"The constructive efforts of our committee are being and have been thoroughly examined into by numerous important independent and impartial sources, resulting in each case in recommendations that bonds be deposited with the committee."

DETROIT & MACKINAC.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for a certificate authorizing the abandonment of its Hurst branch, from La Rocque to Hurst, Mich., 5.08 miles.

GRAND TRUNK PACIFIC.—*To Pay Interest.*—J. P. Morgan & Co. announce that the Bank of Montreal has been ordered by the

Dominion of Canada to pay the coupons due in November on the Alberta bonds.

INTERNATIONAL-GREAT NORTHERN.—*To Buy Bonds.*—J. & W. Seligman & Co. and Speyer & Co., reorganization managers, have arranged to purchase the first mortgage 6 per cent (extended to 7 per cent) bonds of the International & Great Northern, due November 1, not heretofore deposited under the plan. The bonds should be presented on that date to the Equitable Trust Company, where they will be purchased at par. When the new International-Great Northern securities are issued, as it is expected they will be later in the year, the old first mortgage bonds will be cancelled and the mortgage discharged. Interest due November 1 will be paid by the receiver upon the surrender of the coupon.

NORFOLK & WESTERN.—*To Redeem Equipment Notes.*—Holders of the following equipment gold notes issued under the agreement dated January 15, 1920, are requested to present them for payment on or after January 15, 1923, at the Guaranty Trust Company of New York: Notes maturing from January 15, 1924 to January 15, 1935, inclusive, and bearing numbers 1378 to 1835, 1837 to 2294, 2296 to 2753, 2755 to 3212, 3214 to 6885, all inclusive, for $1,000, each, and D1 to D10, E1 to E10, F1 to F10 and G1 to G10, all inclusive, for $100, each, at 103 per cent of par, and accrued interest.

TEXAS & PACIFIC.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $810,000 of 5 per cent certificates to be issued by the Commercial Trust Company of Philadelphia and to be sold at not less than 97½.

WESTERN MARYLAND.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to issue $450,000 of 5 per cent equipment trust certificates to be issued by the Commercial Trust Company of Philadelphia.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to or received from the several roads the following amounts:

Charleston & Western Carolina Railway Company	$1,450,000
Georgia Southern & Florida Railway Company	50,000
Delaware & Hudson Company paid Director General	1,500,000
Beaumont Wharf & Terminal Company paid Director General	19,935

Dividends Declared

Central of New Jersey—$2.00, quarterly, payable November 15 to holders of record November 10.

Cleveland & Pittsburgh—Guaranteed, 87½ cents, quarterly; special guaranteed, 50 cents, quarterly; both payable December 1 to holders of record November 10.

Trend of Railway Stock and Bond Prices

	Oct 31	Last Week	Last Year
Average price of 20 representative railway stocks	69.50	72.40	56.00
Average price of 20 representative railway bonds	86.40	87.13	77.35

THE STATE OF UTAH, through Attorney General H. H. Cluff, has petitioned the Interstate Commerce Commission to be allowed to intervene in the proceedings of the Southern Pacific for permission to acquire control of the Central Pacific. The state intends to support the contention of the Southern Pacific and to oppose the application of the Union Pacific, which objects to the granting of the Southern Pacific application.

THE ST. LOUIS-SOUTHWESTERN has filed a petition in the Supreme Court of the District of Columbia for a writ of mandamus compelling the Interstate Commerce Commission to permit representatives of the railroads to inspect records of the Bureau of Valuation relating to the valuation of its property. The commission had denied the request of certain carriers to be permitted to examine and make copies of various detailed notes in possession of the bureau, unless and until such notes should be offered in evidence in a valuation hearing or in a court.

Railway Officers

Executive

John J. Mantell, manager of the New York region of the Erie, has been appointed vice-president of the New York region, with headquarters at New York City. Mr. Mantell was born at Elmira, New York, and was educated in the public schools of that city and at Elmira Academy. He began railway work in June, 1899, as a clerk and stenographer in the superintendent's office of the Erie. Later he served consecutively as yard clerk, chief yard clerk, yard master and general yard master at Croxton and Jersey City, N. J., and Susquehanna, Pa. He then became special agent in the office of the general superintendent at New York and afterwards served consecutively as trainmaster of the Delaware and Jefferson divisions, terminal trainmaster at Jersey City and superintendent of the Wyoming division. In 1915 he was appointed superintendent of terminals at Jersey City and in May, 1917, became general superintendent, Lines East. During federal control, he was terminal manager at Jersey City for the Eastern and Alleghany regions and at the termination of federal control was appointed manager of the New York region.

J. J. Mantell

W. E. McGraw, whose promotion to vice-president of the St. Louis Southwestern of Texas, and general superintendent of the St. Louis Southwestern lines, with headquarters at Tyler, Texas, was reported in the *Railway Age* of October 14, was born in 1875, at Fond du Lac, Wis. He entered railway service as a fireman on the Chicago, Milwaukee & St. Paul in 1893. From 1898 to 1900 he was a brakeman and conductor on the Wisconsin Central, and for the next six years he was superintendent of terminals of the Denver & Rio Grande and the Colorado & Southern at Denver, Colo. In 1906 he became superintendent of terminals for the Grand Trunk, and from 1907 to 1910 he was a trainmaster on the El Paso & Southwestern, with headquarters at El Paso, Texas. In 1910 he was promoted to superintendent of the lines in Mexico, which position he held until 1916, when he entered the employ of the St. Louis Southwestern as supervisor of terminal service of the entire line. He was promoted to superintendent of the Northern division in 1920, which position he held until his recent promotion.

W. E. McGraw

Franklin G. Robbins, vice-president of the Chicago & Erie, has been appointed vice-president in charge of the Chicago

region of the Erie Railroad. Mr. [illegible] became vice-president of the Chicago & Erie in May, 1922, and a photograph and a brief biographical sketch of him appeared in the *Railway Age* of June 3.

R. S. Parsons, vice-president in charge of operation of the Erie, has been appointed vice-president of the Ohio region with headquarters at Youngstown, Ohio.

W. A. Baldwin, manager of the Ohio region of the Erie with headquarters at Youngstown, Ohio, has been promoted to vice-president in charge of operation with headquarters at New York. Mr. Baldwin was born at Elmira, N. Y., on July 26, 1876, and was graduated from Cornell University in 1896. He began railway work the same year as a chainman for the Erie. In May, 1899, he was promoted to rodman and some time later to assistant engineer. From March, 1902, until September, 1903, he served as trainmaster. He was then appointed division engineer and retained that position until 1909, from which time until December, 1910, he again served as trainmaster. He was promoted to superintendent of the Chicago and Lima divisions in 1910 and was transferred to the Jefferson and Delaware divisions in May, 1912, after which he was promoted to general superintendent, Lines East of Salamanca, and in 1917 was transferred to the Lines West with headquarters at Youngstown. He was appointed transportation assistant in June, 1918, and a month later was appointed general manager, in which position he served until April, 1920, when he was appointed manager of the Ohio region. In this position he was serving at the time of his recent advancement.

W. A. Baldwin

Financial, Legal and Accounting

J. N. Davis, whose promotion to commerce counsel of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, was reported in the *Railway Age* of October 28, page 824, was born on February 27, 1880, at Clermont, Mo. After graduating from Grand Island College in 1906, he entered the employ of the Fidelity & Casualty Company of New York, in the Chicago office, where he was assistant trial attorney. He remained in this capacity until May 1, 1911, when he entered railway service as assistant general solicitor of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, which position he was holding at the time of his promotion to commerce counsel.

J. N. Davis

L. L. Atwood, whose promotion to contract attorney of the Missouri Pacific, with headquarters at St. Louis, Mo., was reported in the *Railway Age* of October 21, was born on July 1, 1872, at Bridgeton, Mo. He was graduated from Washington University, St. Louis, Mo., in 1893, and entered railway service as assistant claims attorney of the Missouri Pacific, with headquarters at St. Louis, Mo. He held this position until his recent promotion.

J. M. Salter, treasurer of the Texarkana & Fort Smith, has been appointed assistant treasurer of the Kansas City Southern. **H. H. Hoar** succeeds Mr. Salter on the Texarkana & Fort Smith.

A. K. Atkinson has been appointed assistant auditor of the Wabash with headquarters at St. Louis, Mo. Mr. Atkinson is 30 years of age. He entered railway service as an office boy in the office of the general auditor of the Denver & Rio Grande in October, 1909. He held various clerical positions in the office of the auditor of disbursements and, after serving as traveling accountant for several years, was appointed special accountant. On April 1, 1919, he entered the service of the Railroad Administration as field accountant and in July, 1921, was advanced to the position of supervising accountant. In March, 1922, he was appointed assistant to the comptroller and held this position until the time of his recent appointment.

I. C. McGee has been appointed treasurer of the Kansas City Southern, succeeding H. Visscher, deceased. Mr. McGee was born at Holt, Missouri, in December, 1873. He began his railroad career with the Chicago, Burlington & Quincy (Hannibal & St. Joseph) as a telegraph operator in 1887 and served in various capacities including that of bridge train dispatcher at Kansas City, which position he resigned on November 1, 1898, to engage in business. He returned to railroad service in September, 1900, as clerk in the auditing department of the Kansas City Southern and in April, 1903, was elected treasurer of the Texarkana & Fort Smith with headquarters at Texarkana, Texas. He remained in that capacity until January, 1915, when he was elected assistant treasurer of the Kansas City Southern with headquarters at Kansas City, Mo., and held the latter position at the time of his appointment as treasurer.

I. C. McGee

Traffic

T. A. Ward, chief clerk in the freight claim department of the New York Central at Buffalo, N. Y., has been promoted to district freight claim agent, with headquarters at Chicago, succeeding C. J. Lindemann, deceased.

G. E. Schnitzer, assistant general freight agent of the Chicago, Rock Island & Pacific, with headquarters at Little Rock, Ark., has been promoted to general freight agent. He is succeeded by **H. E. Rilley,** chief clerk to the vice-president and freight traffic manager, with headquarters at Chicago.

W. L. Nichol, assistant general freight agent of the Nashville, Chattanooga & St. Louis, with headquarters at Nashville, Tenn., has been promoted to general freight agent succeeding **C. Barham,** resigned to accept the position of chairman of the Southern Freight Association, with headquarters at Atlanta, Ga. Mr. Nichol was born on January 5, 1872, at Nashville, Tenn., and entered railway service as a delivery and bill clerk in the local office of the Nashville, Chattanooga & St. Louis at Atlanta, Ga., in 1891. In 1892, he became a claim and rate clerk in the general freight office at Nashville, Tenn., which position he held until 1897, when he was promoted to assistant local agent at the Tennessee Exposition, with the same headquarters. A year later he was promoted

to soliciting freight agent with the same headquarters, which position he held until 1899, when he was promoted to commercial agent with headquarters at Chicago. In 1901, he was transferred to Nashville, Tenn., where he remained until December 1, 1912, when he was promoted to assistant general freight agent, with the same headquarters, which position he was holding at the time of his recent appointment.

Operating

G. E. Donnatin has been appointed assistant trainmaster of the Los Angeles division of the Southern Pacific with headquarters at Indio, Cal.

E. J. Sturdevant has been appointed superintendent of transportation of the Minneapolis & St. Louis and the position of superintendent of car service has been abolished.

C. E. Green, trainmaster of the Chicago, Rock Island & Pacific, with headquarters at Cedar Rapids, Ia., has been promoted to superintendent of the Des Moines Valley division, with headquarters at Des Moines, Ia., succeeding C. T. Ames, deceased. He will be succeeded by **C. F. Redans**, trainmaster, with headquarters at El Reno, Okla. **C. G. Adams**, chief clerk to the vice-president and general manager has been promoted to trainmaster of the Chicago Terminal division with headquarters at Chicago.

G. L. Whipple, whose promotion to general superintendent of transportation of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, was announced in the *Railway Age* of October 28, was born on January 30, 1872, at Keithsburg, Ill. He entered railway service in 1888 as a telegraph operator on the Chicago, Milwaukee & St. Paul and held this position until 1894, when he was promoted to train dispatcher, which position he held until 1900. On the latter date he was promoted to chief dispatcher and held this position for the next six years. His next promotion was to trainmaster, which position he held from 1906 to 1910, when he was promoted to assistant superintendent of transportation. Two years later he was promoted to superintendent of transportation and has held this position until the time of his recent promotion.

G. L. Whipple

Mechanical

E. W. Smith, whose promotion to general superintendent of motive power of the Southwestern region of the Pennsylvania, with headquarters at St. Louis, Mo., was reported in the *Railway Age* of October 21, page 776, was born on September 21, 1885, at Clarksburg, W. Va. He was graduated from the Virginia Polytechnic Institute at Blacksburg, Va., in 1905 and entered railway service as a shop hand in the Wilmington shop of the Pennsylvania on June 5, of that year. On August 1, 1906, he was promoted to special apprentice in the Altoona machine shop. On July 26, 1909, he was promoted to inspector in the office of the assistant to the general manager and on March 12, 1913, to foreman in the office of the general superintendent of motive power. On October 15, 1913, he was promoted to assistant master mechanic at the Wilmington shop, which position he held until April 19, 1915, when he was transferred to the Altoona machine shop. He was promoted to assistant engineer of motive power in the office of the general superintendent of motive power on July 1, 1916, and to master mechanic of the Harrisburg shops on the Philadelphia division on October 10, 1917. On May 26, 1918, he was promoted to superintendent of motive power of the Central Pennsylvania grand division, with headquarters at Harrisburg, Pa., which position he held until December 1, 1919, when he was transferred to the Eastern Pennsylvania grand division, with headquarters at Altoona, Pa. On March 1, 1920, he was promoted to engineer of transportation in the office of the vice-president in charge of operation, which position he was holding at the time of his recent promotion.

Engineering, Maintenance of Way and Signaling

J. W. Stone, assistant valuation engineer of the Pennsylvania System, has been appointed valuation engineer with headquarters at Philadelphia, effective October 1, succeeding C. A. Preston, retired. Mr. Stone was born in Philadelphia and educated at Treemont Seminary, Norristown, Pa. He began his railroad career as a rodman in the engineering department of the Pennsylvania when he was but seventeen years of age. After four and one-half years in the engineering department he was transferred to the operating department where he served successively as transitman, assistant supervisor, supervisor and division engineer at various points on the lines east of Pittsburgh and Erie. On May 15, 1915, Mr. Stone was appointed assistant valuation engineer of the Pennsylvania Railroad, Lines East, and served in that capacity until his present appointment as valuation engineer of the Pennsylvania System.

J. W. Stone

P. Aagaard, president of the T. S. Leake Construction Company, Chicago, and formerly superintendent of buildings on the Illinois Central, has returned to that road as general building inspector, with headquarters at Chicago.

F. F. Seeburger, signal inspector on the Chicago, Milwaukee & St. Paul, with headquarters at Tacoma, Wash., has been promoted to signal supervisor, with headquarters at Deer Lodge, Mont., succeeding J. T. Mullaney, resigned.

Obituary

H. B. Green, general agent of the Baltimore & Ohio, with headquarters at Cleveland, Ohio, formerly division superintendent of the Cleveland division until its consolidation with the Newcastle division on April 1, died on October 30 at Cleveland from paralysis.

H. J. Simmons, formerly general manager of the El Paso & Southwestern, with headquarters at El Paso, Texas, died on October 16, at El Paso, Tex. He was born on July 17, 1869, at Adairville, Ky., and entered railway service as a rodman on the Huntsville & Monte Sano in April, 1888. From 1889 to 1893 he engaged in the private practice of civil engineering and from August, 1893, to August, 1895, he was civil engineer for the railroad commission of Texas. During the next seven years he was engineer and superintendent of the Galveston, La Porte & Houston and the Arizona & New Mexico, respectively. He entered the employ of the El Paso & Southwestern as chief engineer in April, 1902, and later held the positions of general superintendent and of general manager from which latter position he resigned on September 1, 1915. In March, 1920, he was appointed general agent and representative of the company in its dealings with the Federal Railroad Administration. At the time of his death he was general agent, with headquarters at El Paso, Tex., and was also in charge of valuation matters.

What Will the Mechanical Section Do?

[Editor's Note—The following editorial was written and in type when news was received that the General Committee of the Mechanical Section had decided this week not to hold a convention next year, although a business meeting will be held. This decision does not in the least alter the facts as to what kind of convention OUGHT to be held next year, and therefore the editorial is published exactly as originally written. We shall publish further discussion of the situation presented in later issues.]

IT IS FIVE MONTHS since the last convention of the Mechanical Section of the American Railway Association was held. Almost ever since then the mechanical department officers have been engaged in fighting the shop employees' strike or trying to remedy its effects. Therefore, little progress has been made in doing the preliminary work of making the program and preparing the reports for the 1923 convention.

It is not too late, and it certainly is not too early, to emphasize that the convention next year can and should be made the most important and constructive in the history of the mechanical associations. Whether this will be done, however, will depend on whether the mechanical department officers, with the assent and encouragement of their executives, take advantage of the opportunities and live up to the demands of the situation which exists now and will exist for months to come. If the papers, reports and discussions at the next convention are not extraordinarily valuable and constructive it will be because they will fail to deal with the subjects with which they ought to deal, and with the frankness, intelligence and courage with which they ought to deal with them.

The year 1922 has thus far been one of the most important in the history of American railroads, and especially of the mechanical departments. A number of locomotives of new and remarkable design and construction have been put into service. The policy of running locomotives over more than one division without turning them, in order to increase the useful service of locomotives, has been tried on several railways and within the months immediately ahead will be tried on many more. The railways have gone through the first nation-wide strike in their history, and it has been a strike in the shops. When this strike began there was an almost unprecedented amount of bad order equipment, and the strike rendered it impossible for months materially to improve this condition. Some railways have settled the strike, but many more have not, and in spite of this the railways are now handling almost as large a volume of freight as they ever did in history. Cold and stormy weather will come within a few weeks, finding many locomotives in bad condition, and the mechanical departments during the winter will be put to one of the severest tests they have ever known.

We are mentioning these things because they suggest the most important subjects with which next year's convention should deal. What does—or ought—the Mechanical Section exist for? Obviously, to help promote economy and efficiency in railroad operation. How can it best do this? By serving as a clearing house for the experience and ideas of those who are especially charged with responsibility for the design, maintenance and operation of locomotives and cars. These men have technical questions, and they also have human problems. The two kinds of problems are interlocked. Neither kind can be solved unless the other is solved. A railway may buy the best designed and constructed locomotive ever turned out, but unless it is repaired, maintained and operated by men who do their work skillfully it may get very little better results for the company than would a poorer locomotive.

What has been the experience of mechanical department officers with the locomotives of new and even novel types which recently have been put in service? What are the arguments for running locomotives over more than one division, what new problems does this practice give the mechanical departments, and how may they best be solved? What new methods have been used to expedite reduction of the amount of bad order equipment, and what have been the results? Why did most of the shop employees, and even the foremen, on some roads strike, while on others only part of them struck, and what lessons does the experience teach? How have the roads that settled with the labor unions got along, as compared with those that have not, and why? What methods have been and are being used to train the big army of new employees that many roads have in their shops as a result of the strike? What improvements in shop equipment does the necessity of recruiting and training this army of new men suggest are needed? The railways for months com-

plained loudly about the working rules of the national agreements with the shop crafts. What changes have been made in these rules on railways which have not settled with the shop crafts and what have been the results? What have these railways done to increase efficiency not only by changing working rules, but also by effecting more intelligent differentiation between the pay of unskilled and skilled employees, and what have been the results? What new methods for dealing with employees have been adopted and with what results? These are the kind of questions which ought to be considered at the convention, and adequate consideration of which would make it a great convention. They afford opportunities for papers, reports and discussions which would be most interesting and most valuable if frankness, intelligence and courage prevailed in them.

Is this opportunity going to be missed and the convention allowed to consist of mere perfunctory threshing over of old straw, or is the opportunity going to be grasped and the convention made one which will be of really great value to mechanical department officers and the railroads? This will not depend entirely upon the mechanical department officers. It will depend largely on the railway executives. It will depend upon whether the executives tell their mechanical department officers that matters such as those which have been mentioned are too sacred and delicate to be frankly talked about at a convention, or tell them that the more squarely these problems are faced and the more fully and freely they are discussed the sooner their solution will be effected.

One of the most foolish and harmful superstitions in the railroad business is the widely prevalent superstition that it is all right for railway officers to get together and publicly discuss the technical problems of the industry, but that it is dangerous for them to get together and talk publicly about the great economic and human problems of the industry. One of the principal causes of the troubles the railways have been having for years is that their officers have not thoroughly studied and frankly and fully discussed the economic and human problems of the business and the methods for solving them. Does the existing labor situation in the railroad industry indicate that the prevalent past policy of dealing with it has been a success? Is there any industry in the United States today which has relatively more men in it who constantly resist efforts to increase its efficiency or who gladly listen to every misrepresentation of its management that is spread abroad and actively participate in propaganda against its management?

The officers of the Mechanical Section, with the sanction and approval of their superior officers, should begin at once to prepare to make next year's mechanical convention the most valuable ever held. They should recognize from the very start, however, that they will not do this unless they decide to discuss frankly and fully the important and vital problems of the mechanical department, including its labor problem. There have been too many mechanical conventions within recent years at which 90 per cent of the time has been consumed in the consideration of problems to which mechanical department officers do not devote 10 per cent of their time when they are in their own offices or out on their own lines.

Let the mechanical department officers decide to devote 90 per cent of the sessions of the next convention to the problems to which they devote 90 per cent of their thought and energies at home, and the convention will be most important and valuable to the railways of the country—and it will not be unless this is done.

The Farmer and Freight Rates

NOTHING IN THE FUTURE is more certain than that within the next year there is going to be a great struggle over freight rates on farm products. In the western states many candidates for the national House of Representatives and Senate devoted most of their campaign speeches to attacks upon the Transportation Act and the present freight rates, which they attribute to it, and most of the candidates who did this have been elected. Some of the western state railway commissions already have started proceedings for further reductions of freight rates. The farmers have been told that most of their present troubles are due to freight rates, and they believe it.

There is no doubt that the farmers generally are suffering severely from present economic conditions. The situation in which they find themselves and the transportation situation are the two conditions which afford the strongest arguments to those who express doubt whether the period of prosperity the country is entering will last long. If, however, the farmers would investigate the facts for themselves, instead of believing the gross misrepresentations of men such as Senator LaFollette of Wisconsin, and Messrs. Brookhart and Howell, who have just been elected to the United States Senate from Iowa and Nebraska, they would soon find that they are laboring under a remarkable hallucination when they attribute most of their troubles to freight rates.

Freight rates are higher compared with the prices of farm products than they were immediately before the war. *But it is also true that the prices of almost all the things the farmer has to buy are higher compared with the prices of farm products than they were before the war.* The railway rates and prices of the year 1913 are usually selected for comparison with present railway rates and prices. The average rate per ton per mile in 1913 was 0.729 cents and in 1921 it was 1.275 cents, an increase of 68 per cent. As a result of the 10 per cent reduction made this year, the average rate is now 57 per cent higher than in 1913. Wholesale prices of all commodities are reported monthly by the Bureau of Labor Statistics of the Department of Labor. These statistics show that in July, 1922, the average price of farm products was 35 per cent higher than in 1913. What do the statistics of the Bureau of Labor show regarding the average wholesale prices of other commodities? They show that in July, 1922, the average price of cloths and clothing was 80 per cent higher than in 1913; the average cost of

fuel and lighting, 154 per cent higher, the average price of lumber and building materials, 70 per cent higher, and the average price of house furnishings, 78 per cent higher. The average wholesale price of all commodities, except farm products and foods, was 62 per cent higher than in 1913. It will be seen that the increase over 1913 in the prices of almost all other things the farmer buys was greater than the increase in average freight rates.

But why compare the statistics of 1913 with those of 1922? Railway rates had descended to almost the lowest level ever reached in 1913. On the other hand, the prices of farm products and other commodities had been increasing for some years before that. The average railway rate is now only 50 per cent higher than the average railway rate of the 10-year period, 1900 to 1910. As compared with the average prices of 1900-1910, the average price of farm products showed an increase in July, 1922, of 74 per cent; of cloths and clothing, 99 per cent; fuel and lighting, 176 per cent; metals and implements, 40 per cent; lumber and building materials, 70 per cent; house furnishings, 82 per cent. The average increase in the wholesale prices of all commodities was 79 per cent as compared with an average increase in freight rates of only 50 per cent.

These statistics show conclusively that the increase which has occurred in the average freight rate, as compared with the increases which have occurred in the prices of commodities, is being enormously exaggerated.

Furthermore, the farmer makes only a comparatively small part of his total expenditures for freight transportation. James R. Howard, president of the American Farm Bureau Federation, is authority for the following estimate of expenditures made by the farmers in a year: For purchases at wholesale prices, $7,018,340,000; for interest, at least $1,000,000,000; for taxes, $663,000,000; for railway transportation, freight and passenger, $1,103,000,000. These figures make a total of $9,784,000,000 for expenditures made by the farmers. If this estimate is correct, the farmer's expenditure for railroad transportation is only 11 per cent of his total expenditure; his expenditure for freight transportation is not more than $800,000,000. Therefore, of his total outlay not more than 8 per cent is made for freight transportation.

Upon what theory of economics can it be claimed that the farmer is being ruined because there has been an increase in the cost of something for which he makes only about 8 per cent of his total expenditures?

According to Mr. Howard's estimate the farmer is paying about a billion dollars a year in interest. This is more than he is paying for freight transportation. The total mortgage indebtedness on the farms of the country increased 132 per cent between 1910 and 1920. The average rate of interest also increased, so that what the farmer pays in interest has increased much more than what he pays for transportation.

Nothing could be plainer than that the real cause of the farmer's troubles is the disparity which exists between the prices of his products and *the cost of all things for which he has to pay*, and that only a relatively small fraction of his present troubles is due to freight rates. Why, then, do men such as Senator Capper of Kansas, Senator LaFollette and Messrs. Brookhart and Howell tell him that most of his troubles are due to freight rates? Why do they not tell him the truth—viz., that no reduction of freight rates which there is the slightest possibility of his getting would help him much, and that if the situation in which he finds himself is really to be improved, he must secure a more satisfactory relationship between the prices of the things he has to sell and the costs of all the things for which he must pay? The reason why they do not is that they are demagogues who attack the railways and their rates because they believe that by doing this they can best promote their own political interests. Senator Capper is a wealthy publisher of many farm papers. Is it entirely unreasonable to suspect that the reason why he so persistently attacks railway rates and ignores the relatively high cost of other things besides transportation that the farmer has to buy is that the people who sell these other things to the farmers advertise in his farm papers?

The fact is that the farmer can less afford to have reductions made in his freight rates than in the cost of anything else he buys. The farmer is today suffering heavy losses because the railways are unable to furnish enough transportation to move farm products satisfactorily to market. This condition can never be remedied except by an increase of railway facilities. A sufficient increase in railway facilities can never be secured unless the railways are allowed to earn net returns large enough to enable them to raise large amounts of new capital. To reduce railway rates under present conditions would inevitably be to keep the net return earned by the railways inadequate. The railways as a whole could not financially stand any further reduction of their rates unless it was accompanied by further reductions of wages and the prices of the fuel and materials they have to buy. But under present conditions it would be impracticable for the railways to secure further reductions of wages. There is no perceptible tendency of the prices of materials to decline. The cost of coal has been increased as a result of the coal strike.

Under these conditions an order, whether made by the Interstate Commerce Commission or any other government body, including even Congress itself, for a reduction of railway rates would be confiscatory, and therefore unconstitutional and void.

In the course of years further reductions of railway rates may become practicable. They will not become practicable, however, until corresponding reductions in the prices of commodities, in rates of interest and in the wages of labor have been or can be brought about. The railways cannot reduce their rates as long as the wages of labor and the prices of commodities remain so much higher than they were before the war, because the railways have to pay these high wages and high prices themselves. They never can make pre-war rates until they can get labor, materials and fuel at pre-war costs. To force a further reduction of railway rates under present conditions would do little toward bringing about the needed general readjustment, and it would be ruinous to the railways and make it impossible for them to provide the increased transportation service that the farmers and all the other producers of the country imperatively need. Demagogues may go on lying to the farmer and misleading him as long as they like, but these are the irrefutable facts.

Old Rules Not Outlawed By Ignoring Them

Twenty-seven passengers injured and a damage bill of perhaps $15,000 constituted the net result of a crossing collision at Houston, Tex., as described in one of the latest investigations made by the Interstate Commerce Commission, reported in another column. This collision was due to open-eyed and evidently deliberate violation of two rules which have been well-known for years; first, the rule to stop before crossing another railroad unless interlocked signals are provided—a rule which, in essence, is at least 60 years old—and, second, the rule to use air brakes on long freight trains, which is of many years' standing. Let us not entertain the superficial idea that automatic train control is the only problem in the prevention of collisions. Had either of these unlawful practices been eliminated, says the report, "this accident undoubtedly would have been prevented."

Improving Employee Relations

Two unique contributions on improving the relations with the employees appear elsewhere in this issue. They present some interesting facts and both of them are written by neutrals—one a Y. M. C. A. secretary and the other a college student who has spent a couple of summers in railroad service. Both of these, in different ways, stress the necessity of a "get together" spirit on the railroads which will eliminate the gulf between the employees and the executives and allow them to meet in a friendly way on a common platform. There are many ways in which this better relationship can be cultivated. Although many progressive industries have been promoting employee representation for a number of years, the term has been little used and is hardly understood on railroads. The inauguration of such a plan on the Pennsylvania Railroad, which permits the groups of officers and employees at a local point, on a division, or in a region, or on the system as a whole, to meet around a table to discuss their common problems, has worked wonders in getting each side to recognize the good points and claims of the other side and humanize their relations. It is remarkable how misunderstandings and grievances have melted away and have been replaced by a spirit of co-operation.

Quality Rather Than Quantity

One unfortunate effect of the shop strike was its interference with the work of the various associations of railway officers. Although this did not militate against the success of any of the conventions held this fall, it caused a general postponement of the American Railway Engineering Association's committee meetings durings the summer months, when the bulk of the subcommittee work is usually carried on. However, judging from the number of committee meetings which have been held by this organization during the past three weeks, this delay is now being largely overcome. There is every reason to believe that these committees will exercise scrupulous care to avoid the inclusion of any ill-considered or superficial work in the reports that are submitted for publication. But in the effort to expedite the progress of the committee work, there is danger that some defective material may creep into the published conclusions. It is well, therefore, that each committee keep definitely in mind the periodic admonishments of the association's officers, that reports be presented only on those assignments that have stood the test of mature thought. There has been a growing tendency in recent years to increase the length of the committee reports. This fact, together with the enlarged membership of the association, makes it increasingly difficult to undertake a detailed consideration of all of the reports at the annual conventions. The result is that most of the committee reports are accepted as the word of the association with little or no change from the form in which they were presented. This imposes a responsibility on the committees which must not be borne too lightly. The aim should be for quality rather than quantity.

Delays to Freight Cars

In periods of car shortage a special effort is usually made by the railroads to secure quick loading and unloading. This means of reducing the idle time of cars should not be neglected at present, but there are other features of car movement that deserve as much, or more attention. One of the most important is delays in yards. In making an average trip of 475 miles, a freight car passes through about four division terminals. It is very easy for dead freight to lose two or three days in yards and empty cars especially are likely to be delayed when yard tracks are crowded. The time lost between movements is usually much greater than the time wasted during loading and unloading and for that reason speeding up yard operation probably offers one of the greatest fields for saving cars. Providing a few tracks on which trains can be set after they are made up is a simple method of relieving congestion and avoiding delays that is applicable at many of the smaller terminals. Running trains through intermediate terminals without switching is another means of eliminating idle time which should be carefully considered.

Institute a Signaling Investigation

When confronted with the necessity of increasing the track capacity of single track lines no road can afford to overlook the possibility of solving the problem by an installation of automatic block signals. Obviously, this would require an extensive investigation by competent officers. In many cases the management and the operating officers have considered signaling as a dubious quantity; in fact some roads in the absence of convincing data or due to a lack of study of train operations on roads equipped with signals, have actually constructed second track when an expenditure of only approximately $4,500 a mile for signaling would have permitted the traffic to be handled on single track for years to come. For example, a certain road that had adopted a large program of second tracking, had failed up to 1917, to close up a few stretches of from 10 to 75 miles of double track on a 300 mile division. In 1919 an operating officer, in co-operation with the signal officers, instituted a traffic study that evolved a signaling system for the stretches of single track so as to increase the track capacity of the entire division to the extent that the completion of the original double tracking program can be deferred for years to come. On this same road there is a low grade single track division 165 miles long, connecting two trunk stems. For years, at certain seasons, this line has been congested with freight requiring rerouting over other divisions. On account of the many curves and rock cuts the expense of constructing a second track is excessive, and as a result little has been done to relieve the situation. However, this road has just awakened to the fact that an installation of automatic signals would relieve the congestion and obviate the necessity for second tracking for years. No doubt there are many other roads that, through a lack of co-operation between the operating, engineering and signaling departments, have missed opportunities for enormous savings. Therefore, on roads where certain single track divisions are known to be "bottle necks" in the system, it would seem advisable to require the signal engineer, in co-operation with the operating officers, to make an investigation and report on what can be expected from an installation of automatic block signals.

Protecting Records from Fire

One of the interesting topics discussed at the Baltimore meeting of the Railway Fire Protection Association (*Railway Age*, October 25, page 799) was the recent burning of the Burlington office building at Chicago and one of the most significant utterances in the discussion was that of B. S. Mace, of the Baltimore & Ohio, who emphasized the importance of maintaining fireproof vaults on every division of a large railroad. A single one at headquarters is not enough. In almost every railway office are records and papers the loss of which would entail much inconvenience and loss of time and money. Some of them could not be replaced at any price. It is true that no railroad is so well provided with funds that it can install all the equipment it needs. When funds are available there must be a selection among various possible expenditures in accordance with their relative merits. In the ordinary course of business, however, it is the new machine or other improvement which promises direct and immediate savings to which attention is most easily directed. Ordinarily it is only after a disastrous fire has occurred that the installation of fireproof vaults and filing cases for the protection of important records receives the attention it deserves. This condition is unfortunate, for it is much more profitable to lock the stable with the horse within than to barricade the door after the animal has been stolen. Similarly the protection of records which can be replaced only at great expense or not at all should be considered on a par with improvements which promise a direct money return. The safeguarding of valuable possessions already in hand is quite as important as the acquisition of new things—be they bridges, machines, buildings or records and documents which represent the expenditure of money and effort in their compilation.

A Figure of Leading Importance

"Net railway operating income," the term which the *Railway Age* has recently been discussing in these columns, is given an official or legal definition in that much discussed section of the Transportation Act—namely Section 15-a. The definition is contained in paragraph 1 and reads as follows: ". . . and the term 'net railway operating income' means railway operating income, including in the computation thereof debits and credits arising from equipment rents and joint facility rents." In last week's issue, page 830, there was given a list of the items in the form on which the carriers report their monthly earnings to the Interstate Commerce Commission and an explanation was given showing how the figure of net railway operating income was worked out. Quotation of the definition as given in Section 15-a adds nothing to the definition as given in the description of the monthly report form. The point in introducing it here at this time is to emphasize the importance of the figure and in so doing to make clear the value of a proper understanding of what it means. It may be worth while at this time to refer to the fact that it is net railway operating income which for all the roads in a rate-making group is supposed to equal 5¾ per cent on the property used in the service of transportation. For federal control it was the basis of standard return. It seems hardly necessary also to add that net railway operating income is in the case of the individual road the figure upon which is based the computations for the recapture of half the earnings over 6 per cent. All in all, therefore, the figure of net railway operating income is a very significant and important one. In the monthly reports of the carriers as individuals or in total, it serves as an index available 12 times in the year for use by the commission, by railroad men, by investors and the public generally. In its annual form it supplements and supplants the monthly figures, and in addition stands as one of the basic indices in railway regulation. The figure in whatever form it may appear has had a deservedly increasing popularity. It is unfortunate, however, that there still remains considerable hesitancy about using it and some inconsistency, embodied chiefly in the difficulty of comparing or reconciling the figures shown in the monthly reports with those covering the year as a whole.

Consolidation by Amalgamation

The wholesale railway consolidations under way in Great Britain are being effected by the exchange of securities in the new companies for those of the existent companies, rather than by the acquisition of control of smaller companies by purchase of stock or lease by the larger companies. These exchanges of securities are arranged, insofar as possible, to provide new stocks and bonds of the same earning power and relative security as those of the old companies. Under the terms of the Railways Act of 1921, all British railways must be consolidated into four non-competing systems. The companies are required to submit plans for consolidation to the Amalgamation Tribunal, a body created by the Railways Act, before January 1, 1923. If satisfactory plans are not filed by that date the tribunal is authorized to prescribe provisions of its own formulation. The directors and security holders of the railways have, however, been active in their negotiations to arrive at equitable and acceptable plans of amalgamation and their efforts have, generally speaking, been quite successful, considering the great variety of interests which they have had to reconcile. The provisions for railway consolidations in the railway law of this country are voluntary. The carriers are not compelled to consolidate, although there is some agitation in Congress to make the consolidation provisions of the Transportation Act obligatory on the railroads. At any rate, however, there will probably be many consolidations of railways in this country during the years to come, even if they are not forced upon the roads. The British method of amalgamation by an exchange of securities has certain advantages over acquisition by lease or purchase of stock and a study of British practice might be of value to railway officers in this country who are interested in the subject of consolidation.

Receiving Representatives of the Press

Railway managements as a whole are giving far more attention to publicity than they have in the past. They are fast learning the desirability of improving the relations with both the public and their own employees by educating them as to the problems with which the managements are confronted and by giving them facts relating to railway operation and finance. Much more, however, can be done in this direction. One way in which some roads can greatly improve matters is to show more appreciation to the representatives of the newspapers. Government officers at Washington, including the President and prominent members of his Cabinet and Administration, make it a practice to set aside a certain hour once a week, or oftener, to receive press representatives and to talk with them frankly as to their problems and answer questions. This is in addition to the regular news releases from their offices in typewritten or printed form. It is understood that these officers will not be quoted direct, unless specific permission is given so to do. Members of the press, however, are given a view back-stage, as it were. This makes it possible for them to anticipate certain important developments and more correctly to interpret the situation to their readers. This practice not only conserves

the time of both the Government officers and the representatives of the press, but it is invaluable to both parties in directing public thought along the right lines. It would be impossible to overestimate the value of these informal meetings with representatives of the press in recent years. Why cannot railway officers adopt the same policy to advantage? Newspaper men complain that they find great difficulty in getting to some of the prominent railroad officers; railway officers say that too much time is often required in receiving representatives of the press. An important point of contact is therefore being largely neglected and lost. Why not set aside definite times each week to receive representatives of the press, talk to them of the road's problems and answer questions as far as it is possible to do so? It would help to break down a most undesirable wall which now exists between some railway officers and the press. It would eliminate a lot of misunderstanding and be exceedingly helpful to the railroads in improving the relations with both the public and their employees.

D., T. & I. Again Experiences Deficits

Although Henry Ford and his son continue to give advice to the railroads, it is noted that they have been less inclined recently than they were for a time to base their discussions on the "remarkable" results experienced on their own railroad, the Detroit, Toledo & Ironton. After the Fords had bought this road and given it a large volume of new traffic, the results were much more satisfactory for a time than those obtained by the former management, but the improvement has by no means been kept up, as expenditures for maintenance and for hire of equipment have increased with the increase in traffic. For the first six months in 1922, the road's reports to the Interstate Commerce Commission disclose, it had a net operating income of $705,518, as compared with $190,082 for the similar period of last year. However, for the month of July there was a deficit of $16,367, for August of $300,404 and for September of $383,097, with the result that for nine months of the calendar year the net operating railway income has been reduced to $5,650. Operating revenues for that period were $6,687,749, an increase of $1,906,539, while the expenses were $5,577,756, an increase of only $1,779,842. However, there was also an increase of $463,855 in the debit balance of equipment rents. The September revenues also showed an increase over September of last year, but the increase in expenses was still greater.

Equipment Orders in October

Locomotive orders in October totaled 184, freight car orders 14,498, and passenger car orders 116. For the ten months period the totals for domestic orders have now reached 1,856 locomotives, 125,658 freight cars and 1,553 passenger cars. The total of 184 locomotives in October was not bad; it was, however, not as good as the totals reported for the four preceding months. Why there should have been a falling off it is difficult to say. The disappointing railway net reported by most roads for August and September was possibly a deterrent to purchasing. A more important reason may have been that many roads that have already placed their orders are having difficulty securing deliveries. Some sizable inquiries, however, are in the market, so the prospects for November look to be far from disappointing. The orders for freight cars in October were much better than those for locomotives. The October freight car total—14,498—was double those for August and September combined. It was exceeded, however, by narrow margins by the totals for July, May and February, but it was only half the total for 1922's biggest month to date—April—when the New York Central's business brought the total up to over 30,000. Interest in these car and locomotive figures now has two values—one embodied in the use of the figures as an index to the volume of railway purchasing and the other as an indication of the success the railways are having in meeting deferred equipment requirements. Car loadings of over a million cars for the week ended October 21 and the present severe car shortage are a measure of the deferred requirement. The railways are making fair progress towards meeting this particular problem; the volume of orders for new equipment is, on the whole, quite satisfactory. The present transportation situation, however, is plain evidence that still further progress is needed. The experts say that business in general should be extremely satisfactory in 1923. If they are correct, a continuation of the present volume of equipment purchasing and possibly an increased volume as well, are quite properly to be expected.

CAR AND LOCOMOTIVE ORDERS

	Locomotives	Freight cars	Passenger cars
January	5	7,960	235
February	8	14,721	160
March	76	5,550	23
April	272	30,507	540
May	99	18,337	235
June	22	11,097	37
July	353	15,675	120
August	220	576	22
September	617	6,737	63
October	184	14,498	116
Total, 10 months	1,856	125,658	1,553

A Word of Warning

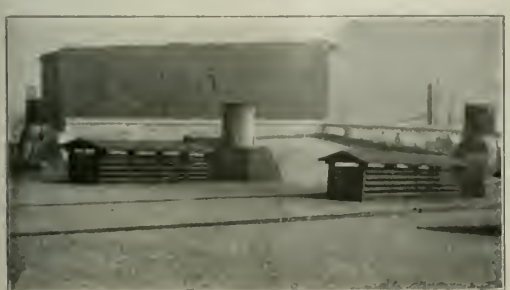
The unfortunate controversy between the Pennsylvania Railroad and the Labor Board over the question of employee representation has given the public at large a wrong impression of this whole question. It is even claimed by some that the real object of this new development was to destroy the Railroad Labor Board and the Transportation Act. Now that the full facts about the scheme are becoming known and understood, the real significance of this remarkable advance is becoming more widely recognized. The time was when railway officers assumed that questions of wages and working conditions were matters to be settled by the management only; the employee could take them or leave them. Unfortunately, some managements still do not recognize the advisability and necessity of giving the employees a voice in these matters. The employees on the Pennsylvania, as was shown in the article in the *Railway Age* of October 14, page 691, now have a voice in these questions and the machinery has been set up for the prompt hearing and adjustment of all grievances or criticisms relating to them. The results in increased loyalty and better production are truly remarkable. Other roads seeing these results are anxious to adopt similar measures. A word of warning is necessary. It must be recognized that this development on the Pennsylvania was not brought about in a few days, a few months, or even a few years. It began some years ago. The foundations have been well laid. The request for the present arrangement first came from the train service employees and it was finally worked out by them in co-operation with the officers. Other roads wishing to adopt similar measures must recognize this, and as indicated in the editorial on page 828 of last week's issue, must not attempt to hand down a ready-made plan, but must develop it with the co-operation of the employees. After all, the machinery of the plan is unimportant as compared to the spirit of a square deal which must dominate it. This same thing holds true of all personnel work.

From the Turntable Side

Erie Builds New Enginehouse at Jersey City, N. J

An Old Structure Destroyed by Fire Is Replaced Without Interference With Locomotive Operations

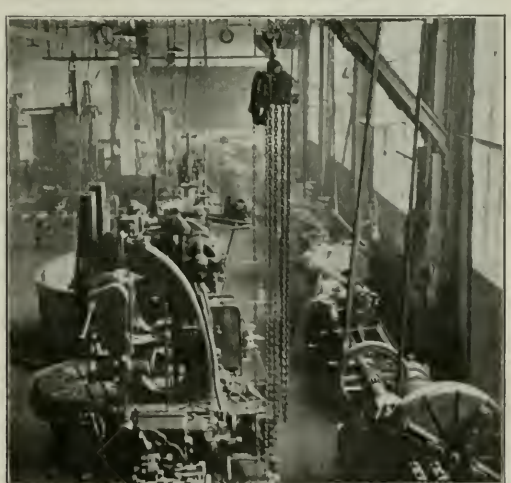
The Erie Railroad has recently completed a new engine terminal at Jersey City, N. J., which includes a 21-stall enginehouse, machine shop and other facilities, the construction of which was carried on "under traffic." It replaces an old layout which was destroyed by fire and was built on the old site without interference with operation, the old turntable and radial tracks being kept in use for the turning and servicing of both passenger and yard locomotives. Because of the restriction as to location and space and the necessity for non-interference with the motive power movements, the design and construction are both novel and interesting. The new building is a combination of a radial type 105-ft. enginehouse and a rectangular building.



Alternate Installations of Two Types of Smokejacks

The old enginehouse was of timber construction with 21 stalls served by an 80-ft. turntable and adjoined Pavonia avenue, a heavy trucking thoroughfare ending at the ferries. The back wall of the structure was parallel to the street line, a plan that was followed in the construction of the new enginehouse. In conjunction with the 21 stalls in the enginehouse, there was a repair bay containing 8 tracks which connected with 6 radial tracks at one end, and with a transfer table at the other. This transfer table is located between and serves the repair bay and a rectangular enginehouse of 12 tracks known as the "long" house. The fire destroyed the main part of the layout, leaving only the transfer table and the "long" house. Most of the engine pits, which were of timber, were badly damaged.

Jersey City is the eastern terminal of the Erie and, as a result, a large freight and passenger business is handled at this point. In addition there is a heavy commuter traffic. The freight engines and through line passenger engines as well as a large number of switching and yard locomotives



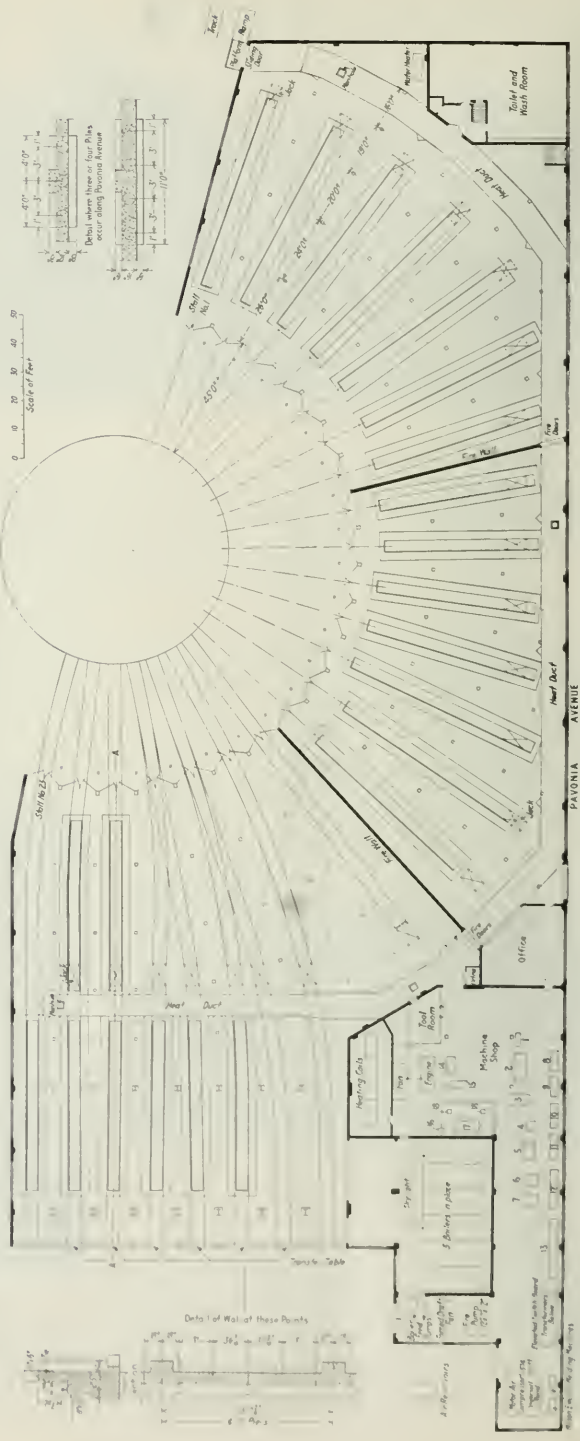
General Arrangement of the Machine Shop

are turned at the Secaucas engine terminal in the Hackensack meadows. The Jersey City enginehouse is primarily for the servicing of the commuter engines although all of the New York division passenger locomotives and a few yard locomotives are also handled there. About 200 engines are turned daily at Jersey City which, in connection with the congested layout, presented a problem that was easily rendered serious by the loss of the enginehouse. It became imperative that the utmost speed be developed in erecting another structure with a minimum of interference to engine movements and motive power repair requirements since under the circumstances the old tracks had to be continued in use. At the same time it was desired to use this opportunity to modernize the layout. The result was that construction and design proceeded almost simultaneously and both were largely prescribed by the existing conditions, predominant among which was the location of the turntable.

The new layout is a rectangular shaped building, having straight walls on three sides and the customary inner circle of doors facing the turntable. It is of brick and concrete construction with a timber superstructure of the shed roof type modified to fit the rectangular shape at the corners and where joining into the machine shop and the repair bay monitor. There are 21 stalls, divided into three sections of seven stalls each, one section adjoining and actually being a part of the eight-track repair bay of the monitor type. In one corner of the rectangular house beyond the radial section is located a large machine shop, the boiler and engine room, forges, air compressors and pumps, hot air heating equipment and the offices. A similar corner, although smaller, at the other end has been utilized for the washroom, shower baths, and lavatories and above this, in a small second floor, are located the lockers. A lean-to adjoining the north wall of the repair bay houses the pumps, tanks and other machinery for a complete boiler washing system.

The rectangular shape of the building resulting from the location of the center of the 80-ft. turntable only 159′-3 1/8″ from the street line, the existing radial tracks and the necessity for complete utilization of all available space, produced a non-uniform spacing of pilasters in the street wall. Thus the distance between each pilaster increased gradually at either side of the turntable center line perpendicular to the street, tending to become too wide for economical construction beyond the points where the street line intersected the outer circle of the standard 105-ft section. Between these points, that is, along the chord, single pilasters of heavy construction were used while in the remainder of the wall, intermediate pilasters were used to permit of the easy installation of standard size sash.

Much of the foundation is supported on piling, the site of the enginehouse being filled ground near tidal waters, the piling being driven in clusters of from two to four under the pilasters. Four piles were driven under each of the single pilasters in the chord section.

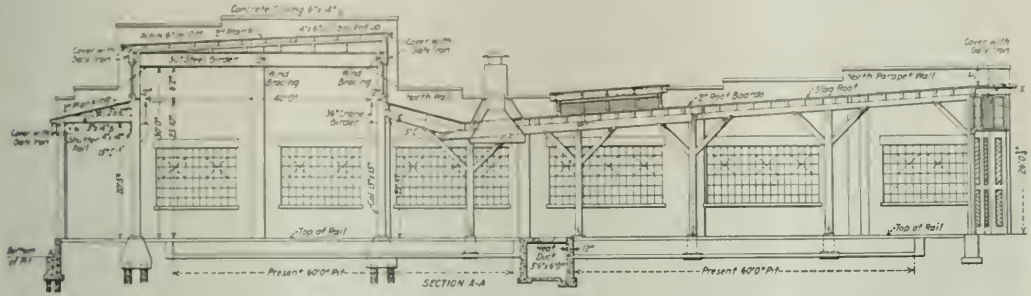


General Plan of the Erie Enginehouse Layout

three under each of the other main pilasters and two under the intermediate ones. This, as well as the location and number of piles in the other sections of the building are shown clearly in the illustrations. Piles were driven and cut off at an elevation of 1 ft. 6 in. above mean low water. These were capped or surmounted with concrete footings, 3 ft. wide, 20 in. thick, and from 7 ft. to 13 ft. long depending upon the number of piles and the location. These footings carry piers from 5 to 11 ft. long, 13 in. thick and 4 ft. high with an 8-in. by 24-in. pilaster poured integrally with it on the inner side. The street wall proper is carried on a continuous reinforced concrete girder, resting on these piers and running the full length of the wall. It is 13 in. thick and 7 ft. 4 in. high with an 8-in. by 24-in. pilaster poured integrally with it to correspond with the pilaster section poured with the piers. The remainder of the street wall with the exception of the lintel, which is another reinforced concrete beam running continuously, is of brick and steel sash. The foundation adjoining the transfer table is a gravity wall stepped to carry one of the transfer table rails.

The engine stalls are designed on the basis of a standard 105 ft. house with five bays spaced from inner to outer wall at distances of 26 ft., 24 ft., 20 ft., 19 ft. and 16 ft. The limiting factor of the distance from the center of the turntable to the street line made it necessary to continue the old with 6-ft. by 6-ft. footings carrying a 2-ft. 4-in. square pier 8 ft. 9 in. deep.

The repair bay is of the monitor type with a steel superstructure fabricated from floor beams, chords, etc., taken from an old steel bridge across the Susquehanna river. This work was done by company forces, the erection being handled by the bridge gangs. A 15-ton electric traveling crane will be installed in this section of the building, provision having been made in the design and construction for this purpose. The crane bay is 42 ft. 7½ in. wide from center to center of posts and runs the full length of this section. A Whiting hoist of 200-ton capacity has also been installed in this section in conjunction with four new concrete pits. Other crane and hoisting facilities consist of a series of six post cranes of 16-ft. radius installed at convenient points throughout the house.



A Cross Section Through the Enginehouse and Repair Bay

Within the circle there are three stalls without engine pits, five with old wooden pits, four of which have been extended with concrete, and 13 new concrete pits with inside lengths varying from 52 ft. to 89 ft. The seven-stall section at the east end of the house has been floored with 6 in. of concrete poured with depressed drains on each outer side of the pit rails. These drains connect with the engine pits and carry off quickly any water which may accumulate on the floor during boiler washing, this section being used chiefly for

The Engine Terminal Occupies an Extremely Congested Location

angle between tracks of about 8 deg. 12 min., 49 sec. in order to secure sufficient clearance at the doors; instead of the usual standard of the Erie for this length of stall of about 7 deg. The roof structure is of timber overlaid with Barrett roofing and is supported upon wooden posts spaced as described above. These in turn are carried on and anchored to heavy concrete piers and footings with a bearing surface of 6 ft. by 6 ft. The lower footing is 18 in. thick, the upper is 3½ ft. by 3½ ft. and 12 in. thick and the pier is 1 ft. 6 in. square. The repair bay, having been designed for an electric traveling crane, required heavier foundations. Four piles were driven under each column and surmounted with 6-ft. by 6-ft. footings carrying a 2-ft. 4-in. square pier 8 ft. 9 in. deep.

The repair bay is of the monitor type with a steel superstructure fabricated from floor beams, chords, etc., taken from an old steel bridge across the Susquehanna river. This work was done by company forces, the erection being handled by the bridge gangs. A 15-ton electric traveling crane will be installed in this section of the building, provision having been made in the design and construction for this purpose. The crane bay is 42 ft. 7½ in. wide from center to center of posts and runs the full length of this section. A Whiting hoist of 200-ton capacity has also been installed in this section in conjunction with four new concrete pits. Other crane and hoisting facilities consist of a series of six post cranes of 16-ft. radius installed at convenient points throughout the house.

Within the circle there are three stalls without engine pits, five with old wooden pits, four of which have been extended with concrete, and 13 new concrete pits with inside lengths varying from 52 ft. to 89 ft. The seven-stall section at the east end of the house has been floored with 6 in. of concrete poured with depressed drains on each outer side of the pit rails. These drains connect with the engine pits and carry off quickly any water which may accumulate on the floor during boiler washing, this section being used chiefly for that purpose. One pit contains a concave section of track with a 5½ in. drop, an arrangement which permits of easy removal of spring hangers, etc., without use of drop pits or hoists. The remainder of the enginehouse and repair bay has a cinder floor. The machine shop floor is Kreolite wood block laid on concrete while the boiler room, blower room and pump room are floored with concrete. Alternate installations of Johns-Manville and Dickinson smoke jacks have been made to secure comparative performance data.

The structure is heated by a modern installation of heating coils and blower discharging into a concrete air duct situated below the floor and around the outer circle. This

duct is tapped between each two stalls by lines of vitrified clay pipe which carry the heated air to the engine pits. Wherever the enginehouse tracks cross the duct, the upper slab has been reinforced and in addition, the running rails are carried in a double rail trussed construction.

Electrically Equipped for Economical Operation

The power used in the enginehouse for machine shop and other uses, is purchased from an outside source supplying two-phase energy at 2,300 volts, and 60 cycles which is stepped down to 220 and 110 volts according to needs. A unique method has been utilized to prevent the destructive action of gases on wiring installed in conduits above the gas line. From the switchboard at one end of the enginehouse, the conduit is led out through the street wall and along and over the exterior of the building. At points where it was necessary to run wiring above the gas line, it was accomplished by mounting the wire on glass petticoated insulators supported on the rafters.

On the inside of the street wall, two 100-watt lighting units are installed between stalls and so arranged that the light beams from each will cross each other, both also being inclined downward to an angle of about 15 deg. from the horizontal. A single unit of this type is mounted on the door posts. The circuits for this latter installation are brought over the roof of the enginehouse and down on the outside of the door posts. Three flood lights mounted on the roof, keep the turntable well lighted at night. Facilities for arc welding are furnished by two Wilson two-man sets delivering sufficient current for four welders through cables tapped at each stall and terminating in a 150-ampere charging receptacle. The welder simply plugs in his welding lead at the proper receptacle, removing it when he has completed his work.

The majority of the machine tools are belt-driven from an overhead line shaft operated by a 50-hp., 220-volt, two-phase motor with a 30-hp. motor in reserve which can be substituted immediately by throwing on a belt. Two large turret lathes, a blower fan, and a large Ingersoll-Rand air compressor unit have individual motor drives. The latter unit is of the duplex, two-stage, constant speed type with a capacity of 1,574 cu. ft., the regulation of the supply being accomplished by a five-step clearance control which loads or unloads the compressor in five successive steps, according to needs. The motor is a 260-hp. synchronous motor operating on 2,300 volts. The plant supplies air at 100-lb. pressure for use in the electro-pneumatic interlocking plant, for charging train lines and for various shop and enginehouse requirements.

The air line to the enginehouse stalls is carried on brackets with other pipe lines suspended from the rafters and following around the building 30 ft. inside of the doors. There are five distinct lines, aside from the steam line, consisting respectively of a 3-in. air, a 4-in. cold water, a 4-in. filling, a 4-in. washout and a 5-in. blow-off line. Each pit has individual connections.

The Machine Shop Equipment

The machine shop is well arranged and well equipped for the work to be performed, which consists entirely of light running repairs. Should heavier repairs be required, a locomotive is sent to the North Shop on the other side of the tracks. At the entrance from the enginehouse to the shop there is a toolroom which serves all the men whether working in the shop or on locomotives. Adjoining this on the same side is a double blacksmith forge with a blower, two anvils and a trip hammer. A 3½-in. bolt threader is also placed on the same side of the room in a convenient position.

Six engine lathes are arranged in line along the street side of the shop. These range in size from 14 in. by 6 ft. to 36 in. by 20 ft. In front of the lathes is a 60-ton rod press, a double-end emery wheel grinder, a 42-in. drill press, a 4½-ft. radial drill, a 28-in. shaper, a 24-in. vertical turret lathe, and a 42-in. vertical boring mill.

The Street Wall of the Enginehouse on Pavonia Avenue

List of Shop Tools and Equipment

The location of the various machine tools is shown on the general plan by numbers given in the following table:

1—60-ton rod press.
2—4½-ft. Mueller radial drill press.
3—28-in. Smith & Mills shaper.
4—20-in. by 3-in. double-end emery wheel grinder
5—42-in. drill press.
6—24-in. Bullard vertical turret lathe.
7—42-in. Colburn vertical boring mill.
8—14-in. by 6-ft. Cisco engine lathe.
9—17-in. by 8-ft. National engine lathe.
10—18 in. by 8 ft. National engine lathe.
11—18-in. by 8-ft. National engine lathe.
12—28-in. by 12½-ft. Boye & Emmes engine lathe
13—36-in. by 20-ft. New Haven engine lathe
14—3½-in. Adams bolt threader
15—Trip hammer.
16—Buffalo forge blower.
17—Double blacksmith's forge.
18—Two anvils

Protection Against Future Fires

Ample precautions have been taken for proper fire protection in addition to the fire walls between each of the seven stall sections and between the machine shop and the engine-

house proper. A fire pump situated in the machine shop connects with the main intake water supply by a system of valves which are normally set so that the water is by-passed around the pump. Each valve is plainly numbered while a large chart shows clearly what valves should be turned to deliver water to any section of the building or the yard. Fire hose connections have been installed between every two pits within the building, as well as on the roof structure, there being five in the latter instance alone. In addition numerous other hydrants are installed in and around the remainder of the building.

Methods Necessitated Close Co-operation

The construction of the Erie house necessitated close co-operation between the engineering, motive power and operating departments. The broad plan adopted was for the construction forces to be allowed three tracks at a time, free from interference while the operating department would deliver each 24 hours the designated cars of material before the starting of work each morning. The engineer in charge of construction was given authority to move engines in the roundhouse not under repair from stall to stall according to the needs of the occasion. This factor in itself eliminated much waste motion since it was possible to return one or more tracks to the motive power department and take possession of others promptly, thus keeping the construction forces and equipment steadily at work. Another factor of consequence was the assurance of ready material by keeping it "in load." On account of lack of storage space wherever possible all material purchased was loaded into Erie cars and when this was not possible it was transferred on the job as soon as such cars were available. These cars were held in one of the outer freight yards subject to the orders of the engineering department. Each afternoon a list of the cars containing the materials wanted for the next day's work was forwarded to the operating department, which moved them to the roundhouse after rush hours, the ones designated being set in on the enginehouse tracks before morning.

Construction itself was prosecuted from as many different points as possible. Both track drivers and land drivers were used for the piling, working in the case of the former from the radial tracks and extensions to them laid along the line of the outer wall. As soon as each cluster of piles was in place, work was started on the concrete piers. The supports for the roof posts were built in a progressive manner from one end of the house to the other, the excavating, sheeting and shoring where necessary, being handled by one gang, and the forms by another, after which followed the concreting, removing of forms and backfilling.

The erection of the superstructure was handled in a somewhat similar manner, the work in this case being divided and carried out progressively from one end wall in each of the three sections. The posts, roof beams and rafters were framed in a car placed on the track next to the wall after which the timbers were erected with the aid of a locomotive crane. Material for additional stalls was then hoisted on top of the roof and the remainder of the roofing structure framed and erected from the top with the exception of the posts. The posts were distributed well in advance of the roof construction and as needed were erected by a locomotive crane operating on engine stall tracks. This method insured the use of a minimum amount of ground work and a consequently greatly lessened interference with locomotive work.

Boiler Washout Section, Showing Depressed Drains, Post Cranes, Etc.

The new enginehouse was designed by the engineering department of the Erie, R. C. Falconer, assistant to the president and chief engineer, C. H. Splitstone, superintendent of construction and surveys; F. A. Howard, engineer of structures and O. V. Derr, resident engineer, in active charge of construction in the field. The Austin Company, Cleveland, Ohio, was the contractor for the superstructure and Frank D. Brown of Jersey City, N. J., for the substructure.

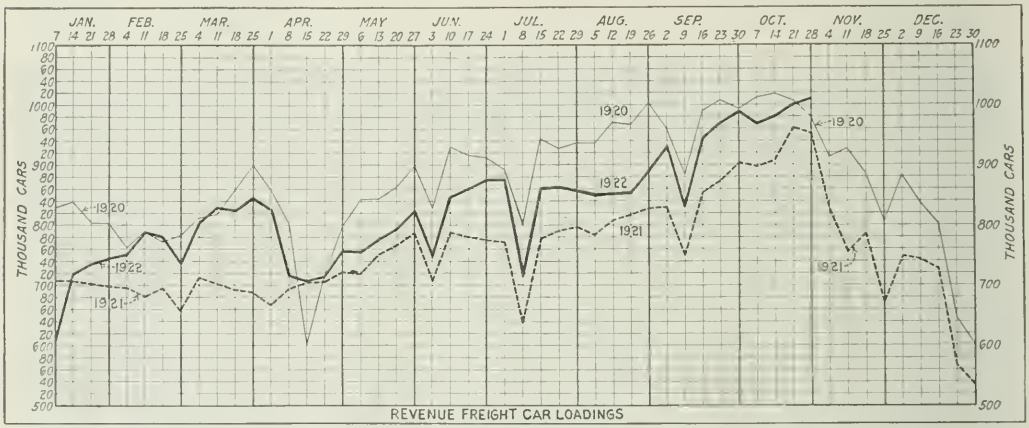
Non-observance of Rule 6 of the code of per diem rules, requiring subscribers to the car service and per diem agreement to make settlements for car hire with non-subscriber connections at the established per diem rate without any free time and without reclaim, has been complained of to the Board of Directors of the American Railway Association, and an appeal has been issued, calling upon the railroads to see that the provisions of Rule 6 are uniformly enforced. Non-observance results in discrimination as between non-subscriber railroads and in constant efforts of non-subscriber roads to obtain as favorable arrangements as may have been made with the few, all of which has a tendency to break down the entire per diem structure.

Freight Car Loading Shows Further Gain

WASHINGTON, D. C.

REVENUE FREIGHT car loading continued to increase during the week ended on October 28 and was over the million mark for the second time this year. The total, 1,014,480, was also only 4,059 cars less than the record for a week established in October, 1920, and in all districts except the Pocahontas and the North Western, the loading was in excess of that for the corresponding week of 1920. The loading for the three western districts combined was also in excess of that for 1920. The total loading for the week was 10,721 in excess of that for the previous week, 63,096 greater than that for the corresponding week of last year, and 33,238 greater than that for the corresponding week of 1920. The peak of car loading this year is later than it was in 1920 or 1921, but it is now regarded as probable that the next week's loading will show some reduction. The loading of grain and grain products was less than it was the week before although all other classes of commodities showed an increase and all but coal and merchandise l.c.l. showed increases as compared with last year. All except coal, coke and ore also showed increases as compared with 1920. The summary as compiled by the Car Service Division of the American Railway Association is given in the accompanying table.

The number of locomotives out of service for repairs showed a further decrease during the first half of October to 15,935, or 24.7 per cent, for repairs requiring over 24 hours, and 3,296, or 5.1 per cent, for repairs requiring less than 24 hours. The number of locomotives turned out of shop during the period was 11,404. However, the number of serviceable locomotives stored had been reduced to 950.



REVENUE FREIGHT LOADED

Railway Development Lags Behind Traffic Increase

C. H. Markham Tells Railway Business Association How Inadequate Facilities Menace Prosperity

THAT THE INCREASE in railway facilities during the past decade and more has been entirely inadequate to meet growing traffic requirements and that this check to railway development has resulted from restrictive legislation was the theme of the address of Charles H. Markham, president of the Illinois Central, delivered at the annual dinner of the Railway Business Association on Thursday evening. Other speakers were Senator George Wharton Pepper of Pennsylvania and James A. Emery, counsel of the National Association of Manufacturers.

Mr. Markham presented some interesting statistics to show the extent of the decline in railway development in recent years. For example: during the five-year period ended in 1921 the increase in the combined tractive effort of all locomotives was 60 per cent less than for the five-year period ended 1907; similarly, the increase in tonnage capacity of all freight cars was 85 per cent less for the period ended 1921 than for that of 1907. Mr. Markham also laid emphasis upon the significant fact that the present acute shortage of transportation is being felt at the beginning of a period of industrial revival and not, as has always been the case heretofore, at the peak of business activity. Mr. Emery, in his address, advocated an end to government interference in labor disputes unless there is imminent danger of an interruption in transportation. The addresses of Mr. Markham and Mr. Emery follow in part:

Mr. Markham's Address

We have witnessed this year a remarkable change in conditions in the United States. The country recently was passing through one of the most profound business depressions in its history. It has emerged from this depression, and has entered a period of tcaivity in production and commerce such as those which always have followed its panics and depressions in the past. Foreign conditions affecting our export business are very unsatisfactory, and it is impossible to measure the influence they will exert. But our domestic commerce always has been many times as important as our foreign commerce, and in our own land almost every condition seems favorable to another era of expansion and prosperity.

At the very threshold of this new era, however, we are confronted with a shortage of railroad transportation. The farmers have produced bumper crops. The railways have moved more grain this year than ever before in history. Nevertheless, the farmers complain that, although their big crop has not all been harvested, they cannot get enough cars for even the grain that is ready for shipment. Lumber manufacturers find themselves unable to ship the lumber they have produced and for which there is a demand. The coal mine operators cannot get anywhere near as many cars as they order. Manufacturers of iron and steel show that their output is being restricted because the railways cannot deliver them enough fuel and raw materials. Road building and other construction concerns complain that their business is interfered with by the priority in the use of open top cars being given to coal under an order of the Interstate Commerce Commission. Growers of fruit and vegetables say they are suffering large losses because they cannot get enough refrigerator cars.

Some of these complaints are exaggerated. Some are without justification. But they reflect a nationwide condition, the existence of which cannot be questioned.

Transportation Shortage, Heretofore Felt Only at Peak Times, Now Comes at Beginning

There have been other times when the service the railways could render has been unequal to the demands. This was the case, for example, in 1906 and 1907, and in the war years. But in every past time when there was a shortage of transportation it was felt only after the revival and increase of business had been going on for some time and had carried production and commerce to higher levels than ever before. What we call "car shortages" always have represented inadequacy of all railroad facilities. The "car shortages" of 1906 and 1907 did not come until toward the close of a ten-year period of industrial and commercial expansion during which the railways had increased by 2½ times the volume of freight carried by them. The car shortages of the war years did not begin until when, in 1916, the railways were handling 20 per cent more freight than in the previous year.

The outstanding fact regarding the present shortage of transportation, the significant fact which challenges our attention, is that it has been met at the very beginning of a period of business revival. In this respect it creates a situation unprecedented in the history of the United States—a situation which should cause every farmer and business man, every railway regulating official, every public man, every wage worker, to pause and reflect seriously.

Adequate Transportation Necessary for Prosperity to Any Class

It is plain to every man who thinks that the wage labor can be paid, the income the farmer can get, the profits that can be derived from business, depend in the long run upon the total amount of production and commerce that can be carried on. If the necessities, comforts and luxuries each of our people have is to be increased, we must increase our total production and commerce more rapidly than our population. We have always done this in America. But nothing could be more obvious than that the increase in production and commerce which is vital to the welfare of all cannot be secured without a corresponding increase in transport.

It is a historic fact that in this country within the last one hundred years production and commerce and the material welfare of the people have increased faster than they ever have in any other country in the world. It is also true, as every student knows, that this wonderful material progress has been made possible by the fact that until recently our railroads always were developed ahead of, and prepared the way for, the growth of population and industry. The conditions which now exist, therefore, mark a revolution in our affairs. Nothing less than a revolution has occurred when our railroads, whose surplus capacity has always in past periods of business made possible the vast increases which have occurred in our production and commerce, are found threatening to prove unequal, or actually proving unequal, to the demands made upon them at the very beginning of a period of business revival.

The railways are now moving about as much freight

weekly as in 1920, when the highest record was made. In spite of this the "car shortage" recently reported has been the largest ever known, and the demands of shippers continue to increase. In past periods of business revival the increase in freight business has gone on until it has reached a point 35 to 150 per cent higher than ever before. We may well ask ourselves whether, with the railways finding it difficult to surpass the freight carrying record of 1920, they can be expected within a few months or years to handle such an increase in tonnage as past experience shows would be only normal in a period of general revival of commerce and industry.

Inadequate Transportation Costs Farmers $400,000,000

Who can measure the losses which may be sustained by the country's people if the railways prove unable to increase anywhere near as much as they have in past periods the amount of freight handled? Mr. Julius H. Barnes, president of the Chamber of Commerce of the United States, was head of the government's grain corporation during the war, and has been in the grain exporting business for 30 years. In a recent address Mr. Barnes showed how inadequacy of transportation has so restricted the flow of grain from our farms to Europe that, in his opinion as an expert, the difference between the prices of grain on our farms and in foreign markets average 10 cents a bushel more than it would if transportation conditions in this country enabled the grain to flow normally to market. He estimated that if similar transportation conditions continued throughout the crop year the loss due to them suffered by farmers on grain alone would be $400,000,000. He attributed the inadequacy of transportation to "an over-rigid system of government regulation over our railroads, which has extended over ten or twelve years." Apply similar reasoning to all the rest of the industry of the country, and you will get some idea as to why Secretary Hoover recently estimated that every period of shortage of transportation costs the country at least a billion dollars.

Why are we suffering from this shortage of transportation at the very beginning of a business revival? The correct answer must be given to this question, and the public must be convinced that it is correct. Without an informed public opinion the situation cannot be remedied.

The situation is partly due to the coal strike and the shop employees' strike. The long coal strike has imposed upon the railways a demand for the movement during the fall and winter months of a vast tonnage of coal which should have been moved in the spring and summer. The shop employees' strike has delayed repairs to a large amount of equipment which was in bad order when it began and which would have been made ready for service if the strike had not occurred.

Development of Industry Continues— Railroad Development Lags

But it would be a serious mistake to assume that these strikes have caused the present shortage of transportation and that it will disappear when their effects have been removed. The causes of the present shortage of transportation and the still greater shortage there is reason for fearing go much deeper and farther back. During the last 15 years the production and commerce of the country, in spite of occasional reverses, have grown as rapidly in proportion as in previous years. The increases in the freight offered the railways conclusively prove this. But during this time the development of the facilities of the railways has steadily and rapidly declined. The time has come at last when not only has the surplus capacity of the railways been exhausted, but when their development has fallen far behind that of other industries. These are the real causes of the present situation.

Decline in Tractive Power Increase 60 Per Cent, Car Capacity 85 Per Cent

In the 5 years ending with June 30, 1907, the number of locomotives in service on the railways of the United States increased 18,160. The end of this period coincided with the beginning of the period of restrictive regulation. Compare this with the increases that have occurred since then. In the 5 years ending with June 30, 1912, the increase in the number of locomotives in service was only 8,447; in the 4½ years ending with December 31, 1916, it was only 4,558; and in the 5 years ending with 1921 the number of locomotives in service actually *decreased* 664. The locomotives retired were constantly being replaced with more powerful engines, and the increase in the total tractive power, or total pulling capacity of the locomotives in service in the first 5 years of this period was 640 million pounds. In the next 5 years it was only 338 million pounds; in the next 4½ years 367 million pounds; and in the 5 years ended with 1921 only 262 million pounds.

Now, take freight cars. In the 5 years ending with June 30, 1907, the number in service increased over 480,000. In the next 5 years it increased less than 230,000; in the 4½ years ended December 31, 1916, it increased only 114,000; and in the 5 years ended with 1921 the number of freight cars in service actually *declined* 13,521. The cars retired were constantly replaced with cars of larger capacity, and the increases in the total capacity of the freight cars in service were as follows: 5 years ended with 1907, 23 million tons; 5 years ended with 1921, 16 million tons; 4½ years ended with 1916, 12 million tons; 5 years ended with 1921, 3½ million tons.

Comparison of the figures for the two 5-year periods farthest apart show that the increase in the total tractive power of locomotives was almost 60 per cent less, and the increase in the total capacity of freight cars 85 per cent less in the 5 years ended with 1921 than in the 5 years ended with 1907. Probably these statistics afford as good a measure as could be given of the decline in the expansion of the railways which has occurred.

Decline in Increase of Other Facilities

The decline in the amount and capacity of the equipment provided has been accompanied by a corresponding decline in other facilities provided. Construction of new lines, which formerly averaged about 5,000 miles a year, has dwindled until during the last 5 years more mileage has been abandoned than built. The enlargement of terminals, the construction of second and other additional main tracks, the improvement of stations, have been for years coming nearer and nearer to a standstill.

The fact that a decline in the expansion of the railroads has been occurring has been frequently stated and is generally known. I have given these statistics not so much to show there has been a decline as to make clear how much greater it has been than most people realize.

Railways Can Increase Facilities if Capital Is Forthcoming

It should be evident to every well informed person that the country must have a revival of the expansion of its means of transportation, or its production, commerce, wealth and the well being of its people will never be able to increase again as in the past. Some advocate the development of other means of transportation, such as inland waterways, upon the theory that needed transportation can be obtained more economically by other means than by railroad development, or that adequate development of the railroads has become impossible. In my opinion, it is easily demonstrable that the additional transportation needed can be secured more economically by increasing the capacity of the railways

than in any other way. Furthermore I say merely what every experienced railway officer will endorse when I add that if a reasonable amount of new capital can be raised by them the capacity of our railroads can be increased just as easily and rapidly in future as it formerly was.

The Cause of the Present Situation

What is it that has caused this great and menacing decline in railroad development? What must be done to revive their expansion? From time to time it is suggested that regulation should be abolished and the managements of the railroads given the same freedom of action as those of other concerns. I believe the railroads, because of their character and fundamental importance to all other business, should be operated under the supervision of agencies controlled by the public. But while I am a firm believer in the principle of regulation, I also believe that government regulation as it has been practiced for 15 years is almost wholly responsible for the decline of railroad development and for the existing shortage of transportation. For 10 years before the war, regulation kept down the rates and reduced the net return of the railroads, although wages, prices and the returns earned in other lines of business were increasing. The policy of regulation was dictated chiefly by those who charged that the railways were enormously over-capitalized and who argued that because they render an essential public service the net return they are allowed to earn should be especially restricted. Persons who had money to invest more and more avoided the railroads. The market value of their securities declined, and with it the capital they could raise to expand their facilities. After the country entered the war they were unable satisfactorily to meet the demands. When the government after operating them 2 years returned them to their owners, without having substantially enlarged their facilities, their expenses had been increased so much more than their rates and earnings that they were incurring a large deficit, and the prices of their securities had sunk to new low levels.

Congress provided in the Transportation Act that the Interstate Commerce Commission should have authority to set aside rates made by state authorities which were discriminatory against interstate commerce or unreasonably unremunerative; that it should make a tentative valuation of the railroads and so fix the rates on this valuation as to enable the carriers, under economical and efficient management, to provide adequate transportation; and that for two years it should take 5½ per cent upon the valuation as its measure of a fair return and might in its discretion allow ½ of 1 per cent more to be earned.

The Commission in 1920 granted advances in rates which it believed would be sufficient to cover the increases in operating expenses which had occurred and to enable the railways to earn a return of 6 per cent upon the tentative valuation of $18,900,000,000 made by it. But the country was just entering a period of business recession and depression. Railway traffic declined to the lowest level since 1915. In spite of the most drastic retrenchments, instead of 6 per cent the railways earned and received in 1921 only 3⅓ per cent—an amount barely equal to their fixed charges. Although a large part of the railways were threatened with bankruptcy, there was raised throughout the country a demand for a general reduction of freight rates. Farmers, business men, politicians, all joined in it. Reductions of rates being manifestly impossible without reductions of wages, and the cost of living and wages in other industries having declined, the railways applied to the Railroad Labor Board for general reductions of wages.

Reductions of rates were advocated on the ground that they were essential to a revival of general business. Without now arguing the question whether they were desirable or not, it is notable that general business began to revive before any reductions of rates were made. Within the last 6 months the freight business handled by the railways has increased 30 per cent, and the net return earned by the carriers as a whole this year has been somewhat larger than last year, having averaged 4 per cent upon their valuation. Owing to this, to the relatively large advance which has occurred in the market prices of railway securities and to the prospective demands of a still heavier traffic, the railways thus far this year have ordered more cars and locomotives and begun more improvements of other kinds to enable them to handle more business than they have for several years. To the middle of October orders for locomotives this year has totaled 1,792, for freight cars 122,053 and for passenger cars 1,467.

Adequate Revenues the Only Solution of Railroad Problem

Clearly it is essential to the welfare of the country that the railways should as rapidly as practicable put their existing facilities in good condition, and that they should for some years rapidly improve and expand their properties. What is necessary to insure that this will be done? Those charged with the responsibility of managing railways can make but one answer. The one thing, and the only thing, which ever will enable and cause the railways to carry out a sufficient program of expansion will be to let them earn sufficient net return to raise the new capital required for that purpose. The question is not what interest and dividends railways *ought* to pay. It is what they *must* pay to get capital.

The Interstate Commerce Commission having, after 2 years more of investigation, again held reasonable the valuation placed by it upon the railways in 1920, has held it would be fair and in the public interest for them to earn in future an average annual net return of 5¾ per cent on this valuation. In view of past experience in the railroad business and of present economic conditions it is impossible to comprehend how any reasoning mind could conclude that the earning power by the railways of any smaller average return than 5¾ per cent over a period of years would enable them to raise the large amounts of new capital which, in the interest of the entire producing, commercial and consuming public, they should raise and invest.

It is a fact, however, which we must not minimize or disregard that a strong and widespread propaganda is being carried on to secure legislation to reduce the net return of the railways to a much lower basis than that which the Commission has held reasonable. It has been proposed in bills introduced in Congress to restore to the states the same authority to regulate rates that they had before the Transportation Act was passed. This would remand the railways again to the rule of 49 masters. It would result in the states again making state rates lower than the corresponding interstate rates. It would destroy the ability of the Interstate Commerce Commission to so regulate rates as to enable the railways to earn net returns adequate to attract a sufficient amount of new capital.

In addition, the valuation made by the Interstate Commerce Commission is being attacked by certain labor and political leaders on the ground that it is from $5,000,000,000 to $7,000,000,000 too large.

The passage of the Valuation Act under whose provisions the Interstate Commerce Commission collected and compiled the information upon which the valuation was based, was secured 9 years ago chiefly by men who claimed that the railways as a whole were grossly over-capitalized. Basing its estimate mainly upon the wages and prices of materials which prevailed in 1914 the Commission, after 8 years' work in carrying out the valuation law, has found that the value of the railways as a whole, while less than the investment shown by their books, is more than $2,000,000,000 greater

than the amount of their securities actually outstanding in the hands of the public.

Attacks on Rate Making Provisions of Transportation Act

It would be unwise to ignore the fact that many people, especially railway employees, and farmers in the middle west who are suffering from adverse conditions, are believing and being influenced by propaganda against the railways. Its avowed purpose is to bring about changes in federal regulation by which the valuation would be scaled down billions of dollars and the net return of the railways correspondingly restricted. The attack is directed chiefly against the rate-making provisions of the Esch-Cummins Act. The most important of these provisions now in effect is that which directs the Interstate Commerce Commission in fixing rates to consider the need of the country for adequate transportation. Therefore, the principal thing Congress would do by repealing the rate-making provisions would be to say in effect to the Commission that it should not in future consider the need of the country for adequate transportation.

The principal lesson taught by the outlaw switchmen's strike two years ago and the recent shopmen's strike seem plain enough. Both, after doing much harm, proved failures. They plainly indicate that, having established an impartial tribunal to pass on labor controversies, the public will always be so strongly against railway employees who strike that most strikes will in future be foredoomed to failure from the start. The public and the railroads long since decided it would be best for all concerned for differences between the railways and their employees which could not be settled by direct negotiations to be settled by arbitration. Labor leaders have been hostile to arbitration. There are indications, however, that railway labor leaders who are not infected with radical hostility to the entire present industrial and social system, but who are simply striving to promote the best interests of members of their unions under the present industrial system, are losing confidence in strikes, and especially in strikes on a huge scale, as means for promoting the welfare of labor.

With respect to the valuation law and the rate-making provisions of the Transportation Act, there seems real danger that they will be changed for the worse unless the public can be given a better understanding of the railroad situation, and of what must be done to improve it if it is not to be allowed to restrict the growth of production and commerce until it brings a great disaster upon the nation. That disaster must be avoided; and therefore adoption of the policy that would cause it must be prevented.

Duty of Executives to Educate Employees and Public

In concluding my remarks I wish to emphasize as strongly as I can the duty that those responsible for the management of the railroads owe to their security owners and to the nation to make much greater efforts than they ever have to give railway employees and the public a better understanding of railroad management, of the railroad situation and of the railroad problem. Most of the troubles of mankind are due to lack of understanding or to misunderstanding. A very large majority of the employees of the railways are good citizens who do their duty as they see it, and who desire to contribute their share toward their country's progress and prosperity. I have an abiding faith, based upon long experience as a railway officer, that if the managements of the railroads will not only treat the employees fairly, but will also get to them the facts about the railroad business which they are entitled to know, and appeal to and rely upon their intelligence and good sense, a large majority of railway employees will respond in what they say and do in the same spirit.

I have, besides, an abiding faith in the fairness and good sense of the American public. We should never have had the unfair and harmful policy of regulation we have had for fifteen years if there had not been abuses in the railroad business which the managements themselves ought to have corrected. Furthermore, we should not have seen this policy persisted in year after year if the railroad managements had not failed to use legitimate means which were available for presenting to the public the simple facts which demonstrate that, in spite of some abuses, the railways of this country have been as honestly, as economically and as public spiritedly developed and managed as any large industry.

The duty—the selfish duty, if you please—of helping create an intelligent public sentiment regarding regulation of railroads rests upon our agricultural leaders, our business leaders, our public men and our newspapers as much as upon railway managers; and all will suffer in the disaster that will result if such a public sentiment is not created.

Mr. Emery's Address

If it is no longer necessary for a railway business man like John Stevens to convince a Livingstone that a locomotive may operate upon a track with the speed and safety of a canal boat, or persuade a complacent turnpike company that it is feasible to substitute steam for a Conestoga wagon, you are still confronted with conceptions of public railway control that fit only "the Toonerville trolley that meets all the trains." I view with apprehension that misguided belief that would divide the control of national transportation among 48 principalities or fatuously insists that we may starve our distributive service and insure its growth. The lessening consuming power of the transportation giant already reacts upon a thousand activities that fed its diminished appetite. If economic necessity drives from its exclusive service the great specialists who have ministered to its needs and multiplied its powers, it is the American people who will suffer.

From the shipper's viewpoint, what problem is more vital than an effective means to prevent the continually threatened interruption of interstate commerce through disputes between carriers and their employees? Within 35 years, four notable legislative experiments are represented in the Acts of 1888, 1898, 1913, and the Labor Board provisions of 1920. Standing in the shadow of the most serious effort to paralyze transportation since 1894, may we not inquire whether the nature and operation of the present method indicates that its theory and practical administration are best calculated to secure the object sought?

Two things are prerequisities of any plan. The one, an enlarged acceptance of social responsibility so indispensable to the security of our interdependent social life; the other, a resolute and effective enforcement of existing law against any and every combination that crosses the deadline of public safety.

Approaching the present plan, I criticise neither the personnel of the Labor Board nor its administration. I am concerned with a far more fundamental aspect of the matter, the principle of operation and the tendencies it is plainly developing. What is it that is sought? A practical means of protecting the paramount public interest in uninterrupted transportation, efficiently performed at reasonable rates. The method employed is arbitration through representative groups, compelling inquiry and delivering an opinion without penalty. This is not adjustment through a commission representing the public exclusively, but arbitration through groups representing the parties at interest in which the public element

is a minority. The Board is unrelated to the Interstate Commerce Commission. The primary determination of income and outgo is therefore the separated function of unrelated public bodies. The price of transportation is necessarily fixed by its cost, but the body fixing the price is not a participant in determining the cost.

These structural defects may be cured by amendment if it is practicable to establish a liaison between the Labor Board and the Commission. But a still graver difficulty lies in the nature of the plan and will become more aggravated with its continuing operation. The public is not concerned in every difference between management and men incidental to the employment relation, but only such as threaten a substantial interruption of commerce. The present Board, in 2½ years, has received 11,000 disputes, which means that in practical operation it deals not with irreconcilable differences of gravity but becomes a detailed and meticulous supervisor of every circumstance of working conditions, necessarily substituting the judgment of a public body for the discretionary authority of experienced management in contract, individually or collectively, with free men. If this means anything at all, it is practical substitution of government for private control under circumstances that do not make for economic operation. But, furthermore, the establishment of that morale, once the proud boast of every road, demands an intimate relation between management and men in accordance with their mutual agreement. But right employment relations cannot be manufactured by government and imposed from without. The experience of all industry teaches that they are a human growth that springs up only from within.

The issue then is, are we, as a matter of national policy, to permanently approve the meticulous regulation of the relation of railroad managers and employees, or urge government intervention only when their natural disagreements, arising out of their differing conception of private interest and public obligation, threaten the suspension of indispensable service. One method leads to a detailed governmental control characterized by all the essential aspects of ownership. The other gives free play to the origination and establishment of employment relations in accordance with the circumstances of each road as an independent unit of self-interest and transportation production and stops the assertion of group interest only when it approaches the deadline of public safety. It rests upon continuing enforcement by public authority, of public order, under every circumstance and upon every occasion and with all the weapons possessed by government under the long standing, clearly recognized limitations upon combined aggression.

Are we then left to the ultimate of compelled arbitration if the dispute reaches its crisis? Compulsory arbitration is the last resort of social self-defense. Why, therefore, not experiment within safe limits, with the protective sanction of an aroused and informed and therefore invincible public opinion? Suppose the President of the United States, whenever in his judgment, a dispute between a carrier and its employees threatens the movement of the mails, the free flow of commerce between the states, or the distribution of supplies essential to the Army and Navy for the national defense, halted the controversy and appointed, for the express purpose, a commission of not to exceed five impartial and qualified persons to investigate the causes and circumstances of the controversy and report their findings to him, to be made by him public. To preserve the subject matter of controversy and insure uninterrupted operation, it may be made unlawful for the parties to the dispute to strike or lockout until a reasonable time after the publication of the report of the President's commission. Thereupon, if the determination to concertedly but peacefully withdraw from the service of the carrier remains, it may be exercised after the taking of a secret ballot, under the supervision of a public officer, by the parties in association.

Ultimate intervention in the public interest may thus be secured under circumstances which, while protecting transportation from obstruction or stoppage, insures an inquiry into any dispute of substantial importance under circumstances which, riveting public attention upon the event, assure for the commission's finding attentive consideration and the establishment of an informed opinion. The period of delay intervening for permitted action assures a deliberate exercise of judgment under circumstances which excite the recognition of a condition demanding correction or the public condemnation of the withdrawal in terms so certain that it cannot endure.

I. C. C. Declines To Take Charge of Car Distribution

WASHINGTON, D. C.

THE Interstate Commerce Commission has declined formally to take charge of car distribution under Paragraph 15 of Section 1 of the Interstate Commerce Law, as it was requested to do by the Washington Department of Public Works and others who have presented demands of the shippers of the Northwest for an increased car supply, on the ground that the commission deems such a step unwise and prefers, under the circumstances, to work in co-operation with the Car Service Division of the American Railway Association. The Car Service Division has recently taken steps to relieve the situation in the Northwest by issuing orders for the return by the eastern roads of cars of western line ownership, but in spite of this fact the commission has been urged, particularly by O. O. Calderhead, traffic expert of the Washington commission, and also by Senator Poindexter, to exert its emergency powers. On November 3 the Washington commission advised Mr. Calderhead, who has been in Washington in connection with the matter for several weeks, in effect to demand that the commission take direct charge. This was followed by a message to the commission on the subject from Senator Poindexter, to which the commission replied as follows:

"The commission deems it unwise formally to take charge of cars under sub-section 15. The effect might be to relieve carriers from responsibility and the commission is without the elaborate organization necessary to handle the subject in detail, and the time required to build up such an organization renders it practically impossible. The fact of the matter is there are not enough cars and motive power to go around and it is physically impossible wholly to relieve the situation. The directions of the Car Service Division of the American Railway Association are made after the fullest conferences with our representatives and we have the personal assurances of the executives of the affected carriers that orders will be observed. In fact our check shows car distribution is being made so far and fast as physical conditions permit. The demand made on carriers now is the greatest in history at this time of the year, with motive power only two-thirds in service as a result of the strikes."

The Car Service Division reports that the orders issued October 25 have been made effective on all lines and that the movement of empty western route cars to home lines is well under way. Although reports were not yet available from all lines, such as have been received indicate substantial progress in this direction. For instance, up to and including October 30, three New England lines delivered 371 western cars to connections for home, while six of the smaller lines east of Chicago report delivering 598. Two Kansas City lines report delivering 512 while six western lines delivered 1,618. In addition to the above an informal report from one of the larger eastern lines says that up to

the evening of the first it expected to have completed delivery at western junctions of 400 cars with approximately 200 more en route to be delivered within 48 hours.

Western lines have also received orders to expedite the return of cars belonging to eastern lines, by eliminating their use in local service and by loading either to home lines or terminal markets where there will be eastern loading to take the cars home.

The above orders have received rather wide publicity and the reaction to it has been very favorable in all sections of the country and at Washington. The entire movement is being closely watched by the Car Service Division with the view of obtaining the maximum performance.

Reports show an excessive number of open tops in New England, Michigan and the Northwest, and the Car Service Division is actively after the return of these cars. The heavy loading of coal is taking the cars into this territory in abnormal amounts.

Division Five of the Interstate Commerce Commission has approved the recommendation of the Federal Fuel Administrator that the use of open top cars be permitted for loading coke when consigned to public utilities or for domestic use.

P. J. Coleman, formerly assistant general superintendent of transportation of the Northern Pacific, has been appointed district manager of the Car Service Division of the American Railway Association with headquarters at Minneapolis, Minn. Mr. Coleman will have the authority of the Car Service Division in the territory to which he is assigned, which includes the terminals at St. Paul and Minneapolis, states of Minnesota, North and South Dakota, northern part of Wisconsin, and the state of Montana east of the Rocky Mountains.

Valuation Questions Argued Before I. C. C.

WASHINGTON, D. C.

THE Interstate Commerce Commission devoted three days last week, November 1, 2 and 3, to hearing oral argument on questions as to various fundamental principles of its valuation work raised by the protests of the carriers to the tentative valuations served by the Bureau of Valuation in approximately a dozen cases. One of the chief points discussed was involved in the insistence of the carriers that the commission state the methods or process by which it arrives at the figures stated as representing the "final value" and particularly as to whether it should state only a value for rate making purposes or a figure which would represent the commercial value. Counsel for the railroads urged a valuation representing the latter type, while representatives of the bureau of valuation and of the state commissions urged the use of a "rate base" as representing the principal purpose of the valuation work, although some of them also expressed the opinion that the commission should state what considerations it had given weight to and what kind of a value it means in stating the final value. In the tentative valuations the question is avoided and the figure given is stated to represent value in accordance with the meaning of that term as used in the interstate commerce act. Several of the commissioners dissented from the opinion in the Evansville & Indianapolis case because it contained no analysis of the method by which the final value was arrived at.

W. G. Brantley, speaking for the Winston-Salem Southbound, asked of what avail it is when the commission has said that the value is so much and the company says it is so much more, if nothing is known as to the process by which the commission arrived at its conclusion. Leslie Craven, representing the railroad valuation committee, said that the greatest danger is that there will be no exact definition of what the commission has done, that these points have been argued before the commission for years and no decision has been reached yet on one of the greatest economic problems before the country. The railroad lawyers took the position that the question of the value of a railroad property is a judicial and not an administrative one and that without a statement of the methods, which they said the act contemplated, the results published by the commission would be of little value. P. J. Farrell, chief counsel of the commission, although he opposed the railroads on other points, said that the time has come when the commission must say what it is doing and that if it is going to make no distinction between value for rate-making purposes and commercial value it will create a valuation that can't be used for any purpose. Mr. Brantley also pointed out that even if the valuation act when passed had contemplated a valuation for rate-making purposes the transportation act provided for several additional uses for the valuation. He also asked where is the constitutional protection if the commission has centered in it the two powers of making rates as its judgment dictates and determining values in the same way. If this is so, he said, the carriers are remitted for a remedy "back to politics, back to efforts, if you please, to bring about the appointment of a new commission, and things of that kind."

Edgar E. Clark, former chairman of the commission, appeared for the Tonopah & Tidewater and expressed views in general similar to those of Mr. Brantley regarding the finding of a single sum value.

J. M. Souby said that the bureau is proceeding in a circle in contending that there is a value for rate purposes lower than the commercial value of the same property, because, if so, the other value would be reduced. He argued that cost cannot be made the basis of a reasonable rate for the conveyance of passengers or freight.

While several roads have taken the position that their earning power should be treated as at least an important element of value, some of the roads represented at the hearing that have had frequent deficits took the position that their potential earning power should be considered or that they were at least entitled to the cost of reproduction of their property. Mr. Brantley said that if a road had earning power it should be given weight, but that at least its physical value should be considered.

Attorney Matthews of the Western Pacific said that in a valuation for rate making purposes an argument based on earning power begs the question and that to take a new and undeveloped carrier and assume that its immediate earning power is a measure of its ultimate earning power would do it great injustice. He contended that the cost of reproduction is the essential criterion and he pointed out that the commission would not fix rates in relation to the valuation of the Western Pacific except as its valuation entered into the valuation of the roads as a whole used as the base for figuring a 5¾ per cent return. The purpose of the valuation, he said, is to afford a check on rate making, not an absolute basis for it.

In reply to this type of argument, Mr. Farrell said that when a railroad has a low earning power its valuation is not cut down on the basis of the earning power but on the ground of improvident investment.

Walker D. Hines, formerly director general of railroads, appeared on behalf of the Western Union Telegraph Company in opposition to the inclusion in the railroad inventory of contributions made by the telegraph company to the property of the railroad along its right of way.

Arguments were also presented by Sanford Robinson, for the valuation committee, C. W. Needham, P. J. Doherty and H. H. Hartman for the bureau of valuation and John E. Benton, general solicitor of the National Association of Railway and Utilities Commissioners.

Latest type of dining car for the Pennsylvania System

Pennsylvania System Dining Cars Built at Altoona

Attractive Interior Finish, Kitchen Equipment, and Cast-Steel Truck Side Frames Features of Design

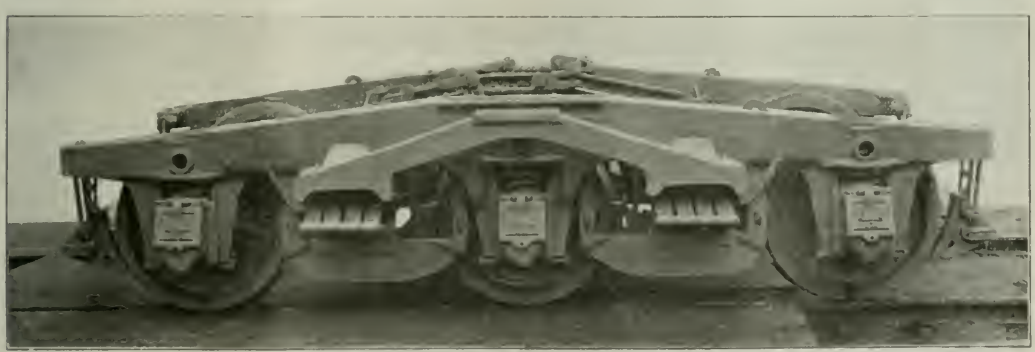
TWENTY NEW STEEL dining cars for the Pennsylvania System have just been completed in the car shops at the company's Altoona works. Structurally, these cars are the same as others now in service, having a strong built-up center sill with a cross-sectional area of 50 sq. in., and four cantilevers, two attached to each side of the center sills, spaced 18 ft. 9 in. from the transverse center line of the car, supporting the superstructure. No bolsters are used in this construction.

The sides below the window sills are designed to act as trusses and transfer the load to the cantilever supports, which in turn carry it to the center sill. The side posts, of the cantilever type, are made of ⅛-in. pressed steel and extend from the bottom of the side to the deck plate, the lower onals between corner and door posts. Standard diaphragms are attached to the I-beams.

The general dimensions are as follows:

Length over buffers	82 ft. 3⅛ in.
Distance between centers of trucks	56 ft. 3 in.
Distance between centers of cross cars	37 ft. 6 in.
Width over sides	9 ft. 10⅛ in.
Width over roof	9 ft. 11½ in.
Width over upper deck	7 ft. 7 in.
Height from rail to center line of coupler	34½ in.
Height from rail to top of platform	50 in.
Height from rail to car floor	52 in.
Height from rail to eaves lower deck	11 ft. 2⅝ in.
Height from rail to eaves, upper deck	13 ft. 3½ in.
Height from rail to top of roof	14 ft. ½ in.
Seating capacity	36 persons
Weight when fully equipped with ice, coal, water and supplies	160,000 lb.

The air brake is the Westinghouse type UC-1812, without



Cast Steel Side Frames Reduce the Weight of the Truck and Decrease the Number of Parts

deck roof sheets, 1/16 in. thick, being riveted directly to the posts. The deck plate is ⅛ in. thick and the upper deck roof sheets are 3/32 in. thick. The roof sheet joints are welded.

Vestibules have been omitted since passengers enter the dining cars only from adjoining cars. End protection against collapse is of the same strong construction used in all Pennsylvania System steel passenger equipment cars, which for non-vestibule cars consists of one 12-in. I-beam on each side of the doorway and two Z-bars, one 4 in. by 8.2 lb. and one 3 in. by 6.7 lb., at each corner, with pressed steel diagthe electro-pneumatic attachments, although this feature can be readily applied as the wiring has been installed.

The cars are heated with vapor, having a thermostatic control and may also be operated manually, the thermostat being located at the center of the car between windows.

The lighting effect is very satisfactory, semi-indirect lights being used, one over each pair of tables. Each fixture contains a 100-watt lamp, which makes a very efficient light. Between each pair of lamps is an electric fan with an air deflector or distributor, which produces a movement of air at intervals of about 20 times per minute. This feature of in-

termittent breeze eliminates the steady gust of air common to many types of electric fans.

The draft gear is of the Westinghouse type N-11 with attachments for cheek castings at least 25 per cent stronger than the A. R. A. requirements for freight cars. The tail yoke is cast steel with quadruple shear attachment to stem, which has the latest A. R. A. type D head.

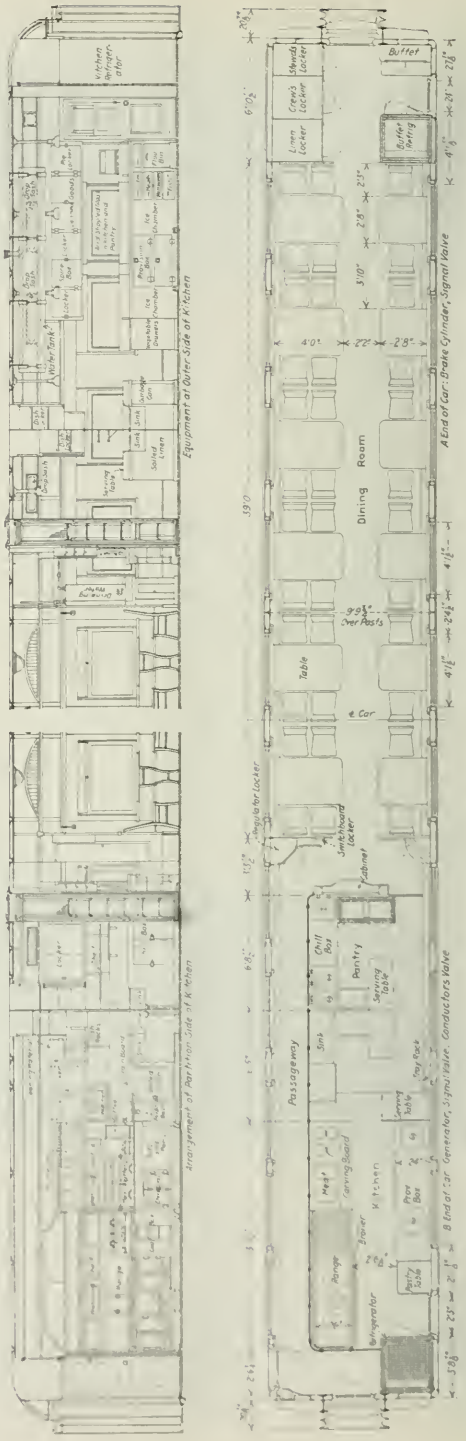
The trucks are of the six-wheel clasp brake type and have a wheel-base of 11 ft. 0 in. The axles are of the special Pennsylvania System type with 5½-in. by 11-in. journals, and the wheels are rolled steel, 36 in. in diameter. The general scheme of the trucks is the same as used on all former Pennsylvania System cars, the bolster being of riveted plate construction, which has been exceedingly satisfactory on previous cars. It was designed to flex readily in a horizontal plane, but is rigid against transverse and longitudinal strains.

The bolster is supported on sets of quadruple elliptic

The Interior Is Finished in Olive Green

springs, one set under each end of each spring beam. The equalizers supporting the elliptic springs have one end hung from the truck frame, the other being attached to an inverted U-shaped equalizer and hanger combined, which rests on the helical spring located over the center journal box. The helical springs are supported directly on the journal boxes which in turn are guided as usual in pedestals. It will be noted that this arrangement results in having the least possible non-spring-supported weight and, therefore, the least possible kinetic effect on rails. The principal feature which differs from the old trucks is the side frame.

The older trucks had side frames built up of channels, cast steel pedestals, spacing pieces, cross-braces, etc. In the new truck all of these parts are combined into two cast steel frames, one on each side, connected flexibly by only two 2-in. transverse rods, located respectively between the center and each end axle. Each frame can, therefore, readily adjust itself, independently of the other frame, to meet track irregularities. Also, since the bolster is flexible in a horizontal plane, it in turn can adjust itself to the various positions taken by the side frames and, being rigid longitudinally,



Plan of Pennsylvania Diner and Elevations, Showing Kitchen Arrangement

holds the side frames in correct transverse alinement. The cast-steel side frames were designed to be interchangeable with the old built-up side frames so that when repairs are necessary to old trucks the cast-steel frames, which weigh less than the built-up frames, can be substituted. The total weight of each truck is 23,000 lb.

The interior of these dining cars is arranged so that there is a large dining room, seating 56 persons. They are finished in plain mission style of architecture, the walls being painted a medium shade of olive green with striping of a darker shade of green edged with gold. The ceiling is cream color striped with dark green. The carpet and curtains are of a green shade. The color of the side walls is unique and has been the subject of many complimentary remarks from passengers.

At one end of the dining room are located the linen lockers, crew's lockers and steward's lockers, while on the opposite side of the passage-way is a large refrigerator with a humidor used by the steward for mineral waters, etc. There is also at this end of the car a buffet for the use of the steward.

At the other end of the dining room the pantry and kitchen are located. These are arranged especially for quick service, the kitchen and pantry being in one without a partition between them as is usually the case; this permits the waiters to enter the kitchen and allows more freedom for the men.

The kitchen and pantry have a number of special features, such as a water filter for filtering all water used on the tables, and separate coolers for milk, cheese, butter, meats and fish.

Hearing on Disposition of Central Pacific

WASHINGTON, D. C.

ORAL ARGUMENTS were held by the Interstate Commerce Commission at Washington on November 4 on the petition filed by the Union Pacific asking the commission to dismiss for want of jurisdiction the application of the Southern Pacific, which had been set for hearing on November 21, for authority to retain control of the Central Pacific by stock ownership and by lease pending the completion of the commission's plan of consolidation. In a general way, counsel for the Union Pacific based their arguments on the contention that the jurisdiction of the case is with the United States court for the district of Utah, which was directed by the Supreme Court to prepare a decree for the separation of the Central Pacific and the Southern Pacific and that the Supreme Court has decided that control by the Southern Pacific is contrary to public interest. On the other hand, the contention of the Southern Pacific was that the court had not attempted to deal with the situation created by the transportation act because it lies within the administrative functions of the Interstate Commerce Commission, and that the commission, therefore, has jurisdiction over its application and should certainly allow a hearing on it. The Union Pacific's argument was presented by H. A. Scandrett, commerce counsel; N. H. Loomis, general solicitor; C. C. Dorsey, general attorney, and Edgar E. Clark, formerly chairman of the Interstate Commerce Commission, while the Southern Pacific was represented by Fred H. Wood, commerce counsel; J. P. Blair, general counsel, and Max Thelen, who was formerly chairman of the California Railroad Commission.

Mr. Scandrett began the argument for the Union Pacific by reading from the Supreme Court decision, which held that the Central Pacific and the Southern Pacific were competing lines and directed the lower court to prepare a decree severing the control by the Southern Pacific. Commissioner Potter asked if it was his claim that the commission may not ultimately award the Central Pacific to the Southern Pacific in a consolidation plan. Mr. Scandrett said that it was not necessary to argue that point now, although, in his opinion, the commission may not do so, as the Supreme Court has held that the control by the Southern Pacific is contrary to the public interest. Commissioner Meyer asked if the commission might not at least hear the application of the Southern Pacific, to which Mr. Scandrett replied that if it appears that the commission would have no authority in law to grant the application time would be wasted in holding a hearing. He said the commission is asked to exercise an extraordinary power—to nullify a decree of the Supreme Court. If that power is conferred by the law it must be done only in express terms. Unless the commission can say at this time that the inclusion of the Central Pacific in the Southern Pacific system will be in accord with its final consolidation plan, he said, it cannot entertain the application now. In reply to a question as to whether the commission could not afford the temporary relief asked by the Southern Pacific, Mr. Scandrett said that the relief asked is not temporary and that the commission cannot say what will be the best plan of consolidation until it reviews the entire field. Commissioner Hall pointed out that the court acted under the Sherman law, while the commission is to act under the new law. Mr. Scandrett said the court was presumed to know of the transportation act and, in fact, the consolidation provisions were called to its attention in argument, so that if it had wanted to it could have referred to the situation created by the new law in its decision. Mr. Scandrett contended that the control proposed by the Southern Pacific is in effect a consolidation, although authority to approve a consolidation in advance of the final plan is expressly withheld from the commission in paragraph 2 of section 5. The roads are now consolidated into a single system for ownership and operation and only the further step of conveying the property to the Southern Pacific could make the consolidation more complete. The Southern Pacific, he said, is asking the commission to perpetuate a control which the Supreme Court has said now constitutes a practical identity of the properties.

When Commissioner Potter asked if the Supreme Court has foreclosed the question of the public interest, Mr. Scandrett said that the jurisdiction of the district court is exclusive until the decree is carried into effect and it is the duty of the district court in preparing a decree to make arrangements for joint use of terminal properties, etc., which would require a long time. Unless the commission finds that the Central Pacific should be included in the Southern Pacific system, the court proceedings must go on. When Commissioner Hall asked what effect an order of the commission could have on the court, Mr. Scandrett said that he was not in the confidence of the Southern Pacific, but he guessed it would show the order to the court and ask it to stay its hand. He argued, however, that until the court proceeding has reached a finality, the commission should not interfere with the subject matter; otherwise there would be an unseemly conflict of jurisdiction resulting from a court order directing a separation and an order of the commission allowing control by the Southern Pacific. Commissioner Meyer asked how the commission can find what is in the public interest until it hears the evidence. Mr. Scandrett replied that that is *res adjudicata*. Even if the Supreme Court decision is not conclusive, Mr. Scandrett said, it precludes a finding of the commission in advance of its final consolidation plan that such a consolidation would be in the public interest and until there is a separation in accordance with the decree there is no way in which the Central Pacific can have a voice in the matter because its directors are selected by the Southern Pacific. When Mr. Scandrett asked if briefs would be allowed to be filed, Mr. Wood, on behalf of the Southern Pacific, entered a vigorous protest, saying that the whole purpose of the Union Pacific was to

cause delay, but the commission ruled that briefs might be filed within seven days.

Mr. Loomis discussed the bearing on the case of the Pacific railroad acts, which contemplated a continuous through line from the Missouri river to the Pacific coast, although the line was built by two separate companies. The law provided, he said, that neither company should discriminate against the other in the handling of through traffic and, therefore, the Union Pacific is barred from building or acquiring a line of its own to San Francisco to handle freight which would otherwise go by the Central Pacific. But, he said, the Central Pacific cannot possibly treat its partner, the Union Pacific, fairly, because it is under the domination of the Southern Pacific. The Pacific railroad acts constitute a three-party contract between the government, Central Pacific and Union Pacific, which cannot be impaired. He did not claim that the Central Pacific should be given to the Union Pacific, but merely that it cannot be given to the Southern Pacific because the Southern Pacific would be "bound to operate it in its own interest."

Mr. Clark said that the consolidation provisions of the transportation act, except the clause relating to the express company, speak for the future and give no power to the commission to approve an existing consolidation. The commission's approval of the Southern Pacific application, he said, would be based only on a tentative finding of the public interest and would involve a breach of comity toward the Supreme Court. Commissioner Aitchison asked if the commission does not have a mandate from Congress to carry out the provisions of the transportation act, to which Mr. Clark replied that the law gave it power only to deal with a control not then in existence. When Commissioner Hall referred to the case in which the Pennsylvania was allowed to lease the Panhandle, Mr. Clark said that different facts and circumstances existed, but Mr. Hall asked how the commission was to get at the facts without a hearing. Mr. Clark also pointed out that the commission has no power to require a consolidation and that the Central Pacific could refuse to consent to any plan of consolidating it with any other company, and under Southern Pacific domination, he said, it could not give any independent assent to any plan. He also made the point that the Southern Pacific is not in lawful possession of the stock which it has voted to assent to control of the road by the Southern Pacific.

Mr. Wood said that counsel for the Union Pacific had presented the kind of arguments that would naturally follow the presentation of evidence on the merits instead of on a motion to dismiss. The sole issue, he said, is the question of public interest, and for the purpose of the present argument the allegations of the Southern Pacific petition as to the harm that would result if the roads were to be separated must be taken as true. He pointed out that motions to intervene on behalf of the Southern Pacific have been filed by the state authorities of Utah and Nevada and by a statewide committee representing commercial organizations of California, all of which say that the granting of the Southern Pacific petition will be in the public interest.

Mr. Wood also contended that the Southern Pacific does not seek the continuation of the existing status. It seeks control of the Central Pacific by a valid lease and a lawful stock ownership, whereas, according to the opinion of the Supreme Court, it has never been in lawful control of the Southern Pacific. As to the effect of the Pacific railroad acts, he said that the unreversed decision of the district court that the provisions of those acts could be carried on by the Southern Pacific as lessee of the Central Pacific, as well as by the Central Pacific itself, stands as the law of this case and that the control of the Southern Pacific is in no way violative of the Pacific railroad acts. The Supreme Court, Mr. Wood said, did not pass on any issue arising under the transportation act, because there was none before it and could not be until the commission exercises its administrative jurisdiction and the court has something to review. The commission and the commission alone is empowered by the act to bring about a relation between railroads in harmony with the new policy of Congress. When Commissioner Potter asked what would happen if the commission should award the Central Pacific to the Union Pacific in a consolidation plan and the Southern Pacific should prevent such a consolidation by asking $500 a share for the stock, Mr. Wood replied in that case the commission could terminate its lease.

The Southern Pacific's belief, he said, is that if the properties are separated the quality of public service will be impaired and harm done both to the public and to the Southern Pacific, but he realizes that the commission should not now authorize a form of control that would be any barrier to the consummation of the commission's final plan. He said the Union Pacific probably hopes that if the commission shall refuse jurisdiction and the district court requires a sale, the Central Pacific will fall into the hands of people who will never sell it back to the Southern Pacific at any price that would be approved by the commission. On the other hand, if the commission should grant the Southern Pacific's petition, the disposition will be in its hands. If the separation were to take place and the commission should subsequently grant authority to the Southern Pacific to acquire the road, it would have to pay much more for it than it would get for it at a forced sale. He also contended that the form of control proposed by the Southern Pacific does not constitute a consolidation any more than other cases where the commission has authorized leasing of roads which are already controlled by stock ownership.

Mr. Blair said that Congress had not attempted to tie the Union Pacific and the Central Pacific together any closer than by the requirement of physical connection and nondiscriminatory treatment. As long as there is a thorough, unhindered transportation route, the public is not concerned with where one road begins and the other ends. He said that the sending of more freight over the Southern Pacific by the El Paso gateway is not a discrimination prohibited by the Pacific railroad acts. When Commissioner Potter referred to the Union Pacific-Southern Pacific dissolution plan which provided for the sale of the Central Pacific to the Union Pacific, Mr. Blair said that that was a plan which the Southern Pacific had had to consent to at a time when "a club was being held over its head in one hand and a bribe was held in the other."

Mr. Thalen denied that the doctrine of comity prevails as between the judicial and legislative branches of the government and said that the commission is a representative of Congress. The case before the commission, he said, does not have a similarity of purpose, subject matter or relief to that before the court because the public will be represented before the commission but not before the court. The only remedy available to the court, he said, is to tear apart; the commission may keep the properties together. If the commission is in doubt, he said, it should decide in such a way that the representatives of the public may have a chance to be heard and he referred to the petitions filed by the state authorities and commercial organizations of California, Nevada and Utah.

H. W. Prickett spoke briefly on behalf of the state of Utah and the chambers of commerce of Salt Lake City and Provo, asking that the commission give an opportunity to be heard on the Southern Pacific's petition, and the concluding argument for the Union Pacific was made by C. C. Dorsey, who said that if the Supreme Court had expected the Interstate Commerce Commission to interfere with the separation it had ordered it would have made some provision for it in its mandate.

Two Points of View on Employees' Relations

Officers and Employees Should Be on More Friendly Basis—The Value of System Athletics

THE *Railway Age* drive on the necessity for improving relations between the managements and the employees has brought many expressions of interest and commendation to the Editor's desk. Two of these, incorporated in this article, are of special interest—both are based on actual experiences and both are thought-provoking and constructive.

The contribution from Ward W. Adair focuses out into clear relief one of the fundamental reasons for the misunderstandings which are the rule rather than the exception on many roads. The mere fact that this condition is allowed to continue to exist is because its very existence is, or has been, largely overlooked; at least its great importance has not been recognized. Mr. Adair, by the way, is a keen student of human nature. He is one of the most successful of the Railroad Y. M. C. A. secretaries and has had special opportunities—as a neutral—for studying the relationships between managements and men on American railroads. Incidentally, he knows how to express himself in writing and make his point clear.

The second contribution—that from Leander H. Poor—is equally striking. Mr. Poor is a student at the Massachusetts Institute of Technology and has spent two summers in the service of the Pennsylvania Railroad. The article was originally written in connection with his college work after his first summer on that road; it was revised this fall on the basis of his more extended experience and observation. While it relates largely to the value of a system athletic program, reading between the lines it goes far deeper into the big and complicated problem of employees' relations on the railroad.

An Incident and a Suggestion

By Ward W. Adair
Executive Secretary, Railroad Branch Young Men's Christian Association of the City of New York

The vice-president of an Eastern railroad sat at his desk wrestling with the great transportation problems that occupied each waking hour, when the clerk laid a letter of introduction on his desk. He read it, then reread it, and pondered. The thing that gave him pause and pain was that an outsider was introducing him to one of his own men.

"Show him in," he said to the clerk.

The man entered and was cordially greeted by his superior officer, who listened patiently and sympathetically to the story of a personal injustice of several years' standing, which had greatly worried the employee, but which in the presence of his kindly disposed superior was straightened out in five minutes. Happy over the outcome, the railroader rose to go, and as he did so, the vice-president held out his hand and bade him goodbye.

Letters of Introduction Not Needed

"And now," said the official, "let me urge upon you that if you ever have another such incident in your life, you will come to me without any letter of introduction. We both belong to the same great railroad family, and you have as free access to me as to any other man in our employ. It makes me feel a little badly to think that one of our own men should go to an outsider to get a letter of introduction to me, and I want our men to feel that no such ceremony as that is necessary. Whenever anything is wrong, feel perfectly free to come to me and we will talk it out together."

This story is not a figment of the imagination, for it actually happened within the past year, and it is highly interpretative of a regrettable situation that has grown up within the last decade. A gradually developing feeling of estrangement between officialdom and the men of the rank and file has been observed and deplored by many thinking people who are at once friends of the railroad companies and of the men who work for them.

To a certain extent, the condition is the result of rapid growth, and it frequently is the penalty that is paid for quick development. In the organization served by the writer, where the membership has grown from 1,500 to 5,000 within a comparatively short time, it is altogether possible that a member might seek a letter of introduction to the executive, for the very reason that the larger family is more unwieldy and more difficult to know than the smaller one. In such an organization as the railroad company, however, the lack of personal acquaintance breeds grave misunderstandings and misapprehension. The "stove pipers" are much given to derogatory conversation. Many of them are accomplished knockers, and it is a well known fact that a knocker needs neither mental capacity nor training in order to become an expert. When a group of this kind get together, and none of them have any personal acquaintance with their superior officers, they are great breeders of dissension and distrust. If they knew some of the men at the top, and knew how thoroughly human the most of them are, such knowledge would greatly temper their conversation, but they draw on their imagination for qualities that really do not exist, and they have no scruples about doing the man an injustice.

Humanize the Railroad

Now, the antidote to this whole situation is in the get-together idea. The human element in railroading is first of all human. Wives and little ones of the section hands are just as dear to them as the wives and little ones of the president and general manager are to them. There should be mutual understanding, mutual sympathy, mutual acquaintance. The humanizing of the whole railroad situation is one of its most crying needs.

A big machine looks terribly heartless at times to the fellows down at the bottom. If they are not careful they will find themselves conjuring up visions of high salaried and unfeeling men who care nothing for their struggles and problems. As a rule, nothing is farther from the truth, but in order to dispel these erroneous ideas, officials should be ready and eager to avail themselves of opportunities to meet their men in social fellowship, man to man.

In the writer's 30 years in a branch of the railroad service that provides a common meeting ground for the men and the officials, he has had a varied experience. Certain railroad officials stand out in memory as those who always had "a previous engagement" when an opportunity was given them for an evening with their men. Certain others, and these I am thankful to say have been in the majority, have shown an appreciation of such opportunities, and have cancelled engagements, and inconvenienced themselves in order that they might seize upon opportunities to further friendly acquaintance with the employees. The vice-president above cited is a conspicuous and refreshing example of this latter class, although even he was in danger of being misunderstood by one of his own men.

It was my lot to listen not long ago to an address on the

subject, "The Human Element in Railroading." The speaker had not talked five minutes before it was patent to any thinking man that he had overlooked the pivotal fact that the human element in railroading is, first of all, intensely human. It is the appreciation of that fact that will engender good feeling on the railroad, and it is the ignoring of it that will work infinite and irreparable harm. The employees of any railroad should be one big, happy family, with plenty of "family reunions," where everybody would get to know everybody else in a great human way. We are constantly progressing toward it, and only the slow of heart lag behind the procession.

Place of Athletics on the Railroad

By Leander H. Poor

"What's all the shootin' for?" With these words the stable man in George Cohan's stage success "The Tavern" introduced himself. "What's all the shootin' for?" seems to neatly express the public's attitude in our ever recurring industrial disputes. The "shootin'" is all because the two factions, labor and capital, cannot agree. That much is evident. But why can't they agree? Each side mistrusts the other. Neither party wishes to retrench. Such has been the general attitude in the past. But today, industries, individually, are awaking to the fact that both capital and labor are indispensable to successful operation. And coincident with this awakening comes the further realization that a closer co-operation between these two necessary factors will net both of them greater returns. But that this principle has been successfully applied to one of the largest railroad systems in the country may come as a surprise. Indeed, taking the public at large, the much too general impression of a railroad is a complex organization which conveys one at its convenience from starting point to destination. The conductor who takes one's commutation ticket is carelessly looked on as being scarcely more human than the machine which gurglingly swallows nickels and dimes in the subway; the engineer and fireman, as only necessary adjuncts to that complicated, wheezing giant out front, which somehow gets one home at night; the shopman, as a bolshevist in disguise, and the official as the cartooned plutocrat, who sits back in a plush chair and snarls at his cringing subordinates. But the realization, by railroad officials and the public, as well, that the railroad organization is made up of individuals every bit as interested as the rest of us is coming.

Railroad Organization Made Up of Individuals

The officials of the Pennsylvania System have long since come to this realization. The results from it were brought home to me today as I watched the Eastern Pennsylvania Division elimination contests in track, field and swimming events, as well as in tennis, trapshooting, quoits, tug-of-war, golf and baseball. In a most beautiful setting in the mountains of central Pennsylvania are the Pennsylvania Railroad athletic grounds at Tyrone. As I sat looking across the greensward of the baseball field, the cinder track and the tennis courts to the swimming pool, and the golf links beyond, I asked myself, as you would have, what has a man rightfully to complain of when he has all this given to him to use as he so desires?

And my mind turned back to a day late in September, 1921. The scene was in eastern Ohio—"The Twin Cities" they called themselves—Dennison and Ulrichsville—and they had been chosen as the scene of the Second Annual Pennsylvania System Field Day. Almost before daylight I had been awakened by an unusual commotion. In the station the first "Special" had arrived with its load of enthusiastic rooters from Philadelphia. Before it had pulled out into the yards another pulled in from St Louis, then one from New York, then one from Cleveland, and so on, until, by the middle of the morning, the little towns were fairly swarming with ruddy faced variously tagged but unanimously zealous supporters. All morning long a cheerful mob drifted toward the green field and white bleachers at the foot of the street. Meanwhile the preliminary and elimination contests were being run off in the green carpeted arena, accompanied by the intermittent barking of shotguns, as the trapshooters pulled away on the blue clay pigeons in the meadow behind the east stands.

By noon, the sun in a spotless blue sky, shining through an atmosphere such as exists only after a recent rain, lent its warmth to the enclosure, while its rays were reflected from the gigantic red keystone on yonder hill with its P. A. C. (Panhandle Athletic Club) emblazoned in gold letters. By this time the movement to the field had become general, and there was a steady stream of delegations marching on to the field, each led by its band. At one o'clock the stands were jammed and the field was well cleared of all but contestants and field day officials. Bands kept the air aquiver with blatant notes of popular songs. Good humored jibes floated back and forth between stands and field, while events were run off with a dispatch and precision that might well be copied in collegiate competition.

The sun was setting as the last inning decided the West victor over the East in the first of the three-game "Railroad World Series." And then the rush for the waiting trains began. In the rapidly advancing dusk the medals were awarded, by the manager of the Central Region, Vice-President J. A. McRea. And finally with the perfect order with which we like to characterize good railroad operation, the 20 trainloads of employees and officials, 25,000 in number, were cleared of the Dennison station, while the individual passengers sought what rest they could get as the clickety-click of wheels on rails stepped off the miles toward home.

How the Work Is Organized

This field day at Tyrone today was the first of two elimination meets in preparation for the Third System Field Day. These elimination contests are based on the geographical divisions of the system. Each superintendent's division has a team which is picked by the divisional chairman of athletics, his choice being based on the showing of the individual candidates in practice, time for which is granted by the company. These teams compete in the grand division meet, one of which was the meet at Tyrone today. The qualifiers, the first four in each event, or the winning team, in these meets represent the grand division in the regional meets, where in a similar manner the regional representatives for the system meet are qualified. This plan is satisfactory in every respect; there are thus about five teams competing each field day. The general plan had its birth in 1916 on the then Pennsylvania Lines East (lines east of Pittsburgh), with the expectation of extending the scheme over the entire system if it proved popular. The war and government control interfered with the immediate expansion, but competition was continued through 1918 and 1919 on the lines east, or as it had come to be known, the Eastern Region. In 1920, with the return to private control, the First Annual Pennsylvania System Field Day was held on the Cricket Club grounds (P. R. R.) at Altoona, Pa. It proved beyond a doubt the success of the plan and the added interest shown in the Second Annual Field Day, held at Dennison, Ohio, last fall insures its continuance as a leading feature in the welfare program in years to come.

This success has been possible only through the generous help of the management in establishing first-class athletic grounds and equipment at important division points, such as Philadelphia, Tyrone, Altoona and Columbus in connection with its already excellent Y. M. C. A.'s. Athletic directors were placed in charge of the well equipped gym-

nasiums, use of which was encouraged among the employees. The organization, once decided upon, was placed in the hands of competent workers. It is based like the competition, on the geographical and traffic divisions of the system. At the head there is the chairman of the system athletic committee, who is directly responsible to the management. Responsible to him are the regional chairman, under whom are respectively the grand divisional chairman, and the superintendent's divisional chairmen. Too much cannot be said in praise of these chairmen. Their enthusiasm is an example to college coaches and their confidence in the future success of athletics on the Pennsylvania is an explanation of the extraordinary development of the plan in the past. "The biggest athletic meet in history" is their slogan for the System Field Day at Altoona* this fall.

Is It Worth While?

After the difficulties and expenses experienced in procuring extra service, arranging for conventions, etc., one may well ask, "Is this all worth while?" The most direct and conclusive answer is that if it were not, the Pennsylvania System would not be doing it. As a matter of fact, the cost to the railroad is comparatively small, consisting only of the extra transportation facilities, and the time lost away from the job. That the scheme is actually worth the expense is apparent in the general attitude of the employees. The immediate effect is the same that athletics have on college life, a wholesome diversion from the monotonous routine of daily affairs.

A day or so away from the old grind and each man comes back to his job on Monday morning refreshed and with something to talk about besides reduced wages and the faults of the management.

Particularly among the younger men is the effect beneficial. The young men have entered the railroad service in answer to the appeal that railroading still holds for many of us. In their daily work they come to feel infinitely remote from the guiding forces at the head of the organization. The labor union organizers work on these young men with their usual collection of arguments, tending to instill the principle of the union first, the railroad afterward. The eventual result of such persistent hammering on the youthful mind can lead to but one result: the detriment of the man's effectiveness. But see how the field days arrest the intent of this poison. Here is the railroad willing to give the man time off to play, not idle play, but play by which he can get his name or picture in the local paper, by which he can become known among his fellows. So the railroad is trying to flatten out his pay envelope, is it? Well, at least, he is getting a good time out of it, rather better all around than his school chum who is selling neckties in the haberdasher's shop. Then on the field he meets the general manager or a vice-president, or a superintendent, or even his own boss, who comes up to him, grabs him by the hand, and calling him by name, compliments him on his performance. Are these the niggardly tightwads the union agitator has described? He should say not! At least, not so he can notice it! That friendly recognition is going to be remembered, every word of it. And it has not hurt the official. It is a man's frank recognition of another man's honest work. For the time being, he can forget his office and be a man among men. Yes, that handshake is worth the man's wages to the management, for it means a step toward permanency in the working force.

Then perhaps to a lesser extent, there is the feeling of sectional rivalry which springs up out of this field day. These fellows the competitor meets are good sports and all that, but they aren't like the home bunch. Or it may be—see their roadbed, not much as it is on his division—or the engines, not quite like the baby he and Jim were pulling down yesterday, and so it goes. The effect on the spectators is much the same. "Good stuff these fellows have here but they can't travel fast enough to beat our bunch," or "The luck was with them this year, but we'll show 'em next year and you can bet I'll be on hand to see 'em do it."

Cultivates Good Will

So much for the immediate effects of the field day, but what about the ultimate result of the continuance of the plan? It looks to me like a solution to much of the unrest in the labor situation of today. I firmly believe it builds for a better understanding between the management and the employee, because it is founded on good-will. If not a cure-all, it is a potent combatant of the disastrous effects of radical labor agitation. If anything will build for democracy in the industry, certainly here is a means—effective because of its universal scope on the system. The fireman, the mechanic, the apprentice, the draftsman, the clerk, the conductor, the office boy, and the official are mingled for a day in equal footing. If collective bargaining, or any kind of wage agreements, can be made between labor and management without outside interference, here is a way for both parties to discover to themselves their respective places in the industry.

Across the conference table, as on the field, they can meet as man to man, no longer as lord and slave, each mistrusting the moves of the other.

Organization is not perfect by any means; very few human creations are. Grumbling and discontent cannot be stifled; they are bound to exist. Discontent with conditions as they were has brought civilization ahead as far as we have come. But discontent and grumbling to the extent of hindering progress is disastrous and I believe the ultimate result of the System Field Day will be to reduce these necessary evils to their proper status. It is coming, I feel sure. The employee is a true man at heart, and as soon as he has recovered from the Arabian Nights dream he enjoyed under the Railroad Administration, he must, and will see that field days, trades picnics, welfare lectures, employee ownership of company stock, and the employee benefit associations fostered by the railroad are not tools for prying more work out of him for a smaller wage, but are methods of showing the management's interest in making the man worth more to himself as well as to the company. What can result but an increasing loyalty to the industry and a desire in the man to show his appreciation, by increasing the returns from his own labor?

Such are my conceptions of the possibilities in the results of field day. I find the whole idea aptly summarized in an editorial referring to the system meet of 1921 by Cullen Cain, sports editor of the Philadelphia "Public Ledger" in its issue of September 30, 1921. I quote in part: "Athletic and competitive sports are best of all to promote better and friendlier feelings and to create a pride in the firm or institution in the hearts of employees. It might be said now that the sports idea among great business and industrial institutions is universal. But this system meet of the Pennsylvania, the second annual affair of its kind, by the way, is a sports promotion on a tremendous scale. To furnish a gym for the workers is very fine, and to lease a baseball grounds and even go 40 miles from town to play a rival is fine also. *But when the conservative old Pennsy system assembles its children from the Atlantic seaboard to the Mississippi shore by the thousands in an Ohio town for a competitive meet on such a scale as this Dennison affair, then it is time to scratch all piker entries, enlarge the grandstand, build some more bleachers and issue a new catalogue embellished with the royal seal. It is also time to think.*

"What do sports mean to workers and their children? Some day the answer to this question may amaze the world."

In the foregoing I have attempted to outline my conception of the field for athletics in one industry.

* See *Railway Age*, September 30, 1922, pages 597 and 607

Signaling Busy Terminals

By T. Holt

Signal Engineer, Chicago Union Station Company, Chicago

Train speed in congested terminal territory must of necessity be retarded. The current of traffic is in both directions on all tracks, with train movements deflected over crossovers and turnouts which are arranged for a multiplicity of routes. There is little need of high speed signals, but a great need for a system of signaling which will permit train movements at the maximum authorized terminal speed when the route set up is unoccupied. Such a system should also provide an indication for retarding train movements to a speed which allows them to follow each other with safety to occupied tracks.

Two general schemes of signaling have been used on the important terminals in this country, one a dwarf signal scheme with dwarfs operating in three indications; the other a two-arm high signal scheme using four indications, usually known as special terminal signaling.

With the dwarf signal clear, information is conveyed to the engineman to proceed at maximum authorized terminal speed, that the track is clear to the next signal, which is either at clear or caution. The dwarf signal at caution indicates that the next signal is at stop and the track between the caution and the stop signal may or may not be occupied. The stop indication gives information that the route is not set. These three indications are considered by some operating officers as giving sufficient information for the proper governing of traffic on a busy terminal. However, other operating officers feel that information should be given as to whether the track ahead is occupied when a caution signal is displayed. This has led to the adoption of special terminal signaling on some important terminals.

The top arm of the two-arm high signal in special terminal signaling has three indications and is used to govern to all routes, showing clear when the track is clear and the next signal at caution or clear; showing caution when the track is clear and the next signal at stop and showing stop when the route is not set. The bottom arm has but two indications, one in a proceed indication in combination with the top arm at stop which shows that the switches are set for a route which is occupied. The other is a stop indication in combination with the top arm at stop which shows that the switches are set for a route which is occupied. The other is a stop indication in combination with the top arm at stop, which indicates that the route is not set.

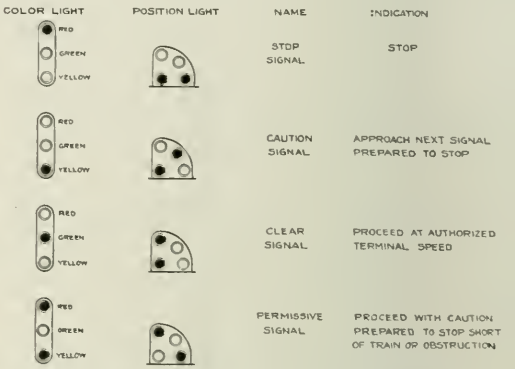
The unusual use of the top arm to govern to all routes is based on the assumption that the maximum authorized speed in the terminal territory is the safe speed for all turnout and crossover movements. This same assumption makes it possible to move trains at the maximum authorized terminal speed by dwarf signal indication.

The chief advantage derived from the use of special terminal signaling is the information as to the occupancy of the track ahead. This not only quickens the movement on a caution indication but makes follow-up moves safer. The information is clear and definite and no indication can have two meanings.

The chief disadvantage is the difficulty of placing signals at the proper points to allow the tracks to be used to full capacity, as the complicated track layouts with crowded clearances usually found on important terminals make it almost impossible to erect the overhead structures at actual fouling points for the support of high signals.

The dwarf signal has the advantage of being located at the proper point to permit trains to occupy tracks to full capacity, but as it is used today it cannot give the information as to the occupancy of the track ahead. The engineman running under a dwarf signal caution indication must determine for himself whether the track immediately ahead is occupied. His decision depends largely on his view of the track. The careful engineman will proceed with caution prepared to make a stop, watching the line-up of switches to determine whether he is to be deflected to an occupied track. The optimistic engineman will take a chance and proceed without reduction of speed, prepared to stop at the next signal, but he may have to make an emergency stop before he reaches it. The first man may slow up the terminal movement unnecessarily. The second man may make follow-up movements hazardous. The only factor of safety for him is to have the maximum speed permitted in the terminal slow.

Actual observations of the speed at which train movements are made through short slips and crossovers on some terminal layouts would indicate that the track engineer has allowed for a considerable factor of safety in his decision as to the



Four Position Dwarf Signal Indications

safe speed at which these deflecting moves should be made. Unless enginemen are constantly checked up the speeds are usually exceeded, but very rarely with disastrous results. This has an important bearing on the need in indicating definitely when the track ahead is occupied, as the speed of the optimistic engineman may be one that makes an emergency stop difficult. Having in mind the cautious and the confident engineman, it is seen that the addition of the fourth indication, which is gained by using two-arm high signals, will speed up the first man on the other indications and will retard the second man when he is moving to occupied track.

Considering the two schemes of signaling, we find that if the addition of one indication were made to the dwarf signal scheme it would have the advantage of special terminal signaling without its disadvantages, and the advent of the light signal makes this fourth indication possible without any change in the design of the signal as now used for three indications. This would seem to make the dwarf signal particularly adapted for the proper governing of traffic on a busy terminal, as it combines the advantages of the two systems as now used on our important terminals without their disadvantages and makes possible the operation of a busy terminal to its full capacity. The four indications are shown in the sketch.

Lumber Mills of British Columbia report that 90 per cent of their output is now being purchased by China and Japan. The Prairie Provinces were formerly the chief outlet for this province's lumber. So insistent is the demand from the Orient that most of the Coast mills are said to be sold out a month ahead.

Railway Electrical Engineers Meet in Chicago

Heavy Electric Traction, Power Trucks, and Axle Generator Pulleys Among Subjects Discussed

THE THIRTEENTH annual convention of the Association of Railway Electrical Engineers was held at Hotel La Salle, Chicago, October 31 to November 3. This was the first annual meeting that the electrical men have held since October, 1920, the usual fall gathering having been omitted in 1921 on account of the business depression which prevailed at that time. In spite of the labor difficulties of the past troublesome months, the convention was well attended and much interest was manifested in the proceedings. Considerably more than 100 railway electrical officers registered and the attendance included many others who did not register.

The first session of the convention was called to order by the president, L. C. Hensel, electrical engineer of the St. Louis-San Francisco Lines, at 10:30 a. m. on Tuesday, October 31. After a brief opening address by Mr. Hensel, the reports of the secretary and auditing committee were presented and accepted.

Crane Type Trucks Show Remarkable Economies

Presented as unfinished business was the question of affiliation with the American Railway Association. This subject was first broached to the Association of Railway Electrical Engineers at its annual convention in October, 1919, and has been held in abeyance ever since. Originally, it appeared that certain advantages might accrue to the members by becoming affiliated with the American Railway Association, but more recently these advantages do not appear so marked. Whatever may subsequently develop in the situation will be taken care of by a committee consisting of J. R. Sloan, chief electrician, Pennsylvania System; L. S. Billau, assistant electrical engineer, Baltimore & Ohio; J. A. Andreucetti, assistant electrical engineer, Chicago, Northwestern, and E. Wanamaker, electrical engineer, Rock Island Lines.

E. A. Lundy of the Railway Electrical Engineer, chairman of the committee on data and information, presented a report including tabulated information showing the extent to which electrical equipment is being used on the various railroads throughout the country. This report is the first of its kind that has been presented since 1918, and the figures given show a remarkable increase in the use of electrical apparatus. One field in which this increase is particularly noticeable is that of electric arc welding. It is plainly evident that the roads are coming to realize the economic advantages of electric welding and it is only a question of time when this work will be common practice on all roads.

A report on power trucks and tractors was presented by L. D. Moore of the Missouri Pacific. Inasmuch as trucks and tractors are not always electrically operated, the report includes gasoline operated equipment as well as those deriving power from storage batteries. The report outlines in general the different types of equipment for use under various conditions and locations. While it was believed for the most part that electrically operated trucks and tractors would satisfactorily meet all requirements, it was conceded that under some conditions gasoline equipment might be the best to use.

One particularly interesting development which was brought out in the discussion which followed the reading of the report was in regard to the crane type truck. John Carson of the New York Central Lines stated that his company was using three trucks of this type in enginehouse service and had found them to be one of the greatest labor-saving machines that had ever come into their hands. Locomotive air compressors, front ends, main rods, or any similar parts are handled with no trouble whatever. The machines are of the Elwell-Parker type, having a capacity of 3,000 lb. at a 6-ft. radius. The trucks are equipped with outrigging so that the danger of the machines tipping over is very remote. It has been found best to place one man on each shift in charge of this truck and not to allow it to be operated by anyone else.

To illustrate the economy effected with the crane type truck, Mr. Carson stated he knew of several instances where a crippled compressor had been removed and a new one applied by three men in 25 minutes. A front end can be handled in a proportionately short time. For use in yard work, unloading cars, or handling material such a truck with an operator and two men will accomplish 75 per cent more work than six men will do in the same length of time.

The Committee on Heavy Electric Traction presented a very extensive report, including much tabulated data on railroad electrification in both North and South America. This report was read by J. R. Sloan, chairman of the committee. In reply to a question by E. Marshall, electrical engineer of the Great Northern, as to what lies in the immediate future along the line of heavy electric traction, Mr. Taylor of the General Electric Company said: "It is rather a general subject as to just what is going on. Here in Chicago, the Illinois Central has just given out a report that it is going to electrify its suburban service, using 1,500 volt direct current. Of course, that is in the immediate future. There are several foreign jobs, one in Chile and another in Mexico. There seem to be more requests for reports on electrification just now than at any other time; more steam railroads seem to be interested in the possible electrification." In speaking on the same subject, Q. W. Hershey of the Westinghouse Electric and Manufacturing Company said in part: "During the war, of course, there was no money available to spend for electrification and all energies were exerted to provide transportation. Following that came a peak in traffic requirements and again everybody fell in to move the load. Then came the depression. Then following that another peak, which we are now in. The problem of the railroads has been taking care of details for the immediate necessities of the transportation requirements, so that in this country there has not been very much physical electrification work

done in the last four or five years. This condition exists—that in a very broad sense the railroad managements are looking forward to preparing for the time when money will be available to provide such electrification as they will find they need. It would seem your part of the electrical inquiries of the railways should be that of studying their problem rather than letting some outside people do it without their participation. I want to compliment the committee and also the Railway Electrical Engineer for the data which has been prepared. I believe this is the most complete statistical data that has been offered at any time since electrification has been thought of, and it will stand as a valuable reference work."

In touching upon the factor of regeneration by electric locomotive, it was brought out that the important feature was not the amount of power which could be returned to the trolley or power system but rather the control and restraint of trains traveling down grade.

One of the significant points in the report of the Committee on Electric Repair Shop Facilities and Equipment was brought out by E. H. Hagensick of the Union Pacific, who said: "During this last labor trouble on our road we have had a great deal of difficulty with motors burning out and we have got by simply because we had lots of spare motors." Spare motors are vitally essential if tie-ups are to be avoided, for without means to replace a burnt out machine most costly delays may easily develop. In order not to carry an excessive number of spare motors or parts, it is clearly advantageous to standardize on motors for different purposes.

Another factor which is destined to become an important adjunct to the already large scope of activities for the electrical men was presented in the form of a motion picture illustrating the Regan System of Automatic Train Control. This picture, together with a description of the equipment, was presented by Joseph Beaumont and B. F. Meisel of the Regan Safety Devices Company.

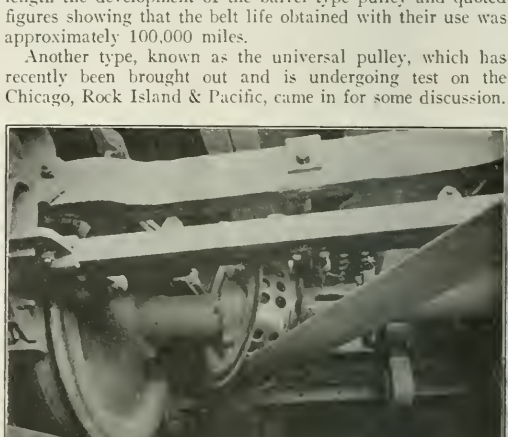
The report of the Committee on Illumination was presented by L. S. Billau, chairman of the committee. A number of changes has been made in the report since it was presented at the June meeting of the association in Atlantic City. The principal point of interest, however, is that of train lighting lamps now available and listed in commercial production. Stocks of lamps which are in general use by all railroads and are apt to be found everywhere in the country, ought to be reduced to a minimum. The committee recommmends that the 50-watt gas filled lamps should be brought out with the bowl enameled or frosted in order to prevent glare which results from the unprotected filament of such lamps. There has been an increasing demand during the past year for a locomotive cab lamp of smaller physical dimension than is possible to secure at present, and it is believed that a smaller 32-volt lamp can be developed that will give reasonably good life. It may also be said that in the effort to secure smaller lamps for locomotive cab use the Michigan Central and the New York Central Railroads have been experimenting with 6-volt lamps. In view of the fact that practically all railroads are using flashlights for inspection purposes throughout all departments, it was felt that some consideration should be given to the desirability of standardizing these miniature lamps.

Another point emphasized by the committee was the fact that illumination intensities are being used in other than railroad fields that are 100 per cent higher than was considered good practice three or four years ago. It is believed that an increase of lamp load, which means higher illumination intensities, would be justified by the advertising benefit derived even though it might increase the cost of operation and maintenance to some extent. The discussion developed the fact that a mill type tungsten filament lamp has been developed which many of the roads are using with entire satisfaction in all kinds of portable service in shops.

The report of the Committee on Motor Specifications presented by E. Wanamaker did not provoke a great deal of discussion, but the committee has obviously taken a step in the right direction by preparing a standard specification for motors used in railroad service. Such motors are of necessity frequently required to perform work that is particularly arduous. By preparing a set of specifications with the cooperation of representatives of the motor manufacturers, motors more suitable for the exacting requirements of railroad service may be developed.

The discussion of the report of the Committee on Train Lighting Equipment and Practice centered largely upon the subject of axle pulleys, particularly the barrel type pulley as used by the Pullman Company. E. Lunn, chief electrician of the Pullman Company, explained at considerable length the development of the barrel type pulley and quoted figures showing that the belt life obtained with their use was approximately 100,000 miles.

Another type, known as the universal pulley, which has recently been brought out and is undergoing test on the Chicago, Rock Island & Pacific, came in for some discussion.



New Axle Pulley Built on the Universal Joint Principle

This pulley, which is designed on the universal joint principle, aims to keep the axle pulley in line with the generator pulley regardless of whether the car be on curve or tangent track.

The report of the Committee on Electric Welding consisted of a tentative specification for the rating of welding machines. The little discussion that followed was confined largely to the merits of alternating current welding equipment and the extent of its application, a subject upon which opinions seem to differ.

The electric headlight report was substantially the same as the progress report presented in June, with a few minor changes. L. C. Muelheim of the Baltimore & Ohio, chairman of the committee, read the report. The discussion which followed touched briefly on the subject of regrinding ball bearings and rebushing and reboring the turbo-generator machine cases to fit the ball bearing properly, after having been worn down in service. Both of these practices are entirely feasible and practical.

The final paper of the convention was the report of the Sponsor Committee on Insulated Wires and Cables of the American Engineering Standards Committee. The report was accepted and no discussion followed. An interesting feature of the final convention session was the presentation of a motion picture showing the various stages in the manufacture of rubber covered wire by the Okonite Company, Passaic, N. J.

Election of Officers

The officers elected for the coming year are as follows: E. S. McNab, Canadian Pacific, president; Ernest Lunn, Pullman Company, first vice president; E. J. Hill, Michigan Central, second vice president. Two new members of the executive committee were selected as follows: E. H. Hagensick, Union Pacific, and George W. Bebout, C. & O.

Railway Electrical Supply Manufacturers' Association Exhibit

The exhibit of the Railway Electrical Supply Manufacturers' Association, which is always held in conjunction with the convention of the electrical engineers, was highly successful. There was a number of new exhibitors. All of the exhibition space was taken up, and if the number of exhibitors increases further either larger quarters will have to be secured or some of the larger companies will be obliged to give up part of their space.

The officers of the manufacturers' association elected for the coming year are as follows: Daniel Woodhead, Daniel Woodhead Company, Chicago, president; R. L. McClelland, Westinghouse Electric and Manufacturing Company, New York, senior vice president; George H. Scott, Safety Car Heating and Lighting Company, Chicago, junior vice president; Edward Wray, Railway Purchases and Stores, Chicago, treasurer; J. Scribner, General Electric Company, Chicago, secretary.

The Financial Starvation of the Railways*

Industry and Commerce Strangled by Shortage in Transportation Facilities

By Herbert Hoover
Secretary of Commerce

OUR TRANSPORTATION facilities have lagged far behind the necessities of the country. Progress has been made in their restoration from the demoralization of war, but our rolling stock, our trackage, and many of our terminals are unequal to our needs. Some increases in equipment have been made during the past year; yet they are entirely insufficient as the result of long-continued financial starvation. The deficiency in transportation finds its visible expression in car shortage; and while the recent strike has temporarily aggravated the situation, the trouble is far more deep-seated. Except during periods of business depression or strikes there has to some degree been continuous car shortage for the last six years. Furthermore, car shortage reaches its most acute stage during the four or five months of peak load in the fall and early winter.

Railway cars are the red blood corpuscles of commerce, and we suffer from commercial anaemia every year, because they are starved. The losses through short transportation are a tax upon the community greater than the cost of our government, because such a shortage not only stifles the progress of production and introduces speculation into distribution, but it also seriously affects price levels. No better instance exists than the lift in the price of coal by over 300 per cent in 1920 when there was no strike, and over 60 per cent in 1922, after production following the strike had been resumed. In both cases the mines could have produced 30 per cent more coal, and if the railways could have transported even 20 per cent more, then prices would have been normal. Furthermore, this very shortage is one of the most deep-seated causes of the instability in the bituminous industry and its recurrent strikes. The car shortage also directly affects our farmers, because in every car-shortage period a price differential on grain below the Liverpool price (and yet in excess of the railway rates and handling costs) sets in of from 5 to 15 cents per bushel. The losses to livestock growers are very great because of the necessity to feed stock beyond the fattened stage. And there are regularly great losses in fruit and vegetables because of the lack of refrigerator cars.

The management of our principal railways to-day, by all the tests of administration, of load factors, of mechanical efficiency, etc., is the most efficient transportation machine in the world in so far as it is not limited by causes beyond the managers' control.

A Cumulation of Experiments

The situation has been contributed to by the war, but also fundamentally by the cumulation of experiments in public relations to the railways, both national and state. We have tried uncontrolled operation; we have tried negative regulation in the prevention of discrimination; we have tried nationalization; we are now trying positive regulation. Nationalization would be a social and economic disasteer; free operation would reconstruct the vicious practices of 30 years ago. Regulation in some form is necessary, but constructive development of this regulation—to preserve the initiative and responsibility of our railway executives, to secure the fine values of private operation, and at the same time to secure public protection and assure adequate service—are absolutely vital and not necessarily incompatible. The present Transportation Act possesses many constructive features and some weakness. It was the result of compromises in many particulars, and these very compromises are some of its weakest points.

Disproof of Fiction That Earnings are Guaranteed

If the causes of financial starvation were solely a question of war and of hard times, we could afford to wait for a natural solution, but they are not. The Transportation Act of 1920 affirmatively declared that the rates should yield a fair return on the aggregate real value of the railway properties (as determined by the Interstate Commerce Commission) used in public service and operated under honest, efficient, and economical management. It provided that the fair return during the first two years should be at the rate of 5½ per cent on the railways as a whole, or in each of the major groups in which the country might be divided in the administration of the law, and that during this period there might be added ½ per cent for rehabilitation. At the expiration of this two-year period the Interstate Commerce Commission placed the fair return at the rate of 5¾ per cent per annum, or 6 per cent less ¼ per cent to cover income taxation. The law, however, further provided that any particular carrier which earns in excess of 6 per cent per annum shall hand over one-half of that excess into a contingent fund to be administered by the Interstate Commerce Commission "in fur-

*Extracts from the forthcoming annual report of the Secretary of Commerce for the fiscal year 1921-22.

therance of the public interest in railway transportation" either by loans to carriers or by the purchase of transportation equipment and facilities and the leasing of the same to the carriers. The carriers have never earned these amounts and the failure of earnings without charge on the government is complete disproof of the current fiction that earnings are "guaranteed."

Strong Railroads Cannot Provide Equipment for Weak Ones

Furthermore, the immediate effect of this recapture provision would be that whereas the strong and fortunately situated railways are able to earn in excess of 6 per cent, and are therefore able to secure finance for betterments, the very fact that they did earn in excess of the average would mean that the weaker roads were unable to earn up to the average. It may be accepted as a general proposition that carriers earning materially below the 5¾ per cent return are not in a position to command the confidence of investors which is necessary for expansion to meet the public demand. The contingent fund makes available money which such carriers may borrow, provided, however, that they are able to give the necessary security for repayment. It is easy to comprehend that such a contingent fund may serve the purpose of bridging carriers over temporary difficulties, but it is more difficult to understand how a carrier which, though it may be very essential to its part of the country, is financially a chronic weakling is to be made strong and capable by becoming more deeply involved. If there is any merit in this device, it seems not to extend to those anaemic carriers that are unable to give the government the color of assurance of repayment. This device also carries a certain liability to the government in that carriers that borrow from the fund and fail to pay are likely to become government railways through their financial difficulties. It would seem that the first of the two uses to which moneys of the contingent fund may be put holds out better promise of furtherance of the public welfare. However, the creation of such a national reserve of transportation equipment has not been seriously undertaken. It would seem that our dire distress in time of car shortage and, at times, motive-power shortage would strongly argue for the creation of such reserves. Rolling stock for limited use during 60 to 90 days is probably unprofitable to any railroad, and certainly the stronger railroads can not, and should not, be expected to provide it for the weaker ones.

The present act contemplated the solution of the problem of the weak roads through voluntary consolidation of the weaker and stronger roads into larger systems to be definitely indicated by the Interstate Commerce Commission. There is no doubt that such consolidation would be a large advance in solution to the whole problem. As the nation has resolved to control rates, and thus to depend no longer on competition as a means of rate regulation, it should secure the manifest advantages of larger systems. The economies in operation through standardization and better employment of rolling stock would be constructive themselves, but of vastly more importance would be the strengthening of the foundations for the financing of betterments and for more intelligent handling of rate regulation. The part of the act providing for consolidations has not been advanced very much so far, although a tentative plan for grouping has been issued to serve as a basis for investigation, and hearings have been begun. When the permissible consolidations are once enunciated it is possible that some railways can arrange terms amongst themselves for such consolidations.

How far such voluntary action would solve the problem is uncertain, but compulsory consolidation leads into many untenable premises. It might be that there could be invented some inducements to consolidate into the proposed systems, or to lease for consolidated operation, or some form of cooperative operation. If the recaptured profits principle is to be maintained and if it can be enforced by the Interstate Commerce Commission, the assured application of such recaptured profits within such enunciated groups in some form might at least be worth discussion as an inducement to consolidate.

The alternative of repealing the miscalled guaranty clauses of the act does not fundamentally assist the expansion of the weaker roads, for so long as rates are controlled by 49 different commissions, it is unlikely that the rates would or could be made discriminatory in favor of the weaker roads, and thus the basis for the financing of betterments by these roads would not be materially improved. The suggestion that all rate control should be repealed except control against discrimination or preference would not meet the situation of the weaker roads, because the restoration of competitive rates would enable the stronger roads to again drive the weaker roads nearer to the wall.

Rate Structure Needs Reorganization

Another vivid question in this connection is that of the rates themselves. In an era of wide disparity between farmers' income and that in and of industry, the transportation rates have proven to be a heavy burden on agriculture. On the other hand, under present conditions railway earnings are obviously not large enough to assure railway expansion. Some relief both to the railways and the farmer may be obtained by thorough reorganization of the rate structure. Some classes and areas of traffic are carried at actual loss; others are carried at lower rates than the relative value of the commodities warrant; and a series of scientific upward readjustments should be made in some cases in order to give the railways and the shippers of primary commodities and agricultural produce some relief. The recent reduction of 10 per cent in rates on luxuries as well as on primary goods contributed nothing to commerce and impoverished the railways just that much. The tangled skein of rates seems a mesh in which there is so persistent a resistance against every constructive proposal, that we are incapable of rescue except by some complete departure in courage.

Labor Regulation Unsatisfactory

Another phase of present regulation is the machinery of wage control and strike prevention, which are unsatisfactory. The legislation embraces the important principle of the public's right to secure continuity of service and it carries the obligation of the public to secure just wages to the employees. The Railway Labor Board has performed large services to the employees, to the railways, and to the public. The difficulties arise from the tripartite structure of the board under the act, from its detachment from the rate-making body, and especially from the fact that the act did not originally contemplate that the government would be a universal wage fixer. It was the assumption that the board would only function in case of a major threat of stoppage in service. The failure of the local adjustment boards for direct contact between employees and employers has thrust all disputes on the labor board; and in result we have practically governmental fixing of all wages and conditions of labor.

There can be no question that action in some direction is imperative, if industry and commerce are not to be further strangled by a shortage in transportation. Whatever may have been the sins of railway finance in the last generation, we are not only suffering from them, but we have maintained an attitude of bitterness in our public relationship to our railways for which we pay thrice over in prevention of their proper development.

We must have increased transportation, if we are to maintain our growing productivity. We must therefore find a way out of the cycle of systematic starvation of a large part of our mileage and the denudation of our railway managers of their responsibilities and initiative.

T. E. A. Displays Keen Interest in Long Engine Runs

Convention Discussed Utilization of Power and Operation of Stoker and Oil Fired Locomotives

A REPORT of the opening session of the thirtieth annual convention of the Traveling Engineers' Association, held at the Hotel Sherman, Chicago, October 31 to November 3, inclusive, appeared in last week's issue. The following are abstracts of the more important reports which were presented and discussed at the later sessions.

Distribution of Power: Its Effect on Operating Costs

At more or less frequently recurring periods, every railroad is confronted with a situation where its ability to earn revenue is controlled by its ability to move the traffic offered. Likewise periods occur when surplus equipment represents a large overhead investment producing no revenue. Any plans that will contribute toward improving these conditions will help greatly in reducing the general cost of operation.

A study of the power situation with a view to conserving tractive effort on the railroad system as a whole, without reference to particular conveniences or economies on a single division, is of paramount importance. Records of fuel and locomotive maintenance cost will show that, generally speaking, where the size of the train is limited, the smallest type of engine that will comfortably handle the train will give the lowest annual operating cost for fuel, wages and repairs, and in turn will release the heavier type of power for trains where the loading is controlled only by the tractive effort of the engine. Investigation has shown instances of comparatively heavy engines handling very light local passenger trains, with lighter engines handling tonnage freight trains on other divisions, perhaps for the reason that the engineman returned on a heavier run, or because that particular division inherited that particular class of power as a result of some changes in the power distribution on the district as a whole. Changes in power distribution or extending the run of locomotives over two divisions have in such cases brought about considerable saving in tractive effort and as a result decreased the cost of operation.

Locomotives having a large reserve of power for the trains they are required to handle, or more modern in design, can be in less than average good condition and yet make the time without failure. Furthermore, small types of more or less antiquated power are not popular at the general shops for overhauling, for the reason that the more modern types are usually in demand, and it is easier to figure on what they will require in repair parts. The motive power officer on the division has for his yardstick man hours per locomotive despatchment and engine failures, rather than the total cost of operation per 1,000 gross ton miles or per passenger car mile.

It has been stated by eminent authority that the loss to the farmers of the United States, through not being able to move their crops when markets are favorable, amounts to about $400,000,000 annually, and yet railroad officers find themselves at certain periods with considerable surplus of power. These considerations, together with the fact that the average miles per locomotive day for freight locomotives in 1920 was 59.3, gives to the subject of power utilization a compelling interest, any discussion of which will naturally resolve itself into consideration as to the merits of pooled vs. regular engines, of long runs vs. division runs, and many other things.

One feature to consider in engine assignment is that engines having a large reserve of power for the trains assigned to them do not call for the same refinement in the handling and firing that will obtain where it is necessary to have skillful handling in order to deliver the desired service. This absolutely works out in practice. The fuel used at terminals and in stand-by losses represents probably 30 to 35 per cent of the total and this expense increases with the larger power on light trains.

The cost of locomotive operation for a representative midwestern road for the year 1920, and which will be fairly representative of 1922 conditions, was as follows:

	Total cost for year	Cost per loco. owned per annum
Fuel	$28,789,756	$13,158
Repairs	26,462,086	12,094
Wages—enginemen, firemen and enginehouse employees	18,442,173	8,429
Lubricants	424,917	194
Other supplies	335,696	153
Total of selected items	$74,454,628	$34,029

This represents average costs applied to all locomotives owned. If this were shown only for the locomotives in actual service or for the heavy freight locomotives in service, the average cost would be much higher, but this will serve for illustration.

The St. L. S. F. has for some time made up a daily cost sheet for each freight train operated. This shows the cost per 1,000 G. T. M. for fuel and wages, including overtime. This information reaches all division operating officers, including the road foremen of engines, daily, and is very valuable in keeping individual fuel and wage costs before all concerned, including enginemen and trainmen.

On the majority of roads the operating or transportation department distributes the power, in conjunction with the motive power department, which usually approves of the individual engines to be assigned to divisions or runs, but this is not always the case in transfers of power between divisions or districts. A very close working arrangement is necessary if the best results are to be obtained. Transfers of power are sometimes, if not usually, made at times of rush business when new men are entering the service, both in the shops and on the road. A transportation officer without training in locomotive matters cannot fully appreciate all that is involved in introducing new types of locomotives into new territory. The experience of men with the training of the traveling engineer is very valuable in such times and should be utilized. The traveling engineer so advising should be thoroughly familiar with the operating conditions on the railroad as a whole and make his recommendations accordingly, without reference to division economies which disregard the general good to be accomplished. Compound engines or engines equipped with certain special devices, while giving excellent service where regularly used, may prove of negative benefit when thrown into a group of engines of similar tractive power perhaps, but unlike in design or equipment. This is especially true where there are many new men in engine service and shops not entirely familiar with the types of locomotives or devices.

A number of roads have increased the available power supply through lengthening locomotive runs. This will not apply equally on all roads, but has great possibilities under

certain conditions. This practice has been very much extended since our 1921 meeting, and the experience of the members is invited in the discussion to follow. Local conditions, as to train schedules, conveniences for taking coal and water, the grade of fuel used and facilities for caring for the fire and ash-pan enroute, must be considered. It is a fact that enginemen and firemen are assigned to runs rather than to engines and the difficulty in actually having regular crews on engines has increased, thus making it difficult to secure satisfactory mileage from regularly assigned engines to runs. It is safe to predict that where the character of the fuel used will permit, the tendency of operating departments of railroads will be to develop the fullest information as to the desirability of extending the length of runs for locomotives in passenger and fast freight service, but particularly in passenger service. The experience of the New York Central Lines, with which two members of your committee are connected, has been that to date the average monthly mileage of all passenger locomotives has not increased as a result of running certain engines over two divisions, although individual engines will make large mileage for a period. There is a saving in fuel due to decreased terminal consumption and the supervision given toward maintaining good condition of fires enroute to avoid delays for steam. We suggest the possibilities of extended runs for locomotives be made a subject for next year's convention.

Segregating certain types of engines to one district or division, instead of mixing up different classes in one territory, has its advantages. This may appear to impose a hardship at first if the engines are new to the district and somewhat more difficult to maintain and to operate than the engines regularly or previously used, but if done at a time when business is not too heavy and when experienced men are on both sides of the engine, and a high standard of inspection and repairs can be built up, it is a very paying proposition. It is the practice, also, on some roads to work fairly close on power at all times, the motive power officers themselves insisting on this, thus keeping the largest possible reserve of power laid up in good order for rush periods. It costs money to take engines out of storage, and it should not be done without knowing that they are actually needed.

The roads referred to also maintain pooled freight engines throughout the year rather than assigning regular crews to engines duing slack periods and then having to pool them when a rush comes on. The principle involved is that of maintaining a more rigid average year round system of inspection and repairs at terminals than would obtain with regularly assigned engines for certain seasons of slack business, and when we more or less depend on the engineer's report and personal interest to help maintain the power than when running pooled engines. However, when forced to return to pooling it is hardly possible to build up quickly the inspection and the method of caring for repairs or to keep the same degree of interest alive among the engine crews that obtains with regularly assigned engines or with a highly developed plan of pooled service. The advent of newly promoted enginemen and new firemen is an important point to consider and it is always to be remembered that the period of rush business is when the earning capacity of the locomotive is the greatest and when we should be able to get the best possible use from it.

The report is signed by Robert Collett (N. Y. C.), chairman; David Meadows (M. C.); W. R. Garber (K. & M.); J. E. Ingling (Erie), and C. A. Fisher (G. N.)

Discussion

The discussion of this report centered very largely around the subject of long engine runs, in which it is evident that the members of the association are taking a deep interest. Several cases of passenger runs of from 250 miles to over 600 miles were cited, and a number of cases were also cited where freight locomotives were running over two districts. It developed that in several cases the extension of the length of the locomotive run has required an increase in the size of the cylinder lubricator. The four-pint lubricator has been found too small for large passenger power and in some cases six pint lubricators are being installed. This matter has offered no real obstacle, however, as extra oil is placed on the engine for use in case the original filling does not carry the locomotive over the entire run.

On the New York Central passenger locomotives are being run through from Harmon, N. Y., to Syracuse. This has saved turning 40 locomotives a day at the Rensselaer terminal (Albany, N. Y.), at an average cost of from $6 to $9 each, with a corresponding reduction in the number of movements between the roundhouse and the station, a distance of one mile over a busy double track bridge. Car department employees fill the main pin grease cups and shovel the coal forward at the Albany station in an average of from five to seven minutes. The locomotives have a short layover at Syracuse and return to Harmon in less than 24 hours. This practice has not necessitated any increase in the engine house force either at Harmon or Syracuse. On the two divisions, trains which formerly required 21 locomotives to handle are now being taken care of with 16 locomotives. No case was cited in the discussion where the practice, once established, had been discontinued because of the inability to overcome any of the difficulties encountered, although the shopmen's strike has interfered with the development of the practice in some cases. Although numerous difficulties have been encountered, the consensus of opinion of those members of the association who have had experience with it, indicates that some increase in locomotive mileage may be expected, that train miles per locomotive failure need not be decreased by the longer runs and that engine house expense will be reduced. Definite opinions as to what effect the long runs will have on fuel consumption and locomotive maintenance was not brought out.

Is Mechanical Firing Reducing the Cost of Train Operation?

The outstanding features of stoker firing are the possible increase in tonnage or decrease in time between terminals, or both, together with the possibility of handling a fuel of a lower B. t. u. value and a corresponding lower cost.

As an offset against these considerations, which directly affects the cost of train operation, there has always been charged the increase in coal consumption per 1,000 gross ton miles, which has always been considered as going hand in hand with stoker operation. In the early development of the stoker the only successful machine was one having a relatively high point of delivery, and, consequently, when the locomotive was being forced to its maximum the lighter particles of coal were carried over the arch, where arches were used, thereby resulting in an excessive stack or spark loss. In recently conducted road tests it has been found that this condition no longer prevails. It was shown that where the same attention was given the stoker as in hand firing, the fuel consumption per 1,000 gross ton miles per hour was generally lower on the stoker-fired locomotive. This difference in fuel consumption was no doubt due to the higher average temperature obtainable in stoker firing, due to the elimination of the periodical inrush of cold air, and the more perfect combustion possible through carrying a lighter fire as well as the more regular and uniform fuel feed.

The data in the table was obtained as the result of a careful test conducted on a trunk line road to determine the difference between assigned and pool service

Fuel Performance of U. S. R. A. Light Mikado Type Locomotives Equipped With Stokers

	Assigned service	Pool service
February, 1922		
Engine No.	652	656
Engine miles	3,150	3,773
Gross ton miles	4,514,135	4,436,685
Pounds coal between terminals	476,271	515,530
Pounds per 1,000 G. T. M.	105.59	134.66
March, 1922		
Engine No.	652	656
Engine miles	3,150	6,144
Gross ton miles	5,189,449	7,723,177
Pounds coal between terminals	590,862	913,279
Pounds per 1,000 G. T. M.	113.24	118.25

The test extended over a period of 60 days. The two locomotives were identical in every respect, and operated in the same class of service, viz., fast freight. Locomotive No. 652 was operated by the same crew throughout the entire test, while locomotive No. 656 was handled by four crews alternating. Note that during the first 30 days the assigned locomotive made 18,150 more ton miles and 553 less engine miles than the pooled engine, and consumed 128,820 pounds less coal or a difference of 27.5 per cent calculated on a 1,000 gross ton mile basis.

At the end of the first month it was possible to make an immediate comparison which showed up the above difference in coal consumption. Steps were therefore taken to bring the performance of the pool crews to that of the assigned crew by teaching and getting the men interested, and the result of this action is reflected in the results for March.

While these results show an increase of 7.3 per cent in fuel for the assigned engine, this increase was due almost entirely to weather conditions. The table shows, however, that the active supervision over the pool crews, together with their co-operation, resulted in a decrease of 13.8 per cent. As the weather conditions affected both alike, it is reasonable to assume that had the pool crews been allowed to go on during the month of March as in February, the coal consumption for Engine No. 656 would have been affected the same as in the case of Engine No. 652, i. e., increased 7.3 per cent, which would have made it approximately 144.49 lb. per 1,000 gross ton miles instead of 118.25 lb.

This test proves, first, that the excess in fuel consumption of the pooled over the assigned engine was not due to the stoker or the locomotive, but altogether to the manner in which it was handled by the four crews; and, second, that intelligent supervision will bring the same results in case of stoker as in hand firing.

Economical train operation means the movement of the greatest possible tonnage over a division in the shortest possible time. The loading and time factors are the all-governing ones and must be carefully worked out by the operating department, as an error of 10 per cent either way, i. e., overloading or underloading, spells a material increase in operating expense. What has the stoker to do with correct loading? Everything. Where the coal consumption per hour approaches the physical limitations of the fireman, it is only through the application of the stoker that a uniform maximum steam pressure is possible at all times, and it is only through the maintenance of the maximum steam pressure that the desired speed can be sustained.

Opinions vary as to the size of the locomotive to which the application of stokers seems justified. This is because the conditions are not the same on all railroads or even on all divisions of the same railroad, and as men speak of things as they find them, it is but natural that there should be a difference of opinion.

A certain railroad in the Southwest, where temperature ranges are high, operated consolidation type locomotives of 45,000 lb. tractive effort, 49.5 sq. ft. grate area, over two divisions, one being 117 miles long of practically one per cent continuous grade, the other 124 miles long with one per cent broken grades, the longest continuous grade being 40 miles. The rating of the locomotives when worked to their capacity was 1,500 gross tons. Owing to the physical limitations of the firemen it was found necessary to reduce the tonnage over the first district to 1,150 gross tons and over the second to 1,250 tons in order to get the trains over the road within the sixteen-hour period. Stokers were afterward applied to these locomotives and the tonnage raised to the locomotive capacity; i.e., 1,500 gross, or an increase in the first instance of 30 per cent and in the second of 20 per cent. As the wages remained the same, this change resulted in a corresponding direct decrease in operating cost. In this instance it was not a question of the size of the locomotive so much as a question of climatic conditions and physical characteristics of the railroad.

We now cite a case where the locomotives were so large that when worked to their capacity the firemen were unable to supply the coal as fast as the engine could burn it. These were of the 2-10-2 type, 67,000 lb. tractive effort, 80 sq. ft. grate area, operated over a choppy division 100 miles long having short grades of 1½ per cent. The tonnage behind these engines when hand fired was 2,350 gross tons. Stokers were applied and the tonnage increased to 2,650 gross or 12.76 per cent. The wages and other costs remaining the same, this resulted in a decrease in cost of train operation of 12.76 per cent.

In some very exhaustive tests conducted in the Dominion of Canada during the months of May and June, 1921, with Mikado type locomotives, 53,000 lb. tractive effort and 56.5 sq. ft. of grate area, it was found that the maximum drawbar horsepower that could be developed hand firing on the maximum grade was 996, while the same type of locomotive stoker fired gave a drawbar horsepower output of 1,227, an increase of 22 per cent. An increase of 300 gross tons over the normal hand-fired rating was handled by the locomotive stoker-fired, maintaining the same average speed as was maintained by the hand-fired engines with the lighter tonnage.

On the road represented by the chairman, there is a seasonal fruit rush which calls into service every available man and locomotive to such an extent as to make it necessary to double the road (150-mile division) wherever the condition of the locomotive, the crew, and the hours of service make it possible. When this rush is on, we find no difficulty in getting the men to double back on stoker-fired locomotives even though they have a stoker-fired engine in but one direction. Therefore it is clear that if we did not have stoker-fired engines it would mean either more men, which would often result in the payment of the arbitrary held from home terminal, or in holding the engines for the crew's rest, or in an increase in the number of engines assigned to this service which would mean an increased number of idle engines during the slack period. An idle engine costs money even if standing dead behind the roundhouse, as it represents an investment on which the interest will run from $10 to $15 per day.

The above simply represents the definite decrease in cost of train operation as developed on different railroads through the application of stokers to locomotives of different dimensions.

There is, however, another decrease in cost of train operation which can be absolutely attributed to the application of the stoker, but which varies with the seasons and climatic conditions of the states traversed by the railroads. We refer now to the necessity of sending out relief firemen to take the place of others who on account of the extreme heat or through other causes have become physically exhausted. While this may appear as a small matter, records indicate that on some roads the loss chargeable to this one item amounts to considerable. The committee has records

of one railroad located in the Mississippi Valley having one division 156 miles long, operated by locomotives developing 39,000 lb. tractive effort and during the summer months it is necessary to have relief firemen stationed at intermediate points 50 miles apart, and as a rule one or more firemen are relieved daily. As under the schedule, 100 miles or less constitutes a day's work, it follows that in a case of this kind the labor cost insofar as firemen are concerned, is doubled. This in itself would not amount to so much, provided there is no attendant train delay, but where it is necessary to tie up a train at some intermediate station until a fireman has been deadheaded from a terminal, it results not only in an increased labor cost, but it upsets the dispatcher's entire schedule, delaying not only the train in question, but often other opposing trains.

Going back to the Canadian test previously referred to, it was found that the maximum speed on the grades possible with the hand-fired locomotives was 12.42 miles per hour, while with the stoker-fired engine handling the same tonnage a speed of 15.61 miles per hour was maintained, or an increase in speed which is equivalent to an increase in ton-miles per hour of 25 per cent.

It is on account of the speed factor not being considered that in many instances the mechanical stoker has been charged with an increase in fuel consumption over hand firing. Ton miles or train miles or locomotive miles is a mighty poor yardstick by which to measure train or locomotive operation. The time element should always be taken into consideration and where this factor is considered and coal consumption as well as other operating costs are based on the ton miles per hour, it will be found that the stoker can show economies over the best hand firing.

In the beginning of this paper we referred to one possible reduction in operating costs through the possibility of burning a cheaper grade of fuel. During the last months in 1921 slack coal, or what is termed screenings, became a drug on the market and could be purchased at $1.20 per ton less than the mine-run coal produced at the same mines. A saving of $1.20 per ton held out a very attractive proposition to the railroads, but it was found that in hand-firing practice it could only be handled successfully in switch engines, as in road service the firemen experienced considerable difficulty in maintaining full steam pressure at all times in either passenger or freight service. Tests were conducted to determine whether or not the coal could be successfully used in connection with mechanical stokers, and it was found that with some types of stokers practically the same locomotive horsepower output could be obtained per pound of screenings as per pound of mine-run, and therefore on such roads as were equipped to handle both mine-run and screenings at their coaling stations, screenings were used in the stoker-fired locomotives, resulting in a net saving in fuel cost of 7.6 cents per locomotive mile—more than enough to offset the wages of the fireman.

The report is signed by James Fahey (N. C. & St. L.), chairman; A. L. Bartz (E. P. & S. W.), Joseph Keller (L. V.), William Towney (G. N.), and F. P. Roesch (Standard Stoker Company).

Discussion

The trend of the discussion bore out the conclusions in the report that fuel consumption with stokers firing, when measured on a ton mile basis, is more economical than hand firing. Of course, the only direct comparisons which can be made are with locomotives of less than about 50,000 lb. tractive effort, since engines of greater capacity are beyond the limit of practicability for hand firing.

Considerable attention was given to the question of spark losses in the discussion and it is evident that while these losses were large with some of the early stokers, they are now no longer serious, even when slack coal is being burned. On the Baltimore & Ohio the steam from the stoker exhaust is being diverted into the stoker barrel, where it serves to moisten the coal slightly and to hold it in the firebox long enough for complete combustion to take place. It was suggested that eventually it will be impossible for the railroads to procure screened coal at the mine because of the difficulty of disposing of the screenings and that it will become necessary to purchase mine run coal. It was brought out that this is already the case in some districts. The railroads should, therefore be prepared to burn coal economically with any percentage of slack that may be produced at the mine.

The design of the grate is also receiving attention in connection with stoker firing. The Santa Fe is replacing finger grates with table grates having circular instead of slotted air openings in territory where Gallup coal is being burned. This has effected a reduction both in the spark losses and the loss of unburned fuel through the grate. The Pere Marquette is also applying the table grates on stoker fired locomotives. On the Wabash it was brought out that the standard finger grates are being replaced with Hulson grates. Stress was also laid on the need for high standards of stoker maintenance, particularly of the distributors, to insure that the fuel be uniformly distributed over the grate.

Very little was said about stoker failures. Although the members taking part in the discussion generally admitted that there are stoker failures, it is evident that they are of no more frequent occurrence than the failure of other parts of the locomotive and that they have not had any detrimental influence on the miles per engine failure.

[The reports on Operation and Maintenance of Oil Burning Locomotives and on Employing and Educating Engineers and Firemen will appear in an early issue of the *Railway Age*.—EDITOR.]

Other Papers

Reports were also presented on the following subjects: Flange Oilers; Radiolite for Illuminating Cab Gages, and Relation of Air Brake Defects to Traffic Delays and Fuel Consumption.

Election of Officers

The following officers were elected to serve for the year 1922-23: President, Frederick Kerby, (Baltimore & Ohio); first vice-president, T. F. Howley, (Erie); second vice-president, W. J. Fee, (Grand Trunk); third vice-president, J. N. Clark, (Southern Pacific); fourth vice-president, J. B. Hurley, (Wabash); fifth vice-president, J. D. Heyburn, (St. Louis-San Francisco), and treasurer, D. Meadows, (Michigan Central).

The membership of the executive committee for the coming year is as follows: B. J. Feeny, (Illinois Central); G. A. Kell, (Grand Trunk); James Fahey, (N. C. & St. L.); E. R. Boa, (New York Central); J. A. Cooper, (Erie), and J. H. DeSalis.

THE SOUTHERN PACIFIC will reduce freight rates on a number of commodities from eastern points to Oregon, the reductions ranging as high as 30 per cent and effective November 30.

TWO MILLION WORDS.—A number of words approximately equivalent to that in 26 novels was written by five court stenographers during the nine days of the government's injunction proceedings against striking railway employees; 2,100,000 words, said to be the biggest record in the federal court since the famous I. W. W. trial in 1918. The five stenographers in turn rushed back to their offices and dictated to a corps of 35 typists. In this way they turned out more than 750 pages of the record in a day, and certified copies of the proceedings were delivered to the court, the government attorneys and the attorneys for the defense by the next morning.

Fire Insurance on the Burlington

THE PAPER on fire prevention, by W. T. Krausch, engineer of buildings of the Chicago, Burlington & Quincy, which was read at Baltimore on October 18 and was noticed in the *Railway Age* of October 26, was supplemented by a sketch of the fire insurance and fire prevention activities of the officers of that road, which sketch is reprinted below. This was in the form of a letter to an insurance agent from the vice-president of the road who supervises this work, and was as follows:

"This work is in charge of W. H. Klinsick, who is assisted by H. L. DeCamp, E. Bignell, S. H. Shults and R. M. Parker. Mr. Shults devotes his time to making fire inspections at large shops and terminals and attending monthly meetings of the division fire prevention committees on Lines East. Mr. Bignell devotes a portion of his time to similar fire protection work on Lines West and has been concentrating on the locomotive spark hazard in the lignite territory. Mr. DeCamp and Mr. Parker make fire inspections of important terminals and shop property whenever we feel that such are necessary to check up conditions.

"The inspectors from this office inspect all terminals, coaling stations, elevators, water plants and other important property twice each year and send their report to this office and a copy to the division superintendent. All other points not mentioned above are inspected by our special agents' organization once each year, who send a copy of their report to the division superintendent and one to this office. Fire inspections of bridges are made by the bridge foreman when making monthly inspection and by the master carpenter when making his regular bridge inspection in the spring and fall. All coaling stations where lignite coal is used are cleaned and inspected twice each month, and stations where bituminous coal is used are cleaned and inspected once each month. These inspections are made by or under the supervision of the master carpenter.

"We have organized fire prevention committees on each division, composed of representatives of each department, who meet once each month and discuss matters pertaining to fire prevention. Members of these committees inspect the buildings on their respective divisions and correct any existing hazards. These meetings are held according to a prearranged schedule and on the same day on which the committees on safety and fuel economy meet, so that the work of fire prevention is extended to a large degree by the members of these other committees. At each terminal or shop plant a fire marshal has been appointed who has charge of the fire fighting apparatus and the drilling of fire companies. He also makes semi-monthly inspection of all structures and fire fighting apparatus at his terminal and holds two fire drills each month.

"When reports of inspections are received from the underwriters they are immediately taken up on the ground with the division people and all items are carefully considered. Those not requiring large expenditures of money or new practices, are taken care of immediately. Copies of these reports, showing action taken on each recommendation, are forwarded to the vice-president of operation, the general manager and all concerned.

"Messrs. Shults and Bignell for years prior to their work in fire prevention had been active in the official position of division superintendent. . . ."

The Burlington road has over 5,000 buildings, as follows:

General offices	7
Passenger stations and freight stations, approximately	1,800
Roundhouses, shops, store and oil houses, etc., approximately	720
Power plants (separate and distinct plants), approximately	40
Coal plants, approximately	200
Water plants, approximately	460
Grain elevators	6
Large stock yards	8
Miscellaneous buildings	2,000

Hooper on the "Living Wage"

THE RECENT RULING of the Railroad Labor Board on the question of the "living wage" for maintenance-of-way employees, described in the *Railway Age* of November 4, page 857, has brought forth a torrent of denunciation by the Hearst chain of newspapers particularly in Chicago where the board has its headquarters. This attack has been abetted by statements from Samuel Gompers, president of the American Federation of Labor; Edsel Ford of the Ford Motor Car Company and many labor leaders.

The issues raised by these interests were finally answered by Ben W. Hooper, chairman of the Labor Board, who said:

Mr. Edsel Ford breezily remarks that the railroads would probably suffer "deficits for a while" if the so-called living wage were established. Plunging all the railway systems of the nation into a deficit does not disturb the equanimity of Mr. Ford. He makes no reference to the inevitable consequence of such a deficit, namely, higher freight and passenger rates.

It is now a matter of quite general knowledge that the margin of profit in the manufacture of tin Lizzies is much greater than it is in the operation of railroads. It is also pertinent to note that the man who pays for the operation and upkeep of a Ford is in a better position to sympathize with the men who run railroads than is the manufacturer of the Ford.

Mr. Ford should be able to speak of railroad deficits as one having authority. The records now show that the Ford railroad, although it has the benefit of the diversion of the tonnage of the Ford Motor Company, an advantage it did not enjoy before he purchased it, has experienced deficits at the end of several months. The deficit in December, 1921, was $331,240; in July, 1922, $16,367, and in August, 1922, $300,404. It also goes without saying that the operation of this small railroad can not be taken as exemplary of the operation of the great railway systems of the country.

In so far as the opposition of Mr. Gompers to the Railroad Labor Board is concerned, it is sincere and understandable. He is opposed to anything that looks toward a limitation of the freedom of labor organizations to enforce their demands on the railroads and the public by strikes. The issue is clear between Mr. Gompers and those who believe that the public has a definite and positive right to efficient and uninterrupted transportation, which must not be destroyed by controversies between carriers and their employees. The latter view is not hostile to organized labor. No greater blessing can be conferred upon the employees of the railroads than to free them from the necessity of engaging in recurring industrial struggles at the cost of enormous loss and suffering to themselves and, at the same time, to guarantee to them just and reasonable wages and working conditions.

The attitude of the Hearst syndicate of papers is not quite so clear. The position of this syndicate of papers on the living wage bears many of the recognizable earmarks of political expediency, and this is an unsafe foundation for an economic policy.

The Board in its action on this question has not only served the best interests of the public in general, but has saved labor from the folly of some of those who pose as its friends. A wage award which would crush the railroads would ruin their employees. A wage award which would create an enormous deficit in every railway treasury would necessitate the imposition of higher freight rates on the farmers, producers and shippers of this country. Does this syndicate of papers advocate an increase in freight rates and the consequent increase of living costs to the masses? If not, from what source do they expect to obtain the 125 per cent increase which the so-called living wage would necessitate?

One of the expert economists who presented the matter to the Board for the employees stated that this would "throw a monkey wrench into the industrial machinery" and that the theoretical living wage should not be established all at once, but the minimum should be made 48 cents per hour.

In view of this situation does this syndicate of papers desire to throw the monkey wrench into the machinery? If not, why criticize the Board for refusing to do it. Let it be remembered that the Board contends that it has established "a living wage" for common labor—a wage, which, in an overwhelming majority of instances, is appreciably higher than the wage paid common labor in the same community in other industries.

A flat wage is as impractical as a flat dollar. Both have been tried out in Russia, where the laborer may get millions of roubles for an hour's work, but what will his flat wage and his flat rouble buy him?

The swelling tide of prosperity in our country can not be hastened by methods of this kind.

Subsequently, there has been a noticeable decrease in the space given to this controversy in the Hearst publications.

General News Department

The Missouri & North Arkansas announces that passenger and freight service will be extended to Joplin, Mo., on November 15, thus completing resumption of service over the entire line from Helena, Ark., to Joplin, Mo.

The Illinois Central has announced that all shop employees who lost their pension rights as a result of a strike in 1911, but who remained at their posts during the strike last summer, will have their lost pension rights restored.

The New England Railroad Club will meet on November 14 at the Copley Plaza Hotel, Boston, at 6:30 p. m. C. F. Shirley, purchasing agent of the Forbes Lithograph Manufacturing Company, will speak on New England Railroads from a Commercial Agent's standpoint.

Five hundred dollars fine and three months' imprisonment were imposed as penalties for contempt of court, in the Federal Court at Macon, Ga., on October 28, against two striking shopmen of the Central of Georgia who had violated the injunction against interfering with railroad employees. The two men were found guilty of attacking two workmen several weeks ago. A third man who was tried was found by the jury not guilty.

Two train-robbers killed and no property lost, is the result of an attempt to loot the mail car of Train 805 of the St. Louis-San Francisco near Wittenberg, Mo., on the night of November 2. One of the robbers was well known, having served 12 years in the Missouri penitentiary, and post-office inspectors, who had been watching him for several weeks, were on hand at the scene of the robbery, with railroad and local policemen. They stopped the robbers a short distance away from the train and on their refusal to halt shot them. They had pulled the mail car several miles away from the rest of the train, and after taking the registered letters ran, with the locomotive, still farther, finally jumping off, leaving the engine to run wild.

The Careful Crossing Campaign has had some effect in limiting the number of persons killed and injured, as indicated by preliminary compilations made by the Safety Section, A. R. A., which managed the campaign. The figures do not show any remarkable gain in safety and they are based on only 204,091 miles of road—four-fifths of the Class I mileage of the country—but they indicate a definite diminution in both fatal and nonfatal injuries. For the period of the campaign, June 1 to October 1, there was an increase of 9.7 per cent (as compared with the same period last year) in the volume of railroad business as indicated by the car loadings, and an increase in registration for the same period of 2,009,021 automobiles and trucks, or 21 per cent; but the number of accidents at highway crossings increased only 3.6 per cent; non-fatal injuries 2.4 per cent and fatal injuries 3.6 per cent. This is an average of 3 per cent increase for non-fatal and fatal injuries. The total of the accidents reported for the period was 4,411, an increase of 153; total non-fatal injuries 1,800, an increase of 42, and total fatal injuries 693, an increase of 24.

Commissioners Object to Cut in Valuation Appropriation

Chairman McChord and Commissioners Esch and Lewis of the Interstate Commerce Commission called on the President on November 4 to protest against a proposed reduction in the appropriation for the commission's railroad valuation work for the next fiscal year, which has been recommended by the Bureau of the Budget in its effort to reduce government expenses. The commission had asked an appropriation for this purpose of $1,300,000 and the budget bureau had recommended that the sum be reduced to $750,000. The President was told that if the appropriation requested is allowed the underlying work of valuation would be completed by July 1, 1924. He will discuss the matter further with the officers of the budget bureau.

Circus Train Wreck

Three persons were killed and four seriously injured when the westbound "Sunset Express" of the Southern Pacific crashed into the rear end of the Wartham Carnival Company's special show train near Adeline, La., on October 31. The dead and injured were all members of the theatrical company.

Tank Car Safety Valves

The Mechanical Division of the American Railway Association has issued a circular granting permission to companies having stocks of tank car safety valves of the 1920 design to place in service prior to July 1, 1923 any valves now on hand of that design. All patterns should be changed at once so that future castings will comply with the requirements shown in Supplement 1 to the Tank Car Specifications for 1920. Fig. 9-A and 10-A.

Interstate Commerce Commission Accident Report

Houston, Tex.; Crossing of the Southern Pacific and the International & Great Northern, September 13. At this crossing, where the tracks lie nearly at right angles, a yard freight of the International & Great Northern, with 44 cars, moving slowly, about 4:50 p. m., ran into the side of a passenger train of the Southern Pacific; 27 passengers and one employee injured. Three passenger cars overturned. The inspector finds that the air brakes of the freight train were not in use, a violation of law, and that the engineman did not bring his train to a stop before passing over the crossing, also a violation of law. There are no interlocked signals at the crossing. The investigation disclosed that the movement of yard freight trains without using air brakes and without coming to a stop at the crossing was a common practice, and the officers of the road are held to merit severe censure.

Air Brake Hearings Resumed

Hearings before Examiner Mullen of the Interstate Commerce Commission in connection with the commission's general air brake investigation were resumed at Washington on Wednesday, November 8. Witnesses representing the Automatic Straight Air Brake Company presented a number of voluminous exhibits covering air brake failures and the results of tests and were to be recalled later for cross-examination after the representatives of the roads had had an opportunity to check them. The first witness was a conductor for the Virginian who filed records of several hundred air brake failures on the Virginian and other roads. On being questioned as to whether he was able to testify to these records from his personal knowledge he said that about 75 of the failures occurred on his own train and that these cases had been checked in his exhibit and that the others could be identified by the notation "B. S." which he had used to indicate that the information was taken from the records of the Bureau of Statistics.

Katy Employees Organize Union

Employees in the motive power and car departments of the Missouri, Kansas & Texas lines have completed the organization of the M. K. & T. Association of Metal Craft and Car Department Employees, "to promote the welfare and protect the interests of its members, to promote good feeling and constructive co-operation between the members and the officers of the railway, and, by joint action, protect and promote the interest of the

public." The organization was completed at a meeting held recently in Parsons, Kan., attended by seventy delegates, representing employees at practically all terminal and shop points on the system.

A system adjustment board was created under the provisions of the Transportation Act, and the by-laws of the association provide that this board shall act as the official representative of the association. It is the duty of the adjustment board to place before the officers of the railway all matters submitted to it by local adjustment boards concerning grievances and it will deal with all matters relating to interpretations of rules, rates of pay and working conditions.

The by-laws further provide that any disputes which cannot be settled in conference between the system adjustment board and officers of the railway, shall then be handled in accordance with the provisions of the Transportation Act.

Mechanical Convention in 1923

The General Committee of the Mechanical Division of the American Railway Association decided at a meeting held in New York on November 8 not to hold in 1923 a convention of the kind ordinarily held in past years. It was decided to hold merely a business session of the Mechanical Section, at which reports dealing with interchange of cars, standard box cars and kindred matters will be received.

The explanation given for this action is that owing to the shop employees' strike no meetings of the committees of the section have been held to consider most of the regular reports, and that it will be impracticable to hold meetings of this kind during the rest of the present year. It was therefore decided that it would be impracticable to prepare the usual reports for the convention.

This decision, if left unchanged, means that the business session will be held at some place, possibly Chicago, instead of the convention being held at Atlantic City, as originally intended. It also means that no exhibit of equipment and supplies will be given and that the session to be held will last only two or three days.

Gray and Gormley Speak to Chicago Shippers

C. R. Gray, president of the Union Pacific, and M. J. Gormley, chairman of the car service division of the American Railway Association, were the principal speakers at the annual meeting of the Chicago Shippers' Conference Association which was held on November 7, at the Hotel LaSalle, Chicago. Mr. Gray discussed the Southern Pacific-Central Pacific "unmerger" case, contending that Chicago shippers should be concerned in seeing that the Central Pacific is kept separate from the Southern Pacific.

Mr. Gormley dwelt upon the present car shortage situation, "the greatest in railroad history." On September 9, a total 683,689 cars were moved, while on October 25, 876,657 cars were moved, or an increase of 192,968. He said that 11 per cent of all the cars in service today are awaiting repairs, but with conditions steadily improving. He explained the recent orders issued by the car service division and appealed to the shippers to see that the cars at their disposal are loaded to capacity.

The new officers elected by the C. S. C. A. are as follows: President, R. C. Ross, traffic manager of Joseph T. Ryerson & Son; vice-president, G. A. Blair, traffic manager of Wilson & Co.; treasurer, R. W. Campbell, traffic manager of the Butler Paper Company, and secretary, W. J. M. Lahl, traffic manager of the American Seating Company.

Revenues and Expenses for September

The Class I railroads in September had a net operating income of $58,428,000, according to reports filed with the Interstate Commerce Commission. This represented a return, on an annual basis, of only 2.88 per cent on their tentative valuation. In September last year it was at the annual rate of 4.32 per cent, while in August this year it was 2.65 per cent. The railroads failed by $58,000,000 of realizing a return of 5¼ per cent. September operating revenues were substantially increased but operating expenses increased 8.2 per cent. In September $120,000,000 for maintenance of equipment was expended, an increase of 15.7 per cent over the same month one year ago. The number of freight cars in need of repairs was reduced by 30,000 and of locomotives by 114. Expenditures for maintenance of way, however, were seven per cent under those of one year ago. Measured by net ton miles freight traffic in September this year increased more than 10 per cent.

During the first nine months this year, the railroads had a net operating income of $529,413,000, compared with $393,793,000 during the corresponding period last year. This is at the annual rate of return of 3.96 per cent, compared with 2.95 per cent. Carriers in the Eastern district in September earned net at the annual rate of only 1.98 per cent; those in the Southern district 4.66 per cent and those in the Western district 3.46 per cent.

Forty-four roads in September had operating deficits. Of this number, 23 were in the Eastern district, 4 in the Southern and 17 in the Western. In August, 49 had operating deficits.

New Officers of Railway Equipment Manufacturers' Association

At the annual meeting of the Railway Equipment Manufacturers' Association, held during the Traveling Engineers' Association convention at Chicago, on October 31, the following officers were elected for the coming year: F. W. Venton, (Crane Company), president; R. J. Himmelright, (American Arch Company), vice-president; J. W. Fogg, (Boss Nut Company), secretary, and George E. Haas, (Pyle National Company), treasurer.

The following members of the Association, not included in the list published last week, also had exhibits at the Hotel Sherman during the convention of the Traveling Engineers' Association:

American Steel Foundries, Chicago.—Models of brake beams, couplers, adjustable shelf coupler pocket, adjustable brake heads for passenger beams, vertical key yoke, and side frame and journal box.—Represented by W. G. Wallace, J. H. Tinker and W. C. Walsh.

Ashton Valve Company, Boston, Mass.—Locomotive steam and air gages, driving wheel quartering gage, safety valves, whistles, wheel press recording gage and gage testing devices.—Represented by J. F. Gettrust, H. O. Fettinger and E. W. Nordstrom.

Johns-Manville, Inc., New York—Insulations, packings and locomotive specialties.—Represented by J. E. Meek, J. C. Younglove, J. H. Trent, P. C. Jacobs, Charles E. Murphy, Harry Flannagan, L. S. Wilbur, P. R. Austin, H. J. Crowe and A. H. Purdom.

Sheafe Engineering Company, Chicago.—Locomotive cylinder and lubricator air pump steam cylinder lubricator.—Represented by J. S. Sheafe.

Standard Stoker Company, New York. Photographs and literature of mechanical stoker.—Represented by F. P. Roesch, H. N. Carmer and L. F. Sweeney.

White American Locomotive Sander Company, Roanoke, Va.—Locomotive track sander with new duplex operating valve.—Represented by James Frantz and W. L. Ransom.

The New Santa Fe Shop Employees' Association

Our attention has been called to the fact that the article appearing in the *Railway Age* of October 21, page 768, omits the Atchison, Topeka & Santa Fe as one of the first railroads on which associations of shop employees were formed independent of the American Federation of Labor. The list of roads named at that time emanated from the Railroad Labor Board, as stated, but unfortunately the Santa Fe was not included in the board's announcement.

When the strike began, 2,300 mechanics remained in the service of the Santa Fe, and by August 22, the number of employees in the mechanical department had reached a total of 13,702 or 71 per cent of the normal force. These employees had already formed company unions among themselves and had made a request on the management to negotiate new agreements. Consequently on August 22 new agreements were signed with the shop craft associations, i.e., machinists, boilermakers, blacksmiths, sheet metal workers, electricians and carmen and their helpers and apprentices. Agreements were also made with the stationary engineers, firemen and oilers. The date of this action, therefore,

places the Santa Fe as one of the first railroads in the country to reach a satisfactory settlement of the strike. On October 19, the force in the mechanical department had reached 100 per cent, the road having at the present time 18,972 employees in the mechanical department.

In discussing the effect of the strike on the Santa Fe, one of the officers of that road recently said, "Never in the history of the Santa Fe System Lines has it been offered and handled as heavy a business as it has since the latter part of August. We have no embargoes in effect; we have no serious congestion of any kind; our condition of motive power is normal. Our bad order freight car situation, as of October 25, showed only 4.69 per cent of all cars on our lines in need of repairs the lowest point of record since the return of the roads to private control. We have 2,000 new box cars soon to reach us and we have ordered for delivery in the first quarter of next year 59 locomotives, 1,000 box cars, 1,000 automobile cars, 2,000 refrigerator cars, 500 double-deck stock cars and 500 coal cars."

Decline in Number of Firms Manufacturing Cars

Census reports show the decrease in activities of establishments engaged in the manufacture of cars for use on steam and electric railways during 1921, as compared with the year 1919, according to the Department of Commerce.

In 1921 there were 105 establishments engaged in the manufacture of steam railroad cars and the total value of their products amounted to $314,394,867, as compared with 99 establishments for 1919 with a total value of products of $538,222,831. The decrease in the total value of products was $223,827,964, or 41.6 per cent.

During this same period there were 10 establishments engaged in the manufacture of electric railway cars and the total value of their products was $14,856,068 as compared with 7 establishments for 1919 with a total value of products of $18,441,976; showing a decrease in the value of products of $3,585,908, or 19.4 per cent.

The decrease in the value of products for both classes has been accompanied by decreases in the number of wage earners, in the total amount paid in salaries and wages during the year, and in the cost of materials used. In January, the month of maximum employment, 66,545 wage earners were reported, and in September, the month of minimum employment, 35,264—the minimum representing 53 per cent of the maximum employment. The average number of wage earners in 1921 was 46,863 as compared with 55,218 in 1919, a decrease of 15.2 per cent. A classification of the wage earners shows that 10,170, or 21.7 per cent of the total number were employed in establishments where the prevailing hours of labor per week were 48 and under; 20,295, or 43.3 per cent between 48 and 54; and 16,398, or 35 per cent, were employed in establishments where the prevailing hours of labor ranged from 54 to 60.

The number of cars manufactured during the year by both classes of establishments showed a decrease from 155,186 in 1919 valued at $387,447,866, to 51,894 in 1921, valued at $180,866,191. The decrease was chiefly in the manufacture of steam railroad cars. This class showed, in 1919, 153,288 cars made, valued at $373,945,213, as compared with 50,361 cars, valued at $170,325,626, for 1921. The decrease in the number and value of cars manufactured was 67.1 and 54.5 per cent, respectively.

These figures do not include the number and value of cars manufactured in repair shops of steam and electric railroad companies, or as secondary products by establishments classified in other industries. In 1919 establishments of this kind manufactured 6,345 cars valued at $16,217,044.

Brotherhoods Oppose Changes in Working Conditions

A controversy which labor leaders claim represents the inauguration of an attack on the eight-hour day, came before the Railroad Labor Board on November 2 when W. G. Bierd, receiver of the Chicago & Alton and other officers of that road appeared before the board in support of a petition asking for the elimination of time and one-half for overtime in road-freight transfer and hostler service, the extension of the present eight-hour rule to nine hours in short turn around passenger service and a modification of the working schedules in outlying switching yards on the road.

They asserted that time and a half in connection with the mileage basis for train and enginemen, is wrong; it pays for service never rendered; is a premium for not putting forth ordinary effort; and it prohibits the carriers from supervising train operation closely and economically. Enginemen and trainmen, it was argued, receive a rate of pay that is unfair to every other class of railroad employee. It was also contended that under present conditions the C. & A. is called upon to sacrifice the use of 12 to 20 engines a day and to put on two trains and crews to do what one train and crew had formerly done for many years.

The road also asked the board to grant a nine-hour rule for yard service in small outlying terminals where it has no continuous service. Under the eight-hour day the road cannot get full service from the crew at these small points.

A third question before the board is the double header rule, from which the C. & A. is asking to be released on its 300 miles of single track from Roodhouse, Ill., to Kansas City, Mo. Removing the double header restriction would increase the capacity of this 300-mile line.

In replying, representatives of the employees claim there is evidence tending to show that the punitive overtime rule has been beneficial by increasing the speed of trains, thereby saving in motive power, equipment, etc.

Referring to the road's contentions regarding the eight and nine-hour day, the employees reiterated the arguments on the right of workers to an eight-hour day, adding, "It does not make any difference whether the eight-hour day is in the control of the carrier or not; if a man works longer than eight hours he is drawing unreasonably upon his resources and he is therefore entitled to an increased rate of compensation."

Representatives of the men stated that the objection of the trainmen to double headers is a desire to reduce their hours of labor and that there is an added element of danger involved in handling trains with two engines.

The Condition of the C. P. & St. L.

A possible solution to the difficulties of the Chicago, Peoria & St. Louis is the contemplated merger of that road with a larger line having east and west connections. The hearing on a petition to abandon the road is scheduled for November 13. B. A. Worthington, president of the Cincinnati, Indianapolis & Western, denied that his road had decided by buy the defunct line, but admitted that he had inspected the property and that the inspection report is now in the hands of his directors. He further said: "Unofficially, I will say that the Chicago, Peoria & St. Louis is much too good a road to be scrapped. In the interest of the public good, as well as from the standpoint of the railroads, it should be absorbed with some road with east and west connections. The road has about 247 miles of track, 75 per cent of which is in passable shape. The rolling stock is somewhat out of repair, but it could be put in shape and used with profit. The road has about 1,800 freight cars, 38 coaches and 51 locomotives. Control of 25 per cent of the stock in the Peoria & Pekin Union Terminal stock is valuable, as are also the St. Louis terminals. The road serves a territory which will show great development under proper conditions.

"The fate of the road rests with the bondholders, who hold the prior lien on the property, amounting to about $2,000,000. If the road is scrapped, these people can get their money at once. If another railroad system were to take over the property, it would be necessary that these bondholders take stock in the new organization in place of their former holdings. It might mean a few years to wait, but the property would undoubtedly pay its way within a few years, and the stock would have a good value. The company taking over the Chicago, Peoria & St. Louis would have to put about $3,000,000 in improvements and repairs. With the $800,000 current debts which the road has, no big system will absorb it unless the present owners take part pay in stock in the new organization."

The bondholders are understood to be anxious that the property be abandoned and scrapped, as the scrap value will be ample to relieve the $2,000,000 bonded indebtedness now outstanding.

Traffic News

The San Francisco freight office of the Southern Railway is under the jurisdiction of J. L. Martin, Pacific Coast agent, 705 Monadnock Building.

The Chamber of Commerce of the United States has asked the federal coal commission to be allowed to present the views of organized business in the event the commission seriously considers any proposal looking to the nationalization of the coal industry.

The Illinois Central announces a new train, to go into operation on December 5, between Chicago and Jacksonville, Fla., to be known as the "Floridan." The train will leave Chicago Tuesdays, Thursdays and Saturdays about noon and will arrive at Jacksonville about 9 p. m. the following evening in time to make connections for other Florida points.

The Arkansas Railroad Commission has announced that it will oppose the Oklahoma Corporation Commission's petition to the Interstate Commerce Commission asking a readjustment of the freight rates for the entire southwest, declaring that the petition is directed toward practically the same ends as the "Memphis rate case." It claims that the purpose is to increase freight rates on all commodities moving into and through Arkansas.

The St. Clair River District Transportation Club was organized at Port Huron, Mich., on October 9. The following officers were elected: President, E. C. Miller, Mueller Metals Company, Port Huron; first vice-president, W. M. Markle, Diamond Crystal Salt Company, St. Clair, Mich.; second vice-president, W. W. Shingle, Pere Marquette Railroad, Port Huron; secretary, A. G. Thernstrom, assistant agent, Grand Trunk, Port Huron; treasurer, J. M. Barbee, Port Huron Chamber of Commerce.

Durant Motors, Inc., announces the personnel of its traffic department as follows: William J. Bailey, director of traffic, Long Island City, N. Y.; Fred L. Pomeroy, assistant director of traffic, Long Island City, N. Y.; Edward G. Rice, assistant to director of traffic, Long Island City, N. Y.; P. V. Demerest, traffic manager, Elizabeth, N. J.; Bert C. Sproul, traffic manager, Lansing, Mich.; Earl C. Allander traffic manager, Oakland, Cal.; Arthur C. Heath, traffic manager, Muncie, Ind.; Emmet F. Howley, traffic manager, Leaside, Ont.

The fuel situation has become stabilized to such an extent that the Chamber of Commerce of the United States has notified its members that surveys and reports are no longer necessary, as the program adopted in September to equalize coal distribution through co-operation among users in the period immediately following the strike has been successful. In a letter to business organizations Julius H. Barnes, president of the chamber, calls attention to the present adequate distribution of supplies and to the steady reduction of prices during the last few months.

Storage in transit is now allowed by the Canadian Pacific, on apples in carloads from British Columbia destined to Eastern Canada or to the Atlantic seaboard for export. Exporters are said to be arranging to establish big collecting warehouses in Winnipeg and other cities. The storage in transit privileges are allowed at Winnipeg, Regina, Moose Jaw, Lethbridge and Calgary. The shipper has the privilege of holding this produce in any of the cities named for a period of six months. The new regulations will, on and after November 17, apply on shipments to points in the United States.

The Atchison, Topeka & Santa Fe has announced that until December 31, 1922, one-half present tariff rates will apply on cottonseed cake, meal and hulls, corn and articles taking corn rate, hay and alfalfa from all points on that road in Texas, Oklahoma, Colorado and Kansas; also from Kansas City, St. Joseph, and Superior (Neb.) to Santa Fe points in New Mexico. Half rate basis will apply from Phoenix, Ariz., on cottonseed cake, meal, hulls and alfalfa. This emergency rate reduction is made for the relief of the drought stricken livestock industry in New Mexico. The El Paso & Southwestern and the Southern Pacific have made similar reductions.

The Alabama, Tennessee & Northern announces that additional gasoline motor cars will soon be put in service. On May 1 this road bought and put into service between York, Ala., and Silas, a gasoline motor car, later extending the service to Millry and Healing Springs. The car has proved popular and the same kind of service is to be established from York north, serving Reform, Carrollton, Aliceville, Cochrane, Dancy, Panola and intermediate points. The latest car purchased has improvements over the first one. President J. T. Cochrane says that he does not expect to take off any steam trains; the motor car service is to be in addition to all other trains now in operation.

John T. Cochrane, president of the Alabama, Tennessee & Northern in an interview in the Mobile (Ala.) Register calls for a general freight car pool. He says: "The transportation system of the United States as a whole is under obligation to take care of all shippers as near proportionately equal as practicable, and the only way to do this is to mobilize the cars of the various railroads of the United States under an effective and authoritative central management as can be done by the Interstate Commerce Commission. Cars can be handled through railroads just as the Federal Reserve system handles money through the banks. The A. T. & N. owns more than enough cars to take care of the large production on its railroad, but now its cars are scattered all over the country and we cannot get them back. We are contending that all the cars, including ours, be put into a pool and sent by those in authority to the points where needed most. Until this is done all our railroads are going to continue to have the same hard fight we are having from day to day to get empties."

The wealth of Kaolin in the ground along its lines is the chief topic of the latest newspaper discussion issued by the Central of Georgia. Georgia is generally regarded as an agricultural state, but its mineral products in 1920 were valued in excess of $13,000,000 and clay products (brick and tile) made up approximately 35 per cent of this amount. The development of the clay industry means more to a greater territory and to a larger number of people than any other mineral. The road has been co-operating with the government in a series of tests and states with full assurance that Georgia kaolins when properly prepared can compete with the English china clays in the filler trade and the manufacture of pottery, electric porcelain, floor tile, wall tile, and sanitary ware. An even more inviting field for development is afforded by the refractory clays which possess primary requisite for the manufacture of fire brick, for electric, chemical, metallurgical and industrial furnaces—the ability to withstand fusion at high temperature. There is enough clay in Georgia to supply the needs of the nation for generations to come. Pamphlets describing the clay resources, the tests and the preliminary results, may be had from J. M. Mallory, general industrial agent of the road, Savannah.

The Illinois Central's November Manifesto

The Illinois Central in its latest general newspaper advertisement assures the public that the officers are leaving nothing undone in their efforts to meet the situation. Since the October statement was published 75 large freight locomotives have been bought, making a total of 140 locomotives purchased this year. "However, we are handling the largest traffic in the history of this system, and our patrons doubtless will continue to be inconvenienced by the general shortage of transportation facilities.

"In the seven years ended with 1921 the number of locomotives in the United States increased only 275 a year, and the number of freight cars only 6,000 a year. The increase in the number of locomotives in the seven years ended with 1921 was only one-ninth as great as in the seven years ended with 1907, while the increase in the number of freight cars was only one-fifteenth as great. The decline in the amount and capacity of the equipment provided has been accompanied by a corresponding decline in other facilities. * * * When the confidence of investors in railway securities is fully restored, large expenditures for additions and betterments can be made, and the railroads will then be able to supply all necessary transportation. This is the 'railway question' in a nutshell. * * *"

Operating Statistics for August and Eight Months

The net ton miles of revenue and non-revenue freight handled by the railroads in the month of August totaled 30,452,000,000 as compared with 30,420,000,000 in August, 1921, according to the monthly bulletin of operating statistics issued by the Interstate Commerce Commission. The car miles per car day averaged 21.8 as compared with 22.7 last year, the net tons per loaded car 26.3 as compared with 27.4 and the net ton miles per car day 406 as compared with 400. For the eight months ended with August, the net ton miles totaled 227,739,000,000 as compared with 222,411,000,000 last year.

Southern Freight Association

The Southern Freight Association has recently been organized by the railroads operating in the territory south of the Ohio and Potomac Rivers and east of the Mississippi as a successor of the Southern Freight Rate Association, to have jurisdiction over rate adjustments in that territory. Charles Barham, heretofore general freight agent of the Nashville, Chattanooga & St. Louis, has been elected chairman of the association and also of its executive, general and standing rate committees. L. E. Chalenor, who was secretary of the old association, was elected secretary of the new one.

"Sell Recreation"

M. E. Westbrooke, director in charge of the National Travel and Out Door Life exposition, which will be held in Chicago May 7-12, inclusive, has asked the support of the railroads. At a meeting of traffic men held in Chicago on October 26 he said:

"Sell recreation and you will have sold travel. Recreation is a commodity and should be sold as other commodities. The scenery, highways, hunting and fishing grounds, golf links and polo fields constitute a commodity of which there is an unlimited supply awaiting purchasers. Sell the playgrounds of the United States and Canada and you have sold travel. Outdoor life is a commodity which in the past has been bought much as the farmer purchased his requirements from a mail order catalog, only to meet with disappointment.

"The National Travel and Out Door exposition in its exhibits will symbolize all the principal forms of outdoor recreation. The playgrounds of America and Canada will be visualized to give the purchaser of recreation a realistic picture of what the various sections afford."

Coal Production

Preliminary returns to the Geological Survey on coal production in the week ended November 4 indicate a total of 12,500 net tons, of which about 10,700,000 tons is bituminous coal and 1,800,000 tons is anthracite. Revised estimates for the fourth week of October show 10,681,000 tons of bituminous and 1,773,000 tons of anthracite. Thus a slight increase in the total coal raised is shown for last week as compared with the week before.

The increased rate of production during the past three weeks is said to be principally due to improvement in transportation. The rate of output of soft coal is now about equal to that of 1918 and higher than in 1921, but lower than in 1919 and 1920.

The production of anthracite in the fourth week of October is estimated at 1,773,000 net tons which is a decrease of 11 per cent as compared with the week preceding.

Reports for the week ended October 21 indicate continued improvement in transportation in most of the territory east of the Mississippi. The most notable exceptions were in Westmoreland County, Pennsylvania, and the Tug River district of West Virginia, where transportation losses increased to 49.4 and 72.8 per cent, respectively. In the trans-Mississippi states the rail situation grew steadily worse and losses charged to transportation disability ranged from 1.7 per cent in Iowa to 57.4 per cent in Utah.

The movement of bituminous coal across the Hudson River into eastern New York and New England decreased during the week ended October 28. The cumulative movement for this year to date now stands at 67,872 cars of anthracite and 85,184 cars of bituminous coal through the Hudson gateways, and 282 cars of anthracite and 1,963 cars of bituminous coal through Rouses Point.

The fourth week of October was the seventh successive week in which the tonnage of soft coal dumped into vessels at Lake Erie ports exceeded 1,000,000 tons. Anthracite shipments from Buffalo during the week ended October 31 were 94,200 net tons against 119,100 tons in the week before.

Shipments of bituminous coal through Hampton Roads in the week ended October 28 increased about 6 per cent as compared with shipments in the 2 weeks preceding. In the last week reported dumpings totaled 276,072 net tons as compared with 261,524 in the week preceding.

Reports received by the Car Service Division of the American Railway Association show that under the program agreed upon following the settlement of the miners' strike, the railroads have only 2,000,000 tons to deliver in order to fulfill their agreement. This means the delivery of approximately 666,700 tons a week.

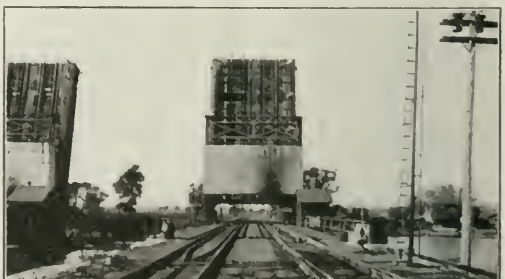
The Car Service Division reported on Nov. 7 a total coal loading for the week of 237,010 cars. This exceeded by 13,599 cars the week which ended on October 21, the previous high mark. Bituminous amounted to 193,103 cars, an increase of 2,827 over the week before, and a daily average of 32,184 cars. This was an increase of 1,139 over the daily average for October one year ago. Anthracite totaled 33,907 cars, an increase of 980 cars over the week before, when Mitchell Day was observed. The average of 5,651 cars daily exceeding the daily averages for both November, 1920 and 1921.

On Monday of this week 43,810 cars were loaded with bituminous coal. Except for the preceding Monday, when 45,298 cars were loaded, this was the largest number of cars loaded on any one day since December 13, 1920.

Commercial Coal Stocks

A canvass of commercial stocks of anthracite and bituminous coal undertaken by the Bureau of the Census and the Geological Survey, indicates that on October 1, commercial consumers had in storage approximately 28,000,000 tons of soft coal, according to an announcement by Fuel Distributor C. E. Spens. This figure compares with 27,000,000 tons on October 1, 1916, and with 28,000,000 tons on October 1, 1917. On September 1, stocks amounted to 22,000,000 tons. The trend of production has continued upward and it is estimated that the increase in storage from October 1 to November 1 will at least equal the increase from September 1 to October 1. The stocks on hand on November 1—approximating 35,000,000 tons—comprise the quantity in the hands of commercial consumers, and does not include coal in the cellars of domestic consumers nor steamship fuel.

"On January 1, 1922," said Mr. Spens, "commercial stocks amounted to 48,000,000 tons, and by April 1, when the strike began, to at least 63,000,000 tons. The average weekly production at present is approximately 10,500,000 tons or roughly, 2,000,000 tons in excess of current consumption.



The Reading's New Drawbridge Over Darby Creek, Chester, Pa.

Commission and Court News

Interstate Commerce Commission

Applications for Relief from the Fourth Section

In the interest of economy and expedition, it has been the practice of the commission to pass upon certain applications for relief from the provisions of the fourth section of the act without hearing. Applications based upon the circuitous character of the petitioner's route are so handled.

While no objections have come to the attention of the commission, some misunderstanding appears to have arisen concerning the status of orders granting relief in such cases. To clear up such misunderstanding the commission announces that where applications are passed upon without a hearing, the orders issued are not to be considered as final but are subject to modification upon complaint after notice and hearing; or without hearing if, because of changed conditions or other adequate reasons, such modification may seem necessary and proper.

In order to afford the public more information with respect to applications for relief under the fourth section, arrangements have been made to issue and place upon the press table in the secretary's office daily synopses of applications as received.

Leases of Property by Railroads to Shippers

The Interstate Commerce Commission has issued a report on its investigation instituted prior to federal control concerning the propriety of practices of carriers in leasing their facilities and other properties to shippers of freight over their lines. The commission holds that no justification exists for the leasing of railway lands to industries at a nominal rental charge. The commission held hearings at New York, Washington, Fresno, Calif., and Spokane, Wash., after which the intervention of federal control delayed action and the commission has since been advised that various changes have occurred as a result of the hearings so that the record does not in all respects accurately reflect the present situation. For the sake of brevity, the report deals only with the situation at Spokane as it was disclosed at the hearing. It is stated that this situation fairly illustrates the questions of law and of public policy involved and affords an adequate basis for the discussion of the questions. The commission goes no further in this report than to indicate some of the underlying principles which, in its opinion, should govern carriers in the leasing of lands to shippers and which are illustrated by the evidence which has already been summarized:

1. No justification exists for the leasing of railway lands to industries at a nominal rental charge. It is conceded that traffic considerations are the moving cause, in such cases, so far as the carriers are concerned. Where the traffic of the lessee is in part the consideration the transaction amounts to a concession to the shipper-lessee, in violation of the law.

