20 a month less than his expense would be if he were renting. A home similar to the one he is living in would rent for about \$35 a month, he says, and his taxes and insurance are not more than \$15 a month.

There are many employes such as these in Vicksburg, and they all agree that their standing in the community was raised considerably when they purchased their homes. They are regarded as interested citizens, and their viewpoint in civic matters has

weight. Not only that, but they find that they are more interested in their positions, because their beloved homes are at stake.

THE VALUE OF AN IDEA

Beyond gold and precious jewels the most valuable assets in life are ideas. A brain which can produce ideas is a mine of wealth, not only to its owner but to all humanity. One who possesses ideas can at his bidding command all emblems of wealth.

—J. HAMILTON MCCORMICK.

Comparative Figures on Fuel Consumption

By J. L. MARLEY, Secretary

General Fuel Conservation Committee

The "Comparison of Fuel Performance" statement for November, 1922, as prepared in the office of the vice-president in charge of operation, shows that our fuel consumption in all classes of service exceeded that of November, 1921, by 1.38 per cent. This is a marked improvement, however, over our September, 1922, performance, which represented a 9.99 per cent increase over that of September, 1921, and a slight improvement over that of October, 1922, when our fuel consumption exceeded that of October, 1921, by 3.3 per cent.

An analysis of the November statement shows that there was an increase in our freight performance efficiency which resulted in the saving of 6,382 tons of coal for the system. Our passenger and switching services, however, show decreases in efficiency, or increases in fuel consumed per 100 passenger car miles and per switching locomotive mile, resulting in losses of 5,379 and 5,154 tons of coal respectively. The losses sustained in the latter two services account for the net loss of 4,151 tons, or 1.38 per cent for the system.

The best individual division performance, considering the services separately, was made by the Minnesota division, which effected a decrease of forty-five pounds of coal per 1,000 gross ton miles, or 16.98 per cent, as compared with November, 1921. The Iowa division effected a decrease of thirty-four pounds, or 14.53 per cent, and runs a close second for the best freight performance honors.

In passenger service the honor goes to the Vicksburg division with a decrease of 253 pounds of coal per 100 passenger car miles, or 12.84 per cent, while the Wisconsin division, with a decrease of 239 pounds per 100 passenger car miles, or 12.02 per cent, ranks second.

The Wisconsin division shows the largest decrease in fuel consumed per switching locomotive mile—forty-one pounds, or 22.16 per cent—while the decreases on the Minnesota and New Orleans divisions were eighteen pounds, or 13.14 per cent, and fourteen pounds, or 8.92 per cent, respectively.

The divisions showing the largest losses and the number of tons lost are:

Freight service—Springfield, 1,283; Louisiana, 1,633; Yazoo district, 1,073.

Passenger service—Illinois, 1,373; Chicago terminal, 1,446; St. Louis, 2,243; Kentucky, 1,030.

Switching service—Chicago terminal, 1,585.

Preliminary reports for December indicate that further reductions have been effected on several divisions, and we should soon make a saving in all classes of service over the last year's performance.

For the information of interested employes, the statement referred to above has been furnished for publicity on our fuel bulletin boards instead of one previously circulated which gave data as to the fuel consumption per unit of service only, with a comparison with the same month for the last two years. It is thought that the report showing the percentage of increase or decrease in efficiency, the saving or loss of coal in tons and the amount of money saved or lost as a result of these performances will enable any employe to understand just what kind of a showing his division is making in fuel conservation and how it compares with the work of other divisions. It is felt that when all available data is placed before those actually concerned in the operation of the trains they will become more interested as they consider the very important positions they hold with reference to the conservation of fuel. A more substantial saving in our fuel cost should be effected as a result.

Two New General Attorneys Announced

*John G. Drennan and Edward C. Craig Are
Honored by Elevation to Higher Posts*

TWO members of our law department, whose long service and meritorious records with the Illinois Central System have been notable, have been made general attorneys, receiving their deserved promotions at the beginning of the present year. These are John G. Drennan of Chicago, for many years district attorney for the company in Illinois, and Edward C. Craig, since 1906 the company's local attorney at Mattoon, Ill.

Announcement of the promotions was made from the office of General Counsel W. S. Horton, Chicago, January 1, 1923, as follows:

"Effective this date, Mr. Edward C. Craig is appointed general attorney, with such duties as may be assigned to him; Mr. John G. Drennan is appointed general attorney, with such duties as may be assigned to him, including those heretofore performed by him as district attorney."

Has Served Illinois Central Many Years

Judge Drennan, as his many friends habitually address him, has been associated with the Illinois Central System in its legal department for more than a quarter of a century. Prior to his connection with the Illinois Central System, he served as a member of various important commissions and as attorney for different railroads, besides holding offices of an appointive or elective nature since engaging in the practice of his profession forty-four years ago.

Judge Drennan was born in Caldwell County, Kentucky, December 3, 1854. While still a small boy he came with his parents to Christian County, Illinois, where he spent the years of boyhood and young manhood on his father's farm. Later he taught school and devoted his spare time to the study of law. In January, 1879, he was admitted to practice in the Supreme Court of Illinois. He served as Master in Chancery of Christian County from April, 1879, to April, 1881; he was elected state's attorney of Christian County in November, 1880, and re-elected in 1884, serving two 4-year terms. He continued to practice law in that county for four years after leaving office, and then located in Springfield, where he formed a partnership with former Governor Palmer, then United States senator, and William E. Shutt, at that time United States district attorney for the Springfield district.

As corporation counsel for the city of Springfield Mr. Drennan served from 1893 to 1895. He also served as local attorney for the Wabash and the Ohio & Mississippi railroads between 1881 and 1892. He was general attorney in Illinois for the Ohio & Mississippi Railroad from 1892 to 1896. He became an attorney for the Illinois Central May 15, 1896, and took up his residence in Chicago coincidentally. He was appointed district attorney of the Illinois Central for Illinois in May, 1899, a position he held with credit until his promotion to general attorney at the beginning of the present year.

Hunting and Fishing His Hobbies

Judge Drennan has successfully handled many important cases for this company, besides holding positions of high responsibility and dignity on public commissions. He served as special counsel for the Sanitary District of Chicago for five years in litigation between the states of Missouri and Illinois and the Sanitary District over the alleged pollution of the Mississippi River waters at and above St. Louis on account of the Chicago drainage project.

Judge Drennan is now a man of ripe intellectual and physical attainments. He has two cherished hobbies, hunting and fishing. Given an autumn day in the brown-

John G. Drennan

clothed fields, with fat birds whirring to the flush, or a spring morning when the wind's light caress is seen on the mirror of some favorite pool, and the judge is happy.

He is a member of the South Shore, Olympia Fields and Iroquois clubs and of the Society of Sons of the American Revolution. During 1899 to 1902, inclusive, he was judge advocate of the Order of Uniform Rank, Knights of Pythias, for the state of Illinois.

Judge and Mrs. Drennan have two sons and one daughter. Major L. H. Drennan is chief personnel officer, Air Service, U. S. A. W. R. Drennan is in the real estate business in Chicago. Their daughter Helen Louise, is the wife of Major W. R. Gruber, U. S. A. Mr. and Mrs. Drennan's two sons, son-in-law and nine nephews served their country during the World War.

Mr. Craig a Native of Mattoon

Mr. Craig has been a resident of Mattoon since his birth, April 7, 1872. He comes of a family of lawyers, his father, James W. Craig, having begun the practice of that profession in 1869 on the same spot where his three sons, Edward C., James W., Jr., and Donald B. Craig, have had and still have their law office.

Edward C. Craig was graduated from Mattoon High School in 1889 and from the University of Illinois in 1893. He completed the law course at Harvard University and was admitted to the bar in January,

Edward C. Craig

1896, beginning his law practice as his father's partner. Since January 17, 1906, when Edward C. Craig was appointed local attorney at Mattoon for the Illinois Central Railroad, the firm of Craig & Craig has looked after the interests of the company at Mattoon and vicinity, as well as assisted with cases of larger importance in the courts of Illinois and other states. Edward C. Craig was one of the Illinois Central attorneys engaged upon the famous Tossine case which was bitterly contested in the Minnesota courts and resulted in a signal victory for the defendant railroad company March 21, 1922.

James W. Craig, Sr., died August 17, 1921. Since that time the old firm name has been preserved, the members being the three brothers associated with Fred H. Kelly and Craig Van Meter.

Soon after announcement was made of Mr. Craig's promotion to general attorney at the beginning of this year, the Association of Commerce of Mattoon, composed of the leading business, railway and professional men of that thriving city, tendered their departing fellow-citizen a farewell dinner. The banquet was held at the Association of Commerce hall, the evening of January 4, and two hundred persons attended.

Honored by Farewell Banquet

Many local speakers paid tribute to Mr. Craig, not only as a citizen, born and reared in Mattoon, but as a distinguished member of the Coles County bar. In closing, Toastmaster Emery Andrews read "An Indian's Speed to a Friend."

"May you always have a safe tent and no sorrow as you travel; may you always have a cache for your food and food for your cache; may you never find a tree that will not give sap nor a field that will not grow grain; may your bees freeze not in winter and the honey be thick and the comb break like snow in the teeth; may you keep your heart like the morning and come slowly to the four corners where men say 'good night.'"

Mr. Craig married Miss Fannie Ione Dilley, of Dallas, Texas, November 9, 1899. Mrs. Craig's father, George M. Dilley, was for many years engaged in railway construction work as a contractor in the Lone Star State. He superintended the building of a large part of the lines of the International & Great Northern and Southern Pacific railroads in the Southwest.

Mr. and Mrs. Craig's union was blessed with two fine sons of whom they are properly proud. George M., named for his grandfather, is now a young man of 18, and his brother, Donald C., named after his uncle, Donald B. Craig, is 15.

Rat "Fly Paper" Kills Off Station Pests

New Sticky Mixture Catches Rodents That Have Done Much Damage to Stored Freight

By C. G. RICHMOND,
Superintendent, Stations and Transfers

RATS and their near of kin, mice, are the immediate cause of substantial losses to American railroads through the medium of freight claim payments incident to the depredations of rodents in and about freighthouses, warehouses and storehouses.

Rats are divided into two species which are widely distributed over the world, the black rat (*mus rattus*) and the brown rat (*mus decumanus*). Both appear to be natives of Central Asia and are said to have found their way into Europe about the sixteenth century. The date of introduction into America is in doubt, but the black rat seems to have come first and to have been gradually driven westward by its larger and more savage cousin, the brown rat. Both infest ships and are thus conveyed to the most distant parts of the world. Both are wharf rats.

The black rat is nearly seven and one-half inches in length, exclusive of the long tail. The brown rat attains a length of more than ten and one-half inches. Both species are extremely prolific bearing, four or five times each year, from four to ten young.

Rats Cause Heavy Damage

Rats feed indiscriminately on almost any kind of animal or vegetable food. They make depredations in warehouses and storehouses, from which they carry off large quantities of material to be stored in their holes. Their strong rodent teeth enable them to gnaw very hard substances, such as wood and lead pipe, either for food or in order to make their way to food. They are creatures of no little intelligence, and many curious stories are told of the arts which they employ to obtain desired objects, of the readiness with which they detect the approach of danger and the skill with which they avoid it. Their sense of smell is very acute, and the professional rat catcher is careful that the smell of his hands shall not be left on the trap.

A British expert says that rats cost America the stupendous sum of \$750,000,000 a year. This is close to what the oat crop has averaged in value for the last five years and is more than the value of the largest potato crop that the country has ever grown.

Based on the federal census of 1920, the

rat exacts a per capita cost of \$7 in the United States, and this, we are informed, simply covers food consumed and destroyed. It does not cover the large fire losses for which we know rats were responsible, nor the cost in health, as it is well known that rats are responsible for the spread of certain contagious diseases.

The damage, by rats, to edible freight shipments awaiting delivery in freight-houses, to United States mail in station baggage rooms, etc., caused the Illinois Central System to experiment with a view to finding a successful method of extermination. Tests were made with various poisons and patent remedies, but, due to certain objectionable features, they were not extensively used. Some stations have cats, and others have efficient rat terrier dogs, but as all stations were not similarly equipped it was desired to find a method that could be universally used.

Catching Rats on Sticky Boards

Tests were made with a new rat-catching preparation which proved very successful and which has since been extensively used on the Illinois Central System. This preparation is a mucilaginous substance of great adhesive power. It is spread about one-fourth inch thick on a heavy board and placed in rat or mice runways, so that they must cross it in getting to or from their holes.

This preparation is similar to the well-known sticky fly paper, used to catch flies and insects. Once rats or mice come in contact with it, they become firmly attached and are unable to extricate themselves. The greater efforts made by them result only in their becoming more firmly enmeshed, and in a short time death results from sheer exhaustion. After a night's catch, the bodies of the rodents are removed, and the board can be again prepared. An instance showing the remarkable adhesive qualities of this preparation developed at Water Valley, Ky., where the agent's prize bird dog made an investigation as to this new substance and had considerable difficulty in freeing himself.

Agents at stations where this exterminator has been used are unanimous in their praise of the results obtained, and many are of the opinion that, after several of the rat colony have met their demise through entanglement in this preparation, the remaining rodents quit the premises.

Rats caught by new method

Following are excerpts from reports of several agents outlining their experience with this preparation.

Agents Pleased With Results

Agent S. Kerr, Cedar Rapids, Iowa: "Rat stickum producing phenomenal results. Caught father, mother and four of the kids last night. Send another can, so that I may catch their relatives."

Agent R. C. Jarnigan, Starkville, Miss.: "We caught twenty-seven rats and mice after putting out the new preparation. This is the most effective 'stuff' that I have ever seen, and I believe the problem facing us for so long has been solved. I know it to be a fact that freight is sometimes routed our way on account of the few rats in our depot."

Agent J. R. Murchison, Gates, Tenn.: "In a ten-day period we caught seven rats and eight mice with this preparation. I think this is a wonderful rat and mouse catcher, and I believe if it is placed in several places in a freighthouse and kept there it will very nearly, if not entirely, eliminate the pests. Very little flour is being damaged since we are using it."

Agent B. E. Hull, Neoga, Ill., "We so far have caught five rats on one board in three nights, and I believe this a good preparation where it can be used in a rat runway."

Agent M. H. Robertson, Mayfield, Ky.: "Fine results have been obtained from the use of this rat exterminator. We caught rats every night for three nights, and the others left the premises. I am still putting the boards out every night, but I haven't

seen any signs of rats or mice for several days."

Other Rats Are Scared Away

Agent W. G. Crawford, Greenville, Ky.: "We started using the rat exterminator September 9, placing the first trap at 3:55 p. m. By 4:15 p. m. we had caught two nice-size rats all stuck up. The first night we caught four; total to date, twelve. This preparation not only holds 'em, but scares 'em. It scares the other rats away. When a rat is trapped on the board, he tries to get away. The more he tries the tighter he gets stuck, and during this attempted flight he is continually squealing, which, I believe, is a warning to the other rats to clear out. I am basing my belief on the fact that we had no indication of rats for the last three nights. I am thoroughly satisfied with results obtained."

Experience has shown that extremely low temperatures render this preparation ineffective, through the congealing of the substance which causes it be non-adhesive. However, rats and mice do not cause any considerable damage during extremely low temperatures. Most of the damage occurs in the summer months and during the early fall and spring, or, in other words, when the rats first begin to go in for quarters and in the spring when it is too cold for them to go out into the open again. These periods are the most annoying, and the principal damage to shipments by rats occurs at these times.

Records are not available to show the amount of money saved in freight claim payments chargeable to damage by rats and mice in the past. However, the marked decrease in the number of bad order reports received showing rat damage indicates that very satisfactory results are being obtained from the use of this preparation. The elimination of rat damage is also pleasing to our patrons.

BET ON YOURSELF

Many a man has walked up to the opportunity for which he has long been preparing himself, looked it full in the face, and then begun to get cold feet. He didn't have the nerve to bet on himself the last dollar he had. He would be a blank fool to bet his last dollar on a horse race; but when it comes to betting on yourself and your power to do the thing you know you must do or write yourself down a failure, you're a chicken-livered coward if you hesitate. I put it in plain language, because that is the only drug that will cure your sickness if you are subject to that kind of nervous hesitation—lack of true self-reliance.—B. C. FORBES.

Rate Clerk Now Piggly Wiggly Executive

*Fletcher Scott, Hard Worker When in Our
Employ, Makes Success in New Venture*

FLETCHER SCOTT, less than 30 years old and vice-president of the Piggly Wiggly Corporation, with headquarters at Memphis, Tenn., was formerly an employe of the Illinois Central System and as such was considered one of the best rate clerks who ever worked in the freight office at Memphis. He has been rewarded for those long hours of overtime he spent in developing himself to be better fitted for his position. He made out of himself a man capable of doing bigger things in life.

Mr. Scott worked hard when he was drawing wages from the Illinois Central System. His work was interesting to him, and he had an everlasting craving for knowledge. He hadn't worked for the Illinois Central System long before his true value as an employe was recognized, and he was rapidly promoted to positions of more importance and greater remuneration.

W. L. Reeves, assistant general freight agent at Memphis, was chief clerk in General Freight Agent Hattendorf's office at Memphis when Mr. Scott was working there, and Mr. Reeves says that he assigned Mr. Scott the most difficult problems that came up in the office. And he says that he did so with complete confidence that they would be solved in every detail.

Entered Our Service When 17 Years Old

Mr. Scott was fresh from school and just 17 years old when he accepted a position on December 5, 1911, as a messenger in the general freight office at Memphis. Within six months he proved to be dependable enough to be made a file clerk. There was a store of information in the files, and he took advantage of his opportunity to learn more about the office by studying the material that was sent to the files. He read earnestly and became familiar with the way the various situations were handled.

A year and a half later he was made tariff clerk and placed in charge of reparation claims. Then he assisted J. L. Shepard, assistant general freight agent, in adjusting the Southeast freight rates.

Mr. Scott recognized no set time to leave his work while he was in the freight office at Memphis. He was busy nearly every night, and worked many Sundays. It was not long before his knowledge of freight rates was appreciated, and he was trusted with the untangling of perplexing matters.

Fletcher Scott

In October, 1917, Mr. Scott was chosen, with Mr. Reeves, to represent the Illinois Central System on a special committee of representatives of the railroads of the South to adjust the freight rates in the Mississippi valley. The committee met in Washington, D. C.

Joined Piggly Wiggly in 1918

When Christmas came that year, Mr. Scott returned to Memphis to spend the holiday at home. While he was there, Clarence Saunders, then a grocer of Memphis, offered him a position as traffic manager for a chain of grocery stores he was planning.

Neither of these men made a decisive step before he had thoroughly investigated the consequences. Mr. Saunders was about to launch upon the business world an unusual enterprise. He had formulated detailed plans and was beginning to round out his organization, so that operation could start. The position of traffic manager was to be an important one, and he wanted a good man to be in that place. He was acquainted with Mr. Scott and selected him

for the position. Mr. Scott appreciated the magnitude of the project when it was explained to him, and he went into details with Mr. Saunders to make sure that it was sound. It was not until March 20, 1918, that Mr. Scott made arrangements to leave the service of the Illinois Central System and take up the duties of traffic manager of Mr. Saunders' stores.

The chain store idea was not new at that time, and Mr. Saunders was experienced in organized co-operative buying, but the enterprise he planned to expand was something entirely different from anything that had been attempted before. The customers were to wait on themselves, pay cash for their purchases and then carry them home. Such an arrangement eliminated most of the cost of clerk hire, bookkeeping, losses from bad debts and the cost of a cumbersome and expensive delivery system.

Why the Name Was Chosen

"Piggly Wiggly" was to be the name of each store in the chain.

"It took me two hours on a trip coming from Terre Haute, Ind., to Memphis to concoct in my mind the names for the stores that I considered possible," Mr. Saunders says. "And when my imagination developed 'Piggly Wiggly,' I stopped and was satisfied.

"I wanted two things: First, a name that at the very first hearing would awaken good-humored interest and keep it awake; second, a name so utterly individual, so absolutely different from any other name that ever could be hit on by anyone else for trade purposes that any thing even remotely like it would be obviously and indisputably an infringement on the face of it."

The first Piggly Wiggly store was opened in Memphis. It was in September, 1916, just two weeks after Mr.

Clarence Saunders

Saunders conceived the idea. Extensive expansion was begun in 1918, when Mr. Scott was employed, and at the present time there are 1,250 Piggly Wiggly stores, doing a total business of \$7,000,000 a month. The number of stores is increasing constantly.

Mr. Saunders made with his own hands the fixtures of the first Piggly Wiggly store. All the various parts of the interior

The Piggly Wiggly headquarters at Memphis

are now standardized and patented—even the little arms on which hang the price tags.

Factory Is at Jackson, Tenn.

The Piggly Wiggly factory on our line at Jackson, Tenn., is where all the fixtures of the Piggly Wiggly stores are now made. Four complete sets of fixtures are turned out a day. The ground occupied by the factory, dry kilns and lumber yards covers practically a city block. The building is a modern 3-story brick structure, with more than 50,000 square feet of floor space. The first floor contains the machine room, glue room and shipping department; the second floor, the cabinet shop; and the third floor, the finishing department. Two hundred men are employed in the factory.

Each Piggly Wiggly store of standard measurement is from 15 to 25 by 75 feet.

The open space across the front is about 10 feet wide, and across this, from side to side, runs a bronzed steel railing in which are two turnstiles of oak wood through which the customers pass. The purchasers enter at the left-hand stile.

Every customer of the Piggly Wiggly stores waits on himself, pays for the purchases before leaving and carries them home. At the turnstile entrance is a bin of market baskets. The purchaser picks up one of these and passes into the aisles of the store, where he selects the articles desired. The basket is for the convenience of carrying the articles while passing through the store. At the end of the shopping journey, the purchases are placed in a paper bag, and the basket is restored to the bin. Each customer must pass through the entire store before leaving, and it is estimated that 185 can be served in an hour.

Each Piggly Wiggly store has only three employes — manager, stock replenisher and cashier. It is this reduction of overhead expenses and the co-operative form of buying for all the stores that permits the Piggly Wiggly stores to sell articles at a close margin of profit.

The fact that Mr. Scott has been made the vice-president of the corporation is proof that he is continuing to do efficient work. He is an eager baseball fan and takes an active part in the Memphis city championship series each year. Last year he was the manager of the Piggly Wiggly team. He was a member of the Illinois Central team that won the city championship in 1916. That same team defeated St. Louis that year. It was the first time that Memphis was victorious over the Mound City.

Diagram of typical Piggly Wiggly store

Served as First Telegraph Superintendent

Lyman A. Louis Is Now Living in Retirement at Centralia, Ill., at the Age of 88

THE first superintendent of telegraph of the Illinois Central Railroad is now living in retirement at 316 South Cherry Street, Centralia, Ill. His name is Lyman A. Louis, and he will be 89 years old next May 29.

Mr. Louis entered the service of the Illinois Central as telegraph operator at Centralia in 1858, at the age of 24, only a few years after the invention of the telegraph. In November of that year he was transferred to be agent, operator and express agent at Ashley, fourteen miles south of Centralia. He had served there six years when Marvin Hughitt, now chairman of the board of directors of the Chicago & North Western, was promoted from superintendent to general superintendent of the Illinois Central Railroad—at that time one of the longest railroads in the world, with more than 700 miles of line.

Mr. Hughitt had observed the work of Mr. Louis at Ashley. One Sunday evening a telegram called Mr. Louis to Chicago for a conference with Mr. Hughitt the next day. Mr. Louis made the over-night trip and was met on the station platform by Mr. Hughitt himself, who invited him up to the Sherman House. When they got there, Mr. Hughitt pulled a paper out of his pocket and read off Mr. Louis' appointment as superintendent of telegraph for all the lines of the Illinois Central.

Nine Years as Superintendent of Telegraph

For nine years—from 1864 to 1873—Mr. Louis continued in the duties of this position, with headquarters at Centralia. Acting upon instructions from Mr. Hughitt, he began attending to repairs and expansion of the telegraph facilities. At the time he assumed the work, Mr. Louis recalls, the Illinois Central had two telegraph lines from Cairo to Chicago and one from Centralia to Dubuque.

Mr. Louis' memory is getting a little uncertain, and he does not recall many of the details of his administration; but he does remember that his travels took him all over the Illinois Central of that time and that he made the acquaintance of most of the employees, including practically all of the agents on the road. Among his old-time railway acquaintances of that time were Emmett and Stiley Wakeman, Charles Welch, John Young, F. E. Allen, Ed Mitchell, C. A. Beck and George Rhodes,

Lyman A. Louis

all of whom, as far as Mr. Louis knows, are no longer in the land of the living.

Mr. Louis' office as superintendent of telegraph was in the old station building at Centralia, not far from the site of the present one. It was while he was stationed there that the great Chicago fire occurred, and he was one of the first persons from his part of the state to reach the scene, as some of the Illinois Central's wires were affected.

For several years after his administration as superintendent of telegraph, Mr. Louis worked in the office at Centralia. It was after his retirement as superintendent that he opened a telegraph institute at Centralia, in which he taught ambitious young men the rudiments of the game. For about two years he conducted this school upstairs in the Dunker House, across the street from the present Langenfeld Hotel. He had as many as forty students in his three months' course, all paid up in advance.

Had Centralia's First Telephone Exchange

Early in the '80's Mr. Louis turned from the key to the switchboard and established the first telephone exchange in Centralia. He worked up the list personally and for

eighteen years was in charge of Centralia's telephone system. Mr. Louis' daughters, Misses Josephine and Idella, who are living with him now, were Centralia's first telephone operators.

After he gave up the telephone business, about twenty years ago, Mr. Louis went into the insurance business. He was active in that work until about three years, when he finally decided to retire—at the age of 85.

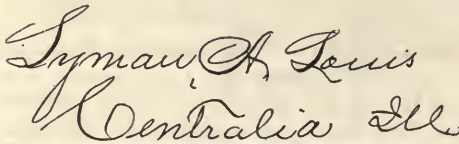

Mr. Louis was born at Belpre, Ohio, opposite Parkersburg, W. Va., May 29, 1834. He was reared at Jeffersonville, Ind., near Louisville, Ky., and began to learn telegraphy the first day the telegraph was installed in Louisville, which was in the late '40's. In 1858, while on a visit to Centralia, Ill., he was introduced to Phineas Pease, then superintendent of the Illinois Central, and Mr. Pease recognized his telegraphic ability by offering him work on the railroad, which he promptly accepted.

His first position, as noted, was as operator at Centralia. He was serving as agent at Ashley when the Civil War began, and the rush of work and lack of help told heavily upon him. It is said of him that he worked day and night. His niece had learned enough telegraphy to recognize the call for Ashley, and he deputized her to arouse him when calls came in during the little sleep he had.

The Father of Ten Children

Mr. Louis was married in 1855, when 21 years old, to Miss Laura Matthews of New Albany, Ind., who died in 1876. Ten children were born to this union, of whom seven—four boys and three girls—grew to maturity. One of the sisters died twenty-one years ago, and one of the brothers, Albert, died a few weeks ago in Cincinnati, Ohio, at the age of 54. The surviving children are Misses Josephine and Idella, both of whom are trained nurses, at home; L. W. of Chicago, J. S. of Los Angeles, Cal., and A. H. of Hamilton, Ohio. Mr. Louis' sole surviving brother, J. B. Louis, is now living in Omaha, Neb., at the age of 80.

All of Mr. Louis' children learned telegraphy, and one of the sons, L. W., worked for the Illinois Central for a time as operator at Centralia. Of eight children in the

A handwritten signature in cursive script, reading "J. B. Louis" on the first line and "Centralia Ill" on the second line.

Mr. Louis' signature at 88

family of J. B. Louis, nearly all learned to telegraph also.

Mr. Louis has lived in the same house in Centralia since 1864, when he was stationed there as superintendent of telegraph. He is still active and erect, although he is a little hard of hearing, and he can write a flowing hand that is the envy of many penmen half his age.

BIG DAY AT BLANCHARDVILLE

Monday noon, Ed Robinson, one of the old timers of Blanchardville, came into the sacred precincts of *The Blade* and informed us that thirty-five years ago today (that is, Monday, January 8, 1923) a great celebration was staged in Blanchardville where the railroad crosses Main Street. The big events of that occasion was the arrival of a steam locomotive of the now great Illinois Central Railroad. The rails had been laid as far as the crossing on Main Street, and the first steam locomotive entered Blanchardville that day (Monday, January 8, 1888) to commemorate the event. It was a great day for the Illinois Central Railroad as well as for the people of Blanchardville. But more so for the latter. People threw their hats in the air—ran hither and thither shouting the news—they simply went wild with joy. And no wonder—they saw what a tremendous advantage it would be to their village and community to have a railroad through it. The late A. Blanchard, founder of our village, took up a collection and purchased a large ox. This ox was killed and then burned where the rails of the new railroad stopped. Then they all danced around the fire. We can't blame Ed for getting excited Monday when this scene was revived in his memory.—Blanchardville (Wis.) *Blade*.

"PULL"

Business today has no time for the individual who is looking for a so-called "pull."

The only kind of a "pull" that is worth anything is "a long pull, and a strong pull, and a pull altogether."

It is the person with "push" that the world is interested in today—

The man or woman who is making good on his or her present job and also constantly working to become big enough for a bigger job—

It is that individual who demonstrates dependability and capacity.—Issued by General Superintendent B. W. SNODGRASS of the Victor-American Fuel Company, Denver, Colo. Sent in by MISS JULIA J. GAVEN, former Memphis division editor, now living in Denver.

Mardi Gras Draws Many to New Orleans

Illinois Central System Makes Plans to Handle the Visitors to the Well-Known Celebration

NEW ORLEANS has made plans for a gayer and more elaborate Mardi Gras this year than even the celebration of 1922. The festivities started as early as January 5 and will continue intermittently through February 13, Mardi Gras day, the final and most eventful day of the carnival.

The program for this year follows:

January 5, Twelfth Night Revelers' Ball; January 19, The Follies Ball; January 30, Krewe of Nippon Ball; February 1, Mithras Ball; February 2, Oberon Ball; February 5, Athenians' Ball; February 6, Atlanteans' Ball; February 7, Mystic Club Ball; February 8, Momus Parade; February 8, Krewe Momus Ball; February 12, Proteus' Parade; February 12, Krewe of Proteus Ball; February 13, Rex Parade; February 13, Druids' Parade; February 13, Carnival Revelers' Ball; February 13, Rex Ball.

The Last Day Before Lent

All the balls will be held at the Athenaeum in New Orleans, with the exception of the Carnival Revelers' Ball, which will be in the Jerusalem Temple.

Merrymakers at the Mardi Gras

Literally, Mardi Gras means "Fat Tuesday," the last day of indulgence before the beginning of Lent. It is French for Shrove Tuesday, the day preceding Ash Wednesday.

The custom of celebrating Mardi Gras in New Orleans is nearly a century old, and it is world famous. The first street procession was held in 1827 by a number of young Creole gentlemen recently returned from the universities of Paris. Ten years later, the celebration was repeated on a much more elaborate scale; and since the Civil

A Mardi Gras float

Another Mardi Gras float

War it has been held practically every year.

From a humble beginning the Mardi Gras has grown into a pageant of unsurpassed originality and magnificence, the climax of which is the grand parade on the last day of the carnival. The brilliant tableaux and the picturesque scenes are the result of the efforts of the secret societies organized solely for the purpose of adding splendor to the pre-Lenten period.

Much of the charm of Mardi Gras is due to the fact that it is staged in New Orleans, one of the five or six cities on the continent that every traveler should see. The blended customs and architectures of three nations, rich historic associations, the mild climate of the semi-tropics, and the enticing cuisine of the unrivaled restaurants give the great Southern metropolis a distinctive and captivating personality.

Our Service to the Mardi Gras

The Illinois Central System has planned an all-expense Mardi Gras tour for those who desire to enjoy the carnival and a mid-winter vacation in New Orleans without having the bother of arranging details of the trip. It is the fifth of similar tours the company has offered. The previous ones proved to be remarkably popular.

All details of the trip are arranged for in advance, and the party will be accompanied by an Illinois Central System rep-

resentative who is skilled in providing for the comfort of special parties. His sole duty will be to further the enjoyment of those in his charge. The members are relieved of all the smaller details incident to travel and may devote themselves completely to having a good time. Parties of friends will be kept together and if of sufficient size may occupy special sleeping cars. The sleeping cars will be located in the commodious, centrally located yards of the Illinois Central System at New Orleans, and will be occupied by the visitors during their stay. These yards are near the heart of the city and are equipped with all necessary conveniences.

The passenger department has issued some attractive pamphlets that describe the Mardi Gras and the Illinois Central System service to New Orleans.

THE BIGGEST BANK

The London Joint City and Midland Bank, Limited, is the biggest bank in the world, established in 1863, and built up by absorption and amalgamation since 1851 of thirty-three separate institutions; today the bank has more than 50,000 shareholders, some 1,600 branch offices scattered throughout the United Kingdom, its capital paid up and reserve are over \$100,000,000, and its deposits above one and a half billion dollars.

—Central Western Banker.

Now in Their 61st Year of Married Life

*Parents of Otto F. Nau, Our Local Treasurer
at Chicago, Were Early Residents of the City*

MR. and Mrs. Charles Nau, parents of Otto F. Nau, local treasurer at Chicago, are now in their sixty-first year of married life. They observed their sixtieth wedding anniversary September 30. It was a quiet affair with only the immediate members of the family and a few very intimate friends present.

Although Mr. Nau is 89 and Mrs. Nau is 77, they are both hearty, strong and healthy. Their married life has been and continues to be one of happiness. They moved into the house where they now reside at 1835 North Park Avenue, Chicago, on May 1, 1876, and they have lived there continuously ever since. Their entire married life has been spent in Chicago, and small village to the metropolis it now is. They have seen the city grow from only a small village to the metropolis it now is. The great Chicago fire of 1871 destroyed all their personal property.

Saw Chicago in Early Days

Mr. Nau was born September 10, 1833, at Darmstadt, Germany. When he was 22 years old, he and his sister came to America. They landed in New York and then went directly to Chicago, where they made

their home at an inn called "Napierville House" on Randolph Street, between Wells and Franklin Streets. His first position was as a clerk in a wholesale hardware store on Market Street.

At that time, nearly all of the buildings of Chicago were frame structures, Mr. Nau says, and there were many residences where the huge business houses now stand in the Loop district.

After a short time Mr. Nau moved to the Hotel May, which was on Wells Street, between Randolph and Washington Streets, where later on he became the hotel clerk. But that didn't appeal to him for very long and he established a grocery store just across the street from the hotel.

January 1, 1858, Mr. Nau opened a livery stable at what was then 215 Washington Street. That was in the heart of what is now the Loop district. The building was wooden, and there was an archway through the house through which the horses passed from the street to the stalls and the lot in the rear. Mr. Nau lived in the house.

Came to America at Age of 9

Mrs. Nau was born April 9, 1845, at

Mr. and Mrs. Charles Nau on their sixtieth wedding anniversary

Tubingen, Germany. She was Miss Sophie Bossert. When she was 9 years old, her father moved the family to America. He came over in 1853 and bought a farm at Schaumberg, Ill., near Palestine, and then sent for the family the next year. Mrs. Nau says that they traveled by rail from New York to Chicago and then to Palestine, where they had to drive to their farm. She remembers New York as a great city at that time, but says that she was so young that she does not recall all of the interesting details. Her father died within a few months after their arrival. The farm was sold the next year and they moved to Chicago.

Her first home in Chicago was on Clark Street, between Monroe and Adams Streets, but soon afterward they moved to a house that stood on the site where the Methodist Church building is now being erected. The next year they moved to a house on Madison Street at the foot of LaSalle Street. LaSalle Street ran no farther then. Later they moved on Monroe Street, near Wells Street.

Mr. and Mrs. Nau met for the first time about 1860. A friend introduced them. Mr. Nau was managing the livery stable then, and they had many nice buggy rides together, Mrs. Nau says. After a courtship of nearly two years, they were married on September 30, 1862. They made their home at the house back of which stood the livery stable.

Went Through the Chicago Fire

The Chicago fire of 1871 destroyed everything they had. When they received a warning that the flames were spreading toward their home, Mr. and Mrs. Nau carried all their clothing and bedding to the corner of Clark and Ohio Streets; but even that was not a safe place for long. The fire was coming from the west side and soon enveloped the entire city. Draymen refused to take their personal effects farther north, and they had to leave them there to be destroyed by the fire.

Homes were scarce in Chicago after the disastrous fire, and Mr. and Mrs. Nau were

Otto F. Nau

forced to live with friends for a while. They were fortunate in being able to purchase the household furnishings of a family that was moving from Chicago. They rented a small cottage on Aberdeen Street, near Van Buren, and lived there until 1872, when they obtained two unfurnished rooms in an office building at what was then 199 Wells Street. They paid \$32 a month rent for those two rooms until May 1, 1876, when they moved to their present home in North Park Avenue.

Mr. Nau continued in the livery stable business after the fire and retired from an active business life in 1897.

There were six children born to Mr. and Mrs. Nau—four girls and two boys. Two of the girls and one boy died, and the three other children are living with their parents. None of them is married.

The Floridan Provides a Popular Service

*New Illinois Central Train Attracts Business
Without Hurting That of the Seminole*

THE Floridan, the new *de luxe* all-Pullman train that was put into service December 5 on the Illinois Central System and connecting lines between Chicago, St. Louis and Florida, has indeed proved to be a popular train. Travelers who have made the trip on it acclaim the service rendered as comparing favorably with that of any of the fine trains in the world.

Passenger traffic to Florida has been unusually heavy this year, and the Floridan carried the maximum number of extra cars on every trip during January. It was double headed each time, and two diners were required in order to serve the passengers.

To date, the Floridan has made every connection. Its record is a remarkable one in maintenance of train schedule for a train running more than 1,100 miles, according to the passenger department. It leaves Chicago at 12:01 p. m. and St. Louis at 4:04 p. m. on Tuesdays, Thursdays and Saturdays and arrives at Jacksonville at 9:10 a. m. the following day. Included in its equipment are through sleeping cars to Jacksonville, St. Petersburg and Miami. The Floridan will continue running through April.

Business of Seminole Unhurt

The Seminole Limited is maintaining its punctual on-time arrivals, and the number of passengers traveling on it has greatly increased this year, in spite of the addition of the Floridan to our service.

One of the nicest compliments to the Floridan came unsolicited from Edward N. Hurley, former chairman of the United States Shipping Board and president of the Emergency Fleet Corporation, who was one of the first passengers to make the through trip from Chicago to Miami, Fla., on the Floridan. The accompanying picture of Mr. Hurley and the following interview were

Observation platform on the Floridan

The Floridan in the yards at Chicago

Edward N. Hurley

printed in the January 4 issue of the *Miami Herald*:

"The greatest thing that has happened for Miami in the last ten years is the placing in service of the Floridan—the through

Pullman express from Chicago—according to Edward N. Hurley, former chairman of the United States Shipping Board and president of the Emergency Fleet Corporation, who has come to the Flamingo Hotel for the winter season.

"Illinois Central Deserves Credit"

"Mr. Hurley, who is chairman of the board of directors of the Hurley Machine Company of Chicago, was one of the first passengers to make the through trip on the Floridan. The service, he says, is the finest of any train, with the possible exception of the Twentieth Century Limited.

"No city can progress which does not possess adequate transportation facilities," said Mr. Hurley. "The Floridan, which leaves Chicago every Tuesday, Thursday and Saturday, is the first step in the right direction, and the Illinois Central Railroad is deserving of much credit for placing this splendid train in service between Chicago and Miami.

"Just imagine," continued Mr. Hurley. "The business man can leave his office in Chicago on Saturday, board the Floridan, and, without making a single change, arrive in Miami on Monday. This is real service and will do wonders toward building up this city. The trip can now be made with such ease that I am leaving for Chicago at the end of this week to bring my family back here with me."

Active in Work for Old People's Home

Members of the Illinois Central family have been not only willing but glad to furnish us pictures of their homes. The responses to our requests not only indicate a pardonable pride of ownership, but give us an inkling of the hopes of all for a peaceful spot from which to watch the sun sink over the western horizon. Many persons, however, have never had the opportunity to

acquire a home in the sense that the word is used in the smaller cities.

In Chicago there are homes maintained for the older people of most of the larger denominations and creeds; several fraternal societies maintain homes for the aged and incapacitated at a nominal cost. Other homes have been founded and endowed with sums of money which enable them to care

Architect's drawing of Oakhaven Home

Left to right: Mrs. James H. Hutton, Mrs. C. A. Tweedy, Mrs. G. F. Phelps

for a certain number of aged persons at an expense varying according to the size of the endowment. Notwithstanding the fact that Chicago has many of these homes, it may be surprising to hear that there are thousands of old persons in the city who have neither home nor friends.

Recognizing the imperative need for additional facilities for the care of these people, members of numerous women's clubs on the South Side have interested themselves in the erection and endowment of another home for the aged to be known as Oakhaven. It is being erected at 113th Place and Western Avenue. It was thought that the main building would be completed at an expense of \$85,000, but the soaring prices of material and labor will bring the final cost to approximately \$110,000. There is still to be raised \$30,000. An endowment fund of \$35,000 already has been raised. As it is now planned to operate the home, \$5,000 endows a room—which means, of course, that the income from the \$5,000 will maintain a room and its occupant, when used in conjunction with the \$500 admission fee.

The progress of the work has been rapid indeed. One of the significant features in connection with the response to the plea lies in the fact that, when it became known that such a project was being considered, applications were immediately received from old persons now desperately in need of homes. Today there are more than one hundred applications on file from those who are anxiously awaiting the completion of the home. The silent appeal of these applications has perhaps been more potent than any other in stimulating the good women who are doing this work.

Prominent in this philanthropic work are many wives of Illinois Central System officers and employees, among them Mrs. G. F.

Phelps, Mrs. C. A. Tweedy and Mrs. James H. Hutton, whose photographs appear here.

ERRONEOUS MAXIMS

Did you ever think to what a low and selfish plane the ancient commercial maxim, "Honesty is the best policy," reduced truth and righteousness? The proverb, "There are tricks in all trades but ours," seems to indicate that those in trade were formerly regarded as tricksters. It is, far from complimentary. The word "bargain," which in its spelling at least suggests an effort to bar another from gain, has an equally unpleasant connotation. The legal doctrine of *caveat emptor*, "let the buyer beware," seems to recognize the seller's right to misrepresent his goods or deceive his customer. It is, I believe, still admitted by the courts as a good defense in some cases, but public sentiment no longer supports its application, and the ethics of business in the Twentieth Century are, I am rejoiced to believe, far in advance of those which prevailed early in the Victorian era.—THEODORE H. PRICE.

THE OBJECT OF SAVING

Today it is not alone necessary for a savings bank to encourage people to save, but also to teach these same people the value of saving through the making of safeguarded investments. We must furnish an objective to the saver. We must encourage the accumulation of the surplus funds for various purposes, entrance into business, children's educational costs, purchase of a home, life insurance, etc. Buying a home and the taking out of life insurance should constitute the principal objectives of a man. In this manner he can overcome all obligations in the event of serious adverse developments to him.—JOHN J. PULLEYN.

Glen Gordon Is a Rendezvous of "Haunts"

Weird Mississippi Plantation, With Crumbling Mansion, Proves Attractive to Sightseers

DURING the past eighteen years one of the most imposing ante-bellum homes in southern Mississippi has been slowly crumbling into ruins. For many years prior to and after the war it was the home of Colonel William Alexander Gordon, who was prominently identified with the management of the New Orleans, Jackson & Great Northern Railroad before the road which now forms the main line of the Illinois Central System between Memphis and New Orleans was taken over by the Illinois Central. Its ruins still stand on the clay hills south of Chatawa, from which the proud mansion once overlooked the main line of the railroad in which its builder was an important figure, although the view of the railroad and Tangipahoa River has been cut off by the growth of pines.

Throughout that portion of the country the ruins are referred to as the "haunted house." Doubtless the neglect of the property has given rise to the many stories that are told of the lights that are said to have been seen moving about the garret at night and the queer noises that are supposed to originate there. Certainly the appearance of Glen Gordon bears out the reputation which the place has, justly or unjustly, earned.

House Built Before War

The house was built in about 1850. Michael Sullivan, section foreman of the Illinois Central at Chatawa, recalls that he attended many fine parties there after the war, for until the house was abandoned by the Gordons in about 1905, it was still kept up in all the splendor of the Old South. Originally, the house was of two stories and basement, surrounded by beautiful and carefully tended drives and masses of flower gardens. An artificial lake was built to the south of the mansion, and canoes were kept there. The lake was filled with lilies of many and varied colors. The Gordons held a prominent place in the social life of the South, and their charming parties were far famed.

Archway in haunted house

But Glen Gordon today presents a most unimposing front to the hundreds of sightseers who go there, by motor and rail, to visit the place. The building which housed the carriages of the Gordons has fallen in. The quarters of the house servants are moss-grown. Some of the broad verandas have crumbled, and so has the dining hall. The artificial lake has filled up, and the surface of the little water that remains is covered with a green scum. The white-plastered walls are filled with the names and initials of visitors. Portions have been torn out of the walls and floors as souvenirs.

Some of the stories that are told of the ghosts that inhabit the frail old house in the dead silences of the night are interesting, and no less so are the explanations of the lights and noises. Here are two:

Examples of "Haunts"

Some young people were 'possum-hunting in the 640-acre estate not long ago when they heard queer noises emanating from the "haunted house." A few bold youths and timorous maidens essayed an investigation. As they entered the front door, the noises seemed to pass on to the second floor. Hearts thumping wildly, the party followed. The noises were heard on the third floor. The conservative members of the party advised a retreat, but the adventurous spirits won. Up to the third floor they went, and the noises passed out onto the veranda. The young people peered out through the open door—and beheld three pairs of bright eyes gleaming out of the darkness. Just as the situation grew most tense, the moon came out from behind a cloud and revealed three goats that, if anything, were more startled than the searchers.

Another occasion worth telling is of a party of young people who visited the "haunted house" on Easter Saturday night, 1921. Two of the boys of the party had made a trip to Glen Gordon a few hours in advance of the party and arranged a

Scenes around Glen Gordon

system of cords with one end attached to a tin kettle filled with pebbles and the other end hanging just inside the door of the entrance. As the party entered the house, one of the conspirators gave the string a terrible jerk—and for nearly half an hour the party was turned into an improvised hospital staff to take care of one of the young ladies who had fainted away at the supposedly ethereal noise.

There are numerous stories told of supposed ghosts and lights and noises about the dim rooms of the house, but none of the people of the community seem to be able to verify these rumors.

There were three children in the Gordon family. The two boys have died. Their sister is married and lives at Natchez. From time to time she and other remaining members of the family come back to visit the property, but nothing has been done in the way of keeping up the place for many years. For some time after the Gordons died, an old negro caretaker lived on the property, but that was years ago—and his going is accepted by the southern Mississippians as another evidence of the verity of the ghostly stories.

It is said that Leslie Gordon came back to the house in 1910, on a night which is still referred to in that part of the country as "the night of the big storm," and spent the night alone in the house that his father had built.

For many years after the Gordons left, all of the costly furniture which furnished the mansion was left there, in place. The room in which Mrs. Gordon died, it was said, had been untouched, and curious little boys and girls tiptoed up to the door and peeped through the keyhole with bated breath. The only piece of house furnishings that remains is a ponderous old bathtub that, according to the traditions of Pike County, had been imported from Italy. The explanation for its remaining, supposedly, is that it is too heavy to be carted away and too hard to be broken to bits by souvenir hunters.

THINGS YOU WILL REGRET

Trying to have the last word. Getting the best of an argument which may cost you a friend. Squandering your time foolishly. Resenting fancied insults. Doing the lower when the higher is possible. Passing the buck, putting the blame, the burden on the other fellow. Trying to get pleasure out of that which lessens your self-respect, makes you feel mean the next day. No recreation, no play, no fun is for you which does not leave you a little more fit for life's duties. Whatever makes you feel demoralized, ashamed, that lessens your self-respect, is vicious, no matter how exciting or exhilarating it might be for the moment.—*Success Magazine*.

Motto of Burnside Y. M. C. A. Is Service

*Religious, Moral and Physical Training of
Our Shop Employes Faithfully Attended To*

Following is the first of a series of articles concerning the activities of the Railroad Y. M. C. A. on the Illinois Central System. The second article will appear in an early number.

THE work of the Railroad Y. M. C. A. at Burnside shops (Chicago) is planned to interest the greatest number of men possible. Games are promoted and supervised for those interested in sports; a technical library is maintained for those studiously inclined; every summer there is a garden for those who enjoy tilling the soil; entertainments are put on during the noon-hour periods; students are enlisted for the night schools maintained in the neighborhood; religious meetings are held; the secretaries serve as advisors to the men on questions affecting religion, morals, home life and Americanization, and assistance is given those seeking citizenship. In fact, the three phases of life that the Y. M. C. A. generally strives to serve—religious, moral and physical—are well represented on the program of Burnside's Y. M. C. A. activities.

Some figures on the amount of work handled by the Burnside Y. M. C. A. during the year 1922 will serve to illustrate the

wide field covered and the intensity with which it is covered.

Take the technical library, which is one of the newer institutions at Burnside, having been established late in 1921. The library was opened with a number of technical magazines furnished by Shop Superintendent L. A. North. To these were added a few fundamental text books on mechanical subjects, purchased by the Burnside Y. M. C. A., and now the circulating library is beginning to take on real importance to the men at Burnside. More books are being bought, and the list of technical magazines subscribed for is being enlarged this year. During 1922 the patrons of the circulating library borrowed 271 pieces of reading material.

Social Events Are Popular

During the year there were 125 social events, principally noon-hour gatherings. The estimated total attendance was around 41,600. Motion pictures were shown on a number of occasions, and there were wrestling and sparring matches.

Among the indoor and outdoor athletic events which were sponsored by the Burnside Y. M. C. A. were indoor and outdoor baseball, volleyball, tennis, basketball and bowling. In the 1,943 games conducted during the year there were 22,006 participants. The big athletic event of the year is a 5-event program in which medals are awarded. The outcome of the 1922 5-event program was reported in the January number of this magazine. The foregoing figures do not include the dart games that were held during the year, 112 games being played, with 756 participants.

The Burnside garden is one of the most interesting features on the Y. M. C. A. program. A 2-acre plat of ground lying in the northwest corner of the property is used for this purpose. The Y. M. C. A. has the ground plowed and staked off and assigned to the men. Last summer seventy-six men had plats in the garden, and therein they raised almost every vegetable known in this climate. So enthusiastic are the men over the Burnside garden that in the middle of January, when this account was written, a large number of applications were in for 1923, and more inquiries were being received every day.

Co-operates With City Schools

Along the line of educational work, the Burnside Y. M. C. A. co-operates with the

John R. Glenn

city school system in the night schools which are held in rented halls in the neighborhood of the plant, principally attended by foreign-born men who are studying for citizenship. English and civics are the principal courses given. During the past season there have been about twenty-five Burnside employes in the night schools as regular attendants. The Y. M. C. A., in addition to enlisting the interest of the men in the night schools, undertakes to furnish entertainments from time to time. During 1922 the Y. M. C. A. arranged for

thirteen educational lectures in the night schools.

During 1922 the Y. M. C. A. assisted fifteen Burnside employes in obtaining their first papers and twenty-nine in obtaining their second papers for citizenship. The amount of work required of the Y. M. C. A. secretaries in this field of their activities is indicated by the fact that last year they wrote more than 800 letters pertaining to citizenship papers on behalf of Burnside employes.

The Y. M. C. A., being a religious or-

ganization, naturally devotes a not inconsiderable part of its time to religious work. During 1922 twenty-one religious messages were delivered at meetings of employees, at which the total attendance was nearly 5,600; on eight occasions programs were put on in co-operation with the churches of the neighborhood; and twenty interviews were given to men concerning their religious life. A Bible class is now being organized for one noon-day meeting each week.

That summarizes the activities of a mighty busy organization. As to the men who deserve the credit for this program:

Experienced Secretary in Charge

The activities secretary is John R. Glenn, who has now been at Burnside for something over a year, and in that year has learned to know every nook and cranny of our big shop plant and to know hundreds of the men by their first names. Glenn is an Illinoisan, 35 years old. After leaving school he taught school for four years, and then spent two years in the wholesale plumbing business at Decatur. It was at that point that he entered Railroad Y. M. C. A. work in 1913 as an assistant secretary. From 1914 to 1917 he was general secretary at Ennis, Texas, and from 1917 to 1920 general secretary at Peru, Ind. In

1920 and 1921 he served as executive secretary of the Grand Trunk Department of the Y. M. C. A. at Chicago, and the first of 1922 he took up his duties as activities secretary at Burnside. He has a big vision of his usefulness and the usefulness of the Railroad Y. M. C. A. organization to the men at Burnside, and the number of his friends testifies to the earnestness and fidelity with which he tackles the big problem that he envisages.

For his assistant, Mr. Glenn has W. R. Davison, who has been in Railroad Y. M. C. A. work since his discharge from the army. His first Railroad Y. M. C. A. experience was with the Chicago & North Western, at Chicago, and for the past two years he has been associate secretary at Burnside. Mr. Davison is twenty-three, and his enthusiasm for the work of the Railroad Y. M. C. A. is one of the reasons for the success of the Burnside program.

The work of the Y. M. C. A. at Burnside Shops is made possible by a liberal contribution from the company.

One of the features of the 1923 program at Burnside is a winter chautauqua course that was put on the week of January 8 to 13. A report of the noon meeting on January 12, at which President Markham was the speaker, is given elsewhere in this number. Musical programs and lectures were given on the five other days of the week.

LAW AND ORDER

The government of the United States, and of the states, of course, which are the integral parts of our great fabric, these mean law and order, and without the maintenance of law and the enforcement of order the whole fabric of civilization will fall to the ground. One of the great things to be remembered is that government should be a free government, a government worthy of our loyalty and our sacrifice, that we must see to it that all men are treated with justice, that no worker can be made to work against his will, but no man and no woman can be prevented from working if they choose to work.—HENRY CABOT LODGE.

WHEN INTUITION FAILS

Intuition is a wonderful thing when it works. I have great respect for it—when it works.

But it doesn't always work.

Intuition is what prompts a hen to set on china eggs as optimistically as on the real article. Intuition is what tempts the setter put to point at the parrot cage. Intuition is what leads many business men into the embrace of the receiver.—ROGER BABSON.

Big Cotton Compress Open on Our Lines

*Object of Plant at New Orleans Is to Make
Two Bales Fit Where One Fitted Before*

ONE of the most modern cotton compresses in the world recently was completed on the Illinois Central lines near New Orleans. Construction of the plant, costing about a million dollars, was begun in April, 1922, and finished December 31. Cotton was received and pressed as early as last September, although the plant was not completed. The New Orleans Compress Company, Inc., is the new concern that has located on our lines between Southport and Shrewsbury, about six miles from New Orleans.

The building that houses this compress and warehouse is 900 feet long and 250 feet wide. It is two stories high and has a storage capacity of 50,000 bales of cotton. It is rated as absolutely fire-proof, being constructed of concrete and steel, and is given an AAA rate of insurance, the lowest in Louisiana. As a further prevention against fire, the plant is equipped with automatic sprinklers throughout.

Concrete platforms extend the entire length of the building on each side for receiving and loading the cotton. The total floor space, including these platforms, is 250,000 square feet.

Presses Bales Into Small Space

The purpose of the cotton compress plant is to press the bales of cotton into the smallest possible bundles, so that a greater number can be loaded in cars and on ships. The practice of making the bales of cotton

Bale before and after compression

of greater density reached its highest development through the necessities of the late war, but its benefits are now recognized as being of economic value to the shippers. The high density bales are more easily handled than the standard density bales, and there is less danger of damage to the cotton.

Most of the cotton that is received by the New Orleans Compress Company, Inc., comes from growers in all parts of the South after the bales have been pressed to standard density at local presses. It is seldom that the local presses make bales of a high density.

The standard density bales that are re-

Bales going through the press

Storehouse of New Orleans Compress Company, Inc.

ceived are placed in a press at the New Orleans Company, Inc., plant and are subjected to a pressure of 200 tons for each bale. This pressure increases the density of the cotton to 22½ pounds a cubic foot, and thus reduces the size of the bale about one-third. When the full pressure is on, the bale is reduced to a thickness of about eight inches; then metal bands are fastened on. These bands hold the cotton in the desired density when the pressure is released.

Bales Are Stored on End

After the bales have been made of high density, they are either stored or loaded for

shipping. They are usually loaded 100 to the car at this plant. To facilitate handling as well as to utilize all the available space, each bale of cotton is stored on its end. The bales are never stacked at the New Orleans Compress Company, Inc., plant.

The capacity of the press is about ninety-five bales an hour, and the New Orleans plant is expected to handle 350,000 each season. Nearly 100,000 bales have been handled since last September.

There are about two hundred and fifty laborers employed at the plant, as well as many clerks.

Building of Line in Kentucky Authorized

Authorization was given December 23 for the construction of a new line between Central City and Dawson Springs, Ky., and work is expected to begin at once. When the new line is completed, we shall have a double-track line between these two points. The maximum distance between the two tracks will be approximately eight and one-half miles.

The Kentucky Midland Railway, a short line of about nine miles extending from Central City west to a coal field, was purchased as part of the plans for the new line. The Kentucky Midland line will be completely reconstructed, and the new line will extend west from its junction to a little south of Madisonville, then in a general southwesterly direction to Dawson Springs.

Construction on a line from Dawson Springs to Providence was stopped during

the war after about four miles had been completed out of Dawson Springs. This section of right-of-way will be used by the proposed Dawson Springs-Central City line.

The new line will be approximately thirty-seven miles in length and will have a maximum grade of .5, or a rise of not more than 26 feet to the mile. The maximum grade of the present main line between Central City and Dawson Springs is 1.25, or a rise of 66 feet to the mile. The maximum curvature of the new line will be 2 degrees, according to the present plans, while the maximum curvature of the present main line is 6 degrees.

The plans for the new line include the construction of new yard facilities at Central City. There will be eight 80-car tracks and five 50-car tracks.

Our fast passenger trains will probably continue to run over the present line.

Effingham, Ill., Honors the Illinois Central

*Civic Boosters Hold Get-Together Banquet
With President Markham as Guest of Evening*

THERE is a tale in mythology about a sculptor named Pygmalion who carved a statue of a beautiful maiden and fell madly in love with the conception which he had created. In answer to his prayer to Venus, the inanimate form of Pygmalion's adored one was endowed with life.

The poetical illustration derived from this ancient legend applies to the spirit responsible for the development and advancement of cities, large and small. Touched by a spark from the living fire of civic progress, inspiration is born in the hearts of the leaders of the community and an enterprising city springs into life. Something like that has happened to Effingham, Ill., a city of about 5,000 population located approximately 200 miles south of Chicago on the main line of the Illinois Central.

The stranger entering Effingham for the first time finds something pleasantly inviting and reassuring about the atmosphere of this little city. The citizens have a spring to their step, and a tone of hearty good fellowship is in their voices. The air is charged with sprightly energy—vigorous, stimulating. Effingham doesn't wait for things to get done; it does them. The secret of this healthful civic condition is unity of purpose and action. A group of energetic young business and professional men have banded themselves together to promote the interests of Effingham, secure in

the belief that whatever is for the betterment of the community will benefit them as its citizens.

Community Spirit Is Active

For example, last summer the enthusiastic Effingham citizens decided that the little city needed a new hotel. They entered upon a campaign and in short order brought in \$102,000 worth of pledges for subscriptions to the capital stock of the corporation that was to be created to carry out their conception. The 3-story, fireproof hotel is now nearing completion. It is expected that it will be ready for occupancy about May 1 next.

It was mainly due to Fred C. Wenthe, president of the Effingham Rotary Club and a former employe of the Illinois Central, that the recent big Effingham-Illinois Central get-together banquet was achieved. In making the plans, Mr. Wenthe had the help of W. W. Austin, president of the Effingham Chamber of Commerce; Colonel Harry Parker, the city's Demosthenes; I. H. Schulte, Henry Eversman, Dr. E. L. Damron and a host of other civic boosters.

The dinner took place Tuesday evening, January 9, with President C. H. Markham, of the Illinois Central System, as the guest of honor. Other members of the Illinois Central System's official family were there, together with a representative gathering of nearly 250 citizens of Effingham and community. Mr. Austin, who is postmaster in

Reception committee and Illinois Central officials who attended a banquet in President Markham's honor at Effingham, Ill., January 9. Reading from left to right: Guy P. Denton, Dr. H. Taphorn, W. H. Bash, local freight agent; H. C. Hayes, assistant engineer, Illinois division; Henry Eversman; J. L. Downs, roadmaster, Illinois division; Dr. S. F. Henry; H. Kabbes, supervising agent, Illinois division; J. W. Hevron, superintendent, Illinois division; F. L. Thompson, chief engineer, Illinois Central System; C. J. Moritz; W. W. Austin; Dr. E. L. Damron; President Markham; Fred C. Wenthe; I. H. Schulte; D. J. Cook.

addition to being president of the Chamber of Commerce, presided, and Mr. Wenthe served as toastmaster. The address of welcome was delivered by Colonel Parker, and appropriate talks were made by J. M. Brewer, superintendent of the Chester Knitting Mills, a branch of which is located at Effingham, and by J. Paul Clayton, vice-president of the Central Illinois Public Service Company.

Introducing President Markham, Mr. Wenthe said, in part:

Tribute to the Illinois Central

"When you know people better, you like them better. If you go to people with an open mind and open heart, you will find them open-minded and open-hearted also. The way to get a friend is to be one. In making acquaintances, I always try for the kind that begets fellowship and friendship. I am happy in the thought that this idea is coming so much in favor that it is growing by leaps and bounds, and I can give no better example of its working than by calling your attention to the presence of our distinguished guest.

"In the case of the personnel of the Illinois Central Railroad Company—starting with the division officers and on up successively to the president himself—what kind of men are they? I have found them human, interesting to talk with, always sympathetic in their consideration of our appeals for community needs. They are real fellows, they admire our fine community spirit, and the only reason for their coming here and giving as much of their valuable time is because they are our friends—impelled by the motive to encourage us in the ways we go about to attain certain goals.

"This evening we are fortunate to have with us the highest executive official of one of America's greatest railroads, the Illinois Central, the road which serves Effingham—a man into whose private office I have been admitted on several occasions without a card, fuss, feathers or formality, and welcomed with a real grasp of the hand. He is the only railroad president I know of who thinks it worth while to keep his company's many patrons informed by publishing monthly conditions reflecting the operation, safety precautions, unjust political attacks, and his extraordinary endeavor to serve the public—always concluding: 'Constructive criticism invited.'

"Gentlemen, it is my privilege and the greatest honor and pleasure of my life to introduce to you my friend and your friend, Mr. Markham."

Mr. Markham paid a compliment to the Chamber of Commerce and Rotary Club of

Fred C. Wenthe

Effingham and expressed his appreciation of the warmth of his welcome by those present.

Mr. Markham's Sentiments

"The interests of Effingham and the Illinois Central are mutual," he said. "That the relations between both parties have always been mutually friendly goes without saying; and mutual co-operation and the spirit of reciprocal service are the greatest things on earth."

Mr. Markham said that last year the Illinois Central paid out about \$178,000 for local salaries and improvements and other expenses at Effingham, while its total freight and passenger receipts at that point amounted to about \$168,000. He said that the Illinois Central System's efforts to keep abreast of the times were shown by the fact that during the last twelve years the management has expended approximately \$200,000,000, or about 60 per cent of the road's capitalization, in improvements of facilities.

Mr. Markham gave a summary of the Transportation Act and railway earnings under its operation. He showed that there had been no guaranty of any stated income since August 31, 1920. All the railroads ask, he declared, is fair regulation. Waterways and other means of transportation can only give an infinitesimal measure of relief in transportation shortages. The transportation burden rests upon the railroads, and they cannot expand adequately to serve the country unless permitted to earn a fair return upon invested capital.

Upon motion of Doctor Damron, a unanimous vote of thanks was expressed by the audience, which voted standing. An informal reception was held after the speaking program.

Distinguished Guests Present

The Illinois Central representatives who attended the meeting, in addition to President Markham, were: Chief Engineer F. L. Thompson, Superintendent J. W. Hevron, Roadmaster J. L. Downs, Assistant Engineer H. C. Hayes, Trainmaster C. W. Davis, Agent W. H. Bash, Supervisor T. Carey, and Supervising Agent Harry Kabbes.

Those at the speaker's table, in addition to the Illinois Central representatives, were:

D. F. Kelly, superintendent, Central Illinois Public Service Company; J. Paul Clayton, vice-president, Central Illinois Public Service Company; J. M. Brewer, superintendent, Chester Knitting Mills; Fred Wenthe, president, Effingham Rotary Club; W. W. Austin, president, Effingham Chamber of Commerce; J. W. Gravenhorst, secretary, Chamber of Commerce; the Rev. Father Lamert, pastor, St. Anthony's Church; Charles J. Moritz, Rotarian; H. S. Parker, Rotarian; Dr. E. L. Damron, Rotarian; George Barnes, Rotarian; I. H. Schulte, Rotarian; H. B. Wernsing, Rotarian and city commissioner; W. H. Engbring, city commissioner, and Paul Eiche, mayor.

Gypsy Smith, Jr., Preaches at Leland, Miss.

By T. L. DUBBS,

Superintendent, Vicksburg Division

Beginning January 7 and continuing until and including January 28, the great evangelist, Gypsy Smith, Jr., conducted a series of meetings in a specially constructed tabernacle at Leland, Miss. The tabernacle has a seating capacity for 2,500 persons, but even that was insufficient to accommodate the crowds. This tabernacle is a temporary structure amply supplied with lighting and heating facilities and with comfortable seats. There is also provided a large and commodious pulpit and a choir platform with seats to accommodate 150.

Gypsy Smith, Jr., is the son of the original Gypsy Smith, known the world over as the "gypsy evangelist." Gypsy Smith, Sr., was born in a gypsy camp near London, England, and lived these until 16 years of age, when he was converted and joined the force of General Booth, who at that time was known as the Rev. William Booth and who had a number of missions known as the Christian Missions, which were afterwards formed into the Salvation Army. When this army was organized, Gypsy Smith, Sr., was the thirty-sixth officer. For

many years he traveled about England as a missionary, working for the Salvation Army. After having had some disagreement with William Booth, he severed his connections with the Salvation Army and became an evangelist. For a number of years he had calls from every English-speaking country on the globe.

Gypsy Smith, Jr., was born in Manchester, England, and was brought up by his father and mother in a religious atmosphere. His father was a full blooded gypsy; his mother, an English woman. At the age of 15, Gypsy Smith, Jr., determined to go to sea. This desire arose, no doubt, from the fact that his mother came from a family of sea-faring people. His father and mother permitted him to follow his inclination in this matter, believing that upon his return, within a year, he would have had sufficient sea-faring experience and would be willing to follow some other occupation on land.

Gypsy Smith, Jr., followed the sea for nine years, the first five years as a common sailor on a sailing vessel, touching many foreign ports. For four years he was an officer on a transatlantic steamer in the

The tabernacle at Leland, Miss.

Gypsy Smith, Jr., golfing at Greenville

British merchant marine, serving between New York and Glasgow.

After he left the sea and at the age of 27, he married a Scotch girl in Glasgow and now has an interesting family of children consisting of two boys and one girl. Soon after the first child was born, the Smiths moved to New York. Later they established their permanent home near New London, Conn., where they now reside. At the age of 27 Gypsy Smith, Jr., was converted while attending services with his wife. Immediately thereafter he became an evangelistic singer. At the age of 34 he was ordained a minister and began an evangelistic campaign in Virginia. He is now 42 years of age.

Gypsy Smith, Jr., is the great son of a great father and is a mighty preacher of the gospel. Much of his work has been in the southland. He has held great meetings in the cities and towns of Virginia, North Carolina, South Carolina, Georgia and elsewhere. He is gifted in many ways and has a most winsome personality.

Associated with Gypsy Smith, Jr., is Charles F. Allen, a native of Indiana, who is a singer of considerable note and who has been with Mr. Smith for five years. Mr. Allen's work has contributed in no small way to the success of the evangelistic campaign. There is also associated with Gypsy Smith, Jr., Miss Lucille Abernathy of North Carolina, who plays the piano.

The services at Leland were attended by people from Washington, Sharkey, Sunflower, Bolivar, Coahoma and Issaquena counties. From four to six hundred automobiles were necessary to carry the people to and from the tabernacle for distances ranging from five to sixty miles.

The tabernacle and its equipment were provided by enthusiastic supporters of the movement, the principal of whom is Joe Aldridge, a prominent planter south of Leland. The heating equipment was provided by the Yazoo & Mississippi Valley.

The ministers in Washington and adjacent counties took a keen personal interest in the success of these services and in having their congregations attend regularly. They themselves made it a point to attend every meeting whenever it was possible for them to do so.

The choir of one hundred and fifty was a splendid one and contributed materially to the success of the campaign. R. S. Porter of Greenville, Miss., and his committee selected this choir.

Gypsy Smith, Jr., is not affiliated with any particular church or denomination; all nationalities, all classes, all creeds, all colors are welcome alike to his meetings or to personal conferences or consultations. He is a democrat, first, last and all of the time; and he is a great enthusiast for his line of work. He keeps himself physically fit by indulging every day, when it is possible to do so, in some out-of-door exercise or sport. We have in Greenville, at the Country Club, a magnificent golf links. Gypsy Smith did not miss one or two trips around these links a single week-day afternoon except when some very unusual circumstance prevented.

COMMANDMENTS OF BUSINESS

Handle the hardest job first each day. Easy ones are pleasures.

Do not be afraid of criticism—criticise yourself often.

Be glad and rejoice in the other fellow's success—study his methods.

Do not be misled by dislikes. Acid ruins the finest fabrics. However, both dislikes and acids may be used to advantage.

Be enthusiastic—it is contagious.

Do not have the notion that success means simply money-making.

Be fair, and do at least one decent act every day in the year.

Honor the chief. There must be a head to everything.

Have confidence in yourself, and make yourself fit.

Harmonize your work. Let sunshine radiate and penetrate.—*Selected.*

Barbecue Launches Reclamation Project

*Work of Great Importance to the Illinois
Central System Is Begun at Brunswick Gap*

By THOMAS TREANOR,
New Orleans Division Editor

THE reclamation of 300,000 acres of the finest farming lands on the face of the globe, the fertility of which is comparable only to the ever-famous Valley of the Nile or the much coveted alluvial lands of Mesopotamia; the rehabilitation of an almost depopulated county in what is known as the Lower Delta; and the consequent increase in the population, wealth and general prosperity in a veritable land of promise—these are the expectations of the people of Mississippi living in a radius of a hundred miles of Vicksburg, now that the section of the Mississippi River front, still unprotected by standard levees and known as the Brunswick Gap, has been taken in hand by the United States government and the work of building a levee to commission grade and standard actually begun.

The levee will be an extension of the system on the east bank of the river, which begins at the south state line of Tennessee and which, when the work is finished two or three years hence, will end at the mouth of the Yazoo Canal at Vicksburg.

Floods Make Farming a Gamble

By referring to the map published with Mr. Crowson's article on flood control in the December, 1922, issue of the *Illinois Central Magazine*, the project is visible at a glance. The water backs up through the

unprotected space there shown and spreads itself over a large territory, making planting a mere gamble with a capricious river, to say nothing of the boll weevil.

For twelve years or more, the people in the affected district have been striving assiduously to interest the government in the great undertaking, and when the members of a congressional committee on board a Yazoo & Mississippi Valley railroad train, plowing through fifty miles of inundated territory on a submerged track, saw for themselves the pity of such a waste, the reward for the good people's admirable persistence was not long forthcoming.

Important to Illinois Central System

Big levee-building machines built by the United States government at a cost of \$120,000 each will be employed in the work, supplemented by team work where necessary. These marvels of mechanical invention have a capacity for handling 7,000 yards of dirt each day and are equipped with 600-horsepower engines which furnish power both for moving and operation. Twenty-two men are required for the operation of a machine. Steam stump-pullers, each carrying a crew of six men, will be used in connection with the building machines. Major R. P. Howell, U. S. A., an authority on levee construction, will be in charge of the work.

The Illinois Central System, whose lines traverse the entire district affected, is

A few of those in attendance at the Brunswick barbecue. In the background is a levee-building machine. At the foot of the tower is the engine room, and above is the crane-man's box. The machine is moved and operated by its own power.

Lining up for the "eats" at the Brunswick barbecue, on the occasion of breaking the first ground for the Mississippi River levee extension.

equally interested with the people in the reclaiming and development of this fertile tract.

A celebration was in order when the first ground was broken at Brunswick, Miss., on December 11. When people in the South wish to celebrate on a big scale, their minds naturally revert to the customs of their fathers, whose favorite medium was a barbecue; and so a barbecue was decided upon. A barbecue is defined as a large social or political entertainment in the open air, at which animals are roasted whole and feasting on a generous scale is indulged in. This barbecue was all that, and more.

Tables were erected in a clearance in the woods near where the work began, and

whole beeves, hogs and sheep, together with game killed in the neighborhood, barbecued to a turn known only to those adept in the art, were served to those who came from far and near to join in the celebration. Big bowls of salad, generous piles of delicious bread, caldrons of strong, fragrant coffee added to the bounteous feast, as the crisp, cool air of the forest added to the sharpness of the appetite.

Prominent speakers from all parts addressed the festive crowd, and the day ended as a red letter one in the annals of the locality.

A committee from the Vicksburg Board of Trade supervised all arrangements for the memorable event.

How an Editor Appreciated Lincoln in 1856

A few days hence America will be celebrating the birthday of the Great Emancipator. For that reason we turn back a few months from our perusal of the files of 1857 to those of 1856, where we learn that on July 17 a mass meeting was held in Dixon in ratification of the Republican nomination of John C. Fremont for president, and that one Abraham Lincoln addressed the meeting. The Amboy editor was there, and in the *Times* of July 24, 1856, we find his impressions recorded:

"Last Thursday we, with a large number of our citizens, went to Dixon to attend the Ratification meeting at that place, and we trust no one regretted their attendance. We heard several excellent speeches, but the speech of the day was made by Hon. Abraham Lincoln, one of our electors at large. When loudly called for he arose, not with slow and dignified motion, but quick as a flash, and lo! what a man. He is about 6 feet high, crooked-legged, stoop shouldered, spare-built, and anything but

handsome in the face. It is plain that nature took but little trouble in fashioning his outer man, but a gem may be encased in a rude casket.

"His first remarks were not of a character to overcome the unfavorable impression which his uncouth appearance made, but when he had spoken some five or ten minutes, he began to warm up on the subject. He laid out his field of operations, and when he had finished his work, we with one accord pronounced it good. Not a stone was left unturned, not an obstacle or objection unremoved. As a close observer and cogent reasoner, he has few equals and perhaps no superior in the world. His language is pure and respectful, he attacks no man's character or motives, but fights with arguments.

"We have heard a good many political speeches in our time but never, we think, one equal to his. He spoke full two hours and still the audience cried, 'Go on.'"—Amboy (Ill.) *News*.

Personal Interest a Safeguard to Freight

*Patrons Are Better Satisfied by Careful
Handling Than by Prompt Payment of Claims*

By ZELLA MacNAIR ROSE,
Office of Superintendent, Indiana Division

"THE Illinois Central not only is the best road I ever dealt with so far as settling claims is concerned, but it is the most careful I know of about handling your freight so that there will be no claim; and, you know, that is what I like the better of the two, because no matter how quickly and fairly your claim may have been settled, you'd have been a whole lot better satisfied if there'd have been no claim at all and your freight had just gone through in good shape without delay." This remark, overheard by one of our employes on an Illinois Central train out of Chicago, brought the whole question of loss and damage to mind, especially as so much of our time and thought has been concentrated on this important subject during recent months.

Loss and damage to freight vary greatly in normal times and in abnormal times, caused by a heavy seasonal movement of crops, shifting demands of localities or labor troubles. The direct reason for increases in loss and damage are shortage of help, irregularity in running trains, poor equipment, rushes of business during which station and train forces are compelled to hurry until they necessarily neglect close checking and fail to give that attention to detail which is required, and lack of interest on the part of those handling freight.

A Duty to Shippers and Company

Causes of exceptions are being studied constantly, and various methods of handling freight are tried out with the idea of reducing exceptions to the smallest percentage possible. This is necessary, of course, on account of the protection which we owe the shipper who entrusts his freight to us and on account of the interests of the company, which is called on annually to pay thousands of dollars in claims caused by freight that is lost or damaged. These causes are briefly: Rough handling, both at station and in transit, errors in billing or checking, poor stowing and bracing, poor packing.

The ordinary means now in effect to enable us to handle freight without damage or loss are as follows: When a shipper delivers freight to us at one of our local freight offices he is required to have it properly crated, packed or wrapped, accord-

Zella MacNair Rose of the superintendent's office, Indiana division, was recently elected president of the Business Women's Club of Mattoon. This organization is only three years old, but already has a membership of one hundred and twenty-five of the representative business women of the town. They occupy a clubhouse at 1521 Charleston Avenue, where they have large club rooms, a dining room in which meals are served daily to members and the public, and sleeping rooms for those members who desire to live at the club. The Business Women's Club endeavors to assist all working girls and give them a meeting place for their social activities. The club co-operates with the other clubs of Mattoon and the United Charities in any way which will help the town.

ing to the commodity, tagged or marked with the consignee's name and address, also his own, in order to facilitate tracing in case it should go astray. At the time of delivery to us the shipper is given a receipt showing that when we accepted his shipment it was in good condition to withstand ordinary handling to its destination. From this time on the responsibility of taking

care of this particular piece of freight rests squarely upon us.

We first make sure that it is placed where our truckers will get it and put it in the right car. After it is trucked to the proper car it must be braced in the car in such a way that it will be protected while the car is being switched and will not be damaged, either by being knocked over and broken or by having other freight thrown against it. Stowmen must see that it is put in such a place in the car that it will not be overlooked at the time of unloading. This question of "station order" loading is one with which we are having a great deal of trouble at this particular time, when we consolidate so many schedule cars in order to release equipment for use during the present shortage. It will be seen readily that when local way cars are loaded in station order, with all the pieces for each station together, it saves time, enables the conductor and agent to accomplish their checking in much shorter time and avoids possible damage from handling and re-handling.

Care Needed All the Way Through

After the freight is loaded properly, sufficient care must be used by the train crews in switching and setting out cars to prevent damage on account of rough handling in transit. When the destination is reached there is still the necessity of avoiding damage at the time of unloading, either by rough handling or from the condition of the weather. Finally the freight is checked out to the consignee, who gives us a receipt similar to the one which was given the shipper by us, and the company has performed one more satisfactory service. All this care is for the particular purpose of avoiding damage. The question of loss must be met by other methods, since it is caused by other irregularities.

Poor marking, mishandling of waybills, failure to unload, failure to check into freight houses, into cars and out of cars, errors in billing, errors in pouching way bills—all these contribute to the percentage of lost freight. It is this feature which is giving us the most concern at the present time, as 75 per cent of our exceptions are from astrays, overs and shorts, all of which are caused by some one of the irregularities mentioned. This is shown up again and again by the analysis which is given each exception charged against us. It is possible to make a great reduction in exceptions by watching this feature closely. It is simply a question of more careful checking, a general tightening up all along the line, from the time the freight comes to us until it is delivered to the consignee.

In this connection we have various systems of setting our cars, giving them spot numbers corresponding to those placed on freight for outbound movement and all the other features of up-to-date platform management. Freight is checked against the waybills, and every effort made to satisfy the loading agent that the shipments have left his station properly loaded in the car which will carry them to, or in the direction of, their destination.

A Question of Personal Interest

Now there is a feature in this campaign of prevention of loss and damage which seems to be of particular importance. This is not a question of two-by-fours for bracing or spot numbers or stevedore reports, valuable as each one of these factors is. In fact, it is nothing upon which you can put your finger, yet it is an element which cannot be disregarded—that is, the personal interest and co-operation of each employe who has anything to do with the handling of freight.

When one considers that freight passes through the following hands while in our possession—receiving clerk, checker, trucker, stowman, train crew, agent or clerk at destination, trucker and delivery clerk—it is evident that there are as many chances for either loss or damage as there are persons concerned, and the care and interest of each one of these men are absolutely essential before we can handle freight in the proper way with the minimum of exceptions. No method of packing or crating, no method of bracing and bulkheading, cross checking or anything else mechanical can be really effective if the men who actually handle the freight are careless or even just indifferent.

This is the reason our annual no exception campaigns result in such notable decreases in the number of exceptions. The interest of all of us is aroused anew, and that spirit of good sportsmanship and friendly rivalry is inspired which changes drab routine to a game with rules which we must observe and goals to which we aspire. If we make a game of our work, we shall find it the most fascinating thing in the world; and if we make a game of preventing exceptions, with their attendant claims, we shall soon see a remarkable reduction in both.

This, then, is one of the essential things which must be done. We must renew our interest in the game, remember that the company's loss is our own, and the company's reputation for fairness and carefulness is but a reflection of the attitude of the men who do the company's work.

He Saw 40 Years' Service on Our Engines

*Joe F. Randall, Tennessee Division's Ranking
Veteran, Retires With a Clear Record*

JOE F. RANDALL of Paducah, Ky., the oldest engineer in service on the Tennessee division, was retired from active service on December 31.

Mr. Randall is a descendant of old Colonial stock whose members first landed in this country on the Mayflower. A great-great-uncle who was an officer in the Revolutionary War handed down in the family a sword he captured in a personal encounter at the battle of Long Island with an officer of General Howe's army.

Mr. Randall's grandfather was a sea captain owning a line of vessels running out of Providence, R. I. He served for a time as internal collector of this port and died at the home of his son, Benjamin P. Randall, in June, 1876, at a ripe old age.

Benjamin P. Randall, the father of Joe F. Randall, came to Athens County, Ohio, in the late fall of 1836, settling upon a farm, where he reared his family and continued to live until his death in February, 1907. Members of the family belong to the nobility, and in old England, whence they came, they were granted a coat-of-arms as far back as 1572. This coat-of-arms is now in the possession of Joe F. Randall.

He Is a Native of Ohio

Mr. Randall was born in Athens County, Ohio, and there grew to manhood. The first school he attended was an old log school building. His first lessons were taught from the old blue back elementary spelling book. From this district school he was sent to the Athens High School. Then he entered the Ohio State University for a 2-year course, this course being made possible by his raising and selling garden truck.

After completing this course at the university, he obtained a position with R. E. Phillips & Company of West Chester, Pa., as a traveling salesman. While in that employ he met J. M. Boone, superintendent of motive power of the Pennsylvania lines west of Pittsburgh (the P., F. W. & C.), took a position as a locomotive fireman on this road and was promoted to engineer. After he had been firing and running on this road about seven years, his services were taken by the Monon Route, where he ran an engine for a year. Quitting there, he came to the old Chesapeake, Ohio & South Western, now the Illinois Central,

Joe F. Randall

January 1, 1883, and remained in the service continuously as engineer, a period of forty years, until the time of his retirement. His last thirty-eight years have been spent in passenger service, handling fast and local passenger trains on the Fulton district of the Tennessee division.

Mr. Randall ended his forty years of service with a clear record and the best wishes of officers and employees.

Pays Tribute to Wife's Help

Mr. Randall married Miss Fannie R. Goodes of Fort Wayne, Ind., February 25, 1879. Two sons were born to them, Charles B. and Guy G. Randall, both of whom are doing well and have families of their own. Mr. Randall also has a great-grandson, the son of his grandson, Clyde B. Randall. It is hoped that Mr. and Mrs. Randall will remain in good health and be spared to one another for many years. Mrs. Randall has been a helpmate in every sense, doing everything possible to assist in making the home life pleasant and happy, thus relieving Mr. Randall's mind of home worries and leaving his attention wholly upon his duties as an engineer. In this manner she assisted him to a great extent in making his

success in life. There is much more credit to be given their wives than most men are willing to admit, Mr. Randall says.

Mr. Randall is and has been from the time of his promotion to engineer a member of the Brotherhood of Locomotive Engineers. He has filled all the offices of his division and has represented it in the grand division as local chairman and on the legislative board for a number of years.

Mr. Randall is well up in Masonry, being a member of Blue Lodge No. 449, Royal Arch Chapter No. 30, Commandery No. 11 of Paducah and a member of Kosair Temple, A. A. O. N. M. S., of Louisville, Ky. He has always taken a great interest in the upbuilding of the city where he lives and helped to organize a Building & Loan Association, of which he was a director. Through this association many of his associates and fellow employes have been enabled to build their own homes. He himself built his home in this way. He believes it is better to build a home in this way and after a few years, instead of having a bundle of rent receipts, have a warranty deed and a home without incumbrance.

A Good Citizen of His Community

Mr. Randall also assisted in raising \$140,000 to encourage new enterprises to come to the city in which he lives. He materially assisted in securing funds to build a \$75,000 Methodist church. Another monument to his city is the Illinois Central shops. Mr. Randall assisted in carrying the

election which carried the bond issue of \$90,000 to assure the building of these shops.

Politically, Mr. Randall is a Democrat. He has served as election commissioner and as president of the State Political League, during which time he refused a nomination for representative in the legislature.

Mr. Randall is very proud that he is being retired with a clear record. He has also expressed his appreciation to the general superintendent and division superintendent for the pension he will receive, this being wholly optional with the management of the Illinois Central and a great inducement for employes to render good and faithful service.

Mr. Randall prizes highly the letters of congratulation he has recently received, among them the following testimonial from J. W. McNamara, one of his old firemen, now in passenger service on the Fulton district:

"Allow me to congratulate you in your success as an engineer and a brotherhood man, as I can speak, since the infancy of my railroading was under your tutelage. I am vain in saying that my success as an engineer now, whatever it may be, is largely contributed to that.

"I wish to extend my best wishes for a successful and happy future, as I am sure you will now appreciate the past. I hope you may live many years to enjoy the record you have made and that you may rest easy for the balance of your life."

Gideon Bibles Are Placed on Our Trains

Gideon Bibles were placed on our library and club cars December 30. The Gideons have placed Bibles in nearly every hotel room in the United States, but this is the first time that railway trains have been so favored. Eighteen leather-bound copies were sent to President Markham for use on our trains.

The suggestion of placing the Bible on the Illinois Central trains was made last June by Fred Sullens, editor of the Jackson (Miss.) *Daily News*. E. C. Robin, field secretary of the Gideons, was placing new Bibles in hotels at Jackson when Mr. Sullens proposed putting them on the trains, and Mr. Robin wrote to President Markham about it on June 17.

Mr. Markham's favorable reply to Mr. Robin was published in the *Daily News*, and a few days later Mr. Markham received the following letter from John P. Bennett, cashier of the Citizens Bank & Trust Company of Yazoo City, Miss.:

"I have always thought the Illinois Cen-

tral was a very progressive railroad and up-to-date in every line of business.

"I note from the Jackson *Daily News* of July 12 that you have given permission for the Gideons to place a copy of the Bible on each of your eighteen library cars. This, in my humble opinion, is very commendable in you, and only goes to show that the Illinois Central is always ready to co-operate in any movement that has to do with the improving of the moral condition of the American people. This act bears me out in my statement."

Mr. Markham requested that the Bibles be supplied in leather binding, so that they would be in keeping with the periodicals already on the cars.

- One of the easiest ways of "hitting the toboggan" is to get jealous of a co-worker or neighbor. If you think you are a better man than he, go out and prove it.—DAVID POWELL.

Editorial

OBSERVING THE RULES

An editorial in the *Memphis Commercial Appeal* of December 26 compares the conduct of a crowd of happy youngsters at play with the conduct of grown-ups in the activities of life. The editorial goes on to say:

"One of the youngsters was a traffic officer. He had a miniature revolving sign, on which were painted the words 'Stop' and 'Go.' His companions were traveling on velocipedes, in toy wagons and on foot. The traffic officer was master of the situation. He blew his whistle and turned his sign, and every order was obeyed. Each youngster realized that there was a time to 'Go' and a time to 'Stop.'"

The thought suggested by the editorial is what a fine thing it would be if grown-ups would conduct themselves as did these little boys at play, not only as pertains to traffic, but in all other activities of life. The editorial says: "It's a wise man who knows when to 'Go' and when to 'Stop.' If we all knew when to 'Go' and when to 'Stop,' there would be less friction in our minds, in our hearts and in social and business life."

There is another thought suggested by this excellent editorial, which has an important bearing on the activities of grown-ups—the conduct of motorists who are about to cross a railway track. The penalty for disobedience of the habit to "Stop, Look and Listen" is oftentimes severe. Those who operate motor vehicles are familiar with the duty and practice of stopping at boulevards. They do so without complaint. If this duty is for their good, and there is no doubt about it, what reasonable argument can be advanced that they should not be required to stop at all railway grade crossings? A railway track is far more dangerous to cross than a boulevard. Those who operate public utility vehicles are required by law in some states to stop before crossing all railway tracks. Why not extend this duty to the drivers of all classes of vehicles? This is the only practical solution of the railway grade crossing problem.

It is very true that there is a time to "Go" and a time to "Stop." Applying this to the conduct of motorists, the time to "Stop" is before crossing a railway track, unless one has become reconciled to the fact

that it is his or her time to "Go"—perhaps to Eternity.

ANSWERING SHIPSTEAD

For many years the country has been suffering the deleterious effect of a railway condition created and maintained by misguided politicians. Secretary Hoover estimates that the losses to the country as a result of transportation shortages are greater than the cost of our government. Those losses must be charged up to politics—not politics in the larger meaning of the word, as defined by the phrase, "the science of government," but politics in the sense of popularity-chasing tactics as resorted to by seekers after political offices.

The path that leads to the politicians' door is clear. Transportation shortages in the last few years have been due to inadequate railway facilities. The inadequacy of railway facilities resulted from an unconstructive public policy with respect to rates that made investors tighten their purse-strings and turn their backs when the railroads came to them seeking money with which to enlarge, improve and extend their facilities. This unwise rate policy was a political creation, supported by the spread of misinformation about the railroads.

Our costly experience ought to constitute evidence of the need for constructive treatment of railway questions.

However, there is an indication that the railroads during the next several months are going to be in for another siege of political misrepresentation. As a result of the recent elections, a number of prominent politicians who are openly hostile to the railroads have come into the Congress. A so-called radical bloc has been formed at Washington, and its legislative program contemplates the repeal of the two most constructive features of the Transportation Act. The desire for a change in the Transportation Act in these two respects is based upon a misunderstanding of the true facts of the railway situation, and the men who are lined up behind the so-called radical program are themselves largely responsible for the misunderstanding that exists in the public mind.

In view of the threatening aspect of the situation, unusual importance attaches to an open letter which President S. M. Felton of the Chicago Great Western, who is

chairman of the western railway presidents' committee on public relations, has addressed to Senator-elect Henrik Shipstead of Minnesota, severely criticising the senator-elect for misrepresenting railway subjects in a public address. Mr. Felton's letter will be taken as indicating that the railroads are prepared to meet the expected campaign of misrepresentation in a frank, open manner. If this proves true, the railroads will be strengthened by those who would destroy them, for the railroads need the constructive thought that a public discussion of the facts will develop.

Senator-elect Shipstead was quoted by the newspapers as making the following statements in an address before the City Club of Washington, D. C., December 5:

"Farmers ship sheep to market and then gets bills for the balance of freight charges due. What they get for the sheep will not even cover the cost of shipping.

"A railroad train operated by five men can now carry ten times as big a load as could be carried twenty years ago, yet, in spite of the great labor cost reduction per ton mile, it costs the farmer more to ship and labor does not get enough to keep it from striking."

The senator-elect's statements about the railroads were answered in the following manner, according to the subjects outlined above:

On the day the speech was made, sheep sold in the South St. Paul market for 6½ cents a pound and in the Chicago market for 5½ cents a pound. The carload freight charge on sheep from three representative points in Minnesota to South St. Paul and Chicago was from 2½ per cent to 10½ per cent of the actual selling price of the carload.

The average number of tons handled per train has increased in twenty years from 281 to 578 tons, or about double, instead of increased ten times. Instead of there having been "a great labor cost reduction per ton mile," the average total labor cost per ton mile has increased from 4.15 mills to 9.02 mills, or more than double, despite the increase in average train load. While the total labor cost of the railroads in twenty years has increased twice as much as the increase in freight handled, the average freight rate has increased only 47 per cent.

Railway employees will be particularly interested in the thorough manner in which Mr. Shipstead has been taken up on his own statements. The welfare of railway employees is not served by such misrepresentation.

Furthermore, the welfare of the public is not served by a misrepresentation of the facts. The railroads need constructive, fair,

sympathetic criticism—criticism based upon a knowledge of the subject. But they have had entirely too much of unconstructive, unfair, unsympathetic criticism—based upon ignorance of the subject. The public should be given the facts whenever a person of the standing of Senator-elect Shipstead attempts to misrepresent the railroads.

OUR VETERAN EMPLOYEES

When the *Illinois Central Magazine* carried in its January issue a story concerning the five employes longest in service on the New Orleans terminal, it brought to a close a series of stories begun sixteen months before. These articles took up in somewhat irregular order the seventeen operating divisions of the Illinois Central System and gave reminiscences and pictures of five of the oldest employes on each division.

Gathering these stories brought the magazine in touch with eighty-five representative old-timers. Now, eighty-five employes are not many on which to gauge the sentiment of 60,000, but these eighty-five were tried and tested—tried by the temptations of other occupations and tested in the long experience of years. Therefore their opinions of their work and of the Illinois Central System have had more than ordinary weight.

If any moral is to be drawn from these stories, it is that of loyalty and faith. Almost without exception these employes have volunteered their belief that railroad-ing is worth while and that the Illinois Central System is the best railroad on which to work. Now, something of that sort is to be expected when an employe is asked to give a public opinion of his work and of his employer, but when such information is volunteered (as it has been in so many of the cases) and with such evident sincerity as these men have shown, the sentiment must not be lightly discounted. Where there is so much smoke, there must be fire; and when these employes of mature judgment and ripe experience offer their well-considered opinion, the younger and less thoughtful employes may well pay heed.

Most of the employes interviewed have averaged more than forty years in the railroad's service. That means that most of them had been in the service close to twenty years before our pension department was installed. With less inducement than we have, they had already chosen railway careers.

Most of the veterans who were interviewed are still active in the service. It

is not for us to say that they have yet laid down the task of holding high the standard of the Illinois Central System. Yet, to paraphrase the words of Lincoln, with the example of our veterans in mind, it might be well for those of us younger in the service to dedicate ourselves to the proposition of carrying on the cause which they have thus far so nobly advanced.

SELF-FORGETTING

The average person is predisposed to the habit of self-pity. We actually like to feel aggrieved, to persuade ourselves that something beyond our own volition or direction is subjecting us to a species of persecution. There is always a pretext upon which to base this assumption, if one cares to look for it. A trifle like the baby fretting, or the kitchen range smoking, or hitting one's thumb with a hammer, or the postman being late, may serve as overwhelming evidence that fate is busy in an actual conspiracy to harass us.

It's so easy to place the responsibility on bad luck if one misses a train, or finds a queue ahead of one at a theater box office or bank-teller's window. Trifles have a way of magnifying themselves into regular thunderclouds of misfortune if one gives them the slightest chance.

And once we admit the belief that we are getting a raw deal—that something or somebody has deliberately set out to give us the worst of it—all the wonderful, beautiful and excellent things in the world fade away behind a pall of self-commiseration. The "me" becomes the only thing apparent. We feel sure that a cunningly malevolent, premeditated purpose is working overtime to make us miserable. When one becomes saturated with the idea that one is being made a martyr, self-pity reaches its finest flowering. There's a sort of morbid and gloomy enjoyment in imagining that one is absolutely caught in the rat-trap of malignant destiny.

The man who says, "I never had a chance—luck has always been against me," is really taking pride in being a failure. He hopes the real sublimity of his misfortune is apparent to everyone. He thinks he undoubtedly deserves a crown or a medal or something because he has a little more cause than anyone else ever had to be despairing.

That's what self-pity will do for any man, if he lets it have a chance. One can lose sight of everything that's worth while in life, if one allows self-pity to get in its diabolical work. Considering one's self discriminated against or neglected or misjudged or downtrodden is fatal.

It is also unsportsmanlike. If there should be such a thing as an evil spirit called Beelzebub, Satan, Old Nick or what not (*and there isn't*) I imagine even he would despise a poor loser. Those who spend all their waking hours thinking about how bereft of blessings they are and bewailing their own deplorable situations are poor losers.

Not many of us are worth more than a passing thought. Why think of ourselves? The overwhelming majority of us are here today and not only gone but forgotten, too, tomorrow. It's a case of not being able to see around the edges of our own ego.

The fellow who can see around the outer rim of his own ego gets glimpses of wonderful things. The universe is a mighty interesting place to scout around in, for a fact. It's full of people, places and possibilities—people doing every imaginable thing under the sun; places that are interesting for a thousand reasons and from a thousand viewpoints; and possibilities which make us dizzy to think about them. Think of the marvels of mechanical ingenuity that are yet to be invented; the wonders of natural and applied science yet to be discovered; the triumphs of the fine arts—music, painting, sculpture, literature.—yet to be achieved; the new fruits, flowers, animals yet to be bred, cross-bred and propagated; the new elemental forces of nature to be detected, isolated and harnessed; new qualities and capacities of the mind to be determined and classified—for, have you ever conceived that what we call intelligence, learning, the possible fund of knowledge, is limitless and illimitable? We are only limited by our ability to understand.

Well, then, let us forget Self for a little while each day as an experiment. Let's widen our outlook. Is there anybody in our little sphere of activities we might help out with a word or a smile, or an encouraging clap on the shoulder? Can we by dint of seeking add one atom to the known total of human learning or human well being or human achievement?

A nail well-driven, a nut on a bolt set snugly, even the most trivial and inconsequential act of life, done well, is a perfect achievement.

Think of the task and its accomplishment, not of him who does it. For, after all, the task itself is the thing—not the one who performs it.

A WORKABLE SUGGESTION

The following is an excerpt from resolutions adopted at the fourth annual conven-

tion of the American Farm Bureau Federation, in Chicago, December 11-14, 1922:

"We urge upon the railroads the establishment of a public relations service which shall interpret agricultural and business needs to the carriers and the carriers' needs to the public and instruct our transportation department to co-operate fully with the railroads in this work."

What better evidence could there be of the need for public relations work on the part of the railroads than that the leading farmers' organization of the country announces itself as standing willing to co-operate fully with the railroads in getting the facts about railway conditions and problems before the public, and especially before that large, representative class composed of farm operators? It should be noted, too, that the federation proposes that this suggested service (a liaison between the railroad and its patrons) shall be double-tracked, with a southbound main as well as a northbound main. The farmers' needs would thereby be interpreted to the railroads, and the railroads' needs would also be interpreted to the farmers.

It is our opinion that the railroads individually will do well to act favorably upon the farmers' suggestion. They have everything to gain. There should be the closest kind of co-operation between a railroad and its farmer patrons. The welfare of business is dependent upon the well-being of both agriculture and transportation. The farmer who raises a thousand bushels of wheat would be no better off than the one whose farm produces only cockleburrs, if he had no means of getting his wheat to market, and this essential carrier service is where the railroad comes in.

Down in Texas there is a move on foot to abandon an unprofitable railway line, and the farming population has fairly risen up in arms in an endeavor to keep the line running. It means to the farmers of that territory the difference between prosperity and failure. A small railroad that serves northern Arkansas discontinued its service last year, and the farmers living along the line lost no time in letting it be known that they wanted the service restored.

The railroads of the country are not headed for destruction, by any means, but from time to time there are moves on foot which threaten to impair their ability to give all the service that their patrons require. It is then that the help of the farmers is needed. They ought to be ever zealous of the welfare of the railroad that furnishes them with a vital service that they cannot get along without.

The public relations service which the

Farm Bureau Federation proposes should interpret to the farmers the needs of the railroads. It ought to tell them of the dangers that lurk in restrictive, oppressive legislation and regulation. With such a service functioning properly, there would be a cessation of the over-regulation that has restricted railway growth and development in the last fifteen years or so. And with the farmers actually asking for such a service, it is an opportunity that the railroads individually cannot afford to pass up.

THE REPARATIONS DIFFICULTY

We in America are at peace in mind as well as in fact because we have not the scars of war on our land to remind us of the recent conflict. In considering overseas events of the last few weeks, it is well to bear in mind that the scars of war on France and Belgium are not yet erased.

France points out that she was the chief sufferer from the war. The wreck included 94 per cent of her wool production, 90 per cent of her steel production, 70 per cent of her sugar production, 55 per cent of her electric energy, 33 per cent of her coal production, 250 miles of railroad; there were four thousand villages, twenty thousand factories, five hundred thousand homes destroyed; nearly 13,000 square miles of territory were rendered unfit for habitation or cultivation.

Little damage was done in enemy territory.

In reconstruction France has done much since the armistice four years ago. She has replaced about 500,000 of the 750,000 buildings destroyed. She has re-established more than 7,000 of the 7,300 schools destroyed or stopped, although only about 3 per cent of the school buildings are permanently reconstructed. In many ways France has made progress toward reclamation.

France complains that she has had to make most of this progress at her own expense. The damages in the devastated region have been estimated at 102,000,000,000 francs. Toward paying for this France already has had to contribute more than 44,000,000,000 francs, while Germany has paid France only 4,000,000,000 francs. That is one of the roots of the trouble, and another is that, on a comparable basis, it has been figured that the Germans are paying taxes at the rate of only \$8 per capita as compared with the \$36 per capita that the Frenchman has to bear.

If you are not glad to see the boss come around it's probably because you know you don't deserve promotion.—*The Watchman*.

PUBLIC OPINION

What the

World Thinks

FACTS FOR THE PUBLIC

President Markham's New Year review of the activities of the Illinois Central System during the last twelvemonth is a record of substantial service and achievement. Notwithstanding that a business depression marked the beginning of 1922, and the middle of it was marked by unpleasant labor difficulties, the tonnage increase aggregated more than 21 per cent of the year preceding. The great increase came in the last six months of 1922. In the first six months of the year, up to July 1, according to the report, the Illinois Central handled an average of 1,169,065,500 ton miles of freight per month. In July it handled 1,311,564,000 ton miles; in August, 1,649,538,000 ton miles; in September, 1,690,066,000 ton miles; in October, 1,759,576,000 ton miles, and in November, 1,703,662,000 ton miles. The October business was the greatest in any month in the history of the system.

President Markham's statement is most hopeful and encouraging. And while he specifies the various handicappings which the system has been forced to undergo, he outlines some of the substantial developments that have been made during the year. New equipment costing approximately \$18,000,000 has been contracted for. Including additional amounts appropriated for other improvements, such as reduction of grades and construction of new main line and yard tracks, expenditures already made or provided for will aggregate \$25,500,000.

Studied on the whole, the record shown by President Markham is one of soundness and stability. But one sentence of that report should be read and pondered seriously, and particularly by those most concerned. It is peculiarly apropos at this time of rumors that there must inevitably be a national political movement launched against the railroads during the coming year. Mr. Markham thus approaches the subject:

"Some of the prominent antagonists of the railroads are expected to make efforts during this year that will, if successful, place further restrictions upon the railroads, making it still more difficult for them to take the steps necessary to forestall further transportation shortages. Farmers, business men, wage earners, and all other

classes of our population should be active in opposing these efforts, because their interests in the stake of adequate railway transportation are just as great as, and in some instances greater than, those of railway men themselves."

Another fear is that the so-called progressive elements may force through a measure to repeal the Esch-Cummins law calculated to give aid to the railroads in rehabilitating their systems and thereby furnishing adequate transportation to the nation.

It would be well, with this fight looming ahead, for Americans to remember the warning of Herbert Hoover against railway-baiting and corporation-busting such as formerly gave great comfort to demagogues and lopsided citizens. For while both railroads and industrial corporations have not always been angels of goodness, and while they need to be regulated intelligently lest they become mischievous and dangerous, it would indeed be national folly to withdraw the protection afforded by the Esch-Cummins bill at a time when the first real going strength on the part of the railroads is being manifested. Without such guarantees the Illinois Central would not have been able to spend \$25,000,000, nor the Louisville & Nashville Railroad more than \$20,000,000, on getting themselves in condition to serve this country and in giving employment to thousands of artisans and laborers.

Such statements as these great railway heads are making are by no means simply advertising propaganda. They are indubitably facts which every thoughtful American should know concerning the transportation problems facing the country.—Birmingham (Ala.) *News*.

IMPORTANCE OF THE INVESTOR

We have had much talk in recent years about the interests of the shipper and the traveler and the rights of the workers who are employed by the railroads. It is time, as President Markham of the Illinois Central told a Louisville audience recently, to think about the railway investor.

It is a queer thing how otherwise intelligent men will brush the investor aside as an inconsiderable factor in the railway problem. If thought is given him at all, it is too frequently only to denounce him

as a species of parasite, seeking big profits and serving no purpose of utility.

A very little reflection on the part of any honest mind would satisfy it that this is a wholly irrational and unjust attitude. If it were not for those who have been willing to invest their savings in the transportation systems of the country, there would be no railroads today. Only as that willingness is maintained can the existing systems hope to extend and improve service to meet the developing needs of an ever-increasing population.

In other words, eliminate the investor, eliminate the continuing supply of investors, and you will have no interests of the shipper and traveling public to discuss, no rights of railway workers to engage the attention of labor boards. That may be one way of getting rid of problems, but it is a way comparable only to that taken by the embarrassed individual who puts a gun to his own head and pulls the trigger.

As President Markham wisely said to the Kentucky manufacturers, the railway business "is not a business in the ordinary sense of the term. It is a service—a vitally necessary service—that must be maintained at all costs. It cannot shut down in slack times or expand rapidly and boost its prices in times of prosperity."

Service is the essential thing. Other matters and problems are secondary, and their importance is relative to their bearing upon the maintenance of efficient service. This is true of agitation for bigger wages for workers, or lower rates for shippers, or increased returns for stockholders. Each of these demands merits fair consideration and just treatment, but all must be considered in their effect upon the main object of the railroads—the giving of adequate service.

Mr. Markham is authority for the estimate that every shortage in railway transportation, such as the country is now going through, costs the public a billion dollars.

Now the shortage is not due to lack of shipments, whatever complaint may be made about rates. Nor is it due, at the present moment, to lack of workers, however loud the outcry on the score of wages. The recent strike hurt; the railroads suffered; but the fact is to be noted that the issue most obstinately fought for by the workers was the right to get back the jobs they had abandoned. They wanted higher wages, but, higher or not, they wanted their jobs.

If shippers could find cheaper and better means of transportation they would not hesitate to use it. If workers could get more remunerative jobs, they would have

no compunction about taking them. And none could blame them.

Investors, however, for a considerable time now have been able easily to discover more attractive opportunities for their money than the railroads offer, and they have been doing just what shippers and workers would do—going where they can get bigger values with at least equal security. And you cannot blame them.

But that is the cause of your shortage. That is why the railroads are unable to give the service a returning prosperity demands. Nor can they make the needed extensions and improvements, the needed increase in locomotive and carrying stock, until they are able to tempt the investors back by the assurance of their earnings. Plainly put, the often despised investor is the key to the situation. You may have an antipathy to him, but you cannot get along without him.

There are two widespread misconceptions which Mr. Markham countered in his address. They have been sedulously cultivated, and their presence in the minds of many people is the occasion for much wrong-headed thinking on the railway problem.

First is the frequently reiterated assertion that the railroads are trying to collect on watered stock, on non-existent values. To this Mr. Markham answers that the machinery set up by the Interstate Commerce Commission for the purpose of getting a value upon the railroads, after years of work, and after eliminating from consideration stocks, bonds, earning capacity and good will, reached in 1920 the tentative estimate, for rate-making purposes, of a total valuation of \$18,900,000,000, or nearly \$2,000,000,000 more than the aggregate net capitalization of all the railroads outstanding in the hands of the public at the close of 1919.

The second misconception is that the government, through the transportation act, guaranteed the railroads earnings of 6 per cent. This is a ludicrously distorted version of what the act provides. The government did little more than guarantee the right of the roads to earn as much as 6 per cent, with instructions to the Interstate Commerce Commission to attempt to fix rates which would make this possible. But the effort of the commission to meet these instructions failed. As a matter of fact, the railroads have earned, in two years of operation under the act, little better than half of 6 per cent.

As we have said, it is time to consider the investor. The public must be educated to an understanding of his importance in the development of transportation service.

He must be coaxed back to the railroads—not for his sake, but for the sake of the 115,000,000 people whose prosperity depends upon the efficient functioning of transportation.—Louisville (Ky.) *Herald*.

WILD STATEMENTS

According to a leading railway executive, no fewer than 135 bills have been introduced in Congress by members who would like to enact new transportation legislation or amend the present transportation laws. One wonders how many of these bills are based on knowledge of the facts bearing on railway service or railway finance.

The first and obvious condition of intelligent railway legislation is knowledge of existing conditions. S. M. Felton, as chairman of the western railway presidents' committee on public relations, has just refuted assertions made recently by Senator-elect Shipstead of Minnesota, a leading figure in the farmer-labor movement. Mr. Shipstead may or may not favor government ownership and operation of railroads, though his supporters advocate the Plumb plan, so called. Still, his theories should have some relation to facts.

Mr. Shipstead categorically asserted, for instance, that labor costs had been reduced in the sphere of transportation in the last twenty years; that trains now carried ten times as much freight on the average as they did in 1901, and that prices paid farmers for sheep did not cover the freight charges. Mr. Felton gives facts and figures which disprove each of these statements.

Twice as much freight is now hauled by the average train, not ten times as much, as was hauled twenty years ago; labor costs have increased, not decreased; the freight rate on a carload of sheep ranges from 2 to 8 per cent of the selling price at central markets like St. Paul and Chicago, and at no time has it absorbed the entire selling price.

Would-be reformers of railway conditions should begin by making sure of their facts.—Chicago (Ill.) *Daily News*.

A STRANGE ATTITUDE

Of all the public service corporations, the railroads are perhaps most useful to all of us. I believe they are fairest to the public, and pay their men the highest average wages. They charge lower rates than similar corporations in other countries, and give better service. Yet every man's hand seems to be against them.

I know a man who was a failure at everything he undertook until he entered the railway service. There he had light work, short hours, high pay, and prospered as

never before. When he was ill, the company took care of him, and favored him in many other ways. He went on strike last summer without good excuse, and lately I saw him working at a hard, temporary job at one-third the pay received from the railway company. He confessed to me that he had voted for the strike, and that his home, which he had been able to buy while in railway employ, was for sale at a sacrifice, to pay his living expenses. It is a curious, dangerous situation. This man is really a good fellow, but he has tremendous enmity toward the company that helped him more than he was ever helped by any other agency. He has a wife, children, yet he hates the best friend he ever had with a viciousness I am unable to understand. If he could, he would blow it off the earth, and burn and shoot.

And remember this man is a good fellow; pretty fair type of American. I have heard him talk about his wrongs in a manner that would disgrace a lunatic. He is safe and sane among his neighbors, but with his employer he has neither honor, truthfulness, intelligence or gratitude.

And we are all, alas, more or less like him.—E. W. Howe's *Monthly* (Atchison, Kan.).

THE WHY OF 6 PER CENT

"I cannot see," writes Dr. David Starr Jordan, discussing the industrial situation, "why railway stockholders are entitled to 6 per cent dividends when agriculture, the basis of prosperity, pays no dividends."

Doctor Jordan is right. The railway stockholders have no divine right to any particular interest rate. They take what they can get. Sometimes, as was recently impressively illustrated in the case of the Alton, they don't get anything.

But a practical consideration enters in. If people do not expect a fair return on their investment, they won't lend their money. Railroads are constantly needing more money for improvements and extensions. The only way for them to get it is to pay returns approximating those paid by other similar investments.

If a 5 per cent dividend rate in the long run will attract enough money for investment in railroads, the railroads probably will get along with that. If 6 per cent is necessary, they will have to be permitted to earn 6 per cent, or the transportation industry will stagnate.

It isn't a matter of what the stockholders are "entitled" to. It is a matter of what rate will produce the results the nation demands.—Kansas City (Mo.) *Star*.

Waste of Life and Limb

Under this caption the following editorial was published in the December, 1922, issue of The Railroad Trainman, official publication of the Brotherhood of Railroad Trainmen.

A study of the assessment notices in the past few issues of this publication will convince the reader that there is too much unnecessary loss of life and limb.

The first time one of our folks gets the notion that he has too many arms and legs, let him take the matter up with one of his friends who hasn't enough to go 'round and get some expert advice on the subject, for, believe it or not, a leg or an arm once lost is never regained; and, while hopping through the world on one leg or trying to cut bully beef with one arm may be an accomplishment, there are things more devoutly to be wished. It is bad enough when a limb has to be sacrificed, but when it is deliberately thrown away, that is another matter altogether; and, as the consequences do not stop with the owner of the lost limb, it is only fair and reasonable that those who have to share the burden of the loss be given some consideration, even if the party of the first part gives himself none at all.

Ask any one of the afflicted what he thought about when he was caught. He'll tell you right off the bat. It will be: "How am I going to make a living for my wife and the kids?" There are bitter moments right then, but they won't bring back the crushed and bleeding limb; the time for regrets has passed, and the day of atonement brings nothing more comforting than, "It might have been saved if I had taken time instead of my feet to make that coupling," which lament doesn't mean much.

If a man will not think for his own safety, then he should be made to remember those dependent upon him. "Made to think" is said advisedly, for when a man becomes so callous to his own welfare that he will jeopardize that of his fellow workmen (and every accident does that more or less) he should not be allowed to work with men who do not believe they have more arms, legs or lives than they need. Don't take a chance of any kind; snow and ice make service conditions worse than usual. Therefore, be extra careful; and even if you delay an operation it will not use up one-tenth as much time as it will to gather you up from under the cars or carry you to a hospital, and in addition you will have your life, legs and arms.

"Safety First," Old-Timer—also Young-Timer.

The Home Division

Edited by

Nan Carter

TURNING THE HOUR GLASS

By C. J. WALKER,

Supervising Agent, Indiana Division

On the first day of the year I always say "Happy New Year" to all my friends. Everybody does, but today I said, "Happy New Year, Billy," and then I chuckled at the humor of it. But almost as soon as the smile came over me, I grew sober, smilingly sober, as a man will at times when he looks back over the twenty or thirty or forty years that belong to him. It's always Happy New Year each January 1, and then one forgets, until something happens to halt for the moment one's future thinking and captures one's memory.

Two weeks ago Billy, my rising young nephew, took dinner with me at a little south-down hotel. While I ate (I like good fried chicken) we thought profoundly on profound things. Billy talked of love—talked vehemently and with the valor and logic of a Caesar contemplating a Rubicon.

"I want her," he said hotly, unaware of the fried chicken. "She wrote me that Jerry wouldn't take 'No' for an answer—"

"Now keep your coat on," said I. "Aren't you going to Johns Hopkins next fall?"

Ambition I considered the most efficacious of opening wedges. Billy is 25, has been out of the University of Illinois two years, and up to this night he had been an example of a manly seeker after success.

"—and Jerry, the old money-bags, doesn't love her, nor she him," continued Billy with fine continuity of thought and utter disregard of me. I perceived I had waved my red cloak at a blind bull.

"It's all a confounded jumble," continued Billy. "She thinks it's Fate. But I don't believe in Fate—that is, sometimes." This isn't Billy's first heart affair.

Billy, I have said, is no fool, and when he admitted as much about fate, I judged his sight was not entirely eclipsed. Again I played my trump.

"But how about Johns Hopkins?" said I, seriously. (I love the boy.) "How about your medical career? It's only a single man who can follow a career. Take it from one who knows, lad, when a man and

a woman become one, it is usually a matter of the half becoming the whole. That fact is as old as history. Look at Macbeth or Rip Van Winkle or Charlie Chaplin!" But Billy knows his literature and values it—as literature. This was a case for brass tacks, and he proceeded to get down to them.

"Those examples of yours," he said, with a grin, "are of the stuff that dreams and the Chicago press are made on. Let's bury the past for the present. How about yourself? Even if your proofs did discover the fact, I dare say they were happy, nevertheless."

When Billy does say anything it means he is fully convinced. Well, my tinselled logic lost all its glamour before his questioning forefinger. I perceived the bull had regained his sight. I threw away my red cloak and climbed out the arena. When a young man begins to talk like that I figure that there is but one thing for him to do, and that is for him to go get himself his happiness. I hauled down my colors.

"I'm going to see her during the Christmas holidays," concluded Billy, firmly, "and if all goes well, I'll wire you."

Today I received a telegram from Billy. "Happy is the word," it read in French. "I will return Monday noon."

Monday is today, and so it was today I said, "Happy New Year, Billy," and chuckled at the humor of it, and afterward grew sober, as a man will when he is reminded of the twenty or thirty or forty happy years that belong to him. We are all Billys under the skin.

Tested Recipes

CRACKER CAKE.—4 eggs, 1 cup cracker crumbs, 1 cup sugar, 1 cup walnuts, 1 cup raisins, 1 teaspoon baking powder. Mix well and place in buttered pan. Bake forty minutes.—MISS ANNE ROSE SWEENEY, *Kentucky division editor*.

APPLE FRITTERS.—Wash, core and slice two large apples. Dip each piece into a batter made of 2 cups of sifted flour, 4 teaspoonfuls baking powder, 4 level tablespoonfuls sugar, 1 teaspoonful cinnamon, ½ teaspoonful salt, 2 eggs, 1 cup of sweet milk. Fry in hot lard until brown on both sides. Sprinkle with sugar. In preparing batter, sift the dry ingredients and

gradually add the beaten eggs and milk.—MISS FRANCES P. OTKEN, *secretary to chief clerk, superintendent's office, McComb, Miss.*

DATE PUDDING.—1 cup sugar, 2 eggs, well beaten, 1½ rounded tablespoons flour, 2 tablespoons milk, 1 teaspoon baking powder, 1 pound dates (cut up), 1 cup nut meats. Bake in oven in double boiler or well buttered pudding pan in water for one hour. Serve with whipped cream.—MISS CORA BURCH, *clerk, superintendent's office, Mattoon, Ill.*

COLONIAL FRUIT CAKE.—1 lb. butter, 1 lb. sugar (brown preferred), 10 eggs, 1 lb. dates, 1 lb. figs, ¼ lb. glace cherries, 2 lbs. raisins, 1 lb. citron, ¼ lb. each lemon and orange peel, candied, ½ lb. shelled and blanched almonds, 1 cup hickory nuts, 1 cup walnuts, 1 cup black coffee, 1 cup Orleans molasses, 3 cups flour, 2 teaspoons baking powder, ½ teaspoon soda in warm molasses. Prepare fruit by cleaning and cutting into bits with knife or putting through food chopper; mix with the nuts and cover with one cup of the flour; cream the butter and sugar; add the liquid, which should be heated and mixed with the soda; add the two remaining cups of flour and then the eggs, which have been beaten separately. Pour into two large cake pans, with a double lining of greased paper, and bake 1½ hours in a slow oven. This cake is ruined if it is allowed to scorch the least bit so great care should be taken not to have the oven too hot. It is a good plan to put the cake into a cold oven, lighting the gas just before putting it in. (This amount will fill two cake pans three inches deep, size about 8 by 12.)—MRS. ZELLA MACNAIR ROSE, *clerk, superintendent's office, Mattoon, Ill.*

MARGARET'S DRESSING FOR SLAW.—Put ½ cup vinegar into a saucepan and place on fire; let come to a boil, then stir in 2 tablespoons melted butter, 2 tablespoons sugar, 2 eggs slightly beaten, pepper and salt to taste, ½ teaspoon mustard, and 2 tablespoons milk or cream. Cook until the mixture coats a spoon. When cold, pour over chopped cabbage.

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them. Address EDITOR, HOME DIVISION.

Little Martha Merle, daughter of Instrumentman Harvey Wright, Indiana division, had reached Florida after a long trip from Mattoon, Ill. A great portion of the ride was spent out on the observation platform. Martha Merle had not ridden in the obser-

vation car before, and she was all enthusiasm, exclaiming to her grandmother, who met her: "Grandma, we rode most all the way on the back porch of the train!"

Little Mary Jeannette Courtney, 6-year-old sister of Parker Courtney, clerk to the supervisor of bridges and buildings, Indiana division, was eating lunch with her brother one day recently, and her brother, feeling that her table manners could be improved upon, attempted to criticize her, saying: "Mary J., I didn't act like that when I was little."

Mary J. replied: "You waited till you growed up, didn't you, Parker?"

Steve Lynch, Jr., 2½ years old, making lots of noise. Grandmother knocks on wall. Grandfather inquires of Steve, "What is that?" Steve says, "I don't know, Granddaddy, you go and see while I get under the table"—and under the table Steve goes.—TOM TREANOR, *division editor, New Orleans division.*

OUR BABIES

No. 1 is Louis Eugene, 1 year old, son of Roundhouse Foreman L. Fideler, Fort Dodge, Iowa.

No. 2 shows Eva Mae, 9 years old; Annie Laura, 12; Mertice Elizabeth, 3, and Howard Green, 7, children of H. H. Howell, agent, Estill, Miss.

No. 3 is Oatis Allen, Jr., 2 years old, son of O. A. Groves, clerk in freight office, Clarksdale, Miss.

No. 4 is Douglas Bernhardt, 4½ years old, son of B. Berckes, claim department, local office, New Orleans, La.

No. 5 is Forrest Marion, son of M. S. Harrison, manager of news stand in Grand Central Station, Memphis. Mr. Harrison was formerly a dining car conductor.

No. 6 is Dane, 2 years 4 months old, son of C. D. Lovelace, car man, Fulton shops.

No. 7 is Lloyd, 3 years old, son of Brakeman O. C. Wilbur, Mattoon, Ill.

No. 8 is Lloyd B., Jr., 3½ years old, son of Lloyd B. Price, machinist, McComb, Miss.

No. 9 is Charles Albert, 2½ years old, son of R. A. Hale, brakeman, East St. Louis, Ill.

No. 10 is R. P., 4 years 9 months old, son of S. B. Swire, assistant chief clerk, Baton Rouge, La.

No. 11 is John Crawford, 2½ years old, son of W. J. Swisher, assistant engineer, bridge department, Chicago.

No. 12 is Kenneth, 5 months old, son of B. E. Breitke, clerk, office of engineer maintenance of way, Chicago.

No. 13 shows Leonard, 6 years old, and Harold, 7 years old, sons of Robert Oliver, car repairer, Indianapolis, Ind.

No. 14 is Bernard J., 4 years old, son of J. A. Rippberger, car foreman, Wallace Yard, Freeport, Ill.

No. 15 is Jean Loretta, 8 months old, daughter of Pullman Conductor and Mrs. J. H. Frink, 828 East 89th Street, Chicago, and granddaughter of Stewart Gilkinson, retired Illinois Central locomotive engineer. Mrs. Frink was Miss Janet Gilkinson and worked several years in the B. & B. department at Chicago.

leaving the service about two years ago when secretary to F. R. Judd, engineer of buildings. Mr. Gilkinson, who was retired April 8, 1916, after thirty years of service, is a native of Scotland and began railroading in 1872 with the Caledonian Railway at Glasgow. He came to the United States in 1881.

No. 16 shows Mackaleetus Jeneline, 8 months old, and Francis Boyd, 2 years old, daughter and son of J. Donahue, section foreman, Onawa, Iowa.

No. 17 is Evelyn, 1 year old, daughter of C. A. Randall, clerk, Birmingham, Ala.

No. 18 is Virginia Frances, 6 months old, daughter of F. M. Cook, valuation accountant, McComb, Miss.

No. 19 is Nellie Bell, 3¼ years old, daughter of Dispatcher W. O. Blair, Baton Rouge, La.

No. 20 is Anna Wilhelmina ("Billie"), 4 years 3 months old, seventh daughter of Car Foreman W. T. Clanton, Cairo, Ill.

No. 21 is Dolores, 5 years old, daughter of A. J. Shedelbower, stockkeeper, Indianapolis, Ind., storehouse.

No. 22 is Ethel Inez, 10 months old, daughter of E. S. Warren, operator, Nashua, Iowa.

No. 23 is Rosemary, 19 months old, daughter of Brakeman J. W. Wickham, Minnesota division.

No. 24 is Patricia, 14 months old, daughter of Fireman G. R. Burns, Wisconsin division.

No. 25 is Stella Elizabeth, 32 months old, daughter of Car Foreman M. Wilson, Paducah, Ky.

No. 26 shows James, 9 years old, and Margery, children of F. R. Williamson, fireman, Water Valley, Miss.

No. 27 shows Orville, 9 years old; Donald, 4, and Verona, 2, children of Car Foreman T. Demond, Cherokee, Iowa.

The Sweetest Thing on Earth

These are the sweetest things on earth;
A mother's kiss, a baby's mirth;
A daughter's love, a father's praise;
The song of birds of summer days;
The joyous laugh of a happy boy;
A maiden's happiness without alloy;
The light of love in lover's eyes;
Age that can be young as well as wise;
An honest hand, a loyal friend;
A heart that is kind unto the end;
Eyes that can smile though they may weep,
Faith as trusting as a child asleep;
A life with right in true accord;
A gift that looks for no reward;
A rose that hides not a thorn;
A soul devoid of greed or scorn;
Lips that can praise a rival's worth;
These are the sweetest things of earth.

—GERTRUDE M. BUSH.

Very Near an Adventure

Miss Myrtle Biersoll, superintendent's stenographer, New Orleans terminal, is an outdoor girl, and her diary contains many interesting items about various events encountered out of doors. From her diary we quote the following concerning an occurrence at Natalbany, La., January 7:

"I suddenly took a desire to remain at home with the kids while the rest of the family went to Hammond to meet No. 2. Started in telling funny stories to the children and solving puzzles left by St. Nick.

Miss Myrtle Biersoll

silence reigned until it poured—for two hours one of the boys and I sat with guns cocked.

"All at once a noise—my friends' return. Disappointment. Erroneous information given. The woman had taken the opposite direction."

Don'ts for Fat Women

(By a plump and pretty correspondent)

Don't wear tight clothes. Loose dresses with long, straight lines are very good.

Don't wear loud colors, checks or stripes. Narrow pin stripes running "up and down" are very effective, in dark materials.

Don't wear satin. The changing lights and reflections on satin tend to make you appear larger.

Don't wear a lot of ruffles and furbelows. Plain things are much more becoming to large women.

Don't be undignified. A small person can hop around and look perfectly all right, but a large person—well, imagine an elephant trying to perform the antics of a French poodle!

Don't bedeck yourself with a lot of jewels and hair ornaments.

Don't dress your hair elaborately. Study the arrangement that is most becoming and that makes your face look slender, and comb your hair that way.

There is a principle which is a bar against all information, which is proof against all argument, and which cannot fail to keep a man in everlasting ignorance. That principle is condemnation before investigation.—HERBERT SPENCER.

Maintenance
of Way
Department

Material Means Money

Save It

Rope

A little care means a safe rope; an unsafe rope, a lot of care.

—Poor Richard III.

During 1922 the Illinois Central purchased 55,244 pounds of rope at a cost of \$9,931.43. These figures cover the purchase of half-inch rope and larger only, and do not include bell cord and rope smaller than half-inch.

The total rope purchased, if braided into a half-inch line, would make a rope nearly fourteen miles long, yet there is probably no article carried in the outfit of a railroad construction or maintenance crew that suffers more neglect and abuse than rope. It is only fair to add that this condition is more often due to a lack of knowledge of rope than to willful neglect.

The average employe does not always realize how easily a rope may be damaged even by dragging it along the ground, as this not only causes wear on the rope but

also picks up sand and grit, which are embedded in the rope and which weaken it by cutting and wearing the fibers. It is, of course, difficult to avoid dragging rope on the ground occasionally, but it should be avoided as much as possible.

Internal wear of rope not only is caused by grit and sand but is often due to bending the rope over too small a pulley or over sharp corners with a heavy load. This causes the fibers to break up in the center and also has a tendency to break the fibers on the outer side of the rope, while a really sharp corner will also cut those on the inner side. Rope under heavy tension may be quickly damaged to the breaking point by abrasion either from rubbing against another rope or against a beam or timber.

Rope, like anything else, wears out; but rope does not give out all at once, and its usefulness and length of service can be extended by proper care, not only when it is in use but also when it is not in use or when stored away. If rope is left out at night, it should be covered as much as possible to protect it from the weather.

Rope should always be stored in a dry place and away from steam pipes or radiators. It should not be allowed to come in contact with acids and oils. Wet rope will rot if stored in a close unventilated storeroom. Therefore the best practice is to dry it thoroughly before storing.

Slings and small ropes should be hung up in a dry place, while large ropes should be coiled on planks or gratings raised slightly above the floor.

A CONSTRUCTIVE HABIT

I have for many years been pretty well convinced that saving money is largely a matter of habit, and people who make a good beginning at it presently discover that it is by no means impossible, and that it is altogether a good thing to do. Just at this juncture in the world's and our country's affairs it is certainly one of the most useful contributions that people could possibly make to putting the world right.—PRESIDENT HARDING.

Rope—and worth saving

For Buddy and Sis

Let's Name That Dog

DEAR BOYS AND GIRLS:

Of course we were all glad to welcome Buddy to our page last month, and we want him to stay with us. Somebody, perhaps St. Valentine, has sent Buddy a dog, and now Buddy is the happiest boy in the world. But he doesn't know what name to give to his 4-legged companion, and he has asked Aunt Nancie for assistance. I think it would be fine if our boys and girls would suggest a name. We will print a list of the names suggested and also the one selected. Buddy has promised to present the boy or girl suggesting the best name with an interesting book. Address your letters to me in care of the Magazine.

With love,
AUNT NANCIE.

Mississippi Towns

Here are twelve towns on our line in Mississippi. The correct answers will appear in the March issue. See how many you can guess correctly.

1. A tree or shrub in demand at Christmas and an elastic body used in mechanisms.
2. A liquid necessary to life and a depression.
3. Where the sun sets and something that a hunting dog does.
4. A president of the United States.
5. A natural stream of water and a refuge.
6. The seventh letter of the alphabet plus the aim of one who runs a race.
7. A southern flower.
8. To scorch and a human being.
9. To cast anchor and an important part of the body.

Mildred Robie, 5 years old, daughter of Section Foreman D. L. Sain, Obion, Tenn., and Sammie Vaughn, Jr., her playmate.

10. A famous queen of England.
11. The kind of stone that gathers no moss and something found on every dinner table.
12. A beautiful and sweet-smelling flower and a low place between hills.

St. Valentine's Day

I am just going to remind our boys and girls that on the 14th of this month we commemorate the memory of Father Valentine, an old priest who has lived in the hearts of the people for his kindness and

BUDDY—And Now We Have to Name Him

By INKID

good deeds since the year A. D. 270. The lessons of friendship, unselfishness, and loving good will which he taught by living precept have endeared him to all through the passing centuries. In his early life he visited the sick and the poor, leaving food on their doorsteps. When he became too old to go about he would write loving messages to his dear people. On February 14, 270, he was put to death, and on this anniversary each year we send loving messages to our friends and resolve to follow in his footsteps of charity and humility—URSULA M. MAHONEY, *Fort Dodge, Iowa.*

Answers to January Puzzle

Nuts to Crack: 1, Almond. 2, Butter-nut. 3, Walnut. 4, Cocoanut. 5, Hazelnut. 6, Chestnut. 7, Beechnut. 8, Brazilnut. 9, Pignut. 10, Hickory nut. 11, Peanut.

Wins Juvenile Automobile

The Trover Shoe Company of Mattoon, Ill., for the last several weeks has been giving numbered tickets with purchases of shoes, the one holding the lucky number to be given an up-to-date juvenile Packard automobile, which has been shown in the window of the shoe company and has been coveted by every youngster in Mattoon for many days. When No. 23 was called as the lucky number, Madonna Walters, 9-year-old daughter of Division Storekeeper A. E. Walters, Mattoon, became the proud

John Taylor Reynolds, grandson of J. V. Fitch, conductor on Indiana division, Mattoon, Ill., and his first birthday cake.

Eighty

Madonna Walters and her motor car

possessor of the little car, and herewith is shown Miss Madonna in her new Packard.

SOME DAY WE MAY—

Transmit unlimited power by radio much as speech is broadcasted today. Pick this energy up anywhere to do the world's work.

Utilize the tremendous energy of the sun in the arid regions to drive the wheels of industry in far-off lands.

Extract unbelievable amounts of energy from the radioactive substances of the earth—energy millions of times greater than our present comprehension.

Achieve the scientists' dream of "cold light" and make electric light or some form of it universal and electricity as cheap as water.

Develop new sources of fuel, such as monster, rapidly growing plants which store more energy in a few days than trees do now in seventy-five years. Use this to help replace our diminishing supplies of coal, oil and gas.

Supply energy through a national and international system of interconnected generating plants from power distribution lines similar to a network of railway tracks.—BREWSTER S. BEACH in an interview with DOCTOR STEINMETZ in *The Nation's Business*.

HARD WORKERS

So many men take pride in being called hard workers. I prefer to be called an easy worker. I know some hard workers who accomplish little, and I know some easy workers who accomplish much. Let us judge men by their accomplishments, not by the way they work.—Tom Drieve's *Anvil*.

Illinois Central Magazine

What Patrons Say of Our Service

Likes Our Card and Our Service

F. A. Anderson, manager of the Gloster Lumber Company, Gloster, Miss., recently wrote as follows to President C. H. Markham:

"We are in receipt of a little Christmas card which your railroad sent out this year.

"We wish to take this opportunity to thank you for this card and also thank you for the spirit in which it was sent.

"We are glad to state that we believe that we are on the best-managed and best-operated railroad in the United States, barring none. We believe that the employees are more considerate, careful and handle their business in a more courteous manner than on any railroad which we have ever used. During the past year of a great shortage of cars, we have been taken care of wonderfully, and we wish to take this opportunity to thank you for this great achievement and say that we think a great deal of it comes from your magnificent management and forethought."

How Success Is to Be Won

There are really three letters belonging in this set, the second and third being inspired by the one just below, recently written to Agent C. C. Kunz of Evansville, Ind., by W. P. Wood, secretary-treasurer of the Best Brick Company, Evansville:

"I am writing you merely to express my appreciation of the really remarkable service furnished by your rate clerk, Mr. Walling, on a long list of Illinois shipping points. The getting out of these rates necessitated several hours of night work on his part, and he was so cheerful and prompt in supplying this that it is a real pleasure for me to express to you, his superior officer, my appreciation of his services in this matter.

"At this same time I want to state my appreciation of the services throughout the year rendered us by Mr. Walling and also Mr. Ogle of your Main Street yard. Courtesy and efficiency are usually not an exception with the employees of the Illinois Central Railroad, but in our shipping relation we come in contact with these two young men a little oftener than anyone else, and the services they have rendered us have been good indeed."

Agent Kunz then wrote to Superintendent H. J. Roth at Mattoon, Ill., as follows:

"I am enclosing a copy of a letter from

Mr. W. P. Wood, secretary and treasurer of the Best Brick Company, this city, expressing his appreciation of service rendered by Rate Clerk Walling and Yard Clerk Ogle in the handling of their business.

"This letter, while mentioning but two members of the force, is merely a reflection of the splendid spirit of co-operation instilled in every clerk on the force.

"While 1922 has been a banner year with us at Evansville, we expect to increase our batting average for 1923 and are going into the opening month of the new year with a team of employees determined to win."

Mr. Roth replied to Mr. Kunz as follows:

"I was very glad to receive your letter inclosing one from the Best Brick Company, wherein they compliment Mr. Walling and also Mr. Ogle. I cannot help but notice where they say: 'No doubt Mr. Walling had to work nights on his own time to render some of the service that he did.'

"This reminds me of an article I have just noticed in a little magazine entitled *The Silent Partner*. The editor says:

"'Have you any record of a man who has made a success between the hours of 9 a. m. and 5 p. m.'"

"'Do you know of anyone who has even risen beyond a small salary who has only given office hours to work?'"

"I believe these boys are on the right track."

Our On-Time Service Appreciated

The following report is from Mack Mahoney, conductor on the Yazoo & Mississippi Valley Railroad of the Illinois Central System.

It happened that I was a passenger not long since on a train of one of our neighboring railroads, and the early morning hours found me with several other passengers in the smoker of the Pullman car. Our train was something like an hour and a half late, and, as we were nearing a prominent railway center, it became clear that several of our fellow passengers were going to miss connections and would be doomed to lie over for several hours or perhaps most of the day.

An atmosphere of discontent and disappointment was evident everywhere, and finally one of our traveling companions broke forth with: "Well, it serves me

right. I should have taken the Illinois Central, though it would have been a circuitous route to my destination. Still, I would have known when I was going to reach there—and now?”

Another gentleman joined in saying that he always took the Illinois Central when that road took him anywhere near to his destination, as he found the service so dependable. Thanking the gentlemen for their complimentary remarks about the road I have the pleasure to be serving, I presented all with our Christmas greeting cards, and from them received hearty congratulations for being with a road so well and favorably known for its efficiency, courtesy and service.

So, unquestionably the public is fully aware and is giving us much credit for the high standard we have attained.

We partners (“money and men,” as our good president, Mr. Markham, has rightly named us) believe we are fully entitled to the good things that are being said about us, for have we not the best managed railroad in the country, are not our officials the fairest in their dealings toward the men, and where will one go to find a more loyal class of employes than on the Illinois Central and Yazoo & Mississippi Valley railroads? Our combination consisting of such partners, with our motto, “Faith and keep together,” there can be no other verdict broadcasted than the one herein mentioned—the Illinois Central System for service, efficiency and courtesy.

Likes the Illinois Central Spirit

Paul M. Willhoite of Wall Lake, Iowa, started the new year well by writing to President C. H. Markham on January 5 as follows:

“I have read your statements which appear in the various papers in this territory from time to time and am taking advantage of the invitation with which you conclude each article to wedge in. It has been not only my privilege but my good fortune to have lived near an Illinois Central line practically all my life, and there are many things that are distinctive Illinois Central traits that appeal to me.

“I became quite well acquainted with the engineers who made the survey and built the Fort Dodge and Omaha line. I have been a patron of the line since its completion and am not looking for a chance to criticize or kick. On the other hand, I feel that I have been fortunate to have had such a system, with its splendid facilities, to handle my shipments.

“My business, being that of a cattle

feeder, has brought me in contact with various branches of your system, agents, brakemen, conductors, yardmasters, switchmen, claim agents, car distributors, etc., and I am frank to say that I have received courteous and efficient service. During the strike the past summer I rode one of your freight trains into Council Bluffs with a string of cattle. It was a very stormy night—raining continuously. When we arrived in the yards, the conductor, Mr. Schaffer, gave me an umbrella and told me to go with him, as there were guards who might cause me more or less delay. It was also dangerous on account of the trackage and traffic. When we finally reached the depot, pretty well drenched, I asked him why it was that one heard so little complaint and kicking among Illinois Central men, and his answer came immediately: ‘We are one big family, and most of us are trying to make that family the best there is.’

“I appreciate the things these men do for my safety and comfort and am glad that I am privileged to be served by a system which serves so well.”

A New Pleasure to an Old Friend

H. B. Ely, of “The Matthews,” Sanibel, Fla. (office, 108 North State Street, Chicago), recently wrote as follows to President C. H. Markham:

“I have been a loyal friend of the Illinois Central for many years, going over its lines on business and pleasure so frequently in years gone by that I once told the late Mr. Harahan: ‘I could place the board for best kept division or section.’

“We came south for the winter on the new No. 41 that left Chicago Saturday, December 16, and I particularly want to compliment the road for the service on this new train, the Floridan. And especially do I wish to call your attention to the exceptionally good work for the company in the manner in which the dining car conductor drew attention to the superior service in that direction, by his courtesy and general ability to satisfy and please the passengers.”

Courtesy in Freight Relations

The employes of the Illinois Central at Waterloo, Iowa, were very kindly remembered at Christmas time by the Waterloo patrons of the Illinois Central, both in “eatable” and “smokable” treats and in expressions of appreciation for services rendered by the local organization. The following letter was received by the freight office employes from the Smith, Lichty & Hillman Company, wholesale grocers:

“We are taking this opportunity at this

happy Christmas time of remembering you in a humble way for the many services which you have rendered us during the past year.

"We want to assure you of the pleasure that it has afforded us during the year to know that you were striving to do your duty by your company as well as its patrons.

"We wish to bespeak for you a very Merry Christmas and a Happy New Year, and hope that the very friendly relations that have existed between you and us will continue unbroken."

Pleased With Service and Civility

President C. H. Markham recently received the following letter from James U. Sammis, Jr., Box 1777, El Dorado, Ark.:

"I have had the pleasure of being a passenger, as far as Memphis, Tenn., on your train that left Chicago at 6:15 p. m., January 11.

"Allow me to express my appreciation for the excellent service rendered.

"Everyone connected with your organization, from the city ticket office down to the dining car waiters, seemed to have but one thought and that was to *please* and be *civil*. Despite the fact that the train was a heavy one and that two engines were used, the starting and stopping were devoid of the usual bumping and jerking that is so evident on most roads.

"I will look forward with keen delight to the time when I can again avail myself of the use of the Illinois Central."

Appreciated Courtesy of Waiter

Mrs. A. W. Wagner of 615 West Prairie Avenue, Decatur, Ill., wrote as follows to President C. H. Markham after noting the service of Waiter George Duckett on our Daylight Special en route from St. Louis to Chicago December 16:

"If your roadbed were a little better, it would not be so difficult for me to write (nor for you to read) of the courteous treatment we have received today from waiter No. 2 on your diner. It is very evident that 'Courtesy First' is his motto. Any time I have a choice of roads to a destination, I shall choose the Illinois Central because of the politeness of its employees.

"I thank you."

Liked Our Christmas Cards

Superintendent C. W. Shaw of the Springfield division wrote to the magazine December 26 as follows:

"I am attaching herewith one of our Christmas cards. Your attention is directed

to what appears on the reverse side, reading: 'We gratefully return the good wishes on the reverse side of this card, and wish to compliment you and the Illinois Central Railroad Company for the arrangements made to accommodate the traveling public, at this congested traffic time of year, this being the only train on our entire trip where the patrons were properly taken care of, especially for enough room and proper heating and ventilation and the courteous and efficient treatment of the crew. (Signed) Mr. and Mrs. C. E. Henderson, Peoria, Ill.'

"Mr. and Mrs. Henderson were en route from Decatur to Pana on December 24, using train No. 123, Conductor Stewart. They were handed one of our little Christmas cards, and it was given back to Conductor Stewart as they were leaving the train at Pana.

"In this connection, I might add that we have received numerous favorable comments on the attitude of our management in rendering the season's greetings in the manner it did."

Christmas Greeting Found Favor

The following letter was recently received from Martin L. Pieper, chairman of the traffic commissioners of Springfield, Ill., addressed to Supervising Agent Fred W. Platé of the Springfield division:

"On turning to the editorial page of the *Illinois State Journal* on the morning of December 30, my eyes fell on the lines: 'Doing Small Things Well; I. C. Christmas Card an Illustration.'

"At the time I had not seen the card in question, but it came into my possession a few days later, and I fully agree with the writer that it deserves particular mention. He calls attention to the efforts of the Illinois Central System to establish friendship between itself and its patrons and to bring this about by means of attention to 'small things' (which are, after all, the things that count). He also mentions the 'good taste' of the greeting. All patrons, present and future, will agree that taste, like service, is a by-word of the Illinois Central System and is carried out to the letter.

"The simple, heart-to-heart greeting of Mr. Markham, president of the Illinois Central System, surely 'touched the spot.'"

It is friction that wears out the machinery, not work. The same is true of us—worry, discontent and grouchiness are the frictions that wear out men. Interest, helpfulness and cheerfulness are our best lubricants. Oil up.—*The Night Watchman*.

HOUSE PLANS FOR OUR READERS

Southern Pine

Spring is drawing nearer day by day. As the winter evenings lengthen, the interest of home-lovers quickens at the thought that, maybe, this approaching spring will see long-cherished hopes materialized in the completion of that wonderful new, sure-enough home. Paying rent is certainly one of the most depressing things in life. Rent day rolls around with a recurrent rapidity that seems to defy all recognized laws of time and reason. Deep in the innermost hearts of every man and woman who truly love the real comforts of home there's the ambition and anticipation that some day they will revel in blissful realization of a dwelling-place that's theirs.

This month's plan is a particularly attractive cottage, the ownership of which should make anyone justly happy and proud. It gives plenty of space for the average family, with two large bed-chambers, living room, dining room, kitchen and bath, a delightful breakfast room and entry hall.

This design is only one of fifty, all different, shown in a plan-book of modern homes which may be obtained free upon request sent to the editor of this magazine. This is made possible by the courtesy of the Southern Pine Association of New Orleans. The American Wholesale Lumber Association also has volunteered to arrange for the co-operation of lumber dealers in giving expert advice to community movements for

the organization of building and loan associations to finance home-building.

A Bunch of Five

LIFE demands that love be a human mirror through which we see something besides the bare truth.

If some people have common sense, they evidently think it is too common to use.

A successful man sees things as they are, not as others tell him they are.

We feel sorry for some men who are compelled to listen to their own talk.

Flattery makes everybody sick except those who swallow it.—W. F., *Burnside*.

Cause and Effect

A minister was trying to impress upon the young minds in his Sunday school class the significance of white.

"Why," he said, "does the bride always wear white at her marriage ceremony?"

No one answered, so he explained, "White stands for joy, and the wedding is the most joyous occasion of a woman's life."

Then a small boy asked, "Why do the men always wear black?"

Mum Is the Word

"Are all these children your brothers and sisters?" asked the district visitor of a little girl in the congested section of one of our largest cities.

"Yes, mum."

"Oh, and what is the biggest one's name?"

"Maxie, mum."

"And what is this wee little girlie called?"

"Minie, mum."

A Fortunate Loss

A young Irishman at college, in need of \$25, wrote his uncle as follows:

"Dear Uncle: If you could see how I blush with shame while I am writing you would pity me. Do you know why? Because I have to ask you for a few dollars

and don't know how to express myself. It is possible for me to tell you I prefer to die. I send you this by messenger who will wait for an answer. Believe me, my dear uncle, your most obedient and affectionate nephew.

"P. S.—Overcome with shame with what I have written I have been running after the messenger in order to take the letter from him, but cannot catch him. Heaven grant that something may happen to stop him, or that this letter may get lost."

The uncle was naturally touched, although not in the way expected, and was equal to the emergency. He replied as follows:

"My dear Jack: Console yourself and blush no more. Providence has heard your prayer. The messenger lost your letter. Your affectionate uncle."—C. E. G.

Erin's Imprint

An Irishman stood looking at an electrical contrivance, when an inventor walked over to him and asked:

"Some machine. I wonder who the inventor was?"

The Irishman looked at him and replied, dryly:

"Shure an' he was a son o' the ould sod. Can't you read his name up there?—'Pat. Pending.'"

Known by Reputation

Daughter—"Oh, mother, I want you to meet Mr. Dill. He is very famous and—"

Mother—"I am really delighted to meet you, Mr. Dill. I've always been so fond of your pickles."

"Finger English"

Rastus: "Lissen heah, boy! Ah believes yo'-all am fondlin' dem dices a little too enthusiastical."

Sambo: "Hol' on, man! Leave yo' social razzar in yo' pocket. Ah only talks to mah bones—talks to 'em, dat's all."

Rastus: "Huh, den yo'-all ben talkin' de deaf-and-dumb language to 'em. Ah craves yo' lucidates by openin' yo' mouf. Ah don't like dat finger-talk."—*American Legion Weekly*.

Accepting a Suggestion

A western college boy amused himself by writing stories and giving them to the

papers for nothing. His father objected and wrote to the boy that he was wasting his time and that he should write for money. The boy wrote back: "Dear Father: Your suggestion accepted. As I am short of change, please send me fifty dollars by return mail."—C. E. G.

Fought a Good Fight

The prison visitor was going her rounds. "Have you ever struggled against the consequences of temptation?" she inquired of a ferocious-looking fellow.

"Yes, ma'am, I have," he answered.

"Ah! I suppose if you had fought just a little harder you wouldn't be here today?"

"Well, ma'am," said the prisoner, modestly, "I did the best I could. It took five policemen to get me to the station."—*Ainad Temple Bulletin*.

Anxious

An undersized man was married to a strapping woman, and his married life was not all that it might have been. Recently he received a black hand letter which read: "If you don't give \$1,000 to our messenger, who will call Sunday for it, we will kidnap your wife."

He replied promptly: "I do not have the \$1,000, but your proposition interests me greatly."

Teaching Them Economy

Tom—My pa is very religious. He always bows his head and says something before meals.

Dick—Mine always says something when he sits down to eat, but he doesn't bow his head.

Tom—What does he say?

Dick—"Go easy on the butter, kids; it's costing us 50 cents a pound now."—C. E. G.

We'll All Want One

"I've an invention at last that will mean a fortune!"

"What is it this time?"

"Why, it's an extra key for a typewriter. When you don't know how to spell a word, you hit this key, and it makes a blur that might be an 'e,' an 'a,' or almost anything else!"

Eighty-six

Making Both Ends Meet

I often hear the neighbors mourn
Because the rent is high;
The price of beans is going up,
I hear them sob and sigh;
I've seen a newly wedded man
Show his disgust complete
When he had labored all day long
In making both ends meet.

Now if he'd learn a lesson
Taught by a little child,
He'd learn a wondrous secret
Which would help him all the while,
For a cooing, prattling baby
While playing with his feet
Thrusts a rosy toe into his mouth,
Thus making both ends meet.

Behold the brawny butcher,
As he charges double price;
You wouldn't think of asking him
For any safe advice,
But when he's making sausage,
To make the "dog" complete,
He tosses in the tail and ears,
Thus making both ends meet.
—L. A. LAWRENCE, Clerk, Supervisor's
Office, Palestine, Ill.

Synthetic Godliness

Daughter: "The preacher just 'phoned and said he was coming to call this afternoon."

Mother: "Gracious, we must make a good impression; give baby the hymn book to play with."

A Satisfactory Substitute

"Did Blondie have a chaperon along when she went motoring with Spike last night?" asked Vera of the rapid-fire restaurant.

"Nope!" replied Anabell of the same establishment. "She says she carried a butcher knife in her muff, but only had to draw it twice."—*Ainad Temple Bulletin*.

A Ring, Anyway

"Auntie, were you ever proposed to?"

"Once, dear, a gentleman asked me to

Illinois Central Magazine

marry him over the telephone, but he had the wrong number."

A Steady Job

A man with all the earmarks of a laborer was smoking thoughtfully and watching a large building in process of construction. Being short-handed, a foreman approached and asked:

"Hey, you, want a job?"

"Yes," was the reply, "but I can only work in the mornings."

"Aw, shucks! Why can't you work all day?"

"Well," the man explained, "every afternoon I got to carry a banner in the unemployment parade."—*American Legion Weekly*.

A Testimonial

Father (who just walked in the parlor and finds his 19-year-old daughter sitting on a young man's lap): "How is it, young man, I find you kissing my daughter?"

Young man: "Wonderful, sir, wonderful!"

INKID SAYS—

COMMUNICATIONS

Employees and Public Relations

TO THE EDITOR: It is with satisfaction and pride that we of the Illinois Central System accept the verdict of our patrons and the general public that ours is one of the foremost transportation systems in the United States. When I speak of it as "our" railroad, I believe I express the feeling of thousands of the rank and file of employees who are devoting their time and energy to the service of this company. We cannot help but feel that it is our railroad because it furnishes us with means of livelihood, enabling us to support and care for those dependent upon us.

The writer has been in the service of the Illinois Central System for more than twenty years, having watched its growth with great interest. Even in that period of time wonderful progress has been made in operating facilities, such as power and equipment, heavier steel, better roadbed and bridges, siding and other track facilities. Our accounting systems have changed to meet requirements.

Not only has it been interesting to watch our growth from the physical and operating standpoint of view, but the human element has been of great interest, the men—officers and employees—who have been responsible for this wonderful growth and achievement. It causes us to realize that after all our success is the result of human thought and effort.

We have seen railroad men come and go, each contributing his part toward efficient railroading, and, judging from the present condition of our road, it is evident that in most cases they were men highly efficient in their work, officers and employees alike.

On the railroad as well as in other industries, the human element, and not only the physical or working conditions, reflects the characteristics and ability of those held responsible for its management. The same is true of the Illinois Central. This being the case, I believe that most of our railway family will agree that nothing has contributed more to our success than the publicity and democratic spirit displayed toward the public and those connected with this railroad by President Markham.

No doubt most of the readers of this magazine also read the newspaper articles of publicity offered from time to time by Mr. Markham. These are straightforward business talks—cards on the table, as it were—an effort better to inform our patrons and the general public of the prob-

lems of railway operation, enlisting their aid and support in the solution of these problems. That the public and the railway employes appreciate his effort is evidenced by their hearty response. We who are directly connected with the Illinois Central have a wonderful opportunity to carry his messages to our friends and patrons in person.

A recent issue of the papers along the system contained a review of our record of service for 1922. In this article, after stating facts and figures showing our accomplishments for the past year, Mr. Markham says: "The handling of this mounting tide of business was made possible by the loyal team-work of the employes of the Illinois Central System and the splendid co-operation received from our patrons."

The statement above tells the story of Illinois Central success and substantiates what was said in the beginning of this article, that those in the rank and file reflect the ability and characteristics of those held responsible for efficient operation.

Quoting further from the article previously mentioned: "Some of the prominent antagonists of the railroads are expected to make efforts during the year that will, if successful, place further restrictions upon the railroads, making it still more difficult for them to take the necessary steps to forestall further transportation shortages. Farmers, wage earners, business men and all other classes of our population should be active in opposing these efforts because their interests in the stake of adequate railway transportation are just as great as, and in some instances greater than, those of railway men themselves."

In every city and town along the lines of the Illinois Central are men and women directly connected with it who are prominent and influential citizens in their respective communities. A great deal can be accomplished toward the betterment of our transportation systems. Mr. Markham's efforts toward publicity can be made more effective if these men and women who have the opportunity of personal contact with our patrons and the public will endeavor to meet the farmer, the wage earner, the business man and others and discuss with them the problems of railway operation, a subject of great importance to all.

An opportunity here presents itself that, if taken advantage of, will enable the army of employes of this railroad through individual effort to promote good feeling and a better understanding of our business among those who, without this understanding brought about by a little effort on our part, might otherwise oppose us in our efforts toward better transportation service.

The result will be a bigger and better railroad, a happy and contented lot of workers serving an appreciative and satisfied public.—H. S. MACON, *Train Dispatcher, Clinton, Ill.*

A Word on Christmas Greetings

TO THE EDITOR: With your permission I would like to submit a few remarks through the columns of your valuable magazine concerning an unusual but very appropriate Christmas and New Year greeting which was sent to the great mass of efficient employes of the entire system of the Illinois Central by and through the courtesy of its distinguished and worthy president, C. H. Markham.

The writer is an ex-employee of the Illinois Central. Having served in the transportation department for a number of years, I am well acquainted with the employes in that department on the St. Louis division. And, as a consequence, knowing that I was one of the "has beens," Conductor Ed Eisfelder, who has charge of a passenger train out of Pinckneyville, gave me one of the New Year greeting cards. In doing so, Conductor Eisfelder requested me to write a few lines to the *Illinois Central Magazine*, expressing his appreciation of the receipt of this New Year greeting from the president of the company and in return to say that he feels very grateful to the president for the recognition shown him, as well as all other employes, in this manner and form.

The writer believes that this step, taken by the president of one of the greatest railway systems of the time, will merit much toward banding together all of its employes and be the means of securing the confidence and friendship of its employes in the future. It will have a tendency to remind each employe from time to time that the railway company has a kind thought for its employes and is grateful to them for the untiring labor that they so well give to help to better the condition of the company as well as of themselves. Would that all railroads would take pattern after the Illinois Central in bestowing greetings to their employes! If they would, the employes would feel more grateful than they do.

To wish for the great Illinois Central System an unusually prosperous New Year, including all its employes, is the desire of an ex-employee.—J. Q. ADAMS, *Pinckneyville, Ill.*

The wisdom of the wise and the experience of ages may be preserved by quotation.—BENJAMIN DISRAELI.

Inkid Becomes One Year Old This Month

C. M. Said, our cartoonist, has created a comic feature which in a year has won many friends. In the February, 1922, issue of the *Illinois Central Magazine*, Inkid appeared on the stage of magazine publicity for the first time alone, before that always having been used to assist in conveying the meaning of a more serious cartoon. Since that issue a year ago, Inkid has grown in popularity, until now the *Illinois Central Magazine* is only one of several publications that find use for the little misogynist each issue.

Mr. Said, creator of Inkid, whose cartoons are well known to readers of the *Illinois Central Magazine*, is a native of Memphis. He entered the service of the Illinois Central in October, 1918, in the office of former Superintendent V. V. Boatner at Memphis. From Mr. Boatner's office he went to the office of General Superintendent A. H. Egan, also at Memphis. Mr. Said came to Chicago in October, 1920, and is at present in the office of the vice-president and general manager.

Since coming to Chicago he has pursued his cartooning at the Art Institute and is now attending the Chicago Academy of Fine Arts. Mr. Said has aided the magazine in other ways besides furnishing drawings. He is responsible for a number of articles of system interest appearing in its pages. The Flapper-Cake-Eater contest in

Buddy

C. M. Said

this magazine last year, which was won by Miss Julia Gaven, former division editor at Memphis, was credited to Mr. Said.

Buddy, Mr. Said's latest addition to the magazine, is confined exclusively to the interests of the Illinois Central kiddies. Buddy derives his name from Mr. Said's younger brother.

We reprint herewith three Inkids taken

Inkid Says

from issues of the *Rock Island Magazine*, with the permission of that publication.

The name, "Inkid," cannot be found in

the dictionary, but the two words that make up that name can be easily identified—"ink" and "kid."

Water Valley Machinists Give a Banquet

By A MACHINIST,

Water Valley, Miss.

Tuesday night, December 22, the Association of Machinists, Helpers and Apprentices at Water Valley, Miss., gave a banquet which was an occasion of great pleasure. Brother Frank Carr called for order and spoke of the aims and purposes of the organization and bade the officers of our division a hearty welcome, calling upon Brother Halliwell to ask divine blessing over the overloaded tables, after which all of the boys tried to see who could eat the most and drink the most "near beer"—which honor fell to Brother Billie Baker.

Next came the introduction of the speakers of the evening. Brother Bob Exum, in his happy Irish way, spoke of how much depended upon him in keeping the Illinois Central moving and impressed upon us all that no railroad could run without jacks. Brother Exum is the official jack repairer at Water Valley shops.

Next came a surprise and a great pleasure when our division superintendent, A. D. Caulfield, was introduced. Looking toward our banner, which was inscribed "50-50," Mr. Caulfield spoke of the near approach of the day (Christmas) when to all mankind was given its most priceless treasure and bade us all to look upon this gift as a personal one. He said it was the greatest pleasure of his life to meet with his men, to share their sorrows and rejoice with them in their success and joys.

Next came Brother John Cowan, machine shop foreman, who gave us his version of the "50-50" motto.

Next came J. L. Chapman, our general foreman. He spoke of the existing conditions at our shop and told us, as we already

knew, that at all times and under all conditions he would go us 50-50 on every proposition.

Next came Fred Waldron, roundhouse foreman. In a short, happy strain, he told us that "50-50" meant him, too.

Next on the program came Master Mechanic S. R. Mauldin. Said he: "Fifty-fifty has been pledged to you by my foremen and general foreman, and I am not going to let them get by me or do more than I would, and I would do better and go over the 50-50 mark." It has been the pleasure of this writer to have been associated with Mr. Mauldin for eleven years and, through these years of accomplishment, wars and ups and downs, he was always been the same. The writer fails to recall one instance in all of these years when you could not approach him and feel assured you would get a 50-50 deal, no matter who you were and what the conditions were.

Next came O. A. Carlson, our local chairman, who spoke of the willingness of the officials to meet the men on a 50-50 basis, from Mr. Markham down the line.

We are indeed indebted to W. F. Henry for the splendid music so beautifully rendered by his splendid band. After many beautiful classical selections and a little "jazz" thrown in for good measure, we had our picture "took" and adjourned, feeling that an evening of pleasure and profit had been spent by all.

PROGRESS

To regard everything as fixed is to prevent progress. To regard nothing as fixed is to destroy progress altogether. Success lies in having a fixed purpose and in adapting flexibility of method in attaining it.—JOHN H. VAN DEVENTER.

Banquet of machinists' organization, Water Valley, Miss., December 22

Sports Over the System

Inter-City Bowling February 17

The Chicago-Memphis bowling contest will be held at the Woodlawn Recreation Alleys, 63d Street and Cottage Grove Avenue, Chicago, beginning at 8 p. m., February 17. The date was previously set for February 3 and 4.

Chief Clerk F. J. Theobald has his picked team of Memphians primed for the fray. In a recent communication to C. M. Said, handling the Chicago arrangements, he writes: "My men are not the best bowlers in the South; neither are they the worst; but we can stand our ground and are ready for anything Chicago has to offer of like averages and weight."

It has been decided to reduce the number of contestants to twenty, instead of thirty, as was formerly planned.

"The Chicago men have been picked at my direction," Mr. Said explained, "and high averages, prestige, etc., were not used to govern the selection. The lack of experience of the Memphis team is to be considered while picking men for the Chicago side, and it is not the policy to make a contest between the cities and then not give the invaders an equal chance."

Some of the best bowlers in the Chicago Illinois Central leagues will be on the team, while there will be other bowlers who have not a consistent average and who have never averaged more than 125 or 140.

J. Ullrich, captain of the Vice-President and General Manager team in the 12th Street General Office League,

Walter E. DuBois

will have charge of the Chicago bowlers. He will be assisted by P. J. Ryan and W. E. DuBois. Mr. DuBois, who is the writer for the Chicago bowling activities among the 12th Street employees, has been helpful in making the coming Chicago-Memphis match a reality.

There will be prizes for the winners. The Memphis boys will be the guests of the Chicagoans and will be treated as such.

R. O. Fischer, president of the 12th Street General Office Bowling League, will roll the first ball for the Chicago men.

Indoor Baseball at Burnside

Indoor baseball as it is played at Burnside shops, Chicago, is not truly indoor baseball, for it is played in the open and has some variations in the rules which govern it so that it has become a cross between indoor and the regular outdoor baseball. This game has been a favorite for more than three years. The star performers are men from the back shop and the roundhouse. Men from these departments may be seen playing the game just south of the

Indoor baseball at Burnside

roundhouse office at noon, no matter what the season of the year may be. Their enthusiasm is never dampened by a drizzling rain or a snowstorm, for they play just the same.

There is something about their spirit of enthusiasm and pep that makes one wonder what causes it. They have been so vigorous in their play that the rules of the game were changed so that home runs would not be so numerous. Even now it is not an unusual occurrence to see a man "wallop" the ball out of the field and into the "well," which is a large pool of water about seventy yards from home plate.

Men who are old enough to be dads to some of the fellows they play with are among the enthusiasts, and there is usually

a large number of rooters out also. If these men "bat" on the job the way they do at noon, the locomotive department at Burnside should feel their influence as good workmen. Men who will get out and play with such consistent enthusiasm will work with a similar vim.

Largely an Illinois Central Team

The football season just closed was a most successful one for the Cherokee, Iowa, High School team, which met and defeated the best teams in northwestern Iowa, scoring 225 points to its opponents' 13. The only defeat was at the hands of the Cedar Rapids High School team in a post-season game for the championship of Iowa played at Cedar Rapids, December 9. The Illinois

Central family was well represented on the Cherokee team. Captain Phil Callahan and his brother, John, are sons of Bridge Foreman Jeff Callahan. Merle Ryan is a son of Conductor Ed Ryan. Clement Donovan is a son of Section Foreman Tim Donovan, and Malcolm O'Leary is a son of Train Dispatcher John O'Leary. Neal Ausman, son of Trainmaster W. E. Ausman, and Robert O'Leary are members of the squad. The team loses four members by graduation this year, including Captain Callahan, but good material is available to construct a winning machine.

Our Bowlers at Fort Dodge, Iowa

The members of the Downstairs Bowling Club, Fort Dodge, Iowa, met the champion

The 1922 Cherokee, Iowa, High School football team. Front row, left to right: Leonard, Nelson, Malcolm, O'Leary, Phil Callahan, Cordon, Lamont, McCulla. Back row, left to right: Ryan, Donovan, John Callahan, Scott.

Sons of Illinois Central employees who were regulars on the Cherokee, Iowa, High School football team in the successful 1922 season. No. 1, Clement Donovan, fullback; No. 2, John Callahan, right halfback; No. 3, Phil Callahan, captain and center; No. 4, Malcolm O'Leary, right guard; No. 5, Merle Ryan, left halfback.

Upstairs players and defeated them two games out of three, December 6. The scores:

He's an All-Around Athlete

Barney Crutchfield, clerk in the vice-president and general manager's office at Chicago, has won athletic trophies and has played on many championship teams. He plays baseball, basketball and soccer and is a long-distance runner. And when he puts on the gloves, he carries a punch that is well worth avoiding.

Crutchfield obtained his first athletic training while attending Central High School at Memphis. In 1916 he was employed in the office of the superintendent of the Memphis division and played in the outfield on the Illinois Central baseball team there. His team won the inter-city championship that year when it defeated St. Louis.

He won the lightweight boxing championship of Paris Island when he was in the Marines in 1918 and at the same time he took second and third places in the 3-mile and 5-mile runs. The next year he was a member of the championship basketball team of the Y. M. C. A., and he won the 3-mile run which was held by the Memphis Athletic Association. He was awarded a silver cup for winning the race.

In 1920 Crutchfield played short-stop with the Polarines, a semi-professional team of the Standard Oil Company at Memphis, and was also captain of the Rangers, an independent basketball team that won twenty-five out of twenty-nine games played during the

Barney Crutchfield

season. The next year he was re-elected captain of the Rangers, and the team won the city championship of the Memphis Athletic Association basketball league and tournament.

Crutchfield played baseball on the Jackson, Miss., team of the Cotton States League and on the Mayfield, Ky., team of the Kitty League in 1922.

Banquet to Baseball Team

Saturday, December 16, the members of the Illinois Central baseball team of New Orleans were guests at a banquet given in their honor at Bossio's Gold Room by the management of the team. This gathering marked the close of the season of 1922, which proved to be the most successful in several years. Out of a total of twenty-two games played, seventeen were won, four were lost and one was tied. Our team ranked as one of the best amateur ball teams in New Orleans, having defeated most of the amateur and semi-professional baseball teams of note in the city. Several out-of-town games were played also, the team meeting with marked success.

C. C. De Luhrey, manager of the team, was toastmaster at the banquet. C. Barnes, captain, responded on behalf of the team. A short talk was made by C. A. Ahern, chief clerk in the local office, business manager of the team, reviewing the results of the last season and outlining the policies for the season of 1923. Each player in turn was called upon to respond. At the conclusion of the banquet the players were presented with individual trophies in the form of silver baseball watch fobs suitably engraved.

The surprise of the evening, however, was the presentation by Mr. De Luhrey to Mr. Ahern, on behalf of the team, of a silver loving cup. Mr. Ahern was considerably overcome, and it was with difficulty that he was able to respond.

The following composed the baseball team, season of 1922: C. A. Ahern, business manager; C. C. De Luhrey, manager; C. Barnes, captain and first base; L. Mohren, pitcher; G. Dell, pitcher; L. Murray, catcher; S. Natal, second base; C. Eble, third base; R. Barnes, short stop; A. Kitto, left field; B. Berckes, center field; E. Perrin, right field; T. Caldwell, utility.

Here's a Basketball Challenge

The headquarters office of the St. Louis division at Carbondale, Ill., has a first-class basketball team that has been winning several victories. The team played the Cobden team January 3, at Cobden, the score being 12 to 14 in favor of the division office. The team also played Cobden an-

other game at Carbondale, January 9, the score being 35 to 15 in favor of the division office. If the other divisions think they have basketball teams that would like to lock horns with the Carbondale boys, they should write to H. E. Goetz, Carbondale, Ill., in care of the Illinois Central Division Office.

Commercial Basketball League, New Orleans

	Won	Lost	Pct.
United Fruit Company.....	5	0	1.000
Woodward, Wight & Co., Ltd.....	4	1	.800
Public Service, Inc.....	3	2	.600
Illinois Central Railroad.....	2	3	.400
Interstate Electric Co.....	1	4	.200
Liverpool London Globe Ins. Co..	0	5	.000

Wednesday, December 13, the Commercial Basketball League of New Orleans was formally opened, the Illinois Central team meeting the Public Service team in the opening game. This was a hard-fought contest, nip and tuck, the Public Service team emerging victor at the end of play by a score of 17 to 9. As aptly put by one of the daily papers in reporting the contest: "A thrill was given the followers of the Commercial Basketball League, at the opening games, when the Public Service aggregation defeated the Illinois Central quintet in the fastest and best played contest witnessed on local courts this season."

Wednesday, December 20, in the second game of the series, the Illinois Central quintet decisively defeated the team representing the Liverpool London Globe Insurance Company, by a score of 20 to 7. This was a one-sided contest, with the railroaders scoring at will. The insurance boys were fortunate to cage two field goals during the entire game, as during the first half not a field goal was scored by them.

The United Fruit Company team, the league leader, on December 27 defeated the Illinois Central team by a score of 25 to 9. The game in the first half was a battle, the fruit company team having only a slight margin at the end. In the second half the railroaders, considerably weakened by the loss of a forward and guard through fouls, were unable to withstand the onslaught.

The Illinois Central team, on January 4, in the fourth game of the league season, easily defeated the Interstate Electric Company team by a score of 23 to 3. In the first half the Interstates only scored one point, a foul goal.

In what was perhaps the cleanest and hardest fought contest of the first part of the season, the Illinois Central team was defeated by the Woodward, Wight & Co. quintet on January 10 by a score of 17 to 15. From the spectators' point of view, this was an ideal basketball contest. At the end of

Ivan ("Shorty") Atcher and Cletus ("Petey") Lafey, employees at Louisville, Ky. "Petey" is the star basketball player on the Louisville district. He is captain of the team of Makin Council, Y. M. I., Louisville, and his team has not lost a game this year. "Petey" is 6 feet 3 inches tall.

the first half the railroaders were leading by 9 to 7, which advantage they held until within three minutes of the end. Two free throws and a field goal gave the Woodward, Wight & Company team the lead.

"Bizzy" Berckes, star forward of the Illinois Central team, led the league at the end of the first leg of the tournament in field goals, foul goals and total points scored. On January 17 the final round began. Judging from the class of basketball displayed thus far and the present standing of the teams, a hotly contested ending can be expected.

A Challenge to Our Bowlers

The 5-man bowling team in the office of the Auditor of Freight Receipts at Chicago claims to be one of the best department teams on the system. It issues a challenge to any department team on the system for a series of games, the members of the challenging team to be confined to one department. Address all communications to Louis Heimsath, in care of the Auditor of Freight Receipts, 6327 Dorchester Avenue, Chicago, Ill.

63d Street Bowlers Doing Well

E. Tersip recently rolled a 267 game and averaged 212 for three games, which are high game and second high average for the 63d Street General Office Bowling League at Chicago. O. Hulsberg rolled a total of 664 pins for three games and rolled second high game with 265. The Panama Limited team has again slipped to seventh place, after losing five of the last six games played. Goodell, captain of the Daylight Special team, remains in first place with his wrecking crew. The Diamond Special team moved up to second place by trimming McCarthy's Freeport Peddler team three straight.

The prize winners for high score for the week of December 8 were: Goodell 213, Smith 205, Tersip 254 and Calloway 206; winners December 15: McKenna 227, Tersip

198, Rowe 211 and Kempes 222; winners January 5: Flodin 199, Hulsberg 265, Tersip 267 and Calloway 205.

The Daylight Special and Panama Limited teams had a tight race January 5. The Daylight team won the first two games by scores of 863 to 859 and 820 to 810, but weakened in the last game and lost to the Panama team by 889 to 745. Kempes was high man on the Daylight team with 530, and Calloway was high with 577 for the Panama team.

Below are teams and individual standings for games up to January 5:

Teams			Per High		Series	Avg.
	Won	Lost	Cent	Game

League Pitcher in Our Employ

Tommy Long, who has been one of the leading pitchers of the Louisville team of the American Association, is now working in the office of Superintendent J. M. Walsh at Memphis, being employed as file clerk, the position he left in the spring of 1917 to enter organized baseball.

Tommy first entered the service of this company as warehouse clerk at Memphis in the spring of 1916. He pitched for the Local Freight Office team, and the Superintendent's Office team in the Illinois Central League during the season of 1916. It was largely through his efforts that the team representing the Superintendent's Office won the city championship of Memphis for 1916 and defeated the St. Louis city champions in an inter-city series. Tommy's work was of such a brilliant nature that it attracted

Tommy Long

the attention of Southern League scouts, and he was signed by the Mobile team of the Southern League in the spring of 1917.

His efforts during his first year in professional work were not crowned with success, and after a poor season he was released outright. He did not play during the season of 1918, but in the spring of 1919 he signed with the Louisville club. His pitching that year was of such high class that several major league clubs made offers for his services. However, the price set on his head by the Louisville club was deemed exorbitant by the major league scouts, with the result that Tommy has been with the Louisville club ever since.

He injured his arm early in 1921. While his work the last two years has not been so brilliant as formerly, he is still considered one of the leading minor league pitchers of the country.

Due to a complete reorganization of the Louisville club, Tommy has been sold to his "first love," Mobile of the Southern League, where he promises to put forth his best efforts and burn up the league during the 1923 season.

Tommy recently married Miss Elsie Rose Mazzoni of Louisville, Ky., and they are residing with his parents in Memphis during the winter. Tommy is just as efficient handling files as he is in the pitcher's box. His work will be greatly missed by the superintendent's office at Memphis when he leaves for spring training, but it is a cer-

tainty he will have the full support of hundreds of Illinois Central employes, both at Memphis and other points on the system, who will be pulling for him to have a banner year and get his well deserved chance in the big leagues.

Knodell Leads 12th Street League

At the start of the season, Knodell was leading the 12th Street General Office Bowling League at Chicago with an average of 184. After rolling thirty-nine games he is still leading the league and has slightly improved his average so that it looks as if he intends to walk off with first-place money. Enright and Bernbach are still in second and third places. Rolff, after a poor start, crashed into 669 pins, jumped into fourth place and has remained there. Block is slowly improving his average, but it is below his average of last year. Larsen is picking up each month, and his average of 170 is good for sixth place. The General Freight team is the only one that can boast of four players among the leading twenty. Koch, as usual, is leading that team, with Tremblay right at his heels, followed by Grismore and Sebastian.

No one has seriously threatened Rolff's 669 pins for high series, and Knodell's 247 still stands as high game.

The Chief Special Agent team, decked out in bright new brown derbies, collected 816 pins in one game January 11 and handed the General Freight team, the league leader, as neat a trimming as any team has ever received; and the General Freight team has not yet recovered from the shock. It is understood the Chief Special Agent team has applied for a patent on the iron kellys, but the General Freight team intends to protest the game, based on the fact it is reported the cops were using square balls.

The General Freight team lost three games the last month, while the General Superintendent of Transportation team was losing but one game, and as a result it no longer looks as if the General Freight team will have an easy time winning the championship of the league. There is a difference of but six games between the team in first place and the one in fifth place, showing the high teams all stand a chance of beating the leaders.

There are bowling fans and howling fans, but the fan worth while, the real sportsman, is the fan who can give the "enemy" a hand for good work as well as those on his own team.

Railway men will again hold a bowling tournament in Chicago starting April 6. The entry fee is \$1 for each event, plus \$1

for each three games rolled, 30 cents of which will be used for prize money. Teams from Kankakee and St. Louis rolled last year, and we hope they will come again, as well as teams from Dubuque, Waterloo, Fort Dodge, Council Bluffs and other cities on our road. Write to W. P. Enright, in care of the Land & Tax Commissioner, Illinois Central Railroad, Chicago, for entry blanks. The entry list closes March 20.—W. E. DuBois.

PUT IT IN WRITING

"Wouldn't it be a wonderful thing," writes a business man, "if everyone carried out this idea?"

Here it is:

Put all business agreements in writing.

Many misunderstandings arise from the loose manner in which business matters are talked over. Each party naturally puts his own construction on the conversation. The matter is dismissed with the words, "all right." Frequently it turns out all wrong and becomes a question for the courts to decide.

A large proportion of the business litigation of the country would be avoided if all agreements were put in black and white.—*Mason's Monthly*.

HOUSE PLANS FOR OUR READERS

Concrete

There is a charm about the Cape Cod farmhouse that is particularly attractive. Its lines have been translated with wonderful success for the use of concrete blocks and stucco by the architect in this colonial plan, the Crowborough.

What a delightful picture this home will present with its white walls and green blinds against a background of stately elm trees. Notice how the ground has been graded up the front doorsteps to give that well-proportioned and cozy appearance to the house that our old colonial homes possess.

Being built of fire-resistive construction, this will be a permanent home that will mellow with age and preserve for all time

the beauty of the colonial tradition. The architect has placed fireproof partitions of concrete block in the basement, which also carry the load of the upper floors without settlement.

In this plan the living room runs the full depth of the house, giving a splendid room nearly twenty feet long and containing four windows. To the right of the entrance hall is the dining room, which is

FIRST FLOOR PLAN

SECOND FLOOR PLAN

11 feet 6 inches square. The rest of the lower floor is taken up with a kitchen, pantry, and other service equipment. The porch off the living room makes a splendid addition for the summer months.

The plan of the second floor is simple, containing three bedrooms and a bath. There are five small closets and one extra large closet for the storage of household goods not in use. This closet could be changed into a sleeping porch without much difficulty at small expense. The width of the house is thirty-three feet, and this calls for a lot not less than forty-five feet wide. A southern exposure is to be preferred for this plan.

This design is a sample of the group of

twenty-five plans appearing in an elaborate plan book called "Concrete Houses," published by the Portland Cement Association, 111 West Washington Street, Chicago, Ill. Through the co-operation of this association we are enabled to publish plans of these portland cement stucco houses each month and to offer our readers this house plan service. The plan book, "Concrete Houses," can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valuable data on that subject, including photographs of many attractive stucco houses, but not including plans, can be obtained free of charge upon application to the editor.

Senatobia, Miss., on Indian Camp Site

Passengers flying southward every night in the year on the Panama Limited, on the Illinois Central System, little dream that the line passes through what was a series of Indian villages, south of Memphis.

In this connection some bits of early history of Senatobia, Miss., are contained in a communication from M. H. Thompson, who writes that when the old M. & T. Railroad was first built in the spring of 1856, out of Memphis, as far down into Mississippi as Hickahala Creek, it was suggested by the promoters that a station ought to be erected on the first hill out of the bottoms, and the selection of a name for the station was left to Colonel Charlie Merriweather, a stockholder in the road, large slave owner and planter in the vicinity of Senatobia. He was the grandfather of Mrs. J. T. Gabbert and Mrs. N. R. Sledge and Mrs. Travis H. Taylor of Como, Miss., and Tom Merriweather, conductor on the Illinois Central's Grenada accommodation.

Mr. Thompson writes that Colonel Merriweather suggested the name of Senatobia for the station, a contraction of Senatahoba, the Indian name of a small creek near his plantation. Thus Tate County's capital was christened. It has grown from a spot on the map, or a station by the side of the Illinois Central, to a town of 1,500 population.

The site of the town was once an Indian camp. The section of land upon which it stands was sold by Ti-ah-oh-le-Chab-Tubby, a Chickasaw Indian, on April 13, 1836, to James Peters, for \$1.25 per acre. He later sold it to Benjamin Rowell, whose descendants still live in Senatobia.

The station is built on an old Indian burial ground near the trail the Indians used in traveling from Pontotoc, Miss., to Helena, Ark.

The M. & T. Railroad was the first line extending south out of Memphis, and was purchased several years ago, then linked into the Illinois Central System.

A big rally was held at Senatobia the day when the road was finished to that point in 1856. There was a barbecue and an excursion train run from Hernando, many persons seeing their first train and taking their first ride on it.

Tate County was organized during carpet-bag days, writes Mr. Thompson. DeSoto County citizens fought the plan, and it required drastic means to get the bill through the Mississippi Legislature.

Jerry Butler, negro, now living in Senatobia, was sent to Jackson to lobby for the bill. The committee back of the new county dressed Jerry in good style. He wore a bee gum hat and frock coat of the finest cloth. He was supplied with plenty of money.

Uncle Jerry, so Mr. Thompson writes, says some of the negro legislators went to the capital barefooted. None could read or write. He told them if they voted for the new county there would be a tax levied sufficient to keep them all their lives, but the first act of the officers of the county after it was created was to build a jail, and the first prisoners in it were negro members of the Mississippi Legislature who had made themselves objectionable in Tate County.

During the past year the Illinois Central System has been lending an active hand in aiding the development of stock raising in Tate County and growing diversified crops. The road counts on Tate being one of the best producers of better stock of any county in Mississippi in the next few years.—Memphis (Tenn.) *Commercial Appeal*.

CLAIMS DEPARTMENT

Guarding the Children's Lives

The accident near Itta Bena Monday evening in which a transportation wagon of the Itta Bena Consolidated School, containing twenty children, was struck by a train of the Itta Bena & Belzoni Railroad, and eight children injured, has resulted in orders being given to the drivers of the school trucks over Leflore County for additional precautions.

An investigation made by the Board of Trustees of the Itta Bena school at a meeting last night showed the accident to have resulted from carelessness of the substitute driver in charge of the truck Monday afternoon, and absolved the engineer of the train from any responsibility for the accident.

Orders have been issued to the drivers of the trucks requiring them to come to a full stop before crossing any railroad, whether a train is in sight or not, and if a train is approaching to wait until after it has passed before attempting to cross the tracks. Failure to observe this precaution will result in immediate dismissal of the offending driver.—Greenwood (Miss.) *Commonwealth*.

The action of the authorities in Leflore County, as shown by the foregoing clipping from the *Greenwood Commonwealth*, is contrasted with that of the authorities in Warren County, Mississippi.

On October 17, 1922, a school truck loaded with school children was driven on the Alabama & Vicksburg Railroad track at a crossing near the village of Bovina, Warren County, and struck by an A. & V. train, resulting in the death of seven of the children and of the driver of the truck and more or less serious injury to ten of the remaining occupants. The report is that the driver of the truck started from the schoolhouse toward the track at a time when the train was in plain view and that, although several of those on the truck, as well as bystanders, warned him of the approaching train and urged him not to drive on the track, he failed to heed the warning.

We are informed that up to the present time no action has been taken by the authorities such as that taken in Leflore County to prevent like future tragedies, nor in fact has action of any kind been taken. At least twenty states in the Union have ordered that all utility vehicles be required to come to a full stop before driving on a railway crossing, so that there may be opportunity for a full and careful observation by the driver as to whether a train is approaching.

It is passing strange that, in the light of such examples and following such a ter-

rible calamity as that at Bovina, nothing has been done by the school or county authorities of Warren County to prevent a recurrence.—E. W. S.

All Set for a Claim

"I am enclosing two pictures of cattle along the right of way that I secured recently on the Sunflower district of the Memphis division," writes V. S. Adkins,

claim agent at Clarksdale, Miss. "Picture No. 1 shows a cow on each side of the track. Ordinarily on the approach of a train one or the other is sure to cross the tracks. Picture No. 2 shows a bunch of cattle coming on the tracks just north of Belzoni."

Ambulance Chasing Condemned

The following is from the St. Louis (Mo.) *Globe-Democrat* of January 9:

"Action by the state legislature to provide additional scholastic requisites to make admittance to the bar more difficult was urged in a resolution passed by the St. Louis Bar Association at its meeting at the University Club last night.

"A report on a bill being prepared by a special committee for presentation to the legislature, intended to eliminate or at least minimize a practice commonly known as 'ambulance chasing,' was also read before the association.

"The bill as submitted last night would

make it a misdemeanor for an attorney to solicit business personally or through persons employed by him, punishable by a fine not exceeding \$500 or a jail sentence not exceeding six months, or both. The bill failed to contain a provision that lawyers would be similarly punished for soliciting the business of corporations, and was returned to the committee that this might be included."

The *Globe-Democrat* of January 10 carried the following editorial comment:

"By a vote of three to one the local Bar Association passed a resolution for higher educational equipment and for a statute penalizing lawyers who solicit professional engagement or hire others to do it for them. For what did the one-fourth who voted 'no' stand? The law confers so many privileges on bar practitioners that they may cheerfully submit to individual restrictions designed for the public's protection and their own collective benefit."

HARRY LAUDER'S READING

My bank book is my favorite reading, I confess. I do my work for the love of it because my heart is in it. But a bank book can be thrilling—the best literary thriller in the world. And don't be afraid the edition of the bank book is too limited. Every man should have his copy and he should keep it for private circulation—very private. No other one in the world should know what is in that precious bank book. The Scots have a proverb: "Aye, keep somethin' to yerself ye would na tell to ony!" That's your bank book. On every page there should be something nicer than on the page before. And every bank book should have a happy ending. On the last page the end should be: "Continued in our next." The bank book should be the foundation of the family library. People open the check book too often and the bank book not often enough. The check book's too full of reading matter.—SIR HARRY LAUDER.

Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions December 29:

Name	Occupation	Years of Service	Date of Retirement
Nicholas Willwert	Carpenter, Burnside Shops	26	6/30/22
John E. Nelson.....	Foreman, Burnside Shops.....	36	9/30/22
John Davidson	Section Laborer, Leitchfield, Ky.....	17	10/31/22
Joseph S. Bradbury.....	Stationary Engineer, Mattoon, Ill.....	19	10/31/22
Charles Hirschfeld	Asst. Foreman (B&B), Chicago Terminal	27	10/31/22
Samuel R. Crawford.....	Agent-Operator, Genoa, Ill.....	43	10/31/22
James L. Dickinson.....	Engineman, St. Louis Division.....	41	11/30/22
Charles Stopfer	Laborer, Freeport Shops.....	27	11/30/22
Edward H. Groff.....	Clerk, Sioux City, Iowa.....	27	11/30/22
Thomas J. Murchison, Sr.....	Agent, Troy, Tenn.....	20	10/31/22
Philip Adrian	Boiler Inspector, Waterloo Shops.....	41	12/31/22
Charles Steinke	Wheel Borer, Burnside Shops.....	31	12/31/22
Jacob Vet	Carpenter, Burnside Shops.....	27	12/31/22
Joe F. Randall.....	Engineman, Tennessee Division.....	38	12/31/22
Albert Davenport	Section Laborer, Valley, Miss.....	42	12/31/22
Yazoo & Mississippi Valley			
Alex Herbert	Pumper, Burnside, La.....	23	10/31/22

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
Ira D. Farrington.....	Conductor, Kentucky Division.....	12/ 5/22	5 months
Albert W. Bellows.....	Switchman, Chicago Terminal.....	12/ 9/22	9 years
William G. Kruger.....	Conductor, St. Louis Division.....	12/ 9/22	3 months
Harry H. Marks.....	Clerk, New Orleans Terminal.....	12/ 6/22	12 years
James W. Jones.....	Agent-Operator, Indiana Division.....	12/ 1/22	2 months
Alex Brown	Laborer, Tennessee Division.....	12/14/22	1 year
Mike Kelley	Engineman, Tennessee Division.....	12/16/22	6 years
Thomas Boland, Sr.....	Section Laborer, Springfield Division..	12/20/22	2 years
Joe Davis	Section Laborer, Mississippi Division..	12/18/22	3 years

Traffic Department

Asphalt Traffic Is Handled in Liquid Form

By O. C. STEIN, Chief Clerk,
General Freight Department, New Orleans

A PREVIOUS issue of this magazine described the location of several oil-refining industries at stations on the Yazoo & Mississippi Valley Railroad—North Baton Rouge, Good Hope, Destrehan and St. Rose, La.

With the construction and operation of these refineries petroleum, refined oils and asphalt have come into being as things manufactured on our line.

The asphalt produced at these refineries is what is known as petroleum asphalt, having as its base crude Mexican petroleum, which moves from Mexico in tank steamers to these Louisiana ports, where it is refined through a heating process.

The crude oil is boiled in stills or re-torts, the first process bringing the light oils to the surface, after which the same process is applied a second time to remove the heavy oils; what remains is asphalt. The gradual boiling, with the increasing heat application, tends to harden or solidify the asphalt, so that the greater the temperature, the harder the asphalt.

Asphalt is sold on specifications providing for certain penetrations, which are determined by a scientific method known as the "penetration test." It is apparent, therefore, that no asphalt is produced until the orders are in hand, and then it is produced in accordance with the specifications as shown in the orders. For example, a road contractor having a contract for the paving of a stretch of road which must accommodate heavy travel will place an order calling for, say, 40-50 penetration, and the asphalt is then manufactured according to these specifications.

From this it is apparent that very little asphalt is stored after being manufactured.

How the "Penetration Test" Works

It may not be amiss here to endeavor to explain the so-called "penetration test." This test is made in the laboratories of the refineries by highly qualified and competent chemists with a scientific instrument which consists of a testing needle, an iron weight weighing 110 grams and a 3-ounce tin container. A sample of asphalt is placed in

the 3-ounce container and heated to a temperature of 77 degrees. The needle is then placed by the use of this instrument on the surface of this sample; the 110-gram weight then forces the needle to penetrate the asphalt for five seconds, and the distance this needle penetrates the sample fixes the solidity of the asphalt. For instance, on 40 penetration asphalt this needle would penetrate the sample 40/100 centimeter, or .15748 inch; under 225 penetration specifications this needle would penetrate 225/100 centimeter, or in other words .885825 inch. The penetration test is a known one for fixing the specifications in connection with the sales of asphalt and is recognized and approved by the American Society for Testing Materials.

Another method occasionally employed to determine the solidity of asphalt is the ring and ball test. A disk of bitumen (asphalt) held by a metal ring of prescribed dimensions is suspended in water or glycerine and a steel ball of prescribed weight superimposed. Through the uniform application of heat this specimen begins to melt (or, more properly, soften) and when it has fallen one inch the thermometer indication is taken as the melting, or softening, point.

All asphalts, of course, are not used in road construction. A considerable volume used for roof coating, known as roofing flux, is of a penetration or test degree from 111 to 225, depending on specifications.

Asphalt Kept Warm in Storage

With orders in hand the production begins according to specifications, the product being run into storage tanks of 60,000 to 100,000 gallons capacity, each penetration or grade being placed in a separate storage tank, where it remains just long enough to be tested and analyzed. In the meantime the asphalt in the storage tanks is kept heated by application of steam through coils connected with the storage tanks, the temperature ranging from 250 to 300 degrees Fahrenheit, depending upon weather conditions. During the winter it is, of course, necessary to apply the maximum steam allowance. After proper sampling and analyzing, the shipments are loaded, mostly in

tank cars, being pumped by powerful pumps from the storage tanks to the tank cars; consequently, the asphalt when loaded in the tank cars is in a heated state and of the same temperature as prevailed when the asphalt was in the storage tank. Tanks are loaded to the full shell capacity, rarely being loaded in the dome.