2. A provision in a lease whereby a shipper agrees to route over the lines of the lessor or its connections all or any part of his traffic amounts to an acknowledgment that the consideration was in part the exchange of traffic for right to occupy the land.

3. The determination of the value of leased premises by mutual agreement of the shipper and carrier, and revaluation from time to time is an arrangement open to serious abuse.

4. Every effort should be made by carriers to obtain terms no less favorable than would be obtained were the land owned independently of the railroad.

The facts disclosed by this investigation strongly support the general conclusion that the above principles have not been sufficiently observed by the carriers, and that leases have often been a medium of unwarranted concessions to shippers. There is reason to believe that this investigation has led to improvements in the practices of carriers. Shippers and others who believe that they are subjected to undue prejudice and disadvantage can be of assistance by bringing such situations to our attention. The proceeding will be discontinued. No order is issued.

State Commissions

The Illinois Commerce Commission has approved an agreement between the Chicago, Aurora & Elgin and Alfred E. Pfahler, whereby the railroad company is to lease 20 passenger cars and one electric locomotive. The railroad is authorized to issue and deliver to Mr. Pfahler $470,000 in equipment trust certificates.

Railroads in Wisconsin Ordered to Repair Cars

Railroads operating in Wisconsin were ordered last week by the railroad commission of that state to take immediate steps to relieve the freight car shortage situation by repairing the cars now idle because of unfitness for service. The roads are called on to make daily reports on the results of their car repair work.

Illinois Commission Appeals to I. C. C.

The Illinois Commerce Commission has asked the Interstate Commerce Commission and the American Railway Association to modify the car service orders which have been put into effect. It is requested that eastern railroads be required to supply some of their own cars for use in the west, especially for grain movement; also that the Pennsylvania, the Baltimore & Ohio and the Cleveland, Cincinnati, Chicago & St. Louis, among the eastern lines, be relieved from the emergency requirement, now in force, of returning box cars belonging to western roads empty on condition that they move grain in them toward the midwest terminals.

Court News

Price for Coal Taken by Railroad

In an action by the shipper of coal against the carrier for the confiscation of the shipment en route by the carrier, which used it as locomotive fuel, the evidence showing that the confiscation was not malicious, the Circuit Court of Appeals, Fourth Circuit, holds that the measure of damages was the market value of the coal at the time and place of confiscation. If the coal had not been taken, it would have gone into certain pools at point of destination, after which the shipper would have been entitled merely to a credit in the pools for an equal amount of coal of corresponding grade. The shipper's actual loss was therefore the market value of the credit.—Norfolk & Western v. Ft. Dearborn Coal & Export Co., 280 Fed., 264.

Commission's Order for Union Stations Held Void

The statutes of Minnesota do not expressly confer upon the Railroad and Warehouse Commission the power to require intersecting railroads to maintain a joint station at the point of crossing, and whether this power is implied in the general control vested in them the Minnesota Supreme Court does not decide, but conceding the implied authority, it holds that an order requiring the Chicago Great Western to construct on its property a station, one fourth of the cost to be borne by the Chicago & North Western, to be maintained at the sole expense of the former, and with no provision for joint occupancy, is an unlawful invasion of the property rights of the two companies, and void.—Palmerlee v. C. G. W. (Minn.) 188 N. W., 328.

State Statute Regulating Car Repair Shops

The federal district court of the District of Minnesota, Third Division, holds that the requirement of the Minnesota statute of 1919, as amended 1921, c. 481, requiring buildings for the construction or repair of railroad cars, is in conflict with section 4 of the Safety Appliance Act, requiring defective cars on interstate carriers' lines to be repaired at the place where the defect is discovered, if feasible, or at the nearest available repair point, and, the federal statute being paramount, the state statute is void as to this requirement.

The whole statute was held void because the section providing for the protection of employees from working outside in inclement weather is too uncertain and indefinite to be valid, this section embodying the real ground of the statute.—C. & N. W. v. Railroad & Warehouse Commission of Minnesota, 280 Fed. 387.

Labor Board Decisions

No Authority Over Lines Outside of U. S.

In a case concerning track forces on the Great Northern lines in Canada, the Labor Board held that it had no authority over the rates of pay and working conditions for employees engaged exclusively in work outside the territorial limits of the United States.—*Decision No. 977.*

Contracting Extra Gang Work

On May 30 and 31 an extra track gang employed on the St. Louis-San Francisco whose laborers were being paid 45½ cents an hour was discharged and the work being done by this gang was turned over to the Walsh Construction Company, which employed negro laborers at a rate of 20 cents an hour. The railroad contended that it had contracted similar work previously and that its action was in accord with the provisions of the Transportation Act obligating the management to operate the property as efficiently and economically as possible. The decision of the Labor Board is the same as in Case No. 1254.

Contracting Coal and Water Supply Work

The Chicago & Alton awarded a contract to Joseph Colianni & Brothers for the handling of coal, sand and cinders, the pumping of water and for engine watchmen, the employees of the railroad having the privilege of going to work for the contractors at a reduced rate of pay. This was brought to the attention of the Labor Board which decided that this case involved the same principles that applied in the case of the Indiana Harbor Belt, that the contract constituted a violation of the Transportation Act, insofar as it purported to remove the employees from the application of the act; and directed the carrier to take up with any employee the matter of reinstatement upon the application of the employee or his representative.—(Decision No. 1254) . . . .

In 1921 the St. Louis-San Francisco advertised for bids for the personal labor required for the operation of individual water stations on a monthly basis. This case (No. 1230) the Labor Board decided substantially the same as that of the C. & A.

Dismissal of Bridge Employees for Refusal to Work Overtime

About 7:15 p. m., on July 29, 1921, 645 ft. of double track trestle on the Stockton division of the Southern Pacific near Banta, Cal., was discovered on fire and 135 ft. was destroyed before the fire was extinguished. It was necessary to call men from adjoining divisions to restore the trestle and track as promptly as possible. Foremen and men were brought from the Sacramento division, arriving at nine the next morning. These men worked until 4 p. m., when they returned to their outfit cars and refused to perform further service at the pro rata rate, notwithstanding that an emergency existed; and for this action they were discharged. In a decision upon a protest registered by the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers the Labor Board decided that the management was justified in the action taken in this case and denied the request of the employees' organization for the reinstatement of the men.—(*Decision No. 1118.*)

Instruction in Traffic Management is now being given by Charles F. Walden at the West Side Y. M. C. A., New York City, and he is preparing a course in the subject which will be available through the United Y. M. C. A. Schools to ambitious men in all parts of the country. Mr. Walden for about 20 years was in the freight traffic department of the Pennsylvania Railroad and subsequently was the president of one of New York city's largest transfer and forwarding corporations. He is offering the class a practical course dealing with every-day problems. He finds that industrial and merchandising concerns are rapidly awakening to the necessity for the services of a traffic expert.

Foreign Railway News

English Firm to Build 17 Locomotives for Spain

Messrs. Babcock & Wilcox, a British concern, have received an order from the Northern Railway of Spain for 17 locomotives. These locomotives will be built at the company's Spanish works at Galindo, near Bilbao. These locomotives will be the most powerful in use in Spain, according to the Times (London) Trade Supplement.

Death of Former American Representative of British Road

Alfred G. Wand, for 20 years general agent in America for the London & North Western, died on October 13. Mr. Wand came to this country in 1898 and remained until his retirement on account of ill-health in 1918. His office was in New York City. He had been in the service of his company for more than 45 years.

Electrification of Argentine Transandine Railway

An increase amounting to 1,500,000 gold pesos over the sum already allotted is provided by a proposed law recently submitted to the Argentine congress, to be used for the electrification of the Argentine Transandine Railway between Zanjon and the Chilean frontier, according to Commerce Reports. A contract between the government and the Argentine Transandine Railway has already been approved under the provisions of the law of October 13, 1921. This agreement provides for joint administration of the Chilean and Argentine Transandine roads, connecting Mendoza and Los Andes. It stipulates that the government shall place at the disposition of the railway company bonds of the Argentine external loan, not to exceed 2,500,000 gold pesos, bearing interest at the rate of 5 per cent per annum, with 1 per cent amortization.

The new line, for which the additional 1,500,000 pesos has been requested, is approximately 45 kilometers in length and connects with the section of the Chilean line, which is also to be electrified.

Death of Well Known British Railway Executive

Charles Aldington, until his retirement in 1921, general manager of the Great Western Railway, died on October 16 at Marazion, Cornwall, where he had resided since his retirement. Prior to his appointment as general manager of the Great Western Railway, Mr. Aldington had held the post of superintendent of the line for nine years, including the whole of the war period. During this period his efforts were directed toward ensuring the smooth operation of troop trains and the carriage of munitions of war, and throughout the war he resided on the premises at Paddington Station, London, so that his services could be available at all hours of the day and night. He became general manager in 1919 on the death of the late Frank Potter, but his health had been undermined by his incessant toil during and after the war. He became seriously ill and retired in June, 1921.

Born at Tamworth, Warwickshire, 59 years ago, Mr. Aldington was educated at Packwood School and joined the staff of the Great Western Railway on the Birmingham division in 1876. After a probationary training at Handsworth and Knowle stations he was transferred to the divisional office at Birmingham in 1879 and to the Northern division staff at Chester in 1881. In 1894, Mr. Aldington was appointed chief clerk in the London divisional superintendent's office. From 1899 to 1902 he was traffic superintendent of the Central London (Electric) Railway. In 1903 he returned to the Great Western and had a year's experience in the general manager's department. Mr. Aldington was in 1904 appointed assistant superintendent of the line. On January 1, 1910, he was promoted to superintendent of the line. His term of office as superintendent of the line coincided with the time when great strides were made in developing the Great Western passenger train service, and in extending the numerous road and rail motor services which Mr. Aldington inaugurated soon after his return to the Great Western in 1902.

Mr Aldington visited the United States and Canada several times and took a keen interest in American railway affairs. His first visit on this side of the Atlantic was in 1900, when he went on an electric traction mission in the interests of the Central London Railway. In 1905 he came to the United States as one of the delegates to the International Railway Congress at Washington, and also in 1909 and 1911 on the business of the Great Western.

Lower Passenger Fares in Britain

Reductions in passenger fares and in the rates charged for perishable freight by passenger trains have been announced by the British railways, effective January 1, 1923. In general, these reductions will bring the level of rates down to 50 per cent above those of pre-war days, instead of 75 per cent above, as at present. In addition to the reductions, there will be a standardization of passenger rates to the basis of 1½d. per train mile, third class, and 2½d. first class. Where present rates are below this standard, they will be raised or lowered under the new tariffs and no rates will be reduced below this basis. On the other hand, all rates will be lowered to this basis, whether the standard reduction would make them that low or not.

It is estimated that the reductions will bring about a loss of revenue of £10,000,000 and negotiations are now in progress between the railways and the railway unions in an endeavor to bring about some reductions in wages in an endeavor to absorb a portion of this loss.

There is some speculation around London concerning the effect which the new tariffs will have on suburban fares, these, in many cases, being considerably lower than the standard rates announced.

Round trip tickets under the new tariff will bear the double rate in all cases. Tourist and excursion fares will be reduced proportionately to ordinary fares. There will be no change made in the rates for season and commutation tickets.

China Notes

PEKING.

Although the financial situation of the ministry of communications has not changed perceptibly during the past few months, the morale has improved considerably. Following the flight of the minister to Peitaiho following the attack upon him by the school teachers of Peking, he resumed office only after having secured certain guarantees of support which tended to clear the situation by making apparent that Wu Pei Fu is "boss." Next he secured from the cabinet a revocation of the pledge to the teachers made by Yeh Kung Cho. In order to take care of the educational needs of the metropolitan area, the cabinet has arranged for a regular pledge from the foreign administered customs revenue. The return of Kao En Hung to the ministry under these conditions has served to break the semi-conscious "going slow" strike which the old "Chiao Tung" clerical staff were conducting in the ministry. Several bureaus are accomplishing as much with less than half the former staff, sleeping during office hours has become perilous, desks are cleared with some regularity, and a general air of cheerful industry prevails. Kao has also set a precedent about preserving "face" and has given an unusual example of "thick skin" for Chinese officialdom.

For the first time in their history the railways of China are facing a concerted strike movement. It began, as reported last month, on the Peking Suiyuan line as a protest against the American Car Loan. No sooner was the government in control, than the Peking Hankow line was paralyzed by a walk-out of shopmen and engine drivers. The representatives, when questioned, could give no coherent account of what they wanted, most of their demands having been met a long time ago by action of the management. This settled, the Lung Hai line underwent the same experience, the complaint being against certain foremen whose dismissal was demanded. A settlement was soon arranged, and by this time the Canton Hankow employees walked out demanding dismissal of certain officials and more prompt payment of salaries. The management endeavored to use vigorous measures, with the result that 150 strikers laid down on the track in front of the train which it was attempting to run. The local military were called upon to disperse the threatened suicides with the result that ten were killed and a score or more injured. This strike is still on, and the connecting line next on the east, the Chuchow Pinghsiang, saw its employees in turn "down tools." Thus the movement had run the length of the "west side" lines beginning at the north and proceeding in regular order to the south. Reports have it that the shopmen of the Peking Mukden line have now presented demands.

At the same time, sympathetic strikes are numerous. The workmen at the Pinghsiang collieries are out, demanding an increase of ten coppers a day—they now receive twenty coppers or about seven cents, gold, per day in the lowest grades. This will probably be granted for if the mines were to be flooded, the Hangyang Steel Works would be helpless for want of fuel. The Canton Hankow as well as the Chuchow Pinghsiang Railway would also lose their principal freight traffic. The Hangyang Steel Works also had a partial walk-out and the Yang Ste Engineering Works are closed for the same reason. The employees of the Hankow Water Works are the latest to be on the rampage. It is well known that certain prominent Russians are spending a great deal of money in small checks on London accounts which are being cashed by coolies. Recently, prominent Chinese educationalists and ex-officials gave public recognition to the Bolshevik movement in terms which identified their interests as being in common. If there is an aristocracy in China it is to be found among the scholar class. At first it seems incredible that this class should be cultivating friendship with Bolshevism. However it must be remembered that China is now under the control of the scholar-official class no longer, but instead is at the mercy of the soldiery, most of whose representatives are near-illiterates. So far, no one has been able to see how the soldier nuisance is to be abated, except by such a demoralization of the country that starvation finally works on the soldier. However, it may possibly be that by giving leadership to the unlearned and unorganized working classes in this way, the scholar class may be able to forge a weapon which can match the arms of the militarists.

However, the ministry of communications is treating the subject of labor disturbances in good faith and along conventional lines. During the past week a conference has been called consisting of eighty-seven representatives of the departments in the several lines together with a few members of the ministry staff, to consider ways and means of improving the conditions of labor on the railways. The meeting had for its object principally the preparing of the officer's minds for the measures which appear sure to come. After considerable discussion it was decided to prepare rules and regulations for a civil service, standard scales of pay, standard leave (vacation) privileges, forms of education for younger employees and for employees' children, and a pension or provident fund system. Considerable attention was given also towards working out piece rates to be applied rather than time wages, as well as bonuses to distribute a portion of the profits during favorable years. Many of these subjects are not new in Chinese experience, but because most of the railway organization has been directed by foreigners, foreign methods of pay rather than the traditional Chinese methods rule at present.

A further contract covering the construction of the Kirin-Huening line in Manchuria has lately been concluded between Japanese interests and the province of Kirin, in which it is agreed that "Japanese shall have charge of the business management and engineering work of the railway." Whether or not the conclusion of this agreement with the province indicates that the Japanese consider Chang Tso Lin's declaration of independence final, it does indicate that these interests have come to the conclusion that some authority nearer to the people of the district than the Peking government must be considered. Considerable local opposition is reported.

Chinese and Japanese in Harbin have organized a Tram and Electric Light Company. The principal interest to Americans in the subject centers around the fourth clause of the agreement, which reads: "The agreements concluded between the China Electric Co. and the American merchants with regard to the purchase of plant, raw materials, etc., shall become null and void."

Who said "Open Door"? The China Electric Company, which is a combination of the Western Electric and the ministry of communications, Peking, held this contract up to a recent date.

In making arrangements for the removal of foreign post offices from China effective January 1, 1923, in pursuance of the agreements made at the Washington conference, the Japanese have refused to consider withdrawing those in the railway zone of the South Manchurian Railway. The Chinese have acquiesced "in order not to jeopardize the friendly relations existing between the two nations."

Equipment and Supplies

Locomotives

THE OLIVER IRON MINING COMPANY may purchase 10 switching locomotives.

THE GRAND TRUNK is inquiring for 10 Mountain type and 10 Santa Fe type locomotives.

THE MONTOUR RAILROAD, reported in the *Railway Age* of September 30 as inquiring for 4 locomotives, has ordered 4 Mikado type locomotives from the American Locomotive Company.

THE PERE MARQUETTE, reported in the *Railway Age* of October 14 as inquiring for 22, 8-wheel switching locomotives, has ordered 20 switching locomotives from the American Locomotive Company.

THE WESTERN PACIFIC, reported in the *Railway Age* of October 21 as contemplating buying 5 Mikado type locomotives, has ordered 6 Mikado type locomotives from the American Locomotive Company.

THE VILLA YON ATOCHA (Argentina) has ordered one Mikado type locomotive from the American Locomotive Company. This locomotive will have 21 by 24 in. cylinders and a total weight in working order of 155,000 lb.

THE VILLA YON ATOCHA (Chili) has ordered one Mikado type locomotive from the American Locomotive Company. This locomotive will have 21 by 24 in. cylinders and a total weight in working order of 155,000 lb.

THE FRUIT GROWERS EXPRESS COMPANY has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 11 by 16 in. cylinders and a total weight in working order of 41,000 lb.

THE AMERICAN WOOLEN COMPANY, Boston, Mass., has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 16 by 24 in. cylinders and a total weight in working order of 99,000 lb.

DENASTON BREAKEY, Breakeyville, Que., Canada, has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 14 by 22 in. cylinders and a total weight in working order of 79,000 lb.

THE PENNSYLVANIA-OHIO ELECTRIC COMPANY, Youngstown, Ohio, has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 14 by 22 in. cylinders and a total weight in working order of 65,000 lb.

THE NEW YORK, NEW HAVEN & HARTFORD, reported in the *Railway Age* of October 7 as having ordered 5 electric locomotives from the Westinghouse Electric & Manufacturing Company, has ordered 7 additional electric locomotives from the same company.

THE MEXICAN RAILWAY COMPANY, LTD., has ordered 10 electric locomotives. These locomotives will be constructed and equipped jointly by the General Electric Company and the American Locomotive Company. The locomotives will have a total weight in working order of 300,000 lb.

Freight Cars

THE PITTSBURGH STEEL COMPANY is inquiring for 25 gondola cars of 75 tons' capacity.

THE SOUTHERN PACIFIC contemplates coming in the market soon for about 3,500 cars.

THE UNION TANK CAR COMPANY is inquiring for from 500 to 2,000, 50-ton tanks cars of 10,000 gal. capacity.

THE DETROIT, TOLEDO & IRONTON is inquiring for 500 box cars of 40 tons' capacity and 500 hopper cars of 55 tons' capacity.

THE CHICAGO, MILWAUKEE & ST. PAUL, reported in the *Railway Age* of October 28 as inquiring for 3,000 gondola cars, 1,500 box cars and 500 automobile cars, is now reported to be considering the purchase of 7,000 gondola cars of 50 tons' capacity and 3,000 box cars of 40 tons' capacity, although the original inquiry has not been increased.

THE LOUISVILLE & NASHVILLE, reported in the *Railway Age* of October 28 as inquiring for 2,000 steel hopper cars of 55 tons' capacity and 1,000 box cars of 40 tons' capacity, has ordered 2,100 hopper cars from the American Car & Foundry Company and has ordered 500 box cars each from the Chickasaw Shipbuilding Company and the Mt. Vernon Car Manufacturing Company.

Passenger Cars

THE CHICAGO & NORTH WESTERN, reported in the *Railway Age* of October 14 as inquiring for 36 coaches and 10 baggage cars, has ordered 40 coaches and 10 baggage cars from the American Car & Foundry Company.

THE NEW YORK CENTRAL is asking for bids until 12 o'clock noon November 27 for the requirements of the New York Central, the Michigan Central, the Cleveland, Cincinnati, Chicago & St. Louis and the Pittsburgh & Lake Erie of passenger equipment as follows: 35, 70 ft. steel coaches with 6-wheel trucks, also alternate bids on cars with 4-wheel trucks; 2 steel dining cars, 72 ft. 6 in. long; 5, 70 ft. steel combination passenger and baggage cars; 10, 60 ft. 6 in. steel baggage cars also alternate bids on 70 ft. cars; 10, 50 ft. steel underframe milk cars and 10 steel passenger motor cars for subway service.

Iron and Steel

THE SAN ANTONIO & ARANSAS PASS has ordered 768 tons structural steel from the Virginia Bridge & Iron Company.

THE GRAND TRUNK of Canada has placed an order, according to a report to the Department of Commerce from Consul General Gunsaulus, Halifax, for 25,000 tons of steel rails with the British Empire Steel Corporation, Sydney, N. S. This order, with others on hand, is said to insure the continuous operation of the Sydney works, employing 3,000 hands, all winter.

Machinery and Tools

THE PENNSYLVANIA is inquiring for one 1,500-lb. steam hammer.

THE CORNWALL RAILROAD is inquiring for a 36-in. by 36-in. by 12-ft. planer.

THE BALTIMORE & OHIO is inquiring for 1 flue welding and swedging machine and 2 motor-driven centrifugal pumps.

THE CHESAPEAKE & OHIO is inquiring for the following machinery: 24-in. by 10-ft. lathe; 20-in. by 10-ft. lathe; 16-in. by 6-ft. lathe; spring forming machine; ¼-in. rotary shear; 3-in. by 36-in. turret lathe; 48-in. upright heavy duty drill; power-driven hack saw; 4-in. pipe machine; 6-in. pipe machine, and a car roofing saw.

Miscellaneous

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS is inquiring for approximately 15,000 barrels of Portland cement.

THE CHILEAN STATE RAILWAYS, 141 Broadway, New York, will receive bids until November 11 for some special tools for repairing Westinghouse air brakes, to include lathes, drills and planers, also for about 600 tons of steel plates for car repairing. Bids are also wanted on November 25 for 14,000 meters of 1¼ in. steel pipe for air brake equipment.

Signaling

THE HALL SWITCH & SIGNAL COMPANY has received an order for 12 single unit, three color "searchlight" signals, 56 relays and 24 signal transformers for installation on English railways.

Supply Trade News

C. E. Naylor has been appointed Texas sales agent of the **Lukens Steel Company**, Coatesville, Pa. Mr. Naylor's office is at 610 Carter building, Houston, Texas.

The Black & Decker Manufacturing Company, Baltimore, Md., has removed its branch office and service station from 318 North Broad street to 824 North Broad street, Philadelphia, Pa.

The Carter Bloxonend Flooring Company, Kansas City, Mo., has received a contract from the Baltimore & Ohio for the installation of 12,000 square feet of bloxonend flooring in a warehouse at Philadelphia.

William Le Compte has been appointed sales manager in charge of the New York territory for Jenkins Bros., 80 White street, New York. Mr. Le Compte has been a member of the sales organization of this company for a quarter of a century.

R. J. Platt, sales representative of the **Sellers Manufacturing Company**, with headquarters at Chicago, has been promoted to assistant general sales agent, with office at the same place, succeeding T. D. Crowley, who has resigned to enter the service of the Creepcheck Company.

T. D. Crowley, assistant general sales agent of the Sellers Manufacturing Company, Chicago, has resigned to become general sales agent of the **Creepcheck Company**, which has opened general sales offices at 564 Peoples Gas building, Chicago. **J. T. Reagan**, western sales manager for the Creepcheck Company, has been promoted to service manager, with the same headquarters. Mr. Crowley was born at Clinton, Iowa, on August 18, 1884, and entered railway service in 1901 as a timekeeper in the track department of the Chicago & North Western. He was later assistant foreman and extra gang foreman in the same department and in 1907 was promoted to assistant roadmaster on the Wisconsin division, with headquarters at Milwaukee. In 1909 he was appointed superintendent of materials in the general storekeeper's department at Chicago and subsequently was promoted to roadmaster, with headquarters at Sparta, Wis. In April, 1914, he went with the Madden Company, Chicago, as sales agent and continued with that firm until his appointment as assistant general sales agent of the Sellers Manufacturing Company in November, 1918, the position he held at the time of his recent appointment. Mr. Reagan was born on July 13, 1887, at St. Louis, Mo., and entered railway service in the transportation department of the Grand Trunk in 1907. In August, 1914, he entered the sales department of the P. & M. Company, Chicago, and in October, 1920, became associated with the Creepcheck Company as assistant general sales agent, the position he held at the time of his recent promotion.

T. D. Crowley

Paul A. Cuenot has been appointed mechanical representative to furnish special tool service to customers of the **Alvord Reamer & Tool Company**, Millersburg, Pa. Mr. Cuenot was formerly connected with the American Locomotive Company and the Pennsylvania Steel Company.

R. S. Gay, formerly Chicago sales representative of Beal Brothers and the Beal Tool Company, and more recently plant manager of Hubbard & Co., Montpelier, Ind., has been appointed a sales representative of the **Safety Car Heating & Lighting Company**, with headquarters at Chicago

Frederick B. Larsen is now field representative for South Carolina, Georgia and Florida for the **Bryant Electric Company**, Bridgeport, Conn. Mr Larsen's headquarters are at Atlanta, Ga. He was for three years manager of the Hunter Electric Company of Clearwater, Florida, and prior to 1919 he was for 12 years sales representative of the Robbins & Meyers Company in the South Atlantic states.

Trade Publications

EXPRESS REFRIGERATOR CARS AND TANK CARS.—The Canadian Car & Foundry Company, Ltd., Montreal, has recently issued bulletins describing steel underframe express refrigerator cars built for the Canadian Pacific and allsteel tank cars of 8,000 gallons capacity built for the Russian Soviet Government. Another bulletin describes helical, semi-elliptic, and elliptic springs manufactured by this company.

CENTRIFUGAL PUMPS.—The Dayton-Dowd Company, Quincy, Ill., has issued bulletin No. 249 illustrating and describing its line of centrifugal pumps. This bulletin includes detailed specifications, efficiency and capacity tables and characteristic curves, as well as a description of the company's method of testing the pumps. The illustrations show the pumps in various combinations and installations.

PACIFIC SOUTHWESTERN.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a railroad from Lompoc to White Hills in Santa Barbara County, Calif., 4 miles.

Underwood & Underwood

A Relic of Old Days Put Into Working Order for Service in the Motion Pictures

Railway Construction

BALTIMORE & OHIO.—This company has entered into a contract with the John S. Metcalf Company, of Chicago, specialists in grain elevator construction, for the preparation of plans and specifications for the new grain elevator facilities at Locust Point, Baltimore, Md., in replacement of the two old elevators destroyed by fire July 2 last. Tentative plans which have been worked out by the company and on which the architects will now prepare drawings, specifications, etc., call for a steel concrete elevator of the most modern type. The storage bins with capacity of 3,000,000 bu. will be so arranged that they can be readily increased to 8,000,000 bu. The plans include complete facilities for drying and cleaning grain, and provisions for unloading grain from boats. Safeguards against dust explosion will be used. The elevator will be constructed on the water's edge adjacent to piers, with galleries and belt conveyors reaching eight berths, four of which will be located on an exclusive grain loading pier, to be constructed for that purpose, the other four on a two-story merchandise pier already in use. Provision will be made so that the gallery system can be extended to other piers in the future. It is expected that the architects will have the detail plans in shape for submission to the railroad engineers within three months, after which invitations for bids on the construction work will be issued.

BUFFALO CREEK & GAULEY.—This company has awarded a contract to the Phoenix Bridge Company, Phoenixville, Pa., for six steel bridges.

CHICAGO, BURLINGTON & QUINCY.—This company has awarded a contract to Edgar Otto, Downers Grove, Ill., for the installation of a pumping plant, intake well, suction piping and intake piping for a reservoir at Galesburg, Ill.

CHICAGO, MILWAUKEE & ST. PAUL.—This company has been ordered by the Board of Railroad Commissioners of the State of South Dakota to construct a station at least 24 by 70 ft. at Draper, Jones county, S. D.

CHICAGO UNION STATION.—This company, reported in the *Railway Age* of October 14 as closing bids October 12 for the granite and stone work for the main building of the Union Station and for the construction of a signal tower, has awarded the former to George A. Fuller Company, Chicago, and the signal tower to R. C. Weibolt Construction Company, Chicago. This company, reported in the *Railway Age* of September 16 as closing bids September 18 for the excavation for permanent station tracks between Van Buren and Harrison streets, has awarded the contract to W. J. Newman Construction Company, Chicago. This company, also reported in the *Railway Age* of September 23 as receiving bids for the widening of Canal street, Chicago, from Harrison street, 225 ft. north, has awarded the contract to Paschen Brothers Company, Chicago.

ILLINOIS CENTRAL.—This company closed bids November 8 for a 100,000-gal. creosoted water tank at Herrin, Ill., to cost approximately $15,000. This company will also construct two yard tracks 5,000 ft. long at Broadview, to cost $22,000; two car repair tracks at Clinton, Ill., to cost $16,000, and a wye track 3,000 ft. long at Blackford Ky., to cost $13,000.

MICHIGAN CENTRAL.—This company, in conjunction with the Michigan State Highway Commission, will construct a two-span girder bridge, 118 ft. long, over its tracks at Leoni, Mich. The contract for the substructure, including 1,406 cu. yd. of concrete, 20,600 lb. of reinforcing steel and 1,040 ft. of vitrified tile, has been awarded to the Fargo Engineering Company, Jackson, Mich., and the contract for the steel superstructure to the McClintic-Marshall Company, Pittsburgh, Pa.

SANTA FE & LOS ANGELES HARBOR.—The Interstate Commerce Commission has issued a certificate authorizing this company to construct a new line from a connection with the Redondo branch of the Atchison, Topeka & Santa Fe near El Segundo to Wilmington in Los Angeles County, Calif., 12.54 miles.

Railway Financial News

CHICAGO & ALTON.—*Stockholder Files Intervening Petition.*—The recently formed independent stockholders' committee of this company's leased lines announces that an intervening petition has been filed in the Federal District Court in Chicago against the Chicago & Alton and its receivers by the executors of the estate of William A. Slater, a large holder of the guaranteed preferred stock of the Kansas City, St. Louis & Chicago, on behalf of the minority stockholders of the road, for the restoration of $598,912 alleged to have been wrongfully appropriated by the Chicago & Alton shortly before it went into receiver's hands. It is stated by the petitioners that this sum was the proceeds of the sale of terminal properties of the Kansas City road and was turned over to the Alton Company without consideration in return therefor.

Deposit of Bonds Asked.—The protective committee for the $45,350,000 3 per cent refunding 50-year bonds, of which Charles A. Peabody, president of the Mutual Life Insurance Company of New York is chairman, has asked the holders of these bonds to deposit them on or before December 22 with the New York Trust Company, or with the Illinois Trust & Savings Bank, Chicago. The committee announced that it contemplated arranging to advance the amount of the October 1 interest to holders of the bonds who deposit their holdings of bonds with the committee.

CHICAGO GREAT WESTERN.—*New Directors.*—Charles G. Dawes and John A. Spoor have been elected directors to succeed Col. A. J. Sprague and Clyde M. Carr.

CHICAGO, MILWAUKEE & ST. PAUL.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for a certificate authorizing the abandonment of its line from Gratiot, Wis., to Warren, Ill., 7 miles.

MISSOURI, KANSAS & TEXAS.—*Date of Sale.*—The sale of this road, postponed four times, has been set for November 29. The sale of the main line will be held at Colbert, Okla., at 10 a. m. and of the Texas lines at Denison at 3 p. m. the same day.

NORFOLK & WESTERN.—*Reduction in Dividend Rate on Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has issued a modification of its order of May 27 authorizing an issue of $6,700,000 of equipment trust certificates so as to change the dividend rate from 5 per cent to 4½ per cent and the minimum price at which the certificates shall be sold from 97¾ per cent to 95½ per cent. The company represented to the commission that money conditions are such as to warrant the belief that certificates carrying the lower rate can be marketed on terms more favorable to it than the 5 per cent certificate. The certificates are to be offered for competitive bidding by the Virginia Holding Corporation.

WESTERN MARYLAND.—*Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $450,000 of equipment trust certificates to be issued by the Commercial Trust Company of Philadelphia and to be sold at not less than 97.25.

WEST VIRGINIA NORTHERN.—*Certificate for Acquisition Denied.*—The Interstate Commerce Commission has denied this company's application for a certificate authorizing the acquisition and operation of a branch line of track 5,612 ft. long extending from a connection with its railroad near Tunnelton, W. Va., to the coal mine of the Atlantic Coal & Coke Company. The branch line is owned by the coal and coke company. The commission says that the results of past operations have not justified the existence of the railroad from a transportation standpoint and in its opinion the matters of record do not justify the addition to capital account of the large sums proposed to be paid for the branch and a proposed extension.

Treasury Payments to Railroads

Since last announcement, dated October 2, payments under Sections 204, 209, 210 and 212 of the Transportation Act, 1920, as amended, have been made by the Treasury as follows:

Section 204:		
Fulton Chain		$3,881
Georgia Coast & Piedmont		23,127
Glenmora & Western		10,917
Little Rock, Mammelle & Western, Receiver		24,414
Midtown Air Line		14,960
Neame, Carson & Southern		39,199
Northampton & Bath		121,911
Waterville Railway		9,671
Wyandotte Southern		10,189
Section 209:		
Charleston Terminal Company		10,352
Chesapeake, Western		6,864
Lehigh & Hudson River		184,751
Middletown & Unionville		10,304
Oil Fields Short Line		11,588
Pacific Coast		2,343
Salina Northern, Receivers		14,086
Texas & Pacific, Receivers		298,042
Section 210:		
Cisco & Northeastern		27,862
Seaboard-Bay Line		1,100,000
Tennessee Central		937,000
Section 212:		
Chicago, Rock Island & Pacific		1,000,000
Seaboard Air Line		300,000
Total		$4,161,611
Total payments to October 31, 1922:		
(a) Under Section 204, as amended by Section 212 for reimbursement of deficits during Federal Control:		
(1) Final payments, including partial payments previously made	3,847,665	
(2) Partial payments to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	1,138,102	
Total payments a/c reimbursement of deficits		4,985,767
(b) Under Section 209, as amended by Section 212 for guaranty in respect to railway operating income for first six months after Federal Control:		
(1) Final payments, including advances and partial payments previously made	109,356,189	
(2) Advances to carriers as to which a certificate for final payments has not been received by the Treasury from the Interstate Commerce Commission	213,590,672	
(3) Partial payments to carriers as to which a certificate for final payment has not been received, as stated above	126,947,222	
Total payments account of said guaranty		449,894,083
(c) Under Section 210 for loans from the revolving fund of $300,000,000 therein provided		317,886,667
Total		$772,766,517

Repayments on loans under Section 210 have been made by 37 companies to the amount of $98,323,511.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out or received from the several roads the following amounts:

Buffalo & Susquehanna Railroad Corporation	$465,000
Norfolk Southern Railroad Company paid Director General	200,000
Morgantown & Kingwood Railroad Company paid Director General	75,000

Tentative Valuations

The Interstate Commerce Commission has issued tentative valuation reports in which it states the final value of the property owned and used as follows:

	Owned	Used
Arizona & New Mexico, 1917	$4,223,928	$4,223,932
Cumberland & Pennsylvania	4,269,273	4,269,523
Gulf & Ship Island, 1916	9,034,850	9,036,302

The capitalization of the Cumberland & Pennsylvania as of valuation date was $4,904,397 and that of the Gulf & Ship Island $11,700,000.

Dividends Declared

Cripple Creek Central.—Preferred, 1 per cent, quarterly, payable December 1 to holders of record November 15.

Kansas City, St. Louis & Chicago.—Preferred, 1½ per cent, quarterly, payable November 1 to holders of record October 20.

Trend of Railway Stock and Bond Prices

	Nov. 6	Last Week	Last Year
Average price of 20 representative railway stocks	70.31	69.50	56.01
Average price of 20 representative railway bonds	86.65	86.40	77.76

Railway Officers

Executive

J. E. Duffy has been elected president of the Port Huron & Detroit, succeeding T. L. Handy, deceased.

Financial, Legal and Accounting

George A. Kelly has been appointed general solicitor of the Pullman Company with headquarters at Chicago, effective November 1.

F. I. Gowen, vice-president and general counsel of the Pennsylvania with headquarters at Philadelphia, Pa., has resigned these offices and has been appointed special counsel of the company. **C. B. Heiserman,** general counsel of the company with the same headquarters, will succeed Mr. Gowen. Both appointments are effective December 1.

R. P. Jones, assistant general auditor of the Seaboard Air Line, with headquarters at Portsmouth, Va., has been appointed assistant to vice-president-accounting, with headquarters at Baltimore. **L. L. Knight,** auditor disbursements, has succeeded Mr. Jones as assistant general auditor and **H. B. Anderson** has been appointed auditor disbursements.

Operating

B. C. Murphy has been appointed chief dispatcher of the Florida East Coast, Northern division, with headquarters at New Smyrna, Fla.

N. Johnson, trainmaster of the Louisiana & Arkansas with headquarters at Minden, La., has been promoted to superintendent with headquarters at Stamps, Ark., succeeding R. L. Whitener, resigned.

Traffic

William B. Lanigan has been appointed general freight traffic manager of the Canadian Pacific, with headquarters at Montreal. Mr. Lanigan was born on October 12, 1861, at Three Rivers, Quebec. He was educated at St. Joseph's College, Three Rivers, and at Stanstead College. In July, 1877, he began railway work with the Quebec, Montreal, Ottawa & Occidental, now a part of the Canadian Pacific. He subsequently served as telegraph operator on the Grand Trunk until September, 1884, and later served in the same capacity on the Canadian Pacific. He was then agent at various places, and from July, 1891, to December, 1900, was traveling freight agent at Toronto. He later served as assistant general freight agent at the same place, and subsequently became general freight agent, at Winnipeg, of the Western division. In March, 1908, he was appointed assistant freight traffic manager of the Western lines and in September, 1918, was advanced to freight traffic manager of the entire system, in which latter position he was serving at the time of his recent promotion.

W. B. Lanigan

M. C. Browning, general agent of the Louisville & Nashville, with headquarters at Cleveland, O., has been transferred

to Chicago, succeeding F. S. Griffin, promoted. **C. F. Stith**, commercial agent, with headquarters at Kansas City, Mo., has been promoted to general agent, with headquarters at Cleveland, succeeding Mr. Browning and will be succeeded by **M. P. Davis.**

E. W. Soergel, assistant general freight agent of the Chicago, Milwaukee & St. Paul with headquarters at Chicago, has been promoted to assistant to the traffic manager with the same headquarters. **J. A. Farmar**, chief of tariff bureau of the same road and **G. E. Stolp**, oriental freight agent with headquarters at Chicago, have been appointed assistant general freight agents with the same headquarters. **F. J. Calkins**, export and import agent with headquarters at Seattle, Wash., has been appointed assistant general freight agent with the same headquarters.

F. P. Cruice, whose promotion to assistant general freight agent in charge of solicitation of the Atchison, Topeka & Santa Fe, with headquarters at Los Angeles, Cal., was reported in the *Railway Age* of September 30 (page 633), was born in Michigan in December, 1874. He entered railway service with the Michigan Central in 1890. In 1898 he entered the employ of the Santa Fe, Prescott & Phoenix at Prescott, Ariz., as voucher clerk and operator in the general manager's office. In 1902 he was promoted to secretary to the president, which position he held until 1905, when he was promoted to chief clerk to the president. He was promoted to assistant to the president in 1908, and from 1910 to 1912, he was assistant to the president, secretary and treasurer and tax agent. Upon the merger of the Santa Fe, Phoenix & Prescott with the Atchison, Topeka & Santa Fe in 1912, he was appointed assistant general freight and passenger agent of the Santa Fe, Prescott & Phoenix lines, and in 1913, assistant general freight and passenger agent of the Coast lines at Prescott and later at Phoenix. In June, 1921, he was appointed assistant general freight agent of the Coast lines, with headquarters at San Francisco, Cal., and in September, 1921, manager of the agricultural and industrial development department, with headquarters at Topeka, Kan.

Mechanical

Alonzo G. Trumbull has been appointed chief mechanical engineer of the Erie.

W. R. Lane has been appointed road foreman of engines of the Missouri division and **L. L. Lasswell** of the Illinois division of the Atchison, Topeka & Santa Fe, with headquarters at Shopton, Ia. **C. C. Reynolds** has been appointed district road foreman of engines of the Los Angeles division, with headquarters at Los Angeles, Cal. **P. J. Maloney** has been appointed road foreman of engines of the first district of the Albuquerque division, with headquarters at Albuquerque, N. M., and the jurisdiction of **W. Daze** will be confined to the second district of the Albuquerque division, with headquarters at Winslow, Ariz.

F. A. Torrey, general superintendent of motive power of the Chicago, Burlington & Quincy, with headquarters at Chicago, whose retirement was reported in the *Railway Age* of October 28, was born in Pennsylvania and when a boy served an apprenticeship in a machine shop. He entered railway service as a locomotive fireman on the Chicago, Burlington & Quincy at West Burlington, Ia., in March, 1874, and, until February 1, 1887, was a hostler and again a locomotive fireman and later a locomotive engineer. On the latter date he was promoted to road foreman of locomotives on the Ottumwa and Creston divisions, which position he held until April 1, 1889, when he was promoted to master mechanic, with headquarters at Ottumwa, Ia. He was transferred to Creston, Ia., on March 1, 1902, and on September 1, 1903, he was promoted to assistant superintendent of motive power, with headquarters at Chicago, which position he held until April 20, 1905, when he was promoted to superintendent of motive power, with the same headquarters. On January 1, 1911, he was promoted to general superintendent of motive power, with the same headquarters, from which position he retired on November 1 after 48 years of active service with the company.

Engineering, Maintenance of Way and Signaling

F. A. Russell, formerly office engineer in the valuation department of the Missouri, Kansas & Texas, with headquarters at Parsons, Kan., has been appointed professor of railway engineering at the University of Kansas, succeeding C. C. Williams.

F. M. Bisbee, chief engineer of the Atchison, Topeka & Santa Fe, Western lines, with headquarters at Amarillo, Tex., whose retirement on November 1, was reported in the *Railway Age* of October 21, was born on September 27, 1853, at Brunswick, Me., and received an education in civil engineering at the University of Maine. He entered railway service in 1878 as a transitman on the Atchison, Topeka & Santa Fe. Later he entered the employ of the Mexican Central as superintendent of construction and was soon promoted to resident engineer of maintenance. In 1883 he returned to the Atchison, Topeka & Santa Fe in charge of construction and in 1887 was with the Colorado Midland for some months, after which he returned to the Atchison, Topeka & Santa Fe. In December, 1890, he was appointed roadmaster of the Gulf, Colorado & Santa Fe, with headquarters at Cleburne, Tex., and in October, 1892, he was employed by the Lake Shore & Michigan Southern, but soon returned to the Gulf, Colorado & Santa Fe, at Cleburne as superintendent of track, bridges and buildings. In August, 1896, he entered the service of the St. Louis & San Francisco as superintendent of track, bridges and buildings and three years later he became general and chief engineer of the Tennessee Central, which position he held until January, 1901, when he became general manager of the Los Angeles Land & Water Company. From 1903 to 1904, he was employed as an engineer by B. Lantry & Sons, railroad contractors, at Ft. Madison, Ia. In June, 1904, he returned to the Atchison, Topeka & Santa Fe as engineer of the Western lines, with headquarters at La Junta, Col. In May, 1913, he was promoted to chief engineer of the Western lines, with headquarters at Amarillo, Tex., which position he was holding at the time of his retirement.

F. M. Bisbee

Purchasing and Stores

Winfield S. Haines, assistant to the vice-president of the Erie, has been appointed superintendent of reclamation service.

J. E. Toms has been appointed purchasing agent of the Tennessee Central, with headquarters at Nashville, Tenn., succeeding E. H. Gaines.

J. L. Higgins has been appointed purchasing agent and **C. F. Leatherman** storekeeper of the Kansas, Oklahoma & Gulf, both with headquarters at Muskogee, Okla.

Obituary

E. E. Kruthoffer, auditor of freight accounts of the Cleveland, Cincinnati, Chicago & St. Louis, with headquarters at Cincinnati, Ohio, died on November 5.

F. S. Gannon, formerly president of the Norfolk Southern and, since 1909, president of the Montana, Wyoming & Southern, died at West New Brighton, Borough of Richmond, New York City, on November 8.

Make It a Real Convention

The decision of the Mechanical Division of the American Railway Association not to hold a regular convention in 1923 has caused some surprise. The decision is attributed to conditions existing in the mechanical departments and in the Mechanical Division itself caused by the shop employees' strike. The mechanical officers have been busy most of the time since July 1 fighting the shop employees' strike and attempting to remedy the effects in the shops and upon railway equipment which have been caused by it. Never in the history of the railroads were any of their officers subjected to a severer test or required to do more arduous, constant work than the mechanical officers have done within the last four and a half months. Not a few of them have been attending not only to their ordinary duties but spending a great deal of time and energy in overalls doing work which previously was done by employees who went out on strike.

In consequence of the strike the conditions in the shops of many railroads are still very unsatisfactory. The principal mechanical officers have had to devote so much time to duties made necessary by the strike that ordinary meetings of the committees of the Mechanical Division have not been held, and in fact it has even been impossible to organize many of the committees. Furthermore, many mechanical officers have expressed fear that they will not be able to do any considerable amount of work on the reports during the rest of the present year.

The conditions which exist and which will continue to exist for months to come do not seem sufficient, however, to make it necessary to hold merely what is called a "business meeting" in 1923.

When next June, the usual month for the mechanical conventions, comes, one year will have elapsed since the shop employees' strike began, and largely because of the unsurpassed energy and loyalty which have been shown by the principal mechanical officers and by many of the supervisory officers and foremen, the railways are handling virtually as much freight business as they ever did before, and in spite of conditions in the shops are steadily reducing the amount of bad order equipment. The existing conditions undoubtedly will be much improved within the seven months which will elapse before the regular time for the mechanical convention. While it probably will not be possible to hold the usual committee meetings and prepare the usual reports meantime, it should be possible to arrange for the preparation and presentation of some very important papers on timely subjects for discussion at the meeting. Furthermore, there are many important subjects concerning which valuable interchanges of experience and opinion could be secured without preliminary preparation of any elaborate reports regarding them. A number of subjects of this kind were mentioned in an editorial which appeared in the *Railway Age* last week.

For some years now the mechanical conventions have been becoming "off again on again" affairs. Sometimes one reason for not holding a convention has been offered and sometimes another. Meantime, the conventions of other important railway technical associations have been held regularly. The American Railway Engineering Association has had its convention in Chicago in March of every year and every year the attendance at and interest in its sessions grew greater. The Railway Fuel Association has regularly held successful meetings. The Traveling Engineers' Association within the last two weeks has held a successful convention regardless of locomotive conditions resulting from the shop employees' strike.

Undoubtedly one of the reasons why for the third time in seven years it has been decided not to hold the regular mechanical convention is that for some years the conventions have been held at Atlantic City and the suspicion has spread abroad that the expenditures in connection with the exhibit and entertainment there were excessive and that the mechanical officers in attendance devoted too much time to diversion and not enough time to work. Everybody in the railroad business within recent years has grown much afraid of doing anything that might cause suspicion or criticism by the Interstate Commerce Commission or the public. It is also undeniable that the reports, papers and discussion at the convention of the Mechanical Division have deteriorated within recent years.

Whether or not it is due to the connection it has established with the American Railway Association, it is a fact that the vitality and initiative which formerly characterized the Master Car Builders' Association and the Master Mechanics' Association have been largely lost.

The work of the large technical associations of the railways of the United States has contributed enormously toward promoting the improvement of practices along all lines and securing the uniformity and standardization where needed, which has enabled our railways to become the most efficient in the world. Never in history was there a time when profound study, interchanges of experience and opinion, and concerted action regarding railway mechanical problems were more needed than now. Six years ago the cost of maintenance of equipment was less than $600,000,000. In 1921, a year of business depression when every possible

economy was practiced, the cost of maintenance of equipment was over $1,250,000,000. The mechanical officers are charged with the direct responsibility of making this vast expenditure efficiently and economically. They also have a very large responsibility with respect to capital expenditures for new equipment which amount to hundreds of millions of dollars a year.

The welfare of the railroads imperatively demands that there shall be some organization of the higher mechanical officers which constantly will study, broadly, profoundly, and constructively—the problems common to all railroads, affecting the design, construction, maintenance and operation of locomotives, cars and shops. If the Mechanical Division of the American Railway Association ceases to do this, as it is ceasing to do it, it will be necessary to leave the work undone or organize some other association to do it. Railway executives in testimony before the Interstate Commerce Commission and Congressional committees have repeatedly within recent years cited the existence and work of the large railway technical organizations as evidence of the constant efforts being made by the railways as a whole to increase the efficiency and economy of operation. Can they afford to allow a condition to develop which will make it necessary for them to tell congressional committees and the Interstate Commerce Commission in the future that with respect to mechanical problems this work on behalf of the railways as a whole is rapidly declining or has virtually ceased?

The initiative in realizing the work of the Mechanical Division should come from the leaders among the railway mechanical officers. It cannot be shown too soon. There is yet time to broaden the scope of the "business meeting" of the Mechanical Division which it has been decided to hold into a meeting at which there will be papers and discussions in addition to the reports of committees such as those on car construction and the rules of interchange which will convert it into a convention which will be highly valuable even though it lasts only a few days. The Mechanical Division will be derelict in its duties to the railroads if it fails to prepare and present at the meeting next year papers dealing with technical, economic and human problems that would justify holding a convention in a far greater emergency than the one which the railroads are now facing.

The National Election and the Railways

It will be very difficult for railway officers to get much comfort from the returns of the recent national elections. Among the public men who voted for the Transportation Act and favored intelligent regulation of railroads who were defeated for re-election were Senator Freylinghuysen of New Jersey, Senator Pomerene of Ohio, Senator Townsend of Michigan, Senator Kellogg of Minnesota and Senator Hitchcock of Nebraska. Two of these senators are Democrats and three Republicans. Three of them, Messrs. Pomerene, Townsend and Kellogg, are members of the Senate Committee on Interstate Commerce. Most of them owed their defeats partly or even largely to their part in helping pass the Transportation Act and their subsequent defense of it.

On the other hand, almost every candidate for senator in the middle western and western states who attacked the Transportation Act in his campaign speeches was elected. Senator La Follette was triumphantly re-elected from Wisconsin. The new senator from Minnesota was elected by a combination of radical farmers and workingmen. The new senator from North Dakota was the candidate of the Non-Partisan League. Iowa's new "republican" senator, Smith W. Brookhart, has long been an advocate of government ownership of railroads and attacked the Transportation Act in his campaign with the most mendacious misrepresentations. Mr. Howell, the new senator-elect from Nebraska, was as mendacious and virulent in his attacks on the Transportation Act and the railways as Brookhart.

The result of the election, in the western states at least, is the expression of a great change of sentiment regarding railway matters within the last three years. Three years ago the western farmers were disgusted with the results of government operation and favored the return of the railways to private operation under a policy of regulation which would enable them to earn reasonable net returns and adequately develop their properties. Railway rates were advanced in 1920 because if they had not been every railroad in the country would have been bankrupted. The prices of farm products began at almost the same time to decline rapidly. The farmers began to suffer severely because the prices of the things they had to sell declined much more than the prices of the things they had to buy. Immediately a host of demagogues sprang up and began to tell the farmers that their troubles were mainly due to high freight rates and that the high freight rates were mainly due to the Transportation Act. They represented that the Transportation Act "guaranteed" the railways a return of 6 per cent, and implied that the railways were getting this while the farmers were suffering great losses.

If ever there was a time in the history of the railways when their officers would have been justified in denouncing and refuting misrepresentations of this kind, and taking advantage of every opportunity and every available means for presenting the facts about the railroad situation, this was the time. For railway officers to denounce and refute misrepresentations regarding the railways is not to go into politics. It is as much the duty of railway officers as *railway officers* to defend the railways from unjust attacks, regardless of who makes them, as to maintain the track or run the trains. Here and there a few replies were made to these misrepresentations, but in most cases they were allowed to go unrefuted and even unchallenged. Most farmers believed them because they often heard them and seldom or never heard them denied. In consequence La Follette, Brookhart, Howell and the rest of their kind hung the hide of the railroads on their political fences in every community where they spoke and will now take it to Washington for further exhibition and perforation. A great industry which will not defend itself in the court of public opinion is more

likely to be profitable in the long run to demagogues than to those who invest their money in it.

Most of the business men of the country now understand the railroad problem, and are willing to cooperate in solving it. The farmers are being misled regarding it, and in the long run they will determine what kind of railway regulation will prevail. Until within recent years the meat packing industry divided with the railways the attentions of demagogues who were seeking the favor and votes of western farmers. The head of a large organization of farmers recently made in public the statement that there was no longer any hostility among the farmers toward the packers, but on the contrary a feeling of friendliness. How was this enmity changed to friendliness? George F. Swift, Jr., chairman of the packing industry's "Committee on Public Relations," recently made the following statement:

"Doubtless there was something to criticise. There generally is in every industry and in every individual. But there was also much to praise. Unfortunately, however, the industry did not tell its story. But the critics of the industry told theirs. Nor did these critics confine themselves to facts. They created an atmosphere of slander; they propagated a swarm of downright untruths—untruths alleging conditions which, were they true, would antagonize any man of common sense and inflame any man of decent feeling. Perhaps packers of those days were too confident that the admirable, efficient service they were rendering would be appreciated and that it would protect their businesses from slander.

"By bitter experience, meat packers have learned the necessity and value of constantly interpreting their industry and its services to the public. Today the industry enjoys a higher standing. Its cheap, efficient service is better understood. Meat packers are more highly regarded and meat products are being re-appraised with respect to healthfulness and high food value."

The packers told their story over and over again in public addresses, newspaper interviews and especially by extensive public relations advertising in newspapers, magazines and farm papers. The Standard Oil Company also has carried on an extensive campaign of public relations advertising. So has the American Telephone & Telegraph Company. So have public utilities throughout the country. Every one of these concerns and industries has by these means greatly improved public sentiment regarding its affairs. The railways have told their story only in a fragmentary way and occasionally. They have never told it through all the channels available in all the ways and with the tireless persistency that it must be told if the public in general is ever to know the facts about railroad regulation and the railroad situation. In consequence, in half the states of the Union, demagogues still find that the surest road to public favor is to tell lies about the railways and advocate legislation for their destruction.

Unless the railroads as a whole, and most individual railways take more seriously their problem of public relations and make real efforts to solve it, they will in time, and in no very long time, make private ownership impossible and government ownership unavoidable.

Brand versus Analysis Buying of Tool Steel

Much of the material used by railroads can and should be purchased according to detailed specifications. Tool steel, however, is not in a class with this material. Attempts to purchase it on specifications based on chemical analysis have proved costly to the railroads and unsatisfactory from the point of view of shop men who used the steel. The final and conclusive test of any tool steel is its cutting capacity, of which it has been well said that 25 per cent depends on chemical analysis and 75 per cent on the experience, skill and care of the manufacturer. Chemical analysis cannot explain the difference in quality of tool steels any more than it can explain the difference between chemically identical diamond and graphite. The large number of tool steel brands, formerly causing so much confusion, has been reduced in the past few years to a comparatively few well-proportioned grades, with properties and qualities well known to shop men by brand name. It is obviously far better to purchase tool steel by brand of reliable manufacturers, holding them responsible for the quality and suitability of the steel, rather than attempt to dictate detailed specifications based on chemical analysis which plays such a small part in the final product. Tool steel is essentially different from structural steel which lends itself more readily to purchase by specification. Tool and structural steels have been aptly compared to a skilled engineer and a laborer. Both steels have similar characteristics as regards strength, fibre, and ability to stand up under varying conditions. The tool steel, however, has certain desirable qualities in excess of the structural steel, just as the engineer has knowledge in excess of the laborer. In tool steel these excess qualities are put there by the manufacturer and designated by some brand name. Metallurgists, heat treaters and chemists may eventually evolve a scientifically exact method of manufacturing tool steel according to specifications in which the results can be exactly predicted from the premises, but in the present state of the art, it is far better to purchase steel-making ability as indicated by brand names rather than attempt to write analysis specifications. Railroad men should also remember how excessively costly poor tool steel proves in the shops and not make the mistake of basing purchases on price rather than quality. In many cases one tool steel, affording only five per cent greater production than another brand, could profitably be purchased even if the price was 100 per cent greater.

The International Union of Railways

The recent formation at Paris of the International Union of Railways is one of the most encouraging developments which have taken place looking toward the restoration of pre-war transportation conditions in Europe. With the setting up of many new nations, especially in Central Europe, the lack of agreements for interchange of equipment and other reciprocal allowances has acted with the serious physical deterioration of the railways as an effectual barrier to any kind of efficiency in international trading. Petty jealousies and intense national feeling prevented the early solution of the problem. With the representatives of the railways meeting together, however, it seems that there is hope for an early restoration of the fairly satisfactory conditions of pre-war days. There is no reason, however, why the newly-formed union should not go much farther than the mere restoration of pre-war efficiency. The railways of Europe were never as closely related to each other as they could have been to their common advantage. Standardization of rolling stock to the extent necessary to permit of universal interchange, standardization of gages, simplification of accounting, avoidance of unnecessary delays for customs examinations—all these are goals

which the union may set before it. Russia, as might have been expected, was not represented in the founding of the International Union. One hears persistent rumors, however, of constantly improving conditions in that country and it may be expected that, before long, it too may join with the rest of Europe in the union. China and Japan belong already, but will not participate actively until the Trans-Siberian Railway is again functioning normally. The International Union of Railways is in a position to accomplish for the railways of Europe some of the results which the American Railway Association and its predecessors have accomplished for the railways of this continent. Consequently it deserves the hearty support of every railway and every nation within its sphere of influence.

Why Shippers Are Unfriendly

There can be no question but that railway executives honestly want to serve the public acceptably and cultivate a friendly feeling toward their roads. Unfortunately, however, with the rapid growth in size of organization, and also as a result of federal control, the morale of the employees in many cases has fallen to a dangerously low ebb. The public has noticed this in indifferent service on the part of the employees and has been constantly irritated by this indifference, which sometimes has bordered on discourtesy. Winthrop Martin, a shipper, tells frankly elsewhere in this issue of his disappointing experiences in dealing with the railroads. He also makes a unique and constructive suggestion, which either by itself, or in a modified form, seems well worth consideration. Fundamentally, of course, the trouble is that the railroads, as they have increased in size, have been notoriously deficient in properly selecting, training and promoting their employees and in training and coaching the foremen and subordinate officers. Fortunately, many of the roads are awakening to the necessity of giving more attention to these and other matters relating to the personnel. Mr. Martin's observations, of course, refer to a limited area; has he overstated the conditions as they exist generally throughout the country? Have our readers other constructive suggestions for remedying the difficulties outlined by Mr. Martin?

Net After Rents

There have now appeared in these columns three references to the use of the figure of "net railway operating income." This is the fourth. The two preceding notes have essayed to define the term and all three have been intended to emphasize its importance and to express a suggestion for its more general and more consistent use. Before going further into the discussion, however, it might be well to emphasize the fact that "net railway operating income" is "net after rents." This comment is rather necessary because of the confusion that may lie in distinguishing between the terms "railway operating income" and "net railway operating income." The former is a figure which has been in use a much longer time than the latter. Briefly it represents the net after the deduction of taxes and of the relatively unimportant item of "uncollectible railway revenues." "Net railway operating income," however, is an entirely different thing. It is after the deduction or addition, as the case may be, of net equipment rents and the net for joint facility rents, which is the reason it is sometimes called "net after rents." All this would seem extremely elemental and hardly worthy of such extended comment, but for the amount of confusion that exists when it comes to differentiating between "railway operating income" and "net railway operating income." One who understands that there is a sharp distinction is inclined to be discouraged somewhat because of the great number of occasions in which one of the figures is shown unwittingly i the place of the other or in which the designation of th figure that may be shown is such that it is impossible t determine which of the two it may be. It is disconcertin further, to see in how many instances the railways in the own monthly reports and still more in their annual repor fail to show the figure of "net railway operating income at all, but remain content with showing merely the olde figure of "railway operating income." Railway accountin is now enough of a science so that there should be greate consistency about this feature. The figures should be carrie down as far as to show the "net railway operating income both in the annual reports and the monthly reports whic the carriers send to the press. In summary, the figure i important enough to be given and to be given correctly unde its proper designation.

Produce or Starve!

President Worthington of the Cincinnati, Indianapolis & Western has something to say on another page about th policies of organized labor as it exist on the railroads today. He directs at tention to certain fundamental princi ples of economics and severely criticise organized labor for not recognizin them. It is important to note, however, that he speaks o organized labor "in the sense that we understand it today." His criticisms are quite likely to be misunderstood if this i not clearly kept in mind. Unquestionably, Presiden Worthington is sympathetic with organized labor having th right motives and under wise leadership. Undoubtedly h would pay a high tribute to that type of organized labo which has remedied abuses in the past and has helped t secure a proper understanding as to the privileges and right of the workman. Unfortunately, however, radicalism within the ranks of labor has caused the pendulum to swing t an extreme radical position. President Worthington's articl indicates the necessity on the part of the railway manage ments for educating the workmen as to their responsibilities and in simple industrial economics.

The Early Bird

WHILE AT FIRST THOUGHT it may seem premature to suggest the consideration of next year's construction program at this time when the present season's work is not yet completed, several roads are already making detailed plans for their 1923 activities. This year has witnessed the gradual resumption of the improvement of existing facilities. On some roads the amount of work undertaken has even approached that of boom years. The heavy traffic with which the roads are now struggling has demonstrated the shortcomings of existing facilities very forcibly and it is to be hoped will soon begin to provide more net revenues from which improvements can be financed, so that the indications point to 1923 being an active year.

The railways have been out of the construction field so long that the organizations to which these activities have given rise in the past have disintegrated in large measure. Few roads have sufficient engineering forces to do other than the minimum amount of work and the experienced locating and construction engineers in their service are few in number. Even more serious is the lack of large contractors' construction organizations familiar with the requirements of railway work. Many of the railway contractors of former days have entered the field of highway construction, while others have gone out of business because of the lack of contracts from the railroads.

It is because of these conditions that the more alert roads are already working on detailed plans for next year. The

engineering department of one road has secured authorization for more than 20 million dollars' worth of improvements and is now preparing plans and specifications preliminary to calling for bids. Other roads are scarcely less active. By calling on contractors for bids on their projects soon these roads will not only be prepared for an early start next spring and secure the use of the facilities quickly, but they will also secure first call on the available contractors.

Whenever activities are resumed on the scale which the present inadequacies of railway facilities demand, there will be a shortage of experienced railway and contractors' organizations which will limit the amount of improvement work which can be completed economically and will lead to competition for service which cannot but add to its cost. The road which anticipates this condition and contracts its work early will be in the same favorable position as the railway which buys its materials in advance of its associates.

Senator Capper on the Railroad Situation

Senator Arthur Capper of Kansas is the leader of the farm bloc in Congress. He is also the wealthy publisher of numerous farm papers. He has done more within recent years to disseminate misinformation regarding railway matters among the farmers than any other man. The sentiment which has been engendered among the farmers by misrepresentations of the Transportation Act and of the facts about the railroad situation was the principal cause of the recent election from many states, especially in the west, of numerous senators and congressmen who advocate a policy of railway regulation which would be more unfair, restrictive and harmful than that which has been followed in the past.

The *Railway Age* recently published an editorial in which it criticized Senator Capper and others for disseminating misrepresentatives regarding railway matters among the farmers. Senator Capper on November 5 devoted a speech at Clearwater, Kansas, to replying to this editorial in the *Railway Age*. He published his speech in his various papers. He denied that he had misrepresented the railway situation, and then proceeded in this very same speech to make another series of wholly misleading statements.

The existing shortage of transportation is so great and serious as to constitute the strongest possible argument from the standpoint of the public welfare for a fair and constructive policy of railway regulation. With respect to this situation Senator Capper said: "As to the present car shortage, that is no new disease. We always have a car shortage with us at this time of year." What are the facts? There was a large car shortage in 1906 and 1907 at the end of a ten-year period during which the total freight handled by the railroads had increased 150 per cent. The railways were then making and for some years continued to make great efforts to so increase their facilities as to remedy this condition. The result was that in the eight years from 1908 to 1915, inclusive there never was a large car shortage except in the fall of 1912, and in six of the eight years there was no car shortage at all.

Meantime, however, because of restrictive regulation the expansion of the railways was rapidly declining, especially after the year 1910. In consequence, when the great increase of business came in 1916 there came a large car shortage which prevailed not only in the fall of each year, but which, except in the spring of 1919, was practically continuous throughout the five years 1916 to 1920 inclusive. Because of the decline of business there was no car shortage in 1921, but the revival of business in 1922 has brought much the largest car shortage ever reported. The largest net car shortage ever reported in any past year was on September 1, 1920, when it was 146,000 cars. The net car shortage reported on October 15, 1922, was 152,034; on October 23, 161,940; and on November 1, it was over 175,500 in spite of the fact that during the two immediately preceding weeks the railways moved more carloads of freight than ever before in the corresponding two weeks of any year in history.

The facts, then, are that during the eight years ending with 1915 there was only one large car shortage, while in six out of the seven years since then there have been large car shortages which have increased in size until we now have one which surpasses all previous records, and which grows larger with every report.

Another statement made by Senator Capper was as follows: "This autumn they (the railways) are doing the greatest business in their history at an increase of 78½ per cent a ton-mile for freight, and of nearly 66 per cent a mile for passengers." Most comparisons between present railway rates and prices are based on the rates and prices of 1913. The average railway rate per ton per mile is now only 57 per cent higher, and the average rate per passenger per mile only 50 per cent higher than in 1913.

Senator Capper also said: "Railway officials estimate that for the last five months of this year the Class 1 roads will earn a net operating income of $480,000,000. This will make a total of $900,000,000 for the year, compared with earnings of $615,000,000 for 1921. $900,000,000 net income equals 5 per cent on $18,000,000,000, the approximate property value of the roads." When Senator Capper said that railroad officials made any such estimate of net operating income for the last five months of this year he said what we believe to be untrue. The *Railway Age* has never seen any such estimate from any railway source, and if any railway official did make it he did not know what he was talking about. To earn in the last five months of the year the amount of net operating income mentioned by Senator Capper, the railways would have to earn an average of $96,000,000 a month. In August they earned only $52,580,000, or at the annual rate of 2.65 per cent on their valuation, and in September, only $58,428,000, or at the annual rate of 2.88 per cent on their valuation. In the first nine months of the year they earned ony $529,413,000 net operating income, or at the annual rate of 3.96 per cent on their valuation. The net operating income earned by the railways in August and September, 1922, was almost $67,000,000 less than in August and September, 1921, when they earned at the rate of only 4½ per cent.

This reduction in net return was due to the reduction of freight rates made on July 1, and to increases in operating expenses caused by the shop employees' strike and by advances in the price of coal. To make their net return for the entire year $900,000,000, the figure mentioned by Senator Capper, they would have to earn in October, November and December a net of $391,000,000. This would be approximately $90,000,000 more than they ever earned in these three months in any year in their history. There is not the remotest possibility that they will earn anywhere near this much and every well-informed man knows it. Any public man who, in the light of these facts, all of which were available when Senator Capper made his speech, would publicly make an estimate that the railways in 1922 will earn an average net return of 5 per cent shows a reckless disregard for facts and a reckless disregard for the effect that his statements are likely to have upon public sentiment, railroad regulation and the public welfare.

No class of people is losing more money now from inadequacy of transportation than the farmer. By minimizing the seriousness of this condition, misrepresenting its causes, and making misstatements adapted to promote the adoption of a policy of regulation which will intensify and prolong it, Senator Capper and other public men influential with the western farmers are doing all they can with respect to railway matters to make worse the bad economic conditions from which the farmers are suffering.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

Mechanical Department is Severely Indicted

New York

To the Editor:

The announcement on page 907 of your issue of November 11, 1922, that the Mechanical Division, A. R. A., convention has been called off for the year 1923, comes as a serious shock to those of us who are particularly interested in mechanical department affairs and developments. Were it not for the reliability of your publication one would be inclined to question the statement that the proposed convention at Atlantic City will be displaced by a business meeting of the Division, to be held at some other place at some time during the year. It seems almost inconceivable that the General Committee of the Mechanical Division could have so far lost its sense of responsibility to the members of the Division, as well as to the railroads at large, as to have taken action of this sort at a time when there was never greater need for a real convention.

What has happened to the mechanical department officers? Have they entirely lost their manhood? What will the executive officers think of this action? They have seen something in recent years of the vital necessity for having the equipment maintained in the best possible condition and they must have learned something of the seriousness of the labor problem in the mechanical department during the past summer. Will they stand patiently by and allow the mechanical officers, through a mistaken sense of loyalty, to stay at home next June when they might far better be gathered in convention, discussing some of these problems, exchanging experiences and educating themselves as to how they may serve their railroads to better advantage?

The time was that the mechanical men gathered in their M. M. and M. C. B. conventions, put over real progressive programs and were a vital force in improving and developing the mechanical department. Can this be said today? If not, why not? Surely the problems now are greater than they ever were before. You have pointed this out repeatedly in editorials and articles in the *Railway Age* during the past few years and yet your constructive suggestions have apparently made no impression. I cannot conceive why this is so. Many mechanical department officers have expressed themselves as being dissatisfied and disgusted with the narrow and inadequate programs which have been followed by recent conventions. They have admired you for your constructive suggestions. Someone seems to be blocking the game. Who is it?

Someone has said that the mechanical department officers have lost caste in recent years. Many people believe that if they pass up the next June convention they will lose the last shred of dignity. You made some excellent and practical suggestions in your editorial last week on "What Will the Mechanical Section Do?" The mechanical department can redeem itself if it will accept your challenge and develop a real program and hold a real convention next June. This does not mean that long-winded, exhaustive reports must be prepared, going into endless detail as to the size of bolts and screws, or limiting dimensions, etc. It does mean some real reports or *individual papers*, prepared by men who are doing things in the strenuous period through which we are passing, which can be discussed to advantage and can be mighty helpful to mechanical men at large. What will the answer be?

D. I. S. Gustee

Give a Thought to the Flagman

Cambridge, Mass.

To the Editor:

Is the shadow of the possible false clear signal to be removed from the signal engineer's mind? Mr. Stevens, signal engineer of the Atchison, Topeka & Santa Fe, in the very interesting paper that he read at Chicago and which you printed on November 4, page 853, talks about the abolition of the flagman in a way that suggests that he really expects to accomplish something in that direction; but can he do it? Can the operating officers, who do not always comprehend all of the fine points of automatic signaling, be induced to put Rule 99 on the shelf?

At present, the flagging rule (including the torpedo rule) is needed because (1) the engineman of the following train may fail to observe a semaphore signal and (2) because the semaphore may be out of order and fail to give him notice of the presence of the train ahead. The automatic stop (as we have known it heretofore) proposes to settle the first point, and Mr. Stevens, apparently, proposes to elaborate the automatic stop (or cab signal) so as to settle the second one also. Just how, he does not explain. The crucial point is the track relay, which must open on the passage of each train and thereby cause the signal behind that train to change so as to indicate to the following train "Stop." Is the train-control specialist going to give us something more certain and more faultless than the track relay? At present, the track relay *is* liable not to open; being closed it does not protect the train; and the train, if stopped or much slackened, must depend for rear protection on the flagman.

Another thing; when you propose to abolish flagging, consider the flagman himself. If you adopt a signal system under which flagging is not required he becomes only a brakeman; or, perhaps, more strictly, a trainman. But if he is faithful and responsible, he still continues to have a general care over the rear end of the train, and his services as flagman may become necessary and important at any time if the automatic train-control apparatus should get out of order. It will be necessary to include in the rules some suitable instructions concerning what to do in case of such failure of apparatus. Therefore, to make it possible that the rear brakeman can be at all times clear in his mind as to the safety of his train from collision, it will be necessary not only that the automatic apparatus be in good order, performing its proper function, but that it give this brakeman *constant assurance that it is so.* The alert and thoroughly competent rear-end man desires this assurance at all times. He desires it today. If his train is stopped on a clear day a quarter mile ahead of a semaphore block signal with horizontal arm plainly within his view, he is satisfied (so far as visual signals are concerned) that his train is protected. He wants this assurance at all stages of his journey, though for most of the time he cannot have it. He most certainly ought to have it, if we are to do away with the rule requiring him to go back; and he ought also to have assurance of an efficient audible as well as visual protection.

Mr. Stevens, presumably, does not claim at present to be doing anything beyond theorizing; but as he is an eminently practical engineer it will be interesting to know if he has considered these essential features.

John C. Harvard.

A New Project for a Railroad to Hudson Bay

Temiskaming & Northern Ontario Building 70-Mile Extension Toward Mouth of Moose River

A NEW CANADIAN railroad route to tidewater on Hudson bay is now being projected in the form of an extension of the Temiskaming & Northern Ontario from its junction with the National Transcontinental at Cochrane, Ont., to James bay. The first 70 miles of this line is now under construction and surveys are being made for its extension to the estuary of the Moose river at the south end of James bay. The story of the Temiskaming & Northern Ontario

Location of the Temiskaming & Northern Ontario Extension

and the extension now under way presents an interesting side light on the effort toward the development of unpeopled areas of Canada through the construction of railways with the aid of provincial or dominion funds.

Less than 20 years ago the northern and largest part of the Province of Ontario, lying between Lake Huron and Lake Superior on the south and James bay on the north, was quite unsettled, and in a large part unexplored, except for a narrow strip of settlement along the shores of these lakes and along the main line of the Canadian Pacific. The belt of country lying immediately north of the lakes and traversed by the Canadian Pacific was rocky and presented a practically unsurmountable barrier to colonization. This belt extends as far north as the "height of land" between the Great Lakes and James bay, and the existence of a large area of clay land further north heavily timbered with spruce and poplar, was not generally known.

It was to tap this clay belt that the province commended the construction of a colonization railway in 1902, from North Bay on the main line of the Canadian Pacific to the north end of Lake Temiskaming. About two years later, the Dominion Government projected the National Transcontinental between Quebec and Winnipeg, and the Temiskaming & Northern Ontario was extended further north to meet the Transcontinental at Cochrane. This was completed in 1908, thus enabling the construction of the National Transcontinental to be carried on east to Quebec and west to Winnipeg.

It will be remembered that the National Transcontinental was to be leased to the Grand Trunk Pacific while the parent company, the Grand Trunk entered into an agreement with the Temiskaming & Northern Ontario Commission for running rights between North Bay and Cochrane, thus completing the connection between the Grand Trunk lines in

Construction Progress View of the Bridge at Mile 11.3

Ontario and the Grand Trunk Pacific lines in the west. War conditions following shortly after the completion of the National Transcontinental completely changed the railway situation in Canada, and, as is well known, the Grand Trunk lost a control of the Grand Trunk Pacific, which along with the Canadian Northern has been incorporated into the Canadian National and the running rights agreement referred to above has never become operative.

Although the Temiskaming & Northern Ontario has not become a real link in the transcontinental railway system as has been anticipated, it has served to develop the country it traverses. A vast area is rapidly being cleared and placed under cultivation, supplies of spruce and poplar and abundant water powers have led to the establishment of large pulp and paper mills, and silver and gold mining is being undertaken at camps such as Cobalt and Porcupine. The construction of the railway has moved the frontier of Ontario 250 miles farther north. The extension now under construction is designed to open up to settlement the area between the National Transcontinental and James bay.

Surveys disclosed that there would be no serious construction difficulties to determine the location of the extension, but that the real problem was to select a route that would best

serve to develop the intervening territory and reach a suitable terminal on tidewater. It was found that the mouth of the Moose river was the most desirable site for a harbor and that the terminal should be located on the west bank of the river opposite Moose Factory, an old Hudson Bay Company post on an island in an estuary of the river.

It is anticipated that the construction of a railway to Moose Factory will create considerable interest in James and Hudson bays, and that during the navigation season of five months, a considerable amount of coastwise shipping will be carried on. On the map it will be seen that in selecting a route for a railway from Cochrane to Moose Factory, the most direct line has not been followed, but it is believed that the route that has been adopted, will serve to open a larger area to settlement, and will better serve to promote the establishment of pulp and paper mills on the Moose river and its tributaries.

The Airplane for Surveys

The initial surveys were carried on by methods usually followed in Northern Canada, the only means of transportation being canoes in summer and toboggans and dog teams in winter. Subsequent to the completion of the exploratory surveys and the selection of a route the Laurentide Air Service, Limited, established an air station near Cochrane and the engineers of the Temiskaming & Northern Ontario have used sea planes to a slight extent. It has been their experience that they are valuable for exploratory surveys in unmapped country, and if they had been available while the surveys preliminary to the selection of a route were being carried on, they would have been of great assistance. The engineering staff, however was not able to utilize them in connection with detailed location surveys.

Currently with the location surveys, topographic surveys were made of the water powers on the Abitibi river. These surveys in part were necessary in order to determine clearances for structures crossing the Abitibi and its tributaries. In all cases these structures are being designed so that they will not restrict the future development of the water powers. Information obtained from the hydrographic surveys, was also used in connection with the investigation of the electrification of the railway, which is now receiving serious consideration.

Construction

The first 70 miles of this extension is now under construction. The general contractors are Grant Smith & Co. and McDonnell, Ltd., Vancouver, B. C. The clearing and grading has been sub-contracted to Noehren & Mannix and the concrete masonry to C. D. French & Co. The work is comparatively light, and the grading quantities, average about 14,000 cu. yd. per mile, while the masonry is relatively somewhat heavier, being about 15,000 cu. yd. in the 70 miles. The maximum gradients are 0.4 per cent southbound and 0.6 per cent northbound. The maximum curvature is four degrees. Embankments are 18 ft. and cuts 24 ft. in width. The location profile showed no solid rock, but a small quantity has been encountered in one or two of the deeper cuts. All structures are of permanent construction. The smaller culverts are reinforced concrete pipe, except in a few cases where by reason of greater facilities in transportation, corugated pipe was used. The larger culverts are of flat top reinforced concrete. The clay is of glacial origin and in the case of most structures, pile foundations are necessary. Spruce suitable for piling is generally found adjacent to the right-of-way. The larger creeks have worn deep ravines and these are crossed by steel trestles, the clay banks of the creeks not being sufficiently stable to permit the construction of large culverts or high abutments.

The contract for the steel bridge work has been awarded to The Hamilton Bridge Works Company, Ltd., Hamilton, Ont. The largest structure is the crossing of the Abitibi river at Mile 44.4 the principal span of which is a 220-foot deck truss. The structures are designed for Cooper's E-60 loading to Canadian Engineering Standards Specifications. The track is being laid with 80 lb. A. S. C. E. section rail, heat-treated angle bars and bolts. The ties are jack pine, untreated.

The Temiskaming & Northern Ontario is under the jurisdiction of a commission appointed by the provincial government, the chairman of the commission being George W. Lee of North Bay. The engineering staff includes S. B. Clement, chief engineer, North Bay, Ont., W. R. Maher, chief locating engineer, A. L. McDougall, division engineer in charge of construction, and A. A. McRoberts, assistant engineer in charge of design of structures.

Railway Commissioners Meet in Detroit

The National Association of Railway and Utilities Commissioners held its thirty-fourth annual convention in Detroit, Mich, on November 14-17, inclusive. The meeting was opened on Tuesday morning, with a short address of welcome by James Couzens, mayor of Detroit. The mayor's talk was especially noteworthy because of its appeal for government ownership. He stated that municipal ownership of street railways is now on trial in Detroit, which has the largest municipally owned street car system in the country. He said that the railway and utilities commissioners had a great power entrusted to them and that was to see that proper service is provided at a reasonable cost; that the commissioners should insist upon public utilities eliminating graft, interlocking relationships, unreasonable salaries, etc.

President C. D. Jackson, of the association, followed with his address of welcome. He made a vigorous attack on the tendency toward centralization in government, and an equally strong plea for the perpetuation of local right and individualism as against socialism and communism. He deplored the national Transportation Act, which, with the amended Interstate Commerce Act, gives the federal commission control of railroad rates within a state when in conflict with interstate rates. He declared that state commissions will continue to resist the further encroachment of the federal power.

The remainder of the morning session was devoted to the reports of the committees on Public Ownership and Operation and Safety of Railroad Operation. The former denounced the Railroad Labor Board, stating that it is clearly apparent to all who have given the subject careful study that the existing dual system of control of the railroads of the country is a failure. The system is wrong in principle, and has proved disastrous in practice, as evidenced by the recent nation-wide railroad strike. It concluded that the only sound economical, logical, reasonable and practical solution to such a perilous situation is to abolish the Labor Board and transfer its function to the Interstate Commerce Commission; at the same time, enacting a law "with teeth in it," which will enable the Commission to enforce its decrees and orders.

The Committee on Safety, the chairman of which was C. C. McChord, of the Interstate Commerce Commission, stated that during the past year a number of serious accidents occurred on the railroads of the United States, which again forcibly calls attention to the necessity for extending the installation of accident preventive safety appliances. The greatest number of serious accidents, this committee claimed, may be attributed to the inherent weakness of the time-table and train order system of operation, necessarily involving the fallibility of the human element. The com-

mittee concluded that the need of automatic train control devices is now paramount, as is also the importance of more efficient power brakes.

Chairman McChord of the Interstate Commerce Commission addressed the commissioners on Tuesday afternoon, choosing as his topic Co-operation. He told of the history and outgrowth of railroad regulation and of the various acts and legal restrictions enacted since the first act regulating commerce was passed in 1887. Speaking of the Transportation Act, he stated that one of its most outstanding features is not generally appreciated and that is car service regulation. He strongly advocated much closer co-operation between the federal and state commissions and the carriers. He stated that the I. C. C. is ready and willing to do its part; that it has commenced a nation-wide investigation of the interstate express rates and charges and has invited all state commissions, through their Washington representatives, to co-operate—not only in respect to the interstate rates, but also in respect to all the intrastate rates. His concluding words were: "Unity of action can, of course, come only from unity of purpose, and that purpose must undeviatingly comprehend the good of the whole. We have laid the foundation. Our co-operative plan announces our purpose and marks the beginning of an epoch in railroad operation."

Committee reports and two round-table discussions took up the remaining time of the convention, which ended Friday. A report from the Committee on Motor Vehicle Transportation discussed the regulatory statutes recently enacted by some states in order to control this type of carrier. This committee stated that, if the railroads hope to retain short haul traffic, it will be necessary for them to make radical changes, both in service and equipment, although, the report continued, it should be the purpose of all regulatory bodies to co-ordinate the various transportation systems of the country in such manner as to render the best service to the public, with the least injury to established rail and boat transportation companies. The committee suggested that a gasoline tax is the most equitable method of requiring the users of highways to contribute in proportion to the use they make of same. Other committees, including that on railroad rates; car service and demurrage; express and other contract carriers by rail; valuation; grade crossing and trespassing; and statistics and accounts, presented their usual annual reports.

The following officers were elected for the ensuing year: D. N. Lewis of Iowa, president; A. Forward, Virginia, first vice-president; H. G. Taylor, Nebraska, second vice-president; J. B. Walker, New York, secretary, and J. H. Corbitt, Tennessee, assistant secretary.

Attendance at the convention was in excess of 100.

If We Do Not Produce We Shall Starve To Death

"Organized Labor" Unless Wisely Led and Conversant With Real Facts Will Bring About Disaster

By B. A. Worthington
President, Cincinnati, Indianapolis & Western

MUCH HAS BEEN SAID and much has been written about the prevailing unrest of labor, and nostrums galore have been offered by "students of human nature," college professors, and an endless array of self-seekers who modestly acknowledge they have found the secret; but when all of these remedies have been simmered down there is not much left that is tangible. In the simmering process, most of it passes off as gas.

It seems more than passing strange that everybody but those in closest touch and directly charged with the responsibilities of getting results from labor knows more about railroad labor troubles and their remedies than management itself knows. The twaddle that has been written about "inalienable rights," "right of strike," "seniority rights," "humanizing industry," "living wages," "labor not a commodity"—an endless list of theories and suggestions—serves principally to becloud the issue. In this impossible potpourri of fantastical and fanatical concoction, we find a financial seasoning—an aid to digestion possibly—in the form of "high finance," "over-capitalization," "valuation of railroad properties for rate-making purposes," "freight cars," "passenger rates," legislation codifying this and that, and restrictions denying this and that, unions defying everything and everybody—it seems that "labor" is running amuck and nobody knows what a halter is or where to find it.

Where Are We Headed For?

If we could only shake our minds free from the foolish obsessions that grip us, we might be able to see things clearly and to understand less hazily. If we do not understand our troubles in these days of ultra-refinement the first thing you know industry will have to submit to dangerous operations, whereas, in fact, it has only the belly-ache because it has been forced to swallow something that it did not want and cannot possibly digest—*and that is all there is to it!* The possibilities that lie right straight ahead of us, if we do not hasten back to common sense, are so terrible to consider that I will assert emphatically, if we could only realize what we are doing and where we are headed for, we would actually shiver in our boots.

Now to get the right view-point on "labor"—and "capital" too, if you please—we must necessarily find some tangible fact, some indisputable common ground to stand upon. We can go on theorizing and debating, and arguing and fighting about "inalienable rights," for instance. The fact is, whether we have any rights at all, alienable, inalienable or otherwise, if we do not *produce* we are going to *starve to death.* And the same thing about "physical valuation of railroad properties for rate making purposes." Suppose, for instance, this physical valuation would "warrant" a freight rate of ten cents, or ten dollars, when the going rate was one dollar. What are we going to do about it? If you lower the rates, the railroads cannot be maintained; and if you increase the rates, the farmers cannot market their produce. And all the way down the list, you might ask yourself seriously, "Well, what about it?" Suppose some of our ideas about "humanizing industry" do not fit into the general scheme of things—to be specific, while we are "humanizing" industry why not try the farming industry—it needs it worse than the railroads. No sanitary toilets (just think of it!), no ice water, no punitive or constructive overtime, no "standard day," no classification of work! Well, what about it?

Necessarily you have got to build on fact. If theory fits into fact, all right—it's a good theory; but you cannot pos-

sibly make fact fit into theory. Fact cannot be altered in any respect. It can be misunderstood and misapplied, and we can pursue the succession of resulting fact as far as we want to—until it becomes impracticable; then, if we have any common sense, we will trace back to see where we got off the right road, and start again from there. If composite American intellect is entitled to the high plane it presumes to occupy, it will never lose sight of the main fact.

The main fact that confronts us today in America is this—hard, substantial and unalterable; in the past 60 years (approximately) America has become a wonderful and powerful nation. Summarized and expressed in units that everybody will understand, bearing in mind always that progress, prosperity, power—everything desirable—has its roots in wealth, the following tabulation taken from authentic sources, is mightily impressive:

ACCUMULATED WEALTH OF AMERICA
(U. S. Bureau of Census)

1840	$7,135,780,000	1890	$65,037,091,000
1860	16,159,616,000	1900	88,517,307,000
1870	30,068,518,000	1904	107,104,212,000
1880	43,642,000,000	1914	204,393,000,000

Now here is fact—basic fact! It is unalterable. Whatever was done in that period, in the main fitted into our conditions well and the results that flowed therefrom were immensely satisfactory. Nothing like it in the history of the world! How proud we ought to feel! How anxiously we should strive to preserve the elements of these facts! Can anybody, in his sane mind, question that? Whether he questions it or not, the fact remains, unalterable—a succession of fact, confirming and endorsing the policies which governed our actions, and blessing us with a superabundance of everything that a sane people might desire!

Produce or Starve!

Are we so superficial, so insanely ambitious, so utterly given over to vain imaginings and selfish aspirations, as to suppose for a lone instant, that this succession of fact will continue indefinitely, or that the present status can be sustained, without continued production? Do we not realize, too, that high costs of production, limitation of output—everything that unionized labor (as we know it)—sponsors today, militates against production? That if we follow the vain theories that have been advanced so insistently and persistently that they have become "recognized" to a certain extent—the theory of ever increasing cost and ever decreasing production—we necessarily must fail in the end? And, at the rate we are traveling in pursuit of a worthless will-o-the-wisp, the end is not far removed?

During this prosperous period of America when, by sheer force of its wealth, it became a factor in the world's affairs, our railroads were built. The close relation that exists between operated railroad mileage and accumulated wealth of America, is easily understood. These two facts are linked together indisputably and inseparably. The antecedent fact upon which this accumulation of wealth has been possible, by which labor profited, directly and indirectly, as it had never profited before, is the fact of the railroads. The level of the "laboring classes" has been raised so high that the laboring man on the streets can scarcely be distinguished from the haughtiest financier. The "working conditions" of labor have been so improved that labor is reduced substantially to pressing a button or throwing a lever. Who made these improvements?

Underlying the physical fact of the railroads is capital! "Organized" capital, if you please! The flow of foreign capital into America was a fact that preceded the fact of the flood of humanity that spread over the continent. "Organized" capital preceded labor and organized it according to the needs of the people; following down this succession of fact we arrive at the financial facts quoted in this article. Are they satisfactory to you? Would you change them?

Another startling fact is the absolute absence of "organized labor" in this entire record of construction—"organized labor" in the sense that we understand it today! It is a remarkable fact—but easily understood when the principle of "organized labor" is understood. It has no place in a constructive program! It is not creative! It would not, could not, and did not fit into the general scheme of things—and we have every material reason to believe that it does not belong there today!

If you analyze "organized labor" as it is operating today, you will find that it is parasitical of origin, destructive in principle, and openly opposed to every attempt to increase production or to reduce the cost of production, both of which are urgently necessary.

For the purpose of this article, I do not believe it is necessary to follow succession of fact much farther. Suffice be it to state that we are at the crossroads, one broad flowery avenue of ease leading off to the beautiful sunset, the sweet Elysium of idle dreams; the other, a rough, hard road to travel possibly, where united effort will carry us to the promise of another day of inspiration which cannot fail for fact. Here, with our feet upon substantial ground always, we may reach the fruit of honest effort, and revel in the substantial benefactions of industry.

Without realizing the motive that compels men of wealth to labor on, even after reaching a point in years where they individually would be justified in retiring, few men are satisfied short of devoting every energy of their entire life to the common cause, and their trained business genius and mature judgment are invaluable to us. Their funds are invested in industry and profits are re-invested in industry whereby production is maintained and workers are profitably employed on a marvelously practical basis—not for additional profits which can mean nothing, but for the satisfactions that flow from voluntary acts that are helpful to the common cause. And so far as relates to the stabilizing effect and broad up-lifting influence upon industry, there is grave doubt whether more wholesome methods may be devised for the distribution of the nation's income. In all the substitutes that are offered, one vital defect is common—the inevitable lack of production that invariably follows the withdrawal of proper incentive.

What We Must Do

It seems to be a fact more or less generally accepted that "collective bargaining," within certain limits, is not to be condemned without a fair trial. There seems to be certain merit in co-operative endeavor, genuinely helpful; but when "collective bargaining" takes the form of unyielding demands, economically impossible, or when wages and working conditions are prescribed by irresponsible parties who have no personal interest in the particular industry or railroad, but who, notwithstanding, are vested with a terrible power of destruction, the organization becomes a thing to be feared—not loved and respected for its wholesome benefits.

What America must do, if it is to maintain its present status, is to get back to earth; that is, get a working basis of fact to build upon. We surely have had enough disturbance—murders, personal assaults, destruction of property and destruction of service—to teach us a real good lesson. The "right to strike" means no rights for anybody but strikers, and "freedom" seems to mean lawlessness. From beginning to end there is not a single fact to justify "organized labor," as we now know it.

The only "organized labor" that fits into our general scheme of things is that organization, brought together, trained, utilized and compensated by organized capital on the basis of economic production. Practically all of our ailments will disappear if we live sanely and naturally and do wholesome things; and what ailments do not disappear spontaneously, may be cured by common law administered by common sense.

A Shipper Comments on Railroad Morale

Conditions Are Deplorable and Drastic Measures Should Be Taken to Improve Them

By Winthrop Martin
San Francisco, Calif.

THE AMAZINGLY complicated problem of the American railways is under attack from widely differing angles. From within and for the employees, Mr Plumb—of the once exciting and now thoroughly moribund "Plumb Plan"—had a fascinating scheme, whereby the investment of merely a few billions would show startling economies in millions. His program lies completely riddled.

The Association of Railway Executives growls and groans periodically, the substance of its plea being, that if the railroads are let alone, and regulation largely withdrawn, they can work their way out.

Then from a distance—usually too great—a host of skilled publicists have taken long-range shots aiming at some solution, but more often their work has been in the direction of diagnosis only.

There is still one angle of approach—a close-up—that I have not seen attacked, the angle of the average and constant railway customer.

Strangled by Red Tape

Living in a California village, a division point on the Santa Pacific, I ship and receive probably 200 cars of freight and travel perhaps 2,000 miles a year. From brakeman and freight clerk, yard master and local agent, to the executives of various departments, I am constantly in touch with what is, I suppose, a typical cross-section of railway management and operation. The preponderant idea in the minds of all these men, their guiding and deep ingrained principle, is "Cleave to the rules and damn the consequences." As a matter of fact, the consequences are thoroughly damned, and with them the railroads in the minds of the shippers.

And why? Not because the personnel is especially chosen for its lack of initiative, its stubbornness, or Mahatma Gandi disposition; but because they pass their official lives in fear and apprehension of a host of distant superiors, and a mass of rules and regulations. The freight tariffs alone, about 15 volumes of them, are so enormously complicated—with exceptions, cross-references, supplements—and so vague in their general terms that an average intelligence, after pawing them for an hour, longs to go out and end it all.

But of course the railways do their utmost to aid in solving and interpreting complicated tariff problems? Of course they do NOT. Consider a recent and still pending case of mine. I was planning the purchase of a carload of corn and corn products from Nebraska. This is the sort of long-haul business that the Santa Pacific craves, so they tell me. But now let us see how badly they want it. This was my first corn shipment from Nebraska and the tariff—a peculiarly intricate affair—was new both to my local agent and to me. Did or did not certain specific products fall into a certain group; if so, well and good, if not the addition of 10 sacks of chick feed would increase the rate $1.60 per ton on the entire carload.

Taking A Chance

Faced with this difficulty, I wrote the district freight agent a specific inquiry as to the rate on the products involved. The universal railway terror—of being by some possibility wrong—so obsessed him that he in turn wired my agent, referring us to the identical tariff over which we had so long and vainly pawed, and giving us not a word as to the interpretation we sought. Ensuing correspondence to Nebraska induced me to chance the shipment as planned, though the delay was costly; on its arrival my local agent assessed the freight on the basis of the lower tariff—and this in spite of the fact that finally the district agent did hand out *as his opinion* that the higher rate prevailed. Yet the incident may not be closed. Subject only to the statute of limitations, a ferreting auditor may drag the item from a mildewed file and an outraged law department may come roaring after me for the difference involved.

The same excessive passion for being on the safe side—at any cost in time and annoyance to the customer—prevails in the matter of refunds for the most obvious sort of overcharges. My last claim took some 90 days in being verified, checked, cross- and re-checked, audited and approved, and then staggered to my desk more dead than alive. And this in the face of the fact that a claim of the same simplicity in normal commercial practice takes from ten minutes to five days for complete adjustment.

The same disposition to avoid the giving out of definite, and therefore possibly compromising, information holds as to traffic rules. Ask the Santa Pacific by letter whether barley can be loaded at Yorktown, milled-in-transit at Hazleton, and consigned to Malta on the through freight rate. To us that seems a simple, definite, and reasonable inquiry. We see no trace of the TNT that undoubtedly lurks there. But the great company knows better. In reply will come a civil letter quoting the general rule on milling-in-transit privileges with not a vestige of an answer to the specific inquiry.

Now these isolated instances of my particular annoyances as a railroad customer are in no sense important, except as they are typical of a very general situation. From scores of shippers I have sought their attitude toward the roads; some are fighting mad, some bitter, some sadly resigned to what they have come to regard as an inevitably bad situation. Not one is even half-way satisfied with the service rendered, or has a reasonably friendly feeling toward the companies.

Lack of Morale

That is truly a serious situation and indicative of some fault far deeper-rooted than mere high freight rates. That fault is, as I see it, an all-pervasive rank-and-file lack of morale that could scarcely be worse if deliberately planned. By and large, railroad employees will fall into two groups, the youngsters eagerly struggling to get out of the game, and the older men plodding drearily along to the day of retirement and a pension. A deliberate effort to inculcate a standard of mediocrity, a dead level of featureless, errorless performance, could have produced no worse results.

Obviously it is no trick at all to draw up a damning indictment such as this, unless with it goes something concrete in the way of diagnosis, and something potentially possible in the way of remedy.

Chief Cause of Discontent

Promotion, or the lack of it on any equitable basis, is one of the chief causes of discontent in the ranks. Now this is a subject on which an outsider can, of necessity, have no detailed or accurate knowledge, except as the promotion policy

affects the great body of employees, which is after all the vital feature. Actually the system of promotion may be a most prefect structure, worked out in the greatest minutiæ, for the elevation of the worthy and the good of the service. But despite all that as an alluring possibility, the railroaders firmly believe that the grossest favoritism prevails in all promotions and that any practice of the grim virtues—loyalty, efficiency, initiative, hard work—merely makes them ridiculous. However much or little truth there may be in this deep conviction is entirely beside the mark. Essentially it is absolutely true so far as they are concerned, and the results in cumulative disloyalty must be staggering.

Take the quaint story of a certain high official and the humble agent at a branch line resort town. This official, whose functions appear largely social and decorative, is habitually hard up in spite of his most adequate salary, and borrowed in fifty and hundred dollar units a rather sizable sum from this agent. Repayment looming awkward, this accommodating chap was rewarded by promotion as agent to one of the most important cities on the entire system. Now that tale, which is universally current and accepted up and down the line, to me seems on the face of it ridiculous and absurd from every angle. Yet that does not in the least reduce its enormous morale-wrecking possibilities over hundreds of miles of the system where every youngster who enters the sevice is regaled with it.

The Poor Agent

Then there is the system of centralization and departmentalization carried to such an extreme that the rank-and-file are removed from all personal contact with their superiors, and contact is made solely by voluminous and formal interdepartmental correspondence. An agent recently gave me a list of 13 chiefs to whom he was responsible for various sections of his work, to whom he reported, and who kept meticulous records of his errors. I am inexorably convinced that that is 12 too many. In theory, instruction, admonishment, and reproof originate by letters from these various department heads; in practice it seems invariably to come from some inexperienced clerk, who knows the rules with commendable accuracy, and who lacks any faint conception of the problems involved in rigid adherence to them in everyday routine. Examples on this score could be given in discouraging profusion, but why waste time on what seems to me the reasonably obvious proposition that such excessive centralization is stultifying to the initiative and ambition of the men who have to support it.

Recruiting for every branch of the service is the third of the major causes of cumulative morale-failure. Until the last 15 or 20 years, different phases of railway work have appealed variously but keenly to a host of youngsters out of school and college. There was real romance, variety, and opportunity in the field, so they thought, and they clamored for admittance. Now that is all in the past, and for reasons already enumerated. In appeal the service is scarcely on a par with routine federal and state employment. The potentially keen and able are seeking what they consider more attractive fields and the effect of this loss will be increasingly apparent as the older men in the service are replaced by the just risen generation.

Where is Help to Come From?

Now what, if anything, and within the limits of possibility, can the roads do about this situation? Obviously they cannot destroy the present huge unwieldy structure, however desirable that course might seem from the angle of pure theory. They will claim that along morale and personnel lines they are already doing an enormous deal, that they provide excellent hospital care for a trifling monthly assessment, that the pension system should prove a lure (it does—to the wrong type of man), that they issue an attractive monthly magazine to all employees filled with "inspirational topics" and "uplift" features. Yet all that is pitifully and even ludicrously inadequate in getting at the real trouble. This magazine is especially an example of all that it should not be. Handed down as pabulum from above, it is full of copy book maxims and urgings of contentment and a sweet optimism in whatever humble position an employee may find himself. Quite naturally, it is received resentfully and read, if at all, mockingly. If it were made a real service paper, actually for and largely by the force, open for suggestions, criticism, and controversial discussions, it would be a real asset in a few months.

The triple problem of promotion, centralization, and recruiting is so widespread and probes so deep into railway management that I doubt if there is any real hope for worth-while relief entirely from within. Rail executives have been in their narrow harnesses for so long and subjected to the "reign of rule" so assiduously that any hope of their wrecking their—to them—perfected structure from within is dim indeed.

In a recent talk with a rail chief well up on the steps of the throne, he was vehemently thankful that he now labored under federal and state commission control, that the evil days of freedom and responsibility were gone forever. This is certainly no place to discuss the merits of government control, but that a rail executive should rejoice to sit under a rule imposed from without is dismally significant. No; help is not likely to come from within alone.

A Constructive Suggestion

But is the following plan, or some modification thereof, so absurd or unworkable on the face of it, that it is unworthy of a trial?

First: Select with infinite care and a seeing eye, 10 men between 30 and 50 years of age, who are reasonably successful in their present work, who are open-minded, thoroughly practical, chosen from widely varying environments, in no sense "experts" or hobby-riders, and above all skilled in the handling of men. That does not seem an impossible task.

Second. Send these men out individually and without contact with each other, giving them no program and no instructions beyond absolute freedom in investigating with a free hand every phase of railroad operation from cellar to roof-tree.

Third: Assemble this crew at the end of six months and throw them together for a ten-day discussion and exchange of information and ideas; and then shoot them out again for another six months on the road.

Finally: Bring them together once more in a jury-room session, holding them until they submit majority and minority reports on improvements in operation, morale, and service to customers. The whole affair would be on a simple and informal basis with no solemn nonsense of testimony and hearings, and no possible grooves into which a jury might slip.

These reports should be of infinite interest and value. They should provide an impartial, intimate, and commonsense survey of the entire situation that would be of enormous value to the rail executives.

From that point on, the cure of necessity must come from within. Mr. Ford has found it possible and desirable to purchase a road *in toto*, to inflict on it all his favorite hobbies and fancies and then so to juggle its traffic and so to feed it freight that it will show a specious profit. The rail executives might easily enough, if the reward loomed large, likewise select a road to be a laboratory and field experiment station on which to practice the procedure outlined by the jury of ten. Certainly the situation is at present so desperate that heroic measures are more than necessary—they are vitally imperative.

The Truth About the Transportation Act

"It Is a Moral and Economic Crime to Assert That Railways Were Over-valued by Seven or Eight Billion Dollars"

By A. B. Cummins

United States Senator from Iowa; Chairman of the Senate Committee on Interstate Commerce

[*Editor's Note.—The Transportation Act was the target for the most false and misleading attacks by many western politicians in the recent political campaign, and it will be the object of similar attacks in Congress after it meets. Senator Cummins, who was one of the principal authors of the act, took little part in the campaign, but delivered one of the ablest addresses in defense of the law at Des Moines on October 30 that has ever been made. Most of his address is reproduced below, because the Transportation Act will be the subject of much discussion and controversy in the months immediately ahead.*]

THE REGULATION by the government of the United States of our railway transportation never has been and I sincerely hope never will be a partisan subject. It is purely an economic problem and with respect to it every man and woman has an unquestioned right to hold and express an individual opinion without regard to party declarations or party affiliations.

I am submitting my views to the people of Iowa upon the subject because I represent them in part in the Senate of the United States and was responsible in a measure for the passage of the Act, and because the regulation of our industries, including railways, will, in my judgment, be the chief matter for consideration in the next session of Congress.

Whatever indignation I may feel respecting the flagrant misrepresentations with respect to the legislation under consideration will not influence me in the least degree in this discussion. I intend to treat the subject from an economic standpoint and from that standpoint alone.

The briefest sort of outline of the physical character of our railway system on the first of January, 1918, will be helpful in understanding the difficulties with which we had to deal in preparing the legislation of 1920.

When the government, in the last days of December, 1917, assumed the control and the operation of the railways, we had substantially 265,000 miles of main-track road. It had been constructed practically without any supervision on the part of the government. It was owned by substantially 900 separate corporations. Some of it was prosperous, some of it bankrupt, some of it in high state of development, some of it poorly built, poorly equipped, and enormously overburdened with capital obligations, but practically all of it absolutely necessary for the tremendous traffic of the country, and to meet the needs of the several communities of the United States. During the first six months of the year 1918 the government returned to their respective owners something like 30,000 miles of this property, consisting mainly of what are ordinarily known as the short-lines.

Federal Control of Railways

Under the Federal Control Act of 1918, the President was authorized to contract for compensation for the use of the property so taken over and retained. The standard fixed for compensation was the average net operating income of the particular road for the three preceding fiscal years. This standard gave to some of the roads, in my judgment, a great deal more than they were entitled, and to some less than they were entitled.

The government operated these roads for twenty-six months; it more than doubled wages and increased the rates 25 per centum. Its net loss for the entire period, assuming that settlements yet to be made are made upon the same basis as those already made, *was at the rate of about* $45,000,000 *per month.* The law provided and the agreements stipulated to return the roads to their owners at the end of federal control in as good condition as they were when taken over on the 1st of January, 1918.

It may be interesting to note that in settlements already made the government has paid, for under maintenance during federal control, $125,428,809—and if future settlements are made on the same basis it will pay $97,167,663 more, making a total of $222,596,472 on this account.

In 1919 the President notified Congress that he would surrender the roads on the 1st of January, 1920, but later modified his notification extending the time to March 1, 1920. It then became the duty of Congress to enact such legislation as was necessary, first, to wind up the affairs of the United States Railroad Administration, and, second, as would enable the owners of these properties to give to the people of the country the transportation service which their business imperatively demanded.

It will be remembered that the railroads were being returned to their owners with an average monthly deficit of substantially $45,000,000 per month. And, also, that for six months before the return application had been pending before the Director General for a further increase of wages amounting in the aggregate to $800,000,000 per year. It was well known that all or a large part of this increase would be granted, and in fact when the applications came to be heard by the United States Railroad Labor Board increases in wages were granted, on the 20th of July, 1920, amounting in round numbers to $650,000,000 per year. It is well to recall at this point that when the government took over the railroads it took over all their cash balances.

Under these conditions Congress continued what is known as the standard contract for six months; and until September 1, 1920, the government has paid or will pay to the railroads which applied for it in apt time, the compensation which was paid during the twenty-six months prior to March 1, 1920. It was also agreed by everyone that the railroads would be compelled to borrow immediately immense sums of money to rehabilitate their several properties, for while the government maintained some of them in reasonably fair condition many of them had been neglected and the equipment especially required the most extensive repairs. We all knew that the credit of even the soundest companies had been seriously impaired, and that it would be impossible for the best of them to borrow money in the immediate future at less than 7 per cent.

This is an outline of the situation, and to meet it and do all that could be done to make it reasonably certain that the railroads would continue to render the service upon which the welfare of the United States absolutely depended, Congress passed the Transportation Act.

I refrain from further discussion of the infinite details of this important measure and proceed directly to the consideration of those parts of the Act which affect freight and passenger rates, only asking you to bear in mind that if rates

had not been increased the railroads as a whole would have incurred after the 1st of September, 1920, for a time at least, a monthly deficit of $100,000,000 per month, and this upon the assumption that nothing had been expended for extraordinary rehabilitation. *If additional revenues had not been provided every railroad in the United States would have been in the hands of a receiver before the 1st of January, 1921, and our system of transportation would have been practically destroyed.* It is, I think, generally admitted that many of the advocates of the government ownership and operation of these utilities, opposed the Transportation Act hoping that the continuance of existing conditions would bring about that result, and I agree that it would have done so.

It is not my intention to inquire into the desirability or wisdom of government ownership and operation. I limit my comment upon that subject to just one remark. It is this: *That if we are to have public ownership of the railroads it ought not to be effected by first physically destroying the efficiency of the facilities of transportation.* If there is to be a change in our policy in that respect it can be and ought to be accomplished through constitutional methods, and without subjecting the people to the almost infinite loss that they would suffer if deprived for any considerable period of adequate means of transportation.

The Increase in Freight Rates

I approach now the specific objections which many people and particularly many powerful agricultural organizations have made and are making against the Transportation Act. It is claimed that the Act is the direct cause of the high freight rates which were established on the 26th day of August, 1920, and which have been and are so burdensome upon industry. I recognize the hardships which the farmers have suffered, and it is not difficult for me to understand their attitude. For reasons which are not pertinent to this discussion their productions went down in 1920 to pre-war levels or below, and at the same time freight rates were increased to a higher level than ever before. This conjunction of two extraordinary events was the severest blow that ever fell upon any industry, and it is not strange that their efforts to escape the disaster commanded all their thought and energy, and it may be that their extreme trials clouded their judgment when they came to inquire into the cause of their misfortune.

In order that there shall be no obscurity about my position with respect to this matter I assert that *the high freight rates* which have oppressed all the people and the farmers particularly *are not due to the Transportation Act,* 1920, but *to other causes over which the government neither had nor has the least control.* I go further and assert that in all probability *freight rates would have been higher without the Act than under it.*

I ask now the most careful and unprejudiced attention to that part of the Transportation Act which it is claimed has had the effect of unduly, unreasonably, and unjustly increasing freight rates.

During the first two years of the operation of the Act, namely, until March 1, 1922, the Interstate Commerce Commission is directed to take as a fair return five and one-half per centum upon the aggregate value of the railroad property, and that, in its discretion, it was authorized to add one-half of one per centum to make provision in whole or in part for improvements, betterments, and equipment, which, according to the accounting system prescribed by the commission, are chargeable to capital account. This means, of course, that not more than five and one-half per centum could be raised for distribution either as interest upon bonds or dividends upon stock. It is to be observed, first, that this proviso of paragraph 3 of the section expired on the 1st of March, 1922, and is not in any manner responsible for the rates which now prevail. I do not, however, say this in apology for it. It is absolutely sound economically. *It is in no sense a guarantee.* It is simply a declaration by Congress that in its judgment a return of five and one-half per cent would meet the Constitutional requirement that private property shall not be taken for public use without just compensation.

The period immediately following the transition from government operation to private operation was chaotic, and it was believed that this rule of rate making would have the double effect of steadying the credit of the railroad systems which were in complete disorder, and at the same time bar the insistence upon the part of the railroads that in view of the high interest rates which they were compelled to pay and the reduced purchasing power of money when applied to both labor and material, for a higher rate of return. In my judgment it fulfilled both these purposes, and it enabled the railroads to render the service without which all business would have been paralyzed. I repeat that it is not a guarantee as at once must be admitted when it is remembered that *during the year* 1920 *the net operating income of all the roads was less than one-third of one per cent,* and during the year 1921 and the first two months of 1922 the net operating income of all the roads was substantially three and three-tenths per cent, and no one contends or has ever suggested that the government is under any obligation to make up the difference between the actual net earnings of the railroads and the five and one-half per cent.

With this statement for the period ending March 1, 1922, let us examine that part of the law which is permanent in its duration. The statute as now in force provides:

> "In the exercise of its power to prescribe just and reasonable rates the Commission shall initiate, modify, establish or adjust such rates so that the carriers as a whole (or as a whole in each of such rate groups or territories as the Commission may from time to time designate) will, under honest, efficient and economical management and reasonable expenditures for maintenance of way, structures and equipment earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation: Provided, That the Commission shall have reasonable latitude to modify or adjust any particular rate which it may find to be unjust or unreasonable, and to prescribe different rates for different sections of the country."

In every respect save one the paragraph just quoted is the declaration of the Constitution as construed again and again by the Supreme Court. That court has many times announced that a rate or body of rates prescribed by a Congress, a legislature, or a commission which does not allow a fair return upon the value of the property which renders the service is confiscatory and unconstitutional. It has more than once set aside a body of rates which allowed a greater rate of return than the railroads have received since September 1, 1920.

It is quite impossible to perceive the justice of a criticism upon this part of the law for it is nothing more than an accurate repetition of the Constitution and the repeated decisions of the Supreme Court interpreting it. If the Congress had directed the Commission to do less than to adjust rates that would make a fair return, or if the Commission without direction had done less, the Act of Congress or the act of the Commission would have been in violation of plain duty and the clearest commands of the Constitution.

The only new thing or element in the paragraph last quoted is the authority given to the Commission to consider what rates will produce a fair return upon the value of the railroads as a whole or in groups instead of considering the railroads singly; and I assert without the least fear of successful contradiction that this authority tends to decrease rates rather than to increase them. More than 90 per cent of the transportation of the United States is competitive in its character, that is to say, that with respect to more than

90 per cent of the traffic the shipper has the choice between two or more railroads. It is apparent that for the welfare of the country substantially all our railroads must be sustained, and it has been the rule of the Interstate Commerce Commission for years to adjust rates upon competitive business accordingly. This necessary practice required rates that might, while giving to one competing railroad a meager return, give to another excessive profits. It must be manifest that if rates are fixed upon the basis of maintaining railroads which have a higher cost of producing transportation than some of its rivals the whole level of rates would be a great deal higher than if they are fixed upon the basis of maintaining the railroads as a whole.

It is this national or group principle that is introduced in the paragraph quoted, and it is this principle which in addition to the suggestion I have already made with regard to the rate of return, which sustains my assertion that freight rates would in all probability have been higher in its absence during the whole period since the Transportation Act was passed, than they have been.

Most people who think at all upon this subject agree that the reasoning which I have laid before you is absolutely sound, and very few people claim that the rate of return fixed in the statute for two years as a fair return, or the rate of return since the expiration of the two years fixed by the Interstate Commerce Commission (5¾ per cent) is too high; and *it would be difficult to find a man with a sane mind but who would claim that the rate of return actually received by the railroads is high enough to escape the condemnation of the Supreme Court, if the question had been submitted to that tribunal.* The critics of the law have practically abandoned that part of their contention and have fallen back upon two other provisions which I will now consider.

It is said that the cost of the maintenance and operation of the railroads since their return to the owners has been excessive, and if these expenditures had been reasonable in amount the net operating income would have been greatly increased. Upon this point the Committee on Interstate Commerce of the Senate, of which I am chairman, has taken an immense volume of testimony. A report is about to be made and I will not anticipate its findings.

If expenditures have been extravagant the fault is not to be attributed to the law. If the facts alleged were proven beyond controversy it would furnish no reason for a repeal or modification of the statute. The Transportation Act in the paragraph to which I have so often referred provides for such rates as "will, under honest, efficient and economical management and reasonable expenditures for maintenance of way, structures and equipment, earn," etc. If we cannot trust the Interstate Commerce Commission to perform diligently and faithfully its duties in this respect then our whole plan of regulation by the government is a failure.

Valuation of Railroad Property

Having a somewhat intimate knowledge of the work of the Commission I am prepared to say that it has done everything in this regard that it could have done. *Of all the many tribunals and departments of the government* charged with the protection of the people against wrong doing *there is no tribunal* or department *which labors more continuously or more intelligently than the Interstate Commerce Commission.* I take pleasure in commending it with all my heart, and while I am conscious that it has made mistakes, for no earthly tribunal is infallible, I venture to say it commands the respect and confidence of the people to a greater degree than any other governmental body administering the laws of the country. In any event, the criticism is not to be directed against the law and if there have been mistakes either of commission or omission in this respect they would have occurred in more serious form if the statute had not been enacted.

The last objection insofar as rates are concerned, involves a subject upon which there has been more misapprehension and more misrepresentation, sometimes intentional and sometimes unintentional, than upon any other, grows out of the statement, current throughout the state, that the Transportation Act validates seven or eight billions of dollars of watered capitalization, and compels the people to pay a return upon seven or eight billions of dollars in excess of the actual value of the railroad property. This charge is flagrantly and obviously untrue, but more honorable men and women have been deceived and misled by it than by any other part of the long continued campaign against the measure. The argument is, that even granting that the rate of return whether designated by Congress or designated by the Commission, when computed upon a value of $18,900,000,000, it becomes excessive, when computed upon a value of $12,000,000,000 the alleged market value of all railway stocks and bonds and that rates could be reduced even though the cost of maintenance and operation is not reduced. The charge is accepted by great multitudes of the people without reflection because they know that there have been vast amounts of railway stocks issued without any consideration. No one has insisted more vigorously than I have that this practice should come to an end, and finally in the Transportation Act it was brought to an end. Everybody knows also that beginning with the first railway construction a very considerable amount of the funded or bonded indebtedness was issued without consideration, and I am glad to say that this vicious financing cannot occur under the Transportation Act. It is, however, a moral and economic crime to assert that because these things have been true that the railroad property of the United States which renders the service of transportation, taken as a whole, was over-valued by seven or eight billions of dollars by the Interstate Commerce Commission when it fixed the value for rate making purposes at $18,900,000,000.

If I cannot make this so plain that any intelligent human being can understand it I will forever despair of establishing the simplest problem in railway economics.

Let us first examine the provisions of the Transportation Act upon this subject. They are found in paragraph 4 of section 422, which added Section 15a to the Act to Regulate Commerce. I quote it:

"(4) For the purposes of this section, such aggregate value of the property of the carriers shall be determined by the Commission from time to time and as often as may be necessary. The Commission may utilize the results of its investigation under Section 19a of this Act, insofar as deemed by it available, and shall give due consideration to all the elements of value recognized by the law of the land for rate making purposes, and shall give to the property investment account of the carriers only that consideration which under such law it is entitled to in establishing values for rate making purposes. Whenever pursuant to Section 19a of this Act the value of the railway property of any carrier held for and used in the service of transportation has been finally ascertained, the value so ascertained shall be deemed by the Commission to be the value thereof for the purpose of determining such aggregate value."

Under this paragraph and in a proceeding properly instituted, known as Ex Parte 74, the Interstate Commerce Commission found, on the 26th of August, 1920, that the railroad property of the United States was, as a whole, of the value of $18,900,000,000. This value was found mainly, if not wholly, under an act passed in 1913, and which now constitutes Section 19a of the Act to Regulate Commerce. Senator Robert M. La Follette, of Wisconsin, was the author of the measure and it was proposed and passed for the sole purpose of giving to the Interstate Commerce Commission a basis upon which to fix rates. In 1920 the Commission had been engaged for seven years in making an inventory and assigning the values of both the real and personal property

of the railroads, and had substantially completed its task. It disregarded all stocks and bonds or other indebtedness and viewed the property just as it existed; in fact, the amount of stocks and bonds which any company had issued became absolutely immaterial. The Commission looked upon the railroads as tangible physical property, no matter from what source the money creating it had been derived. It appraised the property precisely as one would appraise his farm with the buildings upon it or a town lot with its improvements. If there had been $100,000,000,000 of stocks and bonds issued by the railroad companies it would have neither added to nor taken from the value of the property itself. The Supreme Court of the United States had definitely and finally laid down the rule of law for the ascertainment of the value of railroad property. It had declared in many cases that the value of personal property including all structures and improvements is the cost of reproduction less depreciation for age and use, and that the value of the real property or land was at least the value of similar areas of adjacent lands or lots with such additions as would represent the cost of acquiring the lands or lots for railway purposes. Proceeding in this way and in strict obedience to the Constitution and the decisions of the Supreme Court the Commission decided that the property was worth $18,900,000,000. I may not agree, in fact I do not agree, that railway companies should enjoy the benefits of what is known as unearned increment, but the Supreme Court has decided that under the Constitution they are entitled to the increased value of land brought about by general growth and development, and Congress is powerless to change that decision, for the value of property and the elements which enter into that value are judicial and not legislative questions.

The Supreme Court has held that if a right-of-way is donated to a railroad company by the government or by an individual the value of that property is to be considered in determining the value of the entire property of that company. This may seem to be unjust. I think it is unjust, but the Supreme Court says that the Constitution demands it, and as a law-abiding citizen and a law-abiding Senator I accept the conclusion. Property not used for transportation purposes is of course not included in the value upon which rates are based.

At the risk of repetition I venture to state this proposition in another form, because the thing that rankles in the hearts of the people of this state is the feeling induced by the grossest misrepresentation that they are asked to pay a return to the owners of railroad capitalization upon seven or eight billion dollars of watered stock and bonds. If this were true and if there had been any lawful way in which the burden could have been lifted, I agree that the Congress which passed the Transportation Act and every member who voted for it merits nothing but the severest condemnation. The only answer to the proposition is that it is not true, and men who make the statement, if they have studied the subject, are enemies of good government, and men who accept it without inquiry fail in their plain duty as citizens of the Republic.

The railroad property of the United States comprises 265,000 miles of main track road; it consists of right-of-way, land, road bed, bridges, side and second tracks, rails, ties, ballast, station houses, warehouses, elevators, roundhouses, shops, offices, elevated tracks, crossings, and scores of other structures necessary in the construction and operation of a railroad. It also consists of substantially 2,500,000 freight cars, hundreds of thousands of passenger, mail and express cars, 70,000 locomotives, and an infinite variety of other forms of equipment. What is all this property worth? Take any particular company; the property which it uses in rendering the public service is worth just the same in the law whether it has issued fifty millions or a hundred millions of capitalization. The Supreme Court has said that it is worth for rate making purposes what it would cost to reproduce it, less depreciation for obsolescence. If, tested by this standard, the property of all the railroads is worth more than the aggregate amount of stocks and bonds, the railroads as a whole are entitled to that additional value; if the property is worth less than the stocks and bonds that have been issued by the various corporations, the excess of capitalization does not add a penny to the value of the property which renders the public service.

Government Ownership

Suppose those who advocate government ownership should finally become a majority, and the government would undertake to acquire the title to all railroad property. There are two ways in which it could be done: First, to condemn the physical property, in which event the value would be ascertained in precisely the way which the Interstate Commerce Commission has pursued. It could, however, acquire all the stocks and bonds and thus become the owner. If the latter plan were adopted every lawyer knows that these securities would be valued upon the hypothesis that the several roads were, as against any restriction by the government, earning a fair return upon the value of the property ascertained as already indicated, so that the outcome would be substantially the same in either case. The only way in which this result can be avoided is to abolish the Constitution and the Supreme Court. I grant that if we reach the time when the people are willing to adopt the policy of confiscation after having removed these hindrances to that policy, the government can take the railroads with or without compensation, but until we reach that time it is absurd to insist that we can ascertain the value of railroads either by consulting the market value of their securities or by eliminating all the stocks that were ever issued without proper consideration and all the discount upon the bonds that were ever issued for less than par. Whatever you may think, or whatever I may think, with respect to the proper method of valuing such property may be dismissed, for the question has been permanently adjudicated.

I have now given you what seems to me to be the material facts from which you must draw your conclusions upon the proposition I announced in the beginning, and very confidently I submit that no thoughtful man who desires to reach an honest conclusion can do otherwise than acknowledge that the Transportation Act which has been so furiously assailed is not the cause of the high rates, whether freight or passenger, which now prevail.

Cause of High Rates

While it is not strictly pertinent to my present discussion the subject would not be complete if I were not to express my opinion with respect to the cause or causes of these rates. They are due wholly to the increased cost of maintaining and operating the railroads. The expenditures must be deducted from the gross revenues in order to reach the return contemplated by the statute, so that the higher the cost of maintenance and operation, the higher the rates must be. For the year 1920 the total operating revenues amounted to $6,255,417,245; for the same year the total cost of maintenance and operation, including taxes and uncollectible revenue, was $6,124,573,270. These expenditures consisted of maintenance of way and structures, $1,030,503,557; maintenance of equipment, $1,593,481,899; traffic, $73,797,532; transportation, $2,901,583,273; general, $174,102,954; all other expenditures (including uncollectible revenues of about $1,000,000), $238,103,863. For the year 1921 the same items are: Total operating revenues, $5,563,232,215; total expenditures for maintenance and operation, $4,835,593,114. To these expenditures there must be added for the year 1920, expenditures for equipment and joint facility rents, $54,692,311, and for the year 1921, $67,522,377.

These figures taken from the records of the Interstate Commerce Commission tell the whole story. Upon the same volume of business the cost of maintaining and operating a railroad was a great deal more than twice the cost of maintenance and operation in 1917, and the situation was not essentially changed in 1921. To this fact, and to this fact alone, must be attributed the high freight rates of which shippers so bitterly complain, and it should be here noted that the increase in rates beginning with government operation has been about 57 per cent, while the increase in the cost of labor and railroad supplies has been 100 per cent or more.

There have been some sharp criticisms upon the legitimacy of some of the expenditures for maintenance and operation since the roads were returned to their owners. I would like to discuss these things but it is impossible to do it at this time. I repeat that objections of this sort are objections not to the law, but to the administration of the law by the Interstate Commerce Commission. That commission has full authority to examine every item of expenditure and to reduce or altogether expunge any item which has been either exaggerated or is wrongfully inserted in the accounting. I may be permitted to add, however, that if every item which has been challenged in a long and exhaustive hearing before the committee of which I am chairman should be eliminated, or modified, the total expenditure would be reduced less than one per cent. All this means, of course, that the revenues of the railroads cannot be constitutionally lessened in any substantial degree until the railroads themselves are able to reduce their expenses or the government can compel a reduction and that is the matter to which the farmers should turn their attention rather than to assaults upon the Transportation Act.

Should Government Guarantee Farmers a Fixed Price?

One further phase of the controversy deserves some consideration. It has been said that if the government passes a law which provides that railroad rates must be so adjusted that they will yield a fair return upon the value of the railroad property, that the government should likewise make some provision that would insure a market price for farmers' products that would yield to the farmers a fair return upon the value of their property. The government has undertaken to fix the price of transportation and the Constitution says that the price must be so fixed that it will yield a fair return. It would greatly rejoice the railroad corporations if the Act to Regulate Commerce, including the Transportation Act, were repealed, and they be permitted to charge whatever they please, but I assume that there are very few people not connected with the railroads who would be willing to see this done.

I will not discuss the wisdom of putting the farmers of the country in the hands of the government to the same extent as the railroads are. My judgment is that nothing could be more disastrous to the agricultural interests, and so long as the farmers are at liberty to conduct their affairs in their own way there is, of course, no lawful basis for invoking the protection of that provision of the Constitution which forbids the taking of property for public use without just compensation. I am not unmindful of the fact that there are some powerful organizations advocating a movement for the transfer to the government of all industry and all business, but it is not my purpose at this time to enter upon the many hued doctrine of state socialism.

Fifteen pages of the Act cover the establishment of the United States Railroad Labor Board for the settlement of disputes between railroad companies and their employees. I understand perfectly that the railway unions insist upon a repeal of these sections of the Act, and they do so because they fear that the Labor Board will continue to reduce their wages, and that strikes are not as likely to be successful against the judgment of the board as they would be if there were no governmental tribunal to pass upon the justice of the disputes which from time to time arise. I think most of the railroads want the labor sections repealed, for obvious reasons, but it is inconceivable to me that the great body of the people who must in the end bear the expense of every strike or disturbance in transportation will lend their influence to the desires of these two selfishly interested parties. It may be that the Labor Board can be improved; but that we must have some tribunal to settle these disputes and do what we can toward preventing the interruption or paralysis of our transportation system is, I am sure, the judgment of the great majority of the people.

Section 439 gives to the Commission for the first time supervision of the issuance of railway stocks and bonds and it will prevent for all time the harmful speculation in these securities. It also forbids any person from holding an office in two railway corporations unless the Commission finds that neither public nor private interests will be injuriously affected.

I have mentioned but a few of the sections of which the Transportation Act is composed, but I have referred to enough of them to show how blind and destructive the demand for the repeal of the Act becomes when examined in the light of reason and when tested by the common interest.

I close this discussion with the final comment that *when truth and reason resume their rightful sovereignty the people of Iowa and the country will clearly recognize that the promises now so lavishly made in denouncing the Transportation Act can be fulfilled only when the Constitution is trampled under foot, when the courts cease to perform their functions and when the United States is ready to walk in the footsteps of unfortunate, ill-fated Russia.*

GEORGE GEER, of Bozeman, Mont., 83 years old, has just resigned his position as locomotive engineman on the Northern Pacific after serving as fireman or engineman 54 years, and after 67 years in the railroad service altogether. Mr. Geer says that his eyes are as bright and his brain as clear as they were in 1854 but he thinks it time to avail himself of his privilege of going on to the pension list. He began as a water boy on a wood train on the Buffalo & Erie; was a fireman on the Michigan Central in 1857 and was on the Union Pacific in 1868. He began his service with the Northern Pacific in 1884

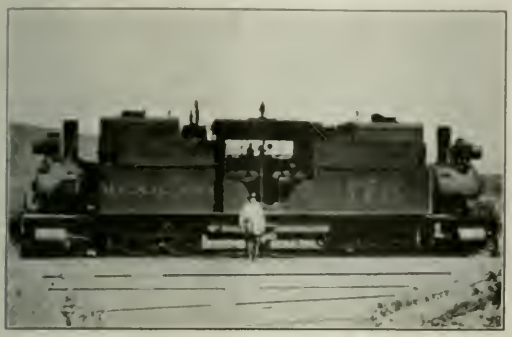
Mexican Railway to Electrify Thirty Miles of Main Line

The International General Electric Company has received an order from the Mexican Railway Company, Ltd., of Mexico City for the electrification of 30 miles of single track between Orizaba and Esperanza which is on the main line between Mexico City and Vera Cruz. The approximate cost of the electrification project will be between $2,000,000 and $2,500,000.

This is the first main line steam road electrification to be



Double-Ended, Oil-Burning Steam Locomotive Which Will Be Supplanted by Electric Motive Power

undertaken in Mexico and is on the oldest and one of the largest railways in the country. The compelling reasons for electrification were the heavy grades and increasing traffic. Indefinite postponement of the necessity for double tracking the road and a saving which will pay for the entire cost of electrification in five or six years is indicated. The system will be operated at 3,000-volt direct current, power to be supplied at this voltage by the Pueblo Tramway Light and

Passenger Train Hauled by Two Double-Ended Steam Locomotives Ascending Grade North of La Bota

Power Company, whose hydroelectric plant is five miles from Orizaba.

The International General Electric Company will supply ten 150-ton locomotives interchangeable for freight and passenger service, equipment for an automatic substation, the trolley overhead and feeder lines and fittings complete. It will also supervise the complete installation.

The electrification of this portion of the Mexican Railway is the beginning of the main line extensions which will follow as it becomes necessary to increase the capacity of the single track or the number of electric locomotives. The total route mileage of the Mexican Railway is 405 miles, rising from sea level at Vera Cruz to a maximum altitude of between 8,000 and 9,000 feet. Grades as steep as 5.25 per cent are encountered while the ruling grade on the electrified portion will be about 4.7 per cent.

R. B. A. Cautions Against Transportation Act Changes

The Railway Business Association at its annual meeting at the Hotel Commodore, New York, on November 9, adopted five resolutions which are given below. The first of these urged that no changes be made in the Transportation Act at this time. Others dealt with the stability of railway purchases, immigration and the appointment of the fact-finding commission for the coal industry; the fifth was an appreciation of the services of the late T. DeWitt Cuyler. Addresses of C. H. Markham, president of the Illinois Central and J. A. Emery, counsel of the National Association of Manufacturers, were reported in the *Railway Age* of November 11. The resolutions, verbatim, follow:

I

Prosperity is here. Let us make it last. Recovery in agriculture, industry and trade has its mainstay in railway buying. It was the replacement and addition of locomotives, cars, tracks, terminals and accessories which largely revived general business. Railway improvements must continue if the traffic is to be carried. Car shortages are upon us. October almost brought a new peak in car loadings. Shippers are confronted by congestion in freight, limit upon industry and sacrifice of farm products. The foundation of railway purchases is the confidence of railway managers and investors. For Congress to consider early amendments to the Transportation Act would open the door to assaults upon the policy which is designed to give the roads an opportunity to make sufficient earnings. To let it be clearly seen that no amendments of any kind are under serious consideration will leave all concerned free for the work of railway rehabilitation and preparation for the coming burden of traffic. We urge that Congress refrain at this time from all amendments to the Transportation Act.

II

We again emphasize the need of giving railway purchases greater stability. Railway improvements even if sufficient in the aggregate over a period of years would yield their fullest public benefit only if so planned as to relieve instead of aggravate general depressions. Greater stability would give steadier employment to industrial labor and a more constant domestic market to farm and mill products. It would promote adequacy in the replacement and production of facilities and economy also by resort to the credit market when rates are low and to the markets for labor and material when both are plentiful. Essential for a policy of planning ahead and adhering to plan is a clearer public and political understanding of the practical financial problem with which the railway managers and directors have to deal. We note with satisfaction an increasing interest in the subject and systematic study of it by agencies both governmental and volunteer.

III

We favor amendment of the immigration law to provide admission limited by quality of applicants instead of by their number. The present law was enacted at a time of serious domestic unemployment. That occasion has passed. Railroad improvements otherwise feasible and urgently needed are delayed by scarcity of unskilled labor and the execution by us of railway orders for material and appliances is impeded by the same cause, which pervades all industry. Sufficiency of common labor is essential to enlarging employment of skilled operatives and fundamental to general prosperity.

IV

We commend the President for appointing to the Coal Investigation Commission no miner or operator. In a body established by the public to inquire into problems of public service and to

appraise the practices of those engaged in such service the public interest is paramount and advocates speaking for these under inquiry should have no seats. The whole personnel should represent the public as such.

V

A heavy loss is suffered by the whole country in the untimely death of Thomas De Witt Cuyler. Discharging with great ability through an active life in large affairs the many professional, fiduciary and civic responsibilities of a strong citizen, he led the railway executives and performed a unique work in the critical period of remedial railway legislation and of development in administration of the new policy. Success in these vital and difficult processes required that the national railway system should have a representative voice; and in Mr. Cuyler was found a sagacious counsellor and a persuasive public spokesman. In gifts, in devotion to great duties and in character he filled a place among Americans who have served the republic well.

The membership of the association as of October 31 was reported to be 545, as compared with 241 on the same date in 1917—an increase of 79 per cent over the pre-war membership.

Government Report On Sulphur Springs Collision

The Interstate Commerce Commission has issued a report dated October 10 and signed by W. P. Borland, chief of the Bureau of Safety, on a rear collision of passenger trains on the Missouri Pacific at Sulphur Springs, Mo., on August 5 when 34 persons were killed and 186 injured.

This collision was reported in the *Railway Age* of August 12 and 19; and the present document gives few additional details except a considerable number of quotations from the rules.

The conclusions at the end of the report include the following paragraphs:

This accident was caused by the failure of Engineman Glenn, of train No. 4, properly to observe and be governed by automatic block-signal indications; and by the failure of the crew of train No. 32 to protect the rear of their train against following trains, as required by rule, for which Flagman Boston, Conductor Long, and Engineman Gross are responsible.

The evidence points to the conclusion that Engineman Glenn was not complying with the rules relative to the observance of the caution indication of distant signals, but was relying entirely upon that of the home signals. The fact that his train was a fast train and naturally was given a clear track, and held a train order that train No. 1, another fast train, would wait at Wickes until 7:40 p. m. for him very likely had a tendency to lead him to the conclusion that the road would be clear.

In this instance had these rules [flagging rules] been complied with at Sulphur Springs alone it is doubtful, on account of the close proximity of the two trains, if the flagman would have had time to get back a sufficient distance to afford any substantial protection. However, had these rules been generally observed at all stations, including Riverside, which would have required the leaving of torpedoes, . . . it is quite likely that Engineman Glenn's attention would have been called to the fact that he was following another train closely, and he would have been more attentive to the signal indications. . . .

Flagman Boston's most important duty was to protect the rear of his train, yet according to his own statement he made no attempt to do so. . . . Conductor Long was in charge of the train and it was his duty to know that Flagman Boston was obeying the rules, yet it is clearly apparent that he knew Flagman Boston was not doing so with respect to flagging and that it was not customary for him to do so. For this negligence Conductor Long shares in an equal degree the responsibility. . . .

This accident still adds to the already appalling list of similar occurrences and but further emphasizes the necessity for the adoption of means which will automatically compel obedience to signal indications by taking the control of the train away from the engineman when for any reason obedience to block signals on his part is lacking. An adequate installation of such a device in this instance would have prevented this accident.

It appears that it is the practice for operators to copy only such portions of a train order as directly affect the trains for which they are being copied. This is a dangerous practice and contrary to the rules of the railroad company.

While the direct cause of this accident was the failure of the engineman, the underlying cause was lax enforcement of the operating rules, for which the supervising officials of the Missouri Pacific must bear the responsibility.

A rule which requires a train receiving a permissive signal indication to proceed with caution prepared to stop short of train or obstruction clearly requires some positive action on the part of an engineman when approaching or passing such signal and the failure to comply with such a rule is a matter which could easily have been checked up by supervising officials. The lax practice in flagging disclosed by this investigation is also a matter which could scarcely have escaped the attention of the officials. According to the statement of Flagman Boston, when officials were riding with them they made only a pretense of flagging. The Missouri Pacific Railway Co. should promptly take steps to secure proper obedience to its rules and regulations to prevent the recurrence of accidents of this character.

Engineman Glenn had been employed as an engineman since 1890; in December, 1908, he was discharged for responsibility in connection with an accident, being reinstated in March, 1910, since which time his record was very good.

The Southern Pacific has reduced the freight claim payments on its lines since January 1, 1922, sixty per cent.

The "Railroad Building and Loan Association" has been formed by railroad men and others at Dallas, Texas, with L. P. Talley, a banker, as president of the association. Among the railroad men on the board of directors are M. L. Buckner, W. G. Crush, John F. Lehane, H. J. Sewell, E. E. Taylor and W. M. Whitenton.

The Greek Exodus from Thrace—Scene at Railway Station at Adrianople

Authority for Reduced Rates to Pacific Coast Denied

I. C. C. Interprets Amendments to Transportation Act— Must Foster Water Transportation

WASHINGTON, D. C.

A NEW CHAPTER in the history of transcontinental freight rates has been written by the Interstate Commerce Commission in its decision made public on November 11, denying most of the fourth section applications filed by the transcontinental lines in August, 1921, proposing to establish from and to the Pacific Coast terminals lower rates than are in effect to and from intermediate points on traffic having origin or destination in the defined territories lying, roughly speaking, east of the Rocky Mountains, to meet the low rates by steamship lines between the Atlantic and Gulf ports and Pacific ports. In this decision the commission interprets and gives force to the amendment to the fourth section made by the transportation act and particularly to Section 500 of that act, which declares the policy of Congress to "foster and preserve in full vigor both rail and water transportation." The commission thinks that the amendment prohibiting it from granting fourth section relief where the charge to and from the more distant point is not "reasonably compensatory" for the service performed was Congress's way of saving that it should follow a less liberal policy in dealing with departures from the long and short haul rule than had been followed in former years and it finds that the carriers have failed to make the necessary affirmative showing that losses of revenue would not result from the reductions they had proposed in Pacific terminal rates. The decision is also based in part on the theory that the region west of Pittsburgh would be accorded a preferential rate structure by the proposal of the railroads to blanket the rates from Pittsburgh to the Pacific from all points of origin from the Atlantic to the Missouri river or even westward while keeping in effect rates from eastern origins in the same territory to intermountain destinations graded roughly according to the respective length of the hauls.

Southern Pacific Reductions Allowed

While denying the general westbound application of the transcontinental carriers for reduced rates on various commodities to the Pacific Coast terminals, however, the commission allowed the proposed reductions on crude sulphur from Texas and Louisiana mines to Pacific Coast terminals on the ground that they are reasonably compensatory to the roads. It also approved the application of the Southern Pacific to establish reduced rates from California terminals to New York City by its rail and water line through Galveston on asphalt, beans, canned goods, dried fruit and rice, but with modification increasing the proposed rates by 5 cents per 100 pounds. The other applications denied were for authority to establish reduced rates on sisal and ixtle from El Paso and Gulf ports to Pacific terminals and green coffee from New York, New Orleans and Galveston to Pacific terminals. Commissioner Aitchison dissented in part from the decision of the majority and six other commissioners signed separate concurring opinions objecting to certain findings of the majority.

Departures from Long and Short Haul Rule Ended in 1918

On March 15, 1918, all departures from the long and short haul rule in westbound transcontinental rates were removed under the decisions of the commission finding that, due to the withdrawal of ships for use in the trans-Atlantic service, water competition between the Atlantic and Pacific ports was no longer a compelling force. The commission found that the maintenance of lower rates to the coast than to intermediate points unduly preferred the coast, and expressed the view that commodity rates in certain instances at least might be graded, but generally speaking, the railroads increased the rates to the terminals to the extent necessary to put them on a parity with the intermediate points, resulting in a blanket extending several hundred miles inland from the Pacific Coast. At the hearings on the applications filed in 1921 the carriers showed that the traffic destined to the Pacific Coast had been moving by water in heavy volume and that competition was keener and the water service more efficient than at any time before the war and that considerably more than half the traffic in most of the commodities involved was shipped by water. All but a small portion of the water-borne traffic originated in and west of Buffalo-Pittsburgh territory, indicating that the Pacific Coast interests were making their purchases in that part of the east which is tributary to the water lines and from which they can secure low rates. The commission says that the movement by water may be relatively greater now than it was during the period of the hearings. The rail lines contended that the proposed rates were no lower than necessary to yield them a fair share of the business. It was the declared purpose of the carriers to be conservative and not to meet water competition where it is a matter of serious concern and then only within reasonable limitations.

None of the proposed rates meet even approximately the coast to coast rates of the water lines. They approximated at the time of the hearings the charges available from certain interior points to the Pacific Coast terminals by rail to the Atlantic and Gulf ports and thence by water, plus such incidental charges as marine insurance and unloading and transfer charges at the Pacific Coast terminals. While on traffic to the Pacific Coast it was proposed to keep the Middle West on a parity with seaboard territory, the latter would be required to pay more than the Middle West on traffic to intermountain territory. Before discussing the rates themselves, the commission discussed the effect of the fourth section as amended, finding that the situation presented to it in former transcontinental cases has been changed by the new language in the law. Its discussion on this point is in part as follows:

The Fourth Section as Amended

Where water competition is involved, the applicants contend that they demonstrate the propriety of relief from the long-and-short-haul rule when they show that the competition by water is actual and compelling; that the rates proposed to meet the water competition, while less than they might otherwise be, are necessary if applicants are to secure an equitable share of the traffic; that the proposed rates yield some margin over the extra expense involved in taking on the additional traffic moving thereunder; and that the rates maintained to intermediate points are not unreasonable in themselves. Each of these positions, they contend, is demonstrated on the present record, taken in connection with our finding in *Intermediate Rate Asso.* v. *Director General, supra*, that the rates to intermediate points are not unreasonable or unduly prejudicial. They further contend that the present wording of the fourth section, prohibiting us from granting relief where the charge to or from the more distant point is not reasonably compensatory for the service performed, does not in anywise invalidate the sufficiency of the showing which they here make. In short, they contend that if the proposed terminal rates are all they can get, and yield something in the way of net revenue, they are perforce reasonably compensatory.

For the intermountain interests it is argued that a rate to be reasonably compensatory to the more distant terminal point must bear its full share of operating expenses, interest on funded debt, equipment and joint facility rents, taxes, and the percentage return fixed by us pursuant to section 15a of the interstate commerce act.

We are unable to accept this interpretation of the phrase "reason-

ably compensatory." So interpreted, the long-and-short-haul rule of the fourth section must become absolute or rigid from the very nature of the case. There may be difficulty in discovering to a nicety the exact legislative intent in the amended fourth section. But the rejection of an absolute long-and-short-haul clause by both Houses of Congress is inconsistent with any construction of the phrase in question which would be equivalent in effect to an absolute clause.

A similar but less extreme interpretation of the words "reasonably compensatory" is urged on behalf of various state commissions in the intermountain territory. It is pointed out that there is a margin between a rate which barely escapes being confiscatory and the highest rate which a regulating body may lawfully allow. To the intermediate point a rate might approach the latter limit while a rate to a more distant point might conceivably be less and yet not so low as to be confiscatory. Seemingly, the rate to the more distant point may contribute something less than a full proportionate share of return upon investment and thus theoretically be less than a greater rate to an intermediate point.

We are unable to accept this interpretation of the words "reasonably compensatory" as used in the amended fourth section.

Where a rate imposed by a regulatory body is under judicial review upon the allegation that the rate fixed is confiscatory, it has been held by the courts that a rate may not lawfully be fixed by such tribunal which is based alone on the out-of-pocket costs ascribable to that particular traffic, but that to be lawful the rate must be sufficient to cover a ratable proportion of the average cost of freight traffic generally, including a return on the property devoted to public service. To hold otherwise would compel the performance of a certain specified kind of service by the carrier at less than average cost. The extension of this principle to other classes of traffic, if pursued far enough, would bankrupt the road.

Where, however, carriers voluntarily propose to reduce certain rates to an out-of-pocket *plus* basis in order to augment the total traffic carried, a wholly different situation is presented. The menace of confiscation is absent, for *volenti non fit injuria;* and the additional traffic, if secured with a resulting augmentation of net revenue instead of laying a burden upon other traffic, affords the possibility of lightening the burden thereon by bringing a greater tonnage under contribution to net revenue.

The criteria of a reasonably compensatory rate in a confiscation case are therefore essentially distinct from the criteria of a reasonably compensatory rate where carriers volunteer a reduction on certain rates to an out-of-pocket *plus* basis. In the first set of cases the carrier has presumably been charged with seeking to extract from the public which is served more than the services are reasonably worth; in the second set of cases the carrier is accused by protestants, not primarily of seeking to extort more than the service is reasonably worth to those who receive the service but of working undue discrimination as between those who can and those who can not avail themselves of the lower rates voluntarily proposed.

The criterion of a reasonably compensatory rate suggested by the carriers has been indicated above. It is summarized in the formula "out-of-pocket-expenses-plus-some-profit."

Just as we have rejected the two interpretations of "reasonably compensatory," suggested by the protestants as too narrow, so we are disposed to reject the single criterion suggested by the carriers in the above formula as insufficient, standing alone. It is probably true that this formula was deemed by us as adequate in disposing of fourth-section applications prior to the amendments of the fourth section in the transportation act, 1920. We do not agree with the carriers that the fourth section has not been changed in substance. The amendment has made mandatory what theretofore rested in our sound discretion as to compensation for the service performed to the more distant point, as to circuity, and as to potential water competition. Moreover, in section 500 of the transportation act, 1920, is expressly declared the policy of Congress to foster and preserve in full vigor both rail and water transportation. We think the amendment was the Congress's way of saying that we should follow a less liberal policy in dealing with departures from the long-and-short-haul rule than had been followed in former years. Our administrative power at this time is in some respects narrower than before the amendment. The fourth section, as amended, requires the observance by us of certain administrative rules which we were enforcing prior to the amendment, but which in some measure lay within our sound discretion to modify or change. We are also required now to accord due observance to section 500 of the transportation act, 1920.

Moreover, the requirements of section 15a may not be defeated or jeopardized by the action of particular rail carriers seeking to augment their own net earnings, irrespective of the effect of rate changes adverse to the carriers of the country generally, or of a large territorial group. It clearly would defeat the intent of Congress to foster transportation by rail and water in full vigor if the rail carriers were permitted, at practically little or no profit to themselves, to operate so as to deprive water carriers of traffic which the water carriers would naturally handle. Moreover, it must be borne in mind that where the out-of-pocket theory is used as a rate basis, there is inevitably thrown upon the rest of the traffic the task of providing the bulk of the net return contemplated in section 15a. Too wide an extension of the out-of-pocket theory would transpose the entire burden of producing dividends and interest and meeting other fixed charges upon only a part of the traffic carried.

In the light of these similar considerations, we are of opinion and find that in the administration of the fourth section the words "reasonably compensatory" imply that a rate properly so described must (1) cover and more than cover the extra or additional expenses incurred in handling the traffic to which it applies; (2) be no lower than necessary to meet existing competition; (3) not be so low as to threaten the extinction of legitimate competition by water carriers; and (4) not impose an undue burden on other traffic or jeopardize the appropriate return on the value of carrier property generally, as contemplated in section 15a of the act. It may be added that rates of this character ought, wherever possible, to bear some relation to the value of the commodity carried and the value of the service rendered in connection therewith. We also find that where carriers apply for relief from the long-and-short-haul clause, of the fourth section and propose the application of rates which they designate as "reasonably compensatory," they should affirmatively show that the rates proposed conform to the criteria indicated above. It goes without saying that carriers should not propose rates or rate structures for approval in a fourth-section application which create infractions of other provisions of the interstate commerce act, and particularly of section 3.

Effect on Revenues

Extensive statistical data were offered by the carriers to prove that the proposed rates to the terminals would be sufficient to pay something over and above the out of pocket costs. After outlining these cost studies, the commission says that so far as revenue is concerned it is satisfied that taking the additional business by itself, the proposed rates generally and easily cover the extra out of pocket expenses involved in handling the additional traffic which the railroads expect to be able to obtain by reducing the rates and in certain instances, it says, that the rates would contribute to the net return on carrier property. Were the rate level alone to be considered, it says, it would be difficult to condemn the proposed terminal rates in the general westbound application. Moreover, the going water rates shown were such as not seriously to invalidate the proposed terminal rates as lower than presumably necessary to meet water competition. However, the commission says, such profit as would accrue from the proposed rates apparently would be largely offset by what would be lost thereby on the traffic that would move by rail even without the reduction. Although a large volume of the traffic in question is moving by water, the movement by rail is still very heavy and it is safe to say that there will always be a substantial movement in most of these commodities by rail because, other things being equal, the shippers prefer rail to water. The rail lines by hauling the business overland would deprive themselves of revenue they are now receiving for the haul from points of production to the ports based largely on local rates presumed to be reasonable and fully compensatory. They believe, however, that the proposed rates would yield greater net returns per 100 pounds than the local rates to the ports, although the rates to the ports would probably yield a greater percentage of profit.

Taking, for example, the iron and steel traffic from the Pittsburgh district, by far the most important traffic involved, the commission says that probably somewhere near half is moving by rail. Assuming the movement of 1,000,000 tons per annum, it is stated that by reducing the rate from $1.66½ to $1 there would be a direct loss on the 500,000 tons now being carried by rail of $6,650,000. If the effect of the reduction would be to take away from the boats one-half of the tonnage they now have it would mean a gross gain to the carriers of $5,000,000, which allows nothing for the expense of handling the additional business. If the cost of service were half of the former rate, or 83 cents, the commission says, the cost of handling the added business would

be $4,150,000, or a net gain from the added traffic of only $850,000 to apply against the loss of traffic now being handled of $6,650,000, or a net loss of $5,800,000. Other similar calculations are given and the commission says it is not prepared to say that it could base upon these estimates of collateral losses of net revenue the necessary denial of the applications, but it is of the opinion that before it grants the affirmative relief asked it is entitled to be shown by the carriers the probable extent of such collateral losses of net revenue, if any, and the way in which such losses would be divided as between various carriers and territorial groups. It is pointed out that the lines east of Pittsburgh, although formal parties to the application, stated at the hearing that they were not to be understood as either actively supporting or opposing it and the commission says it seems clear that the lines east of Chicago have little, if any, reason to expect increased gross or net revenue from the proposed rates. The probabilities are that they would suffer substantial losses. For example, it is stated that the eastern lines propose to haul iron and steel about 468 miles from Pittsburgh to Chicago for a division of 15 per cent of the through rate or a proportion of 15 cents instead of from Pittsburgh to Baltimore, about 311 miles, at the local rate, which is of 35 cents.

"If the carriers are of opinion," the commission says, "that no collateral loss in net revenue would result, the obligation to make such showing is upon the carriers. Should they concede the probability of a net loss in revenue to the carriers as a whole, we should have to consider whether such a shrinkage would adversely affect the return at which we are required to aim under section 15a; and if, reasonably assured on this point, we are prepared to allow the carriers to assume voluntarily a shrinkage in their net revenue, the question might arise whether it is lawful to focus the whole gain resulting to the shipping public upon those shippers mainly located in a particular section or sections, or whether the relief might not more appropriately be applied throughout a wider extent of territory and among a greater number of shippers. We find that the carriers have failed to make the necessary affirmative showing as to the collateral losses of revenue which would result from the proposed terminal rates."

The proposed rates on sulphur, the commission says, are reasonably compensatory and as to the Southern Pacific application it finds that the collateral loss of rail revenue involved is negligible. It finds that the rates proposed will be reasonably compensatory except that "out of abundance of caution" it is of opinion that the proposed terminal rates should be increased by 5 cents per 100 pounds. This would produce a rate on barley in excess of the present rate so that item is omitted from the authority granted.

Separate Opinions

Commissioner Meyer, in a concurring opinion in which Commissioners Esch and Lewis joined, agreed with the finding that the carriers have not justified the relief sought, but did not agree with the findings that a violation of section 3 results from the carriers' proposals with respect to rates from Chicago and points in Chicago territory to the Pacific Coast. He said in part:

Practically all articles upon which the rates apply are produced both on the Atlantic seaboard and in Chicago territory. Under normal conditions producers at Chicago have an advantage in being located nearer the Pacific Coast and have correspondingly lower rates. With the establishment of rates via water routes from the eastern seaboard which are lower than the rail rates from either the seaboard or Chicago, the Pacific Coast supplies its requirements very largely from the East with articles which were formerly shipped from Chicago. If the western rail carriers are to participate at all in the transportation of these commodities, it is necessary for them to make rates which will attract traffic to their lines from the seaboard or from Chicago. If the traffic originates on the seaboard they must divide their revenues with the eastern carriers, but if the traffic moves t
transportation charge. If the
the rate from the seaboard, t
board, and the revenue of the w
be depleted. It is therefore the co
ing Chicago with the water carr
which compels the western carr
Chicago if they are to continue to

One of the reasons advanced in
from Chicago is that it is not pro
to the intermediate territory the
cago; and that the coast points we
markets at equal rates which the
have. Water competition does no
mediate points of destination in th
rates to these points therefore may
tance. The western carriers from C
port traffic to the intermountain terri
serving the same or other markets o
points which will deprive them of the tr
cago, served by the western carriers,
supply. To require the blanketing of ra
eastern seaboard to this territory would
ern carriers to participate in equal rates
divide their revenue with the eastern carr
them of a portion of the revenues which th
retain. The intermountain territory now has ne
gets at equal rates, and would not be at all benefi
Chicago from reaching the coast cities while these
have the advantage of the lower rates from the east

The handling of all-rail traffic from Chicago rather
the seaboard would preserve the revenues of the weste
and be of benefit to the public at large served by them, inc.
intermediate points of destination, in that any addition to t.
nues of these carriers may ultimately enable them to corres
ingly reduce rates to intermediate points. It is my judgment
even if because of the impairment of their revenues the carri
should not reduce their all-rail rates from the eastern seaboard, the
western carriers might well be justified in meeting the competition
of the water routes from the East by reducing the rates from
producing points on their lines in Chicago territory in order that
they may not be deprived of the opportunity of hauling traffic to
supply the requirements of the Pacific Coast points.

Commissioner Aitchison, dissenting in part, said:

The record in the westbound application shows that the applicants have met all the affirmative tests stated in the report as criteria; but the application is denied because they have not gone further and disproved a net loss because of collateral changes in traffic which suppositiously may affect injuriously the earnings of some—not all—of the participating carriers. I am not able to conclude that having shown the necessity for relief and having satisfied all other tests as to the reasonably compensatory character of the rates proposed by them, they should be sent hence and denied access to certain important traffic found to be remunerative, merely because they have not in their presentation entered the realm of speculation and proved a negative by conjectural evidence. Therefore I dissent from the denial of that application.

The addition of 5 cents to the terminal charge made by the majority in the eastbound application finds no warrant in the record, and should not be imposed.

Commissioner Potter concurred in this expression.

Commissioner Hall concurred in the conclusions reached except that he objected to the arbitrary addition of 5 cents to the rates proposed by the Southern Pacific as finding no support in the record. As to the general westbound application, he said: It may be that rates and movements from certain groups on certain commodities, iron and steel, for example, could have been so segregated in the presentation that fourth section relief could be granted on some even if denied on others.

Commissioner Campbell concurred in the conclusions of the majority in denying certain of the applications, but objected to the granting of the Southern Pacific and the sulphur applications, on the ground that if the more distant rates are reasonably compensatory, they become fully compensatory and reasonable at many intermediate points. He expressed the opinion that the construction placed on the amendment does not recognize the full intent of Congress and that "reasonably compensatory" as used in the amendment means a rate equal in amount to a non-confiscatory rate.

ess men live at railroad division points, they know little
nothing about the opportunities in railroad service. Systematic development of the labor material available will do much in remedying labor conditions on railroads at the time of year when men are needed.

The employing officer should have regular days in his office to confer with applicants for positions, and this information should be given on the circulars. This officer should be a responsible person and carefully selected. The first impression made on an applicant is usually a lasting impression. Does he ask the applicant to sit down and treat him as he would like to be treated by taking interest enough in him to ask where he lives and when he arrived, what vocation he followed, if any, and where he could be found when needed, and, in the meantime, judge his mental and physical fitness for the job before giving him the application to fill out? It will be claimed that no one has time to converse with all the men who apply for jobs. Might it not be cheaper in the end to have some capable person or organization responsible for handling all applicants with the chance of getting the right man at a time of need, instead of finally having to take whoever comes? A kind word of encouragement to the promising man, a word of advice to improve himself by study, a recommendation where to obtain literature by recognized authorities on the subject of firing, and a record or symbol written on the face of his application is all that is needed in the way of a preliminary interview and record.

Progressive Examinations

We believe railroads should establish a system of progressive examinations when a man is employed first as a fireman. He will be given the questions on which he will be examined at the end of the first year; having answered these questions satisfactorily, he will then be given questions for the following year. Having passed this examination, he will be given a third and final set of questions, on which he will be examined before being promoted to engineman. It is not expected that a man will answer these questions without assistance, and in order that he may understand them properly, there should be established a school of instruction in the use of the air brake and all other locomotive appurtenances. He should also be invited, and urged, to ask the master mechanic, traveling engineer or air brake instructor or any other official for such information as may be required on any points in connection with his work.

If a man passes 80 per cent or more in all examinations he should be given a certificate. If a man fails to pass the first or second examination, he should be dropped from the service. At the third examination, if a man should fail to pass 80 per cent of the questions asked, two more trials not less than two months apart will be given him to pass the same examination. If he then fails to pass by a percentage of 80 he shall be dropped from the service.

Firemen passing the third and final series of questions will be promoted in order of their seniority as firemen, except that those who pass on the first trial shall rank when promoted above those who pass on the second or third trial and those passing on the second trial shall rank above those who pass on the third trial.

Enginemen employed shall be required to pass the third series of questions before entering the service.

The report is signed by J. B. Hurley (Wabash), chairman; W. H. Corbett (Mich. Cent.); J. C. Simino (Sou. Pac.); Andrew Wheeler (C. & N. W.), and C. W. Stark (N. Y. C.).

Discussion

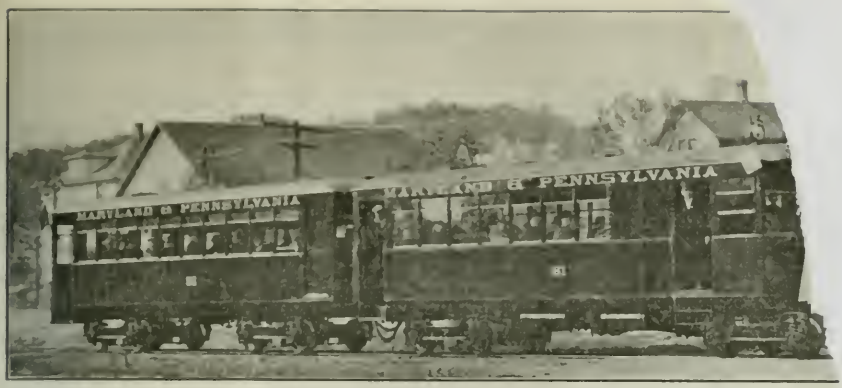
It was evident from the discussion that most of the railroads are following the practice outlined in the paper for examining and promoting firemen. The methods of giving the examination, however, vary considerably. In some cases the new fireman, on entering the service, is given the questions for the first year's examination, which he must answer and turn in by the end of the year. He then receives the questions for the second and third year's examination after having answered the preceding questions. On other railroads the men are not given the examination questions, but are called into the division headquarters to prepare a written examination on questions which they are not permitted to take away with them. The written examination is generally accompanied by an oral examination.

There is considerable variation as to who hires the firemen. In some cases where conditions require the taking on of a large number of men, the men are hired by almost anyone available. The opinion most generally expressed during the discussion, however, was that the traveling engineer should select the new men. It is evident that the problem of securing satisfactory recruits is a difficult one, as compared with conditions in the days when young men were promoted from roundhouse laborers via the ashpit to positions as firemen. One of the difficulties is the inability of many applicants to finance themselves during the period of their trial trips. The opinion was expressed by a number of the members that the railroads should allow student firemen at least the amount of their expenses on the road. This has been solved to some extent on the Baltimore & Ohio by providing the students with meal tickets at certain specified boarding houses.

B. J. Feeney (Illinois Central) follows the practice of passing the word around among the enginemen, firemen and shopmen when new firemen are to be hired. He asks that these employees send men to him with letters of recommendation. This has worked well in securing new employees who come to their jobs with a sense of responsibility and live up to it.

* Abstract of a paper presented before the Traveling Engineers' Association, Chicago, Sept. 1, 1922.

The Missouri Pacific in 1921 paid out $204,972 in livestock claims, or an average of $28.40 per mile of road; and is asking the aid of cattle owners, the press and the public in a campaign to reduce the number of animals killed by trains.



Motor and Trailer Car Driven by 120 h.p. Gasoline Motor

Motor Driven Rail Car with High Power

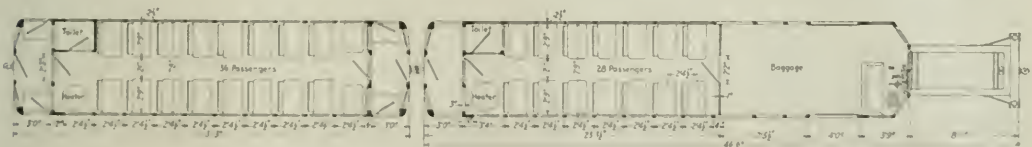
New Equipment for Maryland & Pennsylvania Has 120 Hp. Engine and Seats 76 Passengers

THE MARYLAND & PENNSYLVANIA has recently received a passenger train, consisting of a gasoline motor coach and trailer, with a total seating capacity for 76 passengers, from the Russell Company, Kenosha, Wis. The motor coach is 37 ft. 6 in. in length over the end sills, with a 4-ft. 10-in. baggage compartment and a seating capacity of 28 in the passenger compartment. The trailer coach is 31 ft. 3 in. in length with seats for 40 passengers. Drop seats in the baggage compartment accommodate eight additional passengers. The motor coach is fitted with a 120-hp. motor and weighs 28,000 lb. The trailer weighs 19,000 lb., making a total for the train of 47,000 lb., or 691.2 lb. per seat, excluding the drop seats in the baggage compartment.

The cars are driven by a 5¾-in. by 7-in. six-cylinder Wisconsin gasoline motor, which weighs 1,275 lb. and develops approximately 120 hp. at 1,200 r. p. m. This motor, handling the motor car and trailer, averages 3.8 miles per gallon of gasoline. It is mounted on the underframe in front of the forward truck center and is equipped with an Eismann dual magneto ignition system, Stromberg carburetor and Leece-Neville generator and starting units. A separate 32-volt generator, with a 16-cell storage battery of 70 hours' capacity, furnishes power for the headlight and train lighting. Fuel is carried in two supply tanks with a total capacity of 52 gallons and is fed to the carburetor by the vacuum system, supplemented by air pressure on the supply tanks.

The underframe consists of two 9-in. 25-lb. steel channels spaced 33 in. apart over the outside faces. The drive shaft is carried back through universal joints to the clutch and transmission, which are located under the middle of the underframe. Power for the air compressor and elec light generator are taken off this shaft, in the former cas through a silent chain drive and in the latter through a belt. The transmission provides three speeds forward with a reduction of nearly five to one in low. The reverse gear is specially designed for railway service.

The driven shaft from the transmission passes into a drop gear case just back of the transmission, from this shaft the power is carried down to the drop shaft by a silent chain drive. The shafts inside the case carry two sets of gears. Those on the driving shaft are permanently keyed to the shaft while those on the drop shaft are connected to the shaft by a three position clutch. These gears provide speed ratios of 1.1 to 1 and .76 to 1 for each transmission speed, the



Maximum Size Floor Plan of the Russell Motor and Trailer Cars

purpose being to permit the motor to be operated at a speed lower than that provided by the normal ratio, when the car is traveling at high speed under conditions which do not require heavy duty from the motor.

The drop shaft extends through the case in both directions and from it flexible drive shafts are carried forward and backward to a gear case on the inside axle of each truck. This gear case contains a bevel pinion, supported on ball bearings, which meshes with a bevel gear attached to the axle. The gear case is carried on the axle itself, but attached to it is a torsion arm which is spring supported on a bracket attached to the truck crossframe.

The trucks have a wheelbase of 4 ft. 8 in. They are built up of cast steel pedestal frames of 9-in. I section, connected by structural steel cross members of channel section, and weigh 3,750 lb. each. The side and cross members are joined by top and bottom gusset plates which are riveted to the chan-

...es on the top and bottom ... cast steel wheels 24 in. in ... solid steel axles. The outer and are fitted with ¼-in. ...bearings. The bearings are ... a maximum weight of 40,000 ... mounted in removable cages ... journal box on which the truck ... single coil springs. ...ggage compartment and the loca... in the trailer car, the floor plans ...ylvania coaches are similar to those ... which are the arrangements of the ...odies. The bodies of the Maryland ... built separate from the underframes, ...urely bolted. The overall height is 11 ... rail and the floor is approximately 42 in. ...he bodies are of wood frame construction ...ning. The trailer of the Maryland & Penn... is fitted with a blind vestibule at the front end, ... heater is located; the steps at the rear end of ... car serve the front end of this car. The regular ...ent of the builder, however, provides for vestibule ...es at both ends of the trailer car and at the rear end ...e motor car. The vestibules are fitted with side, end ...d trap doors.

Each car is fitted with a toilet and the trailer car carries a small Arco Ideal hot water heater. The motor car is heated by the motor exhaust, a portion of which may be diverted through metal ducts carried along the sides of the car just above the floor.

The cars are fitted with Westinghouse self-equalizing automatic brakes. The brake heads and shoes are of the M. C. B. type and the couplers are Van Dorn vertical plane type, one-half M. C. B. size. The motor car is fitted with a pilot, an electric headlight, a bell, air operated whistle, and marker brackets, to conform to steam railroad requirements.

Freight Car Loading

WASHINGTON, D. C.

THE USUAL END of the year seasonal decline in freight business manifested itself during the week ended November 4, when the total revenue freight car loading was 994,827 as compared with 1,014,480 in the week ended October 28, which marked the peak for this year. The loading for the week of November 4 was, however, 157,251 cars greater than that for the corresponding week of last year and 79,212 cars greater than that for the corresponding week of 1920. As shown by a chart published by the Car Service Division of the American Railway Association, the peak loading this year was from one to five weeks later than it was in the four preceding years. In 1918 the peak was reached in the week of September 23, when 989,788 cars were loaded; in 1919, in the week of September 23, when 995,901 cars were loaded; in 1920, in the week of October 14, when 1,018,539 cars were loaded, and in 1921, in the week of October 21, when 964,811 cars were loaded. Prior to 1918 the car loading figures were not compiled but the ton-mile figures show the peak to have been reached in 1916 about October 1 and in 1917 the peak was in May, shortly after the United States entered the war.

The peak for 1922 was only three-fourths of one per cent below the record for any single week in the history of the railroads. The decline from the high point is usually very rapid toward the end of the year as the wholesale shipments of Christmas goods cease, the grain reaches the elevators, the lakes freeze up and reserve stocks of coal have been accumulated, but as the result of continued heavy coal shipments and the delayed movement of grain because of car shortage in the west it is expected that the decline this year will be less abrupt. For two weeks the loading this year

has been greatly in excess of that for the corresponding weeks of any previous year.

The principal decrease as compared with the preceding week was in miscellaneous freight, which showed a reduction of 12,668 cars. There was also a decrease in coal of 5,851 and livestock of 2,915. Grain loading showed a decrease of only one car. There were also slight decreases in forest products and ore, but merchandise l. c. l. increased 1,057 cars. As compared with the corresponding week of last year there were increases in all classes of commodities except merchandise and in all districts except the Pocahontas. As compared with the corresponding week of 1920 there was an increase in all classes of commodities except coal, coke and ore and in all districts except the Pocahontas and the North Western.

The summary as compiled by the Car Service Division is given in the accompanying table.

In a bulletin issued last week the Car Service Division said that there is no index of current business conditions more reliable than the loading of miscellaneous freight on the railroads and, calling attention to the fact that miscellaneous loading for the week of October 28, 368,338, had exceeded all previous records, the bulletin said: "If there existed any adjusted period in the country's history which might with certainty be termed normal, the present record car loadings indicate a full and complete recovery from the post-war deflation.

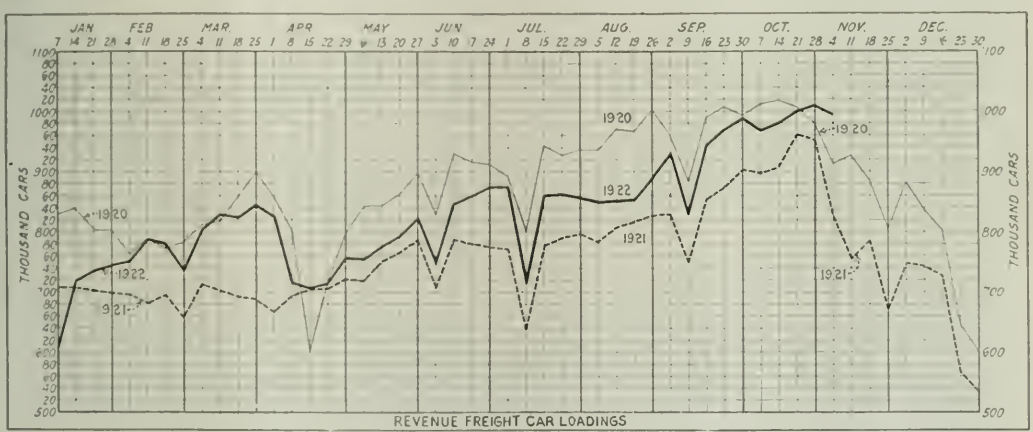
"The fluctuation in the progress of agriculture and industry during and since the war is depicted in the depressions and peaks of the curves for the various years, and an analysis of economic conditions existing during periods of low carloadings gives a fairly accurate picture of the causes of price decline and periods of inflation.

"In analyzing the trend of the loading for 1922 in relation to former years, it will be noted that in spite of the fact that the year was commenced with extremely low loadings, a gradual and healthy improvement is indicated up to the period of the coal strike. This arrangement in this industry, coupled with the effect of the shop strike on the railroads which commenced on July 1, retarded the accomplishment of an immediate return to a period of exceptionally heavy carloadings and an upward trend of prices. Commencing in August, however, the recovery of the railroads was rapid and with the resumption of coal mining in the union fields carloadings have increased to a point where for the week ending October 28 they were but a fraction of one percent under the highest week in the history of the railroads.

"While the general trend of the curves indicates a falling off of business during the months of November and December, this period has been forced ahead during 1922 to a point where we can reasonably expect a continuance of exceptionally heavy loading this year beyond the period of prior years. It is reasonably certain, therefore, that the entire year of 1922, when completed, will be indicative of the fact that business conditions throughout the year and the performance of transportation will lend special emphasis to improved economic conditions and a return to so-called normal conditions."

Earlier in the year the Car Service Division had made an estimate, based on previous experience and assuming a settlement of the coal strike at an earlier date than was realized, that a loading of 1,100,000 cars might be attained by October 21, but the coal strike lasted for some weeks longer and the shop strike also intervened.

The railroads furnished a slightly larger percentage of the open top cars required during the week of October 28 than during preceding weeks, 61 per cent as compared with 59 the week before. While 673,638 cars were required, 408,816 were furnished and 378,092 were loaded. For coal loading the percentage was 57 as compared with 54 furnished the week before.



The freight car shortage for the week ended on October 30 averaged 179,239, an increase of 12,890 cars over the average for the preceding week. The shortage included 91,039 box cars, an increase of 9,305, and 47,273 coal cars, an increase of 698. The largest shortage reported was in the Central Western district, 45,887, while the shortage in the North Western district was 39,164, but the greatest demand for box cars was in the North Western district, where shortages of 27,160 were reported.

The railroads on November 1 had 249,960 freight cars in need of repairs, or 11 per cent of the cars on line. This was a reduction of 20,085 cars since October 15 last. This also was the smallest number of freight cars in need of repairs since March 1, 1921. Since July 1, the date on which the shopmen's strike began, there has been a reduction of 74,623 cars in the number of bad order cars, the total on that date having been 324,583, or 14.3 per cent of the cars on line. On November 1 last year, the number of bad order cars was 345,201.

Of the total on November 1, 198,669 were in need of heavy repairs, a reduction of 16,253 cars since October 15, and 51,291 in need of light repairs, a decrease of 3,832 since October 15.

Effect of the Elections on Railroad Legislation

WASHINGTON, D. C.

AMONG THE QUESTIONS most frequently raised in discussions as to the significance and probable results of the recent elections, which will have the effect of greatly narrowing the present large Republican majorities in Congress, is the one as to how the transportation act will be affected. It is expected that the defeat of numerous of the more conservative of the Senators and Representatives who voted for the law two and a half years ago, and their replacement in many cases by men of more radical tendencies, will tend to renew the agitation which has been carried on since early in 1921 for a repeal of the section under which the Interstate Commerce Commission is directed to make rates in an effort to produce a predetermined percentage of return on the value of the railroad property. Along with this goes the demand for a restoration of the former powers of the state railroad commissions, as the object in both cases is to bring about reductions in freight rates.

However, many of those who are anxious to see the law, or at least its rate-making provisions, given a complete and fair trial without important amendment under conditions somewhat more normal than have prevailed since its passage, see no occasion for serious alarm for some time to come. The new Congress does not get on the job until next December, unless something should happen to force President Harding to call an extra session after March 4, which he now hopes to avoid, and in that time much may develop, just as the improvement in business conditions during the past few months has already changed a general complaint of high rates on the theory that they were stifling traffic to a demand for more cars in which to ship a record-breaking volume of traffic.

While many of those who have just been elected conducted their campaigns to a considerable extent on the issue of opposition to the law, it is much easier to claim than it is to prove that there has been anything like a plebiscite on the question, and until March 4 the Congress will consist of those who have successfully withstood the demand for an emasculation of the act during the past year and a half. The Congress so many of whose members will be retired to private life as a result of the election was criticized as a "do-nothing" Congress. One of the things it did not do was to reduce freight rates, but if good business continues through another year and the Interstate Commerce Commission continues to demonstrate occasionally that section 15-a is no bar to such rate reductions as it thinks justified, even though it may be used as the basis of an argument against reductions it does not think justified (as in the recent transcontinental rate cases), interest in the freight rates may not be so keen in another year as it was last year and the first part of 1922. Also the spectacle of a deadlocked Congress, or a deadlock between the administration and Congress, may be sufficiently interesting to allay the demand which is so prevalent in hard times for Congress to "do something." There is some uncertainty as yet as to the extent to which the radical element, which can hold the balance of power in the new Congress, will be able to so organize itself as to make the necessary trades to put through the legislation it desires, or as to whether it will, as in the past, be mainly successful in obstructive tactics. Even if a majority vote can be secured, there is always the question of obtaining a two-thirds vote to override a presidential veto. As a Senator, Harding did not take part in the final vote on the transportation act, but he was paired in favor of it and he has never expressed any sympathy with the proposals for seriously modifying it, except as to the labor provisions.

The Esch-Cummins bill was not handled exactly as a partisan measure and it was approved by a Democratic President, although most of the votes by which it was put through were Republican and a majority of the Democrats in both the Senate and the House voted against it. Criticism of the act also has been to a considerable extent non-partisan and some of the loudest demands for a repeal or amendment of the rate-making provisions of section 15-a have come from Republicans—notably Senator Capper, who had voted for the bill—but a great deal of denunciation of the law has come as a matter of course from the Democratic side. The great reduction in the Republican majorities in both the House and the Senate in itself, therefore, gives some reason for apprehension but of greater importance is the large number of radicals who have been elected to Congress, regardless of their party affiliations. Among these are such men as Brookhart, Shipstead, Howell and Wheeler, who are expected to form an alliance with Johnson, Borah, LaFollette, Norris and others of the so-called radical group in the upper house, where the Republican majority is so slender that by sticking together they could easily exert a powerful influence on legislation. C. C. Dill, who succeeds Poindexter from Washington, has also been a lecturer for the Plumb Plan League.

In the Senate there will be 52 Republicans and 44 Democrats, but 19 of the Republicans have been classified as radicals, "progressives" or liberals, and 15 of them constitute the "farm bloc," while taking the Senate as a whole, only 40 may be considered conservatives and 56 as liberals or radicals. The Senate committee on interstate commerce, which handles most railroad legislation, has lost four conservative Republicans, Townsend of Michigan, Poindexter of Washington, Kellogg of Minnesota and Frelinghuysen of New Jersey, and two conservative Democrats, Pomerene of Ohio and Myers of Montana. All of these were defeated in the elections except Myers, who was not a candidate. All of them had voted for the Esch-Cummins bill. Senator Cummins, one of the principal authors of the law, will probably remain as chairman of this committee, but he is in poor health and LaFollette is next in line.

In the House there will be 230 Republicans (including one socialist, one independent and one farm labor member) and 205 Democrats, but they have been classified as 210 conservatives and 225 liberals. The House committee on interstate and foreign commerce will lose the following Republicans as the result of the election, including those who were not candidates for re-election: Sweet of Iowa, Stiness of Rhode Island, Jones of Pennsylvania and Burroughs of New Hampshire. These were all considered conservatives and all voted for the Esch-Cummins bill. Representative Johnson of Mississippi, a Democrat, who was against the bill, was also defeated. The chairmanship of this committee will probably remain with Samuel E. Winslow of Massachusetts, a conservative.

At the present time the railroads have no program of affirmative legislation to ask of Congress, although they are vitally interested in proposed anti-strike legislation and other changes in the labor provisions of the law, and it is quite likely that the principal result of the changes in Congress will be to merely increase the number of hostile bills they will have to fight. There are some who believe that the chances of legislation to prevent a recurrence of the shop strike of this summer and of the threat of a trainmen's strike that caused some concern a year or so ago, have been reduced by the effect of the vote demonstration upon the present Congress. This is on the theory that the vote represented a general repudiation of the ideas that have been expressed by the present head of the administration. However, the chances for such legislation were somewhat doubtful before, in spite of the rather strong expressions of public opinion at the time of the strikes, and the intentions of the administration along that line have not yet been definitely announced.

The primary purpose of the extra session called for November 20 is to try to pass the ship subsidy bill, but it is

considered probable that the President will also propose some amendments to the labor provisions of the transportation act, such as he has suggested in the past, in his address or message to Congress at the opening of the session. Some of the leading Senators have been giving some consideration to the subject for some time and Chairman Cummins, on his return to Washington from Iowa, called at the White House on Tuesday and made an engagement to confer with the President later on proposed railroad legislation.

Senator Cummins will endeavor to have Congress consider amendments to prohibit strikes and, by way of compensation for this restriction, to guarantee some kind of a "living wage"; also to transfer the Labor Board from Chicago to Washington and possibly to make it an adjunct of the Interstate Commerce Commission and reorganize it to consist of members representing the public only. The Senator also wants to try again to enact a compulsory consolidation measure and it is understood that he is now considering a plan for the creation of a company to own all railroad equipment. While legislation of this kind may be put through the Senate, the prospects for action in the House are regarded as much less certain, particularly as the introduction of the subject will be a signal for arousing the demand for a repeal of the rate section, and as the short session will be rather crowded with the subsidy bill and the necessary appropriation bills anyway.

Pacific Type for Passenger and Fast Freight

Latest Design for Atlantic Coast Line Is Especially Adapted to Conditions on That Road

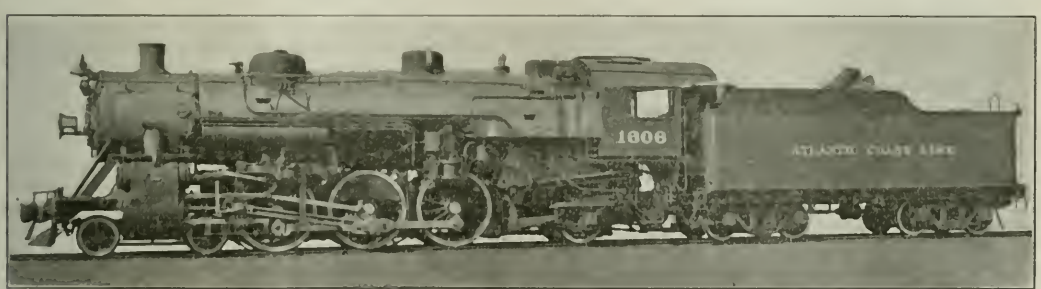
THE MAIN LINE of the Atlantic Coast Line is characterized, throughout the greater part of its length, by comparatively light grades and curves. A heavy passenger traffic is handled, especially during the winter tourist season, and the freight consists largely of perishable goods, which are moved on fast schedules. Up to 1911 a large part of this traffic was handled with locomotives of the Ten-wheel type, but the increased weight of passenger trains required locomotives of greater power than could be obtained with this wheel arrangement and, in the year mentioned, the Pacific type was adopted for the heaviest passenger traffic. These Pacifics, built by the Baldwin Locomotive Works, were subsequently followed by others built on various orders. The latest development of the series is shown in the accompanying illustration of engine 1606, which is one of 45 ordered from the Baldwin Locomotive Works in 1922. A comparison of the leading dimensions of these various Pacific type designs is given in the following table.

Date	Cylinders	Diameter of drivers, in.	Steam pressure, lb. per sq. in.	Grate area, sq. ft.	Water heating surface, sq. ft.	Superheating surface, sq. ft.	Weight on drivers, lb.	Weight, total engine, lb.	Tractive force, lb.
1911	22 in. by 28 in.	72	185	54.2	3,539	...	138,950	220,850	29,600
1912	22 in. by 28 in.	72	200	54.2	2,917	590	139,800	225,900	32,000
1914	22 in. by 28 in.	68	200	54.2	2,635	524	140,400	226,500	33,900
1918	23 in. by 28 in.	68	200	56.5	3,345	792	151,050	243,850	37,000
1922	25 in. by 28 in.	69	200	66.7	3,349	830	166,770	275,950	43,000

A combustion chamber was used in the design of 1914, reducing the tube length from 20 ft. 6 in. to 18 ft. 6 in. This accounts for the reduction in heating surface.

The new locomotives, which are designated as Class P-5-B, are closely similar, in weight and general dimensions, to the standard light Pacifics built for the U. S. R. A. The most important change is a reduction in the driving wheel diameter from 73 to 69 in. This raises the tractive force and gives a ratio of adhesion in the new locomotives of 3.88. The weight on drivers is thus utilized fully and the hauling and steaming capacities are large in proportion to the wheel loads carried in this design.

The boiler has a maximum diameter at the dome ring of 86 in. and is built with a conical connection in the middle of the barrel. This provides an ample water space under the combustion chamber, which is 23½ in. long. The firebox seams are welded throughout and the tubes are welded into the back tube sheet. Flexible bolts stay the combustion chamber and throat, and there is a partial installation of such bolts in the sides and back head. The firebox contains an arch, and the labor-saving equipment includes a power-operated fire door and grate shaker and a coal pusher on the tender.



Pacific Type with 69 in. Drivers for Use in Mixed Service

The valve gear is of the Baker type, controlled by the Ragonnet power reverse mechanism. The valves have a steam lap of 1⅛ in. and an exhaust clearance of ¼ in. and are set with a travel of 6½ in. and a lead of ¼ in. The guides and crossheads are of the alligator type and the piston rods, in accordance with Atlantic Coast Line practice, are bolted to the crossheads instead of keyed.

These locomotives have ample speed capacity for the

passenger train schedules on the Coast Line, and they are also well adapted to fast freight service on lines having moderate grades. They are, therefore, an excellent "all-around" engine for work on this road.

Further particulars are given in the table of dimensions.

TABLE OF DIMENSIONS, WEIGHTS AND PROPORTIONS

Type	4-6-2
Service	Passenger and fast freight
Track gage	4 ft. 8½ in.
Cylinders, diameter and stroke	25 in. by 28 in.
Valve gear	Baker
Valves, kind and size	Piston, 14 in. dia.
Weight in working order:	
On drivers	166,770 lb.
On front truck	54,330 lb.
On trailing truck	54,850 lb.
Total, engine	275,950 lb.
Tender	194,050 lb.
Wheel base:	
Driving	13 ft. 0 in.
Rigid	13 ft. 0 in.
Total engine	34 ft. 11 in.
Total engine and tender	70 ft. 9½ in.
Driving wheels, diameter outside tires	69 in.
Boiler:	
Type	Conical
Steam pressure	200 lb. per sq. in.
Fuel	Bituminous coal
Diameter first ring, outside	74⅝ in.
Firebox, length and width	114⅛ in. by 84¼ in.
Tubes, number and diameter	188—2¼ in.
Flues, number and diameter	36—5½ in.
Tubes and flues, length	19 ft. 0 in.
Grate area	66.7 sq. ft.
Heating surfaces:	
Firebox, including combustion chamber and arch tubes	273 sq. ft.
Tubes and flues	3,076 sq. ft.
Total evaporative	3,349 sq. ft.
Superheating	830 sq. ft.
Combined evaporative and superheating	4,179 sq. ft.
Tender:	
Water capacity	10,000 gal.
Fuel capacity	16 tons
General data, estimated:	
Rated tractive force	43,000 lb.
Cylinder horsepower	2,082
Weight ratios:	
Weight on drivers ÷ total weight	60.4
Weight on drivers ÷ rated tractive force	3.88
Boiler ratios:	
Combined heating surface ÷ cylinder horsepower	2.01
Tractive force ÷ combined heating surface	10.28
Tractive force × diameter drivers ÷ combined heating surface	710
Cylinder horsepower ÷ grate area	31.2

National Industrial Traffic League

THE National Industrial Traffic League held its annual meeting at Hotel Commodore, New York City, on Wednesday and Thursday of this week, with about 400 members in attendance. W. H. Chandler, of Boston, president of the league, occupied the chair, and J. H. Beck, of Chicago, executive secretary of the league, was secretary of the meeting.

The first day was taken up with the first two items on the program, revision of the constitution and an address by Hon. James C. Davis, director general of railroads, United States Railroad Administration. Mr. Davis gave a brief statistical statement of the work which has devolved on the railroad administration since the roads were relinquished by the government and explained, by way of reply to criticisms, the reasons for certain of his acts and decisions. He said, in part: The taking over and operation of the railroads by the federal government, as a measure necessary to the successful prosecution of the World War, was a unique proposition, and the liquidation of the innumerable liabilities and the adjustment of the many and complex controversies resulting is a fascinating story. It was probably the largest liquidation problem ever undertaken. The claims presented for adjustment may be roughly divided into the following classes: 1. Claims of the railroad corporations. 2. The innumerable claims of third persons growing out of the operation of the property. 3. Claims of freight shippers asking reparation. 4. Claims of the carriers for the use of their property.

The property included 250,000 miles of main track—188 large systems and more than 800 short lines. The gross earnings of the property for the calendar year 1917, just prior to federal control, were $4,050,463,579; net railway operating income, $974,778,937. Up to November 1, 1922, the total claims filed by the corporations on final settlement amounted to $958,924,305. Of these claims presented, $677,216,939 have been adjusted. The net amount paid in making these adjustments was $163,509,040.

The settlements so far concluded represent 75 per cent of the mileage under federal control. With the exception of one first class road, adjustments have been made or are still pending with all companies which have presented their claims. When you consider the extent of this property, the opportunity for controversy seems to be almost unlimited, and the adjustment of 75 per cent of the claims without recourse to the courts is a result that is worthy of special consideration. The notion that the railroads were returned to their owners in a much worse physical condition than when they were taken over is not borne out by the investigations made by the Railroad administration. The cost of labor and material greatly increased as between the test period and the period of government operation, but the vast expenditures of the United States Railroad Administration were made under the direct personal supervision of the men who during private ownership had charge of and operated these identical properties, and I believe it is a fair conclusion that the government did everything humanly possible to maintain the property in its possession at the same standard of maintenance established by the owners during private control. Immediately after federal control the railroads did the largest business in their history; if the roads were returned in a dilapidated condition, this result could not have been accomplished.

The railroads suffered serious damage as the result of federal control, but it was an economic rather than a physical damage. When returned they were being operated at a deficit, and were faced with the unpopular and difficult burden of asking an increase in rates and a reduction in wages.

Claims of Third Persons

The claims of third persons consist of an innumerable number of demands of employees and third persons, which may be generally described as based upon personal injuries, fires, and loss and damage. These claims are being adjusted through the agency of the corporations upon whose lines the claims originated. While much progress has been made there were still pending on July 1, 1922, over 14,500 law suits, involving an aggregate of $75,000,000.

Some criticism has arisen as to the attitude of the Railroad Administration in regard to the statute of limitations as to claims against the Administration. The Transportation Act provides that proceedings to enforce claims cannot be commenced after February 28, 1922. If a claim cannot be enforced by suit, it is quite clear that any payment made after the statute has run must be considered a voluntary payment, and I have held that, as a public officer, I cannot disburse public money in the way of voluntary payments. * * * Every one presenting a claim would insist that it was meritorious, and the Administration would at once be in the position of arbitrarily determining what in its opinion was a meritorious claim. The position of a public officer, in the matter of waiving statutory provisions is very different from the position of an individual or a private corporation under similar circumstances. While in some few instances the rule adopted by the Administration has worked an apparent injustice, there are a great flood of claims wholly without merit that have been disposed of, and I feel quite confident that any impartial survey of the situation will justify the conclusion adopted by the Administration.

There is one series of claims that is very unusual. In October, 1918, a great forest fire occurred in Minnesota. An area of some 1,500 square miles was burned over, and several

towns and cities were totally destroyed, notably the town of Cloquet, with a population of some 10,000.

Notwithstanding the fact that there were many fires originating in the burned over section entirely independent of railroad origin, and also notwithstanding the fact that during the period of the conflagration a hurricane was blowing at the rate of 60 miles an hour, the courts of Minnesota have held that if, as a matter of fact, it can be shown that a fire set by a railroad under federal control materially contributed to the conflagration which destroyed individual property, the Railroad Administration is liable. In the trial of some test cases, the jury found against the Railroad Administration, and the Supreme Court affirmed the verdicts.

As a result of this disaster, there were instituted over 10,000 law suits, making claim for an aggregate of some $50,000,000. Having exhausted the defenses which were available to the Administration in litigation, a final conclusion was reached to adjust the losses occurring in that portion of the burned area which was tributary to federally controlled railroads. Up to this time, some 4,000 of these cases have been adjusted, representing aggregate demands of some $20,000,000. The amount paid out, to date, is about $8,000,000, and the total cost to the Government, in completing these adjustments, will be from $15,000,000 to $20,000,000.

Reparation Claims

The adjustment of reparation claims has been the subject of some dissatisfaction. Claims growing out of the charge of unjust rates can be adjusted only after approval by the Interstate Commerce Commission. If the claim is on the informal docket, the approval is made on the recommendation of the Administration. If on the formal docket, the matter must be the occasion of an affirmative finding or order of the Commission requiring payment. * * * The formal awards made by the Commission many times involve quite difficult and complex questions of law. In many important controversies there are differences of opinion as between the members of the Commission, resulting often in dissenting opinions, and at times there is enough involved in doubtful controversies to justify asking the decree of a court, and the Railroad Administration has simply exercised a privilege always accorded carriers under private ownership, of submitting doubtful questions of law to the court. This privilege has been very sparingly exercised.

Since July 1, 1920, when the Railroad Administration commenced paying reparation awards direct, there has been received from the Commission 2,048 awards which have not been subsequently reopened by the Commission.

Of this total, there were 523 formal awards, of which payment has been authorized in 486 cases, involving total payment of $1,707,594. Payment of all the informal awards has been authorized, the total aggregating $1,014,705. There are at this time only 82 awards for which vouchers have not been drawn. Of these 55 are held pending an examination as to whether or not the claimant is indebted to any federally-controlled road. This investigation is required by the provisions of a federal statute. The remaining 37 awards are held pending investigation * * *. The final settlements with the railroads should be completed by say June 30, 1923, and the remaining outstanding matters should be substantially disposed of by the end of the calendar year 1923.

The federal control of railroads was undoubtedly a necessity as a war measure. Whether or not lessons of value were learned as a result of this venture may be the subject of difference of opinion and debate. The cost to the Government was very large. I believe, when the books are finally closed, it will aggregate approximately $1,800,000,000 to $2,000,000,000; $1,200,000,000 to $1,300,000,000 as the general loss by reason of the 26 months of operation, and $600,000,000 to $700,000,000, covering the six months' guaranty period and the adjustment with the deficit short line railroads.

Operating and Maintaining Oil-Burning Locomotives*

In the operation of an oil-burning locomotive great attention should be given to avoiding sudden and great changes in fire-box temperatures. The fireman, by inattention in letting the steam drop back and then forcing the fire to bring the steam up again, not only wastes fuel but works a great hardship on the boiler. Owing to the rapidity with which the temperature can be dropped by cutting down the fire, it is of utmost importance to have the engine crew give special attention to the use of the dampers and handling of injectors or feed water heaters and the blower to prevent abuse of the boiler. In starting a train the locomotive burning oil can develop its maximum power without fear of holes being torn in the fire, but if care is not used in handling the oil-burning engine, this feature will adversely affect fuel economy by producing uneconomical acceleration.

The fuel oil should be heated to about 100 deg. F. in the tank to give the best results, although with the use of very heavy oils it has been necessary to heat the oil to 150 or 180 deg. F. Excessive heating damages the oil by driving off the lighter gases and causing the asphaltum to separate from the lighter oil. This makes the flow to the burner irregular and it is difficult to carry a light fire when drifting or standing.

Frequent sanding of the flues to prevent accumulation of soot promotes economy. Sanding should be done where there is no hazard of starting fires and when the engine is working under heavy conditions at a long cut-off. The intervals between sanding depend upon conditions of operation.

The operation of the firing valve and atomizer require close attention to take care of the varying boiler load, due to changing cut-off. Careful attention in the use of the atomizer and firing valve will eliminate black smoke, except where mechanical defects interfere. Heavy black smoke is not only a direct fuel loss, but rapidly deposits soot on the flues which interferes with the heat transfer to the boiler. A clear stack is deceiving. It may mean only a small amount of air, or it may mean as much as 300 per cent excess. A clear stack is ideal when the gas analysis at the same time shows a high percentage of carbon dioxide, a very low percentage of free oxygen and no carbon monoxide. Under operating conditions it is good practice to regulate the supply of air until a very light brown haze is shown at the stack, which will reduce the amount of excess air and thereby produce economy in the use of fuel. The presence of smoke does not always mean insufficient air. Poor atomization, poor mixture of air and oil, unconsumed oil striking cooling surface and poorly designed or bricked fire-pan frequently cause smoke when the air supply may be far in excess of that required.

Maintenance

Burners should have sufficient air admitted around them to prevent them from becoming heated to a temperature causing carbonization of the fuel at the mouth of the burner, resulting in deflecting the oil spray. The best results have been obtained with a burner located at a point from six to nine inches above the floor of the fire-pan.

The fire-pan should be free from all leaks, except the air openings provided for the combustion of fuel. Leaks in many cases cause the brick work to become loose. Permitting the brick to fall into the bottom of the fire-pan deflects the oil spray. Much can be accomplished in maintaining the brick work by having the fire-pan properly braced, eliminating vibration. Should any carbon be found on the flash-

* Abtsract of a report presented before the convention of the Traveling Engineers' Association.

wall, this should be removed to permit the oil spray to come in contact with a reasonably clean wall.

Both small and superheater flues should be inspected frequently, as there is a possibility of sand collecting in the large flues when leaks exist in the front end. Any restriction in the flues will affect superheating and evaporating efficiency.

The front end arrangement of an oil-burning locomotive is quite similar to that of a coal-burning locomotive, with the exception of the absence of the deflector plate and the necessary netting required to prevent cinders from emitting from the stack. The absence of netting permits of a freer flow of gases in the front end of oil-burning locomotives. If an oil-burning engine is properly drafted and the firebox properly bricked to prevent the localization of high temperatures, the cost of maintenance is about the same as that of a coal-burning engine.

Economic Advantages of An Oil-Burning Locomotive

In comparing the operation of an oil-burning locomotive with a coal burner, the locomotive burning oil has a number of distinct advantages: (1) Reduction in amount of smoke; (2) absence of cinders; (3) largest type of power can be operated without the mechanical stoker; (4) less loss of fuel at the stack; (5) hazard of starting fires along right-of-way reduced; (6) with careful handling the steam can be kept closer to the maximum boiler pressure without frequent or prolonged openings of the pop valve; (7) the fireman is permitted at all times to observe signal indications and operating rules; (8) the use of oil permits a more accurate check of the fuel consumption, which is of great value in compiling individual performance of enginemen, firemen and locomotives; (9) quicker turning of the power may be accomplished with the use of oil, also a reduction of terminal charges because of the reduction in hostler service and the elimination of ash-pit service; (10) better system and lower cost of fuel distribution through the use of pipe lines.

The use of oil is also conducive to longer locomotive runs, as for equal heat value oil occupies much less space than coal. Furthermore, oil when stored does not lose its calorific value as does coal, nor are there any difficulties arising from disintegration such as may be found when coal is stored.

The report is signed by J. N. Clark (Southern Pacific), chairman; J. C. Simino (Southern Pacific), J. C. Brennan (N. Y. C.), E. F. Boyle, W. G. Tawse (Superheater Co.), and Dumont Love (F. E. C.).

Discussion

The principal points brought out by the discussion were the necessity for care in firing up the oil-burning locomotive to avoid the risk of gas explosions in the fire-box, the value of the stack cover for retaining heat in the boiler when the locomotive is in the terminal and a doubt as to whether the risk of roadway fires is entirely eliminated by the use of oil as fuel.

The practice outlined to avoid explosions in firing up oil-burning locomotives, particularly when the fire is to be lighted in a hot firebox, is first to open the blower valve, open the fire door, then turn on the atomizer and finally open the oil valve after the burning waste for igniting the oil has been placed in the firebox. The blower and the open door permits a sufficient volume of air to pass through the firebox to prevent the accumulation of gas which may be formed in the hot firebox should the oil be slow in igniting.

The use of stack covers does not seem to be general practice although a number of roads use them to some extent. Instances were cited where, by the use of the stack cover, it has been possible to retain sufficient steam pressure in the boiler after from 8 to 12 hours in the roundhouse, to permit the engine to be fired up with its own steam in the atomizer.

L. D. Gillett (Dominion Railroad Commission of Canada) raised the question as to the fire hazard of oil-burning locomotives, stating that in Canada an investigation as the result of fires in oil-burning territory had developed the fact that burning tar has been thrown from the stack in quantities sufficient to set fire under favorable conditions, and that a change in the refinery process has eliminated the trouble. The discussion thus started brought out the need of supervision to insure that cigarettes or cigar stubs, pieces of waste, etc., be not thrown into the sandbox, and thence into the firebox, through the tubes and out the stack, only partially consumed, to set fire along the right-of-way and on the adjoining property. Through certain agricultural districts, where considerable grain is grown, the Southern Pacific uses netting in the front ends of its locomotives during the dry season as a precautionary measure against the small sparks thrown out when sanding the tubes. Although it is evident that fires can be set from oil-burning locomotives, the consensus of opinion of the members who have had experience with them, is that the risk is incomparably less than with coal-burning locomotives.

Oregon Wants More Railroads

WASHINGTON, D. C.

THE PUBLIC SERVICE COMMISSION of Oregon has filed a petition with the Interstate Commerce Commission, under paragraph 21 of section 1 of the interstate commerce act, asking it to order the Central Pacific, Southern Pacific, Oregon-Washington Railroad & Navigation Company, Oregon Short Line, Oregon Trunk and Deschutes railways or some one or more of them to extend and construct a line of railroad from Crane, Ore., westward to a connecting point that will give market outlets in California and western Oregon cities to eastern, central and southern Oregon, and to extend and construct connections therewith from the terminals of the present railroads at Kirk and at Bend, Ore., and that such further order be made giving such constructed lines such joint and common use of existing lines as will warrant such construction and thereby adequately serve the territory of eastern, central and southern Oregon and open it to the consuming markets of the East and the Pacific coast markets, ports and terminals. The petition also asks that such railroads be so grouped and such joint and common use be ordered as to assure maximum competition and maximum use of cars, equipment and facilities.

The petition says that there is no railroad extending southeastward from the western part of the state, south of Portland, to any point in eastern Oregon or to that part of southern Oregon lying east of the Cascade mountains; that the existing routes through the state are so circuitous that they constitute continual inconvenience to all inhabitants of the state and are particularly disadvantageous to the marketing of its products; that there is no adequate and efficient line from Lakeview, Klamath Falls, Crane, or Burns to Portland and that the public convenience and necessity require that an adequate and efficient line be constructed from Crane, Bend, Kirk and Eugene to Odell, from Crane to Burns, from Lakeview to Klamath Falls, or from Lakeview north to connect with the proposed Crane-Odell line.

The Oregon commission says that there exist practicable and feasible routes for these extensions and that surveys have been made and in some instances construction actually begun many years since but never completed.

After setting forth the resources of the region, the petition asserts that prompt and effective administration of the state government and the exercise of their duties by state and county officials require more direct routes between central and southeastern Oregon and the northwestern part of the state and that under existing conditions there has always been an annual car shortage in the territories described.

General News Department

The American Railway Association is to hold a special session at the Blackstone, Chicago, on Wednesday, December 6, to consider rules relative to distribution of freight cars and methods of securing observance of car service rules.

The regular monthly meeting of the Western Railway Club will be held at the Auditorium Hotel, Chicago, on Monday, November 20, at 7:30 p. m. Samuel O. Dunn, editor of the *Railway Age*, will speak on "Industry and the Man."

The Pennsylvania's grain elevator at Fifty-seventh and Leavitt streets, Chicago, was destroyed by fire on November 11 with an estimated loss to the building of approximately $200,000, in addition to which 100,000 bushels of oats were destroyed.

The annual meeting of the Telegraph and Telephone section of the A. R. A. will be held at the Hotel La Salle, Chicago, on December 12, 13, 14. This meeting was to have been held in Colorado Springs on September 19, 20, 21, but was postponed on account of railway conditions at that time.

The Chicago, Rock Island & Pacific and the Chicago Great Western, at a hearing held in Des Moines last week, were granted the right to appeal to the United States Supreme Court in their joint effort to prevent the State of Iowa from collecting property taxes based on the state's valuation. A temporary injunction was granted.

The Car Shortage is to be the subject of a debate to be held before the Transportation Club of Louisville, Ky., on Wednesday evening, November 22. T. B. Turner, assistant superintendent of transportation of the Louisville & Nashville, will speak for the railways, and J. Frederick Howard, traffic manager of Henry Knight & Son, for the shippers.

In a strike of freight handlers at the Waverly (N. J.) transfer of the Pennsylvania Railroad on Monday, November 13, about 250 men went out. Leaders of the workmen's brotherhood told New York reporters that a general sympathetic strike of freight handlers all around New York was in contemplation but so far as can be learned they have taken no serious action. The Pennsylvania has replaced the strikers with new men.

The Regan Safety Devices Company, New York city, announces that the installation of the Regan intermittent contact automatic train control apparatus on the Chicago, Rock Island & Pacific, throughout its Illinois division, 164 miles, double track, is to be begun immediately, with the expectation of completing the work in 100 working days. The directors of the railroad company on Tuesday, November 14, confirmed the decision, announced some time ago, to equip this portion of the Rock Island System in compliance with the order of the Interstate Commerce Commission. The apparatus is now being made at the Regan Company's factory at Niagara Falls, N. Y. That part of this train control system which is already installed, Blue Island, Ill., to Joliet, 25 miles, has been in service three years.

Automatic Train Control Order Modified

The Interstate Commerce Commission has modified its automatic train control order to provide that the Northern Pacific may instal automatic train stop or train control devices on one full passenger locomotive division between Mandan and Dickinson, N. D., in lieu of the installation required on the portion of its line designated in the original order, but the Northern Pacific's petition, in so far as it requests a modification of the order so as to permit of the use of an automatic train stop under the control of the engineman, who may, if alert, forestall automatic brake application and proceed, is denied. The commission has also denied a petition of the Chicago, Burlington & Quincy for a modification with respect to the extent of the installation required on its road, and also the joint petition of the New York Central, Boston & Albany, Cleveland, Cincinnati, Chicago & St. Louis, Michigan Central and the Pittsburgh & Lake Erie, asking a postponement of the date.

Conference on Numbering of Steel Called by A. E. S. C.

A conference to consider the desirability of providing a system of designating qualities or kinds of steels by code numbers, has been called by the American Engineering Standards Committee at the request of the U. S. Bureau of Standards. The conference will be held in Room 704, Department of Commerce Building, Nineteenth street and Pennsylvania avenue, Washington, D. C., at 10 a. m., Dec. 6. This conference will attempt to determine the desirability of applying a uniform numbering system to forging steels, casting steels, structural steels, including plates, tool steels or other steels not so classified.

Railway Development Association

The Fall meeting of the American Railway Development Association was held in Chicago, on November 9 and 10. W. W. Harris, editor of "American Railroads," in the absence of Ivy Lee of the Association of Railway Executives, opened the meeting with a talk on publicity, in which he pointed out the benefits to be derived from taking the public into confidence, especially by personal contact. On Friday morning, J. R. Howard, president of the American Farm Bureau Federation, spoke on the farmers' viewpoint on railroad questions. The afternoon sessions of both days were devoted to round table discussions.

Central Railway Club

The regular meeting of the Central Railway Club, Buffalo, N. Y., will be held on Thursday, November 23, at 2 p. m. The principal speaker will be F. W. Brazier, assistant to the general superintendent of rolling stock of the New York Central, who will read a paper on the training of men to act in supervisory capacities and on the best results in handling men.

At 7:30 p. m. in the Hotel Iroquois, the club will hold its annual dinner. There will be special entertainment features and the dinner will be followed by dancing.

A party of members of the New York Railroad Club plan going to Buffalo on a special car to start from the Grand Central Terminal at 8 p. m. on Wednesday.

The speakers at the dinner will be Ivy L. Lee of New York City and Reverend G. F. Williams of Buffalo.

Convention of Chief Interchange Car Inspectors' and Car Foremen's Association

The Chief Interchange Car Inspectors' and Car Foremen's Association held its annual convention at the Hotel Sherman, Chicago, on Thursday and Friday, November 9 and 10. In addition to the discussion of the changes in the rules of interchange which are to go into effect on January 1, papers on the following subjects were read and discussed: Lubrication of Car Journals, Suggestions for Changes in the Rules for Loading Long Material to Better Accommodate Certain Steel Products; The Maintenance of Tank Cars, and Car Department Apprenticeship System.

The following officers were elected for the coming year: President, A. Armstrong, Atlanta, Ga.; first vice-president, William Westall, New York Central; second vice-president, C. M. Hitch, B. & O.; secretary-treasurer, W. B. Elliott, Terminal Railroad Association of St. Louis.

Railroad Meeting of A. S. M. E.

Three papers on locomotive design and operation will be presented at the railroad session of the annual meeting of the American Society of Mechanical Engineers to be held at 29 West Thirty-ninth street, New York, Wednesday afternoon, December 6. The titles of the papers and the authors are as follows: Steam Distribution in the Locomotive, G. H. Hartman, Locomotive Appliance Company; Stresses in Locomotive Frames, R. Eksergian, Baldwin Locomotive Works; Mechanical Drafting of Locomotives, F. H. C. Coppus, Coppus Engineering Company.

On Wednesday evening the society will hold a joint session with the American Economic Association at which L. F. Loree, president of the Delaware & Hudson, will deliver an address. E. M. Herr of the Westinghouse Electric & Manufacturing Company will speak on the subject of the Human Element in Industry.

Wage Statistics for August

The Interstate Commerce Commission's summary of wage statistics for the month of August, 1922, shows an increase in the total number of employees of 126,250, as compared with the number reported for the preceding month. The number of employees in the maintenance of equipment group, counted as of the middle of the month, showed an increase of 78,936 over the corresponding number for July, the first month of the shopmen's strike, making a total as of August 15 of 299,385 maintenance of equipment employees.

Considerable increase is shown in the average earnings per employee due to a greater proportion of overtime, and the fact that August had 27 working days while July had only 25.

Compared with the previous month, the increase in the number of employees, by groups, was as follows:

Executives, officials, and staff assistants	122
Professional, clerical, and general	9,616
Maintenance of way and structures	28,625
Maintenance of equipment and stores	78,936
Transportation (other than train, engine, and yard)	5,696
Transportation (yardmasters, switch tenders, and hostlers)	97
Transportation (train and engine service)	3,158
Net increase	126,250

A comparison of the number of employees and their compensation, by months, follows:

Month	Number of employees	Total compensation
August, 1921[1]	1,679,927	$227,745,895
September, 1921[1]	1,718,330	223,972,822
October, 1921[1]	1,754,136	237,602,959
November, 1921[1]	1,732,353	225,304,006
December, 1921[1]	1,637,151	214,921,396
January, 1922[1]	1,552,014	205,178,639
February, 1922[1]	1,545,040	194,523,427

English Store Door Delivery Discussed by Terminal Engineers

The subject of English methods of store door delivery was presented by F. C. Horner, transportation engineer, before the Society of Terminal Engineers at the Engineering Societies building, New York City, on November 4. Mr. Horner's paper was attended by a moving picture of the work at one of the large railway freight stations. Following this there was an open discussion covering the salient points of his paper as well as those brought out at the September and October meetings when the subjects of store door delivery and shipping containers were presented. Store door delivery in England is, to all practical purposes, a sidewalk delivery made by the railroads and although this service is optional with the shippers or consignees, about 80 per cent of l. c. l. freight is thus handled. The tariff rates for all of the roads show or will show shortly the charges separated into rail haul and cartage items. A minimum rate is provided and certain exceptions are made such as minerals for instance. No classification is made, however, in regard to cartage. The average rate is approximately $1.50 a ton with an average haul of about 2½ miles in London.

Unless otherwise specified, delivery is always made by the railroad, the aim of the roads being to get the freight out of the station promptly. This arrangement is country wide, the railroads arranging with a local trucker in small towns to handle the l. c. l. shipments when there is not sufficient volume to justify railway owned equipment. Motor trucks are now being used to a limited but growing extent. Car load service will be given when wanted. When a shipper or consignee desires to truck his own freight, he is given every facility and is limited only in one respect. He must deliver or call for freight during certain specified times. The average consignment in England is about 300 lb. as compared to 900 lb. in this country.

A. R. A. Offers Co-operation in Work of Coal Commission

The co-operation of the railroads was tendered to the United States Coal Commission, in a letter sent to John Hays Hammond, the chairman, by R. H. Aishton, president of the American Railway Association, on November 14. Extracts from this letter appear below:

"While the railroads of the country have not been officially addressed by the commission concerning the subjects under investigation," Mr. Aishton said, "it is their desire to be as helpful as possible in aiding the commission to obtain a solution of the problems before them. As you are fully aware, the railroads are the largest users of coal, and are therefore vitally interested in the economic problems concerning this industry, from the standpoint of the consumer, as well as the distributor of the product. The railroads and their various agencies extend their helpful co-operation to the commission with a view of aiding in every possible way in bringing about a successful accomplishment of the tasks before you."

Revenues and Expenses for September

The Interstate Commerce Commission's summary of revenues and expenses for Class I roads for September and nine months of 1922 is as follows:

Item	September 1922	September 1921	Nine Months 1922	Nine Months 1921
Average number of miles operated	235,058.13	234,974.18	235,231.63	234,854.39
Revenues:				
Freight	$355,402,370	$354,841,357	$2,846,610,826	$2,894,218,771
Passenger	[2] 97,504,148	[3] 100,599,536	[4] 802,566,601	[5] 893,687,823
Mail	7,383,568	7,376,941	66,550,312	71,256,168
Express	12,980,046	10,426,998	94,023,878	70,544,920

[5] Includes $24,704,519, sleeping and parlor car surcharge

Traffic News

The Chicago & North Western has issued a booklet entitled "Forty Ways, and More, to California and the North Coast."

The Associated Traffic Clubs of America will hold a special meeting on December 5 and 6 at the Hotel Statler, St. Louis, Mo. The Traffic Club of St. Louis will hold its annual meeting and banquet on the evening of December 5 and delegates to the national meeting are invited to attend as guests of the St. Louis club. The Fort Worth Traffic Club, of Fort Worth, Tex., is the thirtieth club to join the national association.

The National Coal Association, through a special committee, calls upon the United States Coal Commission to take action looking to the furnishing, for the coal industry, of a continuous, regular and adequate supply of the means of transportation. "The railroads of the country should be given sufficient freedom, independence and revenue to enable them to obtain the money necessary to provide proper equipment and other facilities to meet their increasing business. They should be regulated only to an extent necessary to insure the proper use and distribution of these facilities when obtained." The causes of the present difficulties in the coal industry include lack of adequate railroad service and the commission is asked to compare the existing freight rates with the rates existing prior to the war; and also to study the effect of adequate transportation facilities on production and cost of coal.

Hearings before Interstate Commerce Commissioner Aitchison on a proposed revision of the coal car distribution rules, including the question of the right of the railroads to assign cars for railroad fuel, were resumed at Washington on November 15 and are expected to continue for some time. Among the witnesses on the first day were A. G. Gutheim, formerly of the Car Service Division of the American Railway Association, C. H. Markham, president of the Illinois Central, F. H. Alfred, president of the Pere Marquette, and E. J. Pearson, president of the New York, New Haven & Hartford, who testified that the only alternative to the assigned car rule at times of shortage is the confiscation of coal by railroads, which results in a general increase in coal prices. The National Coal Association also expected to put a number of witnesses on the stand. Representatives of the state railroad commissions also sat with Commissioner Aitchison.

J. D. Battle has been appointed traffic manager of the National Coal Association, with offices at Washington, D. C., effective December 1, succeeding John Callahan, who recently resigned to enter the coal brokerage business. Mr. Battle has had extensive railroad service, beginning with the Georgia Railroad, and later with Atlantic Coast Line and Charleston & Western Carolina joint terminals. From 1918 until the end of federal control he was connected with the Car Service Division of the United States Railroad Administration at Washington, handling the subject of intensive loading of, and efficient use of, freight cars. When the carriers were returned to their owners, he was appointed a traveling inspector for the American Railroad Association, being recalled to Washington in June of 1920 to assist in directing the work of various terminal committees that were organized for the purpose of clearing up accumulation, etc., resulting from the switchmen's strike. Since September 15, 1920, he has been assistant traffic manager of the National Coal Association.

Oral arguments as to whether the Interstate Commerce Commission should require the railroads to issue interchangeable mileage or scrip coupon tickets at reduced rates were heard by the commission at Washington on Wednesday. Francis I. Gowen, special counsel of the Pennsylvania, presented the argument for the carriers, contending that there is no justification for such a reduction in railroad revenues and S. Blumberg presented the argument for the National Council of Traveling Men's Associations, urging that a one-third reduction in rates on a $100 coupon book, would so stimulate freight and passenger traffic as to result in an increase in revenues. Commissioner Hall seemed somewhat skeptical as to whether freight traffic could be stimulated beyond what it has been during the past few months and asked whether Mr. Blumberg thought the record showed a basis for the determination of just and reasonable rates lower than the rates which the commission has already determined to be just and reasonable. Mr. Blumberg argued that Congress by passing the law leaving the fixing of the rate to the commission had intended the commission to make some reduction.

New England Governors' Committee Discusses Railroad Consolidation

The Joint New England Railroad Committee, appointed some months ago by the governors of the six New England States, sat in Boston last week to hear the views of shippers and others concerning the problem of helping the New England railroads to improve their conditions. The presiding officer was James J. Storrow, chairman of the committee. The first speaker was Henry C. Attwill, chairman of the Massachusetts Public Utilities Commission. Mr. Attwill thought that in all probability the railroads could recover their former financial health if they could have four additional sources of income as follows:

1.—Compensation from those who receive the special privilege of having their freight switched to and from private tracks.

2.—More adequate compensation from the United States Government for the carriage of mail.

3.—More revenue from the carriage of express matter.

4.—Compensation for the carriage of baggage.

The most generally expressed opinion among shippers was that the consolidation of New England railroads with trunk lines west of the Hudson River would be detrimental to the port of Boston and to New England generally. Charles A. Andrews, former president of the Associated Industries of Massachusetts elaborated this view.

Professor William J. Cunningham of Harvard University gave a brief outline of the recent freight rate history of the country, and set forth the advantages of consolidating New England lines with larger systems. New England merchants fear unfavorable changes in freight rates if such consolidations were to be carried out but Professor Cunningham reminded them that the Interstate Commerce Commission would see that New England was not dealt with unjustly. To objections about absentee management, the speaker referred to instances of that kind already in effect which are not inimical to the public interests; for example, the Atchison, Topeka & Santa Fe, which is managed from Chicago and the Boston & Albany which the New York Central people manage to the satisfaction of the citizens of Massachusetts.

On Friday, the third day of the hearing, John E. Oldham presented an elaborate argument in favor of the affiliation of the New England roads with trunk lines.

Coal Production

Preliminary returns to the Geological Survey on coal loaded at the mines in the week ended November 11 indicate a total production of 12,600,000 net tons; 10,700,000 tons bituminous and 1,900,000 tons anthracite. Revised estimates for the week ended November 4 show 10,617,000 tons of bituminous and 1,839,000 tons of anthracite. The rate of output of soft coal is now higher than in 1918 and 1921, and of course much higher than in 1919 when at the corresponding period the great strike of that year had begun; the present rate is lower than the same season in 1920.

The mine reports for the week ended October 28 indicate improved traffic conditions in Ohio, Westmoreland, and Somerset counties, Pennsylvania, Maryland, Northern West Virginia, the New River and Kanawha districts of Southern West Virginia, Western Kentucky, and all the trans-Mississippi states excepting Arkansas. Transportation disability grew more acute in Indiana, Pittsburgh and Central Pennsylvania districts, Pocahontas, Hazard, Harlan, and Southern Appalachian fields, and in southwestern Virginia. In Illinois, and the Panhandle of West Virginia, Winding Gulf, Tug River, and Logan districts, and in Alabama, the transportation situation remained practically unchanged. Reports of "no market" were received from operators in nearly all the states west of the Mississippi.

Shipments of soft coal through Hampton Roads declined dur-

ing the first week in November. Cargoes consigned to New England decreased to 149,466 tons and exports dropped to 10,379 tons.

Since August 21, approximately 10¾ million tons of bituminous coal have been dumped into vessels at Lake Erie ports. The tonnage dumped has been more than a million tons a week during the last 8 weeks, a high record for sustained heavy movement.

According to the Ore and Coal Exchange the total soft coal handled at Lake Erie piers during the week ended November 5 was 1,088,104 net tons, as compared with 1,026,388 tons in the week preceding. Stocks of bituminous coal on the commercial docks at Duluth, Superior, Ashland and Washburn increased from 1,034,520 net tons on October 1, to 1,946,875 tons on November 1. The supply of anthracite increased from 12,370, to 104,430 tons during the same period.

In spite of this large increase, however, the present reserves of soft coal are less than one-third of those on November 1, 1921, and the anthracite supply is only about one-eighth of that a year ago.

Car Relocation Orders

Additional orders for the movement of box cars to western railroads for the purpose of relieving the acute shortage in the northwest, and of 4,050 coal cars to the Louisville & Nashville, were issued by the Car Service Division of the American Railway Association following a meeting of executive and operating officers at Washington on Saturday. A conference was first held with Commissioner Aitchison, who is understood to have insisted that the practical railroad officers devise some plan for relieving a situation caused to a considerable extent by violations of car service rules and later a meeting was held at the offices of the Car Service Division.

Although a large number of cars of western line ownership have been returned under the order of October 26, the results were not fully felt on the roads which were not able to receive cars directly at Chicago, such as the Great Northern, Northern Pacific and Union Pacific, and those roads have had their box car supply depleted to a greater extent than others. Therefore, an additional program was set up by which all western line cars arriving at Chicago empty this week, regardless of ownership, were to be made up into solid trains of approximately 100 cars each to be delivered alternately to the three lines, although some provision was also made for the Soo Line. The first train under this arrangement left Chicago on Monday over the Illinois Central for the Union Pacific. The trains of empty cars were to be moved on the same schedules as fast freight and, if necessary, the program will be continued for another week.