The average capacity of tanks in the asphalt service is 10,000 gallons. These tank cars are equipped with heater coils, so that steam may be applied at the destination to soften or liquefy the contents and thereby permit an easy flow.

Asphalt when loaded in a heated condition contains certain air pockets which disappear with contraction. As a result, almost immediately after loading, a shrinkage or lessening of the volume of asphalt is perceptible. With an outside natural heat rays temperature of about 120 degrees, asphalt will run freely from tank cars ninety-six hours after loading, so that during the summer months asphalt flows freely from tanks ninety-six hours after loading, while during the winter the free-flowing period is reduced to forty-eight.

Have to Reheat When Unloading

From this it will be seen that when asphalt is in transit five days or more it is almost impossible to obtain an easy flow in unloading; hence we note the equipment of the tank cars with heater coils, to which steam is applied at the destination, this method again softening the contents and

thereby permitting the easy flow necessary to unload the car.

Most asphalt shipments are loaded in tank cars, although some shipments of the very heavy paving or solid asphalts are made in steel drums approximating 380 pounds a drum, and this package in some instances is used for asphalt in a heated or liquefied condition.

The heavy movement of asphalt for road building to Northern destinations is during the spring, summer and early fall months, when conditions in such territories are ideal for this road building.

The movement to points in the South is almost continuous the year around.

During the last four or five years asphalt produced in this territory has become a considerable factor in the road-building program of this country. The territory served is not confined to points in the southern states, as there has been a considerable movement to points north and west as far as St. Paul, Minn. With the present campaign for good roads, asphalt should be an ever increasing factor in the construction of road highways.

The movement of petroleum asphalt as produced at these refining points has been an important one in the tonnage of the Illinois Central and Yazoo & Mississippi Valley railroads. With the increased road-building operations, the tonnage should continue to increase in volume and importance.

Christmas Rush Was Test of Our Service

During the closing month of 1922 the employes in the Illinois Central suburban service at Chicago, as well as those in the through passenger traffic, were called upon to handle a tremendous increase of business. December was a test of the efficiency of the entire passenger traffic organization. The men who bore the brunt of this augmented strain acquitted themselves with credit.

During the month a total of 2,362,321 suburban passengers were carried over the Illinois Central at Chicago. On one day alone, December 16, more than 100,000 suburban passengers were handled. A total of 91,676 outbound through passengers also were carried during the month.

Regular suburban and through passenger train service was augmented by additional equipment to scheduled trains and also by extra trains in order to handle the traffic. All employes cheerfully contributed their share toward taking care of the abnormal increase of business.

The month showed a large increase in express shipments over the corresponding period of last year, as well as the preceding months of 1922. United States mail tonnage made a gain of about 60 per cent over that of December, 1921. These increases were taken care of without friction or strain at the Chicago terminals.

Mr. Markham's Christmas greeting to patrons of the Illinois Central System, distributed by employes during the holiday season, strengthened the ties of esteem between those who serve and the public that is served, making easier the task of transporting the people to and from the city during one of the busiest Christmas periods in the history of Chicago.

Two-thirds of "promotion" is "motion." If you want to get ahead, get a move on. Hustle. Learn something about many things and all about one thing, and you're bound to keep moving—up.—*The Night Watchman.*

There Is No Real Compensation for Injury

By A. I. BENTZ,

Iowa Division Conductor

NOW that the winter season is again with us and has brought along its increase of hazard through snow, ice, cold, fog and other causes of personal injury, I think it fitting to bring before the mind of each and every member of the Illinois Central System employe family the necessity of exercising the greatest preventive of personal injury possible, which to my mind is thought. We are all equipped with minds that have the ability to think safety and protection, without interfering with our duties to employer or ourselves.

The cemeteries from end to end of our railway system have a goodly sprinkling of unfortunate employes who failed or did not deem it necessary to think "prevention of injury." Again, look into any of the hospitals, and there you will find another group of employes who neglected to use that marvelous preventive of injury—thought. I do not contend that all cases of injury can be avoided by thinking, yet we all will admit that a very considerable percentage could be eliminated if all of us thought prevention of injury, which would bring us close to the goal of protection of life and limb and permit us uninterrupted pay checks and whole bodies. It matters not what department we represent, from the most menial position to the highest, we can and ought to think of prevention of injury, not alone for ourselves and fellow-employes but also for the public which comes in direct contact with us. We all know that the company we represent has gone to an enormous expense to equip itself with modern safety appliances to prevent personal injury. Every employe remaining in the employ continuously is assuredly an asset, while the injured employe is a sure liability. The company has done its part, and one cannot but think: Are we doing ours?

No Real Compensation for Injury

Any employe is certainly a fool who is willing to forego the joy of health for the compensation paid the injured.

I do not recall, regarding a single accident that has come to my attention in the

A. I. Bentz

twenty-seven years I have been in the employ of the Illinois Central, that I would have been willing to undergo one-fourth the inconvenience and pain that every person I ever knew to receive an injury was forced to undergo for the compensation received, not taking into account the suffering and hardship necessarily forced upon my family.

Why does the colt, driven for the first time up to a threshing machine or automobile, tremble and bolt from left to right to get away? Just thinking of the prevention of injury.

Why does the fox, 'coon or rabbit double back on its trail when pursued by its foes? Is it for the fun of giving them the longer run? Oh, no! Just thinking of the prevention of injury.

Why does the bull-frog, when it sees the lad approaching with club in hand, leave the sunny bank of the pond or creek and dive to the bottom, burying itself in the mud or under a rock? Just another creature—and, as scientists claim, the creature with the least brains of any—thinking of the prevention of injury.

Four Reasons to Avoid Injury

Now shall we allow these dumb creatures to give us warning every day and not heed it?

There are four outstanding reasons why each and every one of us should think prevention of injury at all times:

First, our duty to our employer, from whom we receive the wages that make it possible to keep together the home we have and to provide for the loved ones dependent upon us;

Second, our duty to ourselves, for if we do not think prevention of injury we may soon be crippled wrecks and hindrances to our loved ones instead of helps and protectors;

Third, our duty to our family, who are dependent upon us for the necessities of life and who look to us for a continuance of that which is rightfully theirs;

Fourth, our duty to God, who has given us a wonderful body to live in and a more wonderful mind to use for its protection and who will surely ask an account of the care we have given this earthly temple he has lent for our human habitation. Will he accept our "I did not think" should we be called upon to return a maimed or broken body to him?

Children Put "Safety First" Into Verse

By C. H. WILLIAMS, Sr.,
Freight Office, Jackson, Miss.

"Safety First," addressed originally to transportation employes, has ramified until it is indorsed by all industries, practiced by the public and taught in the schools. A concrete example of the latter is to be found at Jackson, Miss., where Miss Marcia Gibbs, principal of the Poindexter Grammar School, makes it obligatory for every child to study the basic principles of this wonderful panacea for human accidents.

Recently Miss Gibbs started a contest among the younger pupils to see who could write the most effective verse carrying the "Safety First" idea as it appealed to each child. The prize was the privilege of dressing in fancy costume and reciting the winning verse before the assembled school-children.

Both of the two beautiful children shown in the picture, Helen Frances and Dorothy

Dorothy and Helen

Glenn, daughters of J. A. Hardy (an employe of the Illinois Central for sixteen years, at present night chief clerk in the Jackson freight office), won prizes. In this picture they are not, as might be supposed, dressed for a Japanese tea party, but were snapshotted as they were ready to appear before the school.

The verses which these two clever children composed are:

I am not to play with fire,
Nor to touch a broken wire.
A light pole I am not to climb,
For fear that danger comes behind.
Stop, Look and Listen
For the cars that may be nearing.
"Safety First" is my pledge.
No matter where I may go.

HELEN FRANCES HARDY, age 10.

Don't you point your gun at me
For your fun I cannot see.
For my motto, you will know,
I don't go where freight trains go.
If you make safety your line
You will see no trouble comes behind.
My slogan, "Stop, Look, Listen."

DOROTHY GLENN HARDY, age 8.

There is an old saying in college that in case of freshmen you must "catch 'em young, treat 'em rough and tell 'em nothing." In the case of the children at Poindexter School, Jackson, it is apparent that they "catch 'em young, treat 'em gently, and teach 'em everything."

Recent Engineering Promotions Announced

Edward L. Crugar, former district engineer of the Illinois Central at New Orleans, has been appointed engineer of construction for the Illinois Central System, with offices in Chicago. J. W. Kern, Jr., is appointed district engineer of the Southern Lines, with headquarters in New Orleans.

G. M. O'Rourke is appointed roadmaster of the St. Louis division, headquarters at Carbondale, Ill., to succeed Mr. Kern. C. W. Lentz is appointed roadmaster of the Indiana division, with headquarters at Mattoon, Ill., succeeding Mr. O'Rourke.

L. H. Bond is appointed assistant engineer maintenance of way, with headquarters in Chicago, to succeed W. G. Arn, appointed chief engineer, Chicago terminal improvement. M. M. Backus is appointed district engineer, Northern Lines, with headquarters at Chicago, to succeed Mr. Bond. J. E. Fanning is appointed district engineer, Western Lines, with headquarters at Waterloo, Iowa, to succeed Mr. Backus. N. R. Hill is appointed roadmaster of the Iowa division, with headquarters at Fort Dodge, to succeed Mr. Fanning.

NEWS OF THE DIVISIONS

CHICAGO TERMINAL

E. C. Harper

Chief Accountant

Congratulations are in order for C. D. Turley, assistant engineer, who is the proud father of twins—a boy and girl—born Saturday, January 13.

Our business solicitation campaign on the Chicago terminal is going well. It is pleasing to announce the record of Flagman C. C. Monds. Passengers solicited and obtained between Chicago and St. Louis during 1922: January, 2; February, 3; March, 7; April, 11; May, 22; June, 28; July, 12; August, 4; September, 7; October, 10; November, 3; December, 33; various other points during the year, 81; permanent suburban passengers, 90.

Suburban Passenger Service (Marion Pressler)

Pensioner Albert W. Bellows passed away December 9. Mr. Bellows was formerly employed as a switchman at Randolph Street station.

Recently, during the evening rush hour on our suburban trains, a woman passenger lost her bearings in a heavy cloud of steam and stepped between an engine and a car, falling to the ground. The train standing at the platform started to move about the time this woman fell. Conductor L. L. McDonald, on the next platform, observing the condition, immediately got under the platform and prevented the woman, who was only slightly injured, from attempting to get out until the train cleared.

Sympathy is extended to Gateman G. B. Wyllie, who recently lost his wife and son-in-law within a few days of each other.

(A. E. Johnson)

On the morning of December 18, as train No. 150 had started to leave the platform at 63d Street, a passenger came running up the steps to board the train. The train was made up of three Sullivan steel coaches. He tried the side doors, but found them locked. There was so much steam escaping from the coupling between the engine and the car that he was unable to see there was no platform on the car. Nevertheless, he made a leap for the place he thought the platform should be. Conductor Boylan, who had walked up to the head end to ascertain the cause of the escaping steam, saw him lunge forward. Conductor Boylan grabbed him and pulled him back, thus saving him from instant death. The man followed on the next train to Randolph Street, hunted up Conductor Boylan and, disregarding Mr. Boylan's insistence that a reward was not in order, since he was only performing his duties, pushed \$50 in Mr. Boylan's pocket.

Fordham Yards (D. O'Connell)

Disposition Clerk Edwin Hayes of Wildwood has returned to work, after having been absent several days, due to illness.

Chief Yard Clerk Ralph Kinne was absent from duty a few days recently, due to the illness of his wife. The latter is now much improved.

Yard Clerk Joseph Walsh, who has been absent for some time, due to illness, has returned.

Car Carder John Roth informs us he has purchased a home of his own in Harvey, Ill.

Harvey, Ill. (F. W. Wright)

E. Cornell has transferred from the accounting

department at South Water Street to the agent's office at Harvey to fill the vacancy left by the resignation of J. A. Collins, rate clerk.

ILLINOIS DIVISION

George Strauss

Office of Superintendent

A baby girl, Phyllis Anne, was born to Mr. and Mrs. L. H. Thoele of Effingham December 27. Mr. Thoele is ticket clerk at Effingham.

R. L. Tooker, formerly operator at Effingham, has been appointed dispatcher at Champaign.

Miss Neva Jackson of Champaign and Harold E. Walters, accountant in Mr. Hevron's office, were married at the home of the bride's parents December 31. They then enjoyed a two weeks' honeymoon in Jacksonville, Fla.

Frank Gorman, who has been employed as ticket clerk at Champaign, has accepted a position as ticket clerk at Central Station, Chicago.

Marvin Cummins has accepted a position as supervisor's clerk at Gilman.

Miss Grayce Ferguson has accepted a position as stenographer in the yardmaster's office, Champaign.

INDIANA DIVISION

Florence McShane

Secretary to Superintendent

Office of Trainmaster, Palestine, Ill. (Olive Gibling)

Orville O. Wesner, 29 years old, an Illinois Central employe, received an injury December 28 while working in the shops at Palestine. Mr. Wesner was struck in the head by a wrench while at work. He was taken to the Robinson, Ill., Hospital, Wednesday, January 3, where an operation was performed in an attempt to save his life, but the operation was unsuccessful and he died at 7 o'clock that evening. Mr. Wesner came to Palestine several years ago from Oaktown, Ind., and had made Palestine his permanent home. He leaves a widow, daughter, father, mother, four brothers and two sisters and other relatives. Mr. Wesner entered the service of the United States Army during the World War, June 28, 1918, and served in Company M, 4th Battalion, 22d Engineers. He spent ten months overseas, being discharged July 3, 1919. Funeral services were held at the Christian Church, Palestine, December 29.

John B. Sumner, brakeman on the Indianapolis-Effingham district, received a personal injury while doing some work at Mount Perry station at 5:45 p. m., January 8. Train No. 392, on which Brakeman Sumner was the flagman, stopped to do some work at the Templeton track near Mount Perry. The caboose stopped about midway on Buck Creek Bridge and Flagman Sumner picked up his red and white lantern and stepped off the caboose at the bridge, not realizing where he was. He fell to the bottom of the bridge, breaking two ribs and receiving other body bruises. Mr. Sumner was at once taken to the St. Vincent Hospital at Indianapolis, and District Surgeon Ensminger was called. Mr. Sumner's condition is somewhat improved, but, due to his age (57), his recovery will be slow.

Office of Agent, Evansville, Ind. (A. W. Walling)

Effective December 16, H. B. Hopkins, former commercial agent of the Tennessee Central Railroad at

One Hundred Five

Nashville, Tenn., was appointed city freight and passenger agent at Evansville, Ind. Mr. Hopkins has recently moved his family to Evansville.

Wednesday, January 10, A. B. Dade, veteran race starter, died at New Orleans, La., of heart trouble. Mr. Dade was the most renowned starter in the United States, his acquaintance extending from coast to coast. He had officiated at races in the United States, Canada and Mexico. Dade Park, the newly built race track near Evansville, is named after Mr. Dade.

A son, Fred, Jr., was born to Mr. and Mrs. Fred B. Miller December 27. Mr. Miller is accountant at Evansville station.

Indianapolis, Ind. (Margaret Clifford)

M. L. Costley, general freight agent at New Orleans, stopped off on his way to Chicago and renewed his acquaintances January 12 and 13 and talked with our patrons.

Agent Ward, after having difficulty in obtaining help, has hit on a plan to employ clerks from big families. He now has three clerks representing thirty-four persons in the families. He knows now he will have help.

Mabel Swearingen, clerk, transferred from local office, Bloomington, to local office, Indianapolis.

Office of Chief Dispatcher (W. C. Scott)

Operator J. R. McGowan has been appointed to the agency at Wheeler, Ill., vice Harry Feldman, who goes to second trick at Cass, Ind.

Operator Charlie Mehringer has returned to work at Wisconsin Street, after a continued absence while handling special work in the agent's office, Indianapolis.

Telephone Operator Myrtle Flaherty has been absent from duty a few days on account of sickness; Miss Greta Crabtree relieving her.

Dispatcher J. W. West is now happily living at home, having moved his family here from Lewisburg, Tenn.

We are glad to report that Mrs. E. L. Smith, wife of Dispatcher Earl Smith, has completely recovered from an operation performed recently.

Dispatcher Morgan Storm is now "grandpa," a fine son having been born to his son, Merle, and wife.

Business is very good on the Indiana division, showing a considerable increase to date over last month.

Our division handled several of the new Mikado and Central type locomotives through Indianapolis en route to Chicago and Centralia.

Office of Agent, Mattoon, Ill. (W. P. Wooldridge)

The agent's office is now equipped with more telephones, which will be a great convenience to the public. Below is given the new arrangement: No. 196, agent or chief clerk; 585, cashier; 256, OS&D clerk; 254, rate clerk; 159, foreman.

Accountants' Office (Noriene Quinn)

The week before Christmas, Mrs. C. W. Stephenson, wife of Timekeeper Stephenson, while visiting her son, Robert, in Evansville, Ind., fell and broke her leg. She was in the hospital there several days, when she was removed to Mattoon. She is now slowly recovering.

Office of Master Mechanic (Flora Adrian)

J. H. Cobb, gang foreman at Evansville, Ind., was promoted to night roundhouse foreman at Mattoon, Ill., November 16; Holland Brown, night foreman at Mattoon, to machine foreman; William Lofgreen,

machine foreman at Mattoon, to night foreman, Indianapolis.

I. Walton, stockroom laborer, has returned to work after being off duty on account of an injury received by being run over by automobile while riding his bicycle home from work December 26.

Miss Pearl Powers, daughter of General Car Foreman and Mrs. C. C. Powers, 2705 Richmond Avenue, Mattoon, Ill., recently became the bride of Horace J. Dole. The Rev. Marion Hull, pastor of the Presbyterian Church, read the ring ceremony in the presence of about sixty guests. Leslie Dole, brother of the groom, and Miss Ruth Champion were the attendants. A buffet dinner followed the ceremony, the color scheme of pink and white being carried out throughout the dining room. Following a trip to St. Louis, Mo., and Quincy, Ill., the young people will make their home on a farm two miles west of Mattoon, where the groom has a new bungalow already furnished for his bride. Mr. Dole is a son of Mr. and Mrs. W. E. Dole, living northwest of the city. He is a graduate of the Mattoon High School and of the Quincy Business College, Quincy, Ill. His bride is also a graduate of Mattoon High School and later attended the University of Illinois.

Office of Roadmaster (Bonnie Snorgress)

Effective January 1, C. W. Lentz, chief building inspector at Chicago, assumed his duties as Roadmaster of the Indiana division, succeeding G. M. O'Rourke, promoted to the St. Louis division.

Forest Abel, formerly messenger in the superintendent's office, has accepted a position as clerk to Supervisor J. C. Crane, Mattoon. John Roberts is the new messenger.

Office of Superintendent (Zella MacNair Rose)

Since E. C. Craig of the firm of Craig & Craig (our local attorneys) has been appointed general attorney for the Illinois Central at Chicago, Mr. Craig has departed from Mattoon to assume his new duties in the general office, and his family will join him in the near future.

C. J. Walker, supervising agent, Mattoon, was taken suddenly ill January 12 with an acute attack of appendicitis. It was found on examination by Company Surgeon Baker that it would be necessary for Mr. Walker to submit to an emergency operation, and on January 13 he was operated on in the Illinois Central Hospital in Chicago.

John Warren & Sons of West Liberty, Ill., dressed 3,000 geese, shipping them to New York for the Christmas market. They also dressed between 3,000 and 4,000 turkeys and shipped them to New York for the Thanksgiving market, which gave the Illinois Central a nice revenue.

On December 16, O. R. Marriott, agent at Dieterich, Ill., was married to Miss Mary Smith of Newton, Ill. After a simple ceremony performed at the Methodist parsonage at Newton, the bride and groom left for a few days' honeymoon with friends and relatives at Decatur, Ill., returning to Dieterich December 30. Mrs. Marriott is an accomplished musician, having been graduated from the School of Music of Milliken University, Decatur. She will be greatly missed in Newton, as she has taught there since leaving college and has been active in musical circles.

Milton Dorsey, agent at the Mattoon freight house, now on a leave of absence, has been visiting his son, Blaine, in Phoenix, Ariz., and expected to remain there during January. Mr. Dorsey is on his way east, after having spent six weeks on the Pacific Coast.

Office of Trainmaster, Mattoon (Essie Reams)

C. A. Keene, trainmaster, has been in Chicago

the last few days. He went to visit his mother at Edwardsburg, Mich., for a day, after which he came back to Chicago and went to the Illinois Central Hospital for the removal of his tonsils. Reports indicate he got along well.

On December 23, at the Methodist parsonage at Evansville, Ind., Conductor M. D. Alsop and Mrs. Clarice Feutz were united in marriage. They spent the holidays in Cleveland, and expect to make their home in Mattoon as soon as Mrs. Alsop can be relieved from her duties as teacher in the Olney schools.

On December 15 Pat Stuckover, switchman, left Mattoon for a tour of the East. His trip will include Buffalo, Niagara, Syracuse, New York City, Philadelphia and Washington, D. C. Postcards indicate he is at present in New York City.

Carpenters have been busy around the yard office in the last few days altering things in order to make a place for the recently acquired trainmen's board—a gift from the chief train dispatcher.

Norman McLeod, pensioned machinist, Mattoon, Ill., is now, as ever, a booster for the Illinois Central. One day in December last, a friend of Mr. McLeod's casually inquired of him which was the best route to Detroit. Mr. McLeod promptly informed him about the Illinois Central's service by way of Chicago. The friend remarked that someone had told him that another road had a cheaper rate to Detroit. The next morning, when the friend was leaving on an early train, Mr. McLeod arose early and went by for him, and together they went to the station, where the ticket agent informed them that the other road would be a little cheaper. In spite of this, Mr. McLeod prevailed upon his friend to take the route he had laid out (which he himself had often done) and assured his friend that he would surely get there on time and enjoy the trip, too. Mr. McLeod in a few days received a letter from his friend telling him of his pleasant trip and thanking him for the interest he had taken.

Favorable entry has been made on the efficiency records of Brakemen P. A. Vatchett and Gus Overwaser, who fired the engine of train No. 293 from Bethany to Mattoon, Saturday night, December 9, when Fireman A. W. Butts was injured at the water tank at Bethany, Ill.

Shushan Temple No. 180, Dramatic Order, Knights of Khorassan, located in Mattoon, Ill., recently received an official visit from Gus Meece of Spokane, Wash., who is the Imperial Prince of that organization. Mr. Meece has been traveling for more than a year inspecting various temples, and Shushan Temple was the 123d visited on this inspection trip. Mr. Meece realized that Mattoon has the second largest lodge of Pythians in Illinois and that the Mattoon "Dokkys" are well and favorably known throughout several states; he therefore spent two days in our city. A banquet served in his honor at the Association of Commerce Building was attended by about 250 members, many of our railway men being among them. Mr. Meece delivered a pleasing address, in which he complimented the local temple highly and recalled that, as a broom manufacturer in Spokane, he bought his broomcorn in Mattoon and had previously visited our city in connection with his broom business. Mrs. Meece accompanied her husband on the trip to Mattoon.

Charles H. Munson, for many years a resident of Mattoon, Ill., was fatally injured when struck by a United States mail truck in Evansville, Ind., about 6 o'clock Saturday evening, December 2. He was taken to a hospital, where he died in a short time without regaining consciousness. His skull was fractured. Mr. Munson, whose home was in Evansville,

C. H. Munson

now the Indiana division of the Illinois Central, as a bridge carpenter, an occupation he followed for a number of years. In 1888 he became a fireman on the road, and in a few years he was promoted to engineer. For a number of years immediately preceding his death he had been employed as an engineer in the yards of the Illinois Central at Evansville. On September 22, 1887, Mr. Munson married Miss Rosella Althause of Parkersburg, Ill. Surviving are the widow and one son, Roy A. Munson of Freeport; the mother, Mrs. S. P. Munson of Mattoon; two brothers, Will W. Munson of Monmouth and Harry A. Munson of Brazil, South America; three sisters, Mrs. Ed Severns of Mattoon, Mrs. Ed Warren of Villa Grove and Mrs. Will Beer of Mount Clemens, Mich. Mr. Munson was a member of the Masonic Lodge, the Loyal Order of Moose, the Brotherhood of Locomotive Engineers and the Court of Honor.

SPRINGFIELD DIVISION

Della Morrison

Office of Superintendent

Office of Agent, Clinton, Ill.

E. R. Ewy, formerly employed in this office and now temporarily employed with Mr. McPike at Chicago, spent Sunday, December 31, with his family in this city.

Miss Anna Murphy is absent from her duties as stenographer on account of illness of her mother. She is succeeded by Miss Nancy Ely.

Verne Westerholt is being temporarily employed as freight clerk, relieving William Crum, who has been granted a ninety days' leave of absence.

Curtis Borton, receiving clerk, who was taken seriously ill a few weeks ago, is now convalescing and has gone to Oklahoma City to spend a few weeks before returning to his work.

Leonard Brooks, employed in the warehouse, received a message that his sister had been taken seriously ill on January 1 and had been taken to the hospital in Bloomington. It is now reported she is recovering.

Verne Westerholt and Calvin Long of the freight house force starred in a recent basketball game between Clinton and Mansfield at the latter place. After a fast game, the score was 32 to 29 in favor of the local lads. The local team has a remarkable record for this season, having lost no games.

Clinton Shops (Flora Drago)

John Putnum died at the John Warner Hospital, Clinton, on November 17. Mr. Putnum was born at Greensboro, N. C., April 15, 1855. If he had

been able to work until February 4, 1923, he would have been in the service of this company thirty years. He entered the service of the Illinois Central as a car repairer and held a position on the wrecking crew. Faithful service was the cause of his being quickly promoted to gang foreman, a position he held for several years. On account of poor health he was forced to give up this position and resume his work as a caboose carpenter, which he held until the time of his death. During this period of service he never missed a single pay check. Funeral services were held at the home on November 19. His widow, two sons, Otis and Guy, and a host of friends mourn the loss.

John Putnum

Accounting Department (Ethel Jones)

Otis Miller has returned to work after several days' illness, feeling considerably better.

Lee Ely recently received a severe sprain in the back of his leg while playing volley ball with his children.

Clinton Storehouse (Esther Jones)

Authority has been issued for a 67-foot extension to the road department storehouse platform for storage of frogs and switches, which will add materially in maintaining and caring for this classification of stock.

The supply department has taken possession of the extension to the road department storehouse and is using it to store a stock of roadway material.

William Neely, electrician's helper, is ill with pneumonia at his home in Dewitt.

Line Stockkeeper A. Howard recently purchased an automobile.

Decatur Yard (Fon E. Hale)

E. L. Hale, veteran engine foreman, was off duty from December 26 to January 9 with a bad infection on his neck.

H. Kippenhan, switchman, was off duty with a sprained ankle from December 14 to January 2.

Clinton Shops (C. E. Gray)

Machinist Frank Schock has been promoted to assistant roundhouse foreman, day shift.

Engines Nos. 3001 and 3534 have been received on the Springfield division. Both engines have been set up and are now in service.

Engines Nos. 3525 and 3526 passed through Clinton January 9 en route to the St. Louis division.

The Springfield division handled a students' special from St. Louis, Mo., to Champaign, Ill., January 3. Engine No. 1054, with Engineer Hoyt, handled the train, maintaining the enviable reputation of the Illinois Central for "on time" schedule. Many expressions of satisfaction as to the handling of the special have been received.

Decatur, Ill. (Helen Krafft)

New arrivals in the freight office are Francis Mahan, bill clerk; Oleva Parsons, stenographer, and Russell Wykoff, claim clerk.

One Hundred Eight

C. J. Miller, engine foreman, and Mrs. Arrington were married December 30. They have gone to Ohio and other eastern points for an extended trip.

Pana, Ill. (H. J. Lynam)

The *Pana Palladium* of December 28 had the following to say: "Courtesy of a Real Railroad—Northbound Illinois Central passenger train No. 120, due out of here at 11 a. m., was delayed here in the North yards about ten minutes Wednesday morning.

"Mrs. Grace Purdy of Chicago, who has been here visiting relatives, was returning home on this train. After the train had left the station, she discovered that she had left her purse—containing all her money and her ticket—lying on a seat in the waiting room.

"She notified the conductor, and the train was stopped in the North yards and held until a small boy on a bicycle could take the purse up to the waiting train.

"Simply another example of Illinois Central courtesy."

Local painters of the Springfield division have been beautifying Illinois Central property in Pana. As we look east, west, north or south, all we see are yellow and red—bright, brighter, and brightest.

Clinton Storehouse (Esther Jones)

Accountant C. F. Clemons recently returned from spending Christmas with his parents in the Ozark Mountains of Missouri, along Lake Taneycomo. Mr. Clemons reports a fine trip and says the Missourians

On Lake Taneycomo

were having regular spring weather. Lake Taneycomo is said to be the coming summer resort of the Middle West. A power dam at Forsyth, Mo., supplies electric power for Springfield, Joplin, Carthage, Aurora and other places. Forsyth is located a few miles from the home of Mr. Clemons' parents.

Superintendent's Office

On the night of January 8 a number of friends gathered at the home of Trainmaster Frank Walker and gave him a surprise in honor of his 37th birthday. An enjoyable evening was spent. The main feature was an enormous birthday cake bearing thirty-seven candles, which was disposed of.

Work on the new telephone exchange is progressing rapidly, and the present indications are that the work will be completed and service installed not later than February 15.

Business on the Springfield division continues to show a steady increase, December being the second largest month in tonnage in the history of the division.

Our division editor, Miss Della Morrison, enters
Illinois Central Magazine

tained all the young women of the general office force at her home the evening of December 28.

Trainmaster's Office (Clara M. Hoyt)

O. R. McClelland, Clinton district conductor, who is receiving treatment in the John Warner Hospital, is in a serious condition. Mr. McClelland is suffering from cerebral hemorrhage, having been stricken at Pana, Ill., December 13. C. S. Steger is taking his place on passenger runs Nos. 102 and 105.

Mrs. George Thomas, wife of Switchman Thomas, died Sunday, January 7, after an illness of several weeks.

A switching crew in charge of Engineer F. C. Wright and Engine Foreman C. McConiga was placed in service at Vandalia, Ill., December 11.

Brakeman Charles Thorpe was called to Crookston, Minn., January 9, on account of the death of his mother.

Fred Sallee, one of the passenger flagmen on runs between Freeport and Centralia, has been transferred to the Illinois division in a similar capacity.

Conductor J. L. Ford is receiving treatment in the company hospital in Chicago. Mr. Ford has been in poor health for some time. Conductor T. W. Johnson is relieving him on trains Nos. 17 and 18.

Harley S. Roberts, employed as brakeman on the Clinton district for the last three years, died at his home, 114 East Woodlawn Street, Clinton, December 16, typhoid fever being the cause of his death. Mr. Roberts was a native of DeWitt County, and previous to his employment as a brakeman had lived on a farm near Lane. He was considered a careful employe and will be missed by his co-workers. He is survived by his widow and two children.

Conductor and Mrs. O. H. Lawson are enjoying a vacation in Florida. Conductor J. J. Millan is taking his place on trains Nos. 19 and 20.

Frederick Neal Tarvin, son of Conductor and Mrs. R. H. Tarvin of Pana, Ill., died in the Fitzsimmons Hospital, Denver, Colo., December 27, of tuberculosis contracted during his service in the United States Navy during the World War. He was 21 years of age. He was buried in Pana with full military honors. Besides his parents, he is survived by four brothers and one sister.

R. I. Murray is relieving E. A. Rambo as passenger flagman on runs between Gilman and Pana. Mr. Rambo has been ill with pneumonia.

Chief Dispatcher's Office (Gladys Westerholt)

At a dinner party given at the home of Mr. and Mrs. O. B. Koontz on January 2, 1923, was announced the marriage of Dispatcher O. S. Jackson and Miss Helen Grason, both of Clinton, who were married in Peoria on April 25, 1922. They will make their home in Clinton, renting an apartment in the Bianucci flats.

O. L. Oxley has taken the position as agent at Thomasville, effective January 10.

F. J. Stuber, agent at Chestnut, is off duty for a few days.

C. E. Bowman, operator at Waggoner, had an operation performed for goiter in the Chicago hospital January 15.

L. C. Grandfield, operator at East Junction, Clinton, and Miss Helen Wible of Mason City were united in marriage in Peoria on Saturday, December 23. Mrs. Grandfield is a graduate of Normal University and is a musician of considerable talent, having won several vocal contests. The couple will reside in Decatur for the present, but hope to make Clinton their home.

Russell T. Ward was installed as agent at Mont. Ill., effective December 20. This is a new position which was made necessary on account of heavy interchange with the St. L., T. & E. and the Illinois Terminal at this junction.

Mr. and Mrs. W. H. Rooker have returned to their home after an extended vacation in Arkansas.

R. C. Fortman, operator at East Grand Avenue, is off duty on account of illness.

Road Department (John Phillips)

Water Service Foreman P. V. Grimes was the principal speaker before the Rotary Club of Pana, Ill., on December 19.

A Pease vertical blue-printing machine has been received for the use of the engineering department.

C. C. Catlin, one of the oldest and most respected passenger engineers on the Springfield division, died of pneumonia on December 10. Mr. Catlin was born in Mineral Ridge, Boone County, Iowa, on October 1, 1856. When he was about 2 years of age, his parents moved to Keithsburg, Mercer County, where he grew to manhood. When 19 years of age he accepted a position at that place in the roundhouse of the Rockford, Rock Island & St. Louis Railroad Company. After working in the roundhouse approximately a year, Mr. Catlin sought and obtained a position as brakeman, and within a few years he was promoted to position as conductor. Later he took up locomotive firing. After four years and two months in this service he was promoted to engineer on the Chicago, Burlington & Quincy. After leaving that service on February 27, 1888, as a result of labor trouble, Mr. Catlin obtained employment as an engineer with the Chicago, Peoria & St. Louis Railroad in the spring of 1889. After about three years' service he resigned and took up farming. The following years were spent in agricultural pursuits. He then left the farm and went back to railroading, entering the service of the Wabash in 1895 as an engineer. He later became affiliated with the St. Louis, Peoria & Northern, a road which was purchased by the Illinois Central in 1899. Mr. Catlin up to the time of his death had charge of one of our passenger locomotives, the duties of which position he discharged in a careful and conscientious manner. Mr. Catlin leaves to mourn

C. C. Catlin

his death, his widow, two sons, one daughter, one brother, one sister and three grandchildren, besides a host of friends. He was laid to rest on December 13 in Oak Ridge Cemetery at Springfield.

ST. LOUIS DIVISION

J. W. Brown

Office of Superintendent

R. C. Gurley, yard clerk at Mounds, was married to Miss Virginia Childers on January 6. Miss Childers was formerly a teacher. They took a honeymoon trip in Florida and will reside at Mounds.

Myron Brooks, timekeeper in the division office, was married December 25 to Miss Nell Scott of Slater, Mo. They are residing at 516 South Illinois Avenue, Carbondale, where they will be glad to receive any of their friends.

Thompson Randolph of Carterville, Ill., 75 years old, died January 10. Mr. Randolph was the father of Mrs. T. A. Robertson, wife of Road Supervisor T. A. Robertson, and was the grandfather of Max Robertson, messenger in Superintendent Atwill's office.

Horace Mick of Carbondale and Miss Emma Cecil of High Point, S. C., were recently married. Mr. Mick has been employed by the Illinois Central in the water works department for a number of years. He was in the World War. They will reside at 308 South Washington Avenue, Carbondale.

Carl Etherton, M. C. B. clerk, car department, Carbondale, and Miss Cecil Baker of Carterville, Ill., were married recently. They will reside in Carbondale.

There was born to Mr. and Mrs. I. B. Earle of Carbondale on December 21 a 10¼-pound girl. Mr. Earle is an instrumentman for the Illinois Central.

With a steadily improving market, the coal mines in Southern Illinois set a new production record in December for the months since the end of the strike. December production of eighty-three mines reporting to the Coal Operators' Association of the fifth and ninth districts was 1,589,619 tons, as against 1,404,637 tons in November and 1,539,330 tons in October, the second highest month in production.

J. E. Link, section foreman, Tamaroa, Ill., died December 6, 1922, of heart trouble.

W. S. Treece of Anna, Ill., recently found a rail sticking up in the ground and protruding across the track, and removed it, preventing what might have resulted in serious trouble.

L. E. Profflet, Jr., Cairo, Ill., working under Agent F. M. Block, Cairo, has taken a thirty days' leave of absence to take a honeymoon trip.

O. H. Holcomb, switchman, Centralia, Ill., working under Trainmaster Gibbs, died December 31.

J. J. Greer, cashier, freight office, Carbondale, is still confined to his home on account of ill health.

Ralph Sanders, Centralia, has been awarded the temporary position of clerk in freight office, Carbondale, to take the place of W. E. Baggett, who has taken the temporary position of cashier.

Albert Mileur, Murphysboro, Ill., has been appointed messenger in the superintendent's office, Carbondale.

Miss Helen Grief has taken a position as clerk to Trainmaster F. E. Hatch, Carbondale, as E. L. Clayton, who formerly held the position, has been appointed statistician.

Everett Holman has taken the position as clerk to Supervising Agent B. F. Williams, made vacant by the departure of Miss Helen Grief. Miss Lura Bell has taken the position made vacant by Mr. Holman's departure.

Mechanical Department, Centralia District (Thelma C. Gilpin)

Centralia shop has just been notified that, in addition to the \$41,000 worth of new machinery received

One Hundred Ten

and installed in the local shop, \$19,635 worth has been authorized on the 1923 budget and will soon be shipped to Centralia to be installed. In addition to this, Mounds will also receive \$6,370 worth of new machinery.

During the week of January 8, Centralia shop received and set up three Central type locomotives from the Lima Locomotive Works. In addition to this, we are informed that several more are to be sent us at Centralia for the Illinois and Springfield divisions. We have also received three Mikado type locomotives from the Schenectady Locomotive Works and expect to receive more to be set up and put in service on the Illinois and St. Louis divisions.

Engineer Frank Otto was discharged January 12 from the Illinois Central Hospital. He had been there since the early part of December.

E. J. Ellis, engine lister at the roundhouse, is in the Illinois Central Hospital at Chicago, having undergone an operation for appendicitis on January 8.

Roundhouse Foreman Ralph Westbrook has been confined to his bed the last two weeks, due to an attack of muscular rheumatism. Mr. Westbrook so seldom loses time that his absence causes considerable inquiry and comment, this being the first time he has actually lost time for three years. We are glad to report at this time he is much improved.

At a 6 o'clock dinner given by Miss Thelma Gilpin for the girls of the master mechanic's office on December 23, Miss Maude Wallis announced her engagement to Herbert L. Chaffee of Fort Wayne, Ind. Miss Wallis has been file clerk in the master mechanic's office for a number of years. The date of the wedding has not been learned, but it will probably take place some time in the early spring.

It is with a great deal of regret that Centralia reports that, effective December 1, Engineer James L. Dickinson retired as an active locomotive engineer. Mr. Dickinson entered the service as a locomotive fireman March 1, 1882, and his name appeared on the payroll for each month during the entire forty years with the exception of October, 1920, at which time his wife died. Mr. Dickinson leaves the active service beloved by officials and employees alike. He also leaves the service with a reputation of being one of the best engineers that any railroad ever had in its employ. It is not uncommon to hear the train dispatchers talk about the safe runs and the on-time runs that Mr. Dickinson handled. Section men also talk the same way. In the many years of service on the Centralia district, he had become so well known that few failed to recognize him. He had an enviable service record. Mr. Dickinson is 62 years old and one of Centralia's most respected citizens. The immediate cause of his retirement was a slight heart affection. On the advice of the chief surgeon, Mr. Dickinson decided to retire from active work.

Freight Office, Herrin, Ill. (H. L. Tygett)

I. C. Straker, switchman, Herrin yards, ventured into the matrimonial field a few days ago, changing the name of one of our bill clerks, who was formerly Miss Ruth Chew. They will reside in Herrin.

HAMILTON WATCH COMPANY
LANCASTER, PA., U. S. A.

Hamilton Watch

"The Railroad Timekeeper of America"

served at 6:30 p. m., after which the presents were distributed. All in attendance reported the party a big success.

Conductor J. H. Quinlan on train No. 28, December 24, lifted annual pass No. 20556, good on the Wisconsin division, on account of being in improper hands.

Trainmaster G. S. Rought has fully recovered from a serious operation on his eye which was performed at the Illinois Central Hospital in Chicago and is now back at work.

Dispatcher C. S. Pack has resumed his duties after being on the sick list for the last three weeks.

Freeport Shops

(W. H. Diefenthaler)

The Associated Shopcrafts of the Freeport shops and outside shops on the Wisconsin division held a get-together meeting at the Odd Fellows' Temple, Freeport, Ill., Wednesday night, January 3. More than 600 were present, which included shopcraft men and their families.

The Burnside shops orchestra from Chicago furnished the music for the program and dancing. Several of the employees of the local shop who are musicians also assisted the Burnside orchestra. This orchestra is composed of employees of the new shopcraft organizations.

W. S. Williams, general superintendent of the Western Lines, located at Waterloo, Iowa, was the principal speaker. Speeches were also made by the following employees of the Illinois Central: W. R. Smith, local chairman of machinists, Burnside shops, Chicago; H. L. Crowell, general secretary of machinists, Waterloo shops, Waterloo, Iowa; A. G. Wettergren, general secretary of carmen, Chicago, Ill.; J. R. Turner, general secretary of boilermakers, Chicago, Ill.; W. B. McGrew, general chairman of electricians, Champaign, Ill.; Albert Dori, general chairman of sheet metal workers, Chicago, Ill.

Other out-of-town guests were: L. E. McCabe, superintendent, Dubuque, Iowa; R. L. Guensler, chief clerk, Dubuque, Iowa; J. E. Fanning, district engineer, Waterloo, Iowa; George Crawford, local chairman of carmen, Clinton, Ill.; Joe Ducatt, local chairman of carmen, Burnside shops, Chicago, Ill.

The following program was given: A. G. Fleck, chairman of program; Frank Farnum, vocal solo; Albert Symanek, concertina solo; A. L. Edwards, cornet solo; Henry Ipsen, accordion solo; Roscoe LeBarron, vocal solo; Miss Culpin, solo dance. Mrs. Naomi Burnwood Kidd, pianist, accompanied the soloists on the program.

All local officials, including the superintendent, master mechanic, trainmasters, traveling engineers and other supervisory forces of the local offices and shops also attended the meeting.

After the program the dance floor was cleared, and dancing was indulged in between 10 p. m. and midnight.

Charles Stopfer, laborer, employed at Freeport shops, was pensioned, effective December 1. Mr. Stopfer entered our service at Freeport shops, September 16, 1895, and worked continuously up to December 1, 1922, at which time he reached the age of 71 years 9 months.

Rockford, Ill.

(D. M. Evans and W. P. Mullane)

Miss Marjorie Wilson has been given a two months' leave of absence on account of ill health and will

recuperate at the home of her parents in Syracuse, N. Y.

Miss Bessie Mills has resigned her position with the C. & N. W. at Beloit, Wis., to accept a position in our billing department.

Paul Yuccas has purchased a touring car and bids fair to become a racer of note.

Martin Keister of the warehouse force is contemplating resuming his trade as a butcher, opening a meat market in the near future.

Milton Stevens, chief delivery clerk, was called to Indianapolis recently by the illness of a relative.

Sam Northall, who for the last seventeen years has been employed as a delivery man in the freight house, is planning on a trip through the Pacific Coast states the coming summer. This will be his first vacation in his long term of service.

Agent J. J. Carty of the C. & N. W. has perfected a system to prevent the misloading of freight which has attracted official attention from several railroads. The plan, although simple, is a guaranty against truckers' errors. When a warehouseman receives a load of freight, he is furnished with a specially designed check which is to be placed on a spindle in the car. As his check will fit only one spindle, he cannot possibly get into the wrong car.

The Illinois Central bowling teams have resumed activities after a short lay-off over the holidays.

December was our "peak" month for 1922, our earnings for that month exceeding the earnings of any other month that year.

During 1922 we handled 27,219 tons of outbound freight with only seventy-six errors, or an average of 358 tons per error, an average of six exceptions per month.

Road Department, Freeport, Ill.

(Frances Manion)

Yard Foreman C. Hurt of LaSalle, Ill., has received favorable mention on his efficiency record for his alertness in discovering a loose wheel on Pa-576327 at Wenona on October 3. Foreman Hurt found three defects in equipment last year.

Supervisor L. Conley of the North Amboy district is confined to the Illinois Central Hospital in Chicago.

F. A. Redican, chief clerk to Roadmaster Boland, has resumed work after being confined to his home for three weeks with quinsy.

There are thirty-six foremen in the maintenance of way department who did not have a single man injured under their supervision during 1922.

No stock was reported killed on the Wisconsin division during December.

A community Christmas tree was planted on Illinois Central property at Wenona, Ill. All the churches of Wenona participated in the celebration, and a splendid spirit prevailed. More than 600 children

Christmas tree, Wenona, Ill.

were treated, and every one seemed to enjoy the occasion.

Freight Office, Freeport, Ill.
(Mary H. Peck)

Saturday noon, December 23, was a time of much merriment in the agent's office, due to the fact that it was the date for the third annual Christmas party. Promptly at the hour a dinner consisting of chicken patties, mashed potatoes, celery, ice cream, cake and coffee was served and greatly enjoyed by all present. At the conclusion of the feast, gifts were exchanged and a social hour indulged in. This practice has been in effect for three years and is looked forward to each year by the entire force. Those present were: Supervising Agent J. F. Riordan, Agent J. J. Reilly, Chief Clerk M. H. Peck,

Cashier F. Rodemeyer, Accountant L. Kracht, Rate Clerk E. Cahill, Abstract Clerk J. Peck, Car Clerk F. Doyle, OS&D Clerk, R. Schietz, Car Record Clerks E. Green and F. Donahue, Bill Clerks C. Allen and G. Snow and Stenographer M. Richards.

Miss Irene Keister, formerly stenographer in the agent's office, resigned December 26 in order to continue her studies at Beloit College. She is specializing in public speaking. Her place was filled by Miss Margaret Richards, who has been doing the work temporarily during Miss Keister's three months' leave of absence. Miss Richards' position, that of bill clerk No. 2, has been assigned to Mrs. Gertie Snow, who also has been doing temporary work.

On January 13, 1855, the first train from Freeport south was run as far as Rock River. The bridge over Rock River connecting Dixon and North Dixon was not completed at that time. On February 8, 1855, a train running south from Freeport crossed the railway bridge for the first time. This is the date that the bridge was completed over Rock River. On February 12, 1855, trains began running from Dixon to Chicago on the Airline Road, now known as the Chicago & North Western.

IOWA DIVISION

Emmett Coffey,

Chief Clerk to Roadmaster

C. E. Tracy, pensioned supervisor of signals, died at his home at Goulesboro, Me., January 13, 1923. Mr. Tracy was pensioned December 31, 1919, after twenty-six years of service. At the time of his retirement he was supervisor of signals on the Iowa division. He began his service with the company in Chicago as a signalman in 1893. Until 1904 he was signal maintainer on the Chicago terminal and was then made whole line signal gang foreman. In 1907 he was transferred to Dubuque, Iowa, as division signal foreman of the Western Lines, where

"A Signal Maintainer's Dream," by E. R. McCullough, signal maintainer, Fort Dodge, Iowa

he remained until 1914. He was then transferred to the Iowa division as supervisor of signals, where he remained until his retirement. As soon as he retired, he made his home in Gouldsboro, Me., where he passed away in his 59th year.

Cherokee, Iowa (Anna Donahue)

Our first trick dispatcher, L. J. Mooney, left January 2 for Memphis, Tenn., to join party of dispatchers who are making tour over the system.

Lineman B. R. Peck of Cherokee has accepted a position as lineman at Freeport, Ill.

O. J. Anderson, second trick operator at Iowa Falls, Iowa, is on duty again after a trip in the East. Besides his duties as operator, Andy is also a student at Ellsworth College and has been chosen captain of the 1923 football team.

F. H. Spinharney, agent at Barnum, has taken a six months' leave of absence on account of the illness of Mrs. Spinharney.

W. R. Foster, agent at Williams, is making an extended trip through the South.

Frank Seifert, trackman, Oto, Iowa, has been in the hospital at Chicago for an operation.

Section Foreman G. Single of Merrill, Iowa, and Miss Elizabeth Bentz of Remsen, Iowa, were married at Cherokee December 4.

Section Foreman M. Monson of Sioux Falls, S. D., has returned to work after being absent on account of illness.

Council Bluffs Roundhouse (C. C. Kuhn)

Miss Edith Moss and Amos Eastridge were married November 29 at Papillion, Neb. Mrs. Eastridge is employed as a clerk in Road Supervisor Hill's office at Council Bluffs, while Mr. Eastridge is employed in the car department at Council Bluffs. Since January 1, Mr. and Mrs. Eastridge have been at home to their friends at 319 North 12th Street, Council Bluffs.

While Joseph Kurth, general foreman at Council Bluffs, was on a two weeks' vacation, visiting relatives and friends at various points on the Illinois Central System, H. C. Steinmeyer of the Waterloo, Iowa, shops acted as general foreman.

Machinist James H. Oliver has just returned to work after undergoing an operation in the Illinois Central Hospital at Chicago. Mr. Oliver speaks very highly of the Illinois Central Hospital and the interest taken in the patients who are there.

Sioux City Freight Station (C. C. Miller)

Edwin H. Groff, employed at Sioux City station since November, 1894, in various capacities, his longest term of service being that of sub-agent at the stockyards for the Illinois Central, has been ill since September 30, and it is likely that he will have to discontinue his service with the company. In leaving the service of the Illinois Central, Mr. Groff bears with him the well wishes of his former fellow employees.

A collection of \$200 was raised by employees of the Illinois Central at Sioux City as their contribution to the funds of the community drive. The object of this drive was to raise \$175,000 for various institutions and for the needy of that city.

Fort Dodge, Iowa

Engineer Homer Rhodes is spending the winter in California as a result of ill health.

Car Foreman A. L. Nicholas has resumed his duties at Fort Dodge after being out of service a considerable period on account of injury.

M. Toohey, section foreman, Fort Dodge yard, has returned to work after spending several days with his son in North Dakota.

Painter Foreman J. O. Martin has returned to work after a six months' leave of absence.

MINNESOTA DIVISION

Lucille Sims

Secretary to Superintendent

Office of Trainmaster, Dubuque (Marion Coffey)

Sympathy is extended to Conductor E. E. Hillier for the loss of his wife, to Conductor B. T. Crummer for the loss of his mother and to Brakeman L. F. Dunkley for the loss of his brother.

Conductor O'Connor is able to be with us again after being off duty for some time on account of injuries.

Engine Foreman Frank Fautsch has been commended for discovering a broken wheel on B&O-15893 in train No. X-2973, Conductor Everhart, called out of Dubuque for 10:15 a. m., December 22.

Switchman M. J. Herron is the proud possessor of a brand new motor car, a coupe.

Charles Clancy has been added to the office force as an extra caller.

Agent's Office, Waterloo, Iowa (Mabel Ridpath)

The sudden death on January 8 of W. H. Hadley was a great shock to all. Mr. Hadley had been employed as freight caller for the last five years.

Agent's Office, Cedar Rapids, Iowa (Josephine Doyle)

The marriage of Miss Gladys Copp and Milvoy

Malley took place at the rectory of St. Patrick's Church, December 28, 1922. The bride and groom

Mr. and Mrs. Milvoy Malley

have returned from a wedding trip to Chicago. Mr. Malley is assistant bill clerk in our local office.

Much credit is due our division painters, who recently renovated our freight house. We now pride ourselves on having one of the nicest offices on the division.

C. H. Jensen, section foreman, is confined to his home on account of illness.

C. H. Beeken, bill clerk, was host recently to some of the office force. An elaborate dinner was served by Mrs. W. H. Leiter, in whose home the party was held. Holiday spirit prevailed, and a most enjoyable time was had by all.

H. Callahan and his force from Dubuque are installing a new turntable in our upper yard.

Road Department, Dubuque, Iowa

(H. E. Shelton)

Supervisor J. W. Sims is taking treatment for an injured arm at the Illinois Central Hospital in Chicago.

Assistant Engineer S. C. Jump is acting supervisor in Supervisor Sims' absence.

Agent's Office, Dubuque, Iowa

(Grace Phillips)

Mike Bowling, rate clerk, revising bureau, recently resigned to accept a position with Armour & Co., Chicago, Ill.

Miss Ethel Lassance has been appointed assistant to the agent to succeed Miss Vivian L. Brand, who resigned to accept a position with the Bankers Life Insurance Company of Des Moines.

Frank Saul, messenger, who recently accepted a position as stenographer in General Passenger Agent Gray's office at Dubuque, has been relieved by Ralph Lassance.

Store Department, Waterloo, Iowa

(W. E. Barnes)

W. E. Burch, clerk in the store department, recently married Miss Janice Knowles, formerly clerk in the general offices of the Waterloo, Cedar Falls & Northern at Waterloo.

George S. Wise, pensioner, store department, is now convalescing after a protracted illness.

Weather in this vicinity, having been very mild all winter, has instilled the fishing fever in W. R. Hunt, store department laborer, who is now getting in training and making preparations for the spring fishing. If Mr. Hunt has a more successful season in 1923 than in the past, we of the store department will claim to have the champion fisherman of the system.

Miss Evelyn Decker has been recently employed as a stenographer in the office of E. S. Shapland, division storekeeper, Waterloo.

The store department has the honor of having thespian talent. K. E. Beal, assistant storekeeper, Waterloo, has been given one of the principal characters in the cast of "Kathleen," 1923 American Legion home talent play.

KENTUCKY DIVISION

Anne Sweeney,

Office of Superintendent

Local Freight Office, Louisville, Ky.

(John A. Higgins)

The infant son of Mr. and Mrs. James M. Ballard died January 5 after seemingly passing the effects of an operation. However, the child suffered a relapse and died four days after the operation. Mr. Ballard is first bill clerk in the local freight office.

Raymond Welsh has been convalescing from pneumonia and was expected to be able to report for duty Monday, January 15.

Miss Edmonia A. Daughterty had a narrow escape from being seriously burned at her home on the morning of January 8. She was in the act of lighting the stove when the gas light caught her clothing, and only her presence of mind and quick action in disrobing saved her from being perhaps fatally burned.

The billing department has reported the following persons ill during the month: Miss Nellie May Delany, Miss Florence Randolph, John Sage, Edward Dolan, Martin Berger and Allen Bruckert.

Walter Miles, Martin Berger and John Higgins are members of the Knights of Columbus Choral Club, which gave an elaborate concert on Sunday, January 7. The concert was under the direction of Joseph Panther of Louisville, and the soloist was Riccardo Martin, opera tenor, who is a Kentuckian. The concert was a great success.

A daughter, Margaret Elizabeth, was born to Mr. and Mrs. Celestine A. Zeller on January 12. Mr. Zeller is a clerk in the local freight office.

Harry Schoenlaub, in-car record office, was recently presented with a Masonic past master's jewel set with a diamond and moonstone. The presentation was made by the members of Mount Zion Lodge No. 147, A. F. & A. M., of which he has been a member since December 11, 1918, having been made

Hugh D. Bailey and Miss Elsie Louise Carter were married at Louisville, Ky., December 5. Mr. Bailey is agent at Rockport, Ky., and here is a picture of the home to which he brought his bride.

YOUR LOCAL WATCH INSPECTOR'S

Cashier's office force, local freight office, Louisville, Ky. Front row, left to right: Charles Lynn, Dan Buechele and H. L. Bard, cashier; top row: John J. Cassell and Miss Ann Mackie. Mr. Bard entered the service June 23, 1905. Mr. Buechele, assistant cashier, entered the service April 22, 1909, as a messenger. Mr. Lynn entered the service on July 23, 1913, as yard clerk and at present is rate clerk. Miss Mackie was employed on August 1, 1917, as comptometer operator, and at present is prepay clerk. Mr. Cassell entered the service as messenger on December 1, 1919, and at present is the collector.

a master Mason on that date. In 1920 he was elected to serve in the capacity of junior warden for that year, and he was senior warden in 1921. The following year he was elected to the master's chair, and having served in this seat for one year he was given a token of appreciation by the members of his lodge. Harry takes great pride in the fact that he was the youngest master Mount Zion Lodge has ever had, being only 25 years of age the day he was elected to that office.

Mechanical Department, Paducah, Ky. (G. C. Barnes)

Several of the new machines allotted to Paducah shops have been received and are now in operation: Two 40-inch drill presses, one combination axle lathe, one heavy duty engine lathe, two floor grinders, one 300-ampere electric welding machine, one 2x5x $\frac{1}{2}$ -inch flue outfit complete, one 36-inch special draw cut shaper, one electric crane truck. These machines will greatly facilitate the work at the shops.

A band has been organized by employees of the Paducah shops, the officers of which are: J. F. Walker, master mechanic, president; J. B. Thomas, trainmaster, vice-president; B. T. Adams, division storekeeper, secretary and treasurer; A. J. Leutenmayer, general foreman, director in charge; W. E. Thomas, machinist, business manager. The band now consists of twenty pieces, with prospects of more, and is having wonderful success.

One Hundred Eighteen

Air Brake Foreman G. C. Jacobs, who underwent an operation at the Illinois Central Hospital for appendicitis, is reported getting along nicely.

J. D. Alzman, labor foreman, Paducah shops, is wintering in Florida on account of his health.

M. V. Rucker, locomotive engineer, and family have gone to Florida to spend the rest of the winter.

Employees of the Paducah shops organized their annual "Good Fellows Club" before Christmas, chairmen of the various organizations being the leaders. There was \$246.35 contributed to this club for the benefit of fellow workmen, who were in needy circumstances. This has been the practice of Paducah shops employees for several years, to make those less fortunate a merrier Christmas.

Signal Department (J. P. Price)

The signal department educational meeting for January was held at Louisville on Monday, January 29, with an attendance of forty-five. The subject discussed was the maintenance of oil lamps.

Signalmen C. L. Bromley and H. D. Bromley are engaged on the new signal construction work on the Illinois division.

The new automatic signals between Fox Run and Graham, Ky., are now ready for service.

Authority has been received for the installation of automatic signals on the new line between Central City and Dawson Springs, Ky., a distance of forty-two miles. The type of signal to be used in this installation has not as yet been decided.

The work of raising the grade through Princeton, Ky., and constructing viaducts over Jefferson Street and Cadiz Road has been started. This work will eliminate two grade crossings, now equipped with crossing bell protection. It is expected that the work will be completed in about ninety days.

Signal Helper J. B. Taber is relieving Signal Maintainer Moorman at Cecilia.

Louisville Roundhouse (G. W. Shaughnessy)

The wedding of Miss Regina Smith and Maurice Bartley, engine carpenter, was solemnized at St. Mary's Church, Louisville, November 28.

The wedding of Miss Florence Johnson and James H. Dobbins, machinist, was solemnized at the home of the bride January 1.

Taken at "a hog killing" on a recent inspection trip with the superintendent's special, Kentucky division. Left to right: J. Pruitt, supervisor, Central City; B. T. Adams, division storekeeper, Paducah; P. Glynn, roadmaster, Louisville; J. W. Dearing, supervisor, Princeton; J. S. Stinebaugh, water supply foreman, Princeton.

Illinois Central Magazine

All chairmen of the Associated Shopcrafts report they are now having regular meetings which are well attended, and the men seem to be getting more interested at each meeting.

Several employees of the Louisville shops have been off duty on account of grip and the "flu." Engine Carpenters Fred Bader and C. M. Stasel, who have been off duty since Christmas, have just returned to work.

Valley, Ky.

(Alice E. Meadows)

The wedding of Miss Bessie A. Bailey, daughter of Mr. and Mrs. Charles Bailey of Valley Station, Ky., and Charles T. Decker, relief agent, Stephensburg, Ky., was solemnized at the home of the bride on January 10. Mr. and Mrs. Decker will reside at Stephensburg.

Miss Alice E. Meadows, agent at Valley, who has been off duty since December 7 on account of illness, has returned to work, slightly improved in health.

Here is the only 100 per cent agent on the Evansville district, as revealed by recent inspection of the Kentucky division. This shows Lon Kavanaugh on the left, agent at Blackford, Ky., and his station helper, Charles ("Slick") Martin, on the right.

Princeton, Ky.

(Sudie Cash)

Conductor A. E. Meader died of asthma at Evansville, Ind., on January 4. Conductor Meader had been in the service of the Illinois Central since May 1, 1899.

Littleton Groom, who has been clerk in the chief dispatcher's office for the last few years, left Saturday, January 6, to study law at Danville, Ind. He

President

was succeeded by W. O. Quiery, cashier at the Princeton freight house.

The engineers are on the ground and the work of placing viaducts on the Eddyville and Cadiz Street crossings is progressing rapidly.

News from J. W. Taylor, former chief dispatcher at Princeton, is that he is improving nicely and hopes before long his health will permit his return. He is at present in Tuscan, Texas.

Office of Superintendent, Louisville

Miss Helen Connaughton, telephone operator, underwent an operation to have her tonsils removed at SS. Mary's and Elizabeth's Hospital, Thursday, January 11. She is still confined to her home, but is doing nicely.

Miss Lillian Leitchfield, third trick operator, is seriously ill at her home on Greenwood Avenue.

A son, William Prichard, was born to Mr. and Mrs. Richey Prichard, January 9. Mr. Prichard is chief timekeeper. Mrs. Prichard was formerly Miss Irene Satterfield, comptometer operator in the office of the chief accountant.

The superintendent's special, carrying all division officers, inspected the Kentucky division from January 2 to 6.

Alvin L. Prichard, secretary to the superintendent, has resigned to accept a position with the Michelin Tire Company, Pittsburgh, Pa.

(Frank Robeson)

Sam Powers, 42 years old, special officer on the Kentucky division, died on December 14 at the Illinois Central Hospital, Chicago. His death was due to a complication of diseases, from which pneumonia developed. Mr. Powers was a native of Madisonville, Ky. Before entering the service of the special agent's department of the Illinois Central, he was connected with the police department as chief of police of that city for a number of years. He entered the service of the Illinois Central July 1, 1915, with headquarters at Princeton, Ky. August 1, 1918, he was transferred to the Memphis terminal, Memphis, Tenn., where he remained until April 1, 1919, when he was transferred back to the Kentucky division, with headquarters at Louisville. January 1, 1922, he was transferred to Paducah, Ky., and placed in charge of the Paducah district. Mr. Powers was an efficient police officer, fearless and always fair with those whom he asked for an accounting. His wide acquaintance and standing in western Kentucky made him a very valuable officer for the company, especially at the time the "night riders" and "possum hunters" were operating in that section. Surviving him are his widow, son, one sister and three brothers. The funeral was held at Hopkinsville, Ky., December 16.

Sam Powers

MISSISSIPPI DIVISION

Kathleen Hadaway,

Secretary to Superintendent

News has been received of the birth of a son to

One Hundred Twenty

Dispatcher and Mrs. J. R. Huff at the home of Mrs. Huff's parents, Bowling Green, Ky., on January 8. His name is J. R., Jr.

The Winona Infirmary, located at Winona, Miss., was almost destroyed by fire January 5. The fire was discovered in time for all patients to be removed, although several nurses were injured. The stockholders have decided to rebuild, and contractors are now figuring on bids for the reconstruction.

Miss Mildred Hudson and Richard E. Lake were married at the home of the bride's parents at Malesus, Tenn., December 26. Mrs. Lake, who is the daughter of Agent S. W. Hudson of Malesus, was a teacher in the Malesus High School. Mr. Lake is a flagman on the Jackson district.

Lieutenant-Commander L. C. Dunn of the U. S. Navy and Mrs. Dunn have returned to Chicago after a visit to Mr. Dunn's father and mother. Mr. Dunn is the son of Engineman C. E. Dunn, who has been employed on the Mississippi division since 1882.

T. P. Murray, stockkeeper, store department, Water Valley, Miss., has been in the service thirty-three years, completing his thirty-third year on January 1. Mr. Murray was reared in this county. He has a wife and three children, one of his sons also being employed in Water Valley shops.

LOUISIANA DIVISION

Claire Pimm

Office of Superintendent

Superintendent's Office

J. O. Mayfield is the statistician's new assistant.

Accountant I. F. Tullis has been ill in the Illinois Central Hospital at New Orleans, but is very much improved and able to be back at his desk.

Accountant C. H. Douglass is the proud father of a fine girl, Little Christine, who was welcomed into his home on December 9.

Chief Dispatcher's Office

E. W. Spragins, second trick operator at McComb, has been enjoying a sixty days' leave of absence, spending the greater portion of his time in Florida. Operator Bachman of New Orleans relieved him.

E. J. Rivers has accepted a position as third trick operator at McComb.

Dudley Pope, former trick dispatcher, Louisiana division, recently visited his old friends at McComb.

Signal Department

Signal Maintainer Ben Watts is very ill in a Jackson, Miss., sanitarium.

Road Department

Beginning at Asylum, Miss., one mile of double track is being laid on the Yazoo district at an approximate cost of \$35,000.

Additional facilities for handling vegetables during the coming season are being arranged at Crystal Springs, Hazlehurst and Terry.

Installation of additional water facilities at Hammond, La., at an approximate cost of \$20,000, is being made.

Store Department, McComb, Miss.

(J. A. Doyle)

Albert E. Hammond, stockkeeper, and Miss Ophelia Wilkinson of McComb were married by Rev. Mr. Purser at Magnolia, Miss., December 20. They are now at home on Beech Street, McComb.

Division Storekeeper C. B. Sauls, after having experimented for a year or two with a small motor truck for the transportation of material from one point to another in the shop, and having become thoroughly satisfied that the experiment was successful, is now planning an extension of this facility. He is contemplating the grading of a driveway to

SPRINGFIELD, ILLINOIS

connect the roadway store, in the southern portion of the shops, with the mechanical store, and through this channel have a quick outlet to both freight and passenger stations. Mr. Sauls maintains that this method is by far more economical than the old way of handling material by baggage trucks and push cars.

For the first time, efforts are being made to organize a truck growers' association in McComb. Many members of the store department who own farm lands near McComb are interested in the project. The organization is now a reality, sufficient members having been obtained and acreage pledged to authorize the statement that the first year's shipments, with any kind of season at all, will reach into the hundreds of cars, the principal commodities being cabbage, carrots and tomatoes, with small acreage of other things. Not only are members of the store department interesting themselves in this but also members of the shop force whose opportunities make it possible for them to assist in perfecting the project.

Marion Stingily of Pelahatchie, Miss., is the latest employe in the storehouse, for the present placed in charge of the car department bolt room.

Stockkeepers are now wrestling with the problem of becoming acquainted with the new master stock books, a system which was installed on the first of the year. Though the new plan is much larger in volume and number of articles stocked and at first requires much more time, it is thought that, when once in full and active use, it will greatly simplify and reduce the amount of work incident to the monthly compilation of a stock order and, at the same time, maintain a record permanent both at the originating storehouse and at the general storehouse.

Ticket Office, McComb

R. M. Wilson, joint baggage and ticket clerk, and Miss Mary Hannan, daughter of Charles Hannan, switch engineer, were married in Magnolia, Miss., on December 31, spending their honeymoon in New Orleans and Gulf Coast cities.

Ticket Office, Jackson, Miss. (J. G. Moore)

J. G. Moore, ticket clerk, and Mrs. Moore attended

the convention of the American Railway Ticket Agents recently held in Savannah, Ga. Before returning to Jackson, they made a tour through Florida, as well as a trip to Havana, Cuba.

Ticket Clerk C. C. Williams has joined the Jackson Symphony Orchestra.

Freight Office, Jackson, Miss. (C. H. Williams, Sr.)

Mrs. C. M. Quinn of Garyville, La., formerly Miss Ola O'Quin, employed as stenographer in the agent's office, was a visitor during the holidays.

Mrs. Douglas G. McNair, stenographer to the station accountant, resigned, effective January 1, to enter service with the Case-Teal Company of Jackson.

A surprise on Christmas day was the unexpected marriage of Ramsey W. Pridgen, chief clerk, Southern Weighing and Inspection Bureau, occupying office with us, and Miss Alleen Patrick of Jackson. The newlyweds are at home with Mrs. Hamilton on President Street.

C. H. Williams, Jr., formerly employed as clerk in the agent's office, but now a sophomore at the A. & M. College, visited home during the holidays.

Yard Office, Jackson, Miss.

E. E. Hardy, chief clerk to General Yardmaster R. W. Hardin, and Miss Kathleen Mullens were married December 24.

NEW ORLEANS TERMINAL

Care of Agent

Local Freight Office (Jesse W. Ford)

John J. Chiasson, unit clerk, accounting department, has resigned to accept a similar position in the accounting department at the Stuyvesant Docks agency.

The sympathy of employes of the local office is extended to Albert Oustalet, assistant O. S. & D. clerk, in his recent bereavement. Mr. Oustalet suffered the loss of his youngest sister on January 3.

Joseph Sconza, O. S. & D. clerk, owing to bad

"We have our car inspection forces on this division making a campaign on broken arch bars and truck sides," writes E. C. Roddie, master mechanic at McComb, Miss. "The attached photograph shows the defective arch bars and inspectors finding them at Gwin Yard, Gwin, Miss., during November, 1922. Reading from left to right the men are: J. P. Craft, lead inspector; J. F. Ruby, assistant inspector, first shift; R. E. Marks, lead inspector; J. T. Brister, assistant inspector, second shift; A. E. Robertson, assistant inspector; Ed Green, lead inspector, third shift. Men on all shifts find these defects, the first shift finding fourteen; the second shift four, and the third shift nine."

health, has been granted a leave of absence for thirty days.

E. A. Maillho, storage clerk, has been confined to his home for the last thirty days, a victim of the dengue fever. He has now fully recovered and is back at his old job.

George Houck, receiving clerk, is the proud father of a baby girl born January 7. She weighs eight pounds.

W. J. O'Rourke, accountant, local office, New Orleans, entered the service of the Illinois Central in December, 1902, as team track clerk, Levee yard depot, a position he held until September, 1907, when he was promoted to assistant uncollected clerk, local office. He occupied various positions in the accounting department, being advanced to assistant accountant in May, 1912, and made accountant in July, 1918. Mr. O'Rourke is a firm believer in the slogan, "Own your own home," and never lets an opportunity slip by when he can boost his motto. He is very much devoted to his home and family, occupying his spare

Home of W. J. O'Rourke

moments, when not engaged at the office, in improving and beautifying his property.

H. J. Augustine, receiving clerk, Levee depot, suffered the loss of his brother recently.

Some idea of the efficient manner in which coffee is handled at Shed No. 6, Levee depot, can be gleaned from the following record: The steamer Sac City, loaded with coffee, arrived at New Orleans coffee wharf January 2 and began to discharge its cargo on January 3. Five hundred sacks of this coffee were drayed to Shed No. 6, loaded into IC-25461 and forwarded to St. Louis, Mo., in our manifest train of that date.

Export Freight Office, Stuyvesant Docks
(Fred DeLong)

J. A. Hamburger, clerk in the accounting department, has tendered his resignation to accept employment elsewhere.

Mechanical Department
(Edward St. John)

T. J. Murphy, coal clerk, is now the proud father of a baby girl born December 1. The youngster weighed eight and one-half pounds.

The roundhouse force in Government yard is boasting a record hard to equal. They operated 255 successive days during 1922 without a personal injury.

Road Department
(S. S. Sterbenz)

On December 23 a daughter was born to Mr. and Mrs. Joseph Cole. Mr. Cole is foreman in the bridge and building department. The daughter weighed nine and one-half pounds at birth.

Superintendent's Office
(Myrtle Biersoll)

Joseph Carey, assistant chief clerk, has severed his connection with the company to accept employment

February, 1923

elsewhere. He has been succeeded by William A. Delph.

Miss Mamie Smith, telephone operator, Union Station, has been ill for the last thirty days at the Illinois Central Hospital, New Orleans, undergoing treatment. She has now fully recovered and was expected to be back on the old job by January 15.

Thursday, February 8, the Illinois Central Clerks' Social Club of the New Orleans terminal terminal will entertain at a "get-together" dance aboard the steamer Capitol. This is the first outing of the

YOUR CHOICE
\$20.00 MUSICAL
INSTRUMENTS

GIVEN

clerks and marks the opening of the carnival season, or "Mardi Gras." A cordial invitation is extended to all employees of the terminal and any visiting employees to join us on this occasion in celebrating the carnival festivities. August Kuntz is president of the Clerks' Social Club, and A. V. Bertaut is chairman of the arrangements committee.

MEMPHIS DIVISION

Mrs. Collie P. Said.

Secretary, to Superintendent

Ray Lipsey, accountant in the office of Superintendent J. M. Walsh, has obtained a leave of absence on account of ill health and will leave shortly for California.

Favorable reports are coming to us from Frank Williams, baggage agent, Clarksdale, Miss., who was so severely bitten by a dog a few months ago. Mr. Williams' arm, which was badly lacerated, is healing nicely.

Conductor and Mrs. A. V. Isler were called to Peru, Ind., on December 22 by the death of Mr. Isler's mother.

Conductor M. Mahoney has been called to Manitou, Colo., by the serious illness of his wife.

S. P. Critz, instrumentman on the Memphis division, has been transferred to the new construction work at Central City, Ky. His successor has not yet been named.

Agent's Office, Helena, Ark. (Mrs. W. L. Stovall)

J. A. Bonner, claim clerk, Helena freight office, carries a broad smile these days, due to the arrival

of a fine 9-pound boy at his home recently. His name is J. A., Jr.

Agent's Office, Greenwood, Miss. (F. Q. Stinson)

E. F. Page is warehouse foreman at Greenwood, and much credit is due him and his efficient force, including C. R. Bell, delivery clerk; H. G. Patton, receiving clerk, and A. N. Atkins, check clerk, for the splendid services they have rendered the last year and a half preventing claims.

The many friends of Mr. and Mrs. R. W. Brown regret to learn that they have moved to Coffeyville, Kan., where they will spend the winter. Mr. Brown has held the position of chief clerk for the last two years, and he and his lovely wife will be missed by all who knew them. The change was due to Mr. Brown's health.

F. Q. Stinson and Miss Velma Vaughan were united in marriage December 20. They visited relatives at Miami, Fla., during their honeymoon. Mr. Stinson has been appointed chief clerk, temporarily, at Greenwood, due to the illness of R. W. Brown.

Supervisor's Office, Tutwiler, Miss. (Clara Milligan)

Supervisor J. W. Fowler wears a broad smile, due to the arrival of a little daughter, January 3. Ann Jeanette is queen of the household now.

A lot of improvement has been made during 1922 on Supervisor Fowler's territory. Twelve new section foremen's and laborers' houses have been fenced and newly painted. Fruit and shade trees have been set out around each place. This adds greatly to the looks of the property.

Great assistance is being rendered by city authori-

Banquet given by machinists' organization, Sazerac Restaurant, New Orleans, January 4.

Standing, from left to right: A. P. Ruiz, gang foreman, Harahan; Daniel Schmidt, lead man, back shop, Harahan; W. J. Lange, roundhouse foreman, Government yard; M. East, vice-president of machinists' association; George Dougall, chairman, shop committee, Government yard; John P. Marque, lead man, machine shop, Harahan, retiring president; Sam Verdina, president, machinists' association; L. H. Stengel, roundhouse foreman, Harahan; Hy Aufdermarke, secretary-treasurer, machinists' association; Jack Lindgren, chairman, shop committee, Harahan. Seated at table, left side: Dewey Alford, machinist apprentice; E. Barrouse, machinist apprentice; Philip Carlin, machinist apprentice; Harold Fordyce, machinist handy man; George Riehlmann, machinist; Ed Ermon, machinist; Ed Martello, machinist; Jake Pecora, machinist apprentice; J. Dantonio, machinist apprentice; C. W. Harper, machinist apprentice; Ed Boutte, machinist apprentice; Charles Palmisano, machinist helper; Charles Angel, machinist apprentice; D. C. Marchand, machinist; James Halkias, machinist. Seated at table, right side: Charles Arceneaux, machinist apprentice; George P. Barned, machinist; Albert Moore, machinist apprentice; H. D. Edwards, machinist apprentice; Edwin Bivens, machinist apprentice; Pat Parnell, machinist; J. H. DeLaune, machinist; H. Runnells, machinist apprentice; Floyd Obiol, machinist; Alfred ("Ham") Lauber, machinist; J. J. Duggan, engine inspector; Louis Ernst, machinist apprentice; Ed Virgin, machine tool room man.

How You Can Make From \$50 to \$200 a Week

The amazing story of E. A. Sweet, who suddenly found that he was worth \$1000 a month

This is the story of E. A. Sweet of Michigan—as he told it to us—the story of a man whose income suddenly jumped to more than a thousand dollars a month. It is worth reading, for it tells exactly how anyone can do the same as Mr. Sweet did and equal his success.

"For a good many years I worked for a salary. I was an electrical engineer making from \$150 to \$300 a month. Like almost every other man who works for a salary I was dissatisfied, for I felt every day that if I were only working for myself instead of someone else I would make more money. It wasn't only that, either. I just didn't like the idea of having someone to boss me—someone else to tell me how much I was worth—to hire me or fire me just as he pleased.

"How did anybody know what I was worth? How did I know? I didn't, and that is what worried me. I wanted to know. Maybe I was worth five, ten or even twenty times as much as I had been getting. In other words, after a good many years of hard work with a certain measure of success I came to the conclusion that I was getting nowhere and that it was high time for me to do something on my own hook if I ever wanted to be more than just somebody's employee.

"That was only a few months ago. Today I am making more money than I ever dreamed of making. I am my own boss and last month my net profit was more than \$1,200.

"This is how it happened. One day I read an advertisement in a magazine. The advertisement said that any man could make from \$100 to \$300 a month during his spare time, or that he could make \$200 a week if he only had the necessary ambition.

"It was only natural that I should hesitate a bit before answering this advertisement. It seemed almost too good to be true. Frankly, I doubted whether it was possible. But I thought to myself that certainly there could be no harm in writing, so I clipped out the coupon and mailed it.

"I realize today that mailing that coupon was the most important thing I ever did. All that I have today—all the success that I have earned—is due to that one little act of mine.

"My work has been pleasant and easy. I am the representative in this territory for a manufacturer of raincoats. This manufacturer sent me a little eight-page booklet that tells any man or woman just what it told me. It offers to anyone the same opportunity that was offered to me. It will give to anyone the same success that it has brought to me.

"This raincoat manufacturer is the Comer

Manufacturing Company, of Dayton, Ohio—one of the largest manufacturers of high-grade raincoats in America. These coats are nationally advertised, but they are not sold through stores. All that I do is to take orders. I do not have to buy a stock of coats. I do not have to invest any money, and the beauty of the proposition is that I get my profit the same day that the order is taken.

"The little eight-page booklet which the Company will send to you will tell you exactly how you can do as I have done. It will tell you how to get started right in your own territory, and will tell you where to go, what to say, and give you all the information you will ever need.

"In my first month as a Comer representative I made \$243. That was a start, but it was only a start. My second month netted me \$600, and last month I hit the bull's eye with a net profit of more than \$1,200 for my thirty days' work.

"One year ago my life was limited to a \$200 a month income. I worked eight hours a day. Today my income is from \$600 to \$1,200 a month and I work four hours a day. A year ago I was not sure of my position. Today I am the sole owner of my own business. I still consider myself a greenhorn and I expect my profits to grow just as much in the future as they have grown so far."

• • • •

If you are interested in making from \$50 to \$200 a week and can devote all of your time or only an hour or so a day to this same proposition in your territory, write to the Comer Manufacturing Company at Dayton, Ohio. Simply sign and mail the attached coupon and they will send you the same eight-page booklet referred to by Mr. Sweet, without cost or obligation, and they will send you complete details of their remarkable proposition.

CUT OUT AND MAIL

**The Comer Manufacturing Co.,
Dept. Y-67, Dayton, Ohio.**

Please send me, without obligation or cost on my part, copy of your eight-page booklet and full details of your proposition. Tell me how I can make from \$50 to \$200 a week.

Name

Address

E. A. SWEET.

This picture was taken at Poplar Street Station, Memphis, Tenn., in 1898. The engine was formerly No. 506. When the Illinois Central System purchased the Chesapeake, Ohio & South Western, the number was changed to No. 192. It is now being used in switch engine service as No. 200. The crew, shown in the foreground, were, from left to right: Joe Burso, engineer, now dead; Jim Wheeler, fireman, now engineer on a coach engine; Tom Dutton, helper; J. T. Kyle, then and now engine foreman on the same engine; Milton Moore, killed in accident.

ties in the different towns along the Memphis division in the "No Stock Killed" campaign which was being conducted in January. All supervisors report owners of stock co-operating with the railroad in trying to keep stock up and off the right-of-way.

VICKSBURG DIVISION

H H Barlow

Office of Superintendent

A baby girl, Bobbie May, was born recently to Mr. and Mrs. Robert Pinson at Vicksburg. Mr. Pinson is an engineer on the Vicksburg division.

Conductors C. B. Ingram and H. Crichlow are off duty, as members of their family are ill.

N. B. Dennis, who has been in service since October 15, 1917, recently resigned his position as assistant chief clerk in the superintendent's office to take a position with M. C. Lilly & Co., Atlanta, Ga.

W. Shropshire, B. & B. supervisor, who was confined to his bed for a week, is around again.

"Big Ben" Parks comes to us from the Citizen's Bank to be one of the boys in the accounting department, superintendent's office.

Engineer H. B. Robertson, who has been confined to his bed for a week, is back at work again.

The Gypsy Smith, Jr., revival at Leland drew large crowds daily, but on account of the good roads and large number of automobiles in this section, very little of the additional travel came our way.

H. H. Barlow, who has been in the accounting force, superintendent's office, has been promoted to assistant chief clerk, succeeding N. B. Dennis, resigned.

The work of painting stations and other buildings on the division, which has been going on for the last few months, has been about completed, and now the Vicksburg division is trying to outshine them all in its new winter clothes.

C. H. Higgs, who was formerly with the Greenville Gravel Company, is a new member of the accounting department.

C. A. Cadenhead, who has been a member of the accounting department for the last six years, has been promoted to chief accountant.

One Hundred Twenty-six

NEW ORLEANS DIVISION

Thomas Treanor

Office of Superintendent

Along the Line

(S. P. Bolian)

Conductor Tom Appleby, who has been ill in the Illinois Central Hospital at New Orleans, for several weeks, is now on the road to recovery.

Conductor C. E. Gore, one of the oldest on the division, has been laid up for some time, but will be able to resume his run in a few days.

Engineer S. P. Bolian was selected to handle the President's special when Mr. Markham made his recent tour of the division.

The slow flags at Belle Point, La., have been removed. This leaves the track on the New Orleans division in better shape than it was ever known to be.

The grounds at Convent, La., are a thing of beauty, exciting much complimentary comment from passengers on passing trains. Agent Ozene Duhon gives the beautiful flower gardens his personal attention. Mr. Duhon, by the way, enjoys the distinction of being the oldest agent in point of service on the New Orleans division. He took charge at Convent April 22, 1885, and has been there ever since.

Supervisor W. T. Eldridge is encouraging the section foremen to beautify the grounds about the section houses, and they have entered into the spirit of the thing with enthusiasm. The coming spring will find a marked improvement in the aspect of the section houses and surroundings, judging from the present activities of the foremen and their families along the lines suggested by Mr. Eldridge. The other supervisors plan to do likewise.

Vicksburg and Vicinity

(Tom Treanor)

William Cassler, who was born in Bremen, Germany, December 5, 1856, and entered the service of the Yazoo & Mississippi Valley Railroad at Vicksburg, Miss., as yard clerk October 22, 1886, was found dead in bed on the morning of December 24, 1922. Mr. Cassler was a faithful and loyal employee.

Illinois Central Magazine

He was unmarried and maintained bachelor quarters. He died of heart trouble. So far, no relatives have been located, although a strenuous effort is being made by the administrator appointed by the court. Mr. Cassler was widely known in railway circles, especially by the old-timers. "Billy," as he was called by his numerous friends, was deeply loved for his genial character and goodness of heart. Visiting railway people always looked him up, for he was a rare companion. He is sorely missed in and about the Vicksburg yards, as "Billy" in his thirty-seven years of service there was looked upon as an institution.

D. P. Waring, accountant in the superintendent's office, is receiving congratulations on the birth of his third son. Mr. Waring celebrated the event by moving into his new home, which has just been finished.

O. W. Penalver, baggage agent, Vicksburg, who was injured during the recent high water while acting as switchman, has obtained a leave of absence for sixty days for further recuperation.

Mechanical Department (Thelma Howard)

Roy Delagarza is now file clerk in the master mechanic's office, filling a position vacated by Henry Schlottman, the latter having gone into business for himself. Mr. Delagarza and Miss Bonnie Jewell Stephens were recently married at the Methodist Church in this city. They departed immediately thereafter for a two weeks' honeymoon in New Orleans and other points.

Part of the motors for the electrification of the shops has been received and installed as quickly as possible. This means a big improvement in our shops.

Coach Shop Foreman J. A. Winder has just returned from a visit to London, Ontario, Canada. He brought many Canadian coins home with him for distribution among his friends at the shop.

Tool Room Foreman Harry Kay has just about completed his new home on his place, a few miles from Vicksburg.

Natchez, Miss. (R. K. Halman)

Recently our beloved co-worker, Walter B. Alexander, bill clerk, suffered a bereavement in the untimely loss of his dear sister, Ethel Alexander. Miss Ethel, while automobile driving, accompanying her fiancé, J. Hughes, a prominent civil engineer here, was instantly killed and Mr. Hughes was severely injured, their car plunging over a bridge into a deep bayou near Natchez.

In the last issue of our magazine, I narrated a recent hunting experience in company with Victor A. Jehlen, "champion wild duck spotter," which reminds me of a humorous experience while once hunting 'coons with some of my Yazoo & Mississippi

Valley companions. This time Ernest D. Goza, special accountant, proved a champion. I personally accepted full responsibility for conducting a party of 'coon hunters to a certain immense Mississippi River swamp below Natchez, which to my knowledge abounds with some of Mississippi's largest game, ranking among these the honorable racoon and family. My party was kept in silence as to our destination when we left Natchez, but immediately upon our arrival at this swamp we detrained from our sedan and cautiously unloaded our hunting paraphernalia and 'coon hounds, taking the most particular pains with our dogs, lest the signal go forth to our prospective captives of their impending danger before we could shoulder our guns and mount our high-powered searchlights. Immediately starting out in quest of our 'coon rendezvous, located on a creek three miles inland in this swamp, which could only be traversed by foot, I was cheated out of my role as guide by Ernest Goza, as he, unsolicited, gained the position in the lead of the party. (Bear in mind this was Ernest's first entry into this almost impenetrable swamp, famous as "No Man's Land.") We had all followed Ernest for about an hour, all of the time supposedly following a direct log road to the creek, when about the time I figured we should be nearing the creek there was a terrific collision and combustion, when the headlights of our party, in single-file procession, collided head-on with our sedan. First-aid treatment brought us all back to consciousness, and we all readily agreed we had better be promptly returned to our homes for treatment and permanent cure. Ernest proved to be the champion, due to the fact that he promptly showed

the rest of us that we were lost, and he saved our lives by bringing us back to our loved ones, even if we were subjected to such a collision and the resultant injuries, which in no wise can be blamed on him.

General Traveling Auditor D. L. Bloodworth and Assistant Ehrett have just completed a record station audit of the Natchez freight station. This audit required only two days. We boast of ourselves in having our station up to a standard which enabled this record audit to be made, as this was the quickest ever made at Natchez.

Baton Rouge, La.
(W. W. Cunningham)

Flagman Herbert Dobrowolski recently underwent a serious operation at Vicksburg and has recovered sufficiently to return to his home in Baton Rouge.

A very successful movement of the Louisiana cane crop was finished on December 20. It was accomplished without hitch or flaw, thanks to the co-operation of the planters and company.

A party of deer hunters tried their luck in the hunting grounds along the line of the Southern Pacific Railroad and reported considerable success. The party was composed of Engineers R. E. Montgomery, J. R. Smith, P. L. Johnson, E. W. Maddux and D. W. Cowart; Conductors E. O. Day, O. H. Ford and J. I. Wade; Boiler Inspector Hoff, and former Flagman H. B. Anglen. It was ruled that if any of the sportsmen missed a buck he had to submit to a real motherly spanking, and it is said that Engineers Maddux, Montgomery and Smith had to undergo the infliction. This indicates that the rest of the party were sure shots.

Here is the personnel of the office of Superintendent F. R. Mays at Vicksburg. From left to right, top row: R. M. Lowenberg, accountant; J. B. Smith, assistant timekeeper; G. M. Schaffer, chief accountant; John Anderson, timekeeper; E. D. Wilson, accountant; Bud Higdon, accountant; E. D. McCune, rodman; C. J. Brown, division accountant, and S. P. Thompson, statistician. From left to right, bottom row: H. W. Doyle, claim agent; Miss Nora Ring, stenographer; Miss Louise Bankstone, stenographer; Miss Maymie Andrews, tonnage clerk; Miss Marie Kahn, chief clerk to roadmaster; Miss Mary Kate Patterson, tonnage clerk; Miss Aurelia Curran, stenographer; Miss Arnot O'Hara, supervisor's clerk; Miss Jessie Bilet, stenographer; Miss Kate O'Hara, stenographer; Mrs. L. Ingram, assistant chief clerk; Miss Thelma Welsch, stenographer; A. S. Hurt, supervising agent; W. W. Fincher, ticket agent; C. W. Legg, supervisor's clerk; D. P. Waring, accountant; Thomas Treanor, accountant; W. B. Watson, assistant chief accountant; W. F. McDuff, file clerk, and S. F. Lynch, chief clerk.

L. H. Bond

Mr. Bond, recently appointed assistant engineer, maintenance of way, with headquarters at Chicago, was born at Louisville, Ky., November 14, 1879. He entered railway service as a chainman on the Illinois Central at Louisville in September, 1899. Later he served as rodman and instrumentman on construction work. From June, 1904, to June, 1910, he was in service at Carbondale, Ill., first as assistant engineer, then as supervisor and again as assistant engineer. From 1910 to 1914 he served as roadmaster at Clinton, Ill., and from 1914 to 1917 as roadmaster at Carbondale. From June, 1917, to June, 1919, in the absence of Colonel W. G. Arn, whom he now succeeds, Mr. Bond served a temporary appointment as assistant engineer, maintenance of way. Upon Colonel Arn's return, Mr. Bond was appointed district engineer of the Northern Lines, with headquarters at Chicago, a position he held until his recent promotion.

ILLINOIS CENTRAL MAGAZINE

MARCH

NINETEEN TWENTY-THREE

Published monthly by the Illinois Central System in the interest of the system, its officers and employees, and the territory served by its lines.

Address all communications to: The Editor, Illinois Central Magazine, Room 818, Central Station, Chicago. Manuscripts, photographs, etc., will not be returned, except upon request. All contributions should be typewritten—double-spaced—and signed.

GEORGE M. CROWSON, *Editor*.

CHARLES E. KANE, *Assistant Editor*.

We Saved Over Million Dollars in 1922

*Claim Payments Were Reduced \$1,216,594
Last Year as Result of Intensive Campaign*

By C. G. RICHMOND,

Superintendent, Stations & Transfers

THE slogan adopted by the Illinois Central System at the beginning of last year, "Save a Million Dollars in Freight Claims During 1922," was more than accomplished by a reduction of claim payments from \$2,449,275 in 1921, to \$1,232,681 in 1922—a reduction of \$1,216,594, or 49.6 per cent.

The offensive against causes responsible for claim payments started in the earlier part of 1920, did not bring results until August, 1921, but since that time there has been a reduction in claim payments each month for seventeen consecutive months, amounting to a total of \$1,749,126.

The following statement shows the remarkable reduction in claims paid for lost packages destined to stations on the Illinois Central and Yazoo & Mississippi Valley railroads during the last few years:

Claims for Lost Packages

	Number	Amount
1920	11,865	\$394,701
1921	4,575	277,139
1922	2,136	97,363

This reveals: 1921 compared with 1920, claims decreased 7,290, or 61.4 per cent; 1922 compared with 1921, claims decreased 2,439, or 53.3 per cent; 1921 compared with 1920, amount paid decreased \$117,562, or 29.7 per cent; 1922 com-

pared with 1921, amount paid decreased \$179,772, or 64.8 per cent.

It might further be pointed out, in connection with claims paid for lost packages, that there has been a decrease in the number of claims paid each month for twenty-four consecutive months—two full years. This remarkable record shows conclusively

David and Goliath

the result of the close check and supervision which the agents and supervising agents have given this particular class of claims. Under our present system, no claim for a short package is paid until it is approved by the supervising agent in charge of the delivering station.

In analyzing freight claim payments as to commodity, the freight claim department

used ninety-seven classifications. During 1922, as compared with 1921, seventy-eight of the ninety-seven commodities showed a decrease in claim payments.

Where the Decreases Were Made

Following is statement of commodities showing the largest decrease in claim payments during 1922:

Commodity—	1922	1921	Decrease	Per Cent Decrease.
Agricultural Implements.....	\$ 2,893	\$ 17,620	\$ 14,727	83.5
Chemicals and Explosives.....	6,051	25,196	19,145	75.9
Coffee	5,364	20,680	15,316	74.1
All Oils	13,262	49,293	36,031	73.0
Household Goods	18,570	55,249	36,679	66.3
Textiles	19,414	51,137	31,723	62.0
Sugar from All Points.....	46,495	121,808	75,313	61.8
Cotton	17,374	44,790	27,416	61.2
Flour and Other Mill Products.....	28,698	71,539	42,841	59.8
Manufactured Iron Articles.....	24,844	60,990	36,146	59.2
Lumber and Forest Products.....	18,651	44,588	25,937	58.1
Fresh Meats and P. H. P.....	62,070	145,845	83,775	57.4
Castings, Machinery and Boilers.....	19,679	44,918	25,239	56.1
Syrup, Glucose and Molasses.....	10,940	24,828	13,888	55.5
Automobiles and Auto Trucks.....	31,642	70,981	39,339	55.4
Other Manufactures and Miscel.....	199,809	417,070	217,261	52.0
Bananas, Fruits and Perishables.....	258,415	470,198	211,783	45.0
Bituminous Coal	74,735	132,420	57,685	43.5
Grain	106,295	185,869	79,574	42.9
Sewer Pipe and Drain Tile.....	21,388	33,589	12,201	36.3
Furniture (new)	41,786	62,166	20,380	32.7
Total	\$1,028,375	\$2,150,774	\$1,122,399	52.1

Following is a statement showing the reduction in claim payments by principal causes during 1922, compared with 1921:

Causes	1922	Percentage of Total Claim Payments	1921	Percentage of Total Claim Payments	Decrease	Percentage Decrease
Loss of entire package \$	97,637	7.92	\$ 277,139	11.31	\$ 179,502	54.7
Delays	129,938	10.54	341,001	13.92	211,063	61.8
Robbery	51,639	4.17	131,546	5.37	80,177	60.9
Improper refrigeration and ventilation	61,928	5.02	123,736	5.09	61,808	49.9
Loss other than entire package	129,365	10.50	247,793	10.11	118,428	47.7
Defective equipment..	183,003	14.85	349,436	14.27	166,433	47.6
Rough handling of cars	396,502	32.16	643,976	26.29	247,474	38.4
Wrecks	95,226	7.73	131,920	5.39	36,694	27.8
Total	\$1,144,968		\$2,246,547		\$1,101,579	49.0

The Four Chief Causes of Claims

You will note that rough handling leads all causes, being 32.16 per cent of the total, followed by defective equipment, with 14.85 per cent; delays and loss of package follow closely, with percentages of 10.54 per cent and 10.50 per cent. These four causes were responsible for 68 per cent of the total freight claim payments for 1922. The figures forcibly indicate the need of giving special attention to the items of cause showing the largest percentage of the total claim payments.

A review of the reduction of claim payments for the past two years would not be complete without calling attention to the

remarkable accomplishment of the chief special agent's department in reducing claim payments chargeable to pilferage and robbery.

Following is a statement showing the reduction made in the number of robbery reports received and claims paid during the years 1921 and 1922:

Year	Robbery Reports Received	Claim Payments
1920	8,472	\$212,451
1921	2,289	131,546
1922	1,307	51,369

The robbery reports received during 1922, compared with 1920, were reduced 7,165, or

The remarkable reduction in freight claim payments during the last year is very much appreciated by the management. I wish to take this opportunity of offering my personal appreciation and thanks to the officers and employees for their strong support

The accompanying graphic chart shows the percentage of total claim payments to total revenue during 1921 and 1922.

Following is a statement showing the percentage of claim payments to total freight

Total Freight Claim Payments	Total Freight Revenue
\$330,000	\$16,000,000
325,000	15,800,000
320,000	15,600,000
315,000	15,400,000
310,000	15,200,000
305,000	15,000,000
300,000	14,800,000
295,000	14,600,000
290,000	14,400,000
285,000	14,200,000
280,000	14,000,000
275,000	13,800,000
270,000	13,600,000
265,000	13,400,000
260,000	13,200,000
255,000	13,000,000
250,000	12,800,000
245,000	12,600,000
240,000	12,400,000
235,000	12,200,000
230,000	12,000,000
225,000	11,800,000
220,000	11,600,000
215,000	11,400,000
210,000	11,200,000
205,000	11,000,000
200,000	10,800,000
195,000	10,600,000
190,000	10,400,000
185,000	10,200,000
180,000	10,000,000
175,000	9,800,000
170,000	9,600,000
165,000	9,400,000
160,000	9,200,000
155,000	9,000,000
150,000	8,800,000
145,000	8,600,000
140,000	8,400,000
135,000	8,200,000
130,000	8,000,000
125,000	7,800,000
120,000	7,600,000
115,000	7,400,000
110,000	7,200,000
105,000	7,000,000
100,000	6,800,000
95,000	6,600,000
90,000	6,400,000
85,000	6,200,000
80,000	6,000,000
75,000	5,800,000
70,000	5,600,000
65,000	5,400,000

revenue for the last ten years on the Illinois Central and Yazoo & Mississippi Valley railroads, the 1922 percentage being the lowest of all during this period:

Year	Illinois Central	Yazoo & Mississippi Valley
1912	2.87	2.66
1913	2.60	2.44
1914	2.31	1.43
1915	1.46	.99
1916	1.12	.52
1917	1.52	.86
1918	1.83	1.16
1919	2.63	1.67
1920	1.99	1.46
1921	2.08	1.42
192296	.52

Total percentage, Illinois Central and Yazoo & Mississippi Valley,
192291

While the reduction in the price of commodities is responsible for a percentage of

the decreased claim payments, the fact that there was a decrease of 58,390 claims presented in 1921 as compared with 1920 and a decrease of 24,389 presented in 1922 as compared with 1921 and that during 1922 the tonnage of both carload and less-than-carload freight was greatly increased over former years proves conclusively that increased efficiency and interest in the handling of both classes of shipments by the officers and employes resulted in a real improvement.

It is earnestly hoped that this spirit of co-operation will continue. If every employe who participates in the handling of a freight shipment, either carload or less-than-carload, will feel his individual responsibility and make it a point to do his part so well and carefully that no trouble will result, we can again make a material reduction in claim payments and also make 1923 a year of still greater service to our patrons.

Some Thoughts on How to Answer Letters

A letter may be badly mixed up, but that's the more reason for reading it carefully to make a satisfactory reply.

You are carrying on conversation in type. Read the letter and mark the parts to be covered in your turn to speak.

It is surprising how this practice of weighing and sizing up a communication seems to warm the mind to masterful dictation.

Failure to follow this rule in our correspondence is disappointing and discourteous, like conversing without listening to another's remarks, while, from the point of business, the mail is multiplied, customers are disgusted and lost, transactions are delayed—and all for lack of a little concentration and understanding of the possibilities of better letters.

If the people who write you called one after another it would not do to speak to them in short distracted remarks, carelessly overlooking the important question.

Yet this is regularly done in the rush of cleaning up the mail in the busy office. For instance, a young and growing firm described in a rather tedious letter how they were progressing, merely mentioning that a consignment of goods might assist their more rapid expansion. The reply was a dry, stereotyped explanation of the rule of the house against consignments.

That was not the right slant; it would have discouraged and possibly lost a good customer. The right reply dealt in praise

of the firm's progress in so short a period, advised how to secure local capital, and showed consignments to be undesirable for the best profits.

You may say that's pretty deep for the average correspondent. Possibly so, but even an average clerk should be interested in the possibilities of an inspiring reply. There is always the man above who will help the dictator who wants to write better letters.—NELSON C. DURANT.

THE MAGNANIMITY OF BIG MEN

The story is told that, during the Civil War, Jefferson Davis, wanting a reliable officer for some important command, asked General Lee what he thought of a certain young man by the name of Whiting for the post. Lee commended him highly. One of the latter's officers was greatly surprised at the general's commendations, and, calling him one side, asked him if he knew what unkind things Whiting had been saying about him. Lee said, "I understand that the President wanted to know my opinion of Whiting, and not Whiting's opinion of me."

Really big men are too magnanimous, too broad, to notice criticisms or slights. It is the small man who is so carried away with his own importance, his own selfish interest and rights, that he cannot see the other fellow's side, cannot overlook any personal slight or criticism.—*Success Magazine*.

Vice-President Martin Post Blauvelt Dies

*Head of Accounting and Treasury Departments
Had Seen Thirty-eight Years of Railway Service*

MARTIN POST BLAUVELT, vice-president in charge of the accounting and treasury departments of the Illinois Central System since November, 1919, died Sunday morning, February 18, at the Windermere Hotel, 56th Street and Cornell Avenue, Chicago. Death was caused by a disease of the heart.

Mr. Blauvelt had been in failing health for several months. A week before his death he returned to his apartment at the hotel from the Illinois Central Hospital. His condition was believed to have improved, and news of his sudden and unexpected death came as a great shock to his friends and associates.

Mr. Blauvelt began his railway service as clerk in a local freight office. During the last few years of his life he was generally considered one of the ablest railway accounting officers in the United States.

For many years Mr. Blauvelt had been a prominent member of the committee on general accounts of the Association of American Railway Accounting Officers. In 1910 he was elected second vice-president of that association, in 1911 he was made first vice-president, and in 1912 he was made its president. His services with the Association of American Railway Accounting Officers were progressive, uplifting, and of a nature that commanded the high-

est esteem of his associates in dealing with railway accounting methods.

His First Railway Work in 1885

Mr. Blauvelt was one in a family of five children—two boys and three girls. He was born February 25, 1865, on a farm near Suffern, Rockland County, New York, and his education began in the district school at the age of four years. He was graduated from the Goshen Collegiate Institute at Goshen, Orange County, New York.

Mr. Blauvelt first entered railway service in 1885 in the freight office of the Delaware, Lackawanna & Western Railroad at Hoboken, N. J. In this position he gained

Martin Post Blauvelt

valuable experience by contact with the commission men of New York City when he acted as weighmaster in the produce yard of that railroad in Hoboken. In addition to his other duties, he had charge of the yard and was responsible for the placing of cars. On October 6, 1887, he accepted a position as clerk in the office of the auditor of freight traffic of the New York, Lake Erie & Western (now the Erie) Railroad. On February 1, 1891, he accepted a clerkship in the office of the third vice-president and auditor of the same road. Promotion then became rapid, and in 1896 he was made chief clerk in the accounting department, and on June 1, 1902, he was elevated to the position of assistant auditor. Four months later he was made auditor. In November of the same year he was promoted to general auditor, and a year later was elected comptroller.

Entered Illinois Central Service in 1910

Mr. Blauvelt entered the service of the Illinois Central System on February 8, 1910, as comptroller. In 1917 he was tendered, and he accepted, the position of vice-president and comptroller of the Lehigh Valley Railroad Company, thereupon severing his connection with the Illinois Central System. In 1918 Mr. Markham, who was then regional director of the United States Railroad Administration, with headquarters at Phil-

adelphia, appointed Mr. Blauvelt his assistant. In November, 1919, Mr. Blauvelt severed his connection with the Railroad Administration and was elected vice-president in charge of the accounting and treasury departments of the Illinois Central System, which position he held at the time of his death.

The members of Mr. Blauvelt's immediate family who survive him are his widow, Mrs. Mary Blauvelt, and his father, C. A. Blauvelt, who is 87 years of age. The family had lived at the Windermere Hotel for a number of years.

Mr. Blauvelt was a member of the South Shore Country Club, the Calumet Country Club and the Chicago Athletic Association.

Funeral services were held at 11 o'clock, Tuesday, February 20, at Saint Paul's Church, Dorchester Avenue and the Midway, Chicago, and the body was taken to New York City for burial.

The loss to the Illinois Central System in Mr. Blauvelt's death is immeasurable, and he will be greatly missed by those with whom he had been associated. He was a man of sterling integrity and of unusual executive ability.

Whether the world is blue or rosy depends upon the kind of spectacles we wear. It's our glasses, not the world, that needs attention.—*The Watchman*.

Water Service Development in 30 Years

The Illinois Central water department was established in 1894 and was the first system water department organization on any railroad. M. D. Miller was appointed general foreman of water service in 1894 and served in this capacity until December 1, 1904, when he left the service of the Illinois Central to become superintendent of water service on the Missouri Pacific.

Mr. Miller was the pioneer in railway water service, and it was undoubtedly due to the success of his organization on the Illinois Central that many other roads established similar departments. It is also worthy of note that railway water softening received its first real impetus through Mr. Miller's activities in establishing water softening plants on the Missouri Pacific. Mr. Miller left the service of the Missouri Pacific in 1910, when he organized the Railroad Water & Coal Handling Company, general contractor of railway water service work, of which company he is now president.

Mr. Miller was succeeded on the Illinois Central by C. E. Thomas, who served in

the capacity of general foreman of water works until April 1, 1912, when he left the service of the Illinois Central to engage in the sand and gravel business at Mason City, Iowa.

Mr. Thomas was succeeded by C. R. Knowles, who holds the position at the present time. The title of general foreman of water works was changed to that of superintendent of water service on July 1, 1916.

As an example of the development of water service and the increased demand for water on the Illinois Central since the water department was established, a few comparisons are presented:

The largest water tank in service on the Illinois Central in 1894 was of 50,000 gallons capacity, as compared with tanks now in use having capacities of 150,000 and 200,000 gallons.

The greatest consumption of water on any one point in 1894 was at Centralia, Ill., where the annual consumption was 72,000,000 gallons. The consumption at Centralia is now in excess of 300,000,000 gal-

Left to right: C. E. Thomas, C. R. Knowles, M. D. Miller

lons a year. It still represents the largest consumption at any one station on the system.

In 1894 the 400-class locomotive was the largest in service. This engine had a tender

capacity of 3,850 gallons of water, while the Central type now in use has a tender capacity of 12,000 gallons of water, or more than three times the capacity of the tender of the 400-class engine.

Springfield, Ill., Flower Fund Successful

By HENRY CONRAD,
Switchman, Springfield, Ill.

Just a few words about our flower fund, which I believe is the only flower fund on the whole Illinois Central System. For more than two years we, the employees of the Illinois Central at Springfield, Ill., have been keeping up what we call "employees' flower funds." We collect 25 cents every pay day from each member until we have \$50 in the treasury, and then stop until it goes back to about \$10. Every member or one of his family gets a \$2 bouquet of flowers when sick. We send a \$5 bouquet of flowers for any death in the family of a member and a \$10 bouquet for the death of a member. In the two years since we started, we have spent more than \$200.

We have as our members yardmasters, engine foremen, switchmen, engineers, firemen, passenger conductors, flagman, roundhouse men and a few car inspectors. We have at present forty members. We lost our first member by death when Chris Catlin, engineer, passed away December 10, 1922. He enjoyed the flowers that were sent to him during his sickness.

It is to be hoped that our success will start other divisions of the Illinois Central System to having flower funds. N. B. Clark, yardmaster, is our secretary and treasurer, and Jim Leavy is the collector at present. We change about in collecting, so as to give all members a chance to help. Let us hear from other members and divisions.

M. H. Kempton Is Proud of Engine No. 1171

*Illinois Division Engineer Has Driven His
Locomotive 300,000 Miles in Last Five Years*

IN the last five years Engineer M. H. Kempton has driven engine No. 1171 a distance equal to more than twelve times around the earth. His run is on passenger trains Nos. 1 and 2, between Chicago and Champaign.

With an association extending over something like 300,000 miles, Engineer Kempton and his locomotive have become great friends. A locomotive is inanimate in name only, according to a great many of our engineers, among whom Mr. Kempton is one, for under constant handling the engineer comes to know the traits of a locomotive as he knows the traits of a pet dog, or horse, or the traits of an individual. Some engines are fussy, like an old hen which worries over her chickens. They require a great deal of coaxing. Some are surly, rebellious. They must be handled with tact. Some are sturdy, dependable, and under proper treatment will respond as cheerfully and willingly to the task as a patriotic citizen who responds to the call of his country.

Engine No. 1171 belong to the class of willing workers, those who do their work readily and capably, without shirking, according to Mr. Kempton.

"She is always *there* when she is wanted, ready to go," Engineer Kempton declared to his interviewer.

And she has gone, through all kinds of weather, under almost every conceivable condition known to operating men. Under the blazing sun of summer's scorching heat, through blinding snow storms, in clear and foggy weather, she has pulled our passenger trains under Mr. Kempton's efficient hand, helping to maintain the record which the Illinois Central System holds for on-time passenger train performance.

Knows His Locomotive Well

Engineer Kempton's long experience in the mechanical department has taught him to know his locomotive thoroughly. A mother who watches over her child from babyhood to maturity, nurses it, binds up its bruises, shares its joys and sorrows, doesn't understand her child any more thoroughly than Engineer Kempton understands No. 1171. That, after five years of service with the engine, Mr. Kempton is willing to say that No. 1171 has met every test is a compliment not only for the engine, but for the engineer as well.

Mr. Kempton has just passed his sixty-

Photo by Moffett

M. H. Kempton

seventh milepost in age and has to his credit more than fifty years of continuous service in one department. He went to work as an office boy for the superintendent of motive power, learned shop work thoroughly, and went on the road well trained as a handler of engines. His service extends over a period in which remarkable improvements have been made in railway motive power, and in the adaptation of those improvements to the service of the Illinois Central System, especially in the earlier days, he played no small part. The story of his life history, however, will be reserved for telling upon another occasion. For the purpose of this article, let us say that he has run over nearly every foot of track of what he proudly claims is the greatest railroad on the face of the earth. For the past twelve years he has been on his present run.

Proud Also of Illinois Division

Engineer Kempton's pride in engine No. 1171 and in the Illinois Central System, however, must be shared with his pride in the Illinois division, with which he has had such a long continuous connection.

"I regard the Illinois division as the fin-

est division on this great railway system," Engineer Kempton said. "It has made more good operating officers and employes than any other division of the system. I have only to mention such names as A. E. Clift, George E. Patterson, J. W. Hevron, E. H. Baker, J. T. Standford, C. W. Davis, W. E. Ellwood, William E. Rosenbaum, R. Rogerson, W. B. Davis, A. Bernard and J. L. Downs to prove that. Most of our train dispatchers have been trained on the Illinois division. The officers of the mechanical department, outside of J. H. Nash and W. H. Donley, are not directly from our division, but their time with us has been so long that we feel they belong to us. There are many others who should be included on that list—men who have left us and gone to improve the service of other roads. I am mighty proud of my long association with these men."

Engineer Kempton was an Illinois division man even when it came to selecting

Engineer Kempton and No. 1171

a wife, forty-six years ago. In 1877 he went to Tuscola, on the Illinois division, and was united in marriage to Miss Sarah E. Connor. They are the parents of five children, now between 45 and 29 years old, all of whom are married, and the Kemptons have four grandchildren of whom they are truly proud. Mr. and Mrs. Kempton live in Chicago, at 6202 University Avenue.

His Record Book Saves Company Money

A unique record of shipments is kept by F. E. Rehorst, our agent at Ponchatoula, La. A few experiences with the memories of some shippers taught Mr. Rehorst that a stitch in time is sometimes worth a whole flock of birds in the bushes, to use a slightly mixed jumble of adages. So he contrived a little book in which he sets down a concise and detailed history of each carlot shipment that goes forward from Ponchatoula.

This station is a busy point, at certain seasons of the year, for the dispatch of strawberries and vegetables. Strawberries are a highly perishable product and are affected by weather conditions, such as sudden extremes of heat or cold, excessive moisture and the like. All of these contributing factors are taken into consideration by Mr. Rehorst in making up his records.

His little book is arranged in columns. He makes an entry of the car number and initials in the first column; next what it contains, when moved or, if not immediately moved, how long held; he also notes the exact weather conditions on that date, showing the range of temperature, whether clear, cloudy or raining. Anything unusual, like wind or excessive humidity, is noted, also whether or not the products loaded

were in good or bad condition at the time of loading. The exact time of departure and the number of the train are set down, and Mr. Rehorst's little log-book is ready for all comers.

On several occasions his complete and carefully compiled records of shipments have saved the express company and the Illinois Central the expense of unjustified claims for damage. It's a pretty safe hazard that if over-ripe strawberries are loaded at the Ponchatoula station and go bad in transit, the little log-book will show the whole procedure, at the starting end, anyhow.

A commendable feature of the detailed record Mr. Rehorst keeps which makes it of substantial benefit to the shipper whose claim is just is the fact that if the products dispatched were in excellent condition the record shows it. The plan is simply a practical application of the "Square Deal" for everybody concerned.

He only is advancing in life whose heart is getting softer, whose blood warmer, whose brain quicker, whose spirit is entering into living peace.—RUSKIN.

Helping to Build Up the Dairy Industry

*Illinois Central System Opens Up New Market for
Iowa Breeders and Improves Herds in the South*

THE Illinois Central System enjoys the privilege of traversing one of the greatest farming districts in the world. The dairy industry is a profitable enterprise which flourishes in many districts of the upper Mississippi Valley and which is being developed from modest beginnings in other sections. The latter is particularly true of that section lying contiguous to the Illinois Central lines in Mississippi and Louisiana, where the business of dairying and growing purebred cattle is rapidly becoming a profitable source of revenue.

Following its policy of co-operation with patrons on all parts of the system, the management of the Illinois Central System this spring decided to purchase a group of thoroughbred dairy bulls to be lent free of charge to dairymen in Mississippi and Louisiana for the improvement of their herd standards. Twenty registered Jersey males were bought for this purpose, representing the best type of butterfat-producing stock to be found in the Middle West. These animals were obtained from one of the most famous Jersey-breeding districts in the United States, the country lying in north central Iowa around Waterloo and Des Moines.

A double purpose was served in buying these fine dairy sires from breeders along the Western Lines. Patrons of the Illinois Central System in Iowa were thus afforded a market for their purebred stock, and other patrons of the road, in the South, many hundreds of miles distant, were benefited by the introduction of valuable new blood into their herds. The railroad in this way was able to advance the interests of two different and widely removed districts where the dairy industry is of large importance.

Quality of Livestock Improved

In order to stimulate interest as well as to make more profitable the returns from livestock breeding and the dairy industry along its lines, The Illinois Central System, at various times in recent years, has purchased purebred males of the various breeds of beef and dairy cattle for distribution among the farmers of certain states traversed by the system. In some instances these animals were given outright as prizes for progressive showings in competitive breeding or production contests, and in other cases the males were simply lent for breeding purposes without charge to those

A good cow is judged by her deeds as well as her looks. This is Financial King's Interest, now 23 years old, who will soon be the mother of her twenty-second calf. She is shown here with her twenty-first baby when she was 22 years 5 months old. Most cows cease to become milk and butterfat producers at from 12 to 15 years of age. But when this wonderful cow was 18 and 19 she produced more than 1,000 pounds of butter and three calves in the 2-year period. Practically all of the twenty bulls which are being distributed by the Pure Bred Sire Special can trace their ancestry to this cow.

benefiting. In all cases, it has been found that the quality of livestock and dairy production in districts where the plan was followed was greatly improved and that results obtained invariably warranted the action of the railroad's development bureau.

A great many blooded sires of the Angus, Shorthorn, Holstein and Jersey breeds have been distributed in Iowa, Illinois, Kentucky, Tennessee and states farther south under this plan. It was recently decided to make a distribution along similar lines for the benefit of the dairy industry in Mississippi and Louisiana. Accordingly, this extra fine group of twenty purebred, registered Jersey bulls was bought in the vicinity of Waterloo, Jesup and Des Moines, Iowa, and assembled for shipment south. These animals were all carefully chosen with regard to their lineage from dams with high test showings of milk and butterfat production and were purchased under the personal supervision of H. J. Schwietert, general development agent. Mr. Schwietert, after due thought, decided that the famous Financial King family of Jerseys was best adapted to the purposes he had in mind, and all of the sires purchased are members of that excellent strain.

Company to Keep Ownership

Ownership of the bulls will be retained by the railroad, but their use by farmers

in the communities where they are placed will be unrestricted and without charge by the company. The Illinois Central System is building for the future of the dairy industry in the South, by introducing purebred sires into the field at a time when the business is beginning its real development.

Those who have had long experience in the dairy industry say that there is no question about the profitable results from pure breeding. Good stock always brings remunerative returns in appreciated prosperity to a community. Nevertheless, it is just as unquestionably true that, unless good cows and heifers are mated with purebred dairy sires, the strain must necessarily deteriorate in a few generations. The initial prosperity brought by good cows will be transient. Much depends upon keeping up the high standards of one's herd by consistent and intelligent mating with carefully selected males.

With this idea in view, the Illinois Central has gone a long way toward solving the difficulties which confront the small dairyman in the South by placing these fine animals at his disposal. It is doubtful if a finer lot of bulls was ever assembled in one group before in this part of the country. The essential consideration insisted upon by Mr. Schwietert in choosing the individuals was butterfat production on the part of the immediate maternal ancestry. He was not content merely with the record of the bull's immediate dam. He saw to it that excellence was sustained by other generations of milk and butterfat production. Strength of breeding in a high-producing family of individuals, as demonstrated by many generations of milk, butter and show-ring records, is the real proof of merit. It is that alone which gives reasonable assurance that a sire will beget daughters that are certain to possess the characteristics so greatly to be desired.

Bulls Have Good Ancestry

While careful in the selection of males with splendid ancestry on the maternal side,

Financial Merman

Mr. Schwietert also paid attention to the paternal lineage of each individual, making sure that he be strongly bred in the Financial King family as well as well grown, well developed and true to type and conformation. An illustration of these requirements is seen in the bulls which were finally chosen.

In ages they range from 1 to 3 years. Among them is Financial Winner 202404, a grand champion at the Kansas State Fair and the Kansas Free Fair. He is more than a wonderful show bull, since his mother, as a 3-year-old, produced 512 pounds of butterfat in a year; his grandmother, as a 4-year-old, produced 632 pounds of butterfat in a year, and his great-grandmother had a record of 621 pounds of butterfat in one year. Another bull in the group is Financial Merman, grand champion at the Nebraska State Fair. He, too, is backed up by generations of high production, tracing directly back to Count's Miss Marigold, the highest-tested daughter of Financial Count, with a record of 14,473 pounds of milk and 895.67 pounds of butterfat in a single year. Financial Sensation Count is another member with a proud lineage; he won two firsts as a calf—at the North Dakota State Fair and at the Kansas State Fair—and his dam was a daughter of the \$60,000 sire, Financial Sensation; as a 2-year-old she made a record of 338.57 pounds of butterfat in 305 days and produced two calves.

Steady Reward for Purebred Stock

The dam of Financial Sophie's King, another bull in the group, made 492.8 pounds of butterfat in a year, and her dam established a record of 944 pounds, while the great grand-dam of this fine bull reached the high total of 1,113 pounds of butterfat in one year. Another evidence of high excellence in the animals selected is found in the fact that five members of the group have been used as herd sires in the Waterloo Jersey farm and Meredith Jersey farm herds.

So judiciously have the factors which

Financial Winner

indicate greatness in a sire been taken into account in selecting these bulls that there can be no doubt of the splendid results which will be obtained in the communities in which they are placed. In a short time these communities cannot well avoid becoming sources from which high-record, butterfat-producing, show cattle will be obtainable. And it must be borne in mind that there is always a steady demand for purebred dairy stock at fancy prices.

It is just as easy to breed high-class stock as scrubs. The returns justify the initial expenditures many-fold. The following actual records of three cases of pure breeding by farmers in Iowa eloquently express the point of profitable returns:

Breeding Good Cattle Is Profitable

Example 1. This herd was started with one cow and four heifers, in March, 1917. At the end of five years, the results shown were: In the herd were twenty-four head, some of which were extra fine cows testing in high figures; sales of fourteen head, three of which were cows and heifers, had been recorded meanwhile, bringing a total of \$3,244.61.

Example 2. This herd was started in March, 1917, with ten females. During the 5-year period, ten cows and heifers were sold at prices ranging as high as \$750 each, and fourteen males were sold, one of which brought \$900. The total received for stock sold was \$9,288.81. Remaining in the herd were thirty-five head, many of which would command even higher prices.

Example 3. Started in March, 1917, with twenty females. Sales numbered sixteen females and eighteen males, counting two half-interests in different bulls as one individual. The high price for cows was \$750, with several ranging from \$500 to \$650. Two bulls from this herd brought \$1,000 each, and there were many that sold for \$500. The total receipts from stock sold were \$11,097.87. Remaining in the herd at the end of the period were fifty-five head.

These figures should show conclusively that, when properly undertaken and handled, the breeding of thoroughbred dairy cattle is a profitable business. Aside from the sale of surplus increase at good prices, there is a steady income from milk and butter production, no account of which was included in the figures shown above. The income from the latter source, of course, is always larger from purebred stock.

Interest Shown in Stock Raising

General interest is being manifested in the territory traversed by the Illinois Central System south of Memphis, Tenn., in the upbuilding of the dairy industry. It is planned to bring at least 500 high grade and high-producing Jersey cows into the district around Grenada, Miss., this year with which to increase the receipts of butterfat and milk at the local creamery and thereby increase the prosperity of the dairymen.

J. T. Thomas, one of the prominent bankers in Grenada, has announced that he has \$100,000 available at this time for loans to farmers at 5 per cent, especially for the purchase of good dairy cows. The only stipulation is that stock purchased must be purebred or high grade.

In distributing the twenty registered Jersey sires over Mississippi and Louisiana, the Illinois Central System arranged for a comprehensive educational campaign in connection. A special train carrying the animals left Fulton, Ky., February 26 and will cover an itinerary of about fifty cities and towns by March 13. Lecturers and specialists in all matters having to do with breeding, feeding, testing and high production in the dairy industry accompanied the "Purebred Sire Special" and conducted demonstrations and delivered instructive addresses at the points visited. Through the co-operative efforts of farm agencies and bureaus, commercial clubs and bankers, as well as individuals who are forwarding the movement for purebred dairy cattle in the

Financial Model Sensation

Financial Sensation Count

Successful Emancipator

South, it was made possible for generous turnouts of farmers to be informed of the meetings at the various stations.

To Keep Record of Results

Among those accompanying the special train and delivering the series of lectures are: Prof. Hugh G. Van Pelt of Waterloo, Iowa, national authority on breeding and feeding; Prof. L. A. Higgins, dairy husbandman of the Agricultural & Mechanical College, Starkville, Miss.; Mr. Schwietert and members of his staff. One of the features stressed by the railway company's representatives was the proper care and management of the animals which are being lent to the farmers. Detailed instructions were given as to handling the bulls, and the company's men were assigned to the work of supervising the construction of pens and taking safety measures for promoting facility of feeding and service.

Mr. Schwietert will keep complete records of the results obtained from the work, and inspections will be made by the development bureau's field representatives at regular intervals. It is proposed to offer prizes for high showings in percentage of of butterfat production later on, with the idea of stimulating friendly rivalry among the dairymen throughout this section of the South.

"Another thing we expect to accomplish by building up the dairy industry in Mississippi and Louisiana," Mr. Schweitert says, "is indirectly to strike a body blow at the boll weevil. Wherever it is possible to replace the acreage of cotton grown with a corresponding area of grain and hay cultivation, just that far we have reduced the feeding grounds of the pest which is gradually making cotton-raising one of the hazardous ventures of the South. It is generally conceded that the only successful method of stamping out the boll weevil pest is a temporary suspension of all cotton-raising in infected districts for a few years. Other plagues of farming in the South have been reduced or eradicated by scientific remedial measures in recent years. The

March, 1923

whole state of Mississippi is now practically free from cattle-tick, formerly one of the menaces of the cattle industry in that part of the country."

LEASING OF C. M. & G. APPROVED

Affirmative action was taken on February 16 by the Interstate Commerce Commission in the matter of the application of the Illinois Central Railroad Company for authority to acquire control by lease of the railroad and property of the Chicago, Memphis & Gulf Railroad Company. This road extends from a connection with a branch line of the applicant at a point 3.07 miles west of Dyersburg, Tenn., in a northerly direction to Hickman, Ky., a distance of 48.53 miles. The Chicago, Memphis & Gulf also operates into Dyersburg by track-age rights over the rails of the applicant.

"Play for position." The "hit-and-pray" principle never gets far in billiards or anything else. Leave nothing to luck. To progress in any job, "play position"—look ahead, plan ahead, figure out what the next position calls for and prepare for it.—WILLIAM F. HOPPE, world's balkline billiard champion.

Nineteen

Y. M. C. A. Serves Ten Thousand a Month

Four-fold Program of Christian Organization Popular With Our Employees at Waterloo

THE four-fold program of social, physical, educational and religious activities of the Railroad Y. M. C. A. at Waterloo, Iowa, serves about ten thousand persons a month. This number includes those to whom meals are served, those to whom first-aid treatments are given, those served by the library and those who attend the various meetings, participate in games and patronize the dormitory.

A thoroughly modern restaurant is maintained by the Y. M. C. A. for the convenience of the employes at Waterloo, and about five thousand clean, wholesome and appetizing meals are served each month at moderate prices. Nearly one hundred diners are served at noon each day, and it is all done in about forty minutes. About \$2,500 has been spent for repairs, furniture and improvements for the dining room.

Then there is the library, which adjoins the dining room. Many of the employes sit and read at their leisure in the large, comfortable chairs in the reading room. Magazines, newspapers and many books are there, and for some the few moments between lunch time and the whistle are not idly wasted on the street or in the corner store.

Time Saved by First-Aid Room

A room is provided by the Railroad Y. M. C. A. for the company physicians to use as a place to dress the wounds of the injured employes. All items of expense, such as cleaning and laundry, are taken care of by the Y. M. C. A. Dr. F. W. Porterfield, division surgeon, says that the use of

Roy A. Graham

this room has been a great time-saver for the employes who suffer slight accidents while at work. Their minor injuries are dressed, and the men return to their work within an hour. Before the Y. M. C. A. provided the room, an employe lost from three hours to a half a day and more, no matter how small the wound. Probably 250 men receive treatment there each month, Doctor Porterfield says. This work, of course, is under the direction of the hospital

The dining room and lunch counter at noon

department of the Illinois Central System.

The Railroad Y. M. C. A. at Waterloo was organized about twenty-five years ago. About two years ago it became a branch of the central Y. M. C. A. at Waterloo in order to increase the efficiency of the organization. February 1, 1921, Roy A. Graham became the executive secretary of the Railroad Y. M. C. A. At that time the entire association was reorganized, a new committee of management was appointed, the quarters were remodeled and new equipment was added. Since that time other improvements have been numerous.

Mr. Graham was born June 13, 1889, at Jeffersonville, Ind. He attended the high school there, went to college two years, and then took charge of his father's drug store. He remained in this work until March, 1918, when he entered Y. M. C. A. work at Camp Jackson, S. C. He served there and at Charleston, S. C., in the Army Y. M. C. A. until June, 1919. Then he became a member of the staff of the city Y. M. C. A. at Charleston, where he remained until he accepted his present position at Waterloo. He is a valuable aid to the hospital department, since he is a registered pharmacist. Mr. Graham is a hustler and is always on the look-out for something which will keep alive the interest of the employes in the Y. M. C. A.

Dormitory Facilities Popular

The dormitory of the Railroad Y. M. C. A. quarters at Waterloo is filled to capacity all the time, Mr. Graham says. He has

even had to give up his office room, so that a few more beds could be installed.

Community mass meetings are held each month at three points in the railway territory about Waterloo. These meetings are held under the direction of the association at Waterloo. The programs consist of mass singing, practical talks and motion pictures. About 250 persons, on an average, attend these meetings each month.

In addition to these mass meetings, three boys' clubs are kept active. The members are sons of the railway employes, and there are more than 100 enrolled. The weekly programs are conducted along the regular four-fold Y. M. C. A. program lines.

Each Tuesday at noon a free motion picture is shown in the quarters of the Railroad Y. M. C. A. These shows are looked forward to by the employes, and they are largely attended. The pictures, usually educational in character, are furnished by the industrial department of the Y. M. C. A. at New York.

Held Successful Membership Drive

The Railroad Y. M. C. A. at Waterloo conducted a most successful membership campaign last October. In seven days, 252 new members were enrolled. Mr. Graham says that the results of this campaign were not surpassed by those of any similar association in the Middle West. W. S. Williams, general superintendent of the Western Lines, acted as the campaign manager. George Wheeler, a Minnesota division engineer, and Henry Crowell, apprentice boy instructor at the Waterloo shops, assisted

A corner of the library

Mr. Williams as division captains during the membership campaign.

A complete resume of the activities of the Railroad Y. M. C. A. at Waterloo during this last fiscal year has not as yet been compiled, but a glance at the things that were done by the organization during 1921 and 1922 will give an idea of what holds the interest of the employees there.

From May 1, 1921, to May 1, 1922, twenty-four checker boards and men were in constant use; 7,529 men participated in 3,377 horseshoe games; twenty-nine students each day attended nine educational classes which were conducted in co-operation with the company; 2,575 attended fifteen picture shows; 285 books were circulated; three shop chautauquas, with eighteen meetings of health, banking and legal talks and musical numbers, had a total attendance of 3,625; fifty-two strictly religious meetings were attended by 4,963 employees; 86,182 men used the Y. M. C. A. quarters in some way; 4,815 baths were taken; 1,559 nights' lodgings were sold; 129 attended sixteen committee meetings; 1,625 attended six community meetings; fifty-nine nights' lodgings were given to men who were out of work; sixty-eight meals were served to men without money; and 626 employees attended thirty-eight group meetings on fuel, safety first and other company matters.

The total receipts of the Railroad Y. M.

Receiving treatment in the surgeon's room

C. A. at Waterloo from May 1, 1921, to May 1, 1922, were \$12,831.92, and the total expenditures during the same time were \$12,712.49, according to Mr. Graham.

The committee of management of the Railroad Y. M. C. A. at Waterloo is composed of the following: H. G. Brown, chairman; R. A. Barnes, secretary-treasurer; Roy A. Graham, executive secretary; H. S. Taylor, A. G. Robbins, H. O. Dahl, A. E. Bentz, James Pennington, George Wheeler, H. L. Crowell and R. E. Dunlavey.

Our Monthly Roll of Honor

Below is a list of employees retired at the meeting of the Board of Pensions January 31:

Name	Occupation	Years of Service	Date of Retirement
Stephen A. Barker.....	Conductor, Kentucky Division.....	18	10/31/22
Charles C. Meise.....	Switchman, Freeport, Ill.....	27	10/31/22
Garrett Hutton.....	Yard Foreman, Cedar Rapids, Iowa.....	21	11/30/22
Alexander M. Stewart.....	Engineman, Louisiana Division.....	26	11/30/22
James R. Brown.....	Crossing Flagman, Springfield, Ill.....	22	11/30/22
William Lane.....	Car Inspector, Clinton, Ill.....	34	1/31/23
John Sloan.....	Boilermaker, Burnside Shops.....	28	3/31/22
John Boylan.....	Machinist Helper, Council Bluffs, Iowa....	15	12/31/22
George S. Rodenbaugh.....	Engine House Foreman, Vicksburg, Miss.....	32	1/31/23

The following deaths of pensioners were reported:

Name	Occupation	Date of Death	Term as Pensioner
Robert Travic.....	Laborer, Mississippi Division.....	12/27/22	6 years
Thomas Huff.....	Boilermaker, Springfield Division.....	12/18/22	16 years
Ewing Morgan.....	Foreman Carpenter, Memphis Shops..	12/25/22	2 years
Charles E. Tracy.....	Signal Supervisor, Iowa Division.....	1/13/23	3 years
Joseph W. Wenger.....	Traveling Freight Agent, Traffic Dept.	12/27/22	5 years
John Davidson.....	Section Laborer, Kentucky Division.....	1/14/23	3 months
James B. Good.....	Engineman, Tennessee Division.....	1/20/23	2 years
John W. Boyer.....	Engineman, Indiana Division.....	12/14/22	20 years
Louis R. Carpenter.....	Conductor, Springfield Division.....	1/27/23	8 years

State Will Gain by Building of New Line

President Markham Replies to Critics of Proposed Railroad by Saying Illinois Will Profit

ON February 20 President Markham gave out the following statement with respect to the proposed new line of railroad between Fulton, Ky., and Edgewood, Ill., points on the present main line of the Illinois Central System:

"My attention has been called to the fact that many Illinois newspapers have recently contained articles emanating from Cairo concerning the plans of the Illinois Central System for constructing a new single-track line from Fulton, Ky., to Edgewood, Ill. Particular weight has been given to the assertion by opponents of the plan that if this new line is built the revenues of the state will be reduced on account of the diversion of traffic from the charter lines of the Illinois Central. There is not the slightest ground for this charge. I assert confidently that the tax bill of the Illinois Central in Illinois will be increased rather than diminished by the building of the new line. The charter of the Illinois Central provides, in effect, that the railroad shall pay to the state, in lieu of all other taxes, 7 per cent of its gross receipts. Of the more than 6,000 miles of line operated by the Illinois Central System, only 705 miles were built under this charter and are subject to its provisions. All the rest of the mileage of the system is taxed just as are other railroads. The new line will add 130 miles of railroad in Illinois, and all this additional mileage will be subject to general taxation. The new line will open up a portion of the state not heretofore supplied with railway facilities. The greater part of the new business thus created will reach the charter lines at Edgewood, and from that point will be subject to the 7 per cent charter tax.

How System Has Grown

"The history of the Illinois Central has been that every addition to the system has increased the earnings of the charter lines and as a result has increased the amount of taxes paid Illinois. In 1877, before the Illinois Central began its policy of expansion, the state received in revenue from the charter tax about \$316,000, based on gross receipts of about \$4,500,000. Competing roads were invading the Illinois Central's territory and taking away its traffic. With the change in the policy of the road, resulting in the acquisition of a portion of its Southern Lines in 1882, certain lines in central Illinois in 1888, the Yazoo & Mis-

March, 1923

issippi Valley in 1892, the Louisville-Memphis line in 1897, the line from Fort Dodge, Iowa, to Omaha in 1900, the Peoria-Evansville line in 1900 and other important lines now composing the system, the gross receipts of the charter lines steadily increased, so that, without any increase in charter line mileage, the 7 per cent paid the state grew from \$316,351 in 1877 to \$3,170,226.56 in 1922. The effect of the addition of the branch lines has been to increase greatly the gross revenues of the original lines and the payments to the state. We may be sure that history will repeat itself. In all fairness I wish to say that, in proposing this new line, no one connected with the management of the Illinois Central has considered any saving in the amount of taxes paid the state or has believed the change will so result.

"In projecting this line we are thinking only of the imperative need of enlarging our facilities to take care of our steadily expanding business. In the last ten years our traffic on certain parts of our line has been more than doubled. In view of this great increase, if we are to keep ahead of the traffic, it is obvious that a new line must be built, and that as soon as possible. We are rapidly approaching the limit of our present facilities.

Will Develop New Traffic

"The new line will cost \$17,000,000. Its construction will avoid the necessity of double-tracking that part of our Kentucky division from Fulton to Paducah. It will develop much valuable new traffic and serve a considerable territory now without adequate railway service. The heaviest grade will be three-tenths of 1 per cent. The line will be comparatively inexpensive to construct and also economical to operate. On the other hand, it would cost \$24,000,000 to make the changes in existing lines considered necessary for future development, and after this expenditure had been made the expense of maintenance would be much greater than on the proposed line and operating conditions would by no means be so favorable; moreover, the new territory would not be developed.

"The construction of the proposed line will not unduly affect communities on the existing line. There will be business enough for all. It should be obvious that the new line will greatly benefit communities through which it will be built and yet that they will not grow at the expense of

Twenty-three

those located on the existing line. While there will be some necessary rearrangements and readjustments, the public generally will be so greatly benefited that there

is no justification for the effort of certain communities to promote a contrary belief. Illinois will be the gainer in taxes paid, general development and public good."

Our Grade Reduction Projects in Illinois

The extensive improvements contemplated for 1923 by the Illinois Central System, concerning which a public announcement has recently been made by President Markham, include three grade reduction projects affecting the main line in Illinois. The projects are at Magnet and Alma, on the Centralia-Champaign district, and at Paxton, 25 miles north of Champaign. The latter includes a separation of grades at the crossing of the Lake Erie & Western Railroad. Preliminary work will begin around March 1.

The proposed grade reduction work at Magnet Hill will extend from a point about 3,500 feet south of Mile Post C-174 to a point about 1,400 feet south of Mile Post C-180. The project provides for about 540,000 cubic yards of common excavation, including 40,000 cubic yards of ditch excavation; for the construction of a subway at a point about 1,400 feet south of Mile Post C-179; for the extension of several culverts; for the construction and removal of about 63,600 lineal feet of temporary traffic track; for the construction of several overhead highway bridges; for the moving of several buildings at Magnet and Aetna, and for the moving of a number of signals.

The maximum northbound grade within the limits of this grade reduction work will be reduced from .6 per cent to .3 per cent.

The proposed grade reduction work at Alma will extend from a point about 1,300 feet north of Mile Post C-235 to a point about 100 feet south of Mile Post C-236. The project provides for about 87,000 cubic yards of common excavation; for the construction and removal of about 7,550 lineal feet of temporary traffic track; for the construction of an overhead highway bridge, and for the moving and replacing of several signals.

Effect of Improvement

The completion of the grade reduction at Magnet Hill and Alma will be of material benefit to operating conditions, as it will expedite the movement of trains and will make it possible to increase the tonnage rating of trains operating between Centralia and Champaign. In addition, several highway grade crossings will be eliminated.

At Paxton the main track of the Lake Erie & Western Railroad now crosses the northbound and southbound main tracks and the freight house track of the Illinois

Central at grade, and an interlocking plant is maintained and operated at this point. The plan provides for the separation of the grade crossings by raising the main track of the Lake Erie & Western about 2½ feet and depressing the northbound and southbound main tracks of the Illinois Central about 22 feet at the crossing.

The grade of the Illinois Central at Paxton northbound is now the ruling grade on the district between Matteson and Champaign, and trains with rating of .3 per cent grade experience difficulty in negotiating this grade, particularly if they have to stop for the Lake Erie & Western crossing. It is proposed to reduce the present northbound grades through Paxton, which vary from .35 per cent to .621 per cent, to grades varying from .05 per cent to .3 per cent.

Work at Paxton Extensive

It is planned to depress the Illinois Central northbound and southbound main tracks between a point about 400 feet south of Mile Post C-102 and a point about 1,200 feet north of Mile Post C-104. The project also provides for the excavation, by the Illinois Central, of 450,000 cubic yards of common material; for the construction, by the Lake Erie & Western, of a concrete bridge to carry its main track over-grade over the Illinois Central northbound and southbound main tracks; for the construction and removal by the Illinois Central of about 23,800 lineal feet of temporary traffic track; for the construction by the Illinois Central of several overhead highway bridges over the Illinois Central tracks; for the removal of several business spurs; for the rearrangement and extension by the Illinois Central of several industry tracks, northbound and southbound passing tracks and connection with the Lake Erie & Western; for the relocation of the present Illinois Central freight station and the construction of necessary facilities in its new location; for the relocation of the joint passenger station; for the removal by the Illinois Central of several buildings located upon its right-of-way; for the removal by the Illinois Central of its present water facilities and the construction of new facilities in another location; for the removal of the joint interlocking plant, and for the construction, by the Illinois Central, of several new block signals.

Where Strawberries Make Great Industry

Looking in on the Fruit Growers of Tangipahoa Parish, Louisiana, on Our Lines

THE famous strawberry district of Louisiana along the Illinois Central System, located between the stations of Amite City on the north and Ponchatoula on the south, comprises an area about forty miles square. Within this territory are grown annually and marketed more than 1,500 carloads of

The Klondike at home

first grade strawberries, the value of which last year amounted to more than \$3,100,000. The movement of the crop normally begins about March 1 each year and continues until about May 1.

The points on the Illinois Central where shipments are heaviest are, in the order named: Independence with about 400 cars, Hammond with 300 cars, Ponchatoula with 275 cars, Amite with 175 cars, Albany with 150 cars, Woodhaven with 100 cars and Tickfaw, Denham Springs and Doyle with from 85 to a dozen cars each, respectively. These figures are approximate and are for full carloads, taking no account of less than carload shipments.

There is a largely increased acreage of strawberries this year over last, and the 1923 berry crop is estimated by those who are in touch with conditions in the district to promise an increased yield of probably 30 per cent above last year. In the Independence district the increased acreage this year over last is said to be from 8,000 to 10,000 acres.

Up to the first week in February the fruit had been far advanced, and growers were prepared to accept considerable losses by reason of the early ripening of the crop, which would put it upon the market before the Florida and Texas crops are exhausted. A severe cold wave which occurred about February 5 and 6, with freezing temperature to the southern part of the berry district, worked much benefit for the fruit growers by retarding the ripening of the crop. The unusual advancement of this year's crop may be noted in the fact that on February 5 the first car of strawberries was shipped to New Orleans from Independence, which is the earliest that berries in a carlot shipment have ever been marketed from that point.

Business Now Twenty Years Old

The strawberry growing industry in this particular district of Louisiana was established about twenty years ago. The soil and climate of the section are admirably

Experiment farm of R. L. Cloud, Hammond, La.

Mulching a strawberry field

adapted to the successful culture of strawberries. Another advantageous feature, if not most important of all, is the excellent transportation service furnished by the Illinois Central System. The first berry shipments of the season usually go by express; they were expected to begin about the middle of February this year. Later on, a great part of the movement is by fast freight in iced refrigerator cars. The Illinois Central has one of the finest car icing plants in the country at McComb, Miss., where a whole train can be iced in a few minutes. Cars are iced at McComb on their way south to the berry-shipping points; they are then set out, loaded and picked up again; upon arriving at McComb north-bound they are re-iced for transit to destination.

The Klondike Berry a Favorite

The culture of this luscious fruit, one of the most universally enjoyed of all the native fruits of America, has been developed to the fineness of an exact science in the Louisiana country. The berry which practically all the growers cultivate and deem

best suited to their purposes, everything considered, is the Klondike. It is a large, smooth, splendidly flavored fruit and stands shipping best of all the perishable fruits. Major George B. Campbell, editor-owner of the *Hammond Vindicator*, during the first week in February this year sent several pints of ripe Klondike berries to friends and relatives in the North, dispatching them by parcel post. He received word that the fruit arrived in perfect condition.

The Klondike berry was developed and propagated as a distinct variety by R. L. Cloud, who lives in the southern outskirts of Hammond. Mr. Cloud is an enthusiastic student of plant life. He not only originated the Klondike berry, but he has cross-bred and perfected other varieties of small fruits. He is putting a new strawberry plant on the market this year to which he has given the name Pay-Day. He asserts that in many respects it is superior to his earlier triumph, the Klondike.

Mr. Cloud's home farm is something of a wonderland of plant life. It is near the Illinois Central main line, and he laughingly

says that not infrequently when shipments of tropical fruits from New Orleans pass by the seeds of strange weeds and flowers drop and sometimes germinate in the warm, semi-tropical soil of Tangipahoa Parish. When a strange-looking weed shows itself around there, it finds a kindly and tender welcome. Mr. Cloud in this way discovered a strange species of tropical lily which he succeeded in growing and the flowers of which have been found to serve as an insect trap. Through later cross-breeding he has developed a new hybrid with the cotton plant which he strongly believes may turn out to be immune to the boll weevil.

Berries Planted in Long Rows

The berry fields in the Louisiana district are planted in long, ridged rows about three feet apart. Only young, sturdy, healthy plants are used. The rows are gone over carefully about February 1, and all weeds and grass are removed. A heavy mulching of dry pine needles is then put down, which serves the double purpose of keeping down further weed growth and forming a carpet upon which the ripening fruit rests and is kept free from dirt or sand. Most of the growers now use some sort of commercial fertilizer. One hundred to 150 pounds of potash sulphate per acre adds greatly to the firmness of berries. Wood ashes are also considered a valuable element, taking the place of both potash and lime.

When the fruit begins to ripen, the real rush begins. Fields must be gone over entirely every day, as strawberries ripen very rapidly and for shipment must be picked before they are thoroughly ripe. Weather conditions also cut a considerable figure, dry, hot weather making certain precautions unnecessary which must be taken into account when rains occur at picking time. A small army of pickers is always needed during the shipping season in this district. Most of the pickers come from New Orleans and Baton Rouge, often large families coming and remaining for the six or eight weeks' period. Pickers formerly were paid 1 cent a pint box for picking, but some

Fruit Experimental Farm home at Hammond

growers this year and last have paid as high as a cent and a half per box, or 36 cents a crate. A good picker can pick from ten to a dozen crates in the half day of work. As a rule, no berries are picked during the afternoon, since they must be taken to the railroad for shipment on the day picked. It is estimated that about 10,000 pickers will be required to handle the crop this year in the whole district.

Land Prices Still Fairly Low

The opportunities in the business of commercial berry growing at the present time are more attractive than ever before. Land adapted for strawberry culture is still plentiful in the district and may be purchased at prices which are not unreasonably high in view of accessibility and other advantages. In recent years a fine system of hard-surfaced gravel roads has been built throughout Tangipahoa and Livingston parishes, making transportation from farms to railway stations easy. Virgin, cut-over pine land can be bought at \$50 or less per acre. One advantage of strawberry growing is that a paying crop is returned the first year following planting a field.

Successful strawberry growers who engaged in the business a few years ago in the Ponchatoula section are many. There are a great many German families in that section. Prominent among these are Peter Stass, A. Uhlrich and the partnership of Drott & Muller. Other successful growers near by are Barney Jesse and John Pugh. These men all started in strawberry growing ten years or less ago and have made money. Many of them began with small patches and gradually increased their acreage until they have fields of from five to twenty or more acres each.

The majority of the berry farmers in the Independence section, possibly 85 per cent, are Italians. The following named are characteristic examples of those who have become successful after starting on a small scale: G. C. Orfanello began a few years ago with a small field and this year is oper-

The new Pay-Day berry

One-acre Satsuma orange orchard west of Ponchatoula, La.

ating between twenty-five and thirty acres; Gaetano Anzalone started in the berry business twenty years ago. His fields now cover forty acres. L. C. S. Levatone, also one of the early growers, now has between seventy and seventy-five acres in strawberries. George Strate has been growing berries for about eight years. His seventy-five acres of fruit bring him a net income of \$4,000 to \$5,000 a year. Angelo Danna began with an acre or two of berries fifteen years ago. He now has nearly twenty acres in strawberries. Tony Spitala is another successful grower, with fields covering over forty acres. All of these men started with raw, cut-over land, on a small scale, with practically no capital, and have made themselves independent by their own efforts.

Only a Few Tenant Farmers There

The Louisiana strawberry country is a country of individual farm owners. About 75 per cent of the fruit farms are privately owned and operated. There are few tenant farmers. The strawberry industry is only one of the various sources of income which make farming a safe and profitable venture in this district. Vegetable growing is also largely followed here, the principal crop being string beans, which are planted and harvested twice a year—in December and May. Some cabbage also is grown in the district, but the bean crop is the principal one.

In recent years the satsuma, or mandarin orange, has been found a profitable fruit for growing, the soil and climate being admirably adapted to this hardy citrus. A large acreage of satsuma trees has been planted throughout the district in the last half dozen years. One of the best examples of profitable satsuma orange growing is that of G. W. VanDyke, who lives about four miles west of Ponchatoula in one of the most beautiful homes in the parish. He has an orchard of one acre from which last

December he picked and sold \$2,000 worth of fruit.

Experiments are now being carried on for the introduction of blackberry growing in the district. H. E. Carroll, of the real estate firm of Carroll & Preston, in Hammond, has been active in promoting the interest of berry farmers in blackberry culture, buying and distributing stock at his own expense in order to stimulate the movement. Through his efforts and the efforts of other forward-looking men in the district, there are now about 20 acres of blackberries planted near Hammond, and it is planned to ship at least one car of that fruit next year. The MacDonald blackberry is the variety which is being tried out. This berry is large and firm and will stand up well in shipping, it is said. Dewberries are planted along with it for pollenization, the usual plan being to set three rows of blackberries and one of dewberries in regular order across the field. Blackberries ripen following the strawberry crop and furnish an ideal rotation of work for the small fruit farmer.

Bill Expected to Benefit Shippers

The strawberry inspection bill which was passed at the latest session of the Louisiana legislature will be in operation this

Home of G. W. Van Dyke

year and is expected to prove of advantage to the shippers if they adhere to its provisions. The law prohibits the sale or shipment of strawberries within or out of the state where such fruit is overripe or unfit for consumption. Proper inspection and grading of fruit will be made by inspectors at all shipping points, one-half cent a crate being charged for inspection. It is pointed out that the inspection will practically guarantee a better price to the grower for his product, since only fruit of perfect quality can be shipped. The growers generally are in favor of the new law.

Contrary to the practice in most strawberry growing districts, ample facilities are found in this locality for disposing of over-ripe products. There are big preserving and fruit-packing plants at New Orleans which annually handle most of the excess berries which are unfit for shipment into the North because of advanced ripening. These are put down in sugar at the different shipping points where grown and later made into jams, preserves, candied fruits and essences for soda fountains and for various other uses of the kind. There is very little loss from this source in the Louisiana fields. A plan is already under way to secure the establishment of a wine-making plant at Hammond under federal supervision, for the manufacture of wine for medicinal uses. This will give a further market for ripe fruit which cannot be shipped.

Adequate Facilities Provided

The Illinois Central System, following its usual plan for providing adequate facilities for the territory it serves, this winter has enlarged and installed new and improved shipping sheds at Ponchatoula at an expense of about \$12,000. In addition to enlarging and remodeling the passenger station, a new canopy shed has been erected for receiving and loading fruit and vegetable shipments. The new shed is 35 feet long and conveniently located at the north end of the freight depot. Plans are being worked out for a beautiful parkway along the station property also. This parkway will be fifty feet wide, parallel with the railway tracks, and will comprise a stretch of green lawn with flower beds, shrubbery and palm trees. Parkway of a similar character have already been established at other points along the Illinois Central, notably the attractive beautification scheme at Hammond which is admired by travelers who view the bright flowers and splendid palms that flank the station buildings on either hand.

Hammond, La., is probably the pioneer shipping point of the strawberry growing

*A comely daughter
of Italy*

Centralia at the time of his death in January of the present year.

For several years the progressive citizens of several parishes in southeastern Louisiana have been interested in the establishment of a state experiment farm near Hammond. There was some opposition on the part of those who for various reasons did not favor the plan, but about a year ago the project was finally accomplished by the united efforts of the people of Tangipahoa and Livingston parishes.

A tract of virgin land six miles east of Hammond was bought at an outlay of \$8,000. The tract consists of 183.4 acres, mostly forested and cut-over pine land. The state has agreed to maintain and develop the farm in the future, and it is being made into a regular wonderland for the advancement of agricultural and horticultural pursuits in this country.

The people of this section have been fortunate in securing the services of a young man who is a genius in his line and who has been in charge of the experiment farm for the past eleven months. His name is B. Szymoniak, a native of Poland originally, but now an enthusiastic Louisianian—due perhaps, in a little measure, to the fact that Mrs. Szymoniak was born in that state. At any rate, these two talented young people have transformed what was a stump-dotted and weed-covered wilderness a year ago into orderly fields where young orchards of various fruit trees, vineyards and gardens are already growing. There was an old ramshackle house on the farm when it was purchased and some tumble-down sheds. The house has been repaired and remodeled, much of the work of painting and decorating the interior having been done by Mr. Szymoniak and his wife themselves. The farm house is now completely modern, with its own electrical plant for lighting and other conveniences, a water system and all the comforts of a city home. Surrounding it are all manner of flowers and shrubs, and it is planned to build paved drives through the parkway which will in-

tervene between the house and the main road in the near future.

Arrangements Made for Experiment

Forty acres of land have already been cleared of stumps, more than 3,500 pine butts having been blown out to clear the ground. Berry fields have been planted with various kinds of strawberries and blackberries. These are in five acre plots where experiments are to be conducted to determine the advantages of different fertilization, cultivation and all that enters into successful fruit-growing. On one plot, twenty-one different combinations of fertilizers are being used and the results noted. Experiments are under way at present for growing different berries, satsuma oranges, muscadine grapes and pecans. The various kinds of muscadines will be thoroughly tried out on this land.

Mr. Szymoniak has had over ten years' experience in experimental farm work. He was connected with the National Bureau of Plant Research for nine years. Three years of this period were spent in development work in North Carolina, another three

years at the State University of Missouri, and the remaining three years at Baton Rouge, La. He came to the station at Hammond from that place.

A variety of fruit trees are already planted and growing on the farm. These include a satsuma orchard, different varieties of apples, pears, plums, cherries, peaches and other Northern fruits which are not as a rule grown in this part of the South. Given a few more years with a continuation of the progress so far on the state experiment farm, and it may be safely predicted that the tract will be a veritable paradise of fruits and gardens. The tract touches the line of the Yazoo & Mississippi Valley Railroad on the north, and that company has already signified its intention of establishing a station at the farm. A new paved highway also will be built this year along the east line of the farm, and with the completion of the landscaping of the grounds surrounding the stately white house in its clump of pines, the experiment farm will be one of the show places in Tangipahoa Parish.

He Has Lived on Right-of-Way Sixty Years

*Patrick Donovan, Pensioned Section Foreman, Is
Honored by President Markham for Long Service*

PATRICK DONOVAN of Watson, Ill., retired section foreman, has never met Charles H. Markham, but he carries in his heart a high regard for the president of the Illinois Central System, and some of these days when the two do meet Pat is going to tell Mr. Markham in his brusque, Irish way what a fine fellow he thinks the Illinois Central's chief executive is. Mr. Markham may be flustered when he hears all the things Pat will say to him, for Pat has a facile tongue.

It all comes about through an order that Mr. Markham issued nearly two years ago, when Section Foreman Donovan was first placed on the pension list—but even that is ahead of the story. To begin at the beginning:

Born on the Right-of-Way

Pat was born in a section house on the Illinois Central right-of-way. His father, John Donovan was a section foreman for the Illinois Central for upwards of thirty years—just how long, Pat doesn't remember and the records of the company do not show. But the first noise that smote the ears of young Patrick as he lay wriggling in his mother's arms, in the little section house that then stood a mile south of Effingham, Ill., where there is now a coaling station, was the roar of an Illinois Central train that flashed by in the night.

Patrick Donovan recently celebrated his sixtieth birthday, and there has never been a day when he has lived off the right-of-way. His father located at Watson when Pat and his brother Mike, two years older, were youngsters, and just as soon as Mike and Pat were big enough to swing a pick they rode the handcar out on the section with their dad and his crew to work.

In January, 1891, John Donovan passed on to his reward, but he left two sturdy sons to carry on. Mike, being the elder, was made foreman in his father's place, and Pat continued as a laborer. Six years later Mike was made track supervisor and went to Effingham to live, and Pat took charge of the section at Watson. Prior to that time he had served off and on as extra gang foreman, but he had an affection for Watson, and he kept gravitating back there. Supervisor Mike Donovan died seven years ago, but Foreman Pat continued at his post. In February, 1921, he was pensioned, because of failing health, with 43 years and 3 months of service to his credit.

Anxious to Keep His Home

Shortly after Pat was relieved of the foremanship, Supervisor Tom Carey (whose recent death is reported elsewhere in this number of the magazine) dropped into Roadmaster Downs' office with the information that Pat was sick. Questioned as to

Patrick Donovan and his home

the sickness, Mr. Carey announced that his friend was sick because, since he had been pensioned, he would have to give up the section house in which he had lived for so many years and for the first time live off the right-of-way of the railroad that had become so much a part of his life that he felt he just couldn't live away from it.

A few days after that President Markham was riding over the Illinois division on passenger train No. 2. As the train passed Watson Pat was standing out on the front porch of the section house, waving at the train. The division officers waved back, and in reply to a question they told Mr. Markham the story of Pat Donovan's long years of service and his love for the little strip of property along the right-of-way that had been his home for many years.

Nothing more was said, but a few days later the offices at Champaign received a telephone call from Chicago asking for information on the Donovan case. This was followed in a few days by a letter, the purport of which was that, by order of Mr. Markham, Pat Donovan was to have the section house for his use so long as he lives. His successor, a former extra gang foreman, owns his own home at Watson, and his pay was ordered increased by the usual amount to correspond with the pay of a foreman who is not provided with a residence by the company.

To Have Life Tenure of Home

Supervisor Carey sent Pat a note telling him that he was to have the section house for his own for the rest of his life, and a few days later he alighted from the train to verify the news by a personal call. Pat's eyes shone—through a few tears that glistened in the honest light of his Irish eyes. And since then he has been waiting for an opportunity to tell Mr. Markham what a fine man he thinks he is.

Pat is a bachelor. After his mother died, a sister kept house for him and his brother Mike; then Mike married. After Mike was transferred to Effingham, Pat has lived on alone at Watson, except that he occasionally has one of the section men come in and "batch" with him.

Since the records do not disclose John Donovan's length of service, we do not know exactly how many years of labor he and his two sons gave the railroad. But John Donovan was a section foreman when Mike was born, in 1861,—so his service was something more than 30 years. Mike died with 41 years of service to his credit, and Pat had over 43 years to his credit upon retirement. Altogether, the three men were in the employ of the company for at least 115 years.

Although the sons of John Donovan are

out of the service, the third generation is represented in our ranks. The two sons of Mike Donovan are employed at Illinois division headquarters in Champaign—Mike, Junior, as a call boy and Leo as a clerk in the division accounting office.

While it does not involve the relationship of Pat Donovan, it is interesting to note that when his brother Mike chose a wife he selected a daughter of Peter Eldridge, pumper at Four-Mile, between Sigel and Neoga, and Peter Eldridge has given two sons to the service of the Illinois Central System—Track Supervisor W. T. Eldridge, at Baton Rouge, and George Eldridge, locomotive engineer, also on "the Valley."

PREPARATION BEATS INSPIRATION

"This quality they call 'inspiration,'" says Mr. Livingstone, "is one of the most worthless commodities I know of. It's not inspiration but preparation that counts. You hear about men rising to an emergency—and they often do. But the man who rises to an emergency is the man who has fitted himself to do so by years of labor and study and work.

"Genius is supposed to be some peculiar capacity for spontaneous accomplishment. If so, it's one of the rarest things in the world. I've been studying business and human beings for more than sixty years, and I've never yet seen anything permanently worth while that was accomplished on the spur of the moment.

"The man who expects to win out in business without self-denial and self-improvement and self-applied observation stands about as much chance as a prize fighter would stand if he started a hard ring battle without having gone through an intensive training period. Natural ability, even when accompanied by the spirit to win, is never sufficient. We had the finest raw material in the world when we entered the World War—but you will notice that our men had to spend a long training period on this side, learning discipline, before they were sent to France."—Interview with WILLIAM LIVINGSTONE by THANE WILSON in the *American Magazine*.

ASK YOUR BANKER

The banker is a custodian. He is the man who protects money from being lost. He is all for safety. He spends his life studying the signs of danger. For the reason that he always plays safe, a banker is the best possible adviser to every investor at first. There comes a time when a man may become strong enough to outgrow his banker's advice—but that is not often.—HERBERT N. CASSON, in *Forbes*.

Perils of an Engineer Thirty Years Ago

*Striking Cabooses Was Common Occurrence
in 1890 When Jerry Cronin Went on Road*

Jerry Cronin, traveling engineer of the New Orleans division, says that three generations of his family have been identified with the Yazoo & Mississippi Valley Railroad; that his father was among the first employes, if not the very first, of the old Louisville, New Orleans & Texas in the city of New Orleans; further, that, at one time, four of his own boys, besides himself, were carried on the pay rolls of the Yazoo & Mississippi Valley Railroad.

By **JERRY CRONIN**,
Traveling Engineer, New Orleans Division

IN the early '80's my father, John Cronin, was employed as watchman by the Jackson Compress at New Orleans, owned and operated by O'Brien & Company. The property was acquired by the Louisville, New Orleans & Texas Railroad, then in its inception, and my father was retained as watchman until his death. I was then a boy and was fired with the ambition to become a locomotive engineer. It was my determination to get a job on the railroad, and when the yards on Poydras Street were completed I managed to land one with W. R. Jones, who was the first freight agent in New Orleans. I remained with Mr. Jones as notice clerk until August, 1885.

While still working in the freight office, I got my first road experience. On the occasion of the unveiling of a statue erected in honor of Governor Allen of Louisiana, at Baton Rouge in 1885, I was called on to act as flagman on an excursion train which was run out of New Orleans to Baton Rouge. The train consisted of a baggage car and eight coaches, some of them borrowed from the Illinois Central Railroad, and was in charge of a conductor named Barclay. Straight air was used on the Illinois Central coaches and automatic air on ours. When the engine coupled up to the train, some of the air, of course, was applied, but some of it would not set, and we could not get out of town until an old-timer, Engineer Barney Comiskey, happened along and cut in all the coaches for automatic air. We then proceeded to Baton Rouge, but handled only about a dozen passengers on the whole trip. The excursion was a complete failure. Not a very auspicious beginning for a road career, I say.

Started Work in a Roundhouse

Shortly afterward my aspirations began to take shape. C. Linstrom, who was fore-

Jerry Cronin

man at New Orleans, gave me a position as engine cleaner in the 1-stall roundhouse at Galvez and Poydras streets. My duties were to wipe and coal three passenger and one freight engine, and, finishing that job, to help the machinists do what work was necessary. After a year in the roundhouse, my golden opportunity came. I was put out firing for Hume Peevey on engine No. 25, handling rice between Kenner and St. Gabriel, La. I had to watch, wipe and keep No. 25 looking like a new silver dollar. I then went into freight service, ran a switch engine in 1889 and entered road service in 1890. I ran a freight engine between Wilson, La., and Vicksburg, Miss., until 1907, when I was appointed traveling engineer—and here I am, still on the job.

I have seen many strange and unusual things and have had many odd and curious experiences in my career as an engineer.

It was in 1889, as I remember. Master Mechanic Linstrom and I were standing at the old roundhouse at Vicksburg watching a train pull into the yards when our

attention was called to a car with only one pair of trucks under it. The missing trucks were found ten miles south of Vicksburg.

An Extra Passenger on the Pilot

One night train No. 59 left Harriston very late. We stopped at Roxie to take a tank of water. While I was oiling the engine I discovered a negro curled up on the pilot. I looked him over and applied my torch to him. He never moved, and I concluded he was dead, but, on feeling his pulse, I found that he had considerable life left in him, though really dead-drunk. Safely lodged on the pilot beside him was a half-gallon jug of liquor, which, from the odor it emitted, I judge was not of the very best quality. The man's head was hooked around the uncoupling lever, and one foot was on a little step that used to be attached to the pilots.

Evidently he had been sitting on the bumper and, falling off, had been caught in the position in which I found him. We extricated him from his perilous perch and let him drop two or three times on the soft ground, with a view to waking him up—but nothing but Gabriel's trumpet could have aroused that fellow, so completely soaked was he. We planted him tenderly on the depot platform, with his jug of bug juice beside him, within easy reach. This was about 10 o'clock at night.

Before leaving Roxie, I thought I'd take a farewell look at him. He was resting comfortably—but the jug had disappeared. I accused my negro fireman, Joe Edinburg, of annexing the jug, but he indignantly denied it. He said he didn't mind much being accused of theft, but it was a grave reflection on his judgment and taste to charge him with stealing a jug of whisky that would make a fellow do things like those done by the unconscious one on the depot platform. Besides, he said, "that nigger had his nerve to steal a ride in such condition." You must remember, in those days there were no Volstead Acts and the Eighteenth Amendment was never dreamed of. One thing I am quite sure of—if the fellow had not been drunk he surely would have been killed. I was told afterward that he awoke from his profound slumber about 10 o'clock the next day and went on his way rejoicing.

Why the New Engineer Resigned

In those days the winter business was heavy, and during the rush period it was necessary to employ many extra engineers. One night we were going south with the fourth section of No. 13, and we had an engineer on board learning the road. I was firing at that time for Engineer Peevey. While we were passing a big pile of debris on the waylands, Engineer Peevey said:

"Here's where so-and-so struck a caboose."

The extra man nodded.

A few miles further on we passed two engines locked together on a siding.

"Here's where so-and-so and what's-his-name had a head on collision and had to jump to save their skins," remarked Mr. Peevey.

"That's so?" replied the extra man, interrogatively.

Pretty soon after we were taking a curve near Glass, Miss.

"Here's where we all jump," suddenly yelled Mr. Peevey, and it didn't take long to do it.

Hand brakes in use and no flags out, we plowed into a train in front of us—six car lengths. When the dust settled the extra man came up to me and asked: "How far to Vicksburg?"

"Twelve miles or so," I answered.

"Then good-by; I've resigned; I don't want no job on this road."

He started up the track at a swift gait, and that was the last we ever saw of him.

Hitting cabooses was a common occurrence in those days—so much so that the usual salutation when one came in of mornings was: "Good morning! Whose caboose did you hit last night?"

Two wreckers were kept busy day and night during the rush season, keeping the road clear.

We must not forget, however, that it was in the primitive age of no rules, no regulations, hand brakes, links-and-pins, hard-ships and hard "licker." With such a batch of ingredients, all mixed up, somewhat incompatible as it were, wrecks and funerals were just natural, that's all. But we've improved.

This brings me down to 1890. Lots of things have happened since that time. Some day, I'll tell you all about them.

ALWAYS ROOM FOR A FAT MAN

"The easiest person to get on with," says Mr. Rottmann, "at the hotel desk, at any rate, is the fat man. I don't know whether other people love a fat man, but he certainly is popular with the room clerk. He comes up to the desk smiling and says, 'How about a room for little Willie?'"

"Haven't got anything just now," you say.

"That so? Well, I guess you'll find a corner later for a cherub like me, won't you?"

"And you just naturally say, 'Sure! We'll tuck you in somewhere.'"—From "How the Hotel Clerk Sizes You Up," by ALLISON GRAY, in *American Magazine*.

Good Publicity Work by Section Foreman

*Charles Borchert of Madison, Wis., Replies to
Criticism of Railroads in Home Newspaper*

“THE public is unreasonable in its demand upon the railroads for the separation of all grades at crossings,” says Charles Borchert, section foreman at Madison, Wis., an employe active in presenting the case of the railroads to the public. “There is no doubt that such an improvement is greatly needed, but it would cost far more than the railroads could stand. Those who advocate the separation of all the grades lose sight of the fact that such expenditures, in the long run, have to be paid by the public either in increased freight rates or in moves by the railroads for economy that reflect back in some way upon the public. At the same time of the demands for the separation of all grades, there are cries for the lowering of freight rates. It is absurd to expect the railroads to be able to do both things, and the public must be given the facts if it is to see the unreasonableness of its demands.”

Mr. Borchert believes that the section foreman can do much toward educating the public in the grade crossing problem. The section men are probably as intimate with the crossings as anyone else on the railroad, he says. They actually see the daring chances that some persons take in trying to

cross in front of trains, and he says that it is surprising to see many perfectly sane and intelligent persons flirt so with death.

Must Keep Question Before Public

“A man may not like to be told that he was foolish in trying to cross in front of a train, even if he is successful in the attempt,” Mr. Borchert says, “but I believe that, if such instances are continually kept before the public, the uselessness of such actions will soon become apparent. The result will be fewer grade crossing accidents.”

Mr. Borchert is one of the most conscientious section foremen on the Illinois Central System. He takes a personal interest in his work, and is at all times a close observer.

February 5 Mr. Borchert read the following in the “Voice of the People” department of the *Madison Capital Times*:

To the Editor:—Inasmuch as automobile grade crossing accidents are increasing with startling regularity, and Wisconsin has no adequate grade separation legislation, I suggest a plan herein that may prove of interest and value.

Those travelers and pedestrians who meet with injuries by reason of collisions have no very adequate remedy at this time. Senator Severson introduced

Charles Borchert and his family

a bill, I think, at his first session as senator, making the railroads practically insurers against grade crossing accidents. This bill was defeated. I suggest now legislation making the railroads liable in all such cases for the damages occasioned by such collisions whenever the injury happens at a grade crossing, and excepting only when the traveler has willfully placed himself in a position of known danger. This would indirectly hasten grade separation at the more dangerous crossings, as the railroads would soon desire to absolve themselves from liability.

With greatly increased automobile travel is there not here a suggestion which may well be enacted into law? I will thank you, and the people will be duly grateful, if some such legislation can be at once accomplished. I have suggested it to Senator Huber and will thank you to take it up with Senator Severson, or some one else, and see that something is done to prevent in some degree the slaughter of the innocent travelers.—INTERESTED.

Wrote Answer to Complainant

That communication kindled a fire of protest in Mr. Borchert. It was so unreasonable and absurd that he could not let it go unanswered. He says that he lay awake most of that night thinking about it. It was a case where the railroads were being done an injustice, and he was determined that the public should know the truth.

The next morning he went to the office of Agent L. L. Lamb, showed him the clipping and asked him to help prepare a reply.

"Mr. Borchert was enthusiastic about writing a letter replying to 'Interested,'" Mr. Lamb says, "and at the same time he did not feel that his education was adequate to express clearly his ideas. We talked the thing over and decided to write a reply for publication."

The February 7 issue of the *Capital Times* contained the following letter written by Mr. Lamb and Mr. Borchert:

To the Editor:—On February 5, there was a communication in the *Capital Times* which deplored the railway crossing accidents in Wisconsin, claimed inadequate remedies for the victims, intimated gross negligence on the part of the railroads and suggested a plan to take care of the trouble.

There is probably no party more interested in minimizing grade crossing accidents than the railroads themselves. If Interested was as deeply concerned over the matter as he would have the reader believe, he could not help but be aware of the fact that the railroads for over a year have been carrying on an aggressive and intensive campaign to keep people from willfully putting themselves in positions of known danger. For if Interested cares to investigate he will find that it is a rare case when crossing accidents are not due to inexcusable carelessness on the part of the automobilist. By using placards, posters and various conspicuous warnings the railroads are earnestly trying to educate the public out its present joy riding-take a chance philosophy.

As far as present remedies are concerned, one can always sue for damages, and surely Interested doesn't feel that damages are never collected? It is frequently the case that railroads will offer outside of court much more in reparation than a subsequent court verdict will allow. That is, the railroads are willing to go more than half way.

An insurance or general responsibility plan is, of course, laughably absurd. It is not needed, and if it was in effect it would be no better than the situ-

Home of Charles Borchert.

ation at present. No railroad or insurance company will settle with an injured party or his estate until it is satisfactorily proved that the victim did not "willfully put himself in a position of known danger." In short, the process would be the same as now. To collect, the injured party would have to prove that he had taken reasonable precautions.

One is forced to conclude that what Interested had in mind was an irresponsible, helpless automobile public which has innumerable rights but no duties, and which is to be taken care of by the railroads. In short, one gets the impression that the autoing public can "do no wrong," but can and is wronged against by the much maligned railroads. It puts this public in a carefree, well guarded, and highly privileged class, freed of all the legal duties which are incumbent upon the less fortunate public that does not own cars, and which is forced to protect itself from injury at the hands of the privileged autoing public as best it may.—CHAS. BORCHERT, 1505 Spring Street.

That is just one incident to show how vitally interested Mr. Borchert is in railway matters. He is eager to give to the public the knowledge he has gained through his many years of railway service, and he advocates like action on the part of all railway employees.

"Even if an employe does not feel capable of making a reply to such communications, that is no excuse for him to allow the matter to drop," Mr. Borchert says. "Those who are higher in the employ are always glad to offer advice and help."

Mr. Borchert first entered the service of the Illinois Central November 28, 1888, as a section laborer at Fitchburg, Wis. He was 18 years old at that time and had been working on a farm. The section foreman, William Henrichs, who boarded at the farm house, persuaded Mr. Borchert to start working on the section. He was paid \$1.25 a day for ten hours work and remained in that work for six years.

Proved a Dependable Workman

Mr. Henrichs regarded Mr. Borchert as the most dependable laborer on his section. Andy Dailey, the road supervisor, saw the efficient work that Mr. Borchert was doing. He watched Mr. Borchert driving spikes one day, turned to Mr. Henrichs and said: "If all our laborers drove spikes as well as Borchert, we'd have some splendid spiking on this district." On another occasion

ne complimented Mr. Borchert on some mowing that he was doing along the right-of-way.

In January, 1895, Mr. Borchert was made foreman of the section at Monticello, Wis. That was a mighty hard section to keep up, he says. He stayed for a little more than two years, and then decided to go into business for himself.

For five and one-half years he was a merchant in partnership with Mr. Henrichs at Fitchburg, and then he decided to go back to railroading.

At that time there was no section open for him to take charge of, but he was promised the first opening. He served as a laborer on his old section at Monticello for eleven days, and was then made foreman of the west section at that place. He stayed there until 1905, when he was transferred to the section at Madison.

Mr. Borchert still has the reputation of doing his work thoroughly. He works right alongside of his men because he says that there are many things that he wants to be sure are done right.

Quoted Our Figures to Insurance Experts

Below are extracts from an address given at the business conference of the Prudential Insurance Company of America, February 6, 1923, by John W. Stedman, second vice-president and manager of the bond department. In attendance at this meeting were superintendents, managers and real estate loan correspondents of the company from forty-three states in the union.

So you see the character, variation and trend of our investments, in a general way, reflect economic conditions throughout the country. The gross turnover in security investments by the bond department last year of about \$62,000,000 would not have been so large had the housing shortage continued so acute. By the late summer another serious shortage began to make itself felt: namely, the shortage of freight cars and locomotives required to handle the dammed-up traffic let loose by the termination of the coal miners' and railway shopmen's strikes. As reflecting this need for railway equipment, we purchased nearly \$11,000,000 of bonds issued solely for the purpose of building locomotives and freight cars.

When I tell you, at the risk of being personal, that more than twenty years ago I worked on the railroad as a freight brakeman, freight train conductor, switchman and yardmaster and have handled thousands of cars, you will understand why I feel that I know something about the value of this form of security. To lend the people's savings to make possible the hauling of food, coal and building material, you will admit, I think, is as vital to the nation as making possible the building of houses.

This leads me to say a word about our investment of more than \$200,000,000 in other railroad bonds. We read a good deal of false doctrine and vicious misrepresentation in the newspapers by our radical politicians and labor leaders, who denounce the railroads for their mismanagement and for the hardship they inflict, more particularly on the farmers, in charging rates to produce

John W. Stedman

income on "watered" stock. The only reason why the railroads are not run so well as some industrial enterprises, and so well as the Prudential conducts its business, is because their managements are not their own masters; they do not control their own income, that being regulated by the Interstate Commerce Commission, nor do they control the greater part of their outgo, that being regulated by the Labor Board.

Regarding the baseless statements by some of our newly elected Senators that there is \$8,000,000,000 of water in the tentative valuation of \$20,000,000,000 given

the railroads by the Interstate Commerce Commission, let me ask you to think over this concrete comparison: Last year in Illinois bids were opened for the construction of 195 miles of hard-surfaced roads, not concrete, only fifteen miles of which involved heavy grading, and with only twelve light bridges. The average cost proved to be \$25,500 per mile. Now consider the capitalization, that is, the total amount of bonds and stock in the hands of investors of the Illinois Central Railroad, running parallel to these same highways. Throwing in the cost of bridges, stations, roundhouses, signals, shops and machinery, but deducting the value of all locomotives and cars,

appraised at only half their present cost, this capitalization figures out at the rate of only \$23,300 per mile of track.

What is true in Illinois, and with respect to this particular railroad, is equally true in other parts of the country and of other railroads. There are, of course, a few exceptions, which only serve to prove the rule; but in time their capitalization will be made to fit their true values. The water which may have existed twenty years ago has long since been squeezed out, and our transportation system is entitled, if the country at large is to prosper, to a fair rate of return on its investment.

Carnegie and the Dubuque Bridge Contract

The following extract from the autobiography of Andrew Carnegie relating to the contract for building the railway bridge which spans the Mississippi River at Dubuque, Iowa, is called to our attention by Miss F. E. Couch, secretary of the Dunleith & Dubuque Bridge Company. The Illinois Central has owned the Dunleith & Dubuque Bridge Company since 1887-8. The bridge was built in 1868 and completed in December of that year. Its original cost was more than \$1,000,000.

I gave a great deal of attention for some years to the affairs of the Keystone Bridge Works, and when important contracts were involved often went myself to meet the parties. One such occasion in 1868 I visited Dubuque, Iowa, with our engineer, Walter Katte. We were competing for the building of the most important railway bridge that had been built up to that time, a bridge across the wide Mississippi at Dubuque, to span which was considered a great undertaking. We found the river frozen and crossed it upon a sleigh drawn by four horses.

That visit proved how much turns upon trifles. We found we were not the lowest bidder. Our chief rival was a bridge-building concern in Chicago, to which the board had decided to award the contract. I lingered and talked with some of the directors. They were delightfully ignorant of the merits of cast and wrought-iron. We had always made the upper cord of the bridge of the latter, while our rival's was made of cast iron. This furnished my text. I pictured the result of a steamer striking against the one and against the other. In case of the wrought iron cord it would probably only bend; in the case of the cast iron cord it would certainly break and down would come the bridge. One of the direc-

tors, the well-known Platt Smith, was fortunately able to enforce my argument by stating to the board that what I said was undoubtedly the case about cast iron.

The other night he had run his buggy against a lamp post which was of cast iron and the lamp post had broken to pieces. Am I to be censured if I had little difficulty here in recognizing something akin to the hand of Providence, with Platt Smith the manifest agent?

"Ah, gentlemen," I said, "there is the point. A little more money and you could have had the indestructible wrought iron and your bridge would stand against any steamboat. We never have built and we never will build a cheap bridge. Ours don't fall."

There was a pause. Then the president of the bridge company, Mr. Allison, the great senator, asked if I would excuse them for a few moments. I retired. Soon they recalled me and offered the contract provided we took the lower price which was only a few thousand dollars less. I agreed to the concession. The cast iron lamp post so opportunely smashed gave us one of our most profitable contracts, and what is more, obtained for us the reputation of having taken the Dubuque bridge against all competitors. It also laid the foundation for me of a life-long, unbroken friendship with one of America's best and most valuable public men—Senator Allison.

The moral of that story lies on the surface. If you want a contract, be on the spot when it is let. A smashed lamp post or something equally unthought of may secure the prize if the bidder be on hand. And, if possible, stay on hand until you can take the written contract home in your pocket. This we did at Dubuque, although it was suggested that we could leave and it would be sent after us to execute.

The Days When Our Railroad Was Young

*Night Spent at Glen Gordon Forty-six Years
Ago Recalled by Former President Fish*

By STUYVESANT FISH

THE *Illinois Central Magazine* for February, 1923, contains an article on Glen Gordon, near Chatawa, Miss., which interests me greatly on account of early associations. It so happens that the home of Colonel William Alexander Gordon was the first private house in which I ever spent a night in the Southern states. The New Orleans, Jackson & Great Northern and the Mississippi Central railroads, having in 1877 been sold at foreclosure, were bought in the interest of the Illinois Central Railroad Company, and in November of that year consolidated under the name of the Chicago, St. Louis & New Orleans Railroad Company.

Organizing a New Railway Company

With a party, consisting, as I remember, of William H. Osborn, W. K. Ackerman, James C. Clarke and other officers of the company and a number of the members of its law department, among them James Emott of New York, B. F. Ayer and Judge James Fentress, we passed from Kentucky through Tennessee and Mississippi to New Orleans in Louisiana. Stops were made at suitable points in those states and meetings held in each of the four, for the organization of the new consolidated company. There was a tremendous amount of clerical work to be done early and late, the burden of which fell to the well-trained hands of John Dunn and to my willing but far less skilled ones. We had no typewriting machines; it was all longhand copying.

At New Orleans a stay of several days was made. Colonel Gordon, who had become one of the resident directors of the C., St. L. & N. O., was kind enough to take me into his home at Chatawa for a Sunday. There I made the acquaintance of Mrs. Gordon and the younger members of the family and became fairly familiar with the natural beauties of the surroundings of Glen Gordon.

On the night of my arrival, bedtime approaching, Colonel Gordon used a phrase then current in the South but unintelligible to me; he said, "Let us have a glass of my Madeira, which Sherman burned at Columbia." Seeing a blank look in my countenance, he explained that every gentleman in the Confederacy excused his lack of Madeira by saying that he had had so and so many dozen stored at Columbia when General Sherman passed through that town.

March, 1923

Stuyvesant Fish, now a banker in New York City, was president of the Illinois Central System between May 18, 1887, and November 7, 1906. His first service with the company was as a clerk in the New York office in 1871. The next year he was made secretary to the president. March 16, 1877, he became a director of the Illinois Central as well as treasurer and agent for the purchasing committee of the New Orleans, Jackson & Great Northern Railroad. He became secretary of the Chicago, St. Louis & New Orleans Railroad the same year and served in that capacity until 1882, when he was made vice-president. He served as vice-president of the Illinois Central System from 1883 to 1887.

Colonel Gordon then produced some very good whisky, of which we partook. This was then a free country, in which the temperate use of beer, wine and spirits was a matter regulated by the judgment of its free citizens, and not controlled, or attempted to be controlled, by statute law, and especially by federal statutes.

Helped Fight Against Yellow Fever

In another article in the February magazine on Chatawa and the academy there, in which I well remember Mrs. Gordon's tak-

Thirty-nine

ing great interest, reference is made to yellow fever. The first attack of that epidemic with which we had experience came in the summer of 1878. That the source of the disease lay in a certain kind of mosquito was then unknown. Lime was then considered a good disinfectant. The railway company contributed and distributed one hundred cars thereof. Mr. Osborn gave ten cars; this writer, then secretary of the C., St. L. & N. O., one; other officers also contributed. The company gave free transportation for physicians, nurses and supplies of all kinds, expending well over \$100,000 in the work. The local newspapers were free in commending its action, and I

remember getting together and filing at least a hundred of their articles.

The discovery, many years later, of the real source of the disease, a certain kind of mosquito, brought back to my memory that Colonel Gordon and others had then, in 1877, told me that prior to the building of the railroad mosquitoes of any kind were unknown in the "piney woods" of southern Mississippi. All were of the belief that they were imported in the freight cars, which had been carried to New Orleans, left standing there for some days, and brought back empty. Even Captain Conway, our old roadmaster, who lived at Chatawa, admitted this.

Son of Dispatcher a Talented Musician

Dispatcher and Mrs. J. W. Bledsoe of Mattoon, Ill., may be justly proud of their son William, 16 years old, who is a musician of rare ability. He is the possessor of a 4-octave Deagan artists' special instrument xylophone which he manipulates with fine understanding. His playing is skillful, sincere and impressive, and the brilliant style of his music delights his audiences.

William is a member of the Treble Clef Club, the leading musical club of the city. He has been heard at many of Mattoon's social affairs, as well as in nearby towns. He plays in the high school orchestra and specializes in classical solos, but, when occasion demands, his jazz playing more than pleases. He arranges all 4-hammer work himself. William has been playing on the

instrument about two and a half years, but has been studying just a little more than a year. He is a junior in high school, but finds time to make occasional trips to Chicago to study under M. L. Jones, an artist on the xylophone.

To William's mother is due much credit for developing the natural talent of her son. Mrs. Bledsoe herself is an accomplished pianist and has been so recognized for years, and her love of music causes her to devote her time unreservedly to her son's advancement, which has been an incentive for him to forge ahead. Mrs. Bledsoe plays all of William's accompaniments, and those who have been fortunate enough to enjoy their programs have been given a delightful treat. It is predicted that success on a big scale will come to the young musician.

Terminal Employees Meet to Conserve Fuel

Business and Pleasure Combined in Chicago Gathering

With Talks by J. W. Dodge and O. L. Lindrew

AN instructive and entertaining fuel meeting was held the evening of January 19 on the ninth floor of our 63d Street office building in Chicago, under the auspices of the Chicago terminal passenger service employees. The program included fuel talks by J. W. Dodge and O. L. Lindrew, transportation inspectors; motion pictures by E. A. Barton, inspector of stations and transfers; a song, "Three o'Clock in the Morning," over the radio, by H. E. Bragg, chief clerk to the superintendent of suburban passenger service; and a radio concert under the direction of Dwight Clextan, son of Frank Clextan, a suburban service engineer. More than two hundred employees and the members of their families attended the meeting.

It was announced that this meeting was the first of a series of such entertainments for the employees in Chicago and that they were to be for the benefit of the employees and their families of all the departments. A. Bernard, superintendent of the suburban passenger service, was chairman of the meeting.

When the meeting was called to order at 8 p. m., Mr. Bernard introduced Mr. Bragg to the audience, and then announced that Mr. Bragg would leave immediately for WMAQ wireless station of the *Chicago Daily News* on the roof of the Fair building. The *Daily News* previously had consented gladly to allow Mr. Bragg to sing at the broadcasting station.

Coal Saving Guards Pay Check

"Payment for the great amount of fuel that is consumed by the Illinois Central System must be made out of the same treasury that pays you and me," Mr. Dodge said in his talk on conservation. "And when such a sum of money is taken out of the earnings for the payment of the coal bill, it comes mighty close to tramping on your pay check and my pay check. That is one of the reasons I am appealing to each of you to do your part in the conservation of coal.

"It is the little saving by many that in the aggregate makes a great quantity," he continued. "As an illustration, if only one

J. W. Dodge

O. L. Lindrew

additional pound of coal had been saved out of each ton that was purchased by the Illinois Central System during 1921, it would have meant a saving of coal to the value of \$45,000.

"The highest possible efficiency should be got out of coal when it is burned. This cannot be done unless the temperature of the fire is between 1,400 and 1,500 degrees Fahrenheit.

About 35 per cent of the heat value of coal is in the form of gas. This gas is released from the solid matter at 700 degrees, but will not ignite under 1,400 degrees. In other words, if the fire is not kept at 1,400 degrees Fahrenheit, 35 per cent of the heat value of the coal goes to waste in the form of freed gas.

"The results obtained in fuel conservation during the last ten years on the Illinois Central System have been splendid. I can best illustrate by saying that, had we consumed as many pounds of coal per unit of service in 1921 as we did in 1912, our fuel bill would have been about five million dollars more than it was."

Urges Aid to New Firemen

Mr. Lindrew appealed to the employees to stop the leaks on the system. "I believe that if all the leaks were stopped," he said, "the company could afford to increase our salaries.

"No matter how old we are in the business, we can always learn something. Get-together meetings like this will prove very beneficial, and I am sure that each one will gain knowledge through the exchange of ideas.

"I should like to impress upon the engineers how important it is that they give the young firemen all the assistance they can. The younger employees need the help of those who have had experience in the service, and a word now and then will teach them how to save coal. Perhaps it will not be more than a pound a day—maybe a scoopful. No matter how much it is, every little bit helps in the long run. Many times a little thinking will lighten the work and at the same time save coal."

After Mr. Lindrew's speech, Mr. Barton projected several reels of interesting motion pictures. They were pictures of work that is being done on the Illinois Central System. One reel, which bore the title "Loss and Damage to Freight," showed

Dwight Clexton

Damage to Equipment

There is a good reason why we should make every effort to eliminate damage to equipment—a great evil which hovers about us.

In the first place, it is a destructive element of good business. A damaged car is a menace to any railroad. The trip to the rip in a great many instances delays the shipment, causing dissatisfaction both to the shipper and to the consignee, thereby paving the way for criticism instead of a boost.

So in order to enjoy good business we must have boosters instead of knockers. A knocker is exactly what you are, my friend, whenever you carelessly damage a car.

Why not get into the game, be a booster and assist this great railroad to continue to enjoy the large increase and great volume of business which is bound to come our way?—P. S. ENGLISH, *Yardmaster, Chicago.*

clearly just what happens inside freight cars from impacts and collisions.

A Home Talent Radio Program

When the motion pictures were over, Mr. Clexton tuned in his radio set, and the audience enjoyed the music of the artists of the WMAQ station. And then the listeners heard: "By special request of the Illinois Central passenger service employees who are

Harlan E. Bragg

Sees Value in Meetings

R. S. Murphy, 6611 Kenwood Avenue, engine foreman in the passenger yards of Central Station at Chicago, recently wrote to President C. H. Markham the following appreciation of the fuel meeting:

"At the fuel meeting for the employes of the Illinois Central held on January 19, 1923, presided over by A. Bernard, terminal passenger superintendent, assisted by Trainmaster E. O. Guyton, which was attended by several hundred employes and their families, we had the pleasure of hearing a very interesting radio concert.

"Mr. Dodge of the fuel committee gave an interesting and instructive talk on the origin and conservation of fuel. The talk was much appreciated by all present, and I only wish that every employe of the system could have heard this enlightening talk. I believe that much good to the system will come from this meeting, as it brings the employes closer together and creates a feeling of co-operation and fellowship.

"Mr. Markham, I am sure you would have been gratified if you had heard the applause, which was spontaneous, when your picture was flashed on the screen, and I think all the employes would enjoy another such meeting to hear an address from our president."

A GOOD STUDENT

Miss Marie Doyle Pulliam, daughter of R. L. Pulliam, agent, Grayson Springs, Ky., was graduated from the Clarkson High School in the class of 1921-1922 as salutatorian and secretary-treasurer of that class. She is now attending Oxford College at Oxford, Ohio, and will receive a degree of bachelor of music in piano with only three years' study. She is also a talented singer. Miss Pulliam is a member of the Oxford Choral Society and Music Club. She was chosen as one of five to represent a class of eighty-five in the athletics of Oxford's well-known "Campus Day," and she is active in all phases of athletics. Miss Pulliam is seventeen years old.

EDUCATION THE GREAT NEED

The beauty of real education in life is that every one of us always does the best he knows how. If we do the mean and narrow thing, it is because we have not known the better and nobler. We do not need any more leaders to tell us to be good. We want liberators to weigh and compare ideas and conduct, to increase our knowledge, and to show us how to choose. If properly educated we will choose aright.

—IRVING PRICE in *Roycroft*:

assembled in and near Chicago and who are listening to our concert, Mr. Harlan E. Bragg, one of their fellow workers, will render a baritone solo, "Three o'Clock in the Morning," came through the instrument. There was much applause, and everyone leaned eagerly toward the radio apparatus. Mr. Bragg sang, and there was another round of applause. Many said that his voice compared favorably with those of the artists who were on the regular radio program.