Also to make available the maximum number of cars for this purpose orders were issued to the eastern lines to deliver 745 box cars daily at Chicago, of western line ownership if possible, but their own cars if necessary, as follows: Wabash, 15; Grand Trunk Western, 20; Pere Marquette, 25; Erie, 45; Michigan Central, 115; New York Central, 125; Pennsylvania, 100; Baltimore & Ohio, 200, and Philadelphia & Reading, 100, to be divided equally between the Baltimore & Ohio and the New York Central. Arrangements were also made for the daily delivery of 50 cars by the Central of New Jersey, 125 by the Boston & Maine, and 150 by the New Haven, some to be moved westward by Canadian lines, and a meeting was held on Monday to arrange for the movement of box cars from the Southern lines through St. Louis.

The coal car orders provided for the movement within 10 days to the Louisville & Nashville of 750 cars by the Chicago & Northwestern, 750 by the Chicago, Milwaukee & St. Paul, 250 by the Ann Arbor, 500 by the Pere Marquette, 500 by the Michigan Central, 150 by the Detroit & Toledo Shore Line, 100 by the Toledo, St. Louis & Western, 200 by the Minneapolis & St. Louis, 300 by the Chicago Great Western, 250 by the Minneapolis, St. Paul & Sault Ste. Marie, and 300 by the Great Northern.

Under the order of October 26 reports received by the Car Service Division show the delivery of 9,997 western box cars by the New England group of lines, including 6,314 loads, and 16,632 box cars from eastern lines to western lines, including 10,207 loads, at Chicago, Peoria and St. Louis. Also the New England lines have been delivering 200 to 300 empty coal cars a day to the anthracite coal roads.

Commission and Court News

Interstate Commerce Commission

The commission has declined a request of President Howard of the American Farm Bureau Federation that it order an embargo on Canadian grain moving over transportation lines in the United States.

The Interstate Commerce Commission's Bureau of Tariffs has published the third issue of its schedule of sailings of steam vessels which are registered under the laws of the United States and which are intended to load general cargo at ports in the United States for foreign destinations.

The Interstate Commerce Commission has issued orders permitting the states of Utah and Nevada and the chambers of commerce of Salt Lake City and Provo, Utah, to intervene in the case of the application of the Southern Pacific to acquire control by lease and stock ownership of the Central Pacific. The Union Pacific and the Southern Pacific have filed briefs with the commission on the petition of the Union Pacific for a dismissal of the Southern Pacific application which was argued orally on November 4.

The commission has issued orders permitting the states of Utah and Nevada and the chambers of commerce of Salt Lake City and Provo, Utah, and San Francisco and Fresno, Calif., to intervene in the case of the application of the Southern Pacific to acquire control by lease and stock ownership of the Central Pacific. The Union Pacific and the Southern Pacific had filed briefs with the commission on the petition of the Union Pacific for a dismissal of the Southern Pacific application which was argued orally on November 4.

The Public Utilities Commission of Kansas has filed a complaint with the Interstate Commerce Commission praying for reduction in the rates on grain, hay and grain products in Western territory which were increased 35 per cent in 1920, reduced 13 per cent by a decision of the Interstate Commerce Commission last year, but were not included in the general 10 per cent reduction ordered by the commission this year. The commission is asked to establish reasonable and non-discriminatory rates. It has assigned the case for a hearing before Examiner Hunter at Washington on December 11.

I. C. C. to Take Evidence on Southern Pacific Application

The Interstate Commerce Commission on November 14 announced that after considering the motion of the Union Pacific to dismiss the application of the Southern Pacific to acquire control of the Central Pacific it had been voted that the commission will not, without the hearing of any evidence, decide the question of jurisdiction, or its power to grant or deny in whole or in part the application of the Southern Pacific, or the propriety of taking such action. The motion to dismiss the application without the taking of testimony was therefore denied, and the hearing set for November 21, will proceed.

Court News

Placing Freight Cars So as to Obstruct View of Crossing

The placing of freight cars upon a side track so that the view of a crossing is obstructed is not an independent ground of negligence, so that where the evidence in an action for damages to an automobile by collision at a crossing was conflicting as to whether the bell was rung, the Iowa Supreme Court holds that the trial court's error in submitting the negligence of placing box cars so as to obstruct the view, which was the only other ground of negligence, as an independent ground of recovery, was prejudicial error, necessitating reversal. Anderson v. U. S. R. A. (Iowa) 188 N. W. 826.

Foreign Railway News

New Branch of Mexican National to Be Put Into Operation

At odd times for the last several years construction of the extension of the branch line of the National Railways of Mexico from Cuatro Cienegas to Sierra Mojada has been carried on. It is now stated that the line is practically finished and will soon be placed in regular operation. It connects with the Mexican Northern Railroad at Sierra Mojada and with the Eagle Pass-Torreon division of the National Railways at Monclova. It is about 150 miles long and traverses a region that is known to be rich in minerals and coal.

French Railway Labor Act Revised

The bill providing for a revision of the working day on French railroads effects small economies in the operation of the roads, which are now working under a heavy deficit, according to Commerce Reports. A distinction is made between active labor and mere presence on the job. In the former class the 8-hour day still obtains, while in the latter the length of the day varies according to the nature of the work. Each employee must put in 2,504 hours of work a year, with extra pay for overtime. The indefinite nature of this provision for overtime payment is expected to neutralize the good features of the bill.

Allowance is made for a reduction of 30,000 in forces and a decrease of 250,000,000 francs in the annual pay roll, while the eight-hour day law increased the operating forces by 110,000 and the pay roll over 1,000,000,000 francs.

Track Improvements on Mexican National

The entire division of the National Railways of Mexico between San Luis Potosi and Tampico is to be laid with new ties and ballast. The contract for getting out the ties has already been let. It is stated that this division is to be practically rebuilt in many places, the grade reduced and the line otherwise improved. In order to promote the conservation of ties for use in Mexico instead of sending them out of the country, especially to the southwestern part of the United States, the Mexican government recently placed an export duty, equivalent to about 47½ cents on each tie. It is stated that in the Sierra Madre mountains of the state of Chihuahua there was quite an industry of manufacturing ties for export to the United States. It is expected that the new duty will be prohibitive and that the railroads of Mexico will now be able to get all the ties they may need at lower cost than formerly.

Fog Signaling in Great Britain

The first of the autumn fogs descended upon the London area one day recently, and the commuting population made the train journey to town to the accompaniment of a fusillade of fog-signaling, according to the Times (London).

The men who take up their station at distant signals to protect the traffic are drawn from the permanent way staff, and a list of the men available is kept at every station. On the occurrence of fog, these men are either called for special duty, or voluntarily report themselves to the signalman, and, after lighting their familiar fire and arming themselves with a supply of detonators (i.e., torpedoes), take up their responsible duties.

While the signal is in the danger position the fogman must keep two detonators on the rail and show a red lamp or flag to the driver of the train approaching the signal. If the "line clear" signal is given the detonators are removed. Sometimes the detonators are placed in position by hand, but when the fogman has to protect more than one track, detonator-laying machines are used.

Even these comparatively simple arrangements involve the railways in considerable cost. One railway in the London district, which has not a large suburban traffic, nevertheless uses half a million detonators a year, and these cost 2s. 6d. per dozen. The total number of detonators used on all the railways for various purposes, but mainly for fog signaling, runs into many millions a year. During conditions of general fog thousands of men are engaged in fog-signaling work.

Formation of the International Union of Railways

Representatives of European railways, meeting at Paris from October 17 to 21, formed the International Union of Railways (abbreviated in French to U. I. C.). The meeting at Paris was agreed upon at the Genoa conference and the principal purpose of the newly-formed union is to facilitate the movement of international traffic. M. Mange, general manager of the Orleans Railway, was chosen to head the union, which will have its headquarters at Paris.

The administration of the association will be in the hands of a managing board, representing the countries forming the union. Assisting this board will be five commissions as follows:

1. On Passenger Traffic.
2. On Freight Traffic.
3. On Reciprocal Accounts and Exchanges.
4. On Exchange of Rolling Stock.
5. On Technical Questions.

A general assembly of all members of the association will be held regularly at five-year intervals. Voting will be, under certain safeguards, proportionate to route mileage. Decisions cannot be made binding without sanction of governments of all nations affected.

Countries represented at the formation of the union were: Great Britain, Austria, Germany, Belgium, Bulgaria, Denmark, Spain, Esthonia, Greece, Netherlands, Hungary, Italy, Lettonia, Lithuania, Luxembourg, Norway, Poland, Portugal, Roumania, Saare Valley, Serbia, Sweden, Switzerland, Czecho-Slovakia, France, the Oriental Railways and the League of Nations. Japan and China were represented but will not take an active part in the work of the association until the re-opening of the Trans-Siberian Railway again puts them into communication by rail with Europe.

Railway Labor Situation in Britain Better Than Ever Before

"The brightest feature of the British railway situation is found in the happy relations between the companies and their men," according to The Engineer (London). "Never, during the hundred years of railways, has this aspect of the railway position been so good. There is, at present, a noticeable esprit de corps among the men, a greater desire to give a day's work for a day's pay, both in the operating and the manufacturing and repairing branches, that is beneficial to men and masters, and consequently therefore to the railway proprietors and railway users. We will not allow ourselves to think that a fear of the effects on labor of railway grouping is the cause of this change; though it must be recognized that one consequence of the big amalgamations now being made may be considerable reductions in the number of men employed.

"We prefer to believe, and will almost go as far as to affirm, that the attitude of the men is the result of the unions having been recognized and of the men themselves having been given a greater interest in the operation of the railways. This interest is not as great as Sir Eric Geddes intended when, in the outline of his proposals, made public towards the end of June, 1920, he laid down that the boards of management should include representatives of the employees, elected from and by the workers. Subsequent discussions, directly between the companies and the men's unions, led to clauses being agreed upon for inclusion in the Railways Bill—now the Railways Act, 1921—for the recognition of the three railway unions, the continuance of the Central and National Wages Boards, and for the establishment of Whitley Councils.

"The Whitley Councils cover local departmental committees at stations and depots, sectional councils on each railway representing the various grades, and a railway council for each railway. Above the railway councils is the Central Wages Board, and the final court is the National Wages Board. Both the companies

and the men have expressed their determination to give the conferences a fair trial, and, judging by what has happened since the councils were inaugurated in April, they would seem to be doing all the good that was expected of them. . . . ."

Railroad Construction in Finland

The president of Finland has recently sanctioned the government's proposition to the Finnish diet, covering a program of railroad construction to be handled during the next five years, according to Commerce Reports. This program is based upon the assumption that 75,000,000 Finnish marks could be devoted to such work annually. Altogether the different lines recommended for construction in this connection have a total somewhat in excess of 500 miles. Therefore, it may be expected that Finland will construct about 100 miles of railroad annually during the next few years.

In addition to the above construction work that is to be carried forward under government auspices, provision is made for additional construction whenever the various communes will provide the necessary funds for supplementary construction. Obviously it is not possible to estimate the extent to which public sentiment will support such a program, but reports indicate that something along these lines may develop.

Sir William Acworth Compares Railroad Operating Statistics of Various Countries

Sir William Acworth recently addressed the Institute of Transport on British Railway Operating Statistics, making some comparisons between them and similar statistics of other countries. The average length of haul in Great Britain was 58 miles, about the same as in Germany. The average freight train load in Britain was 135 (long) tons and per route mile British railways carried 900,000 tons per annum, as compared with one million in Germany and Russia and 1,650,000 tons in the United States. The average train load in other countries was: Austria, 200; Canada, 400; China, 250; France, 150; Germany, 225; India, 200; Japan (narrow gage), 140; U. S. A., 650.

This comparison, he said, suggested an important practical conclusion. There was room on the existing railways for the existing number of trains. Improvement in train loading ought at least to keep pace with increase of traffic, and especially having regard to the effect of the new grouping, he had no doubt that it would. Further, there was the prospect of electrification increasing freedom of movement on the most crowded sections. If this were so, British railways ought to be able to get along for many years to come with no new capital expenditure for widening main through routes.

The average number of cars per train seemed to be much the same—35 to 40—in England, France, Germany, and the United States. The capacity of the average French or German car was probably 40 per cent higher than the English standard. The American car was four times as large. As to the proportion of loaded to empty cars there seemed also little difference, at least between England, Germany, and America. But the car mileage per diem showed a startling difference. In England it was roughly 9 miles; in Germany 21; in America—as a whole—it was now about 24 though under stress of war it at one time got to over 30.

Dealing with the effect of railway charges on the cost of living, he said statistics showed that the average haul of potatoes was 114.68 miles, and the average charge per ton mile 2½d.—roughly, 8 lb. for 1d. With farmers selling potatoes at less than £2 per ton, farmer and railway between them received 1.625d. for 5 lb. The average housewife could work out from her grocer's bill the amount of what were euphemistically called "other expenses." A year's experience as a member of the Railway Rates Advisory Committee had convinced him that the railways tried to give the shippers what they wanted.

The constant plea of the shippers was that they wanted to get back to pre-war conditions, but they could save a great deal of money by adopting new and more economical methods. The extravagant retail methods of British shippers were shown by the fact that they employed 1,360,000 cars to move twenty thousand million ton miles, while Germany had 700,000 cars to move 38,000 million ton miles and France 332,000 cars to move nearly 18,000 million ton miles.

Equipment and Supplies

Locomotives

The Georgia Railroad is inquiring for 5 locomotives.

The Delaware & Hudson is inquiring for 1 locomotive tender.

The Lehigh Valley is inquiring for 30 locomotive tenders.

The Colorado Midland is inquiring for one Mikado type locomotive.

The Chicago, Burlington & Quincy is inquiring for 50 Mikado type locomotives and 10 Santa Fe type engines.

The Central of New Jersey, reported in the *Railway Age* of November 4 as inquiring for 4 Pacific type locomotives, has ordered 5 Pacific type locomotives from the Baldwin Locomotive Works. This company is now inquiring for 10, 8-wheel switching locomotives.

Freight Cars

Baltimore & Ohio is inquiring for 2,000 hopper cars of 55 tons' capacity.

The Ulen Contracting Corporation, 120 Broadway, New York City, is inquiring for 35 flat cars.

The Union Pacific has placed an order with the American Car & Foundry Company for 100 tank cars.

The Central Railroad of Brazil is inquiring through the car builders of this country for prices on 200 box cars and 200 gondola cars.

The Great Southern Refining Company, Lexington, Ky., is inquiring for about 80 tank cars of from 6,000 to 10,000 gal. capacity.

The East Jersey Railroad & Terminal Company has placed an order with the American Car & Foundry Company for 36, 50-ton tank cars of 10,000 gal. capacity.

Watson, Robb & Company has purchased 13 service box cars from the Canadian Car & Foundry Company, which they have converted into two office cars, five bunk cars, two cook cars and four service dining cars.

The Chicago, Rock Island & Pacific, reported in the *Railway Age* of October 14 as inquiring for 500 box cars and 500 gondolas, has ordered the former from the Western Steel Car & Foundry Company and the latter from the American Car & Foundry Company. This company is now preparing specifications on an additional 1,500 cars, also reported in the *Railway Age* of October 14, with the above inquiry.

New Freight Cars for the Southern Pacific

The immediate construction of 7,000 freight cars, to cost more than $8,000,000, has just been authorized by the executive committee of the Southern Pacific Company. This new equipment, which will be delivered during 1923, does not include refrigerator cars for handling perishables, as the company's supply of refrigerators is provided by the Pacific Fruit Express Company, in which the Southern Pacific owns a one-half interest. The new equipment program of the Pacific Fruit Express, soon to be announced, will add a substantial number of refrigerators to the 21,598 it now owns. Plans for the construction of the new cars for the Southern Pacific are nearing completion and it is expected that a large proportion of the cars will be built on the Pacific Coast with Pacific Coast materials and labor. The new cars will be of the most modern design. The total number of cars owned by the Southern Pacific Company at present is more than 58,000.

Passenger Cars

THE NATIONAL RAILWAYS OF MEXICO are in the market for 10 steel mail cars, 40 ft. long.

THE CENTRAL OF BRAZIL contemplates buying in the near future between 50 and 100 cars of various types for passenger service.

THE PENNSYLVANIA has ordered 3 gasoline motor cars from the J. G. Brill Company. These cars are for use on the Smyrna branch, Bustleton branch and the Berwick branch.

THE BROOKLYN RAPID TRANSIT COMPANY reported in the *Railway Age* of July 22 as contemplating the purchase of 50 cars, is now inquiring for 50 trailer cars for use in its subways.

THE CENTRAL OF NEW JERSEY, reported in the *Railway Age* of October 21 as having placed orders for 65 cars for passenger service, has placed additional orders for 25 coaches with the American Car & Foundry Company, and 25 coaches with the Standard Steel Car Company.

Iron and Steel

THE CHICAGO & NORTH WESTERN is inquiring for 500 tons of bar iron.

THE CHICAGO & WESTERN INDIANA has ordered 5,000 tons of rail from the Illinois Steel Company.

THE NORTHERN PACIFIC has ordered 127 tons of steel from the Minneapolis Steel & Machinery Company for repairing its Mississippi river bridge.

Machinery and Tools

THE GULF & SHIP ISLAND has ordered from the Niles-Bement-Pond Company a 5-ton, 72-ft. span overhead crane.

THE LAKE ERIE & WESTERN has placed an order with the Shepard Electric Crane & Hoist Company for a 1¼-ton hoist.

THE BALDWIN LOCOMOTIVE WORKS has ordered one, 130-in. by 84-in. by 20-ft. planer from the Niles-Bement-Pond Company.

Signaling

THE CITY OF PHILADELPHIA has placed an order with the Hall Switch & Signal Company for 45 single unit, three color "searchlight" signals.

THE MISSOURI, KANSAS & TEXAS has ordered from the Union Switch & Signal Company interlocking for Frisco Crossing, Okla., where the M. K. & T. and the St. L.-S. F. cross the Red River on a joint track. The interlocking machine has ten mechanical levers and three electric switch units, style S-8.

Kadel & Herbert

Collision at a Junction on the Northern Railway (France) at La Briche Fort, Six Miles from Paris

Supply Trade News

W. W. Sayers, representative of the **Link-Belt Company**, with headquarters at Chicago, has been promoted to chief engineer of the Philadelphia works and eastern operations, with headquarters at Philadelphia.

A. H. Hunter, president of the **Atlas Steel Corporation**, Dunkirk, N. Y., has resigned as president, but is still a member of the board. No action has been taken as yet toward electing a successor to Mr. Hunter.

The Chicago Malleable Castings Company, Chicago, has acquired from the Railway & Traction Supply Company of Chicago, all rights for the manufacturing and selling of the Little Giant and Hercules bumping posts.

The Southern Dry Dock & Shipbuilding Company, Orange, Tex., has arranged for a change of name to the **Orange Car & Steel Co.** Its operations in the future will be concentrated on steel railroad car construction and repairs.

F. F. Rohrer, assistant to manager of both the power and railway departments of the **Westinghouse Electric & Manufacturing Company**, has been appointed general contract manager of that company. In his new appointment, which is effective immediately, Mr. Rohrer will be a member of the staff of W. S. Rugg, general sales manager. In his new position, Mr. Rohrer assumes responsibility for service to customers under contracts and will have general supervision of all contract and order work of the company. In addition to this general work, he will continue to have direct charge of the contract work of the power and railway departments which duties he performed in his previous position. Mr. Rohrer, wsa born in Harrisburg, Pa., April 22, 1876, and attended school there until 1895. He entered the employ of the Westinghouse Company as a student in 1896. After serving in the shops for four years, during which time he obtained extensive training in the manufacturing and testing departments he was transferred to the sales department. His services in the latter department have included a number of positions of responsibility. During the war, Mr. Rohrer was a member of the Committee of the War Industries Board appointed to conserve the production of turbine-generating equipment for government needs. After the armistice was signed, he became the representative of the Westinghouse Company in the settlement of contracts which were terminated as a result of the ending of the war. When this work was completed, he served in the capacity of assistant to the managers of both the power and railway departments, which position he held until his present appointment.

F. F. Rohrer

The Norwalk Iron Works Company, South Norwalk, Conn., has opened a Chicago office at 627 W. Washington boulevard in charge of L. R. Bremser, who for 13 years was associated with the Gardner Governor Company.

E. C. Wilson, formerly connected with the U. S. Light & Heat Corporation and the Vapor Car Heating Company, with offices at Chicago, has been appointed western sales manager for the **Ohio Locomotive Crane Company** of Bucyrus, Ohio, with offices in the Railway Exchange Building, Chicago.

Railway Construction

ATLANTIC COAST LINE.—This company has awarded a contract to Fairbanks, Morse & Co., Chicago, for the construction of a 150-ton concrete coaling station at Jesup, Ga.

BALTIMORE & OHIO.—This company has placed a contract with the Seaboard Construction Company, Philadelphia, Pa., covering the remodelling of second-hand girders and the erection of a new superstructure for the bridge carrying its tracks across Stone Coal creek, Macpelah Junction, W. Va. The new bridge at this point is to consist of a 55-ft. through plate girder span, replacing a timber trestle. Remodeled second-hand girders are to be used. For this remodeling, certain new material will be required, which is to be furnished by the McClintic-Marshall Company, under the tonnage contract recently placed with them by the railroad.

CANADIAN NATIONAL.—This company has awarded contracts to Symes & Company, Fort William, Ont., for the laying of 12,500 ft. of 8-in. water pipe at Mount, Ont.; to the Jamieson Construction Company, Edmonton, Alta., for the laying of 6,500 ft. of 8-in. water pipe at North Battleford, Sask.; to J. D. McArthur, Winnipeg, Man., for a dam at Rivers, Sask.; to the Northern Construction Company, Winnipeg, for a water supply system at Pattee, Sask.; and to P. W. Graham, Moose Jaw, Sask., for the construction of an addition to the office building at Saskatoon, Sask.

CHICAGO, ROCK ISLAND & PACIFIC.—This company closed bids on November 14 for a frame icehouse at Eldon, Ia., to cost approximately $12,000.

CHICAGO, ROCK ISLAND & PACIFIC.—This company, with the Vicksburg, Shreveport & Pacific, has been ordered by the Louisiana Public Service Commission to build sheds over the train platforms at the joint station at Ruston, La.

COLORADO, COLUMBUS & MEXICAN.—This company, through its attorney, John Phillips, of Wichita Falls, Texas, has filed a petition with the Interstate Commerce Commission for a certificate authorizing the construction of 550 miles of electric railroad in New Mexico, Texas and Arizona, including a main line from Columbus, N. M., on the Mexican border, to Farmington on the Denver & Rio Grande, with various branches including one to El Paso, Texas. The company has been incorporated in New Mexico with an authorized capital stock of $5,000,000 and asks the commission for authority to issue $20,000,000 of bonds to be sold at not less than 85.

GULF COAST LINES.—This company will construct a six-stall concrete roundhouse at Brownsville, Tex., to cost approximately $50,000.

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of November 11 as closing bids November 8 for a 100,000 gal. creosoted water tank at Herrin, Ill., has awarded a contract for the work to Joseph E. Nelson & Sons, Chicago. This company will also improve its water facilities at Calumet, Iowa.

KANSAS CITY SOUTHERN.—This company has been ordered by the Louisiana Public Service Commission to build a station at De Quincy, Ia.

MINNEAPOLIS & ST. LOUIS.—This company has awarded a contract to the Railroad Water & Coal Handling Company, Chicago, for the construction of a water treating plant of 25,000 gallons' capacity at Manly, Iowa.

SAN ANTONIO & ARANSAS PASS.—This company has awarded a contract to the Virginia Bridge & Iron Company for the construction of a bridge over the Brazos river near Wallis, Texas.

ST. LOUIS-SAN FRANCISCO.—This company closed bids on November 13, for a 300-ton concrete coaling station at Fort Smith, Ark.

ST. LOUIS-SAN FRANCISCO.—This company will construct a storeroom at Ft. Smith, Ark

Railway Financial News

ALABAMA & MISSISSIPPI.—*New Company.*—See *Mississippi & Alabama.*

BOSTON & MAINE.—*Bonds Sold.*—A banking syndicate composed of Merrill, Oldham & Co., Paine, Webber & Co. and Blodget & Co. of Boston, Cyrus Peirce & Co. of San Francisco and Reilly, Brock & Co. of Philadelphia has sold $4,000,000 6 per cent mortgage bonds due January 1, 1933, at 95½ and interest, to yield about 6.62 per cent. These bonds are part of an issue of $112,985,979 and are secured by a first mortgage on 1,651 miles of line, subject only to $2,838,000 underlying bonds on 153 miles.

CHICAGO GREAT WESTERN.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $10,206,000 of first mortgage, 50-year, 4 per cent gold bonds and $3,580,000 of 4 per cent preferred stock to be exchanged for bonds of the Mason City & Fort Dodge.

GEORGIA, FLORIDA & ALABAMA.—*Abandonment of Boat Line Authorized.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of operation of a boat line between Carrabelle and Appalachicola, Fla., 32 miles, which has been operated by the company as a part of its line of railroad. The commission says that it is apparent that the boat line serves no substantial public need which cannot be met adequately by other available means of transportation.

ILLINOIS CENTRAL.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $968,000 of refunding mortgage 4 per cent gold bonds to be pledged from time to time as collateral security for short term notes.

INTERSTATE.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to issue $1,500,000 of common stock for the purpose of purchasing 1,000 all steel hopper cars.

KENTWOOD & EASTERN.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for a certificate authorizing the abandonment of its line from Kentwood to Scanlon, Miss., 16.53 miles.

MACON & BIRMINGHAM.—*Operation to Cease.*—At a hearing in the Superior Court of Macon, Ga., on November 11, Judge H. A. Mathews ordered the suspension of all service on this road, effective November 15. He stated his order was based upon the fact that further operation was unsafe for human life, due to the poor condition of the road bed, and that the receiver had no funds and had exhausted all his credit. This road is 97 miles long, from Sofkee, Ga., westward to La Grange. The Official Guide shows the line as operated only for freight service.

MARIETTA & VINCENT.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for authority to abandon its line from Moore's Station to Vincent, Ohio, 10 miles.

MISSISSIPPI & ALABAMA.—*To Reopen Line.*—Under this name a company has been organized in Alabama for the purpose of rehabilitating and continuing the operation of the 17 miles of line formerly operated as part of the Alabama & Mississippi between Vinegar Bend, Ala., and Leakesville, Miss. Operation on the Alabama & Mississippi between Vinegar Bend and Pascagoula, Miss., 78 miles, was discontinued August 14, 1922.

NEW YORK CENTRAL LINES.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized the New York Central lines to assume obligation and liability in respect of $12,660,000 of 4½ per cent equipment trust certificates to be issued by the Guaranty Trust Company of New York, and to be sold at not less than 95.

PACIFIC SOUTHWESTERN.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to issue $100,000 of stock to be used in the

construction of a railroad from Lompoc to White Hills, Calif., 4 miles.

SANTA FE & LOS ANGELES HARBOR.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized this company to issue $50,000 of capital stock to be sold at not less than par and the proceeds used for construction purposes and the Atchison, Topeka & Santa Fe has been authorized to acquire control of the company by purchase of its capital stock and by lease.

SAVANNAH & SOUTHERN.—*Sale Ordered.* This 32-mile line will be sold under court order on December 5. Julius Morgan was appointed receiver for the road March 2, 1922.

UPPER MERION & PLYMOUTH.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized this company to issue $350,000 of common stock for the purpose of acquiring additional equipment and discharging certain indebtedness.

Tentative Valuations

The Interstate Commerce Commission on November 15 made public its tentative valuation of the properties of the Rutland and the Addison railroads as of June 30, 1917. The final value of the property owned by the Rutland is given as $21,881,255 and that of the property used, including that leased from the Addison, the Central Vermont, the New York Central and private parties as $22,205,821. The outstanding capitalization on date of valuation was $19,952,600. The investment in road and equipment, including land, was stated in the books of the carrier at $22,500,622. This is readjusted in the report to $20,269,100.

The commission has also issued its tentative report on the valuation of the New Orleans Great Northern as of 1916, in which it states the final value as $7,201,388. The capital obligations outstanding as of the valuation date amounted to $15,923,000. The investment in road and equipment as stated on the books of the company was $16,045,668 which is readjusted by the commission to $15,201,241.

The commission has also issued tentative valuations in which the final value of the property owned and used is stated as follows:

Shreveport, Houston & Gulf, 1918, owned $92,578.
Yosemite Valley, 1916, owned $3,436,492.

Dividends Declared

Alabama Great Southern.—Common, 3½ per cent, semi-annually, payable December 28 to holders of record November 29; preferred, 3½ per cent, semi-annually, payable February 16 to holders of record January 19.

Canadian Pacific.—Common, 2½ per cent, quarterly, payable December 30 to holders of record December 1.

Catawissa. 1st and 2nd preferred, $1.25, payable November 18 to holders of record November 3.

Chicago & North Western.—Common, 2½ per cent, semi-annually; preferred, 3½ per cent, semi-annually; both payable January 15 to holders of record December 14.

Chicago, Rock Island & Pacific.—6 per cent preferred, $3.00, semi-annually; 7 per cent preferred, $3.50, semi-annually; both payable December 30 to holders of record December 8.

Colorado & Southern.—Common, 3 per cent, annually; first preferred, 2 per cent, semi-annually; second preferred, 4 per cent, annually; all payable December 30 to holders of record December 16.

Pittsburgh, Bessemer & Lake Erie.—Preferred, 3 per cent, semi-annually, payable December 1 to holders of record November 15.

Southern Pacific.—1½ per cent, quarterly, payable January 2 to holders of record November 29.

Union Pacific.—Common, 2½ per cent, quarterly, payable January 2 to holders of record December 1.

Trend of Railway Stock and Bond Prices

	Nov. 14.	Last Week	Last Year
Average price of 20 representative railway stocks	66.27	70.31	56.21
Average price of 20 representative railway bonds	85.64	86.65	78.77

THE EXPLOSION of the boiler of a locomotive of a freight train of the New York Central at Moreland, N. Y. on the night of November 11 killed four employees and injured three. This engine was the second one of a double head southbound freight, and the boiler was thrown into the air and fell 400 ft. ahead of the train and the leading locomotive ran into it.

Railway Officers

Executive

John G. Walber, whose appointment as vice-president in charge of personnel of the New York Central was announced in the *Railway Age* of October 28, page 823, was born on April 12, 1871, at Cincinnati, O. He was educated in the public schools of that city. He entered railway service in 1885, since which he has been consecutively: To 1893, clerk in the office of president and general manager, Ohio & Mississippi; 1893 to 1899, private secretary to the second vice-president and traffic manager of the Baltimore & Ohio Southwestern at St. Louis, Mo.; 1899 to 1904, chief clerk in the office of the vice-president and general manager of the same road at Cincinnati, O.; 1904 to 1908, assistant to the general manager, with the same headquarters; 1908 to 1909, general superintendent of transportation of the Baltimore & Ohio at Baltimore, Md.; 1910 to 1912, assistant general manager of the Baltimore & Ohio; 1912 to 1914, assistant to third vice-president; 1914 to 1921, secretary of the Bureau of Information of the Eastern Railways at New York; 1921 to the time of his recent appointment, executive secretary of the bureau.

Operating

V. S. Burnham has been appointed trainmaster of the San Joaquin division of the Southern Pacific, with headquarters at Bakersfield, Cal.

P. E. Odell has been appointed general manager of the Gulf, Mobile & Northern and the Meridian & Memphis, with headquarters at Mobile, Ala.

R. G. Parks has been appointed superintendent of car service of the Atlanta, Birmingham & Atlantic and the office of car accountant has been abolished.

O. A. O'Neill, yardmaster of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, has been promoted to trainmaster, with headquarters at Montevideo, Minn.

Traffic

E. N. Todd has been appointed freight traffic manager of the Canadian Pacific.

W. M. Kirkpatrick has been appointed general freight agent of the Canadian Pacific.

George Stephen has been appointed assistant freight traffic manager of the Canadian Pacific, Western Lines, with headquarters at Winnipeg, Man.

H. F. Twining has been appointed general agent of the Ft. Dodge, Des Moines & Southern, with headquarters at Ft. Dodge, Iowa, succeeding **A. L. Hillman**, resigned.

A. L. Still, passenger agent of the Gulf Coast Lines, with headquarters at Brownsville, Tex., has been promoted to assistant general agent, with headquarters at Mexico City, Mexico.

G. W. Sloan has been appointed assistant general freight agent of the Nashville, Chattanooga & St. Louis, with headquarters at Nashville, Tenn., succeeding W. L. Nichol, promoted.

H. J. Niemann, assistant general freight agent of the Vicksburg, Shreveport & Pacific, with headquarters at New Orleans, La., has been promoted to general freight agent, with the same headquarters.

M. D. Riggs, passenger agent of the St. Louis-San Francisco, with headquarters at Cincinnati, O., has been promoted to district passenger agent, with headquarters at Fort Worth, Tex., succeeding **E. Mitchell**, promoted.

Mechanical

W. B. Whitsitt has been appointed assistant mechanical engineer of the Baltimore & Ohio and **W. R. Hedeman** has been appointed chief draughtsman.

J. E. O'Brien has been appointed manager of the mechanical department of the Seaboard Air Line, effective November 15. Mr. O'Brien will report to the president and to the vice-president and general manager. Mr. O'Brien was born on December 4, 1876, at Stillwater, Minn., and was graduated from the University of Minnesota in 1898, in which year he entered railway service as a special apprentice on the Northern Pacific at Livingston, Mont. From November 1, 1901, to November 25, 1903, he was in charge of general inspection of material and tests for that company at St. Paul, Minn. On the latter date he became master mechanic of the Dakota division at Jamestown, N. D. From December 1, 1904, to August 1, 1909, he was assistant shop superintendent at South Tacoma, Wash. On the latter date he was promoted to mechanical engineer, with headquarters at St. Paul. On January 1, 1910, he left the Northern Pacific to become superintendent of motive power of the Western Pacific, with headquarters at San Francisco. In 1913 he left this position to become assistant superintendent of motive power of the Missouri Pacific and a short time thereafter was promoted to superintendent of motive power, which position he resigned in the early part of 1922.

J. E. O'Brien

Engineering, Maintenance of Way and Signaling

Irwin H. Schram, regional engineer of the Hornell region of the Erie with headquarters at Hornell, N. Y., has been transferred in a similar capacity to the Chicago region with headquarters at Chicago.

B. B. Shaw, division engineer of the Chicago, Rock Island & Pacific, with headquarters at Little Rock, Ark., has resigned to become chief engineer of the Cuba Railway, with headquarters at Camaguay, Cuba.

Obituary

F. H. Ustick, general superintendent of the Chicago, Burlington & Quincy, with headquarters at Burlington, Iowa, died on November 13, at Denver, from pneumonia, which followed an operation for appendicitis.

A. F. Vickroy, superintendent of the Union Pacific, with headquarters at Denver, Colo., whose death on October 17 was reported in the *Railway Age* of October 28, page 824, was born on January 16, 1861, at Avoca, Neb. He entered railway service in 1873 as a supply clerk on the Kansas Pacific (Union Pacific) at Ellis, Kan., and from 1874 to January, 1879, held the positions of shop clerk at Wamego, Kan., timekeeper in the motive power department at Armstrong, Kan., telegraph operator at Carr, Colo., clerk and operator in the division superintendent's office at Denver, Colo., and agent at Hugo, Colo., consecutively. When the Union Pacific absorbed the Kansas Pacific in January, 1879, he was transferred to Wallace, Kan., where he remained until May, 1881, when he was promoted to dispatcher, with headquarters at Denver, Colo. In January, 1883, he was promoted to chief dispatcher at Como, Colo. (Colorado & Southern), and from January, 1884, to September, 1901, he was dispatcher and chief dispatcher at Denver, Colo. He was promoted to superintendent of the Kansas division, with headquarters at Ellis, Kan., which position he held until September, 1906, when he was made assistant superintendent of the Wyoming division, with headquarters at Cheyenne, Wyo. On April 1, 1907, he was promoted to superintendent of the Colorado division, with headquarters at Denver, Colo., and held this position until the time of his death. From April 1, 1907, to May 1, 1915, he was also president of the Denver Union Depot Company.

O. L. Kinney, general western passenger agent of the Pere Marquette, with headquarters at Chicago, died on November 10 from an attack of apoplexy while driving from his home in Oak Park to his office in Chicago. Mr. Kinney was born in 1875 and entered railway service in 1894 as an office boy with the Grand Trunk, rising through various promotions to the position of ticket agent. He entered the employ of the Pere Marquette on April 28, 1902, as a ticket agent at Toledo, O., later being promoted to city passenger agent and division passenger agent, with headquarters at Toledo. In 1914, he was promoted to general western passenger agent, with headquarters at Chicago, which position he was holding at the time of his death. During the period of Federal control he was employed as division passenger agent for the Pere Marquette group of lines at Chicago and upon the dissolution of this group resumed his former duties and title.

O. L. Kinney

Emil E. Kruthoffer, auditor of freight accounts of the Cleveland, Cincinnati, Chicago & St. Louis, died at his home in Cincinnati on November 5. Mr. Kruthoffer was born in Batavia, Isle of Java, May 22, 1853, his father at that time being manager of a Dutch East Indies trading company. He was educated in Europe and was a graduate of a college at Frankfort, Germany. At the completion of his studies, at the age of 19, he came to America, remaining in New York City for a short time. He then went to Ohio, locating in Noble county as bookkeeper for his uncle in a large country store. Subsequently he was employed as a steward, or clerk, on a steamboat plying the Ohio river. In 1872 he entered railroad service with the Cleveland, Marietta & Pittsburgh as bookkeeper. He was assistant auditor from 1875 to 1877 and auditor from 1877 to January 1, 1882, on which latter date he became a clerk under E. B. Thomas, general manager of the Cleveland, Columbus, Cincinnati & Indianapolis, which in 1889 was merged by consolidation into the Cleveland, Cincinnati, Chicago & St. Louis Railway. He later became traveling auditor, which position he held until April 1, 1890, when he was appointed freight accountant, the latter position being changed in title to auditor of freight accounts on July 1, 1905.

Railroads and Public Relations Advertising

THE NEED for a better understanding of the railroad situation by the public, and especially the farmers, is plain. To public misunderstanding of the railroad problem is very largely due the results of the recent election in many states, especially in the west. The attitude of a very large part of the men elected to Congress is such as to justify fear that unless there is a substantial change of public sentiment before the new Congress meets, legislation seriously adverse to the railroads will be passed.

During the present year the *Railway Age*, realizing that public sentiment regarding railway matters, especially in western territory, was undergoing an alarming change, repeatedly urged the railways to make greater efforts to set themselves right before the public. There has been an increase of public relations work, but it has been wholly inadequate to the needs of a time when more misleading propaganda against the railways has been carried on than ever before.

There is no more effective means available for presenting the case of the railways to the public and influencing public sentiment than advertising in magazines and newspapers of general circulation and in the farm papers. Public relations advertising is often discussed as if its main purpose and effect are to influence the policy of the press through the counting room, but as a matter of fact the editorial policies of reputable publications are influenced by advertising to a very much smaller extent than many people believe. The real purpose and effect of public relations advertising should be to present to the public in an attractive and interesting way correct information which will influence public sentiment because the information is correct and suggests correct conclusions.

Several railways have done considerable public relations advertising, but no other railway has done as much of it in its own territory, or done it as systematically and thoroughly, as the Illinois Central. Every month for over two years the Illinois Central has published in every daily and weekly English language newspaper of general circulation in its territory an advertisement 30 column inches long dealing with some matter of common interest to the railroads and the public. In these advertisements it has told its patrons and employees the causes and remedies for grade crossing accidents, the way in which every dollar earned by the Illinois Central is spent and the reason and remedies for the shortage of transportation. During the shop employees' strike it explained the causes of the strike and asked for the co-operation of the public in the emergency, and urged its employees to stay at work or return to work. These are but a few examples of the subjects with which its advertisements have dealt.

It cannot be questioned that the Illinois Central is among the best managed railroads in the country. Few railways have done as well in the last two years. Few succeeded in keeping as many of their shop employees at work during the recent strike, as quickly restored their shop forces to normal or were as little affected by the strike in respect to earnings and expenses. In the first nine months of 1922 the Class I railways of the country as a whole had $411,000,000, or over ten per cent, less total earnings than in the same months of 1920. On the other hand, the Illinois Central in these months increased its total earnings by $6,500,000, or over six per cent, as compared with the same months of 1920. The operating ratio of the Class I railways as a whole declined from 96.3 per cent in the first nine months of 1920 to 79.79 per cent in the corresponding months of 1922, or 16.51 points. The Illinois Central's operating ratio declined from 95.2 to 76.8 per cent, or 18.4 points. In the months of August and September, 1922, when the railways' earnings and expenses showed most plainly the effects of the reductions of rates and the shop employees' strike, the net operating income of all the Class I railways declined $77,000,000, or over 40 per cent as compared with the same months of 1921. In these same months the net operating income of the Illinois Central almost doubled, increasing from less than $2,900,000 in 1921 to over $5,600,000 in 1922.

When the management of a railroad is able to show such a record as this its opinion regarding any question of railway policy is entitled to most respectful consideration. Is there any relationship between the Illinois Central's public relations advertising and the operating and financial results it has secured? The management of the Illinois Central is the best judge of that, and its principal officers are unanimous in the opinion that there is such a relationship. They believe that its public relations advertising has been a potent influence in helping it to increase its earnings and in securing co-operation from its employees and patrons in handling its business efficiently and economically. The advertisements have all been signed by President Markham. They have helped to give personality to the railroad, a thing every railroad needs. They have influenced public sentiment favorably to it, and this has attracted business. They have made its employees and its public understand railroad problems better, and this has helped to build up morale and to nullify the effects of anti-railroad propaganda.

It might be assumed that the public relations advertising the Illinois Central is doing costs a good deal of money. The

total annual cost of it is about $100,000. This is 7/100 of one per cent of its total earnings, and 9/100 of one per cent of its total operating expenses in 1921. If every Class I railway in the country had spent relatively as much in 1921 for this purpose as the Illinois Central, the total expenditure would have been less than $4,000,000. Absolutely, this is a large amount of money. Compared with the total earnings of the railways and the importance of a better understanding of the railroad problem by railway employees and the public, it is a small sum.

The total expenditures made by the railways for advertising has shown a marked decline within recent years, both in absolute amount and in proportion to earnings and operating expenses. Omitting the two years of government operation, the total outlay for advertising in 1913 to 1921, inclusive, was as follows:

Year	Advertising Expenses	Operating Revenue	Per cent of Total Revenue	Operating Expenses	Per cent of Operating Expense
1913.....	$9,275,698	$3,125,135,798	.296	$2,169,968,924	.427
1914.....	8,122,328	3,047,019,908	.266	2,200,313,159	.369
1915.....	7,141,908	2,956,193,202	.241	2,088,682,956	.342
1916.....	7,745,466	3,691,065,217	.209	2,426,250,521	.319
1917.....	7,305,790	4,014,142,747	.182	2,829,325,124	.258
1920.....	4,138,198	6,178,438,459	.066	5,833,731,629	.070
1921.....	6,362,810	6,516,556,462	.097	4,562,668,302	.139

It will be seen that the total advertising expense in 1921 was one-third less than in 1913, and that whereas in 1913 almost 3/10 of one per cent of earnings was spent for advertising, in 1921 less than 1/10 of one per cent was spent for advertising. Because of the increase in the cost of advertising space, the decline in the amount of advertising done was much greater than these figures indicate. In 1923 the railways as a whole could spend as much for other kinds of advertising as they did in 1922 and increase by over $3,000,000 the amount spent by them for public relations advertising, and still not make their total expenditure for advertising exceed what it was 10 years ago.

The *Railway Age* does not suggest that each railroad should individually adopt a public relations advertising program relatively as large as that of the Illinois Central. Perhaps better results would be secured if part of the expenditure for this purpose were made by the individual railways and part of it jointly by groups of railways or by the railways as a whole. It does, however, seem most probable that systematic and persistent presentation of the facts about the railway situation through advertising throughout the country would have in time a very beneficial effect upon the relations of the railways with their employees and the public. Several large concerns or groups of concerns such as the American Telephone & Telegraph Company, the meat packers, and the Standard Oil Company have systematically carried on such advertising campaigns for long periods, and got excellent results. The railways that have done such advertising believe it has been worth far more than it has cost.

There are many ways in which more public relations work should be done, but it seems clear that public relations advertising should, and even must be used if all the many millions of people to whom transportation facts and conditions should be presented are to be reached and influenced.

Important Problems Before the Mechanical Division

The Mechanical Division of the American Railway Association has given as the reason for deciding not to hold its regular convention in 1923 the inability of the members to attend committee meetings or to work on reports. This decision was based on conditions just after a nation-wide strike and was undoubtedly influenced by the circumstances existing during the past few months. There is no prospect of another disruption of shop forces; in fact, the worst crisis that can be anticipated at present is a record-breaking traffic. It seems pertinent to inquire at this time what constitutes an emergency that would justify a railroad officer in giving up his work in the technical associations.

There are, of course, emergencies which threaten to stop the operation of the railroads. When they occur, the most important duty of every railroad man is to overcome them. It is well to prepare for emergencies; but it is a mistake to stand in such dread of unforeseen possibilities that the expectation of a crisis will put a stop to progressive and constructive work. Second only in importance to keeping the railroads running is the problem of making them more efficient and economical. Except under extreme conditions, no railroad officer should be too busy to give his attention to anything which promises to add materially to the efficiency and economy of operation. If he cannot do this, there is something wrong with his organization.

The technical associations of railroad officers exist because they afford the most effective means of solving problems of importance to all the railroads. They are co-operative organizations to which the railroads contribute a small amount of time in committee work and in return get the best judgment of representatives of all the roads on the subjects considered. The important railroad problems which form, or should form, the subjects of discussion at technical conventions have not been dispelled by the strike. On the contrary, they have become more pressing due to the large number of new men taken into the service and the amount of equipment in bad order. Eventually, the railroads must bend their energy to solving these problems in the way that will best promote economy and efficiency. Postponing the solution will inevitably cause avoidable waste in railroad operation. It will not save time because the officers of the individual roads will each have to consider these matters which should have been settled for all by the committees. This, in the aggregate, will take much more time than would have been required for a very thorough study on behalf of all the roads by members of the association.

What are some of the problems before the mechanical department on which concerted study and action are needed? First, and most important, is the problem of training employees. Practically every railroad now has considerable

numbers of mechanics who are inexperienced in railroad work. Some also have a considerable proportion of foremen who were promoted during the strike. Very little of the minutiæ of railroad mechanical work has been set down in books. How are these men to be instructed to give them a thorough understanding of their work in the shortest possible time? What policies should be adopted regarding foremen to insure that they will remain loyal in any future crisis? How can they be trained to interpret the policy of the railroads to the men under them so as to counteract the lying propaganda of labor organizations which has proved so destructive to the morale of the workers? A frank interchange of experience and opinion on these topics alone at the next Mechanical Division convention should repay the railroads for all the time which the officers would be required to spend in preparing committee reports.

In addition to these human problems, there are pressing technical problems which the railroads cannot afford to put off for two years. The question of wheel loads and rail stresses is a good illustration. Ever since 1914 the American Railway Engineering Association and the American Society of Civil Engineers have been analyzing the effect of single wheel loads and a combination of wheel loads under both static and dynamic conditions. These tests have brought out the fact that isolated wheels, such as the trailing wheels or two-wheel leading trucks, produce greater stresses in relation to the weight carried than do the locomotive drivers. This indicates that the weight of the locomotive should not be distributed evenly between the wheels, but that greater loads can be carried by the center drivers than by the end drivers and that the load should be still further reduced on the leading and trailing trucks. The Mechanical Division has had a committee co-operating with the American Railway Engineering Association since 1920 and its report should not be further postponed. Other investigations have indicated that heavily loaded freight cars set up far greater stresses in rails than is commonly believed to be the case. This work has such an important bearing on locomotive and car design that the conclusions of the committee should be reported and discussed at the earliest opportunity.

Other questions of special importance at this time are corrosion and decay in cars, the selection and testing of draft gear and the operating results obtained with new designs of locomotives. These are actual problems which the mechanical department must settle sooner or later. It is the function of the Mechanical Division to see that the right solution is presented to the railroads as promptly as possible. These questions are of such importance to the railroads that their consideration should not be deferred.

Hire of Equipment

Railway operating income represents net after taxes. Net railway operating income—the term which the *Railway Age* has recently been discussing at some length in these columns—represents, on the other hand, a net after rents—namely, equipment rents and joint facility rents. The editorials that have already appeared have been intended to throw some much needed light on the difference between the two terms "railway operating income" and "net railway operating income", and also as a plea in favor of a more general and more consistent use of the latter term. Continuing the discussion leads one next to comment on the good judgment which was shown in working out a figure—we refer to that of "net railway operating income" which pays proper regard to the matter of equipment rents. There has been much discussion in accounting circles concerning the proper place and the proper manner in which equipment rents should be shown in the income account. It is not intended, however, just yet at least, to participate in that discussion. We shall content ourselves in this instance in showing just how great an effect the inclusion of equipment rents may have on the operating results. Mr. Ford's railroad, the Detroit, Toledo & Ironton has thus far failed to show those wonderful results which Mr. Ford promised. The D. T. & I.'s monthly earnings reports not only have not been good—they have, on the contrary, been extremely poor. Not enough attention has been paid to the fact that the road's difficulty has been due to equipment rents—or to put it into the terms of our discussion, due to the fact that the monthly reports have had to show net after rents rather than net after taxes only. The figures show that for the nine months ended September 30, 1922, Mr. Ford's railroad had a net after taxes of $1,016,301—a very satisfactory figure, but that it had a net after rents of only $5,650—a very poor figure. A selection of the figures follows:

Detroit, Toledo & Ironton

	Sept., 1922	Nine mos., 1922
Net after taxes	—$233,982	$1,016,301
Net after rents	383,097	5,650
	Sept., 1921	Nine mos., 1921
Net after taxes	$31,779	$893,082
Net after rents	—91,761	352,447

These figures point out that the D. T. & I. needs cars. They also serve as a pertinent example of how much more complete the story of net earnings may sometimes be told if "net railway operating income" is shown rather than merely railway operating income.

Simplified Schedule System at Jackson Shops

Undoubtedly one great objection of many practical railroad men of the old school to shop schedule or routing systems is that certain forms have to be filled out, involving more or less clerical work. Shop schedules consist, however, of far more than filling out forms by some clerk. *They are essentially a method of locating weak departments, speeding up operations and increasing shop output.* They have demonstrated their ability to perform these three functions, and the number of forms used, or details developed, can be readily suited to individual shop needs. A shop schedule, notable for few printed forms as well as for its effective control of shop operations, is installed at the Michigan Central Shops, Jackson, Mich., as described elsewhere in this issue. This schedule has admittedly been one of the important factors enabling the Jackson shops to recover rapidly from the effects of the strike and within three months show an important increase above normal output. The most noticeable feature about the schedule system at Jackson, the one without which no shop schedule can be successful, is that everyone believes in it from the superintendent of motive power down through the ranks. If in any shop the superintendent or general foreman does not believe in the schedule, and give it his hearty co-operation and support, it will be absolutely ineffective and useless. The next feature is that the importance of the work of the schedule supervisor has been recognized. In this case he has been given the title of schedule foreman and made responsible not only for scheduling locomotives, but following up work orders, trucking all material through the shops and shipping

to outside points. To handle details of this work the schedule foreman has under his personal direction an assistant, a work order clerk and ten laborers provided with six power tractors for trucking material. The movement of material is plainly a function of the schedule department although not commonly so considered and the way in which the efficient trailer tractor system at Jackson shops is directed by the schedule foreman is therefore of exceptional interest. The next feature of importance is the special efficiency gang composed of five practical shop experts who devote their entire time to tracing delays as indicated by red marks on the schedule board, locating the weak points in various departments and strengthening them. When one department has been brought up to standard, usually some other becomes the limiting factor and, by correcting these deficiencies, there is a continual improvement in shop operation and output.

Importance of T. & T. Meeting

After several postponements occasioned by the strike of the shop crafts, the Telegraph and Telephone Section of the American Railway Association will hold its annual meeting at Chicago on December 12, 13 and 14. This meeting is the first since that held at Richmond, Va., last March and a number of interesting and valuable reports have been prepared for presentation, which afford an opportunity for constructive work. The section, however, has another opportunity to make this meeting one of the most valuable ever held if it has the courage to discuss the problems arising out of the strike. The meeting can thus be made to cover discussions of technical and the human problems which go hand in hand in any organization. In order that the greatest good may result, railroad managements should see to it that their telegraph department officers are in attendance. Even though problems relating to the strike are not discussed on the floor, the information gained from an interchange of ideas and experiences among the various groups of men in attendance after the sessions will be invaluable. It is fair to assume that those present will come away better equipped to inaugurate savings in the telegraph department which will more than repay the railroads many times over the expense involved. A concrete example of this is where one telegraph department officer was at a meeting when the application of the symbol system to messages was discussed thoroughly. On his return, he inaugurated this system on his road with the result that it enabled him to dispense permanently with operators at certain locations. This road has received a high return on the investment made by having its representative present. Other roads should benefit in similar ways.

The L. C. L. Problem and Motor Trucks

LESS-THAN-CARLOAD freight comprises between four and five per cent of the total tonnage handled by the railways. Yet it requires more than 23 per cent of the cars. While the rates received for its transportation are higher than for carload freight, it is loaded and unloaded by the roads at their expense through stations provided by them. These stations must be located close to the industrial centers if they are to secure the traffic, which means that the investment for land is high. All of these factors make such great inroads on the revenues derived from this traffic that only in rare instances does it contribute its share to the net revenues of the roads. In fact, in many instances, particularly with short hauls, the roads are actually carrying the traffic at a loss. This situation calls for serious consideration by railway officers and gives special timeliness to the able discussion of the motor truck as an aid in the solution of this problem, presented by W. H. Lyford, vice-president of the Chicago & Eastern Illinois, which appears elsewhere in this issue.

The disproportionately large demands for cars to handle this traffic are specially important at the present time when cars are so much in demand, particularly the type required in this service. While some reduction in the number of cars required may be secured by heavier loading, aided by more transfer or assembling points, the relief possible from such measures is limited owing to the relation between heavy loading of l.c.l. freight and claims. There is, however, one place in which improvement can be effected. In many large cities it is the practice to transfer l.c.l. freight between railways in cars, which movement consumes many car days. Furthermore, it is the practice of many roads to transfer the freight between the several receiving and delivery houses and a central assembly and break-up platform or between large industries and this platform by trap cars. In this service the motor truck offers large possibilities, as pointed out by Mr. Lyford. That this is no new idea is indicated by the use of demountable bodies on trucks at Cincinnati, the trailer plan at St. Louis and the more recent suggestions at New York.

The second great opportunity for reduction in cost lies in the use made of the freight station. At the present time the shipper delivers his freight at the station at any time he pleases and the consignee calls for it at his convenience, usually allowing it to remain in the house three or four days. Because he has to call for and deliver his freight, he patronizes the road whose station is located nearest to his plant, thereby forcing the roads to use expensive property, so expensive in fact that as Mr. Lyford points out, the interest charges alone on real estate occupied by at least one freight house in Chicago are more than $2.30 per ton of freight handled.

If the railways could move all freight to the warehouse of the consignee the day it was received, the relatively large proportion of the floor space now required for storage could be restored to its real purpose, relieving the congestion and postponing for a long time expenditures for more area now pressing. It is doubtful if the railways can afford to undertake to deliver this less than carload freight individually because of the duplication of effort and heavy expense. There are also considerations which favor the development of this service by an independent cartage company working in conjunction with all of the railways in a city and making a special charge for it. Such a company should, by reason of the volume of its operations, be able to render the service for shippers for less than it now costs them independently. By working in conjunction with the railways, it could relieve them of the necessity for a large part if not all of the storage. By a further co-ordination of activities and the transfer of the cartage responsibility to another company, much of the objection of shippers to a more remote and less expensive location for the freight stations could be overcome. This again suggests the use of motor trucks.

In the early days of the motor truck, its sponsors launched extensive campaigns to "ship by truck." In launching the motor truck as a competitor of the railways, its friends hindered its development along logical lines. By failing to realize its possibilities as an aid in the solution of their problems, the railways may be losing an equal opportunity. The motor truck is a transportation agency which has a definite future. It is the problem of the railways to utilize it as an adjunct in its operations. In no phase of railway operation are there greater possibilities than in the handling of less than carload freight.

What Increased Coal Prices Are Costing the Railroads

THE NET OPERATING income of the railways sharply declined in August and September. It was 40 per cent less in these months than in the same months of 1921. This decline has been attributed to the reduction of rates made on July 1, and to the effects of the shop employees' strike.

Detailed statistics of operating expenses for August which recently have been made public by the Interstate Commerce Commission disclose that there was another factor which was of very great importance. This was the increase in the average price that the railways had to pay for coal.

Before the coal strike began last spring the average price the railways were paying for coal was declining, and in April, the month immediately following the beginning of the strike, when the prices charged into the accounts were those paid immediately before the strike began, the average cost of railroad coal was $3.46 a ton. From that time the cost began rapidly to increase, and in August it was $4.87, an increase since April of $1.41, or over 40 per cent.

The railways use about 12,500,000 tons of coal a month. Therefore, this increase in its cost of $1.41 a ton added about $17,500,000 to their operating expenses in August. This increase in operating expenses resulted in an equivalent reduction of their net operating income. The reduction in their net operating income as compared with August, 1921, was $37,600,000. Therefore, the increase in the cost of coal alone was responsible for almost one-half of the entire reduction of their net operating income.

The railroads have had a strike of their own. It has cost them a great deal of money. Nobody has proposed to allow them to advance their rates to offset the increased expense caused by the shop employees' strike. On the contrary, most of their rates, including those on coal, are now 10 per cent less than they were before July 1 when the shop employees' strike began.

The coal operators had a strike in their mines. They lost it. In consequence they are paying the same wages to the miners now that they were prior to April 1. The coal strike caused a shortage of coal. The coal operators have, in consequence, increased the price the railways have to pay for coal almost 40 per cent.

The railways are not only being forced, out of reduced rates, to pay the cost of the shop employees' strike, but also a large part of the cost of the coal strike. They consume about one-third of all the coal produced. Therefore, they are paying, roughly, one-third of all the increase in the cost of coal due to the coal strike.

It may be said that the advance in the price of coal was commercially justifiable because of the shortage of it. But there is also a shortage of transportation about which the coal operators frequently complain. If the coal operators are justified in increasing the price the railroads have to pay for coal 40 per cent because of the shortage of coal, upon what theory of morale or economics can it be contended that the railroads should be required, not merely to refrain from advancing rates on coal, but to continue to haul it at rates which are 10 per cent lower than they were before the coal strike began?

The *Railway Age* does not wish to be understood as advocating an advance in the rates on coal. It does contend that for the railways, under present conditions, to be required to haul coal at reduced rates and to be forced to pay coal prices that have been advanced 40 per cent since last spring is an economic and moral outrage.

When is the increase in the prices the railroads have to pay for coal going to stop? In only one month of 1920 or 1921 was the average price they paid as high as in August, 1922. This was in November, 1920, when it was $4.92. We have no disposition to advocate government regulation of the price of coal. But those in the coal business are certainly doing their best to afford justification for the advocacy of such a policy.

There is in some sections a powerful agitation for further reductions of railway rates. Those carrying on this agitation might well direct their attention to the price of coal. How can the railways be expected to reduce rates again when within six months the price of their coal, one of the largest items in their operating expenses, has been increased 40 per cent?

New Books

Biographical Directory of Railway Officials of America. Edited by Elmer T. Howson, Western editor, Railway Age; D. A. Steel, associate editor, Railway Age, and J. B. Tebo. 718 pages, 6 in. by 9 in. Bound in cloth. Published by the Simmons-Boardman Publishing Company, Woolworth Bldg., New York.

The publication of the Biographical Directory was begun by the Railway Age Company in 1885 for the double purpose of furnishing a complete list of American railway officers arranged alphabetically for personal reference rather than under the titles of their companies and also providing a concise record of their railway history. The 1922 edition is the eighth in this series of directories. While the need for an alphabetical list of railway men is now supplied from other sources, the increasing value of a directory confined to the personal history of the men who build, control and carry on the operation of the railways of North America has been demonstrated in the years which have passed since the appearance of the first edition and the Biographical Directory has come to be recognized as an indispensable reference book in every railway library, as it is the only comprehensive history of the professional careers of American railway officers published. The purpose of the directory is to give a concise and accurate record of the railway service of general, divisional and departmental officers.

The present volume shows a larger number of new names than any previous edition; only approximately 1,850 of the more than 5,000 officers whose sketches appear in this volume appeared in the last, or 1913, edition. It is of interest to note that only approximately 650 of the men whose sketches appeared in the 1913 edition are holding the same position as then, indicating that a new generation has come into the command of our railways. More than 3,000 of the sketches incorporated in this volume have been inserted for the first time.

In addition to the sketches of men in active railway service, there are also included sketches of a number of railway officials of extended service who have left important railway positions to engage in other business, but whose railway records still continue to be a matter of general interest. Sketches are also included of many former railway officers now retired and still living. As in the 1913 edition, biographical sketches of the members of the Interstate Commerce Commission and of many of the state railway commissions are grouped in alphabetical order at the end of the volume. To these have been added the members of the Railroad Labor Board.

THE RAILWAY CLUB OF PITTSBURGH will hold its regular meeting at Fort Pitt Hotel, on the evening of Thursday, November 23. F. X. Millholland, assistant to senior vice-president of the Baltimore & Ohio, will speak on Public Relations of the Railroads.

Letters to the Editor

Expedited Service and Rate Making

St. Louis, Mo.

To the Editor:

I have been impressed, sometimes favorably and sometimes otherwise, with the views of Secretary of Commerce Hoover, as published from time to time, respecting freight rates and transportation. I think I see a fundamental feature running through his statements, which, I believe, if recognized and acted upon will result in mutual benefit to the carriers and to the public. Mr. Hoover held, in his testimony before the Interstate Commerce Commission, in General Rate Investigation Docket No. 13,293, that the class rates, or those covering the higher grades of merchandise, might well be advanced, making reductions only in the rates on the lower grades of commodities.

If the carriers would so adjust their methods of handling these different classes of shipments, and recognize that there should be a distinct and well-defined service commensurate with the value of the goods, so that high-class shipments should not be delayed in transit or held in suspense in consequence of maximum train tonnage rules, much higher rates might quite reasonably be demanded. In fact, I believe the shippers and receivers of the higher grades of merchandise would willingly pay higher rates if such rates were predicated on schedule of such speed and guaranteed regularity as would preclude the filling in with cars of pig iron, or other low-grade commodities, in order to bring the train load up.

In other words, if the public were assured of a specially expedited, dependable service on high-class shipments, rates might be maintained on the basis of such schedules, provided a system of refunds, or forfeitures, for failure to make or offer delivery at destination within a resonable, fixed number of hours over schedule were adopted.

My thought is that in this manner we might have a service intermediate with the present merchandise service of the railroads and the American Railway Express service. It may be said that some of the lines have high-class merchandise trains —symbol trains, if you please. It will be found, however, on careful examination of the rules governing the make-up of these trains that low-grade shipments may be put in to make up maximum train tonnage loading. As the maximum speed of a train can be no greater than the bearings of the heaviest loaded car therein will permit, that necessarily becomes the maximum service that can be accorded the higher grade commodities in that train.

The value of the goods is an important factor—important to the carriers in that every unnecessary day in transit adds to the risk, without additional compensation therefor, to say nothing of the loss incident to the misuse of equipment. The importance to the owner of the goods lies in the fact that the value of the goods represents idle capital and every needless day in transit is an unreasonable drain on his working capital, and detracts from his legitimate turnover accordingly. Adam Smith said, over a hundred and fifty years ago (and it is just as applicable to the commerce of today), that "the greatest and most important branch of the commerce of every nation is that which is carried on between the inhabitants of the town and those of the country." Therefore, is it not of vital importance that our transportation system shall provide the most expeditious, economic methods and facilities for the exchange of the products of the farm (the sustaining forces of life) for the finished articles of manufacturing and jobbing centers?

Obviously, this should be done with as little waste of energy and capital as possible. In other words, goods ready for consumption should be moved with the greatest possible dispatch, while the basic articles of commerce may well be moved on a maximum train tonnage basis, so long as industries are kept regularly and amply supplied.

What the shipper wants is service, and he is willing to pay a good price for the genuine article. P. W. Coyle,
Traffic Commissioner, St. Louis Chamber of Commerce.

Concerning Statistical Comparisons

New York, N. Y.

To the Editor:

In the *Railway Age* of November 4, page 831, D. M. Neiswanger criticises certain features of an article of mine in a previous issue. It is only fair to state that the *Railway Age* had held this article for some time and that therefore certain statements were somewhat antiquated. Insofar as his remark that the statistics quoted are erroneous, would say that the original copy of my article specifically stated that these were not all as of the months of July (as was stated in the published version), but were for summer months readily comparable. Mr. Neiswanger was thus misled through the caption over the statistical table. It would seem superfluous to add that the figures used were taken from reports of the U. S. R. A. and the I. C. C., and were not the product of my imagination.

I admit fully the error in the wording of the phrase "average number tons per car-mile" in order to get entire phrase on one line; I felt that railroad men would readily understand that this meant per *loaded* car-mile.

As for the aspersion that .50 cents per car-mile is not a true figure for the cost of handling a heavy official car, or Pullman, would say that this is an *average*. Service of another character is naturally reflected in any average. For authority, might add that this estimate was made by one of the high officials of the Railroad Administration, as the files will disclose. Since that time I have seen higher calculations.

Referring to the remark (in connection with my discussion of passes) that I neglect the principle of "long established consideration of employees, particularly those older in service," would refer the gentleman to the first paragraph on page 703, which especially mentions this factor, almost in the words which he uses.

Mr. Neiswanger's further criticism of my remarks regarding lighter loading of trains as an economy concludes with the contention that this "is open to considerable doubt." Judging by the mass of material appearing in the *Railway Age* and elsewhere, both pro and con, his statement is more than correct, and from the disagreements as between eminent authorities, it would appear that one theory is as valuable as another. His discussion of the economics of the subject is a valuable contribution, but can it not be refuted by arguing from the human equation? Mr. Hungerford in his recent book, depicts a trainman on a northwestern road, who, after creeping over the division on a freight drag, is deadheaded east on his rest period to take out another train. The chapter is well worth reading, and the man who wears out his life to assist in making "tonnage records," etc., show up well, can hardly be blamed for not being loyal to his company. This subject might be stretched into an entire article, for the feelings engendered in the hearts of trainmen forced to take out trains too heavy for the locomotive can never be measured in dollars and cents, nor in gross tons per train.

The further computations of what *might* have been, etc., had there been fewer bad order cars, had business been heavier, and such surmises, I pass over with the suggestion that such hypotheses are about as valuable and informative as the rating of football teams by comparative scores—the probabilities never come true under actual conditions.

Franklin Snow.

Schedule Assists in Rapid Shop Reorganization

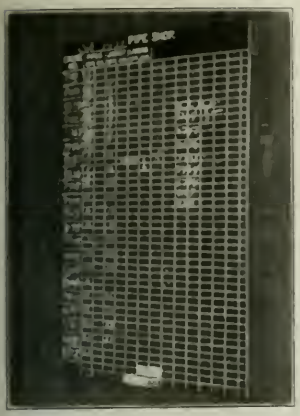

Fig 1—Typical Department Schedule Board

Output of Jackson Shops of the Michigan Central Quickly Raised Above Normal by Simplified Shop Schedule

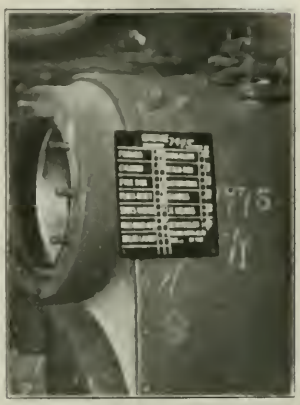

Fig 2—Dates for Erecting Shop Operations

WITH A NORMAL output of about 18 heavy and 20 light repair locomotives a month, the Michigan Central repair shops at Jackson, Mich., closed down during the first three weeks of July as a result of the strike, and the output dropped practically to zero. Reopening the last of the month, the shop force was being rapidly recruited when the so-called Willard-Jewell strike settlement occurred and many of the striking shop men returned, swelling the total shop force in the month of October to almost 25 per cent above normal. During August and September the shop organization was gradually rebuilt and the output increased until, in October, all departments were well balanced and functioning smoothly, so that 25 locomotives were given heavy repairs and 20 light repairs. This output represented an even greater increase over pre-strike months than the proportionate increase in men employed. It was a striking achievement considering that new men were trained, old men relocated, departments built up and the entire shop put on a production basis in three months.

In view of the results obtained, a brief analysis of the shop force and output by months, as shown in Table I, will be of interest. The total number of employees at Jackson previous to the strike was about 862, of whom 556 worked in the repair shops and 306 in the roundhouse. When the strike was called on July 1, only 60 men reported for work and these men were sent to the roundhouse together with the shop foremen to keep as many locomotives as possible in service. The output of heavy repair locomotives was slow in picking up during August and September, as shown in the table, owing to the concentration of work on light repairs; but by October, the shop output had increased fully 25 per cent and the roundhouse 23 per cent.

TABLE I—EMPLOYEES AND OUTPUT OF JACKSON SHOPS, APRIL TO OCTOBER, 1922

	April	May	June	July	Aug.	Sept.	Oct.

Salient Features of Shop Organization

Credit for the rapid reorganization of Jackson shops is doubtless due first of all to the character and ability of the supervisory officers and shop foremen who remained loyal to the railroad in the emergency. They formed the foundation on which the new organization was built. Unquestionably, the factor of second importance, and the one forming the basis of this article, is the simple and effective shop schedule or routing system, by means of which shop operations are controlled. Next in importance is the efficient power-trucking system, directed by the schedule foreman, and designed to secure material and parts from the storehouse or stripping gang, keep them moving through the various shop departments, and truck them to the erecting shop for assembly as soon as they are finished. Mention should also be made of the special shop efficiency department consisting of the assistant shop supervisor and five specialists who devote practically all their time to tracing and removing the causes of delay as indicated by red marks on the schedule board. This department has developed many improved methods, jigs and fixtures which tend to speed up the schedule and increase the general efficiency of the shop as a whole.

Simplified Shop Schedule System

The schedule system employed at Jackson shops is unusually simple, being carried out with as few printed forms as possible. Its success is largely due to the fact that everyone believes in it and works for it, from W. H. Flynn, superintendent of motive power; F. P. Neesley, division master mechanic, and C. W. Adams, shop superintendent, down to the youngest shop foreman.

In brief, the master schedule consists of an immense board, 7½ ft. high by 21 ft. long, taking up the entire front wall of the room in which the foremen meet frequently to discuss the progress of the work. This board is ruled in squares, and provided with a heading, as illustrated in Fig. 3. Horizontal columns *A* indicate the dates on which various operations are due, columns *B* showing the dates on which these operations are actually completed. In case of delay, these dates are marked with red chalk, indicated in the illustration by numbers enclosed in circles. Obviously, a red date is a signal for investigation and action by all concerned.

About the twenty-second of each month, the shop superintendent and foremen meet in the foremen's room to schedule engines for the following month, and another meeting is held on the tenth of the month to make necessary schedule revisions. From work reports and inspectors' reports the condition of each locomotive is known, and a reasonably accurate estimate can be made of the time needed for each repair operation. Dates are accordingly chalked on the master schedule board. All the foremen are present, and if they feel that any of the dates cannot be met, the matter is thrashed out then and there. It is the intention, however, to set the schedule slightly ahead of what can be accomplished, and continually shorten the schedule as better shop methods are developed.

The foreman of each important department has a printed form covering the work of his department, to be filled out in accordance with the master schedule and carried by him for

reference. This form is also duplicated in chalk on a department board, located in a conspicuous position for the information of the workmen. Fig. 1 shows such a board in the pipe shop.

Dates for the completion of erecting shop work on each locomotive are chalked on an 8-in. by 9-in. piece of sheet iron, painted, lettered and attached to the cylinder, as shown in Fig. 2. Dates when material should be received from the machine shop and when it should be applied to the locomotive are shown. Erecting shop men are thus enabled to tell exactly when different operations are due without consulting every important machine and job throughout the shop. Workmen naturally try to get the slips onto the O.K. hook as fast as possible. Moreover, foremen can walk through their departments and tell at a glance which machines have a lot of work ahead and which will soon be caught up.

Dates on the master and department schedule boards are made with yellow chalk, the date when the work is actually completed being put on with blue chalk, except in the case of delays, when red is used. Delays are, therefore, indicated on the master department schedule boards by red dates which are conspicuous and attract attention. In order to avoid

Fig. 3—Reproduction of Upper Section of 7½-ft. by 21-ft. Master Schedule

the foreman. The only other forms in connection with this simplified schedule system are two small ones used to report delays to the foremen, and causes of delay to the shop superintendent. There are, however, two additional small shop forms, one being a work order slip form for outside work and small material not mentioned on the schedule, and the other consisting essentially of a form issued by the schedule foreman for the movement of material.

Work Order Slips Effectively Used

The work order slip (Fig. 4) is of sufficient importance to be described in some detail. In general, it is made out in triplicate by a foreman who needs work done in another department. The original white slip goes to the department which will do the work; the second blue slip goes to the routing office which looks up pattern numbers and gets the rough material from the storehouse or casting platform; the third yellow slip is retained by the issuing foreman for reference. When the work is completed, the time is entered on the original slip; it is signed by the foreman and returned to the routing office which arranges for the finished material to be trucked to the proper department. The work order slip also serves as a record of time spent on individual jobs and is used in computing costs.

A typical work order slip, made out for 20 hexagon head frame bolts, is illustrated in Fig. 4. It is issued by an erecting shop foreman against the blacksmith department which, if the bolts are not in stock, makes them on the forging machine, illustrated in Fig. 5.

Special attention is called to the work order board attached to the forging machine water pipe, as illustrated. One half of the board is painted black and marked "Work Order," the other half being painted red and marked "O.K." Two hooks are provided at the bottom, and when a work order slip is received at the forging machine, it is hung on the black hook at the left. When the work is completed, the slip is transferred to the red "O.K." hook at the right. Most people hate to see a lot of work piled up ahead of them waiting to be done and advantage is taken of this trait of human nature by means of the work order board. It is used not only at the forging machine, illustrated, but at

questioning and possible censure, there is a definite effort on the part of both foremen and men to have as few red dates as possible appear on the boards.

In addition to the monthly schedule meeting, the foremen meet every Monday, Wednesday and Friday after working hours to check up the progress of the work, settle any questions which may arise, and discuss any suggestions for improved shop operation. Minutes of these meetings are taken in shorthand and later distributed to the various foremen

who thus have a permanent reminder of the points discussed. These meetings prove extremely effective in ironing out any differences which may arise between the respective foremen, enabling them to work as a unit for the general betterment of the shops.

Schedule Foreman Has Charge of Routing System, Trucking and Shipping to Outside Points

Shop schedules can never be a success unless run by men of extensive practical shop experience. Obviously, if a clerk is employed simply to go through the motions of filling out

forms in the office, the results are as favorable as far as increasing shop output is concerned. As previously intimated, the importance of the schedule is appreciated at Jackson and a real job has been created for the schedule foreman who has general charge of the routing system, work order slips, trucking material, and shipping to outside points. This schedule foreman is relieved of minor details by an assistant who checks the progress of the work each morning and afternoon. A clerk is also provided in the routing office to take care of all work order slips and shop orders.

The importance of the prompt movement of material and helped which not only speeds the movement of material through the shops but saves a great amount of hard manual labor, formerly required when trucking by hand. The trailer system has another advantage in that material can be loaded on the trailers and then moved, a considerable number of units at a time, without tying up a tractor or being compelled to wait for one.

The importance of the schedule foreman in the scheme of shop operation described is evident and it seems logical that the man who has charge of the progress of both schedule and outside work should also have charge of getting the material,

Board, Taking Up the Entire Front Wall of the Foremen's Room at Jackson Shops

its relation to the shop schedule is recognized by giving the schedule foreman three Ford gasoline tractors and three Mercury storage battery tractors together with 10 laborers for operating the trucks and handling material. The schedule foreman, knowing when the work on various locomotive parts is completed, is in the best position to see that this material is moved promptly. As fast as one operation is completed on a part it is moved along to the next machine.

Fig. 5—Men Like to Get Work Order Slips on the "O. K." Hook

The schedule foreman also has direct charge of ordering and shipping all material to outside points, which work bulks large in the Jackson shop operations. While the erecting shop is of the longitudinal type and more or less difficulty is experienced in transporting material through it on that account, an effective trailer and tractor system has been developed which not only speeds the movement of material through the shops but saves a great amount of hard manual labor, formerly required when trucking by hand. The trailer system has another advantage in that material can be loaded on the trailers and then moved, a considerable number of units at a time, without tying up a tractor or being compelled to wait for one.

The importance of the schedule foreman in the scheme of shop operation described is evident and it seems logical that the man who has charge of the progress of both schedule and outside work should also have charge of getting the material, moving it from point to point about the shop and shipping it to outside points when completed.

Unusually Heavy Repair Work at Jackson

A close examination of the master schedule, illustrated in Fig. 3, will show that the first three locomotives were allowed 18, 16 and 14 days in the shop, the time actually taken being 23, 18 and 17 days respectively. While these shopping periods may appear unduly long, it should be noted that in each case the locomotive was given unusually heavy repairs involving jacket and lagging removal and firebox repairs. Probably there are shops no larger than those at Jackson, which turn out more than 25 heavy repairs a month, but in fairness it should be pointed out that locomotives sent to Jackson shops are given unusually heavy repairs and in fact many locomotives, credited only with light repairs, receive practically heavy classified repairs owing to the rigid Michigan Central ruling on mileage. (Unless a locomotive has made a specified mileage, it cannot be given general repairs.) The proximity to the roundhouse and consequent large number of light repair locomotives also tends to disrupt the shop organization for heavy repair schedule work. In fact, preference is given to light repair or roundhouse work whenever it conflicts with the schedule work.

Shop Efficiency Department

Railroad shops, unfortunately, are not like the "one horse shay," with each department as strong as the other. In consequence a close observation of the master schedule board will usually show weaknesses in certain departments. Obviously, it is the duty of the shop superintendent to take the necessary steps to strengthen weak departments, but one man cannot attend to all the details of this work which is handled at Jackson shops by a special efficiency gang, under the direction of the assistant shop supervisor. The gang consists of two machinists, two boilermakers and one blacksmith, all expert workmen experienced in their respective lines.

A series of red marks in the same department, as shown on the schedule board, always indicates some trouble which may be caused by inefficient machines or methods. In either case some slight change will often remedy matters and

allow this department to get its work done on time and eliminate the red marks. As a rule, when one department has been brought up to the mark in this way, some other department proves to be the limiting factor and so it goes. As a result of the work of the efficiency department, a continual improvement in shop methods and output is obtained.

Among the devices which have been developed comparatively recently may be mentioned a double crown brass turning jig, a power-operated device for pulling in cylinder bushings, a jig for milling throttle lever quadrants, a motion work bushing press, several effective brass room tools, a set of guide liner dies, etc.

Experimental Room

Another unusual feature at Jackson shops is an experimental room in which is segregated all the tool work done for the efficiency department. This experimental room is entirely separate from the main toolroom, being equipped with an 18-in. lathe, an upright drill, a 24-in. shaper and a grinder. All new jigs and fixtures, or devices intended to facilitate the shop work are made in this experimental room, which is allowed to be used for nothing else. It is well known that where work of this kind is carried on in the ordinary toolroom it becomes sidetracked whenever a rush job comes in, and the result is a delay in the development of new tools if the work is not stopped altogether.

In view of the results accomplished, it may safely be said that the shop schedule, as installed at Jackson shops, has justified its existence. It amply fulfils the expectations of those who for years have advocated this method of controlling railroad repair shop operations.

Proposed Railroad Legislation

WASHINGTON, D. C.

PLANS FOR THREE distinct types of railroad legislation, for which it is hoped to obtain consideration by Congress at the extra session, which convened on November 20, or the regular session, which begins in December, are now being worked out by various groups. One type of proposed legislation is that on which Senator Cummins and other administration leaders are working designed to strengthen the Transportation Act by provisions to prevent strikes, requiring compulsory consolidation of railroads and possibly a general equipment company. At the same time members of the agricultural bloc and other so-called progressives have renewed their agitation for a repeal of the rate-making section of the law and the section which authorizes the Interstate Commerce Commission to remove discriminations caused by the action of the State authorities. Heads of railroad labor organizations and their supporters in Congress, while planning to oppose any anti-strike legislation, are also planning an effort to push amendments to the act to abolish the Railroad Labor Board and at the same time to work with the interests that are for a repeal of the rate-making, or so-called "guaranty," section of the law. Senator Cummins has conferred with the President regarding the amendments which he will propose, but he has already indicated that he has little expectation of obtaining definite action during the present session of Congress, and the President did not touch on the subject in his address before Congress.

The reason advanced for proposing compulsory consolidation is that the railroads during the two years and a half that have passed since the law was enacted making consolidations permissive, if approved by the Interstate Commerce Commission, have not displayed more affirmative interest in consolidation plans, although it has recently begun to appear that numerous plans for extensive consolidation have been considered by various groups of railroads, and are merely being delayed by the apparent necessity of awaiting the Interstate Commerce Commission's complete plan for grouping the railroads of the country into a limited number of systems. The Hill roads have been before the commission for several days, urging a consolidation of the Great Northern, Northern Pacific, Burlington and Colorado & Southern in place of the commission's tentative plan which would combine the Burlington with the Northern Pacific and the Great Northern with the St. Paul, and hearings were also begun this week on the petition of the Southern Pacific to retain control of the Central Pacific pending the commission's determination as to how the Western roads should be grouped. The New York Central, Pennsylvania and other roads have also taken several steps in the direction of further consolidation by obtaining permission from the commission to make long-term leases of subsidiaries, and apparently would be ready to proceed with actual consolidation as soon as the commission is in a position to give its approval.

A call for a national conference of "progressives" to meet in Washington on December 1 and 2 and to organize a "progressive" group in Congress was issued on Saturday by Senator La Follette and Representative Huddleston, as chairman and vice-chairman of the People's Legislative Service. The call proposed a meeting of "progressive" members of Congress for December 1 and a gathering of "progressive" leaders generally on the following day. Senator La Follette also issued a statement announcing that among the objects proposed are the defeat of the administration's ship subsidy bill and proposed anti-strike legislation. At about the same time, Senator Capper, chairman of the Senate farm bloc, issued a statement outlining a program of legislation including a reduction of freight rates. Just what Senators and Representatives will join in the movement is not revealed, but there were reports that some friction might be created by the failure of Senator La Follette to consult with all elements of the "progressive" group before calling the meeting. Senator La Follette also attended on November 18 a meeting of the officers of the 16 principal railroad labor organizations associated with the Conference for Progressive Political Action, called by W. H. Johnston, president of the International Association of Machinists, to discuss the legislative situation resulting from the recent elections and particularly plans for opposing proposed anti-strike legislation. At the same time, it is understood that the plans were considered for favoring legislation to abolish the Railroad Labor Board and a call was issued for a national meeting to be held in Cleveland on December 11.

The Human Problems of Modern Industry*

The Development of Democracy in Business Is Under Way—It Needs Wise Leadership and Direction

By Samuel O. Dunn
Editor, *Railway Age*

THE HISTORY of industry and of its relations to the people in the leading countries of the world during the last century, and especially during recent years, presents a strange paradox. The development of modern industry has resulted in a vast increase of production which has enabled every class of people to establish and maintain material standards of living higher than ever were attained by any but a very few in earlier times. It has also made possible reductions of the hours of labor and increase of the hours available for leisure, for intellectual improvement and for pleasure of a vast majority of people.

If any man whose life ended prior to a century ago, or even prior to a half century ago, had foreseen this vast increase of production, this great improvement in standards of living and reduction of hours of work, he might have anticipated that it would usher in a golden age of harmony, peace and contentment among men. Quite the contrary has been the result. There never was a time when there were bitterer quarrels or fiercer struggles in industry than within recent years. The great war and its effects have intensified these struggles, but they began before it occurred and would have continued if it had not occurred.

They have been waged not only between large industries and their employees, but also between large industries and their customers. Both before and since the war the railways have been engaged almost constantly in carrying on controversies with their patrons regarding rates as well as with their employees regarding working conditions and wages. Almost every large industrial combination also has been the object of attacks in the courts which indirectly were the results of efforts made by their patrons to break their power and reduce their rates.

These great struggles between industry and the people are being carried more and more into politics. More and more are efforts made to use legislation and government administrative bodies to settle differences arising between large industries and their employees or patrons; and when legislation and government commissions are invoked their general tendency is to settle the questions submitted to them adversely to large industrial concerns.

Finally, growing more and more active and influential is a class of labor leaders, politicians and agitators with complexions varying all the way from a pale pink to a deep red, who are striving by propaganda, by political action, by strikes and even by violence to overthrow part or all of our existing political and industrial institutions and to establish in their place institutions varying all the way from a mild form of state socialism to the "dictatorship of the proletariat" in both government and industry as it is exemplified in Russia.

Modern Industry the Cause of Social Unrest

No intelligent man would question the seriousness of some of the struggles between large industries and their employees or patrons which have occurred within recent years. There are those who are convinced that these struggles are direct and inevitable results of the development of modern industry and of the way in which many large industrial concerns have been managed and that unless very important changes are made in the management of many of these concerns the struggles between them and their employees and patrons will become more frequent, more bitter and more destructive of the welfare of all concerned.

There can be no question about what has been the principal cause of the great increase of production in modern times. Until a little over a century ago there had never been any really great improvement in the physical machinery of industry. Almost all the power used in agriculture, in manufacture and in transportation had been furnished by the muscles of men and animals. It was chiefly the discovery and utilization of new sources of power, mainly steam and electricity, that made possible the development of modern industry. In order to make the best use of these new sources of power large manufacturing and transportation units were created which rapidly drove out smaller ones. Other improvements in the physical machinery of industry, such as those in means of communication, stimulated the tendency of industrial and transportation concerns to increase in size. Owing to these and other causes we have witnessed within comparatively recent years the development of concerns in many lines of business which are enormously larger than any which existed prior to a generation ago.

How has this great increase in the size of industrial and transportation concerns helped to create the social unrest and antagonisms which now cause so much trouble?

First, it has tended to put great power into the hands of the managers of these large concerns, and it is a law of human nature that men who have great power will be tempted to abuse it to further their own interests and the interests of those they represent. There is hardly a large concern in the country that has not at some time and in some ways abused its power in dealing with its employees and patrons.

Secondly, where great power is possessed, or thought to be possessed, people have a tendency to believe that it is being abused, or to fear that it will be abused even though actually it is not being abused at all and there is not the slightest intention of doing so.

The Need of Personal Contacts

The owners and managers of small concerns come into frequent contact with their employees and patrons and therefore their employees and patrons know what kind of men they are, and the owners and managers know constantly the feeling and attitude of their employees and patrons and can act accordingly. The owners of large concerns usually are numerous stockholders who are widely scattered and hardly ever come in contact with the employees and patrons. Even the managers of large concerns come into direct contact with only a very few of the employees and patrons. In consequence usually they are almost unknown to the many thousands of people with whom indirectly they are dealing; and often they themselves know extremely little about what is in the minds of all these many thousands of people.

If, in addition, as often happens, the principal officers of a large concern deliberately refrain from making any efforts to come into contact with as many of their employees and patrons as they can, or even from making any public state-

*From a paper read before the Western Railway Club, Chicago, on November 20.

ments regarding affairs of the company in which the company and its employees or patrons have a common interest, you have a situation which, human nature being what it is, is certain to beget a lack of mutual understanding which will tend to develop into suspicion, then into antagonism and then into great and dangerous struggles. When the employees and the public begin to suspect, dislike and attack the big concerns in any field the smaller concerns in that field are likely to become the objects of similar suspicion, dislike and attack.

There is not the slightest likelihood of any reduction of the size of industrial concerns. The most radical advocates of socialism or syndicalism or guild socialism would not favor this. On the contrary, they favor wholesale consolidations of all the concerns in each field and seizure of their ownership by the public and transfer of their management either to the government, or to the employees under schemes similar to the Plumb plan.

We have recently seen production seriously interfered with by two great strikes in this country. These strikes were due to controversies between employers and employees. We are now seeing the production and commerce of the country limited by inadequacy of transportation. This is due partly to labor troubles but much more largely to years of government regulations of railways based largely on public misunderstanding and prejudice. Bad human relations in industry are tending to arrest the progress of industry.

What is "Democracy in Industry"?

The policy most persistently and persuasively advocated by the critics of the present industrial system is that of "democracy in industry." This is their principal slogan, although they do not always mean the same thing by it. In fact it is used to mean everything from certain mild forms of government regulation to the Russian soviet scheme of complete ownership and management of industry by the proletariat. It is absurd to call the Plumb plan and similar schemes plans for establishing "democracy in industry." The Plumb plan provides that the public shall buy the railways and turn them over to the management of those on their payroll. If the railways under the employees' management earn any more than interest on the investment in them, one-half of the surplus will be given to the public and one-half distributed among the employees. If a deficit is incurred the public will pay it all. There never would be any surplus, however, because those in the payroll would fix their own pay through a board selected entirely by themselves. Democracy is supposed to be the rule by the many. Where would be the democracy in an industry which was owned by 100 per cent of the people and ruled by only two per cent of them for their own benefit?

How Shall Democracy Be Attained?

However, one may not be very favorably impressed by the plans for establishing democracy in industry which are advocated by those who seek to overthrow the existing political and industrial order, and may, at the same time, believe that an increase of real democracy in industry is inevitable. In fact, there already have been some very great increases of democracy in industry. Labor unions in some industries have acquired so much power that they are able at times for considerable periods practically to dictate their own terms to employers. Witness the recent strike in the coal mining industry and its results. This is one form of democracy in industry, since it involves dictation by hundreds of thousands of employees to a few employers. Our policy of government regulation of railroads affords another illustration of one form of democracy in industry. It involves dictation by the many who use railway service to the comparatively few companies that render it.

The great movement for democracy in government which began some generations ago has been resisted to the last extremity by the upper classes in some countries. The results in those countries, of which France in the eighteenth century and Russia in the present century afford the most striking examples, have been tremendous social explosions and upheavals in which the upper classes, and, indeed, the entire countries have been almost ruined. In England, on the other hand, the upper classes yielded step by step. Vicious class antagonisms were avoided and under conditions of democracy the property owning and more intelligent classes of Great Britain have succeeded in maintaining their leadership in politics and in government down to the present time.

Does not this political history hold a lesson for the present generation, which is confronted with the insistent demand for more democracy in industry? Does it not suggest to the leaders of industry the wisdom of not resisting all efforts to increase democracy in industry, but on the contrary, of furthering its development along lines which will give employees and the public a larger participation in the management and control of industry, while leaving its leadership and direction still in the possession of the comparatively few men of large ability who alone are equal to its leadership and direction?

The employers of past generations took practically the position—and many take the same position today—that it was their right to fix working conditions and wages in their business, and that labor could accept these conditions and wages or go without work. Now, capital furnishes the physical machinery and selects the directing minds of industry, but labor furnishes the manual skill and labor which operate the machinery. There never was and is not now anything unnatural or unreasonable in the desire of labor to have an equal voice with the management in settling the terms and conditions of the employment relationship. But, if the employees are in any real sense to deal with the management regarding these matters, they must do so through representatives chosen by themselves. This necessarily means some organization of the employees. It is very doubtful, indeed, whether some kind of organization of the employees of any large concern can long be prevented. If this is true, then the question is whether the employees of the individual concerns shall be encouraged by the management to form organizations of their own, or whether this shall be discouraged and resisted by the management with the almost certain ultimate result that practically all of the employees will become members of national labor organizations.

From the standpoint of both employers and employees, dealings between each concern and its own employees are far preferable to dealings by each individual concern with national labor organizations. Only agreements between each concern and its own employees can adapt working conditions and wages to the local conditions with which they are immediately surrounded. Personally I have no doubt that all large industrial concerns should favor an increase of democracy in industry which will result from allowing and encouraging their employees to form organizations of their own and from dealing fairly and frankly with such organizations.

Furthermore, it seems highly probable that most large industrial concerns would derive benefits from encouraging conferences between representatives of the employees and representatives of the managements regarding many questions of operating efficiency. In the long run it is as much to the interest of employees as it is to employers to have each concern efficiently operated. About 12 years ago when the record for industrial accidents, and especially railroad accidents, was at its very worst in this country, many industries, including the railways, organized safety committees composed of officers and employees. There has been since then a very remarkable reduction of fatal accidents on the railways.

Undoubtedly this has been mainly due to the work of these safety committees. There does not seem any good reason why it would not be possible and desirable to form similar committees on the railways and in many other industries to bring about co-operative effort by the employees and managements to eliminate waste and increase efficiency. There are many employees in every industry who could do valuable work on such committees and if they did work on them they would not only make contributions toward increased efficiency but also learn some of the difficulties which the managements have to overcome in reducing waste and securing economies.

The Democracy of Ownership

There is another form of democracy in industry which every large business concern should earnestly and energetically promote. This is the diffusion of the ownership of its securities among its own employees and patrons. Most large concerns, and especially the railroads, are regarded by their employees and patrons as being a kind of alien institutions which exploit those who work for them and from whom they get business in order to pour profits into the coffers of a small class of rich people who do business and live at ease in or within a comparatively small radius of Wall Street. So long as the employees and patrons of a large concern regard it thus it will always be very difficult to convince them that they have any interest in its prosperity. Some large industrial concerns have adopted successful means of getting large numbers of their employees to become stockholders. Some of the largest and best managed public utilities in the country are making great and successful efforts to get large numbers of their customers to buy their securities and thereby establish what is called "customer-ownership." The best kind of industrial democracy which could possibly be established would be a democracy of ownership. Substantial difficulties would have to be overcome in securing a widespread diffusion of the securities of railways among their employees and patrons, but it may be they would not be so great as the managements now believe. No management probably knows just how great they would be because so far as I know no management ever has really tried to overcome them.

No great result is ever attained without thorough study and great effort being made to attain that result. There has been study and effort to improve human relations in modern industry but the conditions which exist show clearly enough that this study and effort have been very far from sufficient. The principle of arbitration of all great controversies between employers and employees that cannot be settled by direct negotiations should be insisted upon; but the thing most needed is the adoption of methods and the creation of a spirit which will tend to prevent the development of controversies to a point where they cannot be settled except by arbitration or strikes.

The Menace of Destructive Propaganda

Without doubt one of the principal causes of the bad human relations existing in modern industry is that employees and most of the public have been allowed by the managements to be grossly misled regarding the way in which large concerns really are managed and the profits that are made in them. Most members of the classes that own property and manage commercial and industrial concerns seem to have very little idea of the amount, the character, or the real purpose of the radical literature attacking the present social and industrial order which is being disseminated throughout every country of Europe and America among those who work for wages. Let extensive propaganda go unchecked long enough and it will overthrow any human institution. The propaganda to which I have referred, whether carried on by bolshevists, syndicalists, guild socialists, I. W. W. or parlor socialists, is intended to convince that large majority of people who do not own or manage property that the present system of private ownership and management of property, and especially of large industries, inevitably works the enrichment of the few and the robbery and impoverishment of the many. It preaches that the many, by forcing the payment of wages which industry cannot stand, or by constant strikes and violence, or by governmental action of various kinds, should indirectly or directly take over to itself the virtual ownership and the actual management of all industries.

This kind of propaganda is supplemented by propaganda carried on among small property owners and farmers which attempts to create sentiment among them against the existing order by greatly exaggerating the profits made by the railroads and large manufacturing and mining companies, with the object of causing regulation of their management, their rates and their prices which will help to make private ownership and management of them impossible.

Even if all the problems arising from the relationship of employer and employee could be solved temporarily at least there would not long be peace in industry. The present railroad situation illustrates that. The wages of all railway employees have now undergone some, and those of certain classes substantial, reductions, and probably there would be no more serious controversies between the railways and their employees for some time if the present rates were let alone. But already there is a widespread and energetic agitation for further reductions of rates among the farmers. This is partly due to the fact that the farmers really are suffering severely from an unwholesome disparity between the prices they can get for their products and the rates and prices they have to pay for the transportation and commodities they buy, and partly to reckless propaganda which has been carried on among them to make them believe that while they are suffering losses the railways are guaranteed large profits. If railway rates should soon be reduced again it would be necessary for the railways to start at once to secure further reductions of wages, and then the controversies between them and their employees would begin on a large scale again.

Take the Mystery Out of Big Business

There is a certain large railroad system which from every standpoint is one of the best operated and most successful in the United States. The management of this railroad has tried in numerous ways to establish close relations with its employees and patrons, and has presented to them by newspaper advertising and every other available means the facts about the railroad and what it is doing. It also has been especially prompt and courageous in refuting misrepresentation of this railroad itself and of the railways as a whole. When the recent shop employees' strike came this railroad, from the very beginning, kept one-half of its shop employees and was one of the very first in the country to build up a 100 per cent force. Probably there is no other railroad in the country which is today more popular with and the object of fewer criticisms and attacks from its employees and patrons. Its management is fully convinced that the educational work it has carried on for months and years among its employees and patrons has contributed very greatly toward enabling it to maintain its shop forces, to secure efficient work from its employees, to handle a record-breaking business and largely to increase its net earnings at a time when those of many railways actually declined.

What the management of this railway has done, those of others can do. With respect to this matter of educational work among the employees and patrons of large concerns there are two conclusions I have reached after years of study and observation and which I venture to state and emphasize. The first is that our present system of private ownership and management of large industrial and trans-

portation concerns cannot be permanently maintained without a better understanding and more good will being established between these concerns and their patrons and employees. The second is that the amount of educational work which must be done by such concerns among their employees and the public, if a better understanding is to be secured, must be very greatly increased. There are at least a hundred politicians and labor radicals who are actively engaged in carrying on propaganda to secure the adoption of a ruinous policy of regulation and the destruction of private ownership of railroads in this country to every single man who is actively engaged in combating this propaganda. There are literally scores of radical labor organizations and farmers' organizations that constantly employ men to deliver addresses and secure publicity in every community in the country attacking private management of railroads. There are literally hundreds of thousands of railway employees who, under the direction of radical leaders, are everywhere carrying on propaganda against the managements of the railroads. How many of the 20,000 railroad officers make any effort to combat this propaganda?

The Esch-Cummins Transportation Act was passed to destroy the restrictive policy of railway regulation which formerly prevailed, and to establish in its place a constructive policy. Almost from the time it was enacted it became the object of the most false and misleading attacks that political and labor leaders ever carried on with respect to any piece of legislation in this country. At the recent national election almost every important member of the National House and Senate who voted for and defended that law who was up for re-election was defeated, while almost every candidate who made his campaign largely one of attack upon that law was elected. In consequence, there is the very gravest danger that all the important constructive provisions of the Transportation Act will be destroyed. If this should be the case the railways probably will have to look for protection of their right to earn a reasonable net return to the federal courts. But in the long run the courts themselves cannot be relied upon to afford sufficient protection to property owned by large concerns.

In the long run the preservation of the present industrial order will depend upon public sentiment. Whether public sentiment in regard to railroads and other large industries will be friendly or hostile, wise or unwise, constructive of destructive, will largely depend upon whether the managements of these concerns make real, persistent and intelligent efforts to solve their human problems. Big business must establish closer relations with its employees and the public and destroy popular suspicions and prejudices by taking all the mystery out of big business or big business will have more serious troubles in the future than it ever has had in the past.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING again declined during the week ended on November 11 to 953,909 cars but was still greatly in excess of the loading for the corresponding week of last year, 755,777, and also in excess of that for the corresponding week of 1920 when it was 927,586. This makes the third consecutive week of loading in excess of 1920. Increases as compared with 1920 were shown in all districts except the Pocahontas and Central Western and in grain and grain products, forest products, ore, merchandise, l. c. l., and miscellaneous freight while there were increases as compared with last year in all classes of commodities. A part of the decrease in loading as compared with the previous week is attributed to election day.

The freight car shortage also showed a decrease during the period from November 1 to 8 to an average of 174,498, while the surplus averaged 4,990.

The railroads of the country repaired and turned out of their shops during the period from October 15 to November 1 last the largest number of locomotives for any semi-monthly period in approximately the last two years, according to reports received by the Car Service Division. During the period, 13,490 locomotives were repaired. This exceeded by 2,086 the number turned out of the shops from October 1 to October 15 last. Locomotives in need of repair on November 1 totaled 18,366, or 28.5 per cent of the number on line. This was a decrease of 865 since October 15, at which time 19,231, or 29.8 per cent, were in need of repairs. Of the total, 15,101 were in need of repairs requiring more than 24 hours. This was a decrease since October 15 of 834. The remaining 3,265 represented locomotives in need of light repairs, which was a decrease of 31 within the same period. On November 1 the railroads had 46,096 serviceable loco-

REVENUE FREIGHT LOADED

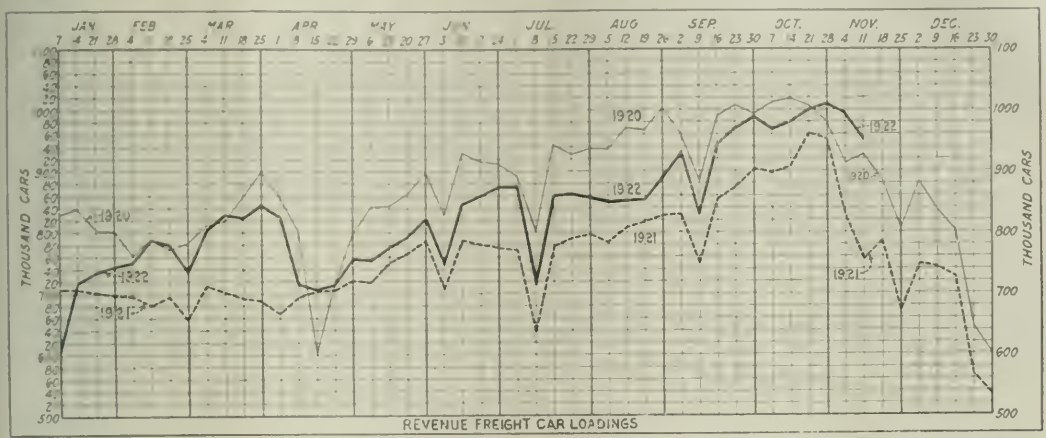
Compiled by the Car Service Division of the American Railway Association.

motives an increase of 9.9 over the number on October 15

The Car Service Division has compiled a chart in which it says is depicted the real basic problem in the distribution of the country's production. The variations in shipments are indicated at the top of the chart and the resultant periods of car shortage and surplus are shown below.

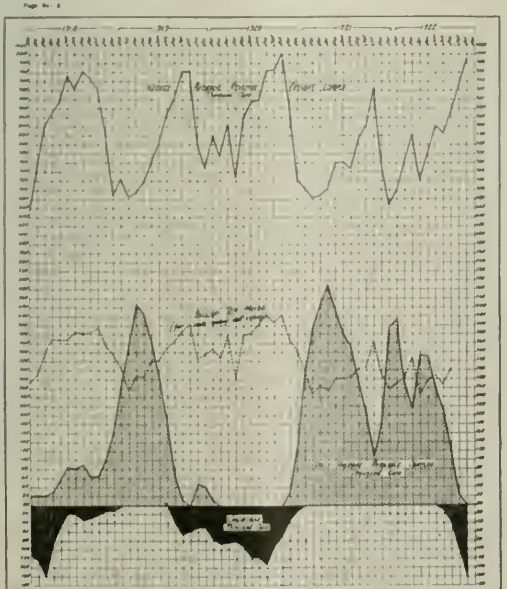
"To even out the distribution throughout the entire year," the bulletin says, "where the character of the commodity will ing of equipment and its expeditious movement. But the elements of movement and number of cars will not alone furnish a panacea for car shortage. To reach the curve in our development where more cars are busy during periods of car surplus and less cars are required during periods of car shortage represents a common ground of research and endeavor for both shipper and carrier.

"During the past 120 months (1912 to Nov., 1922) the



permit, thereby minimizing the severity of car shortages, putting idle capital in the form of car surplus at work, thus permitting of a stability in price level will go far in solving the country's spasmodic economic and transportation difficulties.

"Directly related to less acute fluctuations are the factors of (1) distribution organization, (2) trade practices, (3) trade units, (4) storage capacities, (5) capacity loading, (6) prompt loading and release of cars—together with the build-



country has passed through 87 months of car surplus and 43 months of car shortage. Both periods are expensive to the public and tend to increase distribution costs."

National Industrial Traffic League

The National Industrial Traffic League held its annual meeting in New York City on November 15 and 16. The address of Director General James C. Davis, on the first day of the meeting, was reported in the *Railway Age* of November 18, page 948.

The principal business of this convention was the consideration of the report of the legislative committee; and the main feature of this report was a series of conclusions concerning the character and work of the United States Railroad Labor Board, which conclusions are noticed at the end of this article. These conclusions were adopted with great enthusiasm and without amendment.

Besides the conclusion that the Labor Board ought to be abolished, the report contains numerous other radical recommendations. In adopting it, the League has given its endorsement to the Newton Bill, H. R. 11,822. This bill would repeal the present provision of law under which the Interstate Commerce Commission is to make a plan to consolidate all of the railroads of the country into a few systems, and instead would enact a simple provision under which the Commission may authorize consolidations upon application of interested carriers. It amends section 13 of the Act to regulate commerce so that a state regulatory body may pass upon the general level of intrastate rates which are complained of before the Interstate Commerce Commission, before the federal body makes any order which will have the effect of advancing intrastate rates. This means the adoption of the Shreveport doctrine, with a proviso; the opinions of state bodies being, however, subject to review by the Interstate Commerce Commission.

The Newton bill also provides a substitute for section

15-A of the Interstate Commerce Law by reducing this paragraph to a simple declaration that common carriers are entitled to earn a fair return and that the Commission shall always consider this element. It also amends the section regulating telegraph, telephone and cable companies, providing that the law shall apply to them in all respects the same as to railroads, where this is practicable; and in particular to suits based on loss, damage or delay.

Other sections of the report of the legislative committee relate to various bills designed to prevent destruction of railroad property, to penalize malicious mischief, and to broaden the Erdman Act, providing for conciliation in labor disputes, so that it would apply to all railroad employees. All these measures were approved by the meeting. The League condemns all proposals limiting the freedom of persons seeking employment with common carriers.

The League also went on record as opposing all measures empowering Congress to make railroad rates directly, as for example the pending bill to require the abolition of the surcharge on passenger fares now collected in all cases where the passenger rides in a sleeping or parlor car. It is held that the Interstate Commerce Commission should be free to adjust railroad rates according to its own judgment. The League also made clear that it does not favor the agitation to repeal the Esch-Cummins Act, and it recommends that the Carmack amendment to the Interstate Commerce Law, section 20, be further amended so that a suit may be filed against the delivering carrier or the initial carrier as the shipper may elect.

The League favors the bill prohibiting commercial bribery, which, among other things, would forbid the payment of money to railway employees with a view to obtaining preferred freight service. It opposes all proposals that the Interstate Commerce Commission should regulate the wages of the employees of common carriers and opposes the pending bill which provides penalties against shippers for making false statements in claims for damage to freight, etc. In such claims, incorrect statements are often made without evil intent and there is no provision for a penalty against the railroad employee in similar circumstances.

Diversion, Demurrage and Other Things

The committee on diversion and reconsignment, H. D. Rhodehouse, chairman, presented a long report embodying proposed changes in rules recently discussed with the carriers' committee at a public hearing in Chicago. This report was subjected to a lengthy discussion, participated in by many members, and the conclusions of the meeting, as handed back to the committee, will be the subject of further conferences with the railroads.

A similar course was taken with a brief report of the committee on car demurrage and storage, W. H. Day, Jr., chairman. This report, recommending modifications of rule 1, section B, was adopted substantially as presented.

The committee on freight classification, N. D. Chapin, chairman, presented a report recommending action looking to closer relations between the members of the League and the railroad committee, together with certain proposed changes in the classification rules; and this report was adopted.

Other reports, adopted with little or no discussion, were those of the weighing committee, the committee on embargo rules and regulations, the special committee to confer with railroad traffic executives, and the express committee.

A special committee on merchant marine, Seth Mann, chairman, made a long report containing numerous recommendations, among which is one to the effect that export bills of lading should be left under the jurisdiction of the Interstate Commerce Commission, so far as concerns the movement of traffic within the limits of the United States, rather than in the hands of a new board, which is chiefly concerned in the successful operation of ships.

Under the head of new business, the League adopted a resolution declaring that the National Industrial Traffic League commends the railroads for their efforts to rehabilitate themselves, and calls upon all regulating agencies, commercial organizations and the public at large for patience with the carriers during their forward progress; "the performance of the carriers in the face of handicaps has, generally speaking, been all that could have been expected under the circumstances; and this, in our opinion, is a further evidence that the policy of private competitive operation of the railroads, as advocated by the National Industrial Traffic League, is correct; and it is hereby reaffirmed."

The officers of the League for the ensuing year are: President, Charles Rippin, traffic commissioner of the Merchants Exchange, St. Louis, Mo.; vice-president, Paul M. Ripley, traffic manager, American Sugar Refining Company, New York City; treasurer, E. C. Wilmore, traffic manager, Sefton Manufacturing Corporation, Chicago; executive secretary, J. H. Beek, 111 West Washington street, Chicago.

Dallas, Tex., was selected as the place in which to hold the Spring meeting.

Shippers' Views of the Railroad Labor Board

The "conclusions" concerning the character, status and usefulness of the United States Railroad Labor Board, presented by the legislative committee and adopted by the league, are substantially as follows:

First: We believe in preserving freedom of contract. This principle was wisely written into our fundamental law when our government was founded, and we have always found trouble when we sought to depart from it. It should apply to labor as well as to capital and to contracts of employment as well as to commercial dealings.

Second: We are opposed to having governmental agencies make wages or intervene in the ordinary relations between employers and employees. When our government undertakes to perform these functions it is drifting dangerously near outright socialism. Such a policy will destroy the individual initiative of the workmen, and at the same time undermine the discipline and respect for authority which is necessary in an efficient business organization. The continuance of the Labor Board will undoubtedly have these tendencies.

Third: The Labor Board has failed to accomplish the good results which its advocates predicted for it. It has been demonstrated that it will not prevent strikes, nor will it stop them when once they have started. It has not prevented the intimidation of workers, the destruction of property, the impairment of transportation, nor the taking of human life when labor sought to ignore its mandates. In fact, the acts of the board tend to precipitate many of those troubles. This is no fault of the Labor Board as at present constituted; it is the fundamental danger inherent in any scheme where the government undertakes to make labor contracts for private industries and supplant the time-tested plan of direct dealing between employers and employees.

Fourth: The continuance of any national board to adjudicate controversies between railroads and their employees will necessarily result in nationalization of the industry. It solidifies the national organizations of the employees and in like manner consolidates the executives. All of them on each side must stand shoulder to shoulder for the conflict, while the public pays the bill. There has been too much of this shoulder to shoulder business already. National organizations mean national agreements, and national agreements ignore the important differences in conditions applying in various sections of the country, and at various points in every section. Any attempt by government agencies to make uniform rules and decisions will take away from railroad managers the power and incentive to use business discretion in dealing with local conditions peculiar to each line.

Fifth: We believe that the controversies and grievances arising can generally best be handled between the officers and the men on each particular line. Let us get back to normal operations where the officers in charge of a railroad are supposed to run that railroad and the workmen on that railroad handle their own cases without being subjected to dictation by some national union officer who feels that he has to dictate in order to keep his organization intact. It is impracticable for one national government board to determine the needs and conditions on every division of every railroad in this broad country without doing injustice to one side or

the other. Besides, the business organization and operation of a railroad should remain as far as possible a private enterprise.

Sixth: The very existence of a national tribunal to handle labor questions is a standing invitation to submit every kind of minor grievance for its consideration. The present Labor Board has had to hear and consider thousands of individual grievance cases, many of them being most trivial in character. This demonstrates that the existence of the tribunal will of itself invite disputes which otherwise would be quickly settled by the shop committee or grievance committee on a particular line.

Seventh: The Labor Board is not necessary. For many years, we have had national laws which provided machinery for the settlement of labor disputes in the only way they can ever be settled satisfactorily, namely by conciliation and arbitration. The first of these was enacted in 1888, and provided for general arbitrations. This was superseded in 1898 by the Erdman Act, which provided in detail a plan for handling these disputes and created what is known as the Federal Board of Mediation. In 1913, the law was revised but both the Erdman Act and the revisions applied only to employees having to do with the handling of trains. This law should be broadened so as to apply to all employees of common carriers engaged in interstate commerce, and we so recommend. This law has averted numerous strikes, and most of the disputes determined under it have been individual line grievances. In fact, it can hardly be otherwise. The law should provide for publication of arbitration decisions in important cases, and we so recommend.

Eighth: The operation of such an agency as the Labor Board has a tendency to crystallize rules of seniority and working conditions which will not be to the best interest of the employees. During the past generation, we have seen numerous men rise from laborers, clerks, trainmen or mechanics to become presidents or chief officers of our greatest railroad systems. The individual initiative of the workmen in the ranks has made our railroads the most efficient and progressive in the world, but the events of the past four years have operated to check this progress. Every possible step should be taken to leave a free, open road for every railroad worker to rise as he becomes proficient and we cannot expect this when we have a governmental agency to hedge the workmen in by hidebound rules.

Finally: We believe that private industry will be better off without the railroad labor board. The artificial scales maintained by the national body for railroad labor operate to create unrest in labor conditions affecting private industry. The great inequality between common railroad labor and farm labor, thus continued by the labor board in defiance of the laws of supply and demand, has been one of the greatest factors in creating the serious crisis facing the farmers of this country. The farmers and the public pay these bills, and certainly the government should have no part in the continuance of these conditions.

November Meeting of Signal Section in New York

Brief Report on Economy Effected by Signals—Address by George M. Basford

THE SIGNAL SECTION of the American Railway Association held its eleventh meeting in New York at the Hotel McAlpin on Tuesday and Wednesday, November 21 and 22, with a registered attendance of 333. C. A. Christofferson (N.P.), chairman of the section, presided.

The Committee of Direction, in session on Monday preceding the meeting, abolished the third meeting of the section each year and directed that the annual convention be held in Chicago in March of each year during the same week as the conventions of the Maintenance and Construction Section and also the Electrical Section of the Division IV—Engineering, A. R. A., of which the Signal Section is a part. In view of this new schedule, it is tentatively announced that the 1923 annual convention will be held at the Drake hotel in Chicago, beginning Tuesday, March 13.

At the beginning of the afternoon session on Tuesday, L. C. Porter, commercial engineer of the Edison Lamp Works of the General Electric Company, Harrison, N. J., gave an illustrated lecture on the development of electric lamps for use in electrically lighted railway signals. Curve charts, showing operating characteristic and photographs of testing equipment, together with actual field applications, were shown on the screen. Valuable information was offered on how and why signal lamps are so designed, which was followed with directions on the installation and operation of such lamps to secure the longest life at the least operating expense.

On Wednesday morning George M. Basford, one of the founders and a charter member of the Railway Signal Club, the forerunner of the present Signal Section, was requested to address the meeting. Mr. Basford spoke of the many recent improvements in steam locomotives and reminded the signal engineers that improvements in signaling were equally important as operating factors, and should be their constant study. Signaling should be presented as an economical improvement, capable of saving money in train operation as well as saving lives of passengers. The signal engineer should be busy studying methods of increasing track capacity rather than discussing in detail the proper sizes of bolts and nuts. These details should be thrashed out in committee meetings, not on the floor of the convention. The signal engineer has the opportunity to greatly increase the track capacity of the average single track division with signaling and he should set his goal to make such a line equal, as nearly as possible to a double track road. Signaling is to be looked at not so much as a production of specifications as a means of increasing the net returns to your company. "Do you, as signal engineers, realize that you must also be operating officers? Do you appreciate your association and your opportunities? Develop the highest standard, and then do your best to see that your road lives up to them."

When the committee on Highway Crossing Protection reported, A. H. Rudd, chairman, said that the subjects assigned to the committee for study had been found to be ones which came under the jurisdiction of the Maintenance and Construction section. He moved that the report as published in the proceedings be withdrawn and the motion was carried. He then stated that the committee had been instructed to report on standardization of aspects for mechanical or electrical devices at highway crossings as a substitute for crossing watchmen, gatemen and flagmen.

After the conclusion of the committee reports automatic train control was discussed informally for about an hour. Among those taking part in the discussion were A. H. Rudd, J. M. Waldron, R. C. Johnson, P. J. Simmen and R. W. Richards. Mr. Richards described very briefly an induction apparatus which he is developing at his shop in Baltimore, Md.

Important Savings Produced by Signaling

Savings that are accomplished by various installations of signal apparatus and automatic crossing flagmen are shown in tables in the report of Committee XIX—Economics of Railway Signaling. On a single track division, an installation of 43.6 miles of automatic block signals, with a few interlockings, showed a saving of $190,000 a year in operating expenses.

Of 71 distant-operated switch machines that were installed on 11 different roads for the operation of outlying

passing track switches, an estimated saving of from $2,500 to $8,700 a year was reported for each machine, with a saving of from 10 min. to 30 min. for each train stop eliminated, and an annual saving of coal of from 970 to 1,300 tons.

By consolidating eight small interlockings into the control of only four towers, certain railroads show a saving of $35,000. One railroad reports that by combining the control of three small plants into one having 171 operating functions, it was possible to effect a saving of $43,000 a year in operating costs. A saving of $5,000 a year was accomplished by spending only $2,000 for some automatic interlocking control apparatus.

Reports from 15 roads show that a saving of $165,000 a year was made by the installation of automatic flagmen which replaced 186 crossing watchmen at 133 highway grade crossings. The committee emphasized the fact that because of economy of operation, the additional protection obtained by having 24-hr. automatic flagman service, and the elimination of the human element, this phase of signaling should receive careful attention.

The chairman stated that the committee now had under preparation for presentation at the annual meeting, time charts, dispatchers' sheets and data, covering in detail the methods of determining the savings effected on a certain single track division equipped with automatic block signaling.

In the discussion of this report, H. M. Sperry explained that a rate of $0.40 per minute for a tonnage freight train delay was an average figure covering all items of expense. He further stated that on one road an installation of distant control switch machines and signal protection at the end of a double track costing not over $5,000 had shown a saving of $65,000 a year on a basis of the elimination of train delays to some 30 freight trains a day. The report of the committee was accepted as information.

Other Committees Reporting

Committee VI—Standard designs, presented revisions of five drawings, i.e., binding posts; concrete signal foundation; concrete battery box and various gage plates. Five new drawings showing operating rods for switches were presented for discussion. The opinion was expressed that although some of the new standard switch rods were patented, there was competition in their manufacture and sale and therefore the section might well adopt several different devices as standard. The committee was then directed to complete the plans to include details, facing point and lock connections. The remainder of the report, on enameled steel single blades, was accepted as information.

Committee XV—Valuation, presented a progress report. One of the important items being studied by this committee is establishing percentage multiples to show variation in the cost of signal apparatus from the period indicated by the I. C. C. as the "1914 Period" to the present date. The report was accepted as information.

Committee VII—D. C. Relays, asked for suggestions with reference to the standardization of relays having both front and back contact adjustments. After considerable discussion, the matter was accepted as information and referred to the committee for further consideration.

Committee XVI—Oils, reported progress. The committee has secured the co-operation of the petroleum department of the Bureau of Mines. Thirty-six samples of semaphore oil from various roads are now being tested and analyzed, the data to be used in preparing specifications. The report was accepted as information.

Committee XI—Batteries, presented a specification for cylindrical dry cells, which after a brief discussion was accepted for presentation at the annual meeting.

Committee II—Mechanical interlocking, offered a specification for electro-mechanical interlocking machines together with requisite sheets. After extensive discussion, including numerous suggestions to the committee, the report was referred back for further consideration.

Committee VIII—A. C. Signaling, presented a report including a comprehensive method of making readings and recording the operating characteristics of alternating current track circuits. Charts, tables and diagrams in the report simplify the solution of a. c. track circuit problems and thus offer a means of effecting economies in track circuit operation. This report was accepted for presentation at the annual meeting for inclusion in the manual.

General Contingent Fund, $25,000

WASHINGTON, D. C.

WHILE NO public announcement has been made and while in the nature of things most people are not even inclined to suspect it, the "general railroad contingent fund" contemplated by the transportation act, to be made up of the one-half of the excess income above six per cent which the fortunate roads are required to turn over to the Interstate Commerce Commission under the "recapture" provisions of the law, is in actual existence and contains about $25,000. It is not yet, however, a revolving fund: As directed by the law, the commission has deposited the fund in a bank at Washington where it is drawing interest. It consists of what a few roads have sent to the commission voluntarily, in response to its orders to the carriers to report their returns for that part of 1920 during which they were not under guaranty and for the year 1921, on the basis of the amount of property investment which they reported in connection with the rate case of 1920, and to send it checks for one-half of the excess.

Of 692 roads that filed returns for 1920, only 17 reported excess income, amounting to $645,186. Of 654 filing returns for 1921, 21 reported excess income amounting to $696,944, but not all of the money due the government has been paid and the commission, it is understood, has not been able to accept the payments made as the amounts due because it has not yet completed the valuations of the individual roads on which the law provides that the six per cent return shall be figured. For the same reason it is not yet able to order any road to pay over an exact sum in compliance with the law or to say what roads other than those that have reported excess income were in fact in such a plutocratic state as to have earned more than six per cent in the two lean years referred to.

Many of the carriers filed their returns under protest, some contending that the recapture provision of the law is unconstitutional, and others that returns should not have been asked for the last four months of 1920, while exception was also taken to the idea of basing the percentage of return on the property investment accounts, which many roads claim are less than the actual value.

Until the valuation work is more complete, and perhaps until after there has been a court test of the law, it is not expected that the contingent fund will be of much assistance to the weak roads.

The commission also has another fund consisting of repayments of loans, from the $300,000,000 fund also provided for by the transportation act. Some $98,000,000 has already been repaid on these loans and is available for new loans but only on applications filed within two years from the date of the passage of the law. Mr. Warfield's National Railway Service Corporation and some other companies whose wants had not been entirely satisfied from the original fund have some applications pending but for some months the commission has not been making extensive loans and the amount to its credit in the Treasury has increased.

Labor Board Renders Two Significant Decisions

Contracting and Overtime Involved in Latest Rulings—Both Are Favorable to the Employees

TWO SIGNIFICANT decisions were rendered by the Railroad Labor Board in the past week, one involving the practice of contracting on the Western Maryland and the other in a dispute between the Southern Pacific, Texas and Louisiana lines, and its maintenance of way employees over the assignment of these employees to a ten-hour day, the method of paying them and their supervisory officers for the ninth and tenth hours of service and for going to and returning from work.

In the Western Maryland case the Labor Board held that the several contracts entered into between that road and George E. Fowble, C. J. Wolfe, W. K. Hossack and the Dickson Construction and Repair Company for the operation of its shops and the performance of certain other operations, were in violation of the Transportation Act and Decisions 2, 119 and 147 of the Board.

An interesting point was involved in this case arising from the carrier's contention that a strike called at the shops involved on March 25, 1922, was a strike by the employees of the contractor against the contractor and that, therefore, even if these employees were at the time of the strike order, employees of the railway company, "they have withdrawn from the jurisdiction of the Board by reason of their strike and can now have no standing before the Board."

In discussing this point the Board, in its decision, said:

This brings the Board to the consideration of the new question as to whether the employees lost their right to present their contention against these shop contracts owing to the fact that they discontinued work under the contracts. In other words, the carrier contends that it can close down its shops, put its employees under a contractor, arbitrarily reduce their legally-established wages, and deprive them of the railway shop rules embraced in an agreement of the parties and in the decisions of the Board, although said wages and rules had previously been put into effect by the carrier, and the 30-day notice provided by the agreement and the requirements provided by Congress in the Transportation Act for negotiating such changes in wages and working conditions had not been complied with. Then, having thus violated its obligations, legal and moral, to the men, the carrier takes the position that the men can not present their grievance to the Labor Board, because they have refused to work for the so-called contractors under the diminished wages and mutilated working rules imposed by this process. No court or tribunal animated by the principles of equity should give ear to such a contention as that made by the carrier in this case.

These contracts were merely subterfuges by which the carrier arbitrarily changed the wages and working conditions of these employees without compliance with the provisions of the law. If it be said that the decisions of the Board embodying the wages and rules taken away from these employees were not legally binding on the carrier, it must be remembered that these decisions had been accepted, and put into effect by the carrier and had thus, in effect, become agreements between the parties which could not be terminated except in accordance with the express provisions of the agreements themselves as well as the Transportation Act, 1920. Any effort upon the part of the carrier to change these accepted and effective decisions would have constituted a new dispute, which the statute imperatively directs shall be brought to the Labor Board for adjustment. In these cases, the employees sought conferences with the carrier, but they were denied this right. If it be insisted that the men should have continued work under the contracts and should have brought ex-parte disputes to the Board, let it be noted that the carrier claimed that it had shut down its shops and denied that the men were its employees. At that time, the Board had not yet held that men so situated were as a matter of law employees of the carrier, and the employees of course had no means of knowing that the Board would so hold.

If this had been a case in which the carrier had violated a decision affecting some ordinary matter of wages or rules, there would have been no question as to the duty and necessity of the employees to remain at work until the question in dispute could be adjudicated by the Labor Board. In this case, however, the carrier had taken steps which purported to close its shops, transfer its employees to a new employer, remove them from the application of the Transportation Act, 1920, and obliterate their wage and rule agreements. This was equivalent to a lockout. This was done under a claim of legal right and the employees apparently acquiesced in the carrier's view of the matter that the shops had been closed and that they had not been thrown out of employment. The Labor Board can not afford to strain at a technicality and say that these men, with their entire status as railway employees apparently destroyed by a deliberate act of the carrier, should not be heard to complain before the Board because they stopped work under the contractor. With the principle once thoroughly established that the carrier's effort to expel them from its employment in the way described was illegal and ineffectual, the duty of the employees might be different in the view of the Board.

Three Members File Dissenting Opinion

A dissenting opinion, signed by R. M. Barton, a member of the public group on the Board, and Samuel Higgins and Horace Baker, members of the railroad group, was appended to the decision, these men taking exception to that portion of the decision pertaining to the rights of the employees who went on strike. An abstract of the dissenting opinions follow:

In this case, the facts show that these employees on whose behalf this application was made have and had before the making of this application gone on a strike, voluntarily removing themselves from the service.

The strike was ordered before the matter was brought to the attention of the Board by Mr. Jewell's advice of March 23, which notified the Board of the strike, but did not invoke the Board's action. The strike went into effect on March 25, 1922, and the men left the service without waiting for or invoking action by the Board and pending the Board's correspondence with the parties. In fact, no application has been filed, but the Board took jurisdiction on June 6, 1922, on the ground that the dispute was one likely to interrupt interstate commerce.

After the former employees—on whose behalf action is now invoked by a protest made on the hearing—had left the service, their places were filled by others who have since been doing the work required. It is shown that over 700 men were employed and have been rendering satisfactory service. Written petitions, signed and acknowledged by more than 350 of these employees, representing that they were employed and accepted service in good faith and asking that these relations be not changed, interfered with, or destroyed by the Board, have been filed in their behalf. Their rights are involved and are entitled to consideration.

If the employees here represented had remained in the service and continued to work so as to prevent an interruption of the operation of the carrier, and had submitted the case to the Board for the protection and enforcement of their rights, the same relief would have been granted to them as has been awarded in like cases to other employees. But we are of the opinion that by going on a strike, refusing to do the work required, and voluntarily removing themselves from service, thus compelling an interruption of the operation of the carrier unless their places were filled by other employees, the parties on whose behalf this application is filed have removed themselves from the jurisdiction of the Labor Board and the protection of the Transportation Act, 1920.

The Labor Board was created for the very purpose of settling these disputes and preventing an interruption of transportation. It was intended to prevent acts by either or both parties that would result in such interruption. It matters not that the carrier was first in fault in such case; it is the duty of the other party to comply with the positive mandates of the Act and bring the matter before the Board for decision.

The employees by taking the matter into their own hands to settle it by a strike have violated the spirit, purpose and express directions of the Act; they have removed themselves from the jurisdiction of the Board and prevented it from granting any relief.

The provisions of the Act and the regulations of the Labor Board were entirely ignored. If such action can be sanctioned or condoned the very conditions sought by the Act to be removed and prevented will be encouraged and brought about. The em-

ployees in question voluntarily removed themselves from the class entitled to be heard.

If the matter had been merely a question of equity between the rrier and the employees affected by the contract, we might have een able to agree with the majority, but in our view, with all due respect to the conclusions of the majority, this was not and is not the real question. The decision involves the much more vital question of public interests, public policy, and the enforcement of the Transportation Act, 1920—the carrying out of its spirit and purpose, to which, in our opinion, the equities between the parties must yield.

The decision, in our opinion, also wrongfully affects and destroys the rights of the new employees who accepted employment in good faith. It is contrary to previous announcements and decisions of the Labor Board.

After calling attention to previous orders of the Board pertaining to the rights of employers who go on strike, the minority continue:

We think that the decision adopted by the majority is in effect a reversal of these decisions, orders, and announcements, or at least a very unfortunate modification of them. And we especially regret the effect on the rights of the new employees who may be presumed to have relied on the positions taken by the Labor Board.

We note the position of the majority that the action taken by the carrier was in effect a lockout, but in our opinion this is more technical than real and rather a play upon words. As a matter of fact, all the employees were continued in exactly the same service by the change until they voluntarily left. Other employees in other lines and under like conditions have continued in the work and have been granted relief on the ground that the change was ineffective as to their status as employees of the carrier; that they still remained such and were entitled to the benefit of the provisions of the Act and the protection of the Board.

Board Renders Significant Decision on Overtime

Another significant decision was rendered by the Board recently in a dispute between the Southern Pacific, Texas & Louisiana Lines, and its maintenance-of-way employees. Three questions were involved in this dispute, namely:

"(a) Are employees in the track and bridge-and-building departments entitled to pay under Decision No. 501 for going to and returning from work.

"(b) Are supervisory employees entitled to overtime for the ninth and tenth hours when the force is assigned to work ten hours per day, and

"(c) Is the carrier violating the provisions of Decision No. 501 in assigning employees to work ten hours per day?"

On all three of these questions the contentions advanced by the employees were upheld, the Labor Board deciding that:

"(a) Employees' time will start and end at designated assembling point for each class of employees covered by the agreements governing maintenance-of-way and bridge-and-building department employes,

"(b) Supervisory forces shall be compensated on the same overtime basis as the men supervised when the general force is required to work in excess of eight hours per day, and

"(c) The carrier violated the meaning and intent of section (c-1) and section (h), Article V of Decision No. 501 in establishing the ten-hour day as outlined."

In discussing these questions the Board in its decision said:

Opinion Question ("a") The Labor Board has carefully analyzed the evidence submitted and the positions taken by the respective parties to this dispute, and while principle 12, Exhibit B of Decision No. 119, states that "for eight hours' pay eight hours' work should be performed," it is felt that the characteristics of the service required in the maintenance-of-way and bridge-and-building departments justify certain latitude in the definition of "work" or service.

The nature of the work and the varying locations at which such work is performed in these departments necessitates the designation of points at which men may assemble prior to proceeding to their point of work. After assembly and upon leaving such designated assembling points, the Board feels that it has been generally understood and recognized that the employees were under the supervision of the foremen and that the foremen were considered as being on duty and required to perform the functions incumbent upon that position while proceeding to the point of work, such as the inspection of track and remedying any defect that might be detected while in transit.

The Board does not feel that the time consumed can be properly considered the "men's time" as they are subject to service while en route. The same principle applies to the return to the designated assembling points at the close of the day.

Question ("b")—The Labor Board directs especial attention to that portion of section (h), Article V of Decision No. 501, reading, "service in excess of the working hours or days assigned for the general force" and "such work will be paid for on the basis provided in these rules in addition to the monthly rates."

In the promulgation of this rule it was recognized that there would be incidental services necessary for the supervisory forces to perform requiring their services in excess of the hours worked by the general force, such as making reports, recording time, and similar duties usually incumbent upon the position of foreman. However, as specifically stated in the rule, this exception only referred to service in excess of the working hours or days assigned for the general force, and which was considered a part of the employees' "responsibilities and or supervisory duties."

Section (a-1), Article V of Decision No. 501 provides:

> "Except as otherwise provided in these rules eight (8) consecutive hours, exclusive of the meal period, shall constitute a day's work." (II, R. L. B., 469.)

This rule and other rules relative to overtime, etc., are equally applicable to the supervisory forces, except in so far as the specific exceptions are referred to in section (h) of Article V and which have been hereinbefore referred to.

Hence, it can be properly said that when the "general force" is required to work 10 hours per day the overtime rules are applicable to said general forces and likewise to the supervisory forces in charge for the ninth and tenth hours because of the fact that these two hours do not represent time in excess of the hours or days assigned for the general force. Incidental duties performed in excess of 10 hours, however, such as making reports, etc., which are considered part of the responsibilities or supervisory duties, are excepted in the same manner as if on an eight-hour basis.

Question ("c")—The Labor Board after a careful analysis of the subject matter in dispute promulgated Decision No. 501, in which decision is incorporated the following rule "except as otherwise provided in these rules, eight (8) consecutive hours, exclusive of the meal period, shall constitute a day's work." There was also incorporated in this decision rules providing for the payment of service performed in excess of eight (8) hours per day and on Sundays and holidays, which was not considered a part of the standard measure of a day's work. This decision also embodied a rule which provided a method for changing the starting time of the various classes of employees covered thereby.

The evidence in this case clearly shows that the carrier did not seek or hold conference with the duly authorized representatives of the employees prior to the time certain of the changes complained of were placed in effect. In other words, the starting time of certain employees, which was formerly 8 a. m., was changed to 7 a. m. without proper compliance with section (c-1), Article V of Decision No. 501. Instruction of the carrier with respect to foremen being assigned to 10 hours per day without additional compensation for the two extra hours was not in conformity with the meaning and intent of the provisions of Decision No. 501 as will be noted from the foregoing opinion with regard to Question "b."

The entering of 10 hours' time in conformity with the carrier's instructions was an improper entry, as will also be seen from the Board's opinion expressed above. In the course of the oral hearing conducted in connection with this dispute, the representatives of the carrier indicated that the assignment of the employees to 10 hours per day was prompted by the thought that the supervisory forces could be worked these additional hours without extra compensation therefor in addition to their monthly rate. The position of the carrier if predicated upon this thought was indeed unjust and unreasonable and one which the Labor Board cannot sustain.

The Labor Board recognizes that the carrier has a right under the rules incorporated in Decision No. 501 to work its forces nine, 10 and even a longer number of hours should an occasion arise necessitating and justifying such an assignment, with the provision, however, that the meaning and intent of the rules are adhered to.

E. I. Nichols, of the Baltimore & Ohio Chicago Terminal, has been elected chairman of the steam transportation committee of the Chicago Safety Council, succeeding S. S. Morris, of the Illinois Central. This committee had charge in Chicago of the recent careful crossing campaign.

Southern Pacific Asks to Retain Central Pacific

Officials Point Out Dismemberment of System to Result If Court Decision Under Sherman Law Is Carried Out

WASHINGTON, D. C.

A HEARING on the application of the Southern Pacific to retain control of the Central Pacific through lease and stock ownership pending the completion of the commission's consolidation plan, was begun before Commissioners Meyer and Potter of the Interstate Commerce Commission at Washington on November 21 and was expected to take several days. The application is being vigorously contested by the Union Pacific on the ground that jurisdiction of the matter is still with the United States court which was directed to carry out the mandate of the Supreme Court that the two companies be separated and a large number of commercial organizations and state and local authorities have taken sides in the controversy and were represented at the hearing. So many intervening petitions were offered at the opening that Commissioner Meyer ruled that they should be filed in writing and the commission would pass upon them later. When E. F. Tredwell offered such a petition on behalf of the California Producers' and Shippers' Association, in opposition to the Southern Pacific application, Fred H. Wood, counsel for the Southern Pacific, said that the Southern Pacific at the proper time would move to strike its petition from the files as not offered in good faith. He said the organization is "nothing but the Union Pacific under an alias."

Lewis J. Spence, director of traffic of the Southern Pacific, presented a lengthy statement to show the effects of the separation, along with exhibits showing the traffic interchange, etc., and the indirect corporate relationships. He presented a map which showed a large number of gaps in the Southern Pacific lines that would be left if the Central Pacific were removed from its control.

Seeks I. C. C. Authority for Lease

"By this application," Mr. Spence said, "the Southern Pacific seeks authority to control the Central Pacific, first, by lease until December 31, 1984, subject to termination by order of the commission if and when found by the commission to interfere with the consummation of its final plan of consolidation, and, second, by ownership of all the issued and outstanding capital stock of the Central Pacific during the continuance of the lease." The purpose of this application is to avert the injury to the interested carriers and the public growing out of the operation of these lines as separate and independent companies and at the same time to protect the public interest for the future by making the control sought terminable by the commission so that this control, if authorized, may never under any pretext or under any conditions become a barrier to the bringing about of the consolidations contemplated by the Transportation Act in the manner provided in the plans finally adopted by the commission, whatever they may be.

"The Southern Pacific is now in physical possession of the Central Pacific lines under a lease dating from February 17, 1885, which has been declared void by the Supreme Court of the United States in its recent decision as being in contravention of the Sherman Anti-Trust Act. While the original leasehold interest began February 17, 1885, an amended lease was executed December 7, 1893. This lease, but for the decision of the Supreme Court, would have terminated December 31, 1984.

"The proposed new lease is practically identical in terms with the lease of December 7, 1893, as amended except (1) the provision of Article First of the proposed lease to prevent interference thereof with the commission's final plan of consolidation, (2) the omission from the proposed lease of a provision of the old lease for amendments thereof by consent of the parties or in the event of dispute by reference to arbitrators, and (3) the addition of a clause to the fifth paragraph in the proposed lease providing that if the capital stock of the Central Pacific now deposited with the Central Union Trust Company of New York, as trustee, as security for the payment of the Southern Pacific's 4 per cent Gold Bonds (Central Pacific Stock Collateral) shall be sold under the provisions of said deed of trust, such sale shall constitute a termination of this lease."

Central Pacific Would Lose 500,000 Tons of Transcontinental Freight

Setting up of an independent Central Pacific with consequent withdrawal of Southern Pacific support to the Central Pacific-Ogden route would result in loss of more than one-half million tons of transcontinental freight per annum by the Central Pacific line, or more than six times the tonnage which, upon any theory, can be assumed to have been diverted from the Central Pacific-Ogden route to the Southern-El Paso route as a result of the ownership and operation of Central Pacific lines as a part of the Southern Pacific System, Mr. Spence said.

Mr. Spence said that less than 3½ per cent of the tonnage of the Sunset-Gulf route is transcontinental business. "A fundamental change followed the opening of the Panama Canal in 1914, which has almost eliminated the Sunset-Gulf route from transcontinental business," he said, "and has substituted the canal steamship lines as the agency for transporting substantially all the traffic of the character which was formerly shipped by the Sunset-Gulf route."

"The Sunset-Gulf route does not and can not compete with the Central Pacific-Ogden route or any other route for perishable freight or any other freight that is not adaptable to steamship transportation."

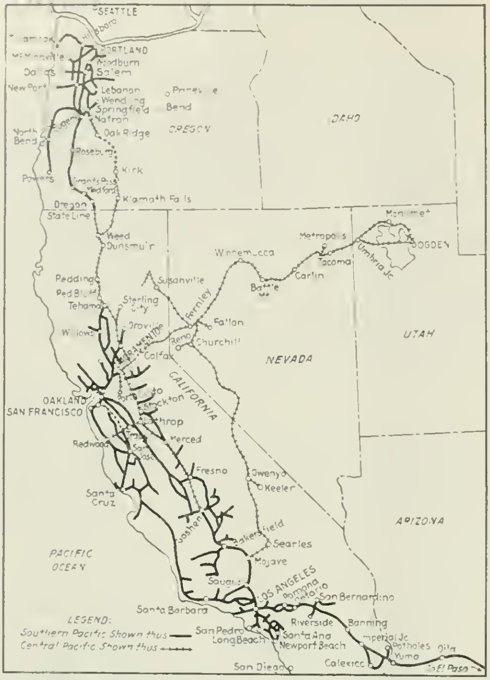
Pointing out that at Ogden and El Paso the transcontinental routes of the Southern Pacific lines were 755 miles apart, Mr. Spence said that the Ogden line and its connections primarily form a route from and to Central-Northern California and Oregon while El Paso route primarily forms a route from and to Southern California and Arizona and New Mexico and that their alternative uses are incidental to their major use in the accommodation of traffic between different sections of the country for which their alternative use is impracticable.

The entire tonnage handled by the Sunset-Gulf route to and from all Central-Northern California points reached by the rails of the Central Pacific was less than seven-tenths of one per cent of the tonnage via the Ogden and El Paso routes to and from all points East of Ogden and El Paso in 1921, according to the witness.

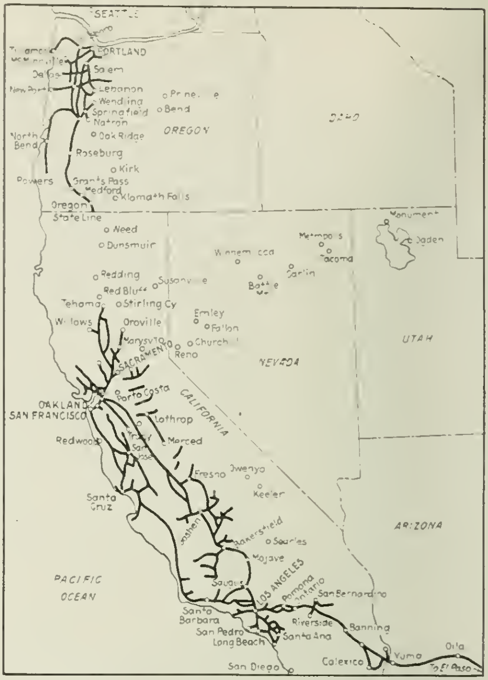
"This," he continued, "is the traffic that has been so industriously used as the principal basis for the disruption of a system, the greatly preponderant use of which is for traffic in which the Union Pacific System has no interest whatever."

Separation of Central Pacific from Southern Pacific Lines would leave the Southern Pacific with no incentive for soliciting the more than 135,000 tons of freight it moves annually from Oregon via Central Pacific-Ogden route nor any incentive for soliciting the more than 215,000 tons of

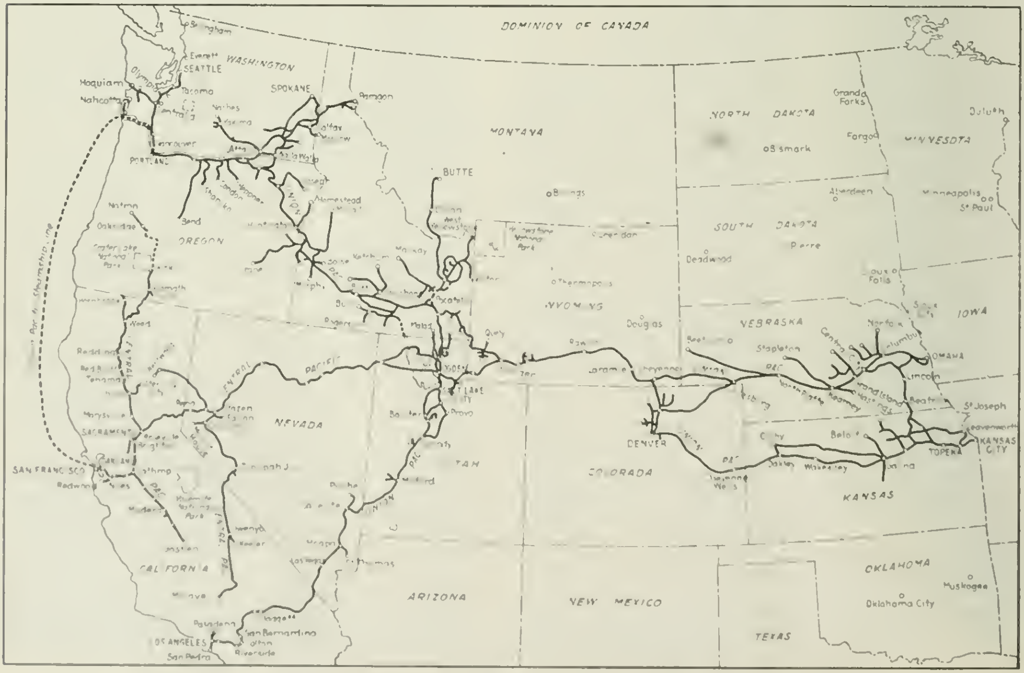
A Southern Pacific Presentation of the Southern Pacific-Central Pacific Case



Map No. 1—Southern Pacific Lines (Pacific System)



Map No. 2—As Southern Pacific Lines Would Be Without Central Pacific



Map No. 3—As Union Pacific System Would Be If It Acquired Central Pacific Lines

freight it moves annually from Southern California via Central Pacific-Ogden route Mr. Spence said. In the event of separation over 915,000 tons of this Oregon and Southern California traffic may be expected to move over all the Union Pacific lines from Portland and Los Angeles.

Mr. Spence said his estimate of tonnage loss to Central Pacific because of the separation does not include the net loss of tonnage that the Central Pacific lines would sustain by the diversion or re-routing of traffic within the Pacific states, nor does it "take account of the additional loss that would be sustained by the Central Pacific during the period of its temporary independence if the Union Pacific management should deem it advantageous to withdraw whatever preferential support it may now be giving to that line in the solicitation and routing of Central Northern California traffic in order to complete its impoverishment and facilitate its ultimate purchase on the bargain counter."

The witness noted that the Inter-state Commerce Commission has repeatedly recognized the fact that two line hauls justify a higher rate than one line haul and declared the tearing apart of the interwoven Central-Southern Pacific lines which have been under common control and operation as a single unit since 1870, would mean that "instead of having better service at lower cost, we will have poorer service at a higher cost."

An Integral Part of Southern Pacific System

Pointing out that the Central Pacific forms an integral part with the Southern Pacific of a transportation system extending 2622 miles from Portland, Oregon on the north to Tepic, Mexico on the south, linking the states of Oregon, California, Arizona, New Mexico, Mexico, Texas, Nevada and Utah, Mr. Spence testified that 76 per cent of the tonnage and 88 per cent of the passengers of the Central Pacific line are handled exclusively within the Pacific states west of Ogden, Utah, and El Paso, Texas and that of such traffic 6,334,848 tons, or 75 per cent was handled jointly by Central Pacific and other Southern Pacific lines.

After referring to the serious disruptions of traffic and higher costs that would result from the separation, Mr. Spence said: "Economy and efficiency have been promoted by the arrangement of freight and train schedules and the method of assembling and distributing freight which a unified system has made possible. The public fully shares the benefit. In like manner, a unified and interwoven passenger service over the Central Pacific lines and over lines of the Southern Pacific has been developed as the result of a lifetime study which cannot be disrupted without serious public inconvenience.

"The Southern Pacific would be in no way the beneficiary of conditions which, under separation, would produce an impoverished Central Pacific," said Mr. Spence, who noted that both roads' earnings and ability upon which good public service depends, largely rests upon their complementary relations.

"The investing public would suffer as a result of perplexing problems that would arise from the separation as a result of the complicated inter-financial relations between the Central and the rest of the Southern Pacific Systems," Mr. Spence said. In this connection he pointed out that the Southern Pacific with the approval of the government authorities guaranteed $58,000,000 of the Central Pacific debts and thus made it possible for the government to get the money due it after committees of Congress had reported that the property was unsufficient to pay the debt. Tracing the developments of the Southern Pacific System through acquisition of a number of separate lines, the witness showed that there is pledged, a security for a portion of the funded debt of the Central Pacific, stocks and bonds of the affiliated Southern Pacific companies, aggregating nearly $84,000,000."

Operating Effects of a Separation

According to the testimony of Mr. Burkhalter, assistant general manager of the Southern Pacific, with the use of these lines as interdependent and complementary parts of a single system trains are so routed as to bring about the maximum of efficiency and public convenience at minimum cost. These results he said, are due entirely to a complete disregard of corporate ownership in the routing of traffic and handling of trains. He continued: "The entire train service in central and northern California would be deranged as to both freight and passenger service by a termination of the present unified use. Existing routes and channels of trade, to which the public has become accustomed, would be destroyed, efficiency would be impaired and the cost of transportation substantially increased. The Central Pacific is deficient in equipment, depending upon the Southern Pacific in large measure for its equipment supply.

"The demand for additional locomotives and cars for the use of the Southern Pacific itself resulting from the rerouting of traffic on account of operation, would compel the Southern Pacific to withdraw locomotives and passenger cars now used by it, leaving the Central Pacific with a supply inadequate to enable it to provide the public with the service now furnishing. The Central Pacific is particularly deficient in freight cars. All Southern Pacific system cars are now pooled for the use of all system lines and distributed to best advantage. This flexibility in use would be destroyed and serious car shortages would be created to the detriment of Pacific Coast shippers.

"Under separate management we estimate that the increased operating expenses incident thereto, and without any improvement in service, would amount to approximately six and one-half million dollars a year and the additional capital expenditures required to provide facilities to take care of traffic as rerouted and under separate management would amount to upwards of $18,000,000, which would be wasted.

"The district affected is one of the most productive areas on the Pacific Coast, where the intricacies of train operation are greatest by reason of the large amount of gathering and delivery service involved. In this particular district the percentage of traffic requiring expedited service is probably greater than in any other portion of the United States and the impairment of service would be particularly disastrous to the public because of the interference with such expedited service under separation.

"Divisional organizations, the growth of 50 years of development in operating methods, would be disturbed, resulting in increased expense and in the unsettlement of conditions of employment for large numbers of men engaged in train service and also working in the shops. The principal shops of the system are today located at Sacramento and belong to the Central Pacific. Shop capacity at Sacramento is largely in excess of that which would be needed for the Central Pacific as an independent company. On the other hand, these shops would not be suitably located as general shops for what would remain of the Southern Pacific lines after separation from Central Pacific lines. The ultimate effect would therefore be the transfer of the shop operation of Southern Pacific to other places and leaving Central Pacific shops at Sacramento with a large surplus capacity unused. The number of employees that would be affected by separation aggregates approximately 18,000.

"The evil effects of separation from the standpoint of the public cannot be avoided by any species of joint use which is not an adequate substitute for unified use as interdependent parts of a single system and under a single management. Joint use if accompanied by competitive effort on the part of joint users necessarily results in wasteful duplication of service.

"The only way in which this waste could be avoided is

by a pooling of earnings and expenses which would in turn destroy the very competitive effort which is the only reason which has ever been assigned for the separation of these properties. Under the latter condition the result would be to restore a species of unified use but of a less efficient character, less responsive to the needs of the public and to the making of necessary improvements, because it would be a unified use dependent upon a double management by two companies whose interests would be conflicting instead of a unified use under the control of a single management all parts working in harmony with each other."

Mr. Kruttschnitt's Testimony

Julius Kruttschnitt, chairman of the Southern Pacific, said that the lines of the Southern Pacific and the Central Pacific are so interwoven in both construction and operation that it is almost impossible to separate them physically. While the title to some parts stands in the name of Central Pacific and to other parts in the name of Southern Pacific, the division is in name only. There are two names but only one railroad system, each part of which is dependent for its maximum usefulness upon some other part or parts. Mr. Kruttschnitt said in part:

Should our application be denied much expense and inconvenience to the public through changing existing routes and channels of traffic will ensue, which will prove to have been entirely unnecessary if the commission in its final consolidation plan should leave the existing relations of Southern Pacific and Central Pacific unchanged.

An analogous case would be that of a house ordered demolished because it did not conform to building regulations within fire limits. Because of a change in the law thereafter it is found to conform rigidly to them; what possible purpose could be served by insisting on its demolition because of infraction of the old law?

In the slow growth and development for over 50 years of Southern Pacific System, an efficiency of operation, implying a high excellence of service to the public, attained by careful adjustment of mileage of divisions, location of division terminals and freight train terminals, convenient to sources of water and fuel supply, arrangement of train service, location of shops, wood-preserving plants, fuel stations, all without regard to corporate ownership, has created an operating organization equalled by few and surpassed by none. The highly co-ordinated train service provided by Southern Pacific can be successfully operated only with terminals functioning with great efficiency. Through long years of training the superintendents and their staffs have attained a high degree of operating efficiency within the terminals along the line and with respect to co-ordinating operations with neighboring divisions and terminals. In assembling fruit and other freight, each terminal builds up its trains so as to minimize switching and insure prompt delivery at destination. A co-operative spirit is maintained between divisions, founded on the theory that each is working to a common end. Each division strives strenuously to increase its own efficiency, but is ready to surrender its individual advantage whenever necessary to improve the service as a whole.

Through a long period of years co-ordinated train service has grown up concurrently with traffic. Traffic is much heavier on some routes than others. Some terminals have become more important than others. As a consequence the various lines and terminals have capacities proportioned to their needs, including sidings and engine-houses, car repair yards and other facilities that must expand with volume of traffic. Important pieces of line have been double-tracked. The operating divisions, 11 in number (not including steamer division) have been established with territories and headquarters to best suit relations with patrons and shippers, and effectively supervise operations.

Central Pacific and other system lines are so interwoven and interdependent as to offer alternative routes for traffic at a very large number of points, a feature of great public convenience, because in case of accident or damage to permanent way by fire or washouts, detours are ready at hand whereby currents of passenger and freight traffic can be diverted and moved with negligible delay. Such abnormal as well as normal movement of traffic requires the indiscriminate use of both lines to complete delivery of freight at destination and to gather freight from origin and assemble it into solid trainloads. The flow of traffic in the main north-and-south commerce arteries between California and Oregon and between Northern and Southern California requires the use, part of Southern Pacific, then of Central Pacific, and finally again of Southern Pacific lines to complete delivery. Where alternative routes exist, train service has been arranged regardless of ownership of rails, so as to afford the best service to the public at the lowest practicable cost.

Joint Versus Unified Use

It has been conclusively shown that complete dismemberment is impracticable. In fact, every suggestion for a termination of the existing unified operation contemplates joint use of certain lines to a greater or less degree, itself conclusive evidence of the interdependence of these lines. Any species of joint use is therefore a mere makeshift to avoid the admitted evils of separation. If the commission denies this application, the district court has no power to authorize a continuance of such unified use of *all* lines. The most that it may do is to authorize a joint use of a part of such lines as compared with the present unified use of all such lines. The extent of such authority and the extent to which the interested carriers, independent of each other, would care to avail themselves of joint use is involved in great uncertainty. To whatever extent joint use may be employed it is not an adequate substitute for the existing unified use. There would be substituted either neutral management of all jointly used properties or management by the owning company with the other admitted as a tenant either with or without neutralization of station and certain other forces.

Increased Cost of Separate Operation

A careful estimate prepared by our operating officers shows that a separation of the properties, even with extensive joint use of tracks and terminals, will result in increased operating expenses for the two lines combined of approximately $6,557,000 per annum. All of this money, which is approximately 21 per cent of the entire net railway operating income of the Pacific System for the calendar year 1921, would be wasted each year during which the separation continues.

A careful estimate also shows that there would be imposed upon the Southern Pacific capital expenditures amounting to $2,676,000, mainly for enlarged facilities to take care of traffic now using Central Pacific tracks, while in order to make good its equipment deficiencies Central Pacific would be required to spend $1,840,000 for passenger locomotives and cars, $3,250,000 for freight locomotives, $10,000,000 for freight cars, to which expenditures should be added other scattering capital expenditures, making a total for the Central Pacific of $17,966,000, or for both lines of $20,642,000.

Central Pacific Without Credit

Whether unified control continues or ceases, capital expenditures should be made on the Central Pacific to provide increased facilities for the handling of traffic both as to second tracks and facilities at important traffic centers. Litigation of the past nine years has so clouded the title of Southern Pacific to Central Pacific that improvements of all kinds have been sparingly made; that is, hardly to the extent demanded by increased traffic. The general increase of traffic has made it imperative to undertake a number of improvements of a pressing nature at once, and Southern Pacific stands ready, if this application for temporary lease of Central Pacific be granted, to advance the money at once, as the Central Pacific itself, with its poor credit, cannot obtain it, in order to provide enlarged and more modern facilities at various points, including stations at Sacramento and Reno, whose requirements have outgrown existing ones; to establish enlarged terminals at Dunsmuir; substitute the most substantial ballast for that now under the ties on parts of the line where necessary; to start the construction of second tracks on parts of the Central Pacific line where such construction will facilitate the prompt movement of traffic such as certain sections of the tracks over the Sierra Nevada and in the territory where the meeting points of eastbound passenger trains out of San Francisco and westbound passenger trains into San Francisco are concentrated.

The Central Pacific as an independent company has no credit in the financial markets of the world. If separated from the Southern Pacific it could not raise the capital necessary for these improvements now needed, nor the huge additional amounts required solely on account of separation and which would otherwise be unnecessary.

Central Pacific contributes 25.4 per cent to the total income of the Southern Pacific System, that is, $9,143,251, out of $35,946,291. The Southern Pacific Company's net income is used for payment of fixed charges, additions and betterments, and for the payment of guarantees on bonds of its constituent or related companies. On July 31, 1922, the amount of such bonds guaranteed by it as to principal and interest was $401,000,000 and in addition $4,479,000 of outstanding bonds have been guaranteed as to interest only. The annual interest on these guaranteed bonds amounts to $17,400,000. It is patent, therefore, that if deprived of the net income contributed by the Central Pacific, the Southern Pacific Company would be in position where it might have to default on some of its obligations incurred in building up a transportation system designed to give to the public the most efficient possible service

Competition or Co-Operation with Motor Truck*

A Discussion of Its Possibilities as an Aid in the Solution of the Terminal Problem

By W. H. Lyford

Vice-president, Chicago & Eastern Illinois

THE TRANSPORTATION of goods is an absolutely essential requirement for the family, industrial and commercial life of a civilized people. The furnishing of transportation is sometimes considered a function of the government, but the people of the United States will not permit the government to perform transportation, except through the mail service and for packages weighing 70 lbs. or less. All other transportation of goods must be performed by the person requiring it, or by a carrier for hire.

Transportation is not complete until the goods are moved all the way from the premises of the shipper to the premises of the consignee, and, for brevity, we will call such movement "complete transportation." Also for brevity, we will use the British term "trader," which includes both shipper and consignee, or all persons for whom transportation of goods is furnished for hire.

The trader is concerned only with complete transportation. His greatest need is that complete transportation shall be furnished with regularity and within reasonable time. His secondary need is that the charges which he must pay for complete transportation shall not be more than the traffic will bear, without curtailing his profitable trade.

Complete transportation cannot be furnished regularly and promptly unless the charges of the carrier are high enough to pay all the expenses of carriage and a profit sufficient to warrant the investment of capital and energy in the installation of the transportation service and in increasing the service as traffic increases. In normal times, the volume of freight traffic in this country increases at a rate of not less than 6 per cent per year.

The trader is entitled to the best transportation service which can be furnished for the charges which he pays, and it is the duty of carriers who, singly or jointly, undertake to furnish complete transportation, to make their charges as low as is consistent with the maintenance of adequate, regular and prompt service.

We are accustomed to think of the transportation of goods as divided into four general classes: parcel post, express, less-than-carload or package freight (commonly called l. c. l.) and carload freight.

The Problem of Collection and Delivery

Whether the government, the express company or the railroad company undertakes to transport the goods, the railway actually performs the entire transportation service, except the movement between the premises of the traders and the stations of the railway companies. Such movement is called "collection and delivery." Parcel post is not collected, but it is delivered by the government. Express is collected and delivered by the express company. Freight is collected and delivered, not by the railway company, but by the trader or by the owner of trucks or teams, whom we will call "the trucker."

Because the railway does not furnish collection and delivery, and that service must be performed by or at the expense of the trader, the traders have located their industries as close as possible to railway stations. Consequently, the vicinity of the freight station is usually a congested district in any large city. If the railway furnished collection and delivery, the location of the freight stations would be immaterial to the trader. A distance of two miles between the locations of two stations in a large city may make a difference of 300 per cent. in the interest charges on the real estate occupied by the stations. In Chicago the interest charge alone on real estate at 12th street on which a freight station is located, is more than $2.30 per ton of freight handled through the station. If the station were located at 55rd street, such interest charge would be reduced to about 80 cents per ton. The amount of interest saved by moving the station to 55rd street would pay the cost of well organized cartage between the 55rd street station and the premises of the trader. The present cartage charges would be saved.

Outbound freight is moved to the station in whatever way and at whatever time the trader chooses, during the business day. Inbound freight is removed from the railway station in whatever way the trader chooses and, on the average, about three days after the freight arrives. Therefore, the station becomes a storage warehouse, congested with piled-up freight awaiting delivery to the trader, at his convenience. With collection and delivery service controlled by or in full co-operation with the railway, large freight stations with storage facilities would be unnecessary. A narrow platform, with a roof over it and with tracks on one side and a highway on the other, is all that would be required.

With very few exceptions, railway freight stations in large cities already are so congested that, unless we can find some way to pass more traffic through the existing facilities, or to keep on enlarging and multiplying them, by extravagant expenditures for additional real estate and track connections, the railways will not be able to handle the normal increase in freight traffic.

Railway companies are organized to furnish transportation. Storage is a separate field for enterprise. The public warehouse is needed and should be fostered because it can be operated at a profit. Storage in railway stations rarely is profitable to the railway company, and it seriously interferes with the legitimate function of the railway—to furnish transportation.

Competition Between Four Agencies

In this country, four different agencies are competing with each other for the transportation of the same goods: Parcel post, the express company, the railway and the trucker. While the parcel post and express are transported over railways, the government and the express company compete with each other, and with the railway for the carriage of packages weighing 70 lb. or less, and the trucker competes with the three other agencies.

Competition for the local carriage of goods within city and suburban areas ought to be welcomed by the railways, as they perform this service at an actual loss, while the trucker can perform it at a profit. On the other hand, competition with the railway for the carriage of goods through rural districts, along main lines of railway, is harmful to the railway and unprofitable to the trucker.

For parcel post there is complete co-operation between

*Abstracted from an address before the Second National Conference on Education for Highway Engineering and Highway Transport at Washington, D. C., on October 28.

railway and highway transportation, as the government has its own cartage system. There is like co-operation in the express business, as the express company operates its own trucks and wagons. For freight traffic, there is hardly any co-operation between the railway and the motor truck.

I have marshalled the foregoing facts with the idea that they might form a background for the statement: *That unless there is a radical change from present practices in railway transportation in the United States, our great transportation system, which is the wonder of the world, will become a hindrance to the further progressive development of this country.*

Five years ago, when our railway system was placed under federal control, its march of progress was halted, and it has never regained its stride. Its development has not kept pace with the industrial development of the country, because its revenues have not been sufficient to attract the additional capital necessary to finance the cost of normal additions and betterments to road and equipment.

The public is clamoring for lower rates, while existing rates are not high enough to produce the net railway operating income which, as determined by the Interstate Commerce Commission, the railways are entitled to earn. Still the tendency of the commission is to reduce rates and there is no reasonable hope of increasing them.

Disregarding the temporarily bad condition of railway equipment resulting from the existing strike of the shop crafts, the only limitation on the volume of traffic which the railroads can move is due to the railway terminal facilities, which are inadequate to take care of the traffic which easily could be transported over the main lines of railway.

Under existing rates, the line haul of freight would be highly profitable, if the revenue therefrom were not absorbed by constantly increasing terminal expenses. If the railways are to remain solvent and carry the traffic for which rail transportation is demanded, they must find a way, first, to reduce terminal expenses, and, second, either to enlarge their terminal facilities or to pass more traffic through the existing facilities. How to do these things is, in my opinion, the most important problem before the American people. I have devoted to it all the time I could spare from my regular duties during the past 15 years, and have arrived at the definite conclusion that the problem can be solved only by remedying the following evils:

First—Too low compensation paid to the railways for carrying parcel post and express on expensive passenger trains.

Second—Lack of organized collection and delivery service, which lack makes it necessary to furnish unreasonably large and expensive freight terminal facilities, and an unreasonably large supply of freight cars.

Third—The use of box cars for the transfer of l. c. l. freight between railway stations in large terminal areas. The trucker could perform that necessary service more quickly and economically. Thousands of box cars thereby would be released from an unprofitable service and would substantially increase the carrying capacity of the railway.

Fourth—The use of box cars as trap cars, for moving l. c. l. freight through terminal areas for industries which have rail connections, and the iniquitous absorption by the railways of trap-car, subway and lighterage expenses, which is equivalent to furnishing free cartage to the favored few large traders, in discrimination against the average trader, who is obliged to provide or pay for his own cartage.

Fifth—The operation of branch lines on which the traffic is too light to sustain railway transportation and which could be served better and at far less expense by the motor truck.

The most important field for co-operation between the railway and the truck is offered by the collection and delivery of l. c. l. freight in large cities. Comparatively few trucks are used in this service, first, because there is no co-operation between the truckers themselves, and, second, because there is no co-operation between the trucker and the railway. As the collection and delivery of l. c. l. freight in large cities is now conducted, the delays to trucks in reaching the station door and in loading and unloading the truck, make unprofitable the use of the truck in station service, so that by far the greater part of this service is performed by horse-drawn vehicles. Truck transportation is only profitable when the truck can be kept moving the greater part of the time.

Notable experiments have been tried in the United States for handling the collection and delivery of the freight of one railway company in a large city and, so far as I have been able to learn, none of them have been successful. No single railway company receives and delivers freight from and to every part of a large city in sufficient volume to make profitable the collection and delivery of such freight by a trucking organization. I am satisfied, however, that the combined l. c. l. freight of all the railways reaching a city could be collected and delivered by a properly equipped single trucking organization, working in full co-operation with the railways, at less cost than is now paid by the traders in that city for their cartage, and still yield a reasonable profit to the trucking organization.

For many years, the Canadian railways have furnished collection and delivery in the principal cities of Canada, under separate cartage tariffs. The president of one of the largest Canadian railways is my authority for the statement that his railway could not possibly handle its traffic through its present terminal facilities without well organized collection and delivery service.

British Operate Terminals Intensively

In England, Scotland and Wales, the railways are furnishing collection and delivery at practically all of their stations. Knowing this, I devoted a few days last year and several weeks this year to intensive study of the collection and delivery service in England and Scotland, principally in London, Manchester and Glasgow. I was given exceptional opportunities and assistance for the investigation at close range of the terminal operations of the principal English and Scotch railways. The several general managers with whom I discussed these problems in Great Britain were unanimous in expressing the following conclusions:

1. That the collection and delivery of freight, at terminal cities and in large industrial centers, by a single trucking organization, is absolutely essential to the most efficient operation of freight stations and that, with such a trucking organization co-operating with it, the railway company may control the time of collection and delivery of freight and is able to operate its stations throughout the 24-hour day if necessary, and to use the same platforms and forces for handling inbound and outbound freight.

2. That collection and delivery can be furnished under a separate tariff at rates high enough to produce an actual profit from the cartage operations, after paying all expenses, and low enough to induce 95 per cent of the traders to avail themselves of the organized collection and delivery service rather than to perform it themselves.

3. That in England, where the general conditions are substantially like those in New England, the railways and the traders have prospered under unified cartage systems, without any substantial additions to station facilities.

In all of these conclusions of the British railway managers I heartily concur and I believe they ought to be adopted by American railways.

Contrast the operations of a large terminal freight station in the United States with a typical British "goods" station. In this country, the inbound freight is handled over one set of platforms by one working force and the outbound freight is handled over another set of platforms by another

working force. Each set of platforms and each working force is operated through the entire business day as freight is taken away from the inbound stores and received at the outbound station during the entire day. The inbound platform is piled up with freight awaiting delivery, interfering with the movement of freight across the platform. When the inbound cars are unloaded, they must be pulled out of the station and set into the outbound station for loading the following day.

In a typical British station, the same platforms are used to handle not only the inbound and outbound traffic, but also a third class of traffic, and they are operated through the entire 24-hour day. When the day force goes on duty at 8 a. m., a line of cars loaded with inbound freight is standing on one side of the station platform and a continuous line of trucks or "lorries" are backed up to the other side of the platform. The city is divided into districts and the freight for one district is loaded into one or more lorries, there being more lorries at the platform than there are districts in the city. As soon as a lorry is fully loaded a driver is summoned by telephone from a nearby stable. He comes with a heavy Clydesdale horse and drives away with a 5 ton load to the proper district, where he makes delivery. When one lorry is loaded and driven away, another empty lorry is backed into its place, loaded and driven away.

Before noon, all the inbound freight has been removed from the cars and delivered by lorries. At 1 p. m. the station platform is clear and ready to receive the outbound freight, which is collected and delivered at the station by the same drivers who delivered the inbound freight in the forenoon. All of the outbound freight is collected before 5 p. m., loaded into cars and dispatched before midnight. The platform is again clear and ready to receive the heavy fish and vegetable traffic which begins to arrive at 1 a. m. and is delivered at the markets before 6 a. m. At 8 a. m., the platform is again clear and the empty lorries are standing at the platform ready for the inbound merchandise.

For collection and delivery in this country, demountable truck bodies, trailers, or semi-trailers doubtless would be used instead of the British lorries and gasoline or electric tractors would be substituted for Clydesdale horses. On our station platforms, we doubtless would use four-wheel trailer trucks drawn by electric tractors, instead of the old-fashioned two-wheel trucks which are used in Great Britain. In fact, I left that country with the firm conviction that, with our American methods applied to the British system of collection and delivery, much greater efficiency would be obtained and better service would be rendered than is now rendered in Great Britain.

Three of the great English railways have combined their collection and delivery service in London with most satisfactory results and I was assured by the manager of the combined service that, if all of the railways reaching London would join in the combination, he could affect even greater economies than he had already accomplished.

I am well aware that the average railway manager in this country fears to encourage the establishment of collection and delivery service, because of the danger that the railway will be required to pay the cost of the service and thereby increase the terminal expenses. I would not recommend that the collection and delivery service be forced upon the trader, but rather, that it be offered to him under separate cartage tariffs at rates which would be less than the trader's present cartage expenses. I believe that the result would be the same as it has been in Canada and Great Britain where the collection and delivery service has been accepted voluntarily by a large majority of the traders.

Collection and Delivery of Car-load Freight

There is a second field for co-operation between the motor truck and the railway, which would require a more radical departure from present methods than the one just mentioned, but which would produce even more beneficial results to all parties concerned. It is the organized delivery of carload freight from public team tracks in large terminal areas. As already stated, this freight is now loaded, unloaded, collected and delivered by the trader, or at his expense. In different cities the trader is allowed from two to five days within which to unload cars after he has received notice that they are ready to be unloaded.

Generally speaking, there is a shortage of team tracks in the central districts of large cities and it is next to impossible for the railroads to furnish additional team tracks. Cars must be held in the outer yards until there is room for them on the team tracks, and then they must be held on the team tracks until it is convenient for the trader, or his trucker, to unload them. The necessary consequence is that large terminal districts are full of idle cars, and I think it is safe to say that the average time that box cars are delayed at the port of New York and in the switching district of Chicago is 10 days per trip. If all of the freight cars which carry loads into the port of New York, the switching district of Chicago, and other large terminal areas, could be unloaded on the day of their arrival, they could be loaded out on the same day, or the following day, and the present freight car equipment of the railways would be sufficient to meet all transportation needs for several years to come.

Competition between the railways to outdo each other in affording privileges to the traders has brought about a situation which is crippling the freight car supply and thereby is injuring the trader more than he is benefited by the allowance of an unreasonable time within which to load and unload carload freight.

At the present time there is a serious shortage of freight car equipment, in all parts of the country. The railways, the commercial organizations and the public authorities are urging the traders everywhere promptly to load and unload cars in order to reduce the idle time of freight cars and supply the crying need for more cars to move accumulated freight. Notwithstanding these appeals, the car shortage is not being substantially remedied.

In my judgment, a new system of delivering carload freight must be adopted and it will require the co-operation not only of the railways and the truckers, but also of the traders, warehouse men, the Interstate Commerce Commission and the State Utilities Commissions. The rules relating to free time for holding loaded and empty cars, awaiting the convenience of the traders, should be so modified as to insure the unloading of cars within 24 hours after they are ready for unloading and the loading of cars within 24 hours after they are placed at the disposal of the trader.

I realize that this is a radical change and would deprive the trader of a substantial amount of free storage which he has always enjoyed and would require him to pay warehouse charges on such inbound freight as he is unable to receive on the day of its arrival. This apparent disadvantage, however, could be, to some extent, offset by cheaper cartage furnished by an organized collection and delivery service and the warehouse charges might be reduced substantially by co-operation between the railway, the trucker and the warehouse man.

Branch Line Service

The importance of cutting down the idle time of cars is shown by the fact, which I believe can be established, that the average time required by a freight car, in carload freight service, to make a round trip is about 20 days, and of that time, the car is actually moving in line haul, loaded or empty, only two and two-tenths days, and it is actually earning revenue only one and one-half days out of the 20 days required for the round trip.

Another field for the profitable use of the motor truck

is the transportation of freight between communities which are served by branch lines of railway, on which the traffic is too light to pay the expenses of any kind of railway transportation. Such branches are almost innumerable and are scattered over every part of the country. They were built before motor transportation was perfected and, undoubtedly, they have performed a necessary public service, but they have outlived their usefulness. The transportation furnished over such lines could be performed better and more cheaply by motor conveyances over the public highways. No more such branch lines ought to be or will be constructed, if the motor trucker will take over the field and occupy it intelligently and efficiently. In recent years, I have known of several cases where railways seriously have contemplated the construction of branch lines, to reach small cities and towns, and, on investigation, have found that they could better afford to establish their own truck service, and the proposed branches have not been built.

I will go further and state that I think that all such money-losing branch lines, along which transportation by truck over existing highways could be furnished at less expense, should be abandoned. The better and less expensive truck service should be substituted by the railroad company, if the trucker will not occupy the field.

Who Will Benefit Through These Changes

Five parties are interested in bringing about the changes we have outlined:

The whole public would be benefited in that the city streets would be relieved from the congestion caused by wagons and trucks carrying small lots of freight to and from the railway stations. The new rural highways would last longer, as the cooperation of railway and truck would put an end to long-distance trucking.

The trader would get better service at less cost.

The motor-truck industry and existing cartage companies and private truckers who would co-operate with the railways would vastly increase their field for profitable operation.

The warehouse man would profit by the additional storage now furnished by the railways.

The railways would cut down their terminal expenses and would increase their capacity for service.

The trucker has a distinct advantage over the railway, in that highways are constructed by the general public, through some form of taxation, while the railway is constructed at the private expense of the railroad company. In the early history of this country, public lands and moneys were contributed to a few railway companies, to induce them to build railways in territory which greatly needed transportation, but such donations have long since been repaid by the enhancement in the value of the taxable property, whose development has followed the railroad and would not have occurred without the railroad.

The railway, through taxation, pays a large share of the cost of constructing and maintaining highways, while the trucker pays no part of the cost of constructing or maintaining the railway. If the trucker is to compete with the railway, either he should pay a substantial part of the cost of constructing and maintaining the highway or the railway should be relieved of taxation for highway purposes.

If, however, the trucker, first, would perform that part of transportation furnished by the railway at an operating loss and on which the trucker could make a reasonable profit; second, would cease to compete with the railway for the traffic which the railway can carry at a profit and on which the profit of the trucker is very doubtful; and, third, would co-operate with the railway in handling traffic which requires transportation both by rail and highway; in other words, if the truck would supplement the railway service instead of competing with it, then it would be to the interest of the railway that the expenses of the trucker should be reduced to the lowest possible limit, and, in my judgment, the railway could well afford to pay substantial taxes for highway purposes and to make no objection to the free use of the highway by the trucker.

There is a steady and, for the trucker, an alarming growth of public sentiment in favor of imposing upon the trucker a more substantial part of the cost of maintaining and renewing public highways, which, it is claimed, are destroyed by heavy trucks almost as fast as the highways can be constructed. If the public were satisfied that the truck was only used as a common carrier where the railway could not furnish as good and as cheap service as the trucker furnishes, I believe, the public would cease demanding that greater burdens be placed upon the trucker, which would increase the cost of his service.

I believe that for every city there is a practical solution, which, with the full co-operation of railways and trucks would result in the movement of freight through the city stations as soon as it arrives there and would thus enable the railway to furnish much more transportation service without increasing its facilities and without increasing its charges for transportation.

Conclusion

The truck should supplement the railway and not compete with it. Wherever complete transportation can be furnished by the truck more efficiently and cheaply than by the railway, the truck should be used. Wherever the railway service is adequate and profitable and less expensive than truck service, the railway should perform the service. Where the best and cheapest service can be furnished profitably by the railroad and truck combined, the railway and the trucker should co-operate in furnishing that service.

Be Sure and Get It Back Together Again So It Will Run, Uncle

Roadmasters Hold Fortieth Annual Convention

Meeting at Cleveland Characterized by Large Attendance—Instructive Papers and Interesting Exhibits

THE FORTIETH annual convention of the Roadmasters and Maintenance of Way Association and the eleventh annual exhibit of the Track Supply Association were held at the Statler Hotel, Cleveland, Ohio, on November 21-23. In spite of the recent labor troubles, more than 400 members were present. The reports and papers presented were specially practical in character and brought active discussion.

The convention was called to order promptly at 10 o'clock Tuesday morning by L. M. Denny, president (supervisor, C. C. C. & St. L., Indianapolis, Ind.). C. E. Denny, vice-president and general manager, New York, Chicago & St. Louis, welcomed the association to Cleveland. After referring to the passenger terminal development now in progress in that city, he emphasized the importance of co-operation, illustrating his remarks by a description of a plan now in effect among the executives of the roads with terminals in Cleveland. These executives meet informally at a weekly luncheon to discuss local transportation problems and "iron out" difficulties. By this means, all congestion has been avoided and it has not been necessary to organize a car service committee. *He closed with the statement that no railroad can afford to retain a man in any responsible position who does not take part in association work and exchange views with those similarly employed.*

C. A. Paquette, chief engineer, C. C. C. & St. L., spoke on the necessity of the roadmasters giving more attention to the personnel of their forces. He said, in part: "To me the track is the most wonderful part of a railroad, because of the human element connected with it. The maintenance of equipment is performed at certain concentrated points, where it is subject to close supervision and direction, but maintenance-of-way work is performed on every foot of the railway with supervision which is of necessity more or less general in character. The big question confronting maintenance officers is that of securing efficiency from the forces.

"In recent years we have seen attempts of professional agitators to inoculate these men with the views of discontent and suspicion, but what attempts have we made to overcome this propaganda? The superintendent is too busy looking over reports and dictating mail to know his section forces. The division engineer who knows all of his track foremen is an exception.

"I have been more concerned over this situation with reference to the maintenance-of-way foreman than any other problem before me. We must find a way to regain his confidence, and his old time interest and pride in his work. I cannot believe that they have disappeared, but they are submerged for the time being. You men are the connecting link between the railways and their maintenance-of-way employees. Upon you rests the responsibility for the restoration of the former relations. Don't lose sight of the value of personal contact with your men. Don't widen the existing gap; close it."

In his presidential address, L. M. Denny reviewed the work of the association during the last year. He paid tribute particularly to the members of the committees who had carried on the work of the association.

Report on Section Gangs vs. Extra Gangs

The committee recommended that all regular routine track maintenance work such as detailed gage, line, surface and cross level maintenance, ordinary drainage, and tie renewals should be taken care of by regularly assigned section forces equipped with modern tools and suitable motor cars. The forces should be maintained at as nearly uniform strength as possible throughout the year, with slight seasonal additions during the heavy working season from April to November in the average American climate. This makes possible and encourages the employment of a better and more skilled class of labor than the great seasonal force variations sometimes practiced, where a bare skeleton organization is maintained through the winter and a large number of extra, and usually floating and poor quality laborers are added during the summer.

The heavy track replacement work such as continuous rail renewals, and heavy ballasting out of face should be taken care of by specially organized forces, housed in movable camp outfits. Extensive fence building or rebuilding and cut or bank widening can also best be taken care of by special forces. Such special forces become skilled in their work and reduce unit costs to a minimum. They should be required to leave their work in a completed condition, and not leave parts of it to be completed by section forces.

Between these classes of usual routine maintenance work and special heavy maintenance work, which should be taken care of by regular section forces and special extra gang forces, respectively, there are some kinds of special work of a lighter nature which can be handled economically by increasing the size of and, if necessary, doubling up the regular section forces. Such work includes scattered rail patching, curve worn rail renewals in short patches, and ballast cleaning and patching or light resurfacing in short stretches. No heavy ditching should be done by hand.

Frequently section and extra gang forces can be worked together advantageously where a large number of men are needed for a short period, but cannot be worked continuously to advantage. On one road extra and section forces are combined for rail renewals. The regular rail extra gang makes necessary preliminary preparations for renewing a stretch of rail, then the track is taken for a day and the rail gang, with the assistance of section forces brought in from 15 miles in either direction, will relay from two to three miles of rail in ten hours, while the trains are being handled over another track. After the rail is laid, the extra gang completes the work of cutting the old rail apart, loading it up, renewing ties and switch timbers under new rail as may be necessary, and other work incident to completing the job.

The same practice of doubling section forces for a short period may be followed advantageously in making short patches of curve rail renewals, or surfacing short stretches of track out of face where the work is too heavy to be handled by one average section force, but not great enough in extent to justify the moving in of an extra gang.

Ordinarily maintenance should be kept up currently so that the necessity of organizing large extra forces for heavy seasonal work may be reduced to a minimum. This can be done where reasonable section forces are maintained throughout the year. Routine fence repair work, for instance, can best be done by regular section forces in the late fall and winter after the undergrowth has disappeared.

(*R. H. Smith* (*chairman*), *assistant division superintendent, N. & W., Roanoke, Va.*)

Discussion

To secure the greatest return for money expended for labor, as well as to get much needed work done, P. J. McAndrews (C. & N. W.) stated that the railroads are now facing a very critical labor situation, since it is a serious question where the labor for the coming year will be secured from. Men, he thought, should not be laid off in the fall at the first sign of frost, for if they are not held it will not be possible to get them again in the spring. The ancient policy of laying off men who can be employed economically during the winter must be revised. On many roads the forces may be kept to a fairly even average throughout the year and to good advantage.

Where section forces are increased to do the work often assigned to extra gangs, there was a distinct handicap, according to T. Thompson (A. T. & S. F.), who said that only about 50 per cent of the section foremen are capable of taking a large body of men and doing construction work. Ordinary renewals, he believed, should be handled by the regular section forces and the heavy work by the extra gangs.

Along the same line J. B. Martin (N. Y. C.) stated that all of the track work could not be done by the section forces. Local conditions prevented the acquisition and holding of large numbers of men such as this plan would necessitate. Under present methods, it requires from 65 to 70 men to lay rail economically, and this would mean that fully one-half of a roadmaster's section forces would be required. The labor supply is a governing factor.

The big advantage of doubling up the forces, according to R. H. Smith (N. & W.) chairman, was that by the use of section and extra gangs it is possible to increase greatly the output, while at the same time there was an additional beneficial effect by thus securing a number of skilled men to balance up the forces.

Where section forces are increased, there are added duties for the section foremen, and in this respect T. F. Donahoe (B. & O.) said that, where this is done, the section foreman should be paid the increased rate for the extra gang foreman, since he must necessarily assume all of the responsibilities of the latter. In addition, another man should be selected to take charge of the section routine work.

F. H. Hansen (G. N.) stated that on some roads extra gangs are an absolute necessity, since winter conditions are so severe that the greater part of the track work must be done during a short working season. Naturally, only routine matters can be carried on during the cold weather and thus it does not seem reasonable to suggest that the railroads should keep men when no work can be done. If a section foreman does better work than an extra gang foreman, the roadmaster is at fault.

Report on Methods of Making Tie Renewals

The committee recommended that tie renewals should commence as early in the spring as possible. This gives the track foreman four months in which to get all of his ties in before hot weather, for in the opinion of many trackmen, if ties are put in in hot weather the chances for buckled track are increased. The most economical method of distribution is by the work train in the late fall or winter months. Ties unloaded from a work train should be piled in neat piles so as to prevent rot, permit seasoning and improve appearances along the right of way.

There is a difference of opinion as to whether ties should be spotted in starting at one end of the section and replacing the bad ties to the other end. Giving the track a general lift in most instances provides a better bearing for the ties and insures better riding track, affords a better opportunity for renewing anti creepers and tie plates and provides an accurate spacing of ties. As a general practice it is found to be a much more satisfactory method than spotting in.

In general, the most satisfactory results in renewing ties over a section are secured by giving the track a general lift over two or three miles each year, putting in ties and working the track thoroughly. This method establishes a cycle of three or four years.

The only feasible way of renewing ties at private and highway crossings, is out of face. Ties put in a spike high are not favored by the majority of roads. The largest number favor tamping solid.

For economical tie renewals, it is essential that the roadmaster or supervisor be notified of the number of ties he will be furnished. If this is not done, he cannot distribute them economically.

(*J. P. Davis (chairman), roadmaster, Central Indiana, Anderson, Ind.*)

Discussion

The part of the report dealing with the best methods and time for the distribution and renewal of ties aroused considerable comment. W. Shea (C. M. & St. P.) stated that it was the duty of every roadmaster to make each tie render the best service possible. This could not be done if ties were distributed in the fall and piled along the right-of-way according to needs, since a section foreman would use them as they were, rather than redistribute them to secure maximum service according to grade, etc. A detailed inspection of the track should be made and no ties distributed until spring, when the proper ties could be unloaded at the proper points. Furthermore, when ties are treated they are not received in large quantities at one time, but over a considerable period. These ties, treated as well as untreated, should be piled at convenient points, classified and sorted so that each requirement for track use in the following spring can be met quickly and economically.

Several members believed that such a plan was expensive in that it cost a certain amount of money each time a tie was handled and that the fewer rehandlings there were, the cheaper the cost of the work. In regard to the question of methods for renewal, J. B. Martin (N. Y. C.) said that, where stone ballast is used, the economical way to maintain track was to raise it out of face and renew ties at the same time. This was not necessary in gravel ballast or on light traffic lines.

R. G. Knight (N. P.) stated that the report dealt chiefly with dense traffic, rock ballasted track and was probably correct in reference to that class of road. It did not, however, cover the problems of the other roads. Thus, in reference to a cycle of track-raising, where track was put in good condition once every three or four years, it might be economical to renew ties which had more than one or two years' life. However, due consideration should be given to the gradually decreasing timber supply and an effort made to secure all possible service from a tie.

Training the Section Foreman

By D. C. Buell

Director, Railway Educational Bureau, Omaha, Neb.

It has come to be recognized by railroad officers generally that the trackman should no longer be considered a common laborer, but should be assisted in an educational way to become a skilled laborer. Labor conditions in this country have been such that it has been necessary to hire and use a great deal of rough labor on track work. Mexicans, Italians, Greeks, many of the Slavic races and even Japanese have been and are still being used in large numbers, in addition to the Negro labor of the south. It is by no means impractical to raise the standard of many of these classes of labor.

With the advent of heavier motive power, leading as

it has to the necessity for much more scientific track construction, the section foreman has come to occupy a position which has hardly any analogy in industry. The section foreman today must deal with engineering work of the highest order.

It is the writer's opinion that the next ten years will see a change in the track foreman's status, that he will be of necessity a better educated man; that he will have as an assistant foreman a younger man who will be training himself in a knowledge of the more technical phases of track work, and that this cycle of training of track assistants will provide the combination of practical and technical man that we are going to need in our track work in years to come.

This is going to be accomplished on some roads by school gangs made up of ambitious young men who want to follow railroad track work as a profession and who would be worked as a special gang under a competent instructing foreman so as to obtain the experience required. Where school gangs are not provided, the right kind of an assistant foreman can study by correspondence and get much of the training that he needs in that way, particularly if given the proper encouragement by his foreman and his higher supervising officers. In order to attract the right kind of young men for such work there must be some system of apprenticeship leading to the position of assistant foreman and foreman at a rate of pay sufficient to attract these men to the possibilities of the opportunity offered.

Every intelligent trackman who expects to follow track work should be urged to become a student of track work as an expected part of his training. Then, in step with the extended use of special track tools, power machines, the further development of signal circuits, the adoption of automatic train stops, and the extension of electrified districts, men will be developing who will be fully competent to give the more skilled supervision required for the proper maintenance of such track on our American railroads.

Report on the Non-Spacing of Joint Ties

The committee recommended the "non-spacing of joint ties and the non-slotting of joints." It is a known fact that the joint is the weakest point in railroad track. Every conceivable means has been applied to reinforce and strengthen it to make it equal in strength to the rail, but nothing that has yet been developed approaches this objective. Why, therefore, should we place an extra burden upon the joint by making it render service over and above the other portions of the rail by anchoring the track at this weak point by slotting the angle bars and spiking through the slots.

With non-slotted angle bars and with rail anchors placed on the intermediate portions of the rail, the joints are permitted to pass over the ties without disturbing them if the rail should creep, thereby eliminating the slewing of the ties and creating no cavities in which the water may accumulate about the joints any more than about any other tie under the rail. This preserves the angle bar and protects the bolts.

All ties should be spaced uniformly under the rail regardless of their position relative to the joint. To space ties uniformly under the joints and elsewhere throughout the length of the rail where the track is given a three-inch raise, pick tamped, will cost $840 per mile in stone ballast, while to give it a three-inch raise in stone ballast where ties are not spaced will cost only $690 per mile, a saving of $150 per mile by not spacing ties. To space ties uniformly throughout the length of the rail in gravel ballast where the track is given a three-inch raise, shovel tamped, will cost $700 per mile and where the ties are not spaced $570 per mile, a saving of $130 per mile by not spacing ties. These figures are based on $0.40 per hour for labor. It will cost $0.80 per joint to space the joint ties and shift the shoulder ties where necessary in stone ballast and $0.50 per joint in gravel ballast.

In spacing ties more or less damage is done which hastens the time of their removal. In spacing ties some of them are necessarily moved off their old bed, while others are not disturbed, which gives them an unequal bearing, however well they may be tamped, and requires more frequent surfacing to maintain the track at a true level.

(*F. L. McMillan (chairman), roadmaster, C. & A., Bloomington, Ill.*)

Discussion

The association voted to go on record in favor of non-slotting of joints; it also voted against the practice of uniform spacing of ties throughout the length of the rail.

Report on Labor-Saving Devices

The committee reported that labor-saving devices are being utilized more and more to speed up the renewing of rail and a great deal is saved by their use. Where long stretches of rail are to be renewed, locomotive cranes are coming into use to replace the tong gangs. The cost of renewing rail by the use of 2 cranes, 4 portable air compressors running 8 pneumatic machines, a work train with 4 double end rail loaders and 262 laborers and 26 foremen or assistant foremen was found, in one instance, to be as follows:

	Per ton	Per mile
Unloading 3,161.5 tons of new 107-lb. rail	$0.49	$82.39
Distributing angle bars, tie-plates, spike and other accessories	.34	57.17
Scoring ties and other preliminary work	.22	36.99
Taking out old 100-lb. rail and renewing with new 107-lb. rail, including picking up old rail and scrap	3.29	533.18
	$4.34	$729.73

The above included the cost of installing new tie-plates and rail anti-creepers, but not the renewing of turnouts. This work, as done in the past by hand and including the cost of closing in for trains, would aggregate approximately $12 per ton or $2,000 per mile.

Where only a few men are available the three-man track layer is a valuable asset, especially in laying rail in yards. These machines with 5 men will do the work of 15 men, assuming that they are used about 2 hours per day, for 60 days in the year.

With the increased weights of rails, frogs and switches, the necessity for unloading machines becomes more pronounced.

The utilization of locomotive cranes in connection with screens in cars for the cleaning of ballast has proved that much can be saved in this way.

The cost of cleaning switches of snow by hand will average 55 cents per switch at interlocking points as compared with 20 cents per switch by the use of hydro-carbon torches. At terminals a steam heating plant properly operated can be run with three laborers and a foreman, whereas it will take 25 men, a foreman and an assistant foreman to keep such a place open during a severe storm.

Investigation shows the cost of tamping ties with tie tamping machines to be little less than the cost of tamping by hand, the work done with these machines will hold up twice as long or more under favorable conditions.

The steam ditcher is one of the greatest labor-saving devices where heavy ditching is to be done. With an air dump car placed on each side in a work train, it will accomplish as much in one day as 30 men will do with flat cars in three days.

A spreader, when used with a work train, has performed the work of at least 20 men in disposing of material on a

fill and in ditching light cuts. This, on the basis of 150 working days, would be a saving of about $9,600 in the course of a year.

The use of weed killers should be extended and two applications made a season. The cost of each treatment, including work train service, is approximately $32 per mile. It would be impossible to perform this work as economically by hand.

Oiling appliances save a great deal of labor in oiling the roadbed and grade crossings. There are also attachments for these devices that can be used to oil track bolts and fastenings.

(*George W. Morrow (chairman), supervisor, N. Y. N. H. & H., New Haven, Conn.*)

Co-operation Between the Track and Signal Departments

By J. A. Peabody

Signal Engineer, Chicago & North Western, Chicago

The item of signaling, which brings the two forces together most often, and which is apt to cause the most trouble is the track circuit. If the track is on slag or coarse gravel and well drained, the foundation is still good when the water collects during the warm part of the day in the early spring, the signalman and trackman usually have a pleasant good morning for each other. But when the ballast is not of the best, when the cinders and sand are thick and not only bear against the base of the rail but perhaps a good ways upon it, their relations are often otherwise.

Instead of quarrelling, however, the signal supervisor should go to the roadmaster during the summer when forces are plentiful and they should go over the situation together. In one case the signalman shows the trackman where cleaning out around and underneath the rail will do everything that is necessary. In another case external drainage is required which the roadmaster has wanted for a long time and, with the help of the signalman, is able to get authority to put in. In a third case the trackman shows the signalman some track that he acknowledges is bad but which cannot be taken care of properly without an expense which both agree is out of the question. But as the signalman has wanted to shorten the track circuit at that particular place for a long time, he gets authority to do it with the trackman's help. Thus the weak parts of the foundations are strengthened, and when the thaws of March, the thunderstorms of July and the floods of any time of year come the foundation stands.

If this method is followed in the field, the supervisors and roadmasters as well as the signal maintainers and section foremen will get some knowledge of each other's work, and with that knowledge will come a better understanding and greater respect for each other.

The Essentials of Morale

By S. E. Shoup

Engineering Assistant to General Manager, Kansas City Southern, Kansas City, Mo.

Favoritism of certain kinds will inevitably weaken if not wholly destroy morale. If a man is favored because of superior energy, because of dependability or because of greater knowledge, there is no resultant weakening of morale. Favoritism of this kind may even strengthen morale and spur individual effort. The favoritism that is objectionable and which will ultimately play havoc is where one man is given all of the easy assignments for no other reason than that he is liked by his foreman or superior. This is frequently found and the effect upon other men who work hard and are not given the equivalent personal consideration and concessions is disastrous.

There is a certain type of man who can never build up a loyal or effective force. This type is conspicuously conscious of his own importance and authority. He is disliked by his subordinates and associates and is usually disgustingly obsequious in the presence of his own superior. It is his delight to humiliate and belittle his men by an offensive display and exercise of his authority. He never accords the benefit of the doubt and is never satisfied with any performance. He is a constant critic and can with unerring accuracy tell how resulting consequences could have been avoided after they materialize. This type is temperamentally unfit to be in charge of men, for he will not only destroy the morale of his own force but will weaken the morale of other gangs with which he comes in contact.

All men are human and it is impossible to discount or deny human traits. Yet we often see men in supervisory capacities unconsciously doing this by indulging in useless and constant criticism. This results in their subordinates believing them unappreciative. When this belief becomes fixed, it is difficult to obtain extra effort, even in emergency.

Another thing well calculated to weaken or even destroy morale is the ignoring of the formal channels of authority. This practice, which is all too freely indulged in, leads to at least one disastrous consequence. The slighted officer feels no responsibility for resulting complications or the carrying out of the project. This brings about lukewarm or even disinterested supervision, and if persisted in will do much to break down the morale of any organization.

And now we come to insincerity—the greatest obstacle to loyalty and as such an insuperable barrier to the building up of morale. Insincerity gives birth to sneers and engenders sarcasm. Insincerity breeds distrust and opens the way for serious breaches of faith. When a superior is insincere to his subordinates the subordinates are not long in finding it out. The inevitable consequence is the complete sacrifice of loyalty and loss of morale.

Conditions Strengthening Morale

Of first importance is the interest in the work to be performed. It is far more difficult to sustain interest than it is to create it. However, by proper methods and with the proper knowledge of men, interest may be successfully sustained. Probably the surest way of sustaining interest in subordinates is for the superiors to sustain their own interest. Interest creates interest, both in the individual who is interested and in those with whom he comes in contact. Enthusiasm is only interest compounded many times, and enthusiasm is irresistible.

Closely allied to the interest in the work is an understanding of the importance of that work. In emergency, when the importance of work is clearly understood by all those engaged in it, men can, for limited periods of time, put forth superhuman effort.

The understanding of men by their superiors is a necessary condition to the creation and sustaining of morale. Superiors should be able to appreciate the perspective of their men, and knowing this, they are in better position to guide and direct their thought along sound and conservative channels. Without this understanding superiors may offend without the slightest intention, or may even bring about a condition entirely opposite from that desired. One of the best recommendations a superior can have is the friendship and personal loyalty of his subordinates. This friendship and loyalty is not only an asset for the man himself; it is also an asset of his company.

Fair play also has an important bearing on morale. When men have confidence in getting fair play and such consideration as they deserve, the result is an extended and spontaneous strengthening of trust, which in turn is reflected in

their morale. Fair play and judicial consideration are of double benefit. First, the superior is allowed an intimate insight into the work, problems and troubles of his men, which would otherwise be withheld; and second, the men are in turn benefited by the broader advice and experience of their superior.

Education is the key and predominant note of the whole subject of morale—education both as concerns methods and ways of handling the daily task and the further broader education of elementary political economy. Knowledge of the handling of men and the performance of work is a prerequisite, but this knowledge may be indefinitely expanded and amplified by properly directed reading and thinking.

Report on Motor Cars

The committee recommended that to obtain maximum efficiency, the motor car must be of sturdy construction. This result is probably better obtained by a steel frame and this type should be specified. The weight of the car must depend largely on the size of the gang and the amount of material hauled and should not greatly exceed 1,200 lb., or if it is greater, some mechanical device such as a turntable or center jack should be carried to facilitate handling. One pair of wheels should be free, that is, have a differential action with the larger part of the dead load distributed to the opposite end so as to permit the turning of the car from the track at right angles.

In the use of a light car for inspection or signal service, the weight should be so distributed that an even torque is obtained in driving, and so balanced that the load will not tend to derailment. This can only be accomplished with the center-load car. Although certain advantages may be claimed for the so-called speeder type, they are largely visionary and the danger of operation overshadows them.

The motor car must have certain features of convenience and safety, which are largely left to the purchaser's discretion. First, adequate space must be provided for tools; this is important and also includes a safety consideration. Tool trays should be placed on each side of the seat platforms of sufficient depth to preclude the possibility of any tools slipping forward over the front of the car. Although most makes may be operated for short distances backward, the front and rear ends should be designated and the car operated accordingly. This will permit the installation of high pipe rails on the front and rear, securely fastened to the floor and connected by a longitudinal center rail. This safety rail arrangement facilitates mounting and prevents men falling from the car. A protecting screen should also be placed at the front end of the car to retain the load. A safety item of prime importance is the protection by shields of all moving parts of the power plant. This precaution will prevent injury to clothing and persons of employees, and also avoid the damage resulting from tools projecting into the working parts.

The factor of power is influenced by many considerations. Probably the greatest limitation is the grade encountered. It must be remembered that even a short distance is a ruling grade for the section car. After the horsepower is decided, care should be taken so that the dead load will not exceed 150 lb. per horsepower. Twenty miles per hour should be considered a maximum speed from a safety standpoint.

The four-cycle free running engine will give the best results for motor car use in railroad operation. The necessity of feeding a fixed amount of oil with the gasoline through the carburetor in order to provide the requisite lubricant for only favorable conditions, without being able to take care of this feature properly under high temperature, heavy load and grade conditions, renders the two-cycle type unfit for the miscellaneous class of work which a railroad motor car is called upon to do. The human coefficient of efficiency is not sufficiently stable, and never will be, to give the requisite amount of ordinary honest effort necessary to operate the two-cycle type under the favorable conditions for which this class was designed. In the four-cycle type, each substance necessary to its operation is separately confined and is applied automatically from separate reservoirs, by reason of which any man failure is easily apparent and the necessary corrective measures can be applied at once, which is an essential feature in securing long life from the car and lessening the maintenance cost.

The motor car for railroad use should be free driven, as the direct driven motor car is not as safe to operate, particularly under load and on grades. The free driven motor car, with friction disc and fibre friction driving wheel, seems to have given the best results with only a slight increase in the cost of the car. The free running belt driven motor car is effective and its first cost is less; it can be used, but the belt itself is adversely affected by weather conditions.

The economical advantages derived from the use of motor cars are (1) the actual transportation time saved, (2) arrival at the point of work without fatigue, resulting in greater efficiency and increased morale, and (3) decreased cost of supervision due to the extension of sections. It has frequently been proven in practice that the substitution of motor cars for hand cars allows the lengthening of sections, thus greatly reducing the expense for supervision. On four large western railroads the replacement of 3,220 hand cars by 2,812 motor cars has yielded a computed saving of $806,993 per annum.

There should be a road organization for making current motor car repairs.

(*J. H. Hartley (chairman), assistant division engineer, Penna., Pittsburgh, Pa.*)

Other Features

On Tuesday evening a program commemorating the fortieth anniversary of the association was presented, with talks by a number of the members. On Wednesday evening the Track Supply Association gave a dinner to the members of the Roadmasters' Association. Following adjournment on Thursday, the afternoon was spent in an inspection by special train of the Cleveland terminals.

The Track Supply Exhibit

Coincident with the Roadmasters' convention, the Track Supply Association held its eleventh annual exhibit of materials and appliances employed in the construction and maintenance of railway tracks in rooms adjacent to the convention hall. Fifty firms participated in the exhibit in addition to 12 firms having representatives in attendance without exhibits.

The officers of the Track Supply Association during the past year were: President, Herbert T. Potter, vice-president, Wyoming Shovel Works, Wyoming, Pa.; vice-president, F. M. Condit, railroad department, Fairbanks, Morse & Co., Chicago; secretary-treasurer, W. C. Kidd, Ramapo-Ajax Corporation, Hillburn, N. Y.; advisory directors, E. T. Howson, Western editor, *Railway Age*, Chicago, and R. A. Van Houten, vice-president, Sellers Manufacturing Company, Chicago; directors: Alex Chapman, Western sales manager, Rail Joint Company, Chicago; J. J. Cozzens, salesman, Union Switch & Signal Company, New York; A. H. Told, general manager, Positive Rail Anchor Com-

pany, Marion, Ind.; and K. J. Eklund, vice-president, Mudge & Co., Chicago; ex-officio, David T. Hallberg, general sales manager, P. & M. Company, Chicago.

The names of those firms exhibiting, with the nature of their exhibits and the names of their representatives follow:

Aeroil Burner Company, Inc., Union Hill, N. J.; oil burners, hand pumps and compressed air for thawing; J. L. Howland.
American Chain Company, Bridgeport, Conn.; rail clamps, replacers, one piece guard rail, compromise joints, rail benders; J. J. O'Connell.
American Hoist & Derrick Company, St. Paul, Minn.; photograph of ditchers; W. B. Maurer and Miss H. Holler.
American Valve & Meter Company, Cincinnati, Ohio; switch stands and track appliances; J. T. McGarry, F. C. Anderson and Dan J. Higgins.
Balkwill Manganese Crossing Company, Cleveland, Ohio; model of an articulated manganese steel crossing; S. Balkwill.
Bethlehem Steel Company, Bethlehem, Pa.; switch stands, guard rails, gage rods; Neil E. Salsich, E. H. Gumbart, J. F. Hennessy, G. Riddle, J. S. Clark, J. H. Richards, C. A. Alden and J. C. Chandler.
Buda Company, Chicago; section motor car, switch stand, track jack; J. E. Murray, F. T. Connor, A. L. Bliss and H. C. Beebe.
Chicago Malleable Casting Company, Chicago; rail anchor tie plate, tie plate with key, rail anchor tie plate with key, rail clips, Hercules and Little Giant hemping posts; Warren Oshorn.
Chipman Chemical Engineering Company, Inc., New York; photographs of track. M. McComb and A. H. Coldwell.
Craft Incorporated, New York; light inspection car with chemical fire fighting tank and acetylene cutting and welding outfit; Albert J. Leonard.
Crerar, Adams & Co., Chicago; bonding drill, track drill, rail saw, die starters, jacks, snow brooms, shovels, etc.; Russell Wallace, W. I. Clock and J. A. Martin.
Dayton Car Wrench Company, Dayton, Ohio; car wrench; H. L. Flack.
Doughtry Safety Guard Rail Lock, Chattanooga, Tenn.
Duff Manufacturing Company, Pittsburgh, Pa.; jacks; E. A. Johnson.
Eymon Crossing Company, Marion, Ohio; model of continuous crossing; Byron E. Wilson and A. C. Queen.
Fairbanks, Morse & Co., Chicago; literature; A. A. Taylor, E. C. Golladay, F. I. Lee, F. M. Condit, G. W. Lewis, H. L. Hilliary, D. K. Lee, J. L. Jones and E. J. Coverdale.
Fairmont Gas Engine & Railway Motor Car Company, Fairmont, Minn.; inspection car, section gang car; H. E. Wade, W. F. Kasper, W. D. Brooks and S. J. Gibson.
Hauck Manufacturing Company, New York; thawing outfits, kerosene torches, circular flame burners, blue flame oil burners and syphon type furnace burner; H. Vogelsong.
Hayes Track Appliance Company, Richmond, Ind.; derail and model showing a cross-section of actual operation; H. J. Mayer, S. W. Hayes, H. H. Jenkins and R. H. Gausepohl.
Headley Good Roads Company, Philadelphia, Pa.; bituminous railroad crossing; F. N. Kern and W. T. Gilbert.
Idol Track Lining Company, Chicago; track lines; F. R. Sinning.
Ingersoll-Rand Company, New York; pneumatic tie tamper, pneumatic rail drill, pneumatic nutting machine and pneumatic bonding drill; W. H. Armstrong, J. N. Thorp, Jr., and C. Dougherty.
Kalamazoo Railway Supply Company, Kalamazoo, Mich.; literature; J. J. McKinnon, F. E. McAllister and H. R. Miller.
Lundie Engineering Corporation, New York; rail anchor, tie plates; W. S. Boyce, W. Brooke Moore and L. B. Armstrong.
Maintenance Equipment Company, Chicago; friction car stop, steel fence post, blue flag derail, rail layer, ballast screen, switch point straightener, tie spacer; J. A. Roche and E. Overmier.
Mudge & Co., Chicago; railway motor car; Karl J. Eklund, John M. Mulholland and Burton Mudge.
National Lock Washer Company, Newark, N. J.; nut locks, lock washers; J. Howard Horn, R. L. Carneross, A. T. Thompson and S. H. Smith.
National Malleable Castings Co., Cleveland, Ohio; wrecking hook, malleable iron washers, rail braces and tie plate; E. V. Sikler.
Oxweld Railroad Service Company, Chicago; reclamation of track materials by the oxy-acetylene process; W. H. Kofmehl, F. J. Duffy and W. Rallen.
P. & M. Company, Chicago; anti-creepers; S. M. Clancey, D. T. Hallberg, L. S. Walker and F. N. Bayliss.
Pocket List of Railroad Officials, New York; copies of publication; Charles L. Dinsmore.
Positive Rail Anchor Company, Marion, Ind.; girder type guard rail, rail anchors, rail braces, guard rail plates and braces and tie plates; A. H. Todd and L. C. Ferguson.
Rail Joint Company, New York; insulated joints, compromise joints, standard joints and track liner, Charles Jenkinson, R. W. Payne, Alex Chapman, G. T. Willard, C. B. Griffin, J. N. Meade, W. F. Godd, M. Marsley and E. A. Condit.
Railroad Supply Company, Chicago; tie plates, G. W. Nibbe and H. G. Van Nostrand.
Railway Purchases and Stores, Chicago, copies of magazine, Edward Wray.
Railway Review, Chicago; copies of paper; W. M. Cam
Ramapo-Ajax Corporation, Hillburn, N. Y., automatic switch stand, double shoulder switch plate, manganese guard rail, guard rail clamp, adjustable rail brace, W. C. Kidd, R. J. Davidson, Jr., J. B. Snow, J. B. Strong, T. L. Akers and John V. Houston.
Reade Manufacturing Company, Jersey City, N. J.; model of chemical weed killing machine, R. H. Bogle, R. W. Pritchard and C. H. Reade.
Reliance Manufacturing Company, Massillon, Ohio; nut locks, H. J. McGinn, E. C. Gross, D. L. Robertson and H. K. Hanna.
Sellock Nut & Bolt Company, East Syracuse, N. Y., track bolts with sellock nut, M. F. Jennings, J. C. Woodward and F. W. Piche.
Sellers Manufacturing Company, Chicago; tie plates; G. M. Hogan and R. A. Van Houten.

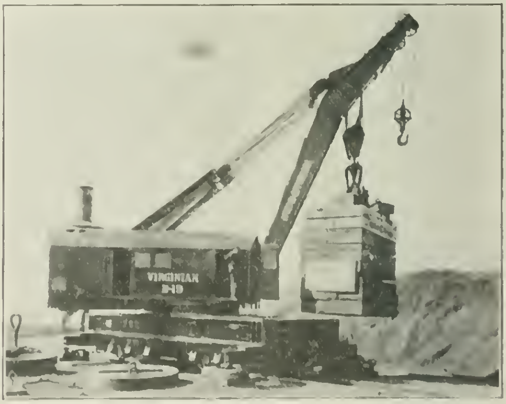
Simmons-Boardman Publishing Company, New York; samples of papers and cyclopedias; E. T. Howson, Milburn Moore, F. H. Thompson, F. C. Koch, B. J. Wilson, W. F. Rench.
Stevens Metal Products Company, Niles, Ohio; galvanized fence posts; S. H. Smith, G. J. Purcell, E. D. Thompson and E. L. Ruby.
Templeton Kenly & Co., Ltd., Chicago; track jacks, car jacks, pole jacks and emergency jacks; J. L. Crowley, G. L. Mayer and H. A. Walters.
Union Switch & Signal Company, Swissvale, Pa.; insulated rail joints; J. J. Cozzens.
Verona Tool Works, Pittsburgh, Pa.; railroad track tools, nut locks, track jacks and rail joint springs; E. Woodings, W. W. Glosser, J. S. Wincrantz and J. E. Hill.
Warren Tool & Forge Company, Warren, Ohio; sledges, hammers, spike mawls; G. F. Konold, H. C. Mull and G. H. Konold, Jr.
William Wharton, Jr., & Co., Inc., Easton, Pa.; manganese steel one-piece guard rail, gauge rod; Victor Angerer, W. H. Allen, H. F. Heyl, J. R. Smith and C. W. Smith.
Wood Shovel & Tool Company, Piqua, Ohio; shovels, spades and scoops; E. H. Hoge and C. L. Butts.
Woolery Machine Company, Minneapolis, Minn.; motor car; H. E. Woolery.
Wyoming Shovel Works, Wyoming, Pa.; track shovels, spades, scuffle hoes and picks; H. T. Potter, Stanley H. Smith, G. E. Geer, E. L. Ruby and A. W. Greetham.

NON-EXHIBITING MEMBERS

American Steel & Wire Company, Chicago.
Cleveland Frog & Crossing Company, Cleveland, Ohio.
Cleveland Railway Supply Co., Cleveland, Ohio.
Dilworth, Porter & Co., Pittsburgh, Pa.
Dressel Railway Lamp & Signal Co., New York.
Elliott Frog & Switch Company, East St. Louis, Mo.
Jordan Co., O. F., East Chicago, Ill.
Morden Frog & Crossing Works, Chicago.
Pettibone Mulliken Co., Chicago.
Q. & C. Company, New York.
St. Louis Frog & Switch Co., St. Louis, Mo.
Universal Crane Co., Cleveland, Ohio.

Virginian Places in Service Largest Wrecking Crane

The Virginian has recently placed in service for use on its lines a new wrecking crane which it is claimed has the distinction of being the largest machine of the kind ever built. Heretofore, as far as is known, the largest railroad wrecking crane was a 160-ton machine having a maximum capacity of 320,000 lb. with all out-riggers in service. As compared with this, the new crane has a capacity on the main hoist of 400,000 lb. at a 17-ft. 6-in. radius with all



The New Crane Has a Capacity of 400,000 lb.

out-riggers in service, a capacity of 200,000 lb. at the same radius with end out-riggers only in service and a capacity of 85,000 lb. at the same radius without the out-riggers. On the auxiliary hoist, the capacities are 90,000 lb. at 24 ft. to 30 ft. radii with the end out-riggers only, and 60,000 lb. at a 24-ft. radius without out-riggers.

In designing the crane, the main problem met was secur-

ing the 200-ton capacity required by the heavy rolling stock on the Virginian without exceeding railroad clearances and a maximum allowable axle load of 65,000 lb. on account of bridges. The crane in running order weighs 356,500 lb. and is mounted on special six-wheel trucks, the maximum axle load in running order being 64,000 lb. The car has a wheelbase of 26 ft. 2 in. and itself is 34 ft. long. The maximum height of the crane is 15 ft. 9 in. and the greatest width, 10 ft. 6 in.

The machine is equipped with a 12-in. by 12-in. engine operating on steam from a 65-in., 160-lb. A.S.M.E. boiler, and a Westinghouse air pump is provided, with clasp brakes on each of the 12 wheels. These brakes may be operated by the operator of the crane or by the engineman of the locomotive. All clutches are operated by air. The machine is a product of the Industrial Works, Bay City, Mich., and is said to have passed through all tests recently applied with ease and smoothness.

State Railway Commissioners Meet in Detroit

Co-operation with I. C. C. Urged—Public Ownership Theory Denounced—Motor Bus Problem Discussed

THE THIRTY-FOURTH annual convention of the National Association of Railway and Utilities Commissioners was held in Detroit, Mich., on November 14, 15, 16 and 17, with over 100 commissioners in attendance; this is said to be the largest convention roll call in the history of the organization. The opening address was made by Mayor James Couzens of Detroit, who after a few words of welcome, warmed to the subject of public ownership, telling the commissioners that within their jurisdiction rests the power to provide good public service to the American people at reasonable cost; that Detroit now has "on trial" the largest municipally owned and operated street railway system in the world, although so far as he is personally concerned, it is not a public ownership experiment, but a definite policy. He advocated the elimination of graft given in the form of unreasonably large salaries and other perquisites to the men who control public utilities. The Mayor said there is a prevailing and growing theory that all public utilities should cover merely operation—they should be operated for the service they give, and not for profits to private individuals. In this, he contended, lay the great advantage of public ownership.

The business of the convention was largely devoted to the reports of standing and special committees, addresses and discussions pertaining to railroad and other public utility regulation. The following officers have been elected for the ensuing year: President, Dwight N. Lewis of the Iowa Commission; first vice-president, Alexander Forward of Virginia; second vice-president, H. G. Taylor of Nebraska; secretary, James B. Walker of New York; assistant secretary, J. H. Corbitt of Tennessee, and general solicitor, J. E. Benton, Washington, D. C. Abstracts of the addresses and the committee reports follow.

Address of Retiring President

Carl D. Jackson, Wisconsin, the retiring president, said: The growing tendency toward centralization in government is not only paternalistic, it is paternalism at the expense of the state. Supervision of state activities, if continued, must mean the necessary taxes not only for the federal government but inexorably necessary taxes by the state governments, the proceeds of which are to be spent under regulation or supervision by the federal government. Taxation in this country has ceased to be a light matter. It will for years bear heavily on all classes of society. When inordinate and unnecessary activity becomes coupled with inordinate and unnecessary taxes, there is no reason to hope that the electorate will take an active interest in the matter and apply the necessary corrective."

Mr. Jackson attributed centralization to the outgrowth of unrest and stated that health, education and happiness has been gained only through the recognition of the individual and his property rights—not through socialism and communism. He spoke of the relations between the Interstate Commerce Commission and the commissions which compose the National Association, referring to the Transportation Act, which, with the amended Interstate Commerce Act, gives the federal commission control of railroad rates within a state when in conflict with interstate rates. He declared that the state commissioners will continue to resist the further encroachment of the federal power, but admitted that they had officially recognized the exercise of federal control to the extent necessary for the efficient exercise of undoubted national authority. As proof of this he cited the action of the association during the past year in agreeing with the Interstate Commerce Commission on a policy of co-operation.

Co-operation

By C. C. McChord

Chairman, Interstate Commerce Commission

Co-operation is potentially as broad in scope as the bounds of human relations. My present interest is in respect of its application in the field of transportation, where it should be practiced between carrier and carrier, between carrier and shipper, between carrier, shipper and the regulating authorities, and between the regulating authorities themselves, state and federal. It is rooted in the spirit of mutual forbearance, sometimes called the spirit of give-and-take, in which neither side seeks an unfair advantage.

The reconstruction and return of the railroads to their owners after the war was complicated by conditions that only time could adjust. In that situation the Transportation Act, 1920, was framed and placed upon the statute books. One of the outstanding features of that act, and one that I think is not generally fully appreciated, is that relating to car service. Under the present provisions the carriers are required to furnish safe and adequate car service and to establish, observe and enforce just and reasonable rules, regulations, and practices with respect to car service. Particular provision is also made with respect to the distribution of cars among coal mines; and thereby vicious discriminations practiced in former times have been curbed. The use, control, supply, movement, distribution, exchange, interchange, and return of locomotives, cars, and other vehicles used in the transportation of property are subject to our supervision and regulation. Whenever in the opinion of the Commission there is a shortage of equipment, congestion of traffic, or other emergency requiring immediate action in any part of the country, it has authority, either upon complaint or upon its own motion, to suspend for such times as may be determined the operation of any or all established rules,

regulations or practices relating to car service; to make such just and reasonable directions with respect to car service during the emergency, without reference to ownership of the motive power and other equipment, and to require such joint use of terminals, as will best promote the service in the interest of the public and the commerce of the people, upon appropriate terms; and to relieve against inadequate transportation service by particular carriers by prescribing the handling and routing of traffic. These provisions have in effect recreated the essence substance of federal control in respect of co-ordinated operation. For all practical purposes it is equivalent to unification of lines as far as the ultimate purpose of railroads is concerned, namely, the movement of traffic. Not only so, but it is in no wise inconsistent with the proposed voluntary consolidation of the railway properties of the continental United States into a limited number of systems.

On May 3, 1922, a joint committee composed of five members of the Interstate Commerce Commission and eight representatives of the state commissions, sitting at Washington, reported a tentative plan of co-operation through conferences and joint hearings. While experience probably will dictate some changes, such satisfactory progress has been made as to insure its ultimate success. For instance, a great opportunity for the practical co-operative plan—one readily adaptable to a completely successful issue—presents itself at this time. The Interstate Commerce Commission has entered upon a nation-wide investigation of the interstate express rates and charges. In that connection we have invited all the state commissions, through their Washington representative, to co-operate with us, not only in respect of the interstate rates but also in respect of all the intrastate rates. The express rates are founded upon a system designed for uniform application throughout the country, both interstate and intrastate. That they should be restored to a complete symmetry no one will deny, and the case peculiarly lends itself to a full justification of our co-operative plan. We hope to receive the necessary co-operation and to achieve a final result that will be above reproach. Unity of action can, of course, come only from unity of purpose, and that purpose must undeviatingly comprehend the good of the whole. We have laid the foundation. Our co-operative plan announces our purpose and marks the beginning of an epoch in railroad regulation.

Address by D. D. Conn

Manager, Public Relations Section, A. R. A.