Mr. Clepton then entertained the audience with radio concerts from a distance for a short time before the meeting was brought to a close.

Watch the Deadline!

Material for the magazine is still being sent in after the 15th of the month, in spite of warnings to the effect that the 15th is the deadline for magazine material. Obviously, material arriving so late will have to hold over at least a month.

Will Push Markham Yard Work This Year

*About Two Years' Work Yet to Be Done
on Large Classification Yard Near Chicago*

By L. L. LYFORD,

Engineer in Charge of Project

ARRANGEMENTS are being made to begin active work, as soon as the frost is out of the ground, on the completion of Markham yard, located between Homewood and Harvey, Ill. This yard was started in 1918, but very little work has been done since the period of federal control. There is yet about two years' work to be done.

In connection with the completion of this yard, it is planned to separate grades with the Baltimore & Ohio Chicago Terminal Railroad and the Grand Trunk Railroad by elevating the Illinois Central tracks through Harvey. When the plans for Markham yard were first developed, it was the intention to elevate tracks through Harvey from the Baltimore & Ohio Chicago Terminal crossing south to a connection with the south end of the yards, but the progress of the electrification program on the Chicago terminal of the Illinois Central makes it advisable to go ahead at once with the separation of grades at Harvey.

There has been spent in four years to date, in acquiring right-of-way, constructing fill and some few tracks, together with the construction of a subway at Homewood and part of a subway at 159th Street, Harvey, approximately \$2,600,000. To complete this yard, in accordance with the plan developed for the partial units to be constructed at this time, will cost approximately \$6,000,000 additional. The yard is so designed that the capacity of the receiving and departure tracks on both north- and southbound units can be doubled at some future date by constructing additional tracks and embankment.

Markham yard is to be what is known as a hump yard—that is, the cars are switched and classified by pushing them over a hump and moving them thence by gravity into the classification tracks. At the present time freight trains from the south and north are handled into the yards at Wildwood, Fordham and South Water Street, but after the completion of Markham yard the runs will end at that place and transfer trains will be handled thence into Chicago by means of transfer crews.

Yard to Have Two Main Units

In general, there will be two units—one for the handling of northbound business and the other for the handling of southbound

L. L. Lyford

business. Each unit will consist of a receiving yard, a classification yard and a departure yard, the present construction providing for ten tracks in each of the receiving and departure yards, sixty tracks in the northbound classification yard and forty tracks in the southbound classification yard. Trains from the south will be brought into the northbound receiving yard, the road engine will be cut off, and a hump engine will push the entire train over the northbound hump, which will be doubled-tracked and located just north of 171st Street.

This classification yard has a capacity of approximately 2,400 cars. Each classification consisting of one or more cars will be handled by switchmen or car riders, the duty of whom is to see that the car is stopped at the proper place without damage to equipment. These men will ride to the lower part of the classification yard and be returned to the hump on motor cars operating on specified tracks in the classification yard. From the classification tracks the cuts will be transferred by switch engine to the departure yard, where they will be built up into trains and then handled by transfer crews to their proper destination in the Chicago terminal. This will eliminate a large part of the switching that is now

Concrete work for Markham yard subway at Harvey

done at various other yards and tracks on the Chicago terminal.

The southbound unit is similar in arrangement, the classification yard holding approximately 2,000 cars. After passing over the hump, cars will be transferred from the classification yard to the southbound departure yard and handled directly from the departure yard by road crews to their destination. A great many cars from connecting lines and clearing yards will arrive in the southbound classification that will have to be returned north to points on the Chicago terminal, and provision is therefore made for transferring these cars from the classification yard across to certain tracks set aside in the northbound receiving yard for this purpose.

In addition to the north- and southbound units of this yard, it will be necessary to provide a transfer station which will be a combination of the ordinary freight house and yard loading facilities. The purpose of this yard is to transfer and consolidate package freight of less-than-carload shipments according to the destination and shipper.

Mechanical Facilities Required

It will be necessary to house and care for a large number of engines for both road and transfer movement, so that adequate mechanical facilities must be provided, consisting of roundhouses and a machine shop for light repairs, a boiler shop, cinder pits, inspection pits, water facilities,

a coaling station, a sand house and other facilities of similar nature. The coaling station will be of the latest mechanical type and able to coal four locomotives at one time. An adequate water supply and fire protection system will be built, water probably being obtained from a pumping station, located near the Calumet River, in the vicinity of 147th Street. The distribution of the water supply will be such that it will be possible to supply locomotives with water at many different points in the yard.

Modern interlocking plants will be installed to handle all switches on the hump and to facilitate the dispatching of the cars and engines from one section of the yard to another. The switches on both humps will be handled by operators stationed in the hump towers, at which point there will also be located a scale house containing the most modern type of scale capable of weighing cars while in motion.

It will also be necessary to provide a lighting system, which will require several hundred lights to be installed at many points throughout the yard.

At both the north and south ends of Markham yard in the main line tracks there will be constructed a series of cross-overs and interlocking plants to handle the switches controlling the movement of trains into and out of the yard. The construction of the plant at the south end is now under way, and it will be completed at an early date. The plant controlling the north

Completed subway at Homewood

end of the yard cannot be constructed until after the Harvey elevation work is completed. It is probable that at one of these interlocking plants, or some point between them, the exchange from steam to electric locomotives on passenger trains will take place, when the passenger tracks into the city are electrified.

No Grade Crossings in the Yard

There were several roads and streets crossing the site of the yard, but such highways and streets as could not be vacated and abandoned will be provided with subways, so that there will be no highway or street crossings at grade in the entire territory occupied by Markham yard between Harvey and Homewood.

There remains about one million cubic yards of filling material to be placed in the yard before the grading for the present development is completed.

The track elevation and grade separation project at Harvey, which will be carried to completion at the same time as the work

at Markham yard, will require the use of approximately one million cubic yards of filling material. This filling material will probably be obtained from some point in northern Indiana, as this sand can be handled easily in all kinds of weather and is suitable for this class of work. Subways of reinforced concrete, similar to those constructed in the Hyde Park territory, will be constructed at the necessary street crossings through Harvey. While the tracks are being elevated, provision will be made for the construction of two additional tracks, so that upon completion of the project there will be six main tracks, together with necessary interchange and industry tracks, through Harvey. Incident to the construction of track elevation project at Harvey will be the construction of a modern passenger station, similar to those we have at Grand Crossing and one or two other points on the Chicago terminal. The estimated cost of this work is \$1,200,000, and it will require two years to complete.

New Orleans Employes Enjoy River Outing

The clerical employes of the Illinois Central System at New Orleans enjoyed an evening of social pleasure and recreation when they held a carnival party and dance on board the big excursion steamer Capitol, Thursday, February 8. More than 1,500 invitations were sent to local and out-of-town members of the Illinois Central family to join in the occasion of gayety, and most of those who were invited took advantage of the opportunity to attend.

The Capitol, which is one of the most palatial boats on the river, was chartered for the evening, the crowd assembling at 8 o'clock. The vessel then proceeded up the river for five miles and returned, while happy revelers danced to the strains of haunting music until close upon the midnight hour. The 10-piece orchestra on board the Capitol is one of the best musical organizations in the South, and Captain John Streckfus, in command of the steamer, has a distinguished reputation for the quality of

entertainment he furnishes those who partake of his hospitality.

The committee in charge of arrangements comprised the following: August Kunz, president *ex officio*; A. V. Bertaut, chairman; E. A. Harang, J. Fine, L. J. Sciortino, J. Kline, L. N. Hubert, A. J. Sherloc, J. W. Howard, M. Curran, C. A. Briel, Joe McCann, P. J. Brady, Tom Calwell, J. A. Meyers, S. Hill, J. Kramer, A. J. Mouton, C. DeLuhery, W. A. Delph, Ed Rice, Charles Rickoll, M. Biersoll, D. McDoiby, F. G. Jourdan, D. Sphor, Jesse Ford, D. Thurman and J. M. Becker. W. A. Delph, employed in the superintendent's office at the New Orleans terminal, was chairman of the committee on publicity.

Yard Operation Takes Thought and Study

*Yardmaster H. O. Dahl, of Waterloo, Iowa, Gives
Some Pointers on How He Handles His Job*

By H. O. DAHL,

Yardmaster, Waterloo, Iowa

THE two words "yard operation" cover a vast territory which takes considerable thought and study. To do the work properly, rules Nos. 900 and 901 of the Transportation Department book of rules must be literally complied with.

It is the writer's opinion that, to obtain the best efficiency in yard operation, the general yardmaster must familiarize himself, before the starting time of his organization, with the entire situation. He should refer the situation to his chief train dispatcher, and the chief train dispatcher should refer to him a similar report, so that he can intelligently start his organization in an efficient manner. This report should be as follows: through loading, short loading, empties, all classified and reported for the different directions, the company coal situation, the power and the train crew situation. The outlining of the movement of trains should be handled entirely by the priority classification, maintaining manifest in manifest trains only.

The yardmaster on duty should be active in creating a harmonious condition in his locality, as we are all aware that harmony creates efficiency.

Ice House Has 18,000-Ton Capacity

At this terminal we have an ice house which has a capacity of 18,000 tons. Twenty-four cars can be spotted for icing at one time. For the proper icing and inspection of the cars, it takes on an average of two minutes per car. Nothing but natural

H. O. Dahl

river ice is used in the icing of cars, except in cases of extreme emergency after the supply of natural ice is exhausted. During 1922 there were 43,696 cars inspected, of which 24,064 were iced. We used 18,733 tons of ice for the handling of these cars.

Repair yards at this terminal have a

Our yards at Waterloo

Here is the force of the yard office at Waterloo, Iowa. From left to right, back row: H. O. Dahl, yardmaster; P. J. Mulcay, car record clerk. From left to right, second row: A. B. Magnusson, checker; A. V. Hillary, operator; H. B. Ellis, bill clerk; Fred Meyer, caller. J. A. Joyner, chief yard clerk, is in front.

track capacity of sixty-five cars. However, during the 24-hour period there are on an average of one hundred cars made O K and switched to the train yard for movement.

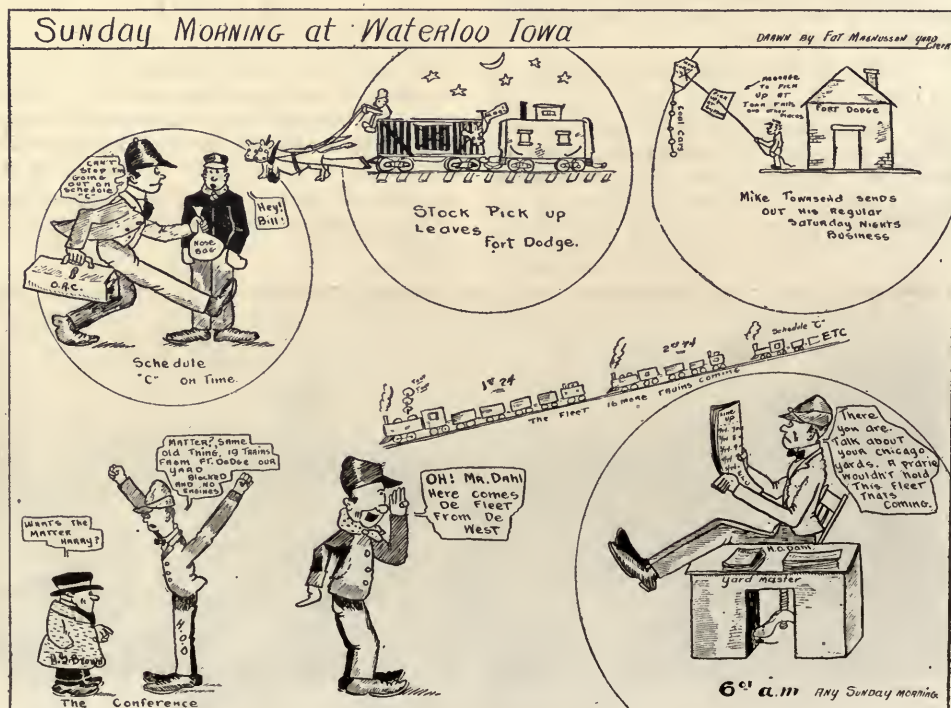

Our city yards, which are located in the heart of the city and serve practically all

of the large wholesale houses, including the freight house and the passenger yards, require continuous switching service during the 24-hour period. There are on an average from seventy-five to one hundred carloads received at Waterloo daily for the different industries, including the merchandise cars for the freight house and the carloads of company material for the division storekeeper at this point.

Engines Need Nine Cars of Coal a Day

At the mechanical coaling station we use about nine cars, or four hundred and fifty tons, of coal daily for engine use, also about one car of screenings daily for the stationary boiler room.

The entire yard is operated with eleven yard engines, six of which are used in the train yard, classifying and switching trains for outbound movement. Three city engines handle the work of the industries in the city yard, the placing of the loading at the freight house and the passenger switching, as well as making the interchange with other railroads. One engine is used exclusively in placing bad order cars in the repair tracks and switching out the loads and empties which have been repaired, besides placing the company material for unloading. One engine works entirely at the Rath Packing Company plant. From October 1, 1922, to January 19, 1923, there were 6,075 loads and empties handled in

Illinois Central ice house at Waterloo

and out of the Rath Packing Company plant.

In order to get the most efficiency from the switch engines, the writer would suggest that the yardmaster handle all of the switching power, as he knows which engines he can use of the different assignments and obtain the best efficiency.

Getting Contact With Our Patrons

Some little time can be spent daily in the solicitation of freight and passenger business by each employe. This gives the employes an opportunity to meet and talk with the business men, which also creates a more "at home" feeling when they call at the different offices to obtain information regarding the placement of cars for loading or unloading.

When yard operation is taxed to the maximum we are all subject to criticism, and we are daily criticised. All concerned in the yard organization should endeavor at

all times to be polite to our patrons. Courtesy should be shown in every respect. Regardless of the controversy, give the patron the benefit of being right, keeping in mind at all times that he is the means of financing the operation of the railroad on which you are employed.

Engine foremen on industrial work should make a complete trip report, using form 968, which is practical and now in use. Train yard and repair yard foremen are under the supervision of the yardmasters, and such a report is not necessary. Complete turn-overs by the yardmaster are essential and materially assist in clearing any controversy which might arise in correspondence or any other form at a future time. The 722 report, or record of cars handled, should be bound up in a neat form and filed in a case daily. All 33 reports, 1485A, 1485B, 1480 forms, along with all other daily reports, should be compiled and bound in a daily file for future reference.

Here is the ice house crew at Waterloo, Iowa. From left to right, they are: A. G. Muncey, foreman; Nate Entwisle, laborer; John Sulentich, laborer; William Burk, laborer; P. L. Entwisle, clerk; Mike Semat, laborer; Jock Sulentich, laborer; Tom Tollivar, laborer; William Remitsch, laborer; Fred Hamerlick, laborer.

An Efficient Ticket Salesman at Champaign

H. C. Knapp Has Sold Nearly Three Million Dollars' Worth of Passenger Business in Six Years

IN the six years that H. C. Knapp has been city passenger and ticket agent for the Illinois Central System at Champaign, the seat of the University of Illinois, he has sold nearly three million dollars' worth of passenger business to our patrons, and he has done it so efficiently and so courteously that his reputation in those lines is known far and wide.

Whenever anyone at the University of Illinois figures on taking a trip he consults Mr. Knapp, and he invariably gets all the information he needs, with some good, timely hints and suggestions thrown in for good measure. It's the same with practically everyone else in the twin cities of Champaign and Urbana. "Ask Knapp" is accepted as the proper first step in preparing for a trip with which the prospective passenger is unfamiliar—and, regardless of what the destination may be, Mr. Knapp knows, or finds the information for the inquirer.

In six years Mr. Knapp has sold, or supervised the selling of, tickets to something like four million persons. Line up four million individuals in single file, allowing three feet to the person, and you would have a line something over two thousand miles long—long enough to reach from Chicago to New Orleans and back again, and then some. Imagine yourself behind the ticket window selling tickets to that throng, and you will have some idea of the job that Mr. Knapp has been handling with great efficiency for six years. He has handled it so well that in the entire six years not more than half a dozen complaints have been made. On the other hand, he has literally made thousands of warm friends for the Illinois Central System.

Business Has Grown Steadily

The following record of the ticket sales at Champaign during Mr. Knapp's term of service will show how the business has grown year by year:

1917	\$ 365,829.71
1918	356,965.66
1919	440,689.67
1920	537,809.46
1921	538,462.99
1922	573,503.28

\$2,813,260.77.

Mr. Knapp estimates that approximately 60 per cent of our passenger business orig-

H. C. Knapp

inating at Champaign is student or other travel incident to the university. By keeping a record of the number of passengers handled at vacation and semester-end periods, at football games, track meets, and the like, and taking into account the increase year by year in the enrollment at the university, he is able to determine pretty closely what equipment will be needed to handle all movements incident to university life. About 70 per cent of all the university travel is over the Illinois Central System.

Each year at the Easter vacation period we handle the movement of about 2,500 students and faculty members. The same is true at the Thanksgiving holiday. Mr. Knapp figures that practically everyone at the university who can make the trip home and back for not to exceed about \$10 goes. Each of these movements usually requires two special trains northbound, one leaving at noon and one at night, and extra equipment on all southbound trains. The end of each semester takes about 5,000 persons away from Champaign, but in these cases the movement is spread out over an entire

week, due to examinations, and it is largely handled by extra equipment on the regular trains. The real rush of the year is at the Christmas-New Year vacation. Just before Christmas last year we handled two special trains to Chicago which carried about 1,000 passengers each, one special train southbound carrying around 700 passengers, one special train to St. Louis via Clinton carrying more than 450 passengers, with extra equipment on practically all other trains.

Good Judgment Is Necessary

As a general rule, the law of averages will govern the term-end and holiday movements; it is when it comes to special trips incident to the football season and the like that good judgment is necessary. So much depends upon the standing of the team, the school spirit of the year and other factors which cannot so easily be put down on paper that the traffic salesman must do some real figuring. But here also Mr. Knapp shines. According to Superintendent J. W. Hevron, there has been only once that Mr. Knapp has not come so near in estimating the travel that the Illinois Central has had just the right amount of equipment on hand to handle the business, and on that occasion it was an over-estimate, instead of an under-estimate—and our patrons were fully protected.

Mr. Knapp finds it of great value to follow the student life at the university closely. He watches the *Daily Illini*, the student newspaper, like the stock broker watches his ticker. No item in the news which may involve business for the Illinois Central System is too small to have his attention, and he makes good use of the information. He takes as much pleasure in arranging a trip for the university band or glee club as he does in planning for the much larger student movements.

Mr. Knapp was asked what he considers the strongest "talking point" in selling the passenger service of the Illinois Central System, and this was his answer:

"Reliable service."

Reliability an Illinois Central Asset

It's reliable service, according to Mr. Knapp, that makes a permanent patron of the railroad, not unfulfilled promises nor the occasional good performance. That's why he likes to talk about our on-time arrivals and the courtesy which patrons receive on our trains, for he knows his promises will be fulfilled.

Making a success of selling passenger transportation service is like making a success at anything else—you have to study your patrons. Mr. Knapp says that he has found the statements to patrons and em-

ployes which are made by President Markham of incalculable benefit to him in striving to be a better transportation salesman. He absorbs information about the railroad like a sponge absorbs water, and whenever the opportunity offers he passes the information on to the other fellow.

"I make it a rule for myself and for my ticket selling assistants," he said, "never to let a person go away from the window dissatisfied, or feeling that he didn't get all the information he wanted. A ticket seller often does not have all the information a patron wants. When that happens, I have the ticket seller make a note of the person's name, address and telephone number and tell me about it. Then I get the information and go to see that person."

Mr. Knapp's first name is Harry. His friends say that his middle name is Courtesy. At any rate, courtesy is what he practices and has his assistants practice—day in and day out. This is the way he puts it:

"It doesn't cost a cent to be polite, and it sure does help the railroad, and help your office."

Good Service to University

With such a record as Mr. Knapp has made at the Champaign ticket office, it follows that he must have won the friendship and confidence of the leaders in the university life. President David Kinley of the University told a representative of the *Illinois Central Magazine* that he is very fond of Mr. Knapp and has always found him courteous, obliging and faithful.

"Mr. Knapp is one of the most efficient passenger agents with whom I have ever dealt," Doctor Kinley said. "In efficiency, I mean to include courtesy, thoughtfulness and general conduct, as well as ability.

"He has the knack of getting for you what you want, and when you want it, even though it is often something difficult to get. I recall one instance when I asked him to endeavor to get a reservation out of Chicago when travel was not only heavy, but the time short. I expected to hear from the request some time during the afternoon, but I had the information within five minutes. What he does for me, I know he does for others.

"From the university's point of view, we appreciate the manner in which Mr. Knapp, for the Illinois Central, anticipates the demands for service. At certain periods of the school year when students are going and coming by the thousands, Mr. Knapp studies out in advance what the needs will be, with the result that the students are taken care of comfortably and expeditiously.

"This personal service such as Mr. Knapp

gives is important to the general public, a service which the public wants but does not always get, and does not always appreciate when it does get it. We do get it in Champaign-Urbana, and most of us appreciate it."

Mr. Knapp is just 30 years old. His first job when he came out of grammar school was call boy for the Big Four at Kankakee. From call boy he went to yard clerk, then to ticket clerk. After serving for about a year and a half as joint ticket

seller for the Illinois Central and the Big Four at Kankakee he worked for five months in the city ticket office of the Illinois Central at Chicago. Then he got a job in the accounting department of the Chicago & North Western at Chicago, but in 1916 he went back to selling transportation—as a ticket seller in our office at Champaign. His appointment as city passenger and ticket agent at Champaign was made on Washington's Birthday, 1917, and he has been on the job since.

Gave Unusual Lecture Recital of "Tosca"

The Book Lovers Club of Princeton, Ky., gave a lecture recital of the opera "Tosca" on January 10 at the home of Mr. and Mrs. Albert Pitzer (Mr. Pitzer is dispatcher at Princeton), under the direction of Miss Marion Waggener, clerk in the office of the supervisor of bridges and buildings at Princeton.

The idea of giving the opera in this manner occurred to Miss Waggener when she witnessed a production of "Tosca" by artists on her recent visit to Paris, France, and she staged each act as nearly as possible like the original production, even to the lighting and designing and making the costume of Tosca.

The music room at Mrs. Pitzer's home

was fitted up to represent the interior of an old Roman cathedral. Miss Waggener was at the piano, and Mrs. R. M. Pool, wife of the president of the First National Bank at Princeton, sang the role of Tosca. Mrs. Pitzer assisted with the organ and chimes. Miss Waggener gave parts of the libretto and used graphophone records of Caruso and Scotti, which not only enabled the audience to follow the story very readily but also made the production very realistic.

"The recital," said the *Paducah Evening Sun*, "is the outstanding musical event of the season in Princeton and proves Miss Waggener to be an artist indeed." So successful was this event that those participating were asked to repeat it as a benefit for the Public Library.

PLAY

As we play, so shall we reap. What do you do when you play? Do you do it well? You should, for you will not only live longer but live better. How many of us differentiate between the two ideas expressed in the words "play" and "entertainment"?

Play is an expression from within. Entertainment is amusement from without. Play is more natural, and hence it is more fun—more real recreation. It lessens the tension, releases something from within, keeps one from souring, re-makes one physically and activates one mentally.

Many families have forgotten how to play; they have ceased to be a social center. Reading comic supplements, going to movies or watching another perform is merely entertainment and can only produce a veneer of joy. The real thing is play. It wells up from within and bursts forth in delicious enthusiasms. It is great because it is creative. Sometimes I wonder how much of joy we deny ourselves because we do not always play the great game of life, yea, and of business, too.—W. B. CHAPMAN.

Mrs. R. M. Pool as Tosca

Memphis Man Honored for Public Service

*George R. James Awarded Silver Loving Cup
for His Contribution to Southern Progress*

ON Saturday, January 27, 1923, at the regular weekly luncheon of the Memphis, Tenn., City Club, there was presented to George R. James of that city a silver loving cup awarded for distinctive service in promoting the advancement and upbuilding of Memphis and the South. Twenty-two citizens of Memphis were nominated for the honor, any resident of the city having the privilege of presenting the name of the person deserving recognition for conspicuous public service. The judges freely conceded the trophy to Mr. James, whose indefatigable and unselfish labors on behalf of the farmers, business men and all classes of citizens in Tennessee and other states of the old South have extended over many years. The silver cup was offered by the *News Scimitar*, an afternoon newspaper of Memphis.

C. C. Hanson, president of the City Club and chairman of the award committee, officiated at the presentation ceremony. Mayor Rowlett Paine presented the cup to Mr. James at the conclusion of the formal program.

"Just praise is a debt that we owe. Flattery is a present that we give. We are not here today to give a present but to pay a debt," President Hanson said in stating the purpose for which the club and its guests were assembled. He then paid an eloquent tribute to the man who had been judged worthiest of all to receive the award

for service rendered, announcing as his subject "Why I Like George R. James." Walter P. Armstrong, city attorney, next spoke briefly for the committee of award and read letters of congratulation and commendation upon the choice of Mr. James.

Award Stimulates Civic Spirit

Judge David B. Puryear, president of the Exchange Club, gave a humorous summary of the methods followed by the award committee in considering the merits of each nominee, taking each individual separately in alphabetical order. Judge Puryear's address was a decided hit. He was followed by several of the nominees who gave their hearty approval of the committee's decision. At the conclusion of these talks, President Hanson introduced Mayor Paine, who presented the trophy to Mr. James.

"Since I have been in office," the mayor said, "I have often been prone to contemplate the problems of our city. This trophy, as a recognition of worthy and unselfish endeavor for the public good, will greatly stimulate civic spirit. It will make men stop and think and endeavor to measure up to a higher quality of citizenship.

"Mr. Cohn and Mr. Morris, of the *News Scimitar*, are entitled to the thanks of the public for their forethought in arranging for this recognition of civic merit. This award to Mr. James, I am glad to note, is based upon his unselfish personal efforts, not upon financial means. Many can give

Presentation of Civic Cup to George R. James. Left to right—President Hanson, Mr. James, Mayor Paine.

money for movements looking to the up-building of the community, but Mr. James has given of himself."

The mayor recounted how he had seen Mr. James catching midnight trains, driving over muddy and almost impassable roads to reach remote places in order to carry a message which would help those engaged in agricultural pursuits to improve their conditions.

Successful Farming Is Fundamental

"Upon successful agriculture," the speaker continued, "depends the perpetuity and safety of the nation. Some years ago Mr. James lent me a book, 'George Washington the Farmer.' I learned from that book that George Washington, 125 years ago, was studying the problems of the American farmer. Fifty years ago, Abraham Lincoln said that the occupation of farming would soon be the most honorable profession in the country.

"Seven or eight years ago," Mayor Paine said, "at the outbreak of the great war, business underwent a depression. Our financial structure was falling, many people could not pay their bills, our whole system seemed to be tumbling down. Most of us squeezed through somehow, but we will not soon forget the experience.

"It was largely due to our unprofitable system of farming in the South. When a number of business men met to consider the situation, we found that Mr. James was already 'carrying on' in this field. He had been doing it for a long time. He has kept on doing it. He knows the problems and the duties that the schools, the merchants and the bankers have to meet and perform. He understands that a farm, like any other producing plant, keeps wearing out and must be built up. Mr. James has been tireless in his activities to inspire and instruct the farmers in the work of increasing the fertility of their lands and their greater profits from improved methods. It has become a part of his life mission."

The audience stood and cheered as Mr. James accepted the trophy.

"Usually words come easily to me when I'm on my feet," Mr. James said, "but this is one time when I do not know what to say. I appreciate the honor you have done me, my friends."

A Man of Much Personal Charm

George R. James is big, physically, intellectually, spiritually. He stands probably 6 feet 4, a broad-shouldered, lean, powerful figure with a massive high-bred head and the look in his eyes of one who knows and knows that he knows.

The trials and difficulties of the people in Memphis and in Tennessee, Mississippi,

Kentucky, Arkansas, Missouri, Alabama, in fact the whole South, are his intimate concern. He shares the joys and sorrows of those who toil in every walk of life. The common people are especially his people. Instances are innumerable where he has come to the rescue of some worthy person who found himself sinking in a sea of troubles.

A touching tribute to the character of Mr. James was seen in a letter from the Rev. T. O. Fuller, pastor of one of the Memphis negro Baptist churches, which was read at the City Club meeting. The letter follows:

"I apologize for any apparent intention to intrude upon the proprieties of the occasion, at the meeting of the City Club, Saturday afternoon, when the public-spirited citizens of Memphis will present a trophy, made available through the generous activities of the *News Scimitar*, to the Honorable George R. James whose untiring and unselfish services for his city, his section and his country have won for him the gratitude and appreciation of all classes of his fellowmen. Would you be kind enough to assure Mr. James that the entire Negro population of this city and section silently joins in the expressions of confidence and esteem which are being extended to him by his associates and admiring friends? As a contributor to our schools, churches and social activities, and as an adviser in matters of vital interest to us as a race, and to the community as well, Mr. James holds a place in our affections that language cannot express. If there is any offense, pardon me."

Active in Business and Public Service

Mr. James has been identified with practically every public activity for civic, social or industrial progress in his section of the country during the last decade. He is a member of countless clubs and organizations scattered through half a dozen states. Asked to name the clubs in which he holds a membership, he smilingly waves a hand and says, "Write down the whole list. I belong to 'em all."

His business affiliations are also numerous. He is president of the William R. Moore Dry Goods Company, one of the largest wholesale dry goods, staples, furnishings and notions jobbing concerns in the South; this firm has been in active business for more than seventy years. Mr. James is also vice-president of the Central State National Bank of Memphis and was formerly president and is still a stockholder in the James-Graham Wagon Company. He is a director of the Yazoo & Mississippi Valley Railroad, one of the lines which are a

part of the Illinois Central System. Through Mr. James' efforts in behalf of the farmers in Tennessee and Mississippi, agricultural interests along Illinois Central System lines have made great progress.

In his own words, it is his ambition to see this section develop its wonderful soil to the fullest of its possibilities, which he declares will make Memphis the gateway to the richest territory on earth. He says:

"There are 6,000 boys in the corn clubs of Tennessee, Mississippi and Arkansas who are raising more corn to the acre than can be raised by the best farmers of Iowa, which has the reputation of being the greatest corn-growing state in the Union."

One of the epigrams he has coined and which he emphasizes in his speeches among the people is: "As the man, so the soil; as the soil, so the people."

Daily Exercise Keeps This Office Force Fit

Exercising for health and efficiency

Employees in the joint office of C. F. M. Tinling, supervisor of demurrage and storage, and R. B. Goe, supervisor of weighing and inspection, at Chicago, go through two 5-minute periods of calisthenics each day. The practice was established last October by J. H. O'Keeffe, chief clerk, and he says that he firmly believes that it has served to keep down sickness in his office during the winter months.

Whether or not the daily exercise is responsible cannot be definitely judged, but there certainly is an unusual amount of "pep" in the office. and Mr. O'Keeffe says that the work has been more efficient.

Former service men who are employed in the office persuaded Mr. O'Keeffe to have the short recesses each day for "setting-up exercises." Mr. Tinling and Mr. Goe both expressed their approval, and when it is possible for them to leave their desks they will be found obeying the "One, two, three, four" commands of L. S. Warrington, former service man, who directs the exercises.

The first period comes at 10:30 a. m. and the second at 3:30 p. m.. At the sound of

Mr. O'Keeffe's buzzer, every employee in the office rises from his or her work, all windows are thrown wide open, no matter how cold the day, and the employees take positions in the passageways between the desks.

Each period begins with arm exercise; then there is body bending, leg exercises and deep breathing at the close. The program of each period differs, but the same general exercises are done during each.

Mr. O'Keeffe is not always at his desk when the time for one of the periods arrives, but he says that on his return he is always reminded of the exercises. Enthusiasm for the calisthenics increases as time goes on, he says.

"When the idea first came to us," Mr. O'Keeffe says, "we had visions of all the employees of the general offices at Chicago lined up in Grant Park going through calisthenics each day. It would be a fine bit of advertising for the Illinois Central System and could be expected to increase the efficiency of all the offices in the same proportion as that of our office."

A. S. Holt, in Service Thirty Years, Dies

Engineer on Illinois Division Had Great Affection for Locomotive Which He Ran for Nearly Twelve Years

A. S. ("BERT") HOLT, engineer on the Illinois division, died February 13 of pneumonia at the Illinois Central Hospital in Chicago after an illness of a little less than two weeks. He had been in the service of the company for thirty years.

Since January 1, Mr. Holt had been on an Illinois Central engine that pulled Cleveland, Cincinnati, Chicago & St. Louis passenger trains between Chicago and Kankakee. Previous to that time he had been on an Illinois Central freight run between Chicago and Champaign.

Probably no engineer ever learned to care more for his engine than did Mr. Holt while he was on that freight run. In 1911 he was given engine No. 1597, when it was first placed in service. The new engine won his heart from the very start, and he tried always to keep it looking like new. That engine was next to his home in his pride. He kept the cab almost spotless, and his wife says that at no time would she have been afraid to go into it in her best clothes. She had heard him praise it so often that her interest in it was almost as great as his. When he went to his home after a run, he always called the roundhouse at Burnside to learn who was to take out his engine.

Mr. Holt's father was in the service of the Illinois Central. The elder Holt discouraged his son's ambitions along railway lines at an early age, but it proved of no avail. "Bert" was determined to be an engineman. His father made him quit the first railway job he obtained, but when he was later found wiping engines at Burnside shops the father decided that it was of no use to try to check such a desire. The father was assistant station master at Central Station in Chicago at the time of his death a few years ago.

"Bert," as all his fellow workers called him, had many friends in the service of the Illinois Central. He was extremely fond of railway workers, and at one time said that he would rather have one railway man as a friend than ten friends who were in other occupations.

While he was ill in the hospital, his wife says, one of his closest friends waited in the building four hours one day for a chance to see him, but had to go away disappointed.

About six years ago Mr. Holt was greatly depressed when he was told that his en-

A. S. Holt

gine, No. 1597, had been ordered to the Iowa division. He watched the engine as it steamed out of the roundhouse at Burnside for the Western home, and told his friends that he felt as if the best friend he had in the world was leaving him.

But the separation was not for long. Engine No. 1597 had

not covered more than half the distance to the Iowa division when it was wrecked and brought back to the Burnside shops for repairs. When it came out of the shops, Mr. Holt was again made its master, and he remained so until the first of this year.

Mr. Holt would have been 50 years old March 9. Only a short time ago he made the last payment on the comfortable little home at 6538 Dorchester Avenue in Chicago. He leaves a widow and one son, 21 years old, who has just completed a business course in Syracuse University. The son entered the service of the American Credit Guide Company in Chicago the first of this year, and on February 21 he was appointed secretary-treasurer of that concern.

Burial was February 15 in Oakwood Cemetery at Chicago, under the direction of the Masonic Lodge. The pallbearers were John Rance, Samuel Kier, Charles Barron, Charles Raybuck, Theo Reuther and Ernest Miersch. They are all engineers in the service of the Illinois Central, and "Bert" considered them among his closest friends.

"Wee Willie" Keeler has just passed away—the greatest batsman that baseball ever produced. He used to say: "Hit 'em where they ain't." He placed his hits for safety first. He mixed brains with every swing. That's a winning method that never fails in any job.—*The Night Watchman*.

Good citizenship means not only the faithful performance of daily tasks, but, likewise, doing something for one's friends, community and country.—*The Watchman*.

Tested Recipes

CHICKEN CURRY.—Cut up a plump young bird and fry brown in olive oil. Remove from the frying pan and place in the oven. Mix together 2 tablespoonfuls each of flour and curry powder, then add gradually one cupful of stock. Fry two sliced onions in the hot fat, add the prepared stock, cook five minutes, then turn in the chicken. Cover and allow to simmer fifteen minutes. Serve hot with boiled seasoned rice. If the curry seems too thick, add more of the stock.—A. DYKSTRA, *engine clerk, Burnside shops.*

PINEAPPLE SALAD.—Chop the contents of 2 boxes marshmallows and cut fine the contents of 1 large can sliced pineapple. Make a dressing as follows: Mix yolks of 3 eggs with $\frac{1}{2}$ teaspoon mustard, $\frac{1}{2}$ teaspoon salt, 1 tablespoon vinegar, 1 tablespoon flour and 1 tablespoon sugar. Cook until thick and thin down with 1 pint whipped cream. When dressing has cooled, pour it over the marshmallows and pineapple, and place on ice until ready to serve.—CHRISTINE ADAMS, *stenographer, superintendent's office, Water Valley, Miss.*

RICE MUFFINS.—Beat 1 egg until light, add $\frac{2}{3}$ cup sweet milk and $\frac{1}{2}$ cup boiled rice. Sift into the egg mixture $1\frac{1}{2}$ cups flour, $3\frac{1}{2}$ teaspoonfuls baking powder, 2 tablespoonfuls sugar, $\frac{1}{2}$ teaspoonful salt. Add 2 tablespoonfuls of melted fat. Bake in buttered muffin tins.—FRANCES P. OTKEN, *secretary to chief clerk, McComb, Miss.*

SALMON LOAF.—Contents of 1 can of salmon, minced fine (if sauce is desired, drain off liquor), 1 heaping tablespoon of butter, 1 cup of bread crumbs, 2 eggs, salt and pepper to taste. Mix well together, put in buttered mould, place in a pan of hot water, cover mould, and bake in oven for one hour, keeping pan filled with water.

Sauce: Heat 1 cup of sweet milk, add 1 egg, pepper and salt. Cook for a few minutes, pour over loaf, garnishing with finely cut parsley. This dish is good hot or cold.—MRS. FRED DE LONG, *wife of accountant, Stuyvesant docks, New Orleans.*

OATMEAL COOKIES.—Cream $\frac{1}{2}$ cup butter and $\frac{1}{2}$ cup lard, add 1 cup sugar, 2 eggs (beaten), $\frac{1}{2}$ cup milk, 2 cups of flour, $\frac{1}{4}$ teaspoon baking soda, 1 teaspoon baking powder, $\frac{3}{4}$ cup either raisins, currants or nuts, and 2 cups of uncooked oatmeal. Mix thoroughly, drop by spoonfuls on unbut-

tered pans, and bake in a slow oven.—MRS. R. H. WRIGHT, *wife of instrumentman, Mattoon, Ill.*

MRS. CONNOR'S CAKE.— $\frac{1}{2}$ cup butter, $1\frac{1}{2}$ cups sugar, 2 cups flour, 2 teaspoons baking powder, 1 level teaspoon cinnamon, 1 cup sweet milk, pinch of salt, $\frac{1}{2}$ cup nut meats, stiffly beaten whites of 3 eggs, folded in, and 1 teaspoon vanilla. Bake as layer cake and put together with boiled frosting.—MRS. DAN CONNOR, *wife of section foreman, Gypsum, Iowa.*

DOUGHNUTS.—Mix 1 cup white sugar, 1 cup sweet milk, 2 well beaten eggs, and 1 teaspoonful vanilla; then add $\frac{1}{2}$ cup sour cream in which has been dissolved 1 teaspoonful of baking soda; stir thoroughly, and then add flour enough to prevent sticking on board, and 2 teaspoonfuls baking powder (sifted with the flour) and a pinch of salt. Do not mix any more than necessary. Roll out to one-fourth inch thickness, shape with cutter, fry in deep fat, and drain.—MRS. M. QUINLIN, *wife of section foreman, Wall Lake, Iowa.*

A Little Child to Love

Where there's a little child to love, the little cares seem less,

The echo of a childish laugh has such a way to bless;

More human beauty fills the earth, and softer grows the strife—

Thank God for one more life to love, for one more little life.

—FOLGER MCKINSEY.

What to Eat

Use foods made of the whole grains, such as whole wheat flours and corn flours. Instead of eating white sugar, use honey, raisins, figs, dates, sweet prunes and other naturally sweet fruits. Have plenty of fresh, uncooked fruit in season. Eat melons and berries. All the year, use plenty of the succulent vegetables. The leafy vegetables, like cabbage, kale, spinach, young beet tops, young turnip tops, endive and lettuce are especially good. Eat some of these vegetable leaves raw every day. In cooking vegetables some of the vital elements are destroyed, but some survive, and under our mode of living the average individual has not strong enough digestion to eat everything raw. No matter how good your food may be, if you fry it, oversalt

it, use much pepper, vinegar and mustard, eat to excess or eat too fast, the results will not be good. Observe these hints and your so-called vitamin problem will be solved.—R. L. ALSAKER, M. D.

Household Hints for Home Makers

Lemons held in hot water a few minutes before cutting will yield double the juice they would otherwise produce.

Remove mildew stains by boiling the garment in cream of tartar water and then laying it in the sun.

Equal parts of turpentine and ammonia will remove paint from clothing, no matter how hard it may be.

Spirits of camphor will take off peach stains.

Lemon will remove match scratches from paint.

Directly after tea is spilled on a tablecloth, cover the stain with common salt, leave for a little while; when the cloth is washed all stain will have disappeared.

To remove tar marks, rub a little butter on the spot and allow it to stand until the tar is softened, when it will wash out with warm water and soap.

Grass stains may be removed from clothing by soaking over night in alcohol.

Kerosene will take iron rust and fruit stains from almost every kind of goods without injuring the fabric. Wash the soiled parts in kerosene as you would in water, before any water has touched them.

All table linen stains, fruit and even coffee stains, when there is cream in the coffee, may be removed by rubbing the spots with pure glycerine. Let it remain a while, then rinse in lukewarm water. It is often best to let the glycerine remain several hours before washing.—DELLA MORRISON, *Springfield division editor, Clinton, Ill.*

Smart Sayings of Our Babies

Our readers are requested to send in the smart sayings of our babies so that we may print them.

While in Chicago recently, my 9-year-old cousin, Jack, did not want me to miss anything, and he asked if I had seen Lake Michigan. I told him I had, and asked if he had ever been out on the lake. He said, "Yes," and asked if I had also been out on the lake. I replied that I had been 'way out on it in a big boat.

Jack said, "I've been out on it on my feet."

While I was floundering around to think just what he meant, he remarked, "The kids skated there last winter."—FLORENCE MC-SHANE, *Indiana division editor, Mattoon, Ill.*

Marion, age 3, was playing with a kitten for the first time. The kitten began to purr. He put the kitten down and running to his mother exclaimed, "Oh, Mamma, the kitten has his engine running."—KATHLEEN HADAWAY, *Mississippi division editor, Water Valley, Miss.*

According to the 10-year-old daughter of a certain clergyman, there are ways of making an old sermon seem almost new.

"Jane," said one of the friends of the young critic, "does your father ever preach the same sermon twice?"

"I think perhaps he does," said Jane, cautiously, "but I think he talks loud and soft in different places the second time, so it doesn't sound the same at all."—DELLA MORRISON, *Springfield division editor, Clinton, Ill.*

OUR BABIES

No. 1 is Charles Peter Fowler, 4 years old, destined to be one of our future superintendents. His father, Charles A. Fowler, is a machinist at Memphis; his grandfather, Peter B. Fowler, foreman at Fulton, Ky.; his great-grandfather, Charles E. Spinner, retired stockkeeper at Paducah, Ky. Charles Peter, who makes his home with his grandparents, Mr. and Mrs. Peter B. Fowler of Fulton, has exhibited an early fondness for the railroad; in less than thirty days he traveled fifteen hundred miles. He has made many friends among the railway men and never forgets them.

No. 2 is Kenneth, 3 years old, son of Hostler P. E. Barnes, Fort Dodge, Iowa.

No. 3 is William Thomas, 5 months old, son of Engineer R. G. Reynolds, Cedar Rapids, Iowa.

No. 4 is Paul, 10 months old, son of Otto E. Lenk, hostler helper, Cedar Rapids, Iowa.

No. 5 is Ralph Arnold, 4 years old, son of Harry R. Malling, machinist helper, Indianapolis, Ind.

No. 6 is J. F., Jr., 4 years old, son of Engineer J. F. Hyland, Champaign, Ill.

No. 7 is Marshal August, 6 years old, son of J. Wakat, car inspector, Kankakee, Ill. Marshal won first prize in 1918 at the Kankakee Fair as the most nearly perfect baby.

No. 8 is Lillard Winston, 5 months old, son of L. E. Craig, clerk, agent's office, Jackson, Tenn.

No. 9 is C. L., Jr., 11 months old, son of C. L. Sartain, conductor, New Orleans division.

No. 10 is Kenneth Ray, son of Eugene H. Shaeffer, locomotive engineer, Memphis terminal. Kenneth won the first prize at a baby show given under the auspices of the McLemore Avenue Presbyterian Church for being the finest boy between the ages of 2 and 3 years old.

No. 11 is Harrel, 7 months old, son of J. C. Martin, signal foreman, Kentucky division.

No. 12 is Morton B., Jr., infant son of Morton B. Duggan, rate expert, passenger department, Chicago.

No. 13 is Clyde E., Jr., 5 years old, son of C. E. Henley, dispatcher, McComb, Miss.

No. 14 is Jack, 2 years old, son of Conductor C. F. Frost, Centralia, Ill.

No. 15 is John Homer, 1 year 2 months old, son of Conductor H. A. Muchow, Wisconsin division.

No. 16 is Harold William, 6 months old, son of William Reilly, car man, Dixon, Ill.

No. 17 is Mary Alice, 6 months old, daughter of Section Foreman Andrew Athos, Rowena, S. D.

No. 18 shows Ruth, 5 years old, and Doretha, 2

years old, daughters of Fireman Otto Odell, Cherokee, Iowa.

No. 19 is Etta, 5 years old, daughter of Operator D. C. Burnside, Peosta, Iowa.

No. 20 is Eva Kathryn, 3 years old, daughter of M. E. Kemper, chief clerk to superintendent, Mattoon, Ill.

No. 21 is Helen La Verne, 21 months old, daughter of S. M. Peerman, tracing clerk, local freight office, Evansville, Ind.

No. 22 is Mary Jo., 2½ years old, daughter of O. D. Allen, manager, telegraph office, Dyersburg, Tenn.

No. 23 is Dorothy Jane, 2 months old, daughter of Yard Clerk M. A. Cole, Fulton, Ky.

No. 24 is Elizabeth, 4 years old, daughter of Car Inspector F. C. Beacham, Natchez, Miss.

No. 25 is Lois, 16 months old, daughter of H. W. Dobrowski, flagman, New Orleans division.

No. 26 is Eleanor Ida, 5 months old, daughter of A. E. Tracy, Belt clerk, local freight office, New Orleans, La.

No. 27 is Viola Lucile, 4 years old, oldest daughter of M. D. Jones, bridge foreman, Greenville, Miss.

No. 28 shows Martha Newton, 1 year old, and

Agnes Catherine, 2 years old, children of L. W. Lowe, machinist, Water Valley, Miss.

No. 29 is Cleona Pearl Frost, 4 years old, sister of Jack, No. 14, above.

No. 30 is Florence Louise, 10 months old, daughter of Diversion Clerk W. F. Smith, Centralia, Ill.

A Story for Papa

There is a moral in this little story of child life.

"Mama," asked little 3-year-old Freddie, "are we going to heaven some day?"

"Yes, dear. I fervently hope so," was the reply.

"I wish papa could go, too," continued the little fellow.

"Well, and don't you think he will?" asked his mother.

"Oh, no," replied Freddie, "he could not leave his business!"—*Hennepin County Yeoman*.

Now on the Sunset Side of Loyal Service

By WILLIAM BOSLEY,

Pensioned Engineer, Indiana Division

My home being located near the Illinois Central shops and yards, I have an opportunity to observe a goodly number of the men employed in and about the shops, as well as some of the men employed in engine and train service, as they are going to and coming from their work.

As I sit in my easy chair by a comfortable fireside and look out upon those men, I often get to wondering if they ever give a thought to what it means to them to be in the employ of the Illinois Central System and what a great benefit the retirement and pension system is to the old employee who has put in most of his life in the service of the company—in whose class they may some day find themselves. I fear there are few of them who give this subject the full consideration to which it is justly entitled, inasmuch as most of the young men—also some of the older ones—think only of the present and give but little thought to the future.

The writer of this article, having passed through the first two stages of railway service, that of the young employee and that of the old employee, is now enjoying the benefits and pleasures of the superannuated or pensioned employee (which may be considered as the third and last stage of railway life) and feels that he is qualified to offer a few suggestions to the above-mentioned employees.

Those who are fortunate enough to be in the employ of the company as fixed or regular employees should give this matter some consideration. If they will do so,

surely they will see wherein it will be to their advantage to hold their jobs and be faithful and loyal to the company; in doing so, they will not only be earning a sufficient compensation to enable them to support themselves and their families, but at the same time be putting money in the bank, which will return to them in the way of a pension when they reach the age of retirement.

In addition to the pension, each superannuated employee is gratuitously given an annual pass for himself and wife, good over the Illinois Central System. This one feature alone should be considered an honor as well as an acknowledgment of long and faithful service.

If you who are in the employ of the company will only pause for a moment and give this matter a little consideration, I feel sure you will agree with me when I say that the grand old Illinois Central is a mighty fine railroad to work for—a benefit to some, a blessing to others and an honor to all who are fortunate enough to be placed on the pension roll!

A TEST FOR EMPLOYMENT

A large employer says that he always tries to frighten an applicant for a position by putting up to him all the objections he can think of: the small pay, the long hours, the sacrificing of leisure and comfort for the sake of the larger future. When he finds an applicant weakening or losing heart or zest for the job he drops him, but if the applicant says, "You can't discourage or frighten me, I want that job," he knows he has hold of the right man.—*Success*.

For Buddy and Sis

Or Maybe "Inkspot," After "Inkid"
DEAR BOYS AND GIRLS:

Here is a form for you to use when writing to suggest a name for Buddy's dog. Tom E. DuBois, 4 years old, son of W. E. DuBois, voucher clerk, local treasurer's office, Chicago, has not yet learned to write, but he asked his daddy to report to Aunt Nancie that he thinks "Spot" would be a good name for Buddy's dog. Read the letters which have been received from Frances Scarborough and Dorothy Hickey. Buddy would like to hear from some more of our boys and girls, as he wants all of them to have a chance to name his playfellow.

With love,

AUNT NANCIE.

AUNT NANCIE:

I suggest the following name for Buddy's dog:

(Write the name on this line)

Name

Address

Age

El Paso, Texas, Feb. 8, 1923.

DEAR AUNT NANCIE:

I am a little girl 9 years old and live in the West now. My father used to be an engineer, but his health got bad and he had to come to El Paso. My father's name was Harry Scarborough. I am going to try to give Buddy's dog a name, I think Rover, but if Buddy doesn't like the name you can write me.

With love,

FRANCES SCARBOROUGH.

P. S.—I live on 3222 Mountain Ave.

BUDDY—What Do You Suggest?

Chicago, Ill., Feb. 4, 1923.

AUNT NANCIE:

You asked in the *Illinois Central Magazine* to name Mr. Said's new Inkid's dog. The following are some of the names which I have selected: Bizz, Boszo, Dewy, and Oolong and Zipp.

DOROTHY HICKEY (10 years old),
7552 Indiana Avenue, Chicago.

ARLENE'S SNOWFLAKES

By URSULA M. MAHONEY,
Superintendent's Office, Fort Dodge, Iowa

It was a crisp, wintry morning as Arlene looked out from the second-story window of the old depot at the field of broken cornstalks half hidden in a blanket of snow and the creek, under its heavy mantle of ice, trying to hasten on its way near the bend of the railway track. She rejoiced in the thought of the good time she would have that noon trying out her new skates.

Arlene was a capable little girl, 12 years of age, her father's comfort and her mother's little helper, and in addition to standing well in her studies at school she had acquired a marked degree of ability in sewing and needlecraft. Her father had been station agent, operator and baggageman at this busy little junction for the last six years, and her mother was obliged to help in the ticket office during the rush hours of the day, leaving added responsibilities for Arlene in the care of the home and her little

Here is a picture of William and Louise, 6 years old, twin children of J. D. McBride, supervisor of bridges and buildings, Memphis, Tenn. These children played the leading roles in a "Tom Thumb" wedding which took place recently at the South Side Methodist Church, Memphis.

blue-eyed baby sister. It was with some degree of satisfaction that Arlene carefully concealed her embroidery from the unsuspecting eye of her mother. She seemed to have accomplished a great deal in the last few minutes; her needle just flew in and out, carrying the long silken threads without even a knot, and she would soon have the coveted surprise ready for her mother.

The clock on the kitchen shelf struck out the hour, and the first school bell sent out its warning message that it would be only thirty minutes more before it would summon all the school children to their daily tasks. Arlene knew her mother would be coming up the stairs almost any moment now. The last morning train had just puffed in and unloaded its passengers and baggage and was ready to rumble on to its next resting place. The old truck had loaded its last cargo and was rattling on its way. Arlene's mother ascended the stairs and made some casual re-

mark about its being near the time for her little girl to be on the way to school.

Arlene said: "Mother, I have been thinking all the time you were helping papa this morning of what I might send cousin Sue for her birthday. I would like to send her something that I could make myself, but it is so hard to think when she has so many pretty things."

Her mother looked into the wistful, serious little face and said: "My little daughter must run to school now, and we will give the matter more thought this evening."

Arlene bundled herself into her coat, cap, overshoes and warm gloves and with a fond good-by started to school. It had been snowing for some time, and great feathery flakes were coming down in countless numbers, covering the landscape with a coverlet of exquisitely jeweled crystals. As she walked along she could not help but notice the beautiful outlines of the dainty designs which were gently descending from the heavens and making a bright relief against her dark coat. As she journeyed on she observed more closely their form. Some were solid with an etched center design, others like open petals, and more like feathery stars. She thought they were like little doilies, dainty lace ones like those she and mother made last year in the summer evenings. How wonderful it would be if the flakes would only remain in shape long enough for her to draw the pattern!

"I wonder if I could not draw some of these designs," she thought.

She resolved to try. She opened her notebook, and it was not long before she had sketched six pretty crystals. "Now mother

From the Indiana division comes the accompanying picture of the three children of R. E. Bayles, agent at Newton, Ill., Harold, age 17, Guy, 12, and Glen, 8, taken in their home at Newton. These three boys are talented musicians, and their performances furnish the residents of Newton much pleasure whenever they appear.

The accompanying picture shows Mittie Elizabeth, daughter of Local Attorney H. H. Creekmore, and James Barron, son of Superintendent A. D. Caulfield, as Miss Columbia and Uncle Sam, in a play given by the primary class of the Water Valley public school at a meeting of the Parent-Teachers' Association, February 7, 1923.

can help me, and I will make some lace doilies for cousin Sue's birthday gift, real lace doilies like the snowflakes she has never seen."

Arlene reached the schoolhouse that morning unusually happy in the thought that she had solved the problem of the birthday gift, which had caused her some anxiety, and that she had discovered one of the missions of the little snowflakes. She hastily searched the book shelves to find some additional information to add to her recently acquired knowledge of the little ice crystals. She discovered that silk and lace manufacturers, jewelers, art craftsmen and metal workers had used the little snowflake doilies for their art designs.

To Arlene it seemed the day would never come to an end so that she could go home and, with the help of her mother, begin work on the little doilies. Like all school days, it came to a close, and with a light heart she hurried homeward and with much merriment related to her mother the joy she had experienced and the information she had obtained that morning from the little

flakes of the air. The evening passed quickly, and it was near bedtime when they had completed one of the little doilies. It was a real masterpiece of delicate loveliness.

Arlene's father, from his big armchair, had been enjoying the evening's discussion on the beauties of the snowflakes, and he was interrupted several times while reading his paper for an opinion on the progress of the work that was being accomplished. He, too, had been giving this matter some thought, and when the work was completed he said: "The wonders and beauties of the snow attracted attention in very early times. I believe if you will look in the Book of Job you will find a reference to these little feathery friends which reads something like this, 'Hast thou entered into the treasures of the snow?'"

The Book of Books was quickly brought, the passage located and read, and then it was time for bed.

GOOD HUMOR

I have mentioned good humor as one of the preservatives of our peace and tranquillity. It is among the most effectual, and its effect is so well imitated and aided, artificially, by politeness that this also becomes an acquisition of first rate value. In truth, politeness is artificial good humor; it covers the natural want of it, and ends more by rendering habitual a substitute nearly equivalent to the real virtue. It is practice of sacrificing to those whom we meet in society all the little conveniences and preferences that will gratify them, and deprive us of nothing worth a moment's consideration; it is the giving a pleasing and flattering turn to our expressions, which will conciliate others, and make them pleased with us as well as themselves. How cheap a price for the good will of another! When this is in return for a rude thing said by another, it brings him to his senses, it mortifies and corrects him in the most salutary way and places him at the feet of your good nature in the eyes of the company.—*From a letter written by THOMAS JEFFERSON to a cousin in 1808.*

VIRTUE NOT ENOUGH

Virtue by itself is not enough, or anything like enough. Strength must be added to it, and the determination to use that strength. The good man who is ineffective is not able to make his goodness of much account to the people as a whole. No matter how much a man hears the word, small is the credit attached to him if he fails to be a doer also; and in serving the Lord he must remember that he needs avoid sloth in his business as well as cultivate fervency of spirit.—THEODORE ROOSEVELT.

Editorial

THE THRIFT HABIT

There is almost no limit to the number of devices that have been developed to encourage the habit of saving. Everyone is familiar with the china pigs and tiny metal houses that are used to attract children into forming the habit. There are cylindrical boxes which hold a stated number of coins of a certain denomination, and which must be filled before any can be extracted. Savings banks encourage small depositors; insurance companies offer attractive endowment policies; building and loan associations have monthly payment plans, and many large companies sell stock to employees and let them pay for it by deductions from their pay.

One objection to some of these plans is that the prospective saver can quit too easily before the habit is fully formed. A Chicago bank has partly overcome this objection by offering to give a coin clock savings bank to each new savings depositor who starts a \$5 account. The clock must be wound every eight hours, and in order to wind it the owner must first deposit a coin—from a 5-cent piece to a half dollar. When the clock is full, it is taken to the bank and opened by the teller, who deposits the money to the credit of the account.

Some persons form thrift habits easily; for some it takes long training and a great deal of self-denial. But it is worth it. Considering the standpoint of community welfare, there is nothing more conducive to good citizenship than the habit of saving.

DEAD SEA APPLES

A curious plant, the *asclepias procera*, grows along the borders of the Dead Sea. This plant yields fruit resembling apples, beautiful on the outside, but bitter to the taste, and when mature filled with fiber and dust.

The lure of bright-colored baubles for many members of the animal kingdom is well known. Crows and magpies are said to be irresistibly attracted by the glitter of silver or bits of colored glass. Hunters have found it possible to entice the shy and timorous antelope or deer within range by displaying a fluttering flag.

Ben E. Chapin, editor and publisher of *The Railroad Employee* (Newark, N. J.), points out some of the weaknesses in the arguments for government ownership of the railroads. In his January issue Mr. Chapin calls attention to the "organized and insid-

ious propaganda, making for the absolute government ownership of the transportation lines of the nation, which is being constantly and effectively 'dinged' into the minds of railway employees by the newspaper, *Labor*, and most of the official publications of the various unions representative of railway employment.

"It perhaps is not to be wondered at that some railway employees, otherwise hard headed and sensibly minded, grasp at the alluring bait of government ownership as the 'cure-all' for every economic ill, or that they fail to look at the other side of the canvas," he declares.

There have been practical illustrations in the United States of the workings of government ownership as well as government control of transportation utilities. Pennsylvania lost more than \$50,000,000 in its conduct of rail and canal transportation systems extending from tidewater at Philadelphia to the headwaters of the Ohio River at Pittsburgh, which ended disastrously in 1855. This enterprise was so honeycombed with corruption, graft and favoritism that the citizens rose *en masse* and elected a legislature pledged to rid the commonwealth of the burden.

Quoting Colonel William Bender Wilson, pioneer telegrapher and historian, who as a young man was employed in connection with the public works of Pennsylvania, Mr. Chapin reports:

"It (the state) suffered all manner of woes at the hands of partisan politicians who knew no law other than their greed . . . The paymaster, after requiring employees to sign the pay roll for the full amount of their pay, deducted 10 per cent, as a political assessment. The public service became gorged with the friends and adherents of the political party in power. . . ."

Massachusetts owned and operated for a number of years what is now part of the Boston & Maine Railroad between Greenfield and the Vermont border. It was generally known that this line, under state ownership, did not pay. It was said that in promotions political influence rather than merit was the rule and that the number of politically appointed officials was greater than the number of employees.

"It is the sincere belief of this publication," concludes Mr. Chapin, "that no busi-

ness enterprise, whether it be a railroad, a manufacturing plant, a coal mine, or a peanut stand, can be conducted as successfully, or with as much satisfaction and benefit to its immediate participants, be they owners, managers, or employes, under public as under private control, for the very simple reason that government ownership produces weaklings, dependents, industrial grafters, mountebanks, bureaucrats, cheap politicians, autocrats and deficits; whereas individualism as represented by private ownership develops strong, self-reliant, progressive and independent free-men, as an example of which the American railway service stands pre-eminent."

The chief cause of Europe's financial woes lies in government operation of railroads. The Austrian state railroads' annual operating loss of \$30,000,000 was responsible for more than 50 per cent of Austria's budget deficit last year. This year the deficit will be larger. There is a 30 per cent increase in personnel since the same lines were under private ownership a few years before the war. Railway jobs have been political plums. The Allied experts are in favor of the sale of the railroads to private interests, but not until they have been put on a better basis by the government.

The Italian state railroads last year lost in the neighborhood of \$50,000,000, equal to one-fifth of the entire national deficit, and this without taking into consideration the interest or depreciation on the cost of the roads. Until a few months ago, most of the employes worked under protest, striking every few weeks and not caring how they wasted time or material. The present Italian government is now offering bonuses for good work and at the same time inflicting punishment on those who are careless or indifferent, the hope being to improve service and earnings and thereby to induce private capital to take up the management.

According to the latest estimates available, government control of the railroads from 1918 to 1920 cost the taxpayers of the United States approximately \$1,800,000,000. The country's practical experience with government operation of its railroads has been an expensive proposition for everybody, but most expensive of all for the taxpayers.

MOTOR TRUCKS AND HARD ROADS

Governor John J. Blaine in his message to the Wisconsin legislature January 11 said, in part:

A man may choose to walk upon our highways or ride in a vehicle of his own choice, but that does not imply that he should bear the burden caused by the extraordinary use of our highways, any more than he who walks should pay generally toward passenger fares or street railway transportation for the

benefit of those who may use that means of transportation.

The people cannot afford to build highways that will carry the maximum load of motor vehicle possibilities. We would go bankrupt if we undertook it. Therefore, our zeal for modern transportation possibilities should not carry us to the extent that means destruction and thus defeat the object of our zeal. I recommend that our laws be strengthened, prohibiting the use of our highways by trucks or motor vehicles that unreasonably destroy our highways and involve the possibility of bankruptcy of farm and industry and the impoverishment of everyone. I do not favor obstructing the advancement of modern means of transportation, except when it reaches the point where, for the sake of our own protection and to prevent bankruptcy and destruction, it becomes necessary to say, "Halt."

In many localities the operation of freight-carrying motor trucks has an appreciable effect upon the traffic of the railroads. Numerous companies have covered parts of the country with regularly operated truck routes which extend to towns and villages around certain distributing centers. In Texas it is estimated that the railroads handle only about 10 per cent of the volume of strictly local freight traffic formerly handled by them.

Until a few years ago the legislatures of practically all the states differentiated in no way between motor vehicles privately employed and those operated for commercial purposes. Pennsylvania, in 1914, placed motor vehicles operated for hire in a separate class coming under the authority of its Public Service Commission. It was the first state to take this step. Now such control, in greater or less degree, is exercised in twenty-two states. However, the following states which are traversed by the Illinois Central System have no regulation of motor trucks as common carriers: Arkansas, Indiana, Kentucky, Mississippi, Missouri, South Dakota and Tennessee.

The latest statistics at hand upon the subject of motor cars and hard-surfaced highways show that there are now in operation in this country 12,357,376 motor vehicles, of which approximately 1,400,000 are trucks. Between 1910 and 1922 more than \$3,000,000,000 was expended for good roads. Generally speaking, the owners of these trucks contributed comparatively little to the cost of constructing the highways which they traverse and which, more than any other agency, they are helping to destroy.

Maryland furnishes an apt example of this point and of the manner in which it was met. That state has a complete system of improved highways, one of the finest in the whole country. It is surrounded by states whose highways are more or less in an incomplete condition. Many large manufacturing cities are located outside the state but near its borders. In consequence, a tremendous truck traffic developed on

Maryland roads, a great number of the trucks paying licenses in other states. Maryland found her roads in danger of being destroyed by agencies which paid nothing toward their building or maintenance. It was decided to weigh each heavily loaded truck and, if it were ascertained that it carried in excess of the maximum load, to fine the owners and compel them to remove the excess wherever found. A few instances of enforcing this regulation had a salutary effect. Nevertheless, overloaded trucks which were permitted to operate over the main highway north and south through Baltimore in 1918 practically destroyed that road, and it had to be reconstructed at a cost of about \$600,000. The State Highway Commission of Maryland has estimated that the saving to truck owners by overloads during the period of wearing out the highway amounted to only about \$16,000, whereas the taxpayers of the state were forced to pay \$600,000 to repair the damage.

It is the opinion of most thinking men that not until the truck operator shall contribute his due proportion to the costs of constructing and maintaining highways can his right to use the highways be considered equal to that of the ordinary taxpayer.

On June 14, 1921, the Public Service Commission of Pennsylvania declared that "public interest would immeasurably suffer" if motor vehicle competition with the railroads were permitted, where the railroads were providing reasonably adequate service. It is, in effect, a case of subsidizing the motor truck industry and requiring the railroads to pay a considerable part of the subsidy in the taxes they contribute to the treasuries of the various states.

Railway managements as a rule do not oppose the motor truck as a convenient and facile transportation utility. Properly systematized, co-ordinated and regulated, it should prove a valuable auxiliary to the railroads as a relief to local congestion of distribution and as a feeder to the national transportation system.

It is, however, clearly imperative that the present state of affairs should be corrected. To permit motor trucks to take the pick of freight and passenger traffic from the railroads when weather conditions are favorable, and then evade the burden at their own discretion, to exact not the slightest guarantee of schedules or service or safety to the public—in short, to allow motor traffic operated strictly as a public utility to run without regulation or restriction in competition with a railway service which is heavily shackled in every way—is opposed to the American spirit of fair play and is weakening to that railway service which the public must have at any cost.

SPEAKING OF WAGES

The subject of compensation for labor performed by hand or brain has been an engaging theme for discussion since employment first began. Philosophers, economists, political opportunists, and exponents of many cults and creeds have gone into the subject exhaustively without devising a solution satisfactory to everyone.

Wages are an important factor in the lives of a host of men and women. Forty million persons work for wages in the United States, and they receive for their labor about forty billion dollars a year, or an average of \$1,000 per person. When it is considered that many thousands of them are paid more than the average, the other side of the balance seems low. There are certain factors, however, that relieve the darker aspects of the situation.

In the innumerable small towns and villages, where living expenses are comparatively small, an annual wage of \$600 may be equivalent to as much as \$1,200 a year in a large city. There is also to be considered the fact that, particularly in the cities, where living costs are greater, there is frequently more than one wage earner in a family; often three or four members contribute to the family income. The number of families of which this is true is appreciably large. In view of these and other factors, the yearly income of the average family is estimated to be about \$1,400. This is approximately \$27 a week, or \$4.50 for each working day. The man, therefore, who is the sole supporter of a family and who receives \$4.50 a day enjoys the average compensation. If he receives more than that, he is in the preferred class of workmen.

The American wage earner is the highest paid in the world. An eloquent illustration of that statement is given in a folder issued by the American Educational Association, of Philadelphia, which, using an ounce of gold as the standard international unit of measurement, shows that, on the average:

One ounce of gold pays wages for—

Twenty hours' work in the United States,

Fifty hours' work in Great Britain,

Ninety hours' work in Japan,

One hundred hours' work in France,

Two hundred hours' work in Germany.

This favorable position of the American workman as compared with the workman's status in four other leading countries is due to various causes. The point of efficiency is to be considered, but not as the paramount factor; the workers of other countries, notably those of Germany and Japan, also have achieved a high degree of

efficiency. We have, perhaps, developed more individual initiative and pride in accomplishment than will be found elsewhere. There is less of that stolid, automatic precision which characterizes the Oriental and to a certain extent the European. The American worker, on the whole, has more nervous energy, more animation, and, of primary importance, more intelligence. In our country production has been highly developed and systematized. The perfection of labor-saving machines has raised the standards of efficiency, increased the volume of output, and enlarged the opportunities for increased compensation in practically all lines of industry and commerce.

Fundamentally, increased production at a greater rate than increase in population is primarily responsible for the high wage figure in this country. Expansion of facilities, concentration of energies, and elimination of waste of material and effort assure a reduced cost of operation, and only in proportion to the reduction of operating costs per unit is it economically possible to increase wages. This should be clear to anyone.

What, in its essential elements, does the term "wages" mean? The protagonists of a certain school of thought assert that whatever a man produces is his. Arguing adversely, another philosophy teaches that there are no individual property rights, that the earth and its fullness constitute a sort of universal trust to be equally shared by all, but not owned by any. Both hypotheses are ethically unsound.

Wages represent a reward for energy expended in producing a given effect. Energy, however, is not wholly man power. Harnessed natural forces, assembled resources, intelligence and experience, concentrated and directed, are creative power. The tool a workman uses to fashion the raw material into a finished product represents energy the same as the human energy expended by the workman in using the tool, and it is as fully entitled to its reward. The great shop with its whirring machines, the mill and factory and foundry, the mine, the railroad, the packinghouse, the store and the plowed field—these are among the tools with which men labor. These things represent money at work, as well as men at work. Men and money, combined, constitute a potent force, the highest form of harnessed energy.

Human energy unaided would be futile in a modern world. Man cannot even plow a field without tractive power and a plow. The forces represented by money and men together make production possible. They are necessary to each other. If the human element in this co-ordinate partnership

should receive a just reward for his efforts, the element represented by money also is entitled to its reward. There should be no friction or misunderstanding between partners whose interests are mutual and whose objectives are identical. The question of a just wage for both money and man forces must take both elements into consideration. There must be common understanding. As long as there is not this mutual understanding, men will say that money desires to take all the rewards and money will contend that men are striving for the lion's share. Teamwork will solve the problem satisfactorily to both.

Is money shirking its share of the burden? Let it bend its back to the load. Are men marking time on the job? Let them give an honest day's work. There must be complete co-operation between these forces for the greatest rewards—and co-operation must be based upon mutual confidence, understanding and loyalty.

SOME THOUGHTS ON "THINKING"

Some persons are merely echoes; their contribution to a discussion consists of repeating what they have heard others say. Their minds are receptive to impressions in much the same way that the wax disk of a phonograph is impressionable. They reproduce the opinions of others. Such a person might as well be a parrot for all the original thinking he does. The process of reasoning—taking a basic idea and following it to its logical conclusion—is to him an unexplored realm. There is one species of human parrot that is even careless about repeating accurately the things it has heard. It gets everything muddled and garbled in the telling. This is the worst sort of human parrot. It ought to be muzzled.

There is another type of individual whose mind might be compared to a concrete sidewalk which has been newly put down. This individual's mind is in a soft state as regards early impressions; the stray dogs, cats and children of vagrant thought gallop across it and leave ugly indentations which later solidify and become permanent. An idea once fixed remains forever. It may be an erroneous idea, but that doesn't cut any figure; it's there to stay.

These two classes of non-thinkers, the echo type and the fellow whose ideas are set in concrete, are demoralizing elements in any community. They spread discontent and disaffection. They are the true scandal-mongers, the disseminators of idle or malicious gossip; they deal in half-truths, in morbidly distorted and magnified misstatements of facts. They are happiest when planting the virulent seeds of distrust in the heart of some fellow creature. To

break down the ramparts of another man's faith and hope in Life's scheme is, to that kind of person, a fine achievement.

The railroads have suffered from the activities of these non-thinkers. Little by little, there has been built up in public opinion a tissue structure of prejudice and resentment against our national transportation system which has all the outward appearance of grim reality. Casually viewed, it seems to be a formidable and enduring fortress which may not be successfully assailed. But when one penetrates its frowning facades, armed with the two-edged sword of reason and judgment, its towering battlements melt and vanish. It is built of smoke and mist. It is a vivid mirage, a false presentment. It is like one of those colossal and magnificent settings that motion picture producers contrive for their productions; its arches and columns and massive walls are made of cardboard.

The Master of the Universe has equipped us all with minds that are admirably adapted for the purpose of thinking. It is undoubtedly His plan for us to make use of our mental equipment. One is sometimes tempted to regret that He didn't make thinking compulsory, but it doesn't seem to be that way. Man has been left to figure things out for himself, and frequently he has made a sorry mess of doing it. He even fails to profit by his mistakes.

The average man is mentally lazy. Who among us employs his mind in constructive or productive thought to as much as 10 per cent of its creative capacity? Thought is the source of limitless power. Nothing exists that is not a product of some causative thought, human or divine. Thinking pays the biggest returns on investment of anything known.

Let's all resolve to do more original thinking. When a human parrot comes squawking his threadbare twaddle in our ears, let's stop a bit and ask ourselves: "Do I need to let this person form my opinions for me, or am I capable of viewing this proposition from its various angles and deciding for myself?"

ACQUAINTANCE AND FRIENDSHIP

On page 76 of the February issue of this magazine appeared a quotation from Herbert Spencer: "There is a principle which is a bar against all information, which is proof against all argument, and which cannot fail to keep a man in everlasting ignorance. That principle is condemnation before investigation."

How frequently this is true in the relations of employe to employer! How prone

men are to gather their information in devious ways—in almost any way except that of direct questions and answers with that person or institution about whom or which they are forming an opinion.

If you sincerely desire to turn an acquaintance into friendship, common sense ought to warn you away from seeking the companionship of the enemies of the person whose friendship you seek. Even the most unprejudiced enemy is an enemy still. Likewise, if you sincerely hope to become a loyal and helpful employe of any organization, it is your plain duty to gather your information regarding the principles and the ideals of that organization from its friends or, at the least, from those entirely distinterested—best of all, from the organization itself, and certainly not from its enemies.

A railroad, in particular, has no point to gain by misleading its employes. Its affairs are public property, and any deception is discoverable, at most, in a few months or years. In a way, this is the best protection a railroad has against misrepresentation by its enemies, since the proof is of public record. The only danger can lie in the inaction of those whose duty it is to make use of the available information.

It has been well said that the false opinions of employes which lead to misunderstandings with their employers are usually attributable to the lack of real information. This condition should not be generally true in the railway field. The information is available, and the railway employe who condemns a railway management without studying it falls in the category to which Herbert Spencer refers. And, to look at it from another angle, the employe who wants to turn his acquaintance with the railroad into friendship can do nothing better than to study fairly the railway situation.

TO ADORN VICKSBURG PARK

The legislatures of seven states that have made appropriations for the Vicksburg National Park are now in session, and another appropriation by each for additional work in it has been asked, as follows: Illinois, statue of Abraham Lincoln for the state memorial; Indiana, statue of War Governor Oliver P. Morton, as the state memorial; Iowa, statue of War Governor Samuel J. Kirkwood; Massachusetts, statue of War Governor John A. Andrew; Michigan, statue of War Governor Austin Blair; Ohio, equestrian statues of Generals Sherman and McPherson, and Pennsylvania, statues of War Governor Andrew G. Curtin and Major General John G. Parke.

PUBLIC OPINION

What the

World Thinks

COST OF GOVERNMENT OWNERSHIP

The final and conclusive answer to those who would have the government take over the ownership of our railroads would seem to be found in the tabulation of a report just completed, showing that the loss to the government from its twenty-six months of experimentation in governmental operation will be approximately \$1,800,000,000.

Shortly before the war there was a constant and growing demand on the part of shippers, politicians and the public generally that the railroads be forced to accept lower transportation rates. This demand was based on the misconception that the profits of the railroads generally were excessive. Then the government took over the railroads.

Gross business increased enormously, and the government was offered the greatest volume of business ever carried by American railroads. Certainly, any failing on the part of the government cannot be attributed to a lack of business. The government promptly increased rates to the highest point in the history of American railroading and advanced them again and again.

The power of the government in the situation was unlimited. Unlike the private railway operator, the government was in position to induce the Interstate Commerce Commission to grant any rate desired and could exercise a greater degree of control over operating expenses than is possible to the private manager. Yet, in slightly more than two years, the government incurred a deficit of nearly \$2,000,000,000.

This deficit must necessarily be a direct burden on the taxpayers of the country, and it would seem to suggest that, in any phase of experimentation in government ownership and operation, the taxpayers would be expected to carry a similar burden. This should constitute the ultimate argument against government operation of railroads.

If other evidence is desired to refute the claims of those who advocate state socialism, it may be found in the experience of our neighbors in the operation of state railroads. The Italian state railroads for the last year report a deficit of more than one billion lire. The government anticipates little, if any, reduction in this deficit for the current year.

Half of last year's deficit was occasioned by wage increases, which have amounted to

700 per cent since pre-war times. Italian finances, now in chaos, would be comparatively sound, were it not for this continuous tax of railway operating deficits.

The state expropriated the railroads in 1905, at which time there were 130,000 employees on 8,125 miles of railroad. Since that time there have been added but 1,200 miles of road; yet the payroll shows 225,000 employees. Politics was interwoven into the whole structure of railway management previous to the rise of the Fascisti movement. Since that time considerable improvement has been achieved; yet the Mussolini government concedes that there is no security for Italian finance until the railroads are turned over to private ownership, and that will be done as soon as possible.—*Chicago Journal of Commerce.*

IMPROVING RAILWAY FACILITIES

The railroad companies are engaged in the expenditure of large sums in the purchase of new facilities. For example, President Markham, of the Illinois Central, announces that his system plans to expend \$45,500,000 during the current year—\$18,500,000 for equipment and the balance for roadway improvement. Noting these expenditures, the critics of railway management cite them as proof that the companies are not in such desperate financial condition as they have been trying to make out. During the acute car shortage of last fall, when the roads were saying that the shortage was due to the fact that they were not permitted to earn enough money to keep pace with equipment demands, railway management was again severely criticized. Thus the railroads were criticized for not having necessary facilities to handle the country's transportation, and now they are criticized when they undertake to supply those facilities. There would seem to be no chance for railway management to escape criticism and reproof.

Notwithstanding, railway management is to be credited with earnest effort to improve its facilities, to the end that the country shall not this year suffer another acute car shortage. The Illinois Central is but one of a number of the larger systems that have given large orders for new equipment or that already have acquired new facilities. The Class I roads, or some of them, made some money last year. The amount was not large. While a portion of these

earnings may have been set aside for the extension of facilities, the purchases that are being made are more a manifestation of confidence in the future than proof of a full treasury. "With railway conditions as they have been for several years past," says President Markham, "such expenditures . . . require an abiding faith on the part of the management in the fairness of the American public. If it were not for that faith, the management could not justify these expenditures."

The railroad managers are to be credited with optimism and courage in proceeding with their plans for enlargement of facilities, involving huge expenditures of capital, in the face of the demands that are being made for further regulatory measures. Perhaps they are encouraged by the prospect of the breathing spell that is promised by the approaching adjournment of Congress on March 4. If the country can escape an extra session, which it now hopes, and with a better business year in prospect than last, there will be a chance for the railroads to make a better showing on earnings than for some years past.

To all this the farmer critic will say that his problem still remains unsolved. Improved service will solve that problem in part, but not wholly. He still is firm in his conviction that transportation rates on the commodities he has to market are too high and that before agricultural prosperity can be restored there must be a readjustment. A rate that will allow the farmer to market his products at a reasonable profit is quite as essential as the facilities to get that product to market. The fact that the railroads are finding a way to solve the problem of facilities lends hope that a solution of the problem of transportation rates fair to both the shipper and the carrier also may be found.—*Sioux City (Iowa) Journal*.

FALSE WITNESS AGAINST RAILROADS

Railway presidents are usually prudent in what they say about attacks by congressmen. Congress has the power of punishment. Yet misrepresentation of the railroads has gone to such lengths that the railroads are taking courage and are talking back. Mr. Felton is chairman of the Western railroads' committee on public relations. He is president of the Chicago Great Western Railroad and is as responsible for his statements as are senatorial critics whom he charges with "baseless and reckless" statements made with intention to mislead public opinion.

It is a "base and unsupported calumny" by Senator Brookhart that farmers are unable to ship their produce because rates are

so high. Service is deficient in the sense that it falls below farmers' demands, but it also is greater in quantity than in preceding years. The railroads have every motive to enlarge their earnings, and are making every effort to do so. Millions have been wasted in discovering valuations of railroads as a basis of rates, but the facts disclosed are rejected by those who laid down the basis of valuation. Mr. Felton describes this as "false and malicious propaganda" against private ownership of railroads. It will be interesting to note what the senatorial reaction will be to criticism so personal, and supported so thoroughly by the record.

The incident does not stand alone. Previously Mr. Felton had made similar remarks regarding Senator Shipstead's "misstatements and misrepresentations." He, too, rejected valuations reported by the Interstate Commerce Commission, because they did not show water in railway capitalization, and added that farmers' proceeds for shipment of sheep do not cover freight costs. Mr. Felton quoted prices and rates for sheep in various markets, showing that farmers realized from ten to fifty times the freight rate. The rate is so small a part of the price that it is impossible that the rate could alone cause the farmers' losses. Both farmers and railroads have losses, but that is no more the fault of the railroads than of the farmers.

The president of the Atchison railroad, with equal directness, challenges the truth of the statements made regarding excessive maintenance charges of the railroads. *Capper's Weekly* has been free with reports of the senator's remarks about excess profits of the railroads. But editions later than the report of the Interstate Commerce Commission contain no verifications of these charges. The railroads cannot conduct their campaign for solvency and service through the *Congressional Record*, but the public is entitled to both sides of the question. The points now raised are not of opinion or policy, but of veracity—questions that can be settled by easily ascertainable facts.—*New York Times*.

DR. CRANE ON RAILROAD BAITING

In a short and trenchant article on railroads which appears on this page today Dr. Frank Crane gives a rather original explanation of the constant agitation against and assaults upon the railway business of the country.

Here, he truly says, is a business by far the most important in the United States from every consideration of national prosperity—since the railroad is every man's partner—and yet railing at the railroads

is the most popular of the activities of demagogues and destructive pseudo-progressives. Here is a business representing an investment of about \$20,000,000,000 which in two active years has managed to make only 3.47 per cent profit annually, and which is actually prohibited by law from earning more than 5.75 per cent. It is an industry that ought to be the most stable in the country but in fact is so far from being even fairly safe that investors hesitate to put their savings into railway securities.

What, then, is the matter with the railway business? Doctor Crane answers that it has run up against the "inferiority complex" of small-bore politicians and shallow agitators; its very size and importance cause it to be hated and attacked in and out of season; its earning power has been pounded down, and threats of further restriction and interference make it difficult to market new stocks or bonds in amounts sufficient to provide the necessary expansion and improvement of transportation facilities.

There is an insistent demand for reductions of freight rates, yet, as Senator Borah pointed out recently, more than half the earnings of some of the railroads was appropriated by the government last year in the form of taxes. To overtax railroads is to put an additional tax on the producers and the shippers of the country.

It is high time the short-sighted and irrational anti-railroad policies were reversed and a square deal given the country's transportation business, in order that the public itself may have a square deal. When lawmakers cripple the railroads in their essential function of carrying the people's products to market they cripple agriculture and every other industry.—*Chicago Daily News.*

SALARIES

One may arrive at almost any conclusion he desires with reference to the salaries paid officials of the Standard Oil Company. The presidents of two Standard Oil corporations receive salaries of \$125,000 each. The senate committee making the investigation was astonished at the size and the number of large salaries paid to Standard Oil officials. A government employe would probably look upon a salary of \$125,000 as exorbitant and outside the realm of reason. As compared with the salaries paid to public officials, the salaries of the Standard Oil presidents are large and apparently excessive.

The president of the United States, with various forms of appropriations intended to augment his salary, receives \$100,000 a year. Cabinet members are paid \$12,000 a year. A United States senator is on the

same salary basis as a member of the house and receives \$7,500 a year.

But going outside official circles and comparing the salaries of the Standard Oil president with salaries paid by other enterprises, they do not appear so large. Will Hays is paid considerably more, and Judge Landis almost as much as the president of the Standard Oil Company. Jackie Coogan gets a retainer four times as large as the salary paid to the president of the Standard Oil Company, with a contract assuring him of 40 per cent of the net profits. Mr. Teagle is every bit as capable as Mr. Coogan, but he would not be worth nearly so much to the producer of motion pictures.

Salaries in the final analysis are generally based upon the prosperity of the institution paying them, resulting often in a large variation in pay between two persons of practically the same capacity. The Standard Oil Company is a tremendously successful concern, and it is not so surprising that its president receives \$125,000 a year as it is that he does not receive more.—*Memphis (Tenn.) News Scimitar.*

MUSSOLINI'S PLANS

When the Mussolini ministry was being formed, and the premier announced his intention of dispensing with parliament and exercising dictatorial powers, many observers wondered just what use the courageous premier would make of those powers and how long he would continue to command the united support of his countrymen.

It is obviously easier to criticize than to build. Mussolini vehemently attacked the old-school politicians and expressed contempt for ordinary party struggles. But what measures had he in mind for the benefit of the country as a whole?

Developments have largely furnished an answer to this natural question. Mussolini has announced a drastic program of retrenchment and economy. Job holders have been dismissed by the thousand. Departments have been ordered to cut down expenditures. Certain changes in the tariff law have been made to encourage imports and thus increase the revenue. New tax measures have been tentatively proposed in order to equalize burdens and abolish unfair exemptions. The way to improve Italian finances, according to Mussolini, is to economize in every direction and put idlers and parasites to work.

But in addition to these measures Mussolini has announced the bolder policy of returning the railroads of Italy to private ownership as soon as may be. For years the railroads have been a liability, not an asset, to the government. They have in-

curred heavy deficits. The employes struck as often as they liked, and there has been great waste of coal and other materials. The service has been bad. All this, says Mussolini, must be stopped and stopped quickly. The railroads must be sufficiently rehabilitated to induce private enterprise to take them over on fair terms. Here is a situation to which the attention of advocates of government ownership of American railroads is earnestly invited.

It is hardly necessary to say that the discharge of thousands of useless officials and state employes tends to increase unemployment. This is why Mussolini would like to be able to send to the United States more than twice the number of emigrants that are admitted under the present quota law. Failing this remedy, he turns to South America and the Italian colonies to find opportunities for Italy's surplus population.

Whether Mussolini and his associates ultimately fail or succeed, they have tackled their difficult and manifold tasks with courage and intelligence. They pander to no class, and seek the benefit of all, even though some of their measures may result in temporary hardships.—*Chicago Daily News*.

RISE OF AVERAGE WAGES

In Palestine in the time of Christ the wage of a laborer was a penny (2 cents) a day, and in the days of Rome's splendor it was little more. Wages rose slowly through the Middle Ages, and especially after the prevalence of the Black Death, which decimated the population. Until about 1790 the English laborers were paid 10 shillings a week—\$2.50. In 1800 wages had risen to 14 shillings a week, and by 1900 to 27 shillings 6 pence. In the century of 1800-1900 wages doubled, and in the decade of 1910-1920 they increased more than two and one-half times.

There is no accurate record of American wage rates, although we find in fugitive records that they fluctuated widely. In 1840-1850 skilled mechanics received from 50 to 67½ cents a day, and from 1860 to 1870, the Civil War period, scarcity of labor caused an advance to more than \$1 a day. The increase in average wages during 1910-1920, compared with 1840-1850, was 116 per cent.—*Pittsburgh (Pa.) Labor World*.

COMPULSORY ARBITRATION

In Australia they have had compulsory arbitration of labor disputes for some years, and the results have been such that a movement is on to get rid of it. An industrial disputes bill has reached the second reading in the South Australian Parliament, and it is claimed by its sponsors that, if

passed, it will prepare the way for the abolition of the Federal Arbitration Court.

The measure is hotly opposed. By employers? No, by labor! The prime minister, in defense of the bill, explains the situation thus: He says Australia is drifting into industrial chaos and is the home of strikes, of which there are more than in any other country in proportion to the population. He says not only is the machinery of the law intolerably slow and cumbersome but that it works only against employers and breeds bitter strife and class hatred.

Mr. Gunn, laborite and leader of the opposition, declares that if the bill were passed it would deprive the workers of means to maintain a proper standard of living, and he threatens to assist in the organization of "direct action." The arbitration act, he asserts, has lifted the standard of living in Australia above that of the rest of the world and the object of its abolition is to subject the workers to the dictates of the "bosses."

Thus we have an interesting contrast. In Australia organized labor demands the retention of compulsion. In the United States the slightest suggestion on behalf of compulsory arbitration, even in essential industry, is greeted by denunciation as passionate as the arguments on its behalf in Australia. Mr. Gompers thunders that it means "involuntary servitude," while Mr. Gunn in Australia thunders that its abolition means submitting labor to the dictation of the "bosses."

What seems clear to the man up a tree is that compulsory arbitration is loaded. It hasn't brought peace in Australia. We doubt it would bring peace in America. If, in spite of Mr. Gompers, it should work against employers, and not against labor, it would lose its sinister character as an engine of slavery and become sanctified to the uses of humanity in the eyes of labor—until its effects began to tell on industry, as they would in due time.

We do not think compulsion is the way to diminish wasteful industrial warfare, though it may be necessary to penalize strikes in certain essential public services to prevent public disaster. But industrial peace must be sought on more constructive lines—by perfecting methods of conciliation, by meeting the legitimate needs of the worker and his dependents, by making participation in ownership easier and more attractive. Improvement in the relations of employer and employe is a process of gradual evolution and will bring peace gradually. The resort to strikes and lockouts cannot be abolished by force, though force must sometimes be used in defense of public peace. Australian conditions do not invite our imitation.—*Chicago Tribune*.

Radio Department

How to Make and Set Up Home Radio Set

TECHNICAL TERMS

AERIAL: A term used interchangeably with "antenna" to designate the wire from which electrical energy is radiated into the ether and also the wire by which the radiated energy is received.

ALTERNATING CURRENT: A current which flows not like water in a pipe in one direction but first in one direction and then in the opposite. A single alternation is called a "cycle."

AMPLIFIER: A term used to designate the means of amplifying the electrical effect detected. The means may be either a vacuum tube (q. v.) or an amplifying unit.

AMPLITUDE: Every wave grows from zero to a maximum value at its crest. The maximum value is the amplitude and is ascertained by measuring the height of the wave crest.

ANTENNA: See aerial.

AUDIO FREQUENCY: Vibrations may or may not be audible to the human ear. When they are audible, they have audio frequency. Frequencies below 10,000 cycles per second are regarded as audio frequencies. See also "radio frequencies."

AUDION: A trade name given to one form of vacuum valve. See vacuum tube.

BROADCASTING: The sending of either telegraph or telephone communications through the ether, so that they may be received by a number of stations simultaneously.

CAPACITY: A term used chiefly in connection with condensers. A condenser stores up electricity, the amount of which depends upon its capacity. Capacities are measured in farads. Since the farad is much too large for practical radio use, the unit generally employed is the micro-farad (m. f. d.) or one millionth of a farad.

CASCADE AMPLIFICATION: One vacuum valve may be added to another, so that the second amplifies the effect magnified by the first, and the third that magnified by the second, and so on. The vacuum valves are said to be arranged in cascade.

CHOKE-COIL: A coil wound to have great self-induction. The resulting choking action is called impedance.

CLOSE COUPLING: When mutual inductance is caused by mounting the primary and the secondary

Your Chance, Radio Fans!

In response to many requests made recently, the *Illinois Central Magazine* herewith offers its readers the first installment of a radio department. Questions about radio will be answered by the conductor of this department. Address, RADIO EDITOR, *Illinois Central Magazine*, 818 Central Station, Chicago.

of a tuning coil very close together, the arrangement is said to be "close coupled."

CONDENSER: See also "capacity." The condenser stores up electricity. It discharges the full charge at once and under high tension. It consists usually of alternate layers of a conductor and non-conductor (Dielectric). A condenser is used in radio for collecting energy and for putting circuits into resonance so as to tune them.

CONTINUOUS WAVE: A continuous wave is a wave in the ether which has a constant amplitude. It is an undamped wave and therefore travels far.

CRYSTAL DETECTOR: A detector in which a rectifying crystal is used to receive electrical effects in such a manner that they can be heard in a telephone receiver.

DETECTOR: Any device which transforms the electrical vibrations set up in the receiving antenna into visible or audible vibrations.

DIRECT CURRENT: An electric current flowing constantly in one direction.

ELECTRON: The elementary corpuscle of electricity. Electrons are always negative.

E. M. F.: Abbreviation for electro-motive force. The unit of e.m.f. is the volt.

ETHER: A medium which is supposed to pervade all space and to serve as the means of transmitting the wave motion of radiant energy.

FLAT-TOP AERIAL: An aerial which has suspended wires stretched parallel to the earth.

FREQUENCY: The number of oscillations per second.

GRID LEAK: A very high, non-inductive resistance connected across the grid condenser or between the grid and the filament of a vacuum valve to permit excessive electrical charges to leak off to an

external source, thus assuring stable control under all operating conditions.

GROUND: A term used to designate any connection to earth, river or sea.

HARMONICS: Every tone is composed of a fundamental and overtones or "harmonics." Harmonics differ in length and frequency from the fundamental. At times radio operators will hear the harmonics of high-power long-wave stations, while their tuners are set for shorter waves.

HENRY: The unit of inductance.

HERTZIAN WAVES: Electromagnetic waves in the ether named after their discoverer.

HOT-WIRE AMMETER: An instrument used in radio transmission to measure amperes by means of a wire expanding in proportion to the heat generated by a current.

IMPEDANCE: The resistance offered by a wire to a current on account of the back electromotive force, irrespective of the ohmage resistance.

INDUCTANCE: Inductance is the name given to the phenomenon of transferring a current from an electrified to an unelectrified conducting body without actual contact.

KILOWATT: One thousand watts.

LOOP ANTENNA: A small frame around which the antenna wire is wrapped. The frame is mounted so that it can be turned in all directions.

LOUD SPEAKER: A device for magnifying received signals so that they can be heard without the aid of ear-pieces.

RADIO FREQUENCY: Frequencies corresponding with vibrations beyond audibility. All frequencies above 10,000 cycles per second are termed radio frequencies. See Audio Frequency.