There must be a public recognition of the fact that the railroads must enlarge their machine at least to keep apace with the progress in the development of agriculture and industry. Notwithstanding the effects of the shopmen's strike the railroads have been loading within a few hundred cars of the peak in car loading in the history of the railroads. Because of the shortage of equipment the railroads have not been able to load all the traffic offered and consequently agriculture and business has been held back by lack of adequate transportation facilities.

It is a fact that there are approximately 30,596,000 tons of freight constantly in transit, valued at approximately $1,503,000,000. If the average time in loading a car or unloading it or in its transportation can be reduced only one day, it will save an annual interest charge against the goods in transit of $18,042,000.

The transportation machine has not kept pace with the business of the country and there are three important economic necessities without which progress in industry and agriculture would be retarded: First, enlarge the transportation machine to the place where its development will again precede that of industry and agriculture; second, promote more efficient methods of distribution of the production of the country in order to narrow the spread between what the producer receives for his product and what the consumer finally pays for it; third, effect a correlation, based on scientific research and study, of our different modes of transportation.

There are many instances today of where we are building concrete highways paralleling rail transportation, but which create no new business and which mainly serve to divert it. The expenditure of this same money in building arterial highways from the farm to the railroad, plus the creation of a system for through movement of traffic via both mediums of transportation, will give each a chance to live.

The Railroad Labor Board

The Committee on Public Ownership and Operation, A. G. Patterson, Alabama, chairman, reported in substance as follows:

It is clearly apparent to all who have questioned the usefulness of the Railway Labor Board and have given the subject careful study that the existing dual system of control of the railroads of the country is a failure. The stystem is wrong in principle and has proved disastrous in practice, as evidenced by the recent nation-wide railroad strike, which was called by labor, in spite of all efforts of the Labor Board to prevent such action. This highly expensive experiment has shown conclusively that it is impracticable to have two separate, distinct and differently constituted governmental agencies endeavoring to regulate and control, in the public interest, the great transportation systems of the nation. Such a policy cannot possibly accomplish the results it was designed to accomplish. It is economically unsound and inherently inconsistent and unjust to have one government agency to fix the income and an incompatible agency to fix the major items of expense of any business institution. It would be just as consistent to have two boards of directors of a bank or of a railroad.

The Interstate Commerce Commission has been in existence for many years. Created by law, and charged with the responsible duty of regulating, in the public interest, the railroads of the country, in regard to their rates, charges and service, it has performed a wonderful service to the nation, and has always been able to enforce its orders and decrees. But not so with regard to the Labor Board. We can all see now that the creation of the Labor Board, charged by law with the impossible duty of settling disputes between railroad employer and employees, and without authority of law to enforce its orders and decrees, was a serious governmental mistake. The very manner in which the Labor Board was constituted as to its membership was wrong, and it has always seemed to be "as one born out of due season." The Labor Board is "a thorn in the side" to the railroads, and they have disregarded its orders and rulings whenever their interests suggested such action. It has been denounced by labor organizations, which have likewise refused to abide by its decisions, and it has been "a huge carbuncle upon the neck of the public," left powerless to relieve itself of its equally unsatisfactory decisions. The present administration has evidently realized that this unfortunate child must be expelled from the national household, judging from the speech of James J. Davis, Secretary of Labor, delivered at Athens, Ohio, on October 14, in which he denounced the Labor Board as being a failure and strongly advised that it be abolished. Secretary Davis, however, suggests as a substitute the creation of a "Board of Conciliation," to function through the Department of Labor, over which he presides as directing head.

If his suggestions were adopted he would soon find his department transformed into a hotbed of bitter factional partisans, each striving selfishly to gain an advantage over the other, in a somewhat similar manner as the Labor Board experiment. After deliberate consideration, it is the opinion

of this committee that the only logical, reasonable and practical solution of this perilous situation is to abolish the Railway Labor Board; transfer its functions to the Interstate Commerce Commission; enact a law "with teeth in it," which will enable the Commission to enforce its decrees and orders. In conclusion, we recommend the last situation herein dealt with, to the most serious and thoughtful consideration of every state commission. We believe that its proper solution will have a tremendous effect in retarding the sentiment favoring government ownership and operation of railroads and other public utilities, which sentiment, it must be admitted, is rapidly growing among certain classes and in certain sections of our nation, and which, if it should be adopted as a national policy, would prove to be a most destructive and disastrous government experiment.

Express and Other Contract Carriers by Rail

I Martin
of California, Chairman

Express service is purely an American institution. In no other country in the world is there a similar service. It has been demonstrated time and again that the express service of this country is a most popular service and has grown to be an absolute commercial necessity.

The state and interstate commissions and the public have not fully recognized the importance of this service.

The numerous changes in transportation rates brought about by the exigencies of war had a disastrous effect upon the express fabric throughout the country. This condition did not hold true of freight rates, for the reason that freight rates were established by various and devious methods, with a great variety of classifications governed by special conditions and disconnected relationship. The express rates, on the other hand, were upon a definite formula of universal application. So, when the horizontal increases in rates took effect and then pyramided, the result was a fabric of express rates without definite relationship, without consideration of traffic conditions, and productive of wide disparity between value of service and cost of service.

With the two increases, of 12.5 per cent and 13.5 per cent in 1920 by the Interstate Commerce Commission for interstate express rates, some of the states did not concur. A number allowed no increase of state rates whatever, and others only the first increase of 12.5 per cent, the result being that in some of the states the rates are on a lower basis for intrastate business than for interstate business. The express company has taken the matter to the Interstate Commerce Commission upon a complaint of alleged violation of the Interstate Commerce Act, claiming that a condition of undue prejudice to and interference with commerce has been created.

It is believed that a comprehensive investigation of the conditions under which express business is conducted at the present time will disclose a number of instances in which improvement of service can be effected under regulation. Revenue and operating expenses should be analyzed with a view of determining the correct basis, if any, for segregating the so-called non-profitable business.

In view of the practically 100 per cent monopoly of the American Railway Express, with the exception of the southeastern portion of the country, all of the good coming from competitive conditions has been eliminated, and the public suffers accordingly. While the operation of an express company as a monopoly may be more efficiently managed and at some less expense by eliminating the duplication of equipment, etc., at the same time we believe there should be competition at least in the matter of service.

It has been held by some that the railroads should operate their own express service, and we see no reason why an express service could not be operated by the railroad organizations just as easily as by an outside agency. Thousands of railway employees are handling express, some with additional compensation and many without. A segregation of express charges and revenues must be made in some manner so the express company may compensate the various rail carriers over which it operates in proportion to the extent each rail carrier participates in the carriage of express matter, and that could as easily be done by the railroads themselves.

The American Railway Express Company is held forever free from loss by its contract with rail carriers, under terms which provide that the express company must pay all of its expenses and from what is left it takes for itself 2½ per cent and the balance goes to the rail line, which furnishes practically all of the transportation equipment, in most cases including depot room, etc. The express company cannot lose. The present contract allows gross revenue from carload shipments on which the express company performs no other service than way-billing, delivery and accounting to be divided on the same basis as all other revenue—whereas no pickup, delivery or other terminal service is involved. Furthermore, the contract is apparently not strictly adhered to, for after the regular terms have been applied the records show certain deductions from gross, such as the $272,367.94 in the annual report of 1921. Since the 2½ per cent contract has been in effect, many economies have been worked out between the contracting parties, whereby railroad employees are being used more and more as joint employees, resulting in elimination of large expense and, many times, at the cost of inferior service to the public.

The express company has contended at various times that the Transportation Act, 1920, provides that it should receive the 5½ to 6 per cent allotted return. If that is a fact how could any regulating body prescribe rates that would assure any uniform return in face of a contract such as is now in force between the express company and the rail carriers? In some states motor truck competition, water competition and privately owned vehicle competition is most keen and the express company should be allowed to meet such competition, and in doing so be assured that such depressed rates would not be used where such competitive conditions are absent.

Motor Vehicle Transportation

E. V. Kuykendall
of Washington, Chairman

Many difficult problems are encountered in determining whether public convenience and necessity justifies the granting of certificates to stages and trucks operating in competition with railroads. It should be the purpose of all regulatory bodies to co-ordinate the various transportation systems of the country in such manner as to render the best service to the public with the least injury to established rail and boat transportation companies. It must be conceded that the country is dependent upon the rail lines for the transportation of passengers and heavy freight over long distances. It is also clear that auto truck transportation meets a public demand in the rapid transit of less-than-carload shipments, including the door-to-door delivery element which the railroads have thus far failed to furnish. The railroad companies have exhibited a degree of indifference or slowness bordering on stupidity in recognizing and meeting the demands of the public for quicker and more convenient movement of less-than-carload freight. Rather than provide light equipment and quick movement, they have relied too much upon securing protection from the regulatory bodies of the various states against truck competition. We believe it evident that if the rail carriers hope to retain their short haul freight traffic, it will be necessary for them to make radical changes, both in service and equipment. Trucks are now

rendering an astonishing service between shopping centers and outlying traffic points. Country merchants prefer direct truck service to the railroads even where the cost of the service is equal, for the reason that the trucks call at the wholesale house, receive the commodities desired and unload them at the store doors. This enables the country merchants to conduct business with a smaller stock of goods, for the reason that new supplies can be obtained conveniently and on short notice through truck service. Truck service is also preferable in the movement of household goods from one town or city to another, there being no need for crating.

It is impossible to lay down any general rules of much value to be observed by regulatory bodies in granting certificates of public convenience and necessity in competition with rail service. Each case must stand largely upon its own bottom. One element which might properly be considered in determining public convenience and necessity is the popular demand for particular service. If truck and stage service are ultimately to supplant short haul rail service, the process in the very nature of things must be slow and gradual. Oftentimes petitions signed by substantially the whole community are presented demanding the truck or stage service. While such petitions are of doubtful evidentiary value, for the reason that the average citizen will sign a petition without much thought or deliberation, they are usually received as having some bearing upon the question of public convenience and necessity. In cases where the demand for the truck or stage service is practically unanimous and insistent, the applications should ordinarily be granted, unless it would result to the detriment of the community by the curtailment or stoppage of train service. On the other hand, it sometimes occurs that the community where a stage or truck certificate is sought, is against the granting of the application and petitions opposing it are filed. In such cases the applications might properly be denied, for the reason that the regulatory body should not assume the attitude of imposing upon a community a service which is not desired. We do not wish to convey the impression, however, that stage or truck service should be permitted in every instance where popular sentiment seems to demand it. There may be other conditions which would outweigh the element of popular demand.

There is a general feeling, particularly in the western states, that motor transportation companies should be required to compensate the state in some way for the wear and tear of the highways over which they operate. In fact we feel that the tendency of the coming sessions of the legislature will be to go to extremes in this direction. Some persons have advocated a gross operating revenue tax, others a mileage tax, and still others various other modes of raising revenue, including the gasoline tax. If any scientific study or investigation has ever been made for the purpose of determining what would be a just form and amount of tax to impose upon motor transportation companies, we have no knowledge of it. We doubt very much if it would be possible to conduct an experiment or make a calculation that would be of much value to a legislature. The gasoline tax, in our opinion, is the most equitable method. It takes more gasoline to propel a 10-ton truck than a Ford. This tax is easily and cheaply administered.

Safety of Railroad Operation

C. C. McChord
of the I. C. C., Chairman

During the year just closed, a number of serious accidents occurred on the railroads of the United States, which again forcefully call attention to the necessity for extending the installation of preventative safety appliances. Probably the greatest number of serious accidents which occurred during the year from a single cause were those arising from the inherent weakness of the time-table and train-order system of operation, necessarily involving the fallibility of the human element. The most serious of these occurred on an important eastern railroad and resulted in the death of 27 and injury to 70 persons.

In previous reports the need for a systematic program for extension of the automatic-block-system has been pointed out. That need is of increasing importance. Statistics compiled by the Interstate Commerce Commission indicate that, during the year ended January 1, 1922, there was an increase of but 517.6 miles of road of automatic, and 66.5 miles of road of non-automatic-block-signal system in the United States. Considering the enormous mileage which still remains unequipped with the block system, these figures indicate that comparatively little progress along these lines is being made.

While the automatic-block-signal system has been perfected until a point has been reached where it affords a high degree of protection and the failures of its apparatus to function are extremely few, investigation has disclosed that accidents resulting from the failure of employees to observe, understand and obey the signal indications are numerous. Statistics gleaned from the accident reports show that from 1909 to 1917, both inclusive, there were 13,339 head-on and rear-end collisions, resulting in damage to railroad property alone of over $19,000,000. These collisions resulted in the death of 2,454 persons and injury of 37,724. In 1918, 220 of the 286 passengers killed met their death in collisions. A study of the accident investigation reports for the last three years, published in the annual reports of the Bureau of Safety of the Interstate Commerce Commission, discloses that during the year 1919, of the 53 collisions which were investigated, 18 were in automatic signal territory, and 10 were in manual block signal territory. During the year 1920, of the 58 collisions which were investigated, 20 were under automatic signal protection with 11 in manual block territory. And during the year 1921, of the 62 collisions which were investigated, 17 were in automatic signal territory and 9 under manual block signal protection.

This year, 1922, will be recorded as an epochal one in the field of automatic train control. In June last the Interstate Commerce Commission, acting under the authority conferred upon it by Section 26 of the Interstate Commerce Act, issued an order requiring each of 49 railroads to install on one passenger-engine division on a designated portion of its line on or before January 1, 1925, automatic train-stop or train-control devices applicable to its needs and according to the prescribed specifications and requirements. Automatic train-stop or train-control devices, as defined by the Commission's order, is a system or an installation so arranged that its operation will automatically result in either one or the other or both of the following conditions: First, automatic train stop; the application of the brakes until the train has been brought to a stop; second, automatic speed control; the application of the brakes when the speed of the train exceeds a prescribed rate and continued until the speed has been reduced to a predetermined and prescribed rate.

Owing to the increasing length of trains, increase of tonnage hauled and the high speed required, the question of providing and maintaining efficient power brakes in order to control the speed of trains, becomes a question of serious moment. Proper maintenance of the air brakes on all locomotives and cars should demand the closest attention of railway officials. There is a strong tendency on the part of some roads, operating in level territory, to pay little or no attention to the maintenance or conditions of the air brake systems on cars passing over their lines. The result is that the burden of maintenance falls upon roads having mountain grades, which are comparatively few in number, causing delay and congestion and, not infrequently, resulting in trains being operated with brakes in unsafe condition.

Car Service and Demurrage

Following the report of the Committee on Car Service and Demurrage, of which A. Forward, Virginia, is chairman, the following resolutions relating to car service were adopted by the convention:

(1) Whereas it is impracticable for the Interstate Commerce Commission to attempt to supervise the distribution of cars as between individual shippers throughout the United States, and

Whereas there should be some governmental authority within reasonable reach to which appeal can be made to require equitable distribution of cars without regard to whether the same are to be used for shipments interstate or intrastate.

Therefore, be it resolved; That we respectfully urge upon Congress the amendment of the Interstate Commerce Act in such way that the regulatory authorities of the states may make reasonable orders and regulations, not in conflict with federal law, or with lawful orders of the Interstate Commerce Commission, requiring cars within the respective borders of such states to be equitably distributed to shippers desiring the same, without regard to whether they are desired for use in shipments that are interstate or intrastate.

(2) Resolved, That we urge upon Congress the repeal of section 15a of the Interstate Commerce Act, as amended by the Esch-Cummins Act, and the making of such other amendments thereto as shall clearly limit and define the power of the Interstate Commerce Commission, and restore to the several states control over their intrastate traffic and the rates applicable to the same; and

(3) Resolved, further: That we endorse the amendments, to accomplish these purposes, presented to the house committee on interstate and foreign commerce, on March 17, 1922, on behalf of the legislative and executive committees of this association, and appearing on page 437 of the printed record of the hearing on H. R. 6861 and H. R. 8131, and that we respectfully urge their early enactment.

Service Accommodation and Claims

G. E. Erb

of Idaho, Chairman

Most commissions throughout the country have been called upon during the year last past to consider applications for permission to discontinue or curtail service heretofore afforded. Service once furnished for any considerable time tends to stimulate certain lines of activity, build up certain industries and results in certain investments. The discontinuance or serious curtailment of such service, after it has existed for any considerable time, results in killing these activities, destroying these industries and partially, at least, destroying the value of these investments and should only be permitted by a regulatory body after full notice to the public, full notice to the security holders, and full opportunity on the part of both public and security holders to be heard, and, after full investigation and unquestionable necessity therefor shown and only to the extent absolutely necessary to avoid confiscation of property. In a consideration of revenues derived from the operation of branch line service, it is erroneous and unjust to credit the branch line with only the revenue derived from the branch line mileage. Credit should be given for an equitable portion of the main line haul of business originating at or destined to points on the branch.

For several years past, sections of the country with heavy seasonal crops have suffered inconvenience and at times serious loss through inability to secure the movement of their products as desired. The energies, not only of the various state commissions, but of the Interstate Commerce Commission as well, should be directed toward the adoption and enforcement of a plan of co-operation in the distribution, and co-ordination with the carriers in the placing of surplus cars, to the end that perishable products, fuel, livestock, foodstuffs and other commercial freight should be served in a manner calculated to entail the least loss or damage possible to the various products and to the various sections.

The personal relationship of a carrier with its patrons is established quite generally and very largely through subordinate employees. The public generally does not come in contact with the general, executive or operating officials of the railway, but bases its judgment of the railway and its efficiency on experience gained through contact with station agents, station employees and trainmen. Unless discipline, relative to personal relationship with the public, is enforced among subordinate employees of the carrier, the business of the carrier will suffer and an advantage obtained by attractiveness of route, by hard work of solicitors or by expenditures in advertising may be entirely lost through the inattention or discourtesy of employees engaged in selling tickets, checking baggage and other subordinate details bringing them in actual contact with the traveling public.

It is safe to assert that of the vast amount paid for loss and damage claims by the carriers, fully 75 per cent is attributable to the carriers themselves and not to exceed 25 per cent to the shippers. The amount paid for loss and damage claims attributable to the carriers is the result of careless billing, rough package handling, rough car handling, defective equipment, defective ventilation, delay in transit, etc. The necessity of education of railway employees is further emphasized when it is considered that to this vast sum paid on account of loss and damage, must be added a still further sum aggregating about five per cent thereof to defray the actual cost of handling the loss and damage claims. The employees of the carriers must not only be taught what to do but how to do it, and further, that discipline will provide a penalty for non-performance.

Statistics and Accounts

B. H. Meyer

of the I. C. C., Chairman

During the year, the question has been raised whether the amount spent by railroads for clerical services is disproportionately large. A satisfactory statement of the growth in the number of clerks over a long period of years cannot be made owing to the radical changes in the classification of employees, but an inspection of current summaries of railroad employment shows that clerks play a large part in railroad operation at the present time. It has been determined that about one out of every eight railroad employees is a clerk.

Much expense and labor could be saved by a reduction in the number of primary accounts in the classification of operating expenses and the Railway Accounting Officers' Association, through its committee on general accounts, is now considering this subject. Individual expressions by a number of the chief accounting officers of railroads indicate considerable opposition to a radical reduction in the number of primary accounts and several have expressed their purpose of seeking permission to continue as sub-accounts the accounts now in use should the classification be materially abridged. Should action such as this be taken by any considerable number of carriers, it is apparent that no reduction in costs from this source would follow. Moreover, many contend that the number of primary accounts is an item of relatively small importance from the viewpoint of economy in management.

New occasions teach new duties. The determination of railroad wages has for many years been left to bargaining between the trade unions or brotherhoods and the railroad managements. Under the Transportation Act, 1920, such controversies are submitted to the Labor Board. These proceedings require more detailed wage statistics. Accordingly, in co-operation with the Labor Board, the Interstate Commerce Commission has prescribed much more detailed reports on this subject. These are published monthly. The number of classes is increased to 148, and the distinction between straight time and overtime is introduced in connection with the service and compensation of each class. Although the impairment of comparability with prior statistics may be

deplored. it was felt that the desire for continuous comparability should not stand in the way of real improvement in statistical data.

Under the Transportation Act, also, it becomes the duty of the Interstate Commerce Commission to pay greater attention to the question of whether carriers are economically managed. The monthly reports of operating statistics, which follow with some modifications those inaugurated by the United States Railroad Administration, afford the statistical basis for studying the economy of management. Monthly summaries based on these reports are forwarded regularly to the various state commissions.

Among the most useful of present-day railroad statistics are those published weekly by the Car Service Division of the American Railway Association. These show by districts the number of cars of revenue freight loaded, classified under the headings, grain and grain products, live stock, coal, coke, forest products, ore, merchandise, l. c. l., and miscellaneous. These reports afford a means of judging of the trend of railroad freight traffic considerably in advance of the reports based on freight revenue accounts.

This committee believes that loss and damage claims by commodities should be made the subject of a test or analysis, and that the ascertained damage rate per ton so found upon the commodities studied, taken in connection with the percentage which the tonnage of those commodities bear to the total tonnage, would determine a fair working unit of apportionment.

Other committee reports and business included that of Grade Crossings and Trespassing on Railroads; State and Federal Legislation; Publication of Decisions and Orders of the State Commissions; and Litigation.

It was voted to hold the next convention at Miami, Florida, on December 4, 1923.

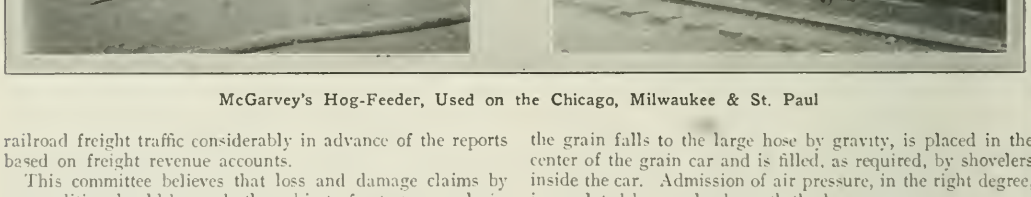
[*The report on Valuation by F. P. Woodruff of Iowa will appear in an early issue of the Railway Age.*]

THE THIRD ANNUAL INDOOR ATHLETIC CHAMPIONSHIPS of the Pennsylvania Railroad will be contested for on April 14, 1923. The city has not yet been selected but eliminations have already started throughout the System. In these approximately 25,000 employees are taking part. More than a thousand contestants will meet in the finals on April 14. The outdoor meet at Altoona, last fall, attracted about 40,000 of the P. R. R. family to that city.

McGarvey's Hog Feeder

JAMES MCGARVEY, of Malden, Wash., who attends to the feeding of train loads of live hogs for the Chicago, Milwaukee & St. Paul at that station, has so shortened the time for completing this task that the pneumatic apparatus with which he effects this economy is being called for at other places where the device has been heard of, and he has applied for a patent on it. Its construction and arrangement are illustrated in the photographs.

A car carrying a supply of corn with which the hogs are to be fed is pushed by a locomotive along a track adjacent to the standing stock train, and compressed air, for blowing the grain into the hog cars, is conveyed from the locomotive through the hose shown at the extreme right in the right-hand picture. The larger hose, with a flat nozzle which can be pushed between the slats of a stock car, is held by a man standing on a removable shelf or platform attached to the doorway of the grain car. The hopper, from which the grain falls to the large hose by gravity, is placed in the center of the grain car and is filled, as required, by shovelers inside the car. Admission of air pressure, in the right degree, is regulated by a valve beneath the hopper.



McGarvey's Hog-Feeder, Used on the Chicago, Milwaukee & St. Paul

The feed is scattered uniformly through the car of hogs, so as to give each animal the needed supply—a task which, with double deck cars, is anything but pleasant or expeditious when done by hand.

The hopper serves as a measure, and a decided saving in the amount of feed used, as compared with former practice, is reported. The grain car, pushed slowly along, is stopped, when at the right place, not by motioning or shouting to the engineman, but by starting the grain blower, which exhausts enough air from the train pipe to stop the locomotive—and the car.

This feeder has been in use at Malden eight months and at Deer Lodge, Mont., Miles City, Mont., and other places for shorter periods. Incidentally, it has been found useful on occasion to transfer a load of grain from a defective car, a job which is done in about one hour. A train load of hogs is fed in about one-third of the time formerly required, and the stock-car doors are not opened at all.

THE CONSOLIDATED PURCHASING AGENCY of the American Short Line Railroad Association will be moved from Washington, D. C., to Chicago on December 1.

Hill Roads Oppose I. C. C. Consolidation Plan

Object to Grouping of Great Northern with St. Paul and Ask That Present Combination Be Continued

WASHINGTON, D. C.

THE HEARING on that part of the Interstate Commerce Commission's tentative consolidation plan comprising Systems 14 and 15, the Northern Pacific Burlington and the Great Northern-St. Paul systems, at Washington on November 17-21 before Commissioner Hall and Examiner Healy, brought forth a vigorous objection to the proposed grouping on the part of the Hill roads, who made strong representations, supported by voluminous testimony and exhibits, in favor of putting the properties of these three companies, including the Colorado & Southern in the same system or group. If this cannot be done, however, the Great Northern asked that it be grouped with the Burlington.

In a preliminary statement, Commissioner Hall said that the commission's tentative plan, based on studies made for the commission by Prof. W. Z. Ripley, does not indicate any prejudging by the commission but was put forth rather for the purpose of eliciting thought and discussion to afford a starting point for the building up of a record on which the final plan will be based.

The commission had placed the Chicago, Burlington & Quincy and the Northern Pacific in System No. 14, together with the Chicago Great Western, Minneapolis & St. Louis, and possibly the Spokane, Portland & Seattle, although it had also suggested as an alternative that the latter be placed in System No. 15, comprising the Great Northern; Chicago, Milwaukee & St. Paul; Chicago, Terre Haute & Southeastern, and possibly the Duluth & Iron Range; Duluth, Missabe & Northern; Green Bay & Western, and Butte, Anaconda & Pacific. The Colorado & Southern was tentatively placed in the proposed Santa Fe system.

While the first part of the hearing was devoted to the presentation of arguments that the Hill roads should be consolidated, the Great Northern officers then took the stand and said that if the roads were to be separated the Great Northern rather than the Northern Pacific should be consolidated with the Burlington. The Northern Pacific offered no testimony on this point but it is expected that its officers will take occasion to reply at a later hearing to be held in the west. It is understood that if the commission had the power to put its tentative plan into effect the Northern Pacific would have nothing to say in opposition to the idea of combining with the Burlington instead of having only a half interest in it, but since there appears no way of compelling the Great Northern to give up its half interest, even if the commission should so provide in its plan, the Northern Pacific prefers to work for a practicable plan and, therefore, has joined with the other roads in asking that the three Hill lines be kept together.

President H. E. Byram of the Chicago, Milwaukee & St. Paul, who also testified, expressed no strong preference as to which of the Hill roads it should be grouped with. He also suggested a grouping with the Union Pacific. An outline of the testimony which was presented by the witnesses for the Hill roads in support of the contention that they should be placed in one system was given in an opening statement on behalf of the three companies by Walker D. Hines, counsel for the Great Northern. Mr. Hines said:

Hines Outlines Arguments for Consolidation of Hill Lines

We propose first to show that the present situation of the Burlington, Northern Pacific and Great Northern together with their interdependence and the further dependence of the Burlington upon its participation in traffic to and from the south is not only one of the great existing facts in the railroad situation of the country but it is a situation which has been the outgrowth of planning of the ablest pioneers in the railroad development of this country, and that the prosperity of the three companies has been due to the realization of this early planning and to the continued and consistent progress of the three companies in the direction of the realization of the great conceptions of these railroad builders who laid the foundations for the development of these roads to their present wonderful capacity for efficient public service.

In 1886 the Burlington was projected to St. Paul with the definite purpose of interchanging with the Northern Pacific which already reached the Pacific coast and with the Great Northern, which was in course of construction to the Pacific coast, and from that day until the present time the Burlington has used the Great Northern freight facilities at St. Paul, the Great Northern passenger and freight facilities at Minneapolis, and trackage over the Great Northern between St. Paul and Minneapolis.

In 1894 the Burlington was built to a connection with the Northern Pacific at Billings, for the purpose of sharing in the business between and through the then Burlington territory and the Pacific coast, and extensive use has been made by the Burlington of Northern Pacific facilities at and near Billings from that time to the present. It will also appear that the Burlington's construction to Billings was simply a substitute for the Burlington itself constructing its own line to the Pacific coast. The Burlington seriously considered such construction, made extensive surveys and examinations with that in view, and further seriously considered in 1895 the acquisition of the Oregon Railroad & Navigation Company, which was subsequently acquired by the Union Pacific. It will further appear that about the same time the Burlington also contemplated constructing its line to a point of connection with the Great Northern in the Great Falls district in Montana, but that at that time J. J. Hill, of the Great Northern, was not sympathetic with the idea of such construction and it did not take place, but that on the other hand within a few years after the purchase of the Burlington stock by the two Northern companies, the Great Northern itself began the construction of a line to connect with the Burlington at Billings, this line being completed in 1908.

It will thus be disclosed that the purchase by the two Northern lines of the Burlington stock in 1901 was simply a further step in the realization of the idea of handling through traffic by these lines which had been in the minds of these great railroad pioneers long before and which had been partially realized by them at early dates.

The vision of the builders of the Burlington was not turned solely towards the north and northwest, but that they equally realized the vital importance of adequate establishment of the Burlington as a line participating in the movement of traffic to and from points west of Denver and to and from points in the southwest and that in consequence of these farseeing views extensive investigations were made with a view to constructing or acquiring railroads west of Denver, railroads into the southwest from Denver, and railroads into the south from Kansas City. It will appear that the Burlington eventually carried out these conceptions directly in the matter of a line from Denver to the southwest through the acquisition of a controlling interest in the Colorado & Southern, and that its interest in the other directions were adequately protected by establishing interchanges of traffic with railroads whose motives to interchange traffic are likely to be largely destroyed if the grouping proposed by the commission should become effective.

We will further show the large expenditures which have been made by all three companies, each seeking to promote this essential development of interchange traffic and bringing about that intensive improvement of these three railroads, and that the result has been that each of the northern lines has become more and more dependent upon the Burlington and the Burlington has become more and more dependent upon each of the northern lines in order that the great facilities which have been created for the public service may be adequately and profitably employed.

We shall then show, through President Holden of the Burlington, the physical and traffic situation of the Burlington, its relation to the Northern Pacific and Great Northern, its dependence upon interchange traffic, the injurious effects which would follow if the tentative grouping of the western roads should become

effective in fact, and the beneficial results if the Burlington, Northern Pacific and Great Northern were grouped together.

It will appear that since the purchase of the Burlington by the two northern lines in 1901, a period of intensive development of the Burlington began so as to equip it for the efficient handling of the growing interchange between the three companies, and that since the purchase by the Burlington of a controlling interest in the Colorado & Southern in 1908, that property has been progressively developed so as to enable it to handle business interchanged not only with the Burlington but through it with the two northern lines.

Regions Served Supplementary

We shall show that the characteristics of the regions served by the Burlington and the northern lines respectively are such that these regions are supplementary to each other so that the free interchange of products between them is of the highest importance, as, for example, the movement of lumber from the northern lines to the Burlington, and that the Burlington has been developed in order to effect this interchange via each of the northern lines, and that each of the northern lines has likewise been developed with a view to this interchange with the Burlington, with the result that the Burlington needs both of the northern lines, and that each of them needs the Burlington.

We shall further show that a highly important part of the strength of the Burlington is due to its interchange at Kansas City and St. Louis of traffic moving between the southwest and Chicago and east, and that the tentative plan of the commission will, if made effective in fact, seriously handicap the Burlington in further participation in that business, because each of the southwestern lines which heretofore have ended at Kansas City or St. Louis and have, therefore, had an important interchange with the Burlington, will be provided with its own line to Chicago, so that its future interest would be to hold this business for its own rails and terminate the interchange with the Burlington. In other words, the tentative plan gives the southwestern lines an outlet to Chicago but gives the Burlington no inlet into the southwest.

It will also be shown that the interchange from the western end of the Burlington into the southwest via the Colorado & Southern is of growing importance, and that this likewise promises to be largely defeated by the tentative plan which takes the Colorado & Southern away from the Burlington.

It will appear that 52.5 per cent of the tonnage handled by the Burlington and 54.9 per cent of the revenue derived by the Burlington is from interchange business and that the loss of interchange with the Great Northern, with connections at Kansas City and St. Louis, and with the Colorado & Southern, involved in the commission's tentative plan would, if the plan should actually be realized, make a serious modification in the standing and prosperity of the Burlington and would so impair its strength as to make it much less able to take care of weak lines to be provided for in the consolidation plan than has been assumed. In fact, the manner in which the Burlington has been dealt with tends largely to destroy the Burlington's strength, which has been a moving factor in the making up of the tentative plan.

It will necessarily appear that such menaces to the prosperity of the Burlington and, therefore, to the two northern lines which own it, will inevitably deprive the Great Northern of any motive whatever to voluntary action which would be necessary to bring about the realization in fact of the existing tentative plan, and since the statute is framed solely on the idea that no consolidations are to take place except by voluntary action of the owners of the properties, it will become evident that the dispositions made by the plan are of such a character as to create insuperable obstacles to its realization, and in this respect also the method in which the properties of the Burlington, Northern Pacific and Great Northern are dealt with constitutes a striking exception to the general policy of the plan which in nearly all other principal aspects is of such a character as not to create new motives adverse to its realization.

A Trade Route Through the Twin Cities

Vice-president Martin of the Great Northern will show that the tentative plan fails to preserve existing routes and channels of trade and commerce as required by the statute, but instead disrupts such routes and channels to a much greater extent than in any other grouping proposed by the tentative plan. He will show that the tentative plan disrupts a route of trade and commerce of very great importance through the Twin Cities, being that over which a great volume of traffic has moved between the Great Northern and the Burlington, such interchange having its beginnings at the time the Burlington was constructed to St. Paul in 1886 and being one of the important purposes of such construction.

It will appear that this interchange has been greatly increased in importance because of the policy which the two northern lines and the Burlington have put into effect since the purchase of the Burlington stock in 1901 to develop a great movement of coal from southern Illinois to points in Minnesota and North and South Dakota, and it will appear that there is a highly important movement of such coal for locomotive use by the two northern companies in addition to the ordinary commercial movement. If this movement to points on the Great Northern and for the Great Northern's own use should be discontinued a serious interference with existing channels of trade would result, not only to the detriment of the Burlington, but to the detriment of the coal mines on the Burlington.

The total interchange between the Burlington and the Great Northern at the Twin Cities has averaged over 900,000 tons per year for the last 20 years and in a recent year has reached as much as 2,000,000 tons.

It will further appear that in order to provide for the direct interchange of traffic between the Burlington and the Twin Cities via the Great Northern a line of 108 miles in length was constructed in 1906 by the Great Northern from Sioux City southwardly to connect with the Burlington and was transferred to the Burlington a little later. This established an important direct channel of trade between the Burlington territory and the Twin Cities, and both the Great Northern's line down to Sioux City and the Burlington's line up to Sioux City are dependent upon this interchange. The tentative plan would disrupt this route. The average tonnage interchanged between these lines for the last 14 years has been over 400,000 tons per year, and this increased to 540,000 tons in 1921.

It will further appear that in 1908 the Great Northern constructed a line 194 miles in length at a cost of $12,300,000 to connect with the Burlington near Billings, Montana, and that the Burlington, partly on account of its Billings interchange with the Northern Pacific existing since 1894 and partly on account of its more recent interchange with the Great Northern, constructed a low grade line to Billings as an alternative to its older line with heavier grades, such new line costing $17,000,000. The interchange between the Burlington and the Great Northern via Billings has averaged over 500,000 tons per year for the last 14 years and reached 890,000 tons in 1921. The maintenance of this route is vital to the success of the Great Northern's connecting line of 194 miles in length, is an important element in the success of the Great Northern as a whole and also in the success of the Burlington. This route will be disrupted by the tentative plan.

It will also appear that in 1909 the Northern Pacific and Great Northern joined in the construction of the Spokane, Portland & Seattle Railway, a low grade railroad from East Washington to the Pacific with a total mileage, including branches, of 885 miles at a cost of over $97,000,000. This line gets a much larger share of westbound business to Portland territory than the two northern lines could otherwise obtain, and this has a highly important effect upon the ability of the two lines to get eastbound traffic. It will be obvious that this line is of the greatest importance to both the northern lines and ought not to be separated from either of them, and that it is also highly important to the Burlington to be able to participate in the business which each of the northern lines is able to handle by reason of its one-half ownership in the Spokane, Portland & Seattle.

Benefits the Public

Mr. Martin will further be able to show the striking benefits to the public which have flowed from the equal ownership by the two northern lines of the Burlington stock and the consequent intensive development of the three lines for the purpose of building up the interchange between each of the northern lines and the Burlington. He will show that since the purchase the three lines have expended for extensions, additions and betterments, including equipment, over $900,000,000. He will show that whereas the three lines had altogether about 18,600 miles of road in 1901, the date of the purchase, they have since that time constructed 5,500 miles of new road. He will show that they have increased their locomotives by 97 per cent and their freight car capacity by 176 per cent. He will show marked increases in efficiency of operation, and will show that in the year 1917 the traffic of the three roads increased 245 per cent over the traffic in the year preceding the purchase. He will show the great increase in productivity of the territory served by these lines.

It will appear that the Burlington stock owned by each of the northern companies is pledged under the respective mortgages of the latter to secure mortgage debts which were incurred with the approval of the commission, so that both the mortgage creditors and the stockholders of the two northern companies are vitally interested in preserving the existing situation, and certainly the stockholders of the Great Northern have no motive for substituting a new condition which would be distinctly injurious to their manifestly legitimate interests.

The statute obviously contemplates that no consolidation plan can be effected without the elimination of some competition, and we shall contend that the competition which could be eliminated by putting the lines of the three companies in the same group

would be so small that the statutory policy would be fully maintained even in its most technical aspect, and that the broad purposes of the act would undoubtedly be promoted by putting the three lines in the same group.

We shall contend that the purpose of the statute would be defeated and not promoted by placing any one of the northern lines in a different group from that containing the other northern line and the Burlington. This would be true because the public interest will be promoted by putting the three lines in the same group and further because the inescapable facts are such as to destroy any motive for voluntary action on the part of the Great Northern to carry into effect the tentative plan for voluntary consolidations, the only sort contemplated by the act. We shall contend that the affiliation existing between these three lines for over 20 years has been preeminently in the public interest, and that it represents a long step in the direction of simplification and increased efficiency of the railroads of the country through a scheme of consolidation, the thing sought by the Transportation Act. There is not another situation in the country where consolidation would be more logical or more in the public interest, and there is no other situation where consolidation could so readily be brought about. We shall earnestly urge that this important reality ought not to be thrown away for the purpose of trying to accomplish some theoretical consolidations much less in the public interest, and which after all cannot be accomplished because the facts we have shown preclude the arising of any motive which could bring them about.

We realize that one important problem which confronts the commission is to provide a satisfactory grouping for the Chicago, Milwaukee & St. Paul. Upon that point our position will be that the existence of that problem can in no event constitute a justification for attempting to dismember the existing affiliation between either of the two northern lines and the Burlington, and furthermore that the mere theoretical placing of the St. Paul road in a group with one of the northern lines will not in practice accomplish the result, because no motive can exist on the part of the Great Northern to take voluntary action, the only sort contemplated by the statute, for the consolidation with the St. Paul when such action would impair the Great Northern's own manifest interests through disrupting the financial and traffic relations with the Burlington. We shall point out that, generally speaking, the commission's tentative plan preserved existing relationships and ownerships in other parts of the country, even though a dismemberment of such affiliations might theoretically have facilitated satisfactory disposition of other lines, and we shall urge that the same principle should be applied in this instance, and that this treatment is called for by public considerations of paramount importance.

But it will further appear in the course of the commission's hearings on its tentative plan that other solutions of the St. Paul problem are practicable and which are indeed more satisfactory than the solutions which the commission's tentative plan adopted in other parts of the country where problems somewhat similar have arisen.

The testimony of the railroad officers who appeared as witnesses, went into great detail in developing the points mentioned by Mr. Hines.

Testimony of Hale Holden

Hale Holden, president of the Chicago, Burlington & Quincy and Colorado & Southern, was the first witness. He produced numerous exhibits of growth in mileage, improvement and enlargements of yards and terminals, second and third track and increases in number of locomotives and cars in support of his testimony, showing the intensive development of these system lines since they became closely associated in 1901, and pointed out the disorganization which would follow from an attempt now to disturb the channels of trade and commerce which have naturally been established in the development of this strong combination of western railroads.

Mr. Holden pointed out that Burlington is in no way competitive with either Northern Pacific or Great Northern. He further showed by careful analysis of tonnage figures that more than 98 per cent of all the freight handled by the Northern Pacific and Great Northern is competitive with other lines, such as the Chicago, Milwaukee & St. Paul, Soo Line, Chicago & North Western systems and Union Pacific System, so that by consolidating the Northern Pacific and Great Northern with the Burlington all practical competition was still to be protected while at the same time the long-standing close alliance between the Burlington, Northern Pacific and Great Northern would be improved and substantial economies in cost would be accomplished.

The Colorado & Southern line from Wendover, Wyo., to Denver is now a part of the Burlington line between Denver and the Northwest, and the proposal of the commission to turn the Colorado & Southern over to the Santa Fe will not only destroy this through line, he said, but also destroy the important north and south route between Galveston and Texas points, Denver and the great Northwest which the Burlington with the Northern Pacific and Great Northern have been interested in building up by the ownership of the Colorado & Southern.

Mr. Holden criticized the whole plan of the commission as based too largely upon east and west traffic instead of also giving consideration to the importance of north and south traffic; he pointed out the growth of the great north and south lanes of traffic; and predicted that the Denver gateway would increase in importance as the center of another large flow of north and south traffic whereby the market for the products of the Northwest, and principally lumber, would increase throughout the central and southwestern states and the volume of fruits, vegetables and other products from the south would increase in volume in the opposite direction into the Northwest.

Four Western Systems Proposed

After reading his prepared statement Mr. Holden said that the western mileage might be grouped into four systems and by way of reply to the argument that such systems would be too big he gave figures showing one-fourth of the business, mileage, revenues, equipment, etc., of the western roads as contrasted with the similar figures for the New York Central and Pennsylvania systems to show that in practically each item they would be smaller but the net revenues would be greater. The former Harriman system or the present Santa Fe system, he said, would also be comparable. Prof. Ripley asked if Mr. Holden's logic was not based mainly on the fact that the tentative grouping would take something away from the present Hill system and that the present arrangement ought not to be disturbed. Mr. Holden replied that in the main that was the basis of his argument, that it would disrupt the results of years of work. "We would be willing to take our share of the weak lines," he said, "but we mustn't have the blood let out of our veins first. Let's take what we have and build up upon that rather than tear it down and begin all over."

When Prof. Ripley asked whether the Northern Securities decision is to be considered, Mr. Holden said that the status of the Burlington itself was not involved in that case, also that the St. Paul's new line to the Pacific coast had created a new condition and that in view of the new law, the application of the Sherman act to the situation seems obsolete. With reference to Mr. Holden's argument about closing gateways to the Burlington, Prof. Ripley asked if that were not the necessary effect of any consolidation; if the purchase of the Burlington by the northern lines had not caused a dwindling of some of the interchange with other roads at St. Paul and if the question did not resolve itself into one of whose traffic was to be dried up. Mr. Holden said that the St. Paul gateway is wide open because the interests of the Great Northern and Northern Pacific require them to maintain an extensive interchange with other roads than the Burlington. Mr. Hines then interposed to say that at the proper time for arguing law questions he was prepared to show that the Northern Securities case has no bearing if the commission should decide that the three roads should be put into one system, also that the present interchanges referred to, constitute the channels of trade which the law says are to be preserved rather than those which may have dried up in the past.

Prof. Ripley expressed considerable interest in Mr.

Holden's suggestion that the western mileage be divided into four systems, but asked if that would not operate to close gateways in the same way that Mr. Holden had opposed. Mr. Holden said that if each system were given a line to the Southwest and the Gulf and an opportunity to build as it might see fit it could look after its own long hauls and would not expect so much in the way of interchange, but that each system must have either its own through line or an open gateway. Prof. Ripley said that one difficulty about giving each system a north and south line was that there was no line so direct as the Colorado & Southern. "That is one reason," Mr. Holden said, "why we are a little cautious about giving it up," but he pointed out that other systems have lines toward the Gulf and said that by watching the map he could see that it was perfectly obvious that the Santa Fe was developing a line to the Southeast. Prof. Ripley then asked why the western lines could not help the commission in developing a practicable plan. He said: "We are breaking our hearts in the commission trying to develop such a plan and not merely an academic one." Mr. Holden said that he has been giving very careful consideration to the subject for 18 months and although he did not want to get ahead of the views of other western railroad executives, he thought they should all get around a table and try to develop something that will help the commission. Prof. Ripley asked if each system should also be given a line to Seattle. Mr. Holden said it isn't possible to give each large system the same location, but that he had suggested that each be given access to the Pacific coast. Prof Ripley said that he had proposed giving the Burlington the Western Pacific as a line to San Francisco and asked what Mr. Holden thought of this proposal. Mr. Holden said he was not prepared to express his opinion at this time. With regard to the placing of the Chicago Great Western in the system of the Burlington and the Northern Pacific, Mr. Holden said: "Well, we haven't been trying to buy it," and when questioned similarly regarding the Minneapolis & St. Louis, he merely stated that the Burlington had a line of its own to the Twin Cities.

Statistical testimony was presented by G. R. Martin, vice-president of the Great Northern, along the lines indicated in Mr Hines' opening statement.

Howard Elliott Outlines Historical Development

Howard Elliott, chairman of the Northern Pacific, testified on November 18 regarding the history of the Burlington and the Northern Pacific and the reasons that led up to the purchase of the Burlington by the two northern companies in 1901, making an arrangement which he said "seemed to me a wise one at that time, that has been a wise one for the last 21 years and is a wise one now—and one that should not be disturbed." He showed that the Burlington had long planned its own line to the Pacific coast but that in 1894 an agreement was made with the Northern Pacific which opened the territory of each road to the other at the Billings gateway and that this was one of the fundamental elements in the development of the situation that resulted finally in the purchase of the Burlington after the Burlington had built its line to the Twin Cities.

The statements of Mr Perkins made in 1901 show that he had regarded the combination made with the two northern companies as to the culmination of the efforts to secure the best results for the Burlington property and the states served by it—the full and final justification for building to St. Paul in 1886 and to Billings in 1894, Mr. Elliott said, and the Burlington has retained and increased its financial strength, because it did not have to spend, as the St. Paul did, the large sums necessary for a new line to the coast. As shown by Mr Martin, the interchange of business between the Burlington and Northern Pacific since 1896 was 34,258,267 tons, and between the Burlington and Great Northern 32,105,506 tons.

"My own views, after having been closely associated with the Burlington and Northern Pacific since 1880, and having a pretty good knowledge of the western country and of its railroad development," Mr. Elliott said, "are:

"That it would be a mistake from the standpoint of the public to separate the C. B. & Q., N. P. and G. N. systems. That permission should be given by the commission to still further unify the three roads, for such unification would permit the maximum development of the properties and the greatest service to the public. That separation of the three roads would not 'maintain' long established, much less 'existing channels of trade and commerce,' would do harm to many engaged in business of all kinds who have established their business based on the present railroad arrangements, and would retard the growth of the country served.

"The next 25 years will show a much greater growth in the United States and in the western country than the last 20. The country needs big tools of every kind for its development, particularly big transportation machines that can furnish the service needed. These three roads will form such a machine. They have done fine work in the last 21 years and can do even better. If consolidation, or the creation of big tools of commerce, is a wise national policy here is practical consolidation that can be made effective. To separate either the Northern Pacific or the Great Northern from the Burlington would introduce a new financial problem of magnitude and create a feeling of uncertainty which would do no good but would check the progress of the railroads in reaching a more stable basis, in overcoming the difficult condition resulting from the war and federal control and in developing their properties so as to give the best service to the public."

Great Northern Wants to Keep Burlington Anyway

Ralph Budd, president of the Great Northern, said he felt the public interest would be best served by placing the three lines in one system but that if that could not be done and the choice had to be made, the Great Northern and the Burlington should be kept together. He went into a detailed explanation of the traffic relations and facilities of the roads in support of that contention.

Mr. Budd said the Northern Pacific had only two principal points of contact with the Burlington, at the Twin Cities and Billings, while the Great Northern had three, the third being at Sioux City. James J. Hill, he said, had much to do with bringing the Burlington to the Twin Cities in 1886 and had allowed it to use the Great Northern terminals. The Great Northern had also built a line to meet the Burlington at Sioux City in 1906. If the Burlington and the Great Northern were made competitors, the Great Northern would not be willing to give the Burlington joint use of its facilities at the Twin Cities, and the separation would otherwise break up interchange between the lines. He said he knew of no place in the United States where a breaking up of existing systems would cause more disruption of the channels of traffic than a separation of the Great Northern and the Burlington. Mr. Budd also said the Great Northern, if separated from other parts of the system, would have weaknesses similar to those which have caused the "well known financial situation of the St. Paul," for example, he said, neither line would have enough transcontinental business to utilize fully its facilities because the Great Northern would lose business which has been coming to it from the Burlington.

Mr. Budd also pointed out that the Northern Pacific has extensive facilities at Duluth which the Great Northern uses and that at Minneapolis the only two passenger stations are those owned by the St. Paul and Great Northern. A grouping of the St. Paul and the Great Northern, Mr. Budd said, would be very impracticable and whereas the officers of the Hill roads have worked together harmoniously and efficiently he feared that placing the roads in different groups would tend to cause discord. He also pointed out that the Great

Northern territory needs many new lines, the construction of which has been delayed by the war and the period of depression and that the Great Northern-St. Paul combination would be too weak to finance the proper development of the territory. He gave the figures showing the amount of bonds of the several companies maturing between now and 1940 to show that the combination of the St Paul and Great Northern would produce the greatest amount of maturities, a total of $404,000,000, as against only $259,000,000 were the Great Northern and Burlington combined That alone, he said, would make the consolidation of the St. Paul and Great Northern practically prohibitive.

Mr. Budd testified that the competitive situation is no argument in favor of selecting the Great Northern as the road to be divorced from the Burlington for the purpose of being grouped with the St Paul. He explained that the erroneous impression that there is much greater competition between the Northern Pacific and St. Paul rests upon the fact that they parallel each other for long distances through the state of Montana. He offered in evidence a relief map to bring out the fact that where these roads parallel each other the country is exceedingly mountainous and the relative amount of traffic is small He stated that on the contrary the Great Northern and St. Paul were in competition in the Great Falls district, which is much more open country with extensive copper and other industries and agricultural interests, and he stated that on the whole there is distinctly more competition between the Great Northern and the St. Paul in Montana than between the Northern Pacific and the St. Paul.

Taking the whole territory, he said, there is no competitive reason for selecting the Great Northern instead of the Northern Pacific for grouping with the St. Paul, and that every other consideration indicates that the Northern Pacific ought to be selected for this purpose if the commission reaches the conclusion that either the Northern Pacific or the Great Northern must be separated from the Burlington in order to be grouped with the St. Paul.

Mr. Budd said that Professor Ripley had proposed to take the Great Northern instead of the Northern Pacific away from the Burlington to be grouped with the St. Paul in order to avoid elimination of competition, and yet for the purpose of adequately strengthening the Great Northern-St. Paul group had proposed the addition to that group of the Duluth, Missabe & Northern and Duluth & Iron Range. He said that these two railroads and the Great Northern were the railroads which handled the immense Missabe iron ore traffic, and that the result was that Professor Ripley's plan contemplates the elimination of a great deal more competition than the amount in question between the Northern Pacific and the St. Paul.

Louis W. Hill, chairman of the Great Northern, outlined some of the early history of that road and the Burlington to show that they had worked together and that J. J. Hill and his associates had an interest in the company which built the Burlington line to St. Paul while the Forbes interests in the Burlington had a one-tenth interest in the St. Paul, Minneapolis & Manitoba, the predecessor of the Great Northern, before the purchase of the Burlington by the two northern companies. The Burlington route had always been a preferred connection of the Great Northern at the Twin Cities, he said, and after J. J. Hill and his associates had bought into the Northern Pacific and were considering the purchase of a line to the south Mr. Hill had considered the Burlington as the logical road for this purpose because it promised the largest interchange of the kind of traffic which the northern companies desired. Some of the Northern Pacific people had preferred the St. Paul and there was some discussion of a purchase of that company. He said that the elder Hill was not influenced by fear that the Burlington would invade the Great Northern territory but felt that the two roads were naturally supplementary and feeders. He said it was the opinion of all the Great Northern directors that the true solution is to place all three companies in one system.

H. E. Byram, president of the Chicago, Milwaukee & St. Paul, had a prepared statement based on the commission's tentative plan pointing out ways in which a combination of the St. Paul with the Great Northern would be advantageous. He said the St. Paul would strengthen the Great Northern in the east and the Great Northern the St. Paul in the west, and that many operating economies could be effected. However, in view of what had been said by representatives of the Great Northern at the hearing, Mr. Byram said that in many ways the same advantages would result from a combination of the St. Paul with the Northern Pacific.

In reply to questions by Professor Ripley as to why the St. Paul is not earning so much in proportion to its value as other lines, Mr. Byram said that is largely due to the lower density of traffic, particularly west of the Missouri, because the St. Paul is the new line in that territory. He said the economies resulting from electrification had not yet been fully realized but that the lines were so separated that he did not think enough Great Northern traffic could be routed over the electrified line to greatly increase its density.

Byram Suggests Union Pacific-St. Paul Combine

Mr. Byram then suggested that an alliance of the St. Paul and the Union Pacific would do away with many of the difficulties which had been mentioned as likely to result from a merger of the St. Paul and the Great Northern. He said the Union Pacific has no lines east of the Missouri while the St. Paul has no lines west of the Missouri, exclusive of the coast line, and that the St. Paul's line to Omaha was double-tracked for the express purpose of the Union Pacific interchange business. Such a combination, he said, would do away with the problem of what to do with the third north coast line and that if the Hill combination were left intact, there would be two systems to the north coast.

Mr. Byram pointed out that the St. Paul has contact with the Union Pacific at Omaha, Kansas City, Butte, Spokane and Seattle. Such a combination would not make an excessive mileage, he said, about 20,000 miles. He thought there would be advantages to the Union Pacific in being linked with the St. Paul, provided the commission is going to require the Union Pacific to have an eastern connection. He said undoubtedly if the commission were not going to require the Union Pacific to have an eastern connection, it would prefer to remain as it is, because it has the advantage of many roads gathering at Omaha.

Mr. Byram said the two roads already use the same facilities at Spokane, Seattle and Omaha.

Professor Ripley said Mr. Byram had made a very interesting suggestion but asked what he would do with the North Western. The witness said that if the Great Northern and the Northern Pacific were separated the North Western might be combined with one of those lines.

Steel Roads Oppose Merger

W. A. McGonagle, president of the Duluth, Missabe & Northern, testified on November 21 in opposition to the inclusion of that road and of the Duluth & Iron Range, which are controlled by the United States Steel Corporation, in the system with the Great Northern and St. Paul. The objections were based, he said, upon the history, character and location of the roads, the kind of service rendered by them, their unique position among the carriers of the country, their competitive relation to the Great Northern, and the fact that they would add neither financial strength nor increased facilities to any other system. From their inception, he said, the railroads have been purely ore-carrying roads and have formed the inseparable part in a mining venture of the Vermilion and the Messaba iron ranges.

Light Weight Gasoline Car for Heavy Grade Line

THE HETCH-HETCHY RAILROAD is a 68-mile line built by the City of San Francisco to transport material for the Hetch-Hetchy water supply project. The road passes through a rugged and sparsely settled country and is built with maximum grades of four per cent. The character of the traffic is well suited for motor car operation and this type of equipment has been used for several years.

A gasoline-driven passenger car, which is of special interest because of the unique features included in the design, has recently been delivered to the Hetch-Hetchy Railroad. The most striking feature of the construction is the location of the gasoline engine, which is placed at the rear of the body behind the driving wheels. The motor is suspended on coil springs directly over the rear axle on one end of a sub-frame to the main frame. The sub-frame forms one-half of a complete truck and has a swivel bolster built in the main frame so that it will turn at curves, thus reducing flange wear and relieving side thrust.

This unique construction has numerous advantages. Since there are no revolving parts in front of the rear axle, a very low-hung body can be used. A considerable increase in seating capacity is also obtained without lengthening the wheel base of the car. Vibration is minimized and motor noises, smoke, or gasoline odors are kept away from the car body.

The car seats 30 passengers weighs but 10,400 lb. complete and makes 8 miles per gallon of gasoline. It is stated that it makes the 12-mile 3.4 per cent grade on the Hetch-Hetchy at a speed of 27 miles per hour. This car is probably the lightest in proportion to its seating capacity that has yet been built, weighing only 347 lb. per passenger. It was built by the A. Meister Sons Co., Sacramento, Cal.

The Location of the Engine at the Rear of the Body Is a Distinctive Feature of This Car

A Sixty-Car Coal Train on the Pittsburg & Shawmut

Each Car Loaded to Capacity—Gross Weight of Train 1,710 Tons, Pulled by Two Mikados, Each Having a Weight of 180,000 lbs. on Drivers

A Multiple Unit Train on the New York Westchester & Boston

Some Service Records of Electric Equipment

A List of Unusual Things Accomplished by Railroads with Electric Motive Power

By Homer K. Smith
Railway Engineer, Westinghouse Electric & Manufacturing Company

The Long Island was the first steam railroad in the United States to substitute electric for steam power on a large scale, the change being made on this road in 1905. Multiple unit cars with two 600-volt d.c. motors and a third-rail contact system were adopted. Since electrification this road's passenger traffic has increased nearly 400 per cent. The freight traffic has increased nearly 200 per cent, and the earnings have increased approximately 200 per cent. There are 220 miles of electrified track and over 700 cars, of which approximately 80 per cent are motor cars, now in operation. The annual passenger traffic is over 600,000,000 passenger miles. Some idea of the dependability of these large motor cars is shown by the fact that during certain hours the schedules call for over 95 per cent of the equipment.

New York, New Haven & Hartford

The New York, New Haven & Hartford, with approximately 550 miles of electrified track, has more connected electrified trackage than any other system in the world. In 1918 the passenger traffic density on this road was second only to that of the Long Island. Single phase electric locomotives are used for the through fast passenger and some of the local passenger service, for the fast freight service and for switching service. Multiple unit cars are used for some of the local passenger service.

In 1921 the electric passenger locomotive averaged 33,000 miles per locomotive failure and the average detention per failure was 18 minutes. The mileage per locomotive was nearly 69,000. During the same year, with a comparatively light freight traffic, the freight locomotive mileage per locomotive failure was approximately 22,500. These locomotives frequently made two round trips between the Harlem river and New Haven in 24 hours. This represents a mileage of 272. Under steam operation in this section the daily locomotive mileage was from 100 to 120.

The New Haven has in operation 16 electric switching locomotives. For a period of seven years—1915 to 1921 inclusive—these locomotives were in actual service over 70 per cent of the total time and during 1916 they were in actual service over 77 per cent of the time. These locomotives are operated 24 hours per day and they consistently make 140 miles a day (based on 6 miles an hour). It is a matter of record that the use of these electric locomotives has resulted in a coal saving of 65 per cent of that required for steam operation of this service and they have replaced steam locomotives in the ratio of 2 to 1.

A striking illustration of the adaptability, flexibility and reliability of the New Haven electrification for meeting heavy traffic emergences was demonstrated on November 20, 1920, this being the occasion of the annual Yale-Harvard football game. From 8:00 a.m. until 11:00 a.m. 44 special trains were dispatched from New York to New Haven in addition to the regular trains. During this period trains were dispatched from the Grand Central Terminal at intervals of 10 minutes. The same day 45 extra trains were operated in the opposite direction. The 89 extra trains carried approximately 70,000 passengers, and all of these trains departed and arrived practically on schedule.

Pennsylvania, New York Terminal

In 1910 the Pennsylvania Railroad placed in service on its electrified extension into the New York terminal 31, 600-volt third rail locomotives. These handle all of the main line passenger traffic into and out of New York terminal, and from November, 1910, to 1918 they made a total of 9,508,765 miles with a total of 121 engine failures, or an average of 78,600 miles per detention on account of locomotive trouble. During one year there was a total train delay due to failure of motive power of only 55 minutes. These locomotives are now averaging about 4,500 miles per month and their maintenance is extremely low.

Norfolk & Western

The Norfolk & Western electrification represents the most severe requirements that electrification has yet been called

upon to perform. This road was the first to substitute electric for Mallet locomotives for mountain grade service when its electrification extending from Bluefield to Vivian, a route distance of 30 miles, was put into operation in 1914. The electrification zone has since been extended west approximately eight miles to Farm. This line is double tracked throughout except for the 3,000 ft. Elkhorn tunnel. There is a considerable mileage of third track, side and yard tracks and various branch or spur tracks to numerous coal mines along this section.

With steam operation, trains of approximately 3,250 tons were hauled up the Elkhorn grade with three most modern Mallet locomotives at a speed of seven miles an hour. Two 300-ton electric locomotives haul the same trains on this grade at a speed of 14 miles an hour. Twelve electric locomotives were purchased to replace 24 Mallets but by the time electric operation was started traffic had increased so that 33 Mallets would have been required. Since electrification was inaugurated the volume of traffic has increased enormously but the twelve original electric locomotives handle the service.

In a service where the average main line haul is short and where there is considerable coal mine setting out and gathering service, as well as pusher service, these electric locomotives consistently do more than 100 miles per day. During the year 1920 they made an average mileage of 37,820. Because of there being so much switching service, the actual mileage was undoubtedly more than shown by the above record. The steam locomotives formerly used in this service averaged approximately 60 miles per day.

The increased train speed and reduction in road delays obtained with the electric locomotives has, of course, greatly increased the track capacity. It has been stated by Norfolk & Western officials that this electrification has at least doubled the track capacity—as compared to steam operation.

A recent notable achievement on this electrification was the handling of 90,000 tons of freight eastbound over the Elkhorn grade, and through the single track tunnel at the summit of this grade, in a single day.

New York, Westchester & Boston

An example of the successful application of heavy alternating current motor cars to dense traffic in exacting suburban service is that of the New York, Westchester & Boston; local and express service from the Harlem river station of the New York, New Haven & Hartford trains make a schedule of 22 miles per hour with a stop every mile. The express train schedule speed is 37 miles an hour with an average distance of 2½ miles between stops.

These equipments have proven their reliability in all kinds of weather. During the heavy snow storms of 1919-20, when the service on many steam roads was seriously demoralized, the operation of the suburban service on this road was 100 per cent perfect. In 1919 the average mileage per car was over 42,000 and the average car mileage per minute of delay was over 2,700.

Pennsylvania, Philadelphia Suburban Service

The Pennsylvania suburban service from the Broad street terminal in Philadelphia to Paoli and Chestnut Hill represents what is undoubtedly the most severe, congested traffic problem in modern railroading. The Broad Street terminal is of the stub-end type. There are 16 tracks in the train shed, but at the interlocking tower controlling the entrance to this terminal, there are only six tracks.

In 1915 this terminal had reached the limit of its capacity of 160 trains per day with steam operation. The physical conditions were such that it was almost impossible to enlarge the terminal, and to increase its capacity electric operation of much of the suburban service with multiple unit cars was inaugurated. All cars are equipped with two alternating current motors on one truck and trains are made up of from three to eight cars. The time required to bring a motor car train into the station and get it out again—including unloading and loading—is approximately one-third of the time required with steam operation. The track movements per train turn-around have been reduced from six to two.

Through the six-track bottle neck at the interlocking tower, approximately 600 trains per day are now operated. Between 5:00 p. m. and 6:00 p. m. 50 trains pass this tower and during one 17-minute period of this hour there is a train movement every minute. This terminal had a capacity of only 160 trains per day with steam motive power.

With electric operation the running time from Broad Street to Paoli—20 miles—has been reduced 10 minutes. With steam operation 82 per cent of the suburban trains were on time while with electric operation the corresponding figure is 94 per cent. During the year 1919 a total of over 2,883,000 car miles were operated with an average of over 48,000 car miles per detention. During one month of this year a total of 252,200 car miles were operated with five detentions, totaling 14 minutes.

Chicago, Milwaukee & St. Paul

The Chicago, Milwaukee & St. Paul electrification is the only example of an extensive single track electrification of a transcontinental railroad. The original installation covered 440 miles from Harlowton, Montana, to Avery, Idaho. On this section the Big Belt, Rocky and Bitter Root mountain ranges are crossed. With steam operation there were four engine districts on this section. The second installation extends from Othello to Seattle, Washington—a distance of 220 miles—and this section crosses the Cascade mountains. Passenger service is handled by the most powerful passenger locomotives in the world, and these locomotives are making mileage far in excess of any previous records. They have ample capacity to haul a 13-car all-steel train over the entire electrified zone without helper.

Soon after these locomotives were placed in service it was decided to run them through the entire 440 miles without turning in at Deer Lodge shops—near the middle of the electrification zone—for a general inspection as had been the previous practice. This was a radical step but the results obtained have justified this plan of operation. The locomotives are given a light inspection at the end of the 440-mile run and are sent to the main shops at Deer Lodge for a general inspection on a mileage basis of from 3,000 to 5,000. Two men at each terminus of electrification—Avery and Harlowton—take care of the light inspection of the equipment.

Individual locomotives in this service have made as much as 12,000 miles in one month. They have made the through run of 440 miles per day for 12 consecutive days during the most severe winter months. On the occasion of schedule derangement on the steam-operated sections of the road, these electric locomotives have been kept in continuous road service as much as 30 hours and have made over 750 miles in a 24-hour period.

The substitution of electric for steam motive power on the Chicago, Milwaukee & St. Paul has made it feasible to greatly simplify the operating organization. The 440-mile section is now in charge of one superintendent with two sets of train dispatchers, whereas with steam operation there were two division superintendents and four sets of dispatchers. Eliminating intermediate engine terminals has, of course, simplified the mechanical department organization also.

There are many other noteworthy railroad electrifications. Those mentioned, however, represent all classes of heavy traction service which electrification will be called upon to perform.

General News Department

The name of the Bureau of Service, National Park and Resorts, maintained by the Chicago & North Western and Union Pacific, will be changed to Department of Tours, effective January 1. This was the name of that department prior to the railroad administration.

A bill was introduced in Congress at the opening of the new session on November 20 by Representative Zihlman authorizing the Interstate Commerce Commission to order priorities in car service and embargoes and to take other necessary steps to secure equitable distribution of building materials.

The American Association of Ticket Agents held its fourth annual convention at Savannah, Ga., beginning on November 13. The attendance numbered about 600. The address of welcome was given by Col. A. R. Lawton, vice-president of the Central of Georgia, and the principal addresses were by Charles A. Cairns, passenger traffic manager of the Chicago & North Western, and Frank W. Connor, passenger traffic manager of the Central Region of the Pennsylvania.

Supreme Court to Review Pennsylvania-Labor Board Case

The United States Supreme Court on November 20 granted a writ of certiorari on the application of the Pennsylvania Railroad providing for a review of the decision of the court of appeals in the controversy as to the authority of the Railroad Labor Board to issue orders governing the method of employee representation on committees formed for the purpose of conferring with the management on questions pertaining to rules and working conditions.

A Break in the Ranks of the "Big Four"

The open break in the ranks of the "Big Four" brotherhood, which has been brewing for some time, is more or less confirmed by recent circulars issued by Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers, appealing to his members to assist T. C. Cashen, president of the Switchmen's Union of North America, in inducing switchmen who are now members of the Brotherhood of Railway Trainmen, headed by W. G. Lee, to leave that organization and enter Mr. Cashen's union. Reports from Cleveland, the headquarters of the majority of the train service brotherhoods, indicate that the Brotherhood of Locomotive Firemen and Enginemen, headed by D. B. Robertson, will be aligned with Mr. Stone, while L. E. Shepard, President of the Order of Railway Conductors, will side with Mr. Lee as he has in previous disagreements among the "Big Four."

D. T. & I. Proposes Employees' Investment Plan

The Detroit, Toledo & Ironton, Henry Ford's railroad, has filed an application with the Interstate Commerce Commission for authority to issue to its employees investment certificates of indebtedness to an amount not exceeding $1,000,000. The certificates are to be issued in denominations of $1,000, $500 and $100 and to be delivered to employees of the railroad for deposits in cash which will be received by ticket agents or other agents of the company. These certificates will bear no definite rate of interest, but a rate will be paid upon them to be determined annually by the board of directors to be derived from a fund set aside from the net earnings of the company after the reserve for the government has been set aside (in case the company has earnings in excess of 6 per cent, as provided in the transportation act), such fund not to exceed 25 per cent of the final net earnings computed semi-annually. It is stated that all expenses in connection with the maintenance of the plan will be paid from the fund and will not be charged against the operations of the railroad. The railroad may use any part or all of the sums so invested by the employees for additions and betterments or for any other expenses in connection with the operation of the railroad or the funds may be invested outside of the railroad.

E. J. Liebold, vice-president of the company, says that his experience indicates that about 50 per cent of the employees will make investments in this way to the amount of 5 per cent of the annual pay roll, and the company has 2,225 employees, earning approximately $185 a month. It is stated that the certificates are to be issued "in order to promulgate a feeling of participation in the earnings of the company, that the employees will gain a spirit of interest in the well-being of the company . . . . . which will result in a more efficient and loyal service. . . . . ." The uses to which the funds deposited with the company by the employees are to be put are to be determined by the board of directors.

Railway Business Association Appointments

Alba B. Johnson, who was re-elected president of the Railway Business Association on November 9, has announced the acceptance of appointment by four new executive members. They are B. L. Winchell, president of the Remington Typewriter Co., who during federal control was Southern regional director; Alexander Brown, president of the Brown Hoisting Machinery Company, and president in 1921 of the Cleveland Chamber of Commerce; E. M. Zehnder, president of the Scranton Bolt & Nut Company, and F. N. Bard, president of the Barco Manufacturing Company, Chicago, chairman for several years of the association's committee on consolidation of exhibits.

W. W. Salmon and W. W. Willets, retiring vice-presidents, have been appointed executive members. Reappointed upon expiration of their three-year terms are J. C. Bradley, Buffalo; S. P. Bush, Columbus; R. P. Lamont, Chicago; Frank J. Lanahan, Pittsburgh; A. H. Mulliken, Chicago, and H. H. Westinghouse, New York.

Four executive members were elected vice-presidents at the annual meeting: J. G. Platt, Boston; F. A. Poor, Chicago; William E. Sharp, Chicago, and S. L. Smith, Cleveland.

The president, seven vice-presidents and 27 executive members constitute the general executive committee.

The treasurer, P. Harvey Middleton, was re-elected and he is also assistant to the secretary, Frank W. Noxon.

Pacific Railway Club Admits Supplymen to Membership

The Pacific Railway Club, the only railway club in the country that has not admitted supplymen to membership, amended its constitution at its November meeting and supplymen will hereafter be admitted to associate membership upon the same basis as they are admitted to other clubs. Supplymen will pay the same dues as other members, $3 a year, but may not vote or hold office. There is no initiation fee.

Heretofore the club has only admitted to membership men actually employed by railroads, those in the service of railroad regulatory bodies, and faculty members of universities. It has an active membership of nearly 400.

The section added to the club's constitution under which supplymen will be admitted reads: An associate member shall be a person not eligible for active membership but who is actively engaged in some occupation where he co-operates with men in railroad service for the advancement of the science of railroading and the best interests of the railroad profession. Manufacturers and dealers in railway equipment, material, and supplies, their salesmen and representatives, are eligible to membership under this section.

William S. Wollner of the Northwestern Pacific is the club's secretary, his address being 64 Pine street, San Francisco, Cal.

Operating Statistics of Large Steam Roads—Selected Items for the Month of September, 1922,

Region, road and year	Average miles of road operated	Train-miles	Locomotive-miles: Principal and helper	Locomotive-miles: Light	Car-miles: Loaded (thousands)	Car-miles: Per cent loaded	Ton-miles (thousands): Gross. Excluding locomotive and tender	Ton-miles (thousands): Net. Revenue and non-revenue	Average number of locomotives on line daily: Serviceable	Unserviceable	Per cent unserviceable	Stored

Heavy Loading of Steel Products

The National Tube Company, Pittsburgh, Pa., in a letter addressed to the traffic department of the principal railroads, has recently given out interesting statistics showing the great increase in car loading by the United States Steel Corporation companies in general and especially by the National Tube Company during the last 20 years. The record of the average outbound car load traffic of the United States Steel Corporation subsidiary companies from 1911 to 1920 increased from 69,200 lb. per car to 94,352 lb. per car, thereby effecting a saving of 356,070 cars in the 10-year period.

The National Tube Company's record of average carload of wrought iron pipe between 1901 and 1920 increased from 38,500 lb. per car to 80,700 lb. per car, effecting a saving of 41,437 cars in the 20-year period. There were 916,904 more tons of wrought pipe shipped in the year 1920 than during 1901 and only 6,194 more cars used. The heavier loading of this traffic effected a saving of 52.3 per cent in equipment.

Attention is called to the fact that the increase in the average car load of wrought pipe was not entirely due to the campaign for intensive loading. In 1911 the question of obtaining suitable cars for wrought pipe was taken up by the trunk lines and in that year 1,000 gondola cars with an inside length of 46 ft. were built. At present there are in service or under construction about 30,000 gondolas 36 ft. or more in length inside.

The new tube works of the National Tube Company now being built at Gary, Ind., will produce wrought pipe and tubular goods up to a diameter of 20 in. and a maximum length of 24 ft. In order to provide for loading two lengths of these larger sizes in a car, the National Tube Company has suggested that future gondola cars be made 48 ft. 6 in. long inside and that flat cars be built the same length.

A Busy Commission

The Interstate Commerce Commission is always busy, but judging by the outward and visible signs it is just now unusually busy. On one day last week nine hearings were being held by members of the commission or by examiners, in Washington, to say nothing of those being held in other cities. On Monday of this week there were six hearings and on Tuesday seven, including several of major importance either from the standpoint of the issues involved or of the number of witnesses heard and time consumed. On Wednesday, although the consolidation hearing had been concluded, there were nine hearings. Last week there was the hearing before Commissioner Hall on the consolidation of western railroads, in which the executive officers of half a dozen big roads have taken part and which was also continued this week; the hearing before Commissioner Aitchison on coal car distribution rules, also continued this week; the Boston port differential case on which hearings also have been and will be held in other cities; the air brake investigation in which there have already been several weeks of testimony; and several hearings on the rate, valuation and finance dockets. On Monday, hearings were begun in the general express rate investigation. There was also argument before the commission involving practically all the sugar rates in the United States, and the consolidation and coal car hearings were continued. On Tuesday a hearing was also begun, to continue for several days, on the application of the Southern Pacific to retain control of the Central Pacific. Not only the members of the commission, but also some of the lawyers who have numerous clients, and the railroad lawyers whose companies are concerned with numerous of these cases, have had difficulty in trying to be at two places at the same time, and not only have some of the commission's hearing rooms proved too small to accommodate those who appeared to hear the testimony and to assist the lawyers and witnesses, but it has been necessary to hold hearings in other buildings, including those of the Interior Department and even the hotel across the street.

The activities of the commission are also indicated by the great number of orders, opinions, reports, statistical statements, notices to the press, etc., which are given out at the secretary's office daily and the number of petitions, applications, complaints and briefs filed by railroads, shippers and others. All these are placed on the press table in the secretary's office each day.

Traffic News

The New England Governors' committee on the railroad situation held hearings last week in Worcester, Springfield and other places, and this week is again in Boston. A number of railroad officers are to be heard. The committee has established at Boston a staff of statisticians headed by Howard G. Kelley, former president of the Grand Trunk Railway. Associated with Mr. Kelley are J. L. White, formerly on the Union Pacific, and Frank C. Wright, vice-president of the Bangor & Aroostook.

Commission Suspends Coal Priority Order as to Southern Roads

The Interstate Commerce Commission on November 18 issued an amendment to its Service Order No. 25 which gave priority in the use of open top cars to coal shipments, suspending the priority provisions of the order effective on November 20 as to lines and portions of lines situated south of the Ohio and Potomac rivers except the Baltimore & Ohio. It is stated that this order will not operate to suspend or vacate directions for special priority heretofore given under the provisions of Paragraph 7 of the order which have not been fully executed and such directions will continue in effect until fully executed.

Express Rates Under Inquiry

A general investigation of express rates throughout the United States was begun by the Interstate Commerce Commission at a hearing this week before Examiners Barclay and Mullen, for the purpose of determining whether the rates are unreasonable or otherwise in contravention of the provisions of the interstate commerce act. The investigation was given a new turn, however, by the recent filing of the application by the American Railway Express Company for permission to make a general increase in express rates for the benefit both of the express company and of the railroads. C. A. Lutz, vice-president of the American Railway Express Company, the first witness, produced statistical evidence regarding the earnings and expenses of the company and stated that during the first six months of 1922 approximately $308,000 had been paid to railroads by the express company as a voluntary contribution because of complaints by railroads that they were not receiving a sufficient return under the new contract. The presentation of the request of the railroads that express rates be increased so as to increase the proportion of express revenue which accrues to the railroads was begun by L. E. Wettling, statistician for the railroads, who presented exhibits showing that in 1921 the railroads had conducted their part of the express business at a loss of over $40,000,000, and that there were prospects for a large deficit for 1922.

Box Car Orders Modified

The Car Service Division of the American Railway Association on November 20 issued modifications of its previous orders directing the return movement of box cars of western line ownership, which were intended to relieve the car shortage on western railroads, to provide that such western cars may be loaded west from certain points instead of being moved empty. The order to trunk line roads provides that in all territory east of Grand Rapids, Detroit, Toledo, Cleveland, Youngstown, Pittsburgh and Wheeling, box cars, except automobile cars of western ownership may be loaded to any point west of the line from Grand Rapids to Wheeling, inclusive, in the direction of the home road. In the territory west of that line box cars of western ownership may be loaded to or beyond Chicago, Peoria, St. Louis or other western junction points. This modification makes no change in the number of empty cars previously specified to be delivered at Chicago. The provisions of the order are also to be applied to Wabash box cars. The orders to the Norfolk & Western, Bessemer & Lake Erie, Detroit & Mackinac, Lake Erie & Western, Toledo, St Louis & Western, permit loading to any point beyond their lines in home direction, while the order to

the Chesapeake & Ohio permits loading to or west of Cincinnati. At points west of Cincinnati western cars may be loaded to or beyond Chicago, Peoria, St. Louis or other western junctions.

Coal Production

Preliminary estimates on coal production during the week of November 6-11, as revised by later reports to the Geological Survey reflecting the curtailed output because of Election Day and Armistice Day, put the total coal raised at 11,939,000 net tons. Early returns on car loadings at mines for last week, November 13-18, indicate 13,200,000 net tons, 11,100,000 tons soft coal and 2,100,000 tons anthracite. This approximates the record for a week made just before the coal strike of 1919.

The estimated cumulative production of bituminous coal this year to November 11, inclusive, stands at 332,668,000 tons, which is 21,541,000 tons, or 6 per cent less than in the corresponding period of 1921.

The production of anthracite in the week ended November 11 is estimated at 1,863,000 net tons, a small increase over the output for the week preceding. The rate of loading on other days indicates a loss of about 300,000 tons, on account of Election Day and Armistice Day. The last week is expected to show an output of more than 2,100,000 tons.

The outstanding feature of the mine reports for the week ended November 4 was a gradual but general improvement in traffic conditions. Only in Somerset County, Pennsylvania, Cumberland-Piedmont, Pocahontas, Southern Appalachian, and the states of Montana and Wyoming was the car supply not equal to that during the preceding week.

Labor has practically ceased to be a factor limiting production, except in Connellsville and Cumberland-Piedmont in the Kanawha districts. The labor supply at the mines reporting in Westmoreland and Somerset counties, Pennsylvania, that have been working shorthanded for many weeks, has now become practically normal.

Anthracite shipments from Buffalo, as reported by the collector of customs for that port, amounted to 109,750 net tons in the week ended November 14; 112,700 tons in the week preceding, and 94,200 tons in the week before that. According to the Ore and Coal Exchange, the total soft coal handled at Lake Erie piers during the week ended November 12, decreased to 987,430 tons, as compared with 1,088,104 tons in the week preceding.

Warfield Again Proposes Remedy for Car Shortage

Complaints of inaction in respect to determining underlying causes for the existing car shortage and in making investigation of the proposals of the National Association of Owners of Railroad Securities to permanently relieve car shortage through pooling of cars, are made in a letter addressed to Commissioner Aitchison of the Interstate Commerce Commission by S. Davies Warfield, president of the association.

The letter says that the Union Pacific on November 11 asked that the commission use the emergency powers granted in the Transportation Act in order that the U. P. may be supplied with cars commensurate with its ownership, to relieve the serious shortage; that it was foreseen early in 1922 that at the present period shippers would be left without cars. It is stated that "adequate service cannot be supplied without a definite central agency with power to utilize the services of any of the forces or agencies of the railroads in investigations with the effect of adopting the most effective method for the acquisition, standardization, rebuilding and selection of classes of interchange freight cars to give best results by pooling and provide a definite distribution system. . . ."

Mr. Warfield says that while the railroads are complaining of over regulation, they at the same time call on the commission to further regulate them by relocating cars on their lines, because of the failure of their present car service association to perform this service for them, the most recent illustration being the application of the Union Pacific.

The association long ago presented proposals, he said; in fact as early as 1919, for an adequate supply and a more extended and economical distribution of freight cars through pooling; and, "in the opinion of many, this would have overcome the condition now confronting the railroads, the country and the commission. . . . How long existing conditions can continue without action to correct them, remains to be seen. Until they are corrected, private operation of the railroads is in danger."

Commission and Court News

Interstate Commerce Commission

The Interstate Commerce Commission has issued a decision finding not justified the $10 per car rental charge proposed by various refrigerator car lines to be applied on their cars when used in so-called local service from Pittsburgh to destinations in Central Freight Association territory.

Personnel of Commissions

B. A. Bridges, a member of the Louisiana Public Service Commission from 1912 to 1918, died at Baton Rouge, La., on Oct. 23.

R. A. Allen has been appointed state engineer of Nevada and ex-officio member of the Nevada Public Service Commission to complete the unexpired term of J. G. Scrugham, who was appointed for a four-year term in 1919, but who resigned recently upon accepting the Democratic party's nomination for governor.

Court News

Negligence in Sudden Stoppage of Train Must be Proved

The Minnesota Supreme Court holds that negligence cannot be established in an injury case by showing that the forward motion of a freight train was suddenly and violently checked and the cars jerked, without also showing that it was due to some negligent act or omission of the trainmen—Perkins v. Great Northern (Minn.) 188 N. W. 564.

United States Supreme Court

Combination of Interstate and Local Rates Cannot Be Used to Defeat Through Rates

The Baltimore & Ohio Southwestern has freight stations at Oakley and at Madisonville, both in Cincinnati, and has published interstate rates on lumber from southern points to both. Those to Madisonville (beyond Oakley) are higher than those to Oakley plus the local rate from Oakley to Madisonville. A lumber dealer at Madisonville had lumber shipped from the south to Oakley; paid the freight to that point; and without unloading the cars, reshipped them within a few days to Madisonville, paying the local freight rate. When shipped, and continuously thereafter, the intention was that the cars should go to Madisonville. They were billed to Oakley to get the benefit of the lower freight charges resulting from the combination of rates. The railroad claimed the through rate and sued for the difference. The Circuit Court of Appeals for the Sixth Circuit affirmed a judgment for the shippers (272 Fed. 675). This judgment is reversed by the Supreme Court of the United States, which holds that "the movement had been divided by the shippers into two stages because they believed that by so doing they could secure transportation to Madisonville at less than the through interstate rate," and whether under the Act to Regulate Commerce lower intermediate rates can be so used in combination was the precise question for decision. The important fact in the case was that the shippers admitted that shipment to the ultimate destination had at all times been intended.

The Supreme Court said, in part: "Through rates are, ordinarily, made lower than the sum of the intermediate rates, but there may be commercial conditions which justify giving exceptionally low rates to movements which are intermediate. The mere existence of such intermediate rates confers no right upon the shipper to use them in combination to defeat the applicable through rate. The interstate rates from the southern points to Madisonville were the only lawful rates. To permit the applicable through interstate rate to be defeated by use of a combination of intermediate rates would open wide the door to unjust discrimination." Judgment for defendants reversed. Baltimore & Ohio Southwestern v. Settle. Opinion by Mr. Justice Brandeis. Mr. Justice McReynolds dissented. Decided November 13, 1922.

Foreign Railway News

Commission Recommends State Ownership of Irish Railways

The commission appointed by the Irish provisional government to inquire into the position of the Irish railways has issued today a majority report recommending state ownership, with an independent board of management. It admits certain objections to nationalization, but says that the advantages to be reaped from unification would outweigh the disadvantages.

Well Known British Railway Journalist Dies

Edwin A. Pratt, a well-known writer on railway subjects, died at Esher, Surrey, England, on October 27. Mr. Pratt was born in 1854 and began his career in journalism at an early age. For ten years he was a sub-editor on the Times (London), and served on the staff of a number of other journals, including the Railway Gazette (London). Mr. Pratt traveled extensively in Europe and America. Some of his better-known works are Rise of Rail Power in War and Conquest, British Railways and the Great War, Railways and Their Rates, State Railways, Railways and Nationalization, etc.

Consolidation Completed on Northeastern Group of Railways in Britain

The consolidation of the railways of the Northeastern group in Great Britain has been completed, to take effect January 1, 1923, and the new company will be known as the London & North Eastern Railway. The principal companies which have been merged to form this road are the North Eastern, the Great Central, the Great Eastern, the Great Northern, the Hull & Barnsley, the North British and the Great North of Scotland.

All the railways of Great Britain will on January 1 be merged into four regional systems. Details of the organization of the Northwestern, Western and Southern groups have not, however, advanced as far as have those concerning the Northeastern.

R. L. Wedgwood, at present general manager of the North Eastern Railway, will be general manager of the new company. Mr. Wedgwood was born in 1874 and was educated at Cambridge University. He entered railway service in 1896 with the North Eastern and served in various official positions in the operating department until 1905, when he became goods manager of the Northern division, with headquarters at Newcastle. In 1911 he became assistant goods manager and, shortly thereafter, chief goods manager. In 1914 he also took over the management of passenger traffic. He occupied a prominent transport position in the British army during the war, and when he returned to the North Eastern in 1919 became chief goods manager, passenger manager and deputy general manager. On January 1 of this year he became general manager.

Railroad Auditors at salaries from $2,500 to $3,600 are wanted by the United States Civil Service Commission for positions in the Bureau of Internal Revenue, to audit and verify income and excess profits tax returns of consolidated railroad companies. Applications must be made on Forms 1312 and 2386 and must be sent in by December 15. Applicants must have had five years' experience. The required experience is defined in the notice in considerable detail; and it is also stated that experience with the Shipping Board or the Railroad Administration or the Interstate Commerce Commission will not be acceptable. Applicants must be between 25 and 50 years old. Employees of the income tax unit have the privilege of attending lectures in the evenings, and are encouraged to engage in study as a supplement to the experience which they gain in their work. If an applicant is appointed, and is satisfactory, the government desires to have him remain at least one year.

Equipment and Supplies

Locomotives

The Fonda, Johnstown & Gloversville is inquiring for 1, 8-wheel switching locomotive.

The Aluminum Company of America is inquiring for 2, 8-wheel switching locomotives.

The Calumet & Arizona Mining Company is inquiring for 3, 6-wheel switching locomotives.

The Wisconsin & Michigan has ordered 2, 4-6-0 type locomotives from the Baldwin Locomotive Works.

The Pittsburgh Steel Company has ordered 1 switching locomotive from the Baldwin Locomotive Works.

The Detroit & Toledo Shore Line has ordered 2 switching locomotives from the Baldwin Locomotive Works.

The Toledo, St. Louis & Western has ordered 2 switching locomotives from the Baldwin Locomotive Works.

The Delaware, Lackawanna & Western has ordered 5 Pacific type locomotives from the American Locomotive Company.

The Chicago, Milwaukee & St. Paul, reported in the *Railway Age* of October 28 as inquiring for 100 locomotives, has ordered 50 Mikado type locomotives from the Baldwin Locomotive Works.

The Duluth & Iron Range, reported in the *Railway Age* of September 16 as inquiring for 8 Mikado type locomotives, has ordered 3 Mikado type locomotives from the Baldwin Locomotive Works.

The Richmond Fredericksburg & Potomac, reported in the *Railway Age* of October 21 as inquiring for 2 locomotives, has ordered 1, 8-wheel switching locomotive and 1, 6-wheel switching locomotive from the American Locomotive Company.

Freight Cars

The Louisville & Nashville is inquiring for bids for the repairing of 250 hopper cars.

The Pacific Fruit Express contemplates asking for bids soon for about 5,000 refrigerator cars.

The Gulf Refining Company, Pittsburgh, Pa., has ordered 150 tank cars from the Standard Steel Car Company.

The Atlanta & West Point and Western Railway of Alabama are inquiring for 150 hopper cars of 50 tons' capacity.

The Baltimore & Ohio is inquiring for 1,000 low side gondola cars of 70 tons' capacity. This company was reported in the *Railway Age* of November 18 as also inquiring for 2,000 hopper cars.

Passenger Cars

The Atlanta & West Point is inquiring for two 70-ft. steel baggage cars.

The Chicago, Rock Island & Pacific, reported in the *Railway Age* of October 14 as inquiring for 50, 70-ft. steel suburban cars, has ordered this equipment from the Standard Steel Car Company.

Iron and Steel

The Southern is inquiring for 200 tons of steel for bridges.

The Louisville & Nashville is inquiring for 2,000 tons of tank plates.

The Chesapeake & Ohio is inquiring for 500 tons of steel for bridges.

The Florida East Coast is inquiring for 200 tons of steel for bridges.

The St. Louis-San Francisco has ordered 118 tons of structural steel from the American Bridge Company to be used in strengthening bridges.

The Missouri Pacific has ordered 201 tons of structural steel from the Mississippi Valley Structural Steel Company, to be used in the construction of additional shop facilities at St. Louis, Mo.

The Kansas City Southern has ordered 540 tons of structural steel from the Kansas City Structural Steel Company, the material to be used in the extension of the company's shops at Pittsburg, Kan.

Machinery and Tools

The Southern Pacific has ordered a Niles end-driven axle lathe from the Niles-Bement-Pond Company

The Norfolk & Western has ordered from the Niles-Bement-Pond Company two right line 8-ft. radial drills.

The Missouri, Kansas & Texas has ordered a 10-ft. full pneumatic plate flanging clamp from the Niles-Bement-Pond Company.

Miscellaneous

The Chilean State Railways will receive public tenders on January 15, 1923, for materials for a telephone selector system for 800 miles of line. Bids are to be opened in Santiago, Chile, at the offices of the Chilean State Railways. The system desired is the Western Electric Company's alternating current type or its equivalent. Public tenders will also be received on February 15, 1923, for material for a signal system for 240 miles of railroad. The bids are to be opened in Santiago, Chile, at the offices of the Chilean State Railways. The Chilean State Railways office at 141 Broadway, New York City, is furnishing specifications and drawings for these bids.

Signaling

The New York Central has ordered from the Federal Signal Company 33 Type 4 automatic signals for use on its Lines West of Buffalo.

The Missouri Pacific has placed orders with the Federal Signal Company for 6 low-voltage switch layouts together with necessary signals, controlling devices and outlying switch locks.

The Chicago, Burlington and Quincy has placed orders with the Federal Signal Company for switch mechanisms, signals and controlling devices necessary for 9 low-voltage switch layouts.

Secretary Denby of the Navy has written to the Interstate Commerce Commission, recommending that the names of towns be painted in large letters on the roofs of railroad stations for the guidance of aviators. They are obliged frequently to fly very low for the purpose of ascertaining the names of the towns over which they pass.

Seven Years and Ten Months was the sentence of imprisonment imposed by the state court at Wilmington, Del., on November 13, on Daniel Befany, one of five men found guilty of attempting to burn a bridge of the Pennsylvania railroad in Wilmington on August 31. The sentences of the others were seven years, seven years, six years, six years.

The American Railway Association announces that, by vote of the Board of Directors, the Association decides to make no contribution of funds to the investigation of the teredo in piling along the Atlantic and Pacific coasts. It is expected that railroads having terminals at tidewater will each for itself decide to what extent to participate in this work.

Supply Trade News

The Hardwood Manufacturers' Institute reports the appointment of R. H. Jones as assistant to the secretary-manager.

R. C. Jerome, vice-president and general manager of the Jerome-Edwards Metallic Packing Company, Chicago, has left the service of that organization.

The Foamite Firefoam Company, of 200 Fifth avenue and 151 Fifth avenue, New York City, has been consolidated with the O. J. Childs Company, Utica, N. Y., under the name of the Foamite-Childs Corporation, Utica.

The Gibb Instrument Co., Detroit, Mich., makers of electric welding equipment, on December 1, will remove its plant and offices to Bay City, Mich. The purpose of this move is to provide increased manufacturing facilities.

D. S. Hutchcraft, formerly vice-president of the Indiana Air Pump Company, Indianapolis, Ind., has been appointed district manager in charge of the Chicago Pneumatic Tool Company's recently established branch office at Tulsa, Okla.

The Minnesota Supply Company with offices in the Pioneer building, St. Paul, Minn., has been appointed northwestern representative for the Flannery Bolt Company, Pittsburgh, Pa. Blake C. Hopper, formerly with the American Steel Foundries, has been elected secretary-treasurer of the Minnesota Supply Company.

E. G. Buckwell, secretary and sales manager of the Cleveland Twist Company, Cleveland, Ohio, retired on November 1. Mr. Buckwell remains a director of the company. W. E. Caldwell, assistant sales manager, has been appointed sales manager. Mr. Caldwell has served in the company's sales department for 21 years.

The Richards Train Control Corporation of Baltimore, Md., has recently been incorporated under the laws of Maryland with a capitalization of $2,000,000 for the manufacture and installation of automatic train control apparatus. This represents a reorganization of the Richards-Ford Train Control Company which was incorporated in 1917.

The Electric Material Company, San Francisco, Cal., with branch office at Los Angeles, has been appointed agent in the State of Washington and parts of Oregon and Idaho for the Roller-Smith Company, New York. The Electric Material Company recently opened an office in the Hinckley building, Seattle, in charge of R. F. Robinson.

The Industrial Works, Bay City, Mich., has built a special crane for the Virginian Railway, which is said to be one of the largest of its kind in the world. It is known as a type Z and its capacity with outriggers extended is 400,000 lb. at a radius of 17½ ft. Without the use of jack beams, the main hoist will lift 85,000 lb., while the auxiliary hoist will lift 60,000 lb. at a radius of 24 ft.

Obituary

F. W. Doty, Pacific Coast representative of the railroad and government department of Johns-Manville, Incorporated, New York, died at San Francisco on November 9.

Prizes for Essays by school pupils on making the highways safe, offered in a contest which is being conducted by the Highway Education Board, Washington, D. C., are the subject of a circular which has been issued by C. I. Leiper, general superintendent of the Pennsylvania Railroad, for the encouragement of school children in the state of New Jersey, particularly children of railroad employees. The announcement has been posted at all passenger stations on the line of that road in New Jersey, and the railroad will supplement the prizes offered from Washington by gifts of books and gold medals. Essays must be of 500 words or less, by school pupils 14 years old and under, and the contest closes on December 4.

Railway Construction

CHICAGO, ROCK ISLAND & PACIFIC.—In announcing the awarding of a contract to the Railroad Water & Coal Handling Company, Chicago, for the construction of a water treating plant at Manly, Iowa, in the issue of November 18, the statement was made that the Minneapolis & St. Louis had awarded the contract. This statement was in error in that the Chicago, Rock Island & Pacific had awarded a contract for the work.

CHICAGO, ROCK ISLAND & PACIFIC.—This company has awarded a contract to the T. S. Leake Construction Company, Chicago, for a one-story addition, 40 ft. by 275 ft., to its machine shop and for the construction of a woodworking mill, 60 ft. by 128 ft., at Cedar Rapids, Iowa.

CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA.—This company has awarded a contract to the Ogle Construction Company, Chicago, for a 150-ton frame coaling station at Emerson, Neb.

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of September 23 as intending to improve its coal handling facilities at Macomb, Miss., has awarded a contract to the Railroad Water & Coal Handling Company, Chicago, for a 300-ton coaling station.

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of November 18, page, 964, as intending to improve its water facilities at Calumet, Iowa, has awarded a contract to W. J. Zitterel & Company, Webster City, Iowa, for the construction of a water station.

LOUISVILLE & NASHVILLE.—This company will construct a steel bridge 4,595 ft. in length near New Orleans, La., also double track lines on the Cumberland division from Hiedrick to Pinesville, Ky., a distance of 15 miles, to cost $2,000,000.

MISSOURI PACIFIC.—This company will accept bids until November 27 for the construction of a passenger station at Harrison, Ill.

NEW YORK, NEW HAVEN & HARTFORD.—This company will install a new turbine generator in its Cos Cob power station to take care of an increased load due to the placing in service of 12 new high speed passenger locomotives. The new generator is a 9,000 kw., single phase, 25-cycle unit.

PENNSYLVANIA.—This company is elevating the tracks of its Atlantic division between Whitman street, Camden, N. J., and a point a quarter of a mile south of White Horse pike, involving the elimination of two highway grade crossings.

SOUTHERN PACIFIC.—This company has awarded a contract to the Utah Construction Company, Ogden, Utah, for the construction of a single track, concrete lined tunnel, 1,200 ft. in length, on its Coast division, 155 miles south of San Francisco, Cal. This tunnel is being constructed in connection with the revision of the line to eliminate several sharp curves. This company also contemplates the expenditure of $250,000 in shop buildings and machinery at El Paso, Tex.

ST. LOUIS-SAN FRANCISCO.—This company, which was reported in the *Railway Age* of November 18, page 964, as closing bids on November 13 for a 300-ton concrete coaling station at Ft. Smith, Ark., has awarded the contract to Roberts & Schaefer Company, Chicago.

TEXAS & PACIFIC.—This company, in conjunction with the Missouri Pacific, will construct a reservoir which will provide adequate water supply for the two companies at Texarkana, Ark., at an approximate cost of $150,000.

UNION RAILROAD.—This company, which is an affiliated line of the United States Steel Corporation, has awarded a contract to the Roberts & Schaefer Company, engineers and contractors, Chicago, for a 100-ton capacity, two-track, reinforced concrete, automatic electric, Simplex roller skip type coaling and sanding plant, at Bessemer, Pa.

Railway Financial News

Revenues and Expenses for September—a Correction

In the table of Revenues and Expenses of Railways for September and the nine months' period which appeared on page 954 of last week's *Railway Age*, the figures for the roads—Grand Trunk Western to Lehigh & New England—were incorrectly shown. The reason lies in a printer's error whereby the figures to the right of maintenance expenses were inserted as the nine months' figures for the Lehigh & New England instead of in their correct position as the September figures for the Grand Trunk Western. To read the table correctly the figures for the roads Grand Trunk Western to Lehigh & New England to the right of maintenance expenses should be each dropped one line with the exception of the nine months' figures for the Lehigh & New England which should have appeared as the first line on the page. Thus for a number of typical roads the correct figures should be:

Name of road		Operating ratio	Net from railway operation	Net after rentals	Net after rentals, 1921
Grand Trunk Western	Sept.	78.00	318,222	141,887	—97,257
	9 mos.	77.80	2,686,409	475,562	—853,297
Great Northern	Sept.	76.10	2,666,889	1,836,120	3,218,755
	9 mos.	78.80	15,456,331	10,084,242	4,212,635
Gulf Coast Lines	Sept.	63.40	319,146	285,812	343,036
	9 mos.	67.40	2,462,862	2,023,354	2,493,306
Hocking Valley	Sept.	84.30	313,370	147,257	296,942
	9 mos.	73.50	2,561,948	1,854,329	313,952
Illinois Central	Sept.	76.80	3,417,412	2,480,288	1,490,926
	9 mos.	76.80	25,586,704	17,623,366	13,685,148
International & Gt. Northern	Sept.	76.20	357,063	245,453	75,457
	9 mos.	83.00	1,764,444	988,747	—214,549
Kansas City Southern	Sept.	76.60	373,290	231,971	332,718
	9 mos.	75.30	3,125,450	2,103,847	3,189,419

ALABAMA GREAT SOUTHERN.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority nominally to issue $500,000 of first consolidated mortgage 5 per cent gold bonds to be held in the treasury.

BALTIMORE & OHIO.—*New Directors.*—At the annual meeting of the stockholders held in Baltimore, Md., on November 20, Henry Ruhlender and Richard H. Williams, both of New York, were elected directors to succeed James Speyer and L. F. Loree, who declined re-election because they could not consistently serve on the Baltimore & Ohio board under the provisions of the Interstate Commerce Act.

Operating Results in 1922.—President Daniel Willard presented a summary of the company's condition from the first of this year up to the present time and the prospects for the future. He said in part:

> At the beginning of the present year 1922, a budget for the year was prepared, based upon an assumed business 5 per cent in excess of the business handled in 1921, and also assuming a reduction in freight rates of 10 per cent, with the continuance of the then existing rates of pay. The budget prepared at the beginning of the year contemplated a net railway operating income of $32,000,000 at the end of the year, which with other income would have provided, after deducting fixed charges, $6,000,000 or $7,000,000 surplus applicable to the common stock after paying the preferred dividend and providing for the $3,500,000 sinking fund.
>
> Notwithstanding the fact that more than three-fourths of all the coal mines located on the Baltimore & Ohio ceased production April 1, due to the coal strike, which of course affected very seriously the business of the company, we were able to show at the end of the first six months' period net operating revenue of more than $2,000,000 in excess of the amount set up in the budget for the same period, and there is every reason to believe that if conditions had continued as they then were, the company would have had not less than $8,000,000 surplus at the end of this year applicable to the common stock.
>
> The total number of men employed in the maintenance of equipment department on June 30, 1922, was 21,150, of which 17,500 left the service, leaving about 3,500 at work. During the period of the strike 1,322 of the men who had left the service returned. On September 15, when the settlement was reached, the Baltimore & Ohio had about 17,000 men working in its mechanical department, 4,634 being old employees of the company, and 12,158 new men who had been hired. There were no unsettled matters of controversy between the Baltimore & Ohio and its men who went on strike on the first of July, and when the settlement was made it was on the basis of the men returning to work under the same rules and working conditions, and at the same rate of wages, that were in effect on the date they stopped work.
>
> The result of the strike bore very heavily upon the Baltimore & Ohio. During the month of June, 1922, the net operating income of the company was $2,666,000 and during the month of October it was $3,000,000. Assuming, which may fairly be done, that the net operating income of July, August and September would have been equal to the average earned in the two months above mentioned, it seems clear that but for the strike the company would have earned during those months a net operating income of more than $8,000,000. On the contrary, however, because of reduced

[illegible] and [illegible] expenses, the [illegible] three months' period [illegible] a net deficit of more than $2,000,000, [illegible] a year's loss to the company, in anticipated income during the three months mentioned, of between $10,000,000 and $11,000,000. This, of course, has very seriously affected the outlook for the company during the present year.

There has been a very steady improvement in the condition of the company's property since the settlement of the strike, with a corresponding increase of business. This is quite clearly shown by the loaded car movement. During the first fifteen days of September the average daily loaded movement by the Baltimore & Ohio was approximately 18,000, while the average daily loaded movement for the first ten days of the present month has been over 34,000, and in some daily instances has nearly reached 40,000. We are today handling practically as heavy a business as we ever handled at this time of the year, and we hope to have our power in condition to meet the seasonable requirements of the situation during the winter months.

The present outlook for business is encouraging, and while the results from this year's operation will be disappointing for the reasons which I have already mentioned, if conditions remain something like normal during the next twelve months—and by normal I do not mean the same degree of industrial activity that exists today, because we are probably above normal at the present time, but with a condition that might fairly be assumed to be normal, and with rates and wages remaining substantially as they now are—I feel confident that the result of next year's operations should be much more gratifying to the holders of our common shares.

CHESAPEAKE & OHIO.—*Initial Preferred Dividend.*—The directors have declared an initial dividend of $1.62½ a share on the company's new issue of $12,558,500 preferred stock. They also declared the regular semi-annual dividend of $2 a share on the common stock. Both dividends are payable January 1 to stockholders of record December 1. The dividend on the preferred stock covers the quarter ended January 1. The directors declared their intention to pay the dividend on the new 6½ per cent preferred stock semi-annually in the future.

CHICAGO GREAT WESTERN.—*Authorized to Issue Notes.*—This company has been authorized by the Interstate Commerce Commission to issue $906,573 of promissory notes to the Pullman Company in connection with the purchase of equipment.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to enter into an equipment trust agreement for the issue of certificates to the amount of $300,000.

ERIE.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to guarantee the payment of $2,800,000 of equipment trust certificates.

SOUTHERN.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority nominally to issue $5,000,000 of its development and general mortgage 4 per cent gold bonds, payable April 1, 1956, to be held in the treasury.

Tentative Valuations

The Interstate Commerce Commission has issued tentative valuation reports in which it states the final value of the properties owned and used as follows:

	Owned	Used
Lake Tahoe Railway & Transportation Company, 1917	$365,453	$178,400
Virginia & Southwestern, 1916	11,947,564	12,197,864

Dividends Declared

Boston & Albany—2½ per cent, quarterly, payable December 30 to holders of record November 30.

Boston & Providence—2½ per cent, quarterly, payable January 1 to holders of record December 20.

Chesapeake & Ohio—Common, $2.00, semi-annually; preferred, $1.62½, initial quarterly, both payable January 1 to holders of record December 1.

Cincinnati, New Orleans & Texas Pacific—Common, 3 per cent, semi-annually; common, 3½ per cent, extra, both payable December 26 to holders of record December 5; preferred, 1¾ per cent, quarterly, payable December 1 to holders of record November 25.

New Orleans, Texas & Mexico—1½ per cent, quarterly, payable December 1 to holders of record November 24.

Pittsburgh, Youngstown & Ashtabula—1¾ per cent, quarterly, payable December 1 to holders of record November 20.

Trend of Railway Stock and Bond Prices

	Nov. 21	Last Week	Last Year
Average price of 20 representative railway stocks	66.67	66.27	56.76
Average price of 20 representative railway bonds	85.29	85.64	80.04

Railway Officers

Executive

L. E. Martin and **A. H. Jones**, assistants to the vice-president of the St. Louis Southwestern, with headquarters at St. Louis, Mo., and **M. M. Sisson**, vice-president and general superintendent of the Ft. Worth and Rio Grande, with headquarters at Ft. Worth, Tex., have been appointed assistants to the president of the St. Louis Southwestern, with headquarters at St. Louis, Mo., and the office of assistant to the vice-president has been abolished. **O. H. McCarty** will succeed Mr. Sisson.

Financial, Legal and Accounting

W. H. Brahany has been appointed auditor of the Detroit, Bay City & Western and the Port Huron & Detroit, succeeding L. C. Van Laan, resigned to accept service with another company.

Henry Wolf Bikle has been appointed general attorney of the Pennsylvania. **E. N. Davis** has been appointed assistant general solicitor with headquarters at Pittsburgh, Pa. **G. R. Allen** has been appointed assistant general counsel with headquarters at Philadelphia, Pa., all effective December 1.

Operating

W. J. Carr has been appointed assistant trainmaster of the New York, New Haven & Hartford to act as office trainmaster at New London, Conn. **W. J. Smith** has been appointed trainmaster with jurisdiction between Waterford, Conn., and Auburn. **A. O. Whitford**, assistant trainmaster at New London, has retired after 40 years' service on account of ill health.

Robert E. Woodruff has been appointed superintendent of the Buffalo division of the Erie, succeeding **Edmund I. Bowen** who has been transferred in a similar capacity to the Rochester division, succeeding A. B. Caldwell, assigned to other duties. The Kent division of the Erie has been extended to include the Marion Terminal and Cincinnati division. **H. R. Adams** is superintendent with headquarters at Marion, Ohio.

Traffic

J. Lever, traveling agent of the Chicago & North Western, with headquarters at Casper, Wyo., has been promoted to division freight and passenger agent, with the same headquarters.

J. A. Behrle, assistant general freight agent of the Chicago & Alton, with headquarters at Chicago, has been appointed general freight agent, with headquarters at Bloomington, Ill., succeeding E. L. Carr, resigned.

F. D. Gahagan, chief clerk to the division freight agent of the Atchison, Topeka & Santa Fe with headquarters at Denver, Colo., has been promoted to division freight agent at Pueblo, Colo., succeeding **G. W. Smith**, who has been transferred to Oklahoma City, Okla., to succeed M. C. Burton, promoted.

W. D. McVey, assistant general freight agent of the Michigan Central, with headquarters at Buffalo, N. Y., has been transferred to Detroit to succeed **E. W. Brunck** who will take over the duties of F. R. Newman, with the same title and headquarters, resigned. **S. W. Carder** has been promoted to assistant general freight agent at Buffalo to succeed Mr. McVey.

J. A. Behrle, assistant general freight agent of the Chicago & Alton, with headquarters at Chicago, who has been promoted to general freight agent with the same headquarters,

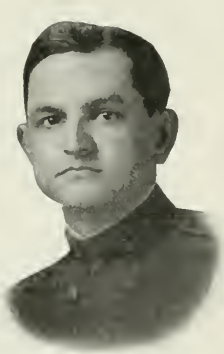
succeeding E. L. Carr, resigned, was born on September 1, 1887, at Chicago, Ill., and entered railway service as a clerk in the traffic department of the Chicago & Alton on August 6, 1903. In 1910 he was promoted to chief clerk to the assistant general freight agent and on September 1, 1912, was promoted to assistant general freight agent, which position he was holding at the time of his recent promotion. During the period of federal control he also had jurisdiction over the Chicago, Peoria & St. Louis.

G. H. Wilcox, assistant to the freight traffic manager of the Southern, with headquarters at Washington, D. C., has been promoted to assistant freight traffic manager, with headquarters at Birmingham, Ala., succeeding **R. L. Simpson**, who has been transferred to Washington, D. C. **W. T. Turner**, division freight agent, with headquarters at Greensboro, N. C., has been appointed assistant to the freight traffic manager at Washington, D. C., succeeding Mr. Wilcox. **C. C. Elder**, division freight agent at Columbia, S. C., has been transferred to Greensboro in place of Mr. Turner. **G. M. Nolen** has been promoted to division freight agent at Columbia, S. C., succeeding Mr. Elder. **H. V. Gardner** has been appointed commercial agent, with headquarters at Los Angeles, Cal.

G. W. Sloan, whose promotion to assistant general freight agent of the Nashville, Chattanooga & St. Louis, with headquarters at Nashville, Tenn., was reported in the *Railway Age* of November 18 (page 965), was born on October 21, 1883, at Nashville, Tenn. He entered railway service on August 23, 1901, as a messenger in the correspondence department of the general freight office of the Nashville, Chattanooga & St. Louis, and during the following six years held various correspondence and rate department positions. In November, 1907, he was promoted to chief clerk to the commercial agent at Nashville, Tenn., and on January 1, 1915, he was appointed chief rate clerk in the general office. On March 1, 1920, he was promoted to chief clerk, which position he was holding at the time of his recent promotion.

Engineering, Maintenance of Way and Signaling

W. G. Arn, assistant engineer of maintenance of way of the Illinois Central and the Yazoo & Mississippi Valley, with headquarters at Chicago, has been promoted to assistant chief engineer of the Chicago Terminal Improvement of the Illinois Central, with the same headquarters. Mr. Arn was born on February 7, 1877, at Terre Haute, Ind., and was graduated from the Rose Polytechnic Institute in 1897. He entered railway service as a rodman on the Louisville & Nashville, September, 1897, and was promoted to masonry inspector in October, 1898, which position he held until 1899, when he was appointed building inspector. In November, 1900, he was promoted to assistant engineer, which position he held until April, 1905, when he was promoted to roadmaster. He left the employ of the Louisville & Nashville in March, 1906, to become superintendent and engineer of the Southern Bitulithic Company at Nashville, Tenn., which position he held until October, 1906, when he became assistant engineer of the Missouri Pacific, with headquarters at St. Louis, Mo., where he remained until March, 1907. On the latter date he entered the service of the Illinois Central as assistant engineer in charge of the construction of the Birmingham terminal at Birmingham, Ala., which position he held until April, 1908, when he was promoted to assistant engineer of the Birmingham division, with headquarters at Corinth, Miss. In September, 1909, he was appointed assistant engineer in charge of the reconstruction of the passenger terminal at Louisville, Ky., and in June of the following year he was appointed assistant engineer in the general office at Chicago, where he was assigned to special work, including valuation. In August, 1912, he was appointed assistant engineer in charge of the construction of the new passenger terminal and subway at Memphis, Tenn., which position he held until November, 1914, when he was appointed roadmaster with headquarters at Mattoon, Ill. In June, 1916, he was promoted to assistant engineer of maintenance of way on the Illinois Central and Yazoo & Mississippi Valley, with headquarters at Chicago, which position he was holding at the time of his recent promotion. Mr. Arn enlisted in the United States Army in February, 1917, and in May of the same year became captain of the 13th Engineers. While in France he was promoted to major and later to lieutenant colonel and was discharged in June, 1919, when he resumed his duties with the Illinois Central.



Col. W. G. Arn

Mechanical

E. H. McFadden, assistant superintendent of shops of the St. Louis Southwestern at Pine Bluff, Ark., has been promoted to master mechanic, with the same headquarters, succeeding J. W. Blakeburn, deceased. **A. Townsend**, road foreman of engines, with headquarters at Pine Bluff, has succeeded Mr. McFadden, and he will be succeeded by **W. H. Graves**, locomotive engineer.

Special

Dr. Heman Humphrey has been appointed chief surgeon of the Kentucky & Indiana Terminal.

Charles E. Hill has been appointed general safety agent of the New York Central Lines with headquarters at New York City, succeeding Marcus A. Dow, who resigned on November 15, to become executive secretary of the Bureau of Safety of New York City, under Special Deputy Police Commissioner Barron G. Collier. Mr. Hill is 46 years old; a native of Illinois. He received his early education in the public schools of that state and taught school for a few years. Later he was graduated from the Southern Illinois College at Enfield. He was for several years clerk of a district court in Illinois. He entered railroad service as claim agent for the Cleveland, Cincinnati, Chicago & St. Louis in September, 1906, was promoted to district claim agent at Paris, Ill., in 1911, and in June, 1914, his territory was enlarged to include Indianapolis. In October, 1916, he was transferred to the Cleveland district and continued to fill this position until he became general safety agent. He has for a number of years been an ex-officio member of the safety committees of the districts in which he was located.

Obiuary

Dr. E. C. Underwood, chief surgeon of the Kentucky & Indiana Terminal, died recently.

E. B. Taylor, who retired two years ago as vice-president of the Pennsylvania, Lines West, died on November 8 at Pittsburgh. Mr. Taylor was born at Riverton, N. Y., in 1850 and was graduated from Haverford College in 1869. The following year he received a degree in civil engineering from the Polytechnic College of Pennsylvania and immediately entered the service of the Pennsylvania Railroad as a clerk in the superintendent's office at Harrisburg. Two years later he was promoted to supervisor and, shortly thereafter, to assistant engineer of the Middle division. Later he was transferred in a similar capacity to the Pittsburgh division and later was promoted to superintendent of the Lewistown division. He was then transferred in a similar capacity to the West Penn division. He then went to the Pittsburgh, Cincinnati, Chicago & St. Louis in a similar capacity and subsequently was promoted to general superintendent, Northwest system. In 1890 he became general superintendent of transportation of all the Pennsylvania, Lines West. The following year he was elected fourth vice-president and was later advanced to third, and then second vice-president in charge of accounting and treasury. Mr. Taylor was 72 years of age at the time of his death.

Radicalism More Dangerous to Public Than to Railroads

Both the shipping and producing public and the railroads may well feel alarmed at the results of the recent election. In the opinion of the *Railway Age*, however, the owners of railway securities and the managers of railways are manifesting more fear than is justified, while the producing and shipping public is showing a much smaller degree of concern than it should.

The recent election will send more extreme radicals to Congress than any election in many years. Indications are that they will hold the balance of power. They seem practically unanimous in favor of repeal of all provisions of the Transportation Act which were intended by its authors to be constructive and to cause an adequate revival of the expansion of railroad facilities. It appears by no means improbable that the Transportation Act will be seriously emasculated when the recently elected Congress meets.

In a speech in the Senate on November 23 Senator Arthur Capper of Kansas, in referring to a recent editorial in the *Railway Age*, said: "The opinion held by the *Railway Age* is not shared by the stock market nor the 'ticker' news. The discussion in regard to lower railroad rates has been going on for more than a year, and some reductions have been made; yet in Wall Street railroad stocks have risen something like 50 per cent within 12 months."

Since Senator Capper has selected the prices of railroad stocks as the barometer of expert opinion regarding the future of the railways we suggest that he include in his comparison the changes in the prices of railroad stocks which have occurred since November 4, three days before the election. In the first place it is not true as Senator Capper stated that railroad stocks have risen something like 50 per cent within 12 months. There were 34 railroad common stocks which were quoted in the stock market reports on November 5, 1921, November 4, 1922, and November 27, 1922. The average price of these stocks on November 5, 1921, was $48.12½ and on November 4, 1922, it was $61.50, an average increase of $13.37½ a share, or about 27½ per cent. The average price of these stocks on November 27, 1922, was $54.75, a reduction since November 4 of $6.62½ a share. Thus in three weeks after the election the decline in the average price of railway stocks wiped out one-half of all the advance in price that had occurred in the preceding year. The declines have ranged from less than $2 to $21.50 a share.

This is the answer made by the stock market to Senator Capper's claim that in spite of the agitation for further reductions of freight rates the prices of railway securities have been advancing. The results of the election have been interpreted as converting what had been an agitation for lower rates into a direct threat of the adoption of a worse policy of railway regulation than the country ever had before.

There is, however, a consideration of the greatest importance with which owners of railway securities and managers of railways may comfort themselves. This is that while a radical Congress can destroy the constructive provisions of the Transportation Act it cannot repeal the Constitution of the United States. Regardless of what may be done to the Transportation Act, the constitutional provisions which prohibit confiscation of property, and which protect the property of a railroad the same as all other property, will still remain in effect. Now, the fact is that the very narrowest possible interpretation of these constitutional provisions would not under present conditions warrant any general reduction of railway rates.

An argument made a year ago for general reductions was that the rates were so high the traffic could not move under them. This argument was based upon the fact that there had been an enormous decline of business since the rates were made. This argument, however, cannot now be used, because during the last eight weeks for which statistics are available the amount of freight that actually has moved on the present rates has been larger than the amount ever before moved on any rates in any eight weeks in history.

The right of the railways to earn a "fair return" upon their valuation, so long as their rates are not excessive *per se*, was not created by the Transportation Act, but by the Constitution as interpreted by the courts. The Interstate Commerce Commission has held that a "fair return" on the valuation of the railways under present conditions would be 5¾ per cent. In view of all past decisions it is most doubtful whether any federal court would hold that the railways could constitutionally be restricted to a smaller return than this. It also seems most doubtful whether the courts would hold excessive the valuation made by the Interstate Commerce Commission for any group of carriers. In the first nine months of the present year the railways earned a net operating income of only $529,400,000, or but 3.96 per cent upon their valuation. Under the ruling of the commission the railways were entitled to earn during this period a net operating income of $770,000,000, or 45 per cent more than they did earn.

The only logical conclusion is that the railways, not merely under the provisions of the Transportation Act, but under the provisions of the Constitution itself, are entitled to earn a larger return than they have been earning, and that if the state commissions, or the Interstate Commerce Commission, or Congress itself should attempt to make reductions of rates which would reduce, or even prevent an

increase of the present net return, the railways probably could defeat this effort by appealing to the courts. The present operating expenses of the railways, owing to the shop employees' strike and the high price of coal resulting from the coal strike, are abnormally high, and should decline and present indications are that traffic will continue to be heavy. Therefore, an increase of railway net operating income seems probable in spite of all the efforts which may be made by the radicals to compel unwarranted reductions of rates.

There is, however, a real danger in the situation. Until the Transportation Act was passed the policy of regulation systematically pursued was that of restricting the net return earned by the railways to the lowest point that would not result in actual confiscation. Under this policy the expansion of railroad facilities steadily declined. The result is that at present the railways are wholly unable to handle the traffic offered to them, and that as the country's production and commerce try to increase the inadequacy of transportation becomes constantly more acute. The adoption of the provisions of the Transportation Act represented an effort by Congress to establish a policy of regulation which would cause an adequate revival of railroad expansion. The repeal of these provisions would result in a return to the restrictive, "near-confiscation" policy of regulation which prevailed before government control and would inevitably prevent the revival of railroad expansion which is essential to enabling the railways to handle the country's commerce. The adoption of such a policy probably would not prevent the railroads from maintaining and substantially increasing the net return now being earned by them, but it would prevent them from making the increases in their facilities essential to enabling them to handle the country's commerce.

If the radicals who have been elected to Congress succeed in carrying out the program of railroad legislation they favor it will not in the long run make the financial situation of the railways any worse than it is now, or even prevent it from improving, but it will make the situation of producers and shippers constantly worse and worse. There are constitutional provisions which can be invoked to prevent general reductions of rates until the railways as a whole are earning larger returns. But there are no constitutional provisions which can be invoked to save farmers, manufacturers and other producers from the enormous losses which they will be caused if transportation continues to become more inadequate.

The radicals who have been elected to Congress are a menace to the railroads; but they are a far greater menace to the prosperity of those who elected them.

The Opportunity of the Mechanical Division

Less than a month has passed since the Mechanical Division of the American Railway Association announced its decision to hold only a business meeting in 1923. In that short time, however, conditions on the railroads have changed so greatly that it is certain if the Executive Committee were to meet now it would have far less reason for calling off next year's convention. Weekly car loadings have now decreased 50,000 cars from the high point reported three weeks ago. Bad order equipment has been rapidly reduced and the roads are entering the winter in much better circumstances than could be anticipated even at the beginning of last month.

This indicates that the handicap under which the mechanical department has been working, is being overcome and the officers will soon be able to give more time to their committee work. It would, of course, be difficult to make up for postponed committee meetings, but the value of reports does not depend so much on the number of meetings a committee holds, or the length of time it deliberates as on the ability and experience of its members. Individual papers on many subjects may be more valuable than the findings of an unwieldy committee. If the subjects which are of the greatest importance at this time could be referred to some of the leading mechanical officers, very valuable papers could be presented when the division meets next June.

In recent issues the *Railway Age* has called attention to the opportunity which the present railway situation offers for constructive work by the Mechanical Division. The problems that might be discussed are so numerous that it should be easy to arrange a program that would appeal to every railroad officer and to every road. The subjects that have been mentioned in previous editorials by no means exhaust the topics as is evident to anyone who comes in contact with the important every-day problems of the mechanical department.

For example, the American Society for Testing Materials has been exposing various kinds of iron and steel sheets to determine the relative corrosion of different materials. Where some of the common types of steel failed completely in sixteen to twenty-two months, sheets of different composition were all sound after forty-six months and 63 per cent were sound after sixty-four months. These results have such an important relation to selection of sheets for freight cars that the railroads should make tests to determine as quickly as possible whether the same decrease in corrosion will be obtained in equipment under actual service conditions.

Long locomotive runs as a means of getting increased utilization from equipment is another important subject in which the railroads are vitally interested. Some roads apparently are getting good results from increasing the length of runs; others have tried this practice and have given it up.

The railroads that are still waiting to experiment with long runs would benefit greatly if they could learn what factors have influenced the success or the failure of this practice where it has already been tried.

There is probably no road in the country which is not anxious to learn the results obtained with new types of locomotives now in service. What effect have radical innovations in design had on the cost of operation? What savings in fuel and in wages of train crews have been affected? What is the cost of maintenance and what monthly mileage can reasonably be obtained from these locomotives? The

Mechanical Division can perform an important service to the roads by presenting information on these matters.

Many roads have now and will have for some time to come large numbers of bad order freight cars. In some cases entire classes require extensive repairs or rebuilding. Methods of scheduling and systematizing this work have proved very effective in reducing costs. The Mechanical Division Committee on Scheduling and Routing Systems could make its report extremely valuable by outlining the best practices and showing the results that have been obtained from centralizing and systematizing car repairs.

It is of the greatest importance that these matters should be discussed before the Mechanical Division by the men who have the most thorough knowledge of the subject. It is immaterial whether committee reports or individual papers are submitted. The important point is that the Mechanical Division has an unusual opportunity to build up a program for its Chicago meeting that will be so constructive that it will give a new impetus to the annual gathering of the mechanical department officers.

The "Veri-Direct" Method of Loading Freight

"Very Correct" would seem to be a suitable designation for the new plan for checking the loading of freight into cars from freight houses, illustrated in an article on another page, which is in use on the Erie Railroad in Ohio. This plan has been described to us by C. G. Johnson, of Youngstown, whose name will be recalled as that of the author of an interesting prize article on loading freight which was printed in the *Railway Age* of November 26, 1915. Mr. Johnson's plan certainly seems calculated to call the blunderer to account, not only at every turn, but at numerous points between turns. The salient point in his story is that he is extending the use of his plan because it is profitable, and proves its profitableness.

Care Needed in Buying Used Machinery

As a rule it is doubtful economy for railroads to purchase second-hand machine tools. Almost certain loss will result if these tools are bought without extremely careful investigation and inspection. The truth of this statement is indicated by the experience of a railroad which was in the market recently for two turret lathes. An order was placed with a prominent manufacturer, but later cancelled when a dealer offered two second-hand machines at a considerably reduced price. The manufacturer was naturally desirous of holding the business, and looked up the serial number of the two turret lathes. It was discovered that the lathes had been working on three eight-hour shifts in a Canadian shell plant since 1914, and were decidedly the worse for wear. On learning this fact the railroad reinstated its order for two new machines, thereby displaying sound judgment. There is enough worn-out machinery in the average railroad shop without installing additional machines which have already given their best service. The difficulty with second-hand machinery is in detecting worn parts and determining how much usefulness may still remain. A reliable opinion cannot be formed without disassembling and inspecting practically every vital part of the machine, and even then, competent inspectors sometimes overlook serious flaws. Machine castings frequently warp in aging, so that the ways and other guiding surfaces get out of alinement. In other cases, machines are used in repetition work in which certain gears or parts are subject to undue wear, whereas the rest of the machine is practically new. Large industrial manufacturers do not consider it safe or a good investment to buy second-hand machinery unless they know all about it, and the railroads should be equally cautious, bearing in mind that "First use is best use."

Employees and the Public

Improved employee relations is intimately associated with improved public relations of the railroads. Indifferent employees, not properly trained and inspired, cause needless irritation and even anger on the part of patrons of a railroad. It is doubtless, also, one of several things that result in keeping the possible traffic of the roads as a whole to a minimum. This is emphasized in an article elsewhere in this issue, entitled, "Do American Railways Lack the Selling Sense?" Indifference and ignorance on the part of employees is directly chargeable to the managements. It cannot be corrected unless those in authority fully appreciate the fact that the directing of men is a highly specialized problem—the greatest problem confronting American railroads and industries today. Conditions change steadily and rapidly in this old world of ours and men cannot be handled today as they were even a decade ago. No field of endeavor presents greater possibilities than this. Changing an organization from a spirit of ordinary or average interest, or from a spirit of indifference, to one of intense loyalty and enthusiasm, has tremendous possibilities. What could not American railroads do today if this condition could be brought about? It can be done!

What Is the Future of Apprenticeship?

Industrial conditions are constantly undergoing change. This is a fact so obvious that its statement in the abstract seems hardly worthy of attention, and yet when its specific application close at home suddenly forces itself on the attention, its recognition comes with something of a shock. It is becoming evident that the conditions affecting apprenticeship in railway shops are no exception to this rule. Considerably less than a generation ago applicants for apprenticeship were so numerous that considerable selection was possible. As a result it became an established rule that sons of employees be given preference and the fear of an over-supply of mechanics led the labor organizations to take an active interest in limiting the number of apprentices. In the national agreement negotiated with the United States Railroad Administration these organizations succeeded in limiting the number to one for each five mechanics. But now it is becoming evident in many cases that there is no occasion for the application either of the rule giving preference to the sons of employees or that limiting the number of apprentices, for the reason that the sons of employees apparently do not consider the opportunities of apprenticeship attractive and other applicants do not present themselves in sufficient numbers to keep up the one to five ratio. This tendency is reflected in the increasing age limits for regular apprentices in newly negotiated agreements and in the complete removal of the upper limit in the case of helper apprentices. A number of questions are suggested by this situation that are worthy of the thoughtful attention of railway executives. Are the highly specialized processes of modern industry, paying comparatively high wages after short periods of training, more attractive to young men than the future offered by the railroad shops after a long period of training? If so, can the railroads successfully depend on the promoted helper and handyman for their future supply of mechanics? If not, how shall they modify

the conditions of railway shop employment to compete successfully with other occupations? Will it be possible to depend more and more on the specialist and less and less on the all-around mechanic? Answers to these questions are necessary before the railroads can formulate comprehensive plans for satisfactory shop conditions in the future.

Earnings in October

In September the Class I railroads reported a net railway operating income of $58,457,464. This compared with $87,606,375 in September, 1921. In other words, there was a decrease of $29,148,911 or 33.2 per cent. The reason for the decrease in net was an increase in operating expenses, shown by the size of the increase in expenses for maintenance of equipment—$16,262,268 or 15.7 per cent—to have been due to the cost of the shopmen's strike. Such of the monthly earnings for October as have been given out up to the present indicate that the October figures will show a considerable improvement over those for September but, on the other hand, it is rather unlikely that the October net railway operating income will come anywhere near equalling the October, 1921, figure which totaled about $90,000,000. Earnings for a number of typical roads follow:

NET RAILWAY OPERATING INCOME

Road	Oct., 1922	Inc. or Dec. compared with Oct., 1921	Ten mos., 1922	Inc. or Dec. compared last year
Baltimore & Ohio	$3,081,157	—$341,340	$15,572,377	—$3,121,317
Boston & Maine	624,244	—205,102	5,749,109	7,126,462
Chicago, Milwaukee & St. Paul	2,224,314	— 285,833	10,205,385	5,124,491
Gulf Coast Lines	294,568	84,274	2,317,922	554,126
Illinois Central	3,204,458	900,506	21,176,121	5,051,505
Lehigh Valley	Def.635,865	—1,746,799	104,967	— 3,719,266
Maine Central	162,150	—30,323	2,030,695	2,307,752
New York Central	5,362,344	—655,858	39,997,455	129,744
New York, New Haven & Hartford	1,121,631	—364,320	10,982,099	12,515,327
Pennsylvania Railroad	4,190,096	—1,964,140	61,245,197	31,615,398
Union Pacific System	5,406,573	—1,048,023	25,285,815	—4,690,288

Railway stocks have recently experienced some rather trying vicissitudes on the stock exchange. The *Railway Age's* average of 20 representative railway stocks was reported in last week's issue as being on November 21 at 66.67, or approximately 7½ points below the peak of 74.16 which was reached on September 12. Of course, rail stocks have not been the only ones which have suffered a decline in the past two months. The decline has been a general one. The rail shares seem, nevertheless, to have suffered a loss of some of their late popularity. This may be partly due to the fear of adverse legislation but there can be no question that the decline in their value and the drag on the recovery of that value on the exchange has been due primarily to the expected effect of the strike on earnings. It is unfortunate that the carriers—as in 1920—have been unable to realize more adequately on the peak business in October.

Utilize the Traffic Man

There is now more freight awaiting movement than the railways are able to handle. With the car shortage already the largest in history, the indications are that it will continue to increase as we enter the winter. With this condition there is now no necessity for the solicitation of additional immediate business and the best argument with which to solicit future traffic is to render the best possible service now. This suggests the importance of the employees of the freight traffic department concentrating their activities on the promotion of freight movement. Much can be done by personal calls on shippers to enlist their co-operation in loading cars to capacity and in releasing them, loaded or empty, in the shortest possible time. In many instances the traffic representatives can aid in devising ways of loading cars more nearly to capacity or more quickly. The problem of car movement is primarily that of keeping the individual car in motion. This requires intensive supervision of industry tracks, team tracks, side tracks and yards. Where the forces of the operating department are insufficient to provide this intensive supervision, traffic employees may be utilized to good advantage. They can aid the car-distributor. The public is now demanding that the railways move a traffic in excess of their capacity and the interests of all departments should be subordinated to the one objective of meeting this demand as fully as may be physically possible.

Facts on the Economics of Signaling

Some railway managements have been doubtful of the possibilities of effecting economies in operating costs by the installation of signaling equipment. The report of the committee on Economics of Railway Signaling, of the Signal Section of the A.R.A., abstracted in the *Railway Age* of November 25, page 983, contains facts worthy of careful consideration by such roads. For example, a study of 71 different distant control electric switch machine installations for the operation of outlying switches showed an annual saving of from $2,500 to $8,700 for each location, while one road saved $5,000 in operating costs each year from a $2,000 installation of automatic interlocking control apparatus. The report is so full of such data regarding the savings effected by automatic signals, automatic highway crossing protection and combined interlocking facilities, that railway officers confronted with the problem of increasing the capacity of certain lines may well give these figures serious attention. Better yet, a committee consisting of a signaling and an operating officer should be directed to make an extensive investigation of the possibilities of automatic signals, interlockers and outlying switch machines on congested divisions and the increase in track capacity that can be expected. As shown by this report it is possible to secure tangible evidence of the economies produced by signaling, and in view of the comparatively small cost of such studies it would appear advisable for the railroads to undertake such investigations as soon as possible while the recent congestion is still fresh in their minds.

Showing Equipment Rents

In last week's issue of the *Railway Age* some figures were given which showed that Mr. Ford's railroad, the Detroit, Toledo & Ironton, had for the nine months ended September 30, 1922, a net after taxes of $1,016,301, but for the same period, a net after rents of only $5,650. The September figure showed a deficit after taxes of $233,982. Net after rents for the month, through a typographical error, was shown as a net of $383,097. It should have been shown with a minus sign and as a deficit, which would, in addition, show that Mr. Ford's payments for equipment and joint facility rents ran in September at about $150,000. The editorial in which these figures appeared was not intended so much to point out the principal reason why Mr. Ford has thus far been unable to make his D. T. & I. property show the wonderful net earnings which we were all led to expect—because of the unusual amount of publicity which surrounded his purchase of the road—were going to be realized. They did point out the reason, to be sure, and in somewhat unmistakable terms, the reason being, of course, that the D. T. & I. is something of a slacker when it comes to having an adequate car supply. The intent of the note, however, was to

point out how much more adequate net earnings of a railroad can be shown if they are carried down as far as net after rents, or net railway operating income, instead of only down as far as net after taxes or railway operating income. In the D. T. & I. we have an extreme example to prove this contention. It should not be thought, however, that because it is such an extreme case it is not a proper one to use. It would be easy to quote figures of other and more typical roads which would bring out a similar relationship. Students of railway figures have been somewhat reticent in recognizing the effect that hire of equipment and joint facility rents may have on railway net. They should realize that these items may in cases be as important indexes as the operating ratio or other of the various figures which are usually given leading importance. All of which is further argument in favor of the railways reporting the net after rents figure in their monthly and annual statements.

The "Peak Load" and Capital Expenditures

THE CRUCIAL TEST of the capacity and efficiency of a railroad's plant and organization is applied when it handles the largest traffic which it can move. This tests the amount of business that, under the conditions existing, the railroad can handle. It also tests the economy with which under the conditions existing, the railroad can operate. Therefore, when a railroad has just handled the peak load of business is the best possible time thoroughly to study its plant and organization and locate the limiting factors in the plant and the weak spots in the organization. Of course, what has been said applies to any business concern or man. The real test of a man comes when he is called upon to meet the greatest demands on his talents and character.

The railways of the United States recently have had offered to them the largest freight business in history. The peak load of their annual business usually comes in the fall. In the eight weeks ended on November 11 they handled a slightly larger freight business than in any previous year. The total carloads of freight loaded and moved in the eight weeks ended November 11, 1920, was 7,863,858, while in the eight weeks ended November 11, 1922, it was 7,880,286. The inequality between the total demand for and the supply of transportation was, however, greater than ever before. Some railways could have handled more traffic, but a large majority moved all the freight they could and still fell far short of meeting the demands. Some railways earned more net operating income while handling the peak load this year than ever before. A large majority fell far short of equalling their best net earning records of previous years. The principal explanation of these facts is that some railways have made relatively greater improvements in their plants and organizations within recent years than others.

All indications are that for some time to come the demands upon the railways for the movement of freight will be extraordinarily large. The seasonal decline of business has come, but it has come later than at any time in recent years, and the decline has thus far been less than in any recent year. Now that on most lines the peak load has passed for a while, it behooves the management of every railroad to make a careful survey of its physical property and organization to determine, as indicated by the way the peak load has been handled, exactly what are the conditions on the physical property and in the organization which have most seriously interfered with the handling of the traffic, and handling it with the greatest practicable economy.

If the limiting factors have been conditions of the physical property, plans for capital expenditures should be so made as to remedy, first, the particular conditions of plant which have interfered most with handling the business, or handling it with maximum economy. Some railways have available only very small amounts of money for physical improvements. Others have available relatively large amounts. Experience shows however that the way in which new capital is invested is almost, if not quite, as important as the amount invested. Nobody can study the capital expenditures made and the operating and financial results obtained by different railways within the last ten years without concluding that some railways have secured much larger results in the form of net earnings from given amounts of capital expenditures than others. An eminent American economist has said that the ability to make investments wisely is the rarest form of business ability. The present earning capacity of most railways has been very largely determined, and their future earning capacity will be very largely determined, by the judgment shown in making capital expenditures.

Has the handling of the peak load this fall shown that the principal limiting factor in a railroad's capacity and operating efficiency has been inadequacy of equipment, or inadequacy of tracks, terminals, roundhouses and shops? There should be a steady increase in ton-miles for each locomotive actually in service, and this increase should be at least proportionate to the increase in tractive power. Do the statistics of a railroad show that in handling the peak load the increase in the ton-mileage per locomotive was not proportionate to the increase in average tractive power per locomotive within, say, the last five or ten years? If not, was this due to the condition of the locomotives, or to the fact that the improvements which have been made in track capacity or engine terminal facilities or in signaling or in operating methods have not been sufficient to make it possible fully to utilize the increased tractive power? If permanent structures and operating methods have not been so improved as to make possible full utilization of increased tractive power, it is evident that what is needed are improvements in other facilities and operating methods. Many railways in the past have acquired better and more powerful locomotives faster than they have improved the facilities and operating methods for utilizing them, and in consequence part of the increased power has been wasted. The conditions on such railways obviously suggest the need for capital expenditures and operating improvements which will give the locomotives an opportunity to do all the work for which they were bought.

A shortage of transportation is always reflected in the form of what is called a "shortage of cars." But is your railroad really short of cars? Do the statistics show an increase in average miles per car per day and in average tons per loaded car within recent years? The real test of freight car efficiency is the average number of ton-miles per car per day when the peak of the business is being handled. Any railway whose statistics do not show an increase in ton-miles per car per day for cars in serviceable condition in a period of maximum traffic is not increasing its operating efficiency as much as is practicable. This may be due to inadequacy of power, to inadequacy of terminals, to failure to induce shippers to increase the loading of cars and expedite loading and unloading, or to lack of supervision which will keep every car moving.

Investigation may show that the capacity of an entire division of a railroad, or even of the entire railroad is limited by congestion upon a particular part of the line. This congestion may be due to the existence of a stretch of single track the demands upon which exceed its capacity. If this is the case, should this part of the line be equipped with automatic block signals or double tracked? Often the installation of an automatic block system on a single track line will so increase its capacity as to postpone the need for the

larger capital expenditure that would be required to double track it.

Perhaps the limiting factor in both capacity and economy of operation is a grade the reduction of which would make it possible to handle longer trains over an entire freight division. Of all the improvements which have been made in the railways of the United States, none have contributed so much toward enabling them to increase their capacity with a minimum increase of both capital and operating costs as those which have enabled them to handle more tons per train. There have been great differences in the extent to which different railways have made such improvements. Statements are often made to the contrary, but nobody with a knowledge of the underlying facts can study the statistics of the various railways and escape the conviction that there are still many railways which could largely increase their capacity and reduce their operating expenses by concentrating their efforts more upon improvements in their physical plants and operating methods which are needed to increase the average train load.

The railways in 1922 have made much larger capital expenditures for equipment and additions and betterments than they did in 1921. Information which the *Railway Age* is gathering and which will be published in a later issue shows that they are planning to make relatively large capital expenditures in 1923. The traffic demands, however, are so great as to make it evident that no amount of capital expenditures which can be made will put them abreast of the demands of commerce and of the necessity for more economical operation for years to come, unless capital expenditures shall be made only after the most careful study to determine where the investment of a given amount of money will produce the very greatest possible result. This means that it is almost as important as it was during the war to restrict to the lowest practicable minimum the investment made in improvements which will not increase capacity or reduce the cost of operation, and to study with the utmost thoroughness the experience recently gained in handling the peak load so as to determine as accurately as is humanly possible just what improvements will yield the greatest results. Each individual railroad is an enormous existing property with an enormous existing investment. The vital problem to be solved is what particular improvements will have the greatest effect in increasing the capacity of the property already in existence and in increasing the net return earned upon the existing investment.

Under such conditions as have prevailed in the railroad business for the last ten years it has required not only rare knowledge and judgment to determine the exact places where capital expenditures should be made, but unusual moral courage to make them. There is always real danger that a costly improvement will not produce the effect expected upon the net return earned. Examples might be cited of large investments which have been made in individual railways within the last ten years which have not increased their ability to earn net return as was expected, and which have so increased fixed charges that they have almost ruined the railroads making them. But in a country such as the United States where conditions change and production and commerce increase with great rapidity, it is even more dangerous for a railroad management to lack the courage to make capital expenditures which are needed and which it is financially able to make, as to make them and take the risk that they will not turn out well. There are few railroads so poor that they cannot raise some capital to invest in improvements. In many cases poor railroads have slowly but surely become rich because their managements have shown rare wisdom in selecting the exact improvements which would pay the best, and courage to go ahead and make them as rapidly as they could.

The greatest increases in capacity and economy of operation always have been and always will be mainly due to wise and courageous investment of capital, and the experience of recent months should be the best possible aid to each management in determining where, and in what facilities, such capital as is available should be invested.

Don't Wait Until Spring

If present indications form any index of what may be expected next year, the railways in common with other large employers are facing a shortage of labor. At the same time many roads are planning large programs of improvement work for next season which will make their requirements for labor greater than in the year now closing. This condition points to the necessity of reducing next summer's peak demands for labor to the minimum. This can be accomplished by doing as much work as possible during the winter and by starting that which cannot be done during this season as early in the spring as possible.

With reference to the first suggestion, the railways are the victims of a long-established, self-imposed habit of reducing their forces to the minimum during the winter and of crowding all but the routine patrol into a summer peak load.

When there was a large surplus of labor this was the easy and perhaps the economical thing to do, but as this surplus has disappeared and maintenance-of-way work has become more complicated, this economy has vanished. Much maintenance work is admittedly seasonal in character and can be done only when the frost is out of the ground, but those roads which have really studied the problem have found that more work can be done during the winter than is commonly performed. Furthermore, much of this can be done with little or no addition to the forces and thereby constitutes a clear gain. In view of the indications that the railways will not be able to secure all of the labor necessary for their improvement programs next spring, and the further indications that the traffic and the earnings will continue at a high point throughout the winter, it would seem the prudent course to make a survey of that work which can be done as economically now as in the summer and get it out of the way in order that forces which are thus productively employed throughout the winter may be diverted to the strictly seasonal work at the first approach of spring weather.

The second suggestion, that of starting the seasonal work at the earliest opportunity, may at first seem premature at this time, but unless plans are initiated promptly the program will not be perfected and materials and forces assembled at the appointed date of starting. Some railways already have their plans for next year's work well in hand with the intention of launching them as early as possible, and thereby securing their quota of men and materials. In times of shortage of labor other roads, must of necessity, take what is left, to their disadvantage.

Many railways have suffered in recent weeks from a lack of facilities which have not only limited the amount of traffic which they could handle but have increased their operating costs. Much construction work of necessity interferes to a greater or less extent with operation and the longer the period over which this work can be distributed, the less is the seriousness of this interference. The policy of starting maintenance-of-way work early is therefore not alone one of economy affecting the maintenance-of-way department, but it is likewise to the interest of the operating department that this work shall be so handled as to decrease the interference with traffic to the minimum and to bring the improvements to completion at the earliest possible date in order that they may be utilized.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

The Car Distributor

[illegible], Mo.

To the Editor:

I have had a number of letters from readers of the *Railway Age* relating to my communication entitled, "Get Better Service from Freight Cars," which appeared in your issue of September 9, page 458. You may be interested in having some additional information which is suggested by questions which have been propounded to me.

Any railroad employee or officer who is in the operating department knows full well that car distribution everywhere is a feature of railroading which is given very little attention, as it is supposed to be a side line of dispatching trains; a duty divided between yardmasters, trainmasters, agents, yard clerks and others. When a car shortage occurs these people are appealed to to get busy and keep cars moving, and to unload; but you very seldom hear any one say anything about distribution, and what relation it has to the shortages, movements and release.

From ten years' actual experience and experiments on the Chicago, Burlington & Quincy and from observations on about all the important railroads in the United States during my several years as inspector for the A. R. A., I found that the thing uppermost in the mind of everybody was to hurry release of cars, obey car service rules when practicable, and to hurry movement; but never was anything said about the distribution.

The car distributor is like the army officer in the field. If he is competent, he distributes his soldiers where he will get 100 per cent service out of them; the same with a car distributor. If he is a competent, experienced man he will get 100 per cent service out of the cars. Please bear in mind that if a car is delayed at a station; if two cars are furnished on an order for one, or a car furnished where one is made empty or none furnished because the yardmaster failed to switch it out; or a coal car not moved because the local would not take it, or an empty delayed on a blind siding because no one knew it was there, or a man received two cars and another none when they had ordered the cars at the same time, it is not the fault of the yard clerk, or of the local train crew; nor of the agent or any other man who is usually blamed for such errors or mishandling of cars; it can be traced back to the man behind the gun, the car distributor.

A car distributor who is burdened with a lot of clerical duties which have nothing to do with the distribution of cars, is like a race horse trying to run a race with a load of coal hitched on behind. It can't be done.

Unshackle the car distributors. Give them a chance to distribute cars and watch moving trains and to take advantage of all means available to know of every car on their division and to keep informed of all the orders; then you will have 100 per cent service, and not before.

There are several ways of distributing cars, but the best way is by dividing the cars into seven classes, and then to follow up each class incessantly. The classes are: (A) Box cars; (B) coal cars; (C) stock cars; (D) flat cars; (E) furniture and automobile cars; (F) all foreign cars when not pooled with system; (G) miscellaneous cars. The tide of each class should be handled separately to avoid repetition when changing or canceling or modifying the tide on one class of cars.

The car distributors should be high class, well educated men with several years of practical experience.

A competent car distributor may handle 10,000 cars a day and distribute and fill orders for a thousand cars to load; but often the record is far below that, and as a rule, it will be found that he has numerous other duties to perform so that he is not able to do justice to the work. Each railroad has a different way of distributing and most of them have long cumbersome, old-fashioned reports calling for a lot of unnecessary information, entailing much unnecessary clerical work. With competent distribution will come less delay and less trouble for demurrage bureaus. By having one man responsible it will take a big load off the division and general officers and do away with the present custom of "passing the buck."

H. B. Dreyer.

The Service of Supply

Portsmouth, Va.

To the Editor:

The possibilities of enormous savings to be made by a properly organized supply department on railroads are thoroughly outlined in H. C. Pearce's article on "Functions of Departments of Purchases and Stores," published in your issue of September 15.

The simple statement that stock has been reduced eight and one-half millions of dollars may not astonish a railroad executive, but to a business man or to a banker to whom I showed this article, a saving of this kind is astonishing, and savings of this kind are what many of the railroads in the United States need most. Interest on eight and one-half million dollars is $500,000 a year. The reduction in stock means that this amount does not have to be handled, saving another half-million, as the handling charges on most roads are more than six per cent. The loss through deterioration, material becoming obsolete, etc., can only be approximated, but it can be safely stated that the C. & O., or any other railroad reducing stock eight and one-half million dollars will save one and one-half million dollars a year.

During the 20 years I was with railroads, from clerk to general storekeeper, pay-roll comparison, more than anything else, stunted and handicapped those railroads whose executives did not have the vision to know what a properly organized supply department could accomplish. Some roads never had a chance properly to organize for this reason. When reductions are made in stock, and the supply department is not properly organized and strengthened, storekeepers, as well as other officials, know serious delays are to be encountered, and storekeepers dread the criticism of being out of material and delaying the work. They know they cannot make an intelligent reduction of stock and still give service. If properly organized, with stock books properly kept, and given increased supervision, which is absolutely necessary with decreased stock, there is no reason for any complaint about shortage of material. Executives do not appear to realize that it takes money properly to operate their stores to secure economical reductions in stock.

A bank will take every precaution on a loan or investment, yet time and again I have known thousands of dollars to be invested in special materials on railroads without mature deliberation, and this material lay on hand for years and was eventually scrapped. There is need for strong and able men in your supply departments.

The principles in this article, and various other articles written by Mr. Pearce are not visionary, but entirely prac-

tical. There is nothing visionary about Mr. Pearce. He is deadly in earnest at all times. He talks and writes straight from the shoulder. Twenty years ago he went to the Southern Pacific, and these same ideas and principles were put in use. Anyone who has worked under or knows Mr. Pearce, knows that this meant that the smallest detail was carried out to the letter. That is the way he has things done. The things that some supply men consider theory are practical to Mr. Pearce's organization.

When railroads consider, as other corporations do, that every dollar invested in material that is not necessary is tied up capital, they will then have reached a common business understanding. Material is cash, but few railroads regard or control it as such.

Who Are the Employees' Leaders?

ITHACA, N. Y.

TO THE EDITOR:

I was in a prayer meeting once, and one of the striking things that I heard was the advice of an old saint to the younger ones to take care, in confessing their sins, to seek diligently to confess the right ones—the real sins. "We are very likely," said he, "to confess something which we class as needing confession, but which after all is not the great fault which God is requiring us to correct." I thought of this as I read your brilliant editorial of November 4 on dealing with the labor problem. You will perhaps say that this is not a fair criticism; for you do, in the last two columns of that article, confess (for the railroads) such grave sins that one can only wish that the editorial, in double leaded type and red border, could go to every railroad director in the land.

The thought that you had omitted to put your finger on the spot most needing attention came to mind in connection with the paragraph on letting the employees organize their "company unions" without being dictated to.

But what will the men do when not dictated to?

The crucial problem is the choice of leaders. Taking warning from innumerable past mistakes, one must feel impelled to warn every group of employees to select as leaders those of their comrades whom they have known for a long time, who have worked for the road a long time and who are well known generally for their integrity, fairness and conservatism.

In thus warning against giving preferment to the short-sighted, the inexperienced and the loud-mouthed, I may perhaps lay myself open to the accusation of squealing before I am hurt; but it is so easy to be fooled by men whose chief qualification is their gift of gab, and it is so difficult to get modest and solid men to do the work, sometimes unpleasant, connected with leadership, that I cannot believe my fears are wholly groundless.

Every division superintendent has a duty to keep as closely as possible in touch with his employees, of different classes, to see how they use their new-found freedom. He is, indeed, debarred from dictating to them; but he must, of course, have an intense interest in seeing that the best and most experienced of his men are at all times fully alive to their duty to guide the younger ones, and the newcomers, in every situation where there is a liability to go wrong. About 99 per cent of our labor difficulties are due to the carelessness with which the rank and file have selected the wrong men for leaders. Let every man do his own thinking!

The fully alert railroad president will, *of course*, see that no superintendent, or other officer negotiating with employees, ever allows the employees' spokesmen to outdo him in courtesy, fairness or patience. R. R. S.

Train Order Form 19

SAN FRANCISCO, CALIF.

TO THE EDITOR:

I am much interested in the article in the *Railway Age* of September 23, page 553, on "Train Orders by Signal Indications," by A. R. Fugina, but I cannot quite agree with Mr. Fugina in his last two paragraphs, where he says that the "19" order for restricting the rights of trains represents one of the greatest advantages of an automatic signal system. The use of the "19" order for restricting trains does not represent "one of the greatest advantages of an automatic signal system." This form may be used with equal safety without such a system. On January 1, 1923, one of the largest railway systems in the United States will, under its new rules, permit the use of the 19 form for the restriction of trains on every mile of its track, outside as well as inside the automatic signal system. There will be a clearance check restriction, and a few minor restrictions; but these will not require the use of Form 31 for more than three per cent of the orders. The *unrestricted* use of the 19 order on single track is unsafe and dangerous.

The movement of trains by train order and time-table is entirely independent of the automatic signal system. All the automatic signal system ever did to extend the use of the 19 train order was to put some additional marrow in the backbone of some who did not understand the real difference between the two forms for restricting purposes.

I am a firm believer in the system of train operation by signals if there are adequate signals and provided some means can be arranged for eliminating the equality between a fast passenger train and a 75-car freight.

With the train-announcing scheme referred to by Mr. Fugina the operator and dispatcher must see the actual movement of the trains, or the result will soon be a blockade. Wireless communication between dispatchers and train crews would be of great value in preventing blockades.

How about permitting trains to do station work, or work extras to work under protection of a flag without holding an opposing extra or other train at the next station (absolute permissive system) or at the home signal intermediate between stations (positive system)? It sounds nice to say that trains will be equipped with portable telephones, but when it becomes necessary to have quick action in case of unexpected delays by a leaky engine or a slippery rail, and the trainmen have what they think is a reasonable excuse for not hooking up a portable set, I am afraid some of our non-operating friends are going to be disappointed.

The trouble with the train order system on some roads has been in overloading a first-class dispatcher with entirely too much territory and requiring him to do routine train sheet work for the benefit of the clerical force.

There is nothing wonderful in the operation of trains by signals alone on double track, as there are comparatively few train orders necessary and train dispatching is a joke.

WM. NICHOLS.

[The large railway system referred to by Mr. Nichols is, no doubt, the Southern Pacific. The rules defining the restrictions on the use of Form 19 which that company proposes to put into effect on January 1 are as follows:

The "19" train order must not be used in the following cases:

When a train order restricting the superiority of a train is issued for it at the point outside of block signal limits where such superiority is restricted, unless it be its initial station.

For a train order to be delivered to a train at a point not a train-order office, or at one at which the office is closed, the superiority of which is thereby restricted (See Rule 217); or for restricting orders sent direct to train and enginemen by telephone.

To restrict a train which has been cleared or the engine of which has passed the train-order signal (See Rule 219).

Where it is necessary for train dispatcher to know before authorizing its use by an inferior train, that the order has been delivered to the superior train.

When it is apparent that train orders are to be received without stopping, train order offices must be passed at a moderate rate of speed.

Transportation Department at Syracuse

Syracuse, N. Y.

To the Editor:

Your editorial in the *Railway Age*, November 4, page 827, which commented upon the recent appointment of John S. Worley as professor of transportation in railway engineering in the University of Michigan and the establishment of a Transportation Department, has been noted and is commended.

For your information, in addition to the Chair of Transportation at Harvard University made possible by James J. Hill, there was also established in 1920 in the College of Business Administration, Syracuse University, a Chair of Transportation made possible by a gift from H. H. Franklin, the Syracuse automobile manufacturer. This chair is filled by Dean Charles Lee Raper, who has built up 11 courses dealing with the economics of transportation. The aim of this specialized work is to furnish men with the economic background necessary in order that they may later deal with transportation problems intelligently.

From your editorial we gained the impression that this school might have been overlooked.

Wayne E. Butterbaugh,
Associate Professor of Transportation.

Why Not Employee Relations Departments Too?

New York.

To the Editor:

The inauguration of special departments to assist the patrons of a railroad is concrete evidence of the railroads' efforts to render intelligent and effective first-aid to those in difficulties—perhaps in locating a lost shipment, or in obtaining settlement of a claim, or possibly in appeasing a passenger who feels that the attitude of a ticket-seller or trainman, or the service in the diner is not all that might be desired. Briefly, it is a centralization into one department of all complaints and dissatisfactions.

Now let us go behind the scenes, as it were, and consider the reason for establishing such bureaus. If the service rendered were all that could be desired, would it be necessary to maintain such organizations? May not public relations work on the railroads be boiled down to the axiom, "If our employees fail you, tell us about it." Going to the heart of the situation, and treating the cause rather than the effect it is first of all necessary to restore the loyalty which was once so conspicuous on practically every railroad. By this statement, we are not attempting to disparage in any sense the great majority of railroad men. On the other hand, it does not require a very long conversation with the average railroad worker of the strictly union class, and especially among the shop and track laborers, to receive the information that "the presidents and directors are a lyin', thievin' bunch of grafters," or "the railroads are rich, why shouldn't we take all we can grab." Again, "what do I care for the company, so long as I get all that's comin' to me," and "why should I work my head off when the big bosses spend their time in a private car ridin' to Chicago to cut my pay still lower?"

It is hard to counteract such a line of thought. Publicity through the daily press will accomplish little. In fact, every editorial and news-dispatch at all critical of the unions merely serves to further antagonize these men, and to deepen their belief that "the executives, through the bankers and newspapers are tryin' to bust the unions." Obviously, the trend of thought above depicted is encouraged, and in fact originated by the labor union periodicals, with their insidious editorials and vulgar cartoons portraying labor as the "martyrs" who wealth," or words which convey such an expression to their unthinking readers. It is sometimes amazing to understand how apparently self-reliant American men can "fall" for such stuff, and yet the fact remains that they have fallen, are falling, and will continue to fall for it unless the companies take some active steps to counteract the influences swaying them. Fortunately the sentiment indicated by the above quotations are probably not typical of the great majority of railroad employees. Yet, a few men with such feelings can do a lot of damage. It is easier to drag a man down than up, and the effect of such language on the auditors is not helpful, to say the least.

What are the railroads doing individually to correct these growing symptoms of disinterest in the company's welfare?

We know of one fairly important system where a truly remarkable example of loyalty is displayed by the shop foremen and higher officers of the motive-power department. the company's shops to be repaired by employees during working hours with company tools and equipment. An amusing incident in this connection occurred a short time ago. A bicycle was brought in by a certain officer, who instructed a mechanic to make a new part to replace a worn-out one. While the job was not a particularly difficult one, it would have consumed over two hours time, so the employee stepped up town, purchased the necessary part for 30 cents and returned to the shop. Placing it on the wheel, he returned the bicycle to the official later in the morning, saying nothing These men bring their motor-cars and children's bicycles to slave that the "capitalists may increase their ill-gotten about what he had done. It is not the purpose of this article, however, to analyze the reason for the man's action—whether he was too honorable to steal the necessary material, or too lazy to make the required part himself. If such instances occur at one point, it is not unreasonable to assume that similar happenings are practiced elsewhere.

We have pointed out, first, that the attitude of the employees in general is not all that it should and could be; and second, that the sense of duty may not be as strongly stressed by those in authority as it might be.

What means are available for correcting such conditions?

Some time ago, we mentioned in an article in the *Railway Age*, the desirability of a closer co-operation between management and employees, with committees which would gather periodically merely for a "get-together" to discuss affairs. The advantages would be far-reaching. A closer association between management and employees (and by employees, we do not mean national unions) would seem to be the first and most effective step, toward improving the esprit de corps.

But of all the opportunities afforded the railroads for improving morale, none is greater than the employees magazine. It is surprising that so few companies, comparatively, have thus far taken advantage of this admirable agent. The value of these periodicals is inestimable. There are many arguments in their favor, of which it may not be amiss to summarize the following.

(1) Improves morale. (2) Provides a point of contact between management and employees. (3) Instructs employees in the importance of their duties, and the relationship thereof to the work of other departments. (4) Offers an opportunity for the real men to express themselves and make known their ability (not necessarily as writers, but as thinkers). (5) Affords a clearing-house for worthy suggestions, by which the employee may benefit himself, as well as the company. (6) Allows the company a means of contradicting the misstatements in the union publications. (7) Makes possible a means for disseminating publicity favorable to the railroads, as such a magazine would be read by the newspaper editors along the line. (8) Pays its own way (by advertisements). (9) Saves money for the company and earns money, by encouraging from employees (a) pep, (b) ideas, (c) loyalty, (d) interest, (e) economy. (10) Keeps readers (officials and

men alike) in touch with what is being accomplished by the company.

Recently, another step has been taken by several roads, in an effort to keep in closer touch with their employees, in the creation of personnel managers, or any of the several titles which cover a similar range of duties.

To every official is offered the opportunity of doing his bit, however, in the way of increasing the initiative of those under his supervision. It is reasonable to assume that many employees could, if properly encouraged, offer some broad, constructive suggestions in the interests of the company. The story goes that an employee of a certain system offered several thoughts toward improving the road's service, and increasing revenues in some obviously possible ways, but was met by a rebuke from the vice-president, that such suggestions were only acceptable when advanced by officials of the road, and that this was the first time in the recollection of the officer in question that any employee had ever taken such a liberty upon himself. There is no doubt but that many employees have originality, plus ambition, and that only the proper encouragement is necessary to apply this to the company's advantage. The B. R. & P. has shown its progressiveness by offering cash prizes for the best suggestions.

FRANKLIN SNOW.

Echoes of the Recent Strike

CHICAGO.

TO THE EDITOR:

As the echoes from the recent strike of the shopmen and allied crafts are reverberating, I am wondering if any good will result from the struggle or if the losses to both sides will be in vain. Is it possible to make an entry on the profit side of the ledger.

In dollars and cents, there cannot be. Even by working overtime and on holidays at time-and-one-half, the men cannot regain the stupendous losses in wages as a result of their self-imposed idleness. Neither can the railroads recoup their losses sustained through idle equipment, destruction of property and the inefficiency of a great majority of those who took the places of the strikers. Nor can the public, the innocent third party, regain the drainage on its resources through the inability of the railroads to transport the commerce of the nation promptly from the producer to the consumer, thus resulting in the loss of millions to the producer for products unsold and to the consumer in higher prices for the products consumed. Consequently there seems to be no immediate or concurrent good resulting from the strike.

Without thought or reasoning man is very little above the level of the brute. The swine feasts upon the acorns beneath the oak tree but never looks up to see whence they came or whether there be any more to fall. The stampeded herd follows its leader over the precipice to destruction on the rocks below. The man who does not think for himself is contented as long as the physical nature is satisfied but is as easily stampeded and led to his destruction as the beasts of the field.

I was a striker once myself and have been the third party in other strikes, and it is my opinion, based on actual experience as well as observation, that only a small minority of those involved in any strike really and truly desire one or have a real plausible excuse, from a personal standpoint, to go on strike. Then why does the vote usually show an overwhelming majority for a strike? Simply for the reason the men do not think for themselves or weigh the cost but follow the universal feeling or impulse that to vote negatively is an evidence of weakness and cowardice and liable to subject them to ridicule by their fellow men. The emotions of the herd become predominant over the reasoning faculties of the individual and the stampede is on.

Labor has always maintained that its right to strike against unfair wages and unjust working conditions is inalienable. But let us analyze the meaning of the phrase and see if this is true. As strikes have been conducted in the past, they mean more than the peaceable cessation of work when wages and working conditions are unsatisfactory. No one will deny the worker the right to quit work, in a peaceable manner, when he feels that he is not obtaining the pay that he considers his labor worth or that his environment is not as pleasant as he would desire; but when he enters into an agreement, or legally speaking, a conspiracy, with other co-laborers that all will cease work at a given moment, he is then beginning to infringe upon the rights of others and thus puts himself in opposition to the principles of our government. If the concerted movement would stop with the cessation of work he might still be within his rights to a certain extent, but they do not stop there. The striker, in leaving his work, does not renounce his claim to the position he leaves, but, calling it his own job, uses every means in his possession, even resorting to violence in many cases, to prevent another from doing the work he said by his actions in quitting that he would not do. Thus the rights of the public to an uninterrupted production or distribution and the right of a man to work where he wills are infringed upon and there is where the government steps in and calls a halt.

This to my mind is the reason for the failure of almost every strike of any magnitude. Our government would cease to exist did it not protect the rights of one against the encroachments of another.

Ask those who have gone through a strike, remaining idle for weeks and sometimes for months, their savings, accumulated by thrift and self denial, exhausted, if strikes pay, if they would be willing to go through another for the same cause, and quicker than they voted "yes" before they will say "no." Circumstances have caused them to do some thinking for themselves and they will think more for themselves in the future than they have allowed others to think for them before.

Railroad labor had been led to believe, through agitation and propaganda from those in authority in each craft and through repeated failures of local strikes, that more could be accomplished through a nation-wide strike, but it is fortunate for the country and labor itself that the shopmen's strike did not include all classes of railroad labor. It is true that our transportation system would have been paralyzed temporarily, but the ultimate result would have been the same, the triumph of our government. The end of the shopmen's strike was not the triumph of the railroads but of the government, and while the losses have been shared alike by the strikers, the railroads and the public all have gained in the awaking of a new consciousness and we find labor coming to its senses and the shadow of an impending national paralysis of our transportation system that has been hovering over the country since 1916 is being dissipated by the return of reason to her throne and the banishment of radicalism from the assembly hall. No stronger indication of this state of mind can be found than in the action of President Lee of the trainmen in declaring that henceforth his organization would stand aloof from all entangling alliances with other organizations and fight its own fight alone.

If then, the strike has taught men to think for themselves and to appreciate the fact that our government exists of, by and for the people, that each has rights upon which the other cannot encroach and that reason, aided by the golden rule, is the best arbiter of all differences, the losses sustained through the strike will be as "bread cast upon the waters."

AN EX-RAILROAD EMPLOYEE.

A General View of the Structure from the South Side

Philadelphia & Reading Builds 46-Arch Bridge

Steel Centers Shifted by Floating Adjustable Traveller at Susquehanna River Crossing at Harrisburg, Pa.

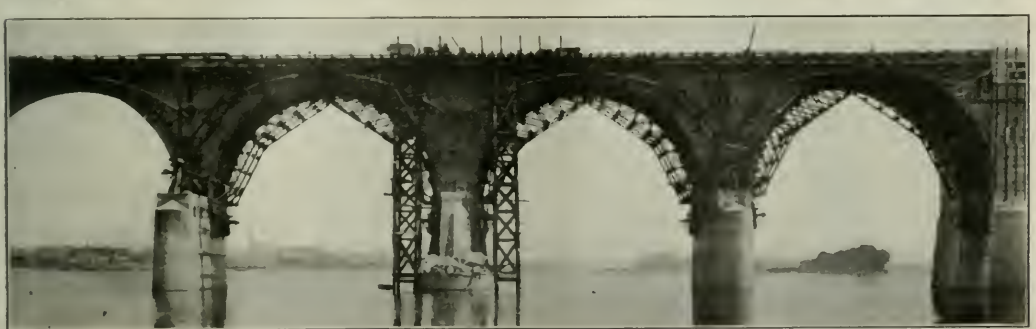
By Charles H. Hitchcock
Assistant Engineer, Philadelphia & Reading, Harrisburg, Pa.

THE PHILADELPHIA & READING'S new arch bridge over the Susquehanna river at Harrisburg, Pa., has reached its second and final stage of construction, traffic having been transferred to the completed southern half on July 11 of this year. The bridge is located on the Philadelphia, Harrisburg and Pittsburgh branch of the Philadelphia & Reading connecting the Lebanon Valley branch at Harrisburg with the Western Maryland at Shippensburg, Pa. An article on the traffic conditions necessitating this change and also descriptive of the design, etc., appeared on page 869 of the November 19, 1920, issue of the *Railway Age*.

The new bridge replaces the original single track 23-span wrought-iron, deck truss bridge built in 1890-1891 by Coffrod & Saylor, its total weight being 5,551,000 lb. The pier masonry of double track was built by Nolan Brothers, Reading, Pa. The original truss spans were 149 ft. 4 in. center to center of end pins, 24 ft. 9 in. center to center of upper and lower chords, and 9 ft. 9 in. center to center, provision having been made for a third truss for double tracking although this was never constructed.

New Structure Has 46 Arches

Bridge No. 8, as the river bridge is designated, will be a double-track, reinforced concrete structure, 3,507 ft. 9 in. long and consists of 46 semi-circular arches with a clear span of 66 ft., and a width between railing panels of 31 ft. 6 in. The bridge, which is constructed on the existing alinement and grade, is 54.65 ft. above water level at the eastern pier and 79.15 ft. at the western pier with a gradient of 0.7 ft. per 100 ft. The old piers were encased in concrete and were 152 ft. 6 in. center to center, the encasement being not less than 18 in., giving a thickness at the springing line of 11 ft. 6 in. These old piers were built in range work from foundation to coping of Clearfield County sand stone laid with cement.



Method of Supporting Upper Chord of Old Trusses to Allow Placing of Centers

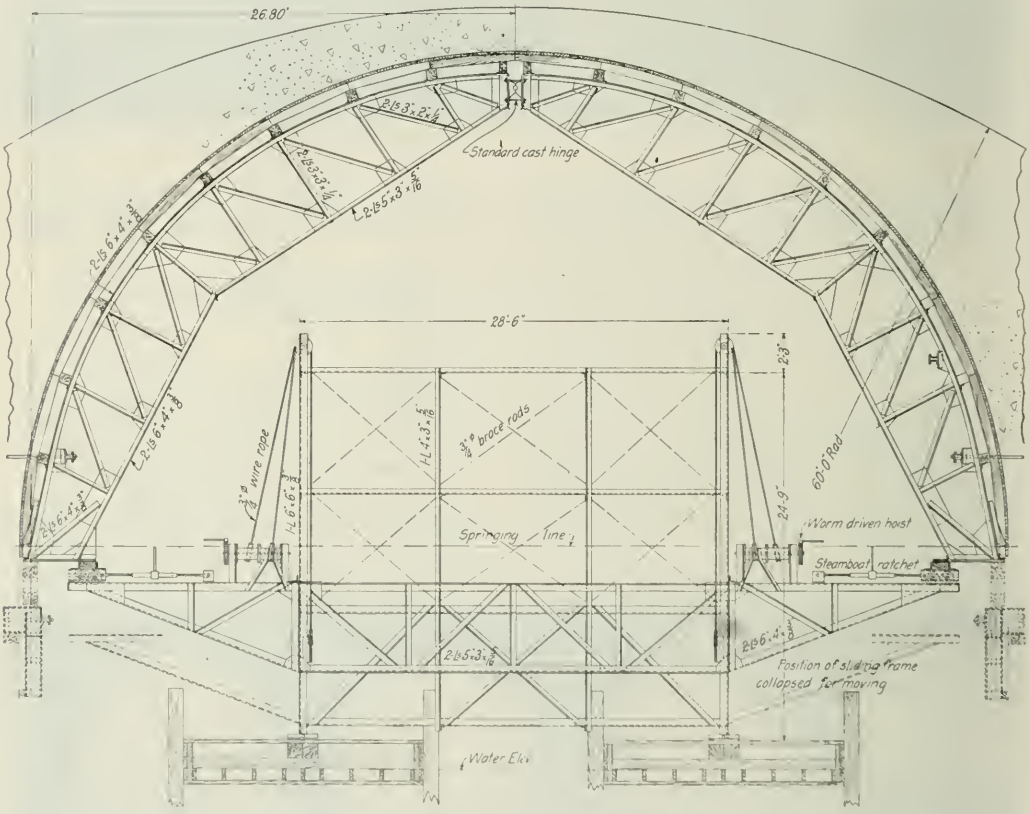
The encasement is thoroughly reinforced and anchored to

the old masonry by means of bolts 3 ft. 6 in. long with 4-in. by 4-in. by ¼-in. plate washers, set in the masonry about two feet. New intermediate concrete piers were constructed between the old piers, making the spans 76 ft. 9 in. center to center, with a thickness of 9 ft. at the springing line. All of the piers in the river have semi-circular noses on both ends with a batter of ½ in. per ft. on the downstream end and 1 in. on the upstream end. The sides have batters of from ½ in. to 1 in. per ft. and were constructed with six recesses on each face to carry supporting brackets for the centering. All the piers were completed for the full length with the exception of Nos. 21 and 23, the northern half of which are now under construction upwards from a point about six feet above water level.

Cofferdams of steel frames with two lines of light Lackawanna steel sheeting about 18 in. apart enclosing a puddle wall were used in constructing the foundations, the depth of water varying from 2 ft. to 8 ft. 6 in. These dams were found to be satisfactory except when fissures in the rock were encountered within the dams making unwatering difficult and requiring considerable more puddle with a layer over the surface outside the dams.

Unique System of Centering is Devised

In order to eliminate falsework, the use of which would have been necessary in the 46 spans at two separate periods,



A Cross Section of the Arch Rib Traveler

Old Trusses Continued in Service During Construction

The springing line of the new arches is 40 ft. below the base of rail and 12 ft. below the tops of the old piers, enabling the contractor to build for the full length and height without interference from the old trusses. Above the springing line the work was divided into two sections, the southern half being constructed with traffic on the old trusses.

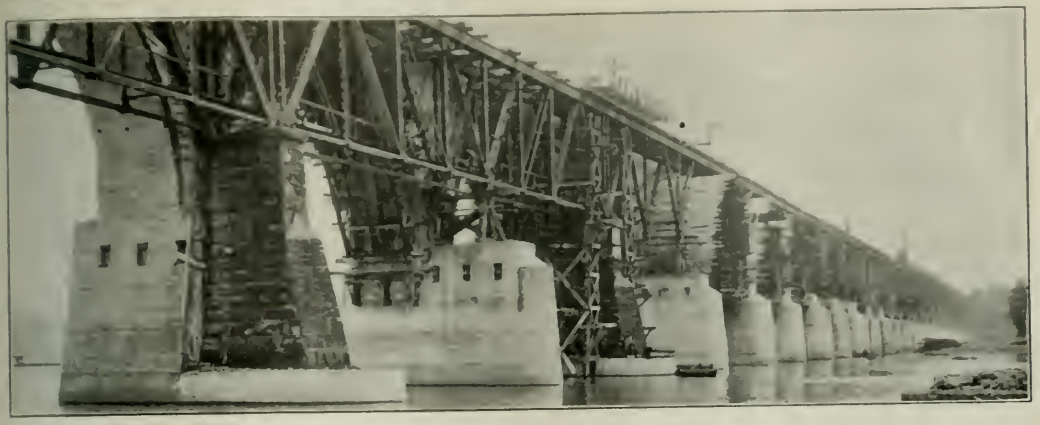
The majority of the old piers were built upon bed rock, in some cases upon gravel overlying the rock. All of the new piers with the encasement of the old were built upon rock with the exception of about ten piers located about midway of the structure.

With all but two spans over water, 10 sets of steel centers made by the Blaw-Knox Company were provided for the arch ring construction. These consisted of three steel arch ribs hinged at the crown and resting on steel brackets set in recesses in the piers, of which there were three in each half of each pier. These centers with the lagging intact were moved from span to span by means of a pontoon traveller constructed and furnished by the same company. The traveller was built of steel and rested on a pontoon of three decked scows built by the masonry contractor. The scows were about 16 ft. wide, 60 ft. long and shallow on account of the depth of water.

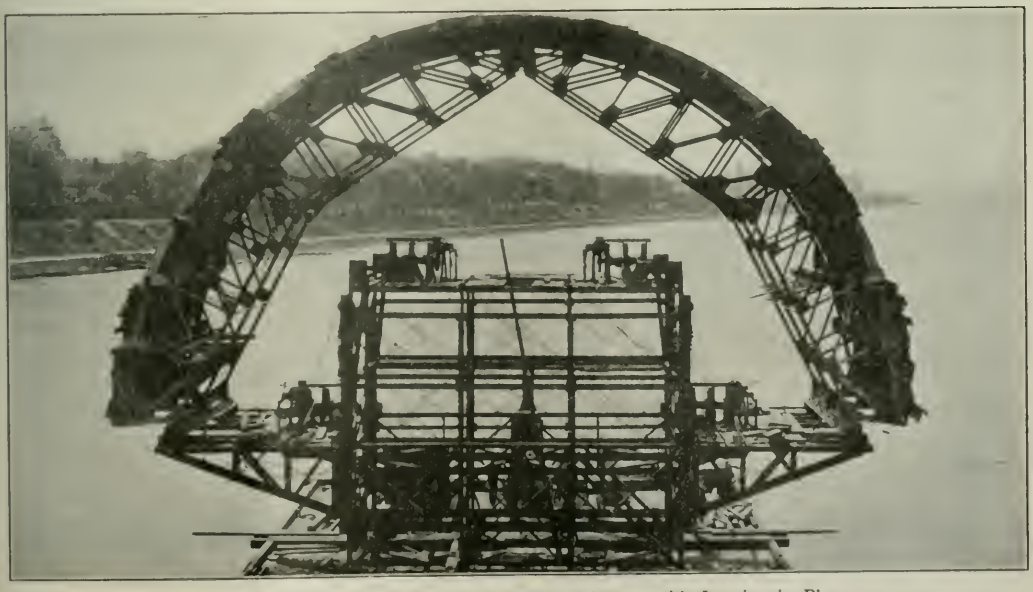
Since there were 44 arches over water in the construction of which it was intended to use 10 centers necessitating about 88 moves, the bridge being constructed in two sec-

tions, it was necessary to devise some method whereby the centers could be raised or lowered on the pontoon to overcome the difference in elevation between arches. The maximum difference in elevation between extremes was about 24 ft. This was accomplished by constructing the traveller so that one section of the steel framework could be raised or lowered on a fixed section made a part of the pontoon, while to cover the maximum difference in elevation, additions were made to the fixed section as required. The movement of this sliding or movable section was controlled by a series of hand power, worm-driven, drum hoists. The center itself rested upon two hand-controlled "roller" type bearings which are moved in or out from the center line of the framework upon a steel section made a part of the upper or sliding section and cantilevered out beyond it on two opposite sides as shown in the illustrations. The clearance of the framework, and thus the center when in position for raising or lowering is about three feet, at the spring line. This arrangement for handling the centers was entirely satisfactory and was found to be a material factor in the saving of time and expense.

The concrete was moved from mixing plants situated on either side of the river by means of a 24-in. gage track built upon 6-in. by 10-in. timbers spaced between the ties and extending sufficiently to give a side clearance of 9 ft. 6 in. from center to center of tracks on the north side of the bridge with passing sidings at both terminals. The train consisted of side dump cars with a 3-ton gasoline engine. Construction was started at both ends of the bridge, spans 20 to 30 being the final location of the centers for the first half section.



Showing a Number of Stages of the Construction



Adjustable Traveler Used to Place the Steel Centers with Lagging in Place

The contract for the removal of the old truss spans was

awarded to the contractor constructing the new bridge. At the time of this writing considerable work has been accomplished in connection with the dismantling, together with the resumption of work on the north half of the new structure. After traffic was transferred to the finished southern half of the new bridge, the old structure was vacated and turned over to the contractor for dismantling.

Floor System of Old Trusses Used for Construction Track

In order to provide means of moving the concrete from the plant on the west side of the river to the location of the centers left in place between Piers 20 to 30, it was decided to make use of the floor of the existing trusses to carry the narrow gage construction track. Trestle bents were constructed on the intermediate piers supporting the center post and the diagonal members on either side of the pier were reinforced with timber compression members. In this way the span of the top chord was reduced sufficiently to permit the removal of the balance of the truss, and resulted in sufficient clearance to permit the shifting of the steel centers to their position under the north half of the new work. When the centers were placed in position and to the proper elevation for the arch ring concrete, the end posts and temporary diagonal members were replaced by batter bents supporting the top chord on the centers. This provided an open and clear space for pouring the umbrella section, when supports were again rearranged, making use of the concrete in the umbrella, after which the other sections of the arch ring were completed.

The pouring of the arch ring will be followed in order by the spandrel walls, waterproofing, protection coat and dry stone packing, until all arches from No. 20 westward are completed. The removal of the upper chord and deck of the old truss will follow in order, after which work will be started on dismantling the old bridge and the construction of the new from Pier No. 20 eastward.

The concrete in the structure is a 1-2-4 mixture with 1½-in. stone for foundations, neat work, arch ring, spandrel walls, center wall copings and railing posts, with ⅜-in. graded stone for railing panels, with some imbedded stone in piers to springing line. The sand being used is crushed silica rock principally from Mt. Holly, Pa., and the stone is lime stone rock from nearby quarries.

The waterproofing is two layers of asphalt saturated fabric protected with a 2½-in. course of concrete reinforced with electrically welded wire cloth 4-in. by 4-in. mesh, No. 12 gage, and fibrous cement in all joints. All overhead wires are removed and placed in a 4 multiple terra cotta duct in the coping on both sides of the bridge with hand holes located at every third pier.

The following are the approximate quantities in the finished bridge:

Excavation	7,000 cu. yd.
Concrete	45,500 cu. yd.
Piles	35,000 lin. ft
Reinforcement	1,300,000 lb.
Waterproofing	153,000 sq. ft
Wire cloth	130,000 sq. ft
Terra cotta conduit	7,000 lin. ft.

The structure was designed by and is now being constructed under the direction of the engineering department of the Philadelphia & Reading, Samuel T. Wagner, chief engineer, Clark Dillenbeck, assistant chief engineer and P. S. Baker, engineer of bridges and buildings. The field work is in charge of the writer until recently associated with Edwin Chamberlain, assistant engineer, now deceased. The contractors on the work are the James McGraw Company, Philadelphia, Pa., T. L. Eyre, Philadelphia, to whom the foundation excavation was sublet and the Minwax Company, New York, for the water-proofing.

New Haven Valuation Report Issued

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION on November 28 made public its tentative valuation report in which the common carrier property used by the New York, New Haven & Hartford and its leased lines is given a "final value" of $382,797,066, or at the rate of $194,000 per mile of line, as of June 30, 1915. The property which is given this valuation covers 1,966 miles of main line (4,405 miles of all tracks), including 751 miles of main track, or 1,800 miles of all tracks, of lines leased by the New Haven, valued at $121,927,724, and 35 miles of main line (90 miles of all tracks) owned by the New Haven but leased to the Central New England and the Boston & Maine, valued at $3,251,800. The final value of the common carrier property wholly owned and used by the New Haven is given as $260,869,342, or $208,000 per mile of line. The total outstanding capitalization of the New Haven was $373,861,350, of which $157,117,900 was stock and $216,743,450 was funded debt. This capitalization covers the New Haven's investment in its leased lines, but not their entire capitalization. It also covers $227,399,330 of investments in the securities of other companies having a book value of $227,399,330, the actual value of which, the commission's report says, is not known. It also covers investments in miscellaneous physical property not included in the commission's valuation, but stated on the books of the carrier as $5,357,414 and 5,851 acres of non-carrier lands of which with the structures, the commission gives the "present value" as $13,466,313. The company's investment in road and equipment as stated on its books was $195,505,843, which the commission readjusts to $193,417,165. The cost of reproduction new of the common carrier property owned is reported as $244,901,542 and of the property used as $338,856,084, while the cost of reproduction less depreciation is given as $187,528,798 for the property owned by the company and $263,759,083 for the property used.

The original cost to date of the common carrier property cannot be obtained, the report says, for the reason that the records are not obtainable.

The final values of the leased properties are given as follows:

Old Colony	$49,002,100
Boston & Providence (Mass.)	16,250,000
Boston & Providence (R. I.)	5,000,000
Providence, Warren & Bristol	2,000,000
Harlem River & Portchester	30,245,500
Holyoke & Westfield	1,750,000
Providence & Worcester	10,350,000
Chatham	150,000
Norwich & Worcester	6,250,000
City of New York	620,000
Ireland Real Estate Co.	286,000
Private Parties	18,887
West End	5,237

The book value of the investments in securities of other companies is classified as follows:

Boston & Maine	$29,017,616
Railroads	86,027,209
Trolley Lines, Water Transportation and public utilities	98,230,766
Other investments	14,133,737

In an appendix the report gives a voluminous history of the development of the physical property of the New Haven system and of its complicated corporate financing, as well as an analysis of its investments in other companies.

APPLES EXPORTED from Halifax, Nova Scotia, up to the end of September amounted to a total of 134,839 barrels, all going to the markets of the United Kingdom. This is double the shipments for the same period a year ago. This year the early apple crops in both the United States and western Canada were good, so that the Nova Scotian exporters only had the English market to supply

Do American Railways Lack the Selling Sense?

Great Possibilities Lie Dormant Which Would Make for Greater Business and Good Will

By a Former Railroad Man

I REMEMBER reading, when I was a small boy, about a surly passenger on a Pennsylvania train, who when the conductor asked him for his ticket, threw the pasteboard on the floor. The story made a great impression on my mind. For the suave and self-possessed conductor said not a word, but stooped, picked up the ticket, punched it and laid it back on the floor.

I was a schoolboy then, and I rode on the Pennsylvania every day. We schoolboys were pretty noisy on the train. But there was one particular train on which we were careful to behave pretty well. The conductor was a stately and white-haired man who stood very straight in his irreproachable uniform, and who wore gold eyeglasses. I used to wonder if he was the one in the story who had met rowdyism with the retort courteous. It was a pleasant feeling to travel with a man of that kind. Some of the conductors used to have more or less trouble with the boys. But the stately old gentleman never did. He carried what we would today call an atmosphere.

There has been a great deal of that kind of influence exerted in America by railroad men. Some of them have been railroad presidents, and some of them of much humbler rank. Some have dominated their communities, and could carry their ward—and others have made more enemies than you could dream of.

Spreading a Trail of Discontent

One day this summer I was riding up in the anthracite regions, where there are many branch lines and changes of cars. The coach in which I traveled was crowded with travelers to the summer resorts. They were just plain folks—not the kind that ride in parlor cars and feel sure of themselves—and they were anxious, disturbed, confused by a transfer we had just made. The conductor was working his way down the aisle. He hadn't gone far until he was scolding an old couple and telling them they were on the wrong train. He grabbed at passengers' tickets as if he suspected the holders of having stolen them. He gave instructions and answered questions in a tone that could not be more than half understood. He spread a broad trail of unrest and discontent.

As I watched him, I told myself that the whole trouble with the railroads is that they lack selling sense—that they've forgotten the cordial courtesy of former days. I told myself that you can buy tickets from them if you insist, but that they're the only people in this whole United States who had no idea of how to *sell*.

There's much talk about railroad ailments, and whether it be right or wrong, a mountain of ill feeling and complaints. These range all the way from the average politician's patter to the grouch a passenger gets in the dining car. And most of them are groundless. We all know American railroads are managed extremely well. Under great difficulties they have functioned and are still functioning steadily as the arteries of our national life. I am inclined to think that their one big failure is the one I've just been telling about.

Is This Typical?

To be sure, the conductor wasn't supposed to be a salesman, and you buy your tickets before you get on the train. But isn't that begging the question? Customers must come back again. I wonder sometimes what the railroads would do if we all quit coming back?

I live in a prosperous suburb of a big town. A weary little woman walked up to the ticket window the other day while I was there.

"What will a ticket to Denver cost?" she asked.

"Denver, Colorado?" replied the clerk, as if correcting her.

She was a timid little thing. "Why, I s'pose so," she began. And then the words began to fall over one another as she told her tale. "My sister's sick," she said breathlessly, "and they sent me a telegram, an' I run right over here quick, an'—"

He turned to a tariff with an air of boredom, jotted down a figure or two, turned halfway back to his desk, called over his shoulder "Fifty-one dollars and eighty cents," and sat down again to the work he had in hand.

She stood reluctant. She wondered whether he meant one way or round trip—how long it would take her to get there and when the train would start. She wondered if she dared to inquire. But the atmosphere was too forbidding—the little woman turned slowly away.

The Banker as a Salesman

The other morning my wife and I were walking up the street when we met the president of our new suburban bank. He was all attention and smiles.

"I certainly do wish you'd come down to the bank and call on us now and then," he said to my wife. "Come in when you're down our way. I counted 63 ladies in our bank the other morning between nine-thirty and twelve—we're getting to be almost as much a social center as the Cash-and-Carry store."

And we all laughed, for the line of limousines that draws up every morning at the Cash-and-Carry store is a rather notable array.

So the banker was trying to sell his banking facilities to my wife. He wanted to see if he could be as successful at it as the grocery man. And he has opened 500 new checking accounts in 60 days.

I wonder why the railroads don't quit scolding, and solicit business that way? For the banker didn't go at it at all like a railroad man—he didn't tell my wife about his capital stock; he didn't grumble about the small dividends banks are able to earn; he didn't once mention the unfairness of the banking laws, or the trouble he is having with labor, or how heavy his taxes are—he just tried to sell her the fact that they were human folks and would be glad to have her stop in. And his banking rooms are cozy. For the ladies there are desks and easy chairs. There is an air of cordial hospitality, and everything is quiet and clean.

Experience in a City Ticket Office

I went into one of the big city ticket offices not long ago. The place was jammed. Customers stood at the long counter two and three deep. I wondered how long I would have to wait. Ticket clerks were hurrying up and down, jostling one another, spending long periods at the telephone, asking one another where to find this or that—a handsome picture of how it should not be done. There was no quiet, no desks, no easy chairs for the customer who had the

temerity to sit. And yet I am told that it is one of the best appointed ticket offices in the world. They employ 16 high-class ticket clerks during the summer rush—men who know routes and rates and are technically equipped to issue you a ticket round the world. The demands upon them are intricate. *But I understand that not one of them ever has heard a talk or read a book on salesmanship.*

I asked one of the road's officials why it was. Here was a great opportunity to sell transportation. But nobody thought of selling anything. I told him that no merchant would dare treat cash customers as they were treating them. He looked at me pityingly. I told him that he was looking for trade, just like the rest of us—or at least he should be.

"And competition," I said.

That was something he could understand. "I don't think we have much," he said complacently.

I led him up a broad and boulevarded street. We went into an automobile place. A brass-buttoned servitor opened the door for us. A courteous attendant asked whom we would like to see. A great leather-covered divan invited us to sit and loaf. We sat idly lookingly at a car that was fit for a king.

"Here is your real competition," I said to the railroad man. "Here's where they're taking money away from you. Down at the big department stores they are taking still more. The shoe man, the jeweler, clothing man—all of them are busy selling goods.

"You railroad men are a decade behind the times. You should think as these merchants think, in terms of customers and sales. If they found themselves confronted with your case—the getting of all these vacation people out of town—they would know what ought to be done. I think I can see their full-page announcements, and their care to stimulate more trade, and I can see the crowds hurrying in their doors. And comfort and promptness and courtesy. People would begin to talk about what a fine thing travel is.

"Shall I open a department store?" he asked. "Job lots of tickets? With signs on the counter, 'Odds and Ends $1.98' and 'Damaged by Fire, Closing Out at Half-Price'?"

I smiled. "I'd just mix in a little selling sense," I said.

I spoke to him about the ticket clerk who had laid down his pipe to tell the old lady what the rate to Denver was. I said I thought that such things were pretty rank.

"You're picking out an exceptional case," he said. "Some of these out-of-the-way stations where we can't always be on the watch."

I smiled at him in a superior way.

"Let me tell you, old man," said I, "that was nothing less than on your own great and most splendidly run road. And it was not at an out-of-the-way station. At least one of your directors uses it regularly to commute. Pretty bad, let me say, when it's done under the official nose."

No Trained Salesmen

And I find it about the same everywhere I go. In the first place, there are no trained selling men. And if there were, there is no proper or adequate physical plant in most stations for selling tickets. There is a dingy and dusty room in which stands a ticket case. It is a crowded little room, and nine times out of ten the light is poor. The agent won't smile at you. And he won't be very polite. He will be crusty if you give him half a chance. And he will not volunteer to do, say, or help in any way if you are in a predicament. As to establishing a relationship with you for his road, or asking if you are going to want any transportation to Florida this winter, or inquiring if he can be of any help when your two girls get ready to start back to school—as to *selling* transportation—it simply isn't being done.

I hear the railroad men jump up to state exceptions. Well, there are exceptions. But they are in spite of the system and dependent on the man. But the dingy surroundings in which he is expected to work out his sales are always the same.

Think them over as your eye glances over the country. The dingy, grimy station at—What town shall we say? They are much alike. The little old wickieup station, and the little window before which you plead. It may be in the northern hills. It may be at a southern winter resort. It may be on the western plains. In Ohio, Michigan, Iowa, you meet the railways through their untrained men.

It is hard to get the right man! We all know that. We have the same difficulty in every business, no matter what it is. I remember it was in that selfsame state of Iowa that the noble-minded agent burned down the station in which he lived so that he could get the insurance on his household goods, to repay his company shortage and die an honest man. They're hard to handle, I'll agree. But can they be handled? And is any organized and adequate means to train the railways' salesmen in salesmanship being pursued? And if not, is it agreed that we are not going to sell transportation at all?

The average merchant or manufacturer succeeds only because he sells. He sells so well that he can say, usually, that his turnover is three or more times his investment per year. If he has a million-dollar plant or stock of goods, he must sell a million dollars' worth of his product every four months. I am not laying down an invariable law; but I am stating an average case.

Are the Railroads Different?

But there is not a single railroad in the United States that makes even one turnover a year. And when you talk about it to railroad men they look at you in surprise. And when you tell them about it, they say that the railroads are different. In what are they different? In that they have put selling effort behind them? The executives of a railroad, like those of a manufacturing plant, divide sharply into production and sales. The railroad man will tell you that he uses no such terms. That is true. But he has operation and traffic, which amount to the same thing.

When the government took over the railroads, the traffic man almost fell dead. His operating colleague had been waiting for that for many years. And now it looked as if his time had come—as if, like the man in the book, he would, officially speaking, die and go to his place.

It was accepted, in other words, as a fundamental fact, that the railways of this country were to be operated solely as a means to carry the maximum of goods that had to be moved. There was no question of creating traffic. There was too much of it at best. The roads no longer solicited trade. The freight solicitor who had run up and down the land taking tonnage from his competitor, but never creating an additional ton of it, was to be made extinct. The passenger solicitor, who wasn't much more useful than he, was to be called in. Most of them have now passed into the great unknown. The officials in charge found that it was a most tempting opportunity to clean house.

But are their successors a different breed? The old men dropped out for the reason that they had never been trained to *sell*. They were former clerks or rate men, grown up by seniority from the lowest ranks. Their capacity was small. They belonged to that era when there was a general passenger agent, who went about the country tacking up posters and cards; and a general ticket agent, who spent his time in trying to see that the road he represented got the big end of the split-up when the revenue came in. It was largely an atmosphere of rates and pro-rates, differentials, arbitraries and rebates, and no fit place for an executive to learn his trade.

That and one or two other considerations explain largely why the railroads today are where they are. It is a de-

batable question whether a man brought up from boyhood, perhaps, in this kind of an atmosphere, can rise to the question of how to teach the spirit of salesmanship, or inspire a body of men with the genius of how to secure the good will of large numbers of our body politic. It is pretty hard to do.

Some years ago Edward Hungerford wrote in the *Saturday Evening Post* that "The primary schools of railroading are the little red and yellow and gray station buildings that one finds up and down the steel highways of the nation, dotting big lines and small." But I venture to say that if you were going to pick out your future big transportation men the average group of station agents wouldn't interest you very much. For this school is a poor one, crowded with unprofitable tasks—shipments of live stock, telegrams, train orders, the collection of freight bills and mending the station stove. The station agent is faithful and hard-worked. But he is far from being an active selling force.

And let me quote further from Mr. Hungerford. "You find at least one of them in each town in America that thinks itself worthy to be called a town. To the railroad their importance can hardly be minimized. They are its tentacles, the high spots and the low, where it touches its territory and its patrons." Therein, I am sure you will agree with him most heartily. They are, as you might say, the dealers who handle the railroad's goods. But the goods are not always well sold. And I am arguing that these dealers should be shown how to sell.

Some years ago, Marvin Hughitt, who had been a station agent's helper himself, once upon a time, said to a recently elected governor of a western state, "Governor, I think I should be entitled to citizenship in your commonwealth."

The governor hadn't been governor very long, and I think he was flattered as the veteran railroader talked with him. "How's that?" he inquired. "I am sure we would all of us welcome you." Which of course they would not, for they were gunning, politically, for all railroad people in those days.

Mr. Hughitt drew himself up a little and looked the governor in the eye. "I have slept," he said, "on the bare ground and under the open skies in every county of the state of which you are now the head. Don't you think that should entitle me to citizenship?"

I think the governor saw the point. He was by way of being something of a pioneer himself. And a pioneer is pretty nearly a patriot. The state need fear no harm from the man who has slept on the ground and under the stars, helping to bring civilization into the wilderness. Many of our railroad men are of the Hughitt type. They have helped to make our cities and our farming communities what they are today. They feel a pride in having been a part of it all. They don't propose that any harm shall fall upon the country they have helped to form. That isn't highbrow, and it isn't altruism—it is just plain human nature, working its own will.

The railroads are in the hands of such men as these today. And it is possible that the roads are just emerging, if I mistake not, from that period of strong personal control. A new type of man will follow where Hughitt and Hill and Ripley once led. The public sees no one of commanding figure to step in when Elliott and Rea, Willard and Atterbury step down. Perhaps, before they go, now would be a good time in which to begin a new line of policy. Perhaps now, when the railroad heads no longer sleep with their engineers on the open ground, it is time for the railroads to turn to the question of salesmanship, so that they may once more come into their own.

How About Advertising?

Our civilization is getting pretty complex. We as a people are no longer pioneers. We are no longer poor. We spend money freely. The railroads cannot be prosperous so long as they do not get their share. And they are not getting it. It becomes a grave question, then, to traffic men, whether they're using all the methods of modern selling power that are available. Many are quite ready to admit that they are not. Selling power, as an example, includes salesmanship-in-print. The railroads are not keeping pace with the manufacturers in the use of this necessary and effective merchandising weapon. Advertisers, in 1921, spent $95,439,236 in nationally circulated periodicals. This included seven of the larger farm papers. But the railroads used only $169,926, and over one-fourth of that was from the three Canadian lines. In newspapers, from the nature of the case, the roads spent more. But much of it was spent with one eye upon the editorial attitude, which is a mistaken point of view.

I doubt if many railroad men have posted themselves fully about the problems and the richly generous results that come from the correct use of the printed page. It presents to the business man a mighty forum wherein to preach profitably the merits of his wares. But in it the voice of the railroad man is seldom heard.

It has become, the railroad people agree, a recognized fact that the day when the merchant could stand in his shop door and solicit trade is past. They agree that the town crier is a municipal institution now wholly of the past. But they haven't learned that the seller must communicate with the buyer in larger ways.

So, if you will examine the difficult case of the railroads, you will find, largely, I believe, because of this, the old question of turnover is constantly bobbing up. It is sure to appear in any business where selling forces are not properly applied. It is, in a way, the old question of grass blades. Is there no practical answer to the belief that two grass blades can be fostered where only one once grew? The whole history of the railroads refutes such a claim. Of course they can be made to grow. But should the railroads continue to wait until some one shows them how?

Short on Good Will

One of the great returns from advertising is good will. The railroads are certainly short on that commodity. And yet there need be no dearth of it. Business men know all about how to secure it, and they use the way to its doors over and over again. The name of it is selling. And in order that selling may be *en masse*, and that big results may be secured in a minimum of time, it takes money, and science, and experience, and brains.

My friend Mr. M. has a plant that is capable of producing a million tons a year. He could put on a night shift and make it two million if only—But his men tell him the public is using all of it that they know how to use. Here not good will, but increased earnings are at stake. There's no market, Mr. M. is told, for his product's greater use. No need to make two millions when only half of it will be absorbed. How like the condition of every railroad in the country today. What road wouldn't be able to handle twice the passenger traffic if it were offered them?

Offered is right. Some of them print a few dodgers to advertise a dollar excursion and think they've done a wonderful thing. Have they talked transportation and sold transportation, until they have stirred the body politic—until the idea of travel occurs constantly in pleasing colors to you and me? I am told it cannot be done. That we know when we want to ship freight and when we want to ride, and that nothing will move us beyond that.

But that is fallacious, and dangerous too. Of course it can be done. The formula therefor is scientifically exact. The manufacturer who decides to put up his volume 20 per cent finds there are three things to do. First he must see that his product is right—that it meets the public idea of

what the public wants. Then he must clean up his organization. He must key every man in it up to the new conception of how much goods he must sell. And then he looks over his finances and costs. He puts down so much for materials, and so much for labor, and so much for selling. And then he goes to it.

A Selling Goal

He will spend for advertising, we will say, on an average of 2½ per cent. Not, mind you, to hold his volume where it is, but to attain a goal—an increase of 10, 20, 30 per cent. Do the railroads need to do something like this? Have any of them ever been known to set for themselves a selling goal? To the business man who does it, the results come so surely that, barring unreasonable folly, he invariably builds up his sales.

Should the railroads do it? Only five American roads so much as used a line of advertising space in the 36 principal national magazines last year. Only a dozen or so spent so much as a hundred thousand dollars in advertising last year. And that for the most part isn't real advertising. I know a road that conducts a great suburban service—three hundred suburban trains in and out of their terminal every day—three magnificent groups of suburban communities to be served. Three high-class experts work incessantly in checking up schedules of these trains. From this checking, the customary pocket time cards for commuters are produced. They are an expensive thing, these little cards. But they are no more advertising than the coal by which the trains are run. Yet their cost is charged that way, along with a hundred other things. There is no way to avoid that. But I mention it because for real advertising, such as influences and creates, there is very little money spent indeed.

The railroad dollar for 1921 was spent as follows: Wages, 46.9 cents; materials and supplies, 26.3 cents; locomotive fuel, 9.5 cents; taxes, 5 cents; rentals and hire of equipment, 1.4 cents, leaving 10.9 cents for fixed charges, improvements, and surplus, if any such there be. For the first six months of 1922 the latter grew to 13.4 cents. Suppose a cent of it was set aside for selling costs—on some of the roads it would amount to several million dollars a year. Suppose it were cut to five mills. That would, in proportion, be less than a tenth of what the average manufacturer pays. And suppose when that were done, the whole thing were spent for actual selling work—that timetable folders and charity donations and subscriptions to the Firemen's Ball were not counted in, and that this great arterial life passage were left open to really vital blood currents. Can some railroad executive get a fleeting vision of what would occur?

"Un-Management"

It is quite likely that there is the very trouble with the whole thing. It is strange indeed how hard it is to make them see. I remember that A. D. Lasker, long before he had tasted the futility of showing the nation how to operate its ships, once said that he knew of no business in which there was so much *un-management* as in the railways. You will note that he didn't say *mis-management*. And I think he was thinking largely of their failure from the standpoint of sales effort. For with all the admirable qualities of our railroad management there is without doubt a spirit of dazed *un-management* in that particular that overlooks a lot of things which the average business man could not overlook for a moment without courting disaster.

How can we get rid of it? It is a strangely tenacious legacy from the days when railroading was more or less backed up by the doubled fist. That is all past long ago. But it seems to have left an inability to do what some one has aptly termed the ability to "think advertisingly," with the result that the roads are failing lamentably properly to advertise their own good qualities. And that is possibly the one big trouble with the roads today. Passenger traffic could be increased, freight movements controlled, general good will, above all else, could be sought and found if only the roads could understand.

The late war taught us that we have to accept great principles daily where formerly a smaller and more restricted view would carry us along. That is true in railroading. There is a tendency to speak of a railroad career today as if it were something that a man should shun. Among railroad executives there is a very general tendency to say that it is a pity that a good man should find himself cast as a railroad man—that the big days for such a career are past. It is doubtful if our best blood—the young men from our universities—are joining the railroad ranks. But it is all based on fallacy. Never in the history of the world has a great nation depended so wholly for its life blood upon one specific thing. Rome could live without her provinces, Greece without her culture, Italy without the Renaissance, and Britain without her far-flung dominions, far more easily than America could do without these arteries of her life.

There will come a big man some day who will see the need of making and binding these arterial interests closer to us—who will stir within us a pride in them that will carry with it justice, and that will interest us in making a greater and broader use of them. He will see from the selling standpoint. He will show us how they are a friendly part of our existence, and how we can put our money into the greater use of them. He will sell us the transportation that nowadays we have to work so hard to persuade the railroads to let us buy.

Utilities' Commissioners' Views on Valuation*

THE COMMITTEE believes that the carriers are endeavoring to establish valuations far in excess of what can fairly be considered reasonable; that the valuation cases—each involving, as it does, millions of dollars—are of very great importance to the country as a whole, as undoubtedly the valuation fixed by the Interstate Commerce Commission will be used as a basis in measuring the rates to be charged.

The Chicago, Rock Island & Pacific case is the first of the large systems to be heard, and it is of the utmost importance that all the elements of value should be well considered and weighed, and ample preparation had so that the principles and rules adopted in the case shall be right, when followed in the other cases so far as applicable. In this Rock Island case, begun and only partially heard, there is an example of what co-ordinated effort will do, as made by the state commissions in the Central Western group. That group was organized for the direct purpose of co-operating in the protection of the public's interests in the case of the Chicago, Rock Island & Pacific and its associated lines. Several conferences were held, and a committee of three commissioners and of engineers was appointed to direct the work and furnish mutual aid and counsel. When the hearing came on at Washington on May 25, this group was represented by counsel, engineers, and other experts, and it is believed that the appearance of these representatives of the states was a very valuable service in that hearing, and will be of more value when we get the other states to join in the further hearing, now only scarcely begun. The states should

* The report of the committee on valuation of the National Association of Railway and Utilities Commissioners at the convention at Detroit on November 14-17, F. P. Woodruff of Iowa, chairman. Other papers and reports of this convention appeared in the *Railway Age* of November 25, page 1001.

be grouped in the different sections and the work together should be done at once, and no effort or expense within the means of the several state commissions should be spared in this work. The tentative value served in accordance with the law should be thoroughly studied by the engineers and statisticians of the various commissions and comparisons of data made—all to be used as a test of the efficiency and correctness of the tentative valuation of such railroad, and evidence should be prepared that could be used as rebuttal to the evidence introduced by the railroads to substantiate the exaggerated claims made in their protest. By the united efforts facts could be produced and shown in each group or for each railroad, that will show the unreliability of many of the facts shown in the evidence given by the carriers in their attempt to get a high valuation.

What may be called the first part of the work of the commission, so far as steam railroad carriers are concerned, has been well advanced toward completion. The accumulation of data from which tentative valuations may be prepared has been substantially completed for the entire country; and the preparation and service of tentative valuations are now going forward with fair rapidity. By September 1, 1922, the number of tentative valuations served upon carriers had reached 258, covering in the aggregate 360 railroad properties, with 37,048 miles of road and 52,045 of track. While any estimate now made may ultimately be found to fall wide of the mark, it would seem probable that tentative valuations covering all the properties of rail carriers may be completed and served within the next two years.

We find that the second part of the commission's work has as yet scarcely begun. The commission has made three so-called final valuations in contested cases: Texas Midland, Winston-Salem Southbound, and Kansas City Southern. While these valuations, however, were styled final valuations, they were incomplete in that they contained no statement of final value.

The third part of the commission's valuation work is the accumulation of data as to changes in condition or value of carrier properties, and the making of appropriate resulting changes in the valuations covering such properties. This is a most important part of the original scheme of the Valuation Act. What the commission is doing towards it is therefore of great interest. The carriers are required to keep a record by valuation sections of changes in their roadway property through additions or retirement. This record is to show the units of property added or retired and the cost, and the carriers are required to tabulate and file this information with the commission "when directed." The carriers are also required to file "annually" statements showing for each valuation section "the charges for property placed in operation and the credits for property retired from operation that have affected the investment in road and equipment."

The committee concluded in its report that the state commissions have a triple duty to perform:

First, in the application of the guiding principles whereby the underlying facts upon which the values rest were to be determined, errors may have been made. To the extent that such errors have been made, and that the state commissions in their respective states are able by checking the work to demonstrate this, protests should be filed, and evidence offered thereon, so that the errors may be verified by the commission and corrected.

Second, with respect to unit prices applied, and other matters involving the exercise of expert opinion, the carriers are seeking to break down the work of the commission. We have explained that the commission's expert forces are now largely disbanded. The reduction of appropriations as the field work approached completion has made this unavoidable. It is the opinion of this committee that the state commissions should not allow unjust criticism of the commission's work to be made without meeting it to the extent that their limited means will enable them to lend support to it by the evidence of their own experts.

Third, and finally, as the values which have been placed upon carrier properties are reviewed by the commission, the state commissions can, by continuing their efforts, serve the public interest by protesting against the inclusion of elements which appear to be unjust and which unduly swell those values.

The committee recommended that the president-elect appoint a special committee of technical men to make a thorough study of the rules and methods of the I. C. C. for keeping its valuations current; and that the states traversed by the lines of the Chicago, Rock Island & Pacific contribute $500 to a common fund for the payment of assistance in presenting the evidence in writing and printing briefs in that case.

A resolution was adopted by the convention that the states having membership in this association be placed in six groups as follows:

(1) The New England states.

(2) New York, New Jersey, Maryland, West Virginia, Ohio, Indiana, Michigan and Illinois.

(3) The states south of the Potomac and east of the Mississippi, not including Louisiana.

(4) Wisconsin, Minnesota, the Dakotas, Montana, Idaho and Washington.

(5) Iowa, Montana, Kansas, Nebraska, Colorado, Wyoming, Utah, Nevada and Oregon.

(6) Arkansas, Louisiana, Oklahoma, Texas, New Mexico, Arizona and California.

(Second) That the Valuation Committee of the Association be composed of one member of each of the above named groups. The appointment of the committee to be made by the president-elect of the National Association during the current session of the convention.

(Third) That one commissioner from each state be appointed to form a group committee on valuation to conduct the group activities, the chairman of such group committee to be a member of the National Committee on Valuation.

(Fourth) That within 30 days from date of appointment, the chairman of each group call a conference of engineers and commissioners and adopt specific plans for immediate work and make a report of the proceedings of said conference to the chairman of the Valuation Committee of the National Association.

(Fifth) That each group chairman shall report at least once each month the program of the group activities to the chairman of the National Association.

The new Valuation Committee is: Chairman, F. P. Woodruff, Iowa; (group 1) T. W. D. Worthen, New Hampshire; (group 2) E. D. Lewis, West Virginia; (group 3) A. G. Patterson, Alabama; (group 4) L. E. Gettle, Wisconsin; (group 5) H. G. Taylor, Nebraska; (group 6) H. W. Brundige, California.

Loyalty Begets Loyalty.—This is the theme of a letter in the Southern Pacific Bulletin from F. J. Bailey, of Houston, Tex., a conductor. The most striking development in this direction during the past few years, says Mr. Bailey, has been the remarkable change in the attitude of the switchmen as a class. Switchmen were formerly ready, apparently, at anytime, to respond to a call to throw up their jobs, and their strike activities made tremendous difficulties for the railroads. "Now all is changed. They are among the most contented and loyal employees on the railroad. This change in attitude dates from the inauguration of the eight-hour day, and the switchmen's acceptance of it in letter and in spirit. If the train service brotherhoods had been equally loyal to the spirit of this reform and not disloyal to the eight-hour principle through the abnormal mileage still made by some, on the claim of seniority, it would have been better for the railroads, the men and the public."

Perishable Freight Service Specialty of R. F. & P.

Miles per Train Hour in 1921 Averaged 19.2. Car Miles per Day 44.2. Earned Three Times Standard Return

The Richmond, Fredericksburg & Potomac operates only 117 miles of line. In reality, it consists of only a single freight district. On this district, however, it is doing some things in railway operation that are of more than ordinary interest. This is evidenced by the fact that in 1921 its train speed or miles per train hour averaged 19.2 as against the country's average of 11.5. Its car miles per day averaged 44.2. Because of the interesting manner in which locomotives are doubled over the division daily and the method followed in returning crews to their home terminal at the end of their day's work, the road succeeded in arriving at a figure of 88.9 locomotive miles per locomotive day, which figure was nearly double that for the railroads of the country as a whole.

Earned Nearly Three Times Its Standard Return

The Richmond, Fredericksburg & Potomac is a consistent money maker; so much so, that Moody's Analyses of Railroad Investments gives all its bonds a rating of Aaa, and its stock a rating of Aa. During federal control the property earned nearly three times its standard return.

The road derives its importance because it is a connecting link between the southeastern lines and the lines to the north. It operates a double track railroad of high standards between Richmond and Washington, in addition to which it owns and operates Potomac Yard, one of the most important freight facilities in the country. The company is controlled by six railroads. This control is carried out through ownership by the Richmond-Washington Company of a majority of the "voting" common stock. The Richmond-Washington Company, in turn, is owned equally by the Pennsylvania Railroad, the Baltimore & Ohio, the Atlantic Coast Line, the Southern, the Seaboard Air Line and the Chesapeake & Ohio. The Atlantic Coast Line and the Seaboard Air Line connect with the Richmond, Fredericksburg & Potomac at Richmond, and from there north the business moves as R. F. & P. business.

Interchange of through freight traffic is made with the Pennsylvania and Baltimore & Ohio at Potomac Yard and of passenger traffic with the same roads at Washington.

The Southern railway connects with the Richmond, Fredericksburg & Potomac just south of Alexandria, and has trackage rights over the R. F. & P. to the Potomac river. The Southern's interest is primarily its interest as a tenant line at Potomac Yard. The Chesapeake & Ohio is in a similar position; it uses the Southern Railway from Orange north and reaches the Richmond, Fredericksburg & Potomac in that manner. Some business also is interchanged at Doswell. The Pennsylvania and Baltimore & Ohio are also interested because of their being tenants at Potomac Yard.

Bearing in mind that the Richmond, Fredericksburg & Potomac consists of a double track line between Richmond and Washington, at the northern end of which link is the important interchange freight facility at Potomac Yard, one must, in studying the operations of this road, divide the analysis into two parts; one relating to the main line operations and one to those at Potomac Yard. Attention will be paid first to the main line operations.

A Prosperous Appearing Property

In riding over the Richmond, Fredericksburg & Potomac one is impressed by the prosperous appearance of the property as a whole. The line is laid with 100 lb. rail and is well maintained. It is ballasted with a high grade of washed gravel. The ballast is lined, the banks and ditches are clean-cut and neat, the road is block-signalled with upper quadrant, three-position signals, and stations and signs are well painted and clean in appearance. White oak ties are standard. Tie plates are used on curves, although there are also 60 miles of tangent track laid to the high standard of tie plates on oak ties. The road, incidentally, at the present time is relaying most of its rail. In 1921 it laid about 60 miles and the program called for new rail entirely at the end of about three years.

It is rather difficult to speak of the Richmond, Fredericksburg & Potomac without referring at length to its ballast. This road was one of the first to use washed gravel ballast and because of its having accessible at Fredericksburg an unusually hard gravel, the use of this ballast has been

extremely successful; so much so, that it has attracted much attention from other railroads. The illustrations which appear in this article give a clear idea of the manner in which the gravel is used and the good roadbed which it produces.

As to signals, attention should be paid to the interlocking towers which exist at nearly every passing track. The railroad further than that makes full use of its signals, and it relies on these signals as much as possible in operation. The tendency is to use messages instead of train orders wherever possible and, in addition, the road has installed take-siding signals which have proved of material assistance to efficient operation. The road uses telephone dispatching and in general follows the modern idea of using the telephone to the largest possible extent.

Road's Specialty Is Perishables

Naturally, under the conditions, the traffic of the line is rather diversified. In 1921 products of agriculture made up 23.5 per cent; products of animals, 1.35 per cent; products of mines, 17.4 per cent; products of forests, 24.2 per cent; manufacturers and miscellaneous, 2.52 per cent. The road's specialty is perishables. In 1921, of the total tonnage carried 12.3 per cent was citrous fruits and other fresh fruits; 6.3 per cent potatoes and other fresh vegetables. Cotton supplies only 0.4 per cent of the total tonnage but the Richmond, Fredericksburg & Potomac like most of the roads to the south of it, depends upon the welfare of the cotton industry considerably more than its proportion of tonnage in cotton would indicate. The reason is that cotton represents such a large proportion of the purchasing power of the South.

The citrous fruit traffic is naturally northbound. The manufactured products represent the southbound traffic and the volume of these manufactured products depends upon the prosperity of the Southeast. The relative importance of perishable freight to the R. F. & P. was indicated rather pointedly in 1921. The road in that year had the largest perishable movement in its history, but the lowest of all other freight for some years. The perishable freight, in other words, saved the day. The road expects that the 1922 movement will even exceed the record-breaking figures for 1921 of 49,361 cars.

The large volume of perishable traffic explains in no small measure the average of 19.2 miles per train hour. The Atlantic Coast Line and the Seaboard Air Line are two of the leading carriers of perishable commodities in the United States because they serve the agricultural communities of Florida and the vegetable and fruit area extending northward along the Atlantic seaboard. These commodities move in fast trains to Richmond. They are turned over to the Richmond, Fredericksburg & Potomac at Acca, the yard adjacent to the Richmond passenger terminal, and they move over the Richmond, Fredericksburg & Potomac at a speed but slightly slower than that of the passenger trains. After their arrival at Potomac Yard they are forwarded under fast schedules to the consuming centers of Baltimore, Philadelphia, New York, Boston, etc. The standard freight locomotives are Pacifics with a tractive effort of from 26,000 lb to 47,320 lb. Because of the high speeds maintained, the average train load is not high. In 1921 the road had a net tons per train, including revenue and non-revenue freight, of 339. This average, incidentally was lowered considerably by the small amount of southbound business which was carried during the year. The average train load in 1920 was 445.

Freight Movement Not Materially Slower Than Passenger

The statement was made above that freight movement over the Richmond, Fredericksburg & Potomac is not materially slower than that of the passenger trains. Of the 34 scheduled passenger trains 20 are operated in connection with the Atlantic Coast Line and Seaboard Air Line. In other words, the statement compares the operation of freight trains with an important and fast passenger service. From Acca to Potomac Yard is 104 miles. The average time of freight trains for this distance is usually kept below five hours. The average crew time, including terminal time at Acca and Potomac Yard is usually kept at approximately 7 hours. June, 1921, was an exceptionally good month in this respect. During that month the crews averaged 6 hr. 28 min.; divided terminal time at Acca, 1 hr. 10 min.; road time, 4 hr. 15 min; at Potomac Yard, 53 min.

The railroad has also compiled some interesting figures relative to the average time which a car of perishable freight spends on Richmond, Fredericksburg & Potomac rails. In May, 1921, which presumably is an average month, this figure was 6 hr. 39 min. from the time the car was turned over to the Richmond, Fredericksburg & Potomac at Acca to the time it was delivered at Potomac Yard. The average included 1 hr. 7 min., representing the time from delivery to the Richmond, Fredericksburg & Potomac at Acca until it left that yard. The road time from Acca to the interlocking tower at Potomac Yard was 4 hr. 34 min. The movement to the receiving yard at Potomac Yard required 58 additional minutes. An analysis of this kind should also include the time the cars were kept in Potomac Yard before delivery to the Pennsylvania or Baltimore & Ohio, but because of the large number of cars held for reconsignment at the yard, as will be explained below, this particular figure would not prove of great value in this connection.

The road does, of course, make some distinction as between perishable and other freight, the perishable in all cases being given preferred attention, but the policy as a whole is to move all trains at high speed. The road, in other words, does not draw the sharp line of demarcation between perishable or manifest and ordinary drag freight, as is the rule on most roads. This is made possible on account of the small proportion of slow freight handled.

These conditions permit the road to avail itself of a number of interesting and unusual methods of operation. For one thing, it is the policy to have all the crew layovers at the home terminal. All of the road's freight crews have Richmond as their home terminal. A crew is called for a run from Richmond to Potomac Yard and after a short layover at the latter point returns to Richmond. The locomotives are pooled. This method has been found very successful and there can be no question but that it is much more satisfactory from the point of view of the crews who have the advantage of being able to get back to the home terminal at the end of their day's work, and besides having their sleep at home are not subjected to additional expenses because of being away from home.

To secure an average of 19.2 miles per train hour requires a high grade roadbed and the use of every facility to keep the trains in motion. These points have been brought out above because mention has been made of the high grade double track line, the completeness of the interlocking system and the use of automatic signals. As a matter of fact, the road normally succeeds in operating a freight train from Richmond to Potomac Yard going into a passing track but once. The automatic signals and interlocking facilitate this movement and keep the time required at a minimum.