RECTIFIER: A device which suppresses one of the pulses of alternating current, so that the resultant

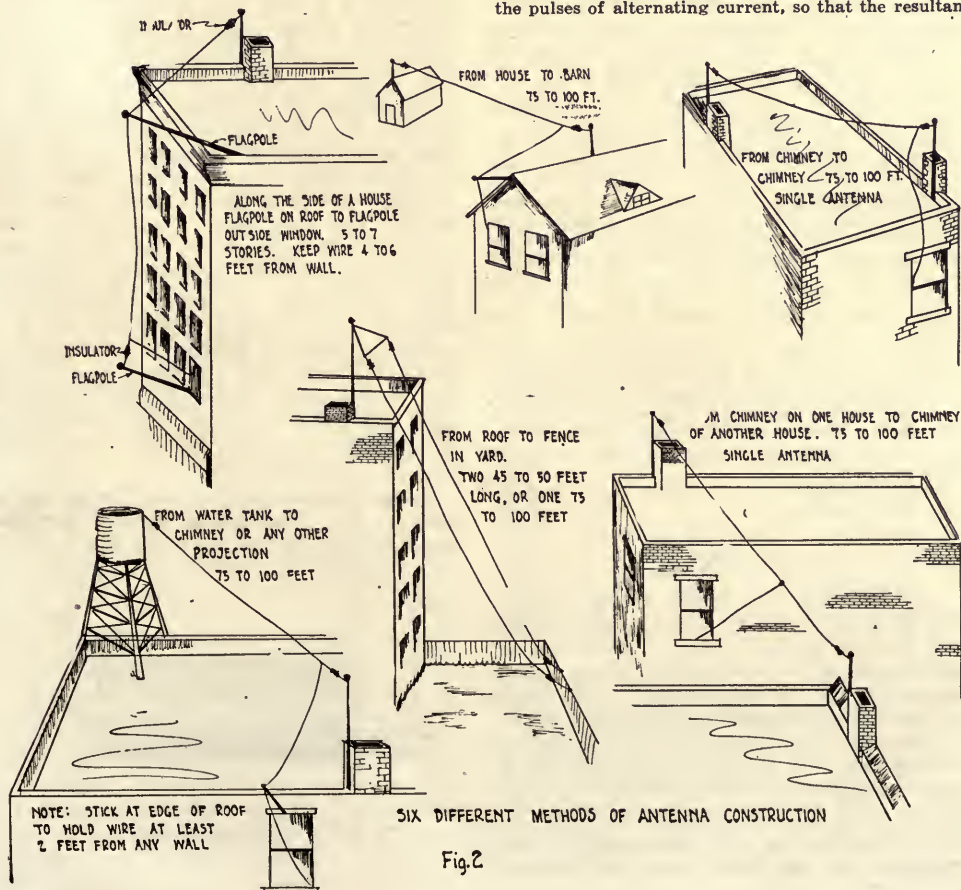

Fig.2

Fig 3

current consists of a series of spurts in one direction.

REGENERATIVE CIRCUIT: A radio circuit comprising a vacuum tube so connected that the signal, after being detected and introduced into the plate circuit, is led back to or caused to react upon the grid circuit. Thus the original energy of the signal received by the grid is increased and the response is greatly amplified.

RESISTANCE: Opposition to the flow of current.

RESONANCE: Resonance exists in a given circuit when its natural frequency has the same value as the frequency of the current introduced in it.

SELECTIVITY: The ability of selecting any wave length to the exclusion of other wave lengths.

STATIC: Natural electrical discharges in the atmosphere which are heard in the receiving apparatus.

TRANSFORMER: Any device for transferring electrical energy from one state to another. Thus we have power transformers, amplifying transformers, telephone transformers, tuning transformers, etc.

TUNING: The selection of a particular wave length. This is done by altering capacity or induction.

VACUUM TUBE: Sometimes called electron tube or thermionic valve. A modified electric incandescent lamp of the vacuum type, which is supplied with the usual filament and with a plate and grid between the plate and the filament. The tube can act as a generator of waves, an amplifier and a detector.

WAVE LENGTH: The distance from crest to crest of two waves.

THE AERIAL

The first step to consider in the installation of a radio receiving set is the location and type of aerial to use. The aerial, or antenna, of a receiving station plays a very important part in the results we are likely to obtain with a given type of receiving set.

The types of antennae now in use may be divided into two general classes—the “outside” type and the “inside” type. In the outside type are included the flat top “L” and “T” types, the cage type, and the counterpoise. In the inside type are included

the loop type aerial and the different devices, such as the antella socket, which make use of existing electric light wires to form the antenna circuit. The outside, flat top, “L” or “T” type of antenna is generally considered to work most efficiently in connection with the ordinary type of receiving set, and for this reason we will confine ourselves to a description of this type of antenna in this article. The other types will be covered in later articles in this series.

The ideal location for an aerial is a low, bare hill, as far as possible from other tall objects, such as trees, chimneys, telephone or power wires or tall buildings. But these perfect conditions are seldom, if ever, encountered at the particular place at which you are obliged to erect the aerial. In this article, therefore, we will assume that the site of your proposed antenna is the only kind that most often may be taken advantage of—the roof.

Two convenient objects to which you can attach the supporting poles are a chimney and the end wall of the building. Support these poles with guy wires or wooden braces fastened to the coping of the roof or to the roof top itself. If the distance between two posts is less than 100 feet, you should arrange to stretch two wires fifty or sixty feet long as shown in Figure 2. If the distance is more than 100 feet, you can use one single wire as shown in Figure 1. Each wire should be insulated at each end as shown. Any size wire will answer the purpose, either bare or insulated, copper, iron or steel. Good results are obtained from a single strand of No. 14 bare copper wire 100 to 125 feet long. The lead-in wire should be the same size as the antenna wire and insulated. Its length should not exceed seventy-five feet. It may be a continuation of the antenna wire or spliced to it. If a splice is made, it should be soldered. In using the “L” type of aerial the lead-in wire drops off the antenna wire on the end near the strain insulator. In the “T” type the drop is made from the center of the antenna wire or wires.

Some persons prefer the 3-wire aerial (Figure 3). The strands should be placed three feet apart. It is made the same as

Fig. 5

the 2-wire aerial, only one more strand of wire is added. The length of each strand should be forty or fifty feet. Almost any arrangement of the wires will give satisfaction, but the essential point to consider is that they must be as completely separated from surrounding objects as possible, particularly power lines, telephone lines and tin roofs. Do not parallel power wires. Cross them at right angles if possible and as high over them as you can get.

The lead-in wire should not touch any surrounding object and should run as directly as possible to the lightning arrester. A porcelain tube should be used where the wire enters the house and the wire passed through it. The lightning arrester, which can be any one of the standard makes now on the market, should have a wire leading from its ground connection to the ground. This ground should be separate from the ground used in connection with your receiving set.

In the construction of the aerial you will need the following material, which can be purchased at any radio or electrical store for about \$1.50: 200 feet of No. 14 bare copper wire; four strain insulators; one porcelain tube; one lightning arrester; one ground connection clamp.

When constructing the aerial a few simple points to remember are as follows:

- a. If possible, use a single wire only, at least 125 feet long.
- b. The length of the lead-in wire should not exceed seventy-five feet.
- c. Run the wire in the form of an inverted "L."
- d. The aerial wire should be at least thirty feet above the ground. A tin roof is considered a ground.
- e. The higher the receiving antenna, the stronger the signal.
- i. Keep the antenna wire as far away as you can as high as you can. If one end can be made higher than the other, go ahead and do it.
- g. Insulate the antenna well at all points where you support it.
- h. Make the total length of your wire from the radio set to the far end not more than 200 feet or less than 160 feet.
- i. Keep the antenna wire as far away as you can from tin roofs, grounded wires, gutters and the like. In any case be sure to have the antenna higher than these.

j. Run the antenna at right angles to any power wires, and as near as you can at right angles to the telephone wires. If you have to choose between the two, pay more attention to the power wires.

k. Use a separate ground for your antenna.

Now that we have erected the aerial, we will proceed to construct the receiving set, the first step of which is to make the tuning coil.

THE TUNING COIL

(Figure 4)

The object of the tuning coil is to provide a simple means for bringing in desired signals at their greatest intensity and eliminating undesired signals. Every radio transmitting station operates on what is known as a "wave length." The object of the tuning coil is to alter the wave length of the receiving station in order that it may be of the same character as that of the transmitting station; this operation is called "tuning." The method we are now considering is the simplest form of tuning known. To construct the tuning coil shown in Figure 4 you will need the following material: One cardboard or wooden cylinder four inches in diameter and ten inches long; two wooden end pieces six inches square, one-fourth to one-half inch thick; two square brass rods, one-fourth inch square and eleven inches long; two brass sliders equipped with phosphor bronze contact strips; two binding posts; one-fourth pound No. 22 cotton-covered or enameled copper wire.

The cylinder should first be given a coat of shellac and dried. Then place the wooden end pieces on each end and wind the coil with one layer of the copper wire. Drill holes one-fourth inch from each end of the brass rods, place the sliders on the rods, and place one rod on the top of the

coil and the other on the side, as shown in the diagram. Fasten the lead-in wire from the aerial to a binding post in the top of the coil (see diagram) and the wire from the detector to the other binding post.

THE CRYSTAL DETECTOR

The detector (Figure 5) can be made from a simple single throw knife-switch, which can be purchased for about 30 cents. Pry the jaws of the switch apart and place between them a piece of tested galena or silicon crystal. A small piece of wire is soldered to the blade of the switch in the form of a spiral that will touch the crystal at a sensitive spot.

THE CONDENSER

The condenser (Figure 6) can be made from three pieces of mica five inches square and two pieces of tinfoil four inches square. The tinfoil is placed between the squares of mica, with a small strip extending on each side to enable connections to be made. The mica can be held in place with shellac.

THE RECEIVERS

The receivers can be purchased at any radio store for \$4 or \$5. They should be a double-phone head set and should have a resistance of between 1,500 and 3,000 ohms. The receivers will cost more than all the other parts of the set combined, but it is desirable to get them, especially if one intends to improve his set later on and wishes

to hear music or messages from a considerable distance away.

THE HOOK-UP

The aerial connects with one slider of the tuning coil while the other slider is connected with the detector. The detector leads to the head-phones, and the condenser is shunted between the head-phones. One terminal of the head-phones leads to the ground.

The receiving set made as described above will enable one to hear the messages sent from medium power transmitting stations within an area of about twenty miles and to hear high-power stations within fifty miles, provided the wave lengths used by these stations are between 200 and 600 meters. Much greater distances are often covered, especially at night.

Heard Mr. Markham Quoted on Radio

We are willing to say, with Doctor Coué, that "day by day in every way things are getting better and better," since seated around our home fireside we had the pleasure of "listening in," per radio, on an address made by W. B. Storey, president of the Santa Fe Railroad, before the Chamber of Commerce of Kansas City at its annual banquet on the evening of February 8.

Mr. Storey, the first speaker on the program, made a very interesting address on railroads. We remember, among the things

he said, that for the last several years there had been entirely too many doctors treating the sick railroads, each one having a new and better remedy for the patient, and by the time the World War came on the roads were hardly able to function, resulting in government control. Of course, government control convinced the people that they wanted private ownership ever after.

The next point of interest in Mr. Storey's address was that the *only railway president he quoted was our Mr. C. H. Markham*, using various statistics given by him as authority.

To say the least, one felt pride in being an employe of the great Illinois Central System, and also felt grateful for the means at hand which gave one the opportunity of listening in on Mr. Storey's address.

If some other radio fan heard any of this address, please communicate it to the editor of the *Illinois Central Magazine*, and let us see how many heard the Illinois Central System advertised in Kansas City.—MRS. W. E. STOVALL, correspondent at Helena, Ark.

Broadcasts Violin Music

Miss Annie Dixon of Memphis, Tenn., who is winning high praises for her artistic talent on the violin, recently took part in a radio broadcasting concert held by the *Memphis Commercial Appeal*. Miss Dixon is a member of the Illinois Central System family, since she is employed in the office of the master mechanic at Memphis.

The radio concert was given on the even-

Miss Annie Dixon

ing of January 30. Miss Dixon played three numbers: "Legende," by Wieniawski; "Mazurka de Concert," by Musin; "Andante," from Mendelssohn's Concerto. Piano accompaniments were played by Mrs. Nell Murphy.

The following tribute to Miss Dixon's

artistry appeared in the *Commercial Appeal* the morning after the concert:

"To say that Miss Dixon's violin solos were the acme of perfection would be but to relate something that everyone who has heard her play knows without being told. She has often played for local radio concerts, but on no previous occasion has her contribution been more thoroughly enjoyed than last night."

On Hallowe'en night, last year, Miss Dixon played for the broadcasting station of the *Memphis Press*, and that concert was another which attracted much attention. The appreciation of listeners-in was attested by numerous telephone requests, some of them by long distance, asking the talented young artist to play certain favorite selections or to repeat numbers already rendered.

Miss Dixon has had a number of offers to

take up public concert work on the stage and in the musical entertainment field, but she has refused because of her desire to remain at home with her parents, as she is an only child. Miss Dixon is popular in Memphis society, and her personal charm and musical gifts are much appreciated. She gives freely of her time and talent to local musical affairs and is always glad to play when a concert is given for some worthy cause in or near the city. As a violinist of exquisite charm and brilliance of technique, music-lovers say that she easily interprets difficult compositions, such as Hauser's "Hungarian Rhapsody" and similar selections, with the finished skill of a professional.

Miss Dixon entered the employ of the Illinois Central June 1, 1917, in a clerical capacity and has been in continuous service in the master mechanic's office ever since.

Former Commercial Agent at Cairo Dies

Joseph Warren Wenger, retired commercial agent at Cairo, Ill., was born at Lacon, Ill., September 28, 1851, and passed away at Cairo December 27, 1922. His early education was received in the public schools, ending with a course in a commercial college.

At the age of 20 he entered the service of the Illinois Central at Gilman, Ill., as clerk in the freight office. With the exception of three or four years between 1871 and 1879 he was an employe of the Illinois Central until retired in 1919, thus devoting his life's work to the interest of the company which he served. He went to Cairo in 1879 as clerk in the freight office; in 1882 he was made chief clerk in the superintendent's office, and in 1887 he was appointed commercial agent, in which position he was identified with many important activities of the Illinois Central at Cairo and vicinity.

At the opening of the great Illinois Central bridge at Cairo, in 1889, Mr. Wenger was among the local officials representing the company.

After his retirement, he and Mrs. Wenger spent several months in Chicago, later going to Florida for a year. With failing health he returned to the city he loved in time to die among his old friends. For more than forty years Mr. Wenger had resided in Cairo, a useful, beloved and honored citizen. He was a devoted husband and father, a loyal churchman, a Mason and Shriner of high standing, giving unwearied service in every position he occupied.

Funeral services, in charge of the rector, Dr. H. P. Hames, were held in the Church

Joseph W. Wenger

of the Redeemer on Friday, December 29—by a comforting coincidence, St. John's Day, one dear to the heart of all Masons. The body was borne from under the Christmas Star of Hope by the hands of loving friends, to its last resting place, attended by a Templar escort, all past commanders of the Cairo Commandery, acting as guard of honor.

Maintenance

Material Means Money

Save It

Motor Car Oil

He who finds one drop plenty
Makes willful waste by using twenty.
—Poor Richard III.

A gallon of oil is equal to nearly 30,000 drops one quarter of an inch in diameter. As an occasional drop of oil is usually sufficient to lubricate properly the bearings on a motor car, a gallon of oil will go a long way if used properly. If four out of every six barrels of oil received at a storehouse were wasted or destroyed the storekeeper would be considered wasteful and incompetent, to say the least; and yet the waste is in exactly the same proportion as when six drops of oil are used where only two are required.

The oils used in the lubrication of motor car engines are among the highest priced oils, and economy should be practiced in their use. It is, of course, essential that sufficient oil be used to prevent damage to the engine and bearings, but an excessive amount does more harm than good.

During 1922 the Illinois Central System used 17,241 gallons of lubricating oil at a cost of \$9,398.17 for motor cars alone.

A common method of lubricating engines on motor cars is by mixing the lubricating oil with the gasoline as used. About 75 per cent of the motor car engines in use on the Illinois Central System are lubricated in this manner. Proper lubrication by this method calls for a mixture of one pint of oil to five gallons of gasoline. The average section motor car should make about twenty miles to the gallon of gasoline. Therefore, a gallon of lubricating oil properly used will run the engine about 800 miles. On this basis, the oil purchased during 1922 was sufficient for 13,792,800 motor car miles.

Using care to obtain the correct mixture of gasoline and lubricating oil will not only save oil but will prevent many cases of engine trouble due to dirty spark plugs and carbon formation. Oil is often wasted in emptying barrels or containers, through leaving a quantity of oil in the container.

*Oil is used or wasted
drop by drop.*

Several gallons of oil may be left in a barrel if care is not used in emptying it, particularly in cold weather, when the oil does not flow freely.

Oil is also wasted in filling cans and oil cups by overflowing them and by carelessly placing cans where they may be overturned or damaged. Keeping an excess quantity of oil on hand invites waste through damage to containers and the use of expensive oil where cheaper oil would answer the purpose.

The cost of gasoline engine oil is more than twice that of black oil, and it should never be used where black oil will answer.

It is true that the individual waste of motor car oil is small, but there are more than 1,600 motor cars in service on the system. There are many small wastes, and in the aggregate they represent a large item of expense. A saving of only a pint a month on each car would amount to fifty barrels a year.

Any fool can quit the job when things go wrong, but the man who has the right sort of stuff in him masters the obstacles that made him want to quit, and when he has done this he no longer wants to quit.—*The Watchman.*

More Service Than We Realize

THE *New Orleans (La.) States* conducts a department called "What Did You See Today?" Azalee Daniel, 509 West Railroad Avenue, Hammond, La., recently won \$2 with the following:

"I went from Hammond to visit my uncle's family at Livingston Sunday morning and was returning home on the evening train. As the train approached Holden, La., the flagman came through the train crying, 'Holden, Holden.' Just then he ran onto the trestle over the Tickfaw River, and an elderly man grabbed the seat arm and held on tightly until the train had crossed over. He probably thinks employes on the line are very considerate."

G. B. O., sending the clipping in, writes: "They evidently do not know that 'Considerate' is the middle name of all our employes."

Social Dangers

(From a story)

"She held out her hand and the young man took it and departed."—*Boston Transcript*.

Day of Rest Prolonged

A negro couple stood before the probation officer for the second time.

"Now this," the officer said to both, "seems to be a case where there is nothing very much the matter, except that your tastes are different. You, Sam, are much older than your wife. It is a case of May married to December."

A slight pause, and then Eva, the wife, was heard to remark in a tired voice:

"I—I really doan't know what you means by yer saying May is married to December. If yer goin' to talk that way it seems to be

Eighty-two

a case of Labor Day married to de Day of Rest."—*Pittsburgh Chronicle-Telegraph*.

Not on Our Line

"The word 'smiles' is the longest word in the English language because there is a 'mile' between the first and the last letters. Maybe that is why so many passengers frown—afraid to let go of their smileage."—*Selected*.

No Connection at All

An old negro preacher was waxing warm about the crime of stealing watermelons. As he reached the high point of his subject, a darky looked up and snapped his fingers.

"How come, brudder," asked the preacher, "dat when I talks about watermelon stealin' yo' all snaps yo' fingers?"

"Nothin' 'tall, pahson, nothin' 'tall. I jes' happen to think whar I left ma knife."

All Out of Conversation

Mike had just arrived in America, and Pat, his Americanized brother, was taking him from the dock out to his country home.

By the side of the road grew a persimmon tree, and Pat, wishing to show Mike what fine fruit was raised in America, climbed the tree and threw a ripe persimmon down.

"Foine! Foine!" exclaimed the delighted Mike.

Pat threw down another, not quite so ripe as the first. As Mike ate it without complaint, Pat threw him down a green one.

Mike ate it, but as he finished he looked up at Pat, panic-stricken.

"Pat! Pat!" he cried, "If ye want t' hear the news from th' ould 'ome folks, ye'd better come down quick. Oi'm closin' up."—*Saturday Evening Post*.

Practical Co-operation

"Say, Doc," said the brawny scrubwoman, "ye'r gittin' a pretty good thing out o' tendin' that rich Smith boy, ain't yer?"

"Well," said the doctor, secretly amused, "I get a pretty good fee, yes. Why?"

"Well, Doc, I 'opes you won't forgit that my Willie threw the brick that 'it 'im."

Half Past Them Both

Neither Sambo nor Rastus could read the time of day—or anything else—but Sambo

Illinois Central Magazine

had a nice big Ingersoll which he exhibited with a great air of superiority.

"What time am it?" said Rastus.

Sambo hesitated and then extended the timepiece saying, "Dar she am."

Rastus looked at it carefully and said, "Dam if she ain't."

Naturally

Suspicious Wife (who has waited until midnight for her husband's return)—Where have you been all evening?

Culprit—I've been talking business matters over with Tom Baker.

S. W.—Yes? And I suppose that is baking powder that is sprinkled all over your shoulder?—Judge.

The Tale (or Tail) of a Dog

A short time ago I met an old telegrapher who worked on the Illinois Central about thirty-five years ago, at a time when the superintendent of telegraph handled the operators, instead of the chief dispatchers, as at present. He could send an operator down to Cairo or up into Iowa.

This operator had a peculiar and interesting experience while working nights for the Illinois Central as operator at a little water tank station in Iowa, which he related to me. I will pass it along to you as he gave it to me.

"I was working nights at a little station in Iowa, and you know we worked 12-hour tricks in those days. Winter was coming on, and I wished I was farther south, as the winters up there are surely cold. I made the acquaintance of a few fellows around town, and they would come down and keep me company most of the nights.

"One night someone suggested playing cards for fun, which we did for a few nights. Then, to make it more interesting, one of them suggested playing poker, which I did not know how to play, but they were willing to teach me, which they did, and they also relieved me of what spare change I happened to have each night.

"One night after they had cleaned me of my last dime, I sat by the fire trying to figure out some way to trim that bunch, as I was just green enough to think their winnings were just luck. It was a bitter cold night, and a 40-mile-an-hour wind out of the Northwest kept me busy firing the

stove; it seemed as if the fire went up the flue when I fed the stove. My thoughts were disturbed by a scratching on the outside door, which I had locked. I went to the door with a poker in my hand, as I did not know what to expect. I turned the key and swung the door wide open. As I did so a little stub-tailed black dog shot in with a gust of wind. The little fellow was almost frozen. I warmed him up and fed him part of my lunch. After he was thawed out, I discovered he was a smart dog. I taught him several tricks. He would sit on a chair and act as if he knew everything that was going on, just like regular folks.

"One night the bunch came in to take me to my usual cleaning. I abstracted a five from the ticket drawer, and I figured if I lost I would have to take to the 'tall uncut.' We started to play. After the draw of the first hand around, something told me, in good Morse code, what each of the other players held. It sounded like a sounder in a barrel.

"Now, I am not superstitious, nor do I believe in ghosts; but it made me feel creepy, as I noticed the sound did not come

The Town of Don't-You-Worry

There's a town called Don't-You-Worry

On the banks of the River Smile,
Where the Cheer-Up and Be-Happy
Blossom sweetly all the while;
Where the Never-Grumble flower
Blooms beside the fragrant Try,
And the Ne'er-Give-Up and Patience
Point their faces to the sky.
In the Valley of Contentment,
In the Province of I-Will,
You will find this lovely city,
At the foot of No-Fret Hill.

There are thoroughfares delightful,
In this very charming town;
And on every hand are shade trees,
Named the Very-Seldom-Frown.
Rustic benches, quite enticing,
You'll find scattered here and there;
And to each a vine is clinging,
Called the Frequent-Earnest-Prayer.
Everybody there is happy
And is singing all the while,
In the town of Don't-You-Worry,
On the banks of the River Smile.

from my instruments. Two or three times this same thing tipped the other fellows' hands to me before I decided to play this ghostly information. I did so, finally, and from that time on I began winning and eventually won everything they had, even to their pocket knives. They left, cursing me for stringing them along.

"When the last fellow closed the door, this same thing said to me: 'We didn't do a thing to them, did we?' I turned, and, to my great surprise, there was my little dog telegraphing to me with his little stub tail on the back of a high stool. Smartest dog I ever saw!"—T. A. G.

Our Music Appreciated

Recently two Roseland women, one of whom was rather deaf, were walking by the Central track. Suddenly the fast train rushed up, with Tom Long as engineer, and as it passed the whistle gave an extra loud shriek. The deaf lady turned to her friend and remarked with a happy smile, "That's the first mocking bird I've heard this year."—*Roseland (La.) Herald.*

Speaking of Curves

An automobile stage was speeding along a narrow, winding road over a Montana mountain. A tourist did not like the look of the many gulches, and, after they round-

ed a sharp turn, his nervousness overcame him, and he turned to the driver.

"Say," he asked, "have we got any more turns like that?"

"Well," answered the driver, as he gave it more gas, "we have one more up here a bit where the radiator will rub the spare tire."—*Judge.*

Tame in Places

Pat Hegarty had just purchased a mule, but he did not obtain from the animal all that he required of it.

So he wended his way back to the horse dealer.

"You said this mule was quite tame," he said to the dealer.

"And so he is tame, isn't he?" replied the dealer, in an aggrieved tone.

"Not altogether—only partly so," the disconsolate Hegarty replied. "He is tame in front, I dare say, but he is desperately wild behind!"—*London Answers.*

Cars and Ships

Little Johnny was seeking information from his father.

"Father," he asked, "freight is goods that are sent by water or land, isn't it?"

"That's right, son."

"Well then, why is it that the freight that goes by ship is called a cargo, and when it goes by car it is called a shipment?"

And then Johnny wondered why father put on his hat and sauntered outside to get the air.

Where Ignorance Is Bliss

Young Wife—Oh, I am so miserable; my husband has been out all evening, and I haven't the faintest idea where he is.

Experienced Friend—My dear, you mustn't worry. You probably would be twice as miserable if you did know.—*London Mail.*

Fair Exchange No Robbery

Friend—Of course, you have made some promises you didn't keep.

Politician—Yes, but I never yet broke a promise to a man without giving him a better one in its place.—*Boston Transcript.*

Placing the Blame

"John! John!" whispered Mrs. Congress-

INKID SAYS—

man Squibbs. "Wake up! I'm sure there are robbers in the house."

"Robbers in the house?" he muttered

sleepily. "Absolutely preposterous! There may be robbers in the Senate, Mary, but not in the House."—Selected.

What Patrons Say of Our Service

New Meaning for "I. C."

In a letter to Senior Vice-President Kittle, Thomas J. Doyle, Dodge Brothers Motor Company, Detroit, Mich., writes as follows:

"Just a line to thank you for the super-courtesy extended to me by you and your associates. I have never experienced such attention before in railroad travel. I not only found the Panama Limited the finest *de luxe* train in the country, but I also discovered that the 'I. C.' worn on the lapels of the trainmen stands for 'Indefatigable Courtesy.'"

"Once more my sincere thanks. I keenly appreciate your attention."

A Promise of Co-operation

Superintendent T. L. Dubbs of the Vicksburg division, Greenville, Miss., recently sent an American Railway Association circular on loading to the Delta & Pine Land Company of Mississippi, Memphis, Tenn. He received the following reply from W. V. Fant, general manager of that company:

"Your favor the 23d, suggesting that we make extra efforts at prompt loading of all equipment furnished us, received and carefully noted."

"We appreciate, Colonel Dubbs, the interest you take in serving your patrons all along your lines, and you may rest assured that we shall co-operate heartily in any suggestion you make."

"We believe, taking it year in and year out, that your division of the Yazoo & Mississippi Valley Railroad Company will show more nearly a 100 per cent service than any other division on your magnificent system."

"We prize greatly our relationship with your system, and we wish you to feel that we know the efforts that you personally make toward perfection of service. Should you find that we can do anything in particular toward developing the service or reaching the goal that you have in mind, kindly let us know what it is, and we will take pleasure in responding immediately."

No Service Equal to Ours

C. E. Crane, traffic manager of the McComb Cotton Mills, 320 Broadway, New York City, recently wrote as follows to T. J. Quigley, superintendent of the Louisiana division, McComb, Miss.:

"I am very appreciative of your letter of January 9 concerning your offer to assist us in tracing the movement of cars in or

out of our McComb mills. We have found, by and all, if we can only get our cars on the rails of the Illinois Central that they receive prompt movement."

"In passing, I wish to take this occasion to say that we have never found anything to equal the service of the Illinois Central."

"I do not know that I will have occasion to come to McComb in the near future, but I hope you will get to New York; and, if so, I would appreciate very much an opportunity to meet and know you personally."

Liked Service on Floridan

Louis M. Steinberg of Mark C. Steinberg & Company, Investment Securities, Boatmen's Bank Building, St. Louis, Mo., recently wrote to President C. H. Markham as follows:

"As a customer, a friend and, indirectly, a stockholder of the Illinois Central Railroad, I feel it my duty to bring to your attention what I consider to be an exceptionally efficient employe of the Pullman service on your train known as the 'Floridan' between Chicago and Jacksonville, Fla., and whose name is, I believe, O'Neill. I was a passenger on this train, which left St. Louis on the afternoon of January 23 and joined the Chicago train at Carbondale. We were on our way to the bedside of my father, who was dying in St. Augustine. I do not think Mr. O'Neill was aware of our distress, but he was so kind and courteous not only to ourselves but to all other passengers that, knowing your desire to hear words of approbation as well as those of criticism and complaint, I feel it my duty to call your attention to this man's services. I can only add that, if he is fit for higher things in the service, I certainly hope that he receives them."

Our Road a Good Investment

William F. Carlson, 620 McCormick Building, Chicago, recently wrote as follows to President C. H. Markham:

"The writer has, for many years, been connected with one of the large estates in Chicago, and had the pleasure of making a hurried trip south, last week, as far as New Orleans. Being interested in properties from the viewpoint of security values, etc., I feel constrained to write and express appreciation of the unusually uniform courtesy on the part of everybody connected with your road."

"The thing which impressed me more than anything else, however, was the splen-

did condition of your equipment, the up-to-date Pullman cars, and—more than all else—the evidence that your equipment is in good shape, as shown by the nicely painted houses and all property owned by the Illinois Central road.

"The truth of the matter is that I told the conductor on your road that the next investment I would recommend or personally would choose would be some stock of the Illinois Central Railroad, based entirely upon what I had observed and the opinion expressed since by men whom I have met in the railway supply business."

The Most Courteous Dining Service

Elmer Ritter, extension professor of the Iowa State Teachers College, Cedar Falls, Iowa, recently penned the following appreciation to President C. H. Markham while en route from Waterloo to Fort Dodge, Iowa:

"We wish to congratulate you on the type of dining service on No. 27 west (Chicago to Fort Dodge). We have received no more courteous service anywhere than we did at dinner this evening."

Good Service Courteously Appreciated

J. V. Lanigan, general passenger agent at Chicago, recently received the following letter from W. A. Mackay of 305 West Adams Street, Chicago, written at Evansville, Ind.:

"The writing of this letter has been on my mind since last Saturday night, and I'll be at ease with the world and myself when it's finished. It has occurred to me that we 'gadders' are quick enough to 'take our pen in hand' when things go wrong, and, I fear, not so ready to do it when things go right.

"Last Saturday I rode from Mattoon to Evansville on the afternoon train and met two of the finest exponents of courtesy it has been my pleasure to meet. I don't even know their names, but I refer to the conductor and brakeman in charge of the train that afternoon. Nothing but plain, old-fashioned, simple courtesy, and so unobtrusively offered it really made a home run with me. 'Was I warm enough?' 'The car isn't too cool for you?' And then, on arrival at Evansville, to have both of them bid me good-night and with it a cordial invitation and expressed wish that I'd ride again with them some time.

"When I was in conversation today with a merchant in this town, he said one of the world's needs today is courtesy and how he has been trying to drive it home to his employes, and I told him the experience I had last Saturday coming down here.

"I don't feel I've had the full value of

my ticket money without telling you how much the courtesy of these two men helped, and while I know that others appreciated it perhaps all of them will take it for granted and not give it a thought.

"There—it's off my mind, and I feel better!"

Combined Intelligence and Alertness

President C. H. Markham recently received the following letter from Thomas E. Wilson, president of Wilson & Company, 41st Street and Ashland Avenue, Chicago:

"Today I had occasion at the last minute to locate one of our officials who was to take the Panama Limited at the 53d Street station, and had it not been for the intelligence and alertness combined, particularly on the part of your agent, A. J. Charaix, I would not have been successful.

"It is, therefore, with much pleasure that I call to your attention what I consider unusual courtesy, even though it be no more than what the public is entitled to. I think it reflects very favorably on the *esprit de corps* of your organization."

Liked Service at Hickman, Ky.

I. Horine, assistant branch manager of the Mengle Company, Hickman, Ky., recently wrote as follows to Superintendent C. R. Young, Fulton, Ky.:

"We wish to take this opportunity to extend to you our thanks and appreciation for the service which has been rendered us by your road during the past year, particularly for the excellent spirit of co-operation which we have enjoyed from Agent R. E. Blow and both of your freight train crews, who are under Conductors George Campbell and Dave Winfrey, respectively. Both of these crews have handled the switching satisfactorily. They co-operate with us in this matter and are very considerate in the handling of the cars, especially the cars which are partly loaded, using due care in handling those partly loaded so as to not disturb the contents."

Good Service on Bankers' Trip

Gordon N. Selby, president of Gordon N. Selby & Company, Inc., Investment Bankers, 1111 Harris Trust Building, Chicago, recently wrote as follows to President C. H. Markham:

"The writer had occasion last week to arrange with A. U. Sawbridge of the city passenger agent's office for a special Pullman car to carry the executives of our organization and a syndicate of bankers over your railroad on an itinerary to carry us from Chicago to St. Louis on train No. 17; St. Louis to Pinckneyville and return, trains Nos. 205 and 206; St. Louis to Carbondale,

train No. 205; Carbondale to Chicago, train No. 22. After completing this trip it is my pleasure to address you for the purpose of informing you of the degree of satisfaction, comfort and service extended us by the executives and officials of the Illinois Central System in Chicago and en route.

"The writer desires to designate Mr. Sawbridge of Chicago, F. D. Miller of St. Louis, W. Atwill and Frank Hatch of Carbondale as being especially responsible for the courteous treatment and highly efficient service extended to us during this trip.

"It is indeed a pleasure for any such party as ours to travel over a system which is able and sufficiently eager to extend such comforts and conveniences as were extended to us, and we sincerely hope that we may have the pleasure of using the Illinois Central as a medium of transportation again in the very near future."

Good Work on Chicago, Memphis & Gulf

James W. Tipton of R. R. Tipton & Company, Tiptonville, Tenn., recently wrote as follows to President C. H. Markham:

"I wish to express my thanks and appreciation to the employes of the Chicago, Memphis & Gulf Railroad for services rendered by them, as they have been exceedingly nice to me in the past season from a standpoint of both courtesy and service. Especially do I wish to thank your conductors and flagmen and your agents at Hickman, Tiptonville and Ridgely. No better service, in my opinion, or more courtesy could have been extended under existing conditions, and I feel that I am ready and will be glad at any time to do anything that I can for them that it may be in my power to do."

Thanks From Real Estate Board

Harry Goldstine, president of the Chicago Real Estate Board, 57 West Monroe Street, Chicago, recently wrote to President C. H. Markham as follows:

"I wish to take this opportunity of expressing, in behalf of the Chicago Real Estate Board, our appreciation of the splendid co-operation and assistance you rendered us on our special to Jacksonville recently.

"I also wish to commend, particularly, the efficient manner in which your Mr. McEvelly co-operated with us at every opportunity."

Good Service Brings Traffic as Reward

C. B. Cornell, secretary and treasurer of the Cleveland Flux Company, Cleveland, Ohio, recently wrote as follows to E. R. Kerwin, our commercial agent at Cleveland:

"We shipped the Belleville Stove & Range

Company of Belleville, Ill., the Cornell Flux before we received your letter, but it was routed via the Illinois Central. We made a large shipment to Dubuque, Iowa, routing over your lines and also two other shipments to Belleville, besides four shipments to Illinois, and gave your road preference in every case.

"We have had less trouble and better satisfaction in routing our shipments over your lines than we have had over any other road. Hence, we throw everything we can your way."

Saw Evidence of Co-operation

G. W. Marshall, assistant traffic manager of the Hoosier Manufacturing Company, New Castle, Ind., recently wrote as follows to President C. H. Markham:

"The writer has read some of your talks on efficiency and co-operation and recently had an opportunity to note first hand the result of your efforts.

"This company was in urgent need of a car of lumber originating at Jackson, Tenn., and I went to Jackson to come through with the car. The loading of this car was completed at 3 p. m. on the 8th and your yardmaster notified. The car was switched from consignor's platform and forwarded north at 11 p. m. the same day.

"I was accorded the same efficient service and courteous treatment by Mr. McConnell and his assistants at Mounds, Ill., by Mr. Spaulding at Centralia, by Mr. Lowery at Palestine and by Mr. Fredenburg's office at Indianapolis, the car being delivered to the Lake Erie & Western at Indianapolis at 8 p. m. on the 11th.

"Please accept the thanks of this company and my personal appreciation of such service."

Enjoyed Mardi Gras Trip

The following letter to President C. H. Markham from Harry J. Millard of Champaign, Ill., comments upon our passenger service to New Orleans for the Mardi Gras celebration:

"A party of Champaign people left here February 10 on your mid-winter vacation party to the Mardi Gras in New Orleans. There were six of us in the party, and we were more than delighted with the wonderful treatment we received. Your representatives, Messrs. Baker, Castle, Truesdale and Mathers and Conductor Howells, made it their business to see that we lacked nothing to make this trip an eventful one. The meals were simply wonderful, and although New Orleans boasts of its good restaurants and cooking, we always found it a pleasure to get back to our diner, which was parked there with the Pullmans.

"We thought we knew something of Illi-

nois Central ways from living here on the main line, but it takes a trip of this kind to realize that 'Service' means something to your wonderful road."

Praises Courtesy of Agent

W. N. Pullen, funeral director, Clinton, Ill., recently wrote as follows to Superintendent C. W. Shaw of the Springfield division:

"We buried the body of Mr. John McCann February 9, 1923, in Woodlawn Cemetery, Clinton, Ill.

"I want to congratulate you on the very efficient young man [J. L. Downs] you have as agent at Chestnut, Ill. Mr. Shaw, it is a real pleasure to transact business with a man who is accommodating at a time like that was. My funeral party remarked to me how very nice he was. Those little acts of kindness on the part of your men go to make up the greatest system we have—service."

Made a Most Satisfactory Trip

E. E. Peek, Waterloo, Iowa, real estate man and vice-president of the Waterloo Building and Loan Association, made a recent trip to San Diego, Cal., and used our line from Waterloo to New Orleans. In appreciation of the service and courtesy received, Mr. Peek wrote City Passenger and Ticket Agent W. L. Buckley as follows:

"Our party reached San Diego last evening, the 16th. Great trip; fine scenery; splendid service. The 'Old Reliable' landed us in Chicago on schedule time to the minute. The Panama Limited is the last word in railway travel. Nothing more to be asked. Sorry when we had to leave the train. Everyone in the Illinois Central employ seems anxious to maintain the high standard of the Illinois Central service. Our party unanimously extends to you a vote of thanks for the assistance you gave us in planning our trip and helping lay out our itinerary."

Good Freight Service Praised

The following is the text of a letter addressed to Agent L. E. Richmond, Central City, Ky., by J. E. Leach, manager of the Barnes Automobile Company, of that city:

"We wish to express our appreciation of the many little favors that you have shown us during the past year, and to commend you and your entire organization on the very prompt service that we have received in most of our shipments.

"We recall to mind one shipment especially that was received very promptly. Heretofore we had been experiencing a great deal of trouble and delay in similar shipments, regardless of how routed. This

March, 1923

shipment that we refer to was from Evansville, Ind. These goods were put in your freight house one afternoon and they were received by us the next morning at 8 o'clock.

"Heretofore, we have been unable to buy very much out of Evansville because of the poor freight service. One reason for the poor service was the delays, another was that the shipment was handled and rehandled at junction points and in a great many cases was not received in good order. However, we have noticed in the recent past that these shipments have been coming through in much better condition and much quicker, and it has enabled us to buy our truck bodies and other accessories in Evansville and have them routed by the Illinois Central instead of buying them in Owensboro where the market is not quite as good.

"So please accept our sincerest thanks and appreciation for good services, the many little favors that have been shown us during the entire past year by you and your organization."

In reply to Mr. Leach, Agent Richmond wrote as follows:

"We are pleased to acknowledge receipt of your letter of the 29th inst., wherein you have been kind enough to say some very nice things about our service.

"To a baseball pitcher who is doing his level best to put them square over the plate, nothing brings greater joy than to see the right arm of the umpire flung in the air with a cry of 'S-T-R-I-K-E.' So, if our effort to deliver the goods during 1922 has met with the approval of one of our largest and most valued customers, you must understand how glad we are to hear you say that she 'went over the plate.'

"We shall strive to merit the continued good opinion that you have of our organization and want you to feel free to come to us at any time for any service we may be able to render you."

Prevented Loss of Night's Rest

Richard A. Hale of 6938 Oglesby Avenue, Chicago, recently wrote as follows to President C. H. Markham:

"On January 2 I left Chicago on the Floridan for Miami, from which point I was to take a later train to Key West. The reservations had been made some time in December. When I reached Jacksonville, I discovered that my Pullman reservation out of Miami necessitated my staying up until about 3 o'clock in the morning, whereas there was a sleeper which was placed on a siding for Miami passengers and picked up by the same train on which my reservation was. The pick-up sleeper was open at 10 o'clock the night before.

"I went to the information man at the

Eighty-nine

station, who did everything he could to find out what the situation was. He said that the Illinois Central representative was somewhere around the station; so he had him paged for me.

"I told my troubles to your representative, who immediately advised me that there was a pick-up sleeper in Miami and that there was no occasion for my waiting around the depot until 3 or 4 o'clock the next morning. I asked him what he could do for me, and he said he would wire the agent at Miami to cancel the space I had and to reserve a berth in the pick-up car instead. He said he would also arrange matters so that the Pullman ticket that I had could be transferred, thus avoiding the necessity of buying a new one and filing a claim for the old ticket.

"When I reached Miami, I went to the Pullman man and found all of this had been taken care of just exactly as your representative had promised.

"As a rule, when things do not go right we kick. When, however, a courtesy is extended, such as was by your representative, we take it as a matter of course and say nothing about it. In fact, we are a great deal like the small boy who was hoeing corn on a hot, dusty day. A man passing by stopped and engaged the boy in conversation. Finally he asked the boy what he got for doing the work. The boy replied, 'Nothing if I do, and h— if I don't.' I feel, therefore, that in this instance at least I would like to reverse the procedure, hence my dropping you a line regarding the above."

Change Made in Memphis Ticket Agents

W. H. Rose, night stationmaster at Grand Central Station, Memphis, has been appointed ticket agent at that station, succeeding H. G. Coltart, resigned. Mr. Rose has been with the Illinois Central System about twenty-five years. He entered the service in June, 1895, as telegraph operator on the Mississippi division. From 1896 to 1898 he was ticket agent and operator at Dyersburg, Tenn. He was appointed ticket agent of the Frisco at Memphis in 1898. In 1901 he returned to Illinois Central as telegraph operator at Grand Central Station, remaining in this capacity until 1910, when he was promoted stationmaster. Mr. Rose possesses a genial disposition and has a reputation for tact in handling the public.

Mr. Coltart began railway service forty-five years ago when he was appointed train dispatcher for the old Mississippi & Ten-

nessee Railroad, now that part of the Illinois Central extending from Memphis to Grenada, Miss. He remained with this line for eleven years, or until the road was purchased by the Illinois Central, about thirty-three years ago. He then went to the Kansas City, Fort Scott & Memphis Railroad and was accorded the honor of selling the first ticket at the old station at Memphis. He was at one time ticket agent for the Memphis & Little Rock Railroad, and he has seen the passing of three passenger depots at Calhoun and Main Streets, Memphis, on the ground now occupied by Grand Central Station. In 1914, when the Illinois Central completed and opened the present Grand Central Station, Mr. Coltart was appointed ticket agent, and he remained in this position until his resignation.

QUICKNESS IN LEARNING

"Comparing youth and middle age," says Dean Robinson, "I find that there is hardly a subject in our curriculum that the average mature mind will not grasp with equal ease and with superior understanding. Take two men of equal intelligence, one 45 and one 20, both in good health and with good habits, both free from hampering worries, and turn them loose on a new subject in which they are both interested. One finds immediately that the man of age and experience has all the advantage. The individual between 40 and 60—who, as Du Maurier says, has 'ceased to hunt the moon'—is normally at the height of intellect and judgment. If health and optimism and determination remain, he has a marked strategic advantage over immature youth." —MERLE CROWELL in *American Magazine*.

HOUSE PLANS FOR OUR READERS

Southern Pine

The attractive 5-room cottage plan which is presented to readers of our magazine this month possesses a cheerfulness and home-like charm which is not easily described. Almost everyone knows of some particular house that has this peculiar quality.

This 5-room cottage is one of those "homey" houses. It has plain, old-fashioned lines. It isn't bedecked with what folks call a lot of architectural gingerbread. It's just a nice, comfortable, conveniently arranged cottage home which can be built at a reasonable outlay and which would be a very pleasant place to find waiting for one after the day's work is done. There is a lot of room in this plan, too, the reader will find upon inspecting it carefully—sufficient space for most families, with two light and airy bedrooms, living room, dining room, kitchen, pantry, bath, and two nice porches.

This plan is only one of fifty designs, all different, and attractive in their individual styles, shown in a modern house-plan book which the editor of the *Illinois Central Magazine* will be glad to send to any prospective home-builder free of charge upon request. Through the courtesy of the Southern Pine Association of New Orleans, these plans are offered to the public without cost. The American Wholesale Lumber Association also announces that it will ar-

range with retail lumber dealers to co-operate with those who desire to build homes in movements for the organization of community building and loan associations.

Sports Over the System

Inter-City Bowling Match a Success

Winning every game from the Memphis invaders in an inter-city match at Chicago, Saturday, February 17, the Chicago Illinois Central System bowlers sent the Southerners home with the same smiles on their faces that were there when they arrived in blizzard-swept Chicago earlier that same day. The Bluff City boys seemed to enjoy the acute cold of the Windy City, and it was noticeable at the banquet which preceded the match that the weather conditions had in no way impaired their appetites.

R. O. Fischer, president of the 12th Street General Office Bowling League at Chicago, a former resident of Memphis, rolled the first ball for the Chicago side.

The two cities divided their ten men into two teams of five men each. Memphis Team No. 1 played Chicago Team No. 1, while Memphis Team No. 2 rolled Chicago Team No. 2. These teams rolled three games each, after which Memphis Team No. 1 rolled the Chicago Team No. 2, and *vice versa*, for three more games. On Chicago Team No. 2 was Knodell, the ace of the 12th Street League, and on Chicago Team No. 1 was Calloway, 63d Street's crack maple knocker.

The Chicago teams were: Team No. 1, Heimsath, Ryan, Klee, Clark and Calloway; Team No. 2, Breidenstein, Coates, DuBois, Koch and Knodell. Team No. 1 was winner of the Chicago high game.

The Memphis teams were: Team No. 1, Webb, Stegar, O'Connor, Higgins and Long; Team No. 2, Sullivan, Theobald, Breen, Mabie and Trouy.

The prize winners were: high team games, Chicago Team No. 1 and Memphis Team No. 2; high game (individual), Sullivan (Memphis), Calloway (Chicago); second high game (individual), Mabie (Memphis), Koch (Chicago); high series, Sullivan (Memphis), Calloway (Chicago); second high series, Webb (Memphis), Koch (Chicago). It will be noted that the Memphis team won as many prizes as the Chicago boys, this feature being arranged to give both cities equal consideration.

Before the bowling began the Memphis boys were guests of the Chicago team at a banquet given by the courtesy of the general officers in the dining room of the 12th Street station. All present were unanimous in expressions of gratitude to the

officials who made the dinner possible. The officers who contributed toward the banquet were: O. F. Nau, W. Newell, C. M. Kittle, C. Chandler, C. C. Westfall, E. L. Crugar, H. G. Morgan, F. O. Draper, F. E. Taggart, G. R. Hurd, F. R. Judd, P. Aagaard, F. T. Wilbur, E. W. Jansen, A. L. Chapin, E. Hunt, C. A. Shaffer, L. Robinson, J. G. Drennan, R. V. Fletcher, H. B. Hull, S. M. Copp, T. G. Taggart, H. D. Warner, R. W. Bell, J. J. Bennett, L. C. Guernsey, H. J. Schwieter, F. B. Bowes, G. A. Dupuy, J. W. Stevenson, Dr. G. G. Dowdall, V. W. Foster, A. L. Davis, C. C. Cameron, R. A. Trovillion, B. A. Beck, W. A. Summerhays, R. E. Kimbell, T. T. Keliher, W. L. Tarbet, J. F. Porterfield, W. Haywood, A. M. Umshler, J. B. Hamilton, J. F. Dartt, G. J. Bunting and A. C. Mann.

C. M. Said, magazine cartoonist, who was responsible for the inter-city meet, presided over the banquet. Those who attended were Knodell, Calloway, Heimsath, Clark, Klee, Ryan, DuBois, Breidenstein, Koch and Coates of the Chicago team, F. J. Theobald,

Second Annual Tournament

American Railway Bowling Association

Open to all Railway, Steamship,
American Railway Express
and Pullman Company
Employees.

To Be Held At

**235 S. Wabash Ave.,
Chicago, Ill.**

April 7 to April 22, Incl.

**Entries Close Wednesday,
March 20**

*For entry blanks and further
information, address*

**W. P. Enright, 135 E. 11th Pl.,
Chicago, Illinois**

Tommy Long, J. Webb, G. L. O'Connor, B. W. Higgins, Paul Breen, C. P. Mabie, L. M. Trouy, C. J. Stegar and B. Sullivan of the Memphis team, and G. M. Crowson and C. E. Kane, editors of the *Illinois Central Magazine*, H. C. Marmaduke, assistant chief clerk to the general manager, E. C. Collier and J. A. Bailey, official scorekeepers, and J. N. Concklin, chief accountant at Memphis.

The table was beautifully decorated with red carnations, provided by the passenger department, and the menu was specially prepared by Manager Huppeler of the Central Station dining room and Mr. Said. At each place was a special printed souvenir menu and a card bearing the well-known "Inkid," the pen and ink creation of the toastmaster.

The last ball of the game was rolled at 1:20 a. m., which made the entire affair last seven hours and twenty minutes.

The statistics on the games were as follows:

Chicago Bowlers

								Total	Average
Calloway	176	167	204	232	177	182	=	1,138	190
Koch	151	192	167	176	191	215	=	1,092	182
Heimsath	174	140	191	170	204	204	=	1,083	181
DuBois	162	211	180	146	164	167	=	1,030	172
Ryan	176	174	175	207	147	136	=	1,015	169
Breidenstein	159	168	171	166	164	187	=	1,015	169
Knodell	202	148	156	177	141	177	=	1,001	167
Clark	164	129	166	200	178	146	=	983	164
Klee	162	173	172	133	157	146	=	943	157
Coates	173	153	147	132	81	131	=	817	136
								10,118	169

Memphis Bowlers

								Total	Average
Webb	146	160	152	130	148	132	=	868	145
Sullivan	136	186	181	122	111	111	=	847	141

								7,499	125

Ernie Perrin

out his opponent in two rounds. This event marked the entrance of Perrin in the ring.

After his discharge from the Navy, in the fall of 1919, he returned to New Orleans and joined the Young Men's Gymnastic Club, the well-known sporting club of that city, with the avowed intention of playing basketball. The club about this time was suffering from a dearth of boxers in the heavy and light heavyweight classes, and "Monk" Simon, then physical director, noting Perrin's wonderful physique and ability as an athlete, prevailed upon

him to train for the boxing game.

Under the guidance of Simon, Perrin quickly developed into a first-class fighter. Early in 1920 he entered the Southern Amateur Athletic Union boxing championship bouts under the colors of the Y. M. G. C. He made rapid progress, and the end of 1920 found him holding the titles of city and Southern champion of the Southern Amateur Athletic Union in the light heavyweight and heavyweight classes. He retained his titles during 1921, defeating all comers, and in April of that year journeyed to Boston to compete against the cream of the amateur boxers of the United States in the National Amateur Athletic Union championship boxing contests. In

New Orleans Employe a Professional Boxer

It was on July 4, 1919, on board the U. S. S. Pueblo, that the recreation officer in charge of troops returning to the States from France first made the acquaintance of Ernie Perrin, a husky member of the battleship's crew. It was on the same day that Ernie first donned the boxing mitts.

The recreation officer, in arranging a smoker to amuse the boys on the glorious Fourth, found a lack of suitable material. Young Perrin was pointed out to him as a lively youngster, and after some persuasion was induced to box one of the returning soldiers in a 3-round bout. Much to the surprise of the soldiers and sailors—and of Perrin himself—he succeeded in knocking

his first bout he easily defeated M. Deady in one round, scoring a knockout. However, he lost his second fight, by knockout, to Magnus Larsen, a husky Swedish youngster of New York, in two rounds.

In the latter part of 1921 Perrin left the ranks of the amateurs, and entered the professional ring, during which time he boxed some of the best in his class in the country, meeting such boys as Art McBride, Jack Bruno, Jackie Mason, Soldier Reynolds, Pat Dalton, Tom Roper, Young Marullo, Dick Adams and "Moon" Poretto. In October of last year, while on a leave of absence, he met and defeated Jimmy Storey in a 4-round, decision fight at Oakland, Cal. Perrin's most recent fight was on January 29, when he went ten rounds to a draw with Tommy Marvin of Shreveport, La.

During his ring career as an amateur, Perrin won eleven fights by the knockout route and two by referee's decisions, and lost one by a knockout and two by decisions.

Ernie is a fine specimen of young physical manhood and is an experienced but gentlemanly boxer, fast, shrewd and possessed of remarkable stamina. He has gained a large following among the employes of the local freight office, where he is employed as check clerk on the river front, export department. At every bout you will find the Illinois Central boys on hand, ready to cheer their favorite on to victory. Sport writers on several large dailies in New Orleans predict a promising career for this young pugilist.

Good Bowlers at Herrin, Ill.

The "Diamond Specials," an Illinois Central bowling team from St. Louis, visited Herrin February 3 and received one of the best trimmings of the season. The visitors were highly elated over the manner in which they were treated and said that they had one of the best times that they ever had while in this city as guests of the Elks. Others interested in bowling who think they have a real team should get in communication with H. L. Tygett, Freight Office, Herrin, Ill.

News of the 63d Street Bowlers

D. Flodin's team, the New Orleans Special, rolled second high series recently, totaling 2,660 for three games. Captain Flodin was high with 621. High 3-game series recently were: Calloway 616, Lind 607, Heimsath 590, McKenna 590 and Tersip 577. Powers 560, Miller 571—this accounts for the New Orleans Limited's win over the Diamond Special. The Seminole Limited moved up to second place when it beat McCarthy's Peddlers three in a row.

The prize winners for high scores recently were: Lawshe 200, Lind 222, Turner 232, Tersip 218, Rowe 214, Miller 232, Calloway 245, Goodell 207.

Here are the statistics:

Baseball Prospects at Chicago

A self-appointed committee composed of W. T. Kelly, A. E. Lawler and A. H. Coates is considering the promotion of an Illinois Central "All Star" baseball team for the season of 1923. It is proposed to try out and select players from the general office and Chicago terminal organizations, forming a team to compete in the Chicago Railroad League.

There is no better baseball material than will be found in the large number of Illinois Central men in Chicago. With co-operation and support, it is believed, the proposed "All Star" team can be developed into a reality and easily rank as one of the leading Chicago teams. Those who are interested, either as players or otherwise, will please communicate with A. H.

Coates (secretary *pro tem.*), Office of Vice-President and General Manager, who will gladly furnish further information on request.

Won Fourth Place in New Orleans League

	Won	Lost	Percentage
United Fruit Company.....	10	0	1.000
New Orleans Public Service..	7	3	.700
Woodward, Wight & Co.....	7	3	.700
Illinois Central Railroad.....	4	6	.400
Interstate Electric Co.....	1	9	.100
Liverpool, London and Globe Ins. Co.	1	9	.100

On January 17, beginning the final round of the Commercial Basketball League at New Orleans, the Illinois Central team met the Public Service team in the last game of the evening. This contest was very one-sided, the Public Service team defeating the railroaders by a score of 38 to 4. The Illinois Central boys were considerably off form and somewhat handicapped by the loss of their star forward, Berckes, who sprained his thumb early in the first half.

The team, however, displayed better form

in its next contest, on January 24, when it easily defeated the greatly improved team of the Liverpool, London and Globe Insurance Company by a score of 15 to 11. A consistent game was displayed by the Illinois Central boys in this event.

A scare was thrown into the camp of the league leaders on January 26, when our team met and was defeated by the Fruit Company team by the score of only 26 to 10, in a prettily played contest. A great deal of credit for the showing made by the Illinois Central team was due to the able work of Abe Rittenberg, the consistent little guard.

The Interstate Electric Company team was the next victim of our team, being easily taken into camp on January 31 to the tune of 19 to 7. This game was easy sailing, our boys scoring almost at will. The last part of the contest was played by our second team men.

The closing games of the league were played on February 2, when the Illinois Central team met the Woodward, Wight aggregation in the second contest of the evening. This appeared to be an easy victory for the Woodward, Wights from the start, the score at the end of the first half being 16 to 2 in their favor. However, the railroaders found themselves in the second period and outplayed their opponents, the Illinois Central losing by a final score of 20 to 16.

While our team did not win the championship of the Commercial Basketball League, it indeed made a creditable showing and helped materially in making the league a success and in bringing basketball again into favor as a winter sport in New Orleans. With more time for preparation and a larger amount of material to choose from, a better showing might have been made. Two of the members of the Illinois Central team were picked for positions on the second all-star team by the various sport writers on the daily newspapers of New Orleans. Berckes was picked as an all-star forward and Rittenberg as guard. It was the opinion of some of the sporting editors that Rittenberg merited a position on the first all-star team because of his wonderful defensive work and his ability to pass and dribble the ball.

Here is Jules Cassard, 16 years old, who is employed in the mechanical department in New Orleans as a messenger. Jules, who is the Southern amateur boxing champion at ninety-five pounds, is ready to defend his title against any Illinois Central employe of his weight. He has been in our employ for the last year. Jules fights only as an amateur. The Illinois Central Magazine for October, 1922, printed a picture of his brother, Mike, Southern amateur bantam-weight, also an Illinois Central employe.

March, 1923

Baseball Prospects Bright at McComb, Miss.

The organization of a baseball team at our McComb, Miss., shops is announced. Louisiana and Mississippi were searched for good players who would cast their destinies with the team for the 1923 season.

We have been extremely fortunate to obtain as pitcher and first baseman P. H. McGehee. "Pat" made his debut in the

Ninety-five

baseball circles in 1908, playing with the Mississippi College team in 1908 and 1909. In 1910 he was affiliated with Columbia University. His work was of such a nature that it attracted the attention of the Cotton States League, with which he signed up for the season of 1911. He remained with that league until the latter part of 1912, when he signed up with the Detroit team of the American League. In 1913 he was sold to the Western League team at Topeka, Kan. For the last five years he has played semi-professional ball throughout Louisiana and Mississippi.

Mr. McGehee entered the service of the Illinois Central January 25, working as head material handler, a position recently created in McComb shops. He promises to be as capable a material man as a ball player.

The club was organized through the efforts of J. A. Wales, William Cullom, Vannie May and R. E. Revere. Mr. Wales was elected manager; Mr. Cullom, coach; W. M. Jenkins, secretary; Mr. Revere, recording secretary.

In the past we have not had a ball club because the employes have not taken much interest. But this season we are up and on the job and are going to have something we have not had in the past—a real baseball club—and, we hope, the winning team on the system. Our equipment is of the best, the weather is warm enough for practicing and the men are getting in good shape. If any other club doubts that we have a ball team at McComb, just give us a trial.

The line-up is: H. L. Everett, boiler-maker, left field; Pat McGehee, head material handler, pitcher or first base; Van May, moulder, catcher; C. W. Wilkes, machinist apprentice helper, first base; Mack Middleton, machinist apprentice helper, second base; Raymond Brown, machinist apprentice helper, shortstop; John Lyons, machinist, third base; T. K. Newman, machinist, shortstop; Karl Webb, tinner apprentice, right field; Ike Cope, machinist apprentice, center field; Bill Cullom, welder, coach (first base or pitcher).—M. AB-BOTT, *Locomotive Department*.

Tie Broken in 12th Street League

When the General Superintendent of Transportation team and the General Freight team of the 12th Street General Office Bowling League at Chicago met on February 15 they were tied for first place, and the interest was at fever heat. Neither team lived up to its reputation as the league's best, but it may have been the jam of rooters that unnerved some of the bowlers. The General Superintendent of Transportation team won the first two

games, then dropped the third one to the General Freight team. Silverberg's 199 pins won the first game for his team, and his 539 pins made up high series for the two teams. Butler had the pins falling in the second game and must be given the credit for winning that game. The General Freight team got started in the third game and won it easily, thereby saving Walter Schrader, its head rooter, from a stroke of apoplexy. Koch, with 523 pins, and Sebastian, with 521 pins, starred for the General Freight team. After the games were over the two teams and thirty-five of their rooters attended a banquet and dance.

The Auditor of Miscellaneous Accounts team has again stepped into third place, supplanting the Bridge and Building team. These two teams shift position nearly every week. The Vice-President Purchasing team, General Superintendent of Motive Power team and Land and Tax team hold the same positions they did last month. The Vice-President Accounting team and the Maintenance of Way team have exchanged positions.

In tenth place we now find the Chicago Terminal Improvement team, whereas last month it was in fourteenth place, the biggest change any team made in the last month. If the Auditor of Disbursements team stood according to the average pins

The Game "Old H. P."

There is a character, well known,
The leading light in bowling zone,
And many a dollar men have sown,
To meet him fair and squarely;
He is evasive, in his way,
And on his perch is prone to stay—
Quite dignified he is, they say,
But he will treat you fairly.

His name we think that you can guess,
Without the aid of further zone—
His acts spell failure or success
For you in your endeavor;
Then meet "Old Head Pin" good and true,
For he commands the winning crew,
And he will prove himself true-blue,
And men will call you clever.

This moral we would here indite:
That "He Who Wins, in Any Fight,
Must E'er in Aim Be True and Right";

This axiom is olden:
The sesame to all success,
In work or play, in ease or stress,
Is "Hit the Head Pin," and no less
Will bring you vict'ry golden.

—FRED T. RUDIGER in the
Bowlers Journal.

per game, it would be in fifth place. Captain Kelly is looking for the hoodoo that causes other teams to bowl above their average while playing against his team.

The General Superintendent of Transportation team won twenty straight games before being stopped on February 8 by the Chicago Terminal Improvement team. Koch, captain of the General Freight team, now holds the record for high game, with 258 pins, and his team has high team game of 977. Rolff's 669 pins for high series still stands.

W. P. Enright of the Land and Tax department has received several requests for entry blanks to the railway tournament from out-of-town teams, and we would like to see at least a dozen out-of-town teams appear at the tournament. So get busy, form a team and write for an entry blank. The earlier your application is received, the more favorable a date will be assigned to your team.

The Chicago, Milwaukee & St. Paul officials thought they could bowl, but discovered the Illinois Central officials were a little more proficient than they were on February 8, when the Illinois Central representatives won two of three games in an informal contest.

L. T. Sawyer, secretary of the Penn-

sylvania Railroad Bowling League, claims to have five bowlers in his league who can beat any five men who roll in the Illinois Central leagues. Mr. Enright is going to find out how good the Pennsylvanians are.

We are having inter-city matches, inter-road matches, inter-official matches, and we should now have an inter-woman match between the women of 12th Street and those located at 63d Street. The *Illinois Central Magazine*, of course, would report the games, and it's a sure thing the girls would be backed by plenty of lusty-lunged rooters. —WALTER E. DUBOIS.

Stars in Track and at Baseball

Gordon Troyer, demurrage and storage clerk at Stuyvesant docks, New Orleans, has won fifty medals and three loving cups,

Gordon Troyer

besides breaking the interscholastic record at New Orleans for the one-half mile race. Thirty of the medals which Mr. Troyer has won are gold, the rest being silver and bronze. The half-mile record Mr. Troyer broke when he was a sophomore in the Warren Easton High School, New Orleans. He made the half mile in 2:02, a record which still stands. Not only has he won the half-mile event on various occasions, but he has also won in the high jump, broad jump, discus, 440-yard and 50-yard dashes. The following was reported in a newspaper in 1919: "Troyer was first in the high jump, half-mile, 440-yard dash; second in the 50-yard dash and broad jump; third in

the discus." All of this he performed in one day.

Mr. Troyer also ranks among the best baseball pitchers in Louisiana. He pitched one season for Abbeville, in the Louisiana State League. He was offered a try-out with the New Orleans club of the Southern League, but did not accept, because his arm went back on him about this time. He was offered a scholarship at the Washington and Lee University, but had to decline on

account of being under contract to the Abbeville team.

Mr. Troyer began his athletic career when he was 17 years old, while going to the Warren Easton High Schol. He is now 22 years old, is a member of the Young Men's Gymnastic Club of New Orleans and expects to win a few more events before his athletic days are over. The time he broke the record for the half-mile, he also won the A. A. U. Southern championship.

Sees Object Lesson in a Railway Failure

There is food for thought in the following article, which was published in the January 20 issue of Colonel Mayfield's Weekly, Houston, Texas:

I am glad that the Orient road is to be abandoned, its track taken up and its service discontinued.

That sounds bolshevistic, doesn't it?

Well, it isn't.

I will tell you why I am glad of it.

It is an object lesson to the people of Texas.

It shows them the result of the niggardly policy with which the state has dealt with the railroads.

We have held their rates down, we have surrounded them with laws and restrictions and regulations so that it is impossible for them to breathe.

We have turned loose the professional damage seekers until the expense of the legal department of a railroad is greater than the operating department.

If a \$10 cow is killed while trespassing on a track she immediately becomes a blooded animal worth \$300, and a local jury never fails to find for the home man against the "wealthy railroad." If a man stumbles over a grip in the aisle of a passenger car he immediately contracts Bright's disease or floating kidneys and gets spots before his eyes, while his attorneys mulct the company for \$30,000.

The treasury of a railway company is legitimate game for the average citizen, and scheming for it has become a profession in many localities. Juries never get the viewpoint of the railroad.

The railroads of Texas have been harassed as no other industry in the world has been harassed.

They are thrown into receiverships and operated in receiverships, while stockholders receive never a penny for their investment.

Roads in Texas are not being operated to make money; they are maintained simply to keep the capital investment from being totally lost.

The collapse of the Orient is a serious thing.

Hundreds of towns will wither and go to seed. Transportation will be cut off from an important trade territory; land values will shrink to an alarming extent. Thousands upon thousands of good, industrious and energetic citizens will be bankrupted. Merchants will go to the wall.

It is a serious matter.

People living along other lines should ponder over the Orient situation.

The same dog might bite them.

Railroads cannot live under the fierce strain of legislative and individual oppression that is forced on them in Texas.

They are all on crutches.

Only the resourcefulness of highly capable and versatile managers is keeping them moving at all.

What is the stock in a Texas road worth?

It is a liability instead of an asset.

You have to pay taxes on it without getting a thing on earth out of it.

Texas was once a fertile field for the construction of railroads, but you couldn't induce a man to invest in Texas railway securities today, with a machine gun. You would have to shoot him first.

Unless there is a change in the present general oppression, more roads are going to pass out like the Orient is passing.

You hicks living along the line of the railroad had better change your attitude toward the great transportation system. Regard it as an essential to the welfare of your community and treat it as such; when you go on juries, look with more kindly eyes on the railroads and more carefully into the injuries of the plaintiff. Regard yourself as a stockholder in the railroad, for you are vitally interested in its success and welfare.

We cannot look, however imperfectly, upon a great man without gaining something by him. He is the living light-fountain which it is good and pleasant to be near.—CARLYLE.

CLAIMS DEPARTMENT

Eye Saved After Injury

H. W. Doyle, claim agent at Vicksburg, Miss., writes us about an employe whose eye was injured and who was treated by Dr. Charles J. Edwards, local oculist, in such a way as to save the sight of the eye, thought lost, and to restore it to normal vision.

"While Memzie Fisher, negro boilermaker helper, was working in the Vicksburg shops on January 10, 1923, a sliver of steel flew into his eye. The piece of steel entered through the eye-lid, passing all the way through the eye, under the eye-ball, and came out on the other side. The medical description of the injury is as follows:

"Penetrating wound left eyeball 10 mm. from corneoscleral junction lower external quadrant-counter puncture 5 mm. from corneoscleral junction median line nasal side. Hemorrhage in vitreous. Nasal side of disc only seen."

"In plain, every-day language, this means that the eyeball was ruptured. Everyone who saw Fisher at the time of the accident thought that he had lost his eye. He was sent to the sanitarium, where he was examined by Local Surgeon Street, who thought the eye was gone. He put Fisher to bed and sent for Doctor Edwards, who went to the sanitarium and, after making an examination of the injured man, announced (to the surprise of everyone present) that he could save the injured eye.

"He immediately went to work on the case. Several days later, when the bandages were removed, it was found that not only had the sight been saved, but the eye was restored to normal vision.

"Fisher continued under the doctor's treatment. When discharged he had fully recovered from the injury. I think the doctor deserves great credit for the successful handling of this case."

Railroad Wins a \$30,000 Suit

Mr. and Mrs. Frank Lunning sued the Illinois Central in the the United States District Court at New Orleans, La., for \$30,000 for the death of their son, Walter Lunning, 29 years old. It was their theory that Lunning, who was employed by Penick & Ford, Inc., had come across the river on a ferry boat and then had started to cross the railway tracks at Napoleon Avenue, when some

cars were kicked over the crossing, striking and killing him.

The case was tried January 18. Three witnesses introduced by the plaintiff testified that they saw the accident and that Lunning was walking across the tracks when he was struck and run over by the cars kicked over the crossing.

The railroad proved that the accident did not occur in this way, but that Lunning was attempting to crawl between some cars a considerable distance away from the crossing, when the cars were moved and he was caught and killed. The railroad further proved conclusively that two of the plaintiff's witnesses, who claimed to have seen the accident, were not present, but were on the opposite side of the river at the time.

The jury evidently accepted the railroad's story as to how the accident happened, as a verdict was returned in its favor.

Two Automobile Suits Defeated

Marks Curry, negro truck driver for the George Dounson Company, New Orleans, La., permitted a cut of cars handled by a switch engine to strike his truck on the Franklin Street crossing, New Orleans, March 28, 1922. The driver suffered rather serious and painful injuries, and the truck was damaged to the extent of \$315.

Louisiana has a Compensation Act under which Curry's employers were responsible to him for a certain sum each week during actual disability. The Compensation Act also provides, where one is injured through a third party, that he can collect compensation from his employer and then sue the third party in the name of his employer. If he recovers damages, he must reimburse his employer for the compensation received and may retain all he recovers in excess thereof.

Curry fell into the hands of a lawyer, who presented a claim. The railroad offered to pay \$250 toward a settlement, but his attorney wanted \$1,250; so Curry sued the railroad in his own name. When his employers heard of that fact, they stopped payment of the compensation, as they had a right to do, because he had sued without their knowledge and in his own name, instead of theirs.

The case, recently tried, resulted in a ver-

diet for the railroad. The plaintiff has now lost both his compensation from his employers and the \$250 which the railroad offered to pay.

Another automobile accident case recently tried in the Parish of St. John the Baptist in Louisiana resulted also in a judgment in favor of the railroad.

This was a suit by the Consolidated Companies against the Yazoo & Mississippi Valley. The plaintiff had a motor truck which was struck by passenger train No. 12 on a road crossing at Garyville, La., December 5, 1919. The evidence showed that proper signals were given by the train crew and that there was no obstruction to the view of the driver of the truck; yet he drove on the track right in front of the advancing train. Eye witnesses said that he apparently neither looked nor listened for the ap-

proaching train. Fortunately, the driver escaped injury. The plaintiff introduced proof that the damage to the truck amounted to \$2,507.

The number of automobile crossing accident suits won by the railroad in Louisiana ought to convince drivers of such vehicles that the courts recognize, if the drivers themselves do not, that there is a legal duty upon such drivers to exercise care and caution when approaching a railway track.

How True!

The fellow who uses his brains knows that railway fatalities are not due to careless railway management, but to careless human beings who take chances that ordinary horse sense warns them not to take.—*Memphis (Tenn.) Trolley Items.*

M. A. Knapp, Noted Railway Arbitrator, Dies

Judge Martin A. Knapp, for many years chairman of the Interstate Commerce Commission, who participated in numerous negotiations for the settlement of railway labor disputes, died February 10 in Washington, D. C. He was a judge of the Circuit Court of Appeals.

Judge Knapp was a little more than 70 years old at the time of his death, having been born November 6, 1843, at Spatford,

N. Y. He was educated at the Wesleyan University of Connecticut. The LL.D. degree was conferred upon him there in 1892 and again at Syracuse in 1911.

In 1869, Judge Knapp was admitted to the New York bar. Between 1877 and 1883 he was corporation counsel of Syracuse, and in February, 1891, President Harrison appointed him a member of the Interstate Commerce Commission. He was reappointed commissioner by President Cleveland in February, 1897, and by President Roosevelt in 1902 and 1908. He was made chairman of the commission in 1898.

As *ex officio* mediator under the Erdman Act, Judge Knapp was prominent in the settlement of railway labor disputes. He was appointed additional circuit judge by President Taft and assigned for five years to the United States Commerce Court as presiding judge. He assumed the duties of that office December 31, 1910, and resigned from the Interstate Commerce Commission at the same time. Later he was appointed mediator for two years under the amended Erdman Act. When the Newlands Act of 1913 superseded the Erdman Act, President Wilson appointed Judge Knapp to the Board of Mediators and Conciliation which was created.

Upon the dissolution of the Commerce Court, December 31, 1913, Judge Knapp was assigned by the chief justice to the Circuit Court of Appeals of the fourth judicial district.

If you can look into the seeds of time, and say which will grow, and which will not, speak then to me.—*Macbeth.*

Judge Martin A. Knapp

HOUSE PLANS FOR OUR READERS

Concrete

The Glastonbury (J. T. Pomeroy, architect, Chicago) is a delightful house for the narrow lot. As shown herewith, this Dutch colonial house can be placed very comfortably on a 30-foot lot and can even be used on a 25-foot lot without crowding. There is a real art in making a slender house look well proportioned inside and out. Three features save this house from having a pinched look: First, it is built close to the ground; second, it has lawn on both sides, and third, the skillful handling of the red asbestos shingle roof, particularly the broad expanse over the front entrance and sun parlor, adds to its beauty. A dis-

tinctive elevation, with the steeply pitched gable, will make it stand out from its commonplace neighbors.

It is remarkable what spacious rooms the architect has been able to contrive in this small home. Entering a small vestibule containing a good clothes closet, we pass into a living room the full width of the house, with fireplace and bookshelves at the farther end. Opening on the living room is a splendid sun porch, with bay windows that give a fine view up and down the street. The stairs ascend from the other end of the living room. Through a cased opening we proceed into a comfortable dining room. Beyond this is the small kitchen, with room for a breakfast table in the far corner, if desired. A screened porch opens from the kitchen at the rear.

Upstairs two fine bedrooms extend the full width of the house, each with windows on three sides. Between them is a well planned bathroom. The alcove nook in the front bedroom has a built-in window seat which may be used as a cedar chest.

This design is one of twenty-five plans appearing in an elaborate plan book published by the Portland Cement Association, 111 West Washington Street, Chicago. The plan book can be obtained from the editor for 50 cents a copy. A smaller booklet, called "Portland Cement Stucco," containing valuable data on that subject, including photographs of many attractive stucco houses, but not including plans, can be obtained free from the editor.

Traffic Man Replies to Critics of Rates

*Officer of Fruit Dispatch Company Advocates
"Closed Season" on Shooting at Railroads*

The following article, taken from the January-February, 1923, issue of *Fruit Dispatch*, published by the Fruit Dispatch Company, 17 Battery Place, New York City, was written by W. A. Schumacher, general traffic manager of that company.

ANYTHING that is "game," be it fish, flesh or fowl, has an open and a closed season, but for the railroads the season is always "open"—not that they come in the category of living things, but nevertheless they are objects of the popular sport of shooting at something.

If a hit is scored, that is so much good work done and the game goes merrily on.

I believe it is generally accepted as a truism that when our railroads are not prosperous the country is not prosperous. And how could it be otherwise, when we stop to consider that transportation is the second largest industry in this country and our health, happiness and prosperity are inextricably bound up in the efficient, adequate and smooth working of our national transportation machine. The railroads are among the largest purchasers of commodities of every description as well as large employers of labor, and their total expenditures for labor and supplies are responsible for payrolls totaling many millions of dollars, all in turn creating vast purchasing power available for other commodities necessary to the well-being and happiness of an army of employes and their dependents.

Why New Equipment Is Needed

If the railroads cannot earn enough to have a surplus after fixed expenses and operating costs have been satisfied they cannot buy new equipment, engines and rails, enlarge facilities or create new ones; they begin to have "growing pains"—their plant becomes clogged and there is a tightness around the waistband that the shipper sees translated into car shortages, congestion, embargoes, permit systems and all the other symptoms of a transportation machine too small and inadequate to handle the business tendered and yet striving to "bring home the bacon."

So what's the use of talking about lower rates if the railroads cannot move the business already offered? What good is a lower rate if a shipper cannot get a car, or the railroads cannot move the car and deliver it at destination expeditiously? What we shippers want is *service*, and we want it when we want it—cars, schedules, yards,

W. A. Schumacher

delivery tracks, 'n' everything. And we are not going to get them without paying for them. Transportation does not differ from any other business enterprise. The rewards (efficient transportation or otherwise) are in proportion to what we put into it—we cannot draw out more from the bank than we deposit, and we cannot get something for nothing.

As a matter of fact, how many of us really care what the *rate* is? How many of us know whether it is 5 cents too high or 5 cents too low? Isn't a *relative adjustment* the thing we are after and really need? Would you sell more or less fruit or vegetables on a lower rate if your relative adjustment were wrong and in comparison with competitors you were still too high? No; you would still be "out of luck," and your entire operation would be hampered until you could secure a proper relative adjustment. Then, no matter if your rate had been reduced or advanced, you could command your rightful share of the business because you would be on an even footing *relatively* with your competitors.

Railway Executives Mean Well

In company with many other, I think rates are too high, and in the course of time must come down, but I doubt if now

is the time to hamstring the railroads. We need more cars, more engines, more sidings and yards, more everything. Railway development has not kept pace with the growth of business and population in this country, and the reason isn't hard to find. They are over-regulated and under-nourished. Every time they get a tummy-ache or a little derangement of the alimentary tract someone rushes for the paregoric bottle in the shape of a new bill designed to correct this or that practice or compel some new one.

I don't think railway management is perfect, and there have been times when I thought it was puerile, but the great majority of executives are, I believe, striving earnestly to give the public efficient, adequate and prompt transportation with such tools as an indulgent Interstate Commerce Commission, forty-eight state regulatory bodies, the Labor Board, labor leaders, *et al*, will permit them to have. No wonder they begin to hedge when shippers start making proposals. Experience has taught them to be on their guard, to look for the bug under the chip. What we need, both shippers and railroads, is a liberal dose of old-fashioned faith. I am a firm believer in laying the cards down on the table and talking frankly. If both parties will do that, most situations can be ironed out to the satisfaction of all. Here is a good motto to follow, and it doesn't apply exclusively to the transportation field, either: First ascertain the facts; the remedy is usually self-evident.

Why Not a Closed Season?

It is unnecessary for me to quote figures of railway earnings—you are all more or less familiar with the fact that they have been, as a whole, far below what was necessary to enable the railroads to enlarge and extend their facilities so as to keep pace with the development of American industry, and we are now paying the penalty. I suggest a closed season for a time. Give the railroads a chance to catch up with the procession. An adequate car supply, prompt and safe movement and a transportation plant capable of handling a peak movement of any commodity at any time with reasonable despatch is worth more to shippers than any number of cut-rate tariffs that are only "paper" rates because the frantic shipper can get no service. When the time comes that substantial reductions in rates may be made, I hope to see no more horizontal reductions. Commodities that can bear a relatively high rate should be the last to be picked out for reductions. The heavy moving, basic commodities should come first, and care should be taken to readjust each class or group in all terri-

tories at the same time so that relative adjustments may be preserved.

In order to show in a few words where most of the trouble lies, I give below the average yearly increase in engines and cars in periods of seven years each:

	1901-1907	1908-1914	1915-1921
Engines ..	2,500	1,500	275
Cars	90,000	50,000	6,000

Read the figures and weep. And don't forget that during all this time business has been increasing tremendously. It is time for business men to look at this situation in its larger aspects and to try to help the railroads to get back on their feet. Don't be afraid they will make too much money. The Interstate Commerce Commission will take care of that, but in the meantime you want efficient and adequate transportation when you want it and, whether you know it or not, what you really need in a *relative adjustment* of rates. The measure of the rate is not half so important as it seems.

Let's call for a closed season and start to do a little boosting.

PROMOTION

I have found that when stars drop out successors are usually at hand to fill their places; and successors are merely men who have learned by application and self-discipline to get full production from an average, normal brain. There is not a man in high place at the Bethlehem Steel Works who did not work his way up from the bottom, round by round. And the promotion in every instance was due to the fact that the man promoted always did his work a little better, a little more effectively than the others around him.—CHARLES M. SCHWAB.

HER DEATH A SHOCK

Rae Wickham's death on January 6 came

Rae Wickham

as a great shock to all fellow employes at Illinois Central Station, Chicago. She left her post full of hope and courage on January 3 and entered the Illinois Central Hospital for an operation, from which she never recovered.

Miss Wickham had been in the service for three years. She worked as a stenographer in the purchasing department

at Central Station, then for six months in the office of the general storekeeper at Burnside, later returning to the purchasing department. She was afterward transferred to the car service bureau, where she was employed at the time of her death.

Funeral services were held in Oakwoods Cemetery chapel Monday afternoon, January 8. All the local employees of the car service bureau and several employees of the purchasing department attended the funeral.

Miss Wickham leaves two sisters, Miss Merry Ruth Wickham and Mrs. Hazel Wildes, and a little brother, Frank. Her

one great ambition was to see Frank through high school and college.

The days come and go like muffled and veiled figures sent from a distant friendly party; but they say nothing, and if you do not use the gifts they bring, they carry them as silently away.—EMERSON.

The weakest among us has a gift, however seemingly trivial, which is peculiar to him, and which, worthily used, will be a gift also to his race.—RUSKIN.

NEWS OF THE DIVISIONS

AROUND CHICAGO

General Offices, 12th Street

Miss Margaret Walsh and "Doc" Pettit of the office of the general superintendent of transportation were married at St. Cyril's Church, 64th Street and Dante Avenue, January 27. After the ceremony a reception was held at the bride's home. The attendants were Miss Irene Morrison and the bride's brother, Jack. The bride wore a white gown of canton crepe and a head-dress of silver and jade green, while the bridesmaid's gown was of orchid canton crepe. The newlyweds were presented with a useful gift by their many friends in the office, who wish them much happiness. They have been at home since February 1 at 2610 East 75th Street.

CHICAGO TERMINAL

E. C. Harper

Chief Accountant

Burnside Shops (William Faber)

Boynt ("Nick") Lundgren announces the birth of a baby girl on Saturday, February 3. Both mother and baby are in the best of health.

Our assistant timekeeper, Andrew Speller, has left Burnside to accept a position at 27th Street as timekeeper.

Here's Loyalty to Service

A. Bernard, superintendent of passenger service, Chicago terminal, writes: "As a striking example of the loyalty and co-operation of passenger service employees, I desire to call attention to the fact that the following employees called on me after completing their regular assigned tour of service in the coach yard Saturday, February 17, when a severe blizzard was raging, and volunteered their services sweeping snow out of switches or off station platforms or performing any other services that would assist in keeping up the passenger service: R. S. Murphy, E. A. Scott, George Diets, W. E. Jones, J. Miller, W. L. Jones, F. C. Funderburg and A. Mitchell, switchmen; Earnest Hynes and R. W. Medill, clerks.

With sincere regret we announce the death of Peter Johnson, father of Elmer Johnson, foreman of the upholstery shop, Burnside.

Suburban Trainmen (A. E. Johnson)

The wives of the conductors employed on the Chicago district have organized an auxiliary to Woodlawn Division No. 327, O. R. C., and have named it after our crack train, the Floridan.

Randolph Street Station (Marion Pressler)

A daughter was born to Mr. and Mrs. D. C. Gaghan on January 10. Mr. Gaghan is towerman at Blue Island Junction tower.

Those who were unable to be present at the fuel meeting held under the auspices of the passenger service department should be on the look-out for the announcement of the next special meeting, which will be on another subject and, we hope, as interesting as the last. All are invited.

A few days ago Flagman Boeschel learned of a party of fifty that was planning a trip from South Chicago to Chicago and return, February 17, via another line. He got in touch with those in charge, solicited them via our line and promised to try to get a car assigned for their use. We assigned the rear car of train No. 248, and the party used our line.

Robert Schwenck, switch tender, discovered a broken rail on track No. 4 at 64th Street at 8 a. m., February 3 and immediately flagged all trains and notified the section men.

This is Miss Helen Burda, who recently returned from a three months' tour of France, Germany and Czechoslovakia, leaving New York September 2 and returning there December 9. Miss Burda is employed in the office of Chief Surgeon G. G. Dowdall at Chicago. While in Europe she visited Bremen and Dresden, Germany; Prague, Czechoslovakia, and Paris, Versailles and Orleans, France.

Harvey, Ill.
(F. W. Wright)

L. V. Cole, ticket agent at Harvey, entered the Illinois Central Hospital on January 20 for treatment. H. H. Evers is filling the position during Mr. Cole's absence.

Roundsman A. A. Bouk has returned to his duties after a successful operation for the removal of his tonsils.

ILLINOIS DIVISION

Iva Phipps

Office of Superintendent

Mr. and Mrs. G. H. Kermeen are the proud parents of a 9-pound boy, born February 8. Mr. Kermeen is an accountant in the superintendent's office.

L. E. Brown, clerk to Supervising Agent Kabbes, has returned home after having undergone an operation for appendicitis in the Illinois Central Hospital at Chicago.

Miss Tula Woolard has accepted a position as stenographer in the accounting department.

Miss Lucille Koover has accepted a position as comptometer operator in the accounting department at Champaign.

G. H. Strauss has been appointed chief clerk to Superintendent Hevron. N. L. Richmond, formerly clerk to Trainmaster J. T. Stanford, succeeds Mr. Strauss as assistant chief clerk. Mr. Richmond was succeeded by W. E. Donaldson.

Champaign Yard Office (Grayce Ferguson)

Assistant Yardmaster Frank Menifee has returned to work after an absence of more than two weeks, due to illness. W. J. Fielding acted as assistant yardmaster during Mr. Menifee's absence.

C. F. Orcutt, switchman, is off duty on account of being severely injured.

Conductor Flora recently lost his mother.

Kankakee Freight Office (J. M. Purtil)

W. F. Hardgrove, who was employed here as switchman for eighteen years, now retired on pension, has moved to Peoria, Ill., where he will make his future home.

During January, nineteen exceptions were charged against Kankakee loading. By taking up and handling each exception to a conclusion, we were successful in getting cancellations for eight from Mr. Richmond's office.

The freight office has been given a general cleaning and painting throughout and looks like new. The force feels proud of such a nice office and takes pride in keeping everything in a neat and orderly condition.

On January 1 a new yard office was opened up at Hospital yard, with Yard Clerks Walter Cox, Thomas Overton and Hallie Damron in charge. This will greatly facilitate the movement of cars.

The old yard office at the junction, which has been in use there for many years, will soon be a thing of the past, as a new one is being built just north of the roundhouse. Yardmasters Damon and Brayton will be glad to get into new quarters.

A new 300-ton track scale has been installed in the North yard. This is one of the best scales on the system and is equipped with a type-registering beam.

Work has begun on the extension of the new third main track between Kankakee and Otto. When completed, this will give service on this track from Otto to North Junction and will greatly relieve the congestion of trains in and around Kankakee.

A NEWS-GATHERER

Miss Claire Pimm, Louisiana division editor for the Illinois Central Magazine, attended the McComb, Miss., schools and was graduated from the high school in 1915. She attended the commercial department of Mrs. W. S. Marks' School at McComb in 1916 and entered the service of the Illinois Central April 10, 1917, as a stenographer in the division storekeeper's office at Memphis, Tenn. She accepted a position as efficiency clerk in the master mechanic's office at Memphis in September, 1918, but resigned November 15 to accept a position as stenographer in the superintendent's office, New Orleans terminal. She held various positions in the superintendent's office until April 5, 1920, when she was transferred to the Louisiana division as clerk to the supervising agent. On November 15, 1922, she accepted a position as clerk in the chief dispatcher's office at McComb.

The Lehigh Stone Company is making extensive additions and improvements at its quarry at Lehigh, Ill., and expects to be in full operation by March 1.

Mrs. Beauchamp, wife of Napoleon Beauchamp, trucker, was operated on recently at the Emergency Hospital. We are glad to learn she is improving.

Thomas Carey, Illinois division supervisor with territory extending from Mile Post 196 to Branch Junction, passed away February 8 at his home on South Banker Street, Effingham, Ill., of pneumonia. He was born in Watertown, New York, February 25, 1858.

For forty years he had been a faithful employe of the Illinois Central. For twenty-eight years he had worked as section laborer, brakeman, section fore-

Thomas Carey

man and extra gang foreman. He was made supervisor in June, 1913.

Mr. Carey is survived by his faithful wife, two sons, Donald of Madison, Wis., and J. J. of Niagara Falls, N. Y.; three daughters, Mrs. Corena Ludwig of Effingham and Misses Loretta and Marie at home; one brother, James, of Manchester, Iowa; four sisters, Miss Mary Carey and Mrs. Martha Kammer of Scales Mound, Ill.; Mrs. William Gilbert of East Dubuque, Ill., and Mrs. Henry Berrigan of Council Bluffs, Iowa; and one granddaughter, Madeline Carey.

Funeral services were held at Effingham, after which the body was taken to Dubuque, Iowa, for burial.

INDIANA DIVISION

Florence Mc Shuak

Secretary to Superintendent

Superintendent's Office, Mattoon, Ill.

(Zella MacNair Rose)

In last month's issue of the magazine the statement was made that Supervising Agent Walker had been operated on for appendicitis in the Illinois Central Hospital, Chicago. This stands for correction. Mr. Walker was in the hospital at Chicago, but after having several days' treatment he returned home without being operated on. Later he became ill again, and went to Olney Sanitarium and was operated on. He is convalescing.

Zella MacNair Rose of the superintendent's office has returned from the Illinois Central Hospital, Chicago, having had her tonsils removed.

A quiet wedding took place Saturday evening, February 10, at the home of Mrs. E. L. Habison, 801 South Robb Street, Robinson, Ill., when her daughter, Miss Flossie, was united in marriage to C. R. Eaton, cashier for the Illinois Central at Robinson. The ceremony was performed by the Rev. H. W. White of the Presbyterian Church in the presence of the contracting parties' relatives. After the ceremony a dainty luncheon was served. The newlyweds immediately left over the Illinois Central for New Orleans, La., and other points in the South to spend their honeymoon. Upon returning they went to housekeeping on Eaton Street, in a home which had previously been made ready. They will be at home to their friends after March 15.

Accounting Department, Mattoon, Ill.

(Norieanne Quinn)

Winston A. Darnell of the accounting force is in possession of a director's diploma from the H. A. Vander Cook School of Band & Orchestra Directors, Chicago, of which he is proud. Mr. Darnell is director of the Mattoon Rotary Club Boys' Band, a picture of which appeared several months ago in our magazine. On February 22 the Boys' Band gave a concert at the Presbyterian Church, Mattoon.

Mrs. A. C. Wilcox, wife of our chief accountant, left for Jacksonville, Fla., early in February to

attend the wedding of her nephew, J. W. Ackerman, in that city, February 12.

Born to Accountant and Mrs. Maring Crane on January 16 a son, John William.

Mrs. C. W. Stephenson, wife of our timekeeper, is gradually recovering from the fall she had at Evansville in December.

Office of Trainmaster, Mattoon, Ill.

(Essie Reams)

Mrs. J. V. Fitch, wife of Passenger Conductor Fitch on the Peoria-Mattoon districts, died at her home in Mattoon, Ill., February 2, 1923, after a prolonged illness of typhoid fever. She was getting along satisfactorily until a few days before her death, when it was found that her heart had been weakened by the severe illness, which she was unable to throw off. Mrs. Fitch was born in Bracken County, Kentucky, in 1858, moved to Shelbyville, Ill., while a small child, and in a few years to Mattoon, where she lived the rest of her life. She was married to Mr. Fitch in 1879. She is survived, besides her husband, by three children—Mrs. John Reynolds of Mattoon, Mrs. John Bridgman of Seattle, Wash., and H. C. Fitch of Indianapolis, Ind., who is also an Illinois Central passenger conductor on the Indianapolis-Effingham districts. Mrs. Fitch was a member of the Eastern Star and of the Presbyterian Church. For several years she taught a large class of girls, of which the writer was a member, and I am sure that in the heart of each one of those girls is a niche which will always be hers.

Office of Master Mechanic, Mattoon, Ill.

(Flora Adrian)

A new gap axle lathe has recently been installed at Mattoon shops.

The Association of Machinists at Mattoon held a business and social meeting on February 6, which was a very enjoyable affair. After the business part of the meeting, refreshments of ice cream and cake were served. Several of the division officers attended and made short talks.

Leo S. Jobe, clerk at Palestine roundhouse, and Mrs. Jobe were called to Mattoon recently by the death of Mrs. Jobe's father, Mr. Cowton.

Aubrey L. Tate, clerk in the office of the master mechanic, got up in a hurry a few mornings ago when the roof of his home caught on fire.

Chief Dispatcher's Office, Mattoon, Ill.

(W. C. Scott)

Chief Dispatcher A. C. Freigo made an inspection trip over the entire system with the chief dispatchers' committee. Dispatcher Bledsoe acted as chief in Mr. Freigo's absence, and Dispatcher Bosley worked first trick, Peoria district, in place of Mr. Bledsoe.

Dispatcher and Mrs. C. V. Whitesitt recently purchased a new home in Mattoon.

Miss Vic Gustafson, clerk, is back at her desk after a course of treatment in the Illinois Central Hospital, Chicago.

Agent and Mrs. M. S. Hacker, Rose Hill, Ill., are the proud parents of a baby girl born recently.

Agent B. B. Knight, Lerna, Ill., has been on the sick list for several days, extra Agent Stinson relieving him.

Agent W. E. Gladville, Stewartsville, Ind., is the owner of a new motor car.

Trainmasters Keene and Vane have been holding several classes recently, reviewing the Book of Rules.

Operator R. V. Cowling, second trick at Morgantown, Ind., is on the sick list, Operator Snow relieving him.

Lineman E. A. Berningers' territory has been extended to include both the Indiana and Springfield divisions, with title of district foreman—headquarters still at Mattoon. Previously he had a district on the Indiana division. He is succeeded as lineman on the Indiana division by Fred Williams, from the Springfield division.

Trainmaster's Office, Palestine, Ill.
(Blanche Pugh)

Miss Olive Gibler, clerk, has resigned. She is succeeded by Miss Blanche Pugh.

Agent's Office, Mattoon, Ill.
(W. P. Wooldridge)

M. Dorsey, agent, has reported for work, having returned February 4 from an extended leave of absence. He visited Tacoma, Wash., San Francisco and Los Angeles, Cal., and Phoenix, Ariz.

A. E. Rust, clerk, who has been on a ninety days' leave of absence, has decided to leave the service of the Illinois Central.

Agent's Office, Indianapolis, Ind.
(Margaret Clifford)

When James Hyland, inspector, who is a great bird and animal fancier, is not busy inspecting freight

Some of James Hyland's livestock

at Indianapolis, he is home taking care of his fine lot of Airedale dogs and white Leghorn chickens.

Miss Lena Schmoll, stenographer at the local office for six years, left the service recently to take a position with the Martin Parry Corporation. The girls entertained for Miss Schmoll with a farewell "spread" the day before her departure.

Roadmaster's Office, Mattoon, Ill.
(Bonnie Snorgrass)

Supervisor Cordier of the Mattoon district, with headquarters at Newton, Ill., has been off duty on account of illness since the first of January.

The following section foremen have been given favorable mention on their efficiency record cards: Barney Lundy, reporting brake rod dragging under C. M. & St. P.-501249; J. W. Allen, discovering broken wheel on Frisco-30014.

Agent's Office, Evansville, Ind.
(A. W. Walling)

John T. Duffy, watchman at Evansville for the last fifteen years, dropped dead in Chicago February 7. Mr. Duffy had been afflicted with heart trouble the last few years, but not seriously enough to keep him from working regularly, until a short time before his death. He went to Chicago to enter

the Illinois Central Hospital for treatment. He is survived by his wife and one daughter.

The following letter has been received from Mrs. Ressie Wesner, wife of O. O. Wesner, who met with an injury in the Palestine shops early in January, from which he died January 3:

"I wish, through the magazine, to thank the officers and members of Mattoon Local No. 16, Association of Car Men, Helpers and Apprentices, for the gift check received January 20, and I assure you that it was appreciated and accepted in the same spirit in which I know it was given. I shall never forget the many acts of kindness bestowed by the men of this organization at Palestine during the illness and death of my husband.

"I presume that you will be glad to know that my claim was handled promptly and that a most satisfactory settlement was made.

"I shall also take advantage of this opportunity to thank the officers and employes of Palestine shops for the beautiful floral offering and financial aid.

"And, lastly, I wish to thank the company surgeons who waited on my husband so attentively during his illness."

During October, 1922, an inspection was made of the Indiana division by Health Officer Beach. There were but two stations on the division that were absolutely free from criticism—Willow Hill and West Liberty, Ill. These two stations were complimented by Supervising Agent Walker, and the following letters from them show their appreciation of the just praise.

Agent W. O. Heuring of West Liberty wrote:

"Your letter addressed to Mr. Hardwick of Willow Hill and myself in regard to the inspection by the health officer during October has been received, and I am very glad to see that my station was given special mention. However, I'm sorry the division in general made such a poor showing.

"Sometimes I get discouraged with this old tumble-down shack; I feel like letting it go and not trying, as you know it is an old relic of the old C., H. & D.; but when we receive reports from inspectors and officials like the letter, I am made to feel that my efforts are not in vain, and I want you to know I appreciate such reports very highly."

Agent J. H. Hardwick of Willow Hill wrote:

"I wish to state the fact that I am surely proud and somewhat puffed up to know that I am one of the two on the Indiana division of the Illinois Central who were given due credit for cleanliness in and around stations, I wish to state further that this cleanliness is kept up and the work done by my clerk and myself—no station cleaner is needed here.

"I surely appreciate the fact that we are clean and sanitary."

SPRINGFIELD DIVISION
Della Morrison Office of Superintendent

Trainmaster's Office, Clinton, Ill.
(Clara Hoyt)

The Springfield division lost one of its best conductors in the death of O. R. McClelland, who passed away at the John Warner Hospital Friday evening, January 26, when he was being treated to overcome a cerebral hemorrhage which he suffered December 19 while working at Pana, Ill. Mr. McClelland was born August 28, 1868, at Central City, Ill., where he resided until he was 21 years of age, when he entered the service of this company as a brakeman. He was promoted to conductor in December, 1895, and had served as passenger conductor on runs Nos. 105 and 102 for two years. Conductor McClelland gave the Illinois Central thirty-three years of effi-

One Hundred Seven

client service, and his record was an exceptionally good one. He had a host of friends throughout the division. He is survived by his widow, two children, a brother, Conductor Marion McClelland of Champaign, and a sister, Mrs. Thomas Burke of Clinton.

A special train carrying members of the Illinois Legislature was handled from Springfield to Champaign February 7 in charge of Engineer Richard Oakman and Conductor J. J. Millan. The trip was made for the purpose of inspecting buildings and looking over proposed improvements at the university.

Conductor C. S. Steger and family have moved to Clinton from Pana, Ill. Mr. Steger has been assigned to passenger runs Nos. 105 and 102 made vacant by the death of Conductor O. R. McClelland.

Yard Clerk R. J. Conroy has been granted an additional leave of absence of ninety days to continue his duties as vice general chairman for the Brotherhood of Railway Clerks.

Conductor J. J. Millan recently relieved Conductor J. Lovell on runs Nos. 517 and 518 while the latter was in Chicago on committee work for the O. R. C.

Meetings were held at Clinton for first ten days of February with all train, engine and yard employees relative to the importance of complying with the Transportation Rules. The meetings were conducted by Trainmaster Walker, assisted by other division officials.

Brakemen R. Reeves and F. J. Franek passed examinations for promotion to conductor on January 28.

Harry Zimmerli, switch tender, is the proud father of a fine girl, Joyce Harriett, who arrived January 14.

Friday, February 9, the Springfield division handled over the Clinton district the first train of sixty cars of oil moving from Casper, Wyo., via Dixon to North Baton Rouge, La. The train was in charge of Engineer Potter and Conductor Bess.

Transportation Inspectors Lindrew and Dodge held meetings in their car February 12 and 13 relative to fuel conservation.

L. R. Carpenter of Lima, Ohio, died in Kissimmee, Fla., on January 27. Mr. Carpenter entered the service of the Illinois Central in 1890 as a brakeman and was later promoted to conductor, which title he held up to the time he received his pension in 1915, after having been in service for twenty-five years. Mr. and Mrs. Carpenter then moved to Lima, Ohio, to make their home. At the time of his death they were on a pleasure trip at Kissimmee, where they had been spending their winters during the last several years. When a very young man Mr. Carpenter answered the call of his country and was in many engagements and battles during the Civil War. At the time of his death, though 78 years of age, he was planning a trip that would take him over the territory through which he tramped as a Union soldier in 1860-1864. Funeral services for Mr. Carpenter were held in DuQuoin, Ill., January 31.

O. R. McClelland

Clinton, Ill., Shops (Flora Drago)

C. E. Hicks, employed at Clinton shops as cinder pit man, died at the John Warner Hospital January 20. He was operated upon for appendicitis and died about one week later. The body was taken to Ramsey, Ill., for burial. Mr. Hicks will be greatly missed at Clinton shops, as he was a very faithful employee.

Engineer J. P. Meehan is out of service and has gone to Hot Springs, Ark., for several weeks on account of his health.

James Smith, machinist, is out of service on account of a serious accident resulting in a badly mashed foot.

Mack Williams, fireman, has returned to work after an absence on account of sickness.

Chief Dispatcher's Office, Clinton, Ill. (Gladys Westerholt)

On Saturday, February 10, occurred the death of Mrs. Emily Crum, aged 84 years. Mrs. Crum, together with other citizens, took an active part in the building of the Illinois Central Railroad between Bloomington and Clinton. For some time she was connected with the commissary department for boarding graders. She was accustomed to tell of many interesting events connected with the construction of the Illinois Central in this territory.

H. C. Moyer, operator at East Grand Avenue, returned to service February 16 after taking a two months' leave of absence in California.

R. F. Deveney, third trick operator at Kenney, is back from Glen Rock, Pa., where he was called by the illness of his father.

Jess Vallow, formerly a dispatcher at Clinton, visited all the division offices the first part of February, having been called to Clinton by the death of a relative.

Road Department, Clinton, Ill. (John Phillips)

Effective February 1, 1923, W. J. Apperson was appointed assistant engineer of the Springfield division, with headquarters at Clinton, succeeding J. W. Swartz, who was made a resident engineer at Central City, Ky. Mr. Swartz came to this division in 1919 as assistant engineer, immediately after his separation from the military service, and proved to be one of the best assistant engineers we ever had. He was a second lieutenant in the Engineering Corps during the war and saw service overseas. Prior to being commissioned in 1918, he was assistant engineer at Freeport, Ill. He will move his family from Clinton to Central City in the near future. Mr. Apperson has been instrumentman-accountant on the Springfield division since June 1, 1919, coming to this station after his discharge from United States service in 1919. He served in the war as a captain in the field artillery and saw service in France. J. H. Brooks was assigned to be instrumentman-accountant, relieving Mr. Apperson. He was formerly employed as instrumentman on the Vicksburg division.

Francis Keene, a representative of the Standard Oil Company, was on the Springfield division the first week of the month explaining to supervisors and foremen the merits of the oil which is now being used in our switch and signal lamps.

Roadmaster Russell and Road Supervisors Cheek, Wood, Johnson and Doyle were at Vernon, Ill., February 8 to witness a demonstration by a representative of the Railway Equipment Company in the use of a track-laying machine.

John McCann, pensioned section foreman, died at his home at Chestnut, Ill., February 7, following a severe attack of pneumonia. Funeral services were conducted at St. John's Catholic Church, Clinton, Ill., February 9, the Rev. S. N. Moore officiating. Pallbearers were Colonel William Hart, John Hart,

John Hamilton, Joseph Mahon, James Hewitt and James Dooley, all of Clinton.

Mr. McCann was born in Ireland on January 6, 1839, and at the time of his death was 84 years of age. When he was 12 years old he came to this country with his parents and settled with them at Fulton, N. Y. On February 4, 1864, he married Miss Ellen Ducey, also a native of Ireland, at Fulton, N. Y. To this union thirteen children were born, four of whom preceded Mr. McCann in death.

In 1868 Mr. and Mrs. McCann moved to Illinois and located on a farm near Wapella. On April 1 of the following year he entered the employ of the Illinois Central as a section laborer at Wapella, in which capacity he remained until December 5, 1871. On that date he was made section foreman at Chestnut, a position he held until his retirement on pension February 1, 1907. Mr. McCann had thirty-eight years of continuous service.

On February 4, 1914, Mr. and Mrs. McCann celebrated their golden wedding anniversary at Chestnut. The *Clinton Weekly Public* of Thursday, February 12, 1914, which gave a concise write-up of the celebration, reported:

"Just about the time the speechmaking was ended, there was a knock on the door and a messenger boy appeared with an envelope which was handed to Mr. McCann. It proved to be a message from Buenos Aires, South America, congratulating the couple on their fiftieth wedding anniversary and expressing appreciation of the fact that they had lived up to his ideals in regard to the prevention of race suicide. The message was from Theodore Roosevelt, and although Mr. McCann had been a Democrat from his early youth he was greatly pleased with the fact that he had won the favor of a former president of the United States, even if Colonel Roosevelt had become a Bull Mooser."

Mr. McCann is survived by Mrs. McCann and the following sons and daughters: Mrs. Christina Suede-meier, Chestnut; Mrs. W. B. Allen, Champaign; Mrs. H. B. Finnigan, Gibson City; Mrs. E. J. White-man, Clinton; Frank, William and Raymond, Chestnut; Edward, Springfield; Daniel J., Clinton.

Freight Department, Clinton, Ill.

(Anna E. Murphy)

V. Pritchett, trucker, who has been ill for several days, has returned to work.

George Crum, trucker, has been off duty on account of a broken finger.

G. W. White, stowman, is planning to move to Vernon, Ill., soon to make that his home.

Tom Hart has been off duty for several days on account of sickness.

Store Department, Clinton, Ill.

(Esther Jones)

Miss Madeline Bradley, who for more than two years was employed in the office of the division storekeeper at the Illinois Central shops at Clinton, died at the home of her parents, Mr. and Mrs. Curtis Bradley, at Vandalia, Ill., Thursday, January 13. Her death was due to complications developing

from influenza contracted in Clinton two years ago. She was one of a family of four children and was born at Vandalia October 4, 1894. She received her education in the Vandalia grade school and also attended high school, being graduated with the class of 1913. Following her graduation she went to St. Louis, where she lived two years, later returning to Vandalia to re-enter the high school and take a commercial course. She was employed in various offices in Vandalia and then came to Clinton, having obtained a stenographic position at the shops, where she worked until taken ill. Surviving are her parents, one sister, Flossie, and a brother, Omar. Two brothers preceded her in death, Berkley E. and Fred, the latter dying from the same cause on December 28, 1922. Miss Bradley was a member of the Rebekah lodge and the Methodist Episcopal Church. Funeral services were conducted at the home Sunday, January 21. Burial was in the Vandalia cemetery.

General Foreman's Office, Clinton, Ill.

(C. E. Gray)

Engine No. 113 has been received on the Springfield division and placed in switching service at Vandalia. This engine replaces No. 139.

William Lane, veteran car inspector at Clinton, who has been retired on pension after many years of faithful service with the Illinois Central Railroad, entered the service August 18, 1888. Upon his retirement Mr. Lane reported that it had been a pleasure to serve under such supervisory officials as there are at this point.

Fred J. Holsinger, general foreman, recently purchased a new motor car, a sedan, of which he is very proud.

R. T. Ohley, assistant day roundhouse foreman, was off duty a few days recently on account of injuries.

John J. Morgan, day roundhouse foreman, has returned to duty after a brief absence on account of illness.

Work on the new machine shop being installed in the North yards at Clinton is progressing rapidly. New machines being installed are a drill press, a bolt cutter and an air compressor.

ST. LOUIS DIVISION

J. W. Brown

Office of Superintendent

Scott Atkins, fifty years a resident of Carbondale, Ill., a lawyer and real estate man, died January 29. He leaves two sons who work for the Illinois Central: Engineer Robert Atkins, Carbondale, and Harry Atkins, dispatcher, now located on the Illinois division. Mr. Atkins was buried at Carbondale.

William Milligan, percentage clerk in Superintendent Atwill's office, was away for a day or so recently on account of illness.

D. C. Sadler, electrician, Carbondale shops, recently married Miss Helen Brown, Anna, Ill. Mrs. Sadler was graduated from one of the leading conservatories of music at Chicago and is widely known as a talented musician, both vocal and instrumental. They will make their home in Carbondale.

Joseph Hewitt, formerly record writer, car department, Carbondale, has resigned to accept a position with the Metropolitan Life Insurance Company, Carbondale.

H. C. Larson, Jr., clerk to Road Supervisor Parks, East St. Louis, recently married Miss Helen Dobson, Carlyle, Ill. Mrs. Larson is teaching in the Carlyle schools. They will reside in East St. Louis.

Frank Rauch, car distributor, has been away from duty for a few days on account of sickness. The chief dispatcher's clerk, Fred M. Hobbs, is taking care of Mr. Rauch's work, and Operator Casberre is on Mr. Hobbs' position temporarily.

C. E. Feirich, local attorney, Carbondale, and Mrs.

John McCann

Feirich recently made an extended visit in Florida, returning February 7.

Born February 6 to Mr. and Mrs. Mel A. Bastin, an 8½-pound boy. Mr. Bastin is a yard clerk at Carbondale, and Mrs. Bastin is the daughter of Trick Dispatcher George Robinson, Carbondale.

Hiram Neely and Miss Goldie Faughn were married at the home of the bride's parents, Mr. and Mrs. Frank Faughn, Metropolis, Ill., recently. Mr. Neely is a fireman on the Illinois Central. Miss Faughn was stenographer in the office of Toof & Toof, Paducah, Ky., until her marriage.

Miss Florence Hileman, yard clerk, Mounds, has been away from duty several days recently on account of the serious illness of her sister.

The twenty-eighth annual session of the Illinois Farmers' Institute and Department of Household Science was held in Belleville, Ill., February 21 to 23, inclusive. Many noted agricultural and household science speakers were on the program.

H. E. Stout, caller, has taken a position as tonnage clerk in the division office, Carbondale.

The division office basketball team is still going well, adding victories to its list.

A. E. Owsley, national commander of the American Legion, and party spent several hours in Carbondale February 15. A splendid banquet was given them at the new Methodist Church, which was dedicated Sunday, February 11. After the banquet Mr. Owsley spoke to a large audience in the auditorium of the Southern Illinois Normal University.

Freight Office, Benton, Ill.

(W. D. Brotherton)

Illinois Central employees are doing their part at Benton, Ill., toward the "safety first" move which is now on. Car Repairman Gabe Shehorn, while going home from his work on February 7, detected a brake hanger down on a Grand Trunk car. He stopped the train and repaired the car, thus eliminating what might have caused an accident. This was done after he was off duty. All employees are on a close look-out for defects on cars and engines, as they do not want to see any personal injuries or accidents.

Conductor F. E. Hegler has reported for duty, after being off duty two weeks on account of sickness.

Conductor O. A. Bartley has been in Pinckneyville several days at the bedside of his 4-year old son, who has pneumonia.

C. F. Settlemoir, switchman at Benton, is doing his part toward cutting down expenses for the Illinois Central. He has turned over numerous angle cocks and air hose to the car department at Benton.

Brakeman D. Stalheber has been absent from duty about two weeks on account of the sickness and death of his mother.

The yard office at Benton has been moved from its location on First Street to one about two hundred yards west of the roundhouse. An additional room was added to the old structure to take care of the increasing size of the yardmaster's forces.

Car Repairman Gabe Shehorn at Benton turned in four angle cocks and four air hose which were picked up around Benton yards.

L. B. Watts, bill clerk at Pinckneyville, was in Benton February 12, at which time he purchased some furniture and made shipment of it to Pinckneyville, Ill. Mr. Watts, who was formerly warehouse foreman at Benton, assured us that he had no serious thoughts of matrimony.

Conductor O. A. Simmons returned from New Orleans February 10 and informed us that while there he purchased two race horses.

C. F. Settlemoir, switchman, and O. V. Carr, engine foreman, have thrown their hats into the ring for nomination to the office of commissioner in Benton.

Meetings of all employees were held at Benton February 4 and 5 by General Yardmaster P. E. Smith and Master Mechanic L. A. Kuhns, in the

interest of prevention of accidents. A good attendance of all concerned was made at both meetings.

Transportation Department, Centralia, Ill.

(Grayce Baysinger)

George Reese, switchman, who was injured at Centralia while switching November 1 and is in the hospital at Chicago, is improving rapidly, being able to get around on crutches and out of the hospital every day.

Conductor Sam West, who underwent an operation at the Chicago hospital, has been discharged.

Hump Towerman Fred Gaiser, who was operated upon for appendicitis at the Chicago hospital, is improving.

The cars handled for Centralia terminal for January totaled 177,680. This exceeds the number of cars handled for any month in the history of the terminal. The largest total of cars handled for one day was on January 9, which showed a total of 6,582 cars. On January 29 1,838 cars were put over the hump, which was the peak movement of cars over the hump.

Conductor D. L. Carlyle has been transferred to Chicago, having accepted a position as traveling yardmaster under Terminal Superintendent A. M. Umshler.

Mechanical Department, Centralia, Ill.

(Thelma Gilpin)

W. L. Becker, chief clerk in the master mechanic's office, surprised his friends at Centralia when he and Miss Augusta Reh, also of Centralia, were married on January 17. They spent a two weeks' honeymoon in New Orleans and other points in the South. Mr. Becker has been chief clerk in the master mechanic's office for more than five years.

Edward Remacle, formerly a machinist at Centralia, has been appointed assistant night foreman at Mounds, Ill.

Miss Maude Wallis, file clerk, returned February 19 from Hot Springs, Ark., where she spent several days with her father, who is there on account of his health.

D. W. Potts, boiler foreman at Centralia, went to the Illinois Central Hospital in Chicago on February 15 to have his tonsils removed.

Gang Foreman J. R. Stull of Centralia has been temporarily transferred to Mount Vernon, Ill., to oversee the building of new freight cars which are being built by the Mount Vernon Car Company for the Illinois Central.

O. E. Bogan, lead inspector at Centralia, has been assigned to the work of inspecting freight cars being built at Terre Haute, Ind.

Steel Car Foreman C. T. Hill has recently moved to his beautiful new home in Melrose Addition.

Miss Louise Bales, formerly a stenographer in the master mechanic's office at Centralia, but now employed in the general manager's office in Chicago, spent the week-end of February 10 at Centralia.

WISCONSIN DIVISION

J. A. O'Neill

Office of Superintendent

Superintendent's Office, Freeport, Ill.

(Theresa Johnson)

Miss Margaret Anna Wilson, clerk to the chief dispatcher, and Earl James Grace were married February 12 at St. Mary's Church by the Rev. Father Joseph Egan. The bride wore a dress of blue tricot, with paisley trimming, and a corsage bouquet of lilies of the valley and rosebuds. Charles and James Richards, sons of Chief Dispatcher C. O. Richards, sang "Oh, Promise Me," and Miss Harriet Cox of the superintendent's office sang "Ave Marie" and "At Dawning" during the nuptial mass. Fol-

lowing the ceremony a wedding breakfast was served to twenty-five guests at the home of the bride's parents, Mr. and Mrs. William Wilson, 811 South Benton Avenue. The table was decorated with crimson hearts, a basket of red roses and streamers of smilax. Mr. and Mrs. Grace have left for the East, where they will spend several weeks.

Andrew B. Tracy was appointed assistant cashier of the State Bank of Freeport February 1. Mr. Tracy is a son of the late John Tracy, who for many years was roadmaster for the Chicago, Milwaukee, & St. Paul and one of the organizers and first directors of the State Bank. Mr. Tracy is a former Illinois Central employe, having been in our service for fourteen years, entering the service as a clerk in the freight office, his last position with the company being that of chief clerk to Superintendent Dignan. For the last two years he has been employed as office manager of the Stephens Motor Works of this city.

Walter Tappe of the accounting department, who has been alderman of the Fifth ward for the last two years, is a candidate for re-election.

Catherine Rodemeier, accountant, had her tonsils removed in the Illinois Central Hospital, Chicago, the first of the month and has resumed work, feeling very much better.

The Wisconsin division made a remarkable record in handling 162,460 cars in the various yards without any yard damage in January. We have certainly begun the year right and hope to be able to keep up this good work. L. L. Earnist, general yardmaster at Freeport, and A. A. Carmichael, agent and yardmaster at Amboy, deserve much credit for this commendable showing. Freeport yards handled 92,432 cars without any yard damage in January, and the Amboy yard has handled 223,482 cars since June 1 without any yard damage.

Road Department, Freeport, Ill.

(Frances Manion)

The marriage of John Smith and Miss Bridget Quinn took place Wednesday, February 7, at St. Catherine's Catholic Church, Freeport, Ill. Mr. Smith is employed as carpenter in the B. & B. department.

Favorable mention has been placed on the efficiency record of Charles Hurt, section foreman, La Salle, Ill., for discovering a loose wheel in train No. 171, engine No. 2919, at La Salle on December 22.

Assistant Section Foreman M. O'Brien has been confined to his home for the last two months on account of sickness.

Favorable entry has been made on the efficiency record of Assistant Foreman J. Lorencki, La Salle, Ill., for discovering a loose truck on MP-64012, train No. 172, January 3, at La Salle.

Charles Hurt has been appointed acting track supervisor on the North Amboy district, with headquarters at Freeport, vice Lawrence Conley, who is on leave of absence on account of sickness. Supervisor Conley, who has been confined to the Illinois Central Hospital at Chicago, has returned home, but as yet is unable to resume work.

Accounting Department, Freeport, Ill.

(Catherine Rodemeier)

A shower and banquet were given at the Brewster Grill on February 5 by the girls of the superintendent's and freight offices in honor of Miss Margaret Wilson, who was married on Monday, February 12, to E. J. Grace. There were about twenty present, and a delicious 5-course dinner was served. Red and white were the table decorations. Before each plate was a double heart holding a candle, which served as a place card. Miss Wilson was clerk to the chief dispatcher, and Mr. Grace is employed by the Crum & Forster insurance office, Freeport.

Freeport, Ill., Shops

John Krueger, coach cleaner at Freeport shops for the last twenty years, who is very conscientious

in his work, is still looking after the interest of the patrons. On January 15 while cleaning coaches on a Dodgeville passenger train he discovered a pocket book lodged between a seat and the side of the coach. Investigation developed that the pocket book, which contained a sum of money and other valuables, belonged to Fred Penninston, a contractor of Argyle, Wis. The pocket book was sent to Mr. Penninston. Mr. Krueger recently has found several pocket books in coaches and made special efforts to locate the owners.

Andrew Richter, machinist at Freeport shops, has been promoted to assistant night roundhouse foreman.

John Shearer, tinner and steam fitter foreman, is still off duty on account of sickness.

All of the new machines recently authorized for Freeport shops have now been installed and are in good working order. They have added greatly to the efficiency of the shops at this point.

Daniel M. Reilly, general foreman at Amboy, who was given a leave of absence a few months ago on account of ill health, writes from Springfield, Ill., that he is still undergoing treatments, is getting along nicely and hopes to be with us in the near future.

MINNESOTA DIVISION

Lucille Sims

Secretary to Superintendent

Assistant Chief Dispatcher and Mrs. H. F. Weimer have returned from a pleasure trip to various winter resorts in Florida.

W. W. Wheaton has resumed his duties as agent at Masonville after a prolonged absence due to the illness and death of his father at Knoxville, Pa.

D. C. Burnside has been appointed agent at Raymond, Iowa; W. H. Weir, agent at Floyd, Iowa; J. P. Burke has returned to Myrtle, Minn., as agent.

Word from J. E. Davis indicates that he is spending a pleasant winter at Long Beach, Cal. He expects to resume his duties as operator at Waterloo about April 15.

E. D. Baylor is again on duty as agent at Peosta after several weeks' illness.

Yard Office, Waterloo, Iowa

(J. A. Joyner)

A large party of friends surprised Conductor and Mrs. P. J. Mulcahy on the night of January 22 at their home in honor of their tenth wedding anniversary. A mock wedding was held, and Mr. and Mrs. Mulcahy were used as the bride and groom. Mrs. J. A. McDonnell acted as minister. A mahogany davenport table was presented to Mr. and Mrs. Mulcahy. The evening was spent with dancing and games.

Conductor Pat Joyce is confined to his home by serious illness. His run is being protected by Conductor F. A. Bradford.

Conductor T. H. Graham attended the B. of R. T. convention at Chicago.

Thirteen new steel underframe cabooses have been received and placed in service on the Iowa division.

The filling of the ice house at Waterloo was completed on February 3. Eighteen thousand tons of ice were carefully packed away for the icing of the perishable freight during the coming summer. It took 610 carloads of ice to fill the house and twelve days to handle them. The ice was all hauled into Waterloo from the Cedar River at Nashua, Iowa.

The Order of Railway Conductors held its annual ball in the K. C. Hall on February 8. There was a very good attendance.

The Ladies' Auxiliary of the B. of R. T. had a masquerade dance in the Ben Hur Hall on Tuesday, January 30. Mrs. P. L. Entwistle, wife of the ice house clerk at Waterloo, took a prize for the neatest costume, and Yard Clerk A. B. Magnusson took a prize for the best comedy make-up.

Mrs. J. A. McDonnell, wife of Brakeman McDon-

nell, is ill at her home with a slight attack of appendicitis.

Records show that there were 68,124 cars handled at Waterloo yard during January, 1923, as compared with 49,859 during January, 1922. We are boosting to make a better record for the entire year of 1923.

Store Department, Waterloo, Iowa

(W. E. Barnes)

Walter Decker, formerly clerk in the store department of the Waterloo, Cedar Falls & Northern Railway Company, Waterloo, has accepted a position as stockkeeper in this department at Waterloo.

Joseph Onn, stockkeeper at Cherokee, Iowa, was off duty several days with the old-time grip, but is now on duty again and reports he is getting along fine.

R. F. O'Haran, store department accountant, Waterloo, attended the general accountants' meeting of the Northern and Western lines held in Chicago, Thursday, January 25. Mr. O'Haran reports the meeting a profitable one, as several corrections and good suggestions were brought out by the auditor of disbursements which would tend to aid in correct and efficient accounting.

The Chicago supply cars, which deliver supplies and material for the road department and agents on the Northern and Western lines, began in December operating on the Iowa division every sixty days instead of every thirty days, as had been the practice in the past. This arrangement has proved satisfactory and makes a saving.

Road Department, Dubuque, Iowa

(H. E. Shelton)

H. Rhoads returned home recently from a visit in the Florida sunshine.

Supervisor J. W. Sims returned to his position on the Dubuque district last week. The "Commodore" had been absent from duty for three months on account of a badly injured arm.

Supervisor Thomas Carey of the Effingham district who passed away at his home at Effingham, Ill., Thursday, February 8, was buried in Mount Olivet Cemetery, Dubuque, Sunday afternoon, February 11. Mr. Carey was a brother of Supervisor James Carey, located at Manchester, Iowa.

Office of Agent, Dubuque, Iowa

(Grace Phillips)

L. E. Moeller, station operator at St. Ansgar, Iowa, has been promoted to revising clerk at the Dubuque freight office. He was relieved at St. Ansgar by Donald Alberts.

Mechanical Department, Waterloo, Iowa

(Hazel Joyner)

Clerk A. E. Lawton has returned from a trip to New York. He reports having a fine time.

Chief Accountant W. L. Larsen and Accountant L. E. Schulte attended the accountants' meeting in Chicago January 25.

Norman Bell, master mechanic, recently made a trip to Wyoming in company with several other officials of the railroad to inspect a spreader in use on the Union Pacific Railroad.

Engineer C. E. Edwards has gone south on account of ill health.

Office of Trainmaster, Dubuque, Iowa

(Marion Coffey)

P. Joyce is confined to St. Francis Hospital, Waterloo, by serious illness.

C. L. Betts, yard clerk, Dubuque, has transferred to switchman in Dubuque yard. Several other changes have been made in the Dubuque yard office force.

Brakeman W. J. Somerville is undergoing treatment in the Chicago hospital.

Conductor C. A. Crowley is enjoying a vacation in the West.

Office of Trainmaster, Waterloo, Iowa

(Frank Hardy)

Conductor F. R. Cooley was confined to his home recently for several days by illness. He is feeling better and has again resumed work on his regular passenger runs on the Albert Lea district.

The ice harvest at Nashua, Iowa, is the best in several years. They are harvesting ice twelve to fifteen inches thick, and the work is being handled in such a nice manner that we now have our company ice house filled and have started to haul ice to fill the Crystal Ice House for domestic use at Waterloo and elsewhere.

Conductors William Beatty, W. D. Taylor and A. Brown have been granted extended leaves of absence and have accompanied relatives to California for the winter months.

A son, Robert Burns, was born to Mr. and Mrs. J. Crudden December 17. Mr. Crudden is caboose supplyman at Waterloo.

Conductor L. F. Hefner is again among us, after undergoing a serious operation in the company hospital at Chicago.

Car Department, Dubuque, Iowa

(Harry Hilbert)

E. K. Richardson, who underwent an operation for appendicitis recently at the Illinois Central Hospital in Chicago, is convalescing. Frank Beener is relieving Mr. Richardson.

Car Inspector J. Nichols and Miss Thelma Grimm of Cassville were married February 9. Mr. Grimm and his bride will make their future home in Dubuque.

Car Department, Waterloo, Iowa

(C. R. Sanborn)

James R. McMullen of the car department at Waterloo is the proud father of a baby girl.

Car Inspector John Wilson, who has been in the employ of this company for the last twenty years, is confined to his home by illness.

We have been informed by Herbert J. Conrad, A. R. A. clerk at Waterloo, that the time to visit California is the late fall or early winter. The fact that he just missed a snow blockade in the mountains only enhanced his trip through the Sunny State. Herb visited Long Beach and Hollywood, but claims to have derived more enjoyment from climbing Mount Lowe and watching the fish through a glass-bottomed boat. One of the many side trips taken was a boat trip from San Pedro to the Catalina Islands, a distance of twenty miles, at which point he embarked in the glass-bottomed boat. Herb claims he saw more fish than he had any idea there were in the whole Pacific; there were billions and billions of all colors and among them goldfish up to almost a foot in length. Next year we are all going to California on our vacations.

Frank Beener, gang foreman at Waterloo, is acting car foreman at Dubuque, Iowa, in place of Eldie K. Richardson.

Office of Agent, Waterloo, Iowa

(Mabel Ridpath)

Clarence Stephens, one of the popular young check clerks of the Waterloo freight department, was united in marriage January 18 to Miss Thelma Filkins. The young couple will reside at Cedar Falls.

Office of Agent, Cedar Rapids, Iowa

(Josephine Doyle)

That we are firm believers in advertising is evidenced by the large sign we are about to place on our office bearing the words "Illinois Central Railroad." We are proud of our little "home" and are glad to show it to the public.

J. B. Scriven, acting yard foreman, is again on duty after an absence of two weeks on account of illness.

The importance of not delaying loaded cars at

terminals is always being dwelt upon. We believe that we should be commended for what we think is a record in the prompt handling of such cars. Cedar Rapids, being the cereal center that it is, is a great grain loading and receiving terminal. Out of the great number of cars received during the last three years at this point, but five were held more than twenty-four hours, and this on account of not having necessary material on hand to make repairs. This will indicate that the shop organizations are co-operating to expediate prompt delivery. Another little instance: On January 20, 1923, the draw bar on a carload of bananas on train No. 491 became pulled out in transit. On receipt of the car, repairs were made, and in less than twenty minutes Foreman Mueller of the machinery department, always on the watch to see that such cars are handled as they should be, had the car to a connecting line for delivery to the consignee. This, we feel, is a pretty good record and should show that all departments co-operate in making the service of the Illinois Central System unusual.

Agent S. Kerr of Cedar Rapids, Iowa, writes: "Miss Josephine Doyle, magazine correspondent at Cedar Rapids, entered the employ of the 'Old Reliable' July 16, 1918. Her charming personality, winsome manner and cheerful disposition are of incalculable value in the position she holds as cashier's clerk. As one of the leading young business men of Cedar Rapids recently said to the writer: 'The sound of her voice, as it comes to me over the 'phone, is one of the most pleasing sensations of my daily toil. I would like to hire her just to answer our 'phone—she can certainly drive away trouble.' Her mellifluous voice sounds like a ring dove cooing to its mate."

Josephine Doyle

IOWA DIVISION

Emmett Coffey,

Chief Clerk to Roadmaster

John L. Hoaglund, janitor in the division offices at Fort Dodge, is at present absent from the service on account of sickness. He is being relieved by his son, Theodore Hoaglund.

On January 26 Otto Buettner, check clerk at Fort Dodge, and Miss Leona Bliss of Glidden were married at Humboldt, Iowa. They are now at home to their friends at 216 South 5th Street, Fort Dodge.

On the night of February 12 the Illinois Central Social Club of Fort Dodge held a dance in the K. C. Hall at Fort Dodge. About seventy-five couples were present, and a good time was reported. Much credit for the success of the dance was due to the efforts of Miss Ruth Nelson, clerk in the roadmaster's office, Miss Alma Nelson, tonnage clerk, Miss Edelle Campagna, trainmaster's clerk, "Mack" Sennett, bill clerk, and Dewey Coffey, caller. Another dance is planned for St. Patrick's Day, March 17.

Con B. Toohy, assistant foreman at Webster City, Iowa, has been promoted to section foreman at Council Bluffs, Iowa.

H. M. Anthony has resumed his position as clerk in the agent's office, Fort Dodge, his duties on the dynamometer car being completed.

March, 1923

On Sunday, February 18, a basketball game was scheduled to be played at Fort Dodge between the American Legion team of Fort Dodge and the Muscatine, Iowa, Elks to determine the state championship. G. A. Jahn, instrumentman, Fort Dodge, is an important cog in the Fort Dodge machine. Mr. Jahn plays center.

Waterloo District

(Mary Christensen)

Mr. and Mrs. William Hoyer of Ackley, Iowa, are enjoying a three months' leave of absence visiting at various points in the West. Mr. Hoyer has been in service as trackman in the maintenance of way department for twenty-seven years.

J. M. Van Meter, operator, Iowa Falls, has been off duty several days on account of illness.

Section Foreman T. J. Fennessy of Duncombe, Iowa, is the proud father of twins.

A. M. Garrick, operator, Cedar Falls, is again on duty after several weeks spent in Chicago on business. He was relieved by M. L. Dunlap.

Cherokee, Iowa

(Anna Donahue)

W. E. Palmer, section foreman at Edna, Iowa, has resigned and will move to Ashley, Ill., in the near future. His place has been taken by Tony Mal'um.

I. Jones, section foreman at Quimby, Iowa, returned to work February 1, after an illness of two weeks.

Supervisor Carl A. Gilbert was born in Sweden, April 19, 1880 and died January 15, 1923 at his home at Cherokee, Iowa, after a brief illness with erysipelas. Mr. Gilbert, at the age of 16, entered the service of the Illinois Central, working as a track laborer at Cleg-horn, LeMars and Cherokee, Iowa, for five years, after which he was promoted to section foreman, holding these positions at Smithland, LeMars, Aurelia and Cherokee, Iowa. He was promoted to road supervisor August 1, 1916, which position he held at the time of his death. Mr. Gilbert was an efficient employe, with the interests of the Illinois Central as his first thought. He was a member of the I. O. O. F., the M. W. A. and the Yeomen, and had been accepted by the Masons, but passed away before he became a member. Surviving him are his widow, three sons, his parents, two sisters and four brothers.

R. B. Johnson, yard foreman at Cherokee, has been promoted to road supervisor on the Cherokee district, effective February 1, to fill the vacancy caused by the death of Supervisor C. A. Gilbert. Mr. Johnson entered the service of this company as section foreman, January 1, 1915.

Carl A. Gilbert

Sioux City, Iowa

(C. C. Miller)

A recent issue of the *Sioux City Spirit of Progress*, issued by the Sioux City Chamber of Commerce, carried an item relative to the proposal for the introduction of two bills at the General Assembly, which convened at Des Moines, January 7. One of the bills provides for the repeal of Sections 2126 and 2145 of the code which have to do with higher rates for shorter than for longer hauls. Under the present code the railroads of Iowa cannot compete in intrastate traffic, and it is proposed to remedy

One Hundred Thirteen

this condition. Nothing definite has been accomplished to date.

A company is being organized to run barges on the Missouri River between Omaha and Sioux City. The company will operate under the firm name of the Sioux City-Omaha Navigation Company, and will handle grain, brick and other rough freight.

The family of our local cashier, Mr. Olson, has been quarantined for diphtheria, but all the members are out of danger and on the road to recovery.

B. E. Moss, yard foreman at Council Bluffs, Iowa, has been appointed supervisor of Omaha district No. 2, with territory between Logan and Omaha. Mr. Moss entered the service of this company as a clerk May 19, 1914, and took up track work in November, 1914.

KENTUCKY DIVISION

Anne Sweeney,

Office of Superintendent

Mechanical Department, Louisville, Ky.

(G. W. Shaughnessy)

Little Miss Ursula Fowler, age 3 years, daughter of Chester Fowler, car department laborer, died at her home on February 3 of influenza followed by pneumonia. The body was taken to Springfield, Ky., for burial.

Close observance of his train by Fireman William H. Torstadt recently prevented a probably serious accident. While the train was heading in at Grayson Springs, Ky., Fireman Torstadt called the brakeman's attention to CB&Q-98163, and upon investigation it was found that the car had a loose wheel. He had the car set out.

Local Freight Office, Louisville, Ky.

(John T. Higgins)

Charles Lynn recently resigned as rate clerk in the cashier's office to accept a position with the Consolidated Realty Company. Eugene Daniels succeeds him.

Tillman ("Bill") Allen seriously injured his foot January 30 by stepping on a rusty nail, which penetrated his shoe. "Bill" was making his daily check of the industries when the injury was received.

Our "songsters"—Clifford Slider and Harry Schoenlaub—are before the public again with a new song hit entitled "I'm Not So Sure About That." This song is being featured for them by the Chicago Orchestra of Goody Holden. Any Illinois Central employee desiring a professional copy can procure it by sending name, address and postage to Main Street Station 3002.

Miss Josephine Jecker was given a surprise party in honor of her birthday, February 7, at which Miss Verna Beard, Miss Anna Macke, Martin Kilkenny, Harry Schoenlaub, William Hefferman and Tillman Allen of the local freight office were among the guests.

Thomas Lynch, platform foreman, entered the service November 7, 1884; E. S. Stout, January 27, 1888, and Harry Wilkerson, July 20, 1898. These three are included on our roster, and their combined service lacks but three years of reaching the century mark.

A playlet in two acts, entitled "Let's Get Married," was given on February 6 at Banner Hall by the entertainment committee of Mount Zion Lodge A. F. & A. M. Harry Schoenlaub starred as a blackface comedian, and Clifford Slider was accompanist.

Signal Department

(J. P. Price)

The new automatic signals between Fox Run, Ky., and Graham, Ky., have now been placed in service. This installation consisted of thirty-three automatic signals of the 3-position, upper quadrant, semaphore

One Hundred Fourteen

type, operated by primary battery, four high-voltage, top post mechanism interlocking signals, and one dwarf signal.

Signal Maintainer E. F. Oates of Nortonville has been placed in charge of the maintenance of the new automatic signals between Fox Run and Graham. Signal Helper W. R. Bevil, formerly of Signal Gang No. 1, has been appointed signal helper at Nortonville, under Maintainer Oates.

The entire main line of the Kentucky division between Louisville, Ky., and Paducah, Ky., is now protected by automatic block signals. Signal protection of the Kentucky division now consists of 466 automatic signals protecting 229 miles of main track, eleven interlocking plants protecting four drawbridges and seven grade crossings and junctions, and forty-four crossing bells protecting highways and street crossings at grade.

The new main line between Central City, Ky., and Dawson Springs, Ky., a distance of forty-two miles, will, when completed, be protected by automatic block signals.

Signal Gang No. 1, in charge of Foreman C. C. Sauer, is now installing shunt circuits and double bootleg wires on the signals between Cecilia and West Point.

Signal Foreman Pfeiffer is now engaged in making repairs to the Henderson interlocker.

Signal Maintainer J. C. Martin, who has been engaged in the work of wiring the new signals between Fox Run and Graham, has now returned to his position at Rockport.

Dennie Jones, who was relieving Mr. Martin at Rockport, has now returned to his position at Dawson Springs.

Signalmen C. L. Bromley and H. D. Bromley have returned from the Illinois division, where they were engaged on signal construction work. They arrived in time to help place the new signals between Fox Run and Graham in service. C. L. Bromley has now returned to his position as signal maintainer at Princeton, and H. D. Bromley has been assigned to Signal Gang No. 1.

Signal Inspector W. H. Claus, Signal Testman J. A. Sauer and Signalman E. J. Davis conducted the circuit tests on the new signals between Fox Run and Graham. Mr. Sauer is now engaged in taking the battery readings on the new signals.

Trainmaster's Office, Princeton, Ky.
(Sudie Cash)

William L. Bennett, late of Princeton, Ky., was born in Salem, Ohio. He entered the service of the Illinois Central January

W. L. Bennett

15, 1899, and made this company a most efficient train dispatcher until his death, February 2, 1923. He was punctual, courteous, reliable, a man whose train orders were always safe, a man to be trusted implicitly in both personal and business affairs, a man whose friendly smile and gracious manner won the respect and confidence of all with whom he came in contact. Within three hours before his death he was at his place of business and apparently well. He is survived by his widow. Burial was at Paducah, Ky., February 4.

B. & B. Department

J. P. Benton was born at Rockport, Ky., May 11, 1861, and died at his home at Rockport January 11, 1923. Mr. Benton had lived at Rockport all his

Illinois Central Magazine

Hamilton Watch

"The Railroad Timekeeper of America"

Seventeen Years of True Time Service

GATEMAN W. H. GOVEY, of the Long Island Station, Pennsylvania Terminal, New York City, here shown at his post, has carried his Hamilton Watch for seventeen years.

Gateman Govey must have a watch he can depend upon to tell true time. The gates must be closed precisely on the minute; not a half minute early or a half minute late. Accuracy is imperative—and as usual a Hamilton Watch is performing the service demanded.

A Railroad Man Can't Afford to Be in Doubt About His Time

That is why most of them choose the Hamilton. The Hamilton Watch combines the quality and sturdiness with that of phenomenal accuracy and gives to the railroad man a timekeeper that he can truly depend upon.

Ask Your Jeweler to Show You the
HAMILTON "992"

Priced at \$48.50 for the Movement Only

This model is the favorite of most railroad men. It meets the most exacting standards of time inspection in a way that will be extremely gratifying to you.

For other than time inspection service, ask to see the Hamilton No. 974, priced at \$25.00 for the movement only. This model gives you Hamilton standards at a moderate price.

HAMILTON WATCH CO.
LANCASTER, PENNA, U S A.

life. His father, William Benton, was born at that point in a log house that stood upon the hill just above the pump house. When the hill was cut away to lay the switch to the mines and when William Benton was 8 years old, his father, Joshua Benton, built the house where J. P. Benton was born, and this house is still standing upon the hill, where it has stood for ninety years. J. P. Benton had two sisters and one brother, all of whom are now dead. His brother, Pendleton Benton, also worked for the Illinois Central. J. P. Benton started to work for the Illinois Central June 8, 1886, under W. A. Bell, and worked for him until Mr. Bell moved to Fulton, Ky., about 1896. Mr. Benton then worked for J. G. Williams until his death. With the exception of two months, when he was laid off on account of a reduction in forces, Mr. Benton worked continuously and did not miss a pay check until his death. He is survived by his widow and three daughters, who reside at Rockport. He was buried at Rockport by Masonic Lodge No. 312.

TENNESSEE DIVISION

Rufus Kemp, Jr. Office of Trainmaster

Switch Tender T. M. White, Fulton, Ky., has been highly commended for finding a piece of flange in New yard and immediately notifying the chief dispatcher, enabling the latter to locate IC-122633, from which the flange was broken, in Extra No. 1574 south and to have it set out.

Flagman H. A. Bristol, Cairo district, has been commended for interest displayed in noticing PL-925416 without light weight and reporting it for correction.

Effective January 1, H. L. Nourse, conductor on the Cairo district, was detached from his regular

duties and detailed to assist in determining and overcoming causes for hot boxes.

Conductor R. L. Scott, Cairo district, has been commended for the interest displayed by him in figuring the gross weight of IC-67467, in his train Extra No. 1744 north, January 13, and finding that there was an error in the stencilled weight of the car. He immediately reported it to the proper authorities for correction.

L. B. Ryan, secretary to Superintendent Young at Fulton, has returned from the hospital at Paducah, after a serious illness and a minor operation, and has resumed his duties.

Mrs. B. Burgess, stenographer in the accounting department, Fulton, has resigned to take up house-keeping for her husband. She is succeeded by Miss Vivian Williams, who has been in the road department.

Miss Jemmie Pritchard, clerk, Dyersburg, has been in Paducah Hospital for some time.

B. G. Boyd, agent at Water Valley, Ky., has been absent from his duties for several weeks on account of illness. The vacancy is being filled temporarily by Operator C. E. Voyles.

Joe Allbritten has resigned his position as clerk in the general foreman's office and entered engine service as a fireman. His place has been taken by Ralph Hornbeak of Fulton, Ky.

J. E. Boone, Jr., formerly employed as clerk in the Fulton freight house, has accepted a temporary position in the superintendent's office.

R. M. Alford, assistant chief dispatcher, Fulton, has been wearing an unusually broad smile for several days; but those of us who are not grandfathers cannot appreciate the fullness of the smile. His grandson, Master Bob Irvin Taylor, Jr., was born in Memphis, January 23, and weighed 8½ pounds. The youngster is now Bob III.

Conductor L. Friedlob, Engineer W. H. Crafton and Fireman W. F. Underwood have been highly commended for discovering the long trestle south of McConnell, Tenn., on fire, while in charge of Extra

Above is a photograph of most of the Tennessee division officers and employees who accompanied the division inspection train over the entire division the week beginning January 8. The photograph was taken at the roundhouse at Jackson, Tenn. Those in the photograph, reading from left to right, are: (top row) G. Grider, stenographer, roadmaster's office, Fulton, Ky.; W. T. Mays, chief dispatcher, Fulton; J. C. Blackwell, storekeeper, Jackson; M. Parker, general yardmaster, Jackson; B. T. Adams, division storekeeper, Paducah, Ky.; L. Grimes, master mechanic, Jackson; J. M. Hoar, assistant engineer, Fulton; L. E. Allen, dispatcher, Fulton; T. D. Clark, supervising agent, Fulton; M. H. Robertson, agent, Mayfield, Ky.; H. W. Williams, trainmaster, Fulton; B. A. Sinclair, carpenter foreman, Fulton; R. E. Hubbard, supervisor of bridges and buildings, Fulton; Rufus Kemp, Jr., trainmaster's clerk and division editor, Fulton; H. S. Moulder, chief gardener, Champaign, Ill.; W. L. Harry, division gardener, Fulton; W. A. Love, supervisor of water works, Fulton; J. Huddleston, general foreman, Fulton; A. A. Williams, traveling freight agent, Memphis; Hugh Magevony, warehouse foreman, Jackson; J. J. Hill, trainmaster, Fulton; John Chester, engineer, Jackson; (middle row, kneeling) B. Herring, agent, Birmingham, Ala.; S. J. Holt, roadmaster, Fulton; F. B. Wilkinson, agent, Jackson; H. R. Myers, traveling freight and passenger agent, Jackson; W. H. Brooks, chief clerk to agent, Jackson; (bottom row) H. L. Nourse, conductor, Mounds, Ill.; A. W. Ellington, trainmaster, Jackson; C. R. Young, superintendent, Fulton; R. L. Beare, president of Beare Ice & Coal Company, Jackson; J. H. Cavender, assistant trainmaster, Dyersburg, Tenn.; W. W. Johnson, agent, Milan, Tenn.; W. N. Waggoner, agent, Dyersburg; J. E. Boone, agent, Fulton; B. F. Evans, chief clerk to superintendent, Fulton.

No. 2941 south at 9 p. m., January 18. They stopped immediately, extinguished the fire and probably prevented a serious accident and the loss of lives.

Here are Miss Sara Linda Farley and "Jack," both of the Illinois Central at Hickory, Ky. "Jack" has been there since August, 1921, arriving on train No. 38 as baggage consigned to the agent. He never told where his former home was nor anything concerning his ancestors, but calmly took charge of the ticket office and baggage room and saw that all outsiders were put in their proper place. He meets all trains that make regular stops at his station and is never late in arriving upon hearing the whistle of these trains. His only bad habits are chasing the neighbors' cats and begging for chewing gum. His pedigree, presented to the agent this winter by one of the conductors on the division, is prized very highly, and she wishes to assure "Jack's" former owner (though unknown) that she is very proud of "Jack," as he recently won first prize at a dog show and in addition is 100 per cent for the Illinois Central.

Sara and "Jack"

MISSISSIPPI DIVISION

Kathleen Hadaway, Secretary to Superintendent

On Saturday evening, January 13, Mrs. Vera Nations, clerk to the supervisor B. & B., was hostess, at the beautiful new home of her sister, Mrs. J. S. DeMarchi, to the young women employed in the superintendent's office. At 6 o'clock a delicious "picnic lunch" was served, the various dishes being prepared by the girls themselves, the recipes for which we will endeavor to obtain for publication in the magazine. The girls had been asked to bring their sewing, and with this fascinating work and various games the hours slipped away quickly. Mrs. Nations and Mrs. DeMarchi were voted ideal hostesses. The following were present: Miss Annie Bell Anderson, Mrs. Janie Hussey, Mrs. Gladys Walker, Mrs. Effie Holcomb, Miss Maude Baker, Miss Christine Adams, Miss Fay Green, Miss Corinne Ederington, Miss Katie May Moorhead, Mrs. Nations and Miss Elsie Gregory of Memphis, the latter as Miss Green's guest. It has been decided to hold a social meeting of this kind each month.

The other day when Engineer J. R. Tate, running between Memphis and Canton, arrived at Canton, he noticed a crowd pointing under his engine. When it stopped he was shown a smutty, greasy, dirty, but

game little Leghorn rooster, looking the part of a real hobo, perched on the tank trucks of his engine. True to his hobo nature, the rooster evaded all efforts to be caught, or even to have his picture taken, but took refuge in a drain tile.

Along the Line (M. L. Hays)

The annual division inspection was held the week beginning January 15. A large number of employees from various departments accompanied division officers on the special train, and the tracks, buildings, station offices and mechanical facilities were carefully inspected, all of which were found to be in excellent condition. A great deal of interest and enthusiasm was displayed by all on the trip, and it is felt that a great deal of benefit was received. The usual committees were organized, and an analysis of their reports disclosed the following: Best district, Grenada district, G. R. Wilkinson, supervisor; best section, Como, Z. Felton, foreman; best section Jackson district, Michigan City, W. M. Pulliam, foreman; best section Water Valley district, North Winona, J. A. Holland, foreman; best section Aberdeen district, Fentress, E. L. Gatlin, foreman. The agents at Duck Hill, Starkville, West Point and Strong checked 100 per cent.

Miss Gladys Bryant of Grand Junction, Tenn., and Frank Roche, clerk at Winona, Miss., were married at Bolivar, Tenn., February 3. Mr. and Mrs. Roche will make their home at Winona.

H. D. Owens, formerly agent at Coldwater, Miss., has been transferred permanently to Sardis as agent, being relieved at Coldwater by M. S. Terry from Batesville.

A. B. Monroe, agent at Batesville, and H. D. Owens, agent at Sardis, are receiving congratulations over the arrival of babies—both boys—at their homes recently.

Sympathy is extended to Miss F. E. Johann, agent at West Point, on the loss of her brother recently. The body was brought to West Point, and funeral services were held January 31.

Mechanical Department, Water Valley, Miss. (L. B. Harley)

S. B. Herron has been in the Illinois Central Hospital at Chicago for the last six weeks, having undergone an operation for appendicitis, but is now improving and is expected to return home soon. Mr. Herron is an accountant in the master mechanic's office.

W. M. Dorman, formerly A. R. A. clerk in the general car foreman's office at Water Valley, now with the Chevrolet Automobile Company, was a visitor to the city recently.

J. M. Parker, machinist helper, has been transferred from the machine shop to the car department office as record writer.

C. C. Martin, painter, lost his baby January 22.

Several employees in the mechanical department have been laid up for the last several weeks with the "flu."

The back shop has turned out four of the best-looking engines in the last sixty days that have ever been turned loose. General Foreman Chapman and the men are proud of these engines—Nos. 912, 794, 799 and 793.

Betty Jane, daughter of Machinist Clark Everett, and Thomas, son of Foreman F. H. Monroe, who have been ill for the last few weeks, are now convalescing.

Two negro employees, Lee Green of the Water Valley roundhouse and Jim Wright of the Water Valley car department, have died recently of influenza.

Bob Travic, negro pensioner, died December 27. "Old Bob" moved to Water Valley from Attala County and began work for the Illinois Central in August, 1867. After forty-nine years of service, he was retired December 31, 1916. As a laborer in the employ of this company he faithfully discharged his

duties. He was a valued character among his race in this vicinity. As trustee of the negro public school and worthy member of A. M. E. Church, he served in every way for the betterment of his race, and his influence is shown by various improvements. In fact, the erection of the new A. M. E. Church was made possible largely through his untiring efforts. He had a host of friends among both whites and negroes. At the time of his death he was 75 years old.

Machinist and Mrs. L. W. Lowe are receiving congratulations on the arrival of a daughter, Virginia Adelle.

Enginemen, Water Valley and Jackson Districts (J. A. Ramey)

Engineman and Mrs. Ben Barrett are receiving congratulations upon the arrival of a son, Billy, on January 8.

Sympathy is extended to Engineman B. A. Boydston and family in the loss on January 17 of their daughter, Elsie, 23 years old. She had been in a sanitarium at El Paso, Texas, for several months and had been home only a short while before her death. Funeral services were held at the First Baptist Church, after which the body was laid to rest in Oak Hill cemetery at Water Valley.

Fireman and Mrs. I. D. Oakes of Water Valley have the sympathy of their many friends in the death of their little son, Dudley, which occurred on January 17.

Trainmen, Jackson and Water Valley Districts (Gertrude Turner)

Favorable mention has been entered on the efficiency record of J. H. Stewart, train No. 92, January 1, for calling the attention of the agent at Coffeeville to an error in the light weight of a car in his train, thereby enabling the company to pick up \$16.10 revenue.

Engine Foreman L. V. Sartain, Water Valley, who is undergoing treatment in the Illinois Central Hospital at New Orleans, writes that he is getting

This picture shows that the South has a touch of real winter every once in a while. This is the bottom of a water tank at the Water Valley, Miss., shops taken February 5. Shown in the photograph is Dennis Collard, representative of the W. P. James Publishing Company of Louisville, Ky., who wanted the picture taken to show an ice scene in the South.

A WRIST WATCH for Easter

The wives and sweethearts now wearing Wrist Watches are all too few—and why shouldn't they have watches as well as men.

Such a gift for Easter would bring real happiness to your wife or sweetheart — and you can get it at *your Local Watch Inspector's* on the

along nicely and is delighted with the courtesy and attention shown him.

District Engineer J. W. Kern, located at New Orleans, passed through Water Valley February 8 and spent a few minutes renewing old acquaintanceships. Mr. Kern was formerly roadmaster at Water Valley.

Conductor Homer Weir, who is located permanently at Grenada as conductor on the tie plant switch engine, has recently bought a home and moved his family to that point.

Road Department (Lola B. Wiggs)

W. T. Floyd of the Jackson district has been appointed assistant section foreman at Sardis, Miss.

The interest manifested by employees prevented the killing of much stock during 1922. J. M. Haworth, signal maintainer, located at Senatobia, Miss., whose territory is from Hernando to Sardis, drove 1,790 head of stock off the right-of-way during 1922.

Favorable mention has been made on the efficiency record of Section Foreman E. T. Sweeney, Tie Plant, Miss., for interest displayed in discovering a brake beam dragging on RI-36619, Extra No. 799 south, January 25.

LOUISIANA DIVISION

Claire Pimm

Office of Superintendent

Freight Office, Jackson, Miss. (C. H. Williams, Sr.)

E. S. ("Sid") Atkinson, clerk, has resigned. The best wishes of the office go with him to his new position with the American Can Company. Temporarily he will be stationed at Roanoke, Va.

Paul Newman has re-entered the service and is now assigned to the O. S. & D. department.

Miss Helen Smith is welcomed to the accounting department in place of Mrs. McNair, resigned.

Mrs. Lanier, Mrs. McDaniels, and Mr. McNair, Sr. and Mr. Williams were our contributions to the "flu" epidemic. At present all of the office force is on duty.

Transportation Department

John W. Mayes, pensioned conductor, born October 22, 1859, died at his home in Brookhaven, Miss., January 29. Mr. Mayes entered the service October 6, 1894, as switchman, New Orleans terminal. He was promoted to brakeman June 23, 1895, and made conductor April 28, 1897. Up until four years ago the division boasted that he was one of her most active conductors, but at that time he was made helpless by a paralytic stroke. In search of a cure, he took up his residence in New Orleans, but all efforts were useless, and he returned to Brookhaven. The attack which resulted in his death was of only two days' duration. Mrs. Mayes before her marriage was Miss Addie Harvey, an Illinois Central telegraph operator.

Pensioned Engineer W. H. Washington of Duluth, Minn., was a recent visitor to numerous points on the division.

Cecil Lawrence, brakeman at McComb, was taken suddenly ill and rushed to the Illinois Central Hospital at New Orleans on February 7, where physicians found that an immediate operation was necessary. Recent reports as to his condition are favorable.

Snow at Yazoo City, Miss.

Engineer Frank P. Railsback has returned to his home in McComb after spending a short time in the Illinois Central Hospital, Chicago.

Miss Elwin Mixon, daughter of Engineer O. F. Mixon, McComb, is convalescent after a severe illness which necessitated her return from the Mississippi State College for Women, Columbus, Miss., where she had been in attendance for the last several years.

J. H. Boodro, traveling freight and passenger agent at Jackson, Miss., died in the Illinois Central Hospital at New Orleans on January 17.

Miss Emma Bee, cashier in the freight office at Brookhaven, Miss., has been critically ill for several weeks. Her condition has somewhat improved.

Brakeman Glen Sudduth was recently operated on at the King's Daughters Sanitarium, McComb, and favorable reports as to his condition have been received.

Road Department, McComb, Miss.

Miss Allie McClendon has accepted a position as clerk, supervisor's office, in place of Victor Watts, who resigned on February 1.

Gayle Taylor, building inspector, has been transferred to the Wisconsin division, with headquarters at Freeport, Ill.

Chief Dispatcher's Office, McComb, Miss.

G. L. McAlister, dispatcher, has been helping the Memphis division out during the "flu" epidemic.

J. A. Cheely, former operator on the Central of Georgia, has been employed on this division, being temporarily stationed on the Canton district.

E. J. Rivers, third trick operator, McComb, and Miss Polly Ard, clerk to Supervisor Smith, Hammond, La., were married on January 20 at McComb.

Miss Julia Cummings, pensioned operator, died in New Orleans on January 28. Miss Cummings entered the service in October, 1887, as an operator at Summit, Miss., and was pensioned in 1920 with a 33-year service record.

Claude Bowman, caller, has been stepping proudly around McComb yards since the arrival of Claude, Jr., on January 16.

R. R. Hutchinson is the successful applicant for operator at Hazelhurst, Miss.

Miss Lee Bacot, operator at Wesson, Miss., and R. B. Thomas, vice-president of the Crystal Springs Bank, Crystal Springs, Miss., were married at Wesson January 7 by Rev. Mr. Purser of the First Methodist Church. Mrs. Thomas entered the service March 16, 1901.

Yard Office, McComb, Miss.

During January, 1923, there were 229 cars of vegetables re-iced at McComb, as compared with 145 cars during January, 1922, an increase of eighty-four cars, or 58 per cent. A check of similar busi-

ness for February, 1923, shows a decided increase over same period last year.

The position of night chief yard clerk has been installed at McComb, and L. Byrd, yard clerk, is the successful applicant.

Mechanical Department, McComb, Miss.
(Hazel McIntosh—Mildred Abbott)

The work of installing about \$75,000 worth of machinery in McComb shops has been completed.

Machinist P. C. Hupperich was slightly injured on January 18. He was given treatment in the McComb Hospital and was able to return to work in several days.

Outside Hostler Sam C. Harvey was off for several days recently on account of illness.

Coal Hoist Operator W. H. Meadows, who was sent to Jackson, Miss., to operate a coal hoist while the mechanical chute was undergoing repairs at that point, was taken suddenly ill, which necessitated his return to McComb.

Machinist Louis Hinton, Tinner Fred Wolbretch and Electrician Nelson Ivy have recently joined the ranks of the married men.

Tinner W. L. Cathings went to the Illinois Central Hospital at Chicago recently for treatment.

John Patterson, former machinist apprentice, was renewing old acquaintances around the shops during the early part of February.

General Foreman E. M. Smith of Baton Rouge, former tool foreman at McComb, was also a recent visitor.

John Feigler, machinist helper, has also joined the ranks of the married men.

Machinist J. K. King, who has been off for several weeks on account of illness, has returned to work. Mr. King received treatment at the Illinois Central Hospital, New Orleans, and commends the work and the hospital staff.

Freight Office, Hammond, La.

The freight depot has been moved three blocks south of its former position and a 40-foot extension has been added.

Strawberry shippers, especially those who make small consignments, were made glad by the announcement of the Illinois Central that hereafter a special car would be provided to transport small shipments of the fruit north. Heretofore such shipments went forward in regular express and baggage cars.

The early movement of berries was checked by the recent cold spell. It is believed that the present season will equal the most prosperous year ever observed in Tangipahoa Parish, which was four years ago, when the first big shipments went forward several weeks in advance of the previous season. With a big increase in acreage and plants all in thrifty condition, the growers believe they will produce the biggest crop in the history of the industry. Some estimate the 1923 crop at \$4,000,000, with anything like favorable climatic conditions. Box factories are working on double schedule time to meet the demands of the growers, and it is believed that sufficient shipping material will be available when the crop begins to move in large quantities.

NEW ORLEANS TERMINAL

J. Milton May,

Care of Agent

Local Freight Office
(Jesse W. Ford)

C. T. Seiler, local freight agent, was a visitor to Chicago January 25 and 26, attending a meeting of the operating committee, Freight Station Section, American Railway Association.

John Freeling, unit clerk, accounting department, and Miss Irma Newman of this city were married on January 25 at the home of the bride, the pastor of St. Anthony of Padua Church officiating.

Eugene Fourcade, delivery clerk, Levee yard depot, has been ill, confined to his home for several weeks.

March, 1923

Ford Runs 57 Miles on Gallon of Gasoline

A new automatic vaporizer and de-carbonizer, which in actual test has increased the power and mileage of Fords from 25 to 50 per cent and at the same time removes every particle of carbon from the cylinders is the proud achievement of John A. Stransky, 3473 South Main Street, Pukwana, South Dakota. A remarkable feature of this simple and inexpensive device is that its action is governed entirely by the motor. It is slipped between the carburetor and intake manifold and can be installed by anyone in five minutes without drilling or tapping. With it attached, Ford cars have made from 40 to 57 miles on one gallon of gasoline. Mr. Stransky wants to place a few of these devices on cars in this territory and has a very liberal offer to make to anyone who is able to handle the business which is sure to be created wherever this marvelous little device is demonstrated. If you want to try one entirely at his risk send him your name and address today.—Adv.

West Pullman Station CHICAGO, ILL.

One Hundred Twenty-one

He is now convalescing and hopes to be able to resume work in a few weeks.

S. L. Valles, unit clerk, accounting department, has resigned to enter the fish and game business for himself. He has been succeeded by Armond Kitto.

Arthur J. Sherlock, check clerk, inbound warehouse, was married on Thursday, February 8, to Miss Ella E. Millet, formerly of Garyville, La., at St. John the Baptist Church.

The sympathy of the employees of the local office is extended to Miss Louise Lang, stenographer, in her recent bereavement. She suffered the loss of her brother-in-law and niece, both of whom died on February 9.

John R. Cousins, formerly foreman in charge at Levee yard depot, now connected with the United States government at the Army Supply Base, was a recent visitor. He expressed a great deal of pleasure in again meeting the boys with whom he had labored so faithfully several years ago.

Mrs. J. C. Whipple of San Antonio, Texas, daughter of Foreman Henry Wilder, Levee yard depot, was a carnival visitor to New Orleans, the guest of her parents.

J. Milton May, assistant chief clerk, local office, and Mrs. May entertained at a buffet supper on February 10, at their home on Ida Street, complimentary to the members of the Illinois Central basketball team. The early part of the evening was devoted to music, games and other forms of amusement. Each member of the team was presented with a souvenir menu, commemorative of the occasion. Those present were Bismark Berckes, Leslie Pic, Frank Moore, Dan Voebel, Tom Kelly, Abe Rittenberg, A. Walsdorf, Ivor Throunk, Armond Kitto and Mr. and Mrs. May.

The New Orleans mid-winter speed boat carnival, an added attraction to Mardi Gras, was held on Lake Pontchartrain on February 18, 19 and 20, under the auspices of the Southern Yacht Club. The employees of the Illinois Central were particularly interested in this event, as, with the exception of about three boats, all of the racers were received and forwarded over the Illinois Central. A great deal of favorable comment was expressed through the newspapers on the prompt, careful and efficient manner with which these valuable and delicate little pieces of mechanism were handled. Not an exception was noted against any of these shipments, in spite of the fact that several boats were loaded in one car, while one, the "Baby Holo," owned by Horace E. Dodge, Jr., automobile manufacturer of Detroit, Mich., was in a derailment north of Memphis.

F. F. Willoz, night banana clerk, is a member of the Krewe of Proteus, the well-known carnival organization of the New Orleans Mardi Gras, and was a masker on one of the cars in their parade the night of February 12. Their subject, "Myths and Legends of the North American Indians," was beautifully portrayed in twenty elaborate floats, enlivened by maskers representing Indians garbed in gorgeous costumes.

Export Freight Office, Stuyvesant Docks (Fred DeLong)

James Foley, Jr., advance charges clerk, accounting department, and Miss Ella Guggenheim, of Algiers, La., were married on February 12 at St. John the Baptist Church. After the ceremony they left for a honeymoon at Memphis, Tenn., and other points.

E. M. Blanchard, cashier, was married on January 30 to Miss Daisy Murray at the residence of the bride, after which the newlyweds left for Memphis, Tenn., to spend their honeymoon.

William Houston, who is on a leave of absence on account of ill health, is now at Covington, La., convalescing rapidly. He hopes to be able to return to his old job soon.

F. J. Reilly, who is on a leave of absence on account of ill health, has returned from the moun-

One Hundred Twenty-two

Dueling Oak, City Park, New Orleans

tains of Carolina, much improved, and is expected back at his desk before long.

Harold Power, chief clerk to Agent A. E. Scaife at Stuyvasant docks, has been ill, confined to his home for several weeks with a touch of dengue fever. He is now back at the office fully recovered.

Mechanical Department (Edward St. John)

T. J. Murphy, coal clerk, has been transferred to the locomotive department, Harahan, La., as timekeeper.

Edward M. St. John, district foreman's office, Government yard, has been transferred to the terminal superintendent's office as chief timekeeper.

J. E. Hodges, stenographer, district foreman's office, returned on February 1 from a leave of absence of one month spent in New York City.

Terminal Superintendent's Office (Myrtle Biersoll)

A. B. Humphrey, efficiency clerk, is the proud father of a baby boy. The stork visited his home on January 5, and the youngster weighed ten pounds.

On January 22 the stork visited the home of Thomas J. Lee, leaving him the proud father of a pretty baby girl weighing nine pounds. The youngster has been christened Ursula Henrietta.

About 8 a. m., February 2, Mack Barnett, a negro laborer employed at the perishable shed, Poydras yard, noticed a negro leaving the east side of a car of eggs standing on the team track. The negro's actions being suspicious, Barnett notified Watchman Henkel, who upon investigation found the seal on the east door missing. The negro in the meantime had disappeared, but Watchman Henkel was able to get a description, which he furnished at once to the special agent's office. It developed that one case of eggs had been stolen from the car. At 10:30 p. m. of the same day, Special Officers A. P. Labbe and C. L. Whitley arrested a negro answering the description of the thief a few squares away from the scene of the robbery. This man was later identified as the one seen near the car. Upon further investigation it developed that he was Raymond Higgins, wanted by the police as being implicated in several robberies.

Miss LaRiene King, clerk in the general storekeeper's office, Burnside, Ill., was a carnival guest of Division Storekeeper and Mrs. I. S. Fairchilds. She enjoyed her stay in the Crescent City very much, and was particularly taken up with the balmy weather of the Sunny South.

Station Master's Office (J. A. McDerby)

Edward Ray, milk clerk, baggage room, Union Station, is the father of a son, Walter, born on January 10 and weighing 10½ pounds.

James P. Labarre, baggage accountant, received a

Christmas present on December 24—a baby boy weighing 11¼ pounds. The young man has been named James Pascalise, Jr., after his proud father.

Yard Offices (A. J. Condon)

E. L. McCrary, chief clerk to the yardmaster, Levee yard, announces the arrival of a baby girl weighing 9 pounds. The young miss was born on Lincoln's birthday, February 12.

Commercial Agent's Office

J. Jeff Ray, trace clerk, who is a member of the Druids, was a participant in their carnival pageant on Mardi Gras Day, February 13. This organization has been participating in the carnival revels for the last several years, and its parade is always awaited with interest.

TELEGRAPH DEPARTMENT, SOUTHERN LINES New Orleans, La.

W. M. Bennett has resumed his work as operator at Poydras Station after spending several weeks in Arkansas and Mississippi.

I. L. Cooper, operator at Poydras Station, rested up for a week with his parents at Way, Miss., being relieved during this time by Extra Operator R. C. Lewis.

A. B. Forres, wire chief of the Western Union Telegraph Company, died at his home in New Orleans on January 28. Mr. Forres was an old-time Illinois Central operator.

Miss Julia Cumming, who was employed for many years as operator at Summit, Miss., and who was recently retired on our Honor Roll, died at the home of her niece, Mrs. Arthur Schreiber, at New Orleans, January 28.

George Milam, who worked as an operator in our New Orleans "BD" office some years ago, has been elected president of the New Orleans Board of Trade. Mr. Milam is also president of the Milam-Morgan Grain Company and a director of the New Orleans Bank and Trust Company.

J. I. Evans, district foreman, was with us several days moving telephone equipment on account of the rearrangement of the yardmaster's office at Harahan yard.

Memphis, Tenn.

All hands have been on the jump to restore and maintain telegraph and telephone service. During the last thirty days we have had to contend with local cyclones, snow storms, ice, excessive rains and—not the least—with scrap wire thrown in the wires. It is hard to say just which lineman performed the best service. Several of them had to build a raft to reach the wires, often working from daylight to late at night. Sam Singleton, our veteran lineman at Kenner, La., was notified at 2:30 p. m., January 30, that all the wires were down north. He immediately loaded material on his motor car and started after the trouble. A pile driver working near Frenier had broken off the top of a pile, which had torn down all the wires. With the assistance of men sent out by the Western Union from New Orleans, the wires were repaired by 8 p. m. Sam, in reporting this, said: "No one got overheated on this job, as we had to work in water from six inches to three feet deep."

One Hundred Twenty-four

MEMPHIS TERMINAL

William Gerber

B. & B. Clerk

Favorable mention has been entered upon the service records of Engineer T. H. Blankenship, Fireman W. T. Lively, Engine Foreman A. B. Holt and the rest of crew, consisting of Louis Pitts, Henry Moore and R. G. Nichols, who, while standing on the main line at Leewood, Tenn., discovered a car of cotton seed hulls burning on the switch of the Buckeye Cotton Oil Company. The crew immediately entered the switch, pulled this car to a water plug and extinguished the fire. This car was one of a number of cars standing in the Buckeye switch at the time, and it is believed that the observation and quick handling by this crew averted what might have resulted in the destruction of the plant of the Buckeye Cotton Oil Company. This incident occurred on Sunday, February 4, at a time when there was no one on duty at the mill.

There is a great deal of activity among the employees in the office of Terminal Superintendent Bodamer with regard to purchasing homes. L. G. Trotter, transportation clerk, and A. W. Giehler recently purchased homes in the eastern part of the city. R. J. Rooney, secretary to Mr. Bodamer, has purchased a lot and contemplates building a home.

T. P. Crymes, assistant engineer on the Memphis terminal, has been transferred to Central City, Ky., as resident engineer in charge of construction of the new line between Central City and Dawson Springs. He was accompanied to Central City by S. P. Critz, instrumentman on the Memphis division. L. W. Lang has been appointed assistant engineer on the Memphis terminal, vice Mr. Crymes.

We have discovered on the Memphis terminal a song composer. C. P. Walker, switchman, recently composed a song known as "On That Old Panama Cannon Ball." This is a song relating to the Panama Limited, and Mr. Walker has been successful in securing a copyright. Mr. Walker is now working

C. P. Walker

Snow at Tutwiler, Miss.

Illinois Central Magazine

on several more songs which he expects to publish in the near future.

Contract has been let to the Ellington Miller Construction Company for the erection of two brick washrooms at Memphis shops. The expenditure involved is \$62,500, and the work is now in progress. Considerable comment, all of it favorable and appreciative, is being heard all over the shops with regard to this construction.

MEMPHIS DIVISION

Mrs. Collie D. Said

Secretary to Superintendent

Engineer E. F. Brown and family, who have been living at Raleigh, Tenn., recently moved to Clarksdale, Miss.

G. L. McAlister, train dispatcher, who has been doing relief work at McComb, Miss., for several months, is back on the Memphis division.

P. C. Pettit, assistant chief dispatcher, is one of a committee of dispatchers at present making a trip over the system on inspection.

W. L. King, Jr., dispatcher's clerk, is wearing a broad smile, the reason being the arrival of a fine boy. Willie says he is sure the boy will make a good dispatcher, as he seems to be on the job all night.

Miss Maymie Andrews, who has been working in the office of Superintendent F. R. Mays at Vicksburg, has transferred to the Memphis division and is now one of the tonnage clerks in the accounting department.

R. E. Addington, rodman on construction work in Kentucky, has been promoted to instrumentman on the Memphis division, succeeding S. P. Critz, transferred. Neil Howell, who has been acting instrumentman on the Memphis division for the last month, has returned to Chicago.

Miss Adron Smith, tonnage clerk, is seriously ill at her home. Miss Smith is suffering from "flu" and complications.

W. M. Concklin, terminal timekeeper, has gone to Chicago, where he expects to undergo an operation shortly.

Sympathy is extended to Mr. and Mrs. E. L. Galloway on the loss of their baby a few days ago. Mr. Galloway is assistant chief clerk in the office of Superintendent J. M. Walsh.

A wedding which came as a surprise to their many friends was that of Miss Edith Wright, daughter of F. F. Wright, Memphis division engineer, and George Sanders Myers, which took place at Marianna, Ark., December 26. Accompanied by Bernard Brant, timekeeper at Nonconnah, and J. C. Shields, conductor, they drove to Marianna and were married. The wedding was kept a secret until January 26. Mr. and Mrs. Myers are now receiving congratulations from their friends.

Agent's Office, Helena, Ark.

(Mrs. G. M. Stovall)

The freight office force at Helena already boasts of having the best-looking quarters of any station on the Yazoo & Mississippi Valley, but when the decorators have completed their work now being done we shall have more cause for pride. Agent McLauren is also going to add a touch by a rigid spring cleaning, and no place could be more desirable for working conditions than the Helena office.

Ticket Agent and Mrs. W. G. Bennett have had a visit from the stork, who left a fine boy.

A new diversion, snow balling, was indulged in by some of the clerks here during the noon hours recently. This was the first snow since 1918.

Supervisor's Office, Tutwiler, Miss.

(Clara Milligan)

During January the Memphis division put on a "Kill No Stock" campaign. The Sunflower and Tallahatchie districts made an excellent showing in

the campaign, Sunflower district ranking first and Tallahatchie district third. Since very little of the right-of-way on these districts is fenced and many head of stock are out in the fields to graze at this time of the year, this was a very good record. The railroad had the co-operation of patrons and stock owners, who volunteered to keep their stock off our waylands as much as possible.

Division Gardener W. Dorsey recently made a trip to Harahan, La., to get cuttings of flowers, trees and shrubs to be distributed on the Memphis division. Mr. Dorsey has been diligently at work with his flowers and shrubs and, due to good weather conditions, has accomplished a great deal toward furnishing foremen with flowers for their homes, instructing them how to make flower beds and set out trees. The parks along the Memphis division right-of-way are being well cared for, and this year will see many improvements along these lines.

An 8-inch snow fell at this point on February 3 and 4, the first snow that has been in this vicinity for the last five years.

Agent's Office, Clarksdale, Miss.

(Olga Kendrick and C. H. Skeahan)

Clarksdale recently organized a municipal band of forty-two pieces. When anything of any importance is started in the city, the railroad is always well represented; so when this band was organized several members of our local freight office, claim department, and locomotive department forces went in for it. Our musicians are: C. H. Skeahan, chief clerk, freight office, alto; S. E. Francis, assistant accountant, freight office, slide trombone; V. S. Atkins, claim agent, snare drum; Fred Montgomery, local attorney, cornet; H. E. Weekly, locomotive fireman, snare drum; C. Skillman, locomotive fireman, snare drum; Dave Mortimer, locomotive engineer, cornet. On February 8 the Masons of Clarksdale held services for laying the corner stone of the new Masonic Temple which is being erected here, and they called on the City Band to furnish the music. The band director selected twenty-three of the advanced members to play, and all of our employees represented, with the exception of two, were included in this number.

Trainmasters J. W. Rea and W. K. McKay recently held meetings for two nights in succession in the local freight office. These "get together" meetings are held to encourage the employees to discuss the reducing and preventing of claims and accidents. Interesting talks were made to the large number of employees who attended each night, and much benefit is expected to be derived from them.

Mrs. Bessie Williams, stenographer to Agent J. W. McNair, has resigned her position to take up life on the farm. She was succeeded by Miss Margaret Denman of Clarksdale.

VICKSBURG DIVISION

H. H. Barlow

Office of Superintendent

Sympathy has been extended to L. C. Murrell, dispatcher, Greenville, Miss., on the recent death of his mother, who resided near Shaw, Miss.

E. K. Farrar, ticket cashier, married Miss Frances Keanon at the bride's home at Greenville, January 17. They spent their honeymoon in Miami, Fla.

Miss P. B. Simmons, file clerk in the superintendent's office, was off duty recently for a week account illness.

J. H. Brooks, instrumentman, has been transferred to Clinton, Ill. R. B. Hickey was promoted from rodman to instrumentman to fill the vacancy.

S. Simmons, chief clerk to the superintendent, recently had the pleasure of entertaining Vice-President L. W. Baldwin in his home while Mr. Baldwin was making a tour over the Yazoo & Mississippi Valley. Mr. Simmons served as chief clerk to Mr.

Baldwin while the latter was superintendent of this division in 1909-1910.

J. R. Solomon, Jr., of the accounting department is back at work, having fully recovered from a serious illness, resulting from a relapse into "flu."

Authority has been received and work begun enlarging the freight office and warehouse at Greenville. The local freight department continues to show increased revenue and business over last year's record.

Sympathy has been extended Section Foreman S. D. Lee on the untimely death of his little girl, Margaret, age 6, caused by accidental burns. She died at the King's Daughters Hospital, Greenville, and her body was taken to Lime Rock, Ala., for burial.

E. L. Pinkston, flagman, married Miss Juanita Stampey of Holly Bluff, Miss., on February 4. They will make their future home in Greenville.

Freight Agent T. A. Noel is now pleasantly located in his new home at 205 McAllister Street, which he recently purchased.

Fireman Joe B. Scott, who was painfully injured on January 23, when his eyes were burned, is improving nicely and will soon be back on his run.

The entire Vicksburg division was covered with about five inches of snow Sunday, February 4. It stayed with us for several days. Everyone was glad to see it, as it was the first snow for several years.

NEW ORLEANS DIVISION

Thomas Treanor

Office of Superintendent

Vicksburg and Vicinity

The big blizzard which recently struck the Mississippi Valley hit Vicksburg in the shape of a sleet storm—and the blow was a knock-out. For twenty-one hours, without intermission, it sleeted. The fall was without precedent. The oldest inhabitant declared that to be a fact.

That venerable and ancient individual who saw service in the Mexican War and "fit nobly" or "fit nobody"—opinions vary—squeaked the same reply to

Snow at Vicksburg, Miss.

all curious inquirers. "I tell yeh," he wheezed, tremulously, "I ain't seed nuthin' like it in my whole eggspierents. No, sah, not in this here country! Nearest thing I ever seed to it was when me and Doc Cook was visitin' the No'th Pole."

The Oldest Inhabitant's veracity is unquestionable, his memory is better than a government record, and his weather predictions knock the weather bureau and the almanacs into a cocked hat. He is even more reliable than the ground hog—everybody admits that.

Classic Vicksburg, like classic Rome, is seated on her seven hills, and when the storm settled and a hard thick crust had formed on the fallen sleet they became very slippery hills—as slippery as eels or politicians. Nothing less than an Alpine climber or a native Eskimo could negotiate them successfully; but the railway workers managed it somehow. They all showed up for work at the right hour, a little disfigured or bedraggled, and in some cases not wholly whole—but enough left for all practical purposes.

Some skidded down the hills; some crawled in a fashion that would have given Bryan a conniption fit could he have seen them, and still others seemed to have used for locomotion every part of their anatomy except their feet.

"More yet," is the prediction of the Oldest Inhabitant, and he is backed up by the ground hog.

The sleet melted in due time, and the net result of the blizzard appears to have been the collapse of a few old roofs, which would have tumbled soon, anyway, a transient epidemic of bumps, bruises, cuts and skinned faces, and a rapid boost in prices of liniments and court plaster.

G. D. Tombs, assistant division storekeeper, is receiving congratulations on the birth of a third daughter.

W. B. Watson, formerly assistant chief accountant, has been appointed chief accountant in the superintendent's office, succeeding George M. Schaffer, resigned to enter other business.

Homer Smith, formerly of the Alabama & Vicksburg Railroad, is now connected with the superintendent's office here as freight train performance clerk.

Joseph Hirsh, lawyer and philanthropist, senior member of the law firm of Hirsh, Dent & Landau, local attorneys of the Yazoo & Mississippi Valley Railroad, died after a long illness January 14. Mr. Hirsh was one of the most prominent and learned lawyers practicing at the Mississippi bar and was noted for his public enterprise and practical philanthropy. He was widely known in railway circles.

Miss Arnot O'Hara, clerk, road department, is down with an attack of influenza.

Natchez, Miss.

(R. K. Holman)

Our Natchez force during the last few weeks has suffered an epidemic of "flu." Those confined to

President

bed were J. H. Douglass, rate clerk; E. D. Goza, special accountant; W. K. Carney, claim clerk; J. L. Schuchs, warehouse foreman. Others were affected, but were able to keep at work.

Natchez is just recovering from the worst siege of sleet, snow and ice experienced here since February, 1907. Some property damage was sustained, but the good effects to the crop prospects will make property loss negligible. The Natchez compress and warehouse was the hardest hit, one of its large brick units completely collapsing.

There is every indication now that Natchez will greatly increase her truck yield, and market in the season just opening. We are loading and shipping our first car of cabbage today (February 9), which if correctly understood is the forerunner of a good many cars to move out from now on. The Chamber of Commerce has been instrumental in the installation of a 5,000-egg hatchery which is today making its first hatch and is already over-run with orders. This is indicative of the abounding interest worked up in the poultry industry. Some months ago a milk and cream station was opened here to stimulate dairying. Already this industry has progressed so rapidly that a complete creamery under the ownership of the Brookhaven Creamery is in course of construction and will be in operation in the near future. Everybody is pulling for prosperous and progressive Natchez and Adams County. The development bureau of our own Illinois Central System, through its field agents, has gone far toward stimulating and nurturing the interest manifested. Incidentally, the general business prospects of Natchez and territory are brighter than in years.

I did not intend to expose any more hunting expeditions executed by our Natchez employees, but since the following happened the other night and is too good to keep secret, I submit the evidence as of interest to the friends of our station accountant, J. B. Landreaux. Another contemplated "coon hunt" took place, but hard luck was manifest again. We failed to find any 'coon, but while our party and dogs were vainly searching one side of the swamp we detected another party of hunters on the opposite side, as evidenced by their horn and the melodious yelps of 'coon dog encouragement. Eventually we circled around to the exact route our predecessors had taken, they by this time seemingly having left the swamp for home. (Bear in mind, our dogs had failed up to this time to make even a "strike.") All of a sudden our strike dog opened

up within just a few feet of Landreaux, who was in the lead. Landreaux got much excited when the old dog made a lunge right up a small forked tree (the fork close to the ground), attacking some mighty varmint and felling him to the ground between his mighty fangs. Landreaux, fearing this large animal would murder our dog and escape, leaped to the dog's rescue and viciously attacked the animal. Just as the dog realized a "grave mistake," Landreaux exclaimed: "Ah, boy! I told you so! Man, ain't he a fine one?"

Some scrap! We all rushed up to inquire about the species of game, and he yelled, "A great big 'possum."

Upon examination we found the 'possum cold in death, evidently killed by our advance guard and placed in the fork of the tree in abandonment. Now don't discredit Landreaux's ability as a 'coon hunter, because he still contends our dog killed that 'possum.

Mechanical Department, Vicksburg, Miss. (Thelma Howard)

P. J. Gallagher, R. E. Ballinger and B. V. Wright have returned from a flying trip to Chicago to attend meetings of the various shopcraft organizations. They are well pleased with the results of the trip. They also visited Burnside shops before returning home.

We are sorry to hear of the death of Albert Rose, negro laborer in the paint shop, who loyally served this company for twenty-eight years.

J. A. Johnson has been made assistant machine shop foreman at Vicksburg.

G. S. Rodenbaugh, who has been in the employ of this company since 1884 and who was pensioned on February 1, had been night roundhouse foreman at Vicksburg since September, 1900.

We lost one of our valued employees when Jim Condon died recently. Mr. Condon had had charge of the injector room at Vicksburg shops for a number of years and was well liked by all who knew him.

Along the Line

J. A. Andrews, our agent at Lindsay, says: "The revenue of our little station has greatly increased in the last month on account of a new spur being installed at Delombre, La., for log shipments. All billing is handled through this station. As soon as the weather clears up, we expect a heavy movement of logs from that point."

Train No. 15 standing at Lutchter, La., on the New Orleans division of the Yazoo & Mississippi Valley, more than twenty-two years ago. The locomotive was in charge of Engineer S. P. Bolian, who has been in the employ of the Illinois Central System forty-six years.

We Don't Want You to Pay Cash

We prefer to have you experience our monthly payment system. It enables the man with an average income to buy the better quality which he knows is real economy in the end.

We have every clothing requirement for men and boys in an excellent quality and we want the privilege of sending our catalog to you free with the shoes. Six months to pay on every article we sell.

Genuine Kangaroo

The finest upper leather for dress shoes that is tanned. Finer and softer than kid. Tough as hickory. Takes a polish like patent leather and never scuffs or peels. Finest heavy single oak sole Goodyear welt-sewed. Goodyear "Wingfoot" rubber heels. Full leather trimmings throughout and every detail of fine shoe-making.

The Admiral "solid comfort" last shown on the right we consider the finest foot-fitting last ever produced. We guarantee both wonderful comfort and dressy appearance. The kangaroo leather in this Admiral last we have sold to many thousands of men who could hardly believe that we offered the genuine article at this low price. Such shoes are generally sold in exclusive boot shops at \$12.00 to \$18.00 a pair. Let us prove to you what a wonderful dress shoe and comfortable shoe the kangaroo is. We only ask the privilege of sending a pair on approval for free examination.

No. 6409—Genuine Kangaroo—Sizes 6 to 11. Only \$1 with order. If thoroughly pleased pay \$1.25 a month **\$7.45**

The Banker last to the left you'll say is rightly named for it is the famous straight last of the bankers and business men. Plain fine stitching with absolutely no perforation or fanciness. Dignified and extremely dressy looking. Finest single oak sole Goodyear welt-sewed. Goodyear "Wingfoot" rubber heels. Genuine leather trimmings and the finest shoe construction throughout.

L. W. Baldwin

Mr. Baldwin, who has resigned as vice-president in charge of operation of the Illinois Central System to become president of the Missouri Pacific, entered the service of the Illinois Central in 1896 as a chainman at Anna, Ill. After service in construction on our Western Lines and as assistant engineer at Fulton, Ky., he was made track supervisor at Springfield, Ill., in 1900; in 1901, roadmaster at Memphis; in 1904, trainmaster of the Mississippi division. In 1905 he was transferred to the Indianapolis Southern (now part of the Indiana division), and in 1906 he was made superintendent of that road. Two years later he was made superintendent of the Vicksburg division, and in 1910 he was appointed engineer, maintenance of way, of the Illinois Central System. Three years later he was appointed superintendent of the Kentucky division. In 1915 he was promoted to general superintendent of the Southern Lines. That same year he was made general manager of the Central of Georgia, and a year later he was promoted to vice-president of the same road. He served during federal control as assistant to Mr. Markham, who was regional director at Atlanta, Ga., and later at Philadelphia. When Mr. Markham resigned from the Railroad Administration in 1919, Mr. Baldwin succeeded him as regional director at Philadelphia. March 1, 1920, Mr. Baldwin was elected vice-president in charge of operation of the Illinois Central System.

Resignation of Operating Vice-President of Illinois Central System Brings About Numerous Promotions

L. W. BALDWIN, vice-president in charge of operation of the Illinois Central System, who has served the Illinois Central System continuously since he first entered railway service twenty-seven years ago, has resigned to accept the presidency of the Missouri Pacific Railroad Company. His resignation became effective April 1, at which time he took up his new duties, with headquarters at St. Louis.

Mr. Baldwin's resignation entails a number of promotions in the operating department.

A. E. Clift, general manager, succeeds Mr. Baldwin. J. J. Pelley, general superintendent, who for two years and a half has been on detached service with the car service division of the American Railway Association, succeeds Mr. Clift. G. E. Patterson, who has been acting general superintendent, Northern Lines, in place of Mr. Pelley, becomes general superintendent, Northern Lines. J. M. Egan, general superintendent, Southern Lines, succeeds Mr. Pelley with the car service division, American Railway Association. W. Atwill, superintendent, St. Louis division, succeeds Mr. Egan. J. W. Hevron, superintendent, Illinois division, succeeds Mr. Atwill. Floyd R. Mays, superintendent, New Orleans division, succeeds Mr. Hevron. J. F. Walker, master mechanic, Kentucky division, succeeds Mr. Mays. C. M. Starke, master mechanic at Centralia, Ill., St. Louis division, succeeds Mr. Walker. H. N. Seely, general foreman at our Waterloo, Iowa, shops succeeds Mr. Starke. J. Kurth, Jr., general foreman at our Council Bluffs, Iowa, shops, succeeds Mr. Seely. H. C. Steinmeyer, air-brake foreman at Waterloo, succeeds Mr. Kurth. Alfred C. Kann, assistant night roundhouse foreman at Waterloo, succeeds Mr. Steinmeyer. W. M. Collier, machinist at Waterloo, succeeds Mr. Kann.

Mr. Baldwin's twenty-seven years of Illinois Central System experience have fitted him exceptionally as an operating officer, and in his work in the Southwest he will carry with him the best wishes of thousands of men who have been associated with him on this railroad.

Almost all of Mr. Clift's thirty-five years of railway service have been with the Illinois Central System. He was first employed by the Illinois Central as a call boy at Champaign, substituting for an employee on leave of absence, but his continuous railway service dates from December 5, 1888, when he became a brakeman in freight service. He was promoted to conductor in 1891. The following year he left the service of the Illinois Central and became a conductor on the Big Four, but he returned to the Illinois Central System again in 1893, after an absence of less than a year, and was made engine foreman at Champaign. He was promoted to yardmaster in 1893, and in 1894 he again became a conductor. He was appointed acting trainmaster of the Chicago district in 1902, and in 1903 he was appointed trainmaster. In 1905 he was promoted to superintendent, Freeport division, and in 1907 he was transferred to the St. Louis division as superintendent.

Mr. Clift was appointed general superintendent, Southern Lines, in 1910, and in 1912 he was made general superintendent, Northern and Western lines. He has been general manager since October, 1917.

Mr. Pelley entered the service of the Illinois Central System in 1900 as a track apprentice. In 1904 he was appointed supervisor on the Indiana division, and in 1905 he was transferred to the Memphis division as supervisor. He was appointed roadmaster, Louisiana division, in 1908, and in 1911 was transferred to the Tennessee division as roadmaster. He was appointed

superintendent, Tennessee division, in 1912, and three years later he was made superintendent, Memphis division. In 1917 he was appointed general superintendent, Southern Lines, and in 1919 he was made general superintendent, Northern Lines. In 1920 Mr. Pelley was lent to the car service division of the American Railway Association, and recently he has been serving as chairman of the Chicago car service commission, also being in charge of the refrigerator car section of the car service division.

Mr. Egan, who is a son of Colonel A. H. Egan, general superintendent, Yazoo & Mississippi Valley Railroad, entered the service of the Illinois Central System in 1893 as a messenger in the transportation department, Chicago terminal. His successive promotions have been: 1894, agent, 104th Street, Chicago; 1898, timekeeper and chairman on construction, Evansville, Ind.; 1899, rodman, engineering department; 1900, bridge department, Chicago; 1901, assistant engineer; 1903, road supervisor and assist-

A. E. Clift

ant engineer, double track work; 1904, roadmaster, Freeport, Nashville and Tennessee divisions; 1911, superintendent, Mississippi division; 1915, superintendent, Tennessee division; 1919, general superintendent, Southern Lines.