Potomac Yard

Potomac Yard is in Virginia and lies about four and one-half miles south of Washington. It was formerly operated by the Washington Southern which was merged with the R. F. & P. in 1920. As already noted, there are five railroads that operate jointly into the terminal; namely, the R. F. & P., the Chesapeake & Ohio, the Southern, the Pennsylvania Railroad and the Baltimore & Ohio. Potomac Yard is not new. It has been described in this paper and elsewhere but not a great deal has been said concerning the

manner of its operation. The following description and details have been supplied by an R. F. & P. officer.

The Facilities at Potomac Yard

Potomac Yard has about 8.5 miles of trackage. There are two receiving yards, one northbound and one southbound. The northbound receiving yard consists of 11 tracks, including two tracks for re-icing purposes which can accommodate 32 cars each, or a total set-up of 64 cars for re-icing at one time. The 11 receiving tracks range in length from 38 to 72 cars each, or a total capacity of 509 cars. The southbound receiving yard consists of eight tracks ranging from 55 to 65 cars in length with a total capacity of 498 cars.

There are two classification yards, the northbound yard consisting of 30 tracks ranging in length from 21 to 60 cars each, or a total capacity of 1,142 cars, while the southbound classification yard consists of 27 tracks ranging in length from 19 to 54 cars each, or a total capacity of 1,053 cars.

R. F. & P. Track is Well Maintained

Both yards are hump yards, the northbound yard being equipped with a system of electric switch control. In addition to the above, there are two advance yards, one northbound and one southbound, consisting of three tracks each, which are used to take care of the overflow from the classification tracks. It frequently occurs that trains are dispatched from the advance yards, although the greater number are made up and dispatched from the classification tracks, providing power is available. At present work is in progress looking to the expansion of the northbound classification yard by the addition of several tracks and the lengthening of existing tracks.

To care for bad-order cars there are two yards for light repairs and one yard for heavy repairs, having a total of 13 tracks with a standing capacity of 327 cars. There is also what is termed a bulk transfer yard consisting of six tracks in groups of two tracks each having a total capacity of 61 cars, the loading track elevated about six inches above the track on which the empty cars are placed for receiving the loads. Potomac Yard gateway being the interchange point between the southern and northern lines, a great number of cars are received from the south which will not pass the clearances of the northern connections. This yard is used for such transfer exclusively.

The L.C.L. transfer consists of a platform about 1,100 ft. in length. There are eight tracks, four on either side of the platform, with a total capacity of 158 cars placed in working position. An average of 120 loads of L.C.L. freight is handled daily, classified into 45 classifications northbound and 48 classifications southbound, an imaginary line about the center of the platform dividing the northbound from the southbound business.

The icing facilities are modern. The ice house has a capacity of about 130 tons per day with a storage capacity of 12,000 tons. The factory is adjacent to the platform where the re-icing service is performed, the ice being stored as near as possible on a level with the incline from the ice factory to a point near the top of the cars where it is automatically lowered to a platform on a level with the top of the cars.

The enginehouse facilities consist of a 12-stall enginehouse with an 80-ft. turntable, three ash pit tracks and a power plant for heating and lighting purposes. An additional turntable is now being installed. One of the tenant lines, the Southern Railway, does not use the enginehouse facilities, as it has its own in Alexandria.

The stock pen facilities consist of 32 livestock pens used for the unloading, feeding, watering and resting of livestock in transit. New and modern pens are now under construction in a new location. No deliveries are made at the yard of any class of freight, except company materials.

Method of Operation

Upon arrival of trains from the tenant lines the waybills are delivered to the yardmaster for booking and record purposes, after which they are passed through the hands of the agent and the revision bureau, an auxiliary department to

the general auditor's office, for the purpose of revising the waybills for routes, rates and revenue. This operation means considerable delay to the movement of trains from the receiving yard to the classification yard; but, during the interval in which the waybills are being revised it is the custom to re-ice, inspect and make running repairs while trains are in the receiving yard. Upon the return of the waybills to the yardmaster the trains are considered as being delivered to connections. They are then passed over the humps into the various classification tracks.

Classifications and Scheduled Trains—Northbound

There are 17 classifications made for the Pennsylvania Railroad and six for the Baltimore & Ohio. Perishable freight via the P. R. R. is classified to move in solid trains for New York, Philadelphia, Baltimore, New England points and points west and north of Harrisburg, Pa. Two com- consisting of citrus and the other, high class perishable. modity classifications are made for New York alone, one In the case of the Baltimore & Ohio, perishable classifications are made for New York, Philadelphia and Baltimore, and one for the west.

As a rule, there is a total of eight northbound perishable trains leaving Potomac Yard daily between the hours of midnight and 7:00 a. m. Three of these trains are for New York and Jersey City via the P. R. R., known as MD-2 (symbol), scheduled to leave Potomac Yard at 4:30 a. m. for next morning market delivery. This train is limited to 45 cars.

Symbol train MD-6 has cars for New England points only and is scheduled to leave Potomac Yard at 6:00 a. m., with a limit of 45 cars, for second morning market delivery. It frequently occurs that these trains are run in sections.

Symbol train MD-18 has cars for Baltimore, Md., and is scheduled to leave Potomac Yard at 7:15 a. m., daily. It also has perishable freight for Harrisburg, Pa., and points north and west, making second day's delivery for points such as Pittsburgh, Erie, Buffalo, Syracuse, Rochester, etc., and also points in the New England territory via the Wilkes-Barre gateway.

B. & O. train No. 92 scheduled to leave Potomac Yard at 3:00 a. m., handles perishable and high class freight for Philadelphia and intermediate points, as well as perishable and high class freight for points on the Philadelphia & Reading and the Jersey Central.

B. & O. No. 97 scheduled to leave at 3:15 a. m., daily moves perishable and high class freight for points west via the B. & O.

Classifications and Scheduled Trains—Southbound

Southbound trains are handled in exactly the same manner as northbound insofar as waybills, inspection, etc., are concerned, excepting that in the case of trains arriving southbound with cars to be re-iced, it is necessary to handle such cars from the southward classification yard to the re-icing station which is located in the northbound yard.

The Richmond, Fredericksburg & Potomac is the connecting line with the Atlantic Coast Line and Seaboard Air Line, and necessarily at Potomac Yard separate classifications are made for those lines to avoid switching at the Richmond terminal.

The Richmond, Fredericksburg & Potomac has three arranged schedules from Potomac Yard, 3:30 a. m., 5:15 p. m. and 11:30 p. m. The latter train handles perishable and high class freight loaded in Baltimore and Washington for delivery in Richmond the following morning, and perishable and high class freight for connections at Richmond. By reason of the heavy northbound movement the R. F. & P. at all times has sufficient power to keep the southbound freight moving currently.

The Southern Railway has four scheduled trains from Potomac Yard daily. Train No. 85, scheduled to leave at 9:00 a. m., handles perishable and high class freight for points between Potomac Yard and Charlotte and west of Asheville, N. C. Train No. 53 scheduled to leave at 11:00 p. m., daily, has perishable and high class freight for Columbia, S. C., Atlanta, Ga., and points beyond. The other two are local connections, one scheduled to leave at 1:30 a.m., and the other at 1:30 p. m., daily, and both handling cars for points between Potomac Yard and Charlottesville on the main line, and branch lines.

The Chesapeake & Ohio has one scheduled train from Potomac Yard, daily, at 11:30 p. m., covering perishable and high class freight for Charlottesville, Va., and points west.

70,920 Cars of Perishables in 1921

During the year 1921 a total of 70,920 cars of perishables, exclusive of livestock, passed through Potomac Yard for

Airplane View of Broad Street Station, Richmond, Va.

northern and western markets. Of this number, 6,440 cars were peaches from the southern peach territory. Of these 2,321 were destined to New York City, 919 to Boston and other New England points, 670 to Philadelphia, 668 to Jersey City, while the balance moved to miscellaneous destinations. Of the 2,321 cars destined to New York City, only 64 failed to make the market for which they were intended, due to engine and equipment failures as well as improper classification, etc.; at the same time, only 20 cars of the above number were received late from southern connections.

The daily movement of cars handled through Potomac Yard averages 3,000, although a maximum of 4,600 cars has been reached. There are 21 crews in service, normally, to handle the business, which number is increased with the heavy movement.

During the peach season all records so far as re-icing and dispatching cars are concerned were broken. On July 5, 1921, 490 cars were re-iced within a 24-hour period, consuming 1,132,566 lb. of ice in the performance; this, of course, included cars held at Potomac Yard for reconsignment or diversion purposes.

One of Potomac Yard's Problems Is Reconsignment and Diversion

The privilege has been extended to the Produce Dealers' Association, through permission from the Interstate Commerce Commission, to make this a holding yard for reconsignment and diversion of perishable freight. The result is that cars are billed from the south as well as the north to Potomac Yard with a privilege of reconsigning them to a point beyond for the purposes of controlling or meeting the

various markets. It is stated by representatives of the Produce Dealers' Association that without this privelege the markets would be glutted causing a loss of considerable perishable freight. This terminal, considered the principal gateway between the north and the south, has within recent years been claimed by the perishable produce dealers to be the most important distributing point in the eastern country. It frequently occurs during the perishable season that as many as 250 to 400 cars of perishable freight of all kinds are held at this point for reconsignment or diversion orders. The usual practice is for the produce dealers to have local representatives in Washington, D. C., or Alexandria, Va., who are advised concerning the perishable freight moving or which is held at Potomac Yard for inspection. These representatives report details to the various produce dealers in the large cities and the cars are sold by market transaction from the Yard.

R. F. & P. Supervision and Statistics

The Richmond, Fredericksburg & Potomac is a small road, so supervision of its operations does not become as difficult a factor as might be the case on a larger and more complicated system. This does not prevent the road, however, from issuing each month some very adequate statistics of earnings and operations. The monthly report gives complete details of operating income and expenses by primary accounts with comparisons with the same month last year and accumulated for the present year. Similarly a detailed analysis is shown of train and car miles, locomotive miles,

Another View of Broad Street Station, Richmond, Showing the Platforms and Loop Tracks

etc., locomotive hours, the latter under 12 items; tons of coal per locomotive mile and locomotive hour, etc.

One notices on the railroad an unusual spirit of loyalty. The section labor, to take one example, is practically entirely native labor. The officers and men seem to be extremely proud of their railroad and seem to be helping in every way to make it show the best results possible.

The Richmond shops are old and considerable money will have to be spent in the near future on both buildings and equipment. This, however, the road has in mind and a site has been chosen for an entirely new installation of engine terminal and shop facilities. The equipment is maintained in good order. The high percentage of superheated steam locomotives is especially noticeable.

The earning of nearly three times its standard return is the Richmond, Fredericksburg & Potomac's record during the period of federal control. This was the largest percentage of standard return earned we believe by any property operated by the government. The reason for the favorable operating results was due primarily to its strategic position as the link between the north and south carriers which has been emphasized in the foregoing paragraphs. The road carried supplies to the southern camps and it was used as part of the routing to the embarkation port at Norfolk and Newport News. Further than that it had a large troop movement both to and from camps and to the transports at Hampton Roads. In view of the earnings during the period of federal control, the road naturally did not decide to accept the guaranty, for the six months of the guaranty period and it earned $500,000 over what its guaranty would have been.

Since the return to private control, the road has not been doing quite so well because of the falling off in business. This is shown by the figures of net railway operating income. The standard return for the property, including the Washington Southern, which was merged in 1920, was $1,604,204. In 1918 the road had a net railway operating income, including as before the Washington Southern, of $4,761,617. In 1919 it earned $4,639,053. In 1920 the net railway operating income had fallen to $1,766,089 and the figure for 1921 fell still further to $1,275,457.

The total tons of revenue freight carried in 1921 were 3,363,411. The revenue ton-miles were 298,386,813, a decrease of 24 per cent from 1920. The average haul was 90.5 miles, this being nearly the entire length of the road. An interesting feature of the operating figures is, as is to be expected from the conditions, the large percentage of traffic received from connections. In 1921 the road handled 3,337,874 tons of freight of which it originated 564,150 tons and received from connections 2,773,724 tons. The number of tons freight carried per mile of road totaled 2,837,846.

In addition to its freight traffic, the Richmond, Fredericksburg & Potomac carries a sizeable passenger business. For the year 1921 the number of passengers carried totaled 1,443,924, the passenger miles totaling 98,498,452, which was a decrease of 23 per cent from 1920. The passenger business is primarily that received from connecting lines. In other words, the road handles between Washington and Richmond the through trains of the Atlantic Coast Line and the Seaboard Air Line. The Richmond passenger terminal, known as Broad Street Station, is owned jointly by the Richmond, Fredericksburg & Potomac and the Atlantic Coast Line. The Seaboard Air Line trains, however, use the Main Street Station in another part of the city.

One of the interesting features of the Richmond terminal is the fact that all of its tracks are on loops. Every train, whether northbound or southbound, goes through the station in the same direction and the arrangement of the facilities is such that the road succeeds in having its locomotives spend but 8 minutes on the average after being uncoupled before reaching the roundhouse. A complete description of the Broad Street Station will be found in the *Railway Age* of February 14, 1919, page 401.

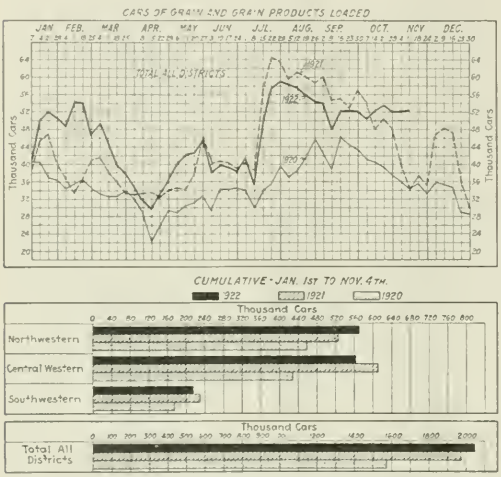
The outstanding funded debt of the Richmond, Fredericksburg & Potomac amounts to $8,491,800 including $1,311,800 of equipment notes. The stock totals $9,417,400, including $1,316,900, "voting" common stock; $481,100, guaranteed 7 per cent stock; $19,300, guaranteed 6 per cent stock; $3,600,100, non-voting dividend obligations and $4,000,000, 6 per cent, non-voting, common stock. The Richmond-Washington Company which is jointly controlled by six roads owns $947,200 of the voting common stock. The 6 per cent, non-voting common stock is entitled to receive the same dividends as may be declared upon the common voting stock but not over 6 per cent. In 1920 and 1921 all of the shares except this issue received 9 per cent.

A large number of the shares of the road are owned by the state of Virginia. It is interesting in this connection to learn that the state of Virginia is using the proceeds on some of this stock in the sinking fund of one of its bond issues. In other words, the bonds are being carried and retired by means of ownership of the stock.

Freight Car Loading

WASHINGTON, D. C.

REVENUE freight car loading increased during the week ended November 18 to 969,094 cars, the preceding week having included the partial holidays on election day and armistice day. This was also an increase as compared with the corresponding week of last year of 178,731 cars and as compared with the corresponding week of 1920 of 79,956 cars. Increases as compared with 1920 were shown in the loading of grain and grain products, livestock, forest products, merchandise and miscellaneous freight and in all



districts except the Pocahontas and Southwestern. As compared with last year increases were shown in all classes of commodities except l.c.l. merchandise. The largest increase as compared with last year was in miscellaneous freight, of which 77,384 cars more were loaded. Coal loading was the largest it has been since the strike, 205,024, an increase as compared with last year of 36,586 cars, but 11,298 cars less than the corresponding week of 1920. This represents the fourth consecutive week of loading in excess of 1920.

The freight car shortage showed a further reduction during the period from November 8 to 15 to 158,236, while for the same period there were surpluses amounting to 4,945. The shortage included 82,533 box cars and 42,827 coal cars.

Labor Board Approves Piece Work

THE PIECE-WORK SYSTEM as established in the Elkhart, Ind., locomotive shops of the New York Central some time ago has been definitely approved by the Railroad Labor Board in a decision handed down last week because the installation of this system "was in accordance with the expressed wishes of a majority of the employees at that point, and in conformity with the agreement between the duly authorized representatives." The testimony in this case showed that a substantial majority of the Elkhart shop employees expressed a desire to work under a piece-work system. Following conferences between the vice-president of that road and the authorized representatives of the unions, it was agreed that the matter should be placed before the employees in an open meeting and the decision whether or not to establish piece-work be decided in this manner. This meeting was held but representatives of the employees later took the position that the Elkhart shopmen had been coerced by officers of the company. As a result it was proposed to take a secret ballot at Elkhart again placing the proposition before the men. This proposal was turned down by the system shop-craft leaders and the matter came before the Railroad Labor Board.

The Board's decision holds that the evidence submitted in the case did not prove coercion and that inasmuch as the agreement was made between the duly authorized representatives of the men and the carriers the result of this agreement should stand.

A seventeen page dissenting opinion was appended to the decision by A. O. Wharton and Albert Phillips, members of the labor group on the Board, who reiterated a great deal of the testimony introduced in this case by the employees, drawing the conclusion that "the outstanding indisputable facts are that the method adopted by the carrier were not in accord with any recognized principle of justice and fair play, both of which it is assumed were the guarantees accruing to railroad employees under the provisions of the Transportation Act and the decisions of the Labor Board."

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, NOVEMBER 18, 1922

Compiled by the Car Service Division of the American Railway Association.

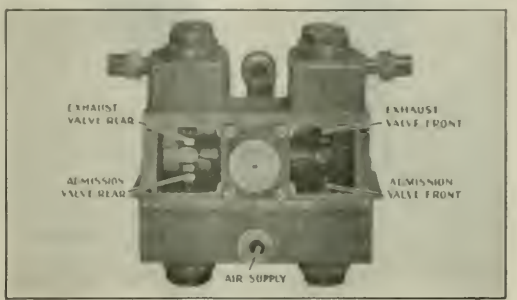
All-Service Locomotive Power Reverse Gear

New Non-Creeping Power Reverse Gear Equally Adapted to Passenger, Freight or Switching Service

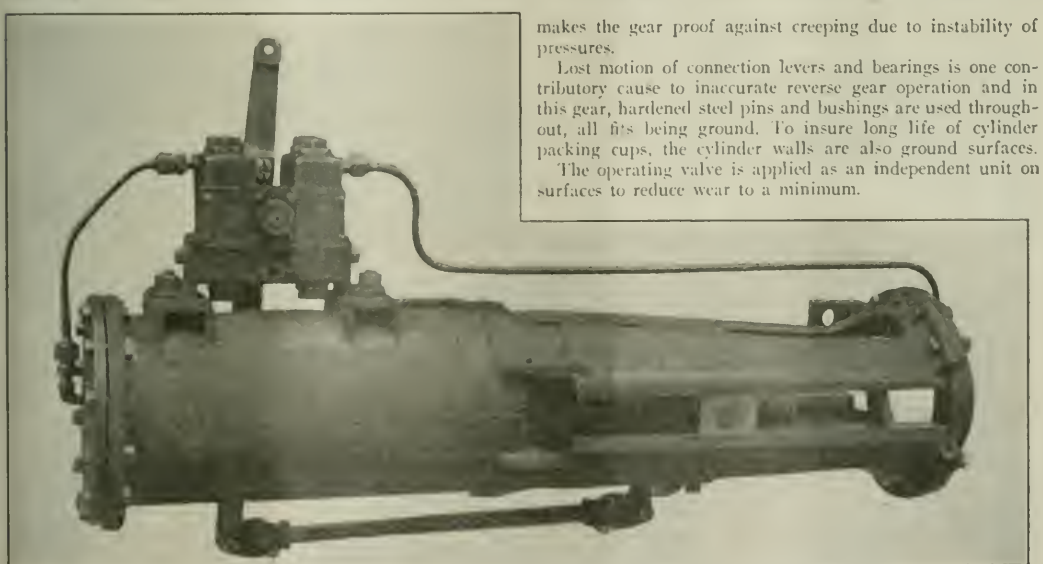
THE ALL-SERVICE power reverse gear is the result of developments extending over a period of about four years, during which the designers, the Transportation Devices Corporation, Indianapolis, Ind., carried on an extensive investigation covering all phases of the reverse gear problem. The concrete result has been the incorporation in this gear of certain features, the value of which has been amply demonstrated.

Desirable features of construction and operation claimed for the All-Service reverse gear include equal adaptability to passenger, freight or switching service, interchangeability with the majority of reverse gears now in service, and positive prevention of creeping. Fine adjustment, air cushioning is provided for passenger and freight service, and quick reverse, easy handling for switching service. In addition, stuffing boxes and glands are eliminated, and the operating valve is readily removable for repairs without removing the entire gear from the locomotive. Many of the parts subject to wear can be obtained from standard stock always carried by the railroads. The provisions made for lubrication are such that in this respect the gears require no attention from the enginemen.

To obtain the above features, the body of the gear is made an integral casting, embodying the cylinder and guides, one



The Operating Valve Is an Independent Unit with Micrometer Adjustments for the Four Poppet Valves



All-Service Power Reverse Gear with Cylinder and Guides on Integral Casting

of the gear. This permits employing the same methods and materials in successful use for years in packing air brake cylinders; cylinder leakage is reduced to the minimum; and there is no possibility of air leaking from one pressure chamber to the other. Furthermore, the absence of any piston rod or stuffing box as a contributory cause for leakage makes the gear proof against creeping due to instability of pressures.

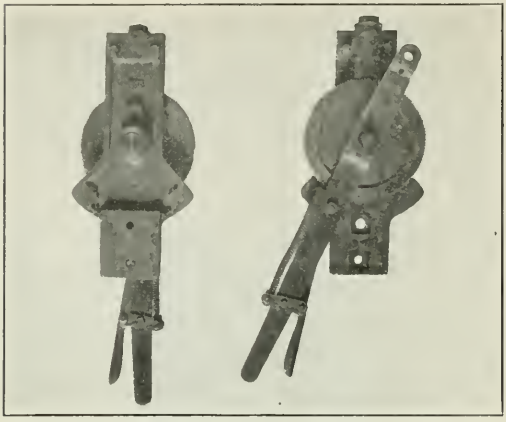
Lost motion of connection levers and bearings is one contributory cause to inaccurate reverse gear operation and in this gear, hardened steel pins and bushings are used throughout, all fits being ground. To insure long life of cylinder packing cups, the cylinder walls are also ground surfaces.

The operating valve is applied as an independent unit on surfaces to reduce wear to a minimum.

cylinder head and bolted joint being thus eliminated. Any load on the gear is supported between the points of attachment to the locomotive, and the cylinder itself takes no load other than internal pressure. A floating cylinder, moving within the main body cylinder, and a fixed piston head are provided, thus eliminating the usual piston rod, crosshead, stuffing box and packing. By this construction the packing rings, or sealing medium, are subjected to air pressure in one direction only for each of the air pressure chambers

The operating valve is applied as an independent unit on the gear, performing the same function as the triple valve with respect to the brake cylinder or reservoir. The four-poppet valve principle is employed to give long life to valves and allow separate adjustments of exhausts and admissions for each of the two air chambers. Micrometer adjustments are provided for each poppet valve to allow of independent clearance, or no clearance at all, and to make the gear sensitive to any adjustments that may be required, either because

of the gear moving itself, or being moved by the engineman. It is apparent from the illustrations that this valve can be readily removed and taken to a bench for repairs, another



Reverse Lever with Fine Tooth Circular Quadrant

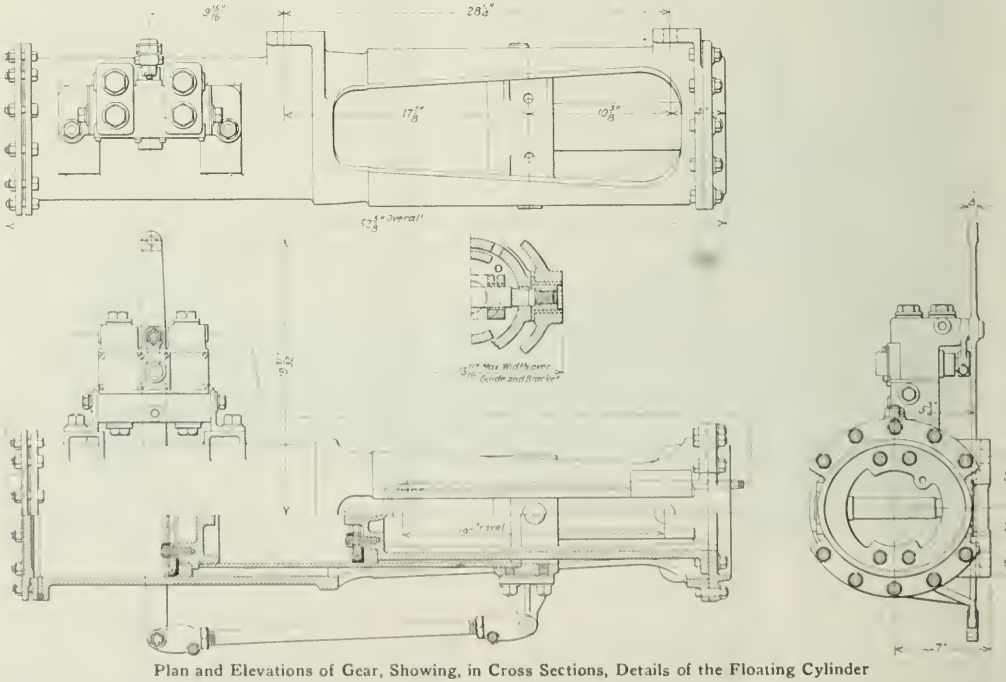
valve being applied in the meantime without disturbing the gear or unduly delaying the locomotive.

Some unusual features are included in the reverse lever and especially the quadrant. A circular quadrant without stops is used to insure full travel of the level. The wear of the quadrant teeth with corresponding lost motion of the lever is compensated for in revolving a new set of teeth to the operating arc of the lever. V-notched teeth are used to make available a large number of adjustments. The notches and quadrant latch are so designed that the reverse lever can be placed in any cut-off position desired. The fineness of adjustment is determined by the fineness of the engineman's movement of the lever.

The valve and lever construction is such that the speed of the reverse gear crosshead is proportionally the same as the reverse lever, preventing "slamming" in reversing and "surging" when the slack is taken up. The pull on the reverse lever need be no greater than can be exerted by one hand, sufficient to open the valves, the power of the gear moving the lever. The air consumption is reduced to that required to fill the increment of volume from which the gear is adjusted. This reverse gear can be readily applied to locomotives with either high or low-hung reach rods, and it is especially designed to work with automatic control of cut-off.

Continuous service for three years without attention of any kind is the record established by one installation of All-Service gear. This gear is in service on high-speed Atlantic type passenger locomotives where convenience of adjustment and stability of cut-off are particularly essential. Several gears have been in use a shorter period and as yet have required no adjustments.

THE FERRYBOAT "BUFFALO," a new vessel of the Delaware, Lackawanna & Western, was launched on November 22 at Elizabethport, N. J. The new vessel is 221 feet long with a carrying capacity of 1,000 passengers; and is to be used between New York and Hoboken. The Philadelphia & Reading has just ordered two new ferryboats for use between Phila-



Plan and Elevations of Gear, Showing, in Cross Sections, Details of the Floating Cylinder

delphia, Pa., and Camden, N. J., where, within the last two years, the movement of vehicles by ferry has increased about 50 per cent. The new boats will be built by Pusey & Jones, Wilmington, Del., and will be 200 feet long by 55 feet wide.

The "Veri-Direct" Method of Handling L.C.L. Freight

To Prevent Wrong Loading, Wrong Way-Billing and Wrong Mailing of Way-Bills—Economy Proved

THE VERI DIRECT METHOD of loading freight from freight houses into cars, which is here described has been in use in the Ohio Region of the Erie Railroad for over a year, and it has reduced the errors and losses due to wrong loading about 70 per cent as compared with former conditions. A very complete checking for errors is regularly made and the system is such that every bill of lading and every way bill must be accounted for. This method was introduced early in 1921 and is now in use at nine stations; and C. G. Johnson, superintendent of station service, has given us a description of it substantially as follows:

From the arrival of a shipment of goods on the consignor's dray to the sending out of the way bill seven blank forms are required. These are:

1. Shipping order (transcript of bill of lading) on which are entered the "flag number" and location number of the car into which the freight is to be loaded; the veri-check progressive number, the rate, the extension and the waybill number.

2. A "veri-check ballot" which is filled out with a description of the car: the flag and location number, the veri-check number, the number of pieces in shipment, the number of pieces on the truck, the checker's number; also the stower's signature and a rubber stamp impression (put on by him) of the flag number.

3. Freight house veri-check record No. 1, one for each day. This shows the arbitrary progressive numbers of the ballots used.

4. Freight house veri-check record No. 2; one each day, showing the veri-check progressive number and the number of pieces of freight on each bill of lading. The difference between record No. 1 and record No. 2 is that No. 1 merely shows what ballots are made, while No. 2 shows, under the head of each car, what ballots were sent to that car.

5. Original waybill, one sheet 8½ in. x 11 in., for each shipment originating at the station.

6. Loading schedule (layout or spot sheet). See illustration. Copies of this are used by the flag clerk, the typist, the way-bill mailing clerk, and all concerned.

7. Combination invoice and veri-check record, used in the main office. This is sent out with the waybills; it is a waybill of waybills.

When the Shipper Comes

When the bills of lading are tendered, the representative of the shipper is sent to the central flagging office, where the bills of lading are routed, and the shipping order separated from the other portions. The clerk here stamps on the shipping order the flag number which indicates the car into which the freight is to be loaded, and the spot number showing where the car is to be found. (Permanent spot or location boards are placed opposite each line of cars, and flagboards within the cars).

The flag clerk has a master flag book showing all the stations on the Erie Railroad, in alphabetical arrangement, and those on connecting lines moving via Erie junctions, together with the flag number and symbol letter; and the shipping orders are "flagged" with this book as his guide.

The clerk places a number on each shipping order, by the use of a consecutive numbering machine, commencing with No. 1 on the first day of every week. This number is used as an identification of the shipment throughout. A record is made of the numbers of all shipping orders so that the shipper can be quickly identified in case a shipping order should be lost. For example: "Progressive Numbers 599 to 604—The May Company." This done, the bills of lading are returned to the shipper's representative and by him tendered to the receiving clerk for the handling of the goods. The check clerk receiving the freight arranges the shipping order portions in alphabetical order as to the destination stations, for convenient checking.

The Check Clerk, the Caller and the Stowman

A caller calls the consignee, the destination marks, the commodity, the case or bale number, or other identification marks shown on the package, and the checker checks against the shipping order.

The freight is placed on a truck and the checker calls the flag and location number, which has been written on the shipping order and the caller writes these numbers on the top of one of the packages. The two numbers are separated by a horizontal line, the flag number being shown above and the spot or location below; example:

$$\frac{66}{503}$$

The veri-check ballot, prepared by the check clerk, shows the flag number and the location number of the car; the veri-check progressive number, the number of pieces in the shipment and on that particular truck, and the checker's number. This ballot is handed to the caller, who deposits it in a receptacle on the side of the truck; and the truck is shoved to the opposite side of the freight house by the caller, and there dropped. Motor tractor or hand power then moves the truck to a point near the location board shown.

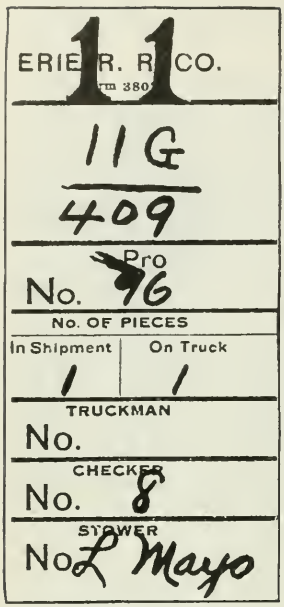
Regular stowmen are assigned to each line of cars, one stowman stowing four or five cars. These stowmen are responsible for the opening of the cars at the beginning of the day's business, the placing of the gang planks, the sweeping of the car floors, the pulling of the nails from the sides and floors of the cars, and the general preparation of cars for the receipt of freight. They are required to place the flag boards inside the car at the right of the door opposite the entrance to the car, in plain view from the platform.

No truckmen or other employes, except the stowmen, are allowed to enter the car except upon the authority of the foreman or assistant foreman.

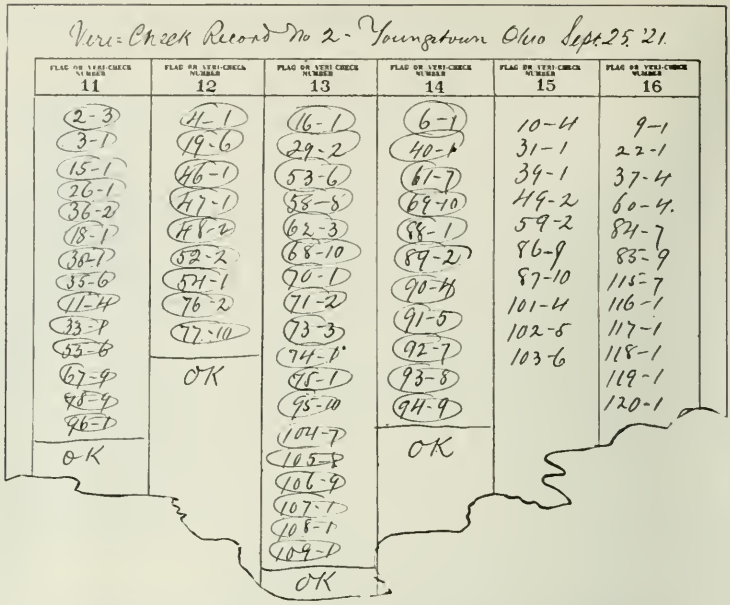
The stowman stows all of the freight. He notes the flag number as shown on one of the packages and moves the freight into the car according to this number. He then removes the veri-check ballot from the receptacle on the truck and compares the flag number on the ballot with the flag number on the flag board within the car. He then counts the number of pieces on the truck and compares that number with the number shown on the ballot. If the number of pieces on the truck is right the stowman places the ballot in the small pocket of his jacket and unloads the freight, observing the destination marks on the packages.

If he has any doubt about the loading he can refer to a book which he carries in his pocket. This book shows all the stations on the Erie Railroad for which freight may be loaded into a particular car. The cars are arranged in this book according to the flag number, in consecutive order. All destinations which may be loaded into a particular car are shown under the flag number of that car, in alphabetical arrangement.

Symbol letters are used for places off the Erie Railroad.



A Veri-Check Ballot



Copy of a Portion of Veri-Check Record No. 2, for September 25, 1921

This record is made in pencil on sheets 16 in. wide and 14 in. in height. This engraving shows a half of one sheet, reduced about two-thirds in width and height. The checking, indicated by a circle around the number, has been completed to the end of the fourth column, as shown by the "O. K."

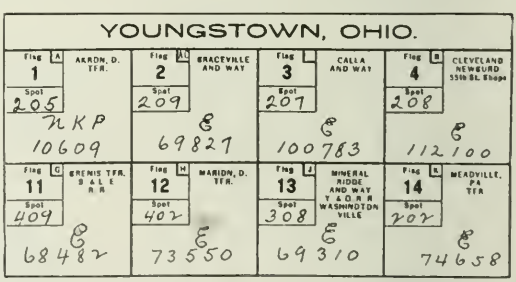
*Cancelled.

The above is a reproduction of half (the right-hand half) of Veri-Check Record No. 1. It is reduced about one-half in width and height. Parentheses indicate that the number has been used this day. Assuming that 120 is the last number used, the clerk makes a notation on the sheet to that effect. It may be assumed that "37" represents a shipment to be held over until the next day.

In the next column is a transcript of an invoice covering 14 way bills. The invoice sheet is 5½ in. wide and has 44 numbered lines, being 17 in. in height. The carbon copy, retained in the sending office is on a wider sheet having three additional columns for (a) the veri-check number (b) the number of packages and (c) initial of the clerk who makes final check of ballots against way bills.



Part of a Daily Loading Schedule—Reduced

A daily loading Schedule for 40 cars fills a sheet 17 in. wide and 8 in. high Numbers 21, 31, etc., would come directly under No. 11; and 22, 32, etc., under No. 12.

ERIE RAILROAD COMPANY

INVOICE FOR WAY-BILLS FORWARDED

Youngstown, Ohio, September 26, 1921.

Flag No. 11
Agent at *Shenango, Pa.* Train No. 77
Waybills for *Erie* Car 68482 Enclosed herewith

(Fourteen waybills)				14,375

For example "11" is the flag number for a car going to Shenango Junction, and 11X means that the destination is on the B. & L. E. to be transferred at Shenango Junction.

On the divider sheet which separates one car from another in the stowman's book, there is a note to the effect that for freight being loaded into this car for stations on connecting lines which do not appear in the alphabetical list, he must, in addition to flag and location number, have the authority of a symbol letter: and this letter is shown.

When the ballot shows only the flag number and the packages are destined to a station not shown in the stowman's book, they are rejected by him and the assistant foreman adjusts the irregularity.

As soon as the freight is deposited in the car by the stowman he removes the ballot from his pocket and stamps at the top of the ballot, the impression of the flag number of the car, by the use of a rubber stamp attached to the veri-check box. He then writes his name at the bottom of the ballot and deposits it in the veri-check box. Stowmen are prohibited from handling more than one shipment or one ballot (or set of ballots for one shipment) at one time.

Immediately after the completion of the check of the shipment by the check clerk at the receiving door, all portions of the bill of lading are compared, and stamped with the regulation time stamp, showing the hour and date of receipt; and he signs his full name on the original, in the space provided under the agent's printed name.

The time stamp used in receipting bills of lading is attached by a chain to the clothing of the check clerk, in order that unscrupulous persons may not have the opportunity to sign spurious bills of lading. The original and memorandum portions of the bill of lading are returned to the shipper's representative and the shipping order is placed on a spindle on the check clerk's desk. These are collected at intervals by a messenger and taken to the freight house veri-check desk in the central flagging office.

The Daily Records

At the beginning of the day's business the veri-check clerk prepares a sheet with numbers equal to the probable number of shipments that will be received on that day. This is veri-check sheet No. 1. These numbers are arranged for quick reference according to the last digit of the number, from "1" to "0"; i.e., number "495" is placed on the "5" column. These numbers are placed on the sheet with a consecutive numbering machine.

Immediately upon the receipt of shipping orders at the freight-house veri-check desk the numbers shown thereon are checked against the arbitrary numbers shown on the sheet, a circle being placed around the number to denote that that particular shipping order has been received at the desk. This is to insure that all shipping orders shall be accounted for.

The veri-check progressive numbers shown on the shipping orders, with the number of pieces of freight, are then recorded on the freight-house veri-check sheet No. 2, each number being entered under the flag number of the proper car. The shipping orders are then sent to the office for waybilling.

At intervals the veri-check ballots are collected by a messenger from the boxes in the cars. He examines the flag number as shown on the flag board and as stamped on the ballots by the stowmen, and if a ballot is found with the wrong number it is turned over to the assistant foreman for adjustment.

A rubber band is placed around each lot of ballots taken from each box, and the ballots are sent to the freight-house veri-check clerk where they are checked against veri-check sheet No. 2 to account for proper loading in car, a circle being placed around the numbers. The ballot is now sent to the main office veri-check desk.

Any omission found by the freight-house veri-check clerk such as the stowman leaving off his name, or failure to show impression of flag stamp, is immediately called to the attention of the assistant foreman. If a veri-check ballot is missing, record No. 2 immediately detects it. For example: if a veri-check number shown under the car on sheet No. 2 has not been circled, while the one below it has been circled, that is a danger signal to the clerk, and the shipping order or waybill is obtained from the waybilling office and an inspection made of the freight in the car to see if it is there. When found a ballot is made covering the shipment and that ballot, marked "duplicate," shows that the freight has been actually loaded in the car.

The checking of the arbitrary progressive numbers on the veri-check sheet number 1 will immediately detect any missing shipping order and reference is made to the record maintained by the flag clerk of the veri-check numbers on the shipping orders; and the shipper is immediately questioned as to the possible delivery of all portions of the bill of lading to him; and the shipping order is returned or a copy made and the record cleared.

If any shipment is held over and not loaded into the car, the shipping order is obtained and the veri-check number cancelled thereon; it is also cancelled on the sheet showing the arbitrary numbers. Every arbitrary veri-check number shown on the sheet must be accounted for at the end of the day's business, or cancelled on the sheet and an explanation made of the reason for the cancellation.

Every veri-check number and number of pieces in a shipment as shown under the flag number on veri-check sheet No. 2 must be accounted for before the cars are closed.

Way-billing and Mailing

Immediately upon receipt of the veri-check ballots in the main office they are placed in a case provided for them, in compartments numbered to correspond with the permanent loading schedule (layout or spot sheet), ready to be checked against the combination invoice and veri-check record.

There is a waybill distribution case with 100 compartments numbered according to the flag numbers on the cars. All waybills show the flag number of the car and they are distributed into the waybill distribution case according to these flag numbers. They are then written on the final veri-check record, which is a combination veri-check record and invoice of waybills. As soon as these waybills are entered on this form, the veri-check ballots are checked back against this record, and if the total number of pieces shown on the ballot or ballots agrees with the number of pieces shown against the record of the waybill, the main office veri-check clerk attests the fact by writing his initials in the verification column on the record; and he then files the ballots for future reference. If the number of pieces on waybill as shown by the record does not agree with number of pieces shown on the ballots the shipping order is secured; and if an error in waybilling has been made a new waybill is made. If there is a missing ballot, the freight-house veri-check record is inspected.

In waybilling freight the veri-check number, as taken from the shipping order, is shown on the waybill in a regularly assigned space. At the close of the day's business, after the ballots have been checked against the combination veri-check and invoice sheet and all items closed out, the main office veri-check clerk goes through each compartment of the waybill distribution case and first compares all of the flag numbers shown on the waybills with the number of the compartment. Then he refers to the permanent loading schedule and finds the initial and number of the car, compares it with the number shown on combination veri-check and invoice form, and then again goes through the waybills and compares the initial and number of the car shown thereon to see that they are all correct.

In addition, he counts the number of waybills and com-

pares them against the number of entries on invoice as shown by the numbered items thereon. He then attaches the invoice to the waybills, together with a copy of the non-revenue waybill upon which the car moves, and places the whole in the envelope, which has previously been prepared. This shows the flag number, the car number, initials, station from and date. If a way car, the original non-revenue waybill is attached to the other waybills.

Before mailing, the envelope is compared against the combination invoice and veri-check record of the car, the copy of the non-revenue waybill attached thereto, and against the permanent loading schedule to see if the car number and initial and the mailing destination of the car are correct.

A copy of the combination veri-check record and invoice is retained at the station as a permanent office record.

A Typical Shipment

In order that the reader may review this method of loading, free from details, we will follow a shipment from the shipper's dray through its various processes to the completion of the waybill and the mailing of that document.

Take a shipment of one box of patterns, 310 lb., shipped by the Carnegie Steel Co., Youngstown, Ohio, to the Edgar Thomson Foundry, Bessemer, Pa.

1. All parts of the bill of lading are presented at the central flagging office. Flag clerk enters (a) the routing (via Shenango & B. & L. E. R.R.); (b) flag number of car ("11G") and location number (409); (c) veri-check progressive number (96) put on with a consecutive numbering machine. He makes a record of the shipping order against the shipper's name, as before noted, and returns all parts of the bill of lading to the shipper's representative.

2. All portions of the bill of lading presented at the receiving door are then separated; and all shipping orders are arranged alphabetically according to destination stations. The caller calls the marks and unloads the freight from the dray and puts it in his truck. The checker checks against the shipping order and announces 11G-409, the flag and location of car, to the caller, who chalk-marks these numbers on one of the packages. The check clerk makes a ballot and hands it to the caller, who places it in the receptacle on the truck. The caller pushes the truck across the house to the car side. The checker stamps and signs all parts of the bill of lading; he returns the original and the memorandum to shipper's representative and hangs the shipping order portion on a hook on his desk.

3. This shipping order is picked up by a messenger and delivered to the freight-house veri-check desk. There it is checked on veri-check sheet No. 1 and the information shown on the order is recorded on sheet No. 2.

4. The shipping order is sent to the main office for billing.

5. The truck with freight thereon is moved by tractor or by hand to a point opposite location board "409."

6. The stowman notes the chalk mark and the flag number and moves the freight into car 11. He removes the ballot from the receptacle on the truck; compares flag number "11G" with flag board No. 11 and symbol G, shown on the board and on the box inside of the car. He counts the number of pieces on the truck and compares with the number shown on the ballot. He does not need to check destination, as the symbol letter "G" is shown. (If no symbol letter is shown the stowman unloads according to destination mark, referring to his book to find any destinations with which he is not familiar) and stamps the ballot with the flag number of the car, he signs his name on the ballot and deposits it in the box inside the car.

7. Messenger collects all ballots from box 11; compares rubber stamp impression number 11 with number 11 on the flag board; takes ballot to freight house veri-check office where it is checked against record No. 2, which shows progressive number and number of pieces; the ballot is then sent to main office.

8. Shipping order is taken by the rate clerk and the rate is entered on it. He enters the waybill number (E-698) thereon with a consecutive numbering machine; extensions are made by the comptometer operator in blue pencil, and the waybill is made by a typist, who makes an exact copy

of the written portion of the bill of lading. A shipping order when finally filed bears seven notations. For example, in the case of the box of patterns referred to:

1. The flag number 11G, and the spot number, 409, written in red pencil.
2. The progressive number, "96."
3. The routing, rubber stamped, "Route 5237 Shenango, B. & L. E."
4. The rate, in red ink, 79½.
5. The freight (310 x 79½), $2.46.
6. Total amount including war tax, $2.53; and the waybill clerk stamps on it the number of his waybill, 698.

9. The waybill is sent to main office mailing desk and there placed in compartment number 11, faced up.

10. The mail clerk transcribes the waybill on a combination invoice and veri-check record (see illustration); then checks the ballot number against the item on the record and returns both the waybill and record to compartment number 11, faced down.

11. The mail clerk counts the waybills and compares the number of each bill with the number shown on the invoice; then he checks all flag numbers shown on waybills to see if they agree with the compartment number; obtains the car number from the loading schedule and checks the car numbers on all waybills; addresses the envelope; attaches invoice and copy of non-revenue waybill to other waybills; compares address on envelope with destination of car as shown on loading schedule, and sends to mail room for mailing. (Loading schedule shows that number 11 car is Erie 68482 and destination Kremis Transfer, B & L E.)

Satisfactory Economy

Mr. Johnson informs us that at a station or transfer handling from 900 to 1,200 consignments a day the additional cost necessary for the operation of the "veri-direct" loading method will not exceed $200 a month; and he declares that this amount is insignificant compared with the saving made by the use of the method in the elimination of loss and

damage claims. He will be glad at any time to meet representatives of railroads who may be interested, at one of the large stations on the Erie and explain the operation.

The method is in use at the following stations: Jamestown, N. Y.; Meadville, Pa.; Youngstown, Ohio; Cleveland, Ohio; Akron, Ohio; Ashland, Ohio; Mansfield, Ohio; Sharon, Pa.; Warren, Ohio.

Freight Transferred

In the handling of outbound freight all through waybills received at the freight-house with goods from connecting railroads are treated the same as bills of lading received direct from consignors. Each such waybill is rubber-stamped when the goods are transferred, showing station and date and car loaded into, and it also has a veri-check number, put on with the numbering machine, the same as though it were a shipping order.

Each freight station that transfers freight from one car to another keeps a loose-leaf record showing all necessary details of every shipment. The record of a given inbound car at Youngstown, for example, shows not only the freight transferred but also all freight for Youngstown proper, with any necessary notations as to condition of goods found in bad order.

Clerks Demand Large Wage Increases

Railroad Labor Board Asked to Restore Rates of Pay Received Under Its Decision No. 2

ANOTHER DEMAND for large wage increases was placed before the Railroad Labor Board when representatives of the clerical employees on approximately 50 carriers appeared before that body on November 23, 24 and 25. In general their requests were for the restoration of the rates of pay in effect under the Board's Decision No. 2, in other words the restoration of the highest rates of pay ever received by these employees. According to their testimony, the increases requested, if granted, would add $5,895,000 to the monthly payroll for clerks (based on the August, 1922 figures) and $1,330,000 to the monthly payroll for freight handlers, a total monthly increase of $7,225,000.

A new argument in favor of wage increases was included in the employees' presentation when, in dealing with the ability of the carriers to pay the increased rates requested, they openly made the charge that "the railroads have persistently concealed the true measure of prosperity which they enjoyed by the grossly misleading practice of carrying excessive charges to maintenance." This "method of concealing profits has long been an integral part of railway financial policy" and is "common knowledge," they continued. "The extent to which it has been indulged and the full significance of that indulgence has been clearly recognized and forcibly driven home by only one prominent financial writer, Thomas Gibson, who in recent years has devoted a large measure of his time to extended analysis of this factor in the railroad income statement and has repeatedly urged his clients—the holders of railroad securities—to realize the influence which overmaintenance exerts in depressing railroad net earnings below their actual proper level."

Numerous "weekly market letters" written by this man were quoted in support of their position, but upon cross-examination none of the employees' representatives could definitely identify the author.

In concluding his argument for a wage advance, E. H. Fitzgerald, president of the Brotherhood of Railway & Steamship Clerks, Freight Handlers, Station & Express Employees, said:

> We have proven:
>
> (1) That inequalities in the wage rates paid to freight handlers in certain localities have worked an injustice and merit immediate action by the Board.
>
> (2) That the cost of a decent standard of living in the United States today is far above the wages received by the classes of employees we represent.
>
> (3) That the standard of living of these workers has fallen and unless the Board acts now, the increases in living costs which are being daily reported will inevitably operate to further depress the standards of living of these railway employees.
>
> (4) That business conditions in general, and the condition of the railroads in particular, are such that an increase in the wage rates can be easily paid from railway earnings. Not only is the financial condition of the railways now very favorable, but every indication points to the conclusion that the railways will profit even more liberally in the near future. We have shown in this connection that the granting of punitive overtime rates for all time worked in excess of eight hours a day or 48 hours a week is under existing conditions not only just and reasonable but an absolute necessity.
>
> (5) That the wages of employees in outside industries have increased very rapidly in the general upward movement that has taken place in the last six months. We have shown that the wages of railway trainmen have been continued at the level prevailing after July 1, 1921. We have shown that individual railways, acting in agreement with their employees, have increased the rates under Decision 1074 in their application to the employees we represent.

In regard to the alleged inequalities, the employees' representatives contended that freight handlers in the larger terminals are suffering from a maladjustment originating in Supplement 7 to General Order 27 and petitioned the Board to restore the differentials formerly existing between clerks and freight handlers in freighthouses.

The "relation between wages and the cost of living" factor enumerated in the Transportation Act as one of the principles to be considered in fixing wages, is inseparably connected with the budget method and the theory of the "living wage," they argued. The minimum cost of living level, they added, averaged more than $1,960 throughout the country, whereas the yearly wages of the classes of employees involved in this dispute ranged between $1,730 for "Class A" clerks and $932 for common labor. In this connection, they also went into the subject of "real wages," basing their conclusions upon a comparison of wages and retail prices of food between 1895 and 1922. This comparison purported to show that the wages of station employees now, measured by their purchasing power, are seven per cent less and the wages of clerks eight per cent less than they were in 1895.

A great deal of the employees' testimony was devoted to an attempt to prove that the carriers' financial difficulties are now over and that they are able to pay the higher wage scale requested. It was in connection with these contentions that the employees introduced their charges of "concealed profits in the form of overmaintenance."

Employees' Testimony Answered by E. J. McClees

The reply of the eastern carriers was presented by E. J. McClees, secretary of the Bureau of Information of the Eastern Railways, who repeatedly called attention to the fact that almost all of the arguments advanced by the employees have been subjects of extended hearings and in many cases

of decisions by the Board. This was particularly true, he pointed out, in regard to the men's demands for punitive overtime and various changes in their working rules.

For instance, the changes in rules requested by the employees should be declined, Mr. McClees said, because: (1), they are merely repetitions of requests previously filed with the Board and upon which exhaustive hearings were held in 1920 and 1921; (2), the railroad testimony submitted at that time clearly showed the drastic and restrictive nature of the proposed rules; and (3), there has been no change in the conditions affecting the employees which would justify a reconsideration of these questions.

Referring to the comparison of wages and retail food costs from 1895 to 1922, Mr. McClees pointed out the "impossibility of establishing any earnings of these classes of railway employees from the Interstate Commerce Commission's reports for these past periods" and also the changes which the Department of Labor has made in the food item at various times between 1900 and 1913 all of which tend to nullify the comparison.

"We feel that there is only one conclusion to be drawn from the general statement on behalf of the employees," Mr. McClees continued, "and that is set forth in the statement made by committees on practically every eastern railroad which is represented in this hearing, namely, that it is the position of the organization that Decisions 147 and 1074 of the Labor Board did not recognize conditions as they existed and therefore were improper and unjust; in other words, that the Labor Board erred when it ordered these reductions."

Taking up the contentions of the employees, namely, first that Decisions 147 and 1074 were improper and unjust, second, that there is an upward trend in the cost of living, third, that the present wages of the employees involved are not sufficient to maintain an average family in health and decency, and fourth, that there have been increases in wages in other industries since Decision 1074 was rendered, Mr. McClees said in part:

"(1) Our exhibits clearly indicate that the treatment which employees have received in the way of adjustment is a complete answer to the claims of the organization concerning inadequate or improper treatment, and demonstrates that all the classes of employees involved in the present hearing have received fair treatment whether viewed from the standpoint of actual increases or upon the basis of reduced purchasing power of money.

"It will be noted for instance that the average hourly rate for clerks in 1915 for the railroads indicated was 27 cents; in October, 1917, 30.7 cents; June, 1921, 62.7 cents; June, 1922, 56.4 cents, and at present 53.3 cents; that the clerks involved are at present enjoying an increase over 1915 of 97.4 per cent in their rates and, after making allowance for the reduced purchasing power of the dollar, they are 18.7 per cent better off than they were in 1915. Using 1917 as a base they are 48.6 per cent better off now than in 1917.

"(2) As to the claims of the representatives of the employees concerning the upward trend in the cost of living, the latest information available completely contradicts the claims of the employees. The Department of Labor bulletin shows that for July, 1922, the index number of the cost of living was 166.9 based on 1914, compared with 166.3 for September, 1922, September being the latest figure available, and 174.3 for December, 1921. Such fluctuations as have taken place since last spring are not sufficiently pronounced to justify the reconsideration of the wage scales upon that factor.

"(3) As to the employees' contention that the present wages do not yield a reasonable living wage, we believe that in view of the conclusions reached by the Board in its recent decision in the maintenance of way case no further argument need be made by the railroads on that subject.

"(4) The best information available shows that nothing approaching a general increase in wages has taken place in other industries. Such changes as have taken place have been spotted and largely confined to associated industries. A summary of an investigation made by the individual railroads as to changes which have taken place in the wage scale of clerical forces in other industries, shows that 83 per cent of 733 firms canvassed have made no changes in the wage scales of their 31,957 clerical employees, that 85.8 per cent of the employees have had no increase or decrease while 15.7 per cent of the firms made increases applying to 14.2 per cent of the employees. It will be observed that nothing resembling a general adjustment has taken place, in increases which have been granted it is evident that they must have been based upon the merits of the individual cases."

Several presentations were made on behalf of the individual carriers and Dr. C. P. Neill and J. W. Higgins presented brief statements outlining the position of the southeastern and western carriers, respectively, the bulk of the testimony on behalf of the latter group was given by representatives of the individual lines involved.

Representatives of the Pennsylvania and the Mobile & Ohio protested their inclusion in the controversy but no ruling was made by the Board on this point. The hearings ended on November 25.

An Automatic Substation for the New York Central

The New York Central Railroad has contracted with the General Electric Company for an automatic substation installation to be used on its electrified division. The new substation, which is the first to be installed on an electrified steam road, will be located beneath the elevated tracks at One Hundred and Tenth street and Park avenue, New York, near the point where they emerge from the Park avenue terminal. While the equipment furnished will provide for full automatic operation, the operator at Mott Haven substation No. 2, about two miles distant, will have the new station under his supervision through pilot wires providing for remote control. This equipment offers an interesting and economical solution to some of the problems of train operation at points where the growth of traffic develops load centers which did not exist at the time of the original installation.

The equipment will consist of a 2,000-kilowatt motor-generator set operated directly from the 11,000-volt transmission line and with the generator supplying power to the 660-volt third-rail system.

The set may be floated on the line all day or may be closed down during the periods of light traffic at the discretion of the operator at the Mott Haven Junction substation. To start the station, he simply operates a control switch and the automatic control in the new substation takes care of starting the motor-generator set and bringing it on to the line. An operator in the station at Mott Haven may also follow the output of the machine and its load conditions at any time of the day. From his knowledge of train movements he is in a position to know when the set may be unnecessary and the indicating equipment on his meter panel gives an additional check on the line load.

In the event of a service interruption due to failure of the high tension supply, the automatic station will of itself shut down and be ready to come onto the line again with the resumption of service from the power station.

The automatic station control is laid out so as to present the characteristics of a constant current generator. The control can be adjusted so that the generator will supply continuously any value of current below the rated output for so long as the operator may anticipate the concentration of load or for such a period as is possible without overheating.

Southern Pacific-Central Pacific Hearing

Washington, D. C.

The hearing before Commissioners Meyer and Potter of the Interstate Commerce Commission at Washington on the application of the Southern Pacific for authority to retain its control of the Central Pacific by lease and stock ownership was continued this week. Following the presentation of testimony by officers of the Southern Pacific, a large amount of testimony was given by representatives of western shippers and of state commissions who have intervened in the case to favor or oppose the Southern Pacific's application. Those who urged the commission to approve the Southern Pacific's application did so largely on the ground that they preferred to maintain the Southern Pacific as a strong railroad system, which they looked upon as a California institution, rather than to have additional competition, while many of them also feared that the service would be impaired by a separation of the Central Pacific from the Southern Pacific. Others who favored the separation took the position that if separated from the Southern Pacific, the Central Pacific would display more interest in the development of the intermountain territory. The Union Pacific witnesses are to be heard later.

L. J. Spence, director of traffic of the Southern Pacific, was cross-examined at length by H. A. Scandrett, commerce counsel of the Union Pacific, regarding the extent of preferential solicitation by the Southern Pacific of traffic over its southern routes. In reply to questions, Mr. Spence said that while the Southern Pacific was under Union Pacific control the agents were supposed to solicit business through the gateway which yielded the longest haul to the system lines, but that after the separation he had substituted specific directions based on the definite geographical line which he had described in his original statement and that in what he called Atlantic-Gulf territory the Southern Pacific agents were instructed to solicit preferentially via the southern routes. In the territory north of that line they solicited preferentially via the Ogden route. He denied that it was the practice to solicit for the southern routes in the territory north of the line. In other words, he said, the Southern Pacific undertook to use the route by which it could most successfully get its share of the business. He admitted that under this policy the Southern Pacific tried to get freight from Cincinnati via the southern route, although the distance was somewhat greater than via Ogden because the southern route was available for this purpose and by it the Southern Pacific would receive a greater revenue, but, he said, the company regarded the Omaha route as an indispensable route by which to solicit business as against the Santa Fe and other lines and that the Union Pacific is indebted to its organization for many a car via Ogden when the Southern Pacific could not get it the other way. Mr. Scandrett inquired whether an independent Central Pacific would view the Cincinnati traffic in the same way and Mr. Spence admitted it would not. When Mr. Scandrett asked if this does not indicate that the Southern Pacific competes against itself, Mr. Spence replied that, in his opinion, the railroad having a long haul by one route and a short haul by another route necessarily competes against itself. He denied that the Sunset-Gulf route is a material competitor against the Ogden route, on the ground that because of canal competition the transcontinental traffic does not amount to much. The canal competition, he said, now has three times the force it had when the Southern Pacific-Central Pacific case was submitted to the court. He also denied that the Southern Pacific had made lower rates over the Sunset-Gulf route to take business away from the Ogden route, asserting that the desire was not so much to make a differential as against the rail lines as for the purpose of meeting the canal competition. Mr. Spence said that when the policy of solicitation was adopted after the separation of the Central Pacific and the Southern Pacific, he had informed Judge Lovett, chairman of the Union Pacific, at his request, and that Judge Lovett had said it was entirely satisfactory.

Commissioner Potter asked if the Southern Pacific in drawing the line had attempted to be impartial. Mr. Spence said that it had drawn the line with reference to the points at which it could make its solicitation effective. Fred H. Wood, counsel for the Southern Pacific, had the witness repeat his original testimony showing that the traffic which moved via El Paso last year which might have gone via Ogden amounted to less than 83,000 tons and that the same policy of solicitation had put 316,000 tons of freight over the Central Pacific which would not have moved that way if the Southern Pacific had not solicited it. Commissioner Potter inquired how much tonnage the Southern Pacific would lose if the line from Ogden to San Francisco alone were taken from the Southern Pacific. The witness said he had made no estimates along that line.

In connection with the cross-examination, Mr. Scandrett recalled testimony by William Sproule, president of the Southern Pacific, before the Railroad Commission of California in 1913 to the effect that the separation of the Central Pacific from the Southern Pacific would be of great benefit to the shippers and the public of California, that additional railroads bringing new competition were always of benefit to a community, and that there would be no advantage in rates and no inconvenience to the public to result from such a separation.

F. L. Burckhalter, assistant general manager of the Southern Pacific, was cross-examined for an entire day by Mr. Scandrett and by H. W. Clark, general counsel of the Union Pacific, regarding the operating conditions which would result from a separation. Mr. Clark attempted to show by the questioning that existing routes need not be disrupted by a separation of the ownership and that the public would not be seriously affected in any way because arrangements could easily be made for joint use or running rights over the trackage so that very little change in present methods of operation need result. He insisted that the Southern Pacific's objection to such joint use was based on questions of economy from the Southern Pacific standpoint, while as to several lines, Mr. Burckhalter said that the Southern Pacific could not afford to enter into any arrangements for joint use because it had lines of its own serving practically the same traffic. "We do not assume that all disruption of traffic is against the public interest," Mr. Clark said, "although that is evidently the case of the Southern Pacific in this hearing. We propose to show that a disruption can be made that will not particularly injure the present service and will in the long run afford better service." With a large map of the lines Mr. Clark had Mr. Burckhalter point out the various routes and cross-hatch with a red pencil the lines over which trains of both railroads could be run without, as he said, much change in methods of operation. Mr. Burckhalter would not admit that traffic would continue to move in the same way in the event of a separation, but Mr. Clark insisted that this merely meant that he thought it would not be economical for the Southern Pacific to enter any joint use arrangements.

Athol McBean, vice-chairman of the California Shippers' Committee, which he said represented the shippers of 90 per cent of the freight tonnage of California, whose freight bill amounts to $250,000,000 a year, appeared in support of the Southern Pacific's application. He said the shippers of California and the Pacific Coast feel that the Southern Pacific is essentially a California institution and dependent to a large extent upon the growth and development of that territory for its prosperity, and that they preferred a strong railroad organization to the competition of additional lines. They also saw in the Southern Pacific Company an institu-

tion which looks from the West east rather than from the East west. The opening of the Panama Canal, he said, and the resultant dwindling of the so-called transcontinental business have accentuated this situation and the freight paying public is virtually unanimous against dismemberment of the Southern Pacific System, because they believe that from such a local institution the state will receive its fullest measure of co-operation. He took the position that the substitution of competitive operation, were the Central Pacific lines not operated by the Southern Pacific, would impair service and substitute higher rates for a two-company haul than are now charged for a single-line haul. Under cross-examination he said it was a good thing for the Santa Fe System to go into northern California and that the competition of the Western Pacific was welcomed, but he declined to admit that the operation of the Central Pacific as an independent system would be of benefit. "We would not want so much competition that it would break down the good service we now have," he said. "There are too many transcontinental lines into Oregon and Washington now. We want one strong road rather than two weak ones. If the Union Pacific wants to build into California, we will go with you, but we don't want you to come in and break down the one strong system we have." He was asked if joint use of the lines would not meet the difficulties as to service, but he insisted that better service could be obtained under unified management by the Southern Pacific.

Grant E. Halderman, chairman of the Public Utilities Commission of Colorado, opposed the Southern Pacific application on the ground that control of the Central Pacific by the Southern Pacific would "perpetuate intolerable conditions now existing" and would be greatly detrimental to the state of Colorado. The interests of the public in Colorado, he said, as well as in the intermountain region, demand that the decision of the Supreme Court be speedily and completely carried into effect and Colorado sentiment is a unit in urging that this course be pursued. He presented resolutions from several organizations in the state favoring a separation of the Central Pacific from the Southern Pacific on the ground that the Southern Pacific has diverted to its southern route a large amount of traffic which would otherwise pass through Colorado and thereby add to the efficiency of the railroads serving that state.

Mr. Wood asked the witness if he or the senators and others from Colorado who have been sending telegrams to public officials in Washington urging a separation of the Central Pacific, on the theory that it would increase the tonnage moving via Colorado lines, had made any investigation of the amount of tonnage that would be affected. The witness said that he "knew nothing about the traffic game" and that he had not heard any of the others discuss the amount of traffic involved. Mr. Wood then asked if he thought an increase of less than 100,000 tons through the Ogden gateway, or less than one per cent of the tonnage of the Union Pacific, would have any very substantial influence one way or the other. The witness admitted that if that were the amount he would not think it was a matter of great importance to the people of Colorado whether the tonnage moved via Ogden or through El Paso, although he thought it might be of some advantage to the proposed tunnel on the Moffat road. Mr. Wood then asked if he knew whether the efforts of the Union Pacific are directed more largely to putting its transcontinental business through Omaha, where it does not pass through Colorado, or through the Kansas City line, where it does pass through Colorado. The witness said that without knowing much about it, it would largely be determined by the origin of the tonnage and that much of it would naturally go through Omaha. Mr. Wood then asked questions to bring out that if the Union Pacific should acquire control of the Central Pacific and close the use of the Central Pacific as a connection of the Denver & Rio Grande, the traffic over the D. & R. G. through Colorado would be likely to be reduced.

H. W. Prickett, testifying on behalf of the state of Utah and various chambers of commerce in that state, favored the retention of the Central Pacific by the Southern Pacific. He said it is the unanimous opinion of those he represents that the future development of the state will be best served by continued competition between the Central Pacific and the Southern Pacific. He feared that a separation would weaken the Central Pacific and that the state would have less competition than it now has with two lines from Utah and California. He testified that Vice-President E. E. Calvin of the Union Pacific had told him that if the Central Pacific was separated from the Southern Pacific there would be no question but that the Union Pacific would acquire it. In his opinion, the amount of traffic moving through the state that would be affected is of comparatively small significance, but that if the Union Pacific or interests friendly to it controlled the Central Pacific they would have a practical monopoly and would advance rates. Other business men of Utah, California and Oregon gave similar testimony. F. A. Summers of San Francisco, who has a large grain warehouse at Port Costa, said he feared that if the Central Pacific were separated it would set up a grain terminal of its own which would deprive Port Costa of a great part of the business it now receives. A number of representatives of the Willamette Valley lumber interests also testified in favor of the Southern Pacific application, saying that control by the Southern Pacific gives competition with the Union Pacific and that joint operation of the Central Pacific by the Union Pacific and the Central Pacific would result in impairment of service.

Representative F. W. Mondell of Wyoming testified in favor of the complete separation of the Central Pacific from the Southern Pacific, saying that the national interest demands that the transcontinental line represented by the Union Pacific and the Central Pacific should be operated by one system. With the Central Pacific under management and control whole-heartedly favorable to the utilization and development of the transcontinental system of which it was intended to be and is a part, he said, the service now rendered in and to Wyoming would be extended, enlarged and improved. Branch and feeder lines would be built and with them would come increased population and a general improvement of conditions in the state. He said he had no quarrel with the Southern Pacific officials, but they cannot be expected and should not be asked to serve two interests.

George E. Erb, president of the Idaho Public Utilities Commission, also opposed the Southern Pacific application, as did C. L. Draper, chairman of the Public Service Commission of Wyoming. J. F. Shaughnessy, chairman of the Nevada commission, presented an intervening petition in support of the Southern Pacific application, saying that a separation leaving the Central Pacific unattached to a strong operating company would cripple it. He said he did not wish to commit the state as to the final disposition which should be made of the property. He also read a letter from another member of the Nevada commission which took the position that it should remain neutral until the federal commission has completed its investigation on the ground that the state commission has held no hearings and the sentiment of the shippers has been represented only by a series of ex parte petitions in about equal number secured by representatives of the Southern Pacific or the Union Pacific.

Richard Sachse, chief engineer of the California Railroad Commission, testified at great length in support of the Southern Pacific application, asserting that a separation of the properties and an attempt to operate over the Central Pacific lines jointly would result in a great decrease in efficiency. He occupied the stand for nearly a day and a half and was cross-examined in detail by Mr. Scandrett.

General News Department

The United States Supreme Court will hear arguments on January 8 in the injunction suit of the Pennsylvania Railroad against the Railroad Labor Board.

Examiners Mullen and Borland of the Interstate Commerce Commission will resume hearings at Washington on December 4, in the general air brake investigation.

The New York Central Lines' Train Control Committee witnessed a preliminary test of the Clifford Automatic Train Control system which was conducted on the Erie at Port Jervis, N. Y., on November 28. The test was made at the request of this Committee and proved satisfactory.

The Senate on November 24 in committee of the whole adopted an amendment to the Liberian loan resolution providing for an appropriation of $170,100 for 35 additional locomotive inspectors for the Interstate Commerce Commission, but on November 27 the Senate voted to recommit the resolution to the finance committee.

Renewed complaint about the condition of railroad equipment as a result of the shop strike was made to President Harding on November 25 by William H. Johnston, president of the International Association of Machinists, and B. M. Jewell, president of the Railway Employees Department of the American Federation of Labor.

They also protested to the President that several railroads were still violating orders of the Railroad Labor Board regarding the contracting out of shop work.

The American Short Line Railroad Association announces the removal of the Consolidated Purchasing Agency from Washington to Chicago, effective December 1. It is also completing plans for a finance corporation, through which gasoline passenger motor cars may be acquired by member lines and others under a lease purchase contract. It is believed that this will be a great help to a large number of railroad companies who have otherwise found difficulty in financing the purchase of motor equipment on this basis.

Pierce Butler of the law firm of Howe, Butler & Mitchell of St. Paul, Minn., has been nominated by the President as an associate justice of the Supreme Court of the United States succeeding William R. Day, resigned. Mr. Butler was formerly general attorney of the Chicago, St. Paul, Minneapolis & Omaha and later counsel for the western group of the Presidents' Conference Committee on Valuation. Representatives of the radical and labor elements in the Senate have announced their intention of opposing the confirmation of the appointment by the Senate.

On Tuesday the Senate Judiciary Committee voted to report favorably to the Senate on the nomination.

Payments for loss and damage of freight by the New York, New Haven & Hartford in the month of September amounted to $39,690, which is a large sum of money; but it is 75 per cent less than the sum paid in September, 1921. Bills paid for losses of entire packages decreased 95 per cent. The percentage of total damage payments to gross freight revenue was eight-tenths of one per cent, as compared with 3.7 per cent in September, 1921. The record for September was not so very exceptional, the payments for the nine months of 1922 having been 62 per cent less than in the same period of 1921.

Employees of the Pennsylvania Railroad have bought, through the Mutual Beneficial Association, 27,000 shares of the stock of the railroad company, and about 1,500 shares were thus bought by employees during one week recently. J. K. Linn, treasurer of the Mutual Beneficial Association, Philadelphia, through whom the purchases are made, says that he recently received from one limited territory nearly 1,000 names of employees desiring to buy stock, most of them ordering a single share each. The stock is bought in the open market and the Mutual Beneficial Association keeps the shares for a time so as to allow the buyers to pay in installments.

The Northern Pacific has announced a new style of land contract. Lands are to be sold on terms which will provide for the spreading of payments over a period of 19 years. One-tenth of the consideration is to be paid in cash and the balance, drawing simple interest at six per cent, is to be amortized over the above period. Under the new plans, purchasers must reside on or within 10 miles of the premises or move thereto within six months, and must maintain this residence for five years. They must utilize the land for farming or stock raising and within one year, place upon the premises improvements of a value equal to five per cent of the purchase price; and, the same in each of the next three years.

The track elevation committee of the City Council of Chicago has given the Pennsylvania and the Baltimore & Ohio ten days to resume work on the elevation of their tracks at Garfield boulevard near Leavitt street, Chicago, in compliance with the provisions of an ordinance of 1921. The roads were notified that unless they started the work within this period, the city would start it and charge the cost to the railroads. If the order of the committee is not observed, the committee will request that policemen be stationed at the grade crossing to stop all trains. It is said that notices will also be sent to the Chicago & Western Indiana, the Baltimore & Ohio, the Monon and the Belt Railway to elevate their tracks at 103rd street and Harvard street and 116th street and Michigan boulevard.

Senator G. W. Pepper, of Pennsylvania, to whom the representatives of the American Federation of Labor, speaking for former Pennsylvania Railroad shopmen, have appealed for aid, had a long conference last week with vice-president W. W. Atterbury, and on Monday, November 27, at the invitation of General Atterbury, conferred at his office in Philadelphia with chairmen of the new associations of shopmen which have been organized since the strike, representatives of the former shopmen also taking part. This tripartite conference on Monday, after three hours' deliberation, was adjourned to a date to be selected by Senator Pepper. Reporting this conference, General Atterbury reiterates the determination of the railroad company to continue its present arrangement with its shopmen, unless the shopmen themselves desire a change; and says that he asked their representatives to confer with the Senator because, "I simply wanted them to share with me the burden of convincing people that what we have jointly set up on this railroad is fair and mutually satisfactory."

St. Louis Southwestern to Spend $5,000,000

The St Louis-Southwestern has announced a $5,000,000 improvement program including the purchase of 500 box cars, 500 automobile cars and 200 convertible cars; also the reballasting during the next three years the entire line from Illmo, Mo., to Texarkana, Tex., and replacing 75 lb. rail to 85 lb. rail on about 100 miles of main line and the conversion of locomotives used in Texas from coal to oil burners. The new equipment purchased will amount to $3,000,000.

Foreign Trade Council Extends Trade Adviser Service

The National Foreign Trade Council has announced that the trade adviser service, which has been a feature of the foreign trade conventions, has been made a year-round service instead of only a few days each year during the progress of the convention. The trade advisers are appointed from

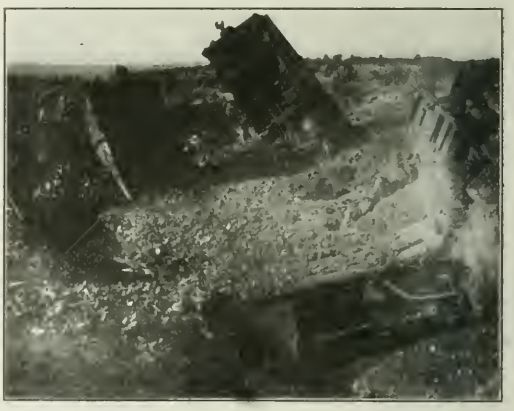
the country's experts in the various lines of foreign trade and their advice on the particular problems of individual manufacturers and exporters is offered free of charge. Further details may be obtained from the secretary of the National Foreign Trade Council at 1 Hanover Square, New York.

The Moffat Tunnel

The Colorado Supreme Court has handed down a unanimous decision upholding the constitutionality of the Moffat Tunnel Act, which provides for the financing of a six-mile tunnel through the Continental Divide on the line of the Denver & Salt Lake by assessment on the property included in an improvement district served by this railway. This decision was the result of a friendly suit to test the validity of the bonds which it is proposed to issue to finance this work. This project was described in the *Railway Age* of September 23, 1922, page 571.

A Spectacular Wreck

In the derailment of a freight train near Cabeza, New Mexico, on the El Paso & Southwestern on October 25, at about 7 p. m., 36 cars of coal (of a train of 43 cars) were thrown off the track because of excessive speed, on a steep descending grade, and the wreck was piled up in a space only 325 ft. long. Only two trucks in this wreck were found in condition for use in moving a car to the nearest shops. One engineman and one brakeman were killed and two other employees were injured; and the property loss was over $92,000.



A Sudden Stop on a Two Per Cent Grade—Two Trainmen Killed, Two Injured

There were two locomotives at the head of the train, but one of these was dead. The engineman of the train lost control of the air brakes, and when the speed rose to 67 miles an hour (as indicated by the speed indicator) some of the cars in the front of the train left the track at a curve of eight degrees; and as before stated, these cars piled up, in a great wreck, the whole of the train except seven cars at the rear. Two views of the wreck are shown below.

Pennsylvania Starts Clearing Way for Pittsburgh Improvements

In an endeavor to clear the way for a widespread future improvement program covering the passenger station and freight station facilities at Pittsburgh, Pa., an ordinance has been submitted by the Pennsylvania Railroad to the City Council. The agreement covers a relocation of Liberty avenue, which adjoins the station, between Eleventh and Seventeenth streets, the probable construction of a large freight station on the north side of Forbes street, a tunnel under Forbes street, the widening of the present Grant Hill tunnel, the relocation of Grant street between Seventh and Liberty avenues, a change in track alinement leading to the Allegheny river crossing and a widening of Cherry way. The present Grant street freight house will be vacated under this plan making the space available for a proposed new post office. The relocation of Liberty avenue with the attendant closing of the old avenue will make available for the railroad a large area for future expansion of station and track facilities to the north.

Subjects for A. S. M. E. Annual Meeting

Many topics of interest to the railroads will be discussed during the Annual Meeting of the American Society of Mechanical Engineers to be held at the Engineering Societies' building, 29 West Thirty-ninth street, New York, December 4-7, 1922. On Tuesday morning, the Management Section will discuss several subjects, including the Installation of Management Methods and Measurement of Managerial Ability. On Tuesday afternoon a session on Training for the Industries will take up reports on Extension and Correspondence Schools, Schools for Apprentices and Shop Training and Industrial Education as Represented in Schools.

The Railroad Session on Wednesday morning will discuss Steam Distribution in the Locomotive, Stresses in Locomotive Frames and Mechanical Drafting of Locomotives. On Thursday morning a session will be held on Power and Safety Engineering. On Thursday afternoon the Forest Products Division will meet. There will also be held during the week sessions on Machine Shops, Material Handling, Research, Standardization and Stokers. A feature of special interest will be the joint session Wednesday evening, December 6, with the American Economic Association at which E. M. Herr, president of the Westinghouse Electric & Manufacturing Company, will speak on The Human Element in Industry, and Wesley C. Mitchell of Columbia University will deliver an address on Making Money and Making Goods.

Petition in Court Against Railroad Labor Board

The Railway Service & Supply Corporation which contracted with the Cleveland, Cincinnati, Chicago & St. Louis to repair freight cars and locomotives at the road's shops at Beech Grove, Ind., and Brightwood, Ind., has petitioned the Federal District Court at Chicago for a writ of certiorari in order to obtain a court ruling on the action of the Railroad Labor Board in declaring these contracts to be violations of the Transportation Act and of decisions of the Labor Board. Petitioner points out that under the contracts the road is saving from $115,000 to $125,000 annually on the repair of locomotives and approximately $11,000 a year on repair of cars. All of the legal arguments which have been advanced before the Board and directed against that body's right to rule against such contracts are cited, and petitioner avers that the Board's decision "unjustly and unlawfully interferes with and prejudices relations established by petitioner with its employees and the railway company" and "any unlawful interference [with these relations] will deprive the petitioner

of the full benefit of time, efforts, industry and large sums of money expended in perfecting the efficiency of its organization employed by it in operating the ships, to the great and irretrievable loss and damage of the petitioner." The application also calls attention to the fact that if the Board's ruling is allowed to stand "petitioner has good reason to fear that the railway company will terminate the contract" and "it will deter other railroads from seeking the services of the petitioner and from entering into similar contracts, all to the petitioner's great and irreparable damage." The Board is charged with exceeding the authority conferred upon it by the Transportation Act, and with infringing upon the judicial power of the courts and the legislative powers of Congress. The fact that the contractor was not represented at or notified of the hearings in the case is cited by the petitioner as depriving it of its rights of property and contract.

Cummins Postpones Plans for Railroad Legislation

Senator Cummins, chairman of the Senate committee on interstate commerce, announced on November 28 that he would not attempt to secure consideration at the present extra session or the forthcoming short session of Congress of bills which he had previously proposed, to amend the transportation act in order to provide a prohibition against strikes, compulsory consolidation of railroads, etc., but would withhold his bills until the next Congress. Senator Cummins has had conferences with the President on the subject and there had been reports that the President would suggest some legislation along these lines in a message at the opening of the regular session of Congress next week, but it is understood that it has now been practically decided that it is inadvisable to open up the subject at this time, particularly in view of the short time available for consideration of the ship subsidy, and plans are also being made for legislation for the relief of the farmer which it is hoped may cause some lessening of the demand for lower necessary appropriation bills on freight rates.

A delegation of representatives of the National Association of Railroad and Public Utilities Commissioners, headed by President D. H. Lewis, called on President Harding on November 23 to present the resolutions proposing amendments to the transportation act which had been adopted at their recent annual convention at Detroit, which included provision for the restoration of the powers of state commissions relating to rates and distribution of cars. They informed the President that they had brought the matters to his attention because it was understood he would probably touch upon the subject of transportation in his message to Congress.

The campaign for legislation to reduce freight rates, particularly on farm products, was opened in the Senate on November 23 in a speech by Senator Capper of Kansas, head of the farm bloc. After describing the conditions faced by the farmers as a result of low prices for their products, he referred to the recent large increases in railroad traffic and to the earnings of some of the more prosperous railroads and rumored increases in dividends to show that the roads could afford to reduce rates. He also argued that the railroads cannot afford not to make reductions in the interest of future traffic. He said that the railroads ought to make further rate reductions voluntarily and at once or in default of such action the Interstate Commerce Commission must reduce rates promptly, and he hoped to see the interstate commerce committee of the Senate report favorably at an early date on his bill repealing Section 15a of the transportation act. Senator Capper particularly criticized the provision in the law under which the Interstate Commerce Commission makes rates intended to produce a fair return for the railroads by groups averaging the strong roads with the weak roads.

James R. Howard, president of the American Farm Bureau Federation, in an address before the annual convention of the Association of Land Grant Colleges on November 21, said that the farmers are looking to Congress to bring relief from high railroad rates. "But we will look in vain," he said, "for the laws of economics supersede any statutory enactment. It is my own conviction that the solution of the railroad problem lies in a more economical handling of present facilities, the continual improvement of equipment and operation and such legislation as will permit the exercise of personal initiative with only that degree of government supervision which insures an honest service to the public, and ultimately in electrification."

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings

Air Brake Association.—F. M. Nellis, 165 Broadway, New York City. Next convention, May 1-4, 1923, Denver, Colo. Exhibit by Air Brake Appliance Association.

Air Brake Appliance Association.—J. F. Gettrust, The Ashton Valve Company, 318 Washington St., Chicago. Meeting with Air Brake Association.

American Association of Demurrage Officers.—F. A. Pontious, Supervisor of Demurrage and Storage, C. & N. W. Ry., Chicago.

American Association of Dining Car Superintendents.—L. A. Stone, C. & E. I. Ry., Chicago.

American Association of Engineers.—C. E. Drayer, 63 E. Adams St., Chicago.

American Association of General Baggage Agents.—E. L. Duncan, 332 So. Michigan Ave., Chicago.

American Association of Passenger Traffic Officers.—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York.

American Association of Railroad Superintendents.—J. Rothschild, Room 400 Union Station, St. Louis, Mo.

American Electric Railway Association.—J. W. Welsh, 8 W. 40th St., New York.

American Railroad Master Tinners', Coppersmiths' and Pipe Fitters' Association.—C. Borcherdt, 202 North Hamlin Ave., Chicago, Ill.

American Railway Association.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Special session, December 6, Blackstone Hotel, Chicago.

Division I.—Operating. J. C. Caviston, 30 Vesey St., New York, N. Y.

Freight Station Section (including former activities of American Association of Freight Agents). R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.

Medical and Surgical Section. J. C. Caviston, 30 Vesey St., New York, N. Y.

Protective Section (including former activities of the American Railway Chief Special Agents and Chiefs of Police Association). J. C. Caviston, 30 Vesey St., New York, N. Y.

Safety Section. J. C. Caviston, 30 Vesey St., New York.

Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 30 Vesey St., New York, N. Y. Annual meeting, December 12-14, Hotel La Salle, Chicago.

Division II.—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.

Division III.—Traffic, J. Gottschalk, 143 Liberty St., New York.

Division IV—Engineering, E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Exhibit by National Railway Appliances Association.

Construction and Maintenance Section. E. H. Fritch.

Electrical Section. E. H. Fritch.

Signal Section (including former activities of the Railway Signal Association). H. S. Balliet, 30 Vesey St., New York, N. Y. Annual convention, March 13, Drake Hotel, Chicago.

Division V—Mechanical (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Exhibit by Railway Supply Manufacturers' Association.

Equipment Painting Section (including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

Division VI—Purchases and Stores (including former activities of the Railway Storekeepers' Association). W. J. Farrell, 30 Vesey St., New York, N. Y.

Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.

Car Service Division—C. A. Buch, 718 18th St., N. W., Washington, D. C.

American Railway Bridge and Building Association.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Exhibit by Bridge and Building Supply Men's Association.

American Railway Development Association.—A. Leckie, Industrial Agent, Kansas City Southern Ry., Kansas City, Mo.

American Railway Engineering Association.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Exhibit by National Railway Appliance Association.

American Railway Master Mechanics' Association.—(See American Railway Association, Division V.)

American Railway Tool Foremen's Association.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

American Short Line Railway Association.—T. F. Whittelsey, Union Trust Bldg., Washington, D. C.

American Society for Steel Treating.—W. H. Eiseman, 1600 Prospect Ave., Cleveland, Ohio.

American Society for Testing Materials.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

American Society of Civil Engineers.—Prof. J. H. Dunlap, University of Iowa, Iowa City, Ia. Regular meeting 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York.

American Society of Mechanical Engineers.—Calvin W. Rice, 29 W. 39th St., New York. Annual meeting, December 4-7, 29 W. 39th St., New York.

Railroad Division—A. F. Stuebing, Manager Editor, Railway Mechanical Engineer, Woolworth Bldg., New York.

American Train Dispatcher's Association.—C. L. Darling, 1310-1311 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

American Wood Preservers Association.—S. D. Cooper, A. T. & S. Fe R. R., Topeka, Kan. Next meeting, January 23, 1923, New Orleans, La.

Association of Railway Claim Agents.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn.

Association of Railway Electrical Engineers.—Jos. A. Andreucetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.

Association of Railway Executives.—Alfred P. Thom (general council), 61 Broadway, New York.

Association of Railway Supply Men.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.

Association of Railway Telegraph Superintendents.—(See American Railway Association, Division I.)

ASSOCIATION OF TRANSPORTATION AND CAR ACCOUNTING OFFICERS.—(See American Railway Association, Division II.)

BRIDGE AND BUILDING SUPPLY MEN'S ASSOCIATION.—John Nelson, Joseph E. Nelson & Sons, 3240 South Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Ass'n.

CANADIAN RAILWAY CLUB.—W. A. Booth, 53 Rusbbrook St., Montreal, Que.

CAR FOREMEN'S ASSOCIATION OF CHICAGO.—Aaron Kline, 626 North Pine Ave., Chicago. Regular meetings, 2d Monday in month, except June, July and August, Great Northern Hotel, Chicago.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Koeneke, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.

CENTRAL RAILWAY CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Iroquois, Buffalo, N. Y.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesian Ave., Chicago, Ill. Meeting with Chief Interebange Car Inspectors' and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, 614 F St., N. W., Washington, D. C.

FREIGHT CLAIM ASSOCIATION.—(See American Railway Association, Division VII.)

GENERAL SUPPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday, preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George P. White, 747 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Wabasb Ave., Winona, Minn.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTER CAR BUILDERS ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James B. Walker, 49 Lafayette St., New York.

NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York.

NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition at convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Next meeting, November 14.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Noxon, 600 Liberty Bldg., Broad and Chestnut Sts., Philadelphia, Pa.

RAILWAY CLUB OF PITTSBURGH.—D. Conway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh, Pa.

RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electric Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—I. W. Engg, Boss Nut Company, 1732 N. Kolmar Ave., Chicago. Meeting with Traveling Engineers' Association

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A. Division IV, Signal Section.)

RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division VI.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Church St., New York.

RAILWAY TREASURY OFFICERS' ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa.

ROADMASTERS' AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, C. & N. W. Ry., Sterling, Ill. Exhibit by Track Suply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Frauenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill, P. O. Box 1295, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—J. L. Carrier, Car Serv Agt., Tenn. Cent. Ry., 319 Seventh Ave., North Nashville, Tenn.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, 2 N. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hilburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, 1177 East 98th St., Cleveland, Ohio. Exhibit by Railway Equipment Manufacturers' Association

TRAVELING RAILWAY CLUB.—Bruce V. Crandall, 605 North Michigan Ave., Chicago. Regular meetings, 3d Monday each month except June, July and August

Traffic News

The Traffic Club of New York has elected as president for the ensuing year Frank W. Smith, Chairman of the Official Classification Committee.

The traffic clubs of Grand Rapids and Lansing, Mich., have joined the Associated Traffic Clubs of America, making the total membership of this organization to date 32 clubs.

The report of the Government superintendent of Glacier National Park for the season just closed shows that 23,935 people visited the park last summer. This is an increase of 21 per cent over the season of 1921. The increase in arrivals by railroad was 53 per cent.

The consolidated freight classification, as issued by the Official Classification Committee, 143 Liberty street, New York city, can now be had in a "Pocket edition," 5 in. by 6¾ in. The page-forms are reduced by photographic process from the standard edition of the classification. A limited number of copies will be for sale by the committee; price two dollars.

Because of the threatened destruction by fire of a large stock pile of bituminous coal, and at the recommendation of the federal fuel distributor, the Interstate Commerce Commission, in Service Order No. 27, directed the Baltimore & Ohio to assign open top cars at the mine of the Elkhorn Piney Coal Manufacturing Company, located on the Long Fork Branch of the Baltimore & Ohio at Weeksbury, Ky., for the loading of coal, at the rate of 30 cars per day for each consecutive working day until a total of 250 cars are so furnished.

Because of the rapid improvement in the coal situation, the Interstate Commerce Commission on November 23 issued an amendment of its Service Order No. 25 so as to release from the requirement that priority be given to coal shipments, open top gondola cars with sides 48 in. or less in height. The previous order had exempted only cars with sides of 42 in. or less.

The commission has issued an order directing the Green Brier & Eastern, the Chesapeake & Ohio and the Norfolk & Western to furnish four cars a day for 10 consecutive working days to three named coal mines for coal consigned to the Commonwealth of Virginia Purchasing Commission in preference to any other use of such cars.

Freight traffic on the Warrior river, Alabama is increasing, and barges are able to get loads both ways. The Birmingham Age-Herald reports a recent shipment of three barges of canned goods from Mobile to up-river ports, to be distributed to points in the states of Alabama, Tennessee, Georgia and Mississippi. These goods came from the Pacific coast on a Luckenbach line steamer to Mobile. Three barges laden with wire mill products were sent from Birmingham to Mobile to be transferred to ocean going barges for Texas. Four barges laden with sulphur from Freeport, Tex., have just moved from Mobile to Birmingham. Selma is shipping 1,700 bales of cotton for export by rail to Demopolis and thence by barge to Mobile. Northbound barges are bringing Brazilian ore for the Tennessee company at Ensley.

New Haven Football Traffic

The New York, New Haven & Hartford reports that the passengers carried to and from New Haven on Saturday, November 25 on the occasion of the Harvard-Yale football game, numbered 56,978; and that 122 passenger trains were run, 59 to New Haven in the forenoon and 63 out in the afternoon and evening. During a period of two hours in the forenoon, a train was unloaded every 2.1 minutes; and for a similar period in the afternoon, a train was loaded every 2.5 minutes. Of the inward trains, 45 were specials and of the outward, 49; and 83 locomotives 369 cars had to be assigned to passenger service over and above the normal number. Forty-seven extra trains had to be run to take empty cars to their proper starting points and, after the rush, to return them to their usual locations. The whole movement was carried

out on substantially the schedule arranged. The total number of passengers was about 3,000 greater than the total on a similar occasion in November, 1920.

Anthracite Shipments in October

Shipments of anthracite in October as reported to the Anthracite Bureau of Information, Philadelphia, amounted to 6,567,928 tons, as compared with 5,872,783 tons during the corresponding month last year, an increase of 695,145 tons. Shipments by originating carriers were as follows:

	October, 1922	October, 1921
P. & R.	[illegible]	[illegible]
L. V.	1,166,195	[illegible]
C. of N. J.	617,[illegible]	[illegible],189
D. L. & W.	[illegible]36,375	759,492
D. & H.	[illegible]	[illegible]8,376
Pennsylvania	579,3[illegible]6	492,632
Erie	[illegible]1,27[illegible]	618,034
N. Y. O. & W.	179,865	126,925
L. & N. E.	292,941	253,311
Total	6,567,928	5,872,783

Coal Production

Bituminous coal production during the week of November 13-18 is placed by the Geological Survey at 11,213,000 tons as against 10,147,000 tons in the week preceding. Early returns for the week, November 20-25, indicate that 11,000,000 tons will be raised. Both bituminous coal and anthracite output in the week ended November 18 were at high rates, and the total coal raised, 13,404,000 net tons, was the highest weekly outturn since the strike and was exceeded this year only in the week ended March 25, when the total outturn was 13,543,000 net tons.

The movement of coal across the Hudson River into eastern New York and New England increased to 3,289 cars of bituminous coal and 3,582 cars of anthracite in the week ended November 18. In addition, 215 cars of soft coal and 35 cars of anthracite were forwarded through Rouses Point. The total all-rail shipments of bituminous coal during 1922 to date are now 21 per cent behind, whereas the anthracite shipments are 72 per cent greater than during the corresponding period in 1921.

The movement of bituminous coal from Lake Erie ports increased slightly in the week ended November 19. Reports from the Ore and Coal Exchange show that 1,042,792 tons were dumped. Of the total dumpings, 1,003,621 tons were cargo coal and 39,171 tons were vessel fuel. Cumulative dumpings of cargo coal during the present season to date stand at 16,839,249 tons, of which 15,718,082 tons went to regular Lake territory, and 1,221,167 tons went to destinations not ordinarily taking Lake coal. In comparison with the three years preceding, the quantity of cargo coal dumped in 1922 is about 22 per cent less than the average for those years.

Colorado River Basin Compact Signed

The Colorado River Basin compact was signed on November 24 at Santa Fe, N. M., by the representatives of the seven states concerned, according to a telegram received at the Department of Commerce from Herbert Hoover, chairman of the Colorado River Commission. The States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming have resolved to enter into a compact, the major purposes of which are to provide for equitable division and apportionment of the use of the waters of the Colorado river system to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters and the protection of life and property from floods. The compact is to become binding when it shall have been approved by the legislatures of each of the signatory states and by the Congress of the United States. It was approved by Chairman Hoover.

The project involves one of the greatest national improvements, requiring over a term of years an expenditure of several hundred millions of dollars. The land under irrigation in 1920 from the river and its tributaries amounted to about 2,464,000 acres in the United States and 190,000 acres in Mexico. It is estimated that the amount of irrigated land can be increased to about 6,123,000 acres in the United States and 800,000 in Mexico. Development of six million horsepower is a possibility as an incident to development of irrigation storage.

Commission and Court News

Interstate Commerce Commission

The commission has suspended until March 25 the operation of numerous schedules of Western and Southwestern carriers and Agents F. H. Boyd and F. A. Leland which propose a general readjustment of rates on grain and feed from western and southwestern points to the Mississippi river crossings, Cairo, Ill., and south thereof, also interior points in the Mississippi Valley and southeastern territory.

The commission has suspended from November 30 and later dates until March 30, 1923, the operation of schedules which propose to reduce the transcontinental rates applicable on various commodities from New York, N. Y., piers, Southern Pacific Atlantic Steamship Lines (Morgan Line) via Galveston to the same basis applicable from Group "D" (Chicago) via all-rail to the same points of destination in the west and southwest.

United States Supreme Court

Statute Imposing Attorney's Fees on Railroad Held Invalid

An action against the Chicago & North Western questioned the validity of a Nebraska statute making every common carrier liable for a reasonable attorney's fee in suits for collection from it of claims for damage, etc., not adjusted within 60 days.

A corporation of Fremont, Neb., which shipped hogs to South Omaha sued for $2,097 and $900 attorney's fees, for loss or injury to hogs shipped in 105 intrastate shipments, the railroad having refused to pay any amount whatever. The jury awarded $802, with interest and the court fixed attorney's fees at $600. On appeal to the State Supreme Court, a remittitur was consented to for $209 and the attorney's fee was reduced to $200, but the Supreme Court taxed the railroad company with an attorney's fee of $100 for services in the Supreme Court.

The Supreme Court of the United States, on the question of the statutory provision for attorney's fees said that: "These are costs imposed on the defeated defendant in the litigation but not on the defeated plaintiff. This is an inequality and the question is whether it is a discrimination which the legislature may make and not take the defeated defendant's property without due process of law." The court made an extended review of its more recent decisions concerning the constitutional validity of inequalities of this general character as between claimants and common carriers, and stated as the general rule to be gathered from these cases that "common carriers engaged in transportation may be grouped in a special class to secure the proper discharge of their functions, and to meet their liability for injuries inflicted in their performance; that the seasonable payment of just claims for faulty performance is a part of their duty, and a reasonable penalty may be imposed for failure promptly to consider and pay such claims. This penalty or stimulus may be in the form of attorney's fees. But it is also apparent from these cases that such penalties or fees must be moderate. . . . The 105 claims sued on were reduced to 72, and the trial lasted four days. The Supreme Court considers that in such case, an attorney's fee of $200 does not shock one's sense of fairness. The fee of $100 imposed on the railroad when it won its case on appeal by reducing the amount recovered in the trial court presented a different question. The original Nebraska statute was amended to read "and in event an appeal be taken, and the plaintiff shall succeed, such plaintiff shall be entitled to recover an additional attorney's fee to be fixed by such court or courts." . . . Thus we have a requirement that the carrier shall pay the attorneys of the claimant full compensation for their labors in resisting its successful effort on appeal to reduce an unjust and excessive claim against it. This we do not think is fair play. Penalties im-

posed on one party for the privilege of appeal to the courts, deterring him from vindication of his rights, have been held invalid under the Fourteenth Amendment.—Missouri Pacific v. Tucker, 230 U. S. 340. . . . So much of the statute as imposed an attorney's fee upon carrier in this case in the Supreme Court was invalid. "The judgment of the Supreme Court is to this extent reversed and in other respects affirmed." —Chicago & North Western v. Nye Schneider Fowler Co. Opinion by Mr. Chief Justice Taft. Decided November 13.

Labor Board Decisions

Payment for Yard Crews

Helping Trains Out of Terminals

Prior to April 1, 1920, yard crews were helping trains out of yards and beyond yard limit boards at various terminals on the Minneapolis & St. Louis as a part of their regular assignment, compensation therefor being covered by yard rates without arbitraries or special allowances. After that date yard crews were allowed a minimum of one hour at road rates of pay, in addition to the day's pay for yard service, for each time such service was required of them, in accordance with an interpretation of paragraph b, Article 20, of supplement 24 to General Order No. 27. After the receipt of decisions rendered by the Labor Board of Adjustment No. 1, indicating that no change in the manner of payment for such services was contemplated in paragraph b, of Article 20, this allowance was discontinued. Members of the train men's organizations then appealed to the Labor Board, contending that this allowance should be continued. The Labor Board decided that paragraph b applied only when yard engineers assist trains beyond the switching limits.—Decision No. 1285.

Classification of Drawbridge Tenders

In a controversy with the Pere Marquette the Order of Railroad Telegraphers raised the question: (A) whether employees who operate drawbridges and are classified as levermen should be paid at a rate less than that provided in Decision No. 2 for such classes, and (B) whether employees who decline to sign application or a contract providing for a lower rate of pay and different conditions should be given employment in their former positions and paid for time lost because of their refusal to sign such a contract. The Labor Board decided that no change should be made in the rates of pay and conditions of employment for drawbridge tenders unless made in accordance with the rules of the agreement or in the manner provided in the Transportation Act. The employees refusing to sign the contract and not taking employment were considered as having severed their connection with the company and claims were denied.—Decision No. 1253.

Compensation for Working on Rest Days

Certain train dispatchers on the Erie were required to work on their rest days during the period from January 30 to March 12, 1921, in violation of Decision No. 2; and application was made for reimbursement and refund of amounts deducted from their earnings as set forth in Decision No. 91. The Erie had issued instructions suspending relief days as it felt that there was no outstanding decision of the board on this point. The Labor Board decided that the carrier should reimburse the train dispatchers for the amount arbitrarily deducted from their earnings and for the rest days which they were required to work in January, February and March, 1921. Decision No. 1332.

The Order of Railroad Telegraphers also had a case before the Labor Board against the Erie with reference to the request of employees in telegraph service for reimbursement of amounts deducted from their wages in January, February and March, 1921. The employees stated that the action of the carrier was taken without consulting or advising the committee regularly elected to represent these employees. The carrier stated that this reduction in working time of the force was put into effect because of the necessity of economizing, as its operating expenses were at that time in excess of its operating revenues. The Labor Board decided that the action of the carrier in deducting certain amounts from the wages of telegraph employees was in violation of the Transportation Act and that the employees affected should be reimbursed for the amount deducted during the above-mentioned months. Decision No. 1286.

Equipment and Supplies

Locomotives

The Chicago, Milwaukee & St. Paul has ordered 25 Mikado type locomotives from the Baldwin Locomotive Works, in addition to the 50 reported in the *Railway Age* of November 25.

The Northern Pacific, reported in the *Railway Age* of October 21 as inquiring for 20 Mikado, 20 Pacific, 15 switching and 4 Mallet type locomotives, has ordered 49 locomotives from the American Locomotive Company.

The Central of New Jersey, reported in the *Railway Age* of November 18 as inquiring for 10, 8-wheel switching locomotives, has ordered this equipment from the American Locomotive Company. This company is now inquiring for 5, 6-wheel switching locomotives.

Freight Cars

The Winston-Salem Southbound is inquiring for 25 gondola cars.

The Canadian National Railways are inquiring for 1,250 stock cars and 50 caboose cars.

The Manila Railroad is inquiring through its office at 17 Battery Place, New York City, for prices on 50 box cars of 28 tons' capacity.

The Missouri Portland Cement Company has ordered 10 steel hopper cars of 50 tons' capacity from the American Car & Foundry Company.

The Northern Pacific, reported in the *Railway Age* of October 28 as inquiring for 3,000 box cars, is expected to place this order this week.

The Pittsburg, Shawmut & Northern, reported in the *Railway Age* of September 16 as inquiring for 200 stock cars, has postponed this inquiry indefinitely.

The Chicago, Rock Island & Pacific, reported in the *Railway Age* of November 18 as having placed orders for 500 box cars and 500 gondola cars, has issued an inquiry for 250 refrigerator cars, 250 ballast cars, 250 flat cars and 250 stock cars.

The Pere Marquette, reported in the *Railway Age* of October 28 as inquiring for 500 hopper cars of 50 tons' capacity and 1,000 box cars, has ordered the former from the Ralston Steel Car Company and the latter from the Western Steel Car & Foundry Company.

The Southern Pacific, reported in the *Railway Age* of November 18 as contemplating the purchase of 7,000 freight cars, is asking for prices on 3,700, 40 ft. single sheathed box cars of 50 tons' capacity; 650, 40 ft. flat cars of 50 tons' capacity; 550, 36 ft. 6 in. stock cars of 40 tons' capacity and 100, 8-wheel caboose cars.

The Chicago, Milwaukee & St. Paul, reported in the *Railway Age* of October 28 as inquiring for 3,000 gondola cars, 1,500 box cars and 500 automobile cars, has placed orders with the Bettendorf Company for 3,000 gondola cars, the Western Steel Car & Foundry Company for 2,000 box cars and the General American Car Company for 500 automobile cars.

Passenger Cars

The Pere Marquette is inquiring for 2 dining cars.

The Philadelphia & Reading is inquiring for 45 steel suburban passenger coaches and 5 steel suburban combination passenger and baggage cars.

The Canadian National Railways are inquiring for 35 first class coaches, 20 sleeping cars, 30 baggage cars, 10 mail cars and 50 express refrigerator cars.

Iron and Steel

THE CHICAGO UNION STATION company is inquiring for 1,500 tons of structural steel to be used on the Roosevelt Road viaduct, Chicago.

THE CHICAGO, ROCK ISLAND & PACIFIC has placed an order with the Milwaukee Bridge Company for 103 tons of structural steel for bridge spans.

Miscellaneous

THE CHICAGO UNION STATION COMPANY has ordered 6 tractors and 200 trailers from the Mercury Manufacturing Company, Chicago, and 2 tractors from the Elwell-Parker Electric Company, Cleveland, O., for use in the new mail terminal.

Signaling

THE ILLINOIS CENTRAL has ordered from the General Railway Signal Company an electric interlocking machine, Model 2, for installation at Homewood, Ill. The machine will have 50 working levers. The order includes 22 switch machines, Model 5.

Railway Construction

CHICAGO, BURLINGTON & QUINCY.—This company has awarded a contract to Joseph E. Nelson & Sons, Chicago, for the laying of 18,000 ft. of 16 in. pipe for its water treating plant at Galesburg, Ill.

CHICAGO, ROCK ISLAND & PACIFIC.—This company, reported in the *Railway Age* of November 18 as closing bids November 14 for a frame ice house at Eldon, Ia., to cost approximately $12,000, has awarded the contract to Joseph E. Nelson & Sons, Chicago. This company will also accept bids until December 8 for the construction of a brick and stone station at Clay Center, Kan., to cost approximately $15,000.

EDWARD HINES YELLOW PINE TRUSTEES.—The Interstate Commerce Commission has issued a certificate authorizing the Edward Hines Yellow Pine Trustees to place in operation in interstate commerce a railroad from Lumberton to Kiln, Miss., a distance of approximately 52 miles. The road was built primarily to facilitate the applicants' logging operations, but a demand arose from the inhabitants of the territory to have it placed in operation as a common carrier.

ILLINOIS CENTRAL.—This company will construct an extension and rearrange its passenger station at New Orleans, La., at an approximate cost of $20,000.

MORGAN'S LOUISIANA & TEXAS.—This company has been ordered by the Louisiana Public Service Commission to construct a viaduct over and across its tracks, facilities and properties in the fifth district in the city of New Orleans, La.

MISSOURI PACIFIC.—This company has awarded a contract to Joseph E. Nelson & Sons, Chicago, for the construction of a one-story brick boiler house 47 ft. by 50 ft. at Coffeyville, Kan.

YAKIMA SOUTHERN.—This company will construct 90 miles of line from Yakima to Underwood in the state of Washington. Contracts for grading and bridges will be let in May, 1923. The maximum grade will be 1½ per cent. The grading on 60 miles of the line through the mountains will be side hill excavation consisting of 30 per cent solid rock, 40 per cent loose rock and 30 per cent earth, and on 30 miles in the valley will consist principally of earth. There will be 12 bridges averaging 100 ft. in length, one tunnel 5,000 ft. long and another tunnel 1,000 ft. long.

THE NORFOLK & WESTERN announces that an agreement has been completed with the newly formed association of its shop employees.

A FIRE at Springfield, Mass., on Sunday afternoon, November 26, damaged the passenger station of the Boston & Albany about $25,000. That part of the station on the north side of the tracks was burned out inside. Plans already had been made to discontinue the ticket office on the north side and to concentrate all ticket selling on the south side.

Supply Trade News

John B. Bassett has been appointed assistant engineer of the New York district with office at 120 Broadway, New York City, of the **General Electric Company**, Schenectady, N. Y.

C. G. Harwig, chief engineer of the Regan Safety Devices Company, with headquarters at Niagara Falls, N. Y., has been appointed sales engineer of the **Hall Switch & Signal Company**, with headquarters at Chicago.

The Reed-Prentice Company, Worcester, Mass., has purchased outright the good will, business and certain assets of the Becker Milling Machine Company, Hyde Park, Mass., and the Whitcomb-Blaisdell Machine Tool Company, Worcester, Mass., and will manufacture the products of these two companies henceforth in its own plant at Worcester. The products will carry their former names, but the manufacturing will be all concentrated in the Reed-Prentice plant and the selling will be done by their present, and enlarged, sales force.

E. Bodde has been appointed consulting engineer for the **Regan Safety Devices Company, Inc.**, with headquarters at Niagara Falls, N. Y. Mr. Bodde was born in Holland and studied in Paris and London before coming to America in 1902. His first position in this country was in the testing room of the General Electric Company at Schenectady, N. Y. He was later employed by the Hall Switch Signal Company in the engineering department at Garwood, N. J., and left this position to undertake research work and wireless telegraphy in Professor Fessenden's laboratory at Brant Rock, Mass. His next position was with the Norwich University at Northfield, Vt., after which he returned to the General Electric Company at Lynn, Mass. During the war he was associated with Elihu Thompson in research work. When the war closed he contracted with the government of China to head the department of electricity in the Institute of Technology at Shanghai, China, which position he was holding at the time of his recent appointment.

Rice & Ilsley, Inc., is the name of a new firm of engineer-appraisers located at 18 Tremont street, Boston, Mass., with which is associated **Ernest W. Rice**, architect, and **Arthur B. Ilsley**, formerly engineer of bridges, Lines East, of the Southern Railway with headquarters at Charlotte, N. C. Mr. Ilsley was born at Limerick, Me., on March 29, 1873, and was graduated from Dartmouth College and the Thayer School of Civil Engineering, entering railway service with the New York, New Haven & Hartford in February, 1896. He subsequently left the New Haven to go with the Boston & Maine as assistant bridge engineer, serving in that capacity until March, 1904, when he left that road to become assistant engineer in the bridge department of the Southern Railway. In August, 1909, he was promoted to engineer of bridges and served in that capacity until February, 1917, when he was appointed as engineer of bridges, Lines East, following a division of jurisdiction, a position he held until his recent resignation. Mr. Rice was formerly employed by the American Appraisals Company, Milwaukee, Wis., and has had 20 years' experience in this work, during the last two years of which he was district superintendent of the company for New England.

Bethlehem Steel Corporation Absorbs the Midvale and the Cambria Companies

The board of directors of the Bethlehem Steel Corporation at a special meeting on November 24 authorized contracts for the purchase of the plants and other assets of the Midvale Steel & Ordnance Company and of the Cambria Steel Company, excepting the ordnance plant and other business located at Nicetown, Pa., and assets appurtenant thereto. In payment for the properties to be acquired, the Bethlehem Steel Corporation, besides providing for the assumption of the bonds and other indebtedness of the Midvale and Cambria companies will issue about $97,650,000

par value of the Bethlehem common stock, of which $95,000,000, par value, will go to the Midvale Company for distribution on dissolution to its stockholders, and the balance to the holders of the stock of Cambria not held by Midvale. As a result of these purchases the stockholders of the Midvale Company will receive for each two shares of $50 par value, of the Midvale Company stock $95, par value, of the Bethlehem common stock, together with a pro rata share of the stock of the new corporation to which the Nicetown plant is to be transferred.

Through the acquisition of the properties of the Midvale and Cambria companies, the Bethlehem Company will acquire plants at Coatesville and Johnstown, Pa., and Wilmington, Del., and important developed iron ore properties in Michigan and Minnesota, as well as developed coal properties in Pennsylvania. It will also give to Bethlehem important lines of steel products which it does not now manufacture, such as steel freight and mine cars, steel wheels, boiler tubes, agricultural implement parts, etc. The Bethlehem Company's present annual ingot capacity of 4,800,000 tons will be increased to 7,600,000 tons by the Midvale-Cambria purchase.

No increase in the aggregate indebtedness is necessary for this transaction. With the additional common stock to be issued for the properties to be purchased and with the 8 per cent preferred stock converted into the new 7 per cent cumulative preferred stock, the approximate capitalization of Bethlehem Steel Corporation will be about $213,500,000 funded debt, $62,000,000 7 per cent preferred stock, $180,250,000 common stock. The combined investment in property and plant, less depreciation and depletion, will be about $465,500,000 and the aggregate net quick assets will be about $133,700,000.

Standard Stoker Company

The management of the Standard Stoker Company, Inc., New York, has been changed. Frank L. Connable, of New York, vice-president of E. I. du Pont de Nemours Co., who was president of the Standard Stoker Company, is now chairman of the board; W. A. Larner, of New York, vice-president of Peyton-du Pont Securities Company, is now president; Eugene du Pont, of Greenville, Del., a director of E. I. du Pont de Nemours, remains as vice-president of the Standard Stoker Company and T. W. Keithley, of Wilmington, Del., formerly secretary, is now secretary and treasurer. The directors include F. L. Connable, W. C. Peyton, of New York, who is president of Peyton-du Pont Securities Company; W. A. Simpson, director of traffic of E. I. du Pont de Nemours Co., Wilmington, Del., G. W. Keithley, Eugene du Pont and W. A. Larner. W. R. Williams, of Richmond, Va., has been appointed general manager with headquarters for the present at Erie, Pa., and Frank P. Roesch, who was western manager, has been appointed sales manager with headquarters at Chicago.

W. R. Williams

William R. Williams was born in Bristol, Va., on November 16, 186[illegible], and was educated in the schools of Richmond, Va. He later, for ten years, attended Virginia Mechanics' Institute, a night school, part of the time teaching mathematics and drawing. At the age of 15 he entered the employment of the Old Dominion Iron & Steel Co. at Belle Isle, Richmond, serving for six years and when he left that company was chief of works' office. He [illegible] to the Richmond Locomotive Works, and was secretary of the company when it was consolidated with the American Locomotive Company. He remained with the latter company two years [illegible] purchasing agent, a total length of service with the [illegible] companies of 18 years. In 19[illegible], in co-operation with [illegible], formerly president of the Richmond Locomotive Co., he organized the Richmond Forgings Corporation. Mr. Williams served as vice-president of the new company until his recent appointment as general manager of the Standard Stoker Company. In July, 1920, he was appointed assistant secretary of war by President Wilson and served until March 4, 1921, when he was reappointed by President Harding and served for one month, returning to the Richmond Forgings Corp.

Frank P. Roesch was born in Alsace, France, and came to this country immediately after the close of the Franco-Prussian War. After graduating from high school he entered the service of the Chicago, Rock Island & Pacific as machinist's apprentice at Trenton, Mo., and while serving his apprenticeship studied mechanical engineering under the tuition of his father. Upon the completion of his apprenticeship he went west, working as a machinist in various shops until he resigned a foremanship to take a job as fireman, being later advanced to locomotive engineman. In 1899 he was promoted to traveling engineer on the Colorado & Southern and later was general traveling engineer of the Colorado & Southern System-Atchison, Topeka & Santa Fe, joint lines. In February, 1902, he was appointed master mechanic of the Chicago & Alton at Slater, Mo. He later served as general manager of the Hicks Locomotive & Car Works until the plant was sold in 1906, when he resigned to become master mechanic of the Southern Railway at Birmingham, Ala., and later was transferred to Spencer, N. C. In 1908 he was appointed master mechanic of the El Paso & Southwestern at Douglas, Ariz., where he remained until August, 1918, when he was appointed regional fuel supervisor, Northwest Region, U. S. R. A., and at the close of the railroad administration he became identified with the Standard Stoker Company, as its western manager.

Frank P. Roesch

Mr. Roesch has been a frequent contributor to the various railway technical journals since 1898. He is an authority on subjects pertaining to locomotive operation, combustion, etc., and is a past president of the Traveling Engineers' Association.

B. H. Tripp, formerly San Francisco manager of the Chicago Pneumatic Tool Co., has associated himself with **F. C. Severin**, formerly of Niles-Bement-Pond Company and Betts Machine Company in the sale of new and used machinery, with offices at 2220 Chestnut street, Philadelphia, Pa., and 25 Church street, New York City, under the name of **Severin-Tripp Machinery Company.**

Obituary

J. J. McCarthy, treasurer and chairman of the board of directors of the Chicago Cleveland Car Roofing Company, Chicago, died in that city from pneumonia on November 25.

J. E. Simmons, assistant to the vice president in charge of sales of the Republic Railway Supply Company, Chicago, died on November 24 from paralysis. Mr. Simmons was born in 1860 at Devonshire, England, and came to this country in 1880, where he entered the employ of the Lake Shore & Michigan Southern in the car repair department at Cleveland, Ohio, and later at Youngstown, Ohio. Some time thereafter he was placed in charge of the car department of the Pittsburgh Coal Company at Pittsburgh, Pa. He was later employed at the Hicks Locomotive Plant, Chicago, and later represented the Pittsburgh Steel Foundry and the Ft. Pitt Spring Company. In 1917 he entered the employ of the Joliet Railway Supply Company as assistant to the vice-president in charge of sales and upon the taking over of this company by the Republic Railway Supply Company in July, 1922, he was appointed to the same position, which position he was holding at the time of his death.

Railway Financial News

ATLANTA & NORTH CAROLINA.—*Asks Authority to Issue Bonds.*—The company has applied to the Interstate Commerce Commission for authority to issue $325,000 of first mortgage 6 per cent bonds for refunding purposes.

ATLANTA, BIRMINGHAM & ATLANTIC.—*Receiver Asks Permission to Issue Certificates.*—B. L. Bugg, receiver, has filed a petition in the United States District Court at Atlanta, Ga., asking for permission to issue $80,000 receiver's certificates for repairing 400 wooden gondolas. Judge S. H. Sibley has set the date of hearing on the petition for December 2.

BANGOR & AROOSTOOK.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to issue $250,000 of equipment trust certificates for the purchase of 300 box cars.

BOSTON & MAINE.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $4,000,000 of 6 per cent mortgage bonds to be sold at not less than 87.89 to provide for the payment of bonds maturing on January 1 and May 1.

CHICAGO & ALTON.—*Asks Authority to Issue Receivers' Certificates.*—The receivers have applied to Federal Judge Carpenter for authority to issue $2,000,000 receiver's certificates. One half of the amount sought will be used in repairing 24 locomotives and 500 cars, 400 of which are coal cars, and for the purchase of 90-lb. rail to be used on 15 miles of its line. The other half of the $2,000,000 is required to pay off pressing debts.

CHICAGO, ATTICA & SOUTHERN.—*Authorized to Operate Lines.*—The Interstate Commerce Commission has issued a certificate authorizing this company to acquire and operate a line from La Crosse to a point 25.72 miles north of Brazil, Ind., and of a branch line extending from Percy Junction to the Illinois state line, having a total length of about 145 miles. The lines form a part of what was formerly the coal railway division of the Chicago & Eastern Illinois, which were recently abandoned in accordance with a certificate issued by the commission. The company proposes to pay $250,000 for the property.

DEATH VALLEY.—*Authorized to Issue Stock.*—Upon further consideration, the Interstate Commerce Commission has reversed its former decision denying the application of this company for authority to issue stock for the purpose of retiring outstanding first mortgage bonds and has authorized an issue of $99,100 for this purpose.

DETROIT & MACKINAC.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue and sell $450,000 of prior lien bonds, the proceeds to be used to pay off notes.

GLADY & VALPENA.—*Abandonment of Line Authorized.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment as to interstate and foreign commerce of this company's line of railroad from Gladwin to Evenwood, W. Va., 18 miles. The line was built primarily to handle forest products and the available supply of timber has been cut.

MAGMA ARIZONA.—*Authorized to Issue Stock.*—This company has been authorized by the Interstate Commerce Commission to issue $800,000 of stock at not less than par for the purpose of changing its narrow-gage railroad of 30 miles connecting at Magma, Ariz., with the Arizona Eastern, from narrow gage to standard gage.

MISSOURI, KANSAS & TEXAS.—*Extension of Time.*—J. & W. Seligman & Co. and Hallgarten & Co., reorganization managers, have announced that the time for the deposit of assignments of claims against the road and of its guaranteed bonds has been extended to January 2, inclusive.

NEW YORK CENTRAL.—The United States Supreme Court, in a decision handed down on November 27, held that the consolidation of the Lake Shore & Michigan Southern and other roads into the New York Central Railroad was not in violation either of the Sherman or Clayton anti-trust laws. The decision was by Justice Van Devanter in a case brought by the General Investment Company of Maine.

NEW YORK, ONTARIO & WESTERN.—*New Director.*—J. L. Richards has been elected a director to succeed Thomas De Witt Cuyler, deceased.

PENNSYLVANIA COMPANY.—*New Director.*—E. E. Ingersoll has been elected a director to succeed Thomas De Witt Cuyler, deceased.

PENNSYLVANIA RAILROAD.—*New Director.*—Arthur W. Thompson, of Pittsburgh, Pa., has been elected a director to succeed Thomas De Witt Cuyler, deceased.

PITTSBURGH, CINCINNATI, CHICAGO & ST. LOUIS.—*New Director.*—Bayard Henry has been elected a director to succeed Thomas De Witt Cuyler, deceased.

RICHMOND, FREDERICKSBURG & POTOMAC.—*Operating Study.*—See article on another page of this issue entitled "Perishable Freight Service Specialty of R. F. & P."

ST. LOUIS-SOUTHWESTERN.—*Preferred Dividends Resumed.*—The directors have declared a semi-annual dividend of 2½ per cent on the preferred stock. This is the first dividend paid on the preferred since April 15, 1914, when ½ of 1 per cent was paid.

Authorized to Acquire Control.—This company has been authorized by the Interstate Commerce Commission to acquire control of the Valley Terminal Railway for 50 years from January 1, 1922.

TEXAS & PACIFIC.—*Terminal Improvements Planned.*—Discussing the bill which has been introduced in Congress by Senator Morris Sheppard to authorize this company, which operates under a federal charter, to issue additional securities amounting to approximately $7,000,000, J. L. Lancaster, receiver of the road, said that if the measure is passed about $1,000,000 will be expended in Dallas on terminal improvements during the next two years. Mr. Lancaster said:

> The development of Texas, especially the territory served by the Texas & Pacific, during the last year has been so rapid that we have not been able to keep abreast with the situation. The greatest need of the line is better terminal facilities. If the road is given authority to issue the $7,000,000 in bonds, the sum will be spent chiefly for terminal improvements.
>
> The present bond limit of the Texas & Pacific is $50,000,000, this being established under the reorganization plan of 1888. If the amendments proposed by Senator Sheppard are allowed by Congress, the second mortgage bonds of the Texas & Pacific totaling about $25,000,000, will be converted into preferred stock and the amount for new bonds for improvements will automatically be made $25,000,000. The second mortgage bonds is the issue under which the Texas & Pacific is now in the hands of receivers.
>
> Reorganization of the Texas & Pacific and dissolution of the receivership will follow rapidly upon the passage of proposed amendments to the company's charter.
>
> The Texas and Pacific is in need of improvements along its entire system. The management of the road has been unable to make such improvements as have been needed since all betterments had to be made out of the earnings of the road. The necessity for larger improvements and the inability of the road to increase its earnings sufficiently to make these improvements, led to the presentation of the bill in the Senate.

WHEELING & LAKE ERIE.—*Loan from Revolving Fund.*—The Interstate Commerce Commission has certified to the treasury a loan of $500,000 to this company to assist it in meeting maturing indebtedness.

Dividends Declared

Atlantic Coast Line: Common, $1.50, quarterly, payable December 9 to holders of record November 30.

Erie & Pittsburgh: 1¾ per cent, quarterly, payable December 9 to holders of record November 29.

St. Louis & Southwestern: Preferred, 2½ per cent, semi-annually, payable December 16 to holders of record December 15.

Trend of Railway Stock and Bond Prices

	Nov. 28	Last Week	Last Year
Average price of 20 representative railway stocks	64.53	66.67	58.87
Average price of 20 representative railway bonds	84.44	85.29	81.94

Railway Officers

Financial, Legal and Accounting

Miss E. S. Redel, chief clerk in the office of the President and vice-president of the Minneapolis & St. Louis, at Minneapolis, Minn., has been promoted to assistant secretary, with the same headquarters.

Operating

R. F. Finley, superintendent of telegraph of the New York Central, west of Buffalo, with headquarters at Cleveland, Ohio, has been appointed also superintendent of telegraph of the Indiana Harbor Belt, the Chicago River & Indiana and the Chicago Junction, succeeding W. L. Connelly, deceased. Mr. Finley acts also in this territory as the superintendent of the Western Union Telegraph Company.

F. S. Elliott, general superintendent of the Western district of the Great Northern, with headquarters at Spokane, Wash., who has been on leave of absence, has resumed his duties. **W. R. Smith,** acting general superintendent of the Western district, has returned to his former position as general superintendent of the Central district, with headquarters at Great Falls, Mont., and **F. Wear,** acting general superintendent of the Central district, has returned to the Butte division as superintendent with the same headquarters.

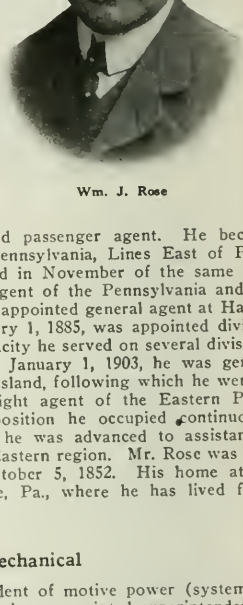
I. H. Luke, general superintendent of the Utah lines of the Denver & Rio Grande Western with headquarters at Salt Lake City, Utah, has been promoted to assistant chief operating officer of the system, succeeding **W. E. Green** who has resigned to accept service with the Train Service Board of Adjustment for the Western Region. **J. D. Stack,** superintendent of the First Division with headquarters at Pueblo, Col., has been promoted to general superintendent of the Utah lines in place of Mr. Luke. **C. E. Leverich,** superintendent of the Third Division with headquarters at Gunnison, Col., has been transferred to Pueblo, succeeding Mr. Stack. **J. W. Martz,** assistant superintendent of the First Division with headquarters at Pueblo, has been promoted to superintendent of the Third Division in place of Mr. Leverich.

W. F. Thiehoff, general manager of the Chicago, Burlington & Quincy, Lines West of the Missouri river, with headquarters at Omaha, Nebr., has been appointed general manager of the Lines East of the Missouri river, with headquarters at Chicago, succeeding **L. B. Allen** who has resigned on account of ill health. **E. Flynn,** General Superintendent of the Nebraska district, with headquarters at Lincoln, Nebr., has been promoted to General Manager of the Lines West, succeeding Mr. Thiehoff. **L. B. Lyman,** general superintendent of the Illinois district, with headquarters at Galesburg, Ill., has been transferred to the Nebraska district in place of Mr. Flynn. **J. H. Aydelott,** superintendent of transportation of the system, with headquarters at Chicago, has been appointed general superintendent of the Illinois district, succeeding Mr. Lyman. **W. H. Card,** division superintendent, with headquarters at St. Joseph, Mo., has been promoted to general superintendent of the Iowa district, with headquarters at Burlington, Ia., succeeding F. H. Ustick, deceased. **J. D. Farrington,** superintendent of the Quincy, Omaha & Kansas City, with headquarters at Kansas City, Mo., has been appointed superintendent of the St. Joseph division of the Burlington succeeding Mr. Card. **H. D. Brown,** who has been doing special work on the staff of the operating vice-president, with headquarters at Chicago, has been appointed superintendent of transportation with the same headquarters, succeeding Mr. Aydelott. **T. J. Thomas,** who has been doing special work in the office of the president, has been appointed superintendent of the Quincy, Omaha & Kansas City in place of Mr. Farrington.

Traffic

J. E. Reilly, chief clerk in the general passenger agents department of the Pere Marquette at Detroit, Mich., has been promoted to general western passenger agent with headquarters at Chicago, succeeding O. L. Kinney, deceased.

William J. Rose, assistant to the traffic manager of the Eastern region of the Pennsylvania, has retired from active service at the age of 70 years, under the pension regulations of the company. Mr. Rose served the Pennsylvania 56 years and 8 months, practically all of which time he spent in the traffic department. At the age of 13 his railroad career began in the engineering department of the Warren & Franklin now a part of the Pennsylvania. In 1867 he was assigned to clerical work in the office of the superintendent of motive power at Altoona. He was out of the service from 1870 to 1871, when he re-entered as a special agent, and on January 1, 1872, he was appointed general freight and passenger agent. He became commercial agent of the Pennsylvania, Lines East of Pittsburgh, on May 8, 1879, and in November of the same year was promoted to general agent of the Pennsylvania and the Northern Central. He was appointed general agent at Harrisburg in 1882, and on January 1, 1885, was appointed division freight agent, in which capacity he served on several divisions. From January 14, 1901, to January 1, 1903, he was general freight agent of the Long Island, following which he went to Harrisburg as division freight agent of the Eastern Pennsylvania division, which position he occupied continuously to January 1, 1922, when he was advanced to assistant to the traffic manager of the Eastern region. Mr. Rose was born at Pittsburgh, Pa., on October 5, 1852. His home at the present time is at Carlisle, Pa., where he has lived for a number of years.



Wm. J. Rose

Mechanical

C. S. Patton, superintendent of motive power (system) of the Seaboard Air Line, has been appointed superintendent of motive power, Northern district, with headquarters at Norfolk, Va. **J. J. Hanlin,** assistant superintendent motive power (system), has been appointed superintendent of motive power, Southern district, with headquarters at Savannah, Ga. **L. D. Freedman,** assistant superintendent of motive power (system), has been appointed assistant to the manager of the mechanical department with headquarters at Portsmouth, Va. Master mechanics will hereafter report directly to the manager of the mechanical department on matters concerning classified repairs and to superintendents of motive power of their respective districts on other mechanical matters. Shop superintendents and other officers hitherto reporting to the superintendent of motive power (system) will report to the manager of the mechanical department.

Engineering, Maintenance of Way and Signaling

W. R. Bennet, signal engineer of the Eastern Bengal Railway, Calcutta, India, who recently spent some time in this country studying railway signaling, sailed from England on November 21 for Calcutta where he will resume his regular duties.

Arthur B. Ilsley, engineer of bridges, Lines East, Southern Railway, with headquarters at Charlotte, N. C., has resigned to become associated with the new firm of Rice & Ilsley, Inc., Boston, Mass., further notice of which appears elsewhere in this issue.

Marine Borers Invade Atlantic Harbors

When the collapse of several docks in San Francisco Bay a few years ago revealed the presence of marine borers in large numbers in the timber substructures, the railways and other owners of water-front property became much concerned over this new danger. At first the activities of these insects were believed to be confined to the Pacific coast, but it is now evident that they have also become active in the harbors along the Atlantic coast. The investigation which the National Research Council is now making shows that they are to be found as far north as Provincetown, Mass., and south to the Gulf of Mexico. This new danger is of live interest to the railways reaching these ports because of the large investment which they have in piers and other water-front structures. The situation is one which demands prompt attention if the inroads of these insects are to be arrested. While extensive scientific investigation must be made to determine means of overcoming their attacks, the destruction they bring about is so rapid that these investigations must be conducted with the utmost speed. The railways which have property in danger from this source should, therefore, give their full support, financially and otherwise, to this investigation before the damage becomes increasingly serious.

Use Train-Order Form 19

The way to get rid of the delays to trains incident to requiring conductors' signatures to dispatchers' orders is to introduce the general use of Form 19 instead of Form 31. The way to introduce it is to use it. An executive order of two sentences, with the proper signature, is enough to start an important progressive movement. This simple truth is known to all well-informed operating officers (and, in some cases, so well known that the knowledge has led to action), yet many, who seem convinced, apparently fear to make the change. Any manager who thinks that possibly the abolition of signatures might increase the risk of collision by a millionth of one per cent ought to re-read the convincing arguments in favor of Form 19, which have been repeatedly published, and then see if he cannot get some neighboring road to join him in accepting and acting on those arguments. If the legal department of your road must be educated before its assent can be secured, the plan of educating two or more legal departments simultaneously may help to overcome inertia. We suggest this neighborhood arrangement because anything like country-wide co-operation seems to be out of the question, at least for the present. One progressive manager who appealed to the Train Rules Committee of the American Railway Association to take action received the reply that the Standard Code rules already allow any road to use Form 19 as freely as it pleases; and the committee dropped the subject. We are not sure but the characteristic conservatism of the A. R. A. is, in this instance, harmless. This reply is a direct challenge. It may be a good thing for railroad managers to loosen up a trifle in their hide-bound worship of precedent, and get out of the habit of hiding behind a big and frigid organization. One leading road, the Southern Pacific, is to extend the use of Form 19 on January 1 throughout its thousands of miles of lines, as noted in the *Railway Age* last week, page 1052. There is ample time for any number of other roads to join in the same movement. Why not make this change on your road on the same day?

Genuine Employee Interest

A communication from an engineman in the employ of the Great Northern Railway of England was recently published by our British contemporary, the Railway Gazette, telling of the "locomotive improvement" classes provided by his railway. The writer tells of a particularly interesting lecture which was given recently at one of these classes. The subject was the valve gear of a three-cylinder locomotive and the lecture was illustrated by a working model. The correspondent says that the lecture room was packed with all classes of enginemen and engine-house employees, "from the chief to the call boy." The audience, he continues, took an active interest in the lecture and plied the speaker with pertinent questions. The correspondent concludes by emphasizing the great change which has come over the employees in their increased interest in their work and their desire to perfect themselves in it. The *Railway Age* has already called attention to the classes in railway economics, operation, law and kindred subjects which have been organized by the British railways and which are attended by hundreds of earnest students—all of them employees of the railways. We have also noted how railway officers and employees are meeting together in committees and councils, not only to settle disagreements, but to take counsel with each other on means and methods of improving the efficiency of the railways. Moreover we have the word of a leading English technical journal to the effect that the harmonious relationship with labor is the most encouraging feature of the British railway situation. Surely American railway officers and employees can learn much about mutually advantageous co-operation from England's example!

Making a Track Capacity Study

A road that proposes to undertake an investigation of the possibility of increasing the capacity of a line should collect the required information with care. If the signal engineer is a close student he should lead the investigation. With the assistance of the engineering department, the large field maps can be reduced to simplified straight line track diagrams on a scale of about one to 1,000, with the grades and curvature indicated by auxiliary lines and with all passing tracks, water tanks, coal chutes, station platforms and train order signals indicated. He should then make a trip over the territory on a motor car to locate on his map numerous local conditions affecting operation, so that these features may be in mind during the studies to follow. He may then well proceed to the dispatcher's office, where he can prepare "time-distance" charts in consultation with the chief dispatcher, covering all train movements for various 24-hour periods of normal and heavy traffic, as taken from the train sheets. A study of these charts will show how trains are spaced and the time that the track is occupied by certain movements. With a

knowledge of the estimated traffic to prepare for, the signal engineer, with the aid of the chief train dispatcher or the superintendent, is now in a position to prepare prospective "time-distance" charts, in which are incorporated the additional train movements that will be permitted by signal protection. With the proper co-operation of the operating and mechanical officers in the study of such charts, relatively accurate conclusions can be drawn regarding the possibilities of expediting the movement of traffic by a signal system. In view of this fact and considering the small incidental expense involved, it would seem advisable for numerous roads to institute such investigations on their busiest single-track divisions that are now giving trouble from apparent lack of track capacity.

"Main Tracker" Here to Stay

In the days when James J. Hill was developing the heavy train load there were many experienced railway men who shook their heads and said that while such a method might work out satisfactorily on the Great Northern, it would not meet the peculiar conditions which existed on their roads. However, the Hill idea has prevailed and one road after another has come to realize its economies until today its merit is generally conceded. The point may be raised whether we are not now facing a similar situation with reference to the making up of trains for movement intact through intermediate terminals to remote destinations. A few roads have followed this practice for years, others have adopted it more recently and there are still many roads who feel that this plan is not practical for their conditions. A few weeks ago when the traffic was at its peak, the capacity of the roads was determined largely by the number of cars which could be classified and dispatched through the terminals. Every train that was kept out of a terminal added, therefore, to the capacity of the roads. The peak of traffic has passed, but capacity is still of prime importance, since many roads are still being offered more business than they can handle. However, there are other advantages of the "main tracker" of equal or even greater value. Foremost among these advantages is the reduction in operating costs. One large railway which has pioneered in this direction estimates that it is saving three-quarters of a million dollars monthly by this plan, considering only those costs which can be allocated directly, such as labor and fuel. Another railway which inaugurated an intensive campaign in this direction about a year and a half ago has been able to effect a reduction of between 50 and 60 eight-hour switch engine tricks daily. This road has also been able to reduce the number of men employed to inspect and repair cars because of the reduced amount of switching. Surely, such economies as these warrant the closest investigation in times of heavy traffic or of light traffic. The "main tracker" idea has been developed on a sufficient number of roads to demonstrate the soundness of the principle. The question on those roads which have not yet taken it up is not whether it is practicable or not, but rather whether when it will be adapted to the local problems of these particular roads.

How to Get New Railroads Built

The petition filed with the Public Service Commission of Oregon asking the Interstate Commerce Commission to order some one or more of the railroads serving that State to construct a considerable amount of new railroad mileage in eastern, central and southern Oregon, as reported in last week's is sue, is interesting as the first important case in which the provisions of the Transportation Act authorizing the commission to require the building of new railroad facilities have been invoked. It is also a most significant illustration of the fact that there are parts of the country where the public wants new railroads which the existing railroad companies have not built voluntarily. The war and the period of business depression which followed it undoubtedly account for some of the lack of railroad extension and expansion in the last few years, but the Oregon commission's petition says that there exist practical and feasible routes for the extensions which it asks that the railroads be compelled to make and that in some instances construction was actually begun many years since, but never completed. If this is the case, it must have been because the projectors of the railroads were unable to demonstrate to those who had capital to invest that the railroads proposed would be profitable enterprises. One of the reasons which has caused doubt as to the prospective profitableness of a railroad enterprise has been the kind of regulation which has been applied to existing railroads, and one of the surest ways of bringing about an increase in railroad facilities would be a policy of regulation which would hold forth a prospect of profitable operation. These remarks are not made particularly for the benefit of the Oregon commission, which was one of the comparatively few State commissions that offered no obstructions to the putting into effect of the increased rates authorized by the Interstate Commerce Commission in 1920, and which may be willing to accord to the new railroads it wants some excuse for being from the viewpoint of others besides those who desire the service. The Transportation Act, which gives the Interstate Commerce Commission power to order new extensions, also expresses a policy intended to appeal to those who must furnish the necessary capital and it also attempts to encourage new construction by providing that a new railroad may retain any "excess" earnings without recapture for 10 years. We are told that the revenue provisions of the act have not yet been able to work as intended, because of the abnormal conditions that have prevailed. If more normal conditions make it possible for the railroads to reach the standard set by Section 15-a of the act, it may be that Oregon can get new lines built without the need for invoking Paragraph 21 of Section 1.

Monthly and Annual Reports

It is as an index of what may be expected from the year's operations as a whole that the monthly reports of railway revenues and expenses find their greatest—although, of course, by no means their only—value. As an index of what the year's earnings may prove to be the monthly earnings' statements have their leading value because they are available in from three to four weeks after the close of the month which they cover. Proper use of the figure for the month and for the cumulative period supplies a readily available measure of the year's results available promptly and increasing in accuracy and in value in proportion to the proportion of the year which the cumulative period includes. It is common sense to say that a railway's report for a particular month or for a particular cumulative period must be used with proper regard to the railway's own peculiar conditions. Thus, for a road like the Atlantic Coast Line which normally shows its best months in the earlier part of the year when the perishable freight is moving, an entirely different set of conditions is presented as compared with those of the Great Northern which makes the better of its net when the iron ore and wheat are moving in the latter half of the year. Realizing the value, with due regard to the road's characteristics and underlying conditions generally, of the monthly statement as an indication of what the year as a whole may show, it would be natural for us to expect that every care would be taken to show a proper relationship between the figures given in the monthly statements and those which ultimately appear in

the annual report itself. This unfortunately seldom proves to work out in actual practice, and the reasons that it does not work out are several. The first is that only a comparatively few roads show in their annual reports that important figure in the monthly report—namely, net railway operating income. Another reason is that frequently the annual report covers a different mileage—because possibly of the inclusion of subsidiary lines—from the monthly report. Third, there are almost always corrections which cause the annual report to show different figures from those which appear, let us say, in the December cumulative statement. And we might go on. Taking the situation by and large, however, it seems evident enough that this is a matter which should be given greater attention than has thus far been given to it. Under present conditions there is much confusion about the figures that should be entirely unnecessary.

Orders in November

With the car and locomotive orders for the first eleven months of the year placed, we are now in a position to make a pretty fair estimate as to how 1922 as a whole will rank with other years from the standpoint of equipment purchases. Up to and including last week's issue, the *Railway Age* had reported in its equipment and supplies column, orders placed for 2,175 locomotives, 139,257 freight cars and 1,706 passenger cars for use on the railways in the United States. These figures break no records but, on the whole, they compare very favorably indeed with the totals for recent years, as is shown in the following table:

DOMESTIC ORDERS

Year	Locomotives	Freight Cars	Passengers Cars
1915	1,612	109,793	3,101
1916	2,910	170,054	2,544
1917	2,704	79,367	1,124
1918	2,593	114,113	109
1919	214	22,062	292
1920	1,998	84,207	1,781
1921	239	24,346	246
1922 (11 mos.)	2,175	139,257	1,706

In this table the striking feature is the comparison with 1921 and the fact that the 1922 eleven months' total for freight cars is the best in the period given with one exception, 1916, when orders for 170,054 cars were reported. Orders in November this year totaled 319 locomotives; 13,599 freight cars, and 153 passenger cars. The November figures and the cumulative totals are shown as follows:

DOMESTIC CAR AND LOCOMOTIVE ORDER IN 1922

Month	Locomotives	Freight Cars	Passenger Cars
Jan.	5	7,960	235
Feb.	8	14,721	160
March	76	5,550	25
April	672	50,507	540
May	99	18,337	235
June	22	11,097	37
July	353	15,675	120
Aug.	220	576	22
Sept.	617	6,717	63
Oct.	184	14,498	116
Nov.	319	13,599	153
Total (11 mos.)	2,175	139,257	1,706

The orders in 1922 are apparently going to hold up well to the end of the year. The November totals were good. The more important fact is that in the equipment and supplies column this week there are reported 3,000 tank cars placed by the Union Tank Line, which 3,000 are not included in the November figures already quoted. The Southern Pacific has arranged to secure some 7,000 cars, inquiries for 5,000 of which are already issued. Inquiries have also been sent out for 5,000 refrigerator cars for the Pacific Fruit Express and it is understood that bids will shortly be asked for 300 additional refrigerator cars for passenger train service. This means that the 1922 eleven months' total is likely to be substantially increased before the year is out.

The Truth About the Transportation Act

RADICAL POLITICIANS and labor leaders will, within the next few months, make an energetic drive to secure the repeal of the Transportation Act, or at least of those provisions of it against which they have constantly carried on propaganda during the last two and a half years. They will make this drive upon the assumption that the Transportation Act is beneficial to the railways. They and many other people seem to reason that anything which benefits the railways must harm labor and the public.

The *Railway Age* advocated the Transportation Act. We still believe that if its provisions had been in the past, and should be in the future, carried out in the spirit in which they were enacted it would do more good and less harm than any other railroad legislation ever enacted in this country. In our opinion, however, the Transportation Act thus far has done the railroads at least as much harm as good, and it is doubtful if they should very strongly oppose its repeal.

The most important provisions of the Act are those relating to rate making, to labor controversies and to consolidations.

The rate making provisions directed the Interstate Commerce Commission to so fix rates that the railways would be able to earn a fair return upon their valuation, giving due consideration to the transportation needs of the country. It directed the Commission to take as a measure of a fair return for the two years ending with March 1, 1922, not less than 5½ per cent. The Commission ruled in the 1920 rate case that a fair return at that time would be 6 per cent, and in the 1922 reduced rate case that a fair return would be 5¾ per cent. What have the railways actually got? In the year ended March 1, 1921, including the government guarantees for the six months of that year, they had a net return of only 3½ per cent. In the year ended March 1, 1922, they had a net return of 3.05 per cent. The average for the two years was 3.57 per cent. For the entire two years, it was $918,000,000 less than a return of 6 per cent on their valuation, and $730,000,000 less than a return of 5½ per cent.

Thus the Commission, in fixing the rates, completely failed to carry out the instructions and intent of the law with respect to these two years. Its failure was mainly due to the depression of business, but it failed in spite of the fact that the railways, during those two years, received $730,000,000 less than the minimum return mentioned by the law, the Commission, immediately after the termination of these two years, yielded to public clamor and made a general reduction of freight rates, and during the seven months ending with last September the net return earned was less than 4 per cent, and in August and September averaged only 2¾ per cent. The net returns which the railways have received in the thirty-one months since the Transportation Act went into effect for which we have complete figures has been $1,146,000,000 less than 6 per cent and $844,000,000 less than 5½ per cent, and has been in fact the smallest return they ever have received in any equal period since statistics for the railways as a whole have been kept.

In other words, the Transportation Act as administered by the Commission, has thus far failed to enable the railways to earn anything approaching a "fair return." It is inconceivable that even if the Act had never been passed, regulation would have or could have restricted them to a lower return than they actually have received under it. But while the rate making provisions thus far have done the railways no good, they have, in one respect, done them much harm. They have afforded pretext for the wide-spread dissemination of propaganda to the effect that the railways are "guaranteed" a return of 5½ or 6 per cent; and this propaganda has done much to create sentiment hostile to the roads.

The rate making provisions further provide that any rail-

way which earns more than 6 per cent on its valuation must hand one-half of its net return in excess of this amount over to the Interstate Commerce Commission. This provision manifestly was predicated upon the assumption that the provision assuring to the railways an opportunity to earn a "fair return" would be carried out. But while the railways as a whole have not earned anywhere near the returns specified in the law and expected by them the Commission, in conformity with the law, is taking steps to collect this "excess" net return of the more prosperous railways.

The results of the passage of the rate making provisions are, then, that the railways never have earned anywhere near a "fair return"; that the provisions have been made the pretext for damaging propaganda against them; and that some railways must surrender a part of their net return which they could have kept if the Transportation Act had not been passed. Plainly, the rate making provisions up to this time have done the railways more harm than good.

From the latter part of 1920 until recently other industries secured the benefit of sharp reductions of wages, especially those of unskilled labor. The Transportation Act required all controversies between railways and their employees that might threaten interruption of transportation to be submitted for settlement to the Railroad Labor Board. The second decision rendered effective by the board on May 1, 1920, caused the largest advance in the wages of railway employees ever given to any class of workers. It put the level of railway wages far higher than it was during the war just when the greatest decline of business in history was beginning. The board subsequently awarded reductions of wages, but they were not made until long after extensive reductions had been made in almost every other industry, and even then left railway wages higher than those in other industries.

Thus, during a period of acute business depression the railways, under the Transportation Act, were compelled to pay wages far in excess of what they probably would have paid if the Labor Board had not been created.

The principal purpose for which the Labor Board was created was to prevent strikes. Its creation did not, however, prevent the most extensive and costly railroad strike that ever occurred.

It is easy to see how railway employees have benefited from the passage of the labor provisions. On the other hand, it seems probable that the railways, during the last three years, would have been better off if these provisions had never been enacted.

The consolidation provisions required the Interstate Commerce Commission to frame a plan for the consolidation of the railways into a limited number of competing national systems. The Commission has tentatively adopted a plan many parts of which might be carried out to the advantage of the railways and the public. This plan would, however, work the disruption of the great Hill system, with consequences which would seriously injure the railways composing that system and which would not benefit the public. Furthermore, the provisions of the Act require that when two or more railways are consolidated, the total securities they have outstanding must be adjusted on the basis of their combined valuation, which tends to make the whole consolidation scheme unworkable. If the law merely authorized any consolidation of railways that the Interstate Commerce Commission should hold not contrary to the public interest, it would promote the welfare of both the railways and the public, but it is doubtful if the provisions actually adopted will ever prove to be of any value, and certainly they have not conferred any benefits thus far.

The truth is that the only provision of the Transportation Act which have done the railways any good are those which continued the war time guarantees during the first six months of private operation and which resulted in loans being made to them by the government to carry them through the period of transition from government to private operation.

The Transportation Act on the whole is a good law. Its rate making provisions, from the standpoint of the welfare of both the railways and the public, are the best part of it. But a good law is no better than a bad law if it is not backed by public sentiment and carried out in the spirit in which it was enacted. The principal purpose of those who framed the Transportation Act was to give the country a law which would end the near-confiscation policy of regulation which prevailed for more than ten years before government control of railways was adopted, and so restore the earning capacity of the railways as to enable them to provide sufficient transportation for the country. With the exception, perhaps, of its consolidation provisions, it should be kept on the statute books if it is ever going to be given the effect its authors intended. If, on the other hand, it is to be emasculated by repeal of its only constructive and valuable provisions, or is not to be carried out in future differently from the way it has been in the past, then every syllable of it might as well be wiped out. The railways would be much better off with a more intelligent public sentiment and the much worse laws by which they were regulated prior to 1920 than they are with a public sentiment poisoned against the Transportation Act by propaganda; for as long as this public sentiment exists, it will do the railways far more harm than any law will do them good.

Human Problems in the Mechanical Department

DURING THE PAST five years the relations between the railways and the employees of the mechanical department have undergone a series of profound and sudden changes. Nineteen eighteen saw the the first complete unionization of shopmen; 1920 marked the introduction of wage adjustment by arbitration of a governmental agency; 1922 brought the first nation-wide shop strike, resulting in the formation of many company unions. On most roads the strike has nominally been settled, but the problems arising out of the strike and the five eventful years that preceded it are by no means settled. Some roads have made great progress in re-establishing satisfactory relations with their employees; on other roads ill feeling still exists. No individual or road has a monopoly of all the good ideas for correcting the present situation and for that reason mechanical officers should find it distinctly helpful to get together when the Mechanical Division meets next year and discuss frankly and thoroughly the methods that have proved effective in improving relations with the employees.

The scope of this question is so broad that a scattering discussion would arrive nowhere. To make it effective some logical plan must be adopted and the most important topics outlined, preferably in individual papers. The starting point for any discussion of this subject should be the development of foremen. No railroad can regard without alarm a possible recurrence of the situation that existed during the strike, when foremen at many points struck with the men. Above all things, the roads must develop in their foremen a high degree of loyalty. Why did some of these men support the labor organizations instead of the managements, and what can be done to prevent it in the future? Mechanical department officers should work diligently to find the answer to this question.

Many new foremen have been employed since the strike. Giving them a title does not automatically qualify them to interpret the policies of the company and to direct men in a way that will win their support and get the best service they are capable of giving. If any railroad is to operate

successfully, it must have foremen who are more than mere time-servers and more than mere mechanics. These men must be made to understand the vital part they play in the organization and the many-sided character of their work, which requires something of the qualities of the diplomat, the business man and the craftsman. The average foreman does not receive a training that will develop all the necessary qualifications. How can he best be fitted for his responsibility? Surely some methods of training are needed.

One large road has adopted the practice of holding annual meetings of its master mechanics, traveling engineers and foremen in the various branches of the mechanical department. Such meetings may have an important effect in unifying the policy and practice of a road, disseminating information as to improved methods, and building up an esprit de corps. This should be a fruitful topic for discussion, for the problem of training foremen is one that the railroads will always have with them.

The present labor situation is focusing the attention of the mechanical officers again on the human problems which, in recent years, the Mechanical Division has consistently avoided. There is need for a return to the constructive viewpoint which J. F. Deems voiced in his presidential address before the Master Mechanics' Association in 1907: "What shall we leave to aid in solving the problems of the future, many of which may be more perplexing than those we are called upon to solve today? We may work in brass and steel, and leave the most perfect mechanism; we may develop and improve and evolve methods and practices until nothing more can be desired; we may reach perfection in all these, in mechanism, structure and method, and yet our bequest be a failure and itself a burden unless we provide that which is paramount, which is over and above the sum total of all this, and for which even today events throughout the world are crying aloud—the man. A man prepared, experienced, earnest; hopeful and happy; consecrated to his work and ready to the hand of the future."

On Making Friends for the Railways

THE RAILROADS sorely need more friends. The best way to make friends is to show that you take real interest in and are truly anxious to promote the welfare of those that you want for your friends. Many intelligent people are influenced, or even controlled, in forming their opinions regarding matters of importance, such as the railroad problem, by the evidence and arguments presented regarding it. But even they are much more susceptible to conviction by spokesmen for an industry that they believe is treating them as well as it can, than by spokesmen for an industry that they believe cares nothing at all about their welfare; and a large majority of people are influenced much less by reason than by sentiment, and therefore are much more likely to give their friendship and support to persons or concerns that they believe are really interested in their welfare than to persons or concerns that never manifest any interest in it.

One of the principal reasons why it is so easy to create a public sentiment hostile to the railways is that railways make so little effort to show the public that they not only want to make money by serving it, but that they really want to so serve it as best to promote the welfare of the public, and especially of the producers, the shippers and the travelers, in their own territories. The railways have lines and representatives in every territory and community. They are selling about five billion dollars' worth of service annually to the public. For the most part it is good service. It is doubtful, however, if any other industry or concern in the world does relatively as little as the railroads of the United States to convince its patrons that it is rendering them the best service that it can, and trying as hard as it can to so render the service and fix the charges for it as to promote the interests of its patrons. The problem presented cannot be solved merely by public addresses or advertising, although they are important. It never will be solved until the railways are so managed and organized that their officers and representatives will come in contact with a larger part of the people and until those who do come in contact with the people so treat them as to show them that the railways take a friendly interest in them.

There is a certain large city from which a certain large railway system derives millions of dollars of business annually. The editor of the leading newspaper in that city recently made the statement that he had never had a call from, and never in his life had come in personal contact with, any officer or representative of this railway. Nor is this an exceptional case. There are literally hundreds of chambers of commerce throughout the country. The railway is one of the largest business concerns in every community that it serves. But there are many of these chambers of commerce in whose affairs no railway officer ever participates. There are, in fact, many large towns which are never visited by any railway officer.

But the most neglected class of all are the farmers. Directly and indirectly, the farmers furnish to the railways a large part of their traffic. There are innumerable public meetings of farmers' organizations to which railway officers would be welcome, and in which they would be given opportunity to participate in the discussions regarding matters affecting the welfare of agriculture, including transportation matters. Seldom, indeed, are these meetings attended by anybody authorized to say a word regarding matters in which the farmers and railways are mutually interested. Every year millions of passengers buy tickets at railway ticket offices and stations. Comparatively little effort is made by railways to select, train and supervise ticket agents so that they will always show an intelligent and courteous interest in the problems of the traveler.

Probably if the whole matter were sifted to the bottom it would be found that the principal and fundamental cause of the constant troubles of the railways with the public is that most railways hardly make any real effort to sell themselves, as institutions, and their services to the public in the right way. Salesmanship is an art in the knowledge and practice of which the railways are strangely deficient. Nobody who constantly comes in contact with all classes of people can have any doubt that the average man regards the average railroad as a huge money-making institution which cares little or nothing about the interests and welfare of its customers, employees and the public. The failure of the railroads to get and keep in close human contact with the people leaves wide open the door of opportunity for demagogues and radical labor leaders who see their own interest in misrepresenting the railroads. The demagogues and labor leaders win railway patrons and employees to their support by professing the most intense interest in their welfare; and day in and day out, year in and year out, the misrepresentation of the railroads, not only by politicians and labor leaders, but even by hundreds of thousands of the railways' own employees, goes on unceasingly. The average man who never meets a railway officer or representative of any rank except ticket agents and train employees, who never hears or reads a refutation of any of the misrepresentations of the railways and hears them constantly repeated, but who does come frequently into contact with the many ardent "friends of the people" who live and further their ambitions by attacking the railways, is sure sooner or later to become hostile to the railways and to act accordingly.

It may be asked, how can railway officers do their present work and at the same time participate in the affairs of chambers of commerce, attend meetings of farmers, call upon local business and newspaper men and otherwise come into

contact with the public? If they cannot do these things—and probably they cannot—that fact plainly discloses a very serious weakness in the organization of the railroads. It indicates that the railways are under-officered; and as to most railways, this is undoubtedly true, at least in some departments. When the organization of a business concern is in such a condition that its officers and representatives cannot do the things which obviously must be done to sell the concern, as an institution, and its services to its patrons on the right terms, then very plainly there is something seriously wrong with its organization which should be promptly remedied.

It will cost money to make the changes in the organizations of the railroads necessary to increase and improve the human contact between them and their patrons and employees. It may be necessary to increase the official staffs, not only at headquarters, but on every division. But how much is it annually costing the railways in net return not to make their organizations such as to enable them to establish better relations with the public? Unfair and prejudiced public sentiment expressing itself in corresponding regulation is costing the railroads hundreds of millions of dollars. They are now handling the largest freight business in their history and yet, owing indirectly to unfriendly public sentiment, failing at the rate of a half billion dollars annually to earn a 5¾ per cent return. If adequate public relations work carried on in the right way would improve public sentiment, it would be worth literally hundreds of millions of dollars to the railways annually. The cost that would be incurred in doing such work would really not be a net loss even if it were a failure. If it were a failure the final outcome would be the destruction of private ownership and management; but it is only a matter of time until private ownership and management will be destroyed anyway unless a more intelligent and friendly public sentiment can be created and maintained.

Mechanical Conventions and Exhibits

THE VIEWS of a supply man as to the proper relationship between the railroad associations and the organizations which exhibit at their conventions, are set forth in a communication elsewhere in this issue. The writer maintains that holding the June convention at a summer resort creates the impression that the convention and exhibit are holidays rather than business affairs; and that, from the exhibitors' standpoint, an organization of the various mechanical associations, so that the members of all of them could attend a meeting or meetings at various times during a continuous period of two weeks, during which time a single comprehensive exhibit would be maintained, would give the best results.

In considering this matter of the relationship of the associations and exhibitors the fact should not be overlooked that the primary objects of the two groups are not identical. The various railway associations have been organized by groups of officers or supervisors, in most case voluntarily, for the purpose of educating and broadening the members and furthering progress in the various branches of the art of railroading. The exhibits, on the other hand, are one form of sales development work of the companies manufacturing and selling tools, materials or devices to the railroads. They are the organized means of seizing the opportunity presented by the convention for a display of wares before, and personal contact with, a large number of men specifying or using these tools, materials or devices, at one time and place. The relationship between the two groups is fundamentally that which always exists between the prospective buyer and the seller. The seller aggressively seeks the more or less passive prospects and by every means at his command seeks to make it easy for him to see and develop a desire to buy whatever goods are offered. In this process entertainment is a time-honored means of creating good will and helping to convert passive into active interest.

When and how the conventions of the railroad organizations are to be held is a matter to be settled by their members in the manner which they believe will best further the purposes of the organization. If, from their standpoint, the exhibits possess real educational value or are otherwise of real service to the members as a whole, then the convenience of the exhibitors should not be left entirely out of consideration.

Whatever the action of the railway associations, however, the question as to whether or not exhibits are to be held must be settled finally by the supply companies and the supply companies alone. They must decide whether or not these exhibits are effective sales development agencies. It is doubtful whether a unanimous affirmative could be obtained in answer to this question. The very fact that exhibits continue to be organized, however, indicates that many companies believe that they are effective. But they might be effective and still be less efficient in the use of time and money than other equally effective methods. Some light may be thrown on this question by an analysis of the cost of the Atlantic City convention and exhibits. Including the hotel bills of both railway and supply men, this cost is estimated at about $1,000,000. In 1922 there were 341 exhibits which were visited by approximately 1,300 railroad men. More than one-half of these men were members of the Mechanical Division and more than one-third were men of lower rank whose principal interest was the exhibit. The remainder were purchasing agents and storekeepers. It is evident then, that had the entire expense been borne by the supply men, the average cost would not have been quite $3,000 for each exhibitor, in reutrn for which he has the opportunity of imparting some knowledge of, or interest in, his product to 1,300 railroad men. But it may be assumed that probably not more than one-half of these men are interested in any one product or device. If this be true, then the total average cost per prospect reached is a little more than $4. Part of this is borne by the railroad men whether there is an exhibit or not. But if the entire amount came out of the pockets of the exhibitors, is it conceivable that the same results could be obtained in any other manner without a several times larger unit expenditure?

At the outset the statement was made that the primary end of the associations and exhibitors are not identical. But if the railroad man finds the exhibit a valuable medium of education and a convenient means of shopping, and if to the supply man it is an effective means of sales development at a comparatively small unit cost, it is evident that there is a strong mutual interest between the associations and the exhibitors. It is evident, however, that this is a strictly business interest and the relations between the two parties should be established on a strictly business basis. On such a basis, elaborate entertainment, although it is a natural development of the buyer and seller relationship, is not essential. On a large scale it cannot escape unfavorable comment, which in itself is detrimental to the interests of the railroad association and indirectly at least to the effectiveness of the exhibit.

It is not the purpose here to enter into a discussion of the feasibility of the form of organization of the various mechanical associations suggested by the writer of the letter already referred to. Suffice it to say that the idea of a combined exhibit with consecutive meetings during a continuous period has already been considered and considered favorably by a number of the minor mechanical organizations. The fact must not be overlooked, however, that the primary object of conventions is not the exhibit and that however mutually advantageous the exhibits may be, any association which cannot function without them has little reason to continue its existence.

Letters to the Editor

The Mechanical Conventions—A Supply Man's View

CHICAGO

TO THE EDITOR:

Your editorials on the defunct 1923 mechanical convention, in the issues of November 11 and November 18, have been read with a great deal of interest. There can be no question but that you have made some very pertinent points in these editorials, but all of the urging which you can put into your pages will not serve to correct a condition which is caused by something deeper than mere lack of interest, which has been increasingly evident in the work of the mechanical conventions during the past few years. There is something basicly wrong, and while we are all loath to believe it, we must face the fact that the mechanical conventions, as held at Atlantic City, are not in conformity with the requirements of present day conditions in the field of railway operations. The proof is before us.

You point to the consistent work of the American Railway Engineering Association, in its annual sessions. These sessions have been held in Chicago, and whether or not they were more business-like, they certainly appeared so. When a railroad man visits Chicago from any part of the United States or Canada it is looked on as a business trip, or, in other words, what it purports to be. When a railway officer visits Atlantic City, this is not true. The trip may be one of business or it may be an annual vacation. If it is a business trip and if the railroad employing the officer who makes it sees benefit therein, why should he have to go to the far east coast from San Francisco, St. Paul or Denver? If it is a vacation, why should he be compelled to take it in June, regardless of the requirements of the service on his railroad?

You point to the success of the International Railway Fuel Association and of the Traveling Engineers' Association in their annual conventions, held in Chicago. Why should not the traveling engineers and members of other minor mechanical organizations, such as the general foremen, the tool foremen, the master blacksmiths, the car and locomotive painters, the fuel men, and others, be amalgamated into one good mechanical association, Division V of the American Railway Association, if you please, or an independent organization? Let them meet on different days in a centrally located city, but let those days be consecutive, the committee reports being so arranged that certain classes of men can come to the convention, sit through that part of the discussion in which they are interested and go home. This is now a new thought, but for some reason it has not been expressed with sufficient force to gain a logical negative reply from those who are not in agreement, so far as I have been able to discover.

The railway supply manufacturers' interests cannot be overlooked in this matter. A dozen conventions throughout the year, spread all over the United States, result in unnecessarily large bills, which must be paid by the railroads and finally by the public. There is no question but that the criticism which has resulted in postponement and abandonment of convention after convention at Atlantic City, comes from those who have considered these facts. Why, then, should we obstinately ignore this sentiment and continue to hold our major mechanical conventions in haphazard manner, always at Atlantic City or not at all? Is there anyone who believes a real convention at Atlantic City would be possible without the support of the supply manufacturers with their exhibits? Had the mechanical association followed the apparently business-like methods of the American Railway Engineering Association, its conventions would have been just as consistently held, year after year.

The railway supply manufacturer who sincerely wishes to exhibit to the railway engineering officers in convention assembled is fortunate indeed, compared with the manufacturer who has wished to effect the same purpose with respect to the mechanical officers. We hear it said everywhere that the railway officers assembled at Atlantic City are confined to a small area throughout the convention, and that, therefore, they will give the exhibits more close attention, there being nothing else to take their spare time, but that if such a convention were held in Chicago the interests would be so diversified that the exhibits would get small attention. The persons who make this statement are paying our railway officers no compliment. The officers who attend the convention for business reasons will consummate their mission. On the other hand, those who go down to the seashore at convention time for a vacation cannot be forced to take any more effective notice of the exhibits by the mere fact that they are imprisoned, so to speak.

In your issue of November 18, D. I. S. Gusted writes pointedly and heatedly on this subject, but he does not get us anywhere except that he adds his voice to the clamor for a convention. By all means let us have a convention. Call it a business meeting, if that sounds better, but let it be a business convention. Encourage the co-operation of the supply manufacturer by furnishing some sort of a guarantee that the attendance will include a representation of all classes of mechanical department officers and he will take chances on their seeing his exhibit whatever may be the other interests of the visitors.

Sentimental inertia dies hard. The writer has seen 13 mechanical association conventions and, compared with the majority in annual attendance, he is low on the seniority list. During these years the exhibit and discussion of a tremendous number of devices has resulted in the improvement of locomotive, car and shop performance, but the space actually demanded for the exhibition of bonafide new devices would not have amounted to more than one-tenth of the space used. The rest was pure waste, not only in space rental, but in the movement of heavy machinery and of locomotive and car parts and devices. Why? Because a few new members were in attendance each year, who might not have seen the exhibits in previous years.

The hand-writing is on the wall. These unnecessary expenditures of time and money must be stopped, but the work must go on. It is true that each annual convention has included a few new faces occasioned by promotion and appointment, but they are not laymen injected suddenly into the railway field. They have been slowly educated and advanced, step by step, to the position of importance which allows of their attendance. Now, if their knowledge of those devices customarily exhibited at conventions is important—and it is—that fact must be recognized and it might as well be recognized early in the individual's service. The difficulty is that he cannot, early in his career, be sent to an Atlantic coast resort with its attendant absence from duty of from 10 to 30 days, its "soup and fish" formality, its $12 a day hotels. The logical result is an attendance year after year of those who "have arrived" and who, therefore, are not as absorbent of new ideas.

Suppose, then, a mechanical department convention were arranged for a centrally located point to extend over a period of two weeks. Suppose committees were organized to include representation of every phase of mechanical department service, including those minor interests represented at present in six or eight different associations. Suppose these reports were systematically programed to make it unnecessary, except in special cases, for any individual to spend

more than two days in attendance, and yet arranged to bring all reports to the fountain head of the general committees made up of members of the present major associations at the close of the general convention. Is not the benefit to the greater number obvious?

Now, consider the case of the supply manufacturer under such an arrangement. He first would plan on a worth-while exhibit, cheapened in cost by the very location. He has men who must work with the general foremen. He has other men who must deal with the traveling engineers. He has still other men whom he must depend on to meet master mechanics and mechanical superintendents. He has but to consult the program and act accordingly, making each man-day and each expense-dollar count.

The exhibit has a run of two weeks during which, not only all railway officers who at present are numbered as members of many present organizations, but younger men who are being educated to follow, may visit it. The cost is reduced to the minimum per observer. The results will be vastly more satisfactory.

The plan suggested is business-like and should command the support of those who have made the faults of past practices so evident as to effect the abandonment of the convention.

L. F. Wilson.
Vice-President, The Bird-Archer Company.

Combine Train Control With Block Signals

Chicago, Ill.

To the Editor:

Referring to the editorial which appeared on page 874, of the *Railway Age* for November 11, 1922, under the caption "Institute a Signal Investigation," it is generally accepted as a fact that the installation of automatic block signals on busy single track railroads has substantially increased capacity. Indeed, there is little doubt that such installations afford substantial relief from congestion because the blocks are reduced in length, permitting following movements to be made under comparatively close headway and under signal protection.

However, an expenditure of $4,500 per mile for signal protection only on single track lines seems unwarranted, for the reason that no real physical protection is afforded by such an installation. It is, of course, true that such an installation will give certain signal indications, but even with this there is no absolute assurance that trains will be governed thereby.

After an installation of automatic block signals is completed—be the scheme what it may—there still remains unspanned a gap between the fixed signals and the trains which they are intended to govern, so that while the signaling system may be complete as such, it is incomplete as to protection. As is well known, each signal is connected through the running rails of the track with the train which it is intended to protect—but is this sufficient? Is it not a fact that in reality the danger lies in the train which the signal is intended to stop? With such a signal system there is no assurance that the approaching train will stop and it is under precisely such circumstances that the conditions peculiar to train operation may bring disaster. The cause may be low visibility occasioned by fog, snow or storm, or the occasional lapse of mind of the engineman. Be the cause what it may, such accidents are the most regrettable because they are entirely preventable.

Why should any railroad management desire to spend approximately $4,500 per mile for signaling when it is possible to secure a signal system and with it complete automatic train control protection for an equivalent amount, with not alone an increase in the capacity of the track but with such safety as signals alone cannot provide? Why continue to install expensive motor-operated semaphore signals with the necessary complicated electrical and mechanical means for moving a semaphore arm when adequate light signals are available, operated entirely through relay contacts? Why not install a combination of light signals and automatic train control such as will not only give signal indications—the same indications by day as by night—but with such an installation bridge the gap between the signal and the approaching train and thus eliminate the possibility of collisions by striking out from our otherwise splendid railroad system the unnecessary hazard which, under existing operating conditions, is always present in the almost irresistible force of a high-speed train closing in upon another train in its path. It is as practicable to control the approaching train as it is to control an automatic block signal. Assuredly then, the cycle of safe operation should be completed in all future installations by combining such automatic block signals as it is necessary to install, with automatic train control.

The attention of railroad managements should be called to the fact that capacity with safety can only be secured by means of a system of automatic train control consistent in its operation with the indication of fixed signals and with sufficient flexibility to meet any demands of traffic. Further, that numerous unnecessary stops will be eliminated by the installation of such a system and the time lost due to rear flagging will be considerably reduced if not entirely eliminated.

J. Beaumont,
Vice-President, Regan Safety Devices Corp.

Need for Diplomatic Apologies

New York City.

To the Editor:

The letter of William W. Tirrell in your issue of October 28, page 783, is a most searching analysis of the factors in our problem of establishing a good understanding between the railroad owner and the men who work for him; so searching, indeed, that the most superficial reader must see at once that the question is rather abstruse. The only way to get practical results, on the broad lines which are sketched in this letter, would be to establish a night school and to require study, for several weeks, on the half dozen important topics suggested. In other words, we have here the texts for a series of lectures of 40 minutes each—the value of which lectures, however, would depend greatly on who gave them and to what kind of men they were addressed.

Mr. Tirrell, indeed, reminds us that the science of educating a thousand railroad employees in mind, conscience and public spirit, so that they will give ideal service, is a complicated science; and one in which very few of us are proficient. In short, the whole matter is so difficult that it continues to be neglected. But, though we have made little progress in the application of this science, we are not debarred from practicing some of its precepts. Let us make a start in some branch that we already have some knowledge of.

For example: "Each employee must be taught to take a personal interest . . . and to defend his railroad, and *know why* he defends it." Set 25 of your best men a definite task in this direction. Require them to write a 200-word essay. Set them to defend some policy, or practice or condition which can be only partly justified; which in part must be apologized for.

The superintendent of a large division, doing a heavy passenger and freight business, could spend $200 in no better way than to offer prizes for excellence in this kind of work. Every large railroad has been obliged of late years to do a good deal of apologizing; and most of the conductors and station agents, on whom dependence is placed for maintaining the road's reputation, have very little skill in that kind of work.

How Can Employee Relations Be Improved?*

A Catechism That Develops Certain Truths Which Must Be Recognized if Conditions Are to Be Bettered

By Roy V Wright
Managing Editor, *Railway Age*

Question. What is a railroad for?

Answer. To furnish adequate transportation for freight and passengers—in short to serve the public.

Question. Who actually performs the detail work in rendering this service?

Answer. The rank-and-file of railroad employees.

Question. How does the public want to be served?

Answer. With courtesy promptness, certainty and as cheaply as possible.

Question. Are the employees specially trained to serve in this way?

Answer. Apparently not, except in a limited number of cases, and even then often only to a limited degree.

Question. Should this special training apply only to those employees who come in actual contact with the traveling public and the shippers?

Answer. No! Every employee can contribute to more efficient or more economical operation. Sometimes it may be in an obscure place or in a seemingly very indirect way. If the contribution is in more economical operation or in the elimination of waste of some sort resulting in more economical operation—and even without coming in contact with the patrons of the road—it is important because it means that better service can be rendered at the same rates or the rates can be lowered for the same service. On some roads with limited earnings or deficits it may even mean keeping them out of bankruptcy.

Question. Are the employees generally imbued with this spirit of service?

Answer. No.

Question. Give some illustrations to prove this.

Answer. (1) The attitude of indifference, sometimes even bordering on discourtesy, on the part of some ticket sellers, agents, conductors, brakemen, gatemen, porters, waiters, freight house employees, clerks, etc., toward the patrons, particularly if of humble appearance, is one illustration[1]—and this in face of the fact that the patrons of the railroad are all cash customers.

(2) Another evidence of the disloyalty toward railroad managements on the part of some employees, is indicated by the unfair and misleading propaganda promoted among many classes of employees through some brotherhood magazines and by so-called labor economists or experts employed by the men. In this respect one quotation in Mr. Brazier's paper is specially significant: "A mule cannot pull while he is kicking, and he cannot kick while he is pulling." What sort of service is being given by employees who are interested in promoting and spreading such propaganda?

Question. The above illustrations are only typical and may be multiplied many times over. In the last analysis, whose fault is it that such conditions exist?

Answer. The managements'.

Question. Surely your answer is wrong! It is inconceivable that railroad managements would knowingly allow such conditions to exist if it were in their power to remove them. Can you prove your point?

Answer. There are several reasons for the failure of railroad managements to realize their full duty and responsibilities and discharge them properly. In the first place, it would almost seem—at least in many respects—that they feel the patrons are under a distinct obligation to them when they condescend to sell them transportation and to serve them. Except in a few cases no real salesmanship[2] ability is shown in dealing with the customers, and no attempt has been made to train even those employees who are engaged in the actual selling processes in the principles of real salesmanship. Moreover, in these days even banks and professional men advertise for business, and yet the railroads with all that they have to sell, spend a mere pittance[3] for real advertising.

Question. Would the amount of transportation as a whole be increased by better salesmanship and more real advertising? Does not the amount of railroad transportation sold depend directly on general business prosperity in the same way as does the sale of postage stamps?

Answer. Decidedly no! Passenger traffic,[4] especially, can be greatly increased by the right sort of salesmanship and advertising. Skillful railroad development departments[5] have found many ways of developing new business. Salesmanship and advertising[6] can be made to pay in many *direct ways*.

Question. Why emphasize *direct ways?* What other good results will follow?

Answer. Shippers and patrons, often irritated and even angered by indifference and ignorance on the part of railway employees, may be converted into friends,[7] and surely the railroads need friends today more than they ever needed them before.

Question. What is another reason for your reference to the failure of the railway managements?

Answer. They have failed to take the employees and the public into their confidence as to their problems, finances, etc. This has allowed a degree of mystery to creep into the

---

* Presented in the discussion of a paper on "The Training of Men to Act in Supervisory Capacities and Best Results in Handling Men," which was read before the meeting of the Central Railway Club on Thursday, November 23, 1922, by F. W. Brazier, assistant to the general superintendent of rolling stock, New York Central Railroad.

[1] This is reflected in the following articles which have appeared in the *Railway Age*: "Do Railways Lack the Selling Sense?" December 2, 1922, page 1039; "A Shipper Comments on Railroad Morale," November 18, 1922, page 929; "Observation of a Trans-continental Traveler," March 11, 1922, page 583.

[7] See "Why Not Sell the Necessary Service at a Profit?" *Railway Age*, March 4, 1922, page 595; "Public Relations Work," *Railway Age*, March 11, 1922, page 553; "For a Better Understanding Between the Railways and the Public," *Railway Age*, April 22, 1922, page 954; "More About Public Relations Work," *Railway Age*, May 20, 1922, page 1155.

business, particularly since there are persons who have been ready—through ignorance, or for other reasons—to spread misleading propaganda as to the earnings, valuations, etc. Except in a few cases—the Illinois Central[8] is one notable example—the managements have done little in a large way to remedy this by giving general publicity to the facts.

Question. What do you regard as another failure of railway managements?

Answer. The managements have failed,[9] as the systems have grown larger and larger and the rank and file has been further and further removed from the chief executives, to give the necessary attention to the selection, training and promotion of employees.[10] Men have often been promoted to the position of foreman purely because of their abilities as craftsmen, or because of their technical knowledge rather than that they understood men, or knew how to direct them. These untrained foremen have frequently irritated and antagonized the men under them when they should have been building up a spirit of loyal co-operation and teamwork among them. Several years are required to train a machinist in the operation of a few simple tools, and yet no special training is given a foreman to fit him to direct the most complicated and highest type of machine in the world—the human being. President Smith of the New York Central is responsible for the statement that "the efficiency of a railroad depends principally upon its men. It is estimated that 95 per cent of railroading is human"—and yet what a lack of appreciation is shown on most roads for taking advantage of the most up-to-date and scientific knowledge concerning the successful handling and direction of human energy.[11]

A number of large industries have found that it paid well to develop limited but intensive training courses for foremen and other officers, or for prospective foremen. These courses have proved so popular and have been so thoroughly appreciated by both the men and the managements where they have been properly conducted, that it would seem the railroads could well afford to develop similar courses of training for their foremen.

Another splendid way of inspiring and training foremen and officers is through the conventions or meetings of their various associations. While these organizations are largely technical, fortunately a few of them have recognized that the human problem was, after all, one of the most important problems which confronted them and have talked the question over frankly both in their open meetings and among themselves outside of the regular sessions. These conventions and meetings act as clearing houses for the best practices and thoughts and should be encouraged.

It is unfortunate that the Mechanical Division, A. R. A., the parent organization in the mechanical department, has failed to recognize this and has limited its committee investigations and the convention proceedings largely to questions relating to equipment standards. It is to be hoped that the mere fact that there has been little time for the preparation of committee reports during recent months will automatically force the consideration at the 1923 meeting of questions relating to employees' relations, through the presentation of individual papers or reports by men who are specially qualified to consider the various aspects of the personnel question.

Question. In what other way have the managements failed?

Answer. In realizing that autocracy must be replaced by a spirit of democracy.[12]

Question. Hold on a minute, you say. This is no place to preach radicalism, socialism or communism. You had better stop where you are.

Answer. The above statement might have been challenged successfully 10 or 20 years ago, but times have been changing rapidly for the better. No one would accuse the Pennsylvania Railroad[13] of being radical; its position has usually been considered quite conservative. That road has summarized its present policy and practice in its relation with its employees in this sentence: "To give all employees an opportunity to have a voice in the management in all matters affecting their wages, working conditions and welfare; and in other matters of mutual concern affecting the welfare of the company and of the public which the company serves."

Question. Are you going to take things out of the hands of the management? What will become of discipline?

Answer. No. The employees can participate in the above mentioned matters and yet it will be possible to preserve the strictest sort of discipline. It is, of course, necessary to have thoroughly understood just what are the rights and responsibilities of the management and just what are the rights and responsibilities of the employees.

Question. Is this in any way related to the training of men to act in supervisory capacities?

Answer. If the representatives of the employees gather around the table with the representatives of the management to discuss matters relating to wages, working conditions and welfare, both sides will come to understand each other much better. Moreover, the bringing up of grievances and the receiving of constructive suggestions from the men should automatically locate weak spots in the organization and foremen and officers who do not understand how to deal with men properly. Efforts can then be concentrated upon these men to coach and train them to deal with the men in the right way. In most cases an immediate improvement will be noted. In some cases where the men are unfitted for the handling of men they can be transferred to positions which do not require their coming in contact with the men in a supervisory capacity.

Question. This matter of employee representation looks good and the scheme seems logical, but is not something else needed to insure its success?

Answer. Yes. It will fail unless it is dominated by justice and the spirit of a square deal.

Question. You fail to use the expression "Golden Rule," which is so much in vogue. Did you do this intentionally?

Answer. Yes.

Question. Why?

Answer. The term "Golden Rule," rightly interpreted, is far more satisfactory than the expression we have used, but it has been applied so thoughtlessly and carelessly that it is to be feared it has lost its real force and meaning to many of those who use it. Obviously, if we are to solve the human relations problem on the railroads, thus insuring the most efficient and economical transportation and the best service to the public, we must inject a real spirit of brotherhood into

the railroad organizations. In other words, the Golden Rule must be applied in its best and strongest sense.

Question. This sounds Utopian and possibly borders a bit too closely on the religious. Why try to put something into the transportation industry that commercial and industrial interests do not recognize?

Answer. Hold up! You are going too fast. Not a few industries and at least one large Chamber of Commerce have come out clearly and forcefully for a more widespread recognition of the Golden Rule in the business world.

Consider the Philadelphia Chamber of Commerce, for instance. That body appointed an industrial relations committee to look into the question of industrial unrest, determine what caused it and suggest a remedy. The committee came to the conclusion that basically it was caused by a too prevalent spirit of greediness and suspicion. The remedy suggested by the committee, enthusiastically endorsed by the Philadelphia Chamber of Commerce, was the recognition of the Golden Rule in its best and highest sense. Attention was directed to the fact that the success of our forefathers in establishing a democracy in this country was due to the fact that they were inspired by a spirit of service and unselfishness and looked to Divine Providence for inspiration and leadership. United States Senator George Wharton Pepper in speaking to the group of 850 business men of Philadelphia, who later adopted what is known as the Golden Rule Pledge, stated that labor and capital could not be reconciled by any of the mechanical methods which trusted in force, but that "we must go back to God." The Golden Rule Pledge which was adopted by the Chamber of Commerce, and which is receiving endorsement by other similar bodies, and is being enthusiastically promoted by Philadelphia business men, follows:

Golden Rule Pledge

"*As Americans*, we recognize that we face a crucial condition in our social, political and industrial life, which, if not corrected, can lead only to individual and national disaster.

"*We Recognize* that the trend of combining interests of individuals and groups will continue.

"*But We Likewise Recognize* that such interests in the creation of their relationships to the many must be controlled by the spirit of equity and reason if they are to endure.

"*Unjust Exploitation* of the many by the few, regardless of its position or field of activity, cannot continue, for self-preservation would force all citizens into hostile groups.

"*The Remedy* of our present malady lies in approaching the interests of others, be they employer or employee, buyer or seller, producer or distributor, individual or group, in a spirit of fairness actuated by the *Golden Rule.*

Facts

"We are all workers.

"The United States is our union.

"Our membership is over 100,000,000 in good standing.

"Our allegiance is first to God and then to that union.

"Our nation is a living expression of belief in our Creator.

"Liberty is our human right by Divine right.

"The Declaration of Independence acknowledges American liberty to be a gift of God: 'All men are endowed by their Creator with certain inalienable rights. * * * * With a firm reliance on the protection of Divine Providence.' —*Declaration of Independence*

"The Declaration of Independence establishes, without discrimination
Independence of person
Independence of property and
Independence of contract.

"The Declaration of Independence is maintained by the Constitution of the United States.

"The Constitution of the United States is administered by representative government.

"Our representative government is controlled by public opinion.

"Public opinion is based on ignorance, illusion, prejudice —or knowledge, truth, judgment.

"The Declaration of Independence—the Constitution of the United States—and representative government will be maintained or destroyed by public opinion! Public opinion is what men think. Our problem is not to change habits, laws or men, but to make facts the basis of thinking.

"*We, as Americans*, recognizing the fundamental nature of the above facts, do hereby declare that we will in all ways urge upon our associates, and those with whom we come in contact, the importance of making *facts the basis of their thinking*, and

"*We Pledge* our loyalty and renew our allegiance to *God* and *Country* to the end 'That this nation under God shall have a new birth of freedom and that the government of the people, by the people and for the people' (*Lincoln*) shall be sustained."

Question. This sounds well, but can it be interpreted in the terms of actual practical application? Does it not border too much on the sentimental?

Answer. Many schemes and methods have been suggested and tried throughout the industrial world for replacing the friction and unrest between the employees and the managements with a spirit of co-operation and teamwork. Some of these plans have proved eminently successful, but only to the degree that they were dominated by a sincere appreciation of the spirit of a square deal, based on the Golden Rule. Looking at the facts frankly, it must be admitted that the most serious problem confronting the railroads today is that of employees' relations. Railroad managements and railroad employees realize that things are not as they should be, and that they cannot continue on the present basis. Both sides are earnestly seeking relief from this impossible situation. Unless the spirit of friction and unrest that exists in many cases can be replaced by a spirit of co-operation and teamwork, the railroads are surely headed toward disaster, which will in the last analysis, affect adversely the interests of the public, the employees and the investors. The old methods of organization and of directing the human element have failed absolutely. The one thing that is left, and the only one which promises any real relief and success, is that which has been suggested in this catechism.

What could the railroads not do in giving better and more adequate service to the public, in improving the living conditions of the employees, and in insuring a fair return to the investors if the organizations could be dominated by the Golden Rule—"Thou shalt love thy neighbor as thyself, and thou shalt do unto others as ye would have them do unto you."

FIVE HUNDRED THOUSAND TONS was the amount of ice transported by the Delaware Lackawanna & Western in 1921, according to an advertisement of the road printed in New York City papers. Most of this ice was taken from lakes in the hills and mountains of New Jersey and Pennsylvania. It is cut with modern machinery, and is so pure that it can be used for storage batteries, druggists' prescriptions and other purposes ordinarily requiring distilled water. About 100,000 tons is shipped to creameries. Ice houses have discarded sawdust and straw packings in favor of insulated walls. Ice cars are carefully washed and pre-cooled and the ice protected from shrinkage by paper linings. The Lackawanna ices refrigerator cars at Buffalo, Elmira, Gouldsboro and Hoboken, and there are separate icing stations for milk cars at Binghamton, Richfield Springs and Chenango Forks.

Who Builds the Highways?*

WHO SHALL PAY for the construction and maintenance of hard-surfaced roads to be ground to powder under the wheels of motor vehicles, of which many of the most destructive compete with the railroads for freight and passenger traffic? The growing use of motor vehicles for commercial purposes and the extension of hard-road systems to cover the entire country make this an important problem. The railroads and their patrons have a great deal at stake in the solution of it.

There were approximately 10,500,000 motor vehicles in this country in 1921, of which more than 1,000,000 were trucks, commercial cars, taxicabs and buses, engaged in the service of transportation. To a large extent, it is true, the service performed by this motorized fleet is supplemental to the transportation service performed by the railroads, but in many instances the two services are competitive. Whether motor vehicle transportation service is supplemental to or competitive with the railroads, however, does not alter the problem.

The railroads pay for the construction, maintenance and improvement of the roadways over which their trains pass, and that cost necessarily becomes a part of the nation's railway transportation bill. In 1921 the maintenance of the tracks, roadbed, buildings, bridges and other structures used by the railroads cost $756,948,985. This was exclusive of interest on the investment and improvements chargeable to capital account. It represents approximately 16.5 per cent of the total operating expenses of the railroads in 1921. A considerable part of the revenues received by the railroads from carrying freight and passengers went to pay that particular cost.

More than 1,000,000 motor vehicles used the public roads for commercial purposes last year. The amount which they paid for that privilege represents only a small fraction of the cost of constructing, maintaining and improving the roadways which they helped to destroy. The total revenues derived from the registration of all motor vehicles and from the issuance of licenses to owners, chauffeurs, manufacturers and dealers amounted to $122,269,071.33, out of which there was available for road work $116,117,167.80, exclusive of taxes on gasoline, which amounted to $5,302,259.79. As compared with this, however, the construction of highways in the United States last year cost $767,421,375. The difference represents the amount which the public had to pay out of funds raised by general taxation. In other words, the users of all motor vehicles paid about 15 per cent of the cost of road-building, and the other 85 per cent was paid by general taxation.

The public at large has as great an interest in transportation by railroad as it has in transportation on the public highways. In fact, the benefits accruing from the use of the railroads are more widespread than the benefits accruing from the use of the highways by the more destructive vehicles—trucks, commercial cars, taxicabs and buses. It is no more equitable that those who do not derive immediate benefit from the destructive use of the highways should pay for them than that the public should be taxed for the cost of building, maintaining and improving the roadways used for rail transportation.

It is important to note in this connection that the railroads pay a not inconsiderable portion of the taxes from which come the funds for 85 per cent of the road work. In 1921 the taxes paid by the Class I railroads of the country in the various states amounted to $237,872,319. This was exclusive of $37,176,773 in federal taxes, $79,042 in District of Columbia taxes, $660,218 in Canadian taxes and $95,244 in taxes not localized to the states.

In order to emphasize the comparison between motor vehicle revenues and highway expenditures, there is shown herewith a table giving the figures by states for 1921.

It is up to railway men to impress upon the public the fact that every burden placed upon the railroads is a burden upon their patrons. The railroads do not have an inexhaustible supply of funds out of which to pay operating expenses, taxes and other charges. A railroad is an institution organized for the giving of a great public service, in the performance of which certain costs are incurred, and these costs are charged back against the public in the form of freight and passenger rates. The shippers and passengers who use the railroads, therefore, pay the railroads' operating expenses, taxes and other charges as truly as if the railroads were not an intermediate involved party in the financial transaction.

When the public gets that view of the situation—and it is the proper view—there will be fewer attempts to unload tax burdens and burdensome operating costs upon the railroads. And when the public comes to realize that the cost of building, maintaining and improving the highways is not being paid by those who put them to a destructive use, a solution will be found for this problem.

	Motor Vehicle Revenues	Highway Expenditures
Alabama	$1,147,265.00	$4,065,000.00
Arizona	195,969.75	8,800,000.00
Arkansas	856,543.60	23,300,000.00

Marine Borers Attack Piling Along Atlantic Coast

The National Research Council Has Undertaken an Investigation to Determine Methods of Protection

BECAUSE of the large investment which the railways and other industries have made in docks and other structures along the waterfront in the harbors along the Atlantic coast, there is cause for concern in the evidence now being brought to light regarding the appearance of marine borers in these waters. Only three years ago the collapse of a

Condition of Test Blocks. (1) From Ft. Sumpter, S. C., Installed on September 6, 1922, and Removed on October 2, 1922. (2) From Ft. Sumpter, S. C., Installed on September 6, 1922, and Removed on October 23, 1922. (3) From Ft. Scriven, Ga., Installed on September 15, 1922, and Removed November 1, 1922.

number of structures in San Francisco Bay brought the ravages of these borers prominently before the owners of waterfront property in this country. As a result of the great damage done in the upper waters of San Francisco Bay, previously immune from marine borers, a committee was organized by local interests to study the problem. This committee soon found that it was necessary to enlarge the scope of the work so as to cover the entire country, and at its suggestion the National Research Council organized a committee to carry on a nation-wide study.

An investigation of the existing literature showed that while much study had been given borers for the past three hundred years, these studies had been disconnected and while much information had been developed, no conclusion had been reached. It was evident that a co-ordinated biological, engineering and chemical investigation offered the best chance for success.

There was found to be little information as to the distribution of the various species of borers and their living requirements. It was, therefore, necessary to find out where these various species existed, under what conditions they lived and what conditions in the water governed their distribution and activities. The damage in San Francisco

Section of an Untreated Pile from Lehigh Valley Pier at Jersey City after Ten Year's Service Indicating Recent Attack. Living Organisms Were Extracted from This Pile in September, 1922

(Left) Condition of Untreated Pile Attacked by Bankia after One Year's Service in Harbor at Norfolk, Va.

(Right) Condition of Untreated Pile Attacked by Bankia after Six Month's Service in Harbor at Norfolk, Va.

was done by the teredo navalis, the pile-worm of Holland. No thoroughly authenticated records could be found which indicated its previous occurrence on the American coasts. It was first identified on the East coast in Barnegat Bay, New Jersey, in 1921.

In order to secure definite information regarding the distribution of the various species and their rate of growth, a test board was designed carrying 24 blocks, one of which is to be removed from each board on the first and sixteenth days of the month and sent to Harvard University or the University of California for biological study, determination of species and rate of growth of the different species. These test boards are expected to determine the presence and species of marine borers in any locality and also the time of the year in which they work and breed. The blocks are 2 in. by 4 in. by 5 in. in size, of wide ring sappy yellow pine,

surfaced on four sides. Each block is identified by a copper tag. The board with its 24 blocks is sunk from the end of a wharf or pier to an elevation about a foot above the mud line and fastened securely in place.

Condition of a Pile Removed from the Standard Oil Company's Pier at Bayonne, N. J., in November, 1922, After Seven Year's Service

With the co-operation of the railroads, the Coast Guard, the Navy, the Army, the Bureau of Lighthouses and various state and municipal bodies and industries owning waterfront structures, 235 of these boards have been put in place between the Eastern boundary of Maine and Kodiak, Alaska, as well as in harbors of the American possessions in the Caribbean Sea and on the Pacific Islands. The first boards were placed in June, 1922, and the number has been increased until the total mentioned above are now in place.

As a result of the inspection of the blocks taken from these boards, teredo navalis has been found in practically all harbors from Provincetown, Mass., south to Delaware Bay, and in several other harbors in the South Atlantic and Gulf. Because this species appears to thrive in water of low salinity and with a high degree of pollution, and since it also has a very high rate of reproduction, it may be considered as probably the most destructive species of borer. The greatest activity has been found in Providence, R. I., where blocks on one of the test boards were practically destroyed in three and one-half months.

Bankia gouldi (xylotria) have been found from Delaware Bay south through the Gulf and on the Pacific Coast. This species grows at probably twice the rate of teredo navalis, but it does not reproduce as rapidly—probably about 1,500,000 young per year as against 2,500,000 for teredo navalis, and so far as known it does not seem to have the resistance to low salinity and pollution that teredo navalis possesses. One of the boards carrying the test blocks in Galveston Bay was totally destroyed in two months by bankia.

A number of new or little known species of molluskan borers have also been identified; some of them apparently not being affected by creosote. The economic importance of these species will be established by further study of the test blocks.

Limnoria have been identified in harbors practically all the way from Maine to Alaska. Their rate of destruction is extremely variable. It seems to be high in some locations in New England and in some Gulf and Pacific harbors.

The biological studies have shown some interesting and

Map Showing Location of Test Boards, Laboratories and Experiment and Salinity Stations

perhaps significant indications in the effect of the proximity of copper and iron to the borers and tests are now being carried on at Providence, R. I., Charleston, S. C., and Galveston, Texas, to determine whether a system of protection for both old and new structures cannot be developed by the use of these metals in strips or wire. The laboratory studies of teredo navalis carried on by the University of California have given some extremely valuable information regarding this most destructive species.

In co-operation with the University of California and the Forest Products Laboratory, test blocks impregnated with various chemicals and various fractions of creosote are being tested by immersion in Gulf and Pacific harbors. Tests are also being made of several tropical woods which are reported to resist borers. Some of these timbers have European and Asiatic records showing a high resistance. As a portion of the report of the Wood Preservation committee of the American Railway Engineering Association to be submitted in March, 1923, a comprehensive study has been made of the literature on the subject of service records of various methods of protection. This report, when published, will give considerable information as to methods which have not been successful, as well as others which have given good results over considerable periods.

Reinforced concrete as a substitute for timber is becoming more and more used. Unfortunately, its record is not one of universal success. In fact, the committee has found very many more cases of failure than of success, and in most cases the causes of failure are very obscure. Studies are being carried on to endeavor to determine these causes and to produce a specification which will result in a construction which can be depended on to give long life, if such a thing be possible with this material.

As the investigation goes on, the interest of the various co-operation agencies has been increasing, as several ideas giving some promise of satisfactory results have developed from the study. The next season's work should be even more productive than the last, as the preliminary work is largely completed and the lines of investigation to be followed by the biologists and chemists are becoming much clearer.

This investigation is being conducted by the Committee on Marine Piling Investigations of the National Research Council, New York City, of which William G. Atwood is director.

Road Test of Clifford Automatic Train Control

Apparatus of the "Conductive" Type Having Continuous Control Feature Tried Out On the Erie

A DEMONSTRATION and test of an automatic train control device which has been developed by the Clifford Automatic Train Control and Signal Corporation was made on the Erie before the New York Central Lines Signal Committee, Train Control branch, other interested railroad men and guests on November 28. A Pacific type passenger locomotive was equipped with the control apparatus while other apparatus was used in the car to demonstrate its operation. The tests were made on the eastbound main track between Port Jervis, N. Y., and Graham, four block sections being equipped with the train control circuits.

The train control apparatus developed by this company is what is known as the "conductive" system. It gives an indication at any point in the block corresponding to any change which takes place in the track conditions ahead. No roadside apparatus is employed, as a superimposed circuit is used in connection with the track circuit and the drop in voltage between the front axle of the engine and the rear axle of the tender in train control territory is utilized as the primary impulse to actuate the apparatus. Through the primary impulse, which actuates specially designed three-position polarized relays, other relays, of the telephone type, are controlled; which in turn govern a solenoid magnet which actuates the air apparatus and also the cab signal. The cab signal is auxiliary to the system itself and can be used or not as desired. This signal consists of white, red, yellow and green lights, from which four indications are obtained. Time element relays of the inverse time element overload type are used in connection with the delayed application effect. The entire electrical equipment, with the exception of the eight-volt storage battery, will be contained in a box 5 in. by 8 in. by 12 in. mounted in a convenient location on the engine.

The circuits used in the test were d. c. polarized circuits of the double rail type. The imposed circuits are carried to the rails over two No. 6 B. & S. gage copper wires and equalized by keeping the voltage in the two rails balanced with the line. The imposed voltage is approximately 18 volts per circuit. In order to get the advance indication the polarity is reversed on the imposed circuit. Current is required in each block section to permit the train to proceed and in this manner the apparatus is made self checking. The circuits which can be used are the double rail imposed circuit, the single rail imposed circuit or the diagonal wired double rail imposed circuit. These have been designed to meet varying conditions and their application is not confined to d. c. steam road operation. An eight-volt storage battery is used to operate the air valve and cab signal lights on the locomotive.

The engine air equipment consists of an eliminating valve cut in the main reservoir lead between the engineman's automatic brake valve and the pipe leading to the main reservoir. The function of this valve is to prevent the engineman from releasing his brakes after an application is made, but it does not prevent him making a greater application if desirable. In addition to the eliminating valve there is an electro-pneumatic or solenoid valve controlled through the track circuit; and also the actuating valve, which sets in motion the automatic brake control valve, which in turn controls the eliminating valve which makes the proper brake pipe reduction. After the proper brake pipe reduction has been made, the actuating valve returns automatically to its normal position. After the stop is made, there is a releasing valve which, when opened, actuates a piston in the eliminating valve which again opens up the lead from the main reservoir to the engineman's automatic brake valve.

Under normal conditions the solenoid valve is always energized. When it is de-energized the solenoid opens an air valve which allows equalizing air to flow against a piston in a graduated air valve which produces an application of the brakes in proportion to the speed of the train and at the same time cuts off the main reservoir supply to the standard E. T. or L. T. brake equipment so that the engineman cannot release his brakes until the train is brought to a stop; but he can make a heavier application if he wishes. As stated above, after the solenoid valve produces the necessary stop application it closes automatically and returns to normal, leaving the standard brake equipment lapped and the

automatic features of the train control device ready for a further application.

The tests made consisted of running the engine in automatic block signal territory not wired up with the train control circuits to show that the engine equipment was not sensitive to the ordinary track circuit; engine running in train control territory with the blocks clear; a shunt put on the track two blocks in advance, showing that the engine would receive an advance caution indication (white and green light) two blocks back, and a caution (yellow light) followed by a stop indication (red light) with an automatic brake application in the next block; a test of the air apparatus to show that the engineman could not prevent the stop but could make a greater application of the air, and a test showing how the device operated when attempting to follow a train too closely.

When the engine entered train control territory, not occupied, the green light showed. A shunt was then put on the track two blocks ahead and the white and green lights showed, these automatic functions taking place irrespective of the train's position in the block. When the train ran into a red block at a speed of 45 m. p. h. or under, the yellow light showed up for about 20 seconds (delayed application), after which the yellow light went out, the red light came on and the train was stopped automatically. If the train operates at a speed over 45 m. p. h. there is no delayed application, but the red light appears immediately and the stop takes place.

The next test was made with the train moving at approximately 25 m. p. h. by putting a shunt on in the block in which the train was running. A delayed stop application was made. With the shunt still on, the engineman released himself after coming to a full stop and then proceeded. The shunt was then taken off with the train in the block and the apparatus cleared up automatically, the green light showing.

The train next went on a siding to allow another train to pass, and after it had cleared the block the train backed out of the siding, the apparatus automatically indicating a clear block by the green light showing.

The next test consisted in opening the track wiring on one of the superimposed circuits to show that the apparatus would still function through the remaining circuit on the one rail. When the train ran from automatic train control territory into non-automatic train control territory an automatic stop was made with the apparatus as it was installed for test purposes. After the engineman released himself he could then proceed without receiving additional stops.

In order to test the effect of foreign current keeping a track relay energized with a train in the circuit, a shunt was put on a block in advance of the train and the track relay was maintained in its normal position corresponding to no train in the block. When the train ran into this section it was automatically stopped in braking distance. This test produced the same effect as if the train had run from automatic train control territory into non-automatic train control territory.

Another test made was to have the test train attempt to close up the gap between itself and a train ahead. In this test the proper indications were received, corresponding to the positions of the trains in the respective blocks, but when the test train ran into the block occupied by the train ahead, the test train was automatically stopped.

As the speed control apparatus was not installed no speed control tests were made, those conducted being in connection with the automatic stop feature only.

Freight Car Loading

WASHINGTON, D. C.

ALTHOUGH the number of cars loaded with revenue freight is showing the usual seasonal drop the reduction continues to be less abrupt than it has been at this season in recent years. For the week ended November 25 the total was 955,495, which was over 13,000 cars less than the loading for the previous week but was 282,030 more than the loading for the corresponding week of last year and 151,794 more than that for the corresponding week of 1920. This was partly due, however, to the fact that the Thanksgiving day holiday last year and the year before came earlier in the month than this year, which destroys the value of comparisons with the figures for the corresponding calendar dates. Grain and grain products loading continued heavy, with a total of 54,790 cars, or slightly less than the week before. Coal loading showed a decrease of about 3,000 but there were increases in the loading of coke, forest products and miscellaneous freight. Ore loading, 15,052 cars, was only about half of that for the previous week.

The freight car shortage was further reduced during the period from November 15 to 23 to 152,565 cars. This was a decrease of 5,671 in approximately a week. The shortage included 79,037 box cars and 43,683 coal cars. At the same time 5,306 surplus cars were reported.

Southern Pacific—Central Pacific Hearing

Most Pacific Coast Witnesses Want Unified Operation Retained—Middle West for Separation

Washington, D. C.

THE HEARING before Commissioner Meyer and Potter of the Interstate Commerce Commission on the application of the Southern Pacific for permission to retain control of the Central Pacific has been continued during the past week, testimony being presented by representatives of the various commercial organizations and state commissions that have intervened in the case either in support of or in opposition to the application. In a general way most of the representatives of California and other Pacific coast communities have strongly urged the retention of the present unified operation of the Southern Pacific-Central Pacific lines, or at least that there should be no separation until the commission has completed its final consolidation plan and has definitely allocated the Central Pacific, while representatives of the inter-mountain and middle western communities served by the Union Pacific have been more inclined to favor the separation of the Central Pacific from the Southern Pacific and its operation either independently or by the Union Pacific. Members of the California Shippers' Committee Against Dismemberment of the Southern Pacific-Central Pacific System have shown more interest in the network of lines in California and indicated the belief that their interests would be better served by maintaining a strong railway system with headquarters in California than by building up competition against it and they have also insisted that rates would be increased and service impaired if the present system and its methods of operation were disrupted.

Those supporting the Union Pacific contention that the Supreme Court's decree ordering a dissolution under the Sherman law should be carried out have shown more interest in the line from Sacramento to Ogden and have taken the position that the Southern Pacific discriminates against the Ogden route because of its greater interest in the longer haul over Southern Pacific rails via the El Paso gateway and that if the Central Pacific were operated independently or by the Union Pacific it would display more interest in developing the territory served by the Ogden line and the Union Pacific. The witnesses have been cross-examined by counsel for the Union Pacific and the Southern Pacific and there has been much discussion of the extensive propaganda conducted by both roads and by the organizations that have lined up with them and numerous questions as to who paid for advertising and publicity matter or what promises on the part of the roads influenced the attitude of the shippers.

Labor Intervenes for S. P.

In addition to the shippers, bankers and public officials who have testified, general chairmen of the train service organizations on the Southern Pacific, reinforced by Grand Chief Warren S. Stone of the Brotherhood of Locomotive Engineers, appeared and protested vigorously against a separation of the Central Pacific from the Southern Pacific, on the ground that it would cause relocation of terminals and the creation of new divisions, thereby uprooting the employees from their homes, causing chaotic conditions affecting their seniority rights and reducing the continuity of employment by dividing the work in California between two railroads.

C. E. Childs of the Omaha Chamber of Commerce testified on November 28 and opposed the Southern Pacific petition, urging the development of the Central Pacific and Union Pacific as a through transcontinental line. He was followed by a number of representatives of the California committee against dismemberment, who supported the Southern Pacific application, including H. H. Sanborn, traffic expert for the committee; Alden Anderson, representing the California Fruit Distributors; James A. Keller, of the Pacific Portland Cement Company; H. H. Van Horn of the California Packing Corporation; Frank Clifford of the Sperry Flour Company; Dallas H. Gray, of the Shippers' Committee for the South San Joaquin Valley; G. J. Bradley, of the Merchants' and Manufacturers' Association of Sacramento; Seth Mann, of the San Francisco Chamber of Commerce; Frank M. Hill, of the Fresno Traffic Association; F. P. Gregson, of the Associated Jobbers of Los Angeles; R. L. Vance, of the California Portland Cement Company; C. L. Bailey, representing warehouse owners; H. E. Woolner, of the Great Western Milling Company; Charles R. Thorburn of the Watsonville Chamber of Commerce, and C. L. Crumrine of the La Habra Shippers' Association. E. O. Edgerton, director of the shippers' committee, filed with the commission 1,000 copies of resolutions adopted by commercial and civic bodies of the Pacific coast territory, which, he said, urged the commission to allow the Southern Pacific to continue to operate the Central Pacific as one system.

See Increased Rates

Many of these witnesses said that a separation of the two roads would substitute two or three line hauls for one line hauls with a consequent increase in rates which, in many instances, they said, would be sufficient to interfere with the movement. Mr. Mann said that while the San Francisco Chamber of Commerce in 1913 had assented to the proposal that the Central Pacific be sold to the Union Pacific, it was influenced at that time by the fact that the government had announced its intention of bringing suit for a separation of the Central Pacific from the Southern Pacific and he also said that conditions had changed since that time. The Panama Canal lines have taken a large part of the transcontinental traffic, the Union Pacific has acquired complete ownership of a line into Los Angeles and there has been a complete change in the country's transportation policy as expressed in the Transportation Act.

The representatives of the employees spoke in a very complimentary way of their relations with the Southern Pacific management and expressed some doubt as to whether their relations would be so satisfactory with another railroad. For example, they said another company might not maintain a pension system. They also said that the Southern Pacific's interest in California was so diversified that it is enabled to employ a large number of trainmen on its southern lines at one time of the year and its northern lines at another time, thereby giving continuous employment which they might not have if the service and the employees were divided among different companies. They testified as to the large number of men that own their own homes and said that some of them were afraid they would have to leave the salubrious climate of California. Also, it was stated that the men who stand high on the seniority list on the Southern Pacific would be placed much lower on the list if transferred to the service of another railroad and perhaps might not be able to obtain employment because of their age.

On December 2 a number of witnesses took the stand in support of the Union Pacific's contention in this case that the Central Pacific should be separated from the Southern Pacific. The first of these was Frank Francis, mayor of Ogden, who said that the Southern Pacific showed only a passive interest in the Central Pacific line to Ogden and treated it as a bridge for through traffic, while reserving its

progressive upbuilding and development work for the territory from which it would receive a longer haul. James Brennan of Ogden, banker and live stock man, also gave similar testimony. A. M. Holloway of Salina, Kan., testified that under present conditions shippers in the middle west are not able to use the Ogden route to the fullest advantage. H. H. Corey, member of the Public Service Commission of Oregon, told of that commission's recent petition to the Interstate Commerce Commission for an order requiring one or more of the railroads of the state to build additional lines through eastern, central and western Oregon and said that the commission is interested in a disposition of this case which will bring Oregon more railroads and more competition. It would oppose, he said, any lease of the Central Pacific to the Southern Pacific which would preclude any joint use of that company's lines in connection with the proposed Natron cut-off. On cross-examination by F. H. Wood, counsel for the Southern Pacific, he said that that question is the particular concern of the Oregon commission and that it would not object to a temporary arrangement which would cause only a reasonable delay in the construction of that line.

The I. C. C.'s Jurisdiction

This led Commissioner Potter to question Mr. Wood as to whether the Southern Pacific's petition contemplates only temporary relief and as to what will be the situation if the commission should decide that it has power only to deal with the permanent situation. Mr. Wood said the company's desire is to present to the commission primarily the situation for the immediate future, because it desires to avoid disruption of its system which might become unnecessary if the Central Pacific were finally allocated to the Southern Pacific in the consolidation plan, but that it asked relief to the extent which the commission shall decide is in the public interest. It has no desire to limit its application to temporary relief, but intended to leave it to the commission to determine the extent of the relief that could be allowed.

A number of witnesses also appeared from Salt Lake City who differed from the position which had been previously taken by witnesses who had appeared on behalf of the governor of the state and the Salt Lake Commercial Club. They said that the people of Northern Utah in general were in favor of an independent Central Pacific that would be interested in developing the territory which it traversed. One of the witnesses told the commission that it would have great difficulty in ascertaining the real sentiment of the shippers and of the public because so many who had taken sides in the case had been influenced by propaganda without making a first-hand investigation of the facts. It was admitted that the Oregon Short Line had paid for some of the full page advertisements which had appeared in Utah papers in the name of the committee of shippers.

Admits Association Financed by U. P.

A strong opposition to the Southern Pacific's application was expressed on behalf of the California Producers' and Shippers' Association. E. F. Treadwell made an opening statement for this association in which he undertook to reply to a statement made by Mr. Wood at the opening of the hearing that this association was "merely an alias" for the Union Pacific. He said that after the Southern Pacific had undertaken a publicity campaign, the Union Pacific had undertaken a counter campaign by getting the support of a large number of producers and shippers throughout the state and that an organization had been formed which consisted of 8,000 members, who, he said, are deeply interested in seeing the spirit of the court decision carried out. He said the association is not pledged to support any ambition of the Union Pacific to acquire the Central Pacific, but is willing that its disposition be controlled by natural laws and by the commission under the laws of the United States. Charles Teague and Van Bernard appeared as witnesses on behalf of the association, among others, asserting that there is a large territory in the Sacramento and San Joaquin valleys that is inadequately served by the railroads, that the farmers have suffered enormous losses by reason of car shortage and that the territory would not be adequately developed without the competition of additional lines. On cross-examination by Mr. Wood, Mr. Bernard, who appeared as a farmer and as chairman of the executive committee of the California Producers' and Shippers' Association, admitted that the organization had been financed by the Union Pacific and that he was being paid by the Union Pacific. Under questioning by Mr. Wood, he testified that the present organization was formed on July 21, although he and a few others had been doing organization work before that and that he had appointed an executive committee consisting first of a farmer, who afterward resigned, two real estate men and an insurance man. Meetings were held and members secured by distributing postal cards, which, he said, had been signed by 3,720 up to the time he left California and additional names since had brought the total membership up to 7,837.

When Mr. Wood questioned him regarding publicity material in opposition to the Southern Pacific's efforts to retain control of the Central Pacific, which had been given out as coming from the "Washington headquarters of the shippers and producers of the Pacific coast," and later from the "Washington headquarters of the California Shippers' and Producers' Association," the same office address being given in both cases, he said he knew nothing of such publicity work prior to the date of this hearing, that the office named was not the headquarters of the association but the office of the publicity bureau which he knew had been giving out publicity during the hearing, and that neither he nor any one representing the association that he knew of had authorized or paid for the publicity. One of these statements purported to be an interview with Secretary McGinty of the Interstate Commerce Commission regarding the effect of the Supreme Court's decision on the commission's consolidation plan, which was dated June 23, 1922, prior to the date of the organization of the association. Mr. Bernard also denied knowledge of a statement handed him by Mr. Wood, in which Wallace Alexander of San Francisco had challenged the association to state who it represented, or a statement issued from the Washington publicity bureau on July 22 announcing the formation of the committee in Sacramento the day before. He said he had been in the office of the Washington publicity bureau but once, when he presented a letter from a publicity man in Sacramento who had been working with his association. When asked who paid the publicity men, he replied: "I don't mind telling you that so far as I know, the Union Pacific is paying the bills. We have made no secret of it."

Other witnesses for the association were Victor R. Larsen, of Lodi; H. S. Maddox, of Sacramento; H. H. Dunning, of Marysville; and John A. Livingston of Auburn, Calif.

Chicago for Separation

J. P. Haynes, appearing on behalf of the Chicago Association of Commerce, and the Chicago Shippers' Conference Association, urged that the Central Pacific be disassociated from the Southern Pacific control in order that the transcontinental route from the central west to San Francisco and northern California may be managed by those who are interested in developing new traffic for that route rather than by an organization whose primary interests, he said, are in the development of traffic from the Atlantic seaboard in preference to movement from the central west.

W. B. Biddle, former president of the St. Louis-San Francisco, speaking for canning interests of Oregon, said

that the interests of Oregon and the Pacific coast would be promoted by the increased competition which would result from a separation of the Central Pacific from the Southern Pacific and F. G. Donaldson, speaking for lumber interests of the Willamette Valley, said that the development of that territory was largely dependent upon increased competition.

Throughout the hearing there have been more publicity agents than newspaper men in attendance most of the time, and the newspaper men who have been sending out stories on it have had the assistance of three sources, as well as three distinct types, of publicity material. The Southern Pacific's representatives have given out copies of the prepared statements of Southern Pacific witnesses and occasionally some extracts from the stenographic report of the hearing. Representatives of the shippers' committee against dismemberment have given out enthusiastically-written stories regarding the testimony of their witnesses and twice daily stories have been given out in the name of the California Producers' and Shippers' Association regarding the testimony of the witnesses who were opposed to the Southern Pacific application, and frequently giving adverse editorial comment on the testimony favorable to the Southern Pacific.

Annual Report of Interstate Commerce Commission

Regulator of Railroads Finds a Revenue Problem of Its Own In Reduced Appropriations

WASHINGTON, D. C.

THE Interstate Commerce Commission has made its annual report to Congress for the year ended October 31, 1922. For the reasons stated elsewhere in the report and in former reports, the commission makes the following recommendations:

Summary of Recommendations

1. That section 1 of the interstate commerce act be amended to provide for the punishment of any person offering or giving to an employee of a carrier any money or thing of value with intent to influence his action or decision with respect to car service, and to provide also for the punishment of the guilty employee.

2. To provide for increases in the number and salaries of locomotive inspectors and the increase in the number of inspectors under the safety appliance acts provided for by the first deficiency act, approved September 22, 1922, be made permanent.

3. That subject to appropriate exceptions the use of steel cars in passenger-train service be required, and that the use in passenger trains of wooden cars between or in front of steel cars be prohibited.

4. That the hours of service act of March 4, 1907, be so amended as to require all service of employees subject to the act to be construed as continuous service, except that if an employee is given a release from duty for a definite period of not less than three hours, and under such circumstances that the employee has proper facilities and opportunities for securing rest during such relief period, such relief period can be used to break the continuity of the service and the service ceases to be continuous and becomes aggregate service.

5. That to complete some and undertake other of the important duties and to keep the general work current, we recommend appropriations sufficient to meet our absolutely necessary requirements. * * *

6. That section 20a of the interstate commerce act be amended to cover electric railway companies engaged in the general transportation of freight.

7. That paragraphs 4 to 8, inclusive, of section 5 of the interstate commerce act be made to clearly provide whether and, if so, how voluntary consolidations may be effected pending ultimate adoption by us of a complete plan of consolidation.

8. That section 25 of the interstate commerce act be amended by making it unnecessary for common carriers by water in foreign commerce to file, and for us to publish, the information referred to in paragraph 1 of the section.

9. That section 19 of the merchant marine act, 1920, be amended so that its provisions will clearly not be applicable to the Interstate Commerce Commission, and that section 28 of this act be reconsidered by the Congress in the light of the circumstances set forth in our 35th annual report

Appropriations Curtailed

The first part of the report is devoted to a discussion of the commission's experiences with government regulation of its own revenues by the Bureau of the Budget; an argument that the commission must have adequate appropriations to do its work properly. For the fiscal year ending June 30, 1923, the commission submitted to the Bureau of the Budget an estimate that $5,649,500 would be required. The bureau after an extended investigation, suggested that because of the financial condition of the Treasury, certain additional activities delegated to the commission by the Transportation Act of 1920 be further held in abeyance and that the commission endeavor to perform its duties within amounts less than the estimates. Therefore, the estimates for this year were cut by the bureau to $5,344,907. This included a reduction of $130,000 in the appropriation for valuation work, from $1,630,000 to $1,500,000. These amounts were approved by the President and submitted to Congress, but were further reduced by Congress to $4,879,500, the amount for valuation being reduced to $1,300,000. The commission recently submitted a deficiency estimate for the fiscal year including $100,000 for general purposes, $73,500 for safety, $201,917 for locomotive inspection, in response to which Congress appropriated $100,000 for general purposes and $66,150 for the work of the Safety Bureau, but failed to provide the amount requested for locomotive inspection. As a result, the commission's appropriations for the current fiscal year are $5,045,650, impairing its ability to complete some and undertake other important duties laid upon it by law. This has resulted in curtailment of activities in several bureaus, notably those of accounts, service, safety, locomotive inspection and valuation. "The same is true," the report says, "as to the studies of economy and efficiency in operation which seem to have been contemplated by the Congress as necessary incidents to some of the duties expressly imposed by recent legislation."

In compliance with the direction of the budget bureau, the commission submitted prior to August 1 an advance report of its estimates for the fiscal year 1924 amounting to $5,204,500, which included $1,280,000 for valuation. The director of the bureau later advised that the President had approved the allocation to the commission of $4,494,500 as a tentative maximum and that, therefore, the estimates should not exceed this amount; but if, in the opinion of the commission, the reduced amount would not meet its absolutely necessary requirements, the estimates might be accompanied by a supplemental statement. This amount, the commission points out, is $710,000 less than its total estimate for the ensuing year and $551,150 less than the current total appropriation. The report then says:

"We have given careful consideration to our work * * *. Reducing the appropriation for valuation more rapidly than we had planned may practically defer recovery of excess earnings under section 15a of the interstate commerce act. Reduction in the current appropriation for our bureau of accounts will retard the policing of carriers' accounts as contemplated by section 20, the revision of the accounting classifications, and the prescribing of classes of property for

which depreciation charges may properly be included under operating expenses. If we are to function promptly and efficiently, more funds must be supplied to care for the disposition of pending fourth section applications. Investigation and suspension cases are increasing and necessarily cause delay in the disposition of other cases. Under paragraph 3 of section 6 of the act we are authorized to make suitable rules and regulations for the simplification of tariffs, but thus far we have been able to only approach this important subject." (The recommendation of the budget bureau submitted to Congress on December 4 provides $4,514,500 for the Interstate Commerce Commission.)

Car Service

In a review of the commission's exercise of its emergency powers relating to car service during the past year, the report points out that the accumulations of freight did not cause congestion at the large terminals as was the case in 1920. Loaded cars accumulated at intermediate terminals or were set out at sidings along the line. The effect of the shop strike caused deterioration of motive power. On certain important trunk lines, the report says, the condition of motive power was most serious and on some lines the number of locomotives retired for repairs was over 60 per cent of the total owned and this condition forced a diversion of freight to lines better able to handle it. Statistics are given showing the accumulated carloads which carriers were unable to move promptly. The number increased from 56,868 in the second week of July to 80,320 in the third week of September, but was then greatly reduced until for the fourth week of October it was down to 52,973. The commission reviews the shortage of freight cars (179,239 on October 31) and says that a considerable net surplus, perhaps 100,000 cars, is necessary to the prompt filling of orders and to avoid waste in transportation. This shortage is attributed to the lack of efficient transportation service, particularly in the south, during the early part of the shopmen's strike, and the inability of the carriers to move cars promptly on account of strike difficulties following the resumption of heavy coal shipments and seasonal crop movements in the north and west. Emergency orders were issued for lake coal, but dealers and consumers in regions remote from their sources of supply are urged to make contracts for a supply in season for early transportation. "They can hardly expect to rely upon our regulatory power continually to relieve them from the consequences of their own inertia." Acting under the coal anti-profiteering act, the commission has ordered priority in transportation and distribution in 14 instances covering 879 cars, but has not found it necessary to lay embargoes.

Freight Rates

A review is given of the case in which the commission made a general reduction in freight rates on July 1 and in this connection the commission says:

"The net railway operating income for the year 1921 was $614,810,531, clearly an inadequate income. * * * The tonnage moved by the railroads has been steadily increasing in recent months until the traffic is almost equal to the largest ever handled. Manifestly the existing rates are no longer interfering with the free flow of commerce as a whole, whatever may have been the situation prior to the reductions of July, 1922. Little opportunity has been afforded for determination of the effect of the reduced rate level upon net earnings because of freight congestion * * *."

Locomotive Inspection

The work of the Bureau of Locomotive Inspection, the report says, has been restricted, the expenditures being kept within the appropriation of $290,000 only by curtailing the activities of the inspecting force to the detriment of the service. There are only 50 inspectors for approximately 70,000 locomotives housed or repaired at 4,600 places.

Automatic Train Control

After outlining the orders issued for the installation of automatic train control devices, the report says the need for such devices has been further emphasized since January 1, by its investigation of six serious train accidents resulting from non-obedience to automatic block signals which resulted in the death of 50 persons and injury to 488 others.

Studies in Efficiency and Economy

Calling attention to the fact that the law requires that in adjusting rates it shall have in mind "honest, efficient and economical management," the commission says:

"To go into the question of efficiency of management in a thoroughly effective way would necessitate an organization of experts especially qualified to investigate the numerous and complex phases of railroad management, such as shop methods, locomotive performance, road and terminal operation, maintenance of way and structures, purchasing, and many others. This would involve a large additional appropriation and would in some degree duplicate the work of the technical staff of the railroads. We have not been convinced that we are called upon to engage in the study of operating efficiency upon this elaborate plan. We have undertaken, however, to emphasize to a greater degree than heretofore the systematic comparison of operating results through statistical reports. We have also given attention to plans for improving the efficiency of the national transportation system by a more effective co-ordination of the various transportation agencies.

"The subject of terminal expense is one of growing importance because of the complexity of terminal operation incident to commercial and industrial activity concentrated in large and growing cities. Delays in transportation are traceable in the main to terminal handling, not to the line haul, and terminal expenses seem out of proportion to line-haul costs. Intensive study of terminal problems, long important, has become of first importance to the communities served, the shipping public, and the carriers. Methods of handling less than carload shipments must be developed which will materially reduce the present cost and delay. The need is no less in respect of carload shipments and the release and return of cars. Discussion of such methods would be unprofitable at this stage of our studies, but we note with approval the attention which carriers are giving to the subject. We are convinced that much can be accomplished along these lines and that the carriers should accomplish it."

Bureau of Finance

Under paragraphs 18 to 22 of section 1 of the interstate commerce act, 100 applications for certificates of public convenience and necessity were filed. Of these, 53, covering 2,941 miles of line, were for authority to construct new lines or to extend existing lines, and 47 were for authority to abandon mileage aggregating 808 miles of line. The commission issued 57 certificates, of which some were on applications made during the preceding year, 27 covering 446 miles of new construction and 30 authorizing abandonment of 526 miles of line, and denied 11 applications, six covering 259 miles of new construction and five seeking authority to abandon 79 miles of line; 12 applications, seven covering the construction of 175 miles of line and five for authority to abandon 100 miles of line, were withdrawn.

In 24 cases hearings have been held for the commission by state commissions during the year, and in the majority of such cases it has followed the recommendations of the state authorities.

The question whether, under paragraphs 4 to 8, inclusive of section 5 of the interstate commerce act, two or more carriers may consolidate their properties either with or without the commission's approval, pending the adoption by it of a complete plan of consolidation, is undetermined * * *.

Paragraph 2 of section 5 authorizes the commission to approve the acquisition by one carrier of the control of one or more carriers in any manner not involving consolidation into a single system. Under this paragraph, 28 applications have been filed and 24 authorizations have been issued. Several important acquisitions have been brought about.

Preliminary to the determination and recovery of excess income, orders dated January 16 and March 16 were served on carriers requiring each to report the amount of its net railway operating income for the applicable period ended December 31, 1920, and the year 1921; the value of the railway property held for and used by it in the service of transportation; the net railway operating income in excess of six per cent of the value; and to remit to the secretary one-half of the excess income received, if any. Returns have been received from all large and many small carriers. Compliance with the orders is still the subject of correspondence with some of the small carriers.

Returns were filed by 739 carriers for the applicable period ended December 31, 1920, of which 17 reported an aggregate of $737,567 net railway operating income in excess of six per cent of the value as reported. For 1921, returns were filed by 692 carriers, of which 21 reported an aggregate of $696,944 in excess of six per cent. Of the carriers reporting excess income, seven reported an aggregate of $50,475 and remitted one-half of the amount to be placed in the general railroad contingent fund. The commission is giving consideration to all returns which indicate that excess income was earned, with a view to early determination of the property values and ascertainment of the excess income recoverable.

Issuance of Securities.—The commission has received 195 applications under section 20a of the act and has authorized the issue of securities and the assumption of obligations and liabilities in respect of securities of others in an aggregate amount of $889,719,710.23 plus 69,760,500 French francs. The report shows how much of each class and how much for new money, for refunding, etc.

Under paragraph 9 of section 20a, certificates of notification of the issue of notes maturing within two years, in the aggregate sum of $54,141,584, were filed.

The Illinois Central and the Chesapeake & Ohio made applications for authority to issue preferred capital stock, the proceeds to be used in making additions and betterments. These applications constitute encouraging indications, the commission says, inasmuch as of late years it has been generally the practice to finance additions and betterments through sale of bonds carrying fixed charges. Both applications have been granted.

Interlocking Directorates.—The provision of section 20a of the act making it unlawful for any person to hold the position of officer or director of more than one carrier unless authorized by the commission became effective January 1, 1922. The evils which the statute was designed to prevent arose mainly from interlocking relationships between operating carriers. * * * The majority of instances in which authority has been denied have related to operating carriers, especially where there has been substantial competition for traffic between the carriers. The commission received 413 applications from individuals and 305 from carriers; 1 carrier application was wholly denied, and 408 individual applications and 308 carrier applications were granted in whole or in part, making a total of 727 applications, 415 individual and 312 carrier applicants, of which disposition was made.

Deficits Under Federal Control.—Claims have been filed for reimbursement by 344 carriers, under section 204, claiming approximately $25,000,000. It is estimated that the amount to be certified on these claims will be approximately $15,000,000, of which $5,093,350 has been certified to date. Settlement has been effected with 83 roads and 17 cases have been dismissed. The commission thinks that practically all of these claims will be settled during 1923.

Six Months' Guaranty for 1920.—As shown in the last annual report, 547 of the 667 carriers which had accepted the guaranty provision claimed an amount approximating $818,000,000 by their returns filed in response to the order of October 18, 1920. An aggregate of approximately $600,000,000 is claimed by 578 carriers which have filed returns conforming to the report and order of December 15, 1921. The commission finds no occasion, however, to make any change in its estimate of the total amount probably payable under the guaranty as stated in its last report, viz., $536,000,000.

Settlements have been effected with 119 carriers and 75 cases have been dismissed. Practically all certificates issued since October 31, 1921, have been in settlement of claims. Of the amount estimated as necessary to make good the guaranty, viz., $536,000,000, the commission has issued certificates in the aggregate amounts indicated below:

As advances under section 209	$263,935,874
As partial payments under section 209 as amended by section 212	168,970,412
In final settlement under section 209g	17,166,759
Total	$450,073,045

Leaving an estimated amount still payable to the carriers under section 209 of $85,926,954.

Loans.—Under the revolving fund, the time during which applications for loans might be made expired February 28, 1922. Loans from the fund subsequent to that date have been and will be confined to applications so made. The aggregate amount of loans requested in pending applications is large, but it is not thought that the total amount of loans yet to be made will be substantial. An appendix contains a revised statement of loans and of the present status of the revolving fund. Out of the original appropriation of $300,000,000 the commission has held out $40,000,000 to cover claims and judgments arising out of federal control as provided by the statute.

Bureaus of Accounts and Statistics

The accounting examinations in determining the amounts due carriers under sections 204 and 209 of the transportation act, 1920, have absorbed much of the time of the bureau, but this work has now decreased and the bureau has resumed in part the general examinations of carriers' accounts. Substantial progress has been made in investigation of the classes of depreciable property and the related percentages of depreciation which, under section 20, the commission is required to prescribe. A vast amount of research is required. A reduction in the appropriation of the bureau made it necessary to restrict the number of field examinations in connection with the work of checking carriers' claims under sections 204 and 209. This has delayed the settlement of these claims to some extent as well as the completion of the special accounting work required by these provisions of the law.

Additional emphasis has recently been put by the Bureau of Statistics upon analysis and research. The development of statistical standards for judging of the adequacy of maintenance, the formulation of index numbers to show the effect of changes in wages and prices of materials upon the cost of railway operations, the separation of terminal and line costs, and a history of changes in wage rates and working conditions from 1918 to 1922 are among the subjects to which attention has been given.

The principal analytical work that is being done is the comparative study of operating averages. An examination is being made of the differences in results obtained by various railroads operated under similar conditions. Although it is difficult to reach final conclusions as to the honesty,

economy, and efficiency of railway management from statistical tests in a central office, it is believed that a systematic effort to explain apparently abnormal results will prove of value.

Formal Docket

The formal complaints filed numbered 1,264, of which 1,127 were original complaints and 137 subnumbers, a decrease of 223 as compared with the previous period; hearings numbered 1,862, producing 227,037 pages of testimony, as compared with 1,616 hearings and 185,111 pages of testimony during the preceding period.

Bureau of Traffic

The commission's activities of an administrative character dealing with the various kinds of charges for transportation and transmission, including rules and regulations affecting those charges, are largely centered in this bureau. The current year has continued to be one of transition, readjustment, and reduction. The number of freight rate changes proposed and made was the greatest in the history of American railroads. In addition to the general reduction on July 1 of all freight rates not previously reduced since 1920, thousands of readjustments of rate relationships disturbed by general changes during war years have been made. Many individual situations have also been revised to remove inequalities and discriminations.

Efforts to settle rate controversies without litigation through correspondence and conferences with shippers and carriers have been continued with considerable success. Tariff publication is permitted upon less than 30 days' notice wherever the proposed rates appear likely to facilitate the free movement of commerce and correct improper adjustments. Due to the rapid and extensive rate changes of the past five years, the tariff situation, already complicated, has become more complex, and special efforts toward simplification of tariffs are being made in conjunction with committees representing carriers and shippers, it being the aim to lessen the expense of tariff publication and to facilitate ready determination by all concerned of the legal charges.

There were filed 135,433 tariff publications, and 2034 were tendered for filing and rejected because of failure to give the notice required by law. Those filed represent an increase of 31,685 over the preceding year. During June approximately 34,000 tariff publications comprising in the aggregate 375,397 pages were filed, most of them in compliance with the findings in Reduced Rates, 1922. Over 8,000 rate memoranda have been prepared for the commission's use or for the use of inquiring shippers, carriers, and other branches of the government, including the federal traffic board.

For violations of the interstate commerce act and related acts 27 indictments were returned, 16 informations filed, and 20 cases concluded. The indictments returned and informations filed charged the falsifying of records of common carriers, unlawful use of passes, false billing of interstate shipments, and frauds in connection with the issuance and use of bills of lading.

Bureau of Service

With a steady improvement in business conditions, there has been a corresponding increase in the demand for cars. This, with the strike of the miners and shopmen, made necessary the exercise of emergency powers. Continuous efforts have been made to improve the efficiency of transportation service by the rerouting of loaded cars over open routes, by urging the return of cars to the originating carriers and by correcting the specific deficiencies in transportation * * *.

Bureau of Safety

The work of the bureau of safety is reported in a separate document. During the fiscal year 1922, the bureau investigated 51 train accidents, involving a total of 117 persons killed and 953 persons injured. Two investigations pertaining to strength of materials are in progress, one having to do with the prevalence of transverse fissures in rails and the other concerning the endurance of chilled iron wheels under conditions of service. Plans of 179 [safety] devices were examined and opinion thereon transmitted to the proprietors. Of those examined, 23 possessed meritorious features but required further development or service tests to determine their practical utility and nine possessed merit as safety devices warranting some degree of commendation. In co-operation with the American Railway Association, observations of three automatic train-control devices in service have been made and tests of two other devices, of the magnetic-induction type, are now in progress.

Bureau of Locomotive Inspection

A summary of the fiscal year 1922, as compared with the fiscal year 1921, shows a decrease in this department of 48.4 per cent in the number killed, and 11.3 per cent in the number injured. Since 1912, the first year of the existence of the law, there has been a decrease in the number of accidents of 68.1 per cent, 72.5 per cent in the number of persons killed, and 68.3 per cent in the number of persons injured.

The report of the bureau does not mention the shop strike, but says that a comparison of all accidents and casualties during July, August and September, 1922, with those of July, August and September, 1921, shows 288 accidents, 10 persons killed, and 350 persons injured during the three months of 1922, and 152 accidents, 3 persons killed, and 173 persons injured during the corresponding period of 1921, increases for the 1922 period of 89.5, 233, and 102 per cent, respectively. Reports made to this bureau are checked with the accident reports made to the bureau of statistics. The figures for the three months of 1921 include the reports made to both bureaus, but the figures for the corresponding period of 1922 do not include the reports made to the bureau of statistics for August and September, which are not yet available for checking.

A comparison of the number of locomotives inspected during the months of July, August and September, 1921, with the corresponding period for 1922, shows:

	1922	1921
Number of locomotives inspected	16,380	16,722
Number found defective	11,231	7,963
Percentage inspected found defective	67	48
Written notices for repairs served	1,396	817
Total defects found	43,012	24,910

About 3,500 more locomotives were inspected than during the preceding year; but during that year the locomotive inspectors devoted an aggregate of 962 days to special work in connection with the transportation act, 1920, and the interstate commerce act, as against an aggregate of 200 days devoted to such special work in the ensuing fiscal year. On the other hand, during the fiscal year 1922 the inspectors spent a greater amount of time than usual at such points as they visited and at their headquarters, so as to reduce travel and subsistence charges. As a result they were unable to make inspections at 1,913 points where locomotives are housed or repaired.

Because of defective condition of locomotives and willful violation of lawful order of inspectors, suit was brought in the United States district court for the southeastern division of the eastern district of Missouri against one carrier and judgment was rendered on 20 counts in favor of the government. No formal appeal from the decision of any inspector was filed during the year.

Bureau of Valuation

Regarding the work of this bureau the report says in part: "We have reached the stage in valuation of the steam railroads where, except for rechecking, the inventorying of

roads recently constructed, and a few minor details, the original field work has been completed. Underlying reports are being issued in large numbers, and hearings and final arguments on protested tentative valuations are in progress. Of 287 tentative valuations served, 101 have become final through absence of protest. Full hearings upon protests have been had in 39 cases. Six cases have been partly heard and 35 are assigned for hearing before December 31, 1922. Final arguments have been had in three cases and 12 were set for argument in November. Issues raised by protestants in 19 cases have been submitted without argument.

"The act provides that valuation shall be kept up to date and we have taken steps to comply with that provision. We have completed the transfer of all forces and records of the bureau to the central office in Washington. The number of employees has been reduced to approximately 550, or about one-third of the maximum reached in 1918. Expenditures have been reduced from approximately $3,000,000 per annum during the first few years, $2,735,911 for the fiscal year 1920-21, and $1,597,572 for the fiscal year 1921-22, to approximately $1,300,000. This reduction has, in large part, been made possible by the termination of original field work.

"The following table shows data with respect to the underlying reports which have been completed and issued:

Section	Number of reports	Number of corporations	Miles of road	Per cent of total mileage
Accounting, as of Oct. 31, 1921	271	444	61,731	44.80
Accounting, as of Oct. 31, 1922	555	983	151,572	91.11
Engineering, as of Oct. 31, 1921	423	755	133,139	53.68
Engineering, as of Oct. 31, 1922	636	1,165	179,475	72.37
Land, as of Oct. 31, 1921	371	765	71,558	28.85
Land, as of Oct. 31, 1922	671	1,096	144,411	58.23

A like summary covering tentative valuation reports follows:

Date	Number of reports	Number of corporations	Miles of road	Per cent of total mileage
Oct. 31, 1921	151	193	24,493	9.86
Oct. 31, 1922	287	409	39,956	16.11

"These summaries do not adequately reflect the progress made. One feature of reorganization was the concentration of effort on production of reports covering the major steam railroad properties, particularly those of carriers whose gross revenues were $25,000,000 or more per annum. Material progress has been made on these reports. Moreover, 58 tentative valuation reports, embracing 84 corporate properties and 12,939 miles of road, which were completed but not issued on October 31, 1922, are not included in the immediately preceding table.

"The emphasis laid upon valuation by the transportation act, 1920, has necessitated expediting the valuations of the steam railroads to meet increasing requirements.

"In our consideration of Reduced Rates, 1922, we had available underlying valuation reports covering 47.7 per cent of the total mileage. Analysis of the preceding summaries and of the schedule for the remaining months of 1922 indicates that for a similar survey of rates, fares, and charges the underlying reports available early in 1923 would cover approximately 75 per cent of the total mileage.

"Section 5 of the act provides that, in preparing and adopting the plan for consolidation of the railway properties into a limited number of systems, the grouping should be so arranged that the rates, as between competitive systems and as related to the values of the properties through which the service is rendered, shall be the same so far as practicable. Paragraph six of that section provides that the bonds and capital stock at par of the corporation which is to become the owner of the consolidated properties shall not exceed the value of the consolidated properties as determined by us, and makes it our duty to proceed immediately to the ascertainment of such value upon the filing of the application for consolidation. We have need also for valuation findings in regulation of security issues for existing companies and for the recapture of excess earnings. Requisitions for data are made by other branches of the government. Local governments have called for valuation maps for use in planning development of industrial sites, flood control, port development, relocation of tracks, and planning of terminals.

"Although the activities and energies of the bureau have been mainly directed to the properties of steam railroads, all original field work on the properties of the Western Union and Postal Telegraph companies has been completed. The field work on the properties of the Pullman Company has been completed. No substantial amount of work on the telephone lines has yet been completed and no work has been done, except incidentally, on electric railway lines and express and pipe line properties."

Some Experimental Results With Quick Setting Concrete

DURING THE LAST meeting of the International Railway Congress at Rome, Italy, mention was made of the use of a quick setting concrete known as "Ciment Fondu." This is a French cement which has certain characteristics which are distinctly interesting. Predominant among these is its ability to attain a usable strength in a very short period of time. In June, 1922, the Boston Elevated Railroad Company obtained some samples of this product and conducted a series of tests, the results of which are given in the tabulations.

The material was tested at the laboratories of the company in comparison with three well-known brands of American cement and with the specifications of the American Society for Testing Materials for 1921. Three different mixes of ciment fondu were used. Figures were obtained on the amount passing through a No. 200 sieve, the time of initial set and final set, the strength of the French cement after 24 hours, the strength of all cements of the one-to-three mix after 7 and 28 days, and the results of a five-hour boiling test. Separate tests were made of the one-to-two and one-to-one mixes of ciment fondu. From the results it will be noted that the French cement obtained a strength in 24 hours greater than any of the standard cements did in 7 days and that the 7-day test of the French cement is greater by 15 per cent than the 28-day test of the others. On the 28-day test it showed a slight loss in strength compared with that at seven days. This cement, however, did not stand up well under the five-hour boiling test, as it cracked and scaled.

It was the intention of this road to secure some of this cement, if possible, for use during winter weather or for use in track work to shorten the time of from seven to ten days which is required with American cements before traffic can be turned on newly concreted or paved track. Communications with French manufacturers, however, indicate that the question of supply has not been stabilized and so far it has not been possible (at the time of this writing) to secure any of this material.

We are indebted to Edward Dana, general manager of the Boston Elevated, for information regarding these tests.

How To Get at the Inside of a Railroad Payroll

Suggesting a Method of Recapitulation and Comparison of Costs with Transportation Produced

By John Collins Owers

NOTWITHSTANDING the old proverb that familiarity breeds contempt, in these days no one concerned with railroading permits himself lightly to regard the payrolls. On the contrary, indeed, each succeeding month these important documents seem to inspire still greater respect, especially in the hearts of those whose duty it is to direct operating affairs. This is going to continue, so that there can be no diminution of the effort to obtain still higher degrees of efficiency. There will be no let-up in the insistent demand for still more ton-miles per dollar spent.

Obviously then, the thing necessary is to get the best possible understanding of the payrolls, to search their innermost recesses and expose the hidden secrets of non-productive costs, and lost motion wastes, which even on the most carefully supervised roads still sap at the tenderly nourished earnings and hinder achieving the so much desired net; and anything that offers to facilitate such an understanding, and assist in the better control of these expenditures is worthy of receiving thoughtful consideration.

Few railway officers can devote the time necessary really to study their payrolls as they come from the timekeepers, and if they did, such study, however carefully done, cannot possibly result in the thorough comprehension that is really necessary. This will be found true even though the rolls contain the number of hours or miles for which each individual is paid, because neither hours of service nor miles properly indicates how much actual transportation the expense has produced, nor the cost per unit, without which it is impossible correctly to adjudge the expenditures.

Form A

RECAPITULATION OF TRANSPORTATION DEPARTMENT PAYROLLS - OLD COLONY DIVISION

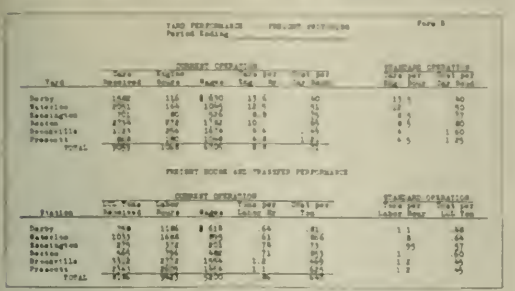
Form A—Recapitulation of Transportation Department Payrolls

Nevertheless, there is a way by which even the busiest officer can speedily delve to the innermost recesses of his payrolls, notwithstanding the bulk of the sheets or the volume of amount they may carry, and bring to light their most obscure secrets, whether of values received, or losses incurred. This may be done by recapitulating the rolls and relating the money that has been spent with the transportation that has been produced; a comparison of cost and accomplishment, which is really a very simple process, but one that is tremendously effective in obtaining a clear understanding of what the payrolls mean. To do this it is necessary only to group the classes of employees engaged in producing a given service, and obtain the total expense of performing their

work, compare this with a proper standard cost for the service rendered and with the transportation results obtained.

For transportation department rolls a recapitulation of this sort would require consolidations of the amounts expended for the purpose of administration, or as it is termed in the classification of expenses, "Superintendence"; Station Oper-



Form B—Yard and Station Performance

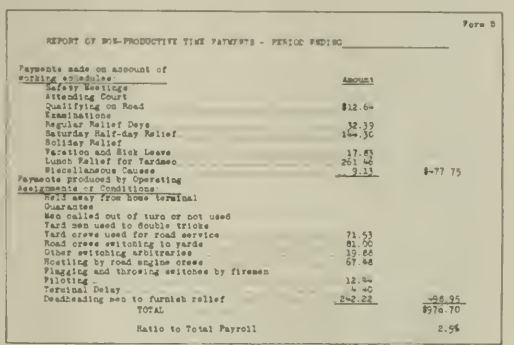
ation, Yard Operation, Passenger and Freight Train Service, Train Control on Line of Road and Highway Crossing Protection, with still one other group to comprise the miscellaneous employees and services, such as non-revenue train operation, police protection, drawbridge operation, and so forth.

To produce the best results, some of these groups, such as "Superintendence" and "Station Service," may be subdivided; Superintendence, being separated as between "Supervision" and "Dispatching Trains," and "Station Service" divided into three sections; one, to include the employees at exclusive passenger stations; the second, those at the freight stations at which the forces fluctuate with the volume of traffic; and the third, to include all the other stations, the forces of which are governed by general operating characteristics.

By recapitulating the amounts of wages paid to the employees in group order as outlined, the total wage expense for a given service is obtained and may be compared with a

becomes possible to ascertain whether the work has been done economically or otherwise.

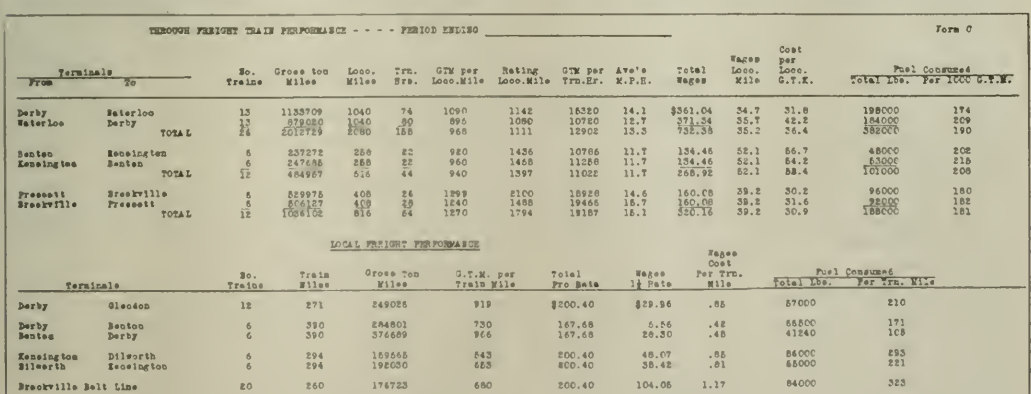
These standards may be made by determining the required number of labor hours and amount of wages to produce a given unit of transportation, such as for passenger and freight train operation per car or ton-mile, or per ton of freight handled at stations, or per car handled in yards. Standards for the other groups may be based on actual requirements for operating purposes. Thus, for the passenger station or train control groups, no difficulty would be encountered in determining the actual wages expenses necessary to provide the service assigned for normal weekdays, Sundays and holidays, and such separate daily totals having been obtained, the normal requirements for each payroll period may be secured by multiplying the standard wage



Form D—Report of Non-Productive Time Payments

expense by the number of weekdays, Sundays and holidays comprising the period under consideration and thus reach a standard total. This recapitulation (Form A) occupies only a letter size sheet, but it furnishes a complete picture of the payrolls, and tells a quick, positive story of the success of the operation, regardless of volume.

In case, however, a closer view of what has been done is



Form C—Through and Local Freight Train Performance

previously determined standard of what the amount should be, and variations noted; also in conjunction with such groups as comprise the train, yard and freight station services, it is valuable to set up the number of miles run, cars or tons handled and the unit cost for each, so that it at once

needed, and it usually is, this sheet should be supplemented by a detail of such operations as readily lend themselves to analysis. For instance, the results obtained at individual yards and freight stations, and the movement of freight service, are particularly interesting, and because of the fact that

these services are largely controlled by the flow of traffic, the forces employed require frequent adjustments in order that a proper balance may be maintained. To provide this information, another sheet (Form B) has been devised, one section of which is devoted to the freight houses and the other to the yards. On this form, each point stands alone, and tells its own story of wage expenditures, tons of freight handled or number of cars received, and the cost per ton and per car, compared with previously determined standard costs; and for those who care for the further information, the number of tons handled per labor hour, or cars handled per switch engine hour may be given with their proper standards for purposes of comparison.

Passenger train service needs no special analysis beyond a comparison of the actual with the standard cost per car mile. A greater than normal variation from the standard is usually caused by overtime, deadheading, or other schedule allowances for which a special sheet is provided.

Although the cost of freight train service is properly comparable with a standard, there are so many elements likely to increase the expenses of operation that it is well to secure a still closer examination of the service, and for this purpose another sheet (Form C) is designed. On this is shown the performance of through and local trains separately by directions and by routes. Thus, if a division consists of a portion of main line and several branches, all the through eastbound trains on the main line between crew terminals are reported in one group, and conversely all the westbound through service between the same points. In separate groups are shown trains operated on the branch lines, whether the service is entirely operated from, or partly operated over, the main line. Thus, all through service between any two terminals will be reported upon a single line which shows the number of trains run, the locomotive miles, gross ton-miles, train hours and wages, with appropriate statistics to show the gross ton-miles and rating ton-miles per locomotive mile, the average speed, the gross tons per train hour, wages cost per locomotive mile, and per 1,000 gross ton-miles; and although fuel consumption is not payroll, the statement may be further extended to show the quantity of fuel used in total, and per 1,000 gross ton-miles, thereby making the report more complete as an operating statement.

On the same sheet, following the through service, is given the local or way freight performance, but not in such detail, as local service is not as readily susceptible to traffic conditions. Data in regard to this class of trains is, therefore, restricted to the number of trains run between specified terminals, the train miles, gross ton-miles, gross tons per train mile, wages cost divided between pro rata and time and one-half pay, the cost per train mile, and also, if the information is desired, the fuel consumption per train mile.

These statements bring out the payroll details in a pretty thorough manner, with the exception of one feature, which, by the way, too often serves as the woodpile for the payroll jinx. This is the element of schedule arbitrary and penalty payments, which unless guarded against may destroy the effect of otherwise good operation. These items run the gamut from passenger conductors' monthly guarantees to the penalty for calling a laborer in advance of his regular reporting hour. They are little foxes continually reaching up to spoil the good grapes; but before they can be stopped they must first be exposed, and their composition and cause brought to the surface. To do this, one more sheet has been added; but it is well worthy of careful study.

This one (Form D) is entitled "Report of Non-Productive Time Payments," because, although in most instances the allowances represent some service rendered, it is almost always the case that they are in the nature of penalties imposed on the company for failure to meet certain operating conditions with employees specially designated to perform the work required.

Thus, a road engine crew ordered to report 30 minutes earlier than the ordinary reporting hour of the run, for the purpose of heating passenger coaches with their locomotive, will not only be paid for the extra 30 minutes that they perform service, but an hour additional because they are doing work not properly that of an engine crew. There are, therefore, at least two hours of entirely non-productive time, and if conditions were such that the work could be assigned to an enginehouse employee, the expense of the 30 minutes actual time might also be avoided, a total of three hours time. Items of this character, unless brought into prominence through such a sheet, become buried in the general cost of service, and are completely lost sight of, but with a proper detail, the interested officer can save many a good dollar from disaster.

By means of the statements described, it is possible to obtain a quick, but thorough, comprehension, not only of what has been spent, and the way it has been distributed, but of what has been obtained in return from each of the groups of employees, and also to ascertain how near to standard the operations have been conducted.

In the "Recapitulation," the whole payroll is brought into view and compared with "budget," or other standard allotments, and any deviation from the allotment by any group can be at once noted. The second sheet brings up for review the individual freight house and transfer platforms, and the individual yards, and at once localizes any discrepancies which may have appeared on the "Recapitulation" data of freight handling, or yard expenses, and thus indicates unmistakably where corrective effort needs to be applied. The third sheet performs a similar service in connection with road freight operation and points immediately to the trains that are not being handled advantageously, so that whatever further investigation is necessary, may be applied directly to the runs needing attention, and the offending individuals brought into proper step.

The last sheet brings graphically to the surface all the little wastes and losses produced by schedule rules and inefficient operating conditions, such as deadheading spare men to furnish relief, guarantee payments, switching arbitraries, time paid for but not worked, initial terminal delays, men called but not used, piloting, and the many other items of similar character that occur on every railroad, but which do not show on the payrolls or usual payroll statements, because the expense is lost in the total wages paid either to the individual, or to the class of employees being dealt with. Such items as these can often be avoided by a little extra foresight on the part of yardmasters, dispatchers, agents and others under whose direction the expense is incurred, and a statement of this character brings very forcibly to the forefront the need of all the foresight that can be brought to bear on the subject.

The preparation of these statements is relatively simple. The basic information is always available, and for the purpose of these sheets needs only to be brought into the proper combination and related with what has been produced as transportation within the same period.

By following the same general principles, analyses may be made of the payrolls of the mechanical and maintenance of way departments; the underlying idea being first to determine how much properly should have been spent during the payroll period, either by means of direct budgeting or by a process of time allotment per unit of production, and then to compare the actual expenditures with the standard. The statements may be made more interesting and valuable by the addition of columns showing the labor hours, as well as the money amounts, but the principle of bringing figures of expense into relationship with figures of production is the only true way by which to determine whether the expense has been wise or otherwise, and by which waste can be forestalled and good operation improved.

Essential Elements of the Human Problem*

"Scientific Management" Must Be Broadened—Employers as Well as Employees Need Education

By E. M. Herr
President of the Westinghouse Electric & Manufacturing Company

THE HUMAN PROBLEM in industry is not a new thing. During a thousand years of ancient times, for the most part before the Christian era, self-supporting and self-regulating organizations of workmen existed, which were remarkably similar to the trade unions of today. They were publicly acknowledged and legislative enactments made to control them. But they were weakened under the reigns of successive tyrants and finally lost with the Christian massacres of Diocletian in the early part of the fourth century and the subsequent feudalism of the dark and middle ages. The immediate cause of the destruction of these far-reaching labor organizations seems to have been the coveting of their wealth and power by the rulers of the day. * * * Constantine in A. D. 337 recognized 35 crafts—architects, brass and copper smiths, blacksmiths, carpenters, decorators, doctors, founders, fullers (cloth), furriers, glaziers, goldbeaters and gilders, goldsmiths, ivory workers, joiners, looking-glass workers, lapidaries, masons, marble cutters, plasterers of various kinds, pearl and filigree workers, potters, painters, plumbers, pavers, sculptors, silversmiths, stonecutters, statuaries, veterinaries, wagon makers, workers in mosaic. There were many strikes, usually called historically, when they attained sufficient proportions, "servile wars." The greatest and last of these was the uprising led by the gladiator Spartacus. Practically all ended disastrously.

And so the tide of the human element in industry has ebbed and flowed through the centuries. The so-called English (industrial) revolution in 1760 marked the beginning of the factory system and a departure from isolated craftsmanship under oppressive landlordism. * * * As late as 1820 less than five per cent of the American people lived in cities with a population of 8,000 and over. Today we are the greatest manufacturing nation in the world and over half of our population are city dwellers. In Massachusetts from 1800 to 1815 laborers received from 35 to 75 cents a day; carpenters and blacksmiths about $1.00, and women employed as domestic servants their board and 50 cents a week. About 1825 occurred the first strike for a ten-hour day. "Sweatshop" methods had then begun. Local trade unions sprang up more or less intermittently early in the century, principally in the shoemakers' and printers' trades, both for mutual benefit and insurance, and for the reduction of working hours and the increase of wages, but it was not until the fifties that national organizations began to take effective form. These were pretty well shattered by the depression preceding the civil war and did not really come into being until the seventies and eighties.

[The speaker here reviewed the development of manufactures in this country, showing, from the census of 1920, that 40 per cent of the inhabitants support the whole, directly or indirectly.]

Principles Underlying the Human Problem

Let us now turn our attention more directly to this problem in an endeavor to ascertain at least some of the directions toward which its solution trends. The principal new thing about the problem is that industry is now conducted on a scale larger than ever known before. The problem has been intensified by the greatly increased size of manufacturing establishments, by the concentration of population in cities having a large foreign element of often radical tendencies, and by the insecurity of employment, in which business cycles play a large part.

The underlying labor unrest and distrust are born of fear and misunderstanding—fear of coercion, unemployment and sickness—and a lack of mutual confidence as between employer and employed. There is more liberty and consideration for the workers than has ever been known before, and with it has come to the workers the greater vision of what they believe should belong to them in welfare and happiness. The social responsibility of management is being emphasized as never before. The awakened worker of today, more sensitive than his predecessors, intelligent, critical and perhaps irritable, must be convinced of the ability of management as well as its good faith, and in extreme cases even of the necessity of its being. It is said that democracy without management reverts to despotism on the mere ground of its inefficiency, and that the fundamental error in the recent Russian failure was confiscation of the factories and the expulsion of the managers, with the resultant breakdown of discipline and credit, on a false theory that labor alone creates wealth, whereas management, with credit and good faith, is of the first importance in the process of production. * * * It is the duty of the management of today to prove its "reason for being" and that the collective result of the combined efforts for managers and workers is a fine and great thing. If they can feel that this is the case, most men will toil cheerfully as subordinates. The management must convince employees by their experience that their treatment is fair and honest and without "bluff." It takes time to establish such confidence, and men will discover very quickly if the "boss" is not square. It must be established that labor and management are not foes.

The personnel department is now becoming common, but its intelligent extension still has far to go and it is regrettable that some companies have seen fit to curtail this activity in times of depression when they and their men need it most. These relations should not be handled and directed by the personnel department alone. The active heads and real managers are the ones on whom this responsibility must rest and who must handle it with their employees, not occasionally nor spasmodically but regularly and continuously, for work of this kind requires a great deal of time and patience. This effort on their part will gain the confidence of the employees and instil a spirit of co-operation throughout the organization, and it must be exerted on those directly in charge of the daily work of production. Anything less than this is futile and doomed to failure. Boards of directors must keep in mind this relation and work with the officers in determining policies which the managers can carry out without destroying valuable relations established only after long and patient work and almost impossible to renew.

Shop Representation Plans

One very large organization cites good results of five years' experience. * * * They find that if the men are free to make suggestions to the management they will not ask an outsider to do it for them. They find that workmen

*Abstract of an address delivered in New York City on Wednesday, December 6, before a joint session of the American Society of Mechanical Engineers and the American Economic Association.

are anxious to learn if given a chance, and they encourage the study in factory schools of the work of other departments. This broadens the employees' perspective and increases their interest in their own work.

It is credibly stated that at present there are in the United States more than 300,000 employees working under shop-representation plans created to give them a voice in the conduct of the shops in which they work, and that in by far the larger number of cases considerable progress has been made in establishing the most cordial relations between management and employees.

The crux of the industrial problem includes the question —How the just share of each party to industry is to be determined and how is each to be guaranteed its right to share progressively in increasing productivity, and be held also to the corresponding obligation to see losses proportionately shared? This obligation is often overlooked. Nominal wages have increased enormously, and it is safe to assert that real wages have also augmented despite the high cost of living and the fact that in the early days of industry few workers depended entirely upon their wage but were "found" many things which must now be purchased. * * * Manufacturers naturally wish to see their employees receive a wage, with reasonable working hours, which will support them in comfort. This, of course, is only possible when economic conditions will permit, as wages are not and cannot be based on the cost of living. If this condition is to obtain, the employee must live in accordance with his income and responsibilities and exercise frugality and care in his expenditures. Unless this is done, the real interest of the employer and employee will not be conserved because wages would be lifted to the point of throttling the industry.

Scientific Management

Scientific management—which is in fact little more than getting rid of confusion and perfecting adjustments, or in other words, good management—has entered largely in recent years into the human problem in industry. As helping to avoid undue strain on the part of the worker, and waste of time and materials, it should be of benefit to all concerned. It should remove the cause of any hostility to the broadest application of scientific knowledge of the conditions of maximum labor efficiency, to the gain of all parties to production. The scientific management which dealt in the earlier stage with individual output in an engineering way must now deal with men collectively and develop that scientific breadth of imagination and application which is becoming a vital necessity for the welfare of a modern civilized community. The psychology of labor, both in good and hard times, says Professor Commons, is fundamentally the psychology of a class of people whose life is insecure. The accident-compensation law has accomplished the first little step toward giving security to the job. It has shown that the only way to establish safety and security is by making it financially profitable to do so. And so shall we make it financially profitable to business to eliminate to a large extent the wage loss due to unemployment on account of sickness, on account of changes in seasons, and on account of fluctuations in business. Labor can never accomplish this result. The only possible accomplishment of it will come when the employer arranges to cover unemployment from sickness by some adequate form of insurance, to the expense of which the employee will contribute, indemnifying the employee against loss of employment from this cause (accident is now covered by our compensation law), and to lessen unemployment on account of the fluctuation in production because of changes in seasonal demand by the proper use of stocks of finished product so as to smooth out these fluctuations and also those due to abnormal variations in business.

Increased security and continuity of employment greatly lessen the human problem, but on account of lessened labor turnover and uniformity of production they also reduce the cost of the product. Many progressive industrial organizations have gone far beyond the requirements of the accident compensation laws and the safety of the worker, incurring large expense in providing liberally for free life insurance, advantageous savings and loan opportunities, housing, service pensions, and education.

Education, Economic and Moral

Additional phases of helpful education might well be tried; for example, how to make repetitive work, in itself monotonous, interesting. A knowledge of the "why" of their product and the use of it and of related products of other departments has been found to materially broaden the operator's perspective. Then, too, workers can be encouraged to exercise their ingenuity in devising means to lighten and quicken their work and thereby incidentally increase their earnings. With shorter working hours there arises the question of what to do with idle time. Any one who investigates the use to which the average employee devotes his leisure undoubtedly will be convinced that such employee would be much better physically, mentally, and morally if he had less idle time, for it is generally used in loafing or in amusements which consume a material part of his earnings without corresponding benefits.

Work well done and with a knowledge of progress is a source of enjoyment with many, taking the place of the recreation others find necessary to their happiness, but education of both sexes in ways in which to use leisure time profitably yet pleasantly is needed. The young should be taught thrift, for a thrifty person will not uselessly waste his leisure time. The human problem in industry cannot but be largely affected by example. H. G. Wells speaks of the disturbing influence of "the obvious devotion of a large and growing proportion of the time and energy of the owning classes to pleasure and excitement. This spectacle of amusement and adventure affects the imagination of the working man. In making labor a part of every one's life and the whole of nobody's life lies the ultimate solution of our industrial difficulties."

The human problem in industry is very complex and can never be entirely solved. To measurably improve the feeling of confidence of the employee in the employer we must always and fundamentally be absolutely honest in our dealings; not only honest in our actions but also in our thoughts and intentions. Unpleasant facts and information necessary to be told to the employees should be given them as honestly as the others, and very promptly, so as to give them as much time as possible to adjust themselves to difficult or distressing conditions.

Finally, is it not clear that at least one direction of the solution of the problem is along educational lines? First, education of ourselves, the employers, to a more general understanding of the spiritual, personal, economic, and physical relations involved; and second, education to encourage and aid in every proper way the general and vocational training of the employees in thrift, especially the younger boys and girls, but also the mature but still impressionable group of young men and women who are keen to learn how their position in the workaday world can be improved. Example in this effort to educate and train the employee is especially effective. Such educational effort should establish confidence and encourage co-operation. It should also be directed so as to develop individuality in each workman and woman.

Let us therefore substitute the rule of reason and intelligence for force and so endeavor to restore in America the freedom of the individual, be he employer or employee— "that freedom which enables the young man to look into the future with confidence, knowing that the only limitations to his achievements are the boundaries of his intellect and the ne sure of his energy."

Fan Draft for Locomotives Discussed by A. S. M. E.

Proposed Construction Would Permit Application of Additional Equipment for Saving Fuel

THREE WIDELY different phases of locomotive design formed the topics of the papers presented at the Railroad Session of the annual meeting of the American Society of Mechanical Engineers held in New York on December 6. An extremely technical discussion of Stresses in Locomotive Frames was presented by R. E. Eksergian of the Baldwin Locomotive Works. George H. Hartman gave an analytical discussion of valves and valve gears in a paper entitled "Steam Distribution in the Locomotive," and Frans H. C. Coppus brought out the advantages that might be derived by securing the draft in a locomotive through the use of turbine-driven fans in a paper on Mechanical Drafting of Locomotives. An abstract of Mr. Coppus' paper, which is especially noteworthy because of the possibility of effecting large fuel savings by the method which he proposes, is given below.

The Mechanical Drafting of Locomotives

By Frans H. C. Coppus

GENERALLY speaking, it is a simpler task to incorporate extensive improvements into the design of a new locomotive than to apply them to one already in operation. Though the author would be the last person to discourage the development of the locomotive along radical lines that would require a total reconstruction or rearrangement of the present locomotive power plant, he believes that more can be accomplished for the immediate future by adding to the existing locomotive equipment which is standard, in principle at least, in stationary and marine practice, and which does not necessitate extensive or costly alterations. The existing locomotives, 68,000 in this country alone, represent such a large investment that no matter how efficient a new locomotive may be built, it is out of the question to relegate them to the scrap heap, and they will be with us for many years to come.

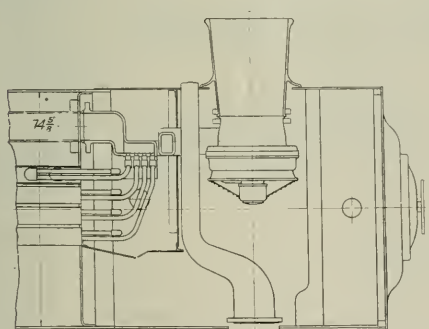


Fig. 1—Modified Form of Standard Front End with Induced Draft Fan

In the treatment of this subject the author has therefore limited himself to the existing locomotive. The supporting data employed are based on modern steam locomotives equipped with superheater and brick arch and fed by means of a live-steam injector.

The use of the exhaust steam for drafting the locomotive makes the locomotive power plant differ in principle from the marine or stationary power plant. In the latter the boiler is an independent unit, while in the former the boiler and the engine are interdependent inasmuch as the exhaust of the engine creates the draft for the boiler and the shutting down of the engine renders the boiler inoperative. Separate the two by substituting mechanical draft for the exhaust jet and there is no reason why the locomotive power plant cannot be fitted out with the devices which have been responsible for the low cost of power generated in marine and stationary power plants. The problem is one of successful adaptation with reliability and moderate maintenance cost, within the present limitations of clearances and other conditions under which the locomotive must operate.

The logical course of development would be as follows: I mechanical induced draft, II undergrate forced draft, III condensing the exhaust steam, IV pumping the hot water from the tender through a waste-gas heater into the boiler, V operating condensing.

Mechanical Induced Draft

About ten years ago extensive experiments with mechanical induced draft were made on the Atchison, Topeka and Santa Fe, but they failed because of the "inability to secure a fan of sufficient capacity to properly handle the volume of gases" within the limitations of clearances.

It is doubtful if a fan without the introduction of an intensifying element can be built to overcome this difficulty. Only recently this new element has been brought out. It takes the form of stationary guide vanes held in a casing. The current of air leaving the propeller is radially subdivided by the individual vanes and taken up without shock. These guide vanes, which have a curvature increasing in the direction of the rotation of the propeller, concentrate the air current and give it a further acceleration, so that a large part of the pressure is produced and a large part of the end thrust taken up by them. This new fan or blower is very much smaller than a multi-blade centrifugal fan of the same capacity, both of commercial construction. Because of this fact the former can be made applicable to the locomotive and the latter not.

Fig. 1 shows the smokebox of a modern locomotive fitted out with a blower in the stack and the exhaust pipe and nozzle displaced by a plain exhaust pipe discharging the exhaust steam into the atmosphere. The guide-vane casing takes the place of the lower part of the stack.

A modification of the fan is necessary in order that it may function properly as an induced-draft blower for locomotives, keeping in mind especially, simplicity of construction, low maintenance cost and assurance that the bearings are kept cool and well lubricated at all times, as the success of the whole scheme hinges not only on the capability of the blower to create the desired draft in the smokebox, but also to stand up under it. A special design has been prepared in which the fan is driven by high pressure steam acting on a turbine wheel at the periphery of the propeller. The revolv-

ing unit has oil cooled bearings and the end thrust is taken up by floating the shaft in oil under pressure.

Saving by Reduction of Back Pressure

One of the outstanding advantages of the use of an induced-draft fan instead of the exhaust jet for drafting the locomotive is the reduction of the back pressure in the cylinders. Prior to the experiments of the Atchison, Topeka and Santa Fe, a series of indicator cards taken from actual road tests of representative locomotives in various classes of service were prepared showing the initial pressure, mean effective pressure, back pressure, and indicated horsepower, and in addition the added mean effective pressure and indicated horsepower which could be obtained by reducing the back pressure to 4 lb. These showed increases in indicated horsepower ranging from 18 to 30 per cent for simple locomotives and an average of 53 per cent for a Mallet compound.

The author understands that since these tests were made the exhaust nozzles have been opened up considerably so that the back pressures have been greatly reduced. It would be idle to estimate what saving in fuel would result from a strong bearing directly upon fuel economy and will greatly increase the overall boiler efficiency.

The heat loss due to combustible in cinders, estimated anywhere from 5 to 20 per cent depending largely on the class of service, is generally classed among the "unavoidable losses." With a fan the constant flow of air through the fuel bed, while gradually changing in intensity, will not lift or tear the fire, and this loss, therefore, can be practically entirely eliminated.

Undergrate Forced Draft

To put the ashpan of a locomotive under pressure might prove impractical for several reasons. To overcome this difficulty the author has constructed a grate with hollow bars taking the air from a wind box to which the forced-draft blower is connected.

The forced-draft blower is of the same general construction as the induced-draft blower. It operates, however, in a horizontal position with no excessive end thrust and handles cold air. Therefore, the special lubrication, end-thrust balancing, and cooling features are unnecessary.

While it is not impossible to operate a forced-draft blower

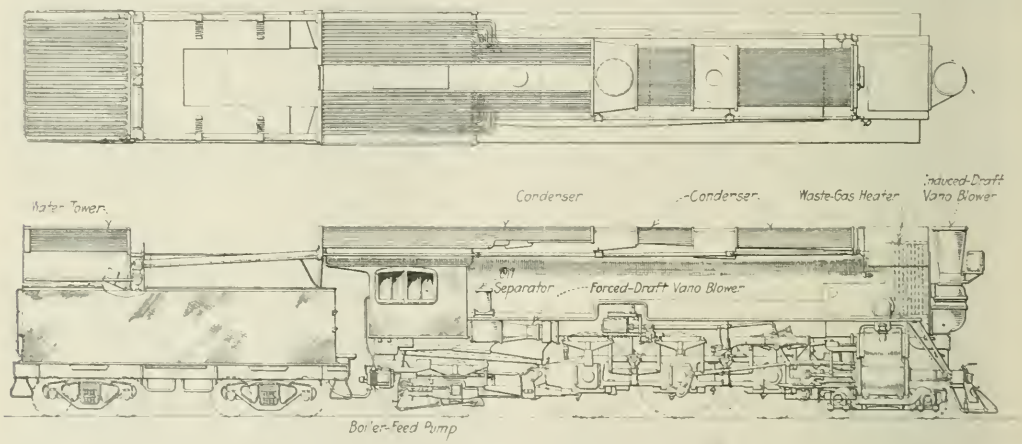

Fig. 2—Proposed General Arrangement of Locomotive with Induced and Forced Draft, Centrifugal Boiler Feed Pump, and Steam Condensing Apparatus

drafting locomotives mechanically due to reduction in back pressure. However, the field seems broad and the prospects bright for enormous savings along this line.

If the only effect of drafting locomotives mechanically was the elimination of the back pressure on the pistons, this would in itself be sufficient to deserve the keenest interest of those responsible for the economical operation of locomotives, but the subject embraces a great many other questions and vitally affects many features in connection with the economical generation and use of steam. Mechanical drafting gives the locomotive a degree of flexibility which it does not now possess.

The steam pressure may be picked up at will or allowed to drop, regardless of the amount of work the engine is doing.

This flexibility of draft makes it unnecessary to favor the engine at any time. The practice of favoring the engine on hills, often no doubt unavoidable under the present method of drafting, is not only wrong from the point of efficiency but cannot help but result in leaky tubes, increasing maintenance cost, and in shortening the life of the boiler.

The advantages of mechanical induced draft mentioned above largely relate to economy in the use of steam after it is once generated. In addition thereto mechanical draft has in conjunction with an exhaust jet, it is much simpler and better to connect it up to an induced-draft fan. The speed of the two blowers could be so adjusted—and after once adjusted, maintained—that there would be an atmospheric pressure condition in the combustion chamber, if carried to a nicety. This is very common practice with stationary and marine boilers. With the fire door open there would be no inrush of cold air nor any outward leaking of flames or gases. Such a condition is called "balanced draft." It can be effected only by the use of a forced-draft blower in conjunction with an induced-draft blower, jet blower, or stack. While in a locomotive boiler there is no boiler setting through which air can filter in, the draft over the fire is so much stronger than in stationary practice and the fire door (on hand-fired coal burners) opened so much oftener, that even greater economies than in stationary practice should result from balanced draft.

With forced draft there is no reason why cheaper grades of fuel could not be utilized, which will not only result in economy in the cost of fuel, but also in the cost of handling and storage of coal.

The air space in the grates may also be very small so that no fuel will be lost in the ashpan, and at the same time the

grate will let sufficient air through on account of the air being delivered under pressure.

The forced-draft blower creates sufficient pressure to force the air through the fuel bed, leaving only the drawing of the gases through the boiler tubes to the induced-draft blower, and the latter may, therefore, be smaller or may be run at a lower speed than if used alone. For these various reasons it is easier and more efficient to use a balanced-draft system than merely induced draft.

Condensing the Exhaust Steam

When the locomotive is drafted mechanically all of the exhaust steam is available for whatever use can be made of it. Heretofore a small part of the exhaust steam has been used to heat the feedwater. This practice has been quite common in Europe but has been only recently successfully carried out on this continent and to only a very limited extent, less than one per cent of American locomotives being thus equipped. The exhaust-steam feedwater heaters have been constructed on the principle of imparting to the water the maximum amount of heat with the minimum amount of exhaust steam because the latter was needed to draft the locomotive. With mechanical draft, the more steam used for heating the feedwater the better, as the more water will be

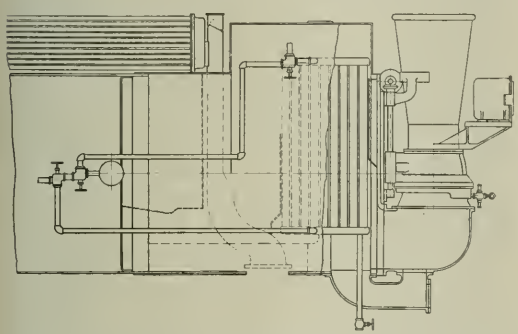

Fig. 3—Modified Front End, Equipped with Induced Draft Fan and Feed-Water Heater

saved. Railroad men fully appreciate the economy in time and fuel due to the saving of water, especially in freight service, and incidentally the not negligible economy in boiler repairs in bad-water districts.

Pumping the Hot Water from the Tender Through a Waste-Gas Heater into the Boiler

The exhaust steam, or as much of it as can be condensed, may be passed through a condenser on top of the locomotive running all the way back to the tender (see Fig. 2). The remainder may be allowed to pass to the air free for the time being. Such an arrangement affords a large cooling surface and the amount of water which can be saved without even attempting to run the engine condensing will be much larger than the amount saved by merely heating the feedwater by means of an efficient heater. The cooling surface may be made more effective by directing over it a current of air created by the speed of the locomotive with or without the assistance of the undergrate-draft blower. It is a simple matter to encase the condenser, provide it with louvers to catch the air, and connect it to the blower inlet by means of a duct. This would have the additional advantage of reclaiming part of the latent heat of the exhaust and supplying the fuel bed with preheated air. A cooling tower located on the back of the tender would further assist materially in condensing the exhaust.

It needs no explanation that with all the exhaust steam available it will be a simple matter to keep the water in the tender at any temperature desired up to the boiling point. This would convert the tender practically into an open heater. Instead of the injector a boiler-feed pump, preferably of the centrifugal type, installed in duplicate, will feed the water through a waste-gas heater into the boiler. The pumps will be located under the cab of the locomotive, so that there will be a sufficient head of water from the tender. Waste-gas heaters have been so far a distinct failure largely on account of the prerequisite that the heater should not interfere with the draft, because if it does the economy derived from its use would be nullified by an increase in back pressure.

The author has constructed a waste-gas heater which can be placed in the front end with slight alterations thereto, and which has a heating surface of over 1,000 sq. ft. By extending the front end this heating surface could be increased if necessary.

From the point of efficiency it may be considered that at the present time the water is put in locomotive boilers at an average temperature of 60 deg. F. the year round. If, instead of an injector, a pump is used the exhaust steam and the waste gases—which comprise the two largest items of waste energy in present locomotive operation—can heat the water from 60 deg. to 300 deg. With an absolute steam pressure of 200 lb. this is an undisputed saving in fuel of a little over 20 per cent.

Operating Condensing

Mechanical drafting of locomotives makes it possible to run locomotives condensing. It can be accomplished without material change in their construction outside of an enlarged and modified tender. This, however, will come later after the steam consumption of the locomotive has been made as small as possible, which will, in itself, make condensing operation easier.

General Arrangement

Fig. 1 shows the induced-draft blower located in the stack. This is naturally the logical first step in the development of an induced-draft system for a locomotive, but a blower in such a position is not readily accessible. Practical considerations led the author to place the blower outside of the smokebox. A diagram showing the general arrangement of exhaust pipe, waste-gas heater, and induced-draft blower is shown in Fig. 3 and will need no further explanation.

Means are provided whereby the guide-vane casing can be quickly separated from the fan casing, giving access to both the fan and the guide vanes for cleaning. Automatic adjustment is provided for maintaining the proper relation between the pressure at the grate bars caused by the forced-draft blower and the draft at the front end caused by the induced-draft blower. The speed of the fans is controlled to keep the boiler pressure from varying more than 10 lb.

The induced-draft blower not only furnishes the necessary draft but also controls the amount of fuel used and the water fed into the boiler. Proper provision is made whereby the steam supply to the different apparatus is partly shut off when the engine is standing, or drifting.

Conclusion

Whatever the saving in fuel will be, due to the elimination of back pressure, the heating of the feedwater, the stopping of the waste of unburned coal through the stack and through the grate, the elimination of cold air over the fire, etc., it is going to reduce just that much the amount of coal that is being fired, or the rate of combustion, which in itself greatly increases the boiler efficiency.

A rate of combustion of 100 lb. shows a boiler efficiency of 65 per cent. Reducing this rate of combustion to 60 lb., directly and indirectly by means of mechanical drafting,

which is not impossible, the corresponding boiler efficiency would be 74.2 per cent, or a saving of 9.2 per cent.

In a paper presented by John E. Muhlfeld, at the annual meeting of the American Society of Mechanical Engineers, December, 1919, entitled Scientific Development of the Steam Locomotive, the following heat balance is shown as representative of locomotives worked at from 25 to 35 per cent cut-off and hand-fired:

	Per cent
Heat absorbed by boiler	55
Heat absorbed by superheater	10
Heat loss in smokebox gases	14
Heat loss in cinders	8
Heat loss in vapors of combustion	4
Heat loss in combustible in ash	3
Heat loss in carbon monoxide	2
Heat loss in radiation and unaccounted for	4
Total	100

Under the same conditions but with mechanical draft and the waste-gas heater as described by the author, the heat balance should be approximately as follows:

	Per cent
Heat absorbed by boiler and waste-gas heater	74
Heat absorbed by superheater	10
Heat loss in smokebox gases	5
Heat loss in cinders	2
Heat loss in vapors of combustion	4
Heat loss in combustible in ash	1
Heat loss in radiation and unaccounted for	4
Total	100

In conclusion, it may be stated that mechanical drafting of locomotives is imperative for the following reasons:

(*a*) It reduces the back pressure to a minimum, effecting a saving in fuel of from 10 to 30 per cent; or increasing the power of the locomotive in the same degree, especially as speed increases, therefore adding to the hauling capacity or speed of fast freight and passenger engines, producing additional revenue tonnage and also eliminating or lessening the necessity for double-heading.

(*b*) It produces an engine that is free-steaming under the most adverse conditions and with all grades of fuel, decreasing liability of delay and saving time and money now spent in changing nozzle tips and experimenting with them.

(*c*) It keeps the steam pressure constant, regardless of load, saving steam now wasted every time the safety valve pops and making it unnecessary to favor the engine at any time, thereby saving fuel, avoiding unequal stresses in the boiler and resulting in saving in maintenance cost.

(*d*) It increases the efficiency of the boiler and grate by effecting better combustion and eliminating the waste of unburned fuel through the stack and in the ashpan—and incidentally stopping the inrush of cold air every time the fire door is opened—thereby avoiding sudden cooling of crown sheet and tubes.

(*e*) It makes possible the use of cheaper grades of fuel, resulting in large economies and in simplifying the handling and storage of coal.

(*f*) It eliminates the smoke nuisance in terminals and freight yards.

(*g*) It makes it possible to condense from 25 to 95 per cent of the exhaust steam, depending upon the season of the year and the kind of condensing apparatus used, resulting in economy in the cost of water and of maintenance.

(*h*) It effects a saving in fuel of 20 per cent by making it possible to preheat the feedwater from 60 to 300 deg. F., and incidentally greatly decreases the cost of maintenance by eliminating unequal stresses caused at present by the great difference in temperatures between the lower and upper portions of the boiler.

(*i*) It reduces the rate of combustion, thereby increasing the boiler efficiency.

(*j*) It lessens the work of both engineer and fireman, thereby necessarily increasing their efficiency.

Discussion

William Elmer (Pennsylvania System) questioned the desirability of making the boiler output independent of the locomotive steam consumption. To show the great amount of air that it would be necessary to handle with a fan if locomotives were drafted mechanically, he presented figures from test plant trials of a Pacific type locomotive with 27 in. by 28 in. cylinders. This locomotive developed over 3,000 hp., evaporated 65,000 lb. of water and burned 12,000 lb. of coal an hour. The draft in the front end was as much as 18 in. of water. It is difficult to determine the amount of air required to burn each pound of coal, but J. T. Anthony states it varies from 12.7 to 8.7 lb. Assuming an average value of 10 lb. of coal and assuming further that a locomotive consumes 10,000 lb. of fuel an hour, the fan would be required to handle 100,000 lb. of air per hour. This would amount to 1,300,000 cu. ft. per hour at atmospheric temperature, and at a temperature of 600 deg., which might be expected in the front end, the volume would be double.

Robert Rennie (American Locomotive Company) stated that a locomotive with 55 sq. ft. of grate area working at full capacity should have a fan capacity of at least 48,000 cu. ft. per min. at atmospheric pressure. Cooling the air before it is admitted to the fan would make mechanical drafting less difficult, but the additional resistance due to any appliance for recovering heat from the waste gases is a disadvantage. He considered that the method of reclaiming water from the exhaust steam would hardly be practical because of the enormous cooling surface required.

W. L. Bean (N. Y., N. H. & H.) called attention to the magnitude of the fuel problem on the railroads and pointed out the desirability of trying such designs as proposed by Mr. Coppus because of the possibility for large savings. He stated that fan efficiency and capacity had been greatly improved since the last trials of mechanical draft were conducted and urged early application of the design put forward after careful engineering investigation had been made.

Dr. W. F. M. Goss discussed mechanical drafting of locomotives by means of a turbo-exhauster. He called attention to the objection of the operation of locomotives in cities on account of the noise and smoke and outlined how these could be overcome by the turbo-exhauster. He stated that the required draft could be obtained with from 40 to 50 per cent of the existing back pressure, and in conclusion expressed the opinion that mechanical drafting had so many advantages that it is likely to come into use soon on the railroads.

In closing the discussion, Mr. Coppus stated that his proposal had in some cases been misunderstood due to failure to consider all the conditions set forth in the paper. His conclusions had been based on careful study and he felt certain that they were practical.

The Relation of Syphilis to Railway Accidents

Call for Thorough Examination of New Men and Men Whose Errors Have Caused Collisions

By Archibald E. Chace, A.B., M.D., F.A.C.S. and George A. Hays, M.D.*

During 1920 there were 10,110 collisions on steam railroads in the United States, of which 8,246 or 82 per cent were due to "man failure." In other classes of railroad accidents, the role played by the human element as distinct from the "equipment factor," with the exception of derailments, is excessive.

There are many reasons, of which the most important are three. Those of us who are railroad surgeons have had a very narrow and completely frozen attitude toward our possible usefulness in the industry of transportation. From this has resulted, if not complacent indifference, at least a very skeptical attitude by the majority of railroad officers toward the possibility of overcoming man failure accidents. The engineer, both civil and mechanical, may have been more aggressive, for he had something to sell unhindered by professional strictures against advertising, and he certainly had an article which the practical business executive could test with his own senses—a gong which he could hear, a signal device which he could see and operate, a rail section or a switch which he could test in service—not an unseen almost unthinkable, entirely intangible normal human sensory-motor mechanism, and the maze of association centers which we must (and in time will) sell to the railroads of this country. To these two causes must be added a third: the antagonism of union labor.

Before the war teachers, professors and psychologists had accumulated some store of knowledge about the testing of brain function, especially of the student. Before, and in the main during, the war, psychologists gathered a large body of statistics both in industry and in the army. Since then they have with some success applied this information to the difficult task of fitting a man to his job. They feel, with some excuse, that a psychologist only is qualified to do this. They forget that an applicant for a job may have a brain perfectly suited and pulmonary tuberculosis. When we prove to railroad executives that we know the functions of the controlling organ in man, as well as we know other human functions, and then patiently study and experiment until we have a plastic, but never a crystallized, method of procedure, then can we be of real service in putting the right man in the right job and keeping him there, with safety to himself and others. This is one of the tasks of the railway surgeon, and the broad field of which the present inquiry is but a small part.

In the healthy man the capacity for judgment and the time of motor response, which are two of the essential elements in railroading, may be assumed to be fairly constant in any one individual under like conditions. In the diseased individual, whether the toxemia of intestinal stasis or an acute infectious disease be the variant, sudden and wide departure from this normal line of judgment and reaction time may be expected. This condition is so well known that proof or further consideration seems unnecessary.

So the study of, and elimination of, diseased individuals from hazardous occupations must be accomplished if we are to greatly lessen the man-failure accidents on our railroads. This as a rule means the removal of the disease, not of the man. To begin with a disease which would likely prove very important, we have undertaken to determine what the relation is between syphilis and man-failure accidents. Let us first examine, however, the general problem.

The Great Cost of Accidents

Railway accidents are usually classified as train accidents, train service accidents, and industrial (or shop and maintenance of way) accidents. These three grand divisions are then sub-divided minutely. Of the 126 sub-divisions of these headings, the two containing by far the highest number of accidents (involve almost entirely exercise of judgment, failure to control by hand brakes and improper handling of cars or locomotives in switching or coupling—giving 2,684 train accidents out of a total of 10,757 man-failures in 1920).

After considering such "causes" of railway accidents, however valuable they may be to railway executives, one is impressed with the undoubted fact that they are not causes at all. They are but visible and outward manifestations of the real cause. We get a little nearer when we discover a lack of judgment, a slow motor response, inattention or wilful misconduct. We are still closer when we find these conditions caused by fatigue, a man with a mental age of eight in a position requiring a mental age of 14; a man dazed by the toxemia of chronic nephritis; an engineer with glasses raising his vision from 20/80 to 20/20 and the one and only pair of glasses in his coat pocket at home; or some acute toxemia or brain syphilis. Such data would give us the real causes of man-failure accidents on railroads, and the means of prevention.

Would it pay the railroads to look into the real causes of man-failure accidents? The first item of the answer is the cost of such accidents now. In 1920 the cost of replacing cars and locomotives damaged by *train accidents alone for which employees were held responsible*, was roughly $10,200,000; and 330 persons were killed and 4,176 injured. In train service accidents there were 3,793 killed and 53,286 injured. In non-train accidents there were 439 killed and 100,519 injured. So we have an approximate total of 4,562 killed and 157,981 injured in one year. Taking the average cost of a death to a railway at $2,000 and $100 for each injury, and adding the equipment damages, we arrive at a total cost for one year of about $35,000,000. If this could be reduced even one-third by strict medical supervision alone—and there are grounds for the belief that it can—the saving would be between 11 and 12 millions of dollars a year, less a small additional cost over the present system. Of course, this calculation does not consider the trend of public policy involved. If then a great saving is possible, and public policy demands the lessened risk to human life, then why haven't the railways long since introduced strict medical supervision? The answer, we believe, is two-fold; firstly, the saving has not yet been fully demonstrated; secondly, the labor unions are opposed to it. What the railway surgeons seek is the opportunity to demonstrate.

Syphilis Among Railroad Men

Now let us consider syphilis in this relation. We are familiar with the ordinary manifestations of this disease. Even in the secondary stage it is now evident that the central nervous system is involved, and the toxemia may be so great as to cause complete incapacity for any occupation. From

*Dr. Chace is chief surgeon of the St Louis-South Western, and Dr. Hays is attending dermatologist at the company's hospital at Texarkana.

this virulent type to the milder affections of judgment and sensory motor response, we may include all cases of secondary syphilis. For this reason we believe such cases should be taken out of the service and given intensive treatment. When proper examination shows them to be Wassermann negative, spinal fluid negative to globulin and colloidal gold test and cell count negative, and normal in brain and nerve function as ascertained by thorough neurological examination, they may be returned to work with the proviso that they continue treatment and are re-examined at first once a month, later every two to six months, for ten years.

In the tertiary stage, so called, we may expect to meet a wide variety of conditions from aortic heart disease to paresis. The early detection of these conditions, and a change to a proper non-hazardous occupation under treatment is extremely important if we expect to exclude syphilis as a factor in railway accidents.

Knowing then the possibilities of syphilis, the next inquiry is whether or not it exists among railway men to an extent sufficient to cause concern. Evidently, if railroad men have very little syphilis, then our inquiry is of small importance. Our hospital statistics show that in the South, at least, more than six per cent of railroad men seek treatment *each year* with a venereal disease, of which half are luetic. Believing that state insane hospitals might throw some light on the subject, letters of inquiry were sent out to about 80 institutions, and so far we have 53 answers. These figures show that of all paretics, railroad men form roughly five per cent, and of these about 80 per cent are from train crews and dispatchers.

The Mayo Clinic has published its statistics of syphilis in regard to occupation. These show that nearly eight railroad men are affected to one farmer, three railroad men to one business man, and two railroad employees to one laborer. "Men of these types (train, yard and engine service), aside from the responsibilities which devolve on them, form an especially interesting occupational group, medically speaking, because they have for years been ostensibly under medical surveillance, and their health record is, therefore, in a sense indicative of the efficiency of the industrial medical practice of the past. To find so high a percentage of the men infected with a grave disease, capable of seriously impairing their efficiency and thus of bringing discredit on railroad administration and danger to the public, is a matter for concern. To find so much of the infection easily recognizable and yet apparently unrecognized, suggests the *need for a modern revision of methods* and conceptions in medical supervision."

Now if 4.2 per cent of all men have syphilis evident without a Wassermann, and if three per cent of railroad men are infected each year (our own statistics), it follows that the Mayo Clinic ratios are not too high as against railroad men.

Wrecks Due to Defective Health

The next inquiry was directed to determine if the records of railroads showed any wrecks caused by syphilis. We have answers from the chief surgeons or claim departments of 47 railroads. These clearly demonstrate that nothing has been done to determine the causes of wrecks.

The American College of Surgeons was next asked for assistance in unearthing railroad wrecks caused by syphilis. From the literature, there has been reported the following situation:

Expressions of belief in the important role played by syphilis as a factor in serious railway accidents are widespread. A bibliography of 22 titles is appended (appendix A). This belief is shared by a number of railway chief surgeons.

Incidents of near-wrecks when dangerous neurosyphilitics were found handling trains, or who became violently insane soon after exercising such responsibility, are also numerous. For example: (†) A conductor had vertigo and blunted memory while running fast train; another conductor (1) had "hemiparesis," amnesia, diplopia, etc., and had to be taken from his train; (2) a fireman became unconscious; (2) an engineer came to a hospital able to obey commands, but unable to understand what he was doing; (2) an engineer in a hospital insisted upon going back to work because "the president of the road had written" wanting him back, but this man had attacks of partial paralysis; there are several cases of forgetfulness while on duty, and the insane hospitals furnish many instances of violent insanity following closely upon duty in hazardous railroad occupations. One engineer ran a fast train in the East, two hours after completing the run tried to kill his wife, and died in a short time from brain syphilis. All of the above near-accidents, which could be multiplied many times, were due to syphilis, and most of them reported by physicians not in railroad work.

Actual wrecks caused by syphilis: The Baker Bridge accident on the Boston & Maine in 1905 appears to us undoubtedly due to syphilis, and the presumption is raised that many if not most wrecks, and other accidents, caused by an employee wilfully disregarding usual precautions are due to syphilis. There are many such accidents in medical literature; for example, conductors who confused orders, engineers who became paralyzed, unconscious or died suddenly in the cab or ran past signals; trainmen who fell from moving cars. Large damages are paid by railroads for "cord injuries" due to syphilis and actual insanity on duty. There are men in responsible positions who are suffering from brain and cord syphilis. Three cases of beginning insanity due to syphilis were discovered on one railroad. It cannot be doubted that a thorough examination would disclose many more.

Remedies

Granted that syphilis is an important factor in railway accidents, what are we going to do about it?

(1) Treat syphilis in railway hospitals and when feasible at emergency stations, because—

(a) We can get hold of the cases more often and quicker when free treatment is given and a square deal is assured.

(b) The community and other employees can be protected by quarantine in no other way.

(c) The patient can get efficient treatment.

(d) Laboratory facilities for early and prompt diagnosis and to check treatment are available.

(2) Teach the early diagnosis of neurosyphilis, by neurologic examination before the laboratory can tell us anything, and before definite tissue destruction has taken place so that neurosyphilis can be cured, not being misled by the lack of primary and secondary manifestations of the neurotrophic spirochete.

(3) When a man-failure accident occurs, the men involved should be very carefully examined, to determine every possible physical defect which might have had a bearing on the accident. This evidence should then be reviewed in conjunc-

tion with the facts brought out at the investigation of the accident.

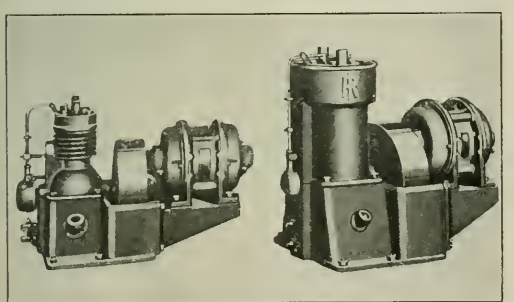
(4) Reorganization of the medical examination of applicants, and periodic re-examination of employees to meet modern standards.

It may reasonably be concluded from the above facts that syphilis alone would warrant a different viewpoint in demonstrating the causes of railway wrecks. Add to this disease all the other physical afflictions, congenital and acquired, which could have a bearing, and it would seem that we have sufficient reasons for a complete reorganization of our method of examining applicants for employment; for maintaining the physical condition of employees and for the more thorough investigation of railway accidents.

Small Vertical-Type Air Compressors

The Ingersoll-Rand Company, New York, announces a new line of small vertical air compressors known as Type Fifteen. In addition to plain belt drive, each of the four sizes is built as a self-contained electric motor outfit, driven through a pinion and internal gears, or by employing a short belt drive arrangement. The compressing end and electric motor of both gear and short belt-drive units are furnished mounted on a common sub-base, so that they are in no way dependent upon the foundation for correct alinement.

Several noteworthy features of construction have been incorporated, of which the constant-level lubrication system is the most important. Others include the constant speed unloader for plain belt-drive machines; the centrifugal unloader



3-in. by 3-in. Air-Cooled and 4½-in. by 5-in. Water-Cooled Ingersoll-Rand Air Compressors

for start and stop control machines; and the increased size of the water reservoir cooling pot.

The lubrication of small vertical compressors employing the enclosed crank case and splash system has often been a source of concern wherever oil in the air is a serious menace. The tendency of the old system has been to feed too much, resulting in the discharged air containing excess oil, or too little, causing scored cylinders, excess loads and burned out bearings.

As with the ordinary splash system, the base of the compressor forms an oil reservoir for the constant-level system. However, with this system, pet cocks determine the maximum and minimum amount of oil in the reservoir. Above this reservoir and directly underneath the connecting rod is a constant-level pan. Oil is pumped from the reservoir into this constant-level pan through a unique oil pump. Regardless of the amount of oil in the reservoir, so long as it is somewhere between the high and low level pet cocks, this system will function, insuring a constant-level of oil in the pan. A projecting stem on the connecting rod dips into this pan and distributes just a sufficient quantity of oil for proper lubrication.

The constant speed unloader controls the unloading of the compressor by automatically opening the inlet valve when the receiver pressure rises above that at which the unloader is set to operate. When the receiver pressure has fallen a predetermined amount, the unloader automatically releases the inlet valve and allows the compressor to return to work and thus build up the receiver pressure again.

The centrifugal unloader allows the compressor to start under "no load" such as is essential when automatic start and stop control is used, and permits the electric driving motor to come up to full speed before the load is thrown on automatically. This unloader accomplishes its purpose by holding the inlet valve open until the motor has reached full speed.

The smallest size is built with either ribbed cylinder for air cooling, where the service is intermittent, or a water-jacketed cylinder of the reservoir type for constant service. All other sizes are built with the water jacket of the reservoir type. The belt and electrically-driven machines include the 3 in. by 3 in. air-cooled, the 3 in. by 3 in., the 3½ in. by 4 in. and the 4½ in. by 5 in. water reservoir cooled machines.

The Daylight Lamp Type of signal gives a more arresting signal than a semaphore and is visible at a longer range in adverse conditions. This is from the report of Major G. L. Hall, inspecting officer of the British Ministry of Transport, on a collision which occurred near Gravesend on the South Eastern & Chatham Railway on August 21 last. In the somewhat limited space available at the location investigated—where an engineman and fireman had both passed the signal without observing it—the light signal is recommended "for the consideration of the managing committee" of the railway. Following this recommendation, and closing the report, Major Hall says this was a typical example of the class of accident preventable by automatic train control. The collision occurred at 6:45 a. m. during the prevalence of a dense mist. The engineman did not remember ever having been stopped at this signal before, and the inspector observes that the infrequency of stop signals at this point "has a distinct bearing on the case." The fireman's observation of the signal is believed to have been "quite perfunctory and he is very much to blame for having misled his driver."

International

"The Oldest Station of the Oldest Railroad in the World"

Mount Clare Station of the Baltimore & Ohio Built in 1830 and Used Now As a Freight Station. The Station Was Built For the Use of the Line From the Western End of Pratt Street, Baltimore, to the Carroll Viaduct, 1½ Miles, Toward Ellicotts Mills, the Terminus at That Time of the B. & O.—a 14-Mile Railroad—This Station Supplanted a Wooden Structure Built in 1829.

General News Department

The American Association of Freight Traffic Officers will hold its annual business meeting at the Waldorf-Astoria hotel, New York City, on Monday, December 11, followed by a banquet in the evening.

Employees of the Chesapeake & Ohio, to the number of about 600, are to receive bonuses, a fixed sum for each day, for their voluntary service in doing emergency work during the shopmen's strike of last summer.

The Northern Pacific Shop Workers' Association is the latest addition to the ranks of the "company unions" not allied with National organizations. The new union is reported to have agreed with the company on wage scales and working conditions.

The North Carolina Short Line Railroad Association held its annual meeting at Southport, N. C., on November 21. C. J. Fields, manager of operation and traffic of the Wilmington, Brunswick & Southern, was elected president of the association.

A jury in a trial court at Chicago, on December 1, awarded a brakeman on the Pere Marquette $41,000 for the loss of an arm and permanent injury to a foot, received when he was thrown from a freight car at Lansing, Mich. The brakeman maintained that the brake chain was too long.

The New York, New Haven & Hartford has made agreements with the enginemen's and the firemen's brotherhoods to continue present pay and conditions until September 30, 1923. The agreements provide for the withdrawal of all cases now pending before the United States Railroad Labor Board.

Pierce Butler's nomination as an associate justice of the United States Supreme Court was passed over by the Senate on December 4 at the close of the extra session, because of the opposition of Senators La Follette and Norris, and President Harding, on the fifth, sent the nomination to the new session of the Senate.

The Southern Pacific is operating a "demonstration train" of 11 cars over its Texas lines, carrying exhibits of agricultural products in great variety, live stock and farm implements; prize winning dairy and beef cattle, sheep, hogs and poultry. A home demonstration car contains exhibits of cooking and sewing. G. A. Long, director of exhibits of the West Texas Agricultural and Mechanical College, has charge of the exhibits.

Grade Crossing Controversy in Toledo

The Toledo, Ohio, city council has forbidden the further construction of railroad tracks in the Lower Town district of that city between Galena street and Bay View Park, following the action of the Ann Arbor Railroad in bringing suit against the city to secure authority to cross several streets in the forbidden district. A proposal to concentrate several Lower Town railroads across one street and thus avoid the cost of eliminating a number of grade crossings will be considered by the council at a future meeting.

Candidates for Officers of Signal Section, A. R. A.

The nominating committee of the Signal Section of the American Railway Association announces the selection of the following candidates for officers of the Section, to be voted for at the annual meeting next March: Chairman, B. T. Anderson (D., L. & W.), first vice-chairman, W. M. Vandersluis (I. C.), second vice-chairman, W. M. Post (Penn.). The time of holding the annual meeting having been changed, the terms of these officers will be from March, 1923, to March, 1924.

A. S. C. E. to Meet in January

The seventieth annual meeting of the American Society of Civil Engineers will be held at the headquarters of the society, 33 West 39th street, New York City, on January 17-19 inclusive. The business meeting will be called to order at 10 a. m. on January 17, at which time the annual reports will be read, officers for the ensuing year elected, reports of special committees presented, medals and prizes awarded, honorary membership conferred with formal appropriate ceremonies and other business transacted.

Automatic Train-Control Orders Modified

The Interstate Commerce Commission has authorized the Central of New Jersey to install, in accordance with the terms of its order, an automatic train-stop or train-control device between Red Bank, N. J., and Winslow Junction, N. J., in lieu of the installation required upon the portion of its line designated in the order of June 13. The Great Northern has also been authorized to make an installation upon one full passenger-locomotive division between Minot, N. D., and Williston, N. D., in lieu of the installation required in the order. The petition of the Richmond, Fredericksburg & Potomac for a modification of the order with respect to certain requirements was denied.

Largest Railway Mail Terminal

The largest mail terminal station in the world was put in operation on December 3, when the Chicago Post Office took possession of the new building at Van Buren street and the Chicago river, Chicago, erected for it by the Chicago Union Station Company. The building is 800 ft. in length and contains belt conveyors, automatic hoists, pneumatic tubes, tilting parcel dumps, and other mechanical devices to aid in the handling of mail. It is equipped to care for 3,000 tons or 100,000 sacks of parcels a day. The building has direct loading facilities on track level for the Chicago, Burlington & Quincy, the Chicago, Milwaukee & St. Paul; the Chicago & Alton and the Pennsylvania. This terminal was described in the *Railway Age* of March 4, page 513.

New Freight Cars in 1922

The railroads of the United States from January 1 to November 1 this year had 47,802 more new freight cars, either ordered and under construction, or installed in actual service, than during the entire year 1921, according to reports received by the Car Service Division A. R. A.; that is to say, a total of 117,238 cars. During the year 1921 the total was 69,436.

Of the total this year, 50,196 were box cars, of which, up to November 1, 19,352 had been installed. Coal cars ordered totaled 49,383, of which 26,812 were actually installed.

There was also an increase of 716 in the number of locomotives installed or on order. Locomotives installed up to November 1 totaled 860, while orders had been placed for 1,232, making a total of 2,098, as compared with 1,382 in the 12 months of 1921.

D. T. & I. Has Deficit for 10 Months

Deficits since July 1 have finally wiped out the net railway operating income earned by the Detroit, Toledo & Ironton during the first six months of the year, and for the 10 months ended October 31 the road had a deficit of $168,807, which represented a decrease of $514,115 as compared with the net earned in the corresponding period of last year, according to its report to the Interstate Commerce Commission. For October the deficit was $174,457. For the 10 months' period the operating revenues were $7,467,782, an increase of $2,056,464. The operating expenses were $6,328,875, an increase of $2,036,457, but there was

a debit balance in equipment rents amounting to $1,137,490, which was $531,561 greater than the debit balance for the previous year. Maintenance of way expenses increased $411,034, and maintenance of equipment increased $919,627, while transportation expenses increased $710,965 and traffic expenses decreased $12,425.

Lehigh Valley Disposes of Morris Canal

By an agreement signed last week by representatives of the State of New Jersey and officers of the Lehigh Valley Railroad Company, the Morris Canal, extending from the Delaware River at Phillipsburg, N. J., to New York Harbor at Jersey City, is officially abandoned, and the property is divided between the railroad company and the state, the railroad company paying over $875,000.

The canal has been in the hands of the railroad company since 1871, and though regular business on it has long since ceased, the railroad company has been at large and constant expense to keep the waterway technically in condition for navigation. Negotiations have been going on between the state and the railroad company for many years, but until now without result.

To the railroad company the important feature of the present agreement is the acquisition of absolute title to the freight terminal occupied by the road in Jersey City; the "Big Basin" going to the railroad company and the "Little Basin" to the state. The railroad retains the right-of-way of the canal from the eastern terminus to the Hackensack River, and also terminal properties at Phillipsburg. The state retains the rest of the canal, including the right to divert water from Lake Hopatcong, and other water rights.

Roadmasters Elect Officers

At the convention of the Roadmasters' and Maintenance of Way Association at Cleveland on November 23, the following officers were elected to serve for the ensuing year: President, J. P. Corcoran, roadmaster, C. & A., Bloomington, Ill.; first vice-president, J. B. Martin, supervisor, N. Y. C., Elkhart, Ind.; second vice-president W. E. Muff, roadmaster, A. T. & S. F., Newton, Kan.; secretary P. J. McAndrews, roadmaster, C. & N. W., Sterling, Ill.; treasurer, T. F. Donahoe, general supervisor of road, B. & O., Pittsburgh, Pa.; members executive committee (two years), H. R. Clarke, district engineer, C. B. & Q., Lincoln, Neb.; B. C. Dougherty, roadmaster, C. M. & St. P., Chicago; (four years), J. P. Davis, roadmaster, Central Indiana, Anderson, Ind., and C. H. Gruver, roadmaster, C. R. I. & P., Manly, Iowa. Chicago was selected as the place where the next convention would be held.

On the same morning the Track Supply Association, which presented an exhibit in connection with the convention, elected officers: President, F. M. Condit, railroad department, Fairbanks, Morse & Co., Chicago; vice-president, J. J. Cozzens, salesman, Union Switch & Signal Company, New York; secretary-treasurer, W. C. Kidd, Ramapo-Ajax Corporation, Hillburn, N. Y.; director (two years), J. Howard Horn, sales manager, National Lock Washer Company, Newark, N. J.

New York Railroad Club Golden Jubilee Dinner

The New York Railroad Club will celebrate its fiftieth anniversary by holding a Golden Jubilee Dinner at the Commodore Hotel, New York, on Tuesday evening, December 12. The principal speaker of the evening will be Ex-Governor John J. Cornwell of West Virginia.

Ex-Governor Cornwell comes of very old American stock and is regarded as the leading citizen of the state of West Virginia. He is resolute and fearless and an able and clear thinker. One of his friends is responsible for the statement that "He believes that we are the greatest commercial and agricultural nation atop of earth and he believes in the American people and does not believe that demagogic politicians should injure the American people. He believes in the railroads of our country as the great distributors of our products."

H. H. Vreeland will preside at the dinner as toastmaster. George A. Post will speak of the importance of the club and Mr. Vreeland will trace its history. Ten days before the dinner 2,100 reservations had been made, so that it will be the greatest railroad event of this kind which has ever been held in this country. Reservations may still be made through J. F. MacEnulty, Pressed Steel Car Company, 55 Broad street, New York.

A Bill to Create Seven Regional I. C. C.'s

A bill to amend the interstate commerce act by providing for the creation of regional Interstate Commerce Commissions located in districts to be constituted by the Interstate Commerce Commission was introduced in the House on December 5 by Representative Hawes. Mr. Hawes also introduced another bill, which provides for the creation of seven district commissions to be designated, respectively, as the New England, Eastern, Southeastern, Central, Western, Southwestern and Pacific divisions of the Interstate Commerce Commission, each consisting of three commissioners appointed by the President, to be charged with the duty of enforcing the provisions of the interstate commerce act pertaining to rates as to the territory included within their divisions. The bill provides for hearings before the commission at Washington in cases involving two or more of such divisions and for appeals from the division commissions to the commission at Washington.

Wage Statistics for September—
Over $3,000,000 in Bonuses

The total number of employees reported by Class I railroads for the month of September, 1922, was 1,708,591, an increase of 114,517, or 7.2 per cent, over the preceding month, according to the monthly statistical bulletin issued by the Interstate Commerce Commission. The total compensation was $238,735,394, an increase of $13,758,750, or 6.1 per cent. The largest increase in employment appears in the maintenance of equipment and stores group, which was 96,505. The total number of employees falling within that group was 410,278, or 85 per cent of the average number employed during the 12 months preceding the strike. The number of persons employed as machinists, blacksmiths, or boilermakers was 69 per cent of the average for the year ended June 30, 1922.

As in August, the overtime made by shop employees was abnormally heavy, representing 25.57 per cent of their total compensation. In June, 1922, or the month just prior to the strike, this percentage was 2.62.

Reports from 181 roads employing 98 per cent of the total number of employees indicate that during the month the employees received bonuses amounting to $3,689,907 for loyal service performed during the strike, which amount is not included in this summary.

Compared with the previous month, the increase or decrease (D) in the number of employees, by groups, was as follows:

Executives, officials and staff assistants	119
Professional, clerical and general	D 7,060
Maintenance of way and structures	1
Maintenance of equipment and stores	96,505
Transportation (other than train, engine and yard)	5,685
Transportation (yardmasters, switch tenders and hostlers)	863
Transportation (train and engine service)	18,404
Net increase	114,517

The reduction in the number of employees in the professional, clerical, and general group was brought about by a reduction in the number of lieutenants and sergeants of police and patrolmen. In June, 1922, there were 8,482 employees in these two classes. In July, as a result of strike conditions, the number was increased to 39,430.

A comparison of the number of employees and their compensation, by months, follows:

Month	Number of employees	Total compensation
September, 1921[1]	1,718,330	$223,972,822
October, 1921[1]	1,754,136	237,602,959
November, 1921[1]	1,732,353	225,304,006
December, 1921[1]	1,637,151	214,921,396
January, 1922[1]	1,552,014	205,178,639
February, 1922[1]	1,545,040	194,523,427
March, 1922[1]	1,570,158	216,701,408
April, 1922	1,578,133	203,413,071
May, 1922	1,628,228	216,672,028
June, 1922	1,685,414	222,932,689
July, 1922	1,467,824	193,571,244
August, 1922	1,594,074	224,976,644
September, 1922	1,708,591	238,735,394

[1]Excludes Detroit, Toledo & Ironton.

Commission and Court News

Court News

U. S. R. A. Baggage Regulations

The Texas Court of Civil Appeals holds that not only did the baggage regulations promulgated by the Railway Administration during federal control set aside any state laws in conflict with them, but they were binding upon all passengers, interstate or intrastate, regardless of the passenger's lack of knowledge of the regulations or the failure of the carrier to inquire as to the value of the baggage—San Antonio, Uvalde & Gulf v. Nast (Tex. Civ. App.) 240 S. W. 596.

Sudden Application of Brakes Danger to Cattle in Cars

In an action for killing mules on the track the Texas Court of Civil Appeals holds that with a heavy train, 40 carloads of cattle moving down grade at 15 or 20 miles an hour, with the mules only 100 ft. ahead, it would have been poor judgment for the engineman to apply his brakes in emergency, even if he could hope to avoid striking the mules, since this would have thrown the cattle in the cars off their balance, to their injury; and a judgment for plaintiff was reversed.—Hines v. Pennington (Tex. Civ. App.) 240 S. W. 703.

Landowner's Contract to Repair Railroad Fence

The Tennessee Supreme Court holds that a landowner's contract to keep a railroad fence in repair with material furnished by the railroad on notice of defects, the owner releasing the company from all claims for damages to straying animals, is not invalid for want of consideration, since the statute does not impose on railroads the absolute duty of fencing their tracks; it merely makes them liable for the value of stock killed by its moving trains if the track is not fenced. The owner cannot recover for the value of his stock killed as a result of his own failure to give notice to the railroad of defects in the fence.—Buford v. Louisville & Nashville (Tenn.) 240 S. W. 759.

United States Supreme Court

Alleged Overcharge Not Recoverable Under Anti-Trust Law

Action was brought under the Anti-Trust Act by a manufacturer of excelsior and flax tow at St. Paul against eight railroad companies, members of the Western Trunk Line Committee and their officers, for damages alleged to have resulted from an agreement for uniform rates from St. Paul on excelsior and tow. The rates had been approved by the Interstate Commerce Commission. Whether there was a cause of action under section 7 of the Anti-Trust Act was the sole question for decision. The Supreme Court of the United States answers the question in the negative, affirming a judgment in favor of the defendants by the Circuit Court of Appeals for the Seventh Circuit (271 Fed. 444).

The plaintiff alleged conspiracy to eliminate competition. The Supreme Court holds that a rate is not necessarily illegal because it is the result of a conspiracy in restraint of trade in violation of the Anti-Trust Act. What rates are legal are determined by the Act to Regulate Commerce. Congress did not intend to provide the shipper, from whom illegal rates have been exacted, with an additional remedy under the Anti-Trust Act. "If a shipper could recover under section 7 of the Anti-Trust Act for damages resulting from the exaction of a rate higher than that which would otherwise have prevailed, the amount recovered might, like a rebate, operate to give him a preference over his trade competitors. It is no answer to say that each of these might bring a similar action under section 7. Uniform treatment would not result, even if all sued, unless the highly improbable happened, and the several juries and courts gave to each the same measure of relief."

It is the Commission which must determine whether a rate is discriminatory, in the first instance at least. Not only did the injury complained of rest on hypothesis, but the damages alleged were purely speculative. Damages must be proved by facts from which their existence is logically and legally inferable. They cannot be supplied by conjecture. Exaction of the higher legal rate may not have injured the plaintiff at all; and for every article competing with excelsior and tow, the adjustment of the rate must have been made. No court or jury could say that, if the rate had been lower, Keogh would have enjoyed the difference or that any other advantage would have accrued to him. Judgment for defendants affirmed. Keogh v. Chicago & North Western. Opinion by Mr. Justice Brandeis. Decided November 13, 1922.

Not Liable for Obstruction of River by Old Piles

In 1895 the California Pacific was authorized to build a new bridge over the Sacramento River at Sacramento, the approval of the Secretary of War being given on condition that the company remove the piers of the old bridge to a depth of 7 ft. below low-water level. This condition was complied with, the old piles being cut down three or four feet lower than was required, to a level with or below the then existing bed of the river. Subsequent dredging operations by the government gradually lowered the bed of the river until, in 1918, the old stumps protruded several feet above the river bed. In that year a dredger, drifting down the river, struck a stump and sank. The owner sued the California Pacific and the Southern Pacific, the railroads using the bridge, for damages for collision. The federal district court dismissed the libel. This was reversed by the Circuit Court of Appeals, Ninth Circuit, on the ground that the railroads should have guarded against the probability of the channel shifting and the river bed being lowered.

The United States Supreme Court has reversed the decree of the Circuit Court of Appeals and affirmed that of the district court, holding that the railroads were entitled to rely on the order of the Secretary of War, and having complied with it, could not reasonably be held to an indefinite and speculative responsibility for changed conditions. The subsequent obstruction was due to changes of a most radical character in the river channel, brought about, in the main, by the government itself, which the railroads were not negligent in failing to anticipate, so that, even leaving out of consideration the order of the Secretary of War, there appeared no ground on which the railroads could be held liable.—Southern Pacific v. Olympian Dredging Co. Opinion by Mr. Justice Sutherland. Decided November 13, 1922.

Not Liable for Injury to Boy Climbing Bridge

A public municipal steel truss bridge over the tracks of the New York, New Haven & Hartford at 149th street, New York City supports cross arms carrying bare electric wires for operating the trains. The nearest wire is 19 inches from the floor of the bridge. With difficulty and danger active boys can climb to the highest parts of the bridge and often did, until chased away. A board at each end of the bridge bore a warning against the danger of live wires. In June, 1916, a boy eight years old climbed to the top of the bridge after a bird's nest, touched the wire and received severe injuries, for which he and his father sued the railroad. The Circuit Court of Appeals, Second Circuit, affirmed judgments for the plaintiffs February, 1921, 271 Fed. 419.

The United States Supreme Court has reversed these judgments. "Infants have no greater right to go upon other people's land than adults, and the mere fact that they are infants imposes no duty upon land owners to expect them and to prepare for their safety," in the absence of some temptation amounting to invitation. In the present case there was no such invitation. "It is clear that if the plaintiff had been an adult, he could not recover; and we are unable to find any sufficient evidence from which the jury could have properly concluded that the railway company either directly or by implication invited or licensed him to climb upon the strut to a point from which he could touch the bare wire thirty feet above the street. The motion for an instructed verdict should have been granted." N. Y., N. H. & H. v. Fruchter. Opinion by Mr. Justice McReynolds. Decided November 13, 1922.

Labor Board Decisions

Drawbridge Operators Classified as Stationary Engineers

A question was raised by the employees of the New York Central regarding the classification and rating of the men in charge of the operation of a drawbridge which is swung by steam power at Charlotte, N. Y. The duties of these men consist of operating the engine incident to the swinging of the bridge, firing the boiler and making routine repairs to the power plant. The employees contended that these men should be classified as stationary engineers, while the railroad contended that they are drawbridge operators. The Labor Board decided that they should be classified as stationary engineers.—*Decision No.* 1354.

Right of Express Company to Reduce Number of Messengers

In the complaint filed against the American Railway Express by the Brotherhood of Railway and Steamship Clerks, etc., the right of the company to make a reduction in the number of messengers on trains between Clarksdale and Yazoo City, Miss., was contested. On March 14, 1922, the company abolished one run and so arranged the schedules that three messengers were able to handle the same trains as four had handled before. The employees requested that the runs be re-established with the four messengers and that the three messengers who had been assigned to these runs be paid a salary commensurate with the number of increased hours they had been compelled to work. As the evidence did not indicate that the reduction in crews and increase in mileage was made for the purpose of offsetting the rules of the agreement, the Labor Board denied the claim of the employees.—*Decision No.* 1338.

Trainmen and Conductors Required to Operate Air Dump Cars

The Order of Railway Conductors and the Brotherhood of Railroad Trainmen protested against the action of the Northwestern Pacific in requiring trainmen to operate "Lidgerwoods," Jordan spreaders or air dump cars. In drawing up the agreement with its employees the railway agreed to relieve trainmen from the physical operation of Hart convertible and similar types of work cars which are dumped by means of a ratchet operated by a man at the end of the car. Air dump cars require merely the manipulation of a valve located on the end of the car to dump the car and return it to the normal position after dumping. It has been the practice for trainmen to operate these valves, while maintenance of way employees were assigned to the operation of such cars as required physical effort. The Labor Board decided that the service required was not unduly burdensome and that it was reasonable to call upon trainmen to operate the valves on air dump cars.—*Decision No.* 1326.

Proof of Authority for Representation Required

On April 18, 1922, the chief executive of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers claimed, before the Labor Board, that the organization represented a majority of the maintenance of way employees and railway shop laborers on the Wabash, Chester & Western. The railway contended that there was no controversy between it and its employees; that on that railroad there was no organization of the employees referred to and that the complainant organization did not represent anyone on that road; and it refused to deal with them. The Labor Board decided that the road should arrange to hold a conference with the representatives of the maintenance of way organization; and if they can produce evidence that the employees on this road have designated that organization to represent them, negotiations shall be conducted in an effort to agree upon rules and working conditions covering the employees involved.—*Decision No.* 1357.

Engine Watchmen Entitled to Meal Period

The Gulf Coast Lines employ three engine watchmen at Anchorage, La., each of which is assigned to work 8 hours a day, exclusive of the meal period, which makes a spread of 8 hr. and 20 min., from the time they report for duty until they are released. The employees contended that these men should be allowed 20 min., or more for a meal period without deduction in pay since they did not leave the premises of the road for lunch, nor neglect any of their duties; there was sufficient time in which to eat while waiting for steam or for an engine to fill with water or oil. They contended further that the carrier has no right to hold them on duty an extra 20 min., without extra compensation. The carrier contended that it was within its rights by arranging the shifts in this manner and requiring a 20-min. overlap. The Labor Board decided that in accordance with section a-2, Article V, of Decision No. 501, the employees should be granted a meal period not to exceed 20 min., without any deduction in pay and without being required to lap shifts or make up this time. *Decision No.* 1345.

Extended Leave of Absence Sustained

A bridge and building foreman on the Chicago, Indianapolis & Louisville was granted two months' leave of absence to serve as general chairman of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers. At the end of this period he decided to retain this position permanently and the railway demoted him to carpenter, contending that an employee in a supervisory capacity should not act as general chairman representing the employees. He was further notified that if he expected to remain in the service of the carrier as a carpenter, he would have to work enough time to keep his name on the payroll. The employees appealed to the Labor Board, which decided that it has been a recognized and time-honored practice with practically all carriers having working agreements with their employees to grant leaves of absence (ofttimes indefinite with full retention of seniority rights) to general chairmen representing large groups of employees in order that they might perform the duties incumbent upon that position. The Labor Board decided that the carrier was not justified in refusing this man further leave and free transportation and that he should be restored to the seniority roster in accordance with his standing prior to his demotion.—*Decision No.* 1342.

Selection of Employee Representation

In accordance with Decision No. 119, the Pere Marquette entered into negotiations with a committee representing the United Brotherhood of Carpenters and Joiners of America which was recognized by the carrier as the duly recognized representatives of the workmen in the bridge and building department. In these conferences certain working rules and agreements were agreed upon, while certain others were not agreed upon and were submitted to the Labor Board for decision. Later the road entered into negotiations with the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, in the course of which a disagreement arose regarding the scope of the rules so negotiated. The Maintenance of Way Brotherhood contended that it represented all employees in the maintenance of way department, while the carrier took the position that the bridge and building employees were represented by another committee and should therefore be eliminated from the scope of the rules under consideration. Later the carrier placed in effect the provisions of Decision No. 501 for all employees referred to therein, including those of the bridge and building department in lieu of the rules agreed upon in the conference with the committee of the United Brotherhood of Carpenters and Joiners of America. Representatives of the employees took the position that the road should not have applied Decision No. 501 to the employees in the bridge and building department in lieu of the rules that had been agreed upon. In its opinion the Labor Board took the position that it will not decide questions as to the jurisdiction of organizations nor as to representation of employees. It sustained the carrier in the application of Decision No. 501 to the employees of the bridge and building department and stated that the inclusion of these employees shall not preclude them from selecting representatives of their own choosing.—*Decision No.* 1358.

Foreign Railway News

New General Manager for the Great Eastern of England

S. A. Parnwell, assistant general manager of the Great Eastern of England, has been appointed general manager succeeding Sir Henry Thornton, K. B. E., who has gone to Canada to take up his new duties as president of the Canadian National Railways. Mr. Parnwell entered railway service as a surveyor for the Great Northern Railway (England) and in January, 1909, was appointed land agent of the Great Eastern. When Sir Henry Thornton became general manager, Mr. Parnwell was named as one of a committee to draw up a new plan for the organization of the company. When the new organization was put into effect Mr. Parnwell was appointed assistant to the general manager. In 1916 he became secretary and comptroller. During the war when Sir Henry Thornton's military duties kept him from his post with the Great Eastern, Mr. Parnwell served as acting general manager. At the end of hostilities he was appointed assistant general manager.

British Firms Secure South African Electrification Contracts

A number of British firms have secured the contracts for the railway electrification in Natal, South Africa. The total expenditure involved is placed at £4,500,000. Among the firms participating are: Metropolitan-Vickers Electrical Co., Ltd.; C. A. Parsons & Company, Ltd.; Babcock & Wilcox, Ltd.; British Thomson-Houston Co., Ltd.; Telegraph Manufacturing Company; A. Reyrolle & Company, Ltd.; South African General Electric Company. For the automatic telephone exchange equipment contracts aggregating £100,000 have been awarded to Messrs. Siemens Brothers & Company, Ltd., of Woolwich, England.

The contracts placed with the Metropolitan-Vickers Company include seventy-eight 3,000-volt, direct-current electric locomotives, according to the Times (London) Trade Supplement for November 25, 1922. The electrical equipment for the locomotives will be built at the Sheffield works of the Vickers Company. The section of railway to be electrified extends from Glencoe to Pietermaritzburg, a distance of about 200 miles. The new locomotives are expected to be capable of making a round trip from Ladysmith to Pietermaritzburg once every twenty-four hours for six days a week, the distance being 129 miles each way.

Equipment and Supplies

Locomotives

The Canadian National Railways are inquiring for about 65 locomotives.

The Lake Terminal has ordered two 8-wheel switching locomotives from the Baldwin Locomotive Works.

The Union Pacific has ordered one 12-ft. cut rotary snow plow from the American Locomotive Company.

The Louisiana Central Lumber Company has ordered one Prairie type locomotive from the Baldwin Locomotive Works.

Norton, Griffith Ltd., Ceara, Brazil, have ordered 2, 4-wheel switching locomotives and 2 Consolidation type locomotives from the Baldwin Locomotive Works.

The Georgia Northern has ordered one 4-6-0 type locomotive from the American Locomotive Company. This locomotive will have 19 by 26 in. cylinders and a total weight in working order of 143,000 lb.

The Detroit Terminal has ordered 2, 8-wheel switching locomotives from the American Locomotive Company. These locomotives will have 25 by 30 in. cylinders and a total weight in working order of 240,000 lb.

The Minneapolis, St. Paul & Sault Ste. Marie has ordered 5 Pacific type locomotives from the American Locomotive Company. These locomotives will have 25 by 26 in. cylinders and a total weight in working order of 269,000 lb.

The Union Oil Company, Oleum, Cal., has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 16 by 24 in. cylinders and a total weight in working order of 99,000 lb.

The Warren Pipe & Foundry Company, Phillipsburg, N. J., has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 16 by 24 in. cylinders and a total weight in working order of 99,000 lb.

The Lehigh Portland Cement Company, Allentown, Pa., has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 14 by 22 in. cylinders and a total weight in working order of 79,000 lb.

The Riverside Portland Cement Company, Riverside, Cal., has ordered one 0-6-0 switching locomotive from the American Locomotive Company. This locomotive will have 18 by 24 in. cylinders and a total weight in working order of 128,000 lb.

The Essex Terminal Railway, Walkerville, Ont., Canada, has ordered one 6-wheel switching locomotive from the American Locomotive Company. This locomotive will have 20 in. by 26 in. cylinders and a total weight in working order of 145,000 lbs.

The Inspectoria Federal das Estradas for: E. F. Central do Piauhy (Brazil) has ordered one 6-wheel switching locomotive and one consolidation type locomotive from the American Locomotive Company. The switching locomotive will have 13 by 18 in. cylinders and a total weight in working order of 70,000 lb., and the consolidation type will have 17 by 22 in. cylinders and a total weight in working order of 90,000 lb.

The Denver & Rio Grande Western has ordered 10 Mountain type and 15 Mallet type locomotives from the American Locomotive Company. The Mountain type will have 28 by 30 in. cylinders and a total weight in working order of 377,000 lb. Of the Mallet type, 10 locomotives will have 25 and 39 by 32 in. cylinders and a total weight in working order of 531,000 lb. and five locomotives will have a total weight in working order of 230,000 lb.

Freight Cars

THE GREAT NORTHERN is in the market for 500, 75-ton steel ore cars.

THE ST. LOUIS, TROY & EASTERN is inquiring for 300 flat cars of 50 tons' capacity, also for 100 gondola cars.

THE TEXAS COMPANY, reported in the *Railway Age* of October 21 as inquiring for 100 tank cars, has ordered this equipment from the General American Tank Car Corporation.

THE CANADIAN NATIONAL RAILWAYS will ask for bids soon for 100 general service coal cars, 100, 40-ton freight refrigerator cars, 100 ballast cars, 800 automobile cars and 2,000 box cars of 40 tons' capacity.

THE UNION PACIFIC is asking for bids on 5,000 refrigerator cars. These cars are for the Pacific Fruit Express. The plans also include the construction of 300, 50-ft., refrigerator cars equipped for passenger train service.

THE SOUTHERN PACIFIC, reported in the *Railway Age* of December 2 as asking for prices on 5,000 cars, is now inquiring for 1,700 cars additional, as follows: 1,150, 50-ton, drop-bottom gondola cars; 50, 50-ton tight-bottom gondola cars, and 500, 40-ton logging cars.

THE CHICAGO, MILWAUKEE & ST. PAUL has ordered 1,000 gondola cars from the Pullman Company and 1,000 from the Western Steel Car & Foundry Company. This is additional to the orders placed by this company for 5,500 cars, as reported in the *Railway Age* of December 2.

THE NORTHERN PACIFIC, reported in the *Railway Age* of October 28 as inquiring for 3,000 box cars, has ordered 1,000 of these cars from the American Car & Foundry Co., 1,000 from the General American Car Company, and 1,000 from the Western Steel Car & Foundry Company.

THE ST. LOUIS SOUTHWESTERN, reported in the *Railway Age* of November 4 as inquiring for 1,200 cars, has ordered 500 box cars from the American Car & Foundry Company, 500 automobile cars from the Mt. Vernon Car Company and 200 convertible cars from the Rogers Ballast Car Company.

THE UNION TANK CAR COMPANY, reported in the *Railway Age* of November 11 as inquiring for from 500 to 2,000 tank cars of 10,000 gal. capacity, has ordered 1,000 from the Standard Steel Car Company, 1,000 from the American Car & Foundry Company, 500 from the General American Tank Car Corporation and 500 from the Cambria Steel Company.

Passenger Cars

THE MEXICAN POST OFFICE DEPARTMENT is inquiring for 30, 40-ft. steel mail cars.

THE CANADIAN NATIONAL RAILWAYS will ask for bids soon for 100 steel sleeping cars.

THE SOUTHERN PACIFIC contemplates coming in the market soon for about 140 passenger train cars.

THE NEW YORK CENTRAL, reported in the *Railway Age* of November 11 as inquiring for 72 cars for passenger service, has ordered 35, 70-ft. steel coaches with 4-wheel trucks from the Pullman Company; 5, 70-ft. combination passenger and baggage cars from the Pressed Steel Car Company and 10 multiple unit steel passenger motor cars for suburban service from the Standard Steel Car Company, all for use on the New York Central. An order has also been placed for 10, 60 ft. 6 in. steel baggage cars with the American Car & Foundry Company for use on the Michigan Central.

Machinery and Tools

THE NEW YORK CENTRAL is inquiring for a 6-ft. radial drill.

THE SOUTHERN PACIFIC has ordered a piston-rod grinder, a lathe and a quartering machine from the Niles-Bement-Pond Company.

Supply Trade News

The Power Specialty Company, New York City, has opened new branch offices in Detroit, Mich., in the Dime Savings Bank building, in charge of **L. Lanyi**, and in Boulder, Colo., at 2324 Fourteenth street, in charge of **R. B. Nutting**, who was formerly Chicago district manager.

Ray G. White, formerly Chicago branch manager of B. M. Jones & Co., Inc., has recently been appointed eastern railroad sales agent for the **McInnes Steel Company, Ltd.**, Corry, Pa., manufacturers of hammered crucible tool steels. Mr. White has opened a temporary office at 56 Murray street, New York City.

W. D. Hudson, formerly principal assistant engineer of C. E. Smith & Co., has resigned to become associated in the capacity of transportation engineer with Harland Bartholomew, city plan engineer, St. Louis, Mo. Mr. Hudson will handle railroad and waterway transportation, also grade crossing elimination problems.

The General Electric Company, Schenectady, N. Y., has set aside a fund of $400,000, the income from which will be available for encouraging and rewarding service in the electrical field by giving prizes to its employees. As an expression of appreciation to Charles A. Coffin, who retired in May 1922 from the active leadership of the General Electric Company, the board of directors named it the Charles A. Coffin Foundation.

E. D. Lynch, of the railway department, **Westinghouse Electric & Manufacturing Company**, East Pittsburgh, Pa., has been transferred to the New Haven, Conn., office, to fill the vacancy made by **J. P. Alexander's** removal to the Boston, Mass., office. **R. W. Everson**, sales manager of the Mexican branch of the Westinghouse Electric International Company, has been appointed district manager of the Atlanta, Ga., office of the Westinghouse Lamp Company, to succeed Julien Binford, Jr., resigned. **A. G. Crocker** has been appointed special power representative in the Detroit, Mich., office of the Westinghouse Electric & Manufacturing Company.

A. C. Scherer has been appointed assistant to C. W. Gennet, Jr., in the supervision of the rail and track appliances department of **Robert W. Hunt & Company**, Chicago. Mr. Scherer graduated from the University of Wisconsin in 1909, and immediately entered the employ of Robert W. Hunt & Company, since which time he has served consecutively as chief inspector at the Monterey (Mexico) Steel works, and at the Lackawanna Steel Company's plant, and in charge of the physical laboratory at Chicago, which position he held at the time of his recent promotion. He served as a lieutenant in the ordnance department of the United States Army during the war.

Lorenzo C. Dilks has resigned as vice-president of the George A. Fuller Company, New York, to become vice-president of **Starrett Brothers, Inc.**, New York City. Mr. Dilks' offices will be in Chicago. Starrett Brothers, Inc., is a new corporation, formed to carry on the business of building construction by Paul Starrett, formerly president of the George A. Fuller Company, Colonel W. A. Starrett, formerly vice-president of the George A. Fuller Company, prior to that chairman of the construction division of the War Industries Board and who was also with Starrett & Van Vleck, architects; Ralph Starrett, formerly of the Thompson-Starrett Company, Andrew J. Eken, formerly vice-president of the George A. Fuller Company, and Lorenzo C. Dilks.

Daniel M. Brady Honored

The directors of the Brady Brass Company, New York, tendered a luncheon at the India House, New York, on December 6, in honor of their president, Daniel M. Brady. The dinner was given in recognition of the fact that he has just completed a half century of service in the railway industry and two score

years in the metal trade. There were a large number of guests, all business friends of Mr. Brady. Hon. Morgan J. O'Brien presided as toastmaster and addresses were made by Henry A. Bishop of Bridgeport, Conn.; John F. Fowles, vice-president of W. R. Grace & Co., and C. S. Trench, editor of the American Metal Market. Mr. Bishop made a presentation speech, Mr. Brady being the recipient of a gold watch, suitably engraved for the occasion, from the stockholders of the company.

Obituary

J. J. McCarthy, treasurer and chairman of the board of directors of the Chicago-Cleveland Car Roofing Company, Chicago, whose death in Chicago from pneumonia on November 25 was reported in the *Railway Age* of December 2, was born at Burlington, Vt., on April 8, 1842, and moved to Chicago with his parents in 1845. His first railway experience was acquired with the Chicago & North Western in 1855. He was engaged in the banking business from 1856 to 1881 in Chicago, being associated with the Tinkeham Banking Company, George C. Smith & Company and the Bank of Montreal, consecutively. During the Civil War he was in the service of the Army of the Potomac in the Quartermaster's Corps, being stationed at Harper's Ferry. In 1881, he organized the Chicago Car Roofing Company, which later became the Chicago-Cleveland Car Roofing Company. At the time of the Chicago fire, when the currency of the banks of that city could not be reached because of the fire, Mr. McCarthy went to New York and secured the first currency that was put into circulation immediately following the fire. Mr. McCarthy was said to be one of the two oldest residents of Chicago.

J. J. McCarthy

Trade Publications

LOCOMOTIVE STARTER.—A booklet describing and illustrating the Street locomotive starter has recently been issued by Clement F. Street, Greenwich, Conn. Photographs and drawings are included showing the locomotive starter as applied to the trailer axle, and also diagrams showing the increase in starting tractive force obtained by the application of the starter to various types of locomotives.

TRUCKING COMPANIES which do business at railroad freight stations in Manhattan, New York City, number more than 150, and the problem of general store-door delivery continues perplexing. As indicating the magnitude of the business to be dealt with, W. H. Connell, assistant manager of the traffic bureau of the Merchants' Association, gives the following data: "During August the American Railway Express Company made 2,626,000 calls to pick up outbound shipments from Manhattan, Bronx, Jersey City and Brooklyn. During this period that carrier made 857,000 calls delivering inbound shipments, or a total of 3,483,000 calls. Of this total 85 per cent of the pick-ups and delivery calls was made on Manhattan Island. Vehicles used numbered 786, of which 412 were engaged in pick-up service for outbound shipments and 376 for deliveries. The pick-up wagons made 237 calls per vehicle per day. The average calls per vehicle in delivering inbound shipments were 2,280 or 84.4 calls per vehicle per day. . . . It is reasonable to assume that no trucking concern in New York city is making 84 calls per vehicle per day on either inbound or outbound freight shipments."

Railway Construction

BALTIMORE & OHIO.—This company has placed a contract with Seaboard Construction Company, of Philadelphia, Pa., covering the erection of new spans required to provide additional waterway at its bridge crossing Grand Calumet river, Gary, Ind. The additional opening supplements a 14-ft. arch built in 1908. The new spans are of the deck plate girder type, double-track, solid floor, 78 ft. and 25 ft. long, respectively.

CANADIAN PACIFIC.—This company has awarded a contract to the Sidney E. Junkins Company of Winnipeg and Vancouver for the construction of an ocean pier, 330 ft. by 850 ft., at Vancouver, B. C., at an approximate cost of $2,000,000. The work is to be completed by September 30, 1923.

CHICAGO, BURLINGTON & QUINCY.—This company will build a second main track for six miles between Sorento, Ill., and Ayres, at a cost of approximately $200,000.

CHICAGO, INDIANAPOLIS & LOUISVILLE.—This company will construct a one-story frame shop 45 ft. by 200 ft., at Lafayette, Ind., to cost approximately $8,000, to replace one recently destroyed by fire.

CHICAGO, INDIANAPOLIS & LOUISVILLE.—This company has awarded a contract to the Ogle Construction Company, Chicago, for the rebuilding of a coaling station of 300 tons' capacity at South Hammond, Ind., to replace one which was recently destroyed by fire.

ILLINOIS CENTRAL.—This company will construct a spur track 3 mi. long from the main line at Elkville, Ill., to the mine of the Black Servant Coal Company, at an estimated cost of $50,000. The work will be commenced at once by company forces.

MISSOURI PACIFIC.—This company has awarded a contract to the Herman & McCain Construction Company, Little Rock, Ark., for the construction of a passenger station at Harrisburg, Ark. The building will be 24 ft. by 71 ft., and will be of brick with slate roof.

PACIFIC SOUTHWESTERN.—This company has been granted permission by the Railroad Commission of California to construct a standard gage line from Lompoc, Cal., to White Hall, a distance of approximately four miles.

WISCONSIN SOUTHERN.—This company, which was organized recently, has completed surveys for a line from Madison, Wis., to Calumetville, and plans to begin grading and track laying in March, 1923. The road will eventually extend from Madison to Manitowoc and other lake Michigan points, a distance of 164 miles. The project is expected to cost approximately $2,600,000. C. D. Smith, of Fond du Lac, Wis., is president of the road.

Kadel & Herbert

Irish Regular Army Railway Patrol Between Cork and Mallow

Railway Financial News

BUFFALO & SUSQUEHANNA.—*Special Dividend.*—This company has declared a special dividend of $10 a share in addition to the regular quarterly dividend of 1¾ per cent on the common stock, also the regular semi-annual dividend of 2 per cent on the preferred stock. The dividends will be paid December 30 and distributed to holders of record December 15.

CHICAGO, TERRE HAUTE & SOUTHEASTERN.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $713,000 of 5 per cent first and refunding mortgage gold bonds to be delivered to the Chicago, Milwaukee & St. Paul for the payment of certain obligations of the company and for the payment by the Chicago, Milwaukee & St. Paul for additions, betterments and extensions to the property of the C. T. H. & S. E. The Chicago, Milwaukee & St. Paul was also authorized to assume obligation and liability in respect of these bonds.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $300,000 of equipment trust certificates.

DETROIT, TOLEDO & IRONTON.—*Reserves Decision on Lease.*—Justice E. J. Gavegan in special term of the Supreme Court of New York on Tuesday reserved decision in the application of Leon Tanenbaum, representing minority stockholders in the Detroit, Toledo & Ironton Railroad, for an examination prior to the trial of a suit against Henry Ford to restrain the company from executing a lease for 75 years to the Detroit & Ironton Railroad. This latter company was organized under the laws of Delaware by Henry and Edsel Ford, who own almost the entire stock. The complainant, who alleges that he invested $10,000 in the old company, charges that the lease to Ford interests would deprive the minority stockholders from sharing in any of the profits that might be derived from the lease.

ERIE.—*Cash on Hand* $6,000,000.—President F. D. Underwood has denied reports of an impending receivership, stating that the company has cash in hand of about $6,000,000 and bills due January 1, 1923, amount to $2,737,411.

MINNEAPOLIS & ST. LOUIS.—*New Director.*—E. E. Nash, vice-president in charge of operation and maintenance of this road, with headquarters at Minneapolis, Minn., has been elected a director.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—*Dividends Declared.*—The directors have declared a dividend of $2 on both the preferred and common stock from the accumulated surplus of 1909 to 1919, inclusive, payable December 28 to stock of record December 15. The same dividend was declared by the Soo Line in March out of accumulated surplus. The preferred stockholders, however, took the matter into court, claiming that it was illegal to pay anything on the common until the full amount for the year had been paid on the preferred. The lower court upheld the company, but the case was appealed and is still in litigation.

MISSOURI, KANSAS & TEXAS.—*Sale Again Postponed.*—The sale of the properties of this railroad has again been postponed to December 13, 14 and 15.

MISSOURI-KANSAS-TEXAS.—*Reorganization Plan Approved.*—The Interstate Commerce Commission on December 4 issued an order approving the principal features of the reorganization plan by which the Missouri-Kansas-Texas Railroad is to take over the properties of the Missouri, Kansas & Texas and authorizing the issuance of the securities in accordance with the plan. The commission issued a certificate that the public convenience and necessity require the acquisition of 19 lines of the system and authorized the purchase of the stock of the companies, also the acquisition and operation under trackage agreements of 5 lines and terminal companies. Authority was also given for the acquisition of control of the property leased by the Booneville Railroad Bridge Company to the Missouri, Kansas & Texas and by the Oklahoma Belt to Charles E. Schaff as receiver for that company, but action was deferred on the request for authority to acquire that property or the properties of the Missouri, Kansas & Texas Terminal Company of St. Louis. Authority was given for the issue of $52,942,752 of prior lien mortgage gold bonds, series A, $27,236,000 of prior lien bonds, series B, $29,121,347 of prior lien bonds, series C, of which $6,500,000 are to be pledged with the director general of railroads, and $57,500,000 of convertible adjustment mortgage gold bonds. The company is also authorized to issue $30,000,000 of 7 per cent preferred stock and such additional amount as may be necessary to effectuate the conversion of the convertible bonds, also 1,000,000 shares of common stock without par value. Commissioner Eastman dissented.

NEW YORK CENTRAL.—*New Director.*—W. P. Bliss has been elected a director to succeed A. T. Hardin, deceased.

STEWARTSTOWN.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to increase its capital stock from $100,000 to $200,000 to pay for some improvements and to pay off a small bond issue.

TIONESTA VALLEY.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for authority to abandon its line from a point near Brookston to a point near Nansen, Pa., 8¾ miles.

WICHITA FALLS & OKLAHOMA.—*Asks Authority to Issue Securities.*—The Wichita Falls & Oklahoma Railway has applied to the Interstate Commerce Commission for authority to issue $6,000 of capital stock and $109,000 of first mortgage gold bonds and the Wichita Falls & Oklahoma Railroad of Oklahoma has applied for authority to issue $7,500 of stock and $418,000 of first mortgage bonds. The Colorado & Southern has also applied for authority to purchase the stocks and bonds of the Railway company and to nominally issue its refunding and extension 4½ per cent gold bonds to the amount of $542,000 and to acquire control of the Oklahoma company by purchase of its stock.

WYANDOTTE TERMINAL.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized this company to issue $415,000 of common stock for the purpose of acquiring property formerly held under lease and additional property.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out or received from the several roads the following amounts:

Pittsburgh, Chartiers & Youghiogheny Railway Co.	$328,000
Ithaca Traction Corporation	8,000
Fort Street Union Depot Company	19,000
Hannibal Union Depot Company	10,000
Leavenworth Terminal Railway & Bridge Company paid Director General	2,500

Tentative Valuations

The Interstate Commerce Commission has issued tentative valuation reports, in which it finds the final value of property owned and used as follows:

		Owned	Used
Nevada County Narrow Gage	1916	$609,270	.....
Georgia Railroad	1916	15,209,360	$17,521,976
Akron Union Passenger Depot Company	1916	301,713	305,763
Mineral Point & Northern	1917	556,927	.....
Crittenden	1916	176,680	.....
Lexington Union Station Company	1917	776,498	.....

Treasury Payments to Railroads

Since last announcement, dated November 1, 1922, payments under Sections 204, 209, 210 and 212 of the Transportation Act, 1920, as amended, have been made by the Treasury as follows:

Section 204:	
Bloomsburg & Sullivan	$15,235
Bristol Railroad	729
Chicago Tunnel Company	22,747
Chicago Warehouse & Terminal Company	64,246
Frankfort & Cincinnati	7,551
La Salle & Bureau County Railroad	13,414
Madison Southern	5,953
Moshassuck Valley	9,224
San Joaquin & Eastern	53,741
Sterling Mountain	48,632
Wisconsin & Northern	2,224

Section 20	
Asheville & Craggy Mountain	1,224
Carolina & Tennessee Southern	4,435
Central New York Southern	15,277
Chicago Tunnel Company	16,813
Chicago Warehouse & Terminal Company	46,806
Cincinnati, Indianapolis & Western	282,081
Cumberland Railroad	15,828
Danville & Western	37,549
Durham & Southern	70,167
Frankfort & Cincinnati	152
Georgia, Florida & Alabama	15,450
Gulf & Ship Island	160,970
La Salle & Bureau County	375
Marion & Southern	2,924
San Antonio, Uvalde & Gulf	82,718
Washington & Choctaw	2,202
Wisconsin & Northern	45,867
Yadkin Railroad	11,008
Section 210	0
Section 212	0
Total	$1,055,542

Total payments to November 30, 1922—		
(a) Under Section 204, as amended by Section 212 for reimbursement of deficits during federal control:		
(1) Final payments, including partial payments previously made	$4,142,914	
(2) Partial payments to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	1,079,502	
Total payments a/c reimbursement of deficits		$5,222,416
(b) Under Section 209, as amended by Section 212 for guaranty in respect to railway operating income for first six months after federal control:		
(1) Final payments, including advances and partial payments previously made	$111,245,534	
(2) Advances to carriers as to which a certificate for final payments has not been received by the Treasury from the Interstate Commerce Commission	212,965,672	
(3) Partial payments to carriers as to which a certificate for final payment has not been received, as stated above	126,494,722	
Total payments account of said guaranty		450,705,928
(c) Under Section 210 for loans from the revolving fund of $300,000,000 therein provided		317,886,667
Total		$773,815,011

Repayments of loans have been made to the amount of $90,339,985.

Dividends Declared

Bangor & Aroostook.—Preferred, 1¾ per cent, quarterly; payable January 1 to holders of record December 15.

Beech Creek.—50 cents, quarterly; payable January 2 to holders of record December 15.

Buffalo & Susquehanna.—Common, 1¾ per cent, quarterly; common (special), $10; preferred, 2 per cent, semi-annually; all payable December 30 to holders of voting trust certificates of record December 15.

Fonda, Johnstown & Gloversville.—Preferred, 1½ per cent, quarterly; payable December 15 to holders of record December 5.

Illinois Central Leased Lines.—2 per cent, semi-annually; payable January 1 to holders of record December 11.

Lackawanna of New Jersey.—1 per cent, quarterly; payable January 2 to holders of record December 6.

Lehigh Valley.—Common, $0.87½, quarterly; preferred, $1.25, quarterly, both payable January 2 to holders of record December 9.

Minneapolis, St. Paul & Sault Ste. Marie.—Preferred and common, $2; payable December 28 to holders of record December 15.

Morris & Essex.—3¾ per cent, semi-annually; payable January 1 to holders of record December 9.

New York & Harlem.—Common and preferred, $2.50; payable January 2 to holders of record December 15.

New York, Lackawanna & Western.—$1.25, quarterly; payable January 2 to holders of record December 14.

New York, Philadelphia & Norfolk.—$3, payable December 31 to holders of record December 15.

Pittsburgh, Ft. Wayne & Chicago.—Common and preferred, 1¾ per cent, quarterly; payable January 2 to holders of record December 9.

Pittsburgh, McKeesport & Youghiogheny.—$1.50, semi-annually; payable January 2 to holders of record December 15.

Rensselaer & Saratoga.—$4, semi-annually; payable January 2 to holders of record December 14.

Rochester & Syracuse.—Preferred, $1, quarterly, payable December 15 to holders of record December 5.

Valley Railroad.—2½ per cent, semi-annually; payable January 2 to holders of record December 16.

Trend of Railway Stock and Bond Prices

	Dec. 5	Last Week	Last Year
Average price of 20 representative railway stocks	64.53	64.53	60.28
Average price of 20 representative railway bonds	85.19	84.44	81.88

Railway Officers

Executive

W. C. Ramsay has been appointed assistant to the president of the Oklahoma, New Mexico & Pacific and general manager of the St. Louis & Hannibal, with headquarters at Hannibal, Missouri.

P. J. Neff, division engineer of the St. Louis-San Francisco, with headquarters at Ft. Worth, Tex., has been appointed assistant to the president of the International-Great Northern, with headquarters at Houston, Tex.

Robert P. Jones, whose appointment as assistant to vice-president-accounting of the Seaboard Air Line with headquarters at Baltimore, Md., was announced in the *Railway Age* of November 11, page 917, was born on April 20, 1892, at Norfolk, Va. He attended grammar school and business college and entered railway service in 1907 as an office boy in the engineering department of the Virginian Railway. In 1909 and 1910 he was employed by the Southern Railway successively as collector, baggagemaster, freight receiver and assistant cashier at Norfolk and Portsmouth, Va. In 1910 he entered the service of the Seaboard Air Line and served successively in a number of various capacities, among which were assistant general bookkeeper, special accountant, principal assistant to the corporate comptroller (during federal control) and assistant general auditor, which last named position he assumed on March 1, 1920, and which he held until the time of his recent appointment as assistant to the vice-president. From September, 1917, to January, 1919, Mr. Jones was employed as cost accountant in the Ordnance Department, serving in the capacity of assistant supervisor and supervisor and during the latter part of his period he was in charge of the Pittsburgh district cost accounting branch.

R. P. Jones

Operating

I. P. DeWitt has been appointed superintendent of the Middletown & Unionville with headquarters at Middletown, N. Y.

J. W. Leyden has been promoted to trainmaster of the Chicago & North Western, with headquarters at Madison, Wis., succeeding L. Jutton, resigned to engage in other business.

J. L. Kendall, superintendent of the Memphis division of the Missouri Pacific, with headquarters at Wynne, Ark., has been transferred to the Missouri division, with headquarters at Poplar Bluff, Mo., and **A. A. Miller,** superintendent of the Missouri division, has been transferred to the Memphis division.

J. C. Goodfellow, terminal trainmaster of the Southern Pacific with headquarters at Los Angeles, Cal., has been transferred to the Tucson division, with headquarters at Yuma, Ariz. **J. J. Sullivan,** trainmaster of the Tucson division, has been transferred to terminal trainmaster at Los Angeles, succeeding Mr. Goodfellow.

W. R. Davidson, general superintendent of Western lines of the Grand Trunk, with headquarters at Chicago, has been transferred to the Eastern lines, with headquarters at Montreal, Que., succeeding **R. H. Fish**, who has been transferred to the Ontario lines, with headquarters at Toronto, Ont. Mr. Fish succeeds C. G. Bowker, whose promotion to operating manager of Lines East of the Detroit and St. Clair rivers was reported in the *Railway Age* of October 21, page 775. **J. A. Clancey**, superintendent of transportation at Chicago, has been transferred with the entire operating department of the Western lines in the United States to Detroit, Mich.

L. B. Allen, whose retirement as general manager of Eastern lines of the Chicago, Burlington & Quincy, with headquarters at Chicago, was reported in the *Railway Age* of December 2, entered railway service in 1885, as a messenger boy on the Chicago, Milwaukee & St. Paul at Austin, Minn. From 1886 to 1889 he served the same road as station clerk and clerk to the master car builder at Minneapolis, Minn. He was promoted to yard clerk and secretary to the superintendent of the Minneapolis Transfer Railway in 1889 and held this position until 1893, when he entered the transportation department of the Great Northern with headquarters at St. Paul, Minn. He was promoted to secretary to the general superintendent in 1896, and on November 15, 1898, was again promoted to assistant superintendent of the Fergus Falls division with headquarters at St. Cloud, Minn. He was promoted to superintendent of the Willmar division with headquarters at Willmar, Minn., on September 1, 1899, and was transferred to the Dakota division with headquarters at Larimore, N. D., on October 1, 1902. A year later he was appointed superintendent of the Cedar Rapids division of the Chicago, Rock Island & Pacific, with headquarters at Cedar Rapids, Ia., and on February 15, 1904, he was transferred to the Illinois division, with headquarters at Rock Island, Ill. On February 1, 1906, he was appointed superintendent of the Ottumwa division of the Chicago, Burlington & Quincy at Ottumwa, Ia. He was promoted to general superintendent of the Wyoming district, with headquarters at Alliance, Neb., on July 25, 1906, and he held this position until May 15, 1909, when he was transferred to the Iowa district with headquarters at Burlington, Ia. On September 1, 1910, he was again transferred to the Nebraska district with headquarters at Lincoln, Neb., and on June 1, 1915, was promoted to assistant general manager of Lines East with headquarters at Chicago. He was promoted to general manager of Lines East on September 1, 1907, and held this position until his recent retirement from service.

L. B. Allen

S. E. Miller, superintendent of transportation of the Boston & Maine, has been appointed superintendent of the Southern division, succeeding **H. C. Robinson**, retired. **W. H. Towne**, assistant superintendent of transportation, has been appointed superintendent of transportation. Mr. Robinson retires after 52 years of service. He has served consecutively as freight clerk, clerk to superintendent, passenger conductor, train dispatcher, chief dispatcher, assistant superintendent and superintendent. Mr. Miller entered the service of the Boston & Maine at Beverly, Mass., in 1899 as an operator. He has served the company in that capacity and as ticket agent, clerk and inspector of freight transportation.

H. Hulatt, manager of telegraph of the Grand Trunk, with headquarters at Montreal, Que., has resigned to accept an executive position with the Alexander Hamilton Institute. Mr. Hulatt was born on February 15, 1883, in London, England, and entered railway service in 1907 in the stores department of the Canadian Northern. In March, 1908, he was appointed private secretary to the manager of telegraph of the Grand Trunk Pacific at Winnipeg, Man., and in October, 1910, was promoted to chief assistant in the same office. He was promoted to superintendent of telegraph of the lines west of Fort William, Ont., in January, 1913, and served in this capacity until October, 1915, when he was promoted to manager of telegraph at Montreal, Que., which position he held at the time of his recent resignation.

H. D. Brown, whose promotion to superintendent of transportation of the Chicago, Burlington & Quincy, with headquarters at Chicago, Ill., was reported in the *Railway Age* of December 2, was born on May 10, 1882, at Atchison, Kan. He entered railway service as a call boy on the Chicago, Burlington & Quincy at St. Joseph, Mo., on March 1, 1898. Shortly after, he was promoted to yard clerk and subsequently to chief yard clerk with the same headquarters. He was a freight brakeman on the St. Joseph division for a short time and was then employed as a clerk in the office of the trainmaster. Later he was promoted to chief clerk in the office of the superintendent at St. Joseph, and served in this capacity until his promotion to assistant chief clerk to the general manager with headquarters at Omaha, Neb. He was promoted to trainmaster with the same headquarters on December 1, 1916. During the period of federal control he was a transportation inspector on the staff of the regional director of the Central Western region with headquarters at Chicago. He was promoted to transportation assistant to the regional director on November 1, 1919, and held this position until the end of federal control when he was appointed assistant superintendent of the McCook division with headquarters at Denver, Colo. He held this position until his recent promotion to superintendent of transportation at Chicago.

Financial, Legal and Accounting

Henry Wolf Biklé, whose appointment as general attorney of the Pennsylvania was announced in the *Railway Age* of November 25, page 1023, was born at Gettysburg, Pa., on October 20, 1877. He attended Gettysburg College, from which institution he received the degree of bachelor of arts in 1897 and of master of arts in 1900. In 1901 he received the degree of bachelor of laws from the University of Pennsylvania. Mr. Biklé entered the service of the Pennsylvania Railroad in 1907 as assistant general solicitor and held that position until July 1, 1916, when he was advanced to assistant general counsel. This latter position he held continuously until the time of his recent promotion except that during federal control he acted as assistant general solicitor of the Pennsylvania, Lines East, and as legal adviser to the traffic assistant for the Allegheny region, U. S. R. A. In addition to his connection with the Pennsylvania Railroad, Mr. Biklé has served on the faculty of the Law School of the University of Pennsylvania in the following capacities: from 1901 to 1908, lecturer in law; 1908 to 1913, assistant professor; and 1913 to date, professor of law. In this latter capacity Mr. Biklé is still serving, his courses being Constitutional Law and Law of Carriers.

H. W. Biklé

W. R. Durland has been appointed auditor of the Middletown & Unionville with headquarters at Middletown, N. Y., succeeding I. P. DeWitt, appointed superintendent.

Traffic

H. Allen, division freight agent of the Missouri, Kansas & Texas, with headquarters at Tulsa, Okla., has been promoted to assistant general freight agent, with headquarters at St. Louis, Mo.

L. F. Kemper, general agent of the Louisville & Nashville, with headquarters at Pittsburgh, Pa., has been transferred to Cincinnati, Ohio, succeeding E. T. Arnold, deceased. **E. L. Blandford** has been appointed general agent, with headquarters at Pittsburgh, succeeding L. F. Kemper.

R. C. Kerr, local freight agent of the Chicago & North Western at Milwaukee, Wis., has been promoted to general agent of the freight department in the same city, succeeding C. Thompson, deceased. **E. P. Rueter,** city passenger agent at Milwaukee, has been promoted to general agent of the passenger department with the same headquarters, also succeeding Mr. Thompson, who served as general agent of both freight and passenger departments.

Edwin N. Todd, whose appointment as freight traffic manager of the Canadian Pacific was announced in the *Railway Age* of November 18, page 965, was born at Huntingdon, Que., on October 17, 1879, and was educated at Huntingdon Academy and Montreal Business College. He entered railway service in May, 1896, as a junior clerk and stenographer in the foreign freight department at Montreal. In 1898 he was advanced to import clerk and served in that capacity at Montreal and at West St. John. In June, 1903, he became a contracting clerk in the office of the assistant freight traffic manager at Toronto. In May of the following year he was advanced to contracting freight agent in the foreign freight department at Toronto. He was promoted to assistant export and import freight agent with the same headquarters in May, 1905, and remained in that position until January, 1909, when he became export freight agent at Montreal. In September, 1911, he was appointed division freight agent at Montreal and, in September, 1915, was advanced to general freight agent. He was appointed general foreign freight agent in March, 1919, and served in that capacity until the time of his recent promotion to freight traffic manager.

E. N. Todd

E. M. Kain, general agent of the Erie, with headquarters at Buffalo, N. Y., has been appointed general freight agent, with the same headquarters. **W. R. Dusenbark,** general agent, with headquarters at Akron, Ohio, has had his jurisdiction extended over freight traffic in the Chicago region between Kent, Ohio, and Mansfield. **A. R. Tennis,** division freight agent, with headquarters at Marion, Ohio, has been assigned to the district from Mansfield, Ohio, to Kings Creek. **J. H. Hackett,** division freight agent, with headquarters at Huntington, Ind., has been assigned to the territory between Espyville, Ohio, and Saxony, Ind. **E. J. Brattain,** division freight agent, with headquarters at Dayton, Ohio, has been assigned to the territory between Urbana, Ohio, and Dayton. **L. Enos,** division passenger agent, with headquarters at Mansfield, Ohio, has been assigned to the territory between Kent, Ohio, and Dayton. **L. B. Smith,** division passenger agent, with headquarters at Huntington, Ind., has been assigned to the territory between Hammond, Ind., and Marion, Ohio. **M. P. O'Brien,** milk and live stock agent, with headquarters at Chicago, has been assigned to the territory between Chicago and Kent, Ohio, and between Marion, Ohio, and Dayton

Mechanical

G. T. DePue, mechanical superintendent of the Ohio region of the Erie, with headquarters at Youngstown, Ohio, has been transferred to the Chicago region, with headquarters at Chicago, Ill.

D. Davis, assistant master mechanic of the Lehigh Valley with headquarters at Easton, Pa., has been promoted to master mechanic with headquarters at Coxton, Pa., succeeding W. B. Woolever, resigned.

W. S. Tasker, general foreman of shops on the Atchison, Topeka & Santa Fe at Clovis, N. M., has been promoted to master mechanic of the Panhandle division, with headquarters at Wellington, Kan., succeeding **A. Dinan,** who has retired on pension.

Engineering, Maintenance of Way and Signaling

F. G. Jonah, chief engineer of the St. Louis-San Francisco, with headquarters at St. Louis, Mo., has been appointed assistant to the president and chief engineer in charge of engineering, maintenance and construction, with the same headquarters.

F. G. Swofford, trainmaster of the New York Central, with headquarters at Gibson, Lake County, Ind., has been appointed superintendent of telegraph on the Indiana Harbor Belt Railway and assistant superintendent of telegraph on the Illinois division of the New York Central, succeeding W. L. Connelly, deceased.

Special

Edgar J. McClees, secretary of the Bureau of Information of Eastern Railways, has been appointed secretary in charge of the bureau, succeeding J. G. Walber. Mr. McClees was born on March 31, 1875, at Philadelphia, Pa., and attended public school in that state. He entered railway service on September 15, 1890, as telegraph operator and extra agent on the Philadelphia division of the Pennsylvania Railroad. In 1897 he was transferred to telegraph operator in the office of the superintendent at Philadelphia and in 1904 was advanced in the same capacity to the general office of the company. In 1910 he was appointed clerk on wage matters in the office of the superintendent of telegraph, the superintendent of telegraph being at that time chairman of the general managers' labor board. In 1912 he was assigned to special duties with the Conference Committee of Managers of Eastern Railroads and in 1914 was advanced to chief clerk of the Bureau of Information of Eastern Railways. In 1918 he was appointed assistant secretary of the bureau and served also as chief of the wage bureau of the Eastern Region of the Railroad Administration. In 1921 he became secretary of the Bureau of Information of Eastern Railways and held that position until his advancement to the position of secretary in charge.

E. J. McClees

Obituary

E. C. Arnold, general agent of the Louisville & Nashville, with headquarters at Cincinnati, Ohio, died on November 24.

W. Queenan, assistant superintendent of shops of the Chicago, Burlington & Quincy with headquarters at Aurora, Ill., died November 28 after a short illness.

Difficulty in Changing Shop Methods

Science, art and industry are in a continual process of change and development, and yet man is so much a creature of habit that he often unconsciously resists changes vital to his best interests. Perhaps this explains why in many railroad shops, new machines or methods of doing the work are introduced only with great difficulty and after unnecessarily long test periods. In some cases it is difficult to get new methods tried at all, and doubtless railroad shop operation is not now on as efficient a basis as it would be if shop executives and men as a whole kept in closer touch with modern industrial shop methods, adopting those best suited to railroad conditions and needs. All too often, satisfaction with a given process because it has always been done that way is a sign of indifference and laziness, pure and simple. The argument that it is best to leave well enough alone applies occasionally, but it can be greatly overworked. When used as a justification for resisting all changes and improvements in methods, it means mental stagnation and decay on the part of men holding it, and loss of money to their employers. One of the practical things which higher mechanical department officers can do to improve shop and roundhouse operation is to instill in their subordinates the idea that present shop methods are by no means perfect and a continual effort should be made to improve them. If shop foremen, for example, once get this idea and are encouraged to read technical papers and visit other shops, both railroad and industrial, where efficient operation obtains, the results in improved operation of railroad shops will be immediately noticeable.

The Next Step to Consider

In a recent issue of the *Railway Age* appeared an editorial entitled "The Water Supply and Traffic Movement." As readers may recollect, this editorial referred to the extraordinary demands which are now being made and which will continue to be made for some time upon railroads of the country for transportation service. It dwelt upon the relation borne by the water supply to this situation. It referred to the responsibility resting upon all officers engaged in or having jurisdiction over water service so to adjust all operations and practices in this department as will contribute most effectively to the unobstructed movement of cars, and finally it enumerated typical operations and practices warranting investigations directed to this end. But what does it avail to devote consideration to this factor in transportation if no agency exists which can be depended upon to put any findings made into effect? This observation brings us to the next step to consider, namely, the importance of having a water service organization. Mention has been made to the responsibility of officers engaged in or having jurisdiction over water service. As a matter of fact, on those roads upon which, generally speaking, water service warrants particular investigation at this time, there are no such officers, in the proper conception of the term. On many roads the water supply rather than being the primary function of some one officer or officers is only the incidental concern of not only several officers, but of several departments. For instance, it often happens that the engineering department is found effecting a change entirely out of harmony with the immediate interests of the mechanical and operating departments and vice versa, or the operating department is found establishing a practice inconsistent with the best interests of either. As a result, what is everybody's business is made nobody's, and the water supply, though the management may not be aware of it, does not function as it should and could if properly handled. Admittedly, it can be handled in the unorganized way which is typical of many roads, but in the interests of transportation it ought to be the special function of a water service organization.

The "Main Tracker" Expedites Movement

One of the objections which has been raised most frequently against the practice of classifying trains for movement through intermediate terminals without break-up is that it delays the cars so classified. In arriving at this conclusion consideration is given only to the originating terminal. It is evident that cars must be held longer at this point if trains are to be made up for a number of terminals than if they are grouped only for the next terminal and are forwarded as soon as there are a sufficient number to make a train. In raising this objection no thought is given to the time which is saved by keeping cars out of the intermediate yards. If a train can be moved through a terminal with only the minimum inspection and the changing of locomotives and cabooses and without breaking it up, it can proceed on its way with relatively little delay, whereas if it is necessary to break it up it is the common experience that the average delay to cars exceeds eight to ten hours. In general, on a line of fairly heavy traffic, any delay in the originating terminal is made up at the first terminal outside and the saving in time at other terminals is a net gain. That this practice expedites rather than delays traffic has been demonstrated on those roads which have applied this method systematically. One road which has specialized on the grouping of trains operating between large centers has found that the reduction of delays in the intermediate yards has enabled these schedules to be shortened as much as 24 hours in some cases, while at the same time it has been possible to add to the tonnage of these trains. From a competitive standpoint, this practice has enabled this road to secure business from other lines which are not able to make deliveries with the same regularity. This improvement in service was effected over and above a saving of one and a half million dollars in operating expenses in the first year it was in effect.

Give the Desk Man a Chance

Commissioner Meyer recently called attention to the fact that one man out of every eight in railway service is a clerk and to this class may be added others whose work keeps them in the office, so that an even greater proportion are denied the broadening influence of a physical contact with the real business of transportation. It has often been said that the desk man is more susceptible to dry rot or petrification than the one who rides on trains or who is directly concerned with the maintenance of cars and locomotives or the tracks on which they run; there is no denying that this barrier between the

man at the desk and the real business of the company which employs him not only decreases his efficiency for the work in which he is directly employed, but curtails his opportunity for advancement. This condition may be overcome at least in part by affording the office man some measure of opportunity to see railroading first hand. A train dispatcher who rides over the division is not only afforded a chance to see what a train is "up against" in moving from "A" to "B", but he will probably get an "earfull" from a conductor or two which will provide him with ample food for thought, granting, of course, that it must be taken with several grains of salt. An agent directing a large city ticket office, handling a heavy coupon ticket business, recently testified to the increased efficiency of a young woman on the staff who obtained a first-hand knowledge of the more popular vacation trips by taking the tours herself as opportunity afforded. Another group, whose work may well be benefited by direct contact with the physical facts, includes the auditor of capital expenditures and his staff; this was recently exemplified in a tour of inspection made by an auditor and a chief clerk over a section of heavy second-track construction accompanied by the engineer in charge. These men went back to the office with a better knowledge of the physical significance of the expenditures with which they were dealing that will pay the railroad many times over for the time and traveling expenses incurred while on the line. The fact that a recent list of appointments to important operating positions on one railroad included the names of two men whose training had been primarily clerical testifies to the ability of the office man to demonstrate his merits if he is given the chance.

The Future of the Irish Railways

The commission appointed by the Irish provisonal government to study the railway situation has recommended government ownership. These railways are at present operated by 28 companies and have 3,500 miles of line. The railways were released from government control on April 15, 1921, and immediately found themselves faced with a serious labor problem, arising out of the dissatisfaction of the employees with wages and working conditions. Arbitration was resorted to but the employees were not satisfied with the result. The commission of inquiry was then appointed to try to find a solution of the labor problem and, in general, to design a workable plan for the future operation of the railways. The commission's report recommends the acquisition of the properties by the government, payment to be made in bonds rather than in cash; the operation of the railways by a board of eight members—one an experienced railway officer, four representing industry and trade, two representing labor and one representing the Irish treasury; and the setting up of sectional conciliation councils, a general railway council and a general conciliation board to deal with labor disputes. The Irish railways under private ownership have been in a most unfortunate position since the war. Wages have increased 300 per cent and prices of material and supplies have increased tremendously. On the other hand, water competition is severe, with most important producing centers located on the sea or navigable rivers. The advantages of centralized ownership and operation by the government are enumerated as: (1) The saving in supervisory personnel, (2) the co-ordination of the services to avoid duplication, (3) standardization of equipment, and (4) the purchasing of supplies in larger quantities. It is thought that the management by a board rather than by a cabinet minister will remove the roads from political control. Acquisition by the government seems to be the lot of railways the world over when they are so unfortunate as not to be able to pay high wages to their employees, offer low rates to shippers and pay dividends sufficiently attractive to bring needed new capital into the enterprise. There seems to be no reason, however, why a combination of properties could not be brought about in Ireland as in England without government ownership and operation. The advantage of private initiative could then be retained together with any benefits which might arise from unified operation.

How Much Surprise Testing Do You Do?

How often must a surprise test be made, for any given engineman, in order to afford reasonable assurance that his propensity to let his mind wander is being thwarted as thoroughly as possible? That is to say, as thoroughly as is possible by means of surprise checking. A speaker at the last convention of the signal engineers, in New York City, said that on his road each trainmaster is required to make 30 surprise tests a month. If a trainmaster has 90 enginemen that means on the average one test for each runner every three months. So far as the signal engineer is concerned, many of the tests included in most surprise schemes have no definite value. Practically all that he cares to know is that the engineman is vigilant at distant signals. If we exclude all tests but those at distant block signals, it is probable, on any road, that most enginemen are tested by the trainmaster less frequently than once in three months. Is not that spreading the tests out pretty thin? Even if a "test" means an eight-hour tour, in which surprises are sprung on as many enginemen as practicable, the adequacy of the program, as regards frequency, still remains questionable. A very practical question for every trainmaster is, How many men should I employ to assist me in this part of my work? Or, to put it in the way that the question first appeals to his mind, how many men can I afford to employ? How many will the general superintendent approve? The speaker to whom we referred believed it to be, probably, impossible for the superintendent of runners traversing 100 or 200 miles of line to enforce the high degree of vigilance in signal observance that prevails on the Interborough Rapid Transit Company's lines (where any runner can be interviewed every few hours and where all block sections are less than 1,000 ft. long); and that may be so. It is certain that the runner who aims to discipline himself finds the task much easier where block sections are short and of uniform length. It would be very interesting, however, to have a direct statement from any superintendent who will deliberately aver that he has done everything that can be done to imitate the discipline of the subway lines.

Increase Miles Per Hour by Decreasing Delays

The prime object of transportation is to remove the barrier which distance imposes on commerce. Second only to this is the conservation of time. The importance of this second element has always been recognized in passenger service but it is only within recent years that any adequate consideration has been given to it in the case of freight train movement. For many years the ton-miles per trip, which is only another way of saying the tons per train, was considered an adequate measure of freight train performance. There is now a growing appreciation that the time consumed in making this trip must also be given some consideration and ton-miles per train hour is coming into use as a measure of freight train performance. This unit carries with it the suggestion that tonnage and time are opposing factors in the ratio and that if less tonnage means less time there might be a possibility of increasing the value of the ratio by decreasing the train load. Considerable light is thrown on this question by a series of tests conducted on the Illinois Central during the

Railroad Administration operation, an account of which will be found on another page in this issue. In the light of these tests the ton-mile per train-hour ratio seems to be a satisfactory measure not only of the amount of transportation per train unit but also of the efficiency with which it is rendered. The tests indicate, however, that the operation of light trains generally does not permit a sufficient decrease in time between terminals to increase the ton-miles per train hour because of the disturbing effect of delays, which were found to be the largest single factor in the equation. This gives emphasis to the importance of eliminating delay in order that the economy of operation as well as the capacity of the line may be increased. The elimination of delays requires the utmost care in every feature of train operation, but the dispatching and spacing of trains is the factor which probably affects the results most directly. Where excessive delays are constantly encountered it no doubt indicates a need for additional track facilities. But even in this case the best utilization of any additional facilities that may be secured, will only be obtained by the utmost skill in dispatching. The ideal conditions would be a scheduled operation which did not vary from day to day, thus making possible a 100 per cent utilization of carefully located passing tracks. Of course, no such operation can be obtained, but is there not a possibility that it may be much more closely approximated than it now is, by the establishment of fixed times for dispatching freight trains with time intervals based on the requirements of the maximum traffic, some of which may be cancelled without disturbing the others, when less trains are required? Some such methods of scheduling have already been tried on several railroads with marked success in the reduction of delays.

Developing Efficient Shop Employees

In the *Railway Age* for December 9, the Human Problems of the Mechanical Department were discussed and several suggestions were made as to what the Mechanical Division might do regarding the training of foremen. The question of the foremen is a big one, yet it is only a part of the labor problem in the mechanical department. Settling the strike has enabled many railroads to obtain their full quota of mechanics. But the individual efficiency of the employees is far more important than the number of men in the shop. The strike settlement did not automatically make efficient mechanics of the new employees and it did not remove the principal causes of labor unrest.

During the past few months shop organizations have been completely disrupted and it will take a long time to build them up again. The forces must be reorganized and while the railroads have the opportunity they should see that the forces are put on a better basis than before. There is a tendency to place the entire responsibility for training men upon the foreman. This is a mistake because the foreman already has too many duties. The railroads need to take more definite measures to train the men in the various crafts. Some railroad officers will, no doubt, say that on their roads apprentice courses are maintained for training competent mechanics. This is fine if apprenticeship really means more than time-serving, but how many competent all-round mechanics have come out of the apprentice courses in recent years? How can apprentice training be utilized in educating the many new men now in the shops? Training methods should be developed that will improve present conditions and that will be suitable to insure a sufficient number of competent mechanics under conditions that may be expected in the immediate future. Is apprenticeship impracticable under present conditions? Some roads maintain that the only salvation for the shops and roundhouses lies in the development of specialists but, on the other hand, at some shops there is a waiting list of high-school graduates who have applied for admission to the apprentice courses.

No doubt a great deal of labor trouble could be avoided if railroad managements would deliberately pay more attention to keeping the employees interested and contented. There is a tendency in some quarters to regard this merely as a question of wages. As a matter of fact, it goes far deeper into the life of the workman. The average employee has an ambition to get ahead in the world; he cannot be satisfied without the consciousness of progress or the anticipation of increased future rewards. No doubt the reason why many men put their loyalty to the union before their loyalty to the company was because they believed the only prospect for larger income lay in the union's program. This indicates the necessity for providing graduated wage scales, piecework and bonus systems, or other incentives for the employees.

Another cause of discontent among the shop men is the belief, carefully fostered by the labor leaders, that railroad profits are unreasonably large and that the wage earners are not getting a fair share of the gross revenues. The campaign of misrepresentation has led to shirking, sabotage and strikes. It still threatens to undermine the organization. We read with amazement of the workmen breaking the first machinery that was built to increase production. Production at the present is not entirely dependent on machinery; it depends fully as much on organized effort. Today the unions are deliberately trying to break down the organizations on which production depends and are setting up friction which keeps them from functioning, yet practically nothing is done to counteract this.

The work of establishing a proper understanding among railroad employees should not be left entirely or mainly to public relations or labor specialists. The local officers should be made to understand that technical skill is only a part of their equipment; that an understanding of the human problem is of equal, or even greater, importance; that they should study carefully every condition which leads to discontent and thereby reduces production. The results obtained in shops still depends quite as much on personnel and organization as on facilities. No one can deny that the personnel problem is and will continue to be one of the most important factors in shop management and shop production. It is one of the outstanding problems and is so big and vital that the Mechanical Division cannot afford to ignore it. The question demands immediate and thorough consideration; this is another reason why the Mechanical Division should not fail to hold a real convention next year.

"Salesmanship in Transportation"

The railways of the country might well publish and send to every employee who sells passenger tickets the address on "Salesmanship in Transportation" delivered by C. A. Cairns, passenger traffic manager of the Chicago & North Western Railway, at the annual convention of the American Association of Railroad Ticket Agents at Savannah, Georgia, on November 13. We publish most of Mr. Cairns' address elsewhere in this issue.

A very large part of all the people in the country buy passenger tickets every year. This is the only form of direct dealing with the railroads that most of them ever have. They have to give their tickets to the conductor but the conductors do not sell them anything. As Mr. Cairns points out, the ticket agent is a railroad salesman in exactly the same sense that a clerk in a store is a salesman. For the benefit of his employer the ticket agent should show the utmost courtesy to every customer and appreciation of the business the customer is giving to the railroad. He should

be so thoroughly informed regarding his goods, which consist of trips on railways throughout the United States, that he can promptly give to the customer all the information he desires. The salesman who does not know his goods and how to present their merits attractively is a poor salesman.

Mr. Cairns' address shows plainly that he knows most railroad ticket agents are poor salesmen. Everybody who has frequent occasion to buy tickets knows this. The average railway ticket agent is quite as well paid as the average clerk in a store but the average ticket agent does not greet his customer with the cordiality that the store salesman does; he is more likely to show ignorance of what he is trying to sell and he is more likely to treat the customer contemptuously if the customer shows ignorance about what he is trying to buy. A chilly attitude, curtness in speech and other characteristics never shown by salesmen are shown by a large majority of railway ticket agents. How many ticket agents ever even say "Good morning" in greeting a customer, or "Thank you," when they take the customer's money? Extremely few.

Mr. Cairns related the incident of a railroad that required its ticket clerks to keep a tally over a period of ten days of the number of the total prospective travelers who called. Subsequent comparison of the total prospects with the total sales made revealed a most unsatisfactory situation. A contest was then started among the ticket agents with prizes for increased sales, and the result was a large increase in the number of sales. The principal point of this story seems to be that the kind of ticket salesmen a railway will have will depend upon what efforts the management makes to develop ticket salesmen. The same thing is true of selling in every branch of the railroad business. Whether a railroad and its service will in the long run be sold right to its customers will depend mainly upon the efforts that the management makes to select the right kind of men to deal with the public, to teach them how to deal with it and to check up on their work to make sure that they are dealing with it right.

While Mr. Cairns' address dealt chiefly with salesmanship in the passenger department, most of it is of much broader application, and it may be read and pondered with profit by officers and employees in every branch of the business.

The Proposed National Transportation Institute

THE ESTABLISHMENT of a "National Transportation Institute" was advocated in addresses made at a dinner in Chicago last week by men representing three different points of view. Those making the addresses were Representative Sidney Anderson, chairman of the Joint Commission of Agricultural Inquiry of Congress, James R. Howard, president, and C. B. Hutchings, transportation manager, of the American Farm Bureau Federation, and Bird M. Robinson, the president of the American Short Line Railroad Association.

The idea of the need for such an organization was an outgrowth of the work of the Joint Commission of Agricultural Inquiry. This body made a remarkably thorough investigation of the relationship of transportation to agriculture and industry. It found it impossible to get a great deal of the information that it wanted. It also found, however, that when the facts regarding any particular situation could be ascertained it was comparatively easy to get men representing diverse interests to agree on the conclusions to be drawn from these facts.

The proposed National Transportation Institute would be supported by and would represent the large agricultural, manufacturing, mining, banking and transportation organizations of the country. It would have a twofold purpose. The first of these would be to investigate and ascertain the facts regarding the relationship of railway rates and service to agriculture, to manufacturing, to mining and to the general public interest. Its second purpose would be to disseminate the information gathered and the conclusions reached among all special interests and the general public in order to form and maintain a sound public opinion regarding transportation matters.

The desirability of accomplishing the objects mentioned is plain. There is no other industry in this country which has been investigated so much and scrutinized so closely by public officials as the railroad business. There is no other industry regarding which so much information is available to those who really want it. The widespread prevalence of misinformation about the railroad business is chiefly due to misrepresentations of it by persons who have deliberately misstated the facts and by persons who have ignorantly repeated these deliberate misstatements. There is, however, a great deal of information not readily available which an institute such as that suggested could collect and make more readily available. But the most valuable function it could perform would be that of disseminating correct information with an authority that would cause it to be accepted by, and through channels and in ways that would cause it to reach all classes of people in all parts of the country.

If, however, such an organization were to accomplish anything that cannot be accomplished through existing organizations one thing would be prerequisite. This would be that it should represent and be supported by the agricultural, industrial and financial interests as well as by the transportation interests. If most of the money for its support were furnished by the railways the information given out and the conclusions stated by it regarding railroad matters would be discounted by many people to as great an extent as these same people now discount information given out and conclusions stated by organizations or persons representing the railroads. The first and most practical question to be raised regarding the proposed organization, therefore, is whether it can enlist the confidence and support of farmers' and business men's organizations. If it can the railways will be justified in giving it their reasonable share of the support it will need. If it cannot first command confidence and support from other interests, the railroads had as well have nothing to do with it.

A transportation institute which did not represent and receive its support ratably from and command the confidence of both those who buy and those who sell transportation service, but which was supported mainly or entirely by the railroads, would merely duplicate the work and expense of existing railroad organizations of high character, such as the Bureau of Railway Economics.

Do the business men and farmers of the country really want to know the facts about the transportation industry and about the relationship of its rates and service to other industries? Do they really want the facts disseminated among the public, and the public's policy of dealing with transportation agencies based upon the facts? Do they really believe that a fair and sound policy on the part of the government in dealing with transportation problems would be beneficial to all concerned? If they do, will they show their belief by indicating their willingness to give material as well as moral support to a proposed institute whose creation is endorsed and advocated by men so entirely removed from railroad influence as Mr. Anderson, who is chairman of the House Committee on Agriculture, and Mr. Howard the head of the largest farmers' organization in the country?

The railroads might well give their support to such an organization along with other special interests, because the railroads have everything to gain and nothing to lose by having the actual facts regarding them more thoroughly investigated and more widely disseminated.

The Standardization of Lumber

THE PURCHASER of lumber is at a marked disadvantage as compared with the buyer of steel because of the much greater variability of the product. The basic reason for this lies in the fact that the lumber manufacturers simply cut into workable shape and sizes a product otherwise entirely finished by nature, while the steel maker has almost complete control of the quality as well as the size and shape of the product. Because nature produces timber in infinite variety as to density and strength with an unending variation as to natural defects, no two pieces of finished lumber can be exactly alike. Furthermore, the common implements for reducing timber to finished lumber, namely, the saw and the planer, function through the reduction of a considerable portion of the material to sawdust and chips. This affects the sizes of the finished material with the result that a so-called "two by four" is rarely, if ever, two inches thick by four inches wide. Steel and iron have fixed specific gravities. Consequently, they are readily sold by weight, but the specific gravity of lumber varies with the species, the rate of growth and the water content, making it necessary to sell wood by volume, that is, by designating a given number of pieces of a specific size and length. This has led the unscrupulous dealer to depart even further from nominal sizes than is necessary because of the limitations of manufacture.

Efforts have been made from time to time by organizations of both the users and the producers of lumber to effect some measure of standardization which would correct some of the obstacles which beset the lumber buyer. However, owing to the fact that the industry covers widely separated territories with more or less diversified interests, the standards which have been set up are limited in their scope to the specific species of timber, consequently the grading rules established for one kind of lumber differ widely from those set up for competing species produced in other portions of the country.

It is in an effort to effect a further standardization of lumber practices that a movement has been started through the agency of the United States Department of Commerce under the leadership of Herbert Hoover. Actually, the efforts are being directed through a voluntary organization in the lumber industry, representing the manufacturers, wholesales and retailers. The Department of Commerce is a party to this project only insofar as it can be of assistance to the representatives of the industry in carrying out the work. Thus far, the deliberations of the committee are still in a preliminary stage and involve a determination of the degree of standardization to be attempted, the drafting of tentative specifications and rules and a thorough discussion of all the questions involved to insure a thorough understanding of the effects of any changes on the various interests concerned.

The progress being made indicates that the work will resolve itself into a simplification of grades, the standardization of sizes and the specification of quality and quantity through the branding of the lumber, the carding of cars and organized inspection. This development is of vital interest to the railroads because of the large amount of lumber that they consume, not only as direct purchasers but in the awarding of contracts for construction work involving the use of lumber bought by others. The movement will also accrue to the advantage of every lumber manufacturer and dealer whose business is founded on square dealing.

AMERICAN CITIZENS coming from Europe and landing at Quebec numbered in the month of September more than 4,000; and thus far during the present year passengers bound for the United States landing at Quebec totaled 16,841 which is more than 50 per cent above the number recorded for the corresponding period of 1921.

New Books

A Selection of Cases Under the Interstate Commerce Act. Second Edition. Edited by Felix Frankfurter, Byrne Professor of Administrative Law in Harvard University. 789 Pages. Size 6½ in. by 9½ in. Bound in cloth. Published by Harvard University Press, Cambridge, Mass.

This book brings up to date the first edition published in 1915. The preface to the former edition contained a statement that the selection of cases included in the volume had been prepared for use in the Harvard Law School. Presumably the second edition is primarily intended for law school students, a factor which, incidentally, rather has a tendency to emphasize how important a factor in legal and judiciary activity the law dealing with public regulation has long since become.

The book, of course, has a value considerably outside of that intended for the law school student who is studying the law relating to railroad or public utility regulation or for the member of a legal department of a railroad. Other railroad men frequently have reason to look up the law relative to federal railroad regulation, and a book of this kind —presuming that the outstanding and more interesting cases are included—would prove of considerable value as a book of reference.

The editor of the volume has included only the decisions themselves; there are no notations or comments on the decisions. The cases are arranged under four divisions, each divided into sub-divisions. They are: I Scope of Commerce Regulated by the Act, subdivided under (1) kinds of carriers, (2) kinds of commerce and (3) "railroad" and transportation; II Duties of Carrier Under the Act, subdivided under (1) services to be rendered, (2) equality of service and (3) maintenance of competition; III Functions of the Interstate Commerce Commission in the enforcement of the Act, subdivided under (1) constitutionality and (2) powers and duties. The fourth section, headed, Function of Courts in the Enforcement of the Act, is divided into (1) primary jurisdiction of the commission, (2) Judicial review and (3) proceedings for enforcement. The cases are almost entirely decisions of the United States Supreme Court, with the exception of the larger part of the third section, which consists of decisions of the Interstate Commerce Commission itself. Included among the decisions are a number of such as the Western Rate Advance Case, the Fifteen Per Cent Case, Increased Rates, 1920, etc.

Inasmuch as the book is a compilation of cases only, it seems hardly necessary to enlarge upon the manner of formulation or the importance of the principles which are embodied in the Interstate Commerce Act and the many court decisions relative to it. It is presumably generally enough understood that the law on the subject is to be found not only in the various acts themselves but also in the long series of decisions in the courts which have guided the workings of the legislative enactments and in truth the formulation of many of the things now contained in the legislation.

Sampling and Analysis of Pig Iron. By the Chemists' Committee of the United States Steel Corporation. 40 pages, 6 in. by 9 in., bound in paper. Published by the Carnegie Steel Company, Pittsburgh, Pa.

This book describes the accepted and approved methods used by the chemists of the constituent companies of the United States Steel Corporation for the sampling and analysis of pig iron, which have been revised to include the latest practices. The work is not only authoritative, but it is also very complete. In addition to methods for determining the more common elements, the determination of titanium and of copper are described.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

The Shipper Needs Information

Chicago.

To the Editor:

I have noted with a considerable degree of interest the article of Winthrop Martin in your issue of November 18. It seems surprising that an article of this type was able to overcome the rather conservative barriers of the *Railway Age*. However, as it no doubt represents the typical views of a large class of shippers, its publication may be of value in presenting in organized form the views of a disgruntled patron of the railroads.

In the first place this article represents the trend of the times—that trend so aptly expressed in the results of the late election. It represents an opinion, formed from personal contact, and with no further effort being made to ferret out causes, or to determine the reasons for conditions complained of. "That the conditions exist is sufficient," argues Mr. Martin. "Let's change them." No thought apparently is given to changing the causes.

Mr. Martin was not always handicapped thus. Perhaps he can remember the time when the Interstate Commerce Commission did not exist. Perhaps he can remember when the commodity tariff file consisted of letters from the general freight agent telling the forwarding agent to apply a certain rate, a rate that was often very agreeable to the shipper and would help him to develop his business. In those days, Mr. Martin would have no difficulty in obtaining any desired rate.

Another thing, has Mr. Martin ever wondered why "an auditor may drag an item from a mildewed file and an outraged law department may come roaring after me for the difference involved?" Has he ever speculated on the expense involved in maintaining that audit office and that high priced legal department? Does he think a carrier, as a business institution, could spend fifty dollars to collect an undercharge of fifty cents, unless it was compelled to? And who compels it? Why, Mr. Martin, himself, and his fellow shippers, through their regulatory measures, passed by their representatives in Congress, interpreted by the Interstate Commerce Commission and enforced by the courts. While a carrier must collect every cent due it by every means possible regardless of cost, until the item proves absolutely uncollectible, a business concern that is able to conduct its business unhampered by regulation would charge it to profit and loss if the expense and trouble were in excess of the benefit. Mr. Martin won't permit a railroad to do this. Its bills must be revised and checked until no chance for an error remains for fear he, himself, or his friends might be discriminated against.

While it is true that tariffs and rules are complicated and while railroad men have an "excessive passion for being on the safe side," what is the reason? Did Mr. Martin ever read the Interstate Commerce Act or the Transportation Act and has he ever taken the time to find out to what minute detail the provisions of these laws have been applied to railway practices? Let him read some of the conference rulings of the Interstate Commerce Commission if he wishes to find out why tariffs are complicated or have him review some of the court decisions based on the various regulatory acts if he has a real desire to find out why a railroad employee has "an excessive passion for being on the safe side." Mr. Martin and his fellow shippers have, through their agents, the Congress of the United States and the various state legislatures, ordered the carriers to be on the safe side. Why should he complain if his demands are lived up to?

Then, there's the cause for the numerous overcharges and undercharges. Here we meet again the same situation that prevented the rate being quoted right in the first place—the complexity of the tariffs. In his fear of being discriminated against, Mr. Martin has forced the carriers to go into such details and finesse in the application of their rates and regulations that, owing to the deficiency in the power of the English language to make a statement understandable, the rule or rate is often interpreted differently by every railway official or employee who attempts to apply it.

Mr. Martin complains about the delay in settling claims. Doesn't he know that he has forbidden a railroad to settle a claim without making a thorough investigation of its merits? To do so would be a violation of a law that he ordered passed. Why complain then of the delay, for it takes time to investigate such causes in such an extended organization as a railway company.

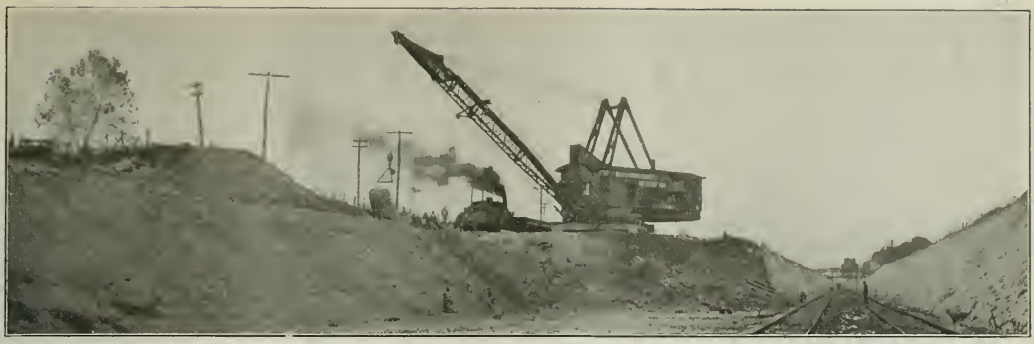
Space forbids going into the other subjects covered by Mr. Martin's article. It is quite evident that they are discussed by him only after a cursory examination of actual conditions or of conditions that exist at one station. But there is one message that his conclusions can convey. It can best be presented by a personal reference. In my ten years of intense reading and study of the transportation business, I have seen innumerable statements that the railroads were being overregulated and if let alone would work out their own salvation. I have read dozens of "panaceas" and "solutions" of the railway problem, but I have never yet seen in public print a concrete explanation or a concrete instance of overregulation. No one has ever taken the trouble to show by definite cases, for the understanding of shippers and railway employees, how railway operations are hampered by regulation. Everyone who speaks or writes an article on the subject seems to take it for granted that specific instances can be found only in the proceedings of investigation committees or in the personal experiences of officers and employees.

What is the result? First, we have the antagonistic attitude of a certain number of shippers as is typified by the article of Mr. Martin, who blame the carriers for conditions when in reality the two causes are something in which the carriers have no control—over-regulation in this case. Second, we have the lethargy of railway employees in seeking the true causes of conditions complained of. They are unable to understand the application of a general statement unless concrete cases come under their observation.

In the first case a little explanation would perhaps change a hostile shipper to a friend of the carrier, but because the employee is unable to explain, due to his ignorance of the true causes of the conditions complained of, he either agrees with the shipper or expresses his indifference. A proper presentation of the problems of the carriers will do more to allay ill-feeling on the part of shippers and promote loyalty on the part of employees than any other undertaking that the railroads could engage in.

C. E. Parks,
La Salle Extension University, Chicago.

Automobiles Exported from Canada now constitute a considerable freight movement. In the month of October, shipments were made to Australia, South Africa, New Zealand, Sweden, Switzerland, United Kingdom, Turkey and the United States. The total value of these exports in that month was more than 2½ millions.



The Drag Line at Monee Cut

Illinois Central Improves Line Near Chicago

Reduces Grades and Adds to Tracks Between Matteson, Ill., and Kankakee Under Heavy Traffic

WHEN IT BECAME EVIDENT early last spring that the mines in Southern Illinois would be closed by a strike on April 1, the management of the Illinois Central decided to take advantage of the expected lull in traffic to reduce the grades and construct additional main tracks between the south limits of the Chicago suburban zone at Matteson, Ill., and Kankakee, 25 miles further south.

Looking South at Matteson with the E. J. & E. Crossing in the Foreground

While the decline in traffic lasted only for a short time, owing to the movement of large quantities of coal into Chicago from the non-union fields in Kentucky, this work has been pushed actively throughout the season and is now nearing completion. It involves a total expenditure in the neighborhood of two and a half million dollars, comprises about 1,000,000 yd. of excavation, and when finished will afford marked relief in the section of the line which now constitutes the throat of the Illinois Central System.

Except for a secondary line extending west through Northern Illinois to Omaha, it is over this line that all Illinois Central business enters and leaves the city. It not only carries all of the traffic of this road between Chicago and southern points, including a heavy tonnage of coal from Southern Illinois, but also a considerable traffic from the St. Louis line which connects with the New Orleans line at Gilman, about 25 miles below Kankakee. The traffic is further enlarged at Kankakee by the business of the Big Four which is handled between that point and Chicago by the Illinois Central. This traffic has increased rapidly in recent years and averaged about 32 passenger and 58 freight trains a day during the period of construction.

Adverse Grades an Obstacle to Traffic

While ample facilities are available for handling the traffic as well as the heavy suburban business between Matteson and Chicago in the presence of a long stretch of practically level track, increasing from four to eight tracks in the direction of the city, the conditions were not so favorable in the 27 miles between Kankakee and Matteson. In the first place, traffic over this section was confined to two tracks, except for a distance of 11 miles between Tucker, four miles north of Kankakee, and Peotone, where a third track was laid three years ago. The grades were also adverse over this section, especially for northbound tonnage. Almost immediately upon leaving Kankakee, a 0.4 per cent grade extended

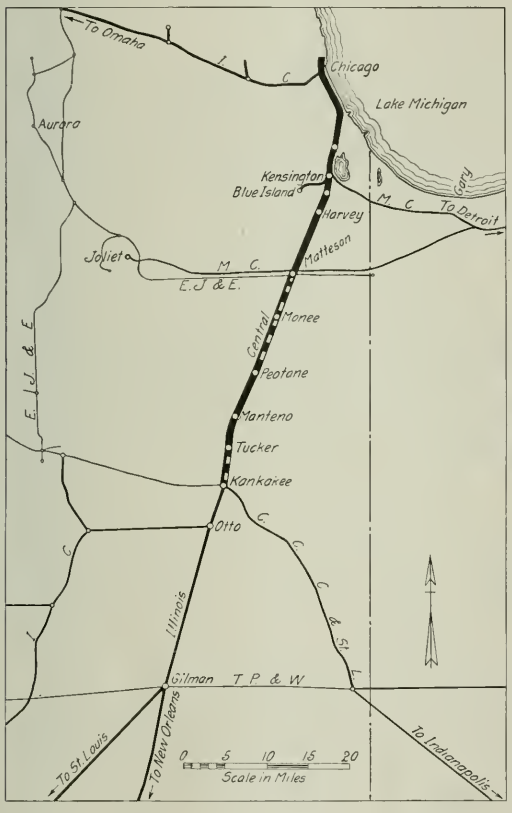
A Plan of the Layout at Matteson Showing the Final Arrangement of Tracks and Buildings Together with the Changes Made Preparatory to Grade Separation

for about 2½ miles to Tucker. Beyond this point more favorable grades were encountered until near Monee, where a 0.425 per cent grade extended for nearly two miles to the top of the hill, 160 ft. above Kankakee. This summit constituted a similarly formidable obstacle to trains proceeding southbound, as it was approached by long 0.4 per cent grades. Added to these obstacles were grade crossings with the Elgin, Joliet & Eastern and the Michigan Central at Matteson.

To improve conditions and give greater capacity, it was decided to extend the four track system from Matteson, south for about seven miles to Monee. As a third track was already in service between Peotone and Tucker, it was decided to continue this track north to the end of the four track section



The Illinois Central System and Tributary Lines Near Chicago

at Monee, and to Kankakee on the south and to install interlocking plants at intermediate stations to permit the diversion of trains from one track to another. It was also decided to reduce the 2½ miles of 0.4 per cent grade between Kankakee and Tucker to 0.3 per cent and to reduce the 0.425 per cent grade approaching Monee from the south to 0.3 per cent. As this involved heavy excavation through Monee a large amount of material was available beyond that required for the new tracks and it was further decided to separate the grade crossings at Matteson by carrying the Illinois Central tracks overhead.

The Monee Cut Was a Big Problem

Because of the distance between the two points at which it was decided to reduce grades, the size of the entire project, the necessity of conducting all work under traffic, and the premium placed on speed, the work was divided into two units, each under the supervision of an assistant engineer reporting to an engineer in charge. The larger of the two was the Monee-Matteson unit, the most spectacular feature of which was the work undertaken in the vicinity of Monee. As before stated, the problem at Monee consisted of reducing about three miles of 0.425 per cent grades to a maximum of 0.3 per cent. To accomplish this and to provide the additional trackage planned, necessitated making a cut directly through Monee which ran 20 ft. deep for about a mile, averaged about 100 ft. in width at subgrade and involved in the neighborhood of 700,000 yds. of excavation.

The proportions of the work suggested the advisability of using a dragline outfit, which was accordingly installed, together with two steam shovels. In order to provide for traffic during the progress of the work, the first step undertaken was that of making a cut 30 ft. wide at the bottom for the entire length of the cut on the east side. To do this the steam shovels removed the approaches at each end, after which the dragline completed the remainder of the heavy excavation in this first cut, utilizing the adjacent main line track for loading. A new track was built west of the main tracks which with the southbound main track were used by traffic. After this cut was completed, two main tracks were

Looking South from the Michigan Central Crossing at Matteson Prior to Grade Separation

laid in the bottom and the dragline returned to the south end of the heavy work where it again began working north, removing the remainder of the cut to the full width as it went.

The dragline proved particularly efficient in this work. Equipped with a five yard bucket operated from a 75-ft. boom, this machine cut a section for the full depth of the cut and 60 ft. wide at the bottom. It handled about 3,200 yd. per day of two shifts, the excavated material, which is of heavy clay, being carried to the dump by four contractor's trains, each containing 15 air dump cars of 12 yd. capacity. These trains were loaded on a temporary track laid along the top of the west slope and were hauled over the main tracks under the supervision of Illinois Central conductors to Matteson and to the Markham yard at Harvey, five miles north of Matteson. On account of the long haul (reaching a maximum of 12 miles and averaging six miles) and the necessity of operating over the main line, the trains constituted the limiting factor in the work, the dragline itself being capable of handling half again as much material.

Before beginning the work at Monee it was necessary to move two elevators to new positions across the track (no mean job in itself in the face of traffic) and two viaducts have been built to carry highways over the tracks. The work at this point also required the moving of the station to a new location and the building of several industry buildings. Another problem which arose by reason of the reduction of the grade at Monee involved two water supply reservoirs at the south end of the cut. The smaller of the two reservoirs, constituting the original source of water at this point, en-

croached upon the new roadbed, because of which it was decided to drain it. This was done by excavating a ditch in the cut sufficient to carry all water to the larger reservoir, which was located some distance down hill.

The Problem at Matteson Was Grade Separation

As stated before it was decided to utilize the material obtained from the Monee cut to separate grades at Matteson. To do this as well as to extend the four tracks through the town from the north required extensive changes in the existing layout at that point. Approaching Matteson from the south, were two main line tracks which extended through the town, crossing consecutively, the two tracks of the E. J. & E., a street and a crossing shared by the Michigan Central and a street adjacent to it, beyond which it merged into the four track section which crossed the Lincoln Highway, about a half-mile distant. Leaving the main line on the east side about a mile south of Matteson, was a track which also crossed the E. J. & E., and then continued north to within a short distance of the Michigan Central crossing, where it turned east to form a transfer connection with the Michigan Central. Leading off from this switch lead, in turn, at Richton, about a mile south of Matteson, was a yard of four tracks running parallel with the switch lead and providing northbound interchange facilities with the E. J. & E., with which it connected through a single track lead. To the south of the E. J. & E. crossing and to the west of the main line were three tracks which served as a southbound interchange yard with the E. J. & E.

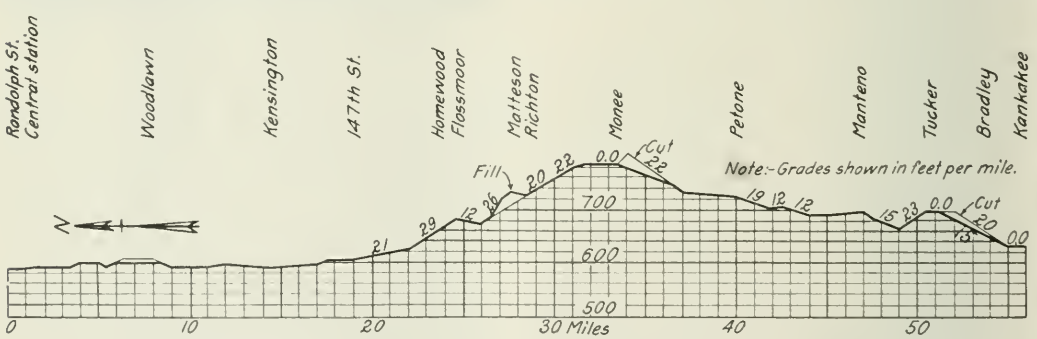
Further, in the short distance between the E. J. & E. crossing and the Michigan Central crossing was a lead extending from the switching lead to a yard of the Michigan Central. The Matteson freight and passenger station, a frame structure adjoining the switching lead on the east, was also located in this area. Extending for about one-half mile north of the Michigan Central crossing on the west side of the Illinois Central main line were the two tracks devoted to permanent work the transfer lead into the Michigan Central yard, situated just beyond the E. J. & E. crossing, was taken up and a new transfer track established north of the Michigan Central crossing by laying a track some distance east of the toe of the new slope and extending it north to a connection with the main line beyond the Lincoln Highway, this work requiring the removal of the pumping facilities for the suburban water supply from the east side of the main line to a new location on the west. At the same time the combination freight and passenger station was dismantled, the passenger section being moved west of the grade separation work where it was established at street level, and the freight station being moved north of the Michigan Central crossing in the vicinity of the new transfer track, just mentioned, an elevator later being installed to afford communication with the elevated tracks.

This done, the suburban tracks on the west were swung out of the way, through traffic was turned over two temporary tracks established west of the existing roadbed, the old main tracks were torn up, and a trestle was built to carry a single track over the entire length of the work with its deck 3 ft. below final grade. Earth was then hauled from the Monee cut over the newly laid eastbound tracks and dumped at the rate of about 350 cars a day continuously until a grade for three tracks was completed, when two tracks were opened to through traffic.

Considerable Concrete Work Was Involved

As the filling was being placed the concrete work was being pushed to completion. This involved the placing of about 12,500 yd. of concrete and consisted in building extensions to several culverts, a two span crossing over the two tracks of the E. J. & E., a street opening about 700 ft. north, a four span crossing over the Michigan Central and the adjacent street and a second crossing over the Lincoln Highway.

Both road crossings were built to give 21½ ft. clearance,



A Condensed Profile from Chicago to Kankakee Showing the New Work Which Was Undertaken

suburban service, together with the suburban station and turntable.

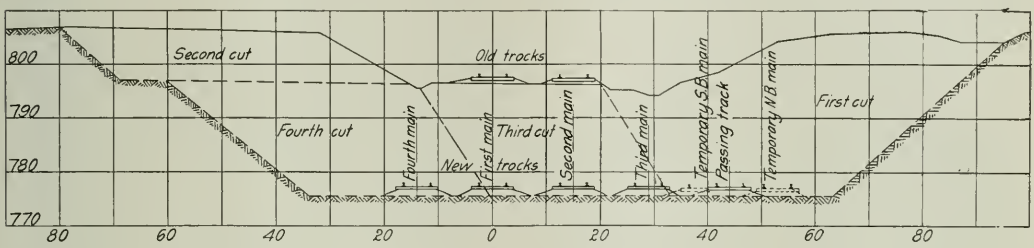
The first step in the construction program at this point consisted in converting the through switch lead into a third track, moving the station at Richton from the east side of the track to a location west of the future fourth main track and establishing a new switch lead, which was extended north to a point just beyond Richton station where it became the west track of a nine-track yard extending as far north as the E. J. & E. crossing and built to accommodate both north and southbound interchange business with this line, thus replacing the existing interchange yard on either side of the main line which encroached on the space required for the new work. To prepare the layout still further for the which clearance was secured at the Michigan Central crossing by lowering the tracks of this road 4 ft. These crossings consist of reinforced concrete abutments and intermediate columns, topped in the case of the Michigan Central by reinforced slabs, and, in the case of the E. J. & E., by concrete-encased I-beams. Of the two structures the Michigan Central was much the larger, requiring about 2,500 yd. of concrete and consisting of a four span structure designed to afford access from the street level to the passenger platform on the new grade by interior stairways.

Except for the extension of culverts, where hand mixers were used, and the construction of the Lincoln Highway subway about 1,000 ft. north of the Michigan Central crossing, where a half yard steam mixer was employed, this

concrete was all mixed and placed from a central plant situated between the Illinois Central main line and the Michigan Central yard. This plant consists of a steam-operated one yard batch mixer, a tractor crane for unloading aggregate from the cars, a stiffleg derrick for filling the mixer bins from the storage piles and a system of tracks over which one yard hopper cars were hauled to their destination by gasoline tractors, there to be hoisted to a point from which the concrete could be spouted into the forms or where, in the case of the slab construction carried on near the plant, the buckets could be picked up bodily by the tractor crane and emptied directly.

With the completion of the grade separation work at this point, which involved 750,000 yd. of fill, the remaining maximum depth of 10 ft. and produced 225,000 yd. of excavation. Since this was 100,000 yd. in excess of that required for the new third track on the east of existing main line, the remainder was wasted along the west side between Kankakee and Peotone to provide for a future main track.

This work, while lighter than that at Monee, was not without its problems, the most interesting of which was the encountering of a water pocket about 1,900 ft. long in the underlying rock when making the first cut. For a time this pocket presented a serious obstacle to the progress of the work, but it was completely drained by widening the cut 10 ft. and establishing a ditch along the top of the east slope. The excavation from the cut was handled by two contractors' trains averaging 15 cars apiece. As on the



A Typical Section Through the Monee Cut Showing the Old and New Tracks

work at Matteson consists only of removing the tracks which were laid temporarily for use by suburban and through service and to build a four track suburban yard south of the E. J. & E. crossing so that suburban trains might enter Matteson on the main line tracks and proceed down into the yard on a 1½ per cent grade.

As before mentioned, the work eliminated the necessity for interlocking towers at the Michigan Central and the Elgin, Joliet & Eastern crossings as well as watchmen at all street crossings. This separation of grades was not accomplished without increasing the gradients somewhat on both sides of the work. The new grade of 0.425 per cent on the north, however, does not exceed the ruling grade over the district while the grade on the south approach is so short that it presents no obstacle to traffic, which approaches it from Monee on a descending grade.

The Tucker Unit Was Also Interesting

The Kankakee-Tucker work was carried on contemporaneously with that between Monee and Matteson. As stated before, this work consisted of reducing about 2.5 miles of 0.4 per cent grade to 0.3 and extending a third track from Kankakee to connect with the existing third track at Tucker. This required several changes in the layout at Kankakee, consisting essentially in making a three track connection with the Big Four yard about four blocks to the east, converting the west track of the existing yard into a new third main track and moving this yard east, as well as moving the track scale to a new location and effecting other minor yard improvements.

The grade reduction work itself began about a mile north of Kankakee at Bradley and involved shovel work carried on in three stages. A cut 30 ft. wide at the bottom was first carried through to Tucker on the east side of the existing roadbed, the earth being carried back to form the grade for the new third track between Kankakee and Bradley, and a track laying gang following behind the shovel with two permanent tracks. Upon the completion of this cut through traffic was turned onto these tracks, the old main line taken up and a second cut was carried through for the new third track. Following this a third cut was then made to make room for a fourth track. This cut gradually increased to a Monee work these trains were in charge of Illinois Central conductors owing to the necessity at times of operating them upon or across the main operated tracks.

Interlocking Towers and Special Track Facilities

In addition to increasing the number of main line tracks and as a means of increasing their capacity still further, three interlocking plants were installed, one each at Tucker, Manteno and Monee, the latter at the end of the new four track section. For this purpose an old station was appropriated at Tucker while at Manteno, Peotone and Monee new towers were built which are of brick construction, fully equipped with heating facilities and modern interlocking equipment. These plants afford the means of diverting trains from one track to another at will. Passing tracks 4,000 ft. long were located at all stations, and at Tucker, Manteno, Peotone and Monee, besides the interlocking plants mentioned, there were also located additional 2,600 ft. passing tracks for use by local freight trains, thus providing the means of keeping them off the main line while doing switching service at these points. No. 18 frogs are installed at all facing crossovers between main tracks and all tracks are laid with 90 lb. rail.

Although the track work as well as the grading and concrete work were contracted originally, the track work was finally done by company forces, it having developed early in the progress of the work that delays both to through traffic and the construction work itself could be avoided only by company forces taking over the track work. The grading was begun on April 15, within three weeks after the contracts were let and the work has been pushed forward without interruption since that time with the result that all traffic has been carried on the new grade for several weeks.

The New Work Aids Traffic

The completion of the work will aid greatly from an operating standpoint. Aside from expediting the movement of trains, it enables the company to take advantage of an unusual and fortunate traffic condition at Kankakee. As mentioned in the early part of this article, the Illinois Central handles the Big Four business from Kankakee into Chicago. As the ruling grade between Kankakee and Matteson has

now been reduced below that between Kankakee and Champaign, the southern end of the district, it is now possible to load trains out of Champaign for the ruling grade south of Kankakee and fill them out at Kankakee with full tonnage for Chicago. The train rating over the section north of Kankakee has been increased from 3,800 tons to 4,400 tons.

Three contractors were engaged in the work, M. L. Windham, Centralia, handling the grading between Kankakee and Tucker, and the Walsh Construction Company, Davenport, Iowa, handling that between Peotone and Matteson, while the Bates & Rogers Construction Company, Chicago, placed all of the concrete involved in the latter unit. This project has been carried on under the direction of F. L. Thompson, chief engineer of the Illinois Central and F. W. Armstead, assistant to chief engineer, with T. H. Robertson as construction engineer in immediate charge.

Freight Car Loading

THE NUMBER of cars loaded with revenue freight during the week ended December 2, which included the Thanksgiving Day holiday, dropped to 845,219, which was a decrease of 110,000 cars as compared with the week before. This compares with 741,849 in the corresponding week of last year and 882,604 in the corresponding week of 1920, but in those years the holiday occurred during the preceding week. In the week which included Thanksgiving last year the loading was 673,465 and in 1920 it was 803,701. For six weeks, therefore, aside from the effect of the holiday, the loading this year has been in excess of that for 1920. Because of the effect of the holiday, comparisons are not particularly valuable, but grain and grain products loading showed a decrease of 5,000 cars compared with the week before; live stock decreased nearly 6,000; coal decreased nearly 16,000, to 186,158; coke loading showed only a slight decrease; forest products decreased 6,000; ore, 5,000; merchandise, 29,000, and miscellaneous, 43,000.

The freight car shortage had been reduced to 133,786 cars on November 30, a decrease of 18,781 compared with the total on November 23. The shortage in box cars amounted to 67,468, a reduction of 11,569, while the shortage in coal cars totaled 42,848, a reduction of 835. At the same time, 5,595 surplus freight cars of various classes were reported, an increase within a week of 289 cars.

Locomotives in need of repair on November 15 totaled 18,356 or 28.5 per cent of the number on line, according to reports filed with the Car Service Division. This was a decrease of ten locomotives as compared with the number

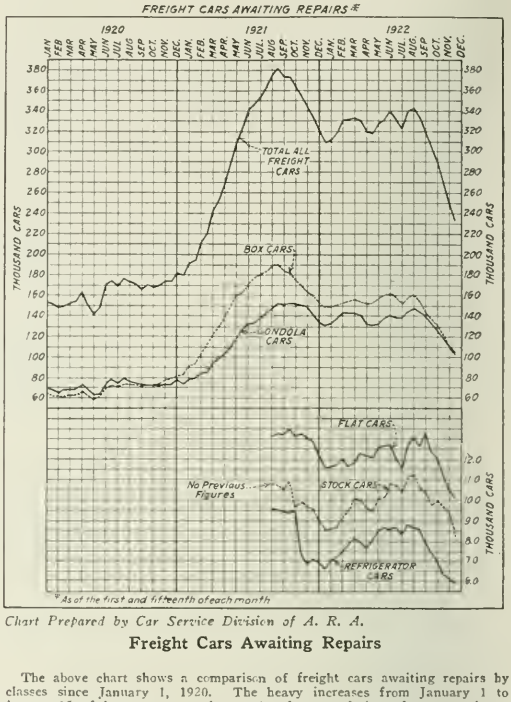


Chart Prepared by Car Service Division of A. R. A.

Freight Cars Awaiting Repairs

The above chart shows a comparison of freight cars awaiting repairs by classes since January 1, 1920. The heavy increases from January 1 to August 15 of last year was the result of accumulation of cars on home roads following heavy service during the previous year and a subsequent reduction in car requirements due to falling off in business during the first nine months of 1921.

As business increased after the middle of August, 1921, cars awaiting repairs decreased until January 1, 1922, after which time they remained practically the same due to labor difficulties until August 1, since which time they have steadily decreased.

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, DECEMBER 2ND, 1922.

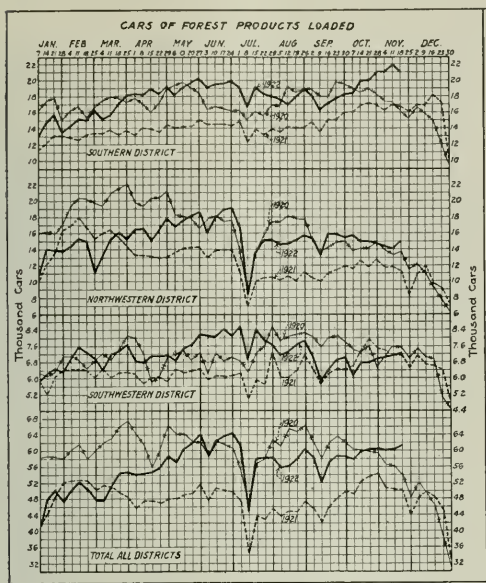
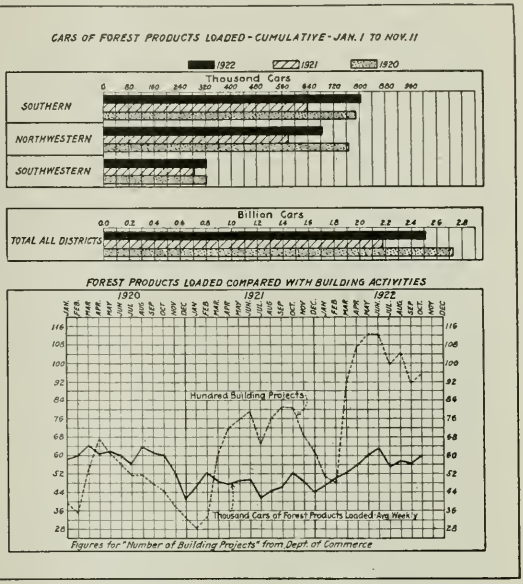
Compiled by the Car Service Division of the American Railway Association.

on November 1. Locomotives in need of heavy repairs totaled 15,120, an increase within 15 days of 19, while those in need of light repairs amounted to 3,236, which was a decrease of 29 within the same period. From November 1 to November 15, the railroads turned out of their shops 12,139 locomotives. The number of serviceable locomotives totaled 46,101 on November 15 as compared with 46,096, which was the total on November 1.





Charts Prepared by Car Service Division, American Railway Association

Large Building Program Stimulates Movement of Forest Products

The charts indicate the trend in the loading of forest products by different districts in the country, together with the cumulative loading in the entire country—the latter contrasted with the building projects now being undertaken.

It will be noted that the loading of the forest products in the Southern district has, with slight exception, been greater than during the years 1920 and 1921. At the present time the loading in that region is far in excess of the two prior years.

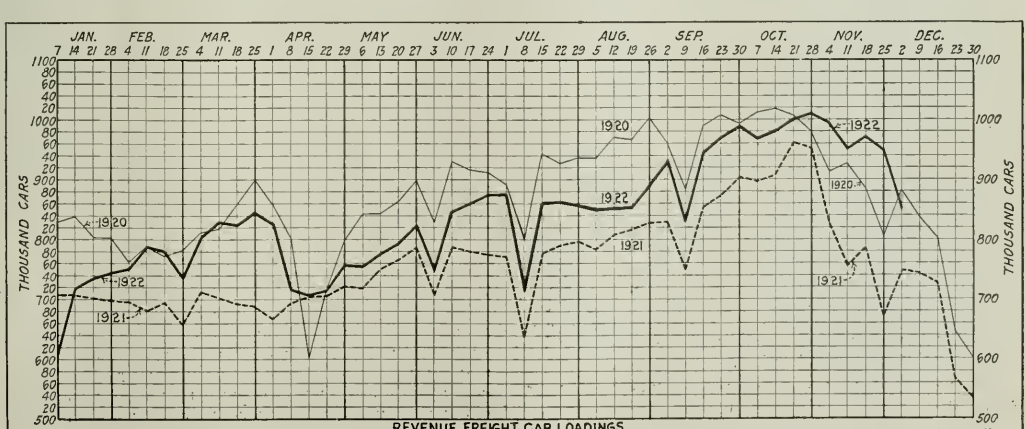
The loading in the northwestern district has not kept the even trend as has been prevalent in the South, and while it now exceeds the loading for corresponding periods of the past two years, this district was slower in recovering, compared with other regions, from the period of acute deflation which affected the industry as a whole, during 1920 and 1921. There has been, however, a large water-borne traffic from mills in this territory, which would partially account for the larger relative decrease in carloading.

Loading in the southwestern territory has exceeded the loading for 1921, but during the fall period of car shortage, has been less than that of 1920. The trend indicates that this section of the country is rapidly recovering however.

For all districts from January 1 to November 11, the loading during 1922 has exceeded the similar period of 1921, but still shows a decrease under the car-loadings during 1920. This is largely due to the fact that for the first five months of 1920 the lumber industry passed through one of the greatest periods of prosperity in its history, where orders far exceeded the ability of mills to cut or ship. The loadings during the first six months of 1920 greatly exceeded the last six months, whereas the reverse condition is generally true during 1922.

It will be noted that the loading of forest products is now on the upward trend, due, in part, to the very large building projects being undertaken which fact, coupled with the depletion of stock yards, should produce continued activity on the part of the milling industry.

For the 46 weeks of 1922, ending with the week of November 18th, the organized saw mill industry of the country shows a total of 10,159,212,045 board feet manufactured, 9,569,673,141 board feet shipped, and orders received for 10,200,834,464 board feet. For the entire year the industry, as a whole, has shipped in excess of 90 per cent of the footage manufactured.



Labor Board Removes Inequalities in Telegraphers' Pay

A DECISION, upholding the contentions of eleven of the largest western carriers as to the necessity for the eliminating of inequalities in the rates of pay of telegraphers and station employees, brought about through the application of an order of the Railroad Administration, was recently handed down by the Railroad Labor Board. The carriers involved, the Chicago & North Western, the Chicago, Burlington & Quincy, the Chicago, Milwaukee & St. Paul, the Chicago, Rock Island & Pacific, the Chicago, St. Paul, Minneapolis & Omaha, the Great Northern, the Illinois Central, the Minneapolis & St. Louis, the Minneapolis, St. Paul & Sault Ste. Marie, the Northern Pacific and the Southern Pacific (Pacific System), asked the Board for the right to correct inequalities produced by the application of Interpretation 8 to Supplement 13 to General Order 27, issued by the United States Railroad Administration. The Board decided that, effective January 1, 1923, "the inequalities * * * shall be eliminated by reducing the hourly rate of these employees an amount equivalent to the increase resulting from the application of Interpretation 8 to Supplement 13 to General Order 27."

The Labor Board, in discussing this dispute, pointed out that for some years prior to 1917 telegraphers employed by the carriers were paid a monthly salary to cover the full calendar days of the month, that is, 28, 30 or 31 days. In the latter part of 1917, telegraph employees in the service of these carriers received an increase in wages of approximately 12 per cent and in conjunction therewith the calendar month basis was changed to a working-day-month basis or 26 days, and thereafter the rate formerly applying for service performed on the calendar days of the month applied for the working days of the month and additional compensation was paid for service performed on other than working days, that is Sundays and holidays. Later the application of Supplement 13 to General Order 27 and its Interpretation 8 resulted was in some instances in the establishment of inequalities of the rates of pay of certain telegraph and station employees, which inequalities constituted the subject of this dispute. The Board's analysis of the case continues in part as follows:

> The carriers state that the application of Interpretation 8 as directed by the Railroad Administration not only created an additional expenditure of over $1,000,000 per annum but created a very disturbing and unsatisfactory situation; that agents, who previously received a substantial differential over telegraphers, are now receiving less than the telegraphers at a great many stations; and that telegraphers, who received rates in excess of other telegraphers working at the same stations, are receiving a lesser rate, notwithstanding the fact that the class of work and responsibility required are unchanged. It is stated that on some roads where, prior to Interpretation 8, there were 30 rates of pay, there are now 172 different rates of pay, and that on the lines represented in this controversy 11,008 employees received increases and 4,027 received no increases. The carriers contend that this has resulted in old experienced agents holding responsible positions taking assignments of less responsibility where rates of pay were increased under Interpretation 8, and agents of less experience accepting the more important stations, thereby impairing the efficiency of the service.
>
> It is the contention of the carrier that the language of Supplement 13 clearly shows that it was never intended to include compensation for Sunday and holiday service where such service was paid for as overtime in establishing the hourly rate to which the increases provided for in Supplement 13 should be added; furthermore, that there is no decision of record issued by the Railroad Administration which provides that overtime should be included in computing the basic rate to which increases prescribed by the various supplements should be added.

The Board upheld these contentions specifically stating in its opinion:

> The Labor Board finds that inequalities exist in the rates of pay of employees in telegraph and station service which are unjustified and detrimental to the service. It appears that the employees who have benefited by the inequalities resulting from the application of Interpretation 8 have received the full amount of the increase provided for in the orders and decisions of the Railroad Administration and the Labor Board, and that the higher rates of pay accruing to them through the application of Interpretation 8 have resulted from the inclusion in the monthly rate used as the basis for computing the hourly rate under Supplement 13, compensation for service which was paid for additional as overtime. This does not appear to have been contemplated by any decision of the Railroad Administration increasing the rates of pay of any class of employees.

A. O. Wharton Files Dissenting Opinion

Again a dissenting opinion was appended to the decision by A. O. Wharton, member of the labor group on the Board, who quoted extensively from the employee's testimony at the hearing in this case, his contention being "that the question now decided adversely to the employees was one which had the personal attention of the Director-General of Railroads; that it was also approved by the Director, Division of Operation, both of whom were experienced railroad officials; and that prior to the decision being rendered the Director-General had received the benefit of the judgment of the Director of the Division of Operation, Railway Board of Adjustment No. 3, and the Board of Railroad Wages and Working Conditions."

Mr. Wharton added that:

> The immediate effect of this decision—based on the figures submitted by the carriers—will reduce the annual earnings of these generally underpaid and highly skilled workers $1,255,680 per annum. In Wage Series Report No. 3, issued by the Labor Board, October, 1921, the average wages per month for telegraphers, et cetera, are shown to be $123.55 per month. The 11,008 directly affected will suffer an average reduction of $114 per annum by this decision, and while it may be said that these employees, as a class, are today under the Board's wage reduction Decision No. 147, effective July 1, 1921, receiving a wage 82 per cent above the miserably low wage rates in effect prior to the period of federal control, the fact remains that they are generally underpaid.
>
> The decision of the majority arbitrarily puts into effect differentials that were in effect during the year 1917, and every practical railroad man must admit that this decision will create a multitude of unjustifiable differentials in rates of pay, and that the existing dissatisfaction and discontent of these employees will be augmented by this impracticable decision, the only effect of which is to bring about another reduction in wages veiled by a thinly spread smoke screen which simply emphasizes the desire of the majority to deny the employees an opportunity to meet the respective carriers in conference and work out an equitable adjustment of any existing improper differentials.

W. L. McMenimen, member of the labor group on the Board, also appended a statement to the effect that while he voted against the decision he did not formally enter a dissenting opinion, adding, "as a rule dissenting opinions accomplish no practical purpose and merely encumber the record."

A resolution accompanying the decision proposed by Mr. McMenimen, and passed by the Board, ordered the retention upon its docket of various other applications from carriers for decreases and employees for increases in the wages of telegraphers. No action on these applications was, however, taken at this time.

GLANDS FIGURE, nowadays, in varied classes of news, front-page and other. The latest item is one concerning the endocrine gland of a woman who was injured by a switching locomotive of the Chicago & Alton, when it struck the automobile in which she was riding, and who is now suing the road in the Federal Court at Kansas City for $50,000. It is charged that, because of an injury to this gland the lady has grown to weigh 375 lbs., a degree of obesity which is very oppressive, and a misfortune for which compensation ought to be made.

A National Transportation Institute Advocated

First Steps Taken to Create An Organization to Develop Fundamental Facts Regarding This Industry

THE FIRST STEPS toward the establishment of a National Transportation Institute "for the purpose of accumulating, organizing and furnishing the people at large full, complete, impartial and unbiased information about transportation" were taken at a dinner at the Hotel La Salle, Chicago, on December 8, when 150 agricultural, railway and business men unanimously endorsed the plan and appointed a committee of 19 men to act in conjunction with Congressman Sidney Anderson, chairman of the joint committee of Agricultural Inquiry, United States Congress, J. R. Howard, president of the American Farm Bureau Federation, and Bird M. Robinson, president of the American Short Line Railroad Association, who are the leading advocates of the institute.

Following the addresses of Mr. Anderson, Mr. Howard, D. B. Hutchings, director of transportation of the American Farm Bureau Federation, and Mr. Robinson, the meeting unanimously adopted a resolution approving the establishment of the institute and urging the agricultural, banking, commercial and transportation interests of the country to participate in its organization. The committee appointed to arrange for an organization committee and to participate in the formulation of plans to be submitted to a representative meeting to be called by them for the purpose of establishing a permanent organization included: H. I. Drummond, chairman of the Board of Governors of the International Farm Congress; M. D. Campbell, president of the National Milk Producers Association; John W. Blodgett, president of the National Lumber Manufacturer's Association; E. B. Polleys, president of the Western Pine Association; A. B. Johnson, president of the Railway Business Association; Irvin T. Bush, president of the Chamber of Commerce of the State of New York; W. R. Skinner, secretary and general manager of the National Dairy Association; J. A. Edgerton, president of the National Association of Manufacturers; George C. Conn, director of traffic of the Buick Motor Company; Ralph Van Vechton, vice president of the Continental & Commercial National Bank of Chicago; J. W. Kerscher, president of the National Wholesale Grocers' Association; W. H. Manns, assistant to the president of the International Harvester Company; Francis Kemper, National Retail Grocers' Association; J. L. Lovett, general manager of the Michigan Manufacturers' Association; Harrison F. Jones, executive secretary of the National Poultry, Butter and Egg Association; W. L. Wagner of G. M. H. Wagner & Sons Company, Chicago; H. A. Palmer, editor of the Traffic World; S. O. Dunn, editor of the *Railway Age;* and William Butterworth, president of Deere & Co.

A tentative plan for organization, as submitted by Mr. Robinson, provides for a board of governors, of 15 prominent citizens, headed by Edward E. Clark, former chairman of the Interstate Commerce Commission, to direct research work, and to present its findings to the public. A board of 35 directors is to be selected upon suggestions of the leading national agricultural, banking, industrial and transportation organizations, thereby insuring that the important business industries in the country who participate in the financial support of the institute shall have an opportunity to participate in the administration of the business and to present to the board of governors their special points of view for consideration. Staff officers are to be employed in each state, whose duty it will be to give to the public information that the investigations of the institute develops. The institute will supplement the work of its staff officers by educating students in the fundamental principles of the various kinds of transportation, facts as to the present condition and the relative importance of each class of common carrier, the effect of present laws and regulations, and how the public and the carriers will be benefited or adversely affected by any attitude or action that may be taken with respect to their transportation problems.

It was estimated that during the research period, which will begin at once, the cost of maintaining the institute will be less than $250,000 per year and later when the staff officers are employed the cost will increase to over $1,000,000 per year. It is thought that when the institute becomes an active, educational one, it will receive a large number of students and the income from this source will aid in paying expenses, and that it possibly will become self supporting in the future.

The American farmer feels that a National Transportation Institute is highly desirable, according to Mr. Hutchings of the American Farm Bureau Federation. He stated that there are numerous problems now vexing the farmer in regard to transportation and that some responsible organization should be formed to sift the truth out of the present cloud of misinformation and malinformation. He declared that each should have full, accurate and unbiased information about the other's problems, what is being done to grapple with them, the methods being used and the success which is being met. Mr. Hutchings called attention to the fact that the executive committee of the American Farm Bureau Federation, at its meeting in June, 1922, adopted a resolution endorsing the movement and that it has since heartily supported it. The American farmer believes that such an organization as the National Transportation Institute would be extremely valuable, and that it should be set to work as soon as possible in order that it may help to cope with the problems now pressing for immediate solution.

The address of Mr. Robinson further pointed out the need for accurate transportation information and sketched a plan for the organization of a National Transportation Institute, including its research work and personnel. He declared that the magnitude of the problem and the work to be done is stupendous, and urged that the men present at the meeting join in the selection of men for a strong organization committee. In conclusion, Mr. Robinson appealed to his audience to join at once in an active, aggressive campaign to inform the public as to the facts of the present rail situation and what must be done to save the nation's transportation system.

Congressman Anderson Advocates Institute

Mr. Anderson urged the creation of a National Transportation Institute to establish sound public policies with respect to transportation and to create appropriate relations between industry, agriculture and transportation. He said in part:

"It has been my observation in the contacts which I have had during the past one and one-half years with almost every important industry in the country, that most of our troubles rise from a lack of understanding of the other fellow's problem and the relation which it has to our own. This meeting is an auspicious indication that we are coming to a realization of this fact.

"I assume that my presence here may be ascribed to the fact that I had the honor to be chairman of the Joint Com-

mission of Agricultural Inquiry, created by Congress in June, 1921. The resolution which created this commission was a very broad one; charging the commission with ascertaining among other things, the causes of the agricultural crisis of 1920; the reasons for the spread between the consumers' and purchasers' prices; the comparative condition of other industries; the adequacy of the credit, transportation, marketing and distributing machinery of the country. It was apparent from the outset that there was no hope of accumulating the basis of fact upon which sound conclusions could be predicated by the usual methods of congressional investigation. As I saw it, therefore, the job was one of organizing new agencies through which a basis of organized and correlated information could be obtained.

"Without going into detail as to the method of organizing the committees and organization which co-operated with them, I may say that altogether we established more than 200 committees and a co-ordinating organization of approximately 3,000 people. This organization included the best men and most constructive thinkers we were able to get in the fields of agriculture, industry, distribution and transportation. In the transportation organization alone, were comprised 115 committees and 200 sub-committees, and a co-ordinating organization of about 1,600 people. We sent out more than 200,000 questionnaires, asked more than 25 million questions, and made, or had made for us, more than 50 million mathematical calculations. I think I may say, after a year spent in this investigation, that the startling fact about transportation, as well as distributive economics, is not what we know, about the agencies and functions of transportation and distribution, but what we do *not* know.

"It is true that there is a considerable amount of data touching physical property and operation of railroads and other transportation agencies, but this data has not been organized with a view of bringing it together in such form as would make possible a sound judgment as to the relations of various factors of physical property and operation, and the drawing of sound conclusions from them.

"Transportation is a public function; it is not an end in itself, but a means to an end. It should be an efficient instrument in the conduct and development of the nation's agriculture, industry and commerce. It can continue to function under private management only if when so functioning it best serves the economic interests of the country.

"I have no personal interest in railroads or in other transportation agencies, but I have seen the economic relation of transportation and industry too thoroughly demonstrated, not to appreciate the fact that the problems of transportation are not merely transportation problems, but are problems in which the agriculture, industry and commerce of the nation are vitally interested. Transportation service and the cost of transportation service, in considerable measure, determine the location and prosperity of industry and agriculture. Transportation rates are as potent a force in determining this location and prosperity as taxes, and in many respects operate like taxes.

"The ability of the transportation agencies largely measures the amount of business that can be done by the country. We have concentrated our attention largely, heretofore, upon the operative and financial problems of transportation. The time has come when some attention must be given to the relationship of different forms of transportation to each other, and to the economic effects of transportation service or the lack of it, and transportation rates.

"There should be an agency representing the economic interests of the country, capable of accumulating the basis of fact upon which the economic effects of rates may be determined. Transportation costs on the whole are a far smaller element in consumers' prices than is generally supposed. It is probable that transportation costs less than wholesale distribution, and that the total cost of retail distribution in the United States is four or five times as great as the total cost of transportation. No accurate determination of the economic effects of transportation rates as to commodities or industries, can be obtained, except on the basis of more detailed information than is at present available.

"Retail associations, wholesale associations and associations of manufacturers, are beginning to realize that the cost of distribution has outrun the cost of production and manufacture; they are setting up agencies for study of the processes of distribution, and for the dissemination of sound principles upon which more effective and efficient methods of distribution can be predicated. If it is worth while for these agencies to undertake to inform themselves and the public in regard to their own business, is it not worth while for these agencies to combine to ascertain their relationship to transportation and the economic effects upon them and upon the country, of transportation rates and service?

"If the problems connected with transportation and distribution were not so practical; if they did not touch industry so closely; if they were not a part of the daily operating factors of every industry; if, in other words, they were more obscure and scientific, we would promptly recognize the necessity of securing a basis of fact from which sound conclusions could be reached.

"When a new bug appears in the country, departments of agriculture and scientific institutions study its life history from the cradle to the grave. If it is worth while to spend millions of public and private funds, in the accumulation and organization of information touching the obscure hazards of agriculture and industry, is it not worth while to set up an agency capable of accumulating and organizing the information touching transportation and its relations to the industry, agriculture and commerce, which so closely touch the prosperity and economic well being, not only of these agencies, but of the whole mass of population?

"Transportation more than any other agency or instrumentality of commerce, is dependent upon sound and favorable public sentiment, yet it is a fact which I think no one will question, that no industry has been at less pains to create favorable public opinion than railroad transportation. Railroads formerly spent millions in securing the adoption of sound public policies by national and state legislative bodies, and in defending these policies and their operating methods and performance before courts and commissions, only to find that these millions had been spent largely in vain, because they have not been supported by adequate public knowledge and favorable public opinion.

"The point I am trying to make is that those interested in the establishment of sound transportation policies, and who recognize relationship of transportation efficiency and service to the progress and prosperity of the nation, cannot expect that politicians or statesmen will be able to overturn public sentiment by unfavorable propaganda in the hectic excitement of a four or five weeks' political campaign. The men in public life who recognize the importance of transportation agencies, and the necessity of sound public policies with respect thereto, have a right to expect that agencies will be created by the industries interested in transportation to accumulate the facts and disseminate the information which will create favorable public opinion touching these policies.

"I know of no idea which has greater potentialities for the establishment of sound public policies with respect to transportation; the creation of appropriate relationships between industry, agriculture and transportation, and for the dissemination of the information which is essential to favorable public opinion, than the idea which is responsible for the proposal to create a National Transportation Institute."

Further efforts to enlist support for the institute will be made at a dinner to be held in New York City on January 18, 1923.

Great Need of Salesmanship in Transportation

"Day Is Approaching When Every Man Who Sells Railroad Tickets Must Be a Salesman, Not a Mere Ticket Clerk"

By C. A. Cairns
Passenger Traffic Manager, Chicago & North Western

THE BACKBONE of an organization like yours is the men who, through many years of experience and travel, have acquired an intimate and specialized knowledge of passenger traffic. Men who make the most of every opportunity to improve the service and who are entitled to be classed as representing the highest art of salesmanship in transportation.

Every time I go into a ticket office and hear the wide range of questions to be answered, it increases the admiration I have always had for the men behind the counter.

Rightly handled, you gentlemen all know his is no easy task. He has a real man's job for, if he is an expert in his profession, he must be a walking encyclopedia of information about travel matters all over and all around the world.

In commercial lines prices often vary for articles which correspond to a large extent and which contrast furnishes the salesman with strong talking points, but generally speaking, railroad fares are the same, likewise the train service via the several routes between principal competitive points, and it accordingly requires expert salesmanship to convince a prospective buyer why he should use one particular route in preference to another.

Some of you may have read an interesting article which appeared several months ago of a plan inaugurated by a certain line for greater salesmanship in its ticket offices. The article went on to say that their ticket men had quit being "Clerks," having acquired the title of "Salesmen" and were being required to live up to the new designation.

In considering the sales possibility, this company grouped prospectives into three classes:

FIRST: Those entirely sold when they enter the office.

SECOND: Those partly sold upon entry and requiring salesmanship in closing.

THIRD: Those shopping around yet susceptible of being sold.

With a view to finding out how much or how little salesmanship was being used in its offices, the company required each ticket clerk to keep a tally over a period of ten days of the number of prospective travelers who called. A comparison of the total prospects with the ticket sales showed a most disheartening situation. The clerks were not it appeared salesmen. They were courteous but did not make sales as often as they should. As a result, a contest was started with two or three prizes as rewards and there was at once a surprising jump in the number of sales in proportion to the number of prospects.