Mr. Patterson entered the service of the Illinois Central System as telegraph operator at Charter Grove, Ill., in 1889. In 1890 he was appointed agent and operator at Laclede, Ill., and later he served as agent at Farina, Kinmundy, Rantoul, Gilman, Mattoon, Champaign and Kankakee, all in Illinois. In 1903 he was appointed division agent in charge of the Illinois division; in 1904 he was appointed inspector of weights; in 1905 he was appointed trainmaster, Freeport district. In 1906 Mr. Patterson was transferred to trainmaster, Amboy district, and in 1907 to trainmaster, Chicago district. In 1913 he was appointed superintendent of the Springfield division; in 1915 he was made superintendent of the Louisiana division, and in 1918 was appointed superintendent of the Illinois division. He became acting general superintendent, Northern Lines, in 1920, succeeding Mr. Pelley.

Mr. Atwill learned telegraphy at Rockford, Ill., his first position being night operator there. He worked as train dispatcher on the Chicago & North Western and the Grand Trunk, but returned to the service of the Illinois Central System in 1901, and was successively trick dispatcher at Dubuque and chief dispatcher at Cherokee, Fort Dodge and Dubuque, all in Iowa. He was promoted to trainmaster at Fort Dodge in 1907, was transferred to the same position at Dubuque, and in 1915 was made

J. J. Pelley

superintendent of the Minnesota division. He was promoted to superintendent of the St. Louis division in 1917.

Mr. Hevron entered railway service in 1895 as operator on the Louisville, Evansville & St. Louis Railroad (now part of the Southern Railway), and with that road he served successively as operator, agent, yard clerk and bill clerk. In 1899 he was employed by the St. Louis, Peoria & Northern Railroad (now part of the Illinois Central System) as operator and yard clerk at East St. Louis. For a short period in that year he was employed by the Toledo, St. Louis & Western as operator, and on Christmas Day, 1899, he returned to the Illinois Central as operator. In 1900 he became an operator in the dispatcher's office at Kankakee, and his successive promotions since then have been as follows: 1900, train dispatcher, Bloomington, Pontiac and Tracy districts; 1901, train dispatcher, Chicago district; 1907, chief dispatcher, Illinois divi-

sion; 1915, trainmaster, Illinois division; 1915, superintendent, Springfield division; 1919, superintendent, Tennessee division; 1920, superintendent, Illinois division.

Mr. Mays began his railway career as a machinist apprentice for the Norfolk & Western Railroad, Roanoke, Va., in 1895. He entered the service of the Southern Railroad as a machinist at Salisbury, N. C., and later was transferred by that company to Selma, Ala., as machinist. Mr. Mays entered the service of the Yazoo & Mississippi Valley Railroad at Vicksburg, Miss., in 1901, as a machinist. He was promoted to locomotive engineer, Vicksburg division, in 1903. His successive promotions since

then have been as follows: Appointed instructor on transportation rules, 1911; promoted to traveling engineer, Vicksburg division, 1911; appointed assistant trainmaster, Memphis division, 1912; appointed trainmaster, Vicksburg division, 1913; transferred to New Orleans division as trainmaster, 1916; promoted to superintendent, New Orleans division, 1917.

Mr. Walker entered the service of the Illinois Central at the Paducah shops as a special machinist apprentice in 1898 and was promoted to journeyman after two years' service. In 1901 he was made night roundhouse foreman. He served successively as machinist gang foreman and day

roundhouse foreman until 1906, when he was appointed general foreman of the Evansville district. The next year he was made general foreman at the Paducah shops. In 1909 he became master mechanic at our East St. Louis, Ill., shops. The next year he was transferred to Paducah as master mechanic.

Mr. Starke entered the employ of the Illinois Central as a clerk in the master mechanic's office at Water Valley, Miss., in 1891. From 1893 to 1897 he served an apprenticeship in the shops. He served as a machinist and gang foreman until 1901, when he was appointed night roundhouse foreman. From 1902 to 1905 he served as day roundhouse foreman, and then until 1909 as erecting shop foreman. In 1909 Mr. Starke was transferred to the Indianapolis Southern as gen-

J. M. Egan

G. E. Patterson

eral foreman at Indianapolis. In 1911 and 1912 he was general foreman at Champaign, Ill. Then he served a year as master mechanic of the Mississippi division at Water Valley, and then four years as master mechanic of the Louisiana division at McComb. In March, 1922, he was named master mechanic at Centralia.

W. Atwill

Mr. Seely served an apprenticeship as a machinist in the Waterloo shops from 1900 to 1904. He was in the service of various other railroads from that time until 1907, when he returned to the Illinois Central as a machinist at Cherokee, Iowa. In 1911 he served as machinist and extra gang foreman at Waterloo and Dubuque, Iowa, and

J. W. Hevron

F. R. Mays

J. F. Walker

then he spent a year as roundhouse foreman at Fort Dodge, Iowa. In 1913 he was general foreman at Dubuque, Iowa, after which he returned to Fort Dodge as roundhouse foreman. In 1917 he was made general foreman at Cherokee, Iowa, and a year

C. M. Starke

later he was made general foreman at Waterloo.

Mr. Kurth has been with the Illinois Central ever since he began his apprenticeship as a machinist in 1897. He worked in various parts of the shop as a machinist until 1911, when he was made gang foreman. In 1915 he was promoted to assistant roundhouse foreman, and a year later he was made roundhouse foreman. In 1919 he was promoted to general foreman.

J. Kurth, Jr.

Railway Success Essential to Prosperity

*Problem Must Be Taken Out of Politics and
Definite Scheme of Treatment Adhered To*

An address on "The Problem of National Railway Transportation," delivered before the Prairie Club, Des Moines, Iowa, February 24.

By JAMES C. DAVIS,

Director General of Railroads

THE views contained in this paper are wholly personal, not connected with any official responsibility, and represent no one but myself.

The greatest problem of vital interest to the American people, the one having the most direct bearing upon every commercial and agricultural investment, is the question of railway transportation.

As has many times been said, the railroads are the arteries of our national life. Unless this controlling factor in modern civilization functions, to the end that our people receive efficient transportation service, at such rates as will permit a free interchange in the way of both passenger and freight movements, we can have no permanent or widespread prosperity.

Next to agriculture, railway transportation represents the greatest, most essential, and most important commercial activity in the land. Any sort of prosperity in the fields of commerce, mining, manufacturing, and agriculture is dependent upon adequate and reliable transportation service, of a character that will enable the prompt movement of tonnage to market or destination.

In Iowa, where the principal occupation of our people is agriculture, and the largest outbound tonnage is the products of the farm, the farming element is peculiarly dependent for its prosperity upon the railroads, and, as the products of the farm represent the greatest single item of tonnage produced in Iowa, the railroads of this state are peculiarly dependent upon these products for any net earnings that their service in this state may produce.

Need to Study the Question

With these two great interests so interdependent, there should exist between the farmers and the railroads such a community of interest as would result in the most cordial co-operation, and I have always believed that this result has not been accomplished for the reason that the basic facts surrounding the railroads, the complexities involved in their operation, their value, the true amount of investment in this property, and their actual earnings, have not been the subject of impartial and detailed study, and, furthermore, that the railway question has

been approached by the people as a political rather than as a very complex economic question.

The thought I am trying to express has been accurately stated in a recent address by the Secretary of Agriculture, where he said:

"An efficient agriculture and an efficient transportation system are indispensable to the national welfare and are dependent upon each other. The relation between the two industries is so very intimate that neither can afford to acquiesce in a condition which seriously affects the other."

A spirit of antagonism has been greatly fostered by the distribution of misinformation.

The railroads for more than thirty years have been subject to ever increasing governmental control. Annual reports, showing in great detail the results of operation, subject at all times to public inspection, have been regularly made, and there is no reason why any one interested in this question should not at any time ascertain the truth about this much discussed and oft-times much misrepresented proposition.

The Growth of the Railroads

In 1835 there were but 1,098 miles of railroad in the United States, confined largely to a few Southern and Eastern states, Pennsylvania, South Carolina, Maryland, and Massachusetts having, in the order named, the greatest amount of mileage. In 1860, just before the Civil War, the mileage aggregated 30,635 miles. In 1870, about the time of the end of the reconstruction period following the Civil War, the mileage had increased to 52,922 miles.

From 1870 to perhaps 1916 or 1917, covering a period of less than fifty years, there has been constructed the present system of national railway transportation, undoubtedly the greatest and most efficient plant of its kind the world has ever produced.

It is a very significant fact that since 1917 more miles of railroad have been abandoned than have been constructed. January 31, 1917, the first track or road mileage of all classes of steam roads was reported as 253,626, and on December 31, 1921, the same mileage was reported as 252,044, showing a reduction of some 1,582 miles. As during this period there was perhaps the normal increase in population and volume of tonnage, this reduction in mileage can only be accounted for by the fact that railway earnings and conditions have not

justified further capital investments. This showing does not indicate a healthy condition of this industry.

Government Control of Railroads

In the beginning of the period of increased railway building, the construction of railroads and the investment of private capital in them was supported by the public in every possible way. Land grants were made by the federal government, and taxes in aid of railroads were liberally voted by states, counties, townships and municipalities, while the investment of private funds was encouraged, not only as a money-making enterprise, but as one in the interest of the general welfare of the people. It was universally recognized that railway extension was essential to national progress and prosperity, and this was especially true in the great Middle West, where railway facilities were absolutely necessary in the opening up and developing of what is now the greatest agricultural empire in the world.

The railroads were, in the early part of this period, recognized as private property, and operated as such, without appreciable effort at government control. Of course, under these conditions, exploitation and indefensible abuses became prevalent. There was much stock manipulation; there was frequent and reprehensible discrimination, not only as between communities but as between individuals; secret rebates, in the way of freight charges, were granted favored interests, and the issuance of free transportation to public officers and influential individuals became a public scandal.

In 1876, the Supreme Court of the United States, in approving legislation enacted by Iowa, Illinois and Wisconsin, popularly known at the time as the "Granger Cases," sustained state legislation regulating railroads and public elevators and warehouses. A paragraph in one of the opinions gives the principle decided by the court. It is as follows:

"When, therefore, one devotes his property to a use in which the public has an interest, he in effect grants to the public an interest in that use, and must submit to be controlled by the public for the common good."

These decisions by the Supreme Court of the United States started an avalanche of state and national legislation in the matter of railway regulation and control, which continued down to the commencement of the World War. Because of real or fancied abuses, there was a complete revulsion of public opinion in regard to railway corporations.

In 1887 Congress enacted the Interstate

Commerce Act, which by frequent amendments has been enlarged and extended. Legislatures, treating the highly complicated question of transportation as a political issue, without any sort of economic study of the problem, regulated the details of operation without regard to the possibility of the carriers complying with them, or the effect such legislation would have upon their net revenues. The 2-cent passenger fare law, passed in very sparsely settled states, full crew laws, and average speed for stock trains are fair examples of the legislation of this character.

Since January 1, 1888, the Interstate Commerce Commission has required annual reports, covering in minute detail everything connected with the operation of the carriers. State railway and tax commissions have also required innumerable reports, many of them being duplicates, except as to slight differences in form. The clerical expense in preparing these many reports is very large.

Every one of these thousands of legislative enactments was for the benefit of the public, the patrons of the railroads, or of the employees; all of them tended to increase operating expenses or reduce revenues, and, until the enactment of the present Transportation Act, there was not a line in any of this legislation looking to the protection of the owners of the property.

For many years the carriers successfully met this rising tide of operating expenses and diminished showing of net earnings by efficiency in operation, largely by reducing grades and curves, laying heavier rail, and purchasing locomotives with greater tractive power and freight cars with larger tonnage capacity. By 1917 this saving had reached its limit. Many of the roads were suffering from deferred maintenance, and large capital expenditures were in demand, for increased equipment, better terminals and improved shop machinery and other facilities.

Results of Federal Operation

The Interstate Commerce Commission had refused what, in the light of subsequent events, would seem to have been reasonable and necessary increases in freight rates; many thoughtful experts in railway operation were apprehensive of a breakdown of the national system of railway transportation, and government ownership began to be considered as perhaps more than a possibility.

The World War caused a truce in the railway situation. On December 27, 1917, the president, as a war measure, took over all the systems of railway property in the United States deemed essential to the uni-

fication of such transportation as a whole. The government retained possession of and operated these properties from December 31, 1917, to February 29, 1920, a period of twenty-six months.

It is neither the purpose nor within the limits of this paper to discuss in detail the results of this great adventure on the part of the government. There is much dispute and discussion concerning the matter. From the somewhat intimate knowledge I have of this situation I have come to some quite definite conclusions.

So far as the physical maintenance of the property is concerned, I believe, with some exceptions, it was maintained up to the general standard fixed by the owners of the property during the test period immediately preceding federal control. On the other hand, at the end of federal control the railroads of the United States were suffering from a profound economic and financial disturbance.

This condition cannot be charged to the government as a result of federal control. Substantially the same situation would have occurred if there had been no such action taken. The peculiar character of railway property, the fact that it is devoted to a public use, and the further fact that interstate common carriers have no right, except through the action of the Interstate Commerce Commission, to raise their rates, made it inevitable that during a World War, a period of continued increases in the price of everything essential to the operation of a railroad, with the necessarily slow progress incident to proper hearings in applications for rate increases, the Interstate Commerce Commission could not have made the successive increases in rates essential to keep annual income on a par with the flight of increasing expenses. In the condition these carriers were in at the time the

president took them over, federal control was a necessary incident to a successful prosecution of the war. Federal control stabilized the income of the carriers, so that without default they could meet their liabilities in the way of paying current obligations for interest charges and usual stock dividends.

A 3-Year Shrinkage in Returns

There would have been a sharp dislocation in the financial situation of the railroads, due wholly to war conditions, independent of whether the government had taken them over or not. While, as we hereafter explain, there is no legal liability on the part of the government for those injuries which this property sustained as a result, if you please, of the "fortunes of war," a candid and just consideration, in solving present transportation difficulties, should be given to a comparison of the financial condition of the carriers immediately before and immediately after the period of federal control.

The government took possession of the property for operating purposes at midnight December 31, 1917. For the calendar year 1917, the net earnings of the property, on what is known as the book or investment value, were \$974,778,937, or 5.13 per cent. Federal control ended February 29, 1920. The government, to enable the Interstate Commerce Commission to make the necessary readjustment of rates succeeding federal control, continued the compensation paid during the control period for six months, or until September 1, 1920, at which time all government support and contribution to the carriers was withdrawn.

For the calendar year ending December 31, 1920, there was an operating deficit of .08 per cent, or \$2,243,839. By reason of the periods during 1920 while the property was under federal control and while the

Director General James C. Davis at his desk

government guaranty was in force, the carriers were not obliged to sustain this operating loss, but the responsibility was placed upon the government and the carriers, at the termination of the guaranty period, to extricate the property from a condition where operation showed a deficit to a point where normal earnings could be restored.

This economic condition, reflecting a transition in three years from fair net earnings to a substantial deficit, is one which requires frank consideration in solving the present problem of national transportation.

Cost to Government \$1,800,000,000

No one contends that this operating result is or can be the basis of monetary claims by the railroads against the government, growing out of the period of federal control. In final adjustments with the carriers no amounts for economic damage because of the disorganization of their finances have been allowed or can be made. Damages because of financial disturbance are the result either of abnormal war conditions or the lawful exercise of governmental authority. In either case, they are claims for which the law affords no remedy; they are remote, contingent, and speculative; they are the result of inconvenience and loss which all citizens were subject to because of war conditions, and no compensation for them has ever been allowed, and no liability can be predicated upon them.

The financial condition of the carriers at the end of federal operation arose from causes for which the carriers were not responsible and over which they exercised no authority.

I cannot at this time go into the details of federal control. There will always be differences of opinion as to whether or not the government, having the power, should have raised rates as operating expenses increased. Personally, I have no criticisms to offer. War conditions made it difficult to determine the proper course to pursue. The government adopted a plan whereby operating deficits should be borne as a general war expense. This, in the end, made the reconstruction period more difficult for the carriers.

During federal control the government undoubtedly did the best it could, so far as hard and fast legislative enactment was concerned. An effort was made not only to preserve the physical value and condition of the carriers' property, but also to maintain that elusive and uncertain element designated as "going value." Just and perhaps generous provisions were made for compensation for the use of the property; carefully prepared plans for maintenance were put in force; conditions were provided for the advance of funds to meet

pressing obligations to those carriers which were not in a situation to pay promptly, and large sums were expended for additions and betterments.

The financial misfortunes of federal control were not borne solely by the carriers. When the final page of the history of this period is written, it will be found that the government, for its share in the venture, lost in the neighborhood of \$1,800,000,000. This sum includes operating losses, payments during the guaranty period, payments to deficit short lines, and all incidental losses directly the result of federal control.

An ideal transportation system could be described as one which furnishes prompt, adequate, and efficient service to the public, at rates that are reasonable and will permit that free exchange of commodities essential to a prosperous commercial life; pay all employees sufficient compensation to live and rear their families under civilized standards of living, and return to the owners of the property held and used in the service of transportation a fair compensation, based on the value of such property.

The Transportation Act of 1920

This result is the aim and purpose of the Transportation Act of 1920. While the termination of federal control in a way speeded the enactment of this law, it is not in any sense a hasty and ill-considered piece of legislation. Congress had for some years been investigating the transportation question in all its details, and this act is the result of patient study and mature deliberation on the part of the most able and experienced men in Congress. It is the first effort on the part of the government, after many years' experience in federal control, to codify the rules governing railway transportation, and is an effort to create a permanent and logical plan, looking to the operation and control of railroads.

The most notable features of the act, emphasized as being a departure from previous legislation, are the provisions extending the powers of the Interstate Commerce Commission, a plan of consolidation, an effort on the part of the government to assume the control of wages, to the end that the economic waste of railway strikes may be avoided, and an attempt to safeguard and protect private interests.

Heretofore Congress and state legislatures have overlooked the protection of the many individuals who for full value are the real owners of the railroads of this country. The latest reliable data indicate that the stockholders in railroads aggregate about 768,000. In one great company, the Penn-

Odd Modes of Travel in Foreign Lands

*Sleighting Over Cobblestones Is Only One of
Queer Methods of Transport Found by Pensioner*

By W. A. PERKINS,

Pensioner, Canastota, N. Y.,

Formerly City Ticket Agent, St. Louis

IT would be well for the reader, before centering his thought on travel in the Old World, first to stop and consider the comforts and pleasures we experience in our own country.

What is lacking to a traveler in making a trip of a thousand or two thousand miles on such trains as the Panama Limited, the Seminole Limited, the Overland Limited or the Twentieth Century Limited of today? He has the club car, which has the conveniences and affords the pleasure of any modern club house; the Pullman compartment and open-section sleeping cars, roomy, sanitary, with a polite servant to administer to his every want; the palatial dining car to serve the most finicky appetite with the most wholesome food obtainable in our many markets; the library observation car, with its social gatherings, its books and magazines and its opportunity for viewing the scenery along the line.

We can justly and unhesitatingly name our *de luxe* trains "palaces on wheels."

Made First Stop at Madeira

I am not going to confine this article alone to railway travel but will include other modes of travel prevalent in the countries I visited in the Old World.

Our first stop after leaving New York was Madeira, "the Island of Sunshine and Flowers," which belongs to Portugal and lies off the southern coast of Spain.

Two stewards on the stone steps swung us ashore as the tender was lifted on top of a wave. We were ashore for the first time in a week, our first stop in the Old World. How we did laugh! Up to us came a vehicle like to nothing we had ever seen. It had two seats facing each other and

over them a canopy draped with cretonne curtains. The seats were scarcely two feet above the ground, and the vehicle moved on runners instead of wheels. No, there was no sign of snow. The weather was like one of our most glorious June days.

The pavement was of cobblestones, edges up, and the impossible vehicle was dragged over it by a team of small oxen. The driver ran alongside and every few minutes put a bag of grease under the runners. It was not uncomfortable; it did not bump at all, but how it did skid going around corners! The driver ran alongside with his bag of grease, and almost constantly, to urge on his oxen or to warn approaching traffic through the narrow streets, he called out in musical tones of soft-slurred Portuguese. Not a wheeled vehicle was to be seen anywhere. All traffic was on oxen- or mule-drawn sleds or on huge wicker baskets carried on persons' heads. We sledged to the railway station and took a cog-wheel railroad up the mountain four miles to the very top of the island. What a ride! What flowers! First came fields of sugar cane, then banana groves; then we passed through a residential section with flowers in greater variety and profusion than Florida ever dreamed of. The end of the railroad was four miles away and a mile higher in altitude, and the trip was much like that on the cog-wheel road up Pike's Peak in Colorado.

Coasting Downhill in Summer

Then came the trip down the mountain. We slid down in a wicker settee on runners like on the ox sleds, with no cover or dash board, with a man holding to a rope on each side to steer and another man acting as a brake. We slid down the mountain, four miles, entirely over cobblestone pavements. The road went around a curve, and one man would stop and pull while the man in the back shied the sled around. What a novel sensation! Coasting in midsummer weather (February 11) through gardens of semi-tropical flowers!

Our next stop was at Cadiz, Spain. After driving around that city in antiquated carriages like those used in Chicago fifty years ago, we boarded a special train for Seville. Perhaps there might have been a station in Cadiz, but I did not recognize it. The train stood in a yard enclosed by a high picket fence. Our guide led the way, and we followed like a drove of sheep until we got

Mr. Perkins in a Madeiran taxi

Coasting on the Madeiran hillsides

alongside the cars; then we made a dash to get into the things.

These cars were about the size of medium-sized street cars, containing six or eight compartments, seating four, six and sometimes eight passengers in each compartment.

The first-class cars had the largest compartments, seating eight and taking up the entire width of the car; consequently we could not leave this compartment until the train came to a stop. The second-class coaches had narrow passages on one side, and the compartments seated six passengers, except the two end ones, which had room for only four. This made room at the end of the aisle for a small folding seat, which I judged was for the guard or, as we would say in this country, the trainman.

Preferred Second Class

I noticed the first-class coaches filled up first on this, our first trip, but on our return the next day my traveling companion suggested we try a second-class coach. We both found it more to our liking, as he said we had a chance to stretch our legs a bit in walking up and down this narrow aisle.

Our train made about fifteen miles an hour. At that speed we were not shaken up to any extent, but the joints were opposite and the rails badly worn, and with these 4-wheeled cars it was not difficult to detect every joint. The cars were lighted by kerosene lamps and, as far as I could learn, had no means of being heated. The walls of each compartment were covered with advertisements and many notices printed in Spanish.

To get out of the first-class compartment it was necessary first to drop the window in the door, then to reach outside and unfasten two catches on the door. At each station many vendors of cakes, candies, postcards and fruit crowded the platforms and cried their wares to the tourist. Our dinner, served in our compartment, was a box lunch, with a bottle of wine to wash it down. It might be well to add here that water suitable for drinking purposes was almost impossible to obtain from the time we left New York until we returned.

The next day we returned from Seville and attempted to get back to our ship, but the waves were running high and the use of the gangway had been discontinued. The tender hung alongside the ship trying to find some way for us to get aboard. A rope ladder was swung across, and one or two men made the ship that way, but it was hardly a success. At last the officers rigged up a huge laundry basket on a pulley. This they swung from an opening in the ship's side to the deck of the tender.

Going Aboard Ship in a Basket

Two young girls—good sports—were the first to try the basket route. They wedged themselves into it, sitting on square cracker tins. An officer from the ship gave the signal, and sailors hoisted the basketful of girls off the deck of the tender, thirty or forty feet through the air and into the opening in the side of the ship. Two more young girls tried it, and the fears of the passen-

Four-wheeled Spanish coach

gers turned into eagerness to try the novel aerial ride. Two by two, all of the women were swung from the tender to the ship, and when the women had all been landed the men had their turn. It was 5:30 p. m. when the tender reached the ship. It was 9 o'clock when we all got aboard.

Our next stop was at Gibraltar. The only transportation I saw was more of these antiquated carriages. These took us about the city and up the rock, where we could enter the galleries, which are from two to three miles in length, tunneled through the solid rock and with batteries built at all advantageous points up to 1,350 feet above the sea, commanding a good view of The straits.

Two days later our ship came to anchor in the bay off Algiers, Africa. Railway travel at this place was unknown. The Arabs, who make up the majority of the population, pride themselves on their Arabian horses, and the decorations some of these steeds wore would appear well in any of our circuses. The Turks and Moors prefer the camel as a means of transportation, and the negroes and Maltese still cling to the ancient and sure-footed donkey. Algiers, like Gibraltar, is very hilly, and the cruder mode of travel seems to prevail.

Railway Travel in Syria

After spending two days in Athens, Greece, and three or four in Constantinople, Turkey, we were overjoyed in once more getting safely on shore at a little village

by the name of Caifa, Palestine, (this was on February 28), where we were to take a special train for Damascus, Syria. Everybody was loaded down with hand baggage, as we were going to be on shore eighteen days and we were not allowed a trunk. Our train was standing alongside the pier, and, after getting a seat in one of the compartments, I moved around like the other passengers, as it seems to be the fashion when the train is at a station for all to get out and walk up and down the platform. This railroad was practically new, having been built by England since the World War. The cars were the 4-wheel type, containing six or eight compartments, and had been brought from England after they were nearly worn out. The engine, however, was new, not much larger than the suburban engines used in Chicago. It was painted up flashily in bright red and green. The whole train was coupled together with chains, controlled by airbrakes and lighted by kerosene. After all had got ashore and our guide had warned us to get aboard, we started out on our journey for Damascus.

Our train passed through Samaria to the Jordan valley, then north for about an hour along that river until we reached the Sea of Galilee. Here we stopped thirty minutes for dinner, which was served in a large, shed-like building back of the station. When it was time for the train to start, the station agent came to the door of the station and rang a bell about like a dinner bell. Then after he had finished and the passengers were aboard, the conductor

blew a small horn similar to the ones used by our fish-peddlers. Then the train started out slowly, giving any belated passenger a chance to hitch on.

Our next stop was Damascus, the oldest city in the world, founded by Shem, the son of Noah. While everything we saw looked thousands of years old, the railway station was new and up-to-date, more so than any I saw in England or France.

Livestock on the Track There, Too

After a stay of two or three days in this ancient city, we took the regular train back to the Sea of Galilee. I had a time card on this road, but, although familiar as I am with all kinds of time-tables, I could not make a thing out of this one. From the time we left Caifa, our little red and green locomotive was screeching nearly all the time, as the country abounds in sheep and goats, and it seems their delight to sun themselves on the railway track, much to the consternation of the long-robed, turban-bedecked shepherds in charge.

We crossed the Sea of Galilee twice in a gasoline launch which was not large enough to hold our party, but which made up for the deficiency by towing three good-sized rowboats behind, filled with the overflow and our baggage.

After spending two days on and around the Sea of Galilee, we took motor cars for a very interesting ride through the Holy Land to Jerusalem. The English government, aside from building railroads in Palestine, has improved the highways, so that today the most important thoroughfares are equally as good as, if not better than, those in this country.

Jerusalem, a city of fifty or seventy-five thousand inhabitants, is surrounded by a huge stone wall about fifty feet high and twelve feet thick, having seven stone archways—or, as they are called, gates—to pass through. Inside the walls the streets are so narrow and have such quantities of steps that the only means of getting around is on the back of a donkey or walking. No wheeled vehicles or street cars are in this city.

Outdoing the Israelites

We left Jerusalem at 6 a. m., March 9, and were told we were going through to Cairo, Egypt, in one day, about three hundred miles. We were going over the same ground and about the same distance it took the children of Israel forty years to traverse. I know the Panama Limited could make it easily in four hours.

Although there were fewer than a hundred passengers, it required two engines to pull us over this hilly country of Judea. The army of General Allenby built this railroad and laid a pipeline for a water supply as it advanced against the Turks all the way from Egypt to Jerusalem. We saw barbed wire entanglements and abandoned army material all along the way. At 3:30 p. m. we reached Kantora, on the Suez Canal. Here we all left the cars and, lugging our own baggage, walked over a long swinging bridge into Egypt, where, after having our baggage inspected and passports examined, we boarded another train going to Cairo.

There was no dining car and no parlor car, and when we arrived in that city, which was at midnight, we were a dusty, dirty bunch. After we left the Suez Canal the weather became much warmer, and the sands from the desert covered the car floors.

Cairo is a city about the size of St. Louis and a favorite winter resort for people from all parts of the world.

The "Poor Man's Street Car" in Cairo

The street car system is very crude for such a large city. Here we saw transportation facilities of every known kind. As I stood on the bridge over the Nile one day, I saw camels, buffaloes, donkeys, automobiles and motor cycles all congested in a bunch trying to get over this bridge. What amused me most in the way of a conveyance in Cairo was what is known as the "poor man's street car." This is a heavy flat platform about ten feet long and three feet wide, balanced between two stout wheels without springs and having a small donkey hitched in front to haul it along over the rough cobblestone streets. The men sit with their feet hanging down, but the women sit in the center, Mohammedan fashion, all wearing veils. There is a huge basket hung underneath the cart, which is used to carry packages and sometimes the

Camel train loaded with grain, Tiberius, Palestine

The "poor man's street car," Cairo, Egypt

children. The fee charged to ride on these crude carts is very small, and I noticed they were always well patronized.

I joined a party in a trip up the Nile as far as the tombs of the kings. Part of the journey took us six miles over the desert. Here we had to rely on the camel for transportation, something new for us. Camel riding is all right after you once get started and catch on to the swing of the beast, but when he gets up and sits down my advice is to hang on for dear life. These old camels make a lot of fuss and do considerable growling, but as far as I could see they are docile and harmless.

The Pyramids of Egypt are about five miles from Cairo. One can get out to the edge of the desert by street car or automobile. There is very little difference in the cost. When you disembark from your car you are surrounded by hundreds of Arabs, who act as guides to take you over the sands and around the Pyramids and the Sphinx. Some have donkeys, some camels and others sand cars, small carts with wide wheels drawn by a small donkey. It is advisable to engage a guide at once, emphatically stipulating the price agreed upon, and not to pay until he is dismissed. This will protect you from being harassed to death by the others, as they are as bad as a nest of hornets around you.

Good Roadbed on Italian Roads

Our next traveling by land was from Naples to Rome, Italy. Here we found the same type of railway cars, only larger. They had eight wheels and ran along more smoothly than the others we had tried, and the engines were larger. Although labor is much cheaper in foreign countries, they do not employ the number of men by half to

equip and run trains they do in the United States. I will say this for the railroads in Italy: Their roadbed is rock ballast, kept in remarkably good shape.

On April 1 we landed at Southampton, England, and from there took a train to Liverpool. The English railroads seemed more like the real thing than any we had yet seen, but their ways were much different from ours.

It was about noon when we got aboard the train at Southampton. There was the big dining car about the middle of the train; so we all went in and took seats. After we had waited about ten minutes, the

Mr. Perkins tries a "ship of the desert" on way to tombs of the kings, Egypt

dining car conductor came to get our seat cards, which we did not have and knew nothing about. Consequently, the thirty or forty hungry Americans had to vacate and go back to their compartments until the seat cards were distributed.

Their plan is, when the meal is ready, for the conductor to go through the train and give seat cards for the first or second sitting, as the passengers may desire, showing the time each must be served. After the first sitting is done, the car is cleaned and the tables spread anew before the people for the second sitting are allowed to go in. I could not see that there was any distinction between first-, second- and third-class travel in the dining cars.

Couldn't Learn English Money

The street cars in Liverpool are all double decked and are divided into first- and second-class accommodations. I found the second-class seats were always well filled and the first-class space generally empty. I cannot tell the price they charge, as I had more difficulty in learning money in England than in any other country.

When leaving Liverpool for London, I asked the hotel porter to buy my ticket. I told him second-class would be all right. He told me there were only first- and third-class passages to London; so I asked about the third-class. He told me everybody went third-class, as it was just as good and half price; so I told him to get me a third-class ticket. Upon boarding the train I found that all my tourist companions had done the same thing. My curiosity being aroused to see what the difference was, I looked through the cars. All the difference I could find was that the first-class compartments had velvet carpets on the floor and the third-class had linoleum covering the floors. As there was no parlor car or sleeper on the train, naturally all the passengers rode third class, except a very few in the first-class coach, whom we all took to be nobility.

Being a stranger in London, I thought it best to be extravagant once and engage a taxi to take me and my baggage to the hotel, which the porter at Liverpool told me was about a mile from the station. That taxi, taking me a mile through the crowded streets of London, cost me all of one shilling. I gave the fellow a florin, and he drove away thinking I must be a very wealthy person. While other foreigners tip freely, their tips are small compared with what the average American gives.

In London a shave cost me fourpence and a haircut eightpence. The barber who served me had a longing to get to the United States; so I asked him why he did not go. The poor fellow said he did not

expect ever to get enough money together to be able to pay his passage.

The Perils of Travel in London

It seems to me the motor busses in London do the greater part of the business. There was a limited number of surface cars, but these cars were not allowed to use the busiest streets; consequently I did not have occasion to use them. The underground railway, known as the "Tube," justly deserves that name. These circular-shaped cars traverse the entire city in large tubes just big enough for the cars to squeeze through. To go anywhere on the Tube, if you are not perfectly familiar with the route, it would be well to take your own guide, as the traveling public is compelled to rely upon its own resources almost entirely. The guards are few and directions confusing. These cars also have first- and second-class accommodations. When you purchase your ticket the ticket seller will give you second-class unless you explicitly call for first-class. The only difference noticeable was that with a first-class ticket you could always get a seat, while in the second-class compartment you generally had to stand.

I spent the evening with a friend in the suburbs of London, and when it was time for me to go he sent his two sons to show me the way to the station. It was well that he did, or I believe I would be wandering around those crooked, hedge-lined streets yet. The suburban trains are similar to those in Chicago, only there is still that scarcity of help of whom you may ask information. I was alone in the compartment. After riding all of half an hour, I began to get uneasy as to where to get off. At one of the stops an elderly gentleman got in my compartment, and I asked him if he knew what station I got off at for the Russell Hotel on Russell Square. He told me he had lived in London all his life and he did not know his way around yet, but he thought it would be safe to go to the end of the line, which I did. There might have been some employes on that train besides the enginemen, but they did not show themselves. The man I bought my ticket of let me on the platform, and the gateman at the terminus let me out and took up my ticket; otherwise, as far as I knew, the train ran by itself.

Visited Our London Headquarters

Before I left Chicago a friend gave me a letter of introduction to Donald Rose, European traffic manager of the Illinois Central, giving the address in Princess Street. After getting nicely settled in my hotel, I started out to find Princess Street, which I did easily, only to find the office had been

moved. I asked a little old man who appeared to be running the elevator if he could tell me where the Illinois Central office had moved to. He told me; then he told me again, and the third time, but I could not understand his English. He became indignant, and I became very much embarrassed, but if it had not been for a younger man who stopped out of curiosity to see what was wrong I would never have been able to find out. If you could have heard that old chap pronounce "Leadenhall Street" you would have been as much confused as I. When he told me to go to the bottom of Cornhill Street and then keep on going, I asked him if I should take a taxi or a bus, and then the little old whiskered fellow became furious.

At this juncture the kindly bystander broke in, pointed down Princess Street and instructed me to take the first turning to the left and go two squares. Under these directions I found it easily. As I was going along Leadenhall Street, my eyes caught a glimpse of a picture in one of the large show windows which looked very familiar. Yes, it was the 12th Street Station of the Illinois Central at Chicago! Mr. Rose was on a business trip to Paris and Rome, but Mr. Chisholm and the other young men in the office certainly gave me a cordial greeting and did much to make my visit in London a pleasant one. A man from Centralia, Ill., and another from some point in Missouri were also making the Illinois Central office their headquarters.

Small Boats on English Channel

The railroads of Europe do not maintain city ticket offices like those in the larger cities of the United States. They depend on the steamship and tourist agency offices to sell their tickets and make reservations.

The trip from London to Paris was uneventful, although in crossing the English Channel about half the passengers on the boat were seasick. This could be remedied if the railroads would use larger and more seaworthy ships. The boats now in use are not much larger than seagoing tugboats, and the boat was so crowded I could not find a place to sit down, although it took us more than four hours to cross.

The railroads in France are much like those in England. The roadbed is kept in excellent condition, but the coaches are not kept any too clean, and there seems to be that same scarcity of help we saw all through Europe. I did not inquire about wages in England or France, but a friend of mine who had just returned from Germany learned that a good stenographer there was paid 1,800 marks a month, telegraph operators 1,500 marks a month, and day laborers 18 marks an hour. In a recent

Mr. Perkins and car in which the armistice was signed, Paris

daily paper I noticed that German marks had gone as low as 1,800 for a dollar.

As we drew near Paris, my attention was called to a train having double-decked coaches, with most of the passengers seated on top. This was a suburban train, and I judged it was a very pleasant way to ride when the weather was fair, but, as it has no covering, it must be very disagreeable on a rainy day.

The tube system in Paris—the "Metro"—does an extensive business. There is also a line of boats on the River Seine which stop about every five or six blocks and which do a thriving business, especially on holidays and Sundays.

How French Load Motor Busses

The motor busses seem to get the heaviest travel. The French have a way of loading which is a great improvement on the London system. A person coming to a corner where the bus stops and finding fifty or a hundred waiting would ordinarily feel he had small chance to get on, but not so. In Paris he goes to a post having a little frame attached to it containing slips of paper, each bearing a number, and he takes one. When his number or turn comes, the conductor will let him enter and then start along to the next stop. This obviates the chance of being pushed aside.

The taxicabs in Paris do a thriving business, and they are really the safest and most economical way to get around. Like those of London, their charge is very small, and the drivers generally speak and understand English.

After spending ten days in Paris, I went to the Canadian Pacific Steamship Company office and made my reservation for home. There I received the same kind attention we do in our city ticket offices in the United States. The young man who waited upon me knew the difficulties one has in getting out of the country, so he gave me a sheet of paper printed in large red letters giving the departure of the train, the date and place of sailing and the name of the ship.

Naturally, an American tourist takes everything that is given him and puts it in his pocket. While this notice seemed of little account at the time, I found I had to show it at every crook and turn, and but for that notice I would have been wandering around France yet.

Glad to Get Home at Last

The sleeping cars on the European roads are all compartment sleepers having much fancy carving and what we would call "dust-catchers." They looked to me about like those used on some of the Western roads in this country thirty-five or forty years ago. I asked a friend of mine who had been on a sleeper two nights, having made a trip up to Luxor, Egypt, "What about the sleeping-car porter? Was it a man or woman?" He told me he did not know, as he had seen no porter either going up or coming back. The dining cars are much like those in this country, except that

they have white women to wait on the tables, and drinking water there, as at all the other restaurants I patronized in foreign countries, is unobtainable.

What rate per mile is charged on European railroads I could not learn, although I inquired at several places.

When our ship steamed out of the harbor at Cherbourg, France, and I knew that our next stop would be America, I heaved a great sigh of relief and felt grateful that I had seen what I had and had got away alive. Heretofore I always felt a tinge of envy for those being able to visit the Old World, but since experiencing the discomforts one meets in the heatless hotels and the crowded streets over there, my envy has changed into the deepest sympathy.

If, perchance, any reader of this article contemplates a trip abroad, let him take my advice and have a round-trip ticket and plenty of money to meet his necessary expenses.

Indiana Division Old-Timers Get Together

The following item is from the Palestine (Ill.) Weekly Register of March 8:

As a result of a series of articles entitled "Early Railroading Through Palestine," recently published in the *Palestine Register*, the old timers of the I. & I. S. Railroad met at Palestine last Sunday and made preliminary arrangements for a reunion of the old boys to be held here the last Saturday in June of this year.

It is hoped that everyone who was an employe of the I. & I. S. in any capacity will meet here for the reunion. An incomplete list of the employes has been made up, and an effort is being made to procure the address of every one. Information is wanted as to the present whereabouts of any of those interested—addresses may be left with Edgar Vane, Ed Bratton, Pierce Mills or forwarded to the *Palestine Register*, Palestine, Ill.

At the Sunday meeting officers were chosen and other arrangements made for a general get-together meeting of the old boys on the foregoing date. The following officers were chosen for the ensuing year: President, C. P. Walker; vice-president, C. H. Ackerman; treasurer, J. H. Price; secretary, E. R. Alexander; executive committee, Edgar Vane, Ed Bratton, Pierce Mills.

J. H. Price, Sr., has kindly furnished a synopsis of the duties of the officers, the name and purpose of the association as follows:

"This organization made March 4, 1923, composed of all living employes of the I. &

I. S. Railroad who served prior to 1899, shall be known as 'The I. & I. S. Old Timers Club.'

"This organization is made for the purpose of bringing together old time I. & I. S. employes and promoting pleasure and entertainment in annual meetings to be held under the direction of the executive committee.

"The officers of this club shall be:

"President, to operate spike maul and track wrench.

"Auditor, to keep track of the track and figure liabilities (there will be no assets).

"Paymaster, to fix time of next pay day.

"There shall be an executive committee elected annually consisting of:

"Gen ral Manager, to supply hot air, make alibis and jolly the construction gang.

"Roadmaster, to find the track and keep it open for good walking.

"Master Mechanic, to furnish pins and links and buckets to bail up with.

"Trainmaster, to find his train and keep it going.

"Dispatcher, to prepare time cards and dispatch footmen.

"The pass word of the club shall be 'Help!' and will never be changed.

"The lapel button shall bear the letters 'N. G.'

"The motto shall be 'Off Again, On Again.'

"The aim, 'Get there, somehow.'

"We hope for a good attendance of the Old Timers and feel assured that we can make the occasion a day well spent."

One Conductor's View of Railway Harmony

*Lack of Agreement Between Managements
and Men Called a Dangerous Weakness*

By A. E. SHULTZ,
Suburban Conductor, Chicago

SINCE transportation is vital to commercial success, it is no exaggeration to say that, without continuous and adequate transportation facilities, American business cannot survive. The welfare of all the people is dependent upon the success with which our great national railroads are operated. We have come to realize that the future of the nation rests in solving the problem of transporting the necessary products that sustain the life of our people.

To prevent national humiliation and perhaps destruction, it is the first duty of every loyal citizen to do what he can to preserve the orderly processes of commercial activity. What is the matter with so many of the railroads today?

To my mind the great obstacle to sustained and adequate transportation is the *lack of harmony* that too often exists between the management and the men. The whole subject has become so honey-combed with suspicion and cynical disregard for the opinions of one side or for the views of the other that in some cases it is degenerating into class warfare, in which blind and infuriated passion and hate threaten to supplant the reign of reason and understanding.

The only remedy is the recognition on both sides that the principles of justice and fair-dealing must be freely established.

This means, in simpler language, that the right of the men to continue to receive a living and wholesome wage shall not be denied; that a real opportunity must be afforded a man to accumulate something for his old age and to care for him in sickness and distress, so that, by thrift on his part, he will be able to have sufficient means with which to build and own a home of his own, where he can enjoy the happiness of family life, with sufficient to educate his children and properly care for them, and that a chance be given him to invest his savings in the property for which he has given the best years of his life.

Granted these rights and privileges, it is his duty to be loyal to his job, to protect the integrity of the property of his company and to do what he can to make it successful.

If the railroads of America can make good on this program, then nothing but

A. E. Shultz is one of the veteran conductors in the suburban service at Chicago who believes that the spirit of the employees is the biggest thing in railroading. He was taught to have the interest of the company first in his mind when he started to work as a flagman February 2, 1901, and he has carried that loyalty clear down to the present. He was promoted to collector December 12, 1905, and to conductor December 10, 1910.

prosperity and better times is ahead. If they fail to do this, then it is simply a question of time until disintegration sets in as a result of the victory of unsound political doctrines advocated by those favoring a class struggle.

The writer has been with the Illinois Central for twenty-two years. His own experience in railway work has proved to him the truth of the views herein mentioned. He believes that there is a common ground upon which all parties in all fields of railway work can get together.

The splendid success which has come to the great Illinois Central System, in whose management are many men who have come up from the ranks, leads me to believe that any economic changes needed to bring about even a closer understanding and a greater spirit of co-operation will be adopted, as soon as developed, by the Illinois Central System—a railroad that is first in the field with constructive and humanitarian ideas.

World War Veterans Open Farm Colony

Illinois Central System Assists in Establishing Experimental Community at Canton, Miss.

MORE than four years have elapsed since the armistice, and the plaint is frequently heard that the valor and sacrifices of the young Americans who bear the scars of war have been forgotten. That may be true to some extent, but there is a wonderful little community in Mississippi that has not forgotten. What it is doing for the rehabilitation of incapacitated soldiers constitutes an admirable example of community enterprise and co-operation.

With the assistance of Madison County, the people of that community and the Illinois Central System, through its development bureau, the United States Veterans Bureau has established a colony of twenty World War veterans on small farms near Canton. It is expected that by fall the colony will be increased to 100. Madison is the first county in the United States to assist the Government in locating rehabilitated veterans on small farms, although the

west of Canton was secured and divided into sixteen 40-acre tracts, and as soon as weather permits a road will be opened up through the section and will be made a county road. Other 40-acre farms have been secured in the vicinity for the other members of the colony who have been located thus far. There is a 1,600-acre farm in crop this year that will be made available in the fall, and the members of the community who are backing the enterprise have two other tracts in view. These tracts are without any improvements whatever, and in giving the student farmers the necessary facilities and equipment is where community enterprise counts.

The land is sold to the veterans at \$50 an acre on long-term payments. At the end of the first year the purchaser pays the interest on his obligation, but need make no payment on the principal. This is to allow for the expense of building a

A view of the land near Canton upon which the veterans' colony is being founded. Homes constructed for four veterans' families are shown in the background.

Veterans Bureau has broached its plan to a number of other communities throughout the South, and the interest that is being created in the colony at Canton indicates that others will follow the lead taken by that enterprising community. The veterans who have been provided with farms are from among those who are receiving vocational training in agriculture under the Government's rehabilitation service. The Government, the county, the business men and individual members of the community and the Illinois Central System are co-operating to get the veterans established.

Some of Finest Land in County

The land that is being divided up and parceled out to the veterans is some of the finest farming land in Madison County.

One entire section of land lying south-

house and providing necessary equipment. At the end of the second year a payment of \$100 on the principal falls due, together with interest, and at the end of each succeeding year there is a \$100 principal payment to be met, until the end of the tenth year, when the balance is due. The members of the community, however, are prepared to secure federal farm loans for the veterans on the 34-year payment plan if they are unable to pay off the balance of their principal at the end of ten years.

The entire community has been co-operating in getting the houses built for the veterans. Lumber was bought in large quantities, and because of the way in which dealers have co-operated in furnishing building materials at liberal discounts and farmers and others in the community have

co-operated in hauling materials, the families are being provided with homes that will take \$1,000 insurance each at costs to the veterans of around \$700 each.

Banks at Canton Finance Veterans

The three banks at Canton have arranged to finance the veterans. Each family is given a budget arranged with the approval of the Veterans Bureau which covers all necessary expenses for the first year, including the costs of building a house and securing livestock, poultry, mules, farm equipment, seed, fertilizer, labor, and so on. The contemplated income from the farm, together with the compensation allowed by the Government to those taking vocational training, is sufficient to cover all these items in the budget. The bank that carries the veteran advances to his credit a sum equivalent to the amount called for in the budget, and against this the veteran is allowed to draw checks in conformity with the budget. At the close of the year he is charged interest only on those funds actually withdrawn. In this way, he is permitted to equip his farm completely during the first year, pay the cost of building his residence and get ready for his second year's operations, the income from which he may use in reducing the amount of his obligation for the purchase of the land.

In order to safeguard the banks and to provide a revolving fund that can be used for emergency purposes, the members of the community raised \$3,000 by popular subscription from the citizens which has been turned over to a committee of three selected by the three banks. As an example of how this fund can be used, it may be noted that one of the farmer veterans lost a mule shortly after getting settled and the fund provided the means for getting a mule to replace the one lost.

Every detail in connection with getting established is being taken care of by the

A front view of the home of Veteran V. W. Dunivant, showing Mrs. Dunivant and their two children posing for the camera man.

community. It is said that the house was completed for one family on a recent Saturday, and Saturday evening the family moved in. On Sunday evening there was a storm, and the house was struck by lightning. Damage amounting to a considerable sum for a family of liberal means was done, and on Monday morning an ex-soldier came to town, wearing a long face, to break the unfortunate news to his benefactors, only to find that insurance had been written on the house, without his knowledge, immediately upon its completion, the result being that his loss was fully covered, and the claim was promptly adjusted.

How a Tractor Was Obtained

The backers of the community enterprise saw that the boys needed a tractor, and C. E. Wilkins, president of the Madison County Chamber of Commerce, wrote a letter to Henry Ford. Almost immediately Mr. Ford's representative wrote that arrangements had been made to have the local Ford dealer turn a Fordson tractor over to the colony without charge. The Government shipped in about \$300 worth of farm implements for each member of the colony. These implements will become the property

A rear view of the home of Veteran E. L. Jackson. The mules are hitched to a disc furnished the veterans by the government.

of individual colonists at the completion of their course of training.

The first members of the colony arrived in January. They had an average of less than \$100 each in ready money. By the middle of March, practically all the farm homes for them were completed, the land was being broken for this year's crops, the members of the colony had their mules and other livestock and their farm implements, and many of them had already set out trees and plants for the beginning of their orchards and gardens. All the members of the colony are married, and there are children in practically all of the families. The first house to be erected was put up for the family of an ex-soldier who has six children. Until the houses were completed, the people of Canton took the soldier families into their homes and gave them a real Southern welcome.

This is a picture of Financial Day King, the purebred bull left at Canton, Miss., especially to be utilized by the members of the veterans' colony for the improvement of its dairy herds. This fine animal is one of the stars of the group of sires recently distributed by the Illinois Central System. He is the son of Financial Beauty's King, grand champion bull of the Middle West and a half-brother of the world's champion milk-producing junior 2-year-old Jersey cow. His mother, Sans Aloï Peep o' Day, had a record of 11,526.7 pounds of milk and 665.33 pounds of butter in one year.

Twenty-eight

The Illinois Central System, through its development bureau, has been taking a very active part in the establishment of the colony. Every veteran is required, under the terms of the budget made for him, to keep at least two cows, and to aid the veterans the Illinois Central System will furnish one or more purebred Jersey sires for free use in building up their dairy herds. One sire has already been placed on the farm of Dr. W. B. Smith, near Canton, which adjoins the farms of the veterans colony and is accessible to them. The development bureau is aiding the veterans in securing good purebred swine and high grade Jersey cows. The services of the bureau also have been proffered the young farmers along the

Left to right: E. L. Jackson, R. L. Hamilton and J. E. Carrow, members of the veterans' colony, and C. E. Wilkins, president of the Madison County Chamber of Commerce. Jackson was in the Navy, Hamilton served in the 19th Infantry, and Carrow was in the 167th Infantry.

lines of diversified farming and in the proper handling and marketing of their crops.

Among Those Who Have Helped

The project is the outgrowth of an arrangement among Blair Harrison of New Orleans, who is chief of the rehabilitation division of the sixth district of the Veterans Bureau, H. J. Schwieter, general development agent of the Illinois Central System, and the Madison County Chamber of Commerce, represented by President C. E. Wilkins. C. L. McNeil, county farm agent, and J. C. Sides, representing the A. & M. College, Starkville, Miss., have been serving as agricultural advisors to the young men. Among the other members of the community who have given time, services or materials in helping to establish the colony are: Tip Ray and L. G. Spivey, attorneys; F. C. McAllister, farmer; A. T. Graham, hardware merchant; B. L. Roberts, insurance agent; W. B. Wiener, banker; Dr. Joseph Frazier; Marvin Hayes; Board of Supervisors; Planters Lumber Com-

Illinois Central Magazine

pany; Gustav Hansen, paint dealer; W. R. Baughman, farmer; F. H. Parker, banker, and other representatives of the Madison County Bank, the First National Bank and the Canton Exchange Bank.

The veterans have been deeply appreciative of the liberal manner in which they

have been treated and have fallen into the spirit of the enterprise with a determination that speaks well for the type of citizenship which Madison County is getting. They have selected as a name for the colony that of the Madison County Veterans Colony.

Southern Breeders Keep Purebred Bulls

Interest in the distribution of our twenty registered Jersey bulls in the dairy districts of Tennessee and Mississippi during the first two weeks in March was very lively, as may be seen from the accompanying pictures, made at points along the route. The bulls were purchased in one of the

famous Jersey-breeding districts of the country, along the Western Lines of the Illinois Central System in Iowa, and were taken on a special train to be lent to patrons of the road in the South. The animals were placed wherever the need of improvement of dairy herds was apparent

1. The alert-looking individual standing just inside the doorway of the Merchants' and Farmers' Bank of Kosciusko, Miss., properly should be quite at home in a financial institution. He is Financial Winner, purebred Jersey sire, one of the bulls recently distributed by the Illinois Central System for the improvement of dairy herds in Mississippi and Louisiana. This fine animal captured first prizes last year at the Grand Forks, N. D., Kansas Free and Kansas State fairs as the best bull in the junior yearling class. He was bred in Iowa and will make his future home in Mississippi.

2. A few of the purebred Jersey bulls which were recently distributed by special train over the Illinois Central System for improvement of dairy cattle breeding in Mississippi and Louisiana. The railway development bureau is lending these sires to communities without charge. This picture was taken in Court Square, Kosciusko, Miss., one of the points on the itinerary of the Purebred Sire Special.

3. At Brookhaven, Miss., where the Purebred Sire Special stopped, there was one of the biggest crowds seen at any point along the route. The New Sight School took advantage of the opportunity to bring a fine exhibit of various articles from its domestic science department.

4. A section of the crowd which received the Purebred Sire Special on the station platform at Brookhaven, Miss.

5. An interested crowd inspecting the purebred sires in the public square at Grenada.

and were lent without charge to the farmers.

Instructive talks and demonstrations were made wherever the special train stopped by lecturers on dairying and breeding. It is generally conceded that these twenty purebred males formed one of the finest groups of dairy sires ever assembled at one time in the Middle West. Each animal was carefully selected by H. J. Schwietert, general development agent for the Illinois Central System, with reference to ancestry in point of butter and milk production.

The bulls were left in the care of dairy farmers, as follows:

Tennessee—Brighton, Daniel McLennan; Covington, Marion S. Roane; Newbern (two bulls), Aubrey M. Fowlks and W. J. Hannah.

Mississippi—Ackerman (two bulls), B. G. Dotson and L. L. Cork; Canton, W. B. Smith; Centreville, C. N. Gallent; Coldwater, Ray R. Slocum; Courtland, G. E. Herring; Grenada, J. M. Rose; Holcomb, W. C. Curle; Le Flore, B. F. Dulweber; Natchez, Mrs. Gwinn; Oakland, W. C. Kuykendall; Port Gibson, R. L. Horton; Sardis, W. E. Terrill; Senatobia, H. P. Berry; West, J. T. Autry; Winona, H. H. Simpson.

A TRIP THAT MADE FRIENDS

When the Illinois Central started its Purebred Sire Special over the Southern Lines, it certainly hit the keynote of making friends for a business. The special was handled over the Grenada district of the Mississippi division on February 28 and 29. Large crowds greeted the train at each point, and great interest was manifested.

Many persons wondered why the Illinois Central was going to such an expense as this. They were informed by the able speakers just what this special train was meant for.

Probably the greatest interest on this trip was manifested at Senatobia, Miss., in Tate County. Senatobia boasts of a commercial club which is an honor to the town. When the special train arrived at Senatobia it was met by a large crowd. A special committee invited all on the special, including the train crew, to a banquet at the agricultural college. Automobiles were sent to the station, and we were taken to the banquet, where we enjoyed many interesting talks as well as an excellent meal.

Finally a committee was appointed, consisting of H. T. Perkins, J. H. Crowe, J. B. Snider, W. D. Rosenborough and E. E. Moore, to arrange for the purchase of a car of registered Jersey heifers. The two banks of Senatobia will finance the purchase. The local men who made talks were

C. H. Moffatt and Mr. Rosenborough. There were present about 150 business men of Senatobia and vicinity.

The demonstration train, in charge of H. J. Schwietert, general development agent, had twenty-four fine Jersey bulls on board. Prof. Hugh G. Van Pelt of Waterloo, Iowa, made the principal address. Professor Van Pelt is recognized as one of the leading dairy experts of the United States. He cited the examples of North and South Dakota, declaring that those states had come back into prosperity solely on the dairy business. He said Mississippi had about the finest dairy country in the world, on account of the mild and short winters. The herd has green pasture the year around, and being near to the markets of New Orleans and Memphis gives the location an advantage.

To say the railroad made many friends on this trip is putting it very lightly, for on every hand compliments were heard and thanks were extended to the management of the Illinois Central System for having sent such an interesting and helpful special into the state.—S. A. LAW, *engineer, Mississippi division.*

ENJOYED BANQUET AT DECATUR

Several members of our traffic department were among the 314 persons who attended the third annual Industrial Banquet of the Transportation Club of Decatur, Ill., held February 28 in that city. They reported it to be one of the most enjoyable affairs of its kind that they ever attended, mainly due to the fact that the business men of Decatur gave such splendid co-operation. T. C. Burwell, president of the Transportation Club of Decatur and traffic manager of the Staley Manufacturing Company, was active in the arrangements. Thomas A. Gilliland, Illinois Central operator at Maroa, Ill., was on the program as a monologist and was enthusiastically applauded. Others representing the Illinois Central were: J. V. Lanigan, general passenger agent; W. Haywood, general freight agent; J. W. Rhodes, foreign freight agent; F. J. Heick, traveling freight and passenger agent; G. W. Morgan, agent at Decatur; and G. A. Lavery, ticket agent at Decatur.

BE A PEPTOMIST

A pessimist closes an eye, wrinkles his face, draws up the corner of his mouth, and says: "It can't be done." An optimist has a face full of sunshine. He beams on you and says: "It can be done"—and then lets George do it. But a "peptomist" takes off his hat, rolls up his sleeves, goes at it, and does it.—*The Rotarian.*

Applies Railway Principles to the Church

General Superintendent W. S. Williams Tells Waterloo Audience How Illinois Central System Operates

The practical application of railway business principles to church progress was the theme of W. S. Williams, general superintendent of our Western Lines, in a paper read before the New Era committee of the Westminster Presbyterian Church at Waterloo, Iowa, March 5. Excerpts from this paper of particular interest to Illinois Central System employes are given below. After reciting statistics concerning the size and territory of the Illinois Central System, Mr. Williams went on to say:

WE have more than 60,000 employes, a large percentage of whom come from families residing on farms and in villages adjacent to our lines.

The officers of the Illinois Central System, almost to a man, have come up through the ranks from the bottom. With this condition, you can appreciate that a healthy relation is established between the people residing along its line and the railway company, because of the fact that many of them have fathers, sons or daughters in the railway service. On account of this close relationship between the railroad and the people along its line, something out of the ordinary must take place to prompt these people to say anything detrimental against our railroad or its service. On the other hand, they are generally singing praise, which is encouraging to the personnel.

Our officers, coming up from the bottom, have detailed knowledge of the property; they know the employes, and the employes know them. With such knowledge, they know where and how to work to strengthen the weak points in providing men and facilities adequate to keep pace with the times. The most up-to-date equipment is purchased, and great pride is manifested in keeping it in good, sound, workable condition at all times, making the handling of the business just as easy and comfortable as it can be made for the men who do the work.

No Secrets in Our Operation

We have no secrets in our operation. Every employe, from the lowest to the highest, is kept informed, as far as possible, as to what we are doing and what it is our desire to do. We have many operating units, every unit having a departmental head; and it is through these heads that instructions and general information are

stepped down. Officers passing over the road, knowing that the men are, in a general way, familiar with details, cost of equipment, supplies, etc., make it a point to talk over matters of mutual interest with the individual employe at every opportunity. In addition to this, efficiency records are kept whereby the work performed by one man or a group of men may be compared with that performed by others in the same class of work. The information obtained from these records is broadcasted among the employes, serves to stimulate a spirit of friendly rivalry and brings about an effort on the part of all for better results. This procedure makes the employe understand that his position is of some importance, thereby stimulating interest and pride in him, and makes him set forth an extra effort to do his work even better than he has done it before; also, it increases his confidence in the officers.

Our officers make frequent trips over the road, checking the details of the work performed by the individual, and require the greatest possible efficiency in the handling of the work. This character of checking,

W. S. Williams

coupled with the fact that the officers personally know a large percentage of the employes, being able to call many of them by their first names, has cemented a relation that is hard to break.

The officers of our road will go out of their way to compliment a man for doing a good piece of work quicker than they will to discipline an employe for making an error. The men appreciate this, and it tends further to stimulate pride and efficiency, so that they may be entitled to further compliments.

Confidence in the Management

All of this has caused the men to feel and know that the officers have confidence in them and are placing a certain amount of responsibility on the shoulders of the individual; and the employes feel free in going to the officers of our railroad in time of trouble, in preference to going to some outside tribunal for relief, knowing their requests will be given the most careful consideration and that the company will go as far in the direction of granting them as is legally and economically consistent.

Our president has repeatedly told the public in statements and addresses and has told the employes in messages to them that he wants to see the employes of the Illinois Central System prosper and that they are deserving of good wages and working conditions—the best, he has said, that economic conditions will possibly justify.

While the Illinois Central does not pay any greater salaries to its employes than are being paid by other railroads, our working conditions are better than on most of the other railroads of the country. Our management prides itself in keeping the property clean and sanitary—and all of this tends to make the employes like to work for the Illinois Central. This, as before stated, coupled with the fact that we select a great many of our employes from along the line, brings about a healthy and substantial condition.

Further, we have a hospital department, furnishing medical and hospital services to the individual employe for the nominal sum of 75 cents a month. This includes medical and surgical care until the patient is well, regardless of the seriousness of the case.

Other Privileges of Employes

After five years of employment, engineers, firemen, conductors, brakemen, switchmen, agents, operators, etc., are given annual transportation over the division on which they are employed. After ten years' service they are given annual transportation over one grand division, and after fifteen years' service they are given annual transportation for themselves and families over

the entire system. All employes, including those with less than five years' service, may, on request, obtain trip transportation over any part of the Illinois Central System, as well as over foreign lines.

Further, we have a pension system which provides that any employe who has been in the service for twenty-five years or more may be retired on a pension when, for any reason, he becomes incapacitated for further service. The amount of the pension is based on his years of service and his rate of pay for the last ten years, with a minimum payment of \$25 a month. Our pensioned employes are also given annual Illinois Central transportation in favor of themselves and dependent members of the family, and they may obtain, on request, transportation over any other railroad in the country.

Our officers hold meetings with their men, discussing with them methods for more efficient and economical operation, accepting from them such suggestions as they may have to offer in the way of improvement. These suggestions are not laid aside, but are given careful consideration, and those who offered them are advised as to the action taken.

Solicitation of Business Needed

While we are fortunate in having our line served by fertile territory, we must be mindful of the fact that competition is keen, that the tonnage alone produced in the field referred to would miss by far the mark necessary to support our line and pay a reasonable return on the investment, to say nothing of maintaining it in a satisfactory manner.

On account of keen competition, no one railway company can afford to sit still, depending upon tonnage sufficient to maintain it being voluntarily offered. In order to obtain its proportion of the business, the road must continually solicit freight and passenger traffic. For this purpose, each road has traffic experts assigned to certain territories, who travel continually in an effort to find new business. In practically every city of any consequence, offices are maintained in which are located city and commercial agents. The freight agent at the individual station spends more or less of his time in trying to influence the movement of traffic over the line he represents.

Right here in Waterloo, including all classes, we have seventeen hundred employes. These employes have formed a club known as the Illinois Central Employes' Business Association, and each member is setting forth his efforts to get business for our company.

The only way which the railroad has to

obtain revenue is through the sale of transportation, based on the ability of the line to give safe handling and quick delivery. The individual employe, in soliciting traffic, especially in a competitive field, can obtain it only through the promise that the service of the line he represents is superior to that of his competitor. With this before you, you can appreciate the efforts that an employe will put forth in trying to get freight or passengers solicited by him to the final destination promptly, in order that his promise may be fulfilled and the patron's confidence in him maintained.

The soliciting of traffic by these seventeen hundred employes is not an obligation imposed upon them by the management; their activities have grown out of a pride in themselves to do more in Waterloo for the railroad than some other group of employes may do at another point. The creation of this organization, however, has stimulated such a pride in the employes on the system that all of them are working along the same line. Such voluntary action on the part of the employes is appreciated, and complimentary letters are written them. The activities of this organization are also given frequent and appropriate publicity in the *Illinois Central Magazine*.

The employes like this spirit of co-operation and appreciation, and it makes them eager to do even better in order that they may secure further compliments and display greater loyalty to their company.

Applying Rules to Church Work

Mr. Williams then cited railway and religious statistics of the country and drew the following conclusions:

In view of all that I have said, my observation has brought me to the belief that the loyalty, co-operation and efficiency of our employes has been accomplished principally by the leadership of our president and the general policies adopted by him, coupled with the fact that the officers are personally acquainted with the employes and take part with them, as far as possible, in a social way, making them understand that a certain amount of responsibility rests on them, that they are cogs in the wheel and that if one fails in any way to function it has a tendency to slow up the whole machinery.

Everyone likes to be on the winning side, be it as a railway employe or as a member of the church. The members of this church have the leadership. In applying such principles, we must understand that we have a personal responsibility. We should be just as active in obtaining new members from the undeveloped fields as the railway employe is in obtaining new traffic.

But, in applying these principles, every member must realize that no one person can carry all the load. In order to be successful, any institution must have the moral support of its entire force, while a church must have not only moral but financial support as well. And, when new members are obtained, they must be safeguarded as far as possible in the same good way as is a shipment of freight which is obtained by an employe until it is delivered to its destination.

POPULAR AT SCHOOL

Edward Byers, son of E. O. Byers, agent, Leitchfield, Ky., is 20 years old. His early education was in the high schools at West Point, Morganfield and Leitchfield, Ky., where his father was agent. He was graduated from the Leitchfield High School in the class of 1920 and entered the University of Kentucky at Lexington in the fall of 1920, which makes him in his third year, or a junior in the College of Engineering, electrical and mechanical. Edward is a member of the Sigma Alpha Epsilon fraternity, assistant manager of the university baseball team, and belongs to the "Wild Cats." He was elected manager of *The Kentuckian*, the school yearbook, for 1923, which is considered one of the highest honors in the university. Edward has distinguished himself in every phase of college life.

Some Rapid Work in Signal Installation

*Protection of Kentucky Division Main Line
Completed Speedily by Careful Planning*

By JOHN PRICE,

Supervisor of Signals, Kentucky Division

THE Kentucky division has recently installed and placed in service about seventeen miles of single track automatic block signals on the Paducah district, between Fox Run and Graham, Ky. This signal installation completes the automatic signal protection of the entire main line of the Kentucky division between Louisville, Ky., and Paducah, Ky.—a distance of 225 miles. In addition, automatic signals protecting yard movements through Paducah yard extend southward to Mile Post J229 on the Tennessee division.

The installation comprises thirty-three automatic signals of the 3-position, upper quadrant, semaphore type; four high voltage, semi-automatic interlocking signals, and one semi-automatic dwarf signal. The automatic signals are the Hall Switch & Signal Company's style "L" bottom post mechanism type, operating on ten volts, direct current, furnished from a primary battery, and equipped with electric lights, controlled by the approach lighting circuit. The electric lamps were designed and furnished by the Aldon Engineering Company, Chicago, and are equipped with 3.5-volt, .025-ampere, single contact, bayonet, can-

Battery wells on flat car ready for distribution

delabra base bulbs. Current for the lights is furnished from four cells of a primary battery. The interlocking signals are the General Railway Signal Company's Model 2-A, semi-automatic, top post mechanism type signals, operating on 110 volts, direct current, furnished from ninety cells of Edison, Type B-4, alkaline storage battery. The dwarf signal, also furnished by the General Railway Signal Company, is a Model 3, semi-automatic, solenoid type.

Foundations Made at Paducah

In order to eliminate the use of revenue coal cars it was decided to make the concrete foundations at the source of the material supply. Accordingly, all the concrete foundations for the entire installation were made at the yard of the Paducah Sand & Gravel Company at Paducah. Sand, gravel and water were available at the yard, and it was necessary to transport only the cement and the forms. As Paducah storehouse is conveniently located near the gravel yard, the cement and forms were transported to the yard in shop trucks. Making up the foundations in this way resulted in the saving of four revenue cars a day which would otherwise have been used in a 75-mile non-revenue freight haul. Another saving was made in the amount of the concrete material used by reducing the size of the foundations from 4 feet by 4 feet by 5 feet to 3 feet 4 inches by 3 feet 4 inches by 4 feet, resulting in the saving of ap-

Derrick outfit placing mast on signal case

proximately one cubic yard of concrete and two tons of weight to each foundation. The finished foundations were loaded on flat cars, transported to Fox Run in one day and distributed between Fox Run and Graham the next day. Battery wells and battery, trunking and track circuit material were also distributed at the same time, thus completing the preliminary work of the installation by the use of one work train.

Automatic signal installations are distributed over several miles of railroad, and it has always been a problem effectively to distribute the material and carry out the work in an efficient manner. The old plan of work was to make the foundations in the field, distribute the signals and battery wells, then transport the workmen and material from one location to another on hand cars or motor cars until the installation was completed. This, at its best, was a wasteful process, resulting in numerous delays and much time lost. On a busy single-track railroad, transportation difficulties aggravated these conditions to such an extent that the progress of the work was often materially delayed and the cost of the work increased substantially beyond the estimated price.

Careful Preparations Made

In order to overcome these conditions and carry out the work in an efficient manner, it was decided to distribute all the material necessary for the preliminary work with the same work train that distributed the

foundations. All battery material was placed in the battery wells, with the result that when the battery wells were distributed they contained all the battery material necessary for each signal location. Trunking, capping, stakes, track circuit material and line material were distributed as the train moved over the road. The work train arrangement for this was as follows: Engine; material car No. 1 (containing trunking material); flat car containing concrete foundations; derrick; flat car containing battery wells; material car No. 2 (containing track circuit material); material car No. 3 (containing line material).

As a battery well is used at each signal location, the work train arrangement shown

Signal Foreman John Pfeiffer and Signal Wireman S. A. Sauer, who handled new signal installation

Foreman Pfeiffer and signal construction gang

New automatic signals in service. Train No. 195 is shown in the block

above makes it possible to unload both foundation and battery well at the same time, without having to respot the train or double back over the installation. The crew line-up was as follows: Derrick foreman, derrick engineer, derrick fireman, one clevis man, one level man, one gauge man, two helpers, six material distributors, usual work train crew.

The result of using the arrangement above was that after the work train had made one trip over the installation, all the material necessary to complete the field work was in its proper place, and the trunking work, track circuit work, line work and banking could then be carried forward to completion while the signals were being wired.

Several Things Done at Once

When the signal cases were received, they were unloaded at Nortonville and the local wiring installed in each signal. This consists of made-up lightning arrestor cable, motor cable, battery cable, terminals and local terminal board jumpers. In addition, lightning arrestors, signal mechanism, relays, ground wire, roundels and a cable outlet were placed in each signal case. While the wiremen were installing this work, the signal poles were fitted with ladders, lamp brackets, number plate clamps and conduit clamps. The conduit for the lighting circuit was cut and fitted and tied to each signal mast with wire, so that when the mast was placed on the case in the field the conduit was ready for installation. When all the work above was completed, the signal cases and masts were loaded on cars and distributed with the work train. In order to facilitate distribution, the following work train arrangement was used:

New signals in service; interlocking signals at left; automatic signal at right

engine; car with signal masts, fitted; derrick; car with signal cases.

Spectacle castings, pinnacles, electric lamps, ground rods and blades were loaded in the same car with the signal cases and were distributed as the train moved over the road. The work train arrangement above made it possible to unload signal cases and masts alternately, without having to double back over the installation. The crew line-up for this arrangement was as follows: derrick foreman, derrick engineer, derrick fireman, four signal fitters, two material distributors.

The average time consumed in unloading and fitting each signal location was seven minutes. After the signals were distributed and fitted, the only field work remaining was to hook up the line cables and battery. The signals were then ready for circuit test and inspection. They were in service ten days after distribution.

MADE MONEY IN TOMATOES

A. W. Ellington, trainmaster at Jackson, Tenn., writes: "J. L. Fincher, Hackleburg, Ala., planted one and one-half acres of late tomatoes in 1922. Shipments were made exclusively in small lots by express to New Orleans. The sales were not pre-arranged and the consignee refused the first shipments, but when he became familiar with the superior quality of the fruit messages were sent almost daily to increase the shipments to two cars a week. The sales were made without the assistance of a growers' association, and the one and one-half acres netted \$310. This goes to prove that the Birmingham district will produce wonderful vegetables, as well as plenty of iron."

Ranks Engine Next to His Wife and Home

*John A. Jones of the Louisiana Division Finds
No. 1075 Worthy of His Study and Affection*

IN the vernacular of the railroad, locomotives are invariably referred to by use of the feminine pronoun. Just why a locomotive should be "she" instead of "it" or "he" is one of the mysteries of grammatical usage, but Engineer John A. Jones of McComb, Miss., believes he can help to clear up the mystery—to some extent, at least.

Engineer Jones advances the explanation that engineers began referring to their locomotives as "she" back in the early days because of the great affection which they came to hold for them. It was a term of endearment, of fondness, and pride when an engineer referred to his locomotive and "her" qualities. And the usage has stuck with the passing years, while engineers have grown even fonder of the massive Amazons which respond so willingly to their every touch.

For about three years Engineer Jones has been the master of Engine No. 1075, pulling passenger trains Nos. 5, 6, 33 and 34 over the Louisiana division between Canton, Miss., and McComb.

"She is the best engine the Illinois Central owns," is the compliment which he pays his locomotive, and he says it with an earnestness that adds conviction to the statement. "I am not ashamed to say I love her. She occupies a place in my affection next to that held by my wife and my home."

Studying a Locomotive

In offering a further explanation of the close feeling an engineer has for the locomotive in his charge, Mr. Jones points out

John A. Jones

than an engineer, while on duty, has his thoughts centered upon the engine to a greater degree than any other railway workman centers his thoughts upon the tools he works with. On the road, especially if he has a passenger run, he doesn't have an opportunity to exchange more than

a few words with the only other person in speaking range, the fireman. He bends every thought upon performance of the engine, and he comes to know it much more thoroughly than even a clerk knows the form sheets he works with, the stenographer her typewriter, or the operator his "bug."

"The engineer's ear is tuned to every noise about the locomotive," Mr. Jones explained, "and from out of all the roar and clamor he can detect the least sound that tells him that something is wrong. I think it is like a mother with her baby. No one else can distinguish between the seemingly meaningless sounds that constitute the baby's effort at talking, but the mother knows them and can interpret every one."

Engineer Jones takes great pride in the maintenance and performance of his engine, and he also takes great pride in doing his

Mr. Jones' locomotive, No. 1075

work well—handling his train for the safety and comfort of the passengers entrusted to his care. He has never struck an automobile, and no person has ever been injured in any way around his engine—and he has been driving an engine more than twenty-six years.

Engine in Good Condition

Engine No. 1075 has traveled something like 90,000 miles since she came out of the back shop from a thorough overhauling in October, 1921, and she is now in good condition.

Engineer Jones stands high in the estimation of the officers and employes of the Louisiana division. He is now serving his third 3-year term as chief engineer of Division No. 196, Brotherhood of Locomotive Engineers. Beginning life without means and having no inheritance, he has acquired a comfortable position in life through the exercise of thrift. He owns a magnificent home at 209 Fifth Avenue, McComb, and is a stockholder and director in the State Bank and Trust Company of McComb, one of the largest banking institutions in that section of the state. He is devoted to the interests of McComb, especially the schools, and has served two terms in the city council, declining re-election at the expiration of that period of service.

"I take my greatest pride in my home, my city and the Illinois Central Railroad," he said. "I believe every man owes it to himself to give his best service to his employer and to take an interest in the life of the community in which he lives.

A Believer in Thrift

"I have always kept in mind setting aside something each month out of my earnings to take care of myself when I give up work, and I think thrift is something that should be practiced by every young man. Too many are content to let the years go by without laying up something for a rainy day, excusing themselves by saying that their earnings will not permit them to save. That is not true, for most of us, at least. Almost any person can save by denying himself, and in the long run he is much happier for doing it."

Engineer Jones believes that one of the greatest problems confronting the engineers has to do with the hazard of striking automobiles at grade crossings. The engineer should exercise every possible precaution, and, since he does that, the automobile driver should be just as considerate. It is Mr. Jones' observation that placing a watchman at grade crossings only serves to increase the probability of accidents, and he explains that by saying that automobilists come to depend upon the watchman in-

Mr. Jones' home at McComb, Miss.

stead of their own senses and in the end grow careless—so careless that not infrequently they run the watchman down.

Mr. Jones is always on the lookout for new business for the company, and he frequently turns in tips which result in securing the long haul on freight and passenger business and give his friends the pleasure and comfort of Illinois Central service.

Engineer Jones is a member of the Masonic fraternity. He has taken all the York Rite degrees and is a Shriner.

A REMINISCENCE OF 1878

Once upon a time I was running a little Danforth & Cook engine on what is now a branch of the N. C. & St. L. Railroad, running between Tracy City and Cowan, Tenn., twenty-two miles long.

We made two trips over this road daily. Coming in on the first trip, my regular fireman was taken sick, and the master mechanic gave me a green fireman who had fired in the yards only a week or so.

This engine was equipped with the old style tank valves that regulated the water from the tank to the boiler; it had two pumps, but no injector. While we were running along, the pump stopped working. I thought the tank valve had jarred down on account of the rough track, as I found the valve cut off. I put the valve on again, and pretty soon the pump stopped working again. Looking around, I found the tank valve down again.

I thought then I would watch the fireman to see if he shut it off, which he did when he thought I wasn't looking. I asked him what he meant by doing that. He said: "The engine steams better with that down."

I asked him if he wanted me to burn the boiler up. He looked at me in an odd way and said: "You would play hell burning iron."

I tried to explain to him the importance of keeping water on the crown sheet, but he only laughed and said: "You must think I am a fool."—P. S. LAW, pensioned engineer, Vicksburg division.

Salesmanship the Duty of Every Employe

*Dreams of the Railway Pioneers Will Be
in Vain Unless We Do Our Part Today*

By L. H. McCAIN,
Brakeman, Indiana Division

This article is written in a spirit of good will toward all, not as criticism, neither as praise; for who am I that I should dictate to you; but as man to man, it is a challenge to better service, that our commodity may sell in the markets of trade that deal in transportation.

THE introduction of this topic may be a little vague to the average railway employe.

Railway men work by instinct born of years of experience and a strict compliance with a set of rules, and naturally become narrowed to some of the important questions relative to their work.

Salesmanship is one of those questions. Any business has two sides, production and distribution; one cannot succeed without the other. Production without distribution would clog the channels of activity until they would not function, and distribution without production is impossible.

Most of our jobs have to do with the production of transportation, but I have been impressed by the fact that we are salesmen of a commodity of such vast importance to the welfare of this nation that it is time that we gave some thought to the "distribution side" of the game. Our officials in higher circles have often tried to impress upon us this idea, but as yet we have given it but little thought.

Sacrifice Shown in Service

In the building of this nation in a field of such natural resources as we have, there must need be "arteries" in order that the natural circulation may exist. Pioneer railway men dreamed of this wonderful service to mankind and sacrificed much in order to bring it about, but as yet their dream is largely unfulfilled.

Not long ago an old railway man passed to his reward. Those who knew him know of the life of toil and hardship he spent in order to maintain service on one of our branch lines. No night was too cold or stormy for him to go when called.

Sacrifice—yes, drops of blood have been shed for every mile of track; and as they dropped, one by one, faith in the great undertaking grew stronger, the dream grew brighter. Shall this sacrifice be unrewarded, this dream not come true?

Not only did the pioneer sacrifice, but he promised, obligated himself to this serv-

L. H. McCain

because of faith in the men who did the work.

Salesmanship in the Shoe Business

Upon one of the bald knobs in the Switzerland of Indiana, a geographically known as Brown County, back in the '70's was born a man who was to become a master shoe manufacturer. No doubt barefooted until of age, he realized that his greatest service to mankind would be in making shoes.

The sharp rocks, mud and minerals taught him the kind of shoes to make, and something spiritual, no doubt, gave him an unusual desire to serve his fellow man and made of him a master in the art of distribution. His reasoning was: Men need shoes; I'll make them; I'll convince men of this need and sell them.

In a mid-western town in the spring of 1914 I met that man for about ten minutes, and I have never seen him since. I was buying a pair of shoes; he came in and watched me fit them.

He asked, "What do you do?"

I told him I was a railway brakeman. He asked me what road, and I told him the old "High Dry."

He said, "That road runs through Brown County, does it not?"

I informed him that it did.

He said, "I am going to give you a pair of shoes, the best pair of shoes you ever had on your feet," and he took my shoe number and was gone.

When he arrived in Boston he sent me the shoes, and they were the best shoes I ever wore. Whenever I can buy that brand of shoes I do so, and I have been the means

ice, to maintain the daily schedules, to assume risks, in short, to deliver the resources of the country at a designated place at a certain time in order that progress might go on. Upon this "word of honor" obligation, the whole system of transportation has been built and maintained, and the only reason these obligations could be taken was

of selling many pairs of them simply by telling this story.

A moment of personal contact, his sense of the need, his ability to give his "word of honor," backed by his faith in this honor of his shoemakers—these gave him confidence to guarantee to me the best shoes I ever wore; then he gave them to me, having faith enough in his fellowmen to believe that I would sell his shoes—shoes that are guaranteed not to pinch the feet, guaranteed to be all leather, oak-tanned, and guaranteed to outlast any pair of shoes on the market, because they were made at the bench of a master shoemaker.

Not long ago I rode on a train with a fellow passenger brakeman, a very close friend of mine; his is a morning run and mine an evening. I said to him, "You have the better job," and he asked why.

The Attitude of Our Passengers

I told him: "In the morning your patrons start out with renewed hope; the disappointments of yesterday are lost in a night's rest; faith has been restored; they look into the future; new conquests are before them, and the spirit of the pioneer is upon them; they whistle, they sing, they laugh. But in the evening, passengers become thoughtful, uncertain whether success or failure will be theirs. Possibly they have failed to keep an appointment, or goods were not delivered or, if delivered, were damaged."

The faces of our associates, the public, tell a wonderful tale, and that tale is the success or failure of someone connected with the arteries of our transportation system; it may be the man in the tower ahead, it may be the man who packs the journal boxes, or it may be the manner in which you or I say, "Good morning," but so closely connected is our job with the great enterprises of business that it is always some part of us that has failed or succeeded.

Ours is a wonderful opportunity, personally connected as we are with the highly charged line of industry; it lies within our power to sway the minds of our associates far more than we think; a word of cheer may lighten the whole vision of some veteran of the grip and send him to his customers with a determination to succeed. A kindly smile and a helping hand may do much to help those who come under our care.

"Personal contact" is an all-important question; this is the thought we have been groping for; this is the doctrine we should try to preach, to show our fellow workers how they are connected with the sales force.

In the country where I grew up there was a party-line telephone, about twenty telephones on one line. The service varied; sometimes all the receivers were down at one time, and when they were the service was very poor. When we took down our receiver, we disconnected our batteries, and the line became weaker. Too many of us worked that line for what it could give and not for what we gave. This illustration is only too true of the transportation systems today.

The Influence of Personal Contact

Not long ago my children and I made a railway trip, and as the conductor collected fares he gave each child half a stick of gum. I watched that man and noticed that he did the same thing all day. It was a little thing, but it radiated much goodwill; it caused a contagion of fellowship among the passengers, and a spirit of chivalry was predominant throughout the trip. I have thought of that man since; his neighbor is every man, woman and child along his two hundred miles of railroad. He can call each one by name; he knows their business, their religion and the condition of their health. They call him "Conductor Joe"; hardly anyone knows his real name. It doesn't matter; he is the man who carries them into the land of the future, away from the cares and toil of the present, into places of hope and success.

Personal contact—who can measure the extent of our influence as we go about our daily duties?

A man stopped me in the aisle the other day and said to me: "You men are sales-

The Song of the Spike

A rusty railway spike am I
Who holds the rail against the tie.
With sledges I am driven deep
So that the rail won't spread or creep,
And there I stay from sun to sun
Clamping the rail so that the trains
may run.

In stormy weather, hot or cold,
You'll find me there with a death-
like hold;
And through the stillness of the night
I lie and grip with all my might,
And folks who ride in luxury
Will never know the strain on me.

They put me there to do my task;
I don't complain or questions ask.
I only know I must not fail
To hold the tie against the rail.
I'm just a rusty spike, 'tis true,
But I've a man's size job to do.

—JOSEPH S. DERAMUS, Associate
Editor, *The Railway Review*.

men; you sell transportation." Sometimes I meet passenger service men who are grouchy, ill-willed, suspicious; others are hearty, well met, jovial and at your service all the time. These latter we have confidence in and give our confidences to; in short, they sell us our transportation; the former we patronize because we must.

Each Has a Part in Selling

But, fellow workman, let that train be late, or some part break down, or the coaches be stuffy and the lights poor, and it takes some mighty good salesmanship to enlarge the order. I visited our back shop in my desire to connect this force and to talk to the workers there about service. I asked a millwright about salesmanship, and he said: "I do not know anything about it; I do not get a chance; I work here all the time; I lack the opportunity to sell; mine is the production side; I build." And I could say no more. I went away, but not disheartened for he had said: "I build."

Millwright, get the vision; I am but the contact; they buy what you build.

Two men met by appointment in a hotel breakfast room not long ago. After their business engagement was over, one arose, watch in hand, and said, "I must go; the 7:15 train is about due." The other pushed a button, ordered a motor car from the man who answered his summons and, with liveried chauffeur in attendance, went his way.

The first man approached the station, bought his ticket and reflectively asked, "On time?"

The agent answered, "On time."

That ticket that our friend bought was but a receipt for money paid for a promise to be delivered at his destination as per the advertised schedule of the train leaving at 7:15. The cheery answer, "On time," was a guaranty backed by the lives of every railway employe on the line.

Tradition Must Be Carried On

Our friend was satisfied and went on his way. The agent, growing old in the service, sat down and mused: "I sell transportation; I have sold tickets here, lo, these many years," and as he day-dreamed, his mind went back into his boyhood days, and he recalled his associates who had passed out, one by one. All were gone except Hogger Bill and Conductor Joe. Yes, they would be on time; never yet had they failed, and then his mind went out into the night, to that distant terminal where they lived, and he saw a hundred men toiling in the night, preparing the train for another journey.

He saw the black and oily forms of the

shopmen as with haste they went about their work; by the light of the torches they held in their hands, he looked into their faces and saw the steel determination to succeed: Hogger Bill and Conductor Joe must go "on time." He followed the train over distant miles as it sped on into the night, through rain and fog, sleet and snow, across the valley and up the hill, bearing its precious burden of joy and sorrow on into another day.

And then they came, at 7:15. A hearty "Good morning," and they were gone.

Hogger Bill and Conductor Joe will soon pass away, and with their going will fall upon us, the younger railway men, the burden and responsibilities of fifty years.

The old agent shook his head: "I'll sell tickets if I can, but it takes a lot of salesmanship to sell a promise that has already been broken."

The dream of the pioneers was service, and they never dreamed that we would fail where they had given so much.

WHERE ALL MAY SEE

Above is shown the Tennessee division fuel board. It is located at Fulton, Ky., in the north end of the park between the Memphis district and the Cairo district main lines. It is eight and one-half feet wide, seven feet high and electrically lighted, so that the figures may be read at night.

The figures which are posted on the board show the Tennessee division fuel performance for 1917, 1918, 1919, 1920 and 1921, the 5-year average, last month's performance and the current performance, compared with the performance of the competing divisions over the same periods of time. The small figures in the lower right-hand corner are those of the competing divisions for the previous month.

Celebrates Golden Wedding Anniversary

*John M. Egan, Veteran Builder of Railroads,
Is Brother of General Superintendent at Memphis*

ON the 20th of January there was celebrated at Amboy, Ill., the fiftieth wedding anniversary of Mr. and Mrs. John M. Egan. The 50-year bridegroom is a brother of Colonel A. H. Egan, general superintendent of the Yazoo & Mississippi Valley Railroad at Memphis, and is an uncle of J. M. Egan, now with the car service division of the American Railway Association. His fifty-two years of railway service, during which he played an active and an important part in pioneer railway development and rose to a railway presidency, were begun with the Illinois Central System as a machinist apprentice in our Amboy shops.

Mr. and Mrs. Egan were married at LaSalle, Ill., while Mr. Egan was employed at St. Louis in the engineering department of what is now the Wabash Railway, and throughout the balance of his eventful railway career Mr. Egan had the encouragement and assistance of a devoted helpmate. The recent anniversary celebration was attended only by the immediate members of the family. Those present were one daughter and three sons—Miss Mary Josephine Egan, who resides with her parents; Frank J. Egan, of New York; John M. Egan, of Anderson, Ind., and Louis H. Egan, of St. Louis. Another daughter, Mrs. J. S. Stokes, of Philadelphia, was unable to attend.

Father Helped Build Our Line

Mr. Egan was born March 26, 1848, at Springfield, Mass. In the summer of 1853 he came to Illinois with his mother and two younger brothers, his father having preceded the family in 1852 to take charge of the masonry and brick work of the Northern Division of the Illinois Central. The family located at Amboy, where the senior Egan had his headquarters, the division machinery and car shops being then under construction at that point. Actual construction work on the charter lines of the Illinois Central was begun in 1852, and Amboy, being one of the principal points on what was planned to be the main line of the proposed railroad, was much in the eyes of the railway world.

John M. Egan attended the public schools at Amboy, and on April 4, 1864, he entered the service of the Illinois Central as a machinist apprentice. After serving a term of three years, an illness caused him to discontinue his work in the mechanical department, and a position was offered him as

office and messenger boy in the division superintendent's office. Later he was transferred to a clerkship in the office of the freight agent, and thence he went into the division engineer's office.

When the division engineer at Amboy was appointed chief engineer of the North Missouri Railroad (now a part of the Wabash), with headquarters at St. Louis, he offered young Mr. Egan the position of chief clerk, and the offer was accepted. Mr. Egan was with the St. Louis road six years, and during that time he was promoted in the different branches of the engineering department, until, in 1875, he was assistant chief engineer.

A Railway Builder in Canada

In January, 1876, Mr. Egan was appointed chief engineer of the Southern Minnesota Railway (now a part of the Chicago, Milwaukee & St. Paul), with headquarters at LaCrosse, Wis. Two years later he was given the duties of a superintendent in addition to his engineering work. It was during his connection with this railroad that it was extended from Winnebago, Minn., to the James River in South Dakota and from Egan, S. D., to Sioux Falls. Mr. Egan received his appointment to the Minnesota railroad from Sir William C. Van Horne, builder of the Canadian Pacific Railway, who was previously connected with the North Missouri, the Southern Minnesota and the Chicago, Milwaukee & St. Paul, and on the last day of 1881 he accompanied Van Horne to Winnipeg, Manitoba, and the following day entered upon his duties as general superintendent of the Canadian Pacific, Western Division, also being in charge of construction. Contracts were awarded to construct the line west from Brandon, Manitoba, to and through the Rocky Mountains and other mountain ranges west of Calgary, Alberta, connecting with the line from the west, and also to complete the road, part of which had been built, eastward from Winnipeg to Port Arthur, on Lake Superior. During Mr. Egan's six years with the Canadian Pacific Railway, the road was completed to the Pacific Coast and eastward from Winnipeg to Montreal, and several branch lines were built.

During the latter part of 1886 Mr. Egan accepted the position of general superintendent, in special charge of construction, of the St. Paul, Minneapolis and Manitoba (now the Great Northern Railway) under

the late James J. Hill. During the period of his employment the line was extended from Minot, N. D., to Helena, Mont., and a number of branch lines were built and placed in operation. Two years later Mr. Egan became connected with the present Chicago Great Western Railroad as general manager, and later he became its president. In 1896 he was elected vice-president and general manager of the Central of Georgia Railway and the Ocean Steamship Company of Savannah, with headquarters at Savannah, Ga. That was before the Illinois Central System acquired control.

Saw Railway Service in Brazil

Leaving Savannah in 1904, Mr. Egan located at Kansas City, Mo. When the Union Station Company at Kansas City was organized, Mr. Egan was chosen its president, and the work of his administration consisted chiefly in the purchase of required property, the preparation of plans for the terminals and the securing of necessary franchises. When these were obtained, he went to Brazil as vice-president of the Brazil Railway (incorporated in the United States). In 1910 he returned to Kansas City as president of the street railway and electric light properties. He retired in 1916.

In the fifty-nine years since Mr. Egan first entered railway life there have, of course, been monumental changes in every-

thing that goes into the construction and operation of railroads.

"When I went to work for the Illinois Central only one make of locomotive was used on the railroad," he said to a representative of the *Illinois Central Magazine*. "The manufacturer was Rogers, Paterson, N. J. The cylinder dimensions were 12x24, 14x24 and 16x28. All were wood burners. There were no injectors; brass pumps to supply water to the boilers were bolted to the frames, with the plunger fastened to the cross head. An angle-iron for a foot rail went around the engine, level with the cab floor, and there was a brass hand rail around the engine; these were used by the fireman when placing melted tallow in the oil cups on top of the steam chests to lubricate the steam chest and the cylinders. The tallow was carried in a can that was kept on a receptacle fastened to the boiler head above the firebox door. The fireman performed this duty when the engine was shut off, going down grade or approaching stations.

Decorations on Old Locomotives

"On these early engines there was no way to regulate the cylinder cocks from the cab. The cocks were placed on the side of the cylinder, and when it was necessary to open or close them the fireman would operate them with his foot from the foot rail. Copper was used for fireboxes, for the

John M. Egan

covers of cylinders, and for domes, sand boxes, hand rails, flagstaff, and the name plates at the end of driving wheel axles. These plates bore the name of the maker of the engine. The jacket bands around the engine were of brass and all were kept polished by the fireman after each trip. Large candles one and a half to two inches in diameter were used in the headlights, and the engineers polished the reflectors daily. They also packed the pumps when that was required, ground all the valves, and removed the cylinder heads and set out the packing when any leakage developed.

"Locomotives were named after famous personages, their tenders and cabs were striped with gold leaf, and picturesque scenes painted in oils ornamented the sides of the tender. I well remember the wave of adverse criticism among railway men when Commodore Vanderbilt issued an order discontinuing the use of brass for covering certain parts of the locomotives on the New York Central."

The changes that have taken place in the transportation department are fully as great as those in the mechanical department, according to Mr. Egan.

"Telephones, of course, were unknown in those days," he said, "and the movements of trains were governed by schedules and rules printed on the timecards. Cars were coupled with link and pin; there were no airbrakes. Passenger cars were heated with wood stoves and lighted by two dim lamps, a candle in each lamp. Trucks were of the 4-wheel type, and baggage cars were provided with a staff and brake wheel inside the car which were used by the baggageman in case danger signals were sounded. Passenger trains consisted of three cars, one baggage car and two passenger coaches, the latter seating from forty to fifty passengers. Freight cars were of ten and twelve tons capacity; there were no refrigerator or tank cars.

Plenty of Work for the Brakeman

"It was the brakeman's duty to be out on top of the cars, no matter what climatic conditions were, to apply the brakes when descending steep grades, when approaching stations, or when the stop signal was sounded by the engineer."

When Mr. Egan began his railway career iron rails weighing forty to fifty-two pounds to the yard were used: The rails were fastened with so-called chairs spiked to the cross-ties at the end of each rail. Cross-ties were ten to twelve feet long and ten inches thick, with not less than an 8-inch face. Truss bridges were of wood, of the type known as the Howe truss.