Commenting upon the sales methods of railroads, a former railroad man has this to say in a recent magazine of nation wide circulation: "The business of transportation is like every other business in that it has something to sell. That 'something' is transportation—transportation of goods or persons.

"Few, very few railroads, really *sell* transportation. Almost invariably it is *bought*. People do not go into the office of a railroad and buy a ticket or ship a car of livestock in anything like the frame of mind with which they enter a cigar or a man's furnishing store or a grocery. To all intents and purposes, the transactions are identical. They involve the exchange of money for goods or service, and a man from Mars might suppose that the methods of procedure would not differ. But they do. The cigar man or the haberdasher or the grocer is keen to make a sale. If what he first offers the prospective purchaser is not to the latter's liking, he offers something else. He points out its good qualities, anticipates criticism and objections, smiles, pleads, urges—in short, he *sells*.

"The railroad representative does not do any of these things. He is not curt or impertinent, but seldom does he give the man who does business with him the impression that his patronage is appreciated. It is, I suppose, in the nature of the business—a 'holdover' from the days when railroads were monopolies. They are not that today."

In view of the result of the investigation of sales conditions previously referred to and in light of this criticism, whether justified or not, have we not here food for thought of possible improvement in our sales methods.

Examples of Good Salesmanship

I was an interested spectator a short time ago at the Information Bureau in a ticket office not a thousand miles away from Savannah. A gentleman came in to make inquiry about service to California. He had in his hand a telegram which made it impossible to determine until he received a reply to same, whether he could start on a Thursday or Friday. He was given the desired information as to fares, service, etc., courteously and correctly by the young man at the counter, who proved to be a *poor* salesman, however, for when he finished answering the inquiries put up to him without volunteering any helpful suggestions of his own, the man started to leave the office. Fortunately, as he hesitated for a moment he was taken in hand by another employee who knew the art of salesmanship and he advanced the idea that it would be well for him to make his arrangements then and there for the day on which he was most likely to go, as by doing so he would be able to get a far better berth location than if he waited and if he found he had made a bad guess with respect to the date, he could bring back the tickets and they would be cheerfully exchanged to meet his requirements. The idea struck him favorably and as a result two tickets were sold to Los Angeles. You will agree the latter evidenced good salesmanship. Both had the same opportunity; one let his slip away, while the other applied good sales methods and secured the business as well as doing the purchaser a real service.

Expert salesmanship is well illustrated in a talk I had a few days ago with a representative of an important tourist agency. A lady came into their office inquiring for information about the Catskills. After a short preliminary talk he inquired if she would accept a suggestion from him as to her vacation plans. She replied that she would be very glad to do so, but that he must keep in mind two essentials—she had only a certain amount of money to spend and a given time to be away from her business. Beyond these limitations she was open-minded. It so happened that his company was interested in a tour to the Bermuda Islands, and seizing the opportunity, he began to tell her of the advantages of an exhilarating sea voyage and expatiated glowingly upon a country she had never seen. In short, he succeeded

* From an address before the American Association of Railroad Ticket Agents, Savannah, Georgia, November 13, 1922.

in a limited time in changing her from the Catskill to the Bermudas, and upon her return she called to tell him how satisfactory her vacation had been. This is simply illustrative of what can be done when proper salesmanship is applied and which efficiency all of our offices must aim to develop.

Salesmen Should Be More Carefully Employed

Recently I was deeply interested in a little pamphlet issued by one of the largest business organizations in the world and which gave an outline of the examination a salesman was required to submit to before his application would be given consideration for employment. As I read it the thought occurred, do we display the care we should in selecting our salesmen and might not the railroads follow with profit some such systematic pre-employment plan, for there is no doubt but that there are many men in ticket offices who have small ability for this important work and who, regardless of training, do not seem to develop into expert salesmen of transportation.

"I can sell three tickets to Joe's one," said a first-class ticket salesman to me a short time ago, and he could by actual count. There was not a circular in the office which did not bear his thumb marks of study and the contents of which he was not familiar with, nor was there a ticket in the case which he could not find as readily as a Scotchman can repeat the Catechism, while his co-worker floated along as easily as he could, having to ask someone else for detailed information in connection with practically every transaction other than that of a strictly local character.

You have all heard the story of the Hebrew who went into a ticket office and asked for a ticket to Springfield, and upon being asked by the polite salesman to which Springfield he desired to go—Springfield, O., Springfield, Mass., or Springfield, Mo., promptly replied, "Give me the cheapest." Unfortunately, this same kind of indifference is now and then noticed in some ticket offices—the easiest methods being employed to get by with, instead of a desire to raise the standard of service, but fortunately such offices are rare exceptions to the general rule.

May we now offer some thoughts which, if developed and worked out, might help solve some of the difficult ticket office problems that are encountered from day to day?

Sometime ago we had an analysis made of our ticket sales and were somewhat surprised to find that approximately 25 per cent of the total passenger revenue of the Chicago & North Western Railway Company was collected in our Chicago offices. When you consider that our total passenger revenue has run as high as $45,000,000 a year, you will appreciate how important it is that we have the right kind of salesmanship in these large offices.

First of all, it takes time and money to make an efficient ticket salesman and on account of the knowledge being largely technical and absorbed only after years of close study and application, frequent changes in the personnel of the office should be avoided and the salary should be made attractive to insure reasonable permanency.

And when changes are necessary, is enough time devoted to the direct tutelage of the new beginner? Are we not too prone to let him shift for himself rather than to put him through a course of study in ticket office problems that he may be educated to become a real salesman. He should be introduced to the tariffs—to the inside of them particularly—not to the outside cover only and furthermore that he absorbs the contents.

Study of Tariffs Needed

Tariffs are necessarily more or less complicated, but much of the mystery that surrounds them can be eliminated by a careful study of the parts that interest a particular office.

It is to be regretted that many ticket clerks make no comprehensive study of tariffs and do not think of looking at anything but the outside covers until someone is at the counter inquiring for information which they contain. There is then a wild scramble to find the information desired—haste often results in mistakes being made—not to mention delay in waiting upon the passenger, thus causing him to leave the office in an irritated mood with a very poor impression of its efficiency. As a matter of fact, the passenger gets the first and strongest impression of the character of the railroad he is patronizing from the manner in which he is served at the ticket counter, and if this service is not prompt, helpful and courteous, it is apt to discolor everything that follows.

Many of us have seen ticket clerks in busy offices do unnecessary work pasting together several pieces of tickets to make up a complete one when, if they had been acquainted with their stock, they would have found a printed form that would have served them all this trouble besides avoiding delay in waiting on the purchaser.

The railroads spend thousands of dollars each year in publishing booklets, exploiting different localities. These are eagerly read by the prospective traveler, but can the same always be said of the man behind the counter who is supposed to be an encyclopedia of information on subjects of travel?

Is it not frequently found that the prospective passenger knows more about what he wants than the man who is attempting to serve him? Some employes will tell you there is not time for study during office hours. This may be true to a certain extent, but there are times during the early and latter part of the day especially when a salesman so disposed can usually find time and furthermore should consider it his duty to read and digest every piece of travel literature that comes into the office, for that is part of his duties.

To illustrate this point, a friend of mine had occasion quite recently to call at a large city ticket office shortly after the opening hour and it happened at that particular time there was not a prospective passenger in the office. He desired some information about an eastern resort and evidently did not get much satisfaction. "Was any one of the six or seven men behind the counter studying the tariffs or reading something of use in connection with their work? No, they were not," he said with emphasis. "They were standing around in pairs, apparently discussing the relative merits of the Yankees and White Sox—all very well in its way, but this does not go very far towards giving satisfactory service to patrons, nor in increasing the size of their pay checks."

A feature of good salesmanship is to have the ticket forces kept familiar with the advertisements your company may be running in daily papers or national mediums of publicity, that they may post themselves on inquiries they are likely to have in connection therewith, and thus be prepared to answer same promptly.

The prompt and accurate handling of sleeping car matters is one of the most important features of good salesmanship in a well organized office and should have close inspection and supervision by the agent himself. An ideal condition in larger offices is to have this important position filled by a man who has had traveling experience and who knows the necessity for prompt and discriminating work. This is especially true when dealing with foreign line ticket agents who frequently control routings from promptness in replies and the satisfactory character of answers received.

A rapid firing and most important sales assistant is the telephone and every one in this room will agree with me that this service should also have close personal supervision. "A soft answer turneth away wrath." If you want to see how quickly your competitor will get the business away from you, put a grouch on this job. He is a twin brother of Delay and both go hand in hand in opening up the floodgates of complaints and consequent loss of traffic.

Work of Information Bureau

An Information Bureau is an indispensable help to good salesmanship if properly organized and harnessed up with the ticket organization. I think you will agree with me that no folder, booklet or other literature should be handed out without polite inquiry being made as to whether the recipient has a trip in view, and if favorable reply is received, opportunity is then afforded to volunteer further assistance in planning an itinerary. If a memorandum is taken of the name, address and telephone number and handed to the soliciting agent, experience proves excellent returns may be expected from such follow-up methods. Unfortunately both of these angles of salesmanship are frequently neglected.

Is enough attention being given by your association to the study and investigation of methods or mechanical appliances that will assist in the reduction of work and at the same time promote the efficiency of the office? Can cash registers be used to advantage in some ticket offices, by simplifying the making of change and methods of accounting, thus giving more time for the counter and adding to the efficiency of the sales force?

In the building of new terminals or in the installation of new city ticket offices, are you men who may be interested in same volunteering ideas and suggestions in connection with their constructions and operation that are based upon practical experience in the successful and rapid handling of traffic?

Has a committee from your organization investigated and passed judgment upon the merits of the so-called double-deck and also wicket counters for city ticket offices which came into existence during the railroad administration, the former being used in the Consolidated Offices at Washington and Cincinnati, and the latter at Denver, Detroit and San Francisco? Are transactions with the purchaser face to face better than the somewhat usual practice of making up tickets on a separate desk some distance removed from the counter with your back towards same so as to avoid interruptions and possible mistakes as a result therefrom?

Noting as you do from day to day the use and abuse of folders, is it not possible for your organization to take this subject in hand and after investigation, offer suggestions as to economies that might be practiced in supplies or improvements made in the make-up or in the distribution of same? Likewise would not the voice of your association be helpful in sounding a note against waste in various other forms of circulars and advertising matter of questionable value, with which your offices are now flooded and much of the information duplicated?

Could not a committee from your association with profit make a study of the simplification of tariffs and give the benefit of its finding from the viewpoint of the transportation salesman as well as the public, to those charged with the issuance of same?

The day is approaching when every man who sells railroad tickets will be required to be a salesman, not a mere clerk from whom tickets can be bought, as our critic has put it, and to know as much about the transportation goods he is selling as the expert clothing merchant does about his. When that day arrives the classification, "ticket clerk," will vanish from the payroll and "transportation salesman" will take its place.

The Executive Board of the Great Lakes-St. Lawrence Waterway Association adopted a resolution at its meeting on December 11, challenging the railroads of the United States to meet with the association and define their stand on the ocean-lakes waterway project. The resolution states that the railways have asked the public for fair treatment and an impartial attitude, and asks in return that the lines respond to a similar appeal from proponents of the deep waterways.

Annual Report of the Bureau of Safety

The Interstate Commerce Commission has issued, in a pamphlet of 43 pages, the report of W. P. Borland, chief of the Bureau of Safety, for the fiscal year ended June 30, 1922. This is a supplement to the annual report of the Commission, which was noticed in the *Railway Age* of December 9, which notice included a paragraph devoted to the principal points in Mr. Borland's report. Other features are here noted.

The number of freight cars inspected during the year under review was 1,046,964, of which 4.35 per cent were found defective; passenger cars inspected, 26,116, percentage defective, 0.97; locomotives inspected, 23,590, per cent defective, 2.40. The usual comparisons are given, with data under this head, for preceding years. More cars and locomotives were inspected than in 1920 and the record also discloses a gratifying decrease in the number found to be defective. Of all the defects found, 65 per cent are in connection with the air brake and hand brake mechanism, and among these, cut-out air brakes are prominent. The report calls attention to the duty of reducing this percentage of brakes cut out. Inspections during the past year have disclosed cars on which the hand brakes were unsatisfactory because of too long brake shafts; and in numerous instances it has been noted that sill steps on freight cars were not properly located under the ladders.

During the shopmen's strike in July, August and September, there was a large increase in the number of cars with defective safety appliances, and totals are given comparing the different months of the year.

The report of hours of service, covering cases where the regulations of the law were not strictly complied with show 31,682 instances of excess service, which is less than half the number reported in the year preceding. Of the 31,682 cases, 9,940 had to do with telegraphers in continuously operated offices; cases where the operators worked longer than nine hours; and there were 659 cases in daytime offices where the operators were on duty longer than 13 hours. The total number of instances of excess service of all classes has progressively decreased, each year, since 1918; due, it is believed, partly to light traffic conditions and also in a good degree to increased effort on the part of the roads to better observe the law.

Inspectors have noticed an increasing tendency on the part of many roads to resort to the practice of temporarily releasing trainmen for short periods under circumstances where no rest could be secured, thus violating the intent and spirit of the law.

The inspections of cars and locomotives are reported in tabular form, in detail, as usual; and in the performance of their exacting duties the inspectors are credited with having displayed "marked ability, meriting special commendation."

In the County Court at Pittsburgh, Pa., the Pennsylvania Railroad has recovered a verdict of $106 in a suit against C. J. Ramsburg for damage to a gate, a shanty and other property when the defendant, disregarding the signals when he approached a crossing, near Dixmont early in the morning one day in December, 1921, broke the gate and was struck by eastbound passenger train No. 8. Mr. Ramsburg's automobile was wrecked, but he himself escaped. There was some snow flying in the air, but the locomotive bell was ringing and evidently the jurymen believed the railroad's statement that the driver had approached the crossing in a reckless manner. On February 11 of this year, Mr. Ramsburg brought a suit against the road for $2,500, the value of his automobile; and on April 15, the railroad brought the suit which has just been decided. Mr. Ramsburg's suit has not yet come to trial.

All-Steel European Sleeping Car Built by Leeds Forge Company, Ltd.

New Cars for International Sleeping Car Company

Leeds Forge Company Build 40 Steel Cars of Interesting Design, Handsome Appearance and Increased Comfort

THE CARS of the International Sleeping Car Company (Compagnie Internationale des Wagons-Lits et des Grands Express Europeens) are operated over many different railroads in France, Belgium, Germany, Austria and other European countries. Owing to the different requirements of the various lines in regard to couplers, brake systems, heating systems, signals, lamp brackets and other details and the fact that the runs are frequently long and cross the borders of several countries, the design of the cars necessarily is a much more complicated matter than would be the case were they to be operated only in a limited area.

The Leeds Forge Company, Ltd., of Leeds, England, are now completing the delivery of 40 new cars to the International Company. These are the first all-steel sleeping cars to be used in Europe and the longest and heaviest coaches ever built in England. In general appearance, beauty of interior finish and arrangements for the comfort of the passengers these cars are particularly noteworthy.

General Arrangement

The cars have been designed to carry 16 passengers in eight one-place compartments and four two-place compartments, six of the one-place compartments being provided with communicating doors capable of being locked from either side. The seats turn over to form the bed, the bedding being secured to the underside of the seat in dust-proof containers. The seat back of the two-place compartment is arranged to lift to a horizontal position to form an upper berth, being supported by pull-out brackets fixed to the body side and corridor partition and by safety straps suspended from the ceiling. The two-place compartments are each also provided with a tip-up seat at the window side and opposite to the main seat, a folding table being fixed to the body side between.

In the first six cars, which were for use on the Peninsula and Orient Bombay Express service of the Paris, Lyons and Mediterranean between Calais and Marseilles, the two-place compartments were fitted with corner wash basin cabinets instead of dressing rooms as provided in the remaining 34. These dressing rooms, of which there are two, are arranged one between each two-place compartment and are provided with locks operating simultaneously on the doors leading to each compartment. A porcelain wash bowl is fitted, both hot and cold water being provided, also mirrors, decanters, drinking glasses, brush boxes, towel rails and soiled towel baskets. The window to the dressing room in the corridor partition is of obscured glass of St. Gobian pattern. The interior of the dressing room is finished in white enamel, all metallic fittings being silver-plated.

Each single compartment is provided with a wash basin cabinet, the basin, which is of the tip-up type, being white-metal, silver-plated, as is also the casing. Hot and cold water are available at each basin. A hinged table forms the front of this portion of the cabinet. The upper portion of the cabinet forms a cupboard for the decanters and drinking glasses and the lower portion contains the chamber utensils.

The leading dimensions and weights of these cars are given in an accompanying table.

Construction of the Body

The structure of the body is entirely of steel, being built on jigs in units comprising full length compartment side, full length corridor side, body ends, platform ends, full length roof and canopies, thus insuring complete interchangeability as well as ease of production. These units, which largely consist of pressings and rolled sections, all made to templates, are readily assembled whole on the underframe, leaving the shell ready for the interior finish. To insure absence of vibration and drumming, the steel work has been covered on the inside with canvas and insulation from heat and cold has been provided. Free air circulation between the outer skin and inner finish is also arranged for the prevention of condensation.

DIMENSIONS AND WEIGHTS

Dimensions:		
Length over buffers	23.452 m.	76 ft. 11⅜ in.
Length over endsills	21.940 m.	71 ft. 11⅜ in.
Distance between truck centers	16.000 m	52 ft. 6 in.
Truck wheelbase	2,500 m	8 ft. 2⅞ in.
Diameter of wheels	1.040 m.	3 ft. 4⅛ in.
Journals	130mm by 280mm.	5⅛ in. by 11 in.
Height, rail to top of roof	4.000 m	13 ft. 1½ in.
Maximum Height	4.024 m.	13 ft. 2⅞ in.
Height, rail to center of buffers	1.050 m.	3 ft. 5⅞ in.
Maximum width	2.875 m.	9 ft. 5⅛ in.
Weights:		
In running order	54 English tons	121,000 lb.
Per axle	13½ English tons	30,250 lb.
Truck		15,230 lb.

The sides are constructed of ⅛-in. pressed steel side-posts of varying sections connected longitudinally at the base to rolled angles, which rest on the underframe, on the outside to a heavy belt-rail molding, and on the inside to a bulb section; at the top the posts are connected by two angle side-plates. The sides below the belt-rail are sheathed with ⅛-

in. steel plates of a special quality. The sheathing above the belt-rail is of ⅛-in. plate, pressed in to form the window openings, four windows being pressed in one piece. Steel moldings are used to cover the butt joints of the side-plates, the whole side being riveted together with rivets counter-sunk on the outside to give a clean appearance to the exterior. The sides thus become deep girders capable of supporting the whole of the superstructure.

The roof is a departure from the former clerestory type, being elliptical. It is constructed of rolled angle carlines riveted to upper partition plates, the latter extending down to the side-plate level across the compartments and shaped to suit the ceiling at the corridor, the angles carrying the ceilings being riveted to either side. These upper partitions are connected longitudinally by angle upper side-plates and by angle purlins, the whole being sheathed by 1/16-in. roof plates lined with canvas to prevent drumming.

The compartment partitions of 1/16-in. steel plate with angle framing are riveted to the underframe, body side and roof and upper partitions thus effectively preventing side swaying with resultant creaking of the woodwork. To the underframes and partitions is fixed a steel flooring on which is secured the wood partitions and floor covering.

The vestibule end is built up of ⅛-in. pressed steel channel section posts and cross rails, sheathed on the exterior with ⅛-in. plates and on the interior with 1/16-in. plates with steel cover moldings. Incorporated with the vestibule ends are cupboards for ice and wine, utensils and coal, with linen cupboards in the ceiling—all of steel—the cool wine cupboard being insulated with asbestos and zinc lined.

The vestibule is provided with two doorways at the sides, a door to the corridor and a communicating door to the next coach through the collapsible vestibule. These doors are of teak.

Underframes

The underframes are of unusual design and consist of a small number of parts, this result being obtained by the use of large steel castings for the ends of the frames. These castings were supplied in a machined condition by the Commonwealth Steel Company, St. Louis, Mo., to the designs of the Leeds Forge Company. Although somewhat similar castings have been used for some time on heavy coaches in America, this is the first occasion on which they have been used in conjunction with side buffers. The castings dispense with a large number of individual parts which would be necessary with the type of buffing and drawgear adopted for these cars. Tail pieces extend from the end castings towards the center of the car in such a manner as to give a thoroughly strong connection with the remainder of the frame. The cast steel construction for the ends of the underframes give great resistance in the event of a collision.

The central portion of the frame consists of a fish-bellied girder built up of two web plates. The depth of this main girder at center of frame is 2 ft. 3 in. and at the part connecting to the end casting 10 in.

The four main crossbearers extend from side to side of the car passing through slots in the web plates of the center girder, other pressed crossbearers and floorbearers being built into the frame.

The side frames are made of rolled Z-sections connected firmly to the tail pieces of the end castings and arranged to form landings for the bottom angles of the body sides.

The buffing gear is of the equalizing type, the ends of the buffer shanks being fitted with shoes bearing on large laminated springs and connected by equalizing bars.

Trucks

The truck frame consists of one steel casting of which the pedestals, bolster suspension brackets, brake hanger brackets, etc., are cast to form integral parts, thus reducing the number of pieces to a minimum. The wear of pin holes is taken care of by the insertion of hard steel bushings and the pedestals and bolster wearing surfaces are faced with liners. The bolsters and spring planks are also of cast steel, having been manufactured, together with the frames, by the Commonwealth Steel Company. The trucks are of the equalizing beam type with double elliptic and helical springs, designed to obtain the easiest possible riding.

Interior Finish

The floors are covered with felt, cork-lino and carpet in the compartments and with cork, linoleum and carpet in the corridors. Bronze handrails are fitted over the fixed windows in the corridor, straps and handrails are provided to enable the dropping windows to be used as a means of exit in an emergency. In the corridor are also boxes for literature, notice frames, thermometer, candle lamps and cupboards for soiled linen and spare parts.

A seat and bed for the conductor or porter is fixed at one end of the corridor. The lavatories are situated one at each end, one being provided with a water closet and tip-up wash basin, the other with a water closet only, all fittings for both being white-metal, silver-plated or polished. The ceilings are removable for access to the water tanks and piping. The lavatories are finished in white enamel, the floor composition being cement and white marble chippings.

A signal alarm apparatus is fitted, capable of being operated from each compartment and from both ends of the corridor, the alarm valve being situated in the vestibule. Each compartment has also a push-button which operates a semaphore fixed above the door in the corridor partition, the bell being at the conductor's end of the corridor. Ventilators of the torpedo extractor type are fitted to the roof, communicating to the corridor and lavatories.

The woodwork of the compartments and corridor is of polished mahogany, constructed in sections ready for fitting into position. The steel compartment partitions are covered on each side with a one-piece section while the corridor partition is made up of several sections. The portions of interior finish fixed to the body sides in the compartments and corridor are also made in sections of suitable size. The wash basin cabinets are each made as one unit, as are also the cupboards in the corridor. The dressing rooms consist of two units, ready for fixing in position, thus ensuring the minimum of time actually spent finishing the inside of the car where working space is limited.

The scheme of decoration for the woodwork of the compartments is inlaid veneered panels above the window sills and figured velvet panels below, that for the corridor being embossed leather above the window sills and plain leather and lincrusta below.

The ceilings are composed of impermeable millboard to which is secured a border pattern of Anaglypta, the whole painted white and secured in position with polished mahogany moldings. The roof steel upper partitions are also covered with a frame to which is secured impermeable millboard with a border corresponding to that on the ceilings and painted white, with polished mahogany securing moldings.

The seats which have comfortable, high backs are upholstered in figured velvet, the material being supplied by the Wagons-Lits Cie., to their own design, as are also the inlaid panels and embossed leather.

The double compartments are provided with three windows of the frameless, balanced type, two dropping to the full extent, the other dropping to the extent of a top glass louvre ventilator operated from inside or out. The single compartments are provided with two windows, one dropping full, the other to the ventilator. The corridor is provided with both dropping and fixed windows. All windows are fitted with roller curtains.

The exterior of the coach sides and ends are finished in royal-blue decorated with gold lining. The roof is painted black as is also the underframe. The vestibule interiors are finished to match teak. The outside lettering on the sides is of bronze.

Heating, Water and Lighting Systems

High and low pressure steam pipes pass through the underframes, the former having connections to a reducing valve placed in the body and the latter to the individual steam heaters.

There are two heating systems, one the usual through steam heating by means of serpentine radiators in the compartments and straight piping in the corridors, the other by hot-water circulation. For the latter a heating chamber is provided at one end of the corridor, in which is fixed a coal-fired boiler. Circulating pipes of copper are run from the boiler to a hot-water tank in the roof and from thence round both sides of the car. The hot-water tank is divided into two portions, the water in one portion being heated by radiation from the water in the other portion which is heated by the boiler, the water thus warmed being used for the wash basins. The cold-water tanks fixed in the roof are also provided for supplying the wash basins. These tanks are filled from connections at the side of coach on the side sills. All tanks and piping, other than for high pressure steam, are of copper.

The electric lighting installation is of the Dick system. The current is generated by a dynamo slung from the underframe and driven by a belt from a pulley attached to one of the axles, the current passing to a pair of battery boxes slung on the frames and thence to the switchboards. Each compartment has a triple electrolier, two bulbs of 27 volts each being used for lighting, a single light with blue globe being provided as a night light. In addition there are reading lamps situated at the head of each berth. The lavatories have each one light, the corridor four lights, the vestibules one each, and one is provided in the roof over and outside each platform entrance door. The switchboard and regulator are placed at the end of corridor near the conductor's bunk.

Brakes

As these cars are run over many railway systems, some of which use the vacuum and others a compressed air brake, it has been necessary to arrange the brake rigging for use with either system. When the cars are operated in trains having the vacuum system two 24-in. diameter cylinders operate a pair of brake shafts from which the power is transmitted to the brake shoes by suitable foundation brake rigging, and when the Westinghouse compressed air system is in use, the power is obtained from a 17-in. diameter brake cylinder. Furthermore, the vacuum brake is fitted with rapid action valves while the Westinghouse brake is fitted with a double pipe line so that the system may be either automatic or controlled.

The foundation brake rigging is necessarily somewhat complicated as the brakes must be applied by either the vacuum or the compressed air cylinders, or by the hand brake controlled by a wheel placed in the vestibule at one end of the car. The trucks are equipped with a clasp brake, the shoes being suspended only 2 in. below the center of the axle. All brake-rigging is elevated well above the track.

The appearance of the end of the car is complicated by the unusual number of hose connections required for the vacuum brake, the automatic and control pipes of the air brake and the high and low-pressure steam heat hose.

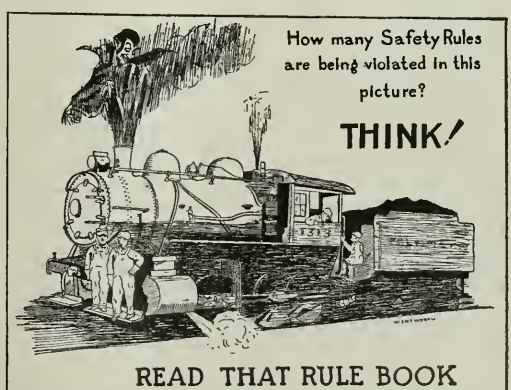
Delivery of the Finished Cars

The question of transportation of the cars to the coast and then of the shipment to France was a difficult one as the cars were larger than allowed by the loading gages of English roads. To obviate the necessity of dismantling the cars for shipment and consequent re-erection on the continent, it was arranged with the railway companies concerned for the cars to travel to the port of shipment on their own wheels complete, excepting for the removal of a few parts of minor importance. Stations were passed at dead slow speeds as the clearances were practically nil.

Once at the port of embarkation it was highly desirable that the cars should be shipped without the necessity of slinging them onto the decks of the ship. Channel ferry-steamers had been built during the war for the purpose of carrying rolling stock to the continent, but the terminals for these boats were at Richborough and Southhampton, however, and to neither of these ports could the cars be run conveniently, owing to their exceptionally large overall dimensions which would have necessitated alterations to the track in places, in order to avoid damage to the cars and to railway property. Negotiations were entered into with the Great Central for a new ferry-steamer terminal to be made on their line at Immingham, within 80 miles of the Leeds Forge Works, and with the Midland, which had charge of the transportation from the works at Newlay, Leeds, to Immingham port. The problem of the actual loading was settled by the provision of ramps over which the cars were run onto the tracks on the ferry-boat deck direct from the quay, an ingenious arrangement taking care of the rise and fall in the dock water-level, and thus preventing delay in loading. On the other side of the channel the delivery was made at Calais.

Work on the Moffat Tunnel of the Denver & Salt Lake has been delayed at least six months by a petition for a rehearing on the case involving the constitutionality of the Moffat Tunnel Act before the Colorado Supreme Court. The unanimous opinion of the State Supreme Court sustaining the Act was reported in the *Railway Age* of December 2.

A new type of Pullman car has been put in service on the Northwestern Limited of the Chicago & Northwestern operating between Chicago, Minneapolis and St. Paul. Permanent partitions extending from the side of the car half way across the backs of the seats provide greater privacy for the occupants of the berths during the daytime. The outer surface of the upper berths is flatter than usual, which gives the interior of the car an appearance of greater width. Other conveniences for the travelers, such as additional coat hooks in the upper berths and more easily operated berth lights, are also provided.



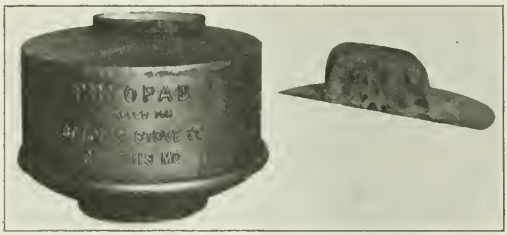
From Tyrone Division Safety Bulletin, Pennsylvania Railroad

An Improvement in Railroad Stoves

DURING THE PAST YEAR and particularly during the last few weeks, with the approach of cold weather, a number of railroads have evinced considerable interest in a recent development in stove design which appears to offer, at a small initial expense, the means of effecting substantial economies in the fuel consumed in stations, cabooses, engine-houses, pumping plants and other places employing coal stoves, and materially to reduce the danger from fire as well as to improve the service obtained from heating facilities at these points.

The development takes the form of a two-piece diaphragm which is supported in the upper part of the stove, one piece consisting of a semi-circular plate which extends horizontally across the fire compartment a few inches below the smoke flue and the other piece projecting from this place vertically to the top of the stove and occupying a position midway between the smoke flue and the front edge of the stove, in which position it leaves a space at each side for smoke and gases to pass from the stove to the flue.

The purpose of this arrangement is so to deflect the path of the flames as to keep them in direct contact with the sides of the stove, instead of allowing them to proceed directly up the center of the stove toward the flue under the influence of the draft. The principle underlying the construction is that by thus eliminating the air space between the flames



The Pyropad Drum (at left) and Pyropad

and the stove, the maximum of heat produced by the combustion is transmitted to the room instead of passing up the stack.

That the device accomplishes the purpose for which it is designed is indicated by several observations made at demonstrations. When fired up with open drafts and with only a small amount of fuel in the fire pot, the stove assumes a cherry red much more quickly than the same stove fired up under similar conditions but not equipped with the device.

It is to be observed also that under any conditions of firing, the intensity of the heat is generally uniform over the sides of the stove, a condition unlike that usually encountered in which the fire pot is red hot and the remainder of the stove quite cool. It is also observed that the heat may be maintained over an unusually long period without replenishment of fuel and with comparatively few coals upon the grate; an observation brought out particularly well in the case of an 800-lb. cast iron roundhouse type stove in which a red heat was secured with Illinois bituminous coal with only a third of an ordinary size scuttle full of coal and maintained even when the grate could be seen through the coals. It has also been observed that a red hot condition of the stove is not accompanied by overheating of the flue, the Fire Underwriters' Laboratories, in fact, having conducted tests on the stove above mentioned in which it was found, among other things, that tissue paper wrapped around the stack experienced no more than a slight turning of color at points where heavy paper would ordinarily have ignited in a short time.

The advantages claimed for the device are several. It appears that much less fuel is required to obtain a given amount of heat, or that more heat can be obtained for a given amount of fuel, or that it is possible to use a smaller stove for any installation designed to afford a specified amount of heat. It also appears that by reason of more perfect combustion less attention is required to keep up the heat and because of the more uniform heating of the metal, less trouble is encountered from cracking and buckling of the bowl or from the burning of grates. It is further advanced that because of more perfect combustion obtained by use of the device, as well as its ability to catch any soot arising during periods of imperfect combustion in the stove, soot troubles are largely eliminated, and finally it appears from the fact that the smoke flue does not become overheated under any condition of firing, a decided protection

The Pyropad Roundhouse Stove

from danger of fire is afforded, since it is a well recognized fact that most fires from stoves arise from the overheating of the flue.

The development is called the Pyropad and is a product of the St. Louis Stove Company, St. Louis, Mo., which not only incorporates it in special types of stoves for railway service called the Pyropad stoves, but also manufactures Pyropad drums which may be adapted to stoves already in service. A number of railroads are now using the device or have it under test. Of these roads the Missouri Pacific recently made an interesting test of the roundhouse type of stove in sand drying in which the Pyropad stove is reported to have dried 50 per cent more sand with approximately 25 per cent less coal than other stoves in service fired under the same conditions.

Telegraph and Telephone Section Holds Meeting

The Use of Concrete Poles, Electrolysis, Message Traffic and the Adoption of Radio Discussed

THE SIXTH SESSION of the Telegraph and Telephone Section of the American Railway Association was held at the La Salle Hotel, Chicago, on December 12, 13 and 14, with an attendance of approximately 150 railroad members and 50 affiliated members. This was the annual meeting which had been scheduled to be held at Colorado Springs, Colo., on September 19, 20 and 21, but which was postponed because of the strike of the shop crafts employees, as many of the telegraph departments were affected by the strike. The strike caused a postponement of a number of committee meetings which prevented the completion of several reports for presentation at that time. The meeting was called to order by the Chairman W. H. Hall, general superintendent of telegraph, Missouri, Kansas & Texas lines, at 10 a. m. on Tuesday, December 12.

Talk Results, Says Mr. Aishton

R. H. Aishton, president of the American Railway Association, in addressing the meeting on Tuesday morning, said that the world was full of railroad saviors at Washington, and this could be expected as long as the feeling existed that the railroads were walking around on crutches. "There has been enough talk of the 'crime of 1918' and of the railroads breaking down. The railroad men themselves can do much to counteract such ideas," Mr. Aishton said, "by getting before the people the tremendous things the railroads are doing." There was never a greater necessity for this than at the present time. Mr. Aishton pointed out that the railroads have done a wonderful work during the past year in spite of the handicaps such as the thousands of idle cars and locomotives during the first part of the year followed by the coal strike, which upset the normal railroad service. This was followed by the shopmen's strike which started on July 1 leaving 18 per cent of the cars in the country in bad order, and on top of this there was a tremendous demand for transportation facilities during the fall. In spite of all these handicaps Mr. Aishton said that the car service division shows that during the first 46 weeks this year, which extended from January 1 to November 18 last, 2,161,522 cars were loaded with grain and grain products, which is the largest number of cars ever loaded with grain and grain products during a similar period in the history of the railroads. Compared with the same period last year this was an increase of 112,583 cars, or 5½ per cent. Loadings of all kinds during the 46 weeks' period this year exceeded the corresponding period in 1920 by 513,059 cars, or 31 per cent.

In speaking of the work done by the Telegraph and Telephone section, Mr. Aishton said it was necessary that all sections show that they are functioning properly. He felt, if the section had done nothing else, the Manual alone was well worth to the railroads all the money spent. He advised all the members continually to look into the future, as radio with all of its possibilities and telephone developments, etc., must be watched closely and the railroads kept informed so that greater economy and efficiency can be obtained. "Get hold of your general managers, presidents and even your subordinates, and tell them of the wonderful things the section has accomplished and the good results to be obtained through the adoption of recommended practices, and you will become one of the most important branches in the association." Mr. Aishton expressed his appreciation to Chairman Hall for the splendid cooperation, and also to Mr. Hulatt for what he had done for the American railways while chairman of the section and he extended to him the best wishes of the American railways for his success in his future work abroad.

One pleasing feature of the meeting was a "Dinner to Dick" which constituted a personal farewell to H. Hulatt from the members of the T. & T. section. The dinner was held on Wednesday evening and was featured with music and songs. Mr. Hulatt was chairman of the section in 1921 and has resigned as manager of telegraphs of the Grand Trunk System to engage in other business in England.

Outside Plant—Construction and Maintenance

In view of the increasing cost of wooden pole lines the report of Sub-committee A of Committee 1, including an outline of a proposed specification on the construction and maintenance of wood pole lines is of interest. The finished portion of the specification establishes definitions of all terms used in this work and includes 22 drawings of proposed layouts and standards.

Concrete telegraph poles were used on the Panama Railroad in 1856 and numerous test installations have been made both in Europe and the United States, the most important being on the Pennsylvania and the Baltimore & Ohio. More recent designs have increased the strength and reduced the weight and material required. Sub-committee A-2 presented a complete specification for these reinforced concrete poles together with photographs and charts showing results of tests made. It is recommended that where permanency is of first importance, concrete poles offer a solution well worth experiment and development.

In May, Sub-committee A-3 decided that the American Engineering Standards Committee should be requested to include in its work specifications for telegraph and telephone cable. However, it was thought that specifications to be drafted by the Standards Committee would not be completed for some time. Therefore, as the Telegraph & Telephone section was desirous of securing specifications as quickly as possible, the committee proceeded at once to prepare an outline; and a sample portion of a proposed specification of paper-insulated lead-covered telegraph and telephone cable which was presented for discussion at the meeting.

By providing a kit of tools according to the lists prepared by Sub-committee A-4, the construction crews and linemen can be held accountable for first class work and a full outfit of equipment. A complete written agreement between the railroads and power companies crossing railroad pole lines with power lines is essential, therefore a new form of agreement was presented by Sub-committee B.

Where tile or fibre conduit is used for underground conduit systems crossing under tracks, at least 2 ft. 8 in. clearance between the top of the conduit protection and the base of the rail is required. If this clearance cannot be obtained it was recommended in the report of Sub-committee C that iron or mild steel conduit be used. Manholes, handholes and terminal poles where practicable, shall have a horizontal clearance of not less than 12 ft. from the nearest track rail. Drawings showing the recommended cross sectional area of conduit and concrete protections are included as a part of the specification.

On account of difficulties in transposing train dispatching circuits, such circuits should be kept in pin positions away

from long distance telephone circuits, according to the report of Sub-committee D—Transpositions, which included a specification covering the assignment of pin positions for phantom telegraph circuits. The end position on the top cross-arms and the lower cross-arms have a slight advantage in being somewhat less subject to cross talk and noise as compared with other pin positions. Transposition poles are to be marked by stenciled letters painted on the poles five feet from the ground.

Inside Plant—Construction and Maintenance

In order to establish standards for switchboard plugs, jacks and cords, Sub-committee B—Apparatus, Material and Tools, has prepared specifications on these three articles for the guidance of manufacturers. Where telegraph, telephone and interlocking equipment is to be housed in the same building, as in interlocking towers, it was recommended by Sub-committee H that the apparatus be located according to typical plans presented with the report and that full information on requirements be furnished from officers responsible for the construction and maintenance of all classes of this equipment.

Instructions for the use of bridge testing sets with variable ratio arms; a 28-page explanation on the theory of simultaneous telegraphy and telephony; and a set of instructions for the maintenance of polar relays were included in the report of Sub-committee J—Circuits and Current Supply.

Specifications for the installations and maintenance of stationary storage batteries, both the lead type and the nickel-iron-alkaline type were given in detail together with sketches in the report of Sub-committee K—Installation and Maintenance. Directions for the circuit cross connection records for wire chiefs and specifications for soldering were also included in the report of this sub-committee.

Message Traffic

A form was presented by Committee 6 for the recording of requests for, and the completion of, long distance telephone calls over railroad telephone circuits. It was recommended that each telegraph message be assigned a number, adding a dash and a suffix number to indicate the number of addresses when more than one person is to receive a copy. On private exchange telephone systems the limiting of the length of conversations to three minutes was recommended. On account of the continual changes in traffic it was not recommended that an "efficiency unit" be established for relay office performance.

Telegraph and Telephone Development

One road has developed a novel and convenient telephone switching device for use in towers and offices where there are numerous circuits to which the operator has occasion to connect his telephone. The "Superphone" is a new telephone invented by R. D. Duncan Jr., chief engineer of the Signal Corps Research Laboratory. This apparatus is said to provide a means for absolute secrecy of communication without possibility of being overheard or interrupted by any one else on that particular line. The system is an outgrowth of the "wired-wireless." The Northern Pacific has installed an extra push button at the long distance operator's position to operate the calling circuits, thereby preventing undesirable "ring backs."

The protector ground connection wire for lightning arresters should be either of copper, not smaller than No. 6. A.W.G. or galvanized steel strand. These wires, according to Committee No. 4, should follow the most direct practicable route and be free from splices, spirals and unnecessary sharp bends.

The most common causes for the electrical unbalances to ground on telephone circuits are the transposition irregularities and local leaks due to contact with limbs of trees or loose joints in the wires. The elimination of such troubles and also the transposition of metallic circuits and cables was explained in the reports of Committee 7—Inductive Interference.

Efforts are continually being made to improve transmission by expensive changes in line circuits, switchboards and sub-station equipment. However, the results so accomplished are in many cases equivalent to only a few miles of standard cable, whereas by educating the users of the telephones to talk with the lips practically against the rim of the mouthpiece, additional saving can be made equivalent to many miles of standard cable, and at no expense. *"Place the lips close to the mouthpiece and speak in a firm tone of voice"* were the instructions recommended by Committee 11, and should be supplemented by a logical educational campaign to teach railroad employees of the more satisfactory service so easily obtained.

A paper on "Electrolysis Mitigation" together with photographs and a map was presented by Edward Entelman, superintendent of telegraph, Southern Pacific. The paper related several occurrences where cable sheath and pipe lines were damaged, the trouble being eliminated by insulating the pipe into sections and using drain connections. A form on which to record the enrollment, qualifications, employment, and progress in studies and advancement of employees was presented by the Committee on Education and Training of Telegraph and Telephone Employees. The first instruction pamphlets are to be for elementary mathematics and for elementary electricity. The books are to be of a pocket size so that a man can use them in the field.

Negotiations were under way with the manufacturers for the construction and tests of several radio sets applicable to railroad needs according to the report of Committee 12—Radio and Wire Carrier Systems. Radio sets for communication between the head and rear end of long freight trains or with nearby stations, using the conductors on adjacent pole lines in a carrier-current system were considered as of first importance. Short range sending and receiving sets to be used in case of pole lines being torn down or in case of accidents are also needed. Patent litigations are delaying progress on the developments of such equipment.

CANADIAN PACIFIC STEAMERS have brought to Montreal this past season 16,722 cabin passengers and have carried out 12,668 cabin and 8,565 third class passengers. These figures represent the passenger business of 59 steamship trips.

An Unmatched Team

New York Railroad Club Celebrates Golden Jubilee

2,200 Attend Banquet Commemorating Club's Fiftieth Year— More Public Relations Work Urged

THE NEW YORK RAILROAD CLUB celebrated its fiftieth anniversary on December 12 by a dinner at the Hotel Commodore, New York. About 2,200 attended. The speaker of the evening was Ex-Governor John J. Cornwell of West Virginia, now general counsel of the Baltimore & Ohio, who called attention to the growth of anti-railroad sentiment in the country and urged the roads to devote more time and money to their public relations work.

Other speakers were H. H. Vreeland, vice-president of the Interborough Consolidated Corporation, who was the toastmaster; George A. Post, chairman of the Railroad Committee of the Chamber of Commerce of the United States, and Daniel M. Brady, president of the Brady Brass Company, who was the only one present who had been a member of the club since its inception.

The three last named speakers devoted their remarks to reminiscences of the earlier days of the club, its accomplishments and to eulogizing those who by their devotion to the work of the club have made it a success.

H. H. Vreeland Reviews Club's History

"The New York Railroad Club," said Mr. Vreeland, "came into being about December 21, 1872, on which date what was perhaps its first regular meeting was held at 111 Liberty street, New York. Its inception, however, dates back to December 12 of that year in the beginning of what had for some time in the minds of men of affairs in the Master Car Builders' Association and to whom Leander Garey, affectionately remembered and honored to this day, was the leader, who was even then a veteran in railroad service and of whom the Hon. Chauncey M. Depew, our only honorary member, in an address given 25 years ago before this club, said, 'an able, industrious, energetic and conscientious railroad man,' and the organization of the New York Railroad Club with Mr. Garey as its first president, 'a happy omen of its permanent success'."

The club, which is now celebrating its golden anniversary, has at the present time 2,000 active members, Mr. Vreeland pointed out. These include men in all ranks of railroad service as well as representatives of the railway manufacturing and supply companies. There are now in this country seven technical railroad clubs, he said, and two in Canada, all modeled after the New York Railroad Club which "is pleased to recognize them all as her own prosperous, successful and well-behaved children."

"It is of still further pride," Mr. Vreeland continued, "that upon our membership list will be found the names of W. J. Harahan, president of the Chesapeake & Ohio; James H. Hustis, president of the Boston & Maine; W. C. Besler, president of the Central Railroad of New Jersey; Elisha Lee, vice-president of the Pennsylvania System; Ralph Peters, president of the Long Island; W. H. Williams, vice-president of the Delaware & Hudson; Frank Hedley, president and general manager of the Interborough Rapid Transit Company; Dr. W. F. M. Goss, president of the Car Manufacturers Association; P. E. Crowley, vice-president of the New York Central; W. C. Thompson, general superintendent of rolling stock of the New York Central and secretary of the Traveling Engineers Association; W. K. Vanderbilt; Daniel R. MacBain, assistant general manager of the New York Central at Cleveland; Robert M. Lovett, chairman of the board of the Union Pacific; George W. Wildin, general manager of the Westinghouse Air Brake Company; Col. B. W. Dunn, chief of the Bureau of Explosives, who has done great work in the cause of safety in railroad travel and transportation of property, and many others so numerous that time will not permit of their individual mention. You will find that all or nearly all of those referred to are here tonight, the 'elder statesmen' being revered for their companionship and helpful co-operation."

Presentation of Cup to Retiring President

Another feature of the program of the evening was the presentation of a silver loving cup to John A. Droege, general superintendent of the New York, New Haven & Hartford, the retiring president of the club. Presentation was made by W. G. Besler, president of the Central of New Jersey. The evening's program was opened by F. T. Dickerson, secretary and treasurer of the Central of New Jersey, the new president of the club. Arthur N. Dugan, vice-president of the Bronze Metal Company, was chairman of the dinner committee in charge of all arrangements.

Mr. Cornwell's Address

With the end of the shopmen's strike, the railroads would have entered a more peaceful period, politically and so far as legislation and a demand for more stringent regulation go, had it not been for the unfortunate condition of the farmer.

This country cannot become really and truly prosperous, or if it has become prosperous it cannot long remain so, unless the farmer has his proper share of that prosperity. Beside being the food producer, the purchasing power of the farmer, in normal times, is almost as great as that of all the balance of the people. If the farmer is crippled or his purchasing power is impaired for long, the balance of the country and all other industries, including the railroads, will soon be affected.

The farmer's products have been deflated to a greater extent than those of anybody else, while he is competing, when he employs labor, with wages of other groups of employees that have not been deflated. The coal miner is getting the highest wage that was paid as a result of war conditions.

So, what are many farmers doing? Taking their boys and their girls out of college, and preparing to cultivate only the land they and the members of their family can till. They find it impossible to sell their farm products at prices which will let them out on the cost of production. And what else is the farmer doing?

He is getting in a bad temper, an ugly frame of mind. He looks around to see what is the matter and is told that the trouble is that the freight rate is so high to market that it eats up the profit and the crop. Naturally, a large percentage of them believe the statements. When a man is in hard luck in business it is not a difficult matter to convince him that he has not had a fair deal; that somebody has robbed him, and when a man has been robbed, or thinks he has, and a seemingly respectable man points out the robber, what is the man going to do? Is it not natural that he should go after the robber, real or supposed?

That is what the farmers seem to have thought they were doing in the recent election in some of the agricultural

states. They have been convinced that the railroads have unjust and exorbitant freight rates and they have prepared, not exactly to go after them, but like the old farmer I once knew was about going to church. He said he would either go or send. Those western farmers are sending. They have sent Mr. La Follette back with a record breaking majority. They have done the same with Mr. Johnson in California. They have elected the Non-partisan League, recalled governor, Mr. Frazer, from North Dakota, and they have commissioned Mr. Brookhart, of Iowa, to come to Washington with a brand new crop of ideas. That is all significant.

The next Congress will, in all probability, seek to do some very decisive things. Instead of putting teeth into the Transportation Act, as some of you railroad men have been talking, they are liable to cut the very gizzard out of it, if indeed it is not scrapped entirely. When these western farmers had the railroads pointed out as the malefactors in the recent campaign, the voters were reminded of all the malodorous things done by the railroads in the old days when rebating was a custom, when discrimination in favor of the big shipper as against the little one was popular and when the general business standards and morals were on a very different plane from what they are today.

Other Shippers Also Dissatisfied

The car shortage is making socialists, temporarily, out of a good many shippers of other classes of freight. That is particularly true of the coal operators. The non-union operators have made little complaint, I think, probably because they got theirs while the coal strike was on and not because they have any more patience or sympathy for the railroads in their troubles than the union operators. The latter, who had a 100 per cent strike for five months, who were able to shut up shop and eliminate all the expense possible by not attempting to run their mines, having sustained heavy losses during the strike, naturally now want to recoup—to get some of the money back, and they want an ample car supply. Some of them forget that the railroads were not allowed to make any huge profits during the war, out of which they might have purchased cars they did not need, for just such an emergency as we have been having; they forget that the railroads also had a strike and could not close down their plants, but had to keep operating, no matter what the sacrifice. They forget that the railroads are now attempting to handle a full year's supply of coal in a few months—that is, some of them do, and they are not only severe in their criticism, but—some of them—are standing around saying: "Well, if this is the best the railroads can do, I am for government ownership."

I suppose it would be a queer doctor who would come and diagnose a case and go away without prescribing a treatment, but I have no patent-medicine chest with me. I have no cock-sure scheme to cure any of the ills with which the body politic is afflicted. I do not know any way by which Mr. La Follette or Mr. Frazer or Colonel Brookhart can be brought to look through your spectacles.

It does, however, occur to me that there are some things the railroads, their officers and their employees can do right now that would be, or at least *might* be, helpful. Very briefly, I am going to tell you what they are. In doing so, I am giving you merely my personal opinions. They are not the opinions or impressions of a railroad man, of the general counsel of the Baltimore & Ohio, but rather the impressions of one who was but lately one of the general public and only a little while ago a public official who was having his troubles dealing with some very acute industrial disturbances.

Need for Vigorous Public Relations Campaign

I would put on a tremendous publicity campaign to put the facts as to the railroad situation before the country. I would tell the railroad story in every conceivable way and to everybody in the country. The railroads have not fallen down as the people think and as the politicians and the demagogues have been telling them. You and I know that but the people don't know it generally. The country is simply outgrowing the transportation facilities just as the big railroad men of the country were predicting a score of years ago would be the case and why?

We know but the people don't know that it is chiefly because railroads have been over-regulated and over-restricted and limited in their operations and limited in their earnings until it really is a great tribute to the men who have been handling them to say that they are operating at the peak, as they have been the past two months and just following a strike.

Probably you are saying to yourselves the railroads already are doing that kind of publicity work. You are, in a way, but a great deal of it does not get anywhere. You are collecting and printing a lot of statistics and bulletins and sending them around to your own officers and employees and to the officers of other railroads. I get a lot of it. I read it, too, for I have not been in the game long enough to lose interest in the subject. But the public is not getting it.

Another thing: If there are any unfair rules or practices being engaged in, anywhere on the part of the railroads, they should be cut out, regardless of whether they are strictly permissible under the laws. The public does not understand that among the hundreds of agents and officers of a single system there are bound to be a few men, here and there, who will occasionally do things not exactly right and that are not in line with the policy of the management which may be trying ever so hard to be on the level. I sometimes wonder whether the executive officers are, themselves, always alive to those facts and whether they are just as alert and as careful to investigate and ascertain whether the under-officials, or all of them, are always playing the game square.

I got a training while a public official which did me a lot of good. I read vicious criticisms, soon after I took office, based upon misinformation, sometimes, I might properly say, gross ignorance of the law or of the facts, or both. A fine opportunity offered occasionally to soak a fellow and soak him hard, but the man who wielded the editorial pen would have the last word. He could keep on talking after I had stopped and gotten absorbed with something else, so, instead of writing him a nasty letter or giving out a statement to his competitor in which I sought to expose his ignorance, I wrote him a polite note and assured him of my confidence in his desire to be fair and accurate in his statements; that I thought he would be willing for me to point out to him that a slight error had crept in and that the facts were as follows. Rarely ever, indeed I can recall but one case, where that kind of letter did not meet a proper response and in at least three instances I made fast friends of influential newspaper editors who belonged to the opposite political party.

There Are Still Opportunities in the Railroad Business

And you young men: I assume most of you are in the railroad game for life. I do not entirely agree with the thought that because railroads are regulated and unduly hampered by governmental agencies that all opportunities for young men in the railroad profession are gone. Genius, energy, common sense, diplomacy, and keeping everlastingly at it will count today and will continue to count in the railroad world.

If the railroads can get through the period they are now approaching and if the coming Congress can be persuaded not to take away the only safeguards left and turn the forty-eight states loose on them to tear them into pieces and make them a patch work, then, with reasonable prosperity ahead for a few years, they will settle down into a more peaceful state and federal ownership will be avoided. But, it is going to take a fight to stave off those things and you should begin now, not wait until the thing is upon you.

Effect on Ton-Mile Cost of Reducing Train Loads

Illinois Central Tests for U. S. R. A. Show Greatest Economy with Full Tonnage Freight Trains

DURING THE PAST 20 YEARS much attention has been given to the rating and loading of locomotives in freight service and it is recognized as one of the most important factors in keeping down the direct ton-mile cost of freight train operation. The most economical loading until recently has generally been considered as the maximum which the locomotive could handle over the ruling grades with a margin of capacity only large enough to prevent stalling under the most adverse conditions likely to be encountered. During this period there has been an increase in the revenue tons per train greater in proportion than the increase in the average tractive effort of the locomotives in freight service.

In the development of accurate tonnage ratings little attention has been given to the element of time, although in many cases it has been taken into account in the practical adjustment of ratings to meet the requirements of local conditions or traffic of special character. With the present character of train service wage agreements, however, the importance of the element of time has been materially increased. With the passage of the Adamson law in 1916, the trip unit was decreased from ten hours to eight hours and in 1919 punitive rates for overtime were established by the Railroad Administration.

Character of the Tests

During the early summer of 1919 a series of freight train tests were conducted on five divisions of the Illinois Central System under the direction of the United States Railroad Administration to determine the best combination of train load and corresponding practicable speed from the standpoint of economy in the two most affected direct costs, that is, fuel and crew wages. The combined effect of tonnage and speed was measured in ton-miles per train hour, in which the train load in tons and the speed in miles an hour are factors of equal weight, and the direct costs were computed on the gross ton-mileage basis. No account of these tests has been published previously, but the results are of fully as much general interest and value now as they were at the time the tests were conducted.

Tests were run on the Champaign district of the Illinois division, the Paducah district of the Kentucky division, the Fulton district of the Tennessee division, the McComb district of the Louisiana division and the Tallahatchie district of the Memphis division of the Yazoo & Mississippi Valley. The tests consisted in the observation of the performance of trains of regular make-up, without special equipment, some of which were given the regular loading in accordance with the tonnage ratings then in force and others of which were given a loading reduced considerably below the regular rating. The observations were made in May, 1919, under exceptionally favorable conditions and on each district were under the personal supervision of a traveling engineer who was given competent assistance in keeping all records accurately.

The coal consumption was arrived at by careful measurements on all districts with the exception of the Paducah district of the Kentucky division, where actual weights were used. Accurate records were made of the time in motion and of all delays. The tonnage hauled was arrived at by taking the scale weights from the way-bills for loaded cars and using the stenciled weights for empty cars.

On the Champaign district the observations were confined to northbound trains only, owing to the fact that the traffic on this district is unbalanced, with the heavy movement from the south. This is a double track district 130 miles long, and is divided into two sections for rating purposes, one 84 miles long with ruling grades of 31 ft. per mile and the other 46 miles long with ruling grades of 18 ft. per mile. The tests included 30 full tonnage trains and 9 reduced tonnage trains.

On the Paducah district of the Kentucky division the results of the operation of 25 full tonnage trains northbound were recorded. With the exception of 10 miles of double track, this is a single track district 99 miles long. It has two tonnage sections, one 58 miles long with ruling grades of 66 ft. per mile and the other 43 miles long with ruling grades of 26 ft. per mile. No reduced tonnage trains were operated on this district because, with its comparatively heavy grades and large number of trains, overtime is the

result of interference by other trains and is not due to slow running speeds.

The Fulton district of the Kentucky division, which is 128 miles long, is double tracked throughout and has ruling grades of 26 ft. per mile. On this district observations of 9 full tonnage and 32 reduced tonnage trains were recorded, the movements being about equally divided between north and south.

The McComb district of the Louisiana division is a double track district 96 miles long with ruling grades of 21 ft. per mile. It compares in a general way with the Fulton district except that it is 32 miles shorter. Records were kept of the performance of 7 full tonnage trains and 9 trains with reduced tonnage, operating in the direction of heavy traffic only.

The Tallahatchie district of the Memphis division is a single track line with the exception of 28 miles of double track and is 144 miles long northward and 145 miles long southward. This is a low grade line, the ruling grade not exceeding 13 ft. per mile southbound and 17 ft. per mile northbound. On this district the tests included 32 trains of full tonnage and 20 trains of reduced tonnage, in each case evenly divided between the two directions.

As has already been stated, only fuel and crew wages were taken into account in the test records and the results were computed to show the cost of each and the total cost per 1,000 gross ton-miles and per train hour with straight time overtime, and the total cost per 1,000 gross ton-miles and per train hour with time and one-half for overtime.

In addition to these direct expenses, however, enginehouse expense is also affected by any change in operating conditions which changes the number of train miles required to produce a given number of gross ton-miles. It is, therefore, necessary to add pro rata to the direct unit costs for the reduced tonnage trains, a proportion of the cost of handling an engine through a terminal equal to the per cent of the increase in the train miles. Furthermore, in cases where the traffic is not balanced any improvement in operating costs derived from the running of lighter trains will be effective in the direction of heavy traffic only, and the cost of fuel and wages as well as the additional enginehouse expense incidental to the balancing movement of the additional locomotives required in the direction of heavy traffic must be added pro rata to the direct unit costs in the heavy direction.

Lower Costs With Heavy Train Load

The effect of these additional items of cost on the relationship of total costs per 1,000 gross ton-miles with reduced tonnage to the total costs with full tonnage are included in Table I, in which is presented a brief summary of the results of the tests. This table shows that in every case where comparisons were made between full and reduced tonnage operation, the lower ton-mile costs, considering the additional items, were obtained with the heavier train loading.

The effect of the lighter train loading on the cost of balancing power is a practical consideration of general importance, since it is exceptional to find the ton-mile movement in opposing directions equalized for more than short periods at a time. This effect alone was sufficient to throw the advantage in favor of the heavy train loading in the only case where the reduction of tonnage effected a reduction in the fuel and wage costs.

Analysis by Districts

In Table II is shown the average performance and direct costs of operation of the full and reduced tonnage trains on each district. It will be observed that, with the exception of the Champaign district, in every case the reduction of the train load resulted in a decrease in the number of gross ton-miles per train hour and an increase in both the wage and fuel costs per 1,000 gross ton-miles.

On the Fulton district, with an average reduction in the train load of 6.5 per cent, there was an average increase in speed between terminals of 1.4 per cent, from 14.6 miles an hour to 14.8 miles an hour, while the average running speed increased from 17.6 miles an hour to 18.3 miles an hour, or 4 per cent. The average delays per trip increased from 1 hr. 26 min. to 1 hr. 47 min. The gross ton-miles per train hour decreased from 48,364 to 45,419, or 6.1 per cent, and the direct expense increased from $.156 to $.162 per 1,000 gross ton-miles, or 3.8 per cent. In this case the difference in the average total time between terminals for the full and reduced tonnage trains was so slight that a change from the straight time to the one and one-half time overtime rate had no effect on the wage cost. The increase in wage cost alone was 6.7 per cent and in the fuel cost, 1.2 per cent.

Table I—Comparative Costs Per 1,000 Gross Ton-Miles of Full and Reduced Tonnage Trains

	Champaign District Tons	Fulton District Tons	McComb District Tons	Tallahatchie District Tons
Train load—full tonnage	3,750	3,308	3,192	3,547
Train load—reduced tonnage	3,271	3,091	2,389	2,948
Per cent reduction	12.7	6.5	25.1	16.9
Cost per 1,000 gross ton-miles: (Pro-rata overtime)				
Full tonnage trains	$.165	$.156	$.202	$.161
Reduced tonnage trains	$.150	$.162	$.228	$.174
Reduced tonnage trains incl. cost of engines and crews returning light and additional enginehouse expense	$.173	$.174	$.300	$.209
Cost per 1,000 gross ton-miles: (Time and one-half O. T.)				
Full tonnage trains	$.173	$.156	$.207	$.167
Reduced tonnage trains	$.151	$.162	$.229	$.180
Reduced tonnage trains incl. cost of engines and crews returning light, and additional enginehouse expense	$.174	$.174	$.301	$.215
Per cent of increase in cost of reduced tonnage trains:				
Pro-rata O. T. ..... Decr.	9.1	3.8	12.8	8.0
Pro-rata O. T. incl. cost in light direction and increase enginehouse expense	4.8	11.5	48.5	29.8
One and one-half overtime..Decr.	12.7	3.8	10.6	7.7
One and one-half overtime incl. cost in light direction and increased enginehouse expense	0.5	11.5	45.4	28.7

On the McComb district the average train load of the light trains was 25.1 per cent less than the average load of the full tonnage trains. The average speed between terminals was increased from 10.6 miles an hour to 12.6 miles an hour, or 19 per cent, while the average speed in motion was increased from 13.6 miles an hour to 16.2 miles an hour, or 19.1 per cent. The average delayed time per trip was reduced from 1 hr. 56 min. to 1 hr. 37 min. The gross ton-miles per train hour decreased from 34,102 for the full tonnage trains to 30,361 for the reduced tonnage trains, or 11 per cent, and the total direct costs per 1,000 gross ton-miles increased from $.2025 to $.2280 on the straight time basis and from $.207 to $.229 on the punitive overtime basis, or 12.8 per cent and 10.6 per cent, respectively. On the straight time basis the increase in wage cost was 20.5 per cent, and the increase in fuel cost was 6.2 per cent.

The average reduction in the light trains on the Tallahatchie district, as compared with the full tonnage trains, was 16.9 per cent. The average speed between terminals increased from 11.4 miles an hour to 12 miles an hour, or 5.3 per cent, and the speed while in motion increased from 15 miles an hour to 16.5 miles an hour, or 10 per cent. There was a slight increase in the average delayed time per trip, which amounted to 3 hr. 5 min. for the heavy trains and 3 hr. 18 min. for the light trains. Gross ton-miles per train hour decreased from 40,144 to 35,075, or 12.6 per cent. The increase in direct ton-mile costs was 8 per cent

on the basis of straight time overtime and 7.7 per cent on the basis of one and one-half time overtime. For the heavy trains the total cost per 1,000 gross ton-miles was $.1612 with straight time and $.167 with time and one-half overtime, while the reduced tonnage trains averaged $.174 and $.18, respectively. On the straight time overtime basis the wage cost increased 14.7 per cent and the fuel cost .5 per cent.

The tests on the Champaign district were the only ones in which the reduction of tonnage was accompanied by an increase in gross ton-miles per train hour and a decrease in both the fuel and wage unit costs. Here, however, there was a marked decrease in the average delayed time for the reduced tonnage runs, amounting to slightly over one-half of the total reduction in time between terminals. On this district the average reduction in tonnage was 12.7 per cent. This was accompanied by an increase in the speed between terminals from 10.8 miles an hour to 13.4 miles an hour, or 24.1 per cent, and an increase in the average running speed from 15.8 miles an hour to 18.4 miles an hour, or 16.5 per cent. Delays were decreased from an average of 4 hr. 1 min. per trip to 2 hr. 41 min. per trip. The gross ton-miles per train hour increased from 39,201 to 43,468, or 10.9 per cent, while the total direct unit costs showed a decrease of 9.5 per cent from $.1656 to $.15 for straight time overtime and 12.7 per cent from $.1735 to $.151 for time and one-half overtime. Wages showed a unit decrease of 8.4 per cent on a straight time basis and fuel a decrease of 10.5 per cent.

When, however, the additional enginehouse expense incidental to the additional train movements required to take care of the 12.7 per cent reduction in average train load and the cost of returning the additional engines and crews in the direction of light traffic are taken into account, the ton-mile costs are in favor of the heavier train loading, even on this district. The net increase in the cost per 1,000 gross ton-miles of the reduced trains was 4.8 per cent with straight time rates and .5 per cent with one and one-half time overtime rates.

After taking into account these same additional items on the other districts, the unit costs of operating the reduced tonnage trains show increases on the straight time basis of 11.5 per cent, 48.5 per cent and 29.8 per cent, respectively, on the Fulton, McComb and Tallahatchie districts, and 11.5 per cent, 45.4 per cent and 28.7 per cent, respectively, with the one and over-half time rate for overtime, in comparison with the cost of operating the full tonnage trains.

Road Delays and Gross Car Weights

A fact of considerable interest disclosed by the averages in Table II is that there is no marked relation between the delayed time and the train load or speed except in the case of the Champaign district. An analysis of the individual runs also bears out this conclusion. On the Fulton district, for instance, the delays vary from less than one hour to 3½ hours per trip throughout the range of train loads up to about 3,400 tons, or 95 per cent of the full tonnage rating. For the trains which were heavier than this there seems to be a tendency towards a higher average of delays, although the number of such trains for which data are available is not sufficient to establish this relationship conclusively. On the Tallahatchie district, a single track line, the trend of delays is constant throughout the entire range of train loads.

Table III—Average Gross Car Weights

District	Tonnage trains	Reduced trains
Champaign	52 tons	46.7 tons
Fulton	57 tons	45.5 tons
McComb	37.1 tons	27.2 tons
Tallahatchie	40.3 tons	42.1 tons

On the Champaign district, where the average delayed time showed a marked reduction for the reduced tonnage group, the variations in the amount of delays between trains in each group is so wide as to raise some doubt as to whether the relationship indicated by the averages would hold if more trains had been included in the light tonnage group.

Another variable condition which in a measure affects the direct comparability of the light and heavy train operation is the average weight per car. An examination of the relation of the average number of cars per train and the average train loads in Table II shows that with the exception of the Tallahatchie district, the car weights are favorable to

TABLE II—COMPARATIVE RESULTS OF OPERATING FULL AND REDUCED TONNAGE TRAINS ON FIVE DISTRICTS OF THE ILLINOIS CENTRAL SYSTEM

District	Champaign		Paducah	Fulton		McComb		Tallahatchie	
Length, miles	130		99	128		96		So. 145 / No. 144

the operation of the heavy trains in every case. The comparison is shown in Table III. Had the train load been expressed in terms of adjusted tons rather than actual tons, the effect of these differences in average car weights would have been to decrease the proportionate amount of the reduction shown in the average loading of the light trains on all except the Tallahatchie district, where the proportional reduction would have been increased. The most important effect of this difference in conditions is on ton-mile costs. An examination of the data for the individual runs on the Champaign district disclosed a well-defined tendency toward increasing ton-mile costs as the average car weights decreased throughout the whole range of train loads and speeds. Considering the individual trains, the relationship between this factor and ton-mile costs is more consistently observable than that of any other single condition directly affecting either the fuel or wage accounts.

In each case the lower average ton-mile costs were obtained with the higher average gross ton-miles per train hour. The relationship of train load to ton-miles per hour, however, is not at all clear and it is evident that under the test conditions the speed between terminals is not generally affected in a sufficiently marked degree by the tonnage reductions to increase the ton-miles per train hour. The road delays, which in the main are unaffected by reductions in the train load or by the average running speed, appear to be the controlling factor. In this connection it is pertinent to note that the test trains were run during a period when the gross ton-miles handled were from 15 per cent to 34 per cent below normal on the districts where the comparisons were made and that, in the opinion of the officers in charge, greater reductions would have been necessary under heavy traffic conditions in order to have secured the same effect on the average time between terminals.

Conclusions

The following are the conclusions of the Division of Operation of the Railroad Administration, based on the results of these tests:

(1) There is no general agreement as to the percentage of tonnage rating which will bring the lowest cost. In the majority of cases this is effected by a load of 100 per cent, but in others the most economical load (considering the cost in one direction only) is about 85 per cent. Each division is governed by its own operating characteristics and no general law appears in the results before us in this study.

(2) The cost per ton-mile decreases as the gross car load increases, due probably to the lower train resistance per gross ton. * * *

(3) The cost per ton-mile increased with the delay on the road. This is illustrated well by the results on the Memphis division. With two hours delay, the cost per 1,000 gross ton-miles was 14.2 cents; at three hours it was 15.8 cents; at four hours it was 17.4 cents, and at five hours it was 19 cents.

(4) Up to a certain critical point the cost per ton-mile decreases as the ton-miles per train hour increases. The cost is stationary or rises slightly, as the ton-miles per train hour increase beyond that point. The critical point is reached only by trains running so far above the normal average speeds for trains of their weight that the increased fuel consumption offsets the saving in wages.

(5) There appears to be no distinct relation between the train load and the hours of delay on the road.

(6) The delay on the road apparently has more effect on the gross ton-miles per train hour than variations in speed while in motion. The element of road delay is probably the most important single factor in the equation.

The practical application to that road of the facts developed by the tests is summarized by the following general conclusions in the report of the Federal manager of the Illinois Central:

(1) It is not practicable to reduce the train load to avoid overtime because of the increased cost incident to the operation of the necessary additional trains in the direction of heavy traffic to handle the same tonnage and in the direction of light traffic to balance power.

(2) To a large extent the cost of handling the most economical train load includes considerable overtime.

(3) Increased cost resulting from overtime, like any other wage increase, must be met by increasing facilities instead of by reducing train load. This reduction, on a good many districts, would add train units in excess of present capacity

One of the Philadelphia & Reading New Coal Cars

Two thousand of these cars have been delivered by the American Car & Foundry Company, Midvale Steel Company, Pressed Steel Car Company and Standard Steel Car Company. They have a capacity of 70 tons and are equipped with empty and load brake and vent valve.

President Discusses Transportation Problem

Proposes Abolition of Labor Board and Creation of a Labor Division of the I. C. C.

WASHINGTON, D. C.

WHILE PRESIDENT HARDING devoted a considerable part of his address to Congress on December 8 to a discussion of the railroad situation, referring to the problem of transportation as an outstanding one demanding the most rigorous consideration of Congress and the country and saying he knows of no problem exceeding it in importance, it is not understood that he was in any sense outlining a program of railroad legislation for immediate consideration. While he made several more or less definite suggestions, including one that the membership of the Interstate Commerce Commission be increased by four to constitute a labor division as a substitute for the Railroad Labor Board, and that power should be conferred either upon the present board or the suggested substitute to require its rulings to be accepted, no change has been indicated in the policy of the administration leaders recently expressed in the announcement by Chairman Cummins that he does not intend to press, although he may introduce, at the present session the bills he has at least tentatively prepared which would carry out some of the President's recommendations, and it is also understood that there has been no alteration of the President's determination not to call an extra session after March 4 if it can be avoided.

With this understanding, therefore, it is apparent that the address was intended mainly as a compliance with the constitutional duty of the President to lay before the Congress from time to time the state of affairs in the nation and that he was making a report to Congress and inviting its consideration of his reactions from his contact during the past year or so with the subject in connection with the controversies over rates, wages and car supply. The President finds much in need of improvement in the transportation situation and he has various ideas, derived from various sources, as to what should be done about it, but while he urged a "prompt enactment at the present session" of legislation for the relief of the farmers, he did not apply the same language to his suggestions regarding transportation and the administration forces are anticipating sufficient difficulty in obtaining action at this short session on even the present program of the Administration.

In his first address to Congress after his inauguration President Harding declared that railway rates and the cost of transportation must be reduced. He is still urgent that this be brought about but he has come to an appreciation that "rates horizontally increased, to meet increased wage outlays during the war inflation, are not easily reduced." When he refers to the "five per cent horizontal reduction" made last year it is understood that he has in mind the fact that the ten per cent horizontal reduction of July 1 did not apply to some rates that had previously been reduced and, therefore, effected less than a ten per cent reduction in total freight revenues at the time, although it has usually been estimated at more than five per cent, and the total reduction from the high level established in Ex Parte 74 was more than ten per cent.

As to how to effect better and cheaper transportation the President is clear that "government operation does not afford the cure." He sees advantages to result from plans to coordinate all transportation facilities and agrees with most railway officers that the motor truck should be turned "into a railway feeder and distributor instead of a destroying competitor," but he wants the government to point the way to reduced freight costs and looks for "genius" among the railway managers to find new economies and new efficiencies in co-operation. The merger of lines into systems, which the Transportation Act invites but temporarily postpones pending the completion of an artificial plant, is suggested as one means, and the President apparently has been impressed with the proposals of Mr. Warfield, some of which found their way into the report of the Joint Commission of Agricultural Inquiry, in the direction of car pooling under a central agency, and the consolidation of facilities.

The President is strongly convinced that the strike is a weapon of organized labor that must be abandoned because its effects are felt more directly by the public than by the railroad companies but he attempts to balance his censure of those responsible for the shop strike by dividing the blame with "heedless forces of reaction" that "sought the pre-war levels" of wages, although the wage reductions that were followed by the strike, which he elsewhere characterizes as "very moderate," were ordered by the Labor Board.

The President introduced the subject of transportation in his address in connection with his recommendations for the relief of the farmer, whose difficulty, he said, has been accentuated by the railway strike. "Had we escaped the coal and railway strikes, which had no excuse for their beginning and less justification for their delayed settlement, we should have done infinitely better," he said. "But labor was insistent on holding to the war heights, and heedless forces of reaction sought the pre-war levels and both were wrong. In the folly of conflict our progress was hindered and the heavy cost has not yet been fully estimated. There can be neither adjustment nor the penalty of the failure to readjust in which all do not somehow participate."

Various measures are pending for the assistance of the farmer, the President said, and the best judgment of Congress ought to be expressed in prompt enactment at the present session, but "permanent and deserved agricultural good fortune depends on better and cheaper transportation." He then continued:

Text of the President's Address

Here is an outstanding problem, demanding the most rigorous consideration of the Congress and the country. It has to do with more than agriculture. It provides the channel for the flow of the country's commerce. But the farmer is particularly hard hit. His market, so affected by the world consumption, does not admit of the price adjustment to meet carrying charges. In the last half of the year now closing the railways, broken in carrying capacity because of motive power and rolling stock out of order, though insistently declaring to the contrary, embargoed his shipments or denied him cars when fortunate markets were calling. Too frequently transportation failed while perishable products were turning from possible profit to losses counted in tens of millions.

I know of no problem exceeding in importance this one of transportation. In our complex and interdependent modern life transportation is essential to our very existence. Let us pass for the moment the menace in the possible paralysis of such service as we have and note the failure, for whatever reason, to expand our transportation to meet the Nation's needs.

The census of 1880 recorded a population of 50,000,000. In two decades more we may reasonably expect to count thrice that number. In the three decades ending in 1920 the country's freight by rail increased from 631,000,000 tons to 2 234,000,000 tons; that is to say, while our population was increasing less than 70 per cent, the freight movement increased over 250 per cent.

We have built 40 per cent of the world's railroad mileage, and yet find it inadequate to our present requirements. When we

contemplate the inadequacy of today it is easy to believe that the next few decades will witness the paralysis of our transportation-using social scheme or a complete reorganization on some new basis. Mindful of the tremendous costs of betterments, extensions, and expansions, and mindful of the staggering debts of the world today, the difficulty is magnified. Here is a problem demanding wide vision and the avoidance of mere makeshifts. No matter what the errors of the past, no matter how we acclaimed construction and then condemned operations in the past, we have the transportation and the honest investment in the transportation which sped us on to what we are, and we face conditions which reflect its inadequacy today, its greater inadequacy tomorrow, and we contemplate transportation costs which much of the traffic can not and will not continue to pay.

Manifestly, we have need to begin on plans to coordinate all transportation facilities. We should more effectively connect up our rail lines with our carriers by sea. We ought to reap some benefit from the hundreds of millions expended on inland waterways, proving our capacity to utilize as well as expend. We ought to turn the motor truck into a railway feeder and distributor instead of a destroying competitor.

A Motor Age

It would be folly to ignore that we live in a motor age. The motor car reflects our standard of living and gauges the speed of our present-day life. It long ago ran down simple living, and never halted to inquire about the prostrate figure which fell as its victim. With full recognition of motor-car transportation we must turn it to the most practical use. It can not supersede the railway lines, no matter how generously we afford it highways out of the public treasury. If freight traffic by motor were charged with its proper and proportionate share of highway construction, we should find much of it wasteful and more costly than like service by rail. Yet we have paralleled the railways, a most natural line of construction, and thereby taken away from the agency of expected service much of its profitable traffic, which the taxpayers have been providing the highways, whose cost of maintenance is not yet realized.

The federal government has a right to inquire into the wisdom of this policy, because the national treasury is contributing largely to this highway construction. Costly highways ought to be made to serve as feeders rather than competitors of the railroads, and the motor truck should become a co-ordinate factor in our great distributing system.

This transportation problem can not be waived aside. The demand for lowered costs on farm products and basic materials can not be ignored. Rates horizontally increased, to meet increased wage outlays during the war inflation, are not easily reduced. When some very moderate wage reductions were effected last summer there was a 5 per cent horizontal reduction in rates. I sought at that time, in a very informal way, to have the railway managers go before the Interstate Commerce Commission and agree to a heavier reduction on farm products and coal and other basic commodities, and leave unchanged the freight tariffs which a very large portion of the traffic was able to bear. Neither the managers nor the commission saw fit to adopt the suggestion, so we had the horizontal reduction too slight to be felt by the higher class cargoes and too little to benefit the heavy tonnage calling most loudly for relief.

Railways are not to be expected to render the most essential service in our social organization without a fair return on capital invested, but the government has gone so far in the regulation of rates and rules of operation that it has the responsibility of pointing the way to the reduced freight costs so essential to our national welfare.

Government operation does not afford the cure. It was government operation which brought us to the very order of things against which we now rebel, and we are still liquidating the costs of that supreme folly.

New Efficiencies in Co-operation Needed

Surely the genius of the railway builders has not become extinct among the railway managers. New economies, new efficiencies in co-operation must be found. The fact that labor takes 50 to 60 per cent of total railway earnings makes limitations within which to effect economies very difficult, but the demand is no less insistent on that account.

Clearly the managers are without that intercarrier, co-operative relationship so highly essential to the best and most economical operation. They could not function in harmony when the strike threatened the paralysis of all railway transportation. The relationship of the service to public welfare, so intimately affected by state and federal regulation, demands the effective correlation and a concerted drive to meet an insistent and justified public demand.

The merger of lines into systems, a facilitated interchange of freight cars, the economic use of terminals, and the consolidation of facilities are suggested ways of economy and efficiency.

I remind you that Congress provided a Joint Commission of Agricultural Inquiry which made an exhaustive investigation of car service and transportation, and unanimously recommended in its report of October 15, 1921, the pooling of freight cars under a central agency. This report well deserves your serious consideration. I think well of the central agency, which shall be a creation of the railways themselves, to provide, under the jurisdiction of the Interstate Commerce Commission, the means for financing equipment for carriers which are otherwise unable to provide their proportion of car equipment adequate to transportation needs. This same agency ought to point the way to every possible economy in maintained equipment and the necessary interchanges in railway commerce.

In a previous address to the Congress I called to your attention the insufficiency of power to enforce the decisions of the Railroad Labor Board. Carriers have ignored its decisions, on the one hand, railway workmen have challenged its decisions by a strike, on the other hand.

The Labor Board

The intent of Congress to establish a tribunal to which railway labor and managers may appeal respecting questions of wages and working conditions can not be too strongly commended. It is vitally important that some such agency should be a guaranty against suspended operation. The public must be spared even the threat of discontinued service.

Sponsoring the railroads as we do, it is an obligation that labor shall be assured the highest justice and every proper consideration of wage and working conditions, but it is an equal obligation to see that no concerted action in forcing demands shall deprive the public of the transportation service essential to its very existence. It is now impossible to safeguard public interest, because the decrees of the board are unenforceable against either employer or employee.

The Labor Board itself is not so constituted as best to serve the public interest. With six partisan members on a board of nine, three partisans nominated by the employees and three by the railway managers, it is inevitable that the partisan viewpoint is maintained throughout hearings and in decisions handed down. Indeed, the few exceptions to a strictly partisan expression in decisions thus far rendered have been followed by accusations of betrayal of the partisan interests represented. Only the public group of three is free to function in unbiased decisions. Therefore the partisan membership may well be abolished, and decisions should be made by an impartial tribunal.

I am well convinced that the functions of this tribunal could be much better carried on here in Washington. Even were it to be continued as a separate tribunal, there ought to be contact with the Interstate Commerce Commission, which has supreme authority in the rate making to which wage cost bears an indissoluble relationship. Theoretically, a fair and living wage must be determined quite apart from the employer's earning capacity, but in practice, in the railway service, they are inseparable. The record of advanced rates to meet increased wages, both determined by the government, is proof enough.

The substitution of a labor division in the Interstate Commerce Commission, made up from its membership, to hear and decide disputes relating to wages and working conditions which have failed of adjustment by proper committees created by the railways and their employees, offers a more effective plan.

It need not be surprising that there is dissatisfaction over delayed hearings and decisions by the present board when every trivial dispute is carried to that tribunal. The law should require the railroads and their employees to institute means and methods to negotiate between themselves their constantly arising differences, limiting appeals to the government tribunal to disputes of such character as are likely to affect the public welfare.

This suggested substitution will involve a necessary increase in the membership of the commission, probably four, to constitute the labor division. If the suggestion appeals to the Congress, it will be well to specify that the labor division shall be constituted of representatives of the four rate-making territories, thereby assuring a tribunal conversant with the conditions which obtain in the different rate-making sections of the country.

I wish I could bring to you the precise recommendation for the prevention of strikes which threaten the welfare of the people and menace public safety. It is an impotent civilization and an inadequate government which lacks the genius and the courage to guard against such a menace to public welfare as we experienced last summer. You were aware of the government's great concern and its futile attempt to aid in an adjustment. It will reveal the inexcusable obstinacy which was responsible for so much distress to the country to recall now that, though all disputes are not yet adjusted, the many settlements which have been made were on the terms which the government proposed in mediation.

Public interest demands that ample power shall be conferred upon the labor tribunal, whether it is the present board or the

suggested substitute, to require its rulings to be accepted by both parties to a disputed question.

Let there be no confusion about the purpose of the suggested conferment of power to make decisions effective. There can be no denial of constitutional rights of either railway workmen or railway managers. No man can be denied his right to labor when and how he chooses, or cease to labor when he so elects, but, since the government assumes to safeguard his interests while employed in an essential public service, the security of society itself demands his retirement from the service shall not be so timed and related as to effect the destruction of that service. This vitally essential public transportation service, demanding so much of brain and brawn, so much for efficiency and security, ought to offer the most attractive working conditions and the highest of wages paid to workmen in any employment.

In essentially every branch, from track repairer to the man at the locomotive throttle, the railroad worker is responsible for the safety of human lives and the care of vast property. His high responsibility might well rate high his pay within the limits the traffic will bear; but the same responsibility, plus governmental protection, may justly deny him and his associates a withdrawal from service without a warning or under circumstances which involve the paralysis of necessary transportation. We have assumed so great a responsibility in necessary regulation that we unconsciously have assumed the responsibility for maintained service; therefore the lawful power for the enforcement of decisions is necessary to sustain the majesty of government and to administer to the public welfare.

Southern Pacific-Central Pacific Hearing

Union Pacific Charges Discrimination Against Ogden Route and Ask that Central Pacific Be Made Independent

WASHINGTON, D. C.

PRESENTATION of the Union Pacific side of the controversy over the application of the Southern Pacific for permission by the Interstate Commerce Commission to retain control of the Central Pacific was begun at the hearing before Commissioners Meyer and Potter on December 7 by Robert S. Lovett, chairman of the Union Pacific. Since November 21 the hearing had been devoted to the Southern Pacific testimony and that of the intervening shippers and state railroad commissioners in favor of or against its application. Mr. Lovett took the position that the continued possession of the Central Pacific by the Southern Pacific would not only be inimical to the Union Pacific, but also to the public interest, because of the policy which it had "gradually" and "discreetly" adopted, he said, since 1915 or 1916, of diverting traffic wherever possible from the Ogden route to its longer El Paso route in violation of the provisions of the Pacific railroad acts against discrimination by either of the two Pacific railroads which built the transcontinental route against or in favor of either company.

The Union Pacific case was completed on December 9, after which some rebuttal testimony was heard, and the hearing was practically concluded on December 13 as far as the two roads most directly involved were concerned, but the Western Pacific was expected to present evidence on the following day. The testimony taken at the hearing amounts to nearly 4,000 pages and there are over 100 exhibits. The commission allowed until January 15 for the filing of briefs and arguments will be heard by the commission on January 19 and 20.

The Interest of the U. P. in the Transcontinental Route

Mr. Lovett went into the history of the Pacific railroad acts to show that "the Union Pacific has a clear and unmistakable interest in the Central Pacific, the manner of its control and the method of its operation, which must be recognized and dealt with if constitutional rights are still to be respected. Now that the Central Pacific is required to be released from control of a competitor the Union Pacific asks that the Central Pacific be allowed to keep faith and fulfil its obligation as the owner of the western half of this one continuous line of railroad from the Missouri river to the Pacific ocean. If this western half is merged by authority of this commission with some other railroad company, then we insist it be with the Union Pacific, which owns the other half of the same railroad which the national laws under which both were constructed, mostly with government money, require to be operated as one continuous line of railroad. We insist that it would be not only a perversion of the Pacific Railroad Acts but a gross violation of the rights of the stockholders and the security holders of the Union Pacific to turn the Central Pacific, the western half of this government-built railroad, over for all time to a company that is not interested in sending a ton of transcontinental traffic over it which it can send over its lines via other gateways, which give it a longer haul and larger revenue, and allow it to switch, as it were, to another gateway, the western end of the line, which is just as essentially a part of this great railroad project as the eastern end of it."

Mr. Lovett said the tentative consolidation plan of the commission was regarded by the Union Pacific "with the gravest apprehension, from the first," and that it had begun preparation immediately, and before the decision of the Supreme Court, to show the "injustice and disastrous effects" of its application to the Union Pacific. If the plan is approved, he said, he had no doubt that the Southern Pacific would buy the Rock Island, if it could acquire it at the price indicated by the prices at which its securities had been selling. And the Southern Pacific, he said, would send all the traffic it could through the El Paso gateway, whether it kept the Central Pacific or not, for that way would be its long haul. After acquisition of the Rock Island the Southern Pacific would use the Union Pacific, the Denver & Rio Grande or the Denver & Salt Lake for such traffic as it routed via Odgen, only as far as Denver, where the traffic would be again turned over to the Rock Island, the Union Pacific and its connections at the Missouri river would be bottled up at Odgen and the traffic would be diverted from its natural channel. "Nothing but a purpose to cripple one of the most important and most efficient transportation agencies of the United States, and the one that yielded the government the largest net return during the war year of 1918, of all the railroads under government control, could justify such a policy," he said.

U. P. Dependent on C. P. for California Traffic

"The Union Pacific has been and is dependent almost wholly upon the Central Pacific for transcontinental traffic to and from central and northern California, to serve which was the purpose of the government in constructing the lines. It has never solicited or sought to send a ton of traffic between the Missouri river and San Francisco or central California via Portland or through Los Angeles, to which some references have been made in Southern Pacific propaganda as competitive routes. The Union Pacific could not buy the Western Pacific, as I believe it might have done at some time, because of the inconsistency of such purchase with the obligation under the Pacific railroad acts. We have felt obliged to work with the Central Pacific as if it were a part of the

Union Pacific. We have no interest or connection inconsistent with the interest of the Central Pacific."

When Mr. Harriman obtained control of the Central Pacific, the witness said, at a time when the Southern Pacific had no ready means for raising large sums of money, he had plunged ahead with improvements on the Central Pacific, providing more than $20,000,000 through advances by the Union Pacific, although he understood that "but scant credit has been given him by some Southern Pacific officers before this commission for his work upon the Central Pacific." He did not dispute that many of the improvements, even the Salt Lake cut-off, may have been planned by Southern Pacific officers long before Harriman made them, but he asserted that such plans were mere dreams until Harriman got control, and that it was Harriman who gave the order for the work and provided the money.

"I understand officers of the Southern Pacific testified that the 'cloud' on their title to the Central Pacific is the reason why double tracking and other increases in the capacity of the Central Pacific ceased with Union Pacific control some ten years ago," said Mr. Lovett. "One might suggest in reply that improvements might be realized in an increased price in case the Southern Pacific were forced to surrender the Central Pacific, but the really surprising thing is that now that the cloud has swept down the chairman of the Southern Pacific appeared before this commission last week and avowed his purpose to proceed at once with the necessary improvements to the Central Pacific if—note the *if*—this commission grants the pending application for the lease which the Supreme Court has just declared illegal! The least that can be said about this proposition is that it is unique.

"We must expect the Southern Pacific officers to do what is lawfully for the best interests of the Southern Pacific Company. If they lawfully can get traffic for their longer haul, they should and will do so. If they can persuade this commission to allow them to retain the Central Pacific and their grip on the Odgen gateway, they should do so. I would do the same if in their place.

Diversion of Traffic

"For a number of years following its completion in 1869 the Central Pacific paid handsome dividends. From the time of the acquisition by the Southern Pacific of the stock of the companies owning the Sunset Route and from the lease of said lines and of the Central Pacific in 1885 until Union Pacific control, the Central Pacific never paid a dividend. The Sunset Route became the preferred route because it afforded the long haul. I have no doubt that the effect on the Union Pacific was very bad, but just how serious I do not know. How much this diversion of traffic had to do with the receivership I do not know, but that it had much there can be no doubt. From 1901 until 1913 the Union Pacific and Southern Pacific were under common control. The rules with respect to the routing of traffic were changed, according to my understanding, so as to send it the way that afforded the most revenue to the combined lines. Very little change followed immediately the unmerging of the Union Pacific and Southern Pacific, according to my information. The full force and power of the Southern Pacific as a competitor of the Odgen-Central Pacific line has not been exerted since 1913. The government had challenged the Southern Pacific's control; but during the long appeal of the government before the decision of the Supreme Court the activity of Southern Pacific solicitors against the Odgen gateway was greatly increased, according to the information coming to me from Union Pacific representatives. If unconditional control of the Central Pacific by the Southern Pacific is in any way finally perpetuated, my opinion is that no San Francisco or other California freight traffic to or from points east of the Missouri river which the Southern Pacific can persuade through the El Paso gateway will ever go through the Odgen gateway unless forced that way by shippers or by competition in time or by the perishable character of the freight. In saying this I am making no criticism of the Southern Pacific or any of its representatives. They are doing precisely what the Supreme Court has many times, and in this very case only recently, recognized as the natural and inevitable effect of placing one line under the control of a competitor.

"If they succeed this important transcontinental line of railroad cannot make a rate or fix a train schedule to or from San Francisco and central California without the consent and concurrence of its rival and competitor, the Southern Pacific Company. We are asserting our rights under the Pacific railroad acts because our opponents are in effect asserting that this country has already, and as I believe, most unexpectedly to the people, arrived at the recall of decisions of the United States Supreme Court.

Judge Lovett Says Difficulties of Separation Exaggerated

"I understand that testimony has been given here indicating that many Californians have been frightened by predictions and testimony of Southern Pacific officials as to what will happen in the way of interrupted and inferior train service and increased rates if the Southern Pacific is required, like all other corporations and people heretofore have been, to obey the decision of the Supreme Court. Of course if the Southern Pacific is to be allowed by the circuit judges when they come to enter their decree and by the California Railroad Commission to absolutely run amuck and do whatever it can to make good its threats, it may do much to inconvenience the public. I assume that these railroad companies will be prevented from interrupting or interfering with the continuity of the train service or in any wise increasing the existing rates except with the consent and approval of proper state and interstate regulatory authority. Trains which now run over portions of both lines should continue to run and the apportionment of the through and joint expenses and revenues can be easily adjusted by agreement of the interested parties in the ordinary way or can be determined by the court or commission if they fail to agree. With great respect for my friends on the other side, I am, nevertheless, bound to say that these lions they have put in the way are very tame and harmless. In the agreement of February 8, 1913, between the Southern Pacific, Central Pacific and Union Pacific, no difficulty was found in providing for this difficulty which the Southern Pacific now presents as so frightful. Once it is settled that the Supreme Court decision is to be carried out all these difficulties will disappear. The Southern Pacific will face about and begin to talk up the Central Pacific to enhance its price if it concludes to sell, for I know the Southern Pacific officers and know something of their great ability as business men.

"Much has been said about the disastrous effects of cutting the Southern Pacific off from its lines in Oregon which are reached only over the Central Pacific. Certainly I should favor the granting of full and equal joint use to the Southern Pacific of the Central Pacific line between Tehama and the connection with the Oregon lines which would assure the Southern Pacific substantially the same use it now has. By the agreement of 1913 the entire use of this part of the Central Pacific was leased to the Southern Pacific, but the government's bill and the Supreme Court's decision seem to contemplate that there shall be competition by the Central Pacific and Southern Pacific lines between San Francisco and Portland.

"Apparently many people in California are in favor of this procedure. Being myself a consistent believer in the principle of competition in service and facilities, I fail to appreciate the reasons why these people oppose it in this in-

stance. However, the plan which this commission is about to lay out for the permanent establishment of the great transportation groups and channels of commerce for this country should be settled by consideration of the permanent welfare of the country and of the people and not by public clamor or the agitation of particular agencies and particular communities in which both parties must almost necessarily resort to propaganda and even ordinary political campaign methods.

"The time has been when the Southern Pacific, its officers, management and the operation of its lines were damned as a grinding monopoly and otherwise by a majority of the people in San Francisco and central California, at least as much as they are now praised. I am sure they were wrong then, for I believe the Southern Pacific almost made California and has been the greatest agency for the development of California that ever existed in that state. I believe the people of California were mistaken in opposing the Southern Pacific then, and I believe they are mistaken in falling in with the Southern Pacific's plans now. They changed their opinion before and I believe they will change it again. Hence I say it is not the fluctuating and more or less cultivated opinion of a community for the time being that should govern, but the deliberate judgment of this commission looking to the future as well as the present that should prevail in settling these important and enduring transportation lines."

Cross-Examination

Mr. Lovett was subjected to a long cross-examination by F. H. Wood, commerce counsel of the Southern Pacific, who asked how much tonnage it was claimed the Southern Pacific had diverted. Mr. Lovett said he had no figures, but that he was interested in the principle and knew that if allowed the Southern Pacific would adopt a more vigorous policy than it had while the litigation was pending. He said that numerous reports had been made to him by B. L. Winchell, while he was traffic director of the Union Pacific, and since by President C. R. Gray and Vice-President H. M. Adams, that the Southern Pacific agents were working against the Ogden gateway in the territory where it had originally been the announced policy to work through that gateway. He said that this had been done to such an extent that he had determined to resort to litigation under the terms of the Pacific railroad acts as a remedy if the Supreme Court had not decided the Southern Pacific-Central Pacific case in the way it did. Asked if he had expected to be successful, he replied: "There is always a chance in a lawsuit." Whereas since its separation from the Union Pacific the Southern Pacific had not added a mile of double track to the Ogden line, he said, on the contrary he knew of no railroad on which the standard of maintenance had been so improved as on the Sunset Route. When Mr. Wood asked if that were a matter of great concern in this case as long as the Central Pacific had been kept in a condition to be able to handle its business effectively, he replied that the necessity for double tracking had been lessened because the Southern Pacific had tried not to send business that way. Referring to the geographical line which L. J. Spence, traffic director of the Southern Pacific, had described as governing the Southern Pacific solicitation as between the Ogden and El Paso routes, Mr. Lovett said that Mr. Winchell had reported that the line had been gradually moving west and his last information was that it had about vanished. The solicitors who formerly had reported to local offices, he said, had been put under Mr. Spence and had been given oral instructions under which the solicitation encountered by the Union Pacific traffic solicitors was "practically Sunset Route everywhere."

Referring to Mr. Spence's testimony that he had explained the plan of Southern Pacific solicitation to Mr. Lovett soon after the unmerger and that he had pronounced it satisfactory, Mr. Wood asked the witness if he had not advised at the time that it would be unwise for the Southern Pacific to give the Union Pacific a memorandum on the subject so soon after the dissolution. He replied that he had said that of course the two companies could not agree not to compete but that it would be wise to continue the territory from which traffic had been solicited preferentially for each of the two lines, and that agreement on this subject had been made public as a part of the dissolution plan.

Mr. Wood asked how the Union Pacific solicited southern California and north Pacific coast business. Mr. Lovett replied that it ought to solicit via the Salt Lake route for southern California and that he certainly hoped it solicited Portland business via the Oregon Short Line and O.-W. R. & N. Asked if this represented any violation of the Pacific railroad acts, he said that the Central Pacific does not run within 400 miles of Portland or 500 miles of Los Angeles and that business for those points was legitimately handled by Union Pacific system lines. Asked who should be the judge of the legitimacy of a route, he said that when the question is raised a judge would have to determine. When Mr. Wood mentioned a reference in the Supreme Court decision to a movement to San Francisco via the Union Pacific to Portland, Mr. Lovett retorted with some energy that the Interstate Commerce Commission's agents had combed the United States and that every Union Pacific agent who had lost his job by the consolidation of agencies after the merger had been questioned, but they had not succeeded in showing that a ton of freight had ever been solicited by the Union Pacific that way and they had shown only one shipper who had sent freight that way. "I feel quite strongly on that point," he said. "We think we are complying with the Pacific railroad acts. If we are not it is our policy to do so and we think the Central Pacific ought to."

Mr. Wood tried to show an inconsistency between Mr. Lovett's present position and his testimony before the California commission in 1913 that so far as immediate results were concerned it might be better for the Union Pacific for the Southern Pacific to keep the Central Pacific because then traffic from central California would continue to go to the Union Pacific at Odgen. He said this statement was predicated on the Southern Pacific's policy remaining the same as it had been and also applied only to the immediate results because the Union Pacific expected to have to build extensive lines in California to supplement the Central Pacific lines before it would be independent of the Southern Pacific. He declined to admit any inconsistency and said that the Union Pacific now would probably lose traffic for a while after a separation of the Central Pacific from the Southern Pacific. He denied that the Union Pacific ownership of stock in the Illinois Central constituted a control of routes between the Missouri river and Chicago and between Chicago and New Orleans, saying that it represents only an investment and that the North Western is the preferred connection at the Missouri river. He said he had argued strenuously with Professor Ripley that the Union Pacific ought to be left at the Missouri river to interchange with several routes rather than linked up with one line to Chicago.

"It is very difficult for me to conceive of the commission's nullifying the decision of the Supreme Court," said Mr. Lovett, "even pending the action of the lower court on the mandate. According to my view of it, the Supreme Court has decided this proposition, and I do not want to take any position that would indicate that the Union Pacific takes any other attitude."

"What is your position as to an independent Central Pacific?" asked Mr. Wood.

U. P. Not Seeking to Buy C. P.

"Our position is outlined in a public statement given out on June 10 by President Gray that we were not seeking to buy the Central Pacific, but that we would buy it if fair and reasonable terms could be agreed upon," said Mr.

Lovett, "and if it could be separated from the Southern Pacific under conditions that would allow it to live. All the Union Pacific is contending for is that it be made independent of the Southern Pacific."

Mr. Lovett was then questioned by Mr. Scandrett as to the ability of the Central Pacific to finance itself if separated. He said it ought to be a self-sustaining property, assuming that it would be treated fairly by the court in the dissolution decree, although a great deal may depend on the conditions under which the lines are separated. At the end of Union Pacific control, he said, the Central Pacific had a surplus of about $25,000,000 and the Southern Pacific owed it approximately $30,000,000. The surplus was reduced by a 20 per cent special dividend which transferred much of it to the treasury of the Southern Pacific and dividends have since been paid on both preferred and common stock while the surplus has again been increased. He said he did not criticize the action in declaring the special dividend; that it was proper and wise. He also went into the subject of the Central Pacific bond issues and said that it owns a very valuable land grant which might be made the basis for some financing. While it has been the practice of the Southern Pacific to take title to the equipment allocated to the Central Pacific, he said that in case of a separation it would be fair for the Central Pacific to buy it at its depreciated value and pay for it in equipment obligations, as the types are better adapted for use on the Central Pacific than on the Southern Pacific. If this were not done, he said, there would be no difficulty in the Central Pacific buying all the equipment it needed in the usual way, by equipment trust obligations, which, as they are secured largely by the equipment itself, can be sold, he said, without much reference to the financial credit of the railroad company.

Propaganda

In reply to a request from Mr. Scandrett that he say something about the publicity work and so-called propaganda that has been criticized, Mr. Lovett said he thought mistakes along this line had been made by both sides. Almost immediately after the Supreme Court decision, he said, a very active propaganda was started on the Pacific coast in favor of the commission's tentative consolidation plan, which allocated the Central Pacific to the Southern Pacific, and against the carrying out of the Supreme Court decision. For a time the Union Pacific said nothing, but the movement spread so rapidly that he and President Gray had conferred and decided they should let the public know what the Union Pacific conceived to be its rights in the case and the course it intended to pursue, that it was opposed to the tentative plan and expected to do what it could to oppose it. He and Mr. Gray then prepared jointly a public statement and decided they ought to take any legitimate means to get their views to the public. Mr. Gray was to handle it in the west and Mr. Lovett said he had authorized the expenditure of whatever might be necessary for the purpose with only the limitation that nothing illegal should be done. They had both agreed that there should be no criticism of Southern Pacific officers because, he said, "they were only doing what we would do if in their place." "The fight got started," he said, "and many agencies were employed. I didn't keep up with the details, but Mr. Gray used to tell me a good deal. Whatever he did within that limitation I endorse and approve, but I realize that in carrying on a work of that kind with so many agencies, some of them strangers to us, mistakes might be made and some things were done which we wouldn't do. I also saw some things on the other side that I thought the Southern Pacific officers would not have approved. But it was a good deal like a war or a political campaign.

At this point Commissioner Meyer remarked that the commission now has some responsibility as to operating expenses and asked Mr. Lovett whether he would say that these expenditures for publicity were warranted. Mr. Lovett said that it was agreed at the outset that they ought not to be charged to operating expenses and they have been carried in a suspense account with a view to charging them to profit and loss—that is to the stockholders rather than to the public, but he thought they were perfectly legitimate and necessary to protect the interests of the company.

On cross-examination Mr. Wood said he had not intended to question Mr. Lovett about propaganda, but since Mr. Scandrett had raised the question he asked whether he had seen any statements from the Southern Pacific prior to that issued by Mr. Gray. Mr. Lovett said he did not recall any during that period in the name of the Southern Pacific, but there were many reports in the newspapers regarding the position of various commercial organizations, etc., which he had no doubt were inspired by the Southern Pacific. When Mr. Wood asked if the Union Pacific had not organized a publicity bureau in Washington in the name of the California Producers' and Shippers' Association, he said that Mr. Gray had told him that he had heard of it recently and had disapproved it. When Mr. Wood said that this bureau had issued a statement by Mr. Gray on the opening day of the hearing Mr. Scandrett stated that Mr. Gray had not authorized it and had merely given the interview to a Sacramento newspaper. "When you employ a lot of people to conduct a hard fight, especially some enterprising newspapermen, you don't always know all they'll do," said Mr. Lovett.

Commissioner Potter then said he would like to hear expressions on the propriety of the commissioners reading propaganda. He had received a pamphlet in the mail sent out by a Mr. Edgerton and wondered whether he ought to read it. Mr. Wood promptly expressed the opinion that the commissioners may with propriety read anything, but that he was sure their decision would be based on the evidence. E. O. Edgerton, director of the California shippers' committee against dismemberment, said he did not know that the pamphlet had been sent to the commissioner but that he thought it was based on facts. Mr. Potter said he would plead guilty of reading it, but wondered if he had so opened the door that he was now obligated to read the so-called Union Pacific propaganda. Mr. Scandrett said he thought the discussion of propaganda had no place in the hearing, but he had asked Judge Lovett to state his views because of the attack that had been made by the other side.

Adams Says S. P. Discriminates Against Ogden Route

H. M. Adams, vice-president in charge of traffic of the Union Pacific, said that an independent Central Pacific would create an additional active competing route between central California and the East and would foster intensive development of that part of California and other states served by its rails, to the material aid and betterment of the several states. There would be an added incentive to increase the interchange of commodities between Utah and Idaho and contiguous territory on the one hand, and points served by the Central Pacific on the other. It may be assumed, he said, that if the two railroads are separated they will be managed by men of experience and broad vision, who will not undertake to circumvent the purpose of the separation or unnecessarily inconvenience the public. With reasonable arrangements for joint use of tracks and terminals, proper through service and rates can be maintained without difficulty, as President Sproule of the Southern Pacific stated it was the intention of the Southern Pacific to do under the contract of 1913.

The Central Pacific, through the Odgen gateway, with the Union Pacific and its connections, forms in comparison with the Southern Pacific through El Paso, the shorter line between central and northern California and the greater part

of the United States east of Denver and Pueblo, Mr. Adams said, and he presented a map and mileage figures to show that only a small part of the territory from which Mr. Spence stated that the solicitation of the Southern Pacific is preferentially via New Orleans or the Texas gateways is within the district where the distances are in favor of such solicitation. "It is thus shown conclusively," he said, "that the division of eastern territory for preferential soliciting and routing purposes, even as stated by Mr. Spence, creates an undue discrimination and prejudice against the Ogden gateway which the decision of the Supreme Court seeks to correct. Attention might well be called to the waste in transportation service which must result in the movement of traffic via circuitous and longer routes. The influence of the originating carrier upon the shipper is very great, and where the relations are cordial, the shipper is generally quite willing to favor the through route suggested or preferred by such originating carrier."

Mr. Adams said he had had great difficulty in obtaining an understanding with the Southern Pacific as to its solicitation policy, although co-operation by the parties to the through route via Ogden was important, but that experience had indicated that the Southern Pacific representatives directed their efforts toward securing for the Southern Pacific the longest possible haul, the route via Ogden being favored only when the nature of the traffic, the train service, or the preference of the shipper was such that they considered it unwise to undertake to prevail upon the shipper to use other routes. He illustrated this by actual instances. He said that the tonnage figures used in the Southern Pacific exhibits, to show the small proportion of traffic which could be diverted from one route to the other, were for 1921, which did not represent a normal condition because of the general business depression and the amount of traffic diverted from rail lines by the Panama Canal.

Joint Use of Facilities Declared Feasible

E. N. Finch, general superintendent of the Oregon-Washington Railroad & Navigation Company, described the joint operation of tracks and terminals in which that company participates with the Southern Pacific, Great Northern, Northern Pacific, Spokane, Portland & Seattle, and Chicago, Milwaukee & St. Paul, to show that joint use of facilities can be worked out on a satisfactory basis. This company participates in joint use of 550 to 560 miles of track.

W. A. Whitney, general manager of the Utah-Idaho Central, and formerly for some five years a division superintendent of the Southern Pacific, testified regarding operating conditions on the California lines as they would result from a separation of the Central Pacific from the Southern Pacific. He described in detail how joint use of facilities could be worked out and expressed the opinion that it would be entirely practicable to effect the separation without disruption or impairment of the present service to the public. He said that joint trackage arrangements would permit a service to the public so nearly identical with the present service that the interests of shippers and passengers would not be affected. He replied in detail to testimony given by F. L. Burckhalter of the Southern Pacific, contending that his estimate of increased operating expenses and capital investment were excessive. He said the problem could be worked out very simply by the operating officers of the two companies with proper co-operation. The routing would have to be changed somewhat in some cases, but the public would not be prejudiced, he said. Commissioner Potter asked questions as to how the operation could be worked out if the Ogden line were separated and the California lines given to the Southern Pacific.

J. E. Muhlfeld, consulting engineer, testified that in his opinion joint operation under neutral management could be applied to the Sacramento shops and various engine houses, etc., in a way that would be feasible and practicable and result in operation as efficient as that of a single company.

N. D. Ballentine, superintendent of transportation of the Union Pacific, testified as to the effect of a separation of the Central Pacific on car service, saying that only an insignificant increase in equipment would be required to handle the business.

C. R. Gray, president of the Union Pacific, said in part:

"It has been charged that the Union Pacific attitude with respect to the Central Pacific has not been consistent throughout. The first announcement of our position with respect to this matter was made under date of June 10, 1922. This position has never changed, and is the same now. The Union Pacific is not primarily, nor fundamentally, asserting a desire to extend its ownership into central and northern california. Our contention is that we are entitled, however, to a connection on the part of the Central Pacific which will work with us whole-heartedly, and has no conflicting interests on account of an additional route through other gateways.

"It is admitted that the long association of the Southern Pacific and Central Pacific in central California has produced a character of community of interests which must have consideration. The shipping and traveling public should not suffer as a result of conditions for which it is not in any way responsible, nor should there be any increase in rates over the basis which has been applied heretofore. Neither should it be deprived of any essential service. The Supreme Court clearly recognized the possibility of these disruptions, and expressly provided that there should be an accommodation of such matters.

"There is ample precedent for the joint use of lines and such joint use is conventional throughout the country. There are many arrangements which are customary, some of which have individual features, due to unique and unusual local conditions, but they are all composed of elements of similarity. Probably the one most prevalent is the so-called 'bridge' arrangement, by which through trains of a tenant line are routed between given points without any intermediate traffic rights. Another is to give the tenant the right to handle freight and passengers to and from its own lines, having origin and destination at stations on the joint line, and still a third is where the tenant has full, free and equal traffic rights.

"Still other methods of joint use comprehend the use of pieces of line by a tenant upon a train-mile basis, with varying traffic rights, and still another limits the use to passenger or to freight train service, as the case may be.

"Still another limits the use to a commodity, and another method is in vogue by which the operation of a certain line is joint throughout, one of the users being entitled to the full haul on all traffic going to its line and *vice versa*, the general and operating expenses being divided upon the basis of benefits received. Still another provides for through operation of trains and engines, each line retaining its individual earnings, and assuming the expense of through trains and locomotives on mileage basis. It can be seen that there are very many precedents for the practical operation of joint trackage between railroads, and any of them could be used in the final disposition of particular parts of this problem, and could be negotiated so as to insure the practical compliance with any detail of the court decree, which would unquestionably have as its basis, the public interest."

Mr. Gray also replied in detail to some comparisons between the respective operations of the Southern Pacific and Union Pacific made by Mr. Kruttschnitt.

The relative business efficiency of each as a common carrier, depends, in the last analysis, upon all of the service performed, and not upon isolated and selected statistics, he said.

Just preceding Mr. Lovett's testimony a number of traf-

fic managers of large shippers located in Detroit, Fort Wayne, Rockford, Chicago and St. Louis had been placed on the stand to explain the character of the solicitation of their freight by the Southern Pacific and Union Pacific agents. Most of these witnesses were asked by H. A. Scandrett, counsel for the Union Pacific, whether the Southern Pacific agents had solicited their traffic via Ogden. The usual answer was that in recent years they had merely solicited their business for a Southern Pacific route, but that the business for central and northern California was generally routed via the Ogden gateway by the shipper. Mr. Wood asked questions to bring out that they were not preferentially solicited by the Southern Pacific agents for the southern routes and also that they usually routed the freight to suit themselves regardless of the solicitation. Senator Gooding of Idaho made a statement in which he bitterly criticized the practices which he said resulted from the monopoly of the Union Pacific system in Idaho and urged that it should not be made more complete by Union Pacific dominance over the Central Pacific. He said that if the Southern Pacific were confined in its control of the Central Pacific it might build competing lines into Idaho.

Rebuttal

After the Union Pacific had rested its case the Southern Pacific put on the stand a large number of traffic managers of middle western shippers and general agents of the Southern Pacific who testified in rebuttal regarding solicitation by the Southern Pacific for the Ogden route.

Monday and Tuesday of this week were devoted to rebuttal testimony on behalf of the Southern Pacific and cross-examination and considerable time was devoted to a discussion of just what lines were meant by the Supreme Court when it directed that the several terminal lines and cut-offs leading to San Francisco Bay, which have been constructed or acquired during the unified control of the two systems for convenient access to the bay, should be dealt with either by way of apportionment or by provisions for joint or common use. Commissioner Potter asked that maps be filed giving this information and said it was important to have all the available facts in the record on this point. He also asked for information to show just how much of the lines to Southern California and toward Portland were to be considered as included in the original Central Pacific project. Mr. Wood filed three maps, with an explanation of the questions arising as to just what is to be considered as Central Pacific property, and said that it is at last questionable whether the court referred to any period prior to the acquisition of stock control by the Southern Pacific in 1899. He said he understood that in anti-trust cases the Supreme Court has never ordered a separation of properties except with reference to lines of corporate ownership. The Union Pacific also filed a map. Mr. Potter said that the commission might conclude that construction since the control was just as much for the account of the Central Pacific as for the Southern Pacific.

Finances of the C. P.

A. D. McDonald, vice-president and comptroller of the Southern Pacific, went into the finances of the Central Pacific in considerable detail to show the financial inability of the Central Pacific to stand successfully as an independent road. The testimony of Mr. McDonald was largely directed at rebutting the earlier testimony of Judge Lovett. "The credit of the securities of the Southern Pacific Company, and of its constituent companies," he said, "rests in a large degree on the value of the Central Pacific as a part of the Southern Pacific transportation system. The market value of the Southern Pacific Company's securities, particularly its stock, is based on the value placed upon that company's equities in the Central Pacific. Deprive the Southern Pacific Company of the Central Pacific, and the market value established by the Southern Pacific Company for its securities since its organization in 1885, will have to be re-established and adjusted to the financial results ex-Central Pacific.

"I think it should be obvious to any one with a sense of justice and fair play, who will make an impartial examination of the affairs of the Southern Pacific Company and the resources of the Central Pacific that it is only through the continued ownership of the Central Pacific by the Southern Pacific that the holders of the securities of both companies will be fully protected and safeguarded and that the traveling and shipping public will be given the service they expect and should receive. I cannot bring myself to believe that the business interests of the communities served by the Southern Pacific Company's Lines should be unsettled, if not jeopardized, by the separation sought for by the Union Pacific and others. Great harm to a great many persons will certainly be done by the separation, while the good expected therefrom is problematical and remains to be ascertained."

Mr. McDonald was questioned about Judge Lovett's reference to the credit position of an independent Central Pacific. He presented an income account of the Central Pacific for the ten years from 1912 to 1921. For that period he said the net income applicable to the payment of interest and dividends averaged $12,695,000. The interest on the funded debt for 1921 amounted to $7,684,000. The balance remaining over the interest amounted to $5,011,000, which is slightly less than six per cent on the common and preferred stock.

Says C. P. Would Lose Traffic

"If no dividends had been paid by the Central Pacific during the ten year period the amount remaining after paying for the additions and betterments which cannot be capitalized, would be $2,711,000, which is equivalent to four per cent on the preferred stock and about three per cent on the common stock. This amount would entirely disappear under independent operation of the Central Pacific. Mr. Burckhalter has testified that if the Central Pacific is separated from the Southern Pacific the present operating expenses will be substantially increased. Moreover, Mr. Spence testified that under independent operation the Central Pacific would lose about 500,000 tons of freight annually."

Mr. McDonald stated that "if and when these things happen the Central Pacific instead of being a self-supporting property able to earn its fixed charges and a reasonable dividend with a margin for ordinary additions and betterments, which cannot be capitalized, would be unable to pay all its fixed charges. If the Southern Pacific's application to retain the Central Pacific is not granted, the Southern Pacific, because of its guarantee of the bonds of the Central Pacific, would have to make good any fixed charges the Central Pacific was unable to pay."

Westbound passenger train No. 5 of the Erie railroad was derailed near Tusten, N. Y., on the night of December 11 and the locomotive fell down a bank. The fireman was killed and the engineman injured.

At Hanahan, S. C., on December 9, a northbound passenger train of the Atlantic Coast Line, No. 80, second section, ran into the rear of passenger train No. 52, crushing a sleeping car of the last-mentioned train. One person was killed and 19 were injured. This collision occurred in a dense fog.

On the Philadelphia & Reading at Port Clinton, Pa., on December 12, the derailment of a freight train resulted in the death of two passengers of train No. 9, a part of the wreck having fallen against the passenger train as it stood at the station. Two coaches were overturned and a number of passengers were injured.

General News Department

The annual meeting of Division VI—Purchases and Stores—of the American Railway Association will be held in Chicago on May 22, 1924.

The Tenth National Foreign Trade Convention of the National Foreign Trade Council will be held in New Orleans from April 25 to 27, 1923.

Examiners Borland and Mullen of the Interstate Commerce Commission have concluded hearings in the general air brake investigation and briefs are to be filed by February 10.

In a fire at East Somerville, Mass., on Sunday, December 10, the Boston & Maine lost a wooden storehouse with large quantities of electrical and signal apparatus and other roadway material; estimated total loss, $250,000.

The American Railway Association announces that by action of the board of directors Alfred P. Thom has been appointed general counsel of the association. Mr. Thom already holds the position of general counsel of the Association of Railway Executives.

The Boston & Maine has been authorized by the Interstate Commerce Commission to install automatic train-stop or train-control upon one full passenger-locomotive division between Boston, Mass., and Greenfield, Mass., in lieu of the installation required in the order of June 13.

General increases in pay ranging from one cent an hour to five cents an hour have been granted by the Pennsylvania Railroad to maintenance of way employees. It is said that the total annual addition to the payrolls which will result from this order will be $1,800,000. The increases are retroactive to November 1.

Senator-elect Shipstead, of Minnesota, appearing before a sub-committee of the Senate judiciary committee last week, opposed the appointment of Pierce Butler to the Supreme Court, presenting a letter referring to Mr. Butler's activities as a corporation lawyer and as counsel for western railroads in valuation proceedings.

The Association of Railway Executives, at a meeting in Chicago on December 7, acting on a report presented by a special committee, Robert S. Lovett, chairman, adopted resolutions under which henceforth the functions of the Association will be confined to questions of National legislation, Governmental action and policies and legal matters of large importance which affect all or substantially all of the railroads of the country. The position of chairman of the association, recently vacated by the untimely death of Mr. Cuyler, is discontinued for the present, and the affairs of the association will be directed by the executive committee. After the first of January, the association will be administered from the office of the general counsel, in Washington, and the New York office will be discontinued. Stanley J. Strong, of New York, formerly executive Assistant, was elected secretary and treasurer.

Disastrous Collision at Humble, Texas

Press dispatches of December 13 report a collision on the Southern Pacific (Houston, East & West Texas) at Humble, Tex., 18 miles north of Houston, on the evening of that day, in which 10 persons were killed and 30 or more injured. Northbound passenger train No. 28 collided with a switching engine in front of the station. Because of the rupture of a steam pipe many passengers were scalded. It is said that the switching engine had drifted afoul of the main track while the engineman and fireman had gone to supper.

"Boring From Within"

Plans for amalgamating the 16 existing railroad labor organizations were discussed at a three-day convention at Chicago, which ended on December 11. A manifesto was adopted and a committee of 50 appointed to carry on the work advocated at this meeting. Reports indicate that of the 360 persons present the majority were former shop employees who are still on strike.

The leaders of the larger railway labor organizations did not participate in this meeting and several of them warned the members of their organizations not to attend. The presence of William Z. Foster and other advocates of the "one big union" idea, indicated that the purpose of the convention was to perfect plans for "boring from within" the existing organizations in order to bring about their dissolution.

Railway Revenues and Expenses for October

The net operating income of the Class I railroads in October totaled $85,234,000, equal to a return, on an annual basis of 4.05 per cent on their tentative valuation. The same roads in October last year reported $105,425,600 or 5.01 per cent; and in September this year $58,457,000, or 2.88 per cent.

Operating revenues now reported aggregate $549,284,800, an increase of 2½ per cent; operating expenses $428,265,000, an increase of 7.8 per cent.

While expenditures for maintenance of way and structures in October totaled $68,800,000, or 5 per cent less than in October last year, expenditures for maintenance of equipment were $130,212,000, or an increase of 16.2 per cent; and the number of freight cars in need of repairs was reduced by 41,694. There was a reduction of 1,361 in the number of locomotives in need of repairs.

During the first 10 months this year net operating income was $614,627,000, compared with $499,346,000 during the corresponding period last year. This is at the annual rate of return of 3.97 per cent, compared with 3.23 per cent in 1921.

Twenty-six railroads in October had operating deficits, of which 15 were in the Eastern district, one in the Southern and 10 in the Western. In September 44 roads reported deficits.

Senator Capper Asks Report on Excess Earnings

A resolution calling upon the Interstate Commerce Commission to furnish detailed information in a report to the Senate as to the amount of earnings in excess of 6 per cent of Class I railroads for the years 1920 and 1921, was introduced in the Senate on December 8 by Senator Capper of Kansas. The resolution says that it is reported that many railroads have earned in excess of 6 per cent, but have failed to make report of the same to the commission; "in disregard of the trust created by said section 15-a. have devoted all of said excess to their own uses" and that 13 great railroad systems will increase their dividends this year. The commission is asked to report its regulations for the determination and recovery of excess income, with a calculation of the excess and the reasons offered by any railroad which has failed or refused to make a report.

The commission, in its annual report submitted to Congress the day before this resolution was introduced, had explained the steps it had taken to get returns from the roads and that it had received only approximately $25,000 of excess earnings so far. It showed that the recovery of excess earnings was being delayed by the necessity for having valuation figures and declared that reducing its appropriation for valuation more rapidly than it had planned would probably defer recovery of excess earnings.

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF OCTOBER AND TEN MONTHS OF CALENDAR YEAR 1922

Teachers of Transportation to Meet

A meeting of university teachers of transportation will be held in connection with the annual convention of the American Economic Association, to be held in Chicago on December 27-30.

The following sessions have been arranged:

Congress Hotel, December 29, 2 P. M.—Business Meeting and Round Table Discussion. Organization of the Association. Formation of plans and policies. "The Aims of College Courses of Transportation."

Congress Hotel, December 30, 2 P. M.—Business Meeting and Round Table Discussion. Election of officers. Adoption of a constitution. "The Methods Used in Presenting Transportation Courses."

University Club, December 30, 8 P. M.—Dinner. Special speakers on current transportation problems.

Consolidation Hearings to Be Resumed

Hearing on the Interstate Commerce Commission's consolidation plan will be resumed before Commissioner Hall and Examiner Healy at Washington, January 17. Evidence will be received with respect to carriers which, under the tentative plan, should be considered in connection with the following proposed systems as there outlined, or in connection with such alternative systems as may be proposed:

System No. 13—Union Pacific—North Western
- Union Pacific
  - St. Joseph & Grand Island
  - Oregon Short Line
  - Oregon-Washington Railroad & Navigation Company
  - Los Angeles & Salt Lake
- Chicago & North Western
  - Chicago, St. Paul, Minneapolis & Omaha
- *Lake Superior & Ishpeming
- Wabash lines west of the Mississippi River

System No. 16—Santa Fe
- Atchison, Topeka & Santa Fe
  - Gulf, Colorado & Santa Fe
- Colorado & Southern
  - Fort Worth & Denver City
- *Denver & Rio Grande
- *Western Pacific
- *Utah Railway
- *Northwestern Pacific.
- *Nevada Northern

System No. 17—Southern Pacific Rock Island
- Southern Pacific Company
- *Nevada Northern
- Chicago, Rock Island & Pacific
  - Chicago, Rock Island & Gulf
- Arizona & New Mexico
- El Paso & Southwestern
- *San Antonio & Aransas Pass
- *Trinity & Brazos Valley
- *Midland Valley
- Vicksburg, Shreveport & Pacific
- Chicago, Peoria & St. Louis.

It is expected that the main affirmative case in respect of each carrier, particularly the documentary evidence, will be presented at the hearing in Washington. Carriers starred in the above list, and other carriers not listed, may introduce all their evidence at the western hearings if the commission is so advised in advance. The western hearings will be held primarily to afford state commissions, communities and the public an opportunity to present evidence and to cross-examine witnesses, provided the commission is advised in season to recall witnesses.

The existing Union Pacific and Southern Pacific systems will not be expected to present their evidence at this hearing. Opportunity will be given them later.

Certain respondents tentatively included in systems No. 14—Burlington-Northern Pacific and No. 15—Milwaukee-Great Northern, are to present their further evidence at the hearing commencing on January 17. Due notice will be given of the time and place of western hearings.

Respondents named in systems No. 18—Frisco-Katy Cotton Belt and No. 19—Chicago-Missouri Pacific, have been asked to be prepared to make their main affirmative cases at Washington upon short notice at any time after January.

Traffic News

A bill to reduce all freight rates on agricultural products and live stock by 33⅓ per cent or to the level existing on June 24, 1918, was introduced in the Senate on December 11.

The Transcontinental Passenger Association has announced the same summer excursion round trip fares from California, Nevada, Oregon, Washington and British Columbia to eastern destinations for the summer of 1923 as were in effect this year. The excursion fares from Chicago, St. Louis, Memphis, New Orleans, etc., to California and the north Pacific coast in effect in 1922 will also be maintained next summer.

Hearing on Proposed Grain Rate Reductions

A hearing was begun before Examiner Hunter of the Interstate Commerce Commission at Washington on December 11 on the complaint of the Public Utilities Commission of Kansas against the western railroads, asking a further reduction in the rates on grain and hay. Henry J. Waters, formerly president of the Kansas Agricultural College, spoke for Kansas and the farmers, declaring that agricultural products are bearing more than their share of the cost of transportation.

Priority Orders Vacated

The Interstate Commerce Commission on December 8 issued Amendment 4 to Service Order No. 25 and Amendment 2 to Service Order No. 24, which vacated and set aside those service orders, effective December 11, removing all restrictions on the use of open top cars east of the Mississippi river and canceling the priority accorded coal and certain other specified commodities, both east and west of the Mississippi river. The orders state that the emergency has been "measurably relieved."

Service Order No. 22 is still outstanding. This requires all railroads to forward traffic to destination by the routes most available to expedite its movement and relieve congestion, with appropriate provision for the protection of the rate over the route designated.

Coal Production

The total estimated output of soft coal in the week ended December 2, including coal coked, mine fuel, and local sales, was 10,336,000 net tons, according to the Geological Survey. As Thanksgiving Day reduced the working time during that week to about 5¼ days the average daily production was 1,969,000 net tons, the highest rate attained in any week this year. Preliminary reports of cars loaded during the first 4 days of the week December 4-9 indicate nearly the same rate of production and a total output of about 11,100,000 tons.

The estimated cumulative production of bituminous coal this year to December 2, inclusive, stands at 365,387,000 tons which is 3 per cent less than in the corresponding period of 1921.

Shipments of bituminous coal from lower Lake Erie ports declined in the week ended December 3, and the season virtually came to a close on that date. Reports furnished by the Ore and Coal Exchange show that 554,525 net tons were dumped, of which 535,505 tons were cargo coal and 19,020 tons were vessel fuel. Cumulative dumpings during the present season to December 3, stood at 18,991,482 tons, a decrease of 18 per cent when compared with the average for the three years preceding. Of the 18,171,965 tons of cargo coal dumped to date, 1,149,063 tons, or 6.3 per cent, were consigned to destinations not ordinarily taking Lake coal.

More freight cars were loaded with bituminous coal on Monday, December 11, than on any one day in the last three years, which is as far back as the Car Service Division of the American Railway Association has any daily record. The total was 45,886 cars. This exceeded by 429 cars the best previous record which was attained on November 22, 1920, at which time 45,457 cars were loaded. This also exceeded by 588 cars the total loading on October 30 last which was the highest for any one day since April 1 last, when the strike of bituminous miners began.

Commission and Court News

Interstate Commerce Commission

The commission has suspended until April 6, the operation of schedules which propose to reduce rates on petroleum and its products to Western Trunk Line destinations, from points in Texas on the Texas & New Orleans and the Houston East & West Texas, which include among others Beaumont, Houston, Orange and Port Arthur; also schedules which propose to extend proportional rates on petroleum from Shreveport and group to Vicksburg and to Natchez to shipments destined to points beyond.

State Commissions

The Kansas Public Utilities Commission has denied the petition of the Leavenworth & Topeka Railroad for permission to discontinue freight service between Leavenworth and Meriden.

The State Utilities Commission of Ohio has dismissed for want of jurisdiction the application of the Detroit, Toledo & Ironton for authority to issue $1,000,000 employees' improvement certificates to be sold to employees of the company. The commission held that its supervision over utility financing extends only over securities issued for construction and betterments. While the application specified that the certificates were to be used for the purpose of promoting cordial relations between employees and the company, it was not established definitely what was to be done with the money derived from their sale.

Personnel of Commissions

L. E. Gettle, member of the Railroad Commission of Wisconsin, has been elected chairman of the commission succeeding Carl T. Jackson, who has been acting chairman. Mr. Jackson will continue as a member of the commission.

Court News

Failure to Warn Passenger of Danger of Riding on Platform Not Negligence

The Texas Court of Civil Appeals holds that where a passenger who had been smoking in a car where smoking was prohibited and after being told by the porter that if he wanted to smoke he would have to go out on the platform, went upon the platform, where he slipped and fell off the train and was injured, the porter was not negligent in failing to warn the passenger of the danger of going on the platform.—Rhodes v. Houston, E. & W. T. (Tex. Civ. App.) 242 S. W. 263.

Injury by Defective Car on Private Siding

A railroad company left a loaded car on an industry track in such a defective condition that a drawhead pulled out while in use. The consignee's employees substituted a chain, which broke. Some days later its inspector, knowing this, used a wire cable to couple it into a short train. This broke with the first strain of a reverse movement and the car, with another car, broke away, but was stopped. The engineer, not knowing his train had parted, collided with the cars in making a run for a grade, and a brakeman in the consignee's employ was thrown from the top of the car and injured. The Circuit Court of Appeals, Sixth Circuit, holds that, under these facts, the negligence of the consignee, its inspector and engineer were not merely intervening causes in ordinary and natural sequence that should have been anticipated by the railroad company, but, on the contrary, the supervening, efficient and proximate cause of the collision and consequent injury, and that the railroad company was not liable for negligence in delivering the defective car as being the proximate cause of the injury.—Lanz v. Pennsylvania, 281 Fed. 796.

Equipment and Supplies

Locomotives

The Union Pacific is inquiring for 5 Mallet type locomotives with 12,000-gal. tenders, and for 73 Santa Fe type locomotives.

The Illinois Central is reported to be considering the purchase of 15 Mountain type locomotives and a number of Pacific type locomotives.

The Imperial Japanese Government Railways have ordered through Mitsui & Co., New York, two 9-ft. cut rotary snow plows from the American Locomotive Company.

The Central of New Jersey, reported in the *Railway Age* of December 2 as inquiring for five, 6-wheel switching locomotives, has ordered this equipment from the American Locomotive Company.

The Chicago, Burlington & Quincy, reported in the *Railway Age* of November 18 as inquiring for 15 Mikado type and 10 Santa Fe type locomotives, is expected to place orders for this equipment this week.

The Chicago & North Western is inquiring for 18 Mikado type superheater freight locomotives, with a total weight of engine in working order of 312,000 lb.; 20, 0-6-0 type superheater switching locomotives, with a total weight of engine in working order of 184,000 lb., and 12 Pacific type superheater passenger locomotives, with a total weight of engine in working order of 294,000 lb.

Freight Cars

The Minarets & Western is inquiring for 200, 40-ton flat cars.

The Bengal & Northwestern (India) is inquiring for 250 freight cars.

The Summers Steel Car Company, Pittsburgh, is inquiring for 500 ore cars of 75 tons' capacity.

The United Gas Improvement Company, Philadelphia, Pa., is inquiring for 150, 50-ton coal cars.

The Muscle Shoals, Birmingham & Pensacola is inquiring for 50, 40-ton box cars and 50 flat cars.

The Illinois Central is reported to be considering the purchase of a large number of freight cars.

The Atlantic Coast Line is inquiring for 500 sets of 40-ton trucks for cars to be repaired in its own shops.

The Steamship Fuel Corporation, 33 Rector street, New York City, is inquiring for 100 hopper cars of 70 tons' capacity. The company may increase the number of cars when the order is placed.

The Pere Marquette, reported in the *Railway Age* of December 2 as having ordered 1,000 box cars from the Western Steel Car & Foundry Company, ordered 1,500 box cars from this company instead of the 1,000 as reported.

The Baltimore & Ohio is inquiring for 2,000 box cars. This is in addition to the inquiry for 2,000 hopper cars and 1,000 gondola cars, mentoned in the *Railway Age* of November 18 and November 25. It is expected that contracts for the hopper and the gondola cars will be placed this week.

Passenger Cars

The Long Island, reported in the *Railway Age* of October 21 as inquiring for 40 motor cars, 20 electric trailer cars, 20 trailer coaches for steam suburban service, 10 coaches for steam service and 2 combination baggage and mail cars, has ordered this equipment from the American Car & Foundry Company.

The Southern Pacific, reported in the *Railway Age* of December 9 as contemplating coming in the market soon for about

140 passenger train cars, will order 15 steel coaches for main line through service, 60 steel coaches for local service, 10 steel diners, 11 steel buffet baggage cars, 35 steel combination mail and baggage cars and 10 steel baggage cars.

Iron and Steel

THE NEW YORK CENTRAL has received bids for 1,300 tons of steel for bridges.

THE GREAT NORTHERN is in the market for 3,345 tons of structural bridge steel for delivery in 1923.

THE BALTIMORE & OHIO has ordered 750 tons of steel for bridges from the American Bridge Company.

THE MISSOURI PACIFIC has ordered 549 tons of structural steel for turntables at St. Louis, Mo., from the American Bridge Company.

THE NORTHERN PACIFIC has ordered 115 tons of structural steel from the American Bridge Company for Center avenue bridge, Minneapolis, Minn.

THE ILLINOIS CENTRAL has ordered 509 tons of structural steel for 387 ft. 6-in. plate girder spans for Simpson, Ill., from the American Bridge Company.

THE ATCHISON, TOPEKA & SANTA FE has ordered 176 tons of structural steel from Joseph E. Ryerson & Son for an addition to its ice plant at Bakersfield, Cal.

THE LAKE SUPERIOR & ISHPEMING has ordered 193 tons of structural steel from the Wisconsin Bridge & Iron Company to be used in its car repair shop at Marquette, Mich.

Machinery and Tools

THE NORFOLK & WESTERN is inquiring for a 20-in. engine lathe, 6-ft. between centers.

THE PENNSYLVANIA, reported in the *Railway Age* of October 28 as inquiring for a list of heavy machine tool requirements, has ordered from various builders about 35 tools, including lathes, grinders and horizontal borers.

THE GREAT NORTHERN is inquiring for one steam operated locomotive crane, 30-ton capacity, 50 ft. boom, 8 wheel car, self-propelling, equipped with enclosed cab, also for two Bucyrus 30-B or similar gasoline shovels with caterpillar mounting with one yard dipper, two 35 ft. booms complete with cable and two one yard clam shell buckets.

Signaling

THE NEW YORK, NEW HAVEN & HARTFORD will install the Union Switch & Signal Company's continuous inductive system of train control on its double track line from the west end of its Providence (R. I.) passenger station to Auburn, R. I., five miles. This territory will be divided into 17 blocks of which 11 are in automatic territory and six within interlocking limits.

THE UNITED ELECTRIC RAILWAYS, Providence, R. I., will have automatic block signals on the line between Providence and Woonsocket, about 15 miles. An order has been given to the Union Switch & Signal Company for 32 color light signals, style N; also for ten "automatic flagmen," showing three aspects. All of this apparatus is to be energized by a current of 2,300 volts, 25 cycle. All installation work will be done by the signal company.

THE ANN ARBOR RAILROAD in connection with its improvements at Manhattan Junction, Toledo, Ohio, to provide for the accommodation of the trains of the Pennsylvania Railroad, running to and from Detroit, is enlarging the interlocking. The present machine, 44 levers, will have electric levers added, and electric detector locking will be provided on the Ann Arbor tracks. The signals on the Ann Arbor will be of the position-light type. Similar improvements will be made at the Hallett interlocking, at the junction of the Ann Arbor with the Toledo Terminal. The apparatus for all this work is furnished by the Union Switch & Signal Company.

Supply Trade News

The **Willamette Iron & Steel Works**, Portland, Ore., will begin the manufacture of gear type locomotive designed for use on logging railways, on January 1. The company expects to build one locomotive a month.

R. M. Chissom, formerly chief clerk to the purchasing agent of the Chicago, Indianapolis & Louisville at Chicago, has been appointed special representative in the railroad department of the **Lehon Company**, Chicago.

William N. Shaw, vice-president of the **New York Air Brake Company**, of New York City, has resigned and in future will devote all his time to the Eisemann Magneto Corporation, Brooklyn, N. Y., of which he has been president for the past four years, and to other interests.

John J. Kehoe, who represented Warren, Corning & Co., no longer handles this account. Mr. Kehoe continues to represent the **Lehigh Railway Supply Company** at 1 Madison avenue, New York City, and all his time in the future will be devoted to this work. This company is the selling representative of manufacturers serving the railway, industrial and marine trade.

Frank N. Phelps was recently placed in charge of railroad sales of Baker industrial tractors and trucks, manufactured by the **Baker R. & L. Company**, Cleveland, Ohio. Mr. Phelps was born at Boston, Mass., on December 14, 1878. He received a mechanical engineering education at Massachusetts Institute of Technology and has been identified with the electric vehicle industry since 1911, when he took over the sale of Baker road trucks in New England. Mr. Phelps now becomes special railroad representative of the same company as noted above.

F. N. Phelps

E. T. Fishwick, formerly sales manager of the Worthington Pump & Machinery Corporation, New York, has been elected vice-president in charge of sales to succeed F. H. Jones, resigned. William Goodman, assistant to vice-president, has been elected vice-president in charge of engineering and manufacturing to succeed J. E. Sague, resigned. Both Mr. Jones and Mr. Sague will remain with the corporation in a consulting capacity. **James C. Barnaby**, plant engineer of the Staten Island Shipbuilding Company, is now in charge of certain engineering work in the Diesel oil engine division of the Worthington Pump & Machinery Corporation.

W. L. Allen, vice-president and general manager of the Laclede Steel Company, St. Louis, Mo., has resigned to become associated after January 1, 1923, with Frank H. Johnson of Chicago, Ill., in the sale of Laclede Steel and other steel companies' products. After leaving college as a metallurgist, Mr. Allen spent several years in the operating departments of blast furnace, open hearth and finishing mill, and was one of the sales engineers of the Carnegie Steel Company. He later acted as commercial engineer of the R. D. Nuttall Company in the development of heat treated gearings. Mr. Allen was president of the Valley Steel Company of East St. Louis, Ill., until that company was taken over by the Laclede Steel Company in 1918.

Alfred B. Carhart has resigned as vice-president and sales manager of the Crosby Steam Gage & Valve Co., to become president and general manager of the **Precision Instrument Company, Inc.**, Newark, N. J. Mr. Carhart was for more than ten years works manager of the Crosby factory. He is a mechanical and electrical engineer and a graduate of Princeton University. The Precision Instrument Co., Inc., has acquired control of the Precision Instrument Co., of Newark, N. J., and the present executive officers will retain their connection with the company. The company's New York City office will be at 114 Liberty street, and the factory will later be moved to New York.

W. E. Caldwell has been appointed sales manager of the **Cleveland Twist Drill Company**, Cleveland, Ohio, succeeding E. G. Buckwell, retired. **Harry Jenson** has been appointed assistant sales manager; **Robert G. Berrington**, sales representative in the Philadelphia district, and **George Kast**, treasurer, has taken on the duties of secretary. Mr. Caldwell, who has been with the Cleveland Twist Drill Company since 1901, was appointed assistant sales manager in 1916. Mr. Jenson was for more than 15 years a representative of the company in the Philadelphia territory, and Mr. Berrington, for 13 years a representative of the sales department in the central states and Canada, has returned to the Cleveland Twist Drill Company after resigning two years ago to act as sales agent for a line of machine tools in the Cleveland territory. Mr. Buckwell, retired secretary and sales manager, previous to 1899 was a traveling salesman for the Sargent Company and later a member of the retail hardware company of McClung, Buffat & Buckwell at Knoxville, Tenn.

W. E. Caldwell

Obituary

W. B. Everest, general traffic manager of the Westinghouse Electric & Manufacturing Company, died on December 5 at his home in Pittsburgh, Pa. Mr. Everest was born July 3, 1868, at Newark, N. J. After completing his high school education he entered the employ of the United States Electric Company at Newark; this company was later merged with the Westinghouse Electric & Manufacturing Company. While at the Newark works of the electric company, he served as chief clerk to the general superintendent of the works. In May, 1884, he was transferred to the East Pittsburgh works, retaining his position of chief clerk. In 1885 he was transferred to the auditing department, in charge of cost, and was later appointed storekeeper and shipper, and then traffic manager of the East Pittsburgh works. In 1914 he was made general traffic manager of the company, which position he held at the time of his death.

W. B. Everest

Railway Construction

Atchison, Topeka & Santa Fe.—This company has awarded a contract to Sharp & Fellowes, of Los Angeles, for the construction of second track on the Arizona division for 40 miles between Griffith, Ariz., and Topock, and for 65.1 miles between Bagdad, Cal., and Daggett. Between Bagdad and Lavic, the double track will follow a new line. This company also contemplates the construction of second track on the Albuquerque division for 8.6 miles between Dalies, N. M., and Rio Puerco, and for 32.6 miles between Perea, N. M., and Defiance.

Atchinson, Topeka & Santa Fe.—This company has awarded a contract to R. E. McKee, El Paso, Tex., for the construction of a brick and steel passenger station at Phoenix, Ariz., to be built in conjunction with the Southern Pacific at a cost of approximately $300,000.

Belt Railway of Chicago.—This company has closed bids for the construction at Chicago of a brick freight house, 40 ft. by 220 ft., with a wood platform 300 ft. long, the total cost of which will be approximately $75,000.

Chicago, Burlington & Quincy.—This company will construct a new double track line two miles long, to cost approximately $185,000, at Weston, Mo., to replace track which has been damaged by high water. This road is also contemplating the construction of a new freight and passenger station at Weston.

Cleveland, Cincinnati, Chicago & St. Louis.—This company has awarded a contract to the Ogle Construction Company, Chicago, Ill., for the construction of a 400-ton, three track, concrete coaling station at Hillsboro, Ill.

Great Northern.—This company contemplates the construction early in 1923 of a new engine house and repair shop at St. Cloud, Minn.

Great Northern.—This company has awarded a contract to the Roberts & Schaefer Company, Chicago, for the construction of a 500-ton fireproof, three track, automatic electric roller skip type locomotive coaling plant at Havre, Mont.

Gulf, Colorado & Santa Fe.—This company has awarded a contract to Doullutt & Williams, of Galveston, Tex., for the construction of two, 400 ft. steel and concrete train sheds at Galveston, to cost approximately $30,000.

Longview, Portland & Northern.—This company will receive bids at its headquarters at Kelso, Wash., until January 1, 1923, for the construction of roadbed, bridges and culverts for approximately 8½ miles of railroad in Cowlitz county, Wash. Twenty-three miles of track are expected to be laid in 1923.

Louisiana & Arkansas.—This company, through its agents, Harrington, Howard & Ash, consulting engineers of Kansas City, Mo., has awarded a contract to the Herman & McCain Construction Company, Little Rock, Ark., for the building of a one story, brick and reinforced concrete locomotive shop to cost approximately $150,000, at Minden, La. The shops of the company were previously at Stamps, Ark.

Oregon, California & Eastern.—This company has awarded a contract to the Eschbach-Bruce-Nettleton Company, Seattle, Wash., for the construction of 14 miles of line from Hildebrand, Ore., to the Sprague river to cost approximately $100,000. Further construction plans of this company were reported in the *Railway Age* of September 23, page 589.

Pennsylvania.—This company is revising the plans for the elevation of its tracks at Garfield boulevard near Leavitt street, Chicago, which were made several years ago, and will begin construction in the spring.

St. Louis-San Francisco.—This company has closed bids for the construction of a five-stall, one-story, frame roundhouse, 70 ft. by 92 ft. to be built at Muskogee, Okla., to replace one recently destroyed by fire.

Railway Financial News

ALABAMA & MISSISSIPPI.—*Operation May Be Resumed.*—See Mississippi Export.

ATLANTIC & NORTH CAROLINA.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $325,000 of first mortgage 20-year, 6 per cent gold bonds.

BALTIMORE & OHIO.—*Income for 1922.*—The preliminary income account for the year ended December 31, 1922, shows net railway earnings of $22,703,709 and a surplus after the 4 per cent dividend on the preferred stock of $1,117,110, compared with a surplus for 1921 of $3,885,806.

Commenting on the results for 1922, President Daniel Willard, said:

That the results of the year are not materially better is due, first, to the suspension of a large proportion of the coal operations on the company's lines from April to September, and, second, and more particularly, to the effect upon the earnings of the company for the three months to September 30, during which period the strike of the shopmen was in progress.

For the first six months of the year to June 30 the net railway operating income was $14,580,295, an increase compared with the same period of the previous year of $6,950,000.

For the three months to September 30 there was a deficit of $2,089,075, a decrease compared with the same period of the previous year of $9,729,000.

For the three months to December 31 (December estimated) the income aggregates $10,212,489, an increase compared with the same period of the previous year of $3,630,000.

Total net railway operating income for the year $22,703,709, an increase compared with the previous year of $850,000.

By the provisions of the $35,000,000 loan of July 1, 1919, there is to be set aside out of the income before dividends a sum equal to $3,500,000 per annum, to be devoted to capital expenditures. The total appropriations made under these provisions, to and including the year 1922, aggregate $12,250,000, on account of the total of $17,500,000 to be so appropriated during the five years beginning with July 1, 1919.

BANGOR & AROOSTOOK.—*Authorized to Issue Equipment Trust Certificates.*—The Interstate Commerce Commission has authorized an issue of $250,000 of equipment trust certificates to be sold at not less than 98.

CAROLINA, CLINCHFIELD & OHIO.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $50,000,000 of first and consolidated mortgage bonds.

CHICAGO & ALTON.—*Asks Authority for Receivers' Certificates.*—The receivers have applied to the Interstate Commerce Commission for authority to issue $2,000,000 of 6 per cent receivers' certificates.

CHICAGO, MILWAUKEE & ST. PAUL.—*Loan Extended.*—The Interstate Commerce Commission has approved this company's application for a loan of $10,000,000 from the revolving fund, to mature March 1, 1930, for the purpose of meeting at maturity on January 1, 1923, a previous loan of like amount.

CHICAGO, PEORIA & ST. LOUIS.—*Suggested Plans for Reorganization.*—The patrons of this road are making strenuous opposition to the proposal of the bondholders to dismantle the line. Herbert A. Tuohy of Springfield, Ill., chairman of the recently organized Patrons' Committee has addressed a letter to the Illinois Commerce Commission and the Interstate Commerce Commission, calling attention to the value of the property and its potential earning capacity. The Circuit Court at Springfield, Ill., acting on a petition for authority to discontinue the operation of trains has decided that the receivers must make their application to the Interstate Commerce Commission, "or any other government body deemed by them to have jurisdiction." About 500 citizens representing 70 towns which would be adversely affected by the abandonment, were present at the hearing. The attorney for the patrons declared that many towns in the best farming regions in the state will be left entirely without railroad service if the road ceases operation.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to assume obligation and liability for $300,000 of preferred stock of the Cincinnati, Indianapolis & Western Car Equipment Company.

DENVER & RIO GRANDE WESTERN.—*Asks Authority to Issue Receivers' Certificates.*—This company has applied to the Interstate Commerce Commission for authority to issue and sell $5,000,000 of 6 per cent receivers' certificates for the purpose of making improvements to its property.

DENVER & RIO GRANDE.—*Extend Time for Deposit.*—The Sutro protective committee has issued a notice to holders of the first and refunding mortgage 5 per cent gold bonds and 7 per cent cumulative adjustment gold bonds and certificates of deposit therefor, announcing that the time within which deposits of these securities may be made with the committee has been extended to and including January 10 next.

FORT SMITH & WESTERN.—*To Be Sold.*—The sale of this road at public auction will be held on January 16, 1923, at Ft. Smith, Ark. The entire property of the company, which operates a single track line between Ft. Smith, Ark., and Guthrie, Okla., and Oklahoma City, a total mileage of approximately 250 miles, will be disposed of to the highest bidder. C. T. O'Neal, Ft. Smith, Ark., is the receiver for the road.

GRAYSONIA, NASHVILLE & ASHDOWN.—*Asks Authority to Issue Securities.*—This company has applied to the Interstate Commerce Commission for authority to issue $300,000 of stock, $300,000 of first mortgage bonds and $300,000 of second mortgage bonds.

ILLINOIS CENTRAL.—*Asks Authority for Lease.*—This company has applied to the Interstate Commerce Commission for authority to lease the Chicago, Memphis & Gulf.

INTERNATIONAL-GREAT NORTHERN.—This company on December 1 acquired and began the operation of the property formerly owned by the International & Great Northern Railway and operated by that company and its receiver.

As a final step in the reorganization of the International and Great Northern, there have been registered in the secretary of state's office at Austin, Tex., three temporary bonds, one for $17,250,000, one for $750,000 and a third for $17,000,000. They will be exchanged for definitive bonds of $1,000 each later and $7,500,000 in stock issued. Evidence has been introduced showing that the owners of the property had put up $4,350,000 in cash as a working fund, which is to be included in the capital stock. A final order has been entered by the Railroad Commission of Texas fixing the valuation of the property at $44,939,000, and the cash deposit was included in that. Among the cancellations were $159,000 of bonds covering the bridge across the Colorado River at Austin. There were also cancelled $11,135,000 of bonds and $2,400,000 of receiver's certificates, besides certain equipment obligations.

Capital Stock Purchased.—See St. Louis-San Francisco.

INTERSTATE.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $1,200,000 of equipment trust certificates to be issued by the Fidelity Trust Company of Philadelphia.

KENTWOOD & EASTERN.—*Authorized to Abandon Line.*—The Louisiana Public Service Commission has authorized this company to abandon operation and dismantle its line from Kentwood, La., on the Illinois Central, southeasterly to Scanlon, 16 miles. The application states that the line was opened for operation in 1905 and practically its entire tonnage has been forest products. The timber holdings in the vicinity are exhausted and the traffic of the line has disappeared. Hard surface highways now practically parallel the road.

MICHIGAN CENTRAL.—*Dividends.*—This company has declared an additional dividend of 6 per cent and the regular semi-annual dividend of 4 per cent, both payable January 29 to stock of record December 29.

MISSOURI-KANSAS-TEXAS.—*Asks Authority to Acquire Lines and Issue Securities.*—This company has applied to the Interstate Commerce Commission for authority to acquire lines and leaseholds in connection with the reorganization of the M. K. & T. system and for authority to issue $51,260,650 of general mortgage 6 per cent bonds and $1,400,000 of common stock.

MISSOURI, KANSAS & TEXAS.—*Sold.*—This road was sold on December 13 for $28,000,700 to Randolph & Blumenthal, representatives of the reorganization managers, J. & W. Seligman & Co., and Hallgarten & Co., New York.

OSAGE.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized an issue of $197,000 of capital stock to be sold at not less than par and the proceeds used to pay existing indebtedness.

PITTSBURGH & LAKE ERIE.—*New Directors.*—Edward S. Harkness and Robert S. Lovett have been elected directors to succeed William Rockefeller and A. T. Hardin, deceased.

SALT LAKE & UTAH.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $600,000 of first mortgage 6 per cent bonds by pledging them with the Secretary of the Treasury as partial security for a government loan.

SOUTH GEORGIA.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized an issue of $199,000 of preferred stock to be exchanged at par for a similar amount of first mortgage 5 per cent bonds which mature on January 1, or to be sold at not less than par, the proceeds devoted to the payment of the bonds.

SOUTHERN.—*Authorized to Procure Authentication and Delivery of Bonds.*—The Interstate Commerce Commission has authorized this company to procure the authentication and delivery of $5,000,000 of development and general mortgage 4 per cent gold bonds to be held in the treasury until the further order of the commission.

ST. LOUIS-SAN FRANCISCO.—*Acquires I.-G. N. Capital Stock.*—E. N. Brown, chairman of the board of the St. Louis-San Francisco, announced on December 13 that his company has purchased the entire capital stock of $7,500,000 of the International-Great Northern and will operate its 1,159 miles of line, if approval is given by the Interstate Commerce Commission. The price of the sale is such as to net the certificate holders of the International-Great Northern $26.75 a share.

Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue and sell or pledge $5,644,700 of prior lien mortgage 5½ per cent gold bonds and $1,047,900 of adjustment mortgage 6 per cent gold bonds.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out and received from the several roads the following amounts:

Georgia, Florida & Alabama Railway Co.	$ 120,000
Akron and Barberton Belt Railroad Co.	$ 70,000
Kansas, Oklahoma & Gulf Railway Company paid Director General	$1,410,000

Dividends Declared

Albany & Susquehanna.—Common, extra, $2.00, payable January 6 to holders of record December 21.

Chicago, Burlington & Quincy—5 per cent, semi-annually, payable December 26 to holders of record December 16.

Chicago, Indianapolis & Louisville.—Common, 1½ per cent; preferred, 2 per cent; both payable January 10 to holders of record December 30.

Chicago, St. Paul, Minneapolis & Omaha.—Common, 2½ per cent, semi-annually; preferred, 3½ per cent, semi-annually; both payable February 20 to holders of record February 1.

Cleveland, Cincinnati, Chicago & St. Louis.—Common, 1 per cent, quarterly; preferred, 1¼ per cent; both payable January 20 to holders of record December 29.

Joliet & Chicago.—1¾ per cent, quarterly, payable January 1 to holders of record December 15.

Mahoning Coal Railroad.—Common, $10.00, semi-annually, payable February 1 to holders of record January 15; common, extra, $15.00, payable December 29 to holders of record December 16.

Michigan Central.—6 per cent, extra, and 4 per cent, semi-annually, payable January 29 to holders of record December 29.

New York Central.—1¼ per cent, quarterly, payable February 1 to holders of record December 29.

Philadelphia, Baltimore & Washington.—3 per cent, semi-annually, payable December 30 to holders of record December 15.

St. Louis, Rocky Mountain & Pacific.—Common, 1 per cent, quarterly; preferred, 1¼ per cent quarterly; both payable December 30 to holders of record December 16.

Troy Union.—6 per cent, annually, payable January 15 to holders of record December 29.

Western Pacific.—Preferred, 1½ per cent, quarterly, payable January 2 to holders of record December 18.

Trend of Railway Stock and Bond Prices

	Dec. 12	Last Week	Last Year
Average price of 20 representative railway stocks	64.84	64.53	57.15
Average price of 20 representative railway bonds	85.31	85.19	80.87

Railway Officers

Financial, Legal and Accounting

J. R. Turney, acting general solicitor of the St. Louis-Southwestern, with headquarters at St. Louis, Mo., has been appointed general solicitor, with the same headquarters. **A. H. Kiskaddon** has been appointed assistant general solicitor, with the same headquarters.

Operating

W. A. Fitton has been promoted to assistant to the general manager of the Southern, with headquarters at Cincinnati, Ohio.

J. E. Smith has been promoted to assistant district superintendent of the Pullman company with headquarters at Cincinnati, Ohio, succeeding C. W. Lewis, deceased.

E. Flynn, whose promotion to general manager of lines west of the Missouri river of the Chicago, Burlington & Quincy, with headquarters at Omaha, Neb., was reported in the *Railway Age* of December 2, was born on May 19, 1873, at Bement, Ill. He entered railway service as a trackman on the Chicago & Eastern Illinois in April, 1900. Until November 15, 1906, he was employed in the track department of the Wabash, as a brakeman on the Southern Pacific and the Wabash, and as a brakeman and conductor on the Chicago, Burlington & Quincy. He was promoted to trainmaster on the latter road, with headquarters at Omaha, Neb., on November 15, 1906, and was again promoted to assistant superintendent, with headquarters at Lincoln, Neb., in 1908. In April, 1909, he was promoted to superintendent, with headquarters at Omaha, Neb., and was transferred to McCook, Neb., in May, 1911. He was transferred to LaCrosse, Wis., in 1913, and to Chicago in June, 1917. He was promoted to general superintendent of the Nebraska district, with headquarters at Lincoln, Neb., in April, 1918, and held this position until his recent promotion to general manager.

E. Flynn

T. Rodger, superintendent of telegraph, the Eastern Lines of the Grand Trunk, with headquarters at Montreal, Que., has been promoted to superintendent of telegraphs and telephones with jurisdiction over the entire system, with the same headquarters succeeding H. Hulatt, manager of telegraphs, whose resignation was reported in the *Railway Age* of December 9.

W. A. Card, whose promotion to general superintendent of the Iowa district of the Chicago, Burlington & Quincy, with headquarters at Burlington, Iowa, was reported in the *Railway Age* of December 2, was born on June 22, 1870, in Rochester, N. Y. He entered railway service with the Chicago, Burlington & Quincy on September 10, 1887, as a telegraph operator. He was promoted to chief clerk to the trainmaster at Aurora, Ill., in August, 1894, and held this position until August, 1903, when he was promoted to trainmaster, with headquarters at Beardstown, Ill. He was transferred to Chicago in September, 1905, and was promoted to assistant superintendent, with headquarters at Galesburg, Ill., in July, 1908.

In February, 1909, he was promoted to superintendent, with headquarters at Creston, Iowa, and in July, 1913, was transferred to the St. Joseph division, with headquarters at St. Joseph, Mo., which position he held at the time of his recent promotion to general superintendent.

Walter H. Towne, whose appointment as superintendent of transportation of the Boston & Maine was reported in the *Railway Age* of December 9, was born on July 6, 1884, in Portland, Me., and was educated in the public schools. He entered railway service in 1903 and served as receiving clerk for the Boston & Maine at Salem, Mass. Shortly thereafter he was promoted to assistant cashier and in 1906 was transferred to Peabody, Mass., as cashier. In 1907 he entered the office of the general manager at Boston as a stenographer and shortly thereafter was transferred to the office of the general superintendent in the same capacity. In 1910 he became a clerk in the office of the chief engineer and served in the same capacity in the office of the engineer, maintenance of way, and in the purchasing department. In 1913 he was promoted to inspector of transportation and in 1914 again became cashier at Peabody, Mass. In 1916 he entered the president's office as clerk and stenographer and in 1917 became a transportation clerk in the office of the superintendent of transportation. In 1918 he was appointed assistant to the superintendent of transportation which position he held at the time of his recent promotion.

Traffic

W. J. Farrell has been appointed general agent of the freight department of the Great Northern, with headquarters at Kansas City, Mo., succeeding B. R. Persels.

J. H. Garrity has been appointed western freight agent of the Buffalo, Rochester & Pittsburgh with headquarters at Cincinnati, O. **J. C. Gross** has been appointed division freight agent at Pittsburgh, Pa.

Everett D. Davis has been promoted to general freight agent of the Buffalo, Rochester & Pittsburgh with headquarters at Rochester, N. Y. **W. H. Francis** has been promoted to assistant general freight agent.

Edward A. Niel has been appointed freight traffic manager of the Buffalo, Rochester & Pittsburgh. Mr. Niel was born at Selma, Ala., and was educated at Dallas Academy of that city. He entered railway service as an office boy for the Selma, Rome & Dalton (Southern Railway). A short time thereafter he became a telegraph operator for the same road, which position he left to enter the service of the Western Union Telegraph Company. From 1883 to 1888 he was a stenographer in the office of the superintendent of the East Tennessee, Virginia & Georgia (Southern Railway) at Selma. From 1888 to 1895 he was chief clerk to the assistant general freight agent of the Southern in the same city. He then became general freight and passenger agent of the Mobile & Birmingham (Southern) and served in that capacity until 1899 when he was appointed eastern general freight agent of the Southern. Shortly thereafter he was promoted to general freight agent and in 1904 to traffic manager of the Atlantic & North Carolina (now Norfolk Southern). From 1905 to 1911 he was traffic manager of the Buffalo & Susquehanna and from 1912 to 1920 he was coal freight agent for the Buffalo, Rochester & Pittsburgh. In 1920 he was promoted to general freight agent and held that position until the time of his recent promotion.

E. A. Niel

Mechanical

E. M. Brockmayer has been promoted to road foreman of engines on the Detroit-Canadian division of the Pere Marquette with headquarters at Detroit, Mich.

J. F. Sheahan has been appointed mechanical engineer of the Atlanta, Birmingham & Atlantic with headquarters at Atlanta, Ga. **A. W. Kirkland** has been appointed superintendent of motive power with headquarters at Fitzgerald, Ga.

Engineering, Maintenance of Way and Signaling

R. C. Bardwell, engineer of water service of the Missouri Pacific, with headquarters at St. Louis, Mo., has been appointed superintendent of water supply of the Chesapeake & Ohio, with headquarters at Huntington, W. Va.

G. W. Koontz, roadmaster on the Delaware & Hudson, with headquarters at Carbondale, Pa., has been appointed division engineer of the St. Louis-San Francisco, with headquarters at Ft. Worth, Tex., succeeding P. J. Neff, whose resignation to become assistant to the president of the International-Great Northern was reported in the *Railway Age* of December 9.

Obituary

John T. Chamberlain, for a number of years master car builder of the Boston & Maine, died on December 12 at Medford, Massachusetts. Mr. Chamberlain was born at Eckington, England, on May 21, 1849, and came to this country with his parents shortly thereafter, locating at New York City. At the age of 18 he went to Kent, Ohio, to learn car building. In 1870 he entered the service of the Boston & Albany in its Allston (Boston) shops. In 1888 he left the Boston & Albany to go to Wichita, Kan., as superintendent of the Burton Stock Car Company. Two years later he returned to New England as master car builder of the Boston & Maine. He served in this position until the time of his retirement in 1907. Mr. Chamberlain was president of the Master Car Builders' Association in 1901.

J. T. Chamberlain

F. E. Batturs, assistant passenger traffic manager of the Southern Pacific, with headquarters at San Francisco, died suddenly on December 7 at a hotel in Washington, where he had been attending the hearing before the Interstate Commerce Commission on the Central Pacific case.

J. L. Barnes, general agent for the Atchison, Topeka & Santa Fe, with headquarters at Chanute, Kan., died in that city on November 30. Mr. Barnes was born in Duchess county, New York, in 1835. He entered railway service September 1, 1859, as a conductor on the first Pullman car ever built, taking the car from Bloomington, Ill., to Chicago. He later became superintendent of the Kansas City, Ft. Scott & Gulf, and when that road was taken over by the Atchison, Topeka & Santa Fe in 1888, he became superintendent of the Southern Kansas division. He held this position until his retirement from active service in 1910. A few years later he was appointed general agent for the Atchison, Topeka & Santa Fe, with headquarters at Chanute, Kan., and he held this position until his death.

Are You Making Friends for the Railroads?

PERHAPS THE MOST important fact that needs to be brought home to every railway officer is that the future of the railways is in the hands of their own officers. We do not mean merely in the hands of their chairmen and presidents, but in the hands of their officers from the chairmen and presidents down to the trainmasters, the road foremen of engines, the traffic solicitors and other subordinate officers.

Too long have railway officers complained that the railways are being ruined by public sentiment and public regulation without themselves putting forth the efforts that they could make and must make to change public sentiment and improve government regulation. A man may lose a fight even though he fights the best he can. But he always stands some chance of winning it if he fights, while he is sure to lose it if he defaults. The railways have lost struggles repeatedly within recent years because they have defaulted when, if their officers generally had stood up and defended them, they could have won.

The railways cannot, however, win important fights unless they have many friends to help them. They never will have enough friends unless their officers of all ranks take trouble and make efforts to make friends for them. The *Railway Age* published in its issue for December 9 an editorial entitled "Making Friends for the Railroads." In that editorial we tried to point out a few of the things that the officers ought to do to make friends for their railroads. We have received a letter regarding this editorial from one of the leading railway officials of the United States—a man who came up through the operating department and whose opinions upon all important railway matters are universally respected. He says:

"I have just taken a good deal of pleasure in reading your editorial in the *Railway Age* of December 9, 'Making Friends for the Railroads.' This is, in my opinion, one of the main things towards which the energies of the railroad organization should be devoted. There is a great lack of the realization of the importance of it. I hope your editorial stirs up some interest in the matter."

One question which every railway officer and every railway employee who desires to see private operation and private ownership maintained, who desires to see the railways prosper, and who desires to see the railroad business continue to afford opportunity for a successful career is: "Am I really trying every day to make friends for my railroad and for the railroads as a whole?" Any railway officer, or for that matter any employee, who cannot answer that question in the affirmative, is not doing his duty to his railroad or himself. The plain truth is that there are many men connected with the railways who are constantly engaged, not in making friends, but in making enemies for them. This is true of every official and every employee who fails to give the public the best service practicable, or who fails patiently, courteously and intelligently, when opportunity offers, to explain the reasons why it is not always possible to give the public the service which it wants or the rates for which it asks.

The successful running of a railroad involves much more than maintaining tracks, making up and running trains and collecting freight and passenger charges. The failure of many people on the pay roll of the railroads to recognize this fact and act accordingly is responsible for a large part of the troubles of the railroads. There are many railway men, and even many railway officers, who steadily perform their regularly assigned duties, but who make no effort to do anything more. They do not try to so participate in the business and other activities of their communities as to make the people of the communities feel that the railway is just as much interested in their welfare as any other business concern. They do not try to acquire broad information respecting the work of their own departments so that they can answer the reasonable and natural inquiries of shippers and travelers. They do not inform themselves as to the facts regarding such matters as alleged "over-capitalization" and excessive valuation of railroads, so-called "guarantees" of net return, the reasons why freight and passenger rates are higher than they used to be, the reasons why the railways cannot furnish all the freight cars wanted promptly, etc., in order that they may impart this information to others. How can railway men expect the public to get correct information regarding these matters unless railway men will inform themselves concerning them and give the information to the public?

We do not mean to suggest that railway officers and employees should engage in acrimonious controversies with patrons who may complain about service or rates, or that they should cram facts about valuation, the decline of railroad development, etc., down unwilling throats. Far from it. What we do mean is that there are millions of people who earnestly desire information regarding these and other railway matters, and that railway officers, and employees who are interested in the welfare of the railways, should make a real effort to inform themselves concerning them, and should, when good opportunities offer themselves, give people the information they desire and will welcome.

Where can railway officers and employees get the information they must have in order intelligently to discuss those problems of their industry in which the public is so much

interested? The public is interested in the facts about each individual railroad, but even more in the facts about the railroads as a whole. Railway men can get or should be able to get from their own higher officers all the information they need about their own railroad. There are many sources from which they can get information regarding the railroads as a whole. They can write to the Bureau of Railway Economics in Washington and get any information for which they may ask regarding the railways as a whole. We believe that without unseemly immodesty the *Railway Age* can truly say that if railway officers and men would carefully read the articles and editorials dealing with railway public problems that are published in every issue of this paper, they could soon equip themselves to discuss intelligently all the questions regarding the railways in which the general public is interested.

It is a fact that is only too well known that hundreds of thousands of railway employees have, under the leadership of the heads of their unions, become enemies of private ownership and are actively disseminating propaganda against private management in every community in the country. These employees get the information or misinformation they disseminate by reading the weekly and monthly publications issued by their labor unions. Can any railway officer or any loyal employee believe he is doing his whole duty to his railway as long as he lets literally hundreds of thousands of employees do more to destroy public confidence in the management of his railway and in the entire policy of private management than he does to defend the management of his railway and private management as a policy?

There is crying need for a great awakening of all railway officers and all loyal employees with respect to this matter. Every management ought to adopt a policy of encouraging and stimulating its officers and loyal employees to do all they can to make friends for the railways by treating the public well, and by speaking out in answer to the misrepresentations and defamations of railway management which are constantly being spread abroad. The managements of some railways have adopted the practice of sending at intervals to many of their officers literature called "talking points," which gives facts and arguments that may be used to refute misrepresentations. Why should this not be done by the management of every railway? Undoubtedly many officers have not spoken out in defense of the railways when they have been attacked because they have feared that they would be criticised by their superiors or because they have not been furnished information which they could use in answering misrepresentations.

The practice of a great majority of railway officers of remaining silent when the railways have been under attack from innumerable unfriendly sources has been followed too long. No industry can year after year allow such false, malicious and extensive propaganda against it to go on virtually unanswered in innumerable communities without finally paying a terrible price for the timidity and silence of those who ought to defend it.

Six New Records Made by the Railways

Severe winter weather has come in the larger part of the country and is interfering in a normal way with railroad operations. Before it came, however, the railroads succeeded in breaking almost every record ever made in the movement of freight. Since there are likely to be unusual complaints regarding deficiencies of transportation during the winter, it is well now to record certain facts. In spite of the shop employees' strike and other difficulties, the railways within recent months have made the following new records:

1. They moved more freight in November than in any previous November in history and thus far have broken all records for December. The four weeks ended on December 2 correspond roughly with the month of November. In these four weeks the number of carloads of freight moved was 483,000 more than in 1918, 530,000 more than in 1919, 221,000 more than in 1920 and 763,000 more than in 1921. In the week ended December 9 they moved 81,875 more carloads than in the same week of any previous year.

2. The week ended November 25 terminated a period of ten consecutive weeks in every one of which the railways moved more than 950,000 carloads of freight. This is the first time in history that they ever moved so many carloads for more than seven consecutive weeks.

3. The amount of freight moved in November and December has so greatly exceeded all previous records that it has made the total carloads handled in the 16 weeks ended December 9 larger than the amount ever moved in the corresponding 16 weeks of any other year. To state the matter in another way, the total number of carloads of freight moved since the coal mines began to open late in August is 156,245 greater than in 1920, the previous record year.

4. In 34 out of 35 weeks ended on December 2 the railways moved more carloads of "miscellaneous freight" than they ever did in the same weeks of any previous year. Transportation experts regard the amount of miscellaneous freight shipped in any given period as the best indication of what general business activity and the total amount of freight business offered to the railways in the months immediately ahead will be. If the loadings of miscellaneous freight during the last nine months are any criterion, the railroads will be called upon to handle a record-breaking business for months to come.

5. The railways on Monday, December 11, loaded 45,886 cars with bituminous coal. This is the largest number of cars ever loaded with bituminous coal on any one day.

6. During six consecutive weeks the total "car shortage" reported exceeded the largest car shortage ever reported in any single week of any previous year. The largest net shortage ever reported before was on September 1, 1920, when it was 146,070 cars. In the six weeks ended on November 23 the net car shortage was never less than 147,259 cars, and went as high as 175,523 cars. On November 30 the net shortage was 128,191. This figure represents a substantial reduction, but it shows that in spite of the fact that the railways within recent weeks have broken all records

with respect to the number of cars loaded and moved at this time of year, the inadequacy of transportation is still almost unprecedented.

If ever any forecast could safely be based upon railway statistics the following two predictions may safely be based upon the foregoing facts:

First, the railways will be offered and will handle more freight in 1923 than in any previous year in history, unless prevented by another coal strike or railway strike.

Secondly, the demand for railroad transportation will in 1923 exceed the amount of it that can be furnished by a larger margin than in any previous year.

The lesson the foregoing facts suggest to the railways is that they should put forth every effort to secure greater utilization of the existing facilities and to improve and enlarge their facilities as rapidly as possible.

The moral for the shippers is, first, that they should ship all the freight they can as soon as practicable, and that, secondly, they should co-operate with the railways in increasing the efficiency with which existing transportation facilities are used by loading cars to their maximum capacity, by loading them and unloading them as promptly as possible, and by delaying them in case of reconsignment as little as possible.

The moral for law makers and regulating commissions is that they should help the railways in every reasonable way to increase the net return earned by them in order that they may be able to raise the large amounts of new capital which must be invested if the capacity of the railways is to be increased anywhere near in proportion to the demands that will be made upon them by industry and commerce.

Much Consolidation Activity

There is complaint in some quarters that the American railroads are not making as much progress with consolidations as they ought to be making or as much as the railways in some other countries have been making. There may be some ground for complaint on this score, although it can be suggested that there might be drawbacks in a consolidation program carried out too suddenly or that there might be reasons for delay incident to the method whereby the Interstate Commerce Commission has to draw up and hold discussions on a plan upon which the consolidations program is to proceed. However, we trust that those who are suggesting the desirability of more rapid process will be satisfied with the amount of work accomplished in the second week of December. In that week there continued the consideration which is being given in New England official circles to the treatment which should be accorded the roads of that district in the consolidation plan. There was also a great deal additional said before the commission in Washington by representatives of the Southern Pacific and Union Pacific concerning the disposition of the Central Pacific. The third development was the announcement that the International-Great Northern had, subject to the approval of the Interstate Commerce Commission, become a part of the St. Louis-San Francisco which, whatever else it may be, is one of the most important steps in the way of consolidations that has thus far taken place. Of course, no one talks much about consolidations without mentioning the Van Sweringens of Cleveland. They came through with the fourth development of the week and likewise a most important one, namely with the news that the Van Sweringen interests had secured an option on H. E. Huntington's Chesapeake & Ohio stock which indicates that the Nickel Plate-Lake Erie & Western-Clover Leaf system possibly has its mind on including also the C. & O.-Hocking Valley lines with the latter's valuable coal traffic and outlet to the Atlantic seaboard. All of this means that progress in consolidations is now finally becoming a much more practical matter than it hitherto has been. Probably it is not by chance that we are hearing fewer extravagant rumors about this than was the rule a few months ago; the real developments supply news enough in themselves.

Shop Operation and Management

During the last few years the Mechanical Division of the American Railway Association has made a commendable start on the consideration of problems of shop operation and management. The Committee on Scheduling and Routing has presented valuable reports which have become even more important since the strike. Many railroad shops have functioned fairly well in the past with little direction of individual workmen because a large proportion of the men were old employees familiar with local conditions. Detailed supervision is more necessary now because many of the new men taken into the organizations have little knowledge of railroad practice. Probably scheduling systems could profitably be extended to include practically every important railroad repair plant. Labor turnover is now considerably greater than in former years and it may continue to be high for some time to come. Under such a condition the systematic planning and assignment of work, which scheduling systems provide, would unquestionably increase shop output to a very marked degree. It is probable too that further developments along the same general line would be advantageous. The instruction of machine operators in the details of their work, providing charts showing methods of setting up machines and the proper speeds and feeds to use for maximum production, would relieve the foremen of a large amount of work and would enable them to get far better results from inexperienced mechanics. Such methods are widely used in industrial plants because they have demonstrated their value in reducing costs. Some railroads have applied similar systems with satisfactory results. Even if there is not time for the preparation of an exhaustive report on this subject for the meeting next June, it would certainly be worth while for the Mechanical Division to arrange for individual papers telling what results have been obtained by roads that have introduced special methods of instruction and supervision in shops.

Like Figures Should Agree

In last week's issue of the *Railway Age* it was suggested that the monthly reports of railway revenues and expenses would prove more valuable if the figures given in them were comparable in better fashion than they now are with the figures which finally appear in the annual reports issued after the close of the year's business. Three reasons were given which in part explain much of the present lack of complete comparability: (1) correction of the figures, (2) the showing of different mileage in the monthly report from that in the annual report, due usually to the inclusion of subsidiary lines in the latter and not in the former, and (3) the failure in the annual report to show the figure of net railway operating income. There are many railroads which are giving proper regard to these considerations, so it must be understood that we are making no attempt to present any particularly new and novel idea. The purpose of the monthly or the annual report, as we see it, is to furnish necessary

information to the management, to managements of neighbor roads, to the Interstate Commerce Commission, to the stock and bond holders, and to the public generally. Each of these has a different use for the statistics and to each they are important although, of course, to varying degree. It is one of the features of railway operations that those interested in railways are given more information concerning the properties in which their interest lies than is the case of any other group of properties—public utility, industrial or whatever they may be. This is a point which must always be borne in mind by the railway accounting officer. It seems to follow that the earnings figures issued should, therefore, be as informative as they can consistently be made. It is very much of a question, however, whether figures can be termed adequately informative which, as is frequently the case, differ for one reason or another although the respective figures purport to cover the same line for the same period. It is sometimes extremely difficult to ascertain the proper figure of a railway's operating net for a particular period because of the manner in which one has to try to select the proper one of several figures, all of which purport to represent the same thing. The present too common manner of supplying different figures purporting to cover the same thing adds a degree of inconvenience that seems hardly necessary in view of the state of the art of railway accounting.

The Frisco I.-G. N. Consolidation

The St. Louis-San Francisco's purchase of the entire capital stock of the newly reorganized International-Great Northern from the latter's voting trustees is, of course, subject to the approval of the Interstate Commerce Commission. The purchase, as it happens, is not in line with the commission's tentative plan of consolidations. The commission's plan puts the I.-G. N. in a Chicago-Missouri Pacific system with the Texas & Pacific, the Missouri Pacific, etc., thereby, among other things, maintaining in one system the so-called Sunshine Route from Houston and from Laredo and San Antonio through Longview Junction and Texarkana to St. Louis. The Frisco in the tentative plan is put with the Katy and Cotton Belt and various smaller lines to form a so-called Frisco-Katy-Cotton Belt system. It is, of course, a question how much importance the commission may place upon its own tentative plan. It is presumed that the plan was offered only as a starting point for discussion and was meant to offer some practical suggestions around which the discussion could take place to greatest advantage. The International-Great Northern should prove of great value in the Frisco system. The road has not a high grade physical plant and its net earnings have not been extremely good. On the other hand, it serves an expanding territory and an analysis of the growth of its gross earnings over a period of years will show that it is a property of possibilities. As a part of the Frisco system, if that result comes to fruition, the I.-G. N. should be better able to realize on these possibilities. It will offer to the Frisco an advantageous outlet to the Gulf of Mexico at both Houston and Galveston, a factor which should prove of leading importance because of the former's position in the petroleum industry and to a lesser extent in the lumber business and because of the latter's standing as a grain port. Laredo, Tex., reached by the San Antonio division, exceeds in importance as a point of interchange for business with Mexico, all the other cities on the Rio Grande combined. There used to be a great amount of business between the United States and Mexico and presumably the time will eventually come when there will be again. The I.-G. N. should be able to realize on this business to a greater extent than any other road this side of the border. The I.-G. N. needs, it is true, a great amount of physical rehabilitation but considering the low price the Frisco has paid for it and the possibilities of the property, it looks, on the whole, as if the Frisco had taken a wise step in effecting the proposed purchase.

Foreign Railways in 1922

The year 1922 has been an eventful one for railways the world over and the *Railway Age*, in its Annual Statistical Number, to be issued on January 6 of the new year, will publish a number of articles covering developments of the year in leading countries of the world. In most countries the railways have in 1922 been somewhat more successful financially than in 1921 and some steps have been taken to renew programs for extensions and betterments which were curtailed during the war. Many changes in management and organization have either been made or seriously projected. The railways of Great Britain have been consolidated into four regional systems. The French railways have been closely co-ordinated. China has had to face a railroad labor problem for the first time in history. In Canada all the government-owned lines have been united under the management of Sir Henry Thornton, who has served in important executive positions both in this country and in England. The war-worn railways of Central Europe have made rapid progress in restoring at least some measure of their former efficiency. Even in unhappy Russia the railways, with the co-operation of Americans, were made to function with the efficiency necessary to distribute thousands of carloads of foodstuffs to the starving people. Many important construction projects have been begun during the year. The railways of most countries find themselves beset with many perplexing problems—in Australia it is the unification of gage, in India the adoption of a more satisfactory method of management and so on. The labor problem has been dealt with in some countries and, in at least one important instance, it must be admitted, in a manner much more satisfactory to all concerned than has been the case in America. These developments, we feel, are of interest to American railroad men who wish to keep well informed about railroading the world over and who may find in the achievements of their foreign confreres suggestions for the solution of some of their own problems. The manufacturer of railway equipment and supplies who is interested in foreign markets for his products should likewise find this information of value. The foreign section of our Annual Statistical Number for last year was, we have reason to feel, a welcome addition to the other material presented in that issue, and in our opinion this section of our forthcoming statistical number will be none the less so.

On a Five Per Cent Basis

In 1922 Great Northern stockholders have received one quarterly dividend of 1¾ per cent and one semi-annual dividend of 3½ per cent. Ostensibly the stock has been kept on a 7 per cent basis but the change from a quarterly to a semi-annual basis, resulting as it did in the omission of one of the quarterly payments, made the total dividend payments for the year only 5¼ per cent. On Monday of this week, the directors declared a semi-annual dividend of 2½ per cent. This dividend is payable February 1 and it results in putting the stock on a 5 instead of on the 7 per cent basis which had been maintained unbroken since 1899.

The reduction in the dividend had in great measure been expected, and apprehension that it would take place has existed at least as far back as the spring of 1922 when the quarterly dividend was omitted and the change made to a semi-annual basis. Great Northern earnings have been rather poor since the beginning of federal control. In the

three years 1918, 1919 and 1920 combined, net railway operating income was only slightly in excess of the standard return for one year and 1921 was not a great deal better, although in these years standard return, guaranty and extra Burlington dividends assisted in maintaining the corporate net. In 1922, prior to the railway shopmen's strike, conditions were beginnng to look much brighter. In July the road operated with a ratio of only 64. At the end of August net railway operating income for the eight months was $8,248,122, or about $7,250,000 better than for the same period of 1921, and the Great Northern's best months were still ahead of it. It appeared then that the company would in all likelihood be able to maintain its 7 per cent rate.

This promising progress was not continued. Increased maintenance of equipment charges due to the railway shopmen's strike and higher fuel costs helped to increase operating expenses. At the same time, difficulties were experienced in getting a proper car supply, and ore traffic which had been running very heavy slumped off rather badly and somewhat earlier in the season than usual. The result was that the September and October earnings were not as good as had been hoped. For the first ten months the net railway operating income of $12,805,569 compared with $8,200,409 for the same period last year and the operating ratio was 77.8. The 1922 earnings have been better than those for 1921 but not sufficiently better to be what one could term at all satisfactory. The Great Northern, in company with several of the other roads in the northwest, has been making a very slow recovery from war conditions; it is now completing its fifth lean year in succession. Under the conditions, it was quite in order that the directors should have decided to take the conservative course in reducing the dividend rate.

New Books

Freight Traffic Red Book for 1923. *By H. G. Williams and C. J. Fagg.* 582 *pages.* 8 *in. by* 11 *in. Cloth. Published by The Traffic Publishing Company,* 150 *Lafayette Street, New York City.*

This well-known book contains about 100 more pages than that issued one year ago, and includes new sections on storage, transit privileges, payment of freight charges, rules of practice before the United States Shipping Board, and parcel post. There is also much other new matter. The great mass of freight traffic information contained in this book comprises nearly everything that could be put into a book of its size and which is wanted for reference on the desk of the local freight agent or the shipper. For shippers it is called an "everyday guide," and it justifies the name. Each detail is treated with great care and evidently with scrupulous attention to accuracy. The Interstate Commerce Act, with rules of practice before the commission and other cognate matter, fills 73 pages; and the forms and tables at the end of the book fill 83 pages. This gives an idea of the completeness of detail which characterizes the book. The publishers promise to issue supplements free, as may be needed, to keep subscribers informed concerning important changes in railroad freight laws or practices. In the 12 months now past five supplements were issued.

Proceedings of the American Railway Engineering Association. 1,370 *pages, illustratcd. 6½ in. x 9½ in. Published by the Association,* 431 *South Dearborn street, Chicago.*

In this volume are included the reports of the 23 standing and special committees presented at the twenty-third annual convention of this association in Chicago on March 14-16, 1922, inclusive, together with the discussions thereon. This convention maintained the high standard for constructive work which has long characterized this association. Among those reports which are of special interest and value are those on "Warehouses in Connection with L.C.L. Freight Houses," "Specifications for Movable Railway Bridges," "Ash Pits," "Engine Terminal Layouts," "Methods for Training and Educating Employees in Engineering and Maintenance Work," "The Economical Operation of Trains Against the Current of Traffic on Multiple Track Railways," "Specifications for Buildings for Railway Purposes," "Freight House Design" and "Pacific Coast Marine Piling." This volume also contains a monograph on "The Flat Disk Center for Turntables" by B. R. Leffler, bridge engineer, New York Central Lines West of Buffalo, Cleveland, Ohio, and a complete report of a special committee on Electrolysis.

American Malleable Cast Iron. By H. A. Schwartz, 416 *pages. 6 in. by 9 in., illustratcd, bound in cloth. Published by the Penton Publishing Company, Cleveland, Ohio.*

The American "black heart" malleable iron industry, which now has an annual capacity for one and a quarter million tons of castings, dates back to the discovery of this process in 1826 by Seth Boyden in a small foundry in Newark, N. J. The process is quite different from that employed in Europe for making "white heart" iron, which was first described by Reaumur in 1722. This book, which is the first complete treatise on "black heart" malleable, has been written by a recognized authority on the subject. There are chapters on the history of the industry, methods of manufacture, principles of metallurgy, procedure for tests and an outline of properties. It is made more comprehensive by the addition of a bibliography of nearly 200 references to chapters and articles in English and foreign books and periodicals, and by a well-prepared index.

From its scope, the book has evidently been written to meet the needs of the user, as well as those of the practical foundryman and the metallurgist. For the producer there are chapters on melting stock, fuel, refractories, furnaces and their operation, annealing practices, molding, pattern-making, cleaning and finishing. Inspection, tests and metallurgy are well covered, together with information relative to physical, thermal and electrical properties.

As a handbook of modern malleable practice, a record of past and present metallurgical investigation, and a compendium of information on the permissible uses of the product, it should be of value to the many railroad men responsible for the design, purchase or use of malleable castings.

The Hot Springs of Japan. 504 *pages;* 196 *illustrations and* 15 *maps.* 4½ *in. x* 6¼ *in. Bound in cloth. Issued by The Japanese Government Railways, Tokio, Japan.*

This is a very complete guide book, printed in English. It has been compiled by F. de Garis, evidently an experienced and accomplished editor in this field. The book covers Korea (Chosen), Formosa and South Manchuria, as well as Japan; and includes also the principal cold springs; though, from a statement in the text, it would appear that the Japanese people, of all classes, including farmers, make a practice of bathing in the hottest water they can find, and usually several times a day. This book, however, is made for foreigners, for whom it explains everything in great detail.

The mineral springs of Japan number more than 1,100, and they are to be found in the mountains, in the valleys, at the sea coast and everywhere. Some railroad lines reach a large variety of springs (classified by their chemical or medicinal qualities), while some of the important springs are reached only by using a motorbus or a jinrikisha, or both. In these pages travelers are instructed as to all these conveyances, in connection with each spring, with the same care and detail as in the case of railroad trains and hotels.

A notice in the front of this book says that the official guide books of the Japanese Railways are for sale at the best book stores in the United States, Canada and Great Britain.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

Signaling Busy Terminals

Cleveland, Ohio.

To the Editor:

The articles on "Signaling Busy Terminals" by T. Holt, signal engineer, Chicago Union Station Company, which appeared in your issue of November 11, 1922, is of value to railroad managements having to pass on this question. In this connection it is interesting to note the similarity existing between the indications which have been decided on for use on the Cleveland Union Terminal and those which Mr. Holt proposes to use on the Chicago Terminal.

The indications I have proposed conform very closely with those suggested by Mr. Holt; the name, however, is different and necessarily the control of train movements must be different. In each case the proposed indications conform with existing rules in the book of rules for the government of the operating department. They are:

Color Light	Name	Indication
 Red	Stop Signal	Stop
Yellow 	Slow-Speed Signal	Proceed at slow speed prepared to stop.
Green 	Clear-Slow-Speed Signal	Proceed at slow Speed.
Yellow  Red	Approach Signal	Approach next signal prepared to stop.

A comparison of the two schemes follows:

1. Red light displayed: The name "Stop signal" and indication "Stop" are the same.

2. Yellow light displayed: The name "Slow-speed signal" and "Caution signal" have similar meaning; however, the indications proposed "Proceed at slow speed prepared to stop" checks more closely with indication No. 4 proposed by Mr. Holt, *i. e.*, "Proceed with caution prepared to stop short of train or obstruction."

3. Green light displayed: The name "Clear-slow-speed signal" checks closely with "Clear signal" proposed by Mr. Holt, especially when considered with the indications proposed, *i. e.*, "Proceed at slow speed" and "Proceed at authorized terminal speed."

4. Yellow light displayed above red light vs. yellow light displayed below red light. The indication "Approach next signal prepared to stop" checks with Mr. Holt's No. 2 indication.

In my opinion Mr. Holt's No. 2 and No. 4 indications should be transposed, for, although, in the scheme suggested above, the display of a red light in connection with the display of a yellow light gives a more favorable indication, the indication given is along the line of safety, because if the red light for some reason should not be displayed, the lone yellow light will give the more restricted speed indication, whereas, with Mr. Holt's scheme, it will give a less restricted speed indication so that instead of receiving the indication "Proceed with caution prepared to stop short of train or obstruction," the indication displayed will be "Approach next signal prepared to stop." Furthermore, the scheme I propose conforms with what is in use on other portions of the line, *i. e.*, a lone yellow light displayed by a dwarf signal indicates "Proceed at slow speed prepared to stop" and is also in accord with the Standard Code; see Rule 601 G.

F. F. Wiegand,
Consulting Signal Engineer, Cleveland Union Terminals Company.

Railway Performance and Business Conditions

New Haven, Conn.

To the Editor:

I have no wish to burden your columns with an argument which obviously cannot lead to definite conclusions. However, the following comments may be pertinent as an answer to Mr. Snow's comments on page 972 of the *Railway Age* of November 25. Naturally Mr. Snow has several objections to my statements, but I regret especially that apparently I did not make sufficiently clear the one important point which I believe he overlooked in his freight comparison, *i. e.*, that selected units of performance are not in themselves indicative of either better or worse performance, when made as these have been, under differing business conditions.

The fact that Mr. Snow's basic figures were not all based on the month of July, 1919, 1920 and 1921, doubtless explains the inability to check his figures. However, the fact makes no difference in my conclusions because there were no summer months in 1919, 1920 and 1921 which are comparable one year with another, so far as volume of business offering is concerned, the basis of my argument. It is believed that Mr. Snow feels that comparable months depend only upon weather conditions.

While there was no intention to cast aspersion on Mr. Snow's average cost of 30 cents per passenger car mile, I do, however, challenge his use of that cost figure as applied to the usual business car movement. Of course in such a case as he so humorously describes in his original article where an additional engine was required to handle a train because of two business cars of officers on their way to a fuel conservation meeting, the cost of the movement was far more than 30 cents per car mile. But surely Mr. Snow is familiar with the customary handling of such cars. On all railroads certain trains do not handle their full capacity. There are none more keen than railroad officers not to overload trains with the business cars necessary for their use under the high pressure and heavy load of present day railroad operation.

As there is no additional engine or train crew expense on such trains, these being important element. of expense, there is no possible method of arriving at so high a figure as 30 cents per car mile for the cost of the additional car movement. In fact, in nine out of ten business car movements the additional expense is negligible.

I am unable to follow the reasoning in Mr. Snow's final paragraph where he refers to the futility of ranking football teams by comparative scores, to which I sadly agree. However, my figures on miles per car day did not show what might have been, but indicated the actual performance of freight cars which were in use. On that basis, 1921 car performance was considerably better than that of 1919, although Mr. Snow, because of failure to take into account important affecting conditions, has the contrary view.

Don M. Neiswanger.

Once did the skies before Thee bow:
A virgin's arms contain Thee now;
While angels who in Thee rejoice
Now listen to Thine angel voice.

A little child, Thou art our guest,
That weary ones in Thee may rest;
Forlorn and lowly is Thy birth
That we may rise to heaven from earth.

Thou comest in the darksome night,
To make us children of the light,
To make us, in the realms divine,
Like Thine own angels, round Thee shine."

Yard Tracks at Left. The Loading and Crane Tracks in the Background

Treating Plant Solves New Haven's Tie Problem

New Installation at Cedar Hill Renders Possible the Use of Hitherto Unused New England Timbers

THE NEW YORK, NEW HAVEN & HARTFORD has recently started the system use of creosoted ties in order to reduce its present annual requirements and to insure a greater local supply. The treatment is being performed at Cedar Hill, near New Haven, Conn., at a modern plant

A Well-Lighted, Well-Ventilated Interior

built by the American Creosoting Company, Louisville, Ky., with a capacity of 1,500,000 ties annually. Through the adoption of timber preservation, the New Haven has made it possible to utilize many more species of local woods, thus stimulating the timber business in New England, while at the same time securing economy in the maintenance of its tracks.

New Haven's Tie Renewals Steadily Growing

The new plant, which is the first in New England territory, is located in the north end of the large freight terminal at Cedar Hill and connects with the receiving, classification and departure yard tracks at that end. It is of the most recent design, being of concrete and brick construction with steel sash and superstructure and embodies many interesting features of equipment and operation.

At the present time there are approximately 15,500,000 cross ties in the tracks of the New Haven, the renewal requirements of which have averaged about 2,000,000 annually. With the gradual depletion of New England's more durable grades of timber such as oak and chestnut, the annual needs threatened to increase to 3,000,000 ties. With the treating plant in operation and the consequent use of treated ties at the rate of about 1,000,000 a year in conjunction with the continued use of chestnut, it is expected to reduce

A Modern Electric Locomotive Handles the Ties

the yearly requirements nearly to one-half of what they now are.

It is estimated that the supply of chestnut and white oak is sufficient to last from five to eight years more. The inauguration of timber preservation has, however, made it possible to use many native woods such as beech, birch, maple, red oak, ash, hickory and hemlock, the supply of which is sufficient to furnish tie wood for the next 15 to 20

years or more. Much of this timber has not been marketable heretofore, chiefly because of the fact that no one grade grows in sufficient quantity in one location to make sawmill operations profitable. It will now be possible to log a tract of mixed timbers with profit and thus in addition to being an economic advantage to the railroad, the inauguration of timber preservation will provide some measure of stimulus to the timber business of that section.

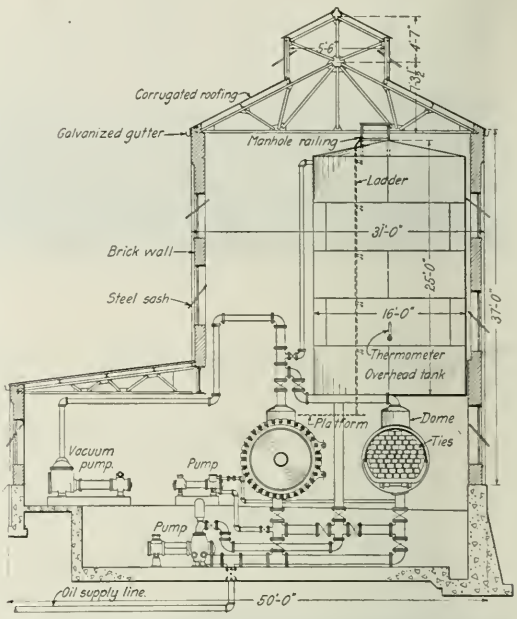
General Layout at the Plant

In a general way, the plant consists of a large well-lighted retort house, a boiler and enginehouse, an office building, storage tanks, tie storage yards, an adzing machine building and a system of narrow gage tram tracks over which a modern electric mine locomotive operates. The chief points of interest in regard to this plant are the design of and permanence of construction of the buildings, the arrangement of the equipment and the refinements in detail and improvements in construction of much of the equipment to secure easier and more economical operation.

About 47 acres of land have been utilized for the plant and attendant tie storage yard. This tract adjoins the Quinnipiac river and the Air Line receiving and northbound departure yards at Cedar Hill. The buildings and narrow gage tracks serving the buildings are located next to the terminal tracks mentioned with the storage yard beyond. When ties are received in a solid train the cars are immediately set in upon receiving tracks at the plant and later distributed throughout the tie yard. In all other cases the cars are cut out in the classification yards and then moved in to the plant's receiving tracks.

Process Used Is the "Improved Lowry"

The treatment given at this plant is the Improved Lowry process. It differs essentially from the straight Lowry process in that the oil is not dropped to an underground tank on the completion of the pressure cycle and the vacuum then pulled, but the oil is pumped out directly from the retort to the charging tanks and a vacuum pulled at the same time. This gives a bigger recovery and a quicker vacuum. Following this method a vacuum of 15 in. is secured in about 5 min., and of 22½ in. in about 10 min., less time than would be taken ordinarily in draining the retort. A normal working pressure of 175 lb. at a temperature



Cross Section of Cylinder Building

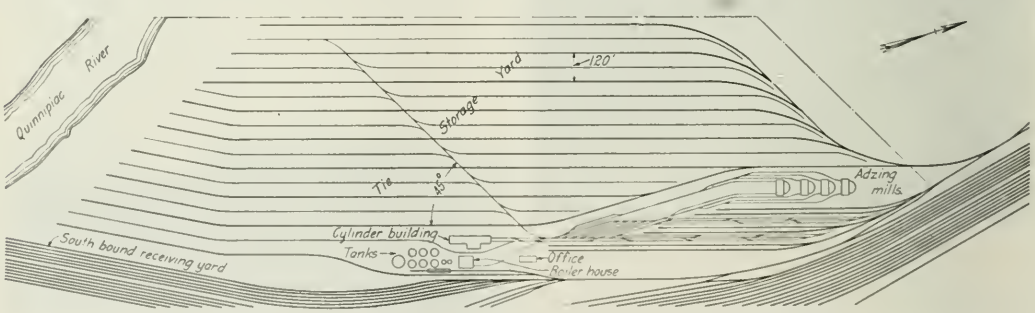
of 175 deg. F. is used and a following vacuum of 26½ in. The average retention for a 6-in. by 8-in. by 8½-ft. tie is 2½ gal. and for a 7-in. by 9-in. by 8½-ft. tie, 3½ gal.

Electrically Operated Narrow Gage System

The tie storage yard consists of a series of alternate narrow and standard gage tracks having an average length of about 2,400 ft. There are nine standard gage and eight narrow gage tracks laid alternately on 60-ft. centers. These standard gage tracks stub end at the river, while the opposite ends are connected through a ladder track with the inbound and receiving tracks and the outbound tracks from the loading docks, etc. A 24-in. narrow gage line crosses the yard at a 45 deg. angle at about the center, connecting with each of the narrow gage yard tracks.

The layout is arranged to secure an easily controlled movement to and from the retort house, either direct from cars, direct from the seasoning yards or via the adzing and boring mill. To do this the cross lead is connected in to the main leads to and from the retort house which in turn connects with a six-track narrow gage storage yard, the adzing mill tracks and the two three-track sets of loading tracks, as shown. All narrow gage tracks have an overhead catenary, furnishing power to an electric locomotive for handling the trams. The locomotive is insulated at the retort end to prevent any possible grounding through the retort.

The retort house is a modern building of marked permanence of construction as stated. The foundations are of



Plan of the Yard and Building Layout

concrete with brick walls, steel sash windows, steel roof trusses and sheet iron roofing with the exception of a lean-to which serves as an engine and generator room. This has a tar and gravel roof laid on cement tile. The building is 174 ft. 8 in. long and 31 ft. wide with a 19-ft. by 62-ft. lean-to.

It is of the monitor type with a height to the eaves of about 13 ft. The center section, housing the charging tanks, is in the form of a tower measuring 31 ft. by 36 ft. with a height to the eaves of 37 ft. Pilasters in the brick walls are spaced about 17 ft. apart. Large steel sash are installed between each pilaster in the walls of the building proper in addition to which there are two upper lines of sash in the center or tower section. Additional lighting is obtained by an extensive system of electric lights, all housed in vapor-proof fixtures and conduits.

The Storage Tanks Are Well and Conveniently Arranged

Retort Heating Coils Reduce Condensation Losses

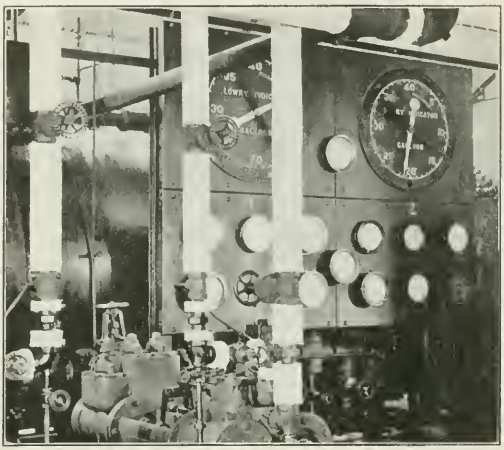
The treating cylinders are two in number, 7 ft. in diameter by 150 ft. long with a capacity of 18 trams of 8-ft. ties and 17 trams of 8½-ft. ties. They have a ¾-in. shell of triple riveted, butt-joint construction designed for a working pressure of 200 lb. The pitch of the rivets was designed to secure tightness of joints at working pressures rather than high pressure resistance. The cylinders are anchored on two saddles at the center and carried upon roller bearing supports for expansion. The doors are of steel plates with cast-steel rims, thus securing a light construction with no loss in strength or tightness.

The heating coils consist of lines of pipe so arranged as to secure a flow of steam in both directions from a center casting and return with an absence of air pockets and condensation losses. Each pipe line from the central casting consists in reality of two lines, an inner and an outer pipe, respectively ¾ in. and 2 in. diameter. Steam is admitted to the inner line at the center casting, flows through the ¾-in. pipe to the far end and returns through the 2-in. pipe to a separate chamber in the center casting. The installation is covered by a perforated plate and is most satisfactory.

The "Working" End of the Retort House

The door rails are controlled through a lever by one man, the arrangement being such that little effort is required to swing them up out of the way or down into place for the

movement of trams. The counterbalance is a compensating one and operates by means of a cable and drum on the supporting shaft, the former passing over a grooved cam controlled by a lever, to a counterweight. Another labor saving installation is two balanced platforms, one for each retort, which drop before the doors to permit the workmen to reach the nuts on the upper half easily and quickly. These platforms are so designed that they will remain safely in either the raised or lowered position, a force of about 20 lb. being required to start and move them from either of these two positions. Between points of about 3 ft. from either extreme position they are in an almost perfect balance, requiring little or no effort to move them.



Two-Pointer Indicators Give Quick and Accurate Readings

Improved Direct Reading Charging Indicators

A pit in the center of the building houses the pumps which handle the charges, as well as a considerable amount of the necessary piping. The vacuum pumps are on the floor level and are installed near the retorts. A large indicator board is installed centrally and below this are situated the control valves. An interesting feature of this indicator board are two large gages, one for each charging tank, which are equipped with two hands, one reading by thousands and the other by hundreds of gallons. Subdivisions permit of reading to units of five gallons. This indicator is accurate to plus or minus 20 gal. It is of the float and cable drum type. The thousand-gallon indicator hand is painted white and the other yellow, thus making them readily distinguishable. The charging tanks are two in number, 16 ft. in diameter and 25 ft. high, each with a capacity of 37,000 gal. The outside storage facilities consist at the present time of four 30 ft. by 30 ft., 150,000 gal. tanks, with provision for two additional to be installed later. Provision has also been made for a contemplated main storage tank of 450,000 gal. capacity. The outside tanks are connected for heating both by live and exhaust steam from the boiler house. The tanks from which oil is being withdrawn steadily for use are kept at or about a temperature of 120 deg. F. A separate pump house handles oil from a 5-ft. by 100-ft. receiving tank located in a concrete pit under a siding, to the storage tanks and circulates the ingredients in the mixing

The Door Rail and Platform Arrangement

The Permanent Form of Construction is Clearly Evident Here

tank. The installation consists of a steam driven pump and an electrically driven centrifugal pump, one being held in reserve.

Modern Equipment for the Boiler House

The boiler house is a concrete and brick building measuring 49 ft. by 62 ft. 6 in. It is equipped with three 150-hp. boilers fed by automatic stokers. Coal is elevated to three overhead hoppers which feed the stokers by gravity. The office building now under construction will be 26 ft. 10 in. by 71 ft. 10 in. in area and of the same general type of construction. It will contain offices for the superintendent and his staff, chemical laboratories, lockers, lavatories, etc. Electric current for the plant is furnished by a 75-kw. generator delivering direct current at 220 volts, located in a room adjoining the retort house and forming a part of it.

Provision has been made for four adzing, boring and branding units, which are now under construction. Each of these units is served by single tracks on both the inbound and outbound sides, the grade of the tracks being such as to insure gravity operation of the trams and the length sufficient to take care of two tram trains on each.

The narrow gage track layout in addition to that already mentioned consists of a two-track storage for inbound tram trains, and a six-track storage yard for adzed ties ready for treatment. This latter yard has a ladder at each end and the switches are interlocked. Two sets of three tracks each on 11-ft. centers are provided for outbound treated ties. One set runs on a loading dock at car door height, the other at grade. Numerous crossovers provide the necessary flexibility of operation. The tracks at grade are flanked by locomotive crane tracks, one 20-ton crane being used at present for the loading of ties into open top cars.

The new plant was constructed under the supervision of the purchase and stores department of the New Haven, N. M. Rice, general purchasing agent, by the American Creosoting Company, Louisville, Ky., A. L. Kuehn, president, and R. H. Mansfield, superintendent at Cedar Hill.

State Commissioner Urges Constructive Regulation *

Emphasizes Necessity of Sane Control if Best Interests of the Public Are to Be Promoted

By Carl D. Jackson
Member, Railroad Commission of Wisconsin, Madison, Wis.

MANY PEOPLE BELIEVE that the sole object of the establishment of regulatory commissions was to bring about the reduction of rates to the consumer, and as a matter of fact in the early history of regulation, reduction of rates rather than the exercise of other functions of regulation did absorb a large part of commission activities. While it is true that regulation was first established largely as a protest against abuses and practices which the public had rightfully found to be against the public interest, it is now beginning to be generally understood that regulation must have in mind the fact that its principal purpose is to bring real service to all of the people upon terms not only fair and equitable to the consumer, but also to the utility and carrier furnishing the service. Regulation must proceed in accordance with economic laws, and any system of regulation which hampers or makes impossible the service which the utility was established to perform is not in the public interest but directly opposed to that interest.

The steam railroads of this country perform a service absolutely vital to our welfare. It is probably safe to say that nothing could more adversely affect our welfare or more seriously threaten the very form of government under which we live, than the complete breakdown of our transportation system. The steam railroads are the arteries supplying the vital elements of our life as it is now lived. An unwarranted attack upon transportation affects industrial welfare and the welfare of our farmers and workmen just as vitally as would a direct attack upon industry itself. The situation of the railroads today is such as to demand not unthinking or unreasonable criticism, but serious and constructive consideration. We are today having a practical experience of what inadequate service in transportation means. The present car shortage comes at a time when the demands for transportation service are not nearly what they will be when industry is again in full swing throughout the country. This means that we must bring about conditions that will insure the necessary increase in railroad facilities to keep pace with our industrial development, for transportation limits are also the limits of production. Inadequate transportation facilities necessarily mean the loss or stoppage of business, the tying up of money in both raw materials and manufactured products, frozen credits and the curtailment of available capital for the business of the country. They mean a direct loss and discouragement to the farming community, which after all is the basic industry upon which all of our prosperity is founded. Our present situation is due to a failure to increase our railroad facilities adequately during the last five or ten years, and this failure, of course, is based on a lack of foresight in the past. I shall not discuss how far it may be due to a short-sighted policy on the part of the carriers, to the war, to government control, to restrictive laws like the Sherman Act or how far there may have been a failure to measure up to the full responsibilities of regulation. I do believe, however, that undue emphasis was placed upon the desirability of lower rates and lower prices for service rendered, very often to the exclusion of consideration of those economic conditions and necessities for revenue upon which alone adequate service could be based. The public had not come to realize the full effect of the existing economic policy; and that failure to meet the situation in a far-seeing way during this period was a mere reflection of the general public attitude toward utilities and carriers. But we are faced with a present problem and this demands not only a study of the past but a careful survey of the future. It is far preferable that we foresee and prevent disaster, than that we cure it after it has come upon us.

There is much discontent today, and some of this discontent is focussed on the railroads. Of this latter discontent, much is wholly unreasonable and unreasoned. Very often it is based on an entire disregard or misunderstanding of facts. Here and there we find a tendency to ignore the actual services now being performed by the railroads or a failure to comprehend their importance or meaning to the country. It is true that transportation service is being performed by

*Abstracted from an address before the Chicago Association of Commerce on December 14.

other agencies than the steam roads, but the slightest knowledge of the actual facts would show that the service performed by the carriers is not of less importance today than it formerly was, but on the contrary, that service is greater today than ever before. The increase in tonnage hauled (service performed), has been steady for 30 or 40 years. We are today doing about the same amount of transportation that was done in the banner year of 1920—the greatest year of transportation service in the history of the country. The amount of freight hauled by the carriers in 1920 is almost seven times that hauled in 1890. It is nearly three times that hauled in 1900, and it is over 70 per cent greater than it was in 1910. No prewar year approaches 1920 in the amount of freight hauled by the railroads. There is no reason to expect a decline in the service that must be rendered, and there is every reason to expect a great increase in it; and it is perfectly idle to suggest or think of other forms of transportation replacing or performing the service now performed by the steam carriers of this country. I believe that this will be so even though we take advantage of every economic form of transportation, including waterways, which should be developed.

The facilities for the performance of this service must be available if this country is to prosper and industry is not to be stifled. The problem, therefore, is one of the greatest in this country. In part, at least, the regulatory bodies will be responsible for its proper solution. That means that the regulatory commissions must be courageous enough to regulate as their vision and judgment dictate although it may be contrary to political expediency or public prejudice at the particular moment.

One of the helpful things that can be done is to continue the attempt already started to bring home to every person in the United States the facts in regard to the situation. If in the end these facts can be brought home to the public and the people can be made to understand how their own welfare is dependent upon the proper solution of the transportation problem, there will no longer be any political advantage to that type of politician whose sole stock in trade consists of unreasonable attacks upon the railroads. I believe that every effort should be made to restore better public relations between the railroads and the patrons and shippers. When this is accomplished, a great step will be made toward solving the problem. Also, the people should come to understand that regulation does not consist always of the reduction of rates, that regulation with this sole object in view is not in the public interest and that unwarranted reductions in rates may be directly against their own interests, leading in the end to an increase in our transportation difficulties. Another great help would be an endeavor on the part of the carriers to bring about the ultimate object of the Transportation Act—the elimination of unnecessary, unreasonable or wasteful competition among themselves. As yet no advantage has been taken or perhaps could be taken of the provisions of the Transportation Act permitting consolidation or pooling as a means of doing away with unnecessary or wasteful competition. The carriers should come to think of the transportation system as a whole and as one transportation facility, and not as made up of a heterogeneous number of individual railroads. It seems to me that the wise policy on their part would be the encouragement of co-ordination between their own and other means of transportation, to the end that there should always be available the cheapest, most economic and adequate service possible.

THE CANADIAN PACIFIC reports that its new line being built between Foremost, Alberta, and Weyburn, is nearly completed, the laying of track on the last 25 miles being now almost finished. The operation of one train each way, three times a week, will probably be begun within two or three weeks.

A "Y" Building and Loan Association

ORGANIZED on July 1, 1919, and having at the present time—three and one-half years later—over 1,000 shareholders with over 5,000 shares subscribed, is the record made by the P. R. R. Y. M. C. A. Building and Loan Association of Jersey City, N. J. The Association has at the present time over $150,000 in assets and its monthly receipts total over $6,000. It has issued 38 loans, 34 to railroad employees to assist them in the purchase of homes.

The officers and board of directors represent a large number of the departments of the Pennsylvania Railroad organization at Jersey City. The president is A. M. Reynolds, assistant master carpenter; the secretary, M. S. Pine, is chief clerk at the Jersey City freight station; the treasurer, J. M. Watson, is chief clerk at Pier K. Among the directors are the ferry station master, the assistant freight train master, the assistant supervisor of stations, and a captain of a Jersey City-New York ferry boat.

The formation of the P. R. R. Y. M. C. A. Building and Loan Association of Jersey City followed as a result of activities at the Y. M. C. A. in connection with the 1919 thrift week campaign. A committee appointed to consider the best method of making practical the ideas embodied in the thrift week creed decided in favor of the building and loan plan which has proved extremely popular in the state of New Jersey, that state being among the leaders in the country from the standpoint of number of building and loan organizations, number of shareholders and total assets. The committee at once consulted with an attorney, a state charter was obtained and the organization started its activities on July 1, 1919, with 50 members who subscribed for a total of 500 shares. On its first anniversary the association had 400 members with a total of 2,040 shares; on its second anniversary, 518 members with a total of 3,406 shares. The third year shows the organization as having over 1,000 members who have subscribed for over 5,000 shares.

The adoption of the building and loan plan of thrift was agreed upon because of the greater profit accruing to the members with the same degree of safety as prevails in a savings bank. An additional incentive is contained in the plan because each subscriber is required to pay in each month $1 for each share. The share matures in about 11 years, depending upon the conditions, and is then worth $200. Loans to prospective purchasers or builders of homes are made on a first mortgage and on a much higher percentage of the house's value than is usual with ordinary first mortgages. The borrower takes out shares in proportion to the amount of his loan, and then proceeds to pay off his loan in monthly installments by paying on his shares. Thus if he is loaned, say, $2,000, he is required to have 10 shares. He then pays $10 a month on his shares and $10 interest, and his loan, if held to maturity, will be paid off at the end of approximately 11 years as mentioned above.

The officers and directors of an association are elected annually by the shareholders, these men being responsible for the loans made to prospective home purchasers and for other investment of the funds. The officers and directors besides being close to the rank-and-file of the members, must be deeply interested in the welfare of the association and also shareholders to enable them to hold such office in accordance with state laws. The association is further protected by having the accounts of these officers inspected and audited at least once a year, as in the case of banks. In New Jersey also all building and loan associations are under the direct supervision of the state banking and insurance commission. The associations pay 7 per cent, or better, to the shareholders as compared with 4 per cent paid by the savings banks. In New Jersey the degree of success of the plan is indicated by the fact that there are at present in the state over 1,100 associations with over 1,000,000 subscribers and with assets approaching $500,000,000.

Traffic Direction By Signal Indication on D. L. & W.

Current of Traffic on the Meadows Line Is Authorized Only by Interlocking Block Signals

THE DELAWARE, LACKAWANNA & WESTERN delivers over 60,000 people every week day to its Hoboken terminal. These are, to a large extent, commuters who take the Lackawanna ferries or the Hudson & Manhattan tubes from Hoboken to various terminals in New York City. In the evening, the commuters are returned to their homes throughout a considerable section of northern New Jersey. Two hundred and fifty scheduled trains are run on week days and 108 on Sundays. To handle traffic of this nature safely and without delays forms one of the greatest problems in modern railway operation.

Track Facilities and Interlockers

The Hoboken terminal has 16 platform tracks. Two large electro-pneumatic interlocking plants, control train movements on the six through tracks, converging to four tracks through the Bergen tunnel. Three of the last mentioned tracks are signaled for traffic in both directions, thus allowing four tracks to be utilized for traffic in a single direction during portions of the day when this is advantageous.

Interlocking Machine and Track Model at Newark, N. J.

An electro-pneumatic interlocking at West End controls train movements to and from Bergen tunnel and the junction of the two main lines—one four-track westward towards Boonton, and one three-track leading southwest to Morristown, Montclair and Gladstone. Practically 80 per cent of the passenger traffic is handled over the latter line, while most of the freight trains are sent over the former, largely because of extensive yards and other facilities which are located at Secaucus.

The signaling which has been installed recently extends from West End interlocking to Newark interlocking—a distance of 5.9 mi. The accompanying track and signal plan indicates, to some extent, the nature of this work. Electro-pneumatic interlockings were installed in place of the older mechanical plants at Hackensack drawbridge, Kearny Junction, Harrison and Newark. A mechanical interlocking plant which was in service at Passaic drawbridge was reduced in size so that it now handles only a freight lead occupying the lower deck of the bridge, while the units governing train movement over the double track on the upper deck are controlled and operated from the Newark interlocking machine.

The four tracks from the tunnel through West End interlocking converge to three and then to two, which pass over Hackensack drawbridge. Three tracks are provided from this drawbridge through Kearny Junction and Harrison interlockings to within about 1,600 ft. of the Passaic drawbridge. The double track over this bridge joins to three tracks at the west end, this junction being handled by the Newark interlocking. Tracks 1 and 3 are signaled for traffic in both directions; track 2 has signals for eastward trains only. The changes in the number of tracks and reversals of normal direction of traffic necessitate the interlocking of switches and signals throughout this section.

Through passenger and suburban express trains pass through the newly signaled zone without stopping, and usually at speeds of from 30 to 50 miles an hour. Some of the local suburban trains stop at Harrison station, between Harrison tower and the Passaic river. No other regular stops are made. Freight trains are moved into and out of Harrison yard, and freight cars are delivered to industries west of Hackensack draw, near Harrison, and in Newark. Movements are also made from the main tracks at Harrison to the lower deck of Passaic drawbridge. Interchange tracks connect with the Pennsylvania at Kearny Junction.

A record taken on an ordinary week day showed 228 trains in 24 hr., or one train for each 6⅓ min. in one or the other direction on one of the three tracks. As a matter of fact, these trains are bunched so as to require that they run on the same track with the headways from two to six minutes during the rush hours at morning and evening. For an average length block (1,930 ft.. from which the variation is not great), trains operated on a two-minute headway must run at:

36 miles an hour on "clear" signal indications;
25 miles an hour on "approach restricting" signal indications; and
14.3 miles an hour on "approach" signal indications.

Opening Drawbridges Interrupt Schedules

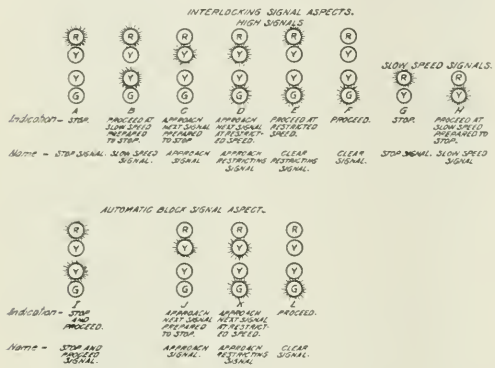
Freedom from traffic congestion cannot be secured on this section of track by even the most careful adherence to the schedules for trains or the most perfect train dispatching, as the drawbridges at the Hackensack and Passaic rivers must allow uninterrupted boat traffic in accordance with the government marine regulations. Occasionally this interferes seriously with train operation, especially when a bridge is opened during rush hours. The trains on from two to six minutes headway will close in and occupy from a half mile to a mile of track, waiting for a bridge to be closed. To witness the rapidity with which the road is freed of congestion of this nature will convince one of the necessity of providing the most complete signal facilities.

Trains can be operated eastward on three tracks or westward on two tracks simultaneously. It is not so essential that westward trains, which are just starting on their runs, be kept exactly on time, as it is that eastward trains be not delayed, as the latter are approaching the terminal and have boat and subway connections to make. With signals 1,930 ft. apart a train can follow a train safely at a headway as low as two minutes. As a result of the signal facilities provided, 95.3 per cent of the eastbound trains have been

normally reaching the terminal on time, in spite of unavoidable drawbridge delays.

Changes Required to Handle Traffic

Ten years ago there were only two tracks across the Meadows and traffic on these was protected by two-position, two-arm semaphore signals, spaced approximately 3,500 ft. apart. The number of trains increased until there was a serious traffic delay in normal operation, so that it became necessary to cut the blocks in half, making these about 1,750 ft. long. To be safe, it was necessary to have two caution signal indications for each stop indication. As traffic increased, a third track became necessary and a system of signals was installed with this which provided for the first time on the Lackawanna a differentiation between "approach" and "approach restricting" signals. A comparison



Interlocking and Automatic Block Signal Aspects

of the interlocking units and automatic signals before and after the addition of the third track and subsequent changes is indicated in the tabulated form below:

Old Layouts

Color-Light Signal Aspects and Indications

The adoption of color-light signals for the Meadows installation is a departure from past practice on the Lackawanna. Interlocking and automatic signal aspects and indications are shown in the accompanying sketch. This general scheme of aspects not only provides for closing in of traffic safely by qualifying the "caution" indication, but has also reduced the number of indications formerly used from

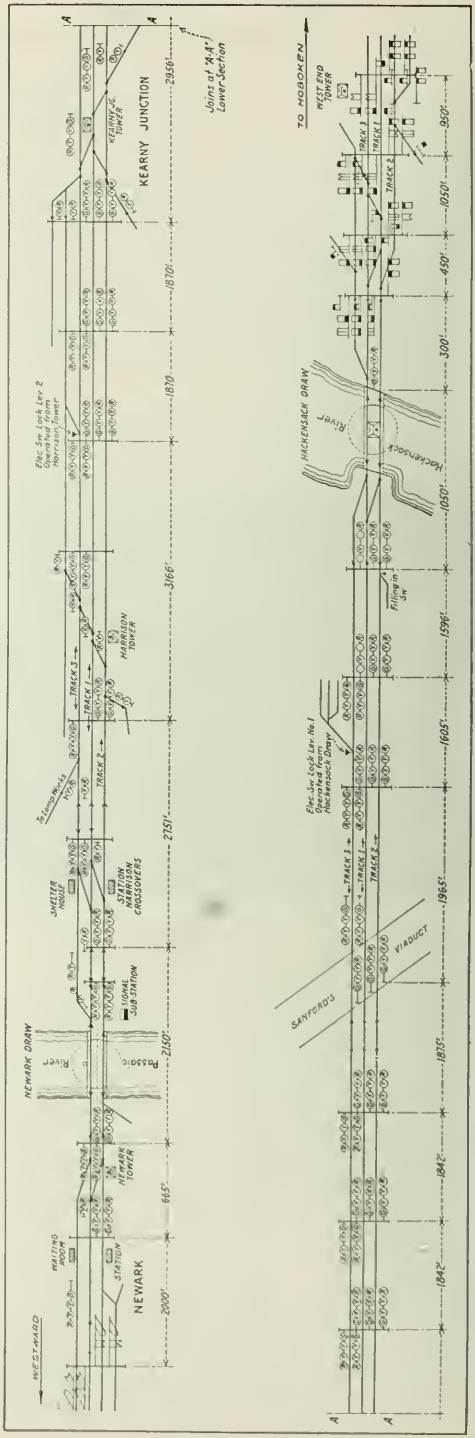

Diagram Showing Color Light Signals Between West End and Newark—Upper Section Joins Lower at Left

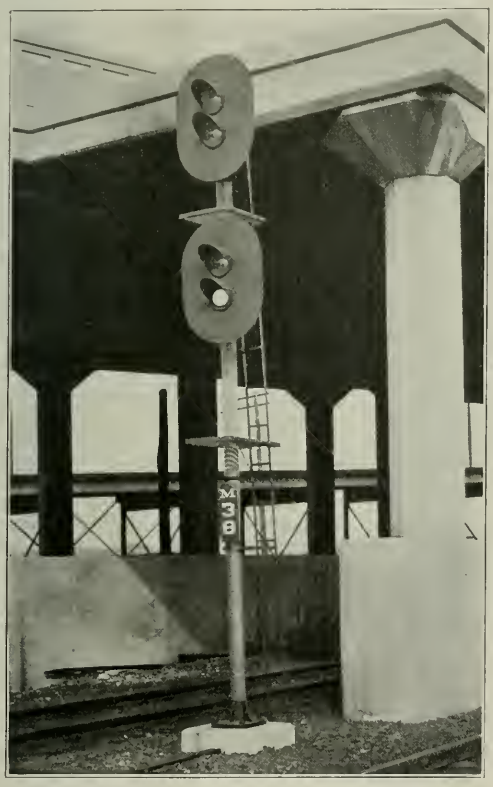
36 to 12. A number of dwarf signals, required by the older scheme, at the base of high signals, have been eliminated.

The greatest variation from past practice in signal indications exists in the introduction of the aspect *D* and *K* which indicates "approach next signal at restricted speed." Thus a "stop" signal, *A*, or a "stop-and-proceed" signal, *I*, will be preceded by an "approach" signal, *C* and *J*, before which will be an "approach-restricting-signal" *D* and *K*. This arrangement provides for signals to be spaced less than braking distance apart and yet allows trains to be run at maximum speed. Trains at lower speeds may close in, one train following another under the indication shown in *C* and *J*. This system furthermore provides, where desired, a "tonnage" signal which is unnecessary on this section as no train is operated which cannot regain headway after having come to a stop at any of the signals.



Two-arm Style-L Ground Signal at Sanford Crossing

Control of Train Movements by Signal Indication

Train dispatchers at Hoboken direct all train movements over this stretch of track. Three levermen, but no directors, are employed at each of the following towers: Newark, Newark drawbridge, Harrison, Kearny Junction and lower Hackensack drawbridge. Telephones and train describers are used between towers to facilitate train operation.

The bulletin placing the Meadows signaling in service contains the following provisions: *"Current of traffic will be authorized only by interlocking block signals. Enginemen will receive signal indications as per track assignment."* In other words, traffic direction is provided by signal indication. The direction of traffic may be changed as required by operating conditions.

Under such conditions the levermen obtain a release from the adjoining tower on the proper traffic lever and reverse the desired signal levers.

Regular and Emergency Power Supply Provided

The regular source of power supply is the railroad company's 6,600-volt, 3-phase, 60-cycle transmission line, which extends across the Meadows and from which taps are taken at two places, Hackensack drawbridge and Harrison substation, just east of the Passaic river. Normal connection is made at the Harrison sub-station. An emergency supply is provided by the public service, 2,400-volt, 2-phase, 60-cycle line, which is converted to 3-phase and the proper voltage by the use of scott-connected transformers.

The emergency supply of power is cut in automatically at any time when there is a failure of the normal supply, through the agency of a General Electric automatic substation. The time required for a complete change-over is approximately one-half second. Circuit controllers are interlocked in such a way as to prohibit single phasing. The change-over is effective not only upon the failure of normal supply, but also whenever the secondary voltage falls as low as 95. Restoration of the connection to the normal supply is made manually.

The three 6,600-volt transmission wires are carried on the same poles as the power department line of the same voltage. It will be noted that it was necessary to use aerial cable at Sanford's Crossing, and submarine cable under the Passaic river. With the exception of these two locations, transmission wires are carried on porcelain insulators. Nineteen 5-kva. transformers provide for the entire signal load. Those transformers are located on the line poles and are protected by means of General Electric compression chamber lightning arresters and choke coils.

The signal transmission line is sectionalized at Sanford's Crossing, Kearny Junction and Harrison towers, at which points air-break sectionalizing switches are used. In sectionalizing, any of the locations mentioned can be fed from either direction. This allows for opening a section of transmission line for repairs without suspending service at any interlocking. Arrangement is provided for the Newark interlocking to be fed from either the signal transmission line or from the railroad power department line.

Energy for Interlocking Plants

The arrangement for the supply of energy to the interlockings is remarkably simple. In the first place, no battery is required as all parts except track circuits are arranged for alternating current supply. There being no battery, no charging equipment is required. The air compressors are Westinghouse (National) type H-1 with a rated piston displacement of 12.2 cu. ft. of free air a minute. The motors are 110-volt, 3-phase, 60-cycle, developing a maximum of 2 h. p. A simple centrifugal motor clutch enables the motors to start easily without a load. An automatic controller provides for a cut-in cut-out at 45 lb. and 60 lb. respectively. Two compressors were installed at each of the Newark, Harrison and Kearny Junction plants, while there is but one at Hackensack drawbridge. The average consumption of air at each plant is less than 2½ cu. ft. of free air a minute. The compressors run approximately 20 per cent of the time. This low requirement of compressed air is brought about by the use of modern electro-pneumatic apparatus.

The supply of energy is so simply arranged that it was not considered necessary to install switch boards. The knife switches for controlling supply to the air compressor motors, the interlocking machine, and plant are suitably mounted in safety panel-boxes attached to the tower wall.

The Union Switch & Signal Company's Model 14 power

interlocking machines at all four plants are similar. Taking the Harrison machine as an example, there are:

8 levers for 15 switches
9 levers for 27 signals
4 traffic levers
1 lever for outlying switch lock

22 working levers, total
1 spare lever

23 lever machine.

It will be seen that 22 levers handle 47 units. This interlocking machine is less than 6 ft. long and its levers can be easily manipulated by one man, an economical factor where traffic is so heavy.

The indication and lock magnets are energized at 110 volts, 60 cycles. All switch levers are equipped for electric detector locking. Traffic levers have a signal lock magnet. All signal levers are three-position. A 3-light lever indicator cabinet extends the entire length of the machine. Green roundels are used except for the bottom row of lamps under signal levers, which are equipped with red prism glass for a special signal indication. The lever lamps are 12-volt. Push buttons of the mechanical stick type are provided for all signals. Mercury time releases operate in conjunction with dwarf signal levers. One push buttom is provided for controlling air whistles located on the signal bridges, with which trains can be stopped in emergency. Also with the whistle a maintainer can be called to a nearby 'phone from any location.

The interlocking machine is self-contained and is completely enclosed in an enameled sheet steel case which has removable panels. The panels are equipped with cabinet locks which prevent access to the machine by other than authorized persons.

Track Models Show Location of Trains

Track models are provided for all of the power interlockings. These are of sheet steel mounted on angle iron frames and supported from the floor on 2-in. pipe posts. Tracks, letters and figures are in white on a flat background. This combination in non-reflective finish is the clearest and best when spotlights are used to indicate track occupancy. Twelve volt telephone type lamps, behind frosted bull's-eyes, indicate by their illumination that trains are not on the various track sections. Because of the short length blocks and consequent brief interval of time for indicating a train approaching a signal, a four-block indication is provided approaching home signals.

The track models are located directly over the interlocking machines, and so provide a location where recording air gages, ground and phase indicating lamps are most readily discernible, and where train describers and clockwork time releases are easily accessible.

Switch Movements

Type A-1 electro-pneumatic switch movements are used exclusively. This movement is equipped with a cylinder having a 12-in. stroke and of sufficient capacity to handle any switch, slip, derail or frog points at 40 lb. air pressure. The switch movements are controlled by means of Style "C" cutoff type valves. The combination of reduced air pressure and normal cutoff of the air supply to the switch cylinder at the valve, results in a very considerable saving of compressed air, as is indicated by the small size compressors

Color-Light Signals Prove Advantageous

Union Style "L" color light signals are used throughout. The aspects and indications have been described and the construction as well as the mounting of these signals is clearly indicated in the accompanying views. The long range of this signal is secured by the use of an accurately based concentrated filament lamp. Provision is made for this lamp burning out and the short range indication improved by a pilot lamp which has an ordinary filament. Individual lamp transformers make possible relay control at 110 volts and the use of a rugged filament 6-volt lamp which provides long life.

The colors used in the lenses are darker than the Signal section A. R. A. standards, thereby providing satisfactory range without any filtering out of the colors, which might otherwise accompany the use of concentrated filament lamps. As a result of a number of tests, a minimum spacing of 4 ft. was established between signal units which might be illuminated simultaneously. This spacing gives ample protection from blurring.

Why D. C. Track Circuits Are Used

Anyone not familiar with all of the factors which were considered in laying out this installation might wonder why with all other units dependent upon alternating current, the track circuits were allowed to remain battery fed. The possibility of this portion of the Lackawanna being electrified at some future time, and the uncertainty at this time as to whether the propulsion current will be alternating or direct, prevents a final determination as to what track circuit apparatus will ultimately be required. Direct current track circuits were in use prior to the present installation and so were allowed to remain. All of the new apparatus will apply without change after the road is electrified, no matter what type of electrification is used.

All switches leading to the three-track line, excepting two, are power operated. These two are controlled by means of electric switch locks for which levers are provided in the Harrison and Hackensack interlocking machines. At Harrison interlocking, lever 2 is moved to the right to allow a train to pass from the siding to the main track, and lever 2 to the left allows the reverse of this movement. The electric switch lock levers are interlocked in such a way with the traffic levers as to prohibit conflicting train movements. Train describers are provided between the Newark and Roseville avenue towers, the latter being located west of Newark. Communication between Hackensack, Kearny Junction, Harrison and Newark towers is by means of telephones. As previously stated, telephones are also located at convenient points throughout the installation so that a maintainer can get in touch with a leverman within a few minutes after hearing the call whistle.

Check Locking Provides Protection Against Conflicting Train Movements

It is obvious that some means of protection against conflicting train movements on tracks signaled for traffic in both directions must be provided. Check locking is in service between adjacent towers throughout for both tracks 1 and 3. The interlocking signal levers governing train movements on tracks 1 and 3 are interlocked with the check locking levers, the latter being controlled through track repeaters in such a way that once traffic direction is established, and a train accepts a clear signal, this cannot be changed until the train has reached the next interlocking plant and it is safe for traffic to be reversed. The automatic signals between towers are wired as they would be for one-way traffic, that is, no preliminaries are provided, as would be necessary in single track operation without check locking.

The automatic signal and interlocking materials were supplied by the Union Switch & Signal Co., and Kerite insulated wire was used. The entire installation was made by the signal department forces in the employ of the railroad company.

Revision of Transportation Act Suggested*

Less Labor Standardization, Changes in Labor Board and Less Restrictive Regulation Needed

By W. G. Besler
President, Central Railroad of New Jersey

THERE ARE TWO schools of thought today, each with its very fixed opinions: one, that the Transportation Act should be revised; the other, that it should not be revised, but should be given a further trial.

Most of the criticism and dissension has to do with that part of the act dealing with disputes between the carriers and their employees and subordinate officers. In the opinion of many, the Labor Board made a fundamental error in including the craftsmen of all classes and descriptions, as well as laborers of no class or description, as employees coming within the category of "railroad men." They undertook to standardize for the railroads of this country, wages and working conditions for 500 classes of employment.

I am firmly of the opinion that this was beyond the thought of those responsible for the framing of the Transportation Act and I further believe that either the Labor Board should now reconsider and revoke its action in this matter, disavowing further authority or jurisdiction therein, or else that it should be accomplished by congressional direction, because the situation as it exists constitutes an unjustifiable subsidy to labor which happens to be in the service of the railroads; and for the further reason that this standardization unsettles for the country at large the wages and working conditions of craftsmen employed in industries other than railroad service, most of whom are of an apprenticeship that can be and is readily interchangeable with craftsmen of similar apprenticeship and training engaged in outside industrial service. As a matter of fact, such interchange is constantly taking place.

Years of service, capacity and training count for nothing. No one will seriously argue that the novice is immediately worth the wages paid to the former trained employee. It is this curse of holding men down to the level of the poorest and least efficient to which I object. It removes all incentive.

Enforcing Awards of Board

The suggestion has been made that "teeth" should be inserted in the labor section. Teeth are all right in their place, but there are false teeth as well as real teeth. I prefer another methods of approach.

No one is required to accept employment in the more than quasi-public service of railroad transportation. If, therefore, a person enters train or engine service or any kindred occupation having to do with the actual movement of traffic, he must voluntarily agree as a prerequisite condition of such employment to surrender his right to terminate his service under conditions which actually, or may in consequence thereof, result in a cessation of service, being in its practical aspect a strike, and that further as a prescribed penalty for violation of such voluntary agreement, he may subject himself to fine or imprisonment, upon the theory that a man who "saws off the limb upon which he is sitting" does so with the full knowledge of its possible subsequent effect upon himself. Is there anything wrong or insuperable in such a suggestion?

There seems to be an ever-increasing sentiment to the effect that the Labor Board should be abolished. Mr. Lee, president of the Brotherhood of Railroad Trainmen, is reported to have said that he longed for the good old days when railroads and organizations sat around the table and threshed out their differences and made agreements. Such a situation, of course, does not contemplate any necessity for a labor board. In those days, when the situation around the table reached a deadlock the next step was arbitration, concerning which we have ample precedent, with results which were just as satisfactory and at least in some respects more so than have been secured through the medium of the labor board.

Should Labor Board Be Reconstituted?

In my opinion the Labor Board, as at present constituted, cannot function properly. I would prefer one representative of labor, one of the carriers, and three of the public; or, if a larger committee is desirable, it might be 2, 2 and 5. In selecting the 3 or 5 representatives of the public, as well as the other members, something in the nature of a civil service examination, showing fitness or capacity, based upon previous training and experience along lines which qualify them to service in such a position, should be a prerequisite to appointment. Is there anything wrong in the thought that the law should require that those who are to serve the public in places of such importance should qualify as to their fitness, inasmuch as we require a prescribed course of study and training, followed by a final examination, before a diploma or license as a certificate of competency is given to a doctor, a lawyer, a minister, or even an undertaker, permitting them to practice their professions, and as a safeguard against "quacks" with their nostrums or unqualified persons who might otherwise practice or visit their schemes upon the public?

Changes in Section 15-A

Should the Transportation Act be amended so as to make the so-called "guaranty" provision, contained is Section 15-A, more effective? At the outset, it should be understood that the Transportation Act does not contain any guaranty provision which is now in effect. The so-called guaranty provision contained in Section 15-A of the Transportation Act cannot be made more effective by any rate-making device; it could only be made truly effective by taking money out of the public treasury. That course is obnoxious. The railroads don't need to be, and they don't wish to be subsidized by the Government. What they want is more freedom from regulation, more opportunity for private initiative and economies that flow therefrom, more opportunity to take care of themselves.

What the railroads need is a legislative holiday. If the regulatory statutes were permitted to become stable so that railroad managements of the country might have some assurance of the rules under which they might operate during the next five or ten years, they would then be in a position to give better service to the public and take better care of their stockholders, subject, of course, to reasonable regulations which would prevent excessive charges and discriminatory practices.

There is now pending in Congress what is known as the Newton Bill (H. R. 11822) which has been endorsed by the National Industrial Traffic League, representing practically all of the large shipping interests of the country. It pro-

*Abstracted from an address before the St. Louis Railway Club at St. Louis, Mo., on December 8.

poses that Section 15-A be amended by substituting for the present rate-making rule, the simple statutory declaration that the carriers are entitled to the opportunity of earning a fair return upon the property they devote to the public use and that the commission shall give consideration to this right in passing upon their charges. This right is already well established at common law by the decisions of the United States Supreme Court, but it has seemed that it had been overlooked at times in the past. It may be desirable that this right be clearly described in the act and thus formally kept before the eyes of the commission.

It is the opinion of a great number whose views are worth while, that Section 15-A as a whole, containing the so-called six per cent guaranty provision and the so-called recapture clause, should be eliminated from the law. Both of these were innovations introduced into the law in 1920. They have accomplished no good, but they have caused a great deal of confusion of thought and the sooner we get away from them and leave a greater freedom to the responsible officers charged with the management of the railroads of the country, the sooner we will get back to that efficiency of operation which made it possible for the railroads as a whole, prior to the war, without the assistance of the government, to earn a return approaching six per cent, while at the same time providing more satisfactory service to the public than it has enjoyed since 1917.

In my opinion, Section 15-A should, and I believe ultimately will, be eliminated. In place thereof, I suggest there might be substituted two rules or principles for the performance and observance of which the Interstate Commerce Commission should be charged with the duty, as well as with direct and personal responsibility in the matter of securing the desired results: (1) The rates charged by the carriers for their service must be reasonable. (2) The service given to the public must be adequate and satisfactory. Neither of these propositions contains anything insuperable. The first contemplates that the rates must be sufficient so as to enable: (a) The payment of wages which are fair; (b) Provision for those other operating costs which are incurred in honest, efficient and economical management; (c) Provision for the payment of fixed charges, taxes, etc., and (d) Permission for at least a reasonable return upon the capital invested.

The second will, as a corollary of these reasonable charges which the public must pay (for the railroads have no other source of revenue, or article for sale than service), result, as the natural consequence of the first being assured, in service both adequate and satisfactory.

Senator Brookhart Attacks Railroads

WASHINGTON, D. C.

SMITH W. BROOKHART, the new senator from Iowa, made his first speech in the Senate on December 18 in support of a motion to displace consideration of the ship subsidy bill to proceed with the immediate consideration of the agricultural marketing bill. He took occasion to criticise the railroads and the transportation act in arguing that the collective thought of the people had decided "that governmental aid to private enterprises for profit is fundamentally wrong and that present economic conditions are disastrously oppressive to agriculture and in a large measure are produced by improper laws and unwise governmental action. "One of the best illustrations in support of this conclusion," he said, "is the transportation act," which, he said, has changed the basic rule of rate-making so that "the paramount rights of the public are eliminated." Among the statements he made to the Senate, a large part of whose members voted for the act and presumably know what it contains, was that the Interstate Commerce Commission is "now commanded to levy rates high enough to yield a return of 6 per cent upon a valuation of $18,800,000,000 and for the first six months the deficit was guaranteed out of the Treasury of the United States." If the farmers could have had a like guaranty during the first six months of their deflation, he said, it would have saved them seven billions of dollars. He contrasted what he called a "guaranty of a half billion dollars to eight thousand millionaires to keep full the measure of their war profits" with a guaranty of the cost of production of seven million farmers for a crop produced at the command of their government. "For the next year and a half," he said, "the commission was commanded without discretion to levy rates that would pay all operating expenses and yield a net return of 6 per cent upon the full valuation." This it tried and failed because the operating expenses climbed up to the sky and the common people went broke and were unable to pay the bill upon any rates whatsoever. Since then the rate has been reduced to 5¾ per cent, and if the farmers and laboring people ever get money enough it will all be collected.

"The valuation of $19,000,000,000, round numbers, as the basis of rates is unjust. It was made under the rules of this law. This is the first time that watered value has been legalized. We have always had watered stocks and watered bonds, but they had to shift for themselves. This watered value is now given the sanction of the law and it will cost the American people $400,000,000 per year to pay the return upon it. This law should be repealed and the water punched out by the simple provision that the value shall not exceed the market value of the securities.

"The railroads are now getting over $10,000,000,000 of their capital at less than 4½ per cent. Under this law we must pay them 5¾ per cent, or a bonus of about $150,000,000 per year. It is unjust and the law should define the adequate or reasonable return, so it shall not exceed the interest rate on the bonded portion of the capital. Other gigantic items are excessive profits of subsidiary corporations and the waste of competition. These certainly amount to several hundred million dollars per year. Altogether, there is an excessive charge upon the American people of perhaps more than $1,200,000,000 per year without considering the wages of any man that works.

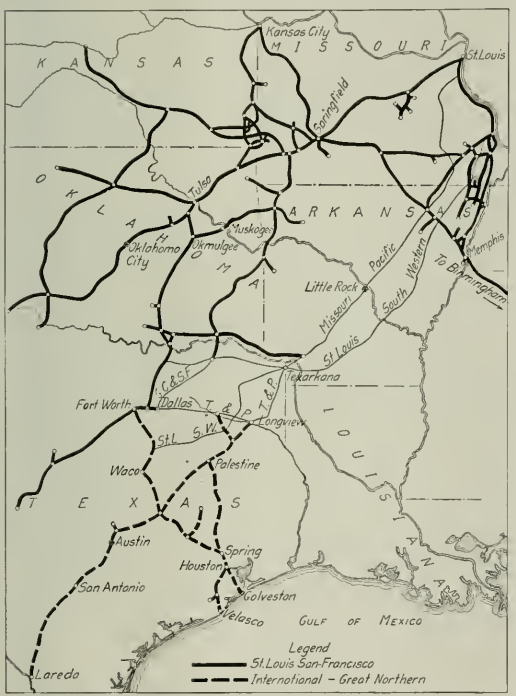
"I have not taken up the railroad law with the view of discussing it in full detail, but only for the purpose of showing that under this law the government itself has imposed these excessive burdens upon the American farmer and is, to that extent, to blame for his present plight, and I want to include this part of my statement with a review of the psychology that produced this law. The roads were being operated by the government. I do not question the integrity of the director general. But down below him, perhaps below his possible personal touch, were managing officers who were neither loyal to him nor to the government of the United States. They served the private owners of the railroads, and they wanted to discredit government operation so the roads would be turned back. They were traitors as truly as Benedict Arnold. They deliberately muddled and mixed up the service. They hired excessive numbers of inefficient employes and paid them excessive wages for the deliberate purpose of increasing the operating expenses. They advertised their own crimes as the evils of government operation.

"They created a general sentiment and demand for a return of the roads to their private owners. With it they coupled the demand for this law. In spite of the disloyalty and inefficiency in government management, in spite of the increased and unnecessary expenses, the first year after the roads were turned back, the private owners further increased the operating expenses by over $1,400,000,000. About $480,000,000 of this was wages and the other $926,000,000 must be attributed to the causes before described. Since that time wages have been reduced in a lump sum of over $400,000,000, with the further reduction that caused the machinists' strike, but rates have been reduced less than $100,000,000."

Frisco Buys International-Great Northern

As announced briefly in last week's issue, the St. Louis-San Francisco has arranged to purchase the entire capital stock of the International-Great Northern and will operate that property in conjunction with its own system, thus increasing its mileage from 4,769 miles to 5,928 miles, including trackage rights held by the purchased line. By this means, the Frisco will secure a through route to the Gulf of Mexico at Galveston and access to the Mexican border at the Laredo gateway.

The purchase was arranged through an agreement with Willard V. King, James Speyer and Frederick Strauss, voting



The Relation of the Frisco System to the International Great Northern

trustees for the majority of the stockholders of the International-Great Northern, for the acquisition of $7,500,000 capital stock, at a price of $26.75 per share, subject to approval by the Interstate Commerce Commission. Subject also to the approval of the commission, and the stockholders of the St. Louis-San Francisco, the purchaser guarantees adjustment bondholders of the International-Great Northern that the distribution on the adjustment bonds during 1924, 1925, 1926 and 1927 shall not be less than three per cent, in consideration of the granting of an option for the purchase of these bonds at 90, plus accrued interest, up to January 1, 1928, and after that date at par and accrued interest.

This plan for the consolidation of the International-Great Northern with the St. Louis-San Francisco is the most recent development in the history of the I. & G. N., which was reorganized effective December 1 with the election of J. W. Kendrick as chairman of the board of directors and T. A. Hamilton as president. It is of interest to note that Mr. Kendrick, who has had a rather intimate contact with his property for a number of years in a study of its economic possibilities, had at one time borne similar relations with the purchasing road, the St. Louis-San Francisco. The financial plan for the reorganization of the International & Great Northern and a discussion of its potentialities as an important carrier were treated at some length in an article appearing in the *Railway Age* of June 10, page 1748, and supplemented in the issue of October 28, page 811.

The International-Great Northern lies entirely in Texas. It comprises a main stem 495 miles long, extending from Longview, Texas, to Laredo, with a connection from Palestine to Houston, 150 miles, and a line from Fort Worth to Houston, 272 miles. There is also a small mileage in three or four branches. Trackage rights over the Galveston, Houston & Henderson afford a connection to Galveston. An inability to obtain adequate funds for capital expenditures and the necessity for curtailing the outlay for maintenance have resulted in a physical condition of road equipment which does not enable the railroad to handle the traffic offered to the best advantage. Five million dollars expended for heavier rails, ballasting and embankment widening and for some additions to power during the course of the receivership, beginning in 1914, has served to effect some improvement, which will be amplified by further expenditures made possible as a result of the reorganization plan, which contemplates improvements in the physical property, the development of traffic and increased efficiency of operation.

The traffic of the International-Great Northern consists primarily of wheat, cotton and forest products. The greater part of the wheat is received in interchange at its northern terminii and delivered to seaboard at Galveston. This is true in part of the cotton traffic, but a considerable portion of this originates on its own lines which traverse an important cotton-producing territory. This is true in a measure also of the traffic in lumber and other forest products. There is also a considerable movement of manufactured products and oil and a growing vegetable business, the latter originating largely in the territory immediately to the north of Laredo. The principal source of strength to which the International-Great Northern may lay claim is its service as a connection between the Gulf ports and the Mexican gateway at Laredo, and the railroads with which it connects at For Worth and Longview, this being the function which it was orginally designed to perform as a part of the Gould system in conjunction with the Missouri Pacific, the Cotton Belt and the Texas & Pacific.

It is in this capacity as a connecting link that it has developed an important through passenger service. By traffic arrangements with the Missouri Pacific and the Texas & Pacific, through passenger trains are run between the junction at Longview, and Galveston and Laredo, that afford through service between St. Louis and the Gulf and Mexico City.

It is also in this function as the connecting link that the International-Great Northern will prove of great value to the St. Louis-San Francisco, a physical connection at Fort Worth, Texas, providing the means by which the St. Louis-San Francisco will be afforded a through line to the seaboard at Galveston and a connection with the National Lines of Mexico at Laredo. This will be of particular advantage in the grain movement to the Gulf, affording the Frisco a long haul on export wheat, which undoubtedly will make it of advantage for that road to develop this routing of the wheat movement to the maximum. This also applies to the cotton business originating on the Frisco lines in Texas and Oklahoma. It will also provide the means of developing a northbound movement of lumber, vegetables and other products originating in either Texas and Mexico, as well as the traffic to be received from shipping at the port of Galveston.

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER OF CARS loaded with revenue freight continued during the week of December 9 to be in excess of all previous records for the corresponding period of the year. The total was 919,828, or 178,487 more than for the corresponding week of last year and 81,875 more than for 1920. The loading was in excess of that for 1920 in all districts except the Pocahontas and in all classes of commodities except coal, coke and ore. The loading of miscellaneous freight was 50,000 cars above that for the corresponding week of 1920 and grain loading, 55,608 cars, was greater than it had been for several weeks, but coal loading, 200,505 cars, was slightly less than it has been in some earlier weeks.

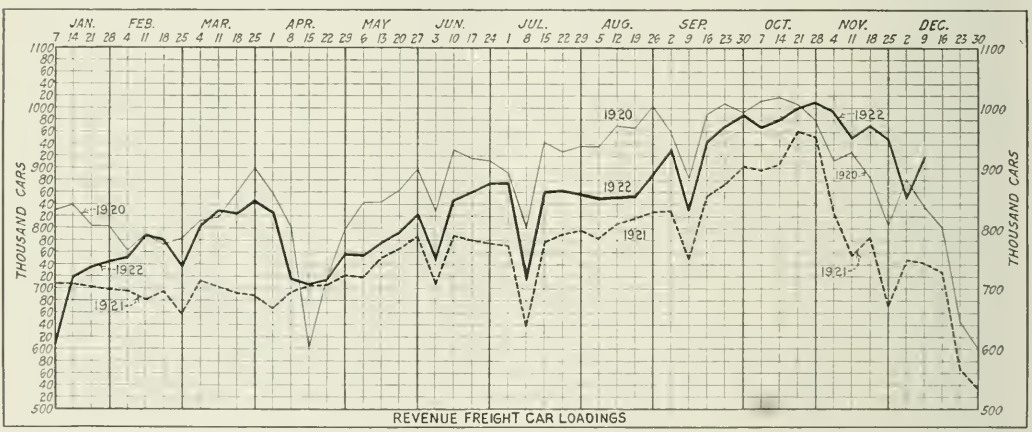
The freight car shortage for the period November 30-December 8 averaged 111,961, a decrease of 21,825 as compared with the previous week. This included 56,711 box cars and 37,613 coal cars. The surplus was 6,657.

The number of freight cars in need of repairs continues steadily to decrease. On December 1, 226,288 freight cars, or 9.9 per cent of the cars on the line, were in need of repairs. This was a decrease of 9,372 cars since November 15. Cars in need of heavy repairs totaled 176,006, compared with 187,596 on November 15, or a reduction of 11,590. Cars in need of light repairs numbered 50,282, which was an increase of 2,218. On December 1 last year 320,292 cars, or 14 per cent of the total number on line, were in need of repairs. Since July 1 last, the date on which the strike of railway shopmen began, there has been a reduction of 98,298 cars in the number in need of repairs.

From November 15 to December 1, the railroads repaired and turned out of their shops 13,484 locomotives. This was within six locomotives of the greatest number repaired during any semi-monthly period in approximately the last two years, and exceeded by 1,345 the number turned out of the shops during the first half of November this year.

Locomotives in need of repair on December 1 last totaled 18,009, or 27.9 per cent of the number on line. This was a decrease of 347, compared with the total number on November 15, at which time there were 18,356, or 28.5 per cent.

Of the total, 14,450 were in need of heavy repairs, a decrease since November 15 of 670 locomotives, while 3,559 locomotives required light repairs, an increase of 323. Serviceable locomotives on December 1 totaled 46,525. This was an increase of 424 over the number serviceable on November 15.



REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY DECEMBER 9TH, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L.C.L.	Miscellaneous	Total revenue freight loaded: This year, 1922	Corresponding year, 1921	Corresponding year, 1920

Labor Problems From An Engineer's Point of View*

With Particular Reference to His Position as an Intermediary As Between Labor and Capital

By Elisha Lee
Vice-President, Pennsylvania Railroad

The engineer in our present industrial system generally occupies a leading position in what we commonly refer to as management. He is entrusted with the determination of policies for successfully guiding and directing the work of large numbers of men. He is in turn responsible for creating and maintaining an output satisfactory as to quantity, quality and cost per unit, and in the case of public utilities, for continuity and safety of operation.

Necessarily, these responsibilities include the building up and holding together of a working force, adequate, but not excessive, in numbers, loyal and willing in spirit, and capable of maintaining a satisfactory rate of production. This means that the engineer must not only devise labor and operating policies which are sound on paper, but must convince his working forces of their reasonableness and fairness. From this viewpoint, part of the engineer's equipment is, or should be, an adequate understanding of human nature, and a real knowledge of the causes which contribute to labor unrest or contentment.

At present, and for some time back, the engineer, confronted with the problems which I have endeavored to sketch, has been obliged to cope with practically a universal demand for lower unit costs. The people want, and in some cases are insistently demanding, lower prices for manufactured articles and commodities and lower rates for service. It is hardly necessary for me to say that this expectation cannot be realized unless we can find some means of effecting lower labor costs, either in the form of readjusted wages, increased production per man hour, or both. This arises from the fact that labor is not only the largest individual item entering into costs, but if we analyze the cost of any product sufficiently, we shall find that labor represents ultimately nearly all the cost. Anthracite coal in the ground is worth only a few cents per ton—at least that is the basis upon which anthracite-bearing land is bought and sold. Anthracite in your cellar is worth $15 or $16 per ton. Practically all of the difference represents wages or compensation for labor or effort paid to different people handling the coal between the workings of the mine and the bin of the consumer. In other words, the cost delivered is largely labor. In the case of the railroads, their own payrolls constitute about 60 per cent of the total costs of operation, and fuel and material costs, which make up nearly all the other expenses, are in themselves almost altogether wages paid to other workers.

The main problem in reducing costs, whether of products or services, lies, therefore, in obtaining the co-operation of labor. Thus far, that co-operation has not been forthcoming with sufficient readiness to make satisfactory progress. We have in this connection two general factors to deal with. One is the attitude of labor unions, and the other is the restriction of immigration. The latter is a matter of public policy and, therefore, beyond control of the engineer as an engineer.

Collective Bargaining, or Collective Coercion

Collective bargaining, in some form or another, is with us and I, for one, see little likelihood of its abandonment. It probably represents the only practicable basis by which the labor relationships of large masses of workers can be dealt with and adjusted. The thing is to distinguish between collective bargaining and collective coercion. Unfortunately, we have had a good deal of the latter; so much so that certain large and important groups of workers have been able to retain, in practical entirety, the highest inflated wage scales which prevailed during the war. We must cure that condition by a process of education, and by directing the pressure of public opinion against the attitude of those groups of workers who persist in substituting coercion for bargaining in their collective relations with society.

How unbalanced the present situation has become may be gathered to some extent from the fact that, while labor in the great organized crafts is receiving about two and one-half times pre-war wages, the farmer is receiving only 64 per cent of what he received for his products in pre-war times. These and other inequalities have set up strains in our social structure which will be very dangerous unless relieved in time. Capital is bearing a very large part of our tremendous tax burden, and, consequently the real return obtainable for its use is less than in pre-war times.

Capital is the savings of those who produce more than they consume; therefore, we are penalizing thrift on the one hand, and, by maintaining excessive wage scales and tolerating inefficiency in output, we are on the other hand placing a premium upon selfishness and waste.

The engineer is responsible not only to the owner of the enterprise in which he is engaged, but to society as a whole, for the cost of the output which society needs. The great task, therefore, is to devise ways and means for bringing the labor costs of products and service into a reasonable relationship with the capacity of the general public to pay. The problem is sometimes referred to as that of bringing down the cost of living. It might be more accurate to describe it as bringing living costs again into conformity with economic law. The present living costs are out of harmony with economic law and are filled with inequalities and injustices largely because many labor costs are being held artificially high.

The Divided Allegiance of Labor

The fundamental problem, which I do not believe is hopeless of solution, is to bring the leaders of labor into acceptances of the truth that labor must conform to the same economic principles as all the rest of society; that otherwise society is on an insecure basis, and disaster to all is certain sooner or later to come about.

If we can achieve acceptance of this truth, we shall then have ended the divided allegiance of labor, between the union on the one hand and the employing industries on the other, which is the basis of most of the present inefficiency and excessive costs. We shall have both forces working to the same end, which is to increase the output and distribution of the product, because it will then be understood that wages can only be paid out of production.

While, according to historians, strikes and other concerted labor movements to obtain more satisfactory working arrangements were not unusual, from about 2000 years B. C. up to modern times in the old country, in our own country the condition of labor unrest did not assume definite form

*Abstract of an address delivered at the meeting of the Technology Clubs, Associated, New York City, Friday Evening, December 15, 1922.

until the early part of the nineteenth century, and was of no particular importance in our economic life until about the outbreak of the Civil War. Since that time the matter of unrest among laboring men has grown in a manner corresponding rather closely to the growth of the so-called factory system of industry, where capital, management and labor are rather distinct individual groups.

It will be recalled that, up to about the beginning of the nineteenth century, industrial plants were small and the owner was not only the capitalist, but also manager and one of the workmen. Therefore, these conditions of employment, constituting an intimate relationship between management and men, deserve serious consideration in determining the policy for the handling of men under our present industrial system.

Desire for Increased Wages Not Greatest Cause of Strikes

I feel that we are often very much misled by the expressed demands involved in concerted labor movements, rather than the underlying cause for these demands. It is, for instance, a rather popular idea that the predominating cause of strikes is a desire for increased wages. As a matter of fact, the element of wages is, certainly in a very large percentage of strikes, only injected after the organization has been completed and functioning for some time. Many strikes are called without any mention of wages at all. There is a deeper cause than either wages or hours of labor, or even many of the demands calculated to improve working conditions. *I believe the chief underlying cause of labor unrest making itself felt in the form of labor unions, or other concerted labor movements, is the human desire to have an unoppressed voice in all deliberations where labor policies are involved.*

The same spirit, it seems to me, which has prompted men in overthrowing kingdoms in the old country from time to time, and particularly since the war, and in fighting to a successful conclusion the Revolutionary war in our own country, is quite as pronounced in the hearts of men with regard to their industrial life. They want to feel that they are a part of industry, have a perfect right to be consulted and to have their views and desires given the same thoughtful and sympathetic consideration that they received during those 300 years when this country industrially was in the state where the capitalist was also manager and co-worker.

There have been some experiments along this line in the form of working arrangements, commonly known as Employee Representation plans, where employees have been given unhampered right to select representatives to help mould the labor policy, and, as far as I have been able to learn, wherever management "threw the cards on the table" and placed these men on their honor, they have proved themselves honest, thoughtful and practical.

There are many other labor problems which the engineer has to cope with, particularly the selection and training of foremen, and their superiors, but, to my mind, no great progress will be made toward the elimination of the present state of unrest unless we establish an effective substitute for that condition where the employee was in position to present his point of view directly to management and have it given careful and sympathetic consideration.

THE ANTHRACITE TONNAGE of the Lehigh Valley Railroad since the resumption of mining—September 15 to December 16—has been greater than in either 1921 or 1920. The total was 3,568,494 tons; 643,196 tons over 1921 and 302,074 tons over 1920. A statement issued by the road says that "at no time since the resumption of mining has there been any suspension because of a shortage of empty coal cars at the mines, and all coal produced has been moved promptly."

Standardization From the Consumer's Point of View*

By N. F. Harriman

ONE OF THE MOST modern aids to industry is standardization, which is now recognized as being of the greatest importance to both producer and consumer. It is sometimes said that the benefits of standardization are mainly to the field of production. This is not the case. They are quite as important to both the field of buying and of selling. In industrial standardization it is the consumer who is ultimately benefited most, but the immediate benefits are largely to the producer, for it at once simplifies his work and enables him to produce what is required by the consumer cheaply and expeditiously. With lower production costs comes more extended use of the standard article, for it is a law of economics that when costs increase substitutes are used.

Objectors to standardization frequently urge that it would stifle initiative and progress and that the adoption of a standard prevents advance through improvements in the arts of manufacture. Of course this is not the case. A standard should remain standard only until something better is developed, but it should not be changed until justified from all points of view. Any given standard, to achieve its object, must be suitable for the intended use in the majority of cases. The exceptional case requires special consideration, and actual perfection will never be attained. The economies and benefits of standardization as applied to qualities of products and processes of manufacture have been so thoroughly demonstrated within the past few years that they are entirely outside the argumentative field. Standardization, like efficiency, is not an easy term to define; it is not always understood in its true sense and by many is looked upon with doubt and suspicion. The general idea of standards is not new, but its application to science, engineering and industry has been developed within comparatively recent years.

Standardization may be defined as the unification of the methods and practices involved in manufacture, construction and industry, and all lines of endeavor which present the necessity of repetition work. It may be considered under several aspects.

Standardization of nomenclature enables buyer, seller and manufacturer to use and understand the same language. It is very important that there be acceptable definitions of terms used in specifications and contracts. Purchasing is often done by persons who are quite familiar with the legal side of drawing up contracts, but who are not familiar with the technical details involved. The efficiency of many purchasing officers is lessened by their lack of knowledge of the nature and names of the articles they are intrusted to buy.

Standardization of variety, or simplification, involves the elimination of unnecessary types, shapes, grades and sizes of manufactured articles. Waste in industry is largely due to an over-multiplicity in the number of products, as well as to inefficiency of process. Waste due to idle stocks of material and products through deterioration, obsolescence and capital charges carried is large, especially with large stocks.

Dimensional standardization insures ready interchangeability of supplies and the proper inter-working of parts which may be manufactured or assembled by different manufacturers.

Standardization of specifications and methods of test puts bids on an easily comparable basis, promotes fairness in trade competition, and insures the proper grade of material for a given use.

---

*From a paper presented at the National Exposition of Chemical Industries, New York, September 15. The author is engineer-physicist, U. S. Bureau of Standards and Technical Secretary, Federal Specifications Board.

The definitely standardized product is manufactured to meet particular wide needs, according to definite specifications, and is constantly tested to ensure its being up to standard grade. The ordinary purchaser is not an expert on quality of supplies, and in many cases the quality can be lowered and he would be none the wiser until the material is put into service.

One type, shape, grade or size of an article will not meet all the requirements of the consumer, neither is it desirable to have such an extensive variety that the differences are small and meaningless. The ideal condition is to have just enough variety to meet all the real needs with no overlapping. Sound industrial economy demands the elimination of the special or little used product and its substitution by the standard or most widely used and most efficiently produced goods.

Standardization of specifications is the most important phase of the subject, from the purchaser's viewpoint. It is the first and most essential step in the economy that arises from the purchase of materials or supplies in large quantities, and is a necessary factor in the improvement of the quality of materials purchased and the adaptation of quality to definite uses. The specification is the common meeting ground for the manufacturer, dealer and user, and it is at once a statement of the users' needs and what the maker is required to supply. Purchase by competitive bids on specifications is preferable to purchase on sample. The latter method implies that each bidder's product must be considered independently and it is often a very difficult matter to decide between different combinations of quality and price. The specification should include limiting values for the properties necessary to meet the required service, with proper tolerances. A proper specification is one which enables bidders to know exactly what is desired or required and what procedure the purchaser will follow to satisfy himself that the specification has been complied with. Defective and incomplete specifications, whether due to compromise of quality for temporary economy, or through lack of data, should be replaced by those in which the best magnitude of each property involved is so specified as to predetermine the definite quality best meeting the need. There is a growing appreciation of waste in industry due to the use of defective and improper materials.

To determine the value of any material for a given purpose, its properties must be measured, assuming that the properties upon which its use depends are known and are measurable. The testing of materials may prove a needless waste of time, energy and money unless due consideration is given to the nature of the tests applied, the conditions under which they are made and the interpretation of results. It includes both qualitative and quantitative measurements. These may vary from a simple visual inspection to an investigation involving laboratory and technical work of the most difficult and precise nature. Standardized methods of test consider all of these conditions and are a necessary part of an ideal specification for a material or a manufactured article. Friction and controversy between buyer and seller often arise as to the question of facts concerning the results of tests, especially when different methods or different equipment are used. Quality may be determined directly by a service test, indirectly by a test under simulated service conditions, or still less directly by a laboratory test of individual properties upon which the quality is known or assumed to depend.

The selection and adoption of specifications or standards without due regard to the manufacturing problems involved would be equally as serious as for manufacturers to establish standards without a careful consideration of the needs of the purchaser.

With many large corporations, the standardization of purchases and the resulting simplification of store stock varieties of materials offer a fertile field for economy.

Ben W. Hooper Addresses Western Railway Club

Efforts of Radical Labor Leaders and Politicians to Destroy American Institutions Denounced

Nine-tenths of the people of the United States agree with President Harding that the functions of the United States Railroad Labor Board must be exercised by some tribunal, in the opinion of Ben W. Hooper, chairman of the board, who addressed the Western Railway Club at Chicago on December 18. But, he said, the general public is probably not greatly concerned as to what the tribunal shall be. The results in wages and working conditions because of the intervention of such a tribunal will not be much different than those likely to be worked out as a natural effect of unrestricted economic action and reaction, in Mr. Hooper's opinion. Such a tribunal will, however, justify itself by the tremendous saving in the cost of the process to the railroads, the employees and the public.

Mr. Hooper began his address with a brief summary of the nature of and the conditions surrounding the work of the Labor Board, in which he characterized the institution itself as a "unique experiment in legislation in this country," conducted under conditions as far from those normal to the industry as they possibly could be. The board, he said, began its work following the fitful period of government control and was charged with the responsibility of deflating wages and working conditions of the biggest industry in the country, which had just been subjected to extremely artificial handling. Mr. Hooper compared the situation of the board with that of a man thrown into a den of Nubian lions and Bengal tigers, with instructions to bring them into peaceful harmony, with no other agency than that of his bare hands.

But whatever may be said of the quality of its work, Mr. Hooper said, the record leaves nothing to be desired as to the quantity. Up to date the board has handled 11,114 cases, 10,453 of which were formally docketed, and has disposed of 9,244 of the total number, 8,534 of these being docketed cases. But the service of the board, he said, cannot be measured alone by the results of its formal decisions. In his opinion, the mere fact that the board existed has in itself been of tremendous service, because it has constituted a forum before which both parties to the contests have had the opportunity of discussing their contentions publicly and in a measure getting the burden off their own shoulders on to that of the labor board. This, he believes, has been of inestimable value in clearing the air.

Radical Labor Leaders

Mr. Hooper then paid his respects to radical labor leaders obsessed with the idea that they must back a political movement to destroy private ownership and hasten government ownership with either government or private operation. It is a serious question, he said, whether the type of morale

can be maintained among railway employees who follow such leadership, that is necessary to give the public the character of service it demands. The labor literature of today does not deal with questions pertaining to the work of the em-employees or those directly affecting wages and working conditions, but is largely devoted to the political aspects of the railway question and seeks to prejudice the employees against the managements and in favor of government ownership.

In making these statements, Mr. Hooper disclaimed any desire to criticize labor leaders for believing in government ownership. His criticism, he said, is aimed at some of the methods used to get it.

Mr. Hooper then referred to the so-called progressive convention held at Cleveland, Ohio, during the second week in December, the membership of which was made up of radical labor leaders and socialists. Continuing, Mr. Hooper said:

"There are not many thinking men who would like to have it said that they are not progressive and not many would want to admit that they are not conservative. A combination of these two characteristics meets the approval of the average American. A progressive who is not conservative is radical. A conservative who is not progressive is reactionary.

"A radical is a man whose normal gait is running away. He reminds one of the story of the man who had bought a new automobile, and overtaking an old colored friend on a country road, invited him to get in and ride with him. Thinking that he would give Uncle Eph a real thrill, he threw his machine wide open and was clipping off about 60 miles an hour. He lost control of the machine for the fraction of a second and the auto left the road and dashed into a tree, turned turtle and threw the occupants high and clear into a sand bank. They were jolted but not hurt. Uncle Eph arose and as he brushed off the sand, said, 'Boss, what pesters me is, how do you stop dat machine wha dey ain't no trees?' The radical element never got control of any government and run it very far without jumping the track and running into a tree.

"A reactionary is best described by the language of the old colored woman, who was asked where she was going. She replied: 'I ain't gwine nowha; I'se done been wha I'se gwine to.' A reactionary has done been wha he's gwine to and his eyes are fixed in satisfied retrospection on that place. Comparatively speaking, there is not a handful of reactionaries in the United States and the real conservatives are extremely scattering.

The "Conservative-Progressive"

"A conservative-progressive is a man who moves steadily forward, but keeps his eyes on the road ahead. This man is the typical American citizen. He is the man who founded this government, the man who preserved the Union and freed the slaves, the man who has developed our vast resources, and the man who today stands for the perpetuation of our form of government, and its adaptation to the changing conditions of men and things. Men of this type realize that society, industry and government cannot stand still. They must go either forward or backward. Such men are not enamored of stagnation nor affrighted by the rolling tide of human progress. The conservative-progressive cannot command the approval of either the radical or the reactionary. The fact that he moves at all disturbs the reactionary. The fact that he studies the chart of human experience and sweeps the sea with the searchlight of prudent investigation peeves the impatient radical.

"These so-called progressive policies, which involve vital changes in our form of government, are not progressive, but are, in every sense, retrogressive. The effort to deprive the courts of the power of injunction for the protection of life, property and the right of free men to work is simply a retrogressive movement to an age when there was no law but might. The meaning of it is that the courts of this country shall stand shackled and gagged in the presence of insolent and triumphant brute force.

"The proposition to confer judicial powers on Congress is, so far as constitutional questions are concerned, retrogressive. It tends to destroy the balance wheel which our forefathers fixed in the constitution, and would ultimately make both the judiciary and the executive subservient to congress. The most radical changes in our government could be speedily wrought and our nation would be headed toward an irresponsible mobocracy and its final sequent, an autocracy. The statesmen who drafted our constitution full realized the danger of self-destruction inherent in popular government, and they made the judicial department a sea-wall against destructive tidal waves of popular sentiment, which recedes as quickly as they rise.

"The so-called progressive convention at Cleveland last week was dominated by certain leaders of labor organizations, associated with prominent representatives of the Socialist party. It seems to me that the rank-and-file of railroad labor in this country would indulge in much serious thought before they permitted themselves to be delivered. It is worthy of note that certain of the railroad labor organizations were conspicuously absent from the Cleveland meeting."

Mr. Hooper then drew attention to the fact that in all history but two ways had ever been found to get men to work. The first is hope of reward. The second is fear of suffering. The first inspires initiative, which brings out freely the full powers of the individual. The extreme example of the second is human slavery. Slavery, Mr. Hooper said, is the ultimate results of socialism or communism, based on the destruction of initiative through the denial to the individual of the hope of reward. In Russia, he said, this reversion to slavery has already taken place in the form of conscript labor.

The Cleveland Socialistic Convention

Continuing, he said: "Not the least remarkable things about this Cleveland socialistic convention, which called itself progressive, was its proposed method of political procedure. It was given out that this organization, which is nothing more nor less than a political party, would not do business under its own name, but its adherents will participate in the nominating primaries of either or both the republican and democratic parties. Then if the nominations are not satisfactory, independent candidates may be put out. Such a proposition is fraught with the gravest political danger. It might easily result in the election of a large number of public officials by a minority of voters. If a majority of the voters of a district were opposed to radicalism but were divided between the two old parties, such an organized radical block might elect candidates by adding this minority vote to the anti-radicals who would slavishly adhere to the party label. Of course, it is obvious that the success of this minority radical movement is entirely dependent on the assumption that those opposed to it will not pursue the same tactics.

"With a situation of this sort in mind, it was recently suggested by Frank Munsey that a new party movement under the name of the democratic-republican party should be launched. This would hardly seem to be impracticable, but it would be perfectly feasible, wherever necessary, to set up an organization of conservative-progressive citizens, which would offset the radical organization, operate effectively in primaries and elections, and stiffen the backbone of weak-kneed candidates who might be intimidated by the organized radical minority.

"By such a course, can men who cherish the traditions of our country, protect our institutions from the assaults of radical malcontents."

Consolidation Locomotive Weighing 301,500 lb. and Having a Tractive Force of 68,200 lb.

Powerful Consolidation Locomotive for the L. & N. E.

Unusually Heavy Weight and High Tractive Force with Well-Proportioned Boiler Are Special Features of This Design

Comparatively few locomotives of the 2-8-0 type have been built during recent years for use on American railways. While this was a popular type of freight locomotive for a long period, it has largely been superseded by the Mikado type because of the increased depth of firebox and length of boiler banel, with correspondingly increased boiler capacity, which can be obtained when a trailing truck is added. However, the Consolidation locomotive is still a highly desirable type where high tractive force combined with low total weight is the important factor as it is where heavy trains, moved at slow speeds, comprise the bulk of the traffic. By careful designing, a boiler of sufficient capacity can be obtained for such service if road clearance does not impose too many restrictions.

Conditions on the Lehigh & New England are especially suited to the operation of Consolidation type locomotives. Most of the traffic is drag freight. Since the road is close to the coal mining section fuel is relatively cheap. The vertical clearance of 15 ft. 8½ in. gives room above the driving wheels for a boiler of large diameter with a deep throat sheet. The bulk of the power is of the Consolidation type and in adding to the number of its locomotives it was decided to adhere to the same type, but to increase the capacity over that of the older locomotives, which had 208,000 lb. on the drivers.

The four Consolidation type locomotives built by the American Locomotive Company which this road has placed in service recently are excellent examples of well-designed engines to meet special conditions. Weighing 301,500 lb. with 279,000 lb. on the drivers, they are the heaviest Consolidation locomotives ever constructed. The previous record for size with this type was made by the locomotives built by the Baldwin Locomotive Works for the Western Maryland and described in the *Railway Age*, May 13, 1921. In several particulars the weights and dimensions are the same for the two designs. Both have 27-in. by 32-in. cylinders, 61-in. drivers, 17-ft. 6-in. driving wheel base, and a rated tractive force of 68,200 lb. The Lehigh & New England locomotives have boilers with a larger grate area and more heating surface, which is reflected in the increase of 6,600 lb. in weight.

The height from the rail to the center of the boiler is 10 ft. 4 in. and to the top of the stack is 15 ft. 8½ in. The firebox is 126⅛ in. long by 96¼ in. wide, while the height from the bottom of the foundation ring to the crown sheet is 83½ in. at the front and 57¼ in. at the back, which gives a fair firebox volume and sufficient space for the application of a brick arch. There are 301 2-in. tubes and 50 5⅜-in. flues.

Dimensions, Weights and Proportions

Type	2-8-0
Service	Drag freight
Cylinders, diameter and stroke	27 in. by 32 in.
Valves, kind and size	Piston — 14 in.
Weights in working order:	
On drivers	279,000 lb.
On front truck	22,500 lb.
Total engine	301,500 lb.
Tender	184,100 lb.
Wheel bases:	
Driving	17 ft. 6 in.
Total engine	26 ft. 11 in.
Total engine and tender	65 ft. 2 in.
Driving wheels, diameter outside tires	61 in.
Boiler:	
Type	Straight top
Steam pressure	210 lb.
Fuel, kind	Soft coal
Diameter, first ring, inside	88 in.
Firebox, length and width	126⅛ in. by 96¼ in.
Tubes, number and diameter	301 — 2 in.
Flues, number and diameter	50 — 5⅜ in.
Tubes and flues, length	15 ft.
Grate area	84.3 sq. ft.
Heating surfaces:	
Firebox, including arch tubes	271 sq. ft.
Tubes and flues	3,395 sq. ft.
Total evaporative	3,666 sq. ft.
Superheating	901 sq. ft.
Comb. evaporative and superheating	4,567 sq. ft.
Tender:	
Water capacity	10,000 gal.
Coal capacity	16 tons
General data, estimated:	
Rated tractive force, 85 per cent	68,200 lb.
Cylinder horsepower	2,755 hp.
Boiler horsepower	2,420 hp.
Speed at 1,000 ft. piston speed	34 m.p.h.
Coal, rate per sq. ft. grate per hour	106 lb.
Weight proportions:	
Weight on drivers ÷ total weight engine	92.6 per cent
Weight on drivers ÷ tractive force	4.08 lb.
Total weight engine ÷ tractive force	4.42
Total weight engine ÷ cylinder horsepower	109.4 lb.
Boiler proportions:	
Boiler horsepower ÷ cylinder horsepower	87.9 per cent
Comb. heating surface ÷ cylinder horsepower	1.66
Tractive force ÷ comb. heating surface	14.93
Tractive force × dia. drivers ÷ comb. heating surface	911
Cylinder horsepower ÷ grate area	32.7

The total evaporative heating surface is 3,666 sq. ft., of which 271 sq. ft. is in the firebox. The superheater has 901 sq. ft. heating surface. The rated boiler capacity is 2,420 hp., or 88 per cent of the cylinder power, which is 2,755 hp.,

a proportion which has been found to be ample for the conditions under which these locomotives are operated.

Of the total weight of the locomotive 92.6 per cent is on the drivers and available for adhesion, whereas with the typical Mikado locomotive the weight on the drivers is nearer 75 per cent. The factor of adhesion is 4.08. The possibilities of excellent use of the weight by a Consolidation type is shown by the fact that the total weight is only 109.4 lb. per cylinder horsepower and 4.42 lb. per pound of rated tractive force, figures that can scarcely be equalled by a locomotive of the 2-8-2 type.

Two of these locomotives are hauling coal trains of 3,500 gross tons from Lansford to Pen Argyl, a distance of 54 miles, part of which is up a 0.5 per cent grade, at a speed of approximately 20 m. p. h. Two others are running out of Pen Argyl and handling 690 gross tons up a 2.75 per cent grade without difficulty. While no test runs have been made, it has been observed that these locomotives are free steamers, of ample boiler capacity and consume a conservative amount of fuel.

The leading dimensions, weight distributions and proportions of these locomotives are given in the accompanying table.

Another Perfect Package Campaign

THE USE OF STEEL strapping or wire binding on boxes of shoes, clothing, confectionery, groceries and other things is looked upon by many shippers, not as an added expense (as compared with boxes not reinforced) but as an improvement in service which more than pays for itself. This fact, demonstrated by extensive inquiry, is the salient point in a circular which has been issued by Lewis Pilcher, secretary of the American Railway Association's Committee on Freight Claim Prevention, and sent to boards of trade, chambers of commerce and other shippers' organizations all over the country. Whether or not Mr. Pilcher would call it a "campaign" we do not know; but his circular contains a picture showing a pile of a dozen boxes, properly strapped and wired, which might well enlist the careful attention of any shipper interested in getting his goods into the buyers' hands in the best possible condition. Perhaps this effort might be called a movement for super-perfect packages.

With merchants or manufacturers who have not carefully investigated the cost and the results of using adequate reinforcements on boxes, the first impression may be that such an addition to ordinary boxing is merely an extra expense to head off thieves, and, therefore, is of interest only to the carrier. The carrier must bear the loss if boxes are tampered with or stolen, therefore let him provide the protection. But the carrier cannot with any reasonable economy go into the shipper's packing-room; and even if he could, the objection of the shipper to his presence there would, usually, be strong. That is one reason for not asking the carrier to take action. Another is that the shipper will find that strapping and wiring are profitable, therefore he will not wish for anybody's assistance in the matter.

A business may be so small that this argument would not be susceptible of complete demonstration mathematically; and a saving, where it is accomplished, may sometimes show itself in so many different elements, or may be spread over such a considerable period of time, that only a careful study will give full assurance of success; but the essential fact remains, nevertheless. Mr. Pilcher gives parts of numerous letters received from shippers who are using wires and straps, from which we quote:

"We would not under any circumstances permit a case to leave our establishment unless fully strapped in accordance with our system. The result of this is shown by the few claims we have had in the past 20 years with railroads although we are one of the largest shippers in the industry."—Clothing manufacturer.

"We find that our claims for damages and losses of goods due to pilfering have been reduced to such an extent that we have almost forgotten how to make out claims for loss in transit. In considering the amount of goods lost and the number of claims that we made before using the straps, we think this in itself is worthy of consideration, also combining it with satisfactory service to our customers."—Manufacturing confectioner.

"We have been using steel band strapping on boxes of groceries for seven years and under no circumstances would we discontinue the use of it."—Large wholesale grocery house.

"Never had to file a claim for damage by bursted container—considered cheap insurance."—Phonograph manufacturer.

The Union News Company uses band strapping and finds "That had order complaints have been reduced 75 per cent."

"Our experience has been that this wire binding, even though it is only one strand to each case, strengthens it very considerably

Examples of Well-Protected Boxes

and transports it in a very satisfactory manner."—Drug house.

"Since using steel strapping, we have had very few claims for loss by pilferage and no complaints from customers owing to poor packing condition. Bands when placed on center of case give strength where most needed."—Manufacturer of underwear.

"Since using strapping our loss claims have been reduced 75 per cent."—Shipper of underwear.

The Freight Container Bureau, A. R. A., has made experimental studies of the strength of boxes, and Mr. Pilcher calls attention to the fact that a box of a given strength can often be made of thinner boards if reinforced by wire or strap, and the addition of these makes the package safer against theft. Pilferers show a marked preference for unprotected packages. The average buyer will give preference to the wholesaler whose shipments arrive uniformly in good condition. Wholesalers testify to the value of this element in holding custom. Its cost is small. With modern methods and apparatus, large cases of dry goods are strapped in less than a minute each.

Railroad men, of whatever branch of the service, who are interested in a smooth-working freight department, will do well to spread this information among all classes of shippers whose goods would be benefited by the improvement.

Labor Board Announces New Rules for M. of W. Men

Previous Orders Regarding Overtime Approved—Labor Member Dissents—Chairman Files Answer

NEW RULES governing the working conditions of maintenance of way employees and dealing specifically with the subjects of seniority, promotion and, in part, hours of service, overtime and call, were announced by the Railroad Labor Board during the past week. At the same time the Board approved its previous rulings on the subjects of punitive overtime, discipline and grievances and other miscellaneous conditions, bringing another dissenting opinion from A. O. Wharton, member of the labor group on the Board. In December, 1921, the Labor Board, in its Decision No. 501, promulgated a set of new rules to take the place of the old maintenance of way national agreement. The outstanding rules announced at that time included provisions for the payment of punitive overtime after the tenth hour, instead of after the eighth hour on continuous service as had been the case under the old national agreement, and for the revision of other rules of the national agreement so that the subjects involved might be left open for adjustment to fit peculiar local conditions. This decision was described in the *Railway Age* of December 17, 1921, page 1215.

The present ruling of the Board continues in effect the following articles and sections of this previous Decision No. 501:

All of Article I, involving the scope of the rule.

All of Article IV, involving questions of discipline and grievances.

Sections a1, a2, a3, a5, a6, a8, d1, d2, e, f, i, j, k2, l, m, n, o, p, q, of Article V, involving hours of service, overtime and calls.

Sections a to h, inclusive, and Section m of Article VI, involving general rules.

The new rules promulgated by the Board at this time include the following:

ARTICLE II—SENIORITY

Sec. (a) Seniority begins at the time the employee's pay starts.

Sec. (b) Rights accruing to employees under their seniority entitle them to consideration for positions in accordance with their relative length of service with the railroad, as hereinafter provided.

Sec. (c-1) Seniority rights of employees are confined to the subdepartment in which employed.

Sec. (d-1) Seniority rights of laborers, as such, will be restricted to their respective gangs, except when force is reduced laborers affected my displace laborers junior in service on their seniority district.

Sec. (d-2) Seniority rights of laborers to promotion will be restricted to the territory under the jurisdiction of only one supervisor or other corresponding officer, except that for laborers in the mechanical department such rights will be confined to the place where employed.

Sec. (e) Seniority rights of supervisory forces in the bridge and building department will extend over the territory under the jurisdiction of one division superintendent.

Seniority rights of supervisory forces in the track and roadway departments will extend over the territory under the jurisdiction of one roadmaster.

Seniority rights of supervisory forces over laborers in the maintenance of equipment department will extend over the territory under the jurisdiction of one master mechanic.

Sec. (f) Employees assigned to temporary service may, when released, return to the position from which taken without loss of seniority.

Sec. (g) Seniority rosters of employees of each subdepartment by seniority districts will be separately compiled. Copies will be furnished foremen and employees' representatives and be kept at convenient places available for inspection by employees interested.

Sec. (h) Seniority rosters will show the name and date of entry of the employees into the service of the railroad, except that names of laborers will not be included and their seniority rights will not apply until they have been in continuous service of the railroad in excess of six (6) months.

Sec. (i) Rosters will be revised in January of each year and will be open to correction for a period of sixty (60) days thereafter.

Sec. (j) Employees given leave of absence in writing by proper authority of the railroad, for six (6) months or less, will retain their seniority. Employees failing to return before the expiration of their leave of absence will lose their seniority rights, unless an extension has been obtained.

Sec. (k) When employees laid off by reason of force reduction desire to retain their seniority rights, they must file with the officer of the subdepartment notifying them of the reduction, their address, and renew same each sixty (60) days. Failure to renew the address each sixty (60) days or to return to the service within seven (7) days after being so notified, will forfeit all seniority rights.

Sec. (l) Employees temporarily transferred by direction of the management, from one seniority district to another will retain their seniority rights on the district from which transferred.

Sec. (m) In case of change in seniority districts, a relative proportion of the total employees affected will be transferred to, and their seniority rights adjusted in, the revised district, by the management, with a properly constituted committee representing the employees.

Sec. (n) Employees accepting positions in the exercise of their seniority rights will do so without causing extra expense to the railroad, except as provided in these rules.

ARTICLE III—PROMOTIONS

Sec (a) Promotions shall be based on ability, merit and seniority. Ability and merit being sufficient, seniority shall prevail; the management to be the judge.

Sec. (b) In transferring employees to fill vacancies or new positions, the provisions of section (a) of this article will apply.

Sec. (c) Employees are entitled to promotion only on the district and in the subdepartment over which their seniority rights prevail.

Sec. (d) Employees declining promotion shall not lose their seniority, except to the employee promoted and only in the next higher rank of service.

Sec. (e) Employees accepting promotion and failing to qualify within thirty (30) days may return to their former positions.

Sec. (f) New positions and vacancies will be bulletined within thirty (30) days previous to or following the dates such vacancies occur, except that temporary vacancies need not be bulletined until

the expiration of thirty (30) days from the date such vacancies occur.

Sec. (g) Promotions to new positions or to fill vacancies will be made after bulletin notice has been posted for a period of ten (10) days at the headquarters of the gangs in the subdepartment of employees entitled to consideration in filling the position, during which time employees may file their applications with the official whose name appears on the bulletin. The appointment will be made before the expiration of thirty (30) days from the date the bulletin is posted and the name of the employee selected will then be announced. New positions or vacancies may be filled temporarily, pending permanent appointment.

Sec. (h) The general rule of promotion and seniority will not apply to positions of track, bridge and highway crossing watchmen and flagmen at railway (non-interlocked) crossings, but, when practicable, such positions will be filled by incapacitated employees from any department, and reference in filling and retaining these positions will be determined by the degree to which incapacitated for other work, seniority in the service of the railroad and ability to perform the work.

ARTICLE V—HOURS OF SERVICE, OVERTIME AND CALLS

Sec. (c-1) The starting time of the work period shall be arranged by mutual understanding between the local officers and the employees' committee based on actual service requirements.

Employees' time will start and end at designated assembling points for each class of employees.

Sec. (h) Employees whose responsibilities and/or supervisory duties require service in excess of the working hours or days assigned for the general force will be compensated on a monthly rate to cover all services rendered, except that when such employees are required to perform work which is not a part of their responsibilities or supervisory duties, on Sundays or in excess of the established working hours, such work will be paid for on the basis provided in these rules in addition to the monthly rate. Section foremen required to walk or patrol track on Sundays shall be paid therefor on the basis provided in these rules in addition to the monthly rate.

Supervisory forces shall be compensated on the same overtime basis as the men supervised when the general force is required to work in excess of eight (8) hours per day.

Sec. (k-1) Where special work, not within the scope of this agreement, is done outside of regular work period and extra compensation agreed upon, overtime will not apply.

Sec. (r) Except as provided in these rules no compensation will be allowed for work not performed.

The request of the employees that a rule be incorporated in their agreements prohibiting the contracting of work to outside employees was denied by the board on the ground that its position with respect to this question "has been clearly and definitely set out in numerous decisions recently issued and that a further reiteration of such position is unnecessary."

A. O. Wharton Files Another Dissenting Opinion

Mr. Wharton, in his dissenting opinion, strenuously objected to the Board's reiteration of its ruling on overtime payments for service rendered on Sunday and seven designated holidays and establishing pro rate payments for the ninth and tenth hours when worked continuous with the regular work period.

After quoting under the caption "Lest We Forget" the recommendations of the Railroad Wage Commission, Mr. Wharton said:

The majority, in denying these employees punitive overtime rates for Sundays and the seven designated holidays and for service rendered in excess of eight hours, are at variance with the trend of modern thought. Wise employers have quite generally recognized the justice of the workers' plea. The federal, state, and municipal governments have almost uniformly recognized the principle of punitive payment for this overtime. Tribunals and boards of arbitration created and selected to pass upon this question are to be included in the long list, and society generally endorses this principle.

There is one notable exception, however, and that is the tribunal created by an act of Congress, obligated under oath to establish "just and reasonable" rates of pay and rules governing working conditions for railroad employees.

Railroad labor, notwithstanding the misstatements emanating from the paid propagandists in the employ of the so-called "hard boiled" group of carriers, does not seek preferential treatment, but does demand and has the right to expect fair and impartial consideration. That much and more they are entitled to.

Of course there is discontent and unrest among railroad employees when an examination of the decisions of this Board will disclose that there has been but one decision issued during its existence that represented any betterment of their conditions of employment, and that decision (Decision No. 2, increasing wage rates, effective May 1, 1920), did not give consideration to the increase in the cost of living by 16 per cent, primarily due to the fact that the information was not available until a date subsequent to the findings of the Board; but the employees never benefited from that fact in any subsequent decision of the Board. This statement must not be construed to mean that the Board has not rendered decisions sustaining employees in many of the disputes filed for decision; it does mean that all other decisions rendered represented no improvement over conditions which had been previously established by and through the various organizations representing employees, or were less favorable than the rules of existing contracts provided.

B. W. Hooper Defends Majority's Ruling

An answer to Mr. Wharton's dissenting opinion in the form of a statement by B. W. Hooper, chairman of the Board, was also attached to the decision. After pointing out that he had not voted for the rule providing for pro rata rates of pay for Sunday and holiday work because of his belief that time and one-half should be paid for Sunday work, *except* such work as is unavoidably and regularly performed on Sundays, and which is absolutely essential to the continuous operation of the railroad (the principle embraced in the Sunday and holiday rule of the shopmen), Mr. Hooper said:

The statement in his dissenting opinion to the effect that there is discontent among railroad employees, because they have not retained under the decisions of the Labor Board everything of rules and wages that they obtained during government control is not impressive. Practically nobody else in this country has succeeded in maintaining the prices and conditions of work and business built up during the stress of that abnormal period. Railroad labor and its representatives could well afford to mingle with their regrets over the comparatively little they lost a large degree of self congratulation over the great advances they have retained. In view of the sufferings and losses of the farmers and producers of the country, from which railroad labor has been largely exempt, the railway employees could consistently subdue their unrest and devote their enthusiastic exertions to the efficient service of the people who are paying for it.

It must also be remembered that many of the carriers have not been pleased with decisions of the Labor Board. Some of the most important decisions that have ever been rendered by the Board were favorable to the employees. For example, the Pennsylvania case and the contract cases, in both of which the Department of Justice at Washington is defending the rights of the employees on up to the Supreme Court.

When the constituted authorities are being criticized, for denying some of the contentions of a given class of citizens, it would be refreshing to make occasional mention of the fact that the same authorities have been equally as zealous in upholding the rights of that class. A degree of fairness along this line would obviate class hatreds, allay unrest, and strengthen loyal patriotism.

News Letter No. 9 has been issued by the Railway Fire Protection Association, E. A. Ryder, president, containing news items and other matters which have come to the attention of the officers since the annual meeting last October. Fires in freight cars constitute the subject of a short article in which operating officers are urged to see that empty cars, when left unattended, have their doors shut. One prominent road, in nine months, has recorded 28 fires in freight cars, with considerable losses; and of this number, 12 were discovered in cars with open doors. In view of experiences had on a number of roads during the past summer in the construction or management of temporary barracks for shopmen, there has been appointed a committee on emergency housing, of which P. A. Bissell, 65 Kilby street, Boston, Mass., is chairman. One of the suggestions in this pamphlet is that the sessions of the association, on the occasion of the annual conventions, should be limited to two hours in the morning and two hours in the afternoon "so that there would be less strain and tiresomeness."

A List of Salaries of Railroad Officers

Senate Committee Publishes Compilation Giving Compensation Before and After Federal Control

A LIST OF THE SALARIES of railroad officers, attorneys, publicity agents, and other employees receiving compensation amounting to $5,000 or more during the calendar years 1914 and 1917, and proportionate compensation for the ten months, March 1 to December 31, 1920, and for the first six months of 1921, together with the amounts and dates of any increase or decrease between March 1, 1920 (the date of the return of the roads from federal control), and June 30, 1921, is published in Volume 5 of the report of the hearings before the Senate committee on interstate commerce in its general railroad investigation under Senate resolution No. 23. The hearings were concluded on June 19 but the report has just been printed. The information as to salaries, etc., published as an appendix to the report, was furnished in sworn statements by the railroad companies, the entire list occupying 241 pages. Following is a list of the presidents or chairmen and also of other officers receiving at the rate of $20,000 or more per annum as shown in the report. There are some duplications in the printed list where men held various positions at different times and in some cases the total compensation can be found only by combining salaries received on various roads comprising a single system. Apparently also one or two roads reported the full year's compensation for the ten months of 1920 and the first six months of 1921 as the amounts shown are the same in both cases, and there are some other apparent errors in the compilation.

Some large roads are missing from the report. In some cases footnotes to the tables state that reductions in salaries were made later in 1921. Of all the officers named in this list about 50 received increases and about ten received decreases for the same position following the return of the roads.

The Navajo Limited: 23d Street, Chicago, December 16. Eight Persons Injured

P. & A. Photo

Union Pacific Locomotive No. 7000 About to Start from Cheyenne

General News Department

The American Society of Civil Engineers will hold its seventieth annual meeting at the Engineering Societies' Building, New York, on January 17, 18 and 19, 1923.

Seven sleeping cars overturned and 40 persons injured, none seriously, is the substance of a press dispatch of December 20 reporting the derailment near Allenhurst, Ga., of southbound passenger train No. 83 of the Atlantic Coast Line.

Senator Capper's resolution calling upon the Interstate Commerce Commission to furnish detailed information concerning excess earnings of the railroads that have earned net returns of over 6 per cent, was adopted by the Senate on December 15.

One trainman was killed and two trainmen and 15 passengers were injured on December 14, when Minneapolis, St. Paul & Sault Ste. Marie passenger train No. 3, northbound, from Chicago to Minneapolis, collided with a southbound freight train near Thorpe, Wis.

A bill to abolish the Railroad Labor Board by repealing sections 300 to 316 of the Transportation Act was introduced in the Senate on December 16 by Senator King of Utah.

S. Davies Warfield, president of the National Association of Owners of Railroad Securities, has issued a statement outlining the association's program for effecting economies in railroad operation and urging that Congress act at the present session on the recommendations made by President Harding in his recent address to Congress, many of which were based on the suggestions of the association.

The Transportation Brotherhoods' National Bank opened for business at Minneapolis, Minn., on December 19. This bank is owned by members of the brotherhoods of railroad enginemen and trainmen and is the sixth bank in the United States owned and operated by members of railroad labor unions. The president of the bank is Warren S. Stone, chief of the locomotive engineers, and the executive vice-president is W. P. Kennedy, general chairman, on the Chicago, Milwaukee & St. Paul Railway of the Brotherhood of Railroad Trainmen.

A Correction

In last week's issue of the *Railway Age* it was announced that the next annual meeting of Division VI, Purchases & Stores, of the American Railway Association would be held in Chicago on May 22, 1924. This is incorrect. The meeting will be held on May 22, 1923.

Eastern Presidents' Conference to Broaden Scope of Public Relations Work

The Eastern Presidents' Conference has decided to broaden the scope of its public relations work and to this end has retained Robert S. Binkerd, who has resigned as assistant to the chairman of the Association of Railway Executives, to take charge of the work. Mr. Binkerd will enter upon his new duties on January 1, 1923, and will have his headquarters at 143 Liberty street, New York.

M. & N. A. Strikers Lose All Rights

Former employees of the Missouri & North Arkansas who went on strike about two months ago following their refusal to accept the wage offered by the road under the decision of the Labor Board, have lost all rights as employees of the road, according to a ruling of the Federal court at Harrison, Ark., in which the temporary injunction against picketing was made permanent. All relationship that the former employees may have sustained to the company has ceased, according to the decision. The temporary injunction which is now made permanent was issued in July, and covered all the road's property in Arkansas.

I. C. C. to Hold Hearing on New York Terminal Plan

The Interstate Commerce Commission has ordered an investigation "in the matter of efficient, economical and joint use of terminals of common carriers in the Port of New York District and the cost to carriers of operating the terminals in performance of common-carrier services." The railroads serving the port are made respondents and the investigation is instituted for the purpose of determining what, if any, order should be made by the commission in connection with the carrying out of the comprehensive plan of the Port of New York Authority for the development of the port of New York. No date has been announced for any public hearing. The Port Authority proposes the construction of extensive belt railroads in New Jersey to connect the different railroad yards and ocean terminals, and its members have complained that the railroads are lacking in sympathy toward the project.

Convictions for the Needles Tie-Up

In the United States District Court at Los Angeles, California, on December 20, eight railroad employees on trial for conspiracy to interfere with interstate commerce were found guilty, by a jury, and are to be arraigned for sentence on December 26. The charge was that defendants had plotted to tie up traffic on the Atchison, Topeka & Santa Fe [at Needles, Calif.] last August by causing a walkout of trainmen. More than a thousand passengers were marooned several days, in intensely hot weather, and much freight and mail were delayed. The defendants said the walkout was justified because of defective equipment and the presence of armed guards at terminals. The Government contended that the walkout was brought about to assist the shopmen then on strike.

Telegraph and Telephone Section Elects Officers

The officers chosen for the ensuing year by the Telegraph & Telephone section of the American Railway Association at its meeting in Chicago last week were as follows: Chairman, R. F. Finley, superintendent telegraph, New York Central; first vice-chairman, I. C. Forshee, telegraph and telephone engineer, Pennsylvania System; second vice-chairman, G. D. Hood, superintendent of telegraph, Chicago, Rock Island & Pacific; members of the Committee of Direction: J. H. Brennan, superintendent telegraph, St. Louis-San Francisco; G. A. Cellar, general superintendent telegraph, Pennsylvania System; C. A. Plumly, superintendent telegraph, Baltimore & Ohio; H. A. Shepard, general superintendent electric transmission and communication, New York, New Haven & Hartford; C. E. Davies, general traffic superintendent, Canadian National Telegraphs; W. Rogers, telegraph and telephone engineer, Missouri Pacific.

It was decided that the officers of the Railway Telegraph & Telephone Appliance Association, which met in conjunction with the Telegraph and Telephone section should retain office during the coming year. These officers are as follows: Chairman, J. Warren Young, Kerite Insulated Wire & Cable Co., New York; vice-chairman, F. W. Bayles, New York Telephone Company, New York; secretary and treasurer, G. A. Nelson, Waterbury Battery Company, New York; members of the executive committee, B. A. Kaiser, American Telegraph and Telephone Company, New York; W. T. Kyle, Page Wire & Steel Company, New York; J. W. Hackett, Okonite Company, New York; Wallace L. Cook, Reliable Electric Company, Chicago; E. V. Adams, Western Electric Company, New York, and D. H. Morris, Ohio Bell Telephone Company, Columbus, Ohio.

Operating Statistics of Large Steam Roads—Selected Items for the Month of October, 1922,

Region, road and year		Average miles of road operated	Train-miles	Locomotive-miles: Principal and helper	Locomotive-miles: Light	Car-miles: Loaded (thousands)	Car-miles: Per cent loaded	Ton-miles (thousands): Gross. Excluding locomotive and tender	Ton-miles (thousands): Net. Revenue and non-revenue	Average number of locomotives on line daily: Serviceable	Unserviceable	Per cent unserviceable	Stored

$10,000,000 D. & R. G. W. Issue Authorized

The United States District Court has authorized the Denver & Rio Grande Western to issue $5,000,000 of receiver certificates to run for two years at six per cent and $5,000,000 of equipment trust notes to run for 15 years and to bear not to exceed 6½ per cent interest. Of the $10,000,000, $6,000,000 will be spent for equipment which will include 10 Mountain type locomotives, 10 heavy Mallet locomotives, 5 narrow-gage Mallet locomotives, a 150-ton wrecking derrick, a 175-ton narrow gage wrecking derrick, a narrow gage rotary snow plow, 500 stock cars, 100 narrow gage stock cars, 350 coal cars and miscellaneous equipment. The remainder of the $10,000,000 authorized in certificates and notes will be expended in improving the various lines. These improvements include new rail, ballasting, lengthening side tracks, yard improvements, water stations and additions to shop facilities, principally at the Burnham and Salt Lake terminals.

Revenues and Expenses for October

The Interstate Commerce Commission's summary of railway revenues and expenses for October and 10 months of 1922 (193 Class I roads) is as follows:

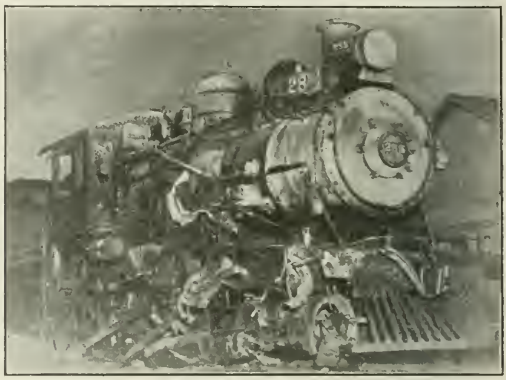
Item	October 1922	October 1921	Ten Months[1] 1922	Ten Months[1] 1921
Average number of miles operated	235,192.62	235,150.38	235,368.31	235,011.30
Revenues:				
Freight	$406,105,599	$401,951,413	$3,253,395,823	$3,296,896,869
Passenger	[2] 90,133,399	[3] 88,903,056	[4] 892,789,742	[5] 982,697,055
Mail	7,515,998	7,359,842	74,076,744	78,625,027
Express	18,755,980	12,178,757	112,784,602	82,728,318
All other transportation	16,240,598	15,917,948	146,641,440	136,856,033
Incidental	10,634,632	9,994,617	94,470,631	99,219,683
Joint facility—Cr.	886,838	595,615	8,297,277	6,357,028
Joint facility—Dr.	221,148	179,594	1,802,860	1,435,732
Railway operating revenues	550,051,896	536,722,654	4,580,653,399	4,681,944,281
Expenses:				
Maintenance of way and structures	68,957,275	72,661,765	617,111,915	653,201,561
Maintenance of equipment	130,408,463	112,191,535	1,024,418,667	1,058,558,504
Traffic	7,245,129	6,904,722	71,817,484	70,588,922
Transportation	205,891,873	189,465,425	1,767,289,149	1,924,445,014
Miscellaneous operations	4,174,925	3,936,269	39,806,196	41,509,392
General	13,044,812	13,285,351	130,299,242	140,906,559
Transportation for investment—Cr.	750,212	486,272	5,479,136	4,910,596
Railway operating expenses	428,972,265	397,958,795	3,645,263,517	3,884,269,356
Net revenue from railway operations	121,079,631	138,763,859	935,389,882	797,674,925
Railway tax accruals	27,014,299	25,825,334	254,935,753	235,416,521
Uncollectible railway revenues	42,014	175,652	1,065,847	1,059,469
Railway operating income	94,023,318	112,762,873	679,388,282	561,198,935
Equipment rents—Dr. balance	6,835,917	5,762,476	49,488,689	45,546,289
Joint facility rent—Dr. balance	1,932,435	1,479,621	15,582,324	16,238,890
Net railway operating income	85,254,966	105,520,776	614,317,269	499,413,756
Ratio of expenses to revenues (per cent)	77.99	74.15	79.58	82.96

[1] Does not include Boston & Albany, the revenues and expenses of which are included in New York Central report.
[2] Includes $2,880,164, sleeping and parlor car surcharge.
[3] Includes $2,658,395, sleeping and parlor car surcharge.
[4] Includes $27,237,711, sleeping and parlor car surcharge.
[5] Includes $27,362,471, sleeping and parlor car surcharge.

The Disaster at Humble, Tex.

The number killed or fatally scalded in the collision on the Southern Pacific at Humble, Tex., reported in our last issue, was 21; and some of the 14 injured were at last accounts in a critical condition. The killed were nearly all in the negro car, and steam from the damaged switching engine, rushing in through an open window, caused all or nearly all the deaths. All other windows of the coach were closed. It was believed that if some or all the rest had been open, the scalding would have been less severe. The collision occurred about 10 p. m. The switching locomotive, which got in the way of the passenger train (Train 28, Engine 255) had been laid up for the night, in charge of a watchman. This watchman had to supply the locomotive with water and with fuel oil; and to do this it appears that he moved it; but he is held to have moved it from one track to another when he should not have done so; and in this movement, in some way not explained, he moved it afoul of the main track.

Of the killed or fatally injured, four were white passengers and 14 were negro passengers; to which are to be added the conductor, the news agent and a porter.



International

Engine No. 255 After the Collision

The man who was in charge of the yard engine, J. H. Smith, is about 60 years old. The reports indicate that he was in such a nervous condition that his narrative was not wholly intelligible; but one account, based on statements made by Smith, says that the locomotive started unattended toward the main track, while Smith was in his shanty; and that he jumped to the engine and tried to reverse it in season to prevent fouling of the main track. The passenger train was approaching at moderate speed but there was a dense fog so that the engineman could not see far ahead.

"Railway Engineering and Maintenance"

Effective January 1, 1923, the name of the Railway Maintenance Engineer will be changed to Railway Engineering and Maintenance. At the same time, the number of editorial pages will be increased to permit the inclusion of more information relative to the design, construction and maintenance of railway bridge, building and water service facilities.

Since the establishment of the Maintenance of Way section in the *Railway Age* in 1911 and its development into the Railway Maintenance Engineer in 1916, there has developed a closer contact between engineering and maintenance, until today they are merged on many railroads. This increasingly intimate relationship has been apparent in the Roadmasters' Association, the Bridge and Building Association and the American Railway Engineering Association. It has also been reflected in the editorial contents of the Railway Maintenance Engineer and its circle of readers, until today this paper is read by nearly every railway officer of technical or practical training in charge of the construction and maintenance of roadway and structures. The new name has been adopted in order to indicate more accurately the nature of the editorial contents and the character of the readers of this publication.

The additional attention which will be given to bridge, building and water service problems is a recognition of the increasing importance of these phases of railway construction and maintenance. By increasing the number of editorial pages these developments will be treated more adequately without detracting in any way from the space now devoted to the problems of track construction and maintenance, or eliminating any other features now appearing in the publication.

Electrification—Installation and Operating Costs

Steam Road Electrification was the title of an address presented by A. H. Armstrong, chairman electrification committee, General Electric Company before the New York Electrical Society on Tuesday, December 19 at the Engineering Societies' Building in New York. Mr. Armstrong stated that the saving in coal effected by electric operation should offset the additional cost of the electrical equipment. Electrical operating facilities exclusive of locomotives, he stated, cost just about as much as the electric locomotives themselves, while steam locomotive operating facilities, not required when a road is electrified, cost about one-half as much as the locomotives. Electrification, he said, in a given case, should save about 20 per cent in operating costs as compared with steam, 12 per cent of which was effected by reduced maintenance costs.

Mr. Armstrong also elaborated upon the better known advantages of electric operation such as increased track capacity, improved terminal facilities, improved operation, etc. He also pointed out the fact that the great majority of steam road terminals were of a necessity on the outskirts of cities and he stated that electrified terminals centrally located would minimize truck competition.

Short Line Association Establishes Purchasing Agency at Chicago

The Consolidated Purchasing Agency of the American Short Line Railroad Association, which was organized in June, 1921, with James W. Caiin as manager of purchases, was removed from Washington to Chicago, on December 1, 1922, and is now located in the Railway Exchange Building. This change was necessitated by the increased volume of business being handled by this department of the association, which can best be taken care of from a more central point. There was also need of being located in an industrial and railroad center to facilitate procuring materials and equipment more promptly. Chicago was chosen in order that the agency might be able to keep in constant contact with manufacturers and secure the best class of used cars and locomotives direct from the trunk lines.

The membership of the American Short Line Railroad Association consists of slightly less than 500 different railroads, which in combination represent over 25,000 miles of main line tracks and an investment of over $1,000,000,000. These roads vary from small logging lines a few miles in length up to interstate carriers of several hundred miles, and include Class 2 and Class 3 roads.

While the consolidated purchasing agency assumes no financial responsibility, being unincorporated and without working capital, it acts as an agency for combining the purchases of these different railroad companies and for negotiating prices on a volume basis instead of the retail basis on which the individual small railroad has heretofore purchased its supplies. There has been no attempt to cover all purchases, but instead the agency has proceeded conservatively and confined its efforts during the first year to those materials which were either standard or susceptible of standardization. For example, purchases of rails have been made in 500-ton lots and distributed to member lines in less than 500-ton shipments, which gave them the same advantage as the purchaser of 500 tons and over. Likewise, spikes and bolts are purchased in carload lots, and even though a small road may need only 25 kegs it derives the benefit of the carload price. Besides purchasing, the agency aids in the sale of materials which the short lines do not need and arranges the exchange of equipment among the roads. To expedite the work of the agency a department of new equipment and materials, one of second hand equipment and one of industrial development was formed.

During its existence the agency has proved its value to the short lines, not only in purchasing and exchanging, but in the selection of equipment best suited to the most efficient operation of these lines. As a result the scope of the organization has reached such proportions that it is necessary to develop a more extensive organization. Accordingly plans are being considered wherein three regional offices will be opened during the next year, one in the East, one in the South and one on the Pacific coast, which will facilitate the distribution of materials shipped in carload lots and reconsigned.

After an investigation covering the greater part of a year, augmented by answers to questionnaires sent to all member lines throughout the United States and Canada, the consolidated purchasing agency made recommendations and placed orders for over a quarter of a million dollars' worth of gasoline railway motor car equipment, representing some 20 cars, which are showing excellent results on the different lines and which are replacing steam passenger trains.

Through the activities of the manager of purchases, a finance corporation is now being organized under direction of the association, whereby member lines and others may acquire motor car equipment under a lease purchase plan, making it possible for the equipment to pay for itself through the saving effected. This corporation will be ready to function by the first of the year, at which time formal announcement will be made.

Work is also progressing satisfactorily in the direction of arranging for standard designs of cars and locomotives, whereby substantial economies may be effected. It will also be possible by using standard designs to arrange financing on a basis that could not be done where a variety of different designs were contemplated. Through the consolidation of the requirements of these lines, the quantity will be sufficient to justify liberal prices and terms.

Just as fast as these different problems are worked out, others will be taken up, such as combining the fuel requirements in different districts, grouping the insurance, and possibly evolving policies giving more complete coverage than heretofore; conversion of coal burning equipment to oil, where the combined locomotives are sufficient to justify lower prices and enable financing of the equipment; and other such innovations which make for economy.

Central Pacific Hearing Concluded

The hearing before Commissioners Meyer and Potter of the Interstate Commerce Commission on the Southern Pacific's application for authority to retain the Central Pacific was concluded on December 14 with the testimony of Harold K. Faye, traffic manager of the Western Pacific, who asked that if the Southern Pacific is authorized to acquire the Central Pacific, care should be taken to insure that the Western Pacific will be entitled to the same treatment by the Southern Pacific so far as joint through rates on both transcontinental and local traffic are concerned, as is accorded the Central Pacific. He took no position for or against the Southern Pacific's application, but pointed out the handicaps under which the Western Pacific and its shippers now work because the Southern Pacific does not participate with it in the making of through rates. There are practically no through rates locally in California between points on the Southern Pacific and on the Western Pacific, he said, and the combination of locals restricts largely the ability of producers and manufacturers located on the Western Pacific to ship to and from points off that line in competition with those located on the Southern Pacific. Also there are similar restrictions as to the application of through transcontinental rates. Asked what would be the effect on interchange between the Union Pacific and Western Pacific at Salt Lake City if the Union Pacific should acquire the Central Pacific, Mr. Faye said he did not know; but he said it would be much against the public interest for the Union Pacific to close that gateway, and he doubted if it would do it. In reply to questions by Commissioner Potter he said that from the standpoint of competition his experience with the local California situation would indicate that the competition offered to the public if the Central Pacific were controlled by the Southern Pacific would not be materially different from that which would be offered if the Central Pacific were independent and he could not conceive of the competition between the Central Pacific and the Western Pacific being any stronger than it is now.

The last witness for the Union Pacific was H. M. Bischoff, general agent of the Chicago & North Western at Chicago, who testified that there was no co-operation between the Southern Pacific and North Western soliciting agents at Chicago in soliciting prospective business for the Ogden route. He said he did not know the Southern Pacific general agent at Chicago and the Southern Pacific was regarded as a competitor because of its interest in the southern route. He was cross-examined by F. H. Wood, commerce counsel for the Southern Pacific, to show that the Southern Pacific might work with other lines out of Chicago for business to be routed over the Union Pacific and the Ogden route.

Traffic News

The Traffic Club of New England, at its meeting in Boston on December 13, elected as president of the club, Charles B. Baldwin of the United Shoe Machinery Corporation, in place of Gerrit Fort. Mr. Baldwin is regional vice-president of the National Industrial Traffic League.

The Baltimore & Ohio now accepts shipments of milk collect using a "collect milk-cream waybill," supplanting the former rule requiring prepayment. By a new system of invoice billing for the return of empty cans a complete record is kept showing the exact time when delivered to the railroad.

A committee of 21 to study problems of the farmer, including marketing and transportation, was authorized by the Wisconsin Manufacturers' Association, at Milwaukee, Wis., on December 14. President Carl A. Johnson will appoint five representatives of agriculture, five dairymen, five bankers and five manufacturers and will himself be chairman of the committee.

The Bureau of Service, National Parks & Resorts, maintained by the Chicago & North Western-Union Pacific system, offers for sale for use as a Christmas present, a prepaid certificate covering railroad fare and all expenses, including hotel accommodations and motor trips, for a 27-day tour to Southern California. The tour may begin leaving Chicago on the Los Angeles Limited either January 6 or 27 or February 17.

Bituminous Coal Production

Production of soft coal continues at a daily rate of approximately 1,900,000 tons. The output for the week ended December 9 is estimated at 11,389,000 tons, including lignite, coal coked, mine fuel, and local sales, according to the weekly bulletin of the Geological Survey. Preliminary reports of cars loaded the first four days of last week indicated a small decline on account of lay-off in some union districts on Tuesday, miners' election day. The estimated cumulative production of bituminous coal this year to December 9, inclusive, stands at 376,826,000 tons, or 2 per cent less than in the corresponding period of 1921.

Anthracite Shipments for November

Shipments of anthracite for the month of November, as reported to the Anthracite Bureau of Information, Philadelphia, amounted to 6,420,102 gross tons, as compared with 5,314,014 tons during the corresponding month last year—an increase of 1,106,088 tons. November of this year showed a slight decrease from October, but average shipments for the days the mines were in operation exceeded those of October.

Shipments by originating carriers were as follows:

	November, 1922	November, 1921	October, 1922
P. & R.	1,224,990	1,017,409	1,266,092
L. V.	1,109,449	913,737	1,166,195
C. of N. J.	583,835	512,613	617,668
D. L. & W.	896,182	814,131	936,375
D. & H.	876,861	756,598	828,216
Penna.	546,214	429,638	579,306
Erie	706,747	503,488	701,270
N. Y., O. & W.	161,660	136,945	179,865
L. & N. E.	314,164	229,455	292,941
Total	6,420,102	5,314,014	6,567,928

Post Office Department Finds Many Late Trains

Elaborate plans made by the Postoffice Department for the use of freight cars for parcel post holiday business are being frustrated, according to a statement issued by the Postoffice Department Information Service, through "delays in the arrival of trains and the failure of the railroads to furnish readily the necessary cars at the desired points. Late trains are resulting in the loss of the utilization of hundreds of cars for many hours."

"A freeze-up at any of the larger terminal freight yards or a bad snow would make matters even worse," the statement continued. "Already many complaints of delay in daily delivery of the regular mails are being received. Many trains are arriving at destination from three to eight hours late. Important connections are failing and causing delays all along the line. The trouble is not confined to any particular road or locality but has become quite general.

"One important mail train from New York missed connection eight times within a month, delaying the delivery of mails in certain industrial centers as much as 24 hours."

Freight Commodity Statistics

The Bureau of Statistics of the Interstate Commerce Commission has issued a statement showing by districts the freight tonnage transported by Class I railways for the quarter ended September 30, 1922. Below will be found a comparison, by general classes of commodities, of the tonnage transported in 1921 with that transported in 1922:

	Number of tons originated		
Class of commodities	Quarter ended Sept. 30, 1921	Quarter ended Sept. 30, 1922	Per cent of increase, 1922 over 1921
Products of agriculture	31,920,709	28,135,979	*11.86
Animals and products	5,919,002	6,473,191	9.36
Products of mines	139,807,662	138,830,954	*.70
Products of forests	17,312,655	22,539,851	30.19
Manufactures and miscellaneous	46,208,214	61,955,035	34.08
Merchandise—All L. C. L. traffic	11,133,525	11,020,382	*1.02
Total	252,301,767	268,955,383	6.60

	Total tons carried		
Products of agriculture	59,612,632	52,584,337	*11.79
Animals and products	10,378,917	11,015,159	6.13
Products of mines	233,031,729	227,565,940	*2.35
Products of forests	33,845,769	42,429,882	25.36
Manufactures and miscellaneous	87,585,753	116,425,428	32.93
Merchandise—All L. C. L. traffic	17,425,904	17,879,418	2.60
Total	441,880,704	467,900,164	5.89

*Decrease.

For the nine months ended September 30 the number of tons carried this year was 1,293,628,322, an increase of 4.2 per cent as compared with last year.

No Congestion of Christmas Mail

Daily telegraphic reports received by the Post Office Department on December 20 from the 15 railway mail service divisions revealed no congestion of the Christmas mails at any point in the United States, according to a statement issued by the department's Information Service.

A marked improvement in the operation of trains was also a feature of the dispatches. Several of the divisions reported heavy increases in the holiday mails over last year, Atlanta showing an estimated gain of 50 per cent and San Francisco 30 per cent. At Omaha the Union Pacific was compelled to run a special mail train of 13 refrigerator cars loaded solidly with mail for Western points making a total of 19 as compared with 15 cars hauled in a single day over the same line last year. A summary of these telegrams received by the department today from its railway mail divisions follow:

ATLANTA: Heavy holiday mails. Fifty per cent increase over same period last year. Mails moving promptly.

BOSTON: Mails moving freely. Indications are early mailing campaign successful and may not have as pronounced peak as in former years.

NEW YORK: No congestion in terminals in and around New York city nor at Albany, Binghamton, Buffalo, Philadelphia and Harrisburg. Weather conditions so far favorable to prompt distribution and dispatch of mails.

WASHINGTON, D. C.: No unusual amount of unworked mail. Number of storage cars dispatched today was 71 as compared with 50 last year.

CINCINNATI: No congestion and no unworked mail. Many trains running late.

CHICAGO: Conditions favorable. No congestion or unworked mail. Empty equipment situation much improved.

ST. LOUIS: Trains running badly but no congestion nor unworked mail.

KANSAS CITY, MO.: Conditions satisfactory throughout division. No congestion. Mails heavy. Weather fine.

SAN FRANCISCO: No unworked mail. No congestion on lines nor terminals. Mails moving early to Eastern points. Estimated increase over last year over thirty per cent.

CLEVELAND: No congestion. Unworked mails normal. Terminals in good condition. Indications are for very heavy run of mail tonight and tomorrow.

ST. PAUL: Condition throughout division satisfactory. No unusual reports of unworked mail and no congestion. Storage mails continue heavy and trains experiencing difficulty in maintaining schedules on account of excessively cold weather.

FORT WORTH: No congestion of mails in district.

NEW ORLEANS: No congestion.

SEATTLE: Conditions are good. No congestion at any point in district Trans-continental trains running from two to ten hours late.

OMAHA: All terminal lines and platforms clear. Trains running much better. On account of car shortage Union Pacific running second section of Train Three as mail special with 13 refrigerator cars loaded solid with mail for Ogden and points west making total 19 storage cars as against 15 last year.

PITTSBURGH: Operation of trains better today. No congestion of mails. No unworked mail.

Commission and Court News

State Commissions

The order of the Alabama Public Service Commission requiring passenger fares in that state to be reduced on December 15 to three cents a mile was suspended on December 11 by a temporary injunction procured by the railroads from the United States District Court.

Personnel of Commissions

I. C. C. Members Reappointed

President Harding on December 20 sent to the Senate the nominations of C. C. McChord and Joseph B. Eastman for reappointment as members of the Interstate Commerce Commission. Their terms expire at the end of the year. Mr. McChord, who is now chairman, has been a member of the commission since 1910 and Mr. Eastman has been a member since 1919.

Court News

Trailer Car Not An Appurtenance Within Boiler Inspection Act

The Mississippi Supreme Court holds that a trail car constructed and equipped like an ordinary flat car, but used exclusively in pushing cars onto a transfer boat to prevent the great weight of the locomotive from being placed on the apron of the boat, is not an "appurtenance" of the locomotive and tender within the meaning of the Boiler Inspection Act. The action was for injuries sustained by being thrown from a defective footboard on the trailer.—A. W. (Miss.) 62 So. 161.

Not Liable for Explosion of Powder Left in Car by Consignee

The Utah Supreme Court holds that railroad cars used in the ordinary course of business do not come within the class of instrumentalities that may be designated as attractive nuisances. A railroad company was therefore held not liable for injuries to a boy from the explosion of powder which he found in a car where it had been left by the consignee, who unloaded the car a short time before the accident, the railroad company having no knowledge that the powder was in the car. The company had the right to assume that the consignee had removed all the powder. The car was not in a public place where children or others had a right to pass.—Bogdon v. Los Angeles & Salt Lake (Utah), 205 Pac. 571.

United States Supreme Court

Indiana Statute Requiring Settlement of Damage Claims in 90 Days Held Valid

An Indiana statute of 1911 provides for the presentation of claims for loss or damage to freight transported wholly within the state within four months and for payment or rejection by the railroad within 90 days therefrom, failing which the claim shall stand admitted as a liability. The Supreme Court of the United States holds that the statute is not unconstitutional as in violation of the due process clause of the Fourteenth Amendment. The court holds untenable the contention that by the statute, in case of suit by a claimant, he is excused from establishing his claim. "If the claim is just, there is no injustice in requiring its payment; if the claim is deemed by the company to be unjust, the statute requires a declaration of the fact by its rejection. Upon rejection, suit, of course, must be brought for it and it must be established. No penalty is imposed for its rejection nor increase of its amount in consequence of rejection."—Southern Ry. Co. v. Clift. Opinion by Mr. Justice McKenna. Decided December 4, 1922.

Foreign Railway News

Ireland Considers Consolidation of Railways

Plans are being made in the Irish Free State to consolidate all the railways into one or two systems, according to press dispatches from Dublin. A bill to that effect will, it is said, be introduced shortly in the Irish parliament.

British Railways in Conference With Unions

Conferences between representatives of the managements of the British railways and the National Union of Railwaymen and the Associated Society of Locomotive Engineers and Firemen are in progress looking toward a modification of certain phases of the national agreements with these unions. In the event that the conferees fail to reach an agreement, it is likely that the question will be submitted to the National Wages Board for adjudication.

Another Electrification Combine in Britain

An agreement is rumored, according to The Engineer (London), between Sir W. G. Armstrong-Whitworth & Company, locomotive builders, and the British Thompson-Houston Company, electrical manufacturers, whereby the former will undertake to build electric locomotives and rolling stock and the latter electrical equipment, power stations, etc. for railway electrification. Two other strong groups similarly organized already exist in England, viz. the Vickers group and the Poiver & Transport Finance Company, which is backed by the North British Locomotive Company and the English Electric Company.

Peru Ratifies Dansmuir Concession

The Peruvian chamber of deputies has ratified the Dunsmuir railway concession with certain reservations, according to dispatches to the Wall Street Journal. After approval by the Peruvian senate the company will have six months in which to place a bond issue for 1,245,000 Peruvian pounds sterling ($5,278,000 at present exchange rates). The proceeds will go to Peruvian government and the concessionaires will receive a monopoly on tobacco which is expected to yield sufficient profit to provide for railway construction.

Nine lines of railway will be built and operated by the concessionaire on his own account. At the end of a period of 45 years these lines revert to the government unless the concessionaire desires to purchase them at cost price. The tobacco monopoly reverts to the government after 33 years. It yields a profit of some $2,500,000 per annum.

The concessionaire, moreover, is to receive as an outright gift of government lands 15½ miles on each side of the railway, in lots of 12,356 acres each, the government retaining and the company receiving alternate lots. Construction must proceed at a minimum rate of 93 miles a year.

French-Built Electric Locomotive Undergoes Test

A trial run of a French built electric locomotive was recently conducted by the French Ministry of Public Works. This locomotive is the first of a series of 50 which are to be built on a standardized design for railroad service between Dax and Toulouse, a distance of 220 miles. They will be constructed by the Société des Construction Mecaniques which recently established works at Tarbes where 900 men are now employed.

It is expected that the section of the Midi Railway between Dax and Toulouse will be completely electrified during 1923. Progressively the whole of the Midi, P. L. M. and Orleans systems representing a total of about 5,750 miles of line, will be similarly transformed. This scheme for the electrification of the railways is being carried out in conjunction with the undertaking for the utilization of the rivers Rhone and Dordogne for the development of electric power, generally. The substitution of electricity for steam as a motive power on the railroads will enable France, according to official estimates, to reduce her imports of coal by about 3,000,000 tons a year.

Equipment and Supplies

Locomotives

THE DENVER & RIO GRANDE WESTERN has ordered one narrow gage rotary snow plow from the American Locomotive Company.

THE NEW YORK, CHICAGO & ST. LOUIS is inquiring for 10 switching locomotives, 10 Mikado type and 8 Pacific type locomotives.

THE SNOQUALMIE FALLS LUMBER COMPANY, Snoqualmie Falls, Wash., has ordered one Prairie type locomotive from the Baldwin Locomotive Works.

THE LEHIGH VALLEY, reported in the *Railway Age* of November 18 as inquiring for 30 locomotive tenders, has ordered this equipment from the American Locomotive Company.

THE MESABA CLIFFS IRON MINING CO., Ishpeming, Mich., has ordered three 6-wheel switching locomotives from the American Locomotive Company. These locomotives are for 19 by 26 in. cylinders.

THE CHICAGO, BURLINGTON & QUINCY, reported in the *Railway Age of* November 18 as inquiring for 50 Mikado type and 10 Santa Fe type locomotives, has ordered this equipment from the Baldwin Locomotive Works.

Freight Cars

THE TENNESSEE CENTRAL is inquiring for 1,000 composite gondola cars.

THE BALTIMORE & OHIO is asking for bids for the repair of 2,000 box cars.

THE AMERICAN TURPENTINE & TAR CO., New Orleans, La., is inquiring for one tank car.

THE TEXAS-LOUISIANA PRODUCING & CARBON CO., Monroe, La., is inquiring for three insulated tank cars of 8,000 gal. capacity.

THE DENVER & RIO GRANDE WESTERN is inquiring for 500 stock cars of 40 tons' capacity, 100 narrow gage stock cars and 350 coal cars.

THE MUSCLE SHOALS, BIRMINGHAM & PENSACOLA, reported in the *Railway Age* of December 16 as inquiring for 50 box cars and 50 flat cars, is also inquiring for 50 hopper cars and 50 gondola cars of 50 tons' capacity.

THE CHICAGO & NORTH WESTERN is inquiring for 3,000 single sheath box cars of 80,000 lb. capacity with steel underframes and upper frames and 200 steel underframe milk cars with standard refrigerator car type bodies and four wheel passenger type trucks.

THE UNION PACIFIC, reported in the *Railway Age* of December 9 as asking for bids on 5,000 refrigerator cars, has ordered 1,000 from the Pullman Company, 1,000 from the General American Car Company, 1,030 from the Pacific Car & Foundry Company, 1,500 from the Standard Steel Car Company, and 500 from the Mt. Vernon Car Company.

Passenger Cars

THE PERE MARQUETTE has ordered two dining cars from the Pullman Company.

THE CENTRAL OF NEW JERSEY is inquiring for three, 70 ft. combination mail and express cars.

THE MISSOURI PACIFIC is inquiring for 13 suburban coaches and 4 combination passenger and baggage cars, 63 feet long.

THE PHILADELPHIA & READING, reported in the *Railway Age* of December 2 as inquiring for 45 steel suburban passenger coaches and 5 steel suburban combination passenger and baggage cars, has ordered this equipment from the Bethlehem Shipbuilding Corporation, Harlan Plant.

THE NEW YORK CENTRAL, reported in the *Railway Age* of December 16 as having placed orders for 60 cars for passenger service, has purchased 125 additional cars as follows: 20 multiple unit steel passenger motor cars, 20 coaches and 10 baggage cars from the Standard Steel Car Company; 30 baggage cars and 20 coaches from the American Car & Foundry Co.; 15 combination passenger and baggage cars and 10 coaches from the Pressed Steel Car Company.

Iron and Steel

THE PENNSYLVANIA RAILROAD has ordered 500 tons of steel for bridges from the Fort Pitt Bridge Co.

THE MISSOURI PACIFIC has ordered 700 tons of structural steel from the Virginia Bridge & Iron Company.

THE FT. DODGE, DES MOINES & SOUTHERN has ordered 238 tons of structural steel from the American Bridge Company.

THE BOSTON & MAINE is inquiring for some structural steel for use on locomotive shops now building at Concord, N. H.

THE CHESAPEAKE & OHIO, reported in the *Railway Age* of November 25 as inquiring for 500 tons of steel for bridges, has ordered 400 tons from the Phoenix Bridge Company.

Machinery and Tools

THE DELAWARE, LACKAWANNA & WESTERN expects to buy shortly a total of about 27 machine tools including engine lathes and a number of miscellaneous tools for its shops at East Buffalo, N. Y. and at Gravel Place, Pa, also for its locomotive shops at Kingsland, N. J.

Miscellaneous

THE GREAT NORTHERN is inquiring for 2 all steel air operated spreaders equipped with ballast spreading and ditching attachments.

THE KANSAS CITY SOUTHERN has awarded a contract to the Truscon Steel Company, Chicago, for the sash to be used in the reconstruction of its shops at Pittsburg, Kan.

MISSOURI PACIFIC.—This company has closed bids for the installation of sprinkler systems for fire protection at its shops at St. Louis, Mo.; Nevada, Crane and Poplar Bluff.

THE NEW YORK CENTRAL has asked for bids for two inclined freight elevators for Pier D, North river, foot of Sixtieth street, New York City, also for fence wire, posts and parts for installing same.

THE CANADIAN PACIFIC has ordered a new passenger steamship for use between Canada and Australia, to be completed in 20 months. The vessel will be of 20,000 tons gross register, 600 ft. long and 72 ft. beam, four screws turned by Diesel engines.

THE MISSOURI PACIFIC has awarded a contract to the Railroad Water and Coal Handling Company, Chicago, for the underground work connected with the installation of sprinkler systems for fire protection in its shops at St. Louis, Mo., Nevada, Crane and Poplar Bluff.

THE NEW YORK CENTRAL is asking for bids until 12 o'clock noon, December 28, for its requirements until April 1, 1923, on the line Buffalo and East, of fuel oil (paraffine base), gasoline, long time burning semaphore oil, turpentine, substitute, coach candles, mineral seal oil, common black oil, West Virginia black oil and gas oil.

J. W. GREEN, a former member of the Brotherhood of Locomotive Engineers, has sued the Brotherhood for $50,000 damages in connection with his expulsion from the Brotherhood for alleged disloyal remarks; and in court at Selma, Ala., on December 13, a jury is said to have given him a verdict for $40,000.

Supply Trade News

E. F. Pride, secretary and assistant treasurer of the **Standard Coupler Company,** New York, has been elected treasurer and **C. T. Lynch** has been elected secretary.

A. P. Dennis, who has been officially connected with the Standard Coupler Company, New York, since its organization, has resigned as vice-president and treasurer.

The Railroad Supply Company, Chicago, has arranged with the Valley Electric Company to take charge of exclusive railroad sales of Valley rectifiers used in signal service.

The Ingersoll Rand Company and the **A. S. Cameron Steam Pump Works,** New York, have opened a branch office at 718 Ellicott Square building, Buffalo, N. Y. This new office is equipped to render full service to those interested in the numerous products manufactured by these companies.

Peter A. Frasse & Company, Inc., New York City, has been appointed exclusive eastern distributor for the electric carbon, alloy and tool steels in bars, billets and die blocks manufactured by the Sizer Steel Corporation with plants at Buffalo, N. Y., and Solvay, N. Y. (Syracuse), combined with the equipment of the Frasse Steel Works, Inc., Hartford, Conn., for cold finishing and heat treating. The Frasse Steel Works, has been appointed the exclusive New England distributor for the Sizer Steel Corporation.

Herbert Hall Hewitt, president of the Hewitt Rubber Company, Buffalo, N. Y.; the Magnus Company, Inc., New York.; the Reading Car Wheel Company, Reading, Pa., and the St. Thomas Brass Company, St. Thomas, Ont., died at his home in Buffalo on December 19. Mr. Hewitt had been in poor health for two years. He was born on January 19, 1855, at Detroit, Mich., and entered the employ of the Pullman Company when he was about 20 years old and later became manager of that company. He subsequently went to Buffalo where he established the Buffalo Brass Company and the Union Car Works. The latter company later became the Buffalo Car Works of the American Car & Foundry Company. Mr. Hewitt was the inventor of several railroad appliances. He had served as president of the Magnus Company since its organization in 1899 and was formerly a director of the Seaboard National Bank and the Mechanics and Metals National Bank of New York City and at the time of his death was a director of the Marine Trust Company, Buffalo.

Major Frank S. Robbins, who recently returned from the Orient after serving as a mechanical adviser for the Inter-Allied Technical Board at Harbin, Manchuria, has joined the forces of the **Pittsburgh Testing Laboratory** at Pittsburgh, Pa., having been appointed railway representative of this organization. After graduating from Purdue University, Major Robbins began his railroad work in 1900 as a machinist's apprentice for the Pennsylvania Railroad at its Meadow Shops, and continued in its service until March, 1921. At the time the company's locomotive testing laboratory was opened at Altoona, Major Robbins was assigned to work at that place. Subsequently, he occupied positions as motive power inspector, assistant road foreman of engines, assistant master mechanic and master mechanic, his last appointment being master mechanic of the Pittsburgh Terminal division. During the war, he served with the 19th Engineers and later was commanding officer of the 65th Engineers and acted as superintendent of motive power of the 16th Grand Division of the Transportation Corps.

Obituary

William J. Clark, advisory manager of the railway department of the General Electric Company, died at his home in New York City on December 12 at the age of 68. Mr. Clark had been connected with the company for 34 years; his headquarters were at the New York City office of the company.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, which was reported in the *Railway Age* of December 16 as contemplating the construction of a second track on the Albuquerque division for 8.6 miles between Dalies, N. M., and Rio Puerco and for 32.6 miles between Perea, N. M., and Defiance, has awarded the contract to Sharp & Fellowes of Los Angeles, Cal., and will begin construction upon the completion of the second track work now under way at Griffith, Ariz.

CANADIAN NATIONAL.—This company will construct a connection approximately 29½ miles long, between the Canadian Northern Ontario Railway near Longlac, Ont., and the National Trancontinental Railway near Nakina. Longlac is on the Canadian Northern main line between Montreal and Winnipeg, 480.7 miles northwest of North Bay, while Nakina is 52.25 miles west of Cochrane. The distance from Winnipeg to Montreal, via the National Trancontinental to Nakina, the proposed connection to Longlac, and the Canadian Northern to Montreal, will be 1,357 miles as compared with 1,411 via the Canadian Pacific, and 1,459 via the Canadian Northern through Port Arthur. The distance from Winnipeg to Toronto will likewise be reduced to 1,207 miles, via the new line, as compared with 1,257 miles, via the National Trancontinental to Cochrane and the Temiskaming & Northern Ontario, and 1,309 miles, via the Canadian Northern line through Port Arthur. This route will also eliminate the necessity of dropping down from the height of land to Lake Superior at Port Arthur and rising again at Winnipeg.

CHESAPEAKE & OHIO.—This company is reported to have approved the construction of a 90 ft. by 242 ft. two story fruit terminal station at Cincinnati, O., to cost approximately $240,000.

CHICAGO, ROCK ISLAND & PACIFIC.—This company will construct a 24 ft. by 115 ft. passenger station at Carlisle, Ark., to cost approximately $15,000.

GULF, COLORADO & SANTA FE.—This company is constructing with company forces a 32 ft. by 80 ft. frame freight station, with platform at McGregor, Tex., to cost approximately $5,250, to replace a warehouse which was recently destroyed by fire.

ILLINOIS CENTRAL.—This company is considering plans for the construction of a new freight house and passenger station at Covington, Ky., to replace one which was recently destroyed by fire with a reported loss of $100,000.

ILLINOIS CENTRAL.—This company contemplates the construction of a new single track line from Edgewood, Ill., to the Ohio river at Metropolis and the reconstruction of its line from that point to Fulton, Ky., a total distance of approximately 175 miles. The present bridge of the Chicago, Burlington & Quincy and the Nashville, Chattanooga & St. Louis at Metropolis will be used. The new line will be about 20 miles shorter than the present route via Centralia, Ill., and Cairo, and will avoid heavy grades on the existing line.

UNION PACIFIC.—This company has completed plans for the immediate construction of shops and yards at Los Angeles, Cal., to cost approximately $1,750,000. The new terminal will include an enginehouse, locomotive shops, freight car shops, coach shops, yards and related facilities.

Boston & Albany Authorizes $4,000,000 Station at Springfield, Mass.

The Boston & Albany has authorized a new station at Springfield, Mass., estimated to cost about $4,000,000. Bids will be called for as soon as detailed plans can be completed. It is estimated that approximately three years will be required to complete the work which includes the station proper, an office building, a baggage, mail and express building and a new interlocking system, besides platforms, tracks, subways, etc. Nine tracks with 20 ft. platforms and canopies will be provided at the station.

Railway Financial News

ALABAMA GREAT NORTHERN.—*Authorized to Procure Authentication and Delivery of Bonds.*—This company has been authorized by the Interstate Commerce Commission to procure the authentication and delivery of $500,000 of first mortgage 5 per cent gold bonds to be held in the treasury.

ANN ARBOR.—*Pennsylvania Leases Terminals.*—The Pennsylvania Railroad has entered into a 100-year contract with the Ann Arbor for the use of the latter's terminals in Toledo, Ohio, and its road to the Michigan state line.

CAROLINA, CLINCHFIELD & OHIO.—*Bonds Sold.*—A syndicate composed of Blair & Co., Inc., Ladenburg, Thalmann & Co., Cassatt & Co., Spencer Trask & Co., Redmond & Co. and A. G. Becker & Co., has sold $8,000,000 first and consolidated mortgage 30-year 6 per cent bonds at 96½ and interest, to yield about 6.25 per cent.

CHESAPEAKE & OHIO.—*Van Sweringens Negotiating for Control.*—Negotiations are reported under way between O. P. Van Sweringen, of Cleveland, and H. E. Huntington, chairman of the Chesapeake & Ohio board, for the purchase of the latter's holdings in the road.

The Van Sweringen interests control the New York, Chicago & St. Louis, the Toledo, St. Louis & Western and the Lake Erie & Western.

CHICAGO & ALTON.—*Protective Committee Formed.*—A preferred and common stockholders' protective committee has been formed to safeguard these holders in the reorganization. An agreement is being prepared and stockholders are urged to deposit holdings to obtain the benefits of concerted action. Walter T. Rosen, of Ladenburg, Thalmann & Co., is chairman of the committee, and the other members are: Franklin Q. Brown, of Redmond & Co.; George Woodruff, vice-president of the National Bank of the Republic, of Chicago; Edward A. Pierce, of A. A. Housman & Co., and Hugh K. Prichitt, of Prichitt & Co. Feiner, Maass & Skutch are attorneys for the committee and S. O. Levinson is counsel. Thomas F. Thornton, of 66 Pine street, New York, is secretary of the committee.

CHICAGO, PEORIA & ST. LOUIS.—*Asks Authority to Abandon Line.*—The receivers have filed an application with the Interstate Commerce Commission for authority to abandon this company's entire line from Pekin to East St. Louis, Ill., with branches from Havana to Jacksonville and from Lock Haven to Grafton, a total of 237 miles. The application says that since federal control the company has been unable to pay its operating expenses from revenues. It was unable to pay its taxes amounting to $120,000 due on April 1, 1922. The taxing authorities of Illinois have been threatening the sale and forfeiture of the property and the receivers are unable to sell receivers' certificates.

DEATH VALLEY.—*Authorized to Issue and Sell Capital Stock.*—This company has been given permission by the Railroad Commission of California, to issue and sell from time to time at not less than par, its capital stock in an amount not exceeding $99,100 and to use the proceeds to retire at maturity at the rate of exchange then prevailing, 277 first mortgage, 5 per cent, sterling sinking fund bonds. The proceeds are to be used in conjunction with the company's sinking fund in retiring the bonds.

ERIE.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $2,800,000 of 5 per cent equipment trust certificates to be issued by the Commercial Trust Company of Philadelphia, and to be sold at not less than 97.

GEORGIA, ASHBURN, SYLVESTER & CAMILLA.—*Authorized to Issue Stock.*—This company has been authorized by the Interstate Commerce Commission to issue $405,000 of common stock for the purpose of acquiring and rehabilitating the railroad purchased from the Hawkinsville & Florida Southern.

GREAT NORTHERN.—*Reduces Dividend.*—The directors have declared a semi-annual dividend of $2.50 a share, payable February 1 to stock of record December 29. This compares with $3.50 a share declared in June, last.

See editorial in this issue entitled "On a 5 Per Cent Basis."

INTERNATIONAL-GREAT NORTHERN.—*Purchased by St. L.-S. F.*—See article on another page of this issue entitled "Frisco Buys International-Great Northern."

MISSISSIPPI EXPORT.—*Asks Authority to Operate Line.*—This company has applied to the Interstate Commerce Commission for a certificate authorizing it to operate a line from Pascagoula to Evanston, Miss., 42 miles, formerly operated by the Alabama & Mississippi Railroad.

MISSOURI, KANSAS & TEXAS.—*Lines Sold.*—The McKinney-Shreveport branch was sold at Greenville, Tex., on December 16 to representatives of Cook & Nathan Co., investment brokers of New York, who are said to hold an agreement to transfer the property to William Edenborn, president of the Louisiana Railroad & Navigation Company. The price was $700,000, the minimum bid fixed by the federal court, which ordered the line sold.

Representatives of J. & W. Seligman & Co., and Hallgarten & Co., the reorganization managers who purchased the Oklahoma properties of the Missouri, Kansas & Texas, have purchased the Texas lines for $6,500,000 and the Wichita Falls & Northwestern, a subsidiary road, for $2,220,300.

The reorganization of the Missouri, Kansas & Texas was approved on December 19 by the Public Service Commission of Missouri. The new name of the road is Missouri-Kansas-Texas Railroad Company.

NORFOLK SOUTHERN.—*Additional Loan Approved.*—The Interstate Commerce Commission has approved an additional loan to this company of $355,000 to aid it in the purchase of reconstructed freight cars.

PENNSYLVANIA.—*Leases Ann Arbor Terminals.*—See Ann Arbor.

READING COMPANY.—*Authorized to Assume Liability.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability as guarantor for $500,000 of 4 per cent first mortgage bonds of the Philadelphia & Frankford.

SOUTHERN PACIFIC.—*Settles With Railroad Administration.*—This company has effected a final settlement with the Railroad Administration covering the accounts arising from federal control, by which it has received from the director general $9,250,000.

ST. LOUIS-SAN FRANCISCO.—*Purchase of I.-G. N.*—See article on another page of this issue entitled "Frisco Buys International-Great Northern."

Dividends Declared

Baltimore & Ohio.—Preferred, 2 per cent, semi-annually, payable March 1 to holders of record June 13.

Canada Southern.—1½ per cent, semi-annually, payable February, to holders of record December 29.

Cleveland, Cincinnati, Chicago & St. Louis.—Common, 1 per cent; preferred, 1¼ per cent, quarterly; both payable January 20 to holders of record December 29.

Detroit River Tunnel.—3 per cent, semi-annually, payable January 15 to holders of record January 8.

El Paso & Southwestern.—1½ per cent, quarterly, payable January 2 to holders of record December 26.

Great Northern.—$2.50, semi-annually, payable February 1 to holders of record December 29.

Kansas City Southern.—Preferred, 1 per cent, quarterly, payable January 15 to holders of record December 30.

Northern Central.—4 per cent, semi-annually, payable January 15 to holders of record December 30.

Philadelphia & Western.—Preferred, 1¼ per cent, quarterly, payable January 15 to holders of record December 31.

Pittsburgh & Lake Erie.—$2.50, semi-annually, payable February 1 to holders of record January 11.

Trend of Railway Stock and Bond Prices

	Dec. 19	Last Week	Last Year

Average price of 20 representative railway bonds	85.10	85.31	80.98

Railway Officers

Executive

Eugene Fox, general traffic manager of the El Paso & Southwestern, with headquarters at El Paso, Tex., has been elected vice-president in charge of traffic, with the same headquarters, effective January 1, 1923.

L. E. Martin, whose promotion to assistant to the president of the St. Louis-San Francisco was reported in the *Railway Age* of November 18, was born on December 12, 1872, at South Olive, Ohio. He entered railway service on June 1, 1892, as a clerk and stenographer in the stores department of the Kansas City, Ft. Scott & Memphis, with headquarters at Kansas City, Mo. He was promoted to maintenance clerk in the office of the general superintendent at Kansas City in January, 1899, and when the Kansas City, Ft. Scott & Memphis was taken over by the Frisco in August, 1901, he was transferred to Springfield, Mo., as chief clerk to the superintendent of bridges and buildings. He later was transferred to the office of the division engineer. He was promoted to assistant chief clerk to the general superintendent in August, 1906, and was transferred to the office of the senior vice-president at St. Louis, Mo., in December, 1908. He was promoted to chief clerk in the same office in May, 1911, and two years later was transferred to the office of the receiver and chief operating officer. During the period of Federal control he was assistant to the general manager with headquarters at St. Louis, Mo. When the roads were returned to private operation in March, 1920, he was appointed chief clerk to the president and held this position until November of this year, when he was promoted to assistant to the president.

L. E. Martin

Resignations on Central New York Southern

Roger B. Williams, Jr., has resigned as president, director and member of the executive committee of the Central New York Southern, effective December 20, 1922. R. B. Williams has resigned as vice-president and director and T. P. Clancy has resigned as director, treasurer, assistant secretary and general manager. In resigning the above mentioned officers have made the following statement in explanation:

"In 1917 the effective control of the corporation, through an agreement at that time deemed necessary, passed into the hands of Messrs. Ford, Bacon & Davis of New York, by virtue of their possession of stock. Certain differences of opinion have arisen between the resigning officers and those in control, culminating in the passage of a resolution of the board of directors committing it to an abandonment of the railroad. The resigning officers feel that such abandonment would be injurious to the property and inimical to the interests of the communities served which have become so largely dependent upon the railroad for transportation. They also feel that such action should not be taken without first exhausting all practical means of preserving the property as a going concern, and that such means had not been exhausted at the time the resolution was passed. While resisting by their arguments and votes the passage of the resolution they were powerless to prevent it. In these circumstances they found it impossible to continue official connections with the corporation and by so doing appear to aid in an attempt to carry into execution a policy to which they are utterly opposed. They have also severed all connections with the Ithaca Traction Corporation, and the Withburn Corporation, all of the stock of each of these corporations being owned by the Central New York Southern Railroad Corporation."

Financial, Legal and Accounting

J. C. Stineman, chief claim agent of the Michigan Central, with headquarters at Detroit, Mich., has been appointed chief claim agent of the New York Central lines, with headquarters at Chicago, Ill., and Indianapolis, Ind., succeeding W. H. McGarr, who has resigned to engage in other business.

Operating

G. W. Leslie has been appointed general manager of the Ohio & Kentucky, with headquarters at Cannel City, Ky.

J. W. Martz, whose promotion to superintendent of the Third division of the Denver & Rio Grande Western, with headquarters at Gunnison, Colo., was reported in the *Railway Age* of December 2, was born on September 19, 1867, at Crawfordsville, Ind. He entered railway service as a locomotive fireman on the Union Pacific at Ellis, Kan., in 1885. He entered the service of the Denver & Rio Grande as a brakeman in 1888, and served in this capacity and as a conductor until 1909 when he was promoted to trainmaster on the First division, with headquarters at Denver, Colo. He was promoted to assistant superintendent with the same headquarters in 1915 and held this position until November 23, 1922, when he was promoted to superintendent of the Third division.

J. H. Aydelott, whose promotion to general superintendent of the Illinois district of the Chicago, Burlington & Quincy, with headquarters at Galesburg, Ill., was reported in the *Railway Age* of December 2, was born in Jersey county, Ill., in 1883. He entered railway service as a stenographer and clerk in the mechanical department of the Chicago, Burlington & Quincy, at Brookfield, Mo., in September, 1902. In 1908, he was promoted to chief clerk to the division superintendent at St. Joseph, Mo., and in 1911, was transferred to the office of the general superintendent at St. Louis, Mo. A year later he entered the office of the general manager at Chicago in the same capacity, and held this position until 1916, when he was promoted to trainmaster, with headquarters at La Crosse, Wis. He was promoted to division superintendent, with headquarters at Hannibal, Mo., in 1917, and during the next three years was transferred to Omaha, Neb., and Casper, Wyo. He was promoted to assistant superintendent of transportation, with headquarters at Chicago in 1920, and a year later was promoted to superintendent of transportation, with the same headquarters, which position he held at the time of his recent promotion to general superintendent.

I. H. Luke, whose promotion to assistant chief operating officer of the Denver & Rio Grande Western, with headquarters at Denver, Colo., was reported in the *Railway Age* of December 2, was born in Tama county, Iowa. He entered railway service in 1877, in the maintenance of way department of the Missouri Pacific. He became a telegraph operator on July 1, 1881, and was promoted to chief dispatcher on December 1, 1889. From June 1, 1896, to December 1, 1902, he was division superintendent at Concordia, Kan., and Sedalia, Mo. During the next five years he was superintendent of the Second and Third divisions of the Denver & Rio Grande, with headquarters at Salida, Colo., and on October 1, 1907, he left the employ of this road to become superintendent of the Kansas City Southern, with headquarters at Texarkana, Tex. He returned to the Denver & Rio Grande as superintendent of the First division on January 6, 1910, but accepted the general managership of the Missouri, Oklahoma & Gulf, with headquarters at Muskogee, Okla., on October 10 of the same year. He returned to the Denver & Rio Grande on September 1, 1911, as superintendent of the Fourth division, with headquarters at Alamosa, Colo., and in January, 1913, was transferred to the Second division, with headquarters at Salida. His appointment as superintendent of the Salt Lake division

on November 1, 1913, was followed on February 1, 1917, by his acceptance of the position of vice-president and general manager of the Utah Railway with headquarters at Salt Lake City, Utah. On October 1, 1918, he returned to the Denver & Rio Grande as general superintendent of Utah lines, with headquarters at Salt Lake City, and held this position until his recent appointment as assistant chief operating officer, with headquarters at Denver, Colo.

Traffic

H. J. Niemann, whose promotion to general freight agent of the Alabama & Vicksburg and the Vicksburg, Shreveport & Pacific, with headquarters at New Orleans, La., was reported in the *Railway Age* of November 18 (page 965), was born in New Orleans, La., on January 25, 1885. He entered railway service as a messenger in the general freight office of the Southern Pacific at New Orleans on September 1, 1902, which position he held until January 24, 1906, when he entered the employ of the Alabama & Vicksburg and the Vicksburg, Shreveport & Pacific as assistant rate clerk in the local offices at New Orleans. He was promoted to chief clerk in the office of the freight traffic manager in 1916, and remained in that capacity until the war. During federal control he was a traffic representative in the corporate offices of the Alabama & Vicksburg and the Vicksburg, Shreveport & Pacific at New Orleans, La. With the return of the roads to their owners on March 1, 1920, he was appointed assistant general freight agent, with the same headquarters, which position he was holding at the time of his recent promotion.

H. J. Niemann

A. E. Reilly, whose promotion to general western passenger agent of the Pere Marquette with headquarters at Chicago was reported in the *Railway Age* of December 2 (page 1070), was born on July 16, 1876, at Chicago, Ill. He entered railway service in January, 1891, as a messenger in the freight office of the Grand Trunk at Elsdon, (Chicago) Ill. He became a telegraph operator at the same place in 1893, and during the next four years served as telegraph operator and agent at various points on the Grand Trunk. He entered the city ticket office at Chicago as a ticket seller and passenger agent in June, 1897, and held this position until 1900, when he was promoted to rate clerk in the passenger office. He subsequently was promoted to chief rate clerk and chief clerk in the same office. In 1918 he was transferred to Detroit as chief clerk in the passenger department of the consolidated railroads under Federal control, whose headquarters were in that city. During the period of government operation he became more closely allied with the Pere Marquette, and when the roads were returned to their owners on March 1, 1920, he remained with the Pere Marquette as chief clerk in the general passenger office at Detroit, which position he held at the time of his recent promotion to general western passenger agent.

A. E. Reilly

F. T. Alexander, ticket agent at the consolidated ticket office at Louisville, Ky., has been promoted to division passenger agent of the Louisville & Nashville, with headquarters at Atlanta, Ga., succeeding H. C. Bailey, deceased.

Mechanical

H. L. Hanna has been appointed mechanical engineer of the New York, Chicago & St. Louis with headquarters at Cleveland, Ohio, succeeding T. A. Lawes, retired.

Purchasing and Stores

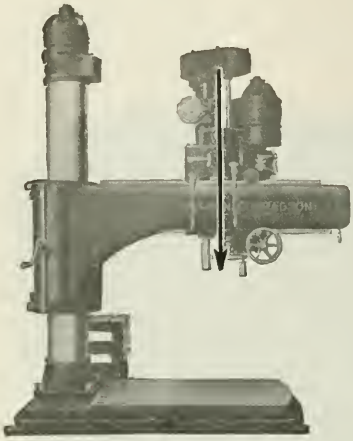
C. S. Williams has been appointed stationer of the Southern Pacific lines, with headquarters at Houston, Tex., succeeding H. O. Koch, deceased.

Obituary

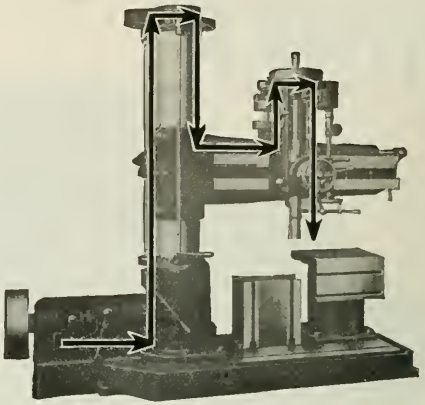
L. L. Dawson, who was superintendent of motive power of the Ft. Worth & Denver City, with headquarters at Childress, Tex., until his retirement in 1918, died on December 11 at Champaign, Ill. He was born on February 5, 1863, in London, England. He came to the United States when a boy and entered railway service in February, 1880, as a machinist's apprentice in the shops of the Illinois Central at Champaign, Ill. He received various promotions until he was made foreman of the shops at Champaign, in May, 1892. He was promoted to general foreman of shops at Louisville, Ky., in January, 1897, and a year later he was promoted to master mechanic at Memphis, Tenn. He held this position for several years until his appointment as superintendent of motive power of the Ft. Worth & Denver City, which position he held at the time of his retirement. Since 1918, he has lived on his plantation at Greenwood, Miss.

F. E. Batturs, assistant passenger traffic manager of the Southern Pacific, with headquarters at San Francisco, whose death on December 7, at Washington, D. C., was reported in the *Railway Age* of December 16, was born on August 27, 1870, at San Francisco, Cal. He entered railway service in April, 1886, as an office boy in the general passenger department of the Southern Pacific. He was promoted to clerk in the same department and held this position until August, 1892, when he was placed in charge of the division of rates in the general passenger department. He was transferred to the ticket audit office in charge of rates and divisions in June, 1894, and held this position until May, 1899, when he was promoted to chief clerk to the assistant general passenger agent. On February 1, 1904, he was appointed assistant general passenger agent of Morgan's Louisiana & Texas, and the Louisiana Western, with headquarters at New Orleans, La., and was promoted to general passenger agent of these lines in January, 1905. Four years later he returned to the Southern Pacific, Pacific System, as assistant general passenger agent with headquarters in San Francisco, Cal. He was promoted to general passenger agent of the Southern district, with headquarters at Los Angeles, Cal., in March, 1911, and was transferred to San Francisco in April, 1915. He was promoted to assistant passenger traffic manager, with headquarters at San Francisco, on September 1, 1918, and held this position until the time of his death.

The Pennsylvania Railroad finds that the annual athletic meets of its employees have been a real and useful means of cultivating the "Pennsylvania family" spirit; and, as evidence of this, cites a recent experience of the editor of the Pennsylvania News. This editor received from each one of a score of his readers the same citation from H. G. Wells' Outline of History; a passage in the history of Greece, wherein he says that the Greek people were held together, not by political organization or a constitution but by common speech, traditions, epics, religion, and, still more important, the Olympian games, that were held every four years. These games were held regularly for more than 1,000 years.



R-C STRAIGHT LINE DRIVE
power flows in one direction



STANDARD RADIAL DRIVE
power changes direction 7 times

New Locomotives Create A Maintenance Problem

NOW that the higher capacity, more economical locomotive has arrived, railroad men are concerned with its maintenance.

In the Ryerson-Conradson twin motor radial, they have found a machine equal to the emergency. In the Round-the-Corner drive of the standard radials, power changes direction seven times between the motor and the spindle. On the R-C Straight line drive, power flows in but *one* direction. (Note the arrows.)

In the R-C Spindle Drive, four shafts and sixteen gears replace the thirteen shafts and thirty-three gears of other standard types.

This elimination of nine shafts and seventeen gears saves a large percentage of power which on other drives is lost through friction of many moving parts.

Friction means wear; wear means breakdowns, repairs and replacement; and breakdowns, repairs and replacements cost money and delay the return of much-needed power to the road.

R-C Straight-line-drive will operate on either AC or DC current. Write for bulletin 4,001 giving full information.

The rust tax

ALL taxes cut into gross earnings, and by no means the least of these is the rust tax.

This is the tax, amounting to millions of dollars each year, paid out by the railroads of the country to replace the enormous tonnage of iron and steel eaten away by rust.

There is, however, one essential difference between the rust tax and other taxes. Much of the rust tax can be eliminated.

Simply by using a pure, rust-resisting iron wherever possible in its equipment, a railroad can reduce its rust tax materially.

That's why for locomotive jackets, boiler tubes, cars, tanks, fences, culverts, and hundreds of other items, many railroads are using "Armco" Ingot Iron.

"Armco" Ingot Iron resists rust because it is a commercially pure iron. In fact, it is the purest iron manufactured in commercial quantities. Gauge for gauge and finish for finish, it outlasts steel under the same conditions.

If you will write us, mentioning the equipment which you contemplate ordering, we shall be glad to tell you where "Armco" Ingot Iron should be used.

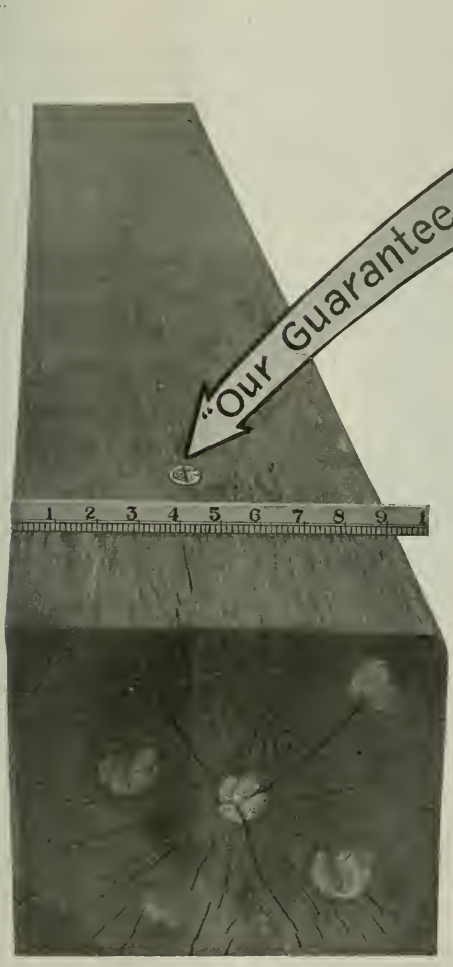
Quality Ties—Permanently Marked With the I.C.C. Co. Dating Nail



THE International Company produces only full size, sound ties, properly treated.

To substantiate our willingness to assume full responsibility for our ties—EVERY International Tie is permanently marked with the I. C. C. Co. dating nail. We are thus staking our reputation upon the service rendered by these ties in Track.

This automatically makes every International Tie a Test Tie. The I. C. C. Co. dating nail will identify International Ties at any future date and demonstrate their supremity over "just ties" by the long and dependable service they render under the gruelling pounding of heavy rolling loads. It is Tie life and Tie service that count,—only Quality Ties will answer in these days of economy. Look for the identification. If it's an International Tie it's a quality Tie.

Every International Tie is a Standard Specification Tie.

Getting Facts

One of the largest and most representative railroads in the United States, wishing to get actual facts on the lubrication question, devoted a full year's service test to lubricants claiming to be "good as Galena."

A check was kept, not only on the cost of the oils, but on the class of service rendered by them——on the number of hot boxes and driving journals, on locomotive performance, fuel consumption, repairs and general condition of the bearing parts of equipment.

At the conclusion of the most thorough and impartial tests these lubricants were discontinued entirely and Galena Lubrication recommended and adopted as being much more efficient in service and considerably lower in cost, through its proven ability to maintain equipment in first class running order and practically eliminate the enormous expenses in time, labor and repairs that had grown to large proportions with the materials under test.

The assertion "good as Galena" is easy to make but hard to substantiate. Service is the unfailing test of ability.

RAILROAD-LUBRICATION

Goodbye 1922

1922 is just about to leave us—with its records of achievements and failures, and, looking back, there will be few who do not agree that it was a pretty good year after all.

The list of Texaco customers has grown remarkably during the year, and old customers have appreciated more than ever the lubrication service rendered by Texaco.

To the roads in whose prosperity we have shared—and to which we have contributed by furnishing better lubrication, we wish a Prosperous New Year.

To the roads who do not know Texaco Lubrication we wish a Prosperous New Year, with the suggestion that during the New Year they see for themselves what better lubrication means in railroad operation.

Protect this metal—with red-lead

Here's a dynamo suspended from a coach body. With the other metal underneath the car, it is partially concealed from view. There is every chance for rust and corrosion to attack these parts because of their position. A protective paint is absolutely essential.

Red-lead is especially necessary to use at contact points and on concealed and inaccessible surfaces. It should always be used for next-to-the-metal coat. It is desirable to use it for following coats.

Dutch Boy Red-Lead is widely used and is specified by the largest railroads in the country. Properly applied to a clean metal surface it holds fast and covers the metal with an even, elastic coat that time affects very slowly.

Dutch Boy Red-Lead is purest red-lead, highly oxidized and prepared in both paste and liquid form.

For contact surfaces and for priming coats the straight red-lead is used. For finishing coats the liquid red-lead comes tinted to light and dark brown, light and dark green, and black—usually preferred for railroad use.

Protect every inch of metal with Dutch Boy Red-Lead.

"Save the surface and you save all"—Dutch Boy Painter

MORE FLOOR SPACE

When You Need It Wherever You Need It

You can have additional floor space quickly and take advantage of the present business situation. You can have an Austin Building ready for useful occupancy when you want it. It will be built on a definite time schedule basis.

The Austin Company is prepared to render this complete service whether you require a new terminal, a round house, a locomotive erecting shop, a machine shop, a car repair shop, a warehouse or addition or alterations of any kind.

Wherever you need additional floor space—at any point on your lines—Austin can meet the demand. In every section of the country there are Austin Branch Organizations ready to serve you. Many years of experience in the railway field will be applied to your building problem.

Austin engineers are ready to cooperate with R. R. engineers in the design and layout of R. R. Buildings of any type. They are available for an immediate conference. Phone, wire or use the coupon.

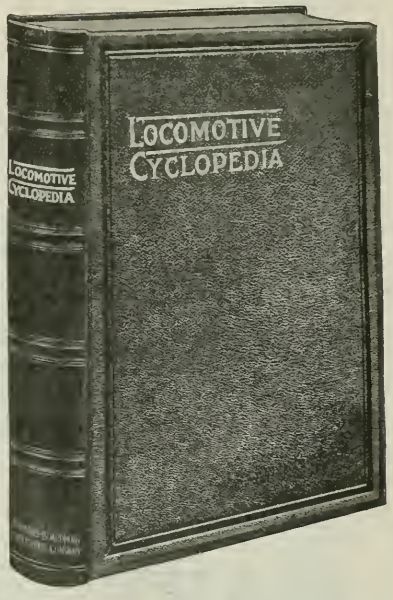
These Two Standard Volumes

1922-1923 Editions

Just Off the Press

Ready for Immediate Delivery

The Locomotive Cyclopedia

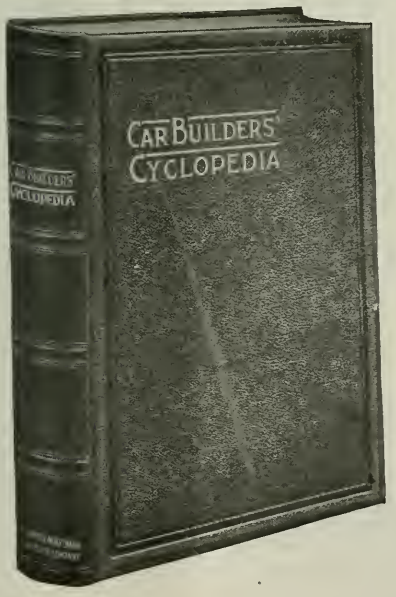


ACCURATE, up-to-the-minute information on locomotive design, construction and maintenance will be found in this Cyclopedia. The 1922-23 edition, with its new, easy-reference plan should receive a heartier welcome from Mechanical Department men than any of the previous issues. Under the new plan (which is also used in the "Car Builders' Cyclopedia") all related matter is grouped in one place—text, drawings, photos and detailed data furnished by various manufacturers. Edited by Roy V. Wright and Charles N. Winter under the supervision of a committee appointed by the American Railway Association—you can be sure that the information is practical, concise and complete.

Contents:

1 Definition and Index Section
2 Locomotive Section
3 Locomotive Details—Fireboxes, Boiler Fittings, etc., with A. R. A. Specifications
4 Tender Section, including Tender Tanks, Underframes, Draft Gear, Couplers, etc.
5 Electric Locomotive Section
6 Material Section, including specifications for materials used in Locomotive Construction
7 Industrial and Foreign Locomotive Section
8 Shop Section, including an article on Scheduling and Routing of Work
9 Rule Section, including the Government Locomotive Inspection requirements and rules relating to Safety Appliances
10 Miscellaneous Section

9 x 12 inches, more than 1150 Pages, 2740 Illustrations.
Buckram Binding, $8.00. Full Leather Binding, $12.00



The Car Builders' Cyclopedia

BASED upon the same easy-reference plan as the "Locomotive Cyclopedia," the "Car Builders' Cyclopedia" gives you usable, up-to-date information on car design, construction and maintenance. Also edited by Roy V. Wright and Charles N. Winter, under the supervision of a committee appointed by the American Railway Association. You will find it packed full of practical data—available at a moment's notice. As both Cyclopedias have had an unusual advance sale and the editions are limited, it is advisable to order your copies as soon as possible. The coupon below is for your convenience.

Contents:

1 Definition and Index Section
2 Freight Car Section, including Specifications
3 Passenger Car Section, with information concerning Motor Passenger Cars
4 General Section, including A. R. A. Specifications
5 Light, Heat and Ventilization Section
6 Materials Section, including A. R. A. Specifications as to Rivets, Castings, Paints, Lumber, etc.
7 Railway Service Car Section
8 Industrial and Foreign Car Section
9 Car Shops Section
10 Rules Section, including Safety Appliances, Government Regulations, etc.
11 Miscellaneous Section

9 x 12 inches, 1192 Pages, more than 3100 Illustrations.
Buckram Binding, $8.00. Full Leather Binding, $12.00

The Lettering of Freight Cars

The number of a freight car (with two, three or four initials indicating the name of the railroad) ought to be plainly lettered on the lower left corner of each side, with distinct horizontal lines above and below. The reader will pardon the dogmatic tone of this sentence when we remind him that it represents a reasonable rule, which was agreed upon by the car-service officers, fourteen years ago, at their convention at Niagara Falls. This simple and useful rule, costing nothing, has been widely neglected. The communication concerning it which appears on another page was accompanied by a lot of pictures showing varied arrangements of lettering, on all sorts of cars. These are new cars, not old ones; and a composite picture of old cars would make a still poorer showing. Also, many roads still show their names (by initials) tiresomely long. Since the organization of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, the introduction of long names in the railway world appears to have run wild, and the car-service men are in duty bound to keep up their movement for common sense and brevity. Our correspondent's suggestion of the use of letters to designate the kind of car is interesting, but critical readers would want to see how well he could succeed in getting a hundred or more yard clerks to make regular use of the plan with sufficient persistence and care *to make it a real time-saver.* Some very good clerical plans depend for success on courageous pushing by a determined officer, throughout a term of months or years.

President Rea on Rapid Transit

President Rea of the Pennsylvania in a letter to the mayor of New York and the chairman of the transit commission has called attention to the tremendous growth in passenger traffic within the city limits of New York which the Long Island Railroad has been called upon to carry. Most of this traffic is handled at the Pennsylvania station, the maximum capacity of which is rapidly being reached. Mr. Rea urged the mayor and the transit commission to plan additional subway and elevated rapid transit lines to relieve the burden on the Long Island Railroad. Only excessive capital expenditures, which would probably not be justified in view of the short haul, would enable the Long Island to meet the present and prospective growth of traffic in its territory within the city limits of New York and the problem is one which the public authorities should be called upon to solve. Mr. Rea also called attention to the great areas in New Jersey which are either entirely undeveloped or only slightly so because of the obstacle which the Hudson river places in the way of traffic. He suggested that the proper authorities in New York City should devote their attention to the construction of bridges across the Hudson river, just as years ago they bridged the East river and opened up Long Island to development. If Mr. Rea's letter starts the discussion which it should start, he will have done a real service to the railroads and to the public around New York City. The transit situation within the city as well as the present provisions for suburban passenger traffic are not satisfactory—primarily because little is being done to develop them to meet increasing traffic—and it will not be long before many existing lines will have reached their maximum capacity. The *Railway Age* is of the opinion that some well-thought-out plan for railway and rapid transit extension should be adopted at an early date and provisions made for carrying it out. Such a plan can only result from a full and free discussion of the problem, and it is hoped that President's Rea's letter will bring this out.

Railroad Long Distance Telephone Circuits

Long distance telephone service between division headquarters and important centers is becoming a necessity for the transaction of business on many roads. The demand for such communication is so heavy that many roads are paying large toll bills to the commercial telephone companies while others have seen fit to add through circuits to the existing pole lines. One road has a long distance conversational circuit 457 miles long in service between two large cities, that cost approximately $100,000, which has proved so useful for railroad business that it has been stated that if all the business handled on this circuit was charged for at the commercial rates the line would pay for itself in a year. It may be that if this business had to be handled by a commercial company, a considerable part of the communication would be handled by mail. However, the use of a railroad owned circuit properly supervised will be found the means of settling important questions promptly and will frequently obviate the necessity for traveling; questions relative to important details in all departments may be asked and answered and the work expedited by the use of such a circuit. Especially those roads which are handicapped by a lack of equipment and track capacity should consider the efficient application of telephones as a facility that will earn a high return on the investment in many cases.

Money Talks

The live operating officer is constantly on the alert for means of increasing the efficiency of the transportation service and, at the same time, reducing costs. One way in which this may be accomplished is through the judicious installation of signals or interlocking at strategic locations. Too often the engineering department is asked for estimates on second track work at such locations when automatic signals will postpone the need for such work indefinitely or crossings are left uninterlocked because of the first cost involved in constructing interlocking plants. As a consequence, trains continue to stop at the crossing day after day, with all the loss incident to such stops. In this connection, a signal engineer on one road carried an item of $60,000 on his budget for several years for the construction of an interlocking at one grade crossing location at which an average of 60 trains

had to stop during each 24 hours. The management refused to approve this expenditure, until the signal engineer capitalized these stops on the basis of $1.25 a stop and showed that a saving of $38,000 a year over and above interest and depreciation would result. The management, thinking $1.25 a stop excessive, referred this question to the mechanical department for check, and this department estimated that $1.40 a stop was more nearly correct. The construction of this interlocking has now been approved. The proper use of signal appliances will yield a high return on the original investment and managements should make it a point to consult the signal departments more frequently on ways to facilitate train operation and to reduce costs. Some managements have found that it pays to do this, and all will find that it pays when they come to realize the important place modern signalling holds in present day railroad operation.

Recording Instruments in Power Plants

It is impossible to run a power plant or in fact any kind of establishment economically, without detailed information regarding operation. To get this information in power plants, various kinds of indicating and recording instruments are necessary and can be installed at a cost which is insignificant compared with the possible savings. The possibilities can be appreciated from the fact that there are over 1,200 railroad power plants in the United States, consuming thousands of tons of coal annually, and many of them operated with only fair efficiency. Power plant engineers should not "save at the spigot and waste at the bunghole" by giving all their attention to the engine room. The furnace and boiler deserve first attention, and the efficiency of these important units can be checked by careful use of the flue gas analyzer, differential draft gage and high temperature thermometer or pyrometer. In certain instances these instruments should be of the recording type in order to give warning of conditions which might not be noted at instantaneous readings. In general, draft conditions, furnace efficiency, equality of boiler loading and boiler efficiency can all be improved by a judicious use of the above instruments. In the engine room, steam indicators, recording gages, graphic wattmeters, power factor and other meters perform the same relative function. They afford information enabling power leaks to be located and stopped. Power plant engineers should be assisted to get such of these instruments as they need and be encouraged—if not required—to use them.

New Figures for Old

An interesting and most disconcerting example of the manner in which railroads have a habit of substituting "new figures for old" in their various reports is that of a railroad which in its December, 1920, report showed for the year ended December 31, 1920, a net railway operating income of roughly $7,000,000. In the annual report covering the year 1920, this figure had become a deficit of roughly $1,300,000. One year later, in the December, 1921, statement to the Interstate Commerce Commission, the comparative cumulative figure covering the year 1920 was shown as a deficit of $500,000, and in the 1921 annual report the comparative figure for the year 1920 was shown in a fourth total of $6,000,000, this time a net. Thus, for this road, we have four different figures ranging from a deficit of $1,300,000 to a net of $7,000,000, all of which figures purport to represent the same thing—namely the net railway operating income for this road for the year 1920. Of course, there are good and sufficient reasons why the figures should differ; there may have been the inclusion in some and not in others of certain subsidiary mileage, of federal lapovers, of reserves for maintenance, etc. But, nevertheless, what was this road's net railway operating income in 1920? It is not easy to find out because it is difficult to determine which one of the four figures is the one desired for proper comparison with the figures of preceding or following periods. In this instance, we chose an extreme case, but although extreme, it is somewhat too typical. "New figures for old" represents a confusing and disconcerting condition which the accounting officer, in fairness to those who have to use the figures, should seek to avoid.

Make Every Dollar Count

Programs for second track construction, such as are now under consideration or actually authorized for the coming year, often give rise to the question of simultaneous grade revision, the economy of which is readily ascertained on the basis of the justified added cost to construct on a revised grade, over the expenditure necessary to provide a second track of the same gradient as the original line. A further problem is introduced in determining whether a complete new double-track line shall be built on an independent location or whether it will suffice to build a new single-track line for the uphill traffic, while retaining the old line for the downhill movement. This solution is particularly appropriate in locations where development for increased distance is required to effect the reduction in grade, since the shorter distance on the old line will be of advantage for the downhill movement in spite of the heavier descending grade. Obviously, second track provided in this manner introduces certain disadvantages such as increased cost of maintenance and the possibility of some movement against the prevailing direction of traffic to afford the necessary local passenger and freight service to an occasional station on the old line. In some cases, it also necessitates left hand operation. But in spite of these real or fancied disadvantages, many railroads have frequently found it profitable to resort to the independent second-track line. One notable example of this is the Echo Canyon line of the Union Pacific where the uphill 1.14 per cent line is used on one side of the canyon, whereas the original line on a 1.77 per cent grade on the other side is used for downhill movement. A similar example is found on the Santa Fe's line up the western slope of the San Bernardino mountains. Both of the illustrations cited involve left hand operation. In these days of inadequate railway transportation, when every effort must be made to effect the greatest increase in facilities for every dollar expended, the opportunities to be afforded by such practices as these should not be overlooked.

When There Is a Load for Every Car

The division superintendent comes into more intimate contact with the employees in those departments contributing most directly to the production of transportation than any other railway officer. Because of this fact he has a better opportunity than any other officer to stimulate these employees to greater efforts to the end that more transportation service may be rendered. There is now and probably will continue to be for some time more business awaiting movement than the railways can handle. Therefore every delay that is elim-

inated means that the capacity and the earnings of the roads are increased accordingly. With a shortage of cars of over 110,000 at the last report (December 8) it is evident that there is a load awaiting every car available. The superintendent and his staff can do much by personal contact with yardmasters, agents and yard clerks to show them the importance of their work in detecting and preventing delays to cars by anticipating their release and arranging for their movement promptly and by similar measures. They can show train crews the importance of contributing to the service the railways are rendering the country in bringing cars with minor defects into the terminals where this can be done safely, by picking up cars at outlying sidings at the first opportunity, etc. The maintenance-of-way foremen can be shown the value of their service in unloading as quickly as possible company materials intended for their use. This is a time when every measure which saves a day's delay to the cars adds to the earnings of the road. More than that it means future business for the road, for when cars are scarce every shipper who is served becomes a friend whose traffic will be highly desirable when equipment is more plentiful and freight tonnage offered for shipment scarcer.

C. & O.—Nickel Plate

Details concerning what the Van Sweringens of Cleveland may have in mind concerning their possible acquisition of a large block of Chesapeake & Ohio stock are so meagre that it is hardly possible to get any reasonable idea of what may be behind their plans. The story that has been given out is that they have recently extended an option covering the purchase of the shares at present owned by H. E. Huntington. These shares are not understood to include a majority control of Chesapeake & Ohio, which detail in itself is sufficient to add an additional measure of complication. Just how Chesapeake & Ohio would fit into the Van Sweringen system as it has thus far been assembled, it is difficult to see. The lines at present include the Nickel Plate, the Lake Erie & Western and the Clover Leaf. The Nickel Plate's traffic relationships are primarily with its connections at the Niagara frontier, so it would appear that the Chesapeake & Ohio offers to the system a rather secondary value as an outlet to the Atlantic seaboard. The C. & O. may have a value to the Nickel Plate from the standpoint of giving it a fuel supply, but it is difficult to regard this reason as important enough for so large a step as is proposed in the C. & O. acquisition. The Chesapeake & Ohio business is principally coal which moves east from the New River, Kanawha and Logan districts to tidewater at Newport News, or west and north primarily over the controlled Hocking Valley to the lakes at Toledo, where the Hocking Valley has one of the busiest of the several coal dumping piers on Lake Erie. The Van Sweringen group of railroads has thus far been made up according to the Interstate Commerce Commission's tentative consolidation plan. The three lines—Nickel Plate, Clover Leaf and Lake Erie & Western—were placed in system No. 5, which was given an outlet to New York harbor, a fuel supply through the inclusion of the Wheeling & Lake Erie, etc. The Chesapeake & Ohio was placed in a separate system, No. 8, with its controlled Hocking Valley and with the Virginian. The two systems might be joined, but it is not easy to see what favorable results might be expected to result from that course. In short, the story that the Van Sweringens may secure the C. & O. needs more amplification and explanation before the investing public is likely to be convinced that the acquisition is probable, or, if probable, that it is wise.

Freight Rates and Commodity Prices

THE CHANGES in commodity prices and freight rates which have occurred within the last year suggest some significant reflections and questions regarding the way in which freight rates should be regulated.

When the earliest proceedings for general advances in rates under the present effective system of regulation were begun by the railways about twelve years ago, the railways contended that rates should be based upon what the traffic would bear, as well as upon the cost of rendering transportation service. They showed that increases in prices and wages were increasing their operating expenses. They pointed out that the general increases in prices which were occurring made it easily possible for traffic to bear higher rates and used this as one of the principal arguments for advances in rates.

The spokesmen of the shippers and regulating authorities almost unanimously repudiated and denounced the theory that rates should be based on what the traffic would bear, and that increases in prices afforded any justification for advances in rates. They contended that schedules of rates should be based almost entirely upon the cost of rendering transportation service. They said that all a railway was entitled to earn was enough to pay its operating expenses and taxes and a fair return upon its valuation, and that as long as it did this it had no legal or moral right to complain if its rates were not advanced when prices increased.

The principle of basing rates on the cost of service was applied so rigorously that up to 1917 no substantial advances in rates had been granted, although in that year the average wholesale price of all commodities had risen until it was 76 per cent higher than in 1913. After that, both railway expenses and prices increased enormously. Strict application of the principle of basing rates on the cost of the service required the large advances in rates made under government control in 1918, and again after the railways had been returned to private operation in 1920.

The advance in rates in 1920 was followed by an unprecedented decline of prices. This was not followed for months by a decline of railway operating costs. Suddenly, however, spokesmen of the shippers reversed their attitude. They pointed out that advances in rates and declines in prices had made the rates on many commodities relatively much higher than prices. They took the position, which was exactly the opposite of that which they had taken for years, that the rates should be based on what the traffic would bear, and that rates in general should be reduced because the traffic could not bear them.

The spokesmen of the farmers had previously been foremost in contending that rates should be based on the cost of the service. Because of the unprecedented decline in the prices of agricultural products, they now became foremost in advocating application of the despised principle of charging what the traffic would bear. The Interstate Commerce Commission itself practically abandoned the cost of service principle and in the early part of 1922 ordered reductions in rates which were wholly unjustified upon any principle except that of charging what the traffic would bear.

At the very time the reductions in rates ordered by the Commission were being put into effect, the entire relationship between freight rates and commodity prices was again undergoing a great change because commodity prices were rapidly increasing. The reductions of rates required by the Commission greatly accelerated this change. The latest statistics of the Commission regarding the average railway rate, and the latest statistics of the Bureau of Labor Statistics regarding commodity prices, show that the present relationship between railway rates and commodity prices is entirely different from what it was a year ago. Then, as compared

with conditions in the pre-war year, 1913, the average railway rate was relatively higher than commodity prices. Now, many commodity prices are relatively higher than railway rates. Between September, 1921, and September ,1922, the average rate per ton per mile declined from 1.27 cents to 1.12 cents, or 12 per cent. This left the average rate per ton per mile only 54 per cent higher than in 1913. On the other hand, between November, 1921, and November, 1922, as shown by the statistics of the Bureau of Labor, the average wholesale price of all commodities increased over 10½ per cent, which made it 56 per cent higher than in 1913. The average price of cloths and clothing was 92 per cent higher than in 1913; of fuel and lighting 118 per cent higher; of metal and metal products 33 per cent higher; of building materials 85 per cent higher; of house-furnishing goods 79 per cent higher; of miscellaneous commodities 22 per cent higher; of chemicals and drugs 27 per cent higher; of farm products and foods 43 per cent. The increase in the average price of farm products within the last year has been the most notable, being 18¼ per cent. Farm products are now only 43 per cent higher than in 1913. This is less than the increase in the average rate of the railways of the entire country, but most farm products are produced in the west and shipped to market mainly over the western lines, and the average rate of the western railways is less than 39 per cent higher than in 1913.

Even in September, coal, which normally constitutes about one-third of railway freight, had not begun to move in normal volume, and probably the average rate of the railways for the last three months of this year will show a greater reduction than it did in September. On the other hand, the general trend of commodity prices is upward, and later reports undoubtedly will show further increases in them.

Now that the average railway rate is lower relatively than the average price of commodities in general, and that the increases in prices which are occurring apparently will make it relatively still lower in future months, what attitude is going to be taken by spokesmen of shippers and by regulating authorities with respect to basing rates on what the traffic will bear? Since they took the position so recently that rates should be reduced because they were relatively higher than the prices of commodities, will they in future accept the results of their own recent reasoning and take the position that rates should be advanced because commodity prices are increasing?

That the argument for reducing rates because traffic cannot bear them has been largely destroyed by the changes within the last year is tacitly recognized by the Interstate Commerce Commission in its annual report for 1922. The Commission says: "The tonnage moved by the railroads has been steadily increasing in recent months until at the end of the period covered by this report the traffic is almost equal to the largest ever handled by our railroads. Manifestly the existing rates are no longer interfering with the free flow of commerce as a whole, whatever may have been the situation prior to the reduction of July, 1922." Since this report was written the total carloads of freight handled by the railways has exceeded that handled in the same part of any previous year.

Some of the western state commissions now have pending before the Interstate Commerce Commission proceedings for further reductions of the rates on farm products in which the principal argument they have made has been that the prices of farm products are so low that the traffic cannot bear the rates. What becomes of this argument now that it can be shown that the average rate of the railways serving the very territory which these commissions represent is lower than the average price of farm products? The spokesmen of these commissions seem to be falling back upon the argument that the railways in their territory are making more money than the farmers. But the relationship between railway rates and the prices of farm products shows conclusively that if this is true the inability of the farmers to make money is mainly due to causes other than the relationship between railway rates and farm prices. Furthermore, if, as these very same men were contending a year ago, rates should be based on what the traffic will bear, what bearing upon the question of the reasonableness of the rates has the question whether the farmers or the railways are making or losing more money?

When the Interstate Commerce Commission about a year ago ordered reductions in the rates on grain, grain products and hay, the *Railway Age* called attention to the fact that in doing so it had in that particular case, at least, abandoned its own principle of basing rates mainly on the cost of the service, and had adopted the principle of charging what the traffic would bear. We showed how inconsistent this was with decisions rendered by the Commission in previous years. We anticipate with more than usual interest, in view of the recent changes in the relationship between rates and prices, what the Commission's decision will be in the case now pending for further reductions of the rates on farm products.

Tackling the Problem of Good Will

When a man uses the word "railroad" he usually means only the physical property. Railway officers at least should not think and speak of a railroad as merely a thing consisting of right-of-way, roadway, locomotives, cars, shops, terminals and stations. It is also a thing of brains, nerves, flesh and blood. The success of its development and operation depends under present conditions even more upon the development and handling of the human than of the non-human part of it.

It may be said, roughly, that a railway consists one-half of physical property and one-half of brains, manual efficiency and good will. No physical property is worth much in the long run if it has not that intangible asset, which it is impossible to appraise accurately—"good will." A concern to be long successful must have good will among its employees and good will among its patrons. The railways of this country are suffering from deficiencies and inadequacy of their physical properties, but they are suffering much more from lack of good will. In fact, the deficiencies and inadequacy of their physical plants are largely due to want of good will. If there were more good will among their patrons they would be more fairly regulated. If there were more good will among their employees they would be more efficiently operated. If the railways could create more good will among their patrons and employees it would enable them to increase their net earnings much more than would mere improvements and enlargements of the physical plants.

Perhaps the most outstanding characteristic of the management of most large modern industrial concerns, including railroads, is the large amount of study they devote to and money they spend in improving their physical properties and the relatively small amount of work they do and money they spend to increase this intangible but vitally important asset of good will. There is no amount of money that a railway will not spend, if it has it available, to increase the capacity and efficiency of its physical plant. Every railway constantly employs large organizations to study and improve its physical properties. When, however, the importance of doing work and spending money to solve the human problems of the industry is urged upon them, most railway officers are likely to begin looking out of the window. Their minds naturally drift away to the consideration of physical problems. They know that the problems of public relations and employees' relations are vast and unsolved, but their experience and training have had so largely to do with the

tangible, physical problems that they find it difficult to keep their minds for any considerable length of time upon the latter class of problems.

Consider the various associations of railway officers. The number of them that deal with the physical problems of engineering, transportation and maintenance is legion. Where is there any association which devotes itself to reports and discussions on the labor problem? Where is there an association which devotes itself to reports and discussions on the problems of public relations?

Wonderful progress has been made in the solution year by year of the physical problems of the industry. It is high time that the great problem of creating among patrons and employees the good will the industry needs should be attacked with equal courage, energy and persistency.

Need for Co-Operative Research

THE RAILROADS of America have long been recognized as the most progressive in testing new designs and new equipment. No foreign railroad has ever conducted research work on locomotives that can compare with the tests made by the Pennsylvania System at its Altoona testing plant. These have added greatly to the scientific knowledge of the locomotive; they have made it possible to build more efficient motive power, and have benefited not only the Pennsylvania, but railroads all over the world. Other American roads likewise have made important individual contributions in research that have promoted economical and efficient management.

During recent years the railroads have been so hard pressed with the operation and maintenance of their properties that they have not given much attention to testing on a large scale. Furthermore, earnings have been low and the roads have not been able to devote any considerable sum to such purposes. Because of the many innovations that have recently been put into service, or proposed, there is at present a great need for research and the railroads cannot afford to neglect this activity.

The railroads have been criticized many times because they have not adopted some new design or appliance that promised to effect large savings. Some proposals, of course, can be proved worthless without making a single installation. Others have great possibilities. In the latter case, the only effective answer that the railroads make to the critic who advocates something new is to show that they have tested it to find out what it would actually save. In the interests of economy, as well as to avoid criticism, the railroads cannot afford to hold back and wait, hoping that some other road will investigate a new design.

In the locomotive field at present there are many promising innovations. The turbine, Diesel electric and Still-Diesel locomotives, and appliances for producing draft by mechanical means have great possibilities. The railroads individually are not able to make extensive tests of such equipment, and it is hardly right that one should bear the expense when all will benefit by any improvement that may be brought out. The logical way to handle this problem is to have tests made jointly for all the roads, insuring that the work is done accurately so that there will be no question as to the acceptance of the conclusions reached and avoiding duplication which would mean a waste of effort and resources.

Co-operative research has been proposed many times in the past. Several years ago the Mechanical Division of the American Railway Association appointed a committee on this subject, but only perfunctory action has been taken at recent conventions. There has never been as great need for co-operative research as exists at the present time. It is to be hoped that the Mechanical Division will soon take some action that will bring about the utilization of the splendid equipment which is available for working out the many important basic problems that are still awaiting extensive research that they may be satisfactorily solved.

Not Insurmountable

MANY RAILROAD EXECUTIVES and employees seem to be coming to a realization of the foolishness of and the waste caused by the present wall of mistrust and misunderstanding which has grown up between them. This wall, based upon deep-seated prejudices, can only be broken down by the most patient effort and tolerant attitude on both sides. Disaster lies ahead if these misunderstandings are not wiped out. This is frankly acknowledged by many of the railroad executives and also by representatives of the men.

Representatives of the men agree that the interests of the men, the railroads, the public and the investors depend upon introducing a spirit of cordial co-operation into their relations with the managements and having each man feel as if the road he worked for was "his road." They declare, however, that they cannot trust the managements, whose representatives zealously seek every means of taking advantage of them. They will support their contentions with many specific examples. For instance, they say, a rule may be agreed upon, but with no penalties attached. The railroad, when called to account for not living up to the rule, will admit that it is at fault, but go right on disregarding the rule. If conditions are to be bettered, these men declare, the whole attitude of the railroad managements toward the men must be changed, and this must come from the very top of the organization. The chief executive must set a high standard and see that his associates live up to it. If this is not done, they say, the subordinate officers and clerks will in many cases continue to be dominated by a spirit of sharp practice in dealing with the men.

On the other hand, railroad executives will speak just as strongly about the attitude of the representatives of labor and will call attention to many specific ways in which these men have failed to observe what they consider to be the principles of square dealing. In commenting upon recent editorials which have appeared in the *Railway Age,* one chief executive expressed himself in this way: "The attitude of the labor leaders who have been, particularly in recent years, during and since the period of federal control, driving into the minds of the railway employees the propaganda that the employers and those connected with the management are their enemies, and must be dealt with only on that basis, has, to my mind, so prejudiced and embittered the mind of the average railroad man that he cannot be approached on the lines you advocate with any argument or facts that will change his mind. He has been led to believe that he cannot expect any consideration from his employers, but what is forced upon them virtually at the muzzle of the gun (the strike)."

This is a sorry state of affairs. Both sides recognize the seriousness of the situation and yet the mutual mistrust is so great that neither side wants to make a move toward improving the situation. The men, however, declare that the first move is strictly up to the managements.

Conditions can be improved. This has been demonstrated in other industries, when both sides have come to a realization that in the long run questions of relations of the employees to the management can not be settled by force and have decided to co-operate and work with each other to the mutual advantage of all concerned. One of the most striking developments in the railway world during the past year has been the getting together of the managements and the men on the British railways. There is no reason why this cannot be done on American railways. As a matter of fact,

so many of the leaders on both sides are devoting intense thought and study to the question and so many things have already been started by the managements looking toward an improvement of conditions, that undoubtedly the coming year will be notable in this country because of the getting together of the managements and the men on a better basis of understanding.

The Public Should Be Told the Facts

We have referred frequently in these columns of late to the extreme modesty of the railways in presenting their case to the public. Nowhere is this illustrated better than with reference to the agitation for hard roads which is sweeping the country. Made possible in its early days in large measure by the aid of the railways who saw in this development a system of highways radiating from the railway station, highway construction is now fostered chiefly by the automobile and motor truck interests which have converted the plan into a grand scheme of trunk lines paralleling and duplicating the railways. Not content with this, they have placed the burden of construction and maintenance on the public, with the result that the railways are required to pay a large part of the cost through taxation. The highways having been built, the country is being filled with irresponsible men and concerns that have bought trucks largely on the installment plan, that are unregulated as to rates or character of service, and that contribute little to the upkeep of the highways which they use. The unfairness of competition of this character is so evident that one is at a loss to understand why the railways have not pointed it out to the public.

There is a pressing need for specific information today regarding the true economics of highway development. What investment is a community warranted in making in hard roads from the standpoint of the farmer, the driver of a pleasure vehicle, or the truck operator? What are the relative damages to the highway which each class of service does? What are their relative values to the community? These are typical of the questions which must be answered before motor transportation can take its permanent place in the movement of the nation's traffic. It is doubtful if the highway department of a state or nation can approach the question fairly. Neither is it contended that the railways, which are suffering from the competition of the highways, will be more fair. There is, however, a way of creating an organization whose conclusions can be made accurately. As the principal sufferer, both from taxation and from the loss of traffic, the railways should take the initiative.

In one community in which an extensive investigation was made, the conclusion was reached that the farmer was not warranted in spending over $7,500 per mile for hard roads, and that this amount was sufficient to provide a good gravel road entirely adequate for his needs. Any expenditure beyond that amount should be charged those in whose interests it is made.

The hard road is here to stay. It is an agency of transportation with a definite place. The problem is to so coordinate it with other means of transportation that it may fill this place most satisfactorily and contribute most directly to the welfare of the country.

Leonard Kipp of Ossining, N. Y., who died last week at the age of 98, was said to have been a commuter on the New York Central for 63 years. He was a passenger on the first train over the road between Ossining and New York. Ossining is 31 miles from New York and it is estimated that Mr. Kipp traveled about 1,500,000 miles.

New Books

American Railroads: Government Control and Reconstruction Policies. By William J. Cunningham, James J. Hill, Professor of Transportation, Graduate School of Business Administration, Harvard University. 408 Pages. 5½ in. by 8 in. Bound in cloth. Published by A. W. Shaw Company, Chicago.

As the preface to this book says, while the volume is intended as a review of railroad events during the years 1917 to 1922, it deals primarily with the period of federal control. The book has 24 chapters, of which 17 relate to the many and varied developments in the two years and two months during which the railways were operated by the United States Railroad Administration. Preceding the 17 chapters are two which serve as introduction and one which deals with the activities of the Railroads' War Board. The four concluding chapters bring the story up to the present. They deal respectively with the Transportation Act of 1920, railroad events in 1920, conditions in 1921 and the situation in 1922. There is also an appendix of over 100 pages. Included therein are the text of the President's proclamation taking over the railroads, that of the federal control act and that of the standard contract. There is also included a paper on the U. S. R. A. operating statistics which is reprinted from the Annals of the American Academy of Political and Social Science.

The book has two assets of primary importance. One is that it is interesting and readable, qualities that appear in books of a technical character infrequently enough so that they are worthy of attention on the part of the book reviewer when they do appear. The second one of the two leading assets is the authoritative manner with which the author handles his subject. One might be tempted to say that the book is a scholarly production, but for fear that the reader might give the word "scholarly" an incorrect interpretation and secure the idea that the book is a bit too learned and heavy which, of course, is far from the case. We may be better content perhaps in pointing out that it is easy to determine that the author is absolutely at home with his facts and that the manner in which the various complicated details or interrelated events are marshalled and co-ordinated makes the story a complete whole. It is easy to follow, and in general the work is so well done as to make one feel that the time spent in reading the book has been expended to good advantage.

This is about the sort of thing, however, that we should expect from a writer of Professor Cunningham's qualifications. We should, indeed, expect a little out of the ordinary from the combination of the practical railroader and the college professor teaching transportation subjects who, in addition, was connected with the Railroad Administration in a fairly prominent capacity. Professor Cunningham was in a position to observe the activities of the U. S. R. A. at close range; he formulated the work of the operating statistics section of the division of operation, was in charge of that section for an extended period, and later served for a time as assistant director of operation.

His official connection with the Railroad Administration might have been expected to lead the author to be lenient with those who directed that organization. While it will be admitted that he is not very severe, it is also true that in no case is he overly lenient. Where criticism is merited, criticism is given, as is notably to be instanced in his chapter dealing with the ill-famed national agreements. His critical comment in that case is fairly typical. Among other things he says:

"Impaired discipline and a general lowering of the morale of the service followed in the wake of the national agreements. . . . It is pertinent to note here that all of the national agreements were entered into on dates subsequent to May 20, 1919, when the President announced that the roads would be returned to their owners at the end of that year. . . . The railroad executives,

therefore, had ground for criticizing the director-general for assuming burdens which these agreements passed on to the railroads while he was unwilling at the same time to assume the responsibility for increasing freight and passenger rates so as to meet the additional expenses."

If one were to make any criticism of the book, it would be contained in the fact that it is rather too short to cover so large a subject, which Professor Cunningham understands so intimately and about which he must have decided opinions. The book adds little or nothing to what we already know or think about either federal control or the Railroad Administration itself. It is intended only as a resumé of what happened and only enough comment is included as is necessary to explain the meaning of the various events or their importance in developments as a whole.

Most of the subjects, except as this objection may apply, seem adequately treated. It is questionable, however, whether the important subject of standardization of equipment merits no more than the meagre five pages which are devoted to it in Chapter VII. Of course, the *Railway Age* had at the time and still has now its own ideas about the U. S. R. A.'s plans for standardization of equipment. We believe that the administration introduced some good designs; that in its publicity it very much exaggerated the value of the standardization idea and that it carried the idea much further than was at all desirable or necessary. Professor Cunningham falls into the error of intimating that the administration standardized on 12 standard types of freight cars and 6 standard types of locomotives of two weights each. He might better have said that there were added 12 new types of cars and 12 (not 6) new types of locomotives to those already in service. He also falls into the error of saying—at least we believe it in error—"Obviously the process of standardization would make the problems of new construction much easier and eventually would reduce the cost of maintenance." The facts are rather that there was a tendency to delay production while the new designs were being worked out. On many roads the problem of maintenance was complicated by the addition of the new designs because of difficulty in getting repair parts for the new locomotives. Of course, the word "eventually" in the sentence helps. In five or ten years there might have been a difference. In 26 months of federal control the Railroad Administration bought 100,000 freight cars and 1,430 locomotives. We wish that Professor Cunningham had pointed out that this represented normal replacements for a period of about 12 months only, or for less than half the federal control period. The U. S. R. A. gave so much publicity to these large purchases that it is worth while to draw attention to this point.

Chapter XX of the book concludes with the following paragraph:

"It is plain, therefore, that nothing definite can be proved from the results of 1918-19. A real test of government operation is possible only if carried on over a longer period—one in which business conditions are normal and which political expediency would have normal play. The period under review would be so abnormal that the results are valueless as guides to what might be expected from a similar control or complete government ownership when normal conditions return."

There are so many of us who will disagree with this conclusion that it is hardly necessary to point out wherein we may disagree. Possibly we can be satisfied with saying that this proves our previous point, that Professor Cunningham is not very severe on federal control.

On the whole, the book is one that no railroad man or student of railway affairs can afford not to read or afford not to have handy in his bookcase. While it is unfortunate that it does not bring any new facts into the discussion or throw any new light on five or six of the most interesting years in American railroad history, it does review what took place in these years in a masterly, authoritative and interesting manner. Therein lies the book's real value.

Letters to the Editor

[*The* Railway Age *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about* 250 *words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.*]

Do American Railways Lack the Selling Sense?

Washington, D. C.

To the Editor:

The article on page 1039 of your issue of December 2 is more especially woven around the idea of *selling tickets*, but the author is quite right, and I have no criticisms to make except to say that he has not gone far enough, for, in my opinion, it is not too much to say that all of the real problems of the railroads today are essentially problems involving *salesmanship;* and our ills and difficulties are due to an all but universal lack of a *selling sense* on the part of the railroad organizations at the top and all the way to the bottom.

The average railroad man still thinks of salesmen with unconscious superciliousness as mere "drummers"; without the realization which is so obvious nowadays to the rest of the business world, that there can be no real success without salesmanship, and that a lack of it is a form of ignorance which is almost as serious a handicap to a successful business as that of downright illiteracy.

The writer was brought to a clear realization of the depth of this characteristic deficiency of railroad men when seeking, in 1919, for one of the largest commercial concerns in the country, to recruit a corps of *salesmen* with the ability to *sell the conception* of quality and service as against price competition; and the railroad solicitors (who almost invariably credited themselves with "selling service"), with a few exceptions, had but the most rudimentary notion of that real militant, creative missionary spirit which is the essence of true *salesmanship.*

In the aggregate there are probably several thousand of these freight and passenger representatives, intelligent men, who represent their respective companies with dignity, credit and a practical altruism for which there is hardly any other business parallel; and if just half of them really understood and applied real *salesmanship* in their daily contacts, they could easily revolutionize and remold the present adverse sentiment of the nation towards the railroads.

However, even the best salesmen do not get satisfactory results without real *sales managers,* who have the confidence, backing, support and co-operation of the entire official staff of their companies up to the chief executives themselves. The highest compliment that can be paid to the chief executive of a big commercial business is to credit him with *salesmanship* talent, but the chief executive of a railroad usually visualizes himself as a statesman in whom he thinks salesmanship is undignified and out of character.

Theodore Roosevelt was of one type of *"salesman,"* Woodrow Wilson of another, and Lloyd George of still another, but the successes of each were due to their ability to *sell their ideas* to the nation; and it was the same outstanding quality which distinguished George Washington, Thomas Jefferson, Gladstone, and every other great man who has gone down in history.

It is by reason of the absence of salesmanship or "selling sense" that the railroads are in their present predicament,

and unless it be speedily developed the opposition "salesmen" of communistic ideas will inevitably succeed in selling government ownership to the nation, with disastrous results to all concerned.

MOULTRIE HITT,
Assistant to President, American Short Line Railroad Association.

The Lettering of Freight Cars

SAN ANTONIO, TEXAS.

TO THE EDITOR:

When you are considering the very numerous proposals to save money or to economize in some new way, which nowadays are sprung upon the railroad world almost every day, please remember the freight conductor and the yard clerk. They constitute an important factor in transportation economy. What a saving of time of these men, and consequent speeding up of the departure of trains from the yards, would be accomplished if all cars were numbered uniformly. Each car should show the name of the system owning the car, the car number, with a letter signifying the kind of car; and the capacity, weight and length; all in white lettering on a black background, placed in the same location on every car. This paint should be a standard paint, which would not flake or fade. The lettering should be placed where it would not be liable to obliteration by oil (as is the case frequently now on tank cars), and on the level of the eyes of the average man as he stands on the ground.

Take the Southern Pacific, where my experience has been; there are about a dozen subsidiary roads included in the Southern Pacific System, and each has its own lettering. In making record of the cars in a train, much time is consumed in writing these various initials. It is frequently necessary to scan the whole surface of the side of a car to get the required information. The record of the subsidiary to which the car is credited could be preserved by the serial number. The information whether it was a double deck, a single deck, a box car, or what not, could be designated by a single letter, to precede the number; as "D13123," indicating a double decker. The adoption of this uniform marking plan need not interfere with the carrying of any other advertising designation desired, nor need it require the repainting of the rest of the car. It could be inaugurated at a cost that would soon be absorbed in the time saved, to say nothing of the elimination of errors in car records.

Every conductor knows how a few minutes' delay is frequently stretched into hours. Take a train of sixty cars; a saving of ten minutes means a saving of six car hours; or, in the country as a whole, millions.

The difficulties beginning with the taking of the numbers are multiplied all along the line. Cars are lost because of a mistake in the number; time is lost by the switching crews through difficulty in deciphering numbers and description. There is a record of fatalities caused by car-checkers backing out onto a parallel track in the effort to decipher a number placed at the top of a car.

No railroad is more efficient than its yards. Competent and experienced checkers are put to it to keep the records straight; and experienced checkers are not numerous. When they show signs of ability they are usually promoted to higher places.

While I am saving minutes, another suggestion may not be out of place. Would it not make for greater efficiency in the disposition of cars at way stations if industries located at such stations were designated by numbers instead of names, frequently long and difficult to decipher? Thus: "S.P. B36860 to spur 6 Sabinal."

If every officer and employee were to be impressed with the fact that every time a train is delayed a minute it means, with a 60-car train, a car-hour lost, there would be fewer car-hours frittered away.

Is Education of Trackmen Worth While?

Carefully Systematized Efforts in This Direction Lead One Road to Endorse Such Activities Heartily

During the last few years the Chicago, North Shore & Milwaukee has been carrying on a rather unique and decidedly interesting work in its maintenance of way department in the form of an educational movement among the track forces. Unlike many educational movements among workers, regular schools have been established where the men are gathered in classes at regular intervals and are taught how to speak, read and write in the English language as well as about American ways and about the railroad on which they work. Nor is the work limited to these schools, for, in addition, courses of instruction are given for foremen and those who care to become foremen, and social gatherings are provided in which the workmen and their families meet together in wholesome recreational activities. In the opinion of the management the experiment has proved very successful. The foreign workers have entered into the spirit of the work, and the company, originally skeptical, considers itself well repaid in various ways for the attention given this subject.

The Work Began as an Americanization Program

The work was undertaken about two years ago as an Americanization program. The need for something of this kind suggested itself during the war. There were then employed in the neighborhood of 200 trackmen. As on other roads, these men were almost all of foreign birth and all of foreign parentage. Altogether 14 nationalities were represented with Croatians and Italians predominating. As usual they were hired through labor agencies. During the war the attention given to selling liberty bonds to these men and to scrutinizing them in the interest of the government disclosed that they were living in a decidedly un-American atmosphere and were harboring un-American ideas to an alarming degree. It was apparent that little in the way of improvement was being accomplished by the customary practice of working through foremen and labor agencies and that something should be done to overcome the Old World ideas which these men entertained about their work and their relations with their employers.

As an initial step in this direction the practice of keeping labor in boarding camps maintained by contractors was replaced by a system of company camps constructed and mantained to attract the better class of men and keep them contented. An improvement was made in the commissary, baths were provided, close attention given to fumigation and finally a Y. M. C. A. secretary was employed to look after their recreation.

While this work was in the right direction it became increasingly evident, that what the men needed was Americanization and after some hesitation it was decided to encourage and by a systematic course of education to assist these foreign born employees in becoming citizens. To this end a committee was selected, composed of four officers of the maintenance of way department and four foreign track foremen to co-operate with and to advise the Y. M. C. A. secretary in carrying forward the work.

As a first step in the program a complete survey was made to ascertain the educational and citizenship needs of these men. This survey revealed some startling figures. Among other things it disclosed that while more than 88 per cent of the men have been in this country over five years, 90 per cent were not citizens and the remainder had only taken out the first papers. The survey showed further that over 30 per cent of these men, whose ages ranged from 18 to 60 years, and averaged 36 years, could not speak the English language, 75 per cent could not read it, and 80 per cent could not write

it, while 25 per cent could not even read or write in their own language. The problem therefore was one of planning a course of instruction to meet the varying requirements of the men and which at the same time would not be looked upon with suspicion by those receiving the instruction and which could be made accessible to all regardless of the place of their employment. As carried out the plans involved putting up classrooms at convenient points along the line where all gangs could meet on local trains passing their houses. In all about six classrooms were provided, the one illustrated being in an abandoned freight house.

Teaching the Men English

The first step of instructions was that of teaching the men English. For this purpose Roberts' System of English for Foreigners was selected, it being a course of study requiring no interpreter nor any reference whatever to the students' native tongues. Briefly the system consists of placing a series of words on a sheet of paper, with a sentence opposite each word to show how the word is used. On the back of this sheet each of the sentences found on the front is printed to show how it appears when written in long hand. The instructor, by means of his voice, shows how the word sounds and explains its meaning by going through the proper motions. For example, when teaching the word "drop," the instructor points out the word on the paper, pronounces it and then drops something so that the student can connect the sound of the word with the motion indicated. To promote the interest as well as enlarge upon the value of the work to the men, attention was given to tying the instruction up with track work and as a method of keeping the study from getting tiresome use was made of motion pictures at these classes. As the work progressed, English was supplemented with simple courses of study in grammar, government and arithmetic, and here, as in the case of English, the instruction was associated with the work the men were actually doing. For example, in arithmetic, a problem would be given as follows: If 350 ties are unloaded for renewals in track and 85 ties have been renewed, how many ties are left?

Beginning late in 1920, two hourly classes were held on two evenings of each week, excepting for two months during the summer, when the program was confined to pictures and recreational pastimes. Instruction was rendered voluntarily by men in clerical and supervisory positions in the service of the company, and all study was conducted on the men's own time. Early in the campaign it developed that not every foreigner was willing to take up this training, and it was thereupon decided to require all men to attend on the ground that it was advisable from a safety standpoint for all men working on track to have some understanding of English, and foremen were instructed to keep in their gangs as far as practical only such men as could read and write English and were willing to attend schools provided for them. The order had a good effect upon attendance to classes, bringing a number of men into the school who had previously shown no interest, and while it necessitated discharging a few men, it does not appear that those remaining entertained any bad feelings over this order.

Much Interest Was Displayed in the Work

Almost from the start a great deal of interest was taken in the work and creditable progress was made by the men in their studies. As indicating the interest taken in the work by some, one man over 40 years of age, who though many years in this country had not learned the language, said to an interpreter at the close of the first lesson, "I would rather learn English than to have $1,000." Even the men who could not read in their own languages began early to make progress in reading and writing English, and the progress was such that a day in May was selected as "first paper" day, upon which all foreign employees on the road who had not yet declared their intentions to become American citizens, could do so. When the day arrived (May 19), every court house from Chicago to Milwaukee was visited by groups of these men, the day being made quite an occasion. As a result of this, the number of employees not yet having declared their intentions to become citizens dropped to 27 per cent, of which six intended going back to Europe, nine did not as yet understand, and seven refused.

A Foreman School Was Instituted

So successful did the work of the English classes progress, that it was decided not only to continue these classes, but also to establish a school for foremen and all who desired to become foremen. As a matter of fact a survey showed that some of the foremen were almost as much in need of the training as the men under them, and instances were recalled where foremen had been discharged for disobeying instructions, which, as it was found out later, through ignorance, they did not understand. These schools are conducted in the form of a club at which lectures are given on methods of maintaining track. The men are not required to study lessons, but it is required that all foremen send in answers to series of questions discussed in the lectures given them. In addition to studies in track methods, foremen also discuss in these club meetings the relation of capital and labor as well as other subjects pertaining to the railroads and their relation to it.

The Work Has Been Very Successful

At the present time the Americanization program and the larger educational program into which it has grown have been conducted for two years and have proven very successful both from the standpoint of the men and the railroad. The carefully systematized instruction given the track men in the classes, supplemented as it is by family gatherings, has gone a long way not only to enlarge his interest in the work he is doing, but also to readjust his viewpoint concerning American institutions, and while much of the benefit to the railroad is not measurable it has plainly been beneficial from a safety standpoint, has materially reduced the labor turnover and minimized labor difficulties.

All of the schools are now grouped at two locations and it is the intention of the management to continue the courses and thus maintain a close contact with these men, which is possible in such a work. The work is carried on under the jurisdiction of J. S. Hyatt, engineer maintenance of way, to whom we are indebted for the above information.

Salaries of Railway Officers Compared

Only One Salary of $100,000 Shown in Data Submitted at Insistence of Senator La Follette

WASHINGTON, D. C.

A CONSIDERABLE number of prominent railway executives had their salaries reduced during the lean year 1921, while many received increases, according to the compilation of salaries made by the Senate Committee on Interstate Commerce, from which those over $20,000 were selected and published in last week's issue of the *Railway Age*. While the entire list shows many more increases than decreases, most of the increases were in the salaries of the lower paid officers.

A list of the salaries of railroad officers for 1917, compiled by McAdoo's Railroad Wage Commission, was made public in 1918 by Commissioner McChord of the Interstate Commerce Commission, who was a member of the wage commission and who furnished a copy to Congressman Sims for publication in the Congressional Record. The new list makes it possible to show comparisons and the trend of salaries in recent years, because it gives the figures for both 1914 and 1917 as well as for the ten months of 1920 following the return of the railroads and for the first six months of 1921 and also increases or decreases after March 1, 1920. It is difficult to make an analysis of the complete list, however, which takes 241 pages of the printed report, because of the numerous changes made during the course of a year, so that the compensation received for six months does not always represent half of a year's pay, and because of some differences in the method of reporting the figures by different roads. Also, a number of large roads are omitted from the compilation, such as the Delaware, Lackawanna & Western, Erie, Lehigh Valley, Seaboard Air Line, Southern and Union Pacific, Central of New Jersey, while many smaller ones are included.

La Follette Insists on Information

It is understood that this information was furnished by the railroads to the committee at its request on account of the insistence of Senator La Follette, who had threatened to call for the information in a Senate resolution. One of the chief points which the committee was attempting to investigate was the cause of the increase of some $1,400,000,000 in railroad operating expenses in 1920 as compared with 1919, and Senator La Follette was anxious to find in the salary lists something to add to the more noticeable items such as the $700,000,000 wage increase made by the Labor Board shortly after the return of the roads, the wage increases made by the Railroad Administration toward the end of 1919, the increases in cost of fuel and supplies, and the large increase in traffic. The compilation shows clearly, however, that the number of men receiving the larger salaries is very limited.

In the 1917 list the highest salary, and also the only one reaching six figures, was that of Robert S. Lovett, chairman of the Union Pacific, who was credited with $104,000. Judge Lovett's name does not appear in the new list as printed because the Union Pacific report to the committee was submitted in somewhat different form from the other roads, but it shows Judge Lovett as receiving at the rate of $75,000 for 1921 as compared with $100,000 in 1917. It also shows President C. R. Gray as receiving $75,000.

In the present list the highest salary shown is that of Julius Kruttschnitt, chairman of the Southern Pacific, $100,000. He is reported as receiving $75,000 for 1914, $87,500 for 1917, $83,333.34 for ten months of 1920 and $49,999.98 for the first six months of 1921. The next highest in the list is A. H. Smith, whose compensation from five companies of the New York Central System totaled $92,580. Of the 90 chief executives shown in the list (chairmen, presidents, receivers, etc.), as indicated by the compensation reported for six months of 1921, together with notations as to increases or decreases, eight received $75,000 or over. Hale Holden, as president and chairman of the executive committee of the Chicago, Burlington & Quincy, received $60,000, an increase of $10,000 on June 1, 1921, but his salary for the Colorado & Southern had been reduced from $15,000 in 1917 to $10,000. He also received $5,000 from the Fort Worth & Denver City, making a total of $75,000. C. H. Markham, president of the Illinois Central, also received $75,000 in 1920 and 1921 as compared with $60,000 in 1917 and $50,000 in 1914; William Sproule, president of the Southern Pacific, $75,000 in 1920 and 1921, as compared with $61,750 in 1917 and $50,000 in 1914; and E. Pennington, president of the Minneapolis, St. Paul & Sault Ste. Marie, $75,000 in 1920 and 1921, as compared with $53,125 in 1917 and $50,000 in 1914.

Six Receive from $60,000 to $75,000

Six executives were shown to be receiving at the rate of $60,000 to $75,000. L. F. Loree, as president of the Delaware & Hudson, was increased from $25,000 in 1917 to $37,500 on March 1, 1920, and as chairman of the Kansas City Southern from $30,000 in 1917 to $35,000 on March 1, 1920, making a total of $72,500. In 1917 he also received $10,000 as chairman of the Wheeling & Lake Erie. Daniel Willard, as president of the Baltimore & Ohio was reduced from $75,000 to $67,500 in 1921. W. T. Noonan, president of the Buffalo, Rochester & Pittsburgh, was increased from $50,000 in 1917 to $60,000 on January 1, 1921. H. E. Byram, president of the Chicago, Milwaukee & St. Paul, received $60,000 as compared with $75,000 formerly paid to A. J. Earling. N. D. Maher, president of the Norfolk & Western, was increased from $50,000 to $60,000 on January 1, 1921. T. M. Schumacher, president of the El Paso & Southwestern, was increased $10,000 on September 1, 1920, and reduced $10,000 on May 1, 1921, so that his compensation for the first six months of 1921 was $33,333.33.

Eleven from $50,000 to $60,000

Eleven salaries of from $50,000 to $60,000 were shown in the list: W. B. Storey, president of the Atchison, Topeka & Santa Fe, $50,000 (E. P. Ripley received $75,000); J. E. Gorman, president of the Chicago, Rock Island & Pacific, $50,000 (H. U. Mudge received $60,000 in 1914); C. E. Schaff, receiver of the Missouri, Kansas & Texas, $50,000; B. F. Bush, president of the Missouri Pacific, $50,000; Howard Elliott ($40,000 as chairman of the Northern Pacific, and $18,000 as chairman of the committee on intercorporate relations of the New York, New Haven & Hartford); E. J. Pearson, president of the New York, New Haven & Hartford, $50,000 (reduced $2,000 on July 1, 1921); Charles Donnelly, president, Northern Pacific, $50,000; Samuel Rea, president, Pennsylvania ($28,411.65 for six months. In 1917 his salary was reported as $75,000); E. N. Brown ($24,000 as chairman of the Pere Marquette, increased $4,000 on October 1, 1920, and $30,000 as chairman of the St. Louis-San Francisco, increased $6,000 on October 1, 1920, and reduced $6,000 on April 1, 1921); A. T. Dice, president, Philadelphia & Reading $50,000; S. M. Felton, president, Chicago Great Western, $50,000 (increased $10,000 on September 1, 1920).

Five railway executives received $40,000 to $50,000:

J. H. Hustis, president of the Boston & Maine, who received $22,500 for the first six months of 1921, but was reduced from $45,000 to $35,000 on July 1; W. H. Finley, president of the Chicago & North Western, $40,000 ($50,000 for 1917); J. M. Kurn, president of the St. Louis-San Francisco, $40,000; W. H. Williams, $25,000 as chairman of the Wabash, and $17,500 as vice-president of the Delaware & Hudson; J. E. Taussig, president of the Wabash, $40,000.

Fourteen from $30,000 to $40,000

Fourteen received $30,000 to $40,000: Percy R. Todd, president, Bangor & Aroostook, $30,000; W. A. Winburn, president, Central of Georgia, $30,000; W. G. Bierd, president, Chicago & Alton, $36,000; W. J. Jackson, receiver, Chicago & Eastern Illinois, $36,000; W. J. Harahan, president, Chesapeake & Ohio, $30,000 and $6,000 as president of the Hocking Valley; Ralph Budd, president of the Great Northern, $30,000; J. A. Edson, president, Kansas City Southern ($32,000, increased $7,000 on April 1, 1920); Ralph Peters, president, Long Island, $30,000; F. H. Alfred, president and general manager, Pere Marquette, $36,000; W. B. Scott, president, Southern Pacific lines in Texas and Louisiana, $36,000; J. M. Herbert, president, St. Louis Southwestern, $35,200; Charles M. Levey, president, Western Pacific, $30,000; J. J. Bernet, president, New York, Chicago & St. Louis, $35,000; Epes Randolph, president Arizona Eastern, $32,500.

Those receiving $20,00 to $30,000, 18 in all, were: L. A. Jones, president and general manager, Alabama & Vicksburg, $20,000; Henry Walters, chairman, Atlantic Coast Line, $22,800; Marvin Hughitt, chairman, Chicago & Northwestern, $25,000 ($50,000 in 1917); B. A. Worthington, president, Cincinnati, Indianapolis & Western, $20,000; H. R. Kurrie, president, Chicago, Indianapolis & Louisville; J. T. Clark, president, Chicago, St. Paul, Minneapolis & Omaha, $25,000; L. W. Hill, chairman, Great Northern, $25,000; J. S. Pyeatt, president, Gulf Coast Lines, $25,000; W. L. Mapother, president, Louisville & Nashville, $11,660.68 for six months; Morris McDonald, president, Maine Central, $25,000 (decreased $10,000 on April 1, 1921); H. B. Ledyard, chairman, Michigan Central, $25,000; W. H. Bremner, president, Minneapolis & St. Louis, $25,000; C. M. Depew, chairman, New York Central, $25,000; J. M. Schoonmaker, chairman, Pittsburg & Lake Erie, $25,000; J. H. Young, president and general manager, Norfolk Southern, $25,000; W. L. Ross, president and receiver, Toledo, St. Louis & Western, $25,000; C. W. Huntington, president, Virginian, $25,000; O. P. Van Sweringen, chairman, New York, Chicago & St. Louis, $21,000 (increased $6,000 on June 1, 1921).

There were also nine receiving $15,000 to $20,000, 14 from $10,000 to $15,000, and five receiving less than $10,000.

The Southern Pacific, in addition to paying the highest salary to its chairman, seems also to have paid the highest salaries to men other than chairman and presidents. L. J. Spence, director of traffic of the Southern Pacific System, is shown as receiving $26,660.65 for the first six months of 1921, or at the rate of $50,000 a year, as he was increased $5,000 on August 1, 1920, and $10,000 on February 1, 1921. J. P. Blair, general counsel, also received the same amount, having been increased $9,000 on June 1, 1920, and $10,000 on February 1, 1921, and A. D. McDonald, vice-president and controller, also received the same, having been increased $15,000 on August 1, 1920, and $10,000 on February 1, 1921.

The report gives the total amount of increase or decrease in the salaries included in the list (those of $5,000 or more) for each road and also totals for the various years. For example, the Atchison, Topeka & Sante Fe shows increases in the salaries amounting to $5,000 a year or over $120,480 following the return of the roads, and also decreases amounting to $9,800. The total shown in the report for the first six months of 1921 was $767,658.79 or at the rate of $1,535,317.58 a year, as compared with $1,333,968 for 1917. The salaries of the vice-presidents on an annual basis, as indicated by the report, were: E. J. Engel, $25,000; W. E. Hodges, $7,200; A. G. Wells (operating), $30,000; E. Chambers (traffic), $25,000; F. G. Pettibone (G. C. & S. F.), $20,000; S. T. Bledsoe, general counsel, is shown as receiving at the rate of $30,000.

The Pennsylvania Railroad shows increases amounting to $53,205, and decreases of $5,000, while its total for the six months of 1921 was $1,407,602, or at the rate of approximately $2,815,204, as compared with $1,184,459 in 1917. President Rea was shown in the 1917 report compiled by the Lane commission as receiving $75,460. The present report shows $47,742 as his compensation for 1917, but also reports $10,875 for the Pennsylvania Company for that year. For the first six months of 1921 he is shown as receiving $28,411.65, but as all of the subsidiaries of the Pennsylvania are not shown the report does not indicate whether or not his salary was reduced. The salaries of the vice-presidents for the six months of 1921 are shown as follows: J. J. Turner, $13,300; W. W. Atterbury, $15,063.72, as compared with $34,880 for 1917; G. D. Dixon, $11,297.69; Henry Tatnall, $13,557.42; M. C. Kennedy, $9,257.78; G. L. Peck, $11,620.65; Elisha Lee, $14,010.

The report also gives the replies of the railroads to questions calling for the amounts paid "as and for expenses in connection with or upon the account of the compensation, expenses and expenditures of any officer, attorney, publicity agent or employee of such railroad in securing or defeating legislative action or the action of any legislative committee of the Congress or of any state legislature," of the amounts spent "for advertising, pamphletizing or publicity work of any kind or nature" and amounts paid to outside companies for maintenance and repair of equipment during the years 1916 and 1920-21.

In giving the information as to expenses in connection with legislation, most of the roads made no explanations. Others gave the names of various committees or organizations to the expenses of which they had contributed, while others mentioned such items as "matters relating to taxation" or "full crew law repeal," or "attending legislative hearings." Some roads gave a division of their expenses as between "advertising" and "publicity."

Railway Station at Coquimbo, Chile, After Great Earthquake

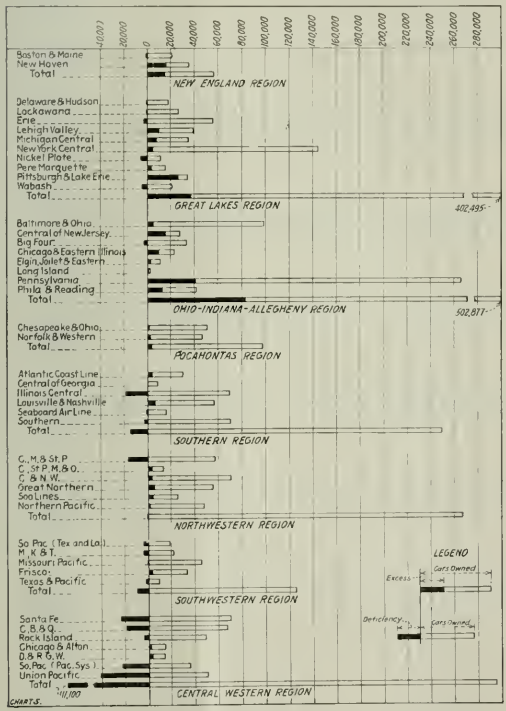
The Distribution of Railway Freight Car Ownership*

Three Bases Are Selected to Study Excess or Deficiency on 46 Leading Railroads

By J. P. Hallihan
Consulting Engineer; Formerly Secretary, Board of Economics and Engineering

THE ORIGINAL THEORY of car ownership in the United States was that each railroad should provide sufficient cars to take care of the traffic offered on its lines.

Freight destined beyond the originating line was formerly transferred at the junction point to cars furnished by the connecting line and the original car was made available for a return load offered by the connecting line or for return



Excess or Deficiency of Car Ownership on Basis of Loaded and Empty Car Mileage During 1920

Cars distributed in same proportion to total cars owned by the 46 systems (1,993,577) as loaded and empty car mileage of the individual road bears to loaded and empty car mileage of the 46 systems. Again taking the Baltimore & Ohio as an example, its ownership was 98,717 and its loaded and empty car mileage for the year was 940,471,000. This figures out at 4.72 per cent of the total empty and loaded car mileage of the 46 systems which in 1920 was 19,916,113,000. Of the total car ownership of the 46 systems—1,993,577—4.72 per cent gives a result of 94,097, or roughly, 94,100. Comparison with the actual B. & O. ownership of 98,717 gives the B. & O. on this basis an excess of approximately 4,600 cars.

empty to the loading point. The rights and responsibilities inherent in individual ownership were thus easily maintained and exercised by the owning company. This is the European system of today.

As transportation facilities were extended by the construction of new lines, difficulties arose. In addition to the delays, breakages and losses attendant upon transfer of lading at each junction point, connecting lines were frequently unable to supply cars promptly for transfer and freight embargoes followed. Large shippers became impatient of these delays and finally furnished their own cars, paying the various railroads participating in the haul on a mileage basis, after the practice of the coal companies on English roads. This opened the door to the formation of private car lines, which offered the shipper specially supervised fast service in the original car to destination, and speedily monopolized the carriage of high-class freight.

The loss in revenue suffered by the railroads forced them to enter into an arrangement for interchange of freight cars on a mileage basis of payment for use under which the roads gradually recovered control of freight traffic, displacing or absorbing all private car lines except those furnishing cars for refrigerator or other special service.

The mileage basis of payment proved defective in that it provided no penalty for undue detention of cars by roads or consignees, and in 1902 it was superseded by the present code of car service rules. Under this code the use of a freight car is paid for at a fixed rate per calendar day regardless of mileage, and the shipper or consignee is penalized by a demurrage charge for undue detention of cars.

During this period of evolution the railroads were obliged to relinquish individual control and to accept the principle of the common use of cars dictated by the commercial advantage of a rapid movement of freight from origin to destination without breaking bulk. The theory of individual ownership remained and it is now proper to inquire into the economic reasons supporting this theory.

A Moral Obligation Easily Evaded

The original requirement that each road should furnish cars sufficient for its originating business was early found to be a moral obligation easily evaded and impossible of enforcement. Roads so situated that they were able to divert empty cars returning to the owning road and load them with freight destined in the same direction were not subject to criticism, since they were complying fully with the car service rules and were, moreover, offering an economic advantage in converting a waste haul into a revenue haul. Feeder lines connecting with more than one trunk line were able to use their competitive position to secure cars.

Nevertheless the business of the country had to be taken care of, not in a restricted manner but to the full measure of the seasonal needs, and the burden has been met by the large systems able to meet it in the expectation that the per diem payments would at least carry the investment. This expectation has not been realized.

For the 15-year period from January, 1907, to January, 1922, the records of the Car Service Division of the American Railway Association show that a surplus of freight cars existed for 162 of the 180 months considered, or for 90 per cent of the time. This surplus exceeded 20 per cent at times, the average, however, on the basis of 2,500,000 cars in service being 156,000 cars or a little more than six per cent. This is not an excessive margin to be kept available for peak business but it is in addition to about the same per-

centage normally out of service for repairs, and taken alone represents an unused capital investment of approximately $150,000,000. The carrying charge at five per cent, leaving out of consideration the storage tracks required, is $7,500,000, incurred for the common good of all roads but met by the individual owners. There is in addition the loss to all roads in empty car mileage caused by return to owner when surplus, and relocation to loading territory when a shortage develops.

During the latter half of this period an attempt was made to cover the carrying charges by an increase in per diem rates but the rate was again reduced and at times suspended during federal control and the net result of individual ownership has been the inequitable distribution of the burden of equipment costs.

Studied From Several Angles

In an endeavor to ascertain the relative inequality of ownership, the traffic of the year 1920, a year of good business, when all the equipment was in use, has been studied from various angles taking as a basis the performance of the 46 principal systems as derived from the records of the Car Service Division of the American Railway Association. The result of these studies is shown graphically by a series of several charts, three of which are herewith submitted, giving the individual position of each road and the position of the regional groups, as defined (1) in the weekly reports of car loadings, (2) in the loaded and empty car mileage, and (3) on the basis of loaded and empty car days.

The calculation of excess or deficiency in ownership is made in each case on the assumption that the ownership of cars on any individual road should bear the same ratio to total cars in service as its car loadings bear to total car loadings or as its car mileage bears to total car mileage, etc.

Three of the Bases Used in Present Instance

In making an analysis of the situation on each road, it was necessary to consider three principal factors:

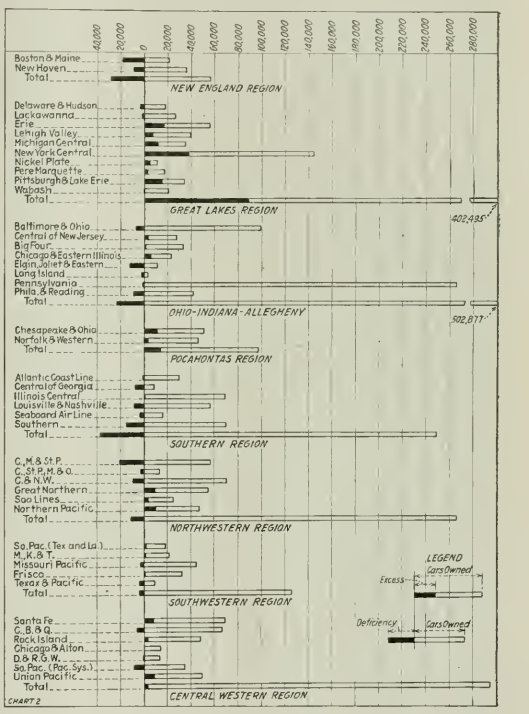
1. The requirement of each road and its contribution to the total business of the country expressed by its car loadings.

2. The participation of each road in the revenue derived from the use of the equipment expressed by its loaded and empty car mileage.

3. The character of service performed by each road expressed by the relation of loaded and empty car days to its loaded and empty car mileage.

On the basis of car loadings alone, it appears that with the exception of the Central Western Region—where the roads have enough cars for their requirements—all the other regional groups own less cars than they should be required to own with the single exception of the roads in the Great Lakes Region which, combined, have a surplus of more than 80,000 cars beyond their requirements for originating tonnage. When the comparison is made on the basis of empty and loaded car miles which in a measure is indicative of the revenue derived from the use of equipment, this situation immediately changes. The roads in the Central Western Region show a deficiency in car ownership of over 111,000 cars, indicating that their contribution to the total car supply of the country is very much less than their proportionate share of the benefits derived. The roads in the Great Lakes Region appear on this basis to be in a more normal position, having more than fulfilled their obligations by a surplus of 36,000 cars.

When the comparison is further extended to show the beneficial use of the equipment or, in other words, the comparative rapidity of movement of freight on the various lines as indicated by the figures of car miles per day and loaded and empty car days, the deficiency of ownership shown in the Central Western Region on a revenue basis disappears, the Central Western Region showing almost a perfect balance due to the long haul and low proportion of terminal delays



Excess or Deficiency of Car Ownership on Basis of Car Loadings for Year Ended February 19, 1921

Cars distributed in same proportion of total cars owned by the 46 systems (1,993,577) as number of cars loaded by the individual road bears to total cars loaded by the 46 systems. Thus the Baltimore & Ohio's ownership for the period was 98,717; its car loadings totaled 1,945,500. The total loadings of the 46 systems for the same period were 36,648,789. The former figure is 5.31 per cent of the latter. 5.31 per cent of the total ownership of the 46 systems—1,993,577—gives a result of 105,859, or roughly, 106,000. This figure compares with the Baltimore & Ohio's actual ownership of 98,717, indicating a deficiency, roughly, of 7,300 on this particular basis.

permitting a much faster movement than on other roads less fortunately situated.

Consider the Pennsylvania System which, besides being the road owning the largest number of cars—over 265,000—enjoys a traffic much more diversified than the average, has a great many feeders and connections with other lines, reaches the great terminals on the seaboard as well as the important gateways in the interior and is, in a word, a great collector as well as a transmitter of freight. The charts show that it is keeping up to its requirements on originating load-

ings; that on the basis of revenue derived from participation in handling the total business of the country it has, in fact, exceeded its obligation by a little more than 40,000 cars, but its movement being somewhat retarded by a large proportion of intermediate hauls, on the basis of car days, it becomes again deficient in its obligation of ownership by 12,500 cars.

The New England Roads

Perhaps the most characteristic example of the necessity of considering the three bases mentioned is shown by the New England roads on which traffic moves slowly and experiences many delays at junctions and at terminals. On the basis of car loadings the New England Region has but little more than half of the number of cars required. If its ownership is considered on the basis of its proportionate obligation due to the revenue derived, it appears with an excess of cars which is wiped out, however, by reason of its slow movement, leaving the New England Region in deficiency on any form of average calculation. From an economic point of view this is as it should be, since under normal circumstances more cars arrive in New England with raw material to be converted into manufactures or to furnish power for such conversion or with food products for the population than are required for manufactured products going out, which constitutes the burden of its outbound traffic.

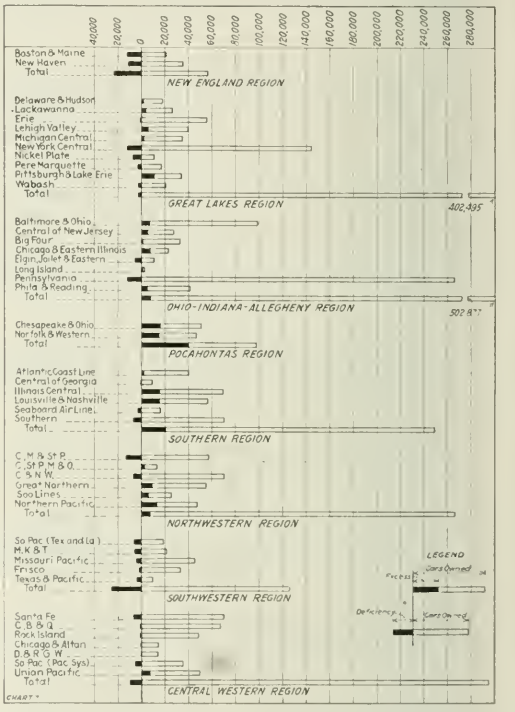
The problem of fair distribution of capital cost of ownership in equipment that is employed, whether individually owned or not, in a common service is quite evidently, from this picture of the situation, not an easy problem to solve. The inherent conditions differ on each road and in each group, differing less between roads in the various groups than between those governing a group of eastern roads and those governing a group of roads in southern or western territory. A short haul coupled with movement in and out of congested terminals has a very important bearing on the movement of freight expressed in car miles per day. Again, the position of a bridge road originating very little freight but receiving freight from its connections destined for points beyond its own lines, giving it the advantage of a long haul with very little terminal switching, permits it to profit from the general business of the country with a very small contribution to the equipment used. In such circumstances, as in New England, it would be an economic loss to compel a road so situated to purchase cars which in time of surplus would come back to its lines for storage, thus creating unnecessary empty car mileage, when the movement of empty cars in both directions over its line furnish it at all times with a supply of cars more than adequate for its needs. Circumstance of location should not, however, permit it to evade its share of the capital cost.

Burden of Ownership Not Now Equitably Distributed

The fact that is brought out very clearly from the analysis is that the burden of ownership is not now equitably distributed, and the question naturally arises whether it is best to attempt equitable distribution on the basis of individual ownership. Certainly it cannot be done without power of enforcing the purchase of rated equipment deficiency by individual roads, and as shown, many of the roads most deficient in equipment on any of the bases considered should not, from an economic standpoint, be permitted to own cars individually so long as the practice obtains of return to owner when surplus. Such equipment, under car service rules, would be located in times of surplus at points where a car supply is not required and would require relocation to loading territory before it could again come into general use.

Coming now to consideration of common ownership as well as common use, it is evident that some thought must be given to the manner of protecting individual ownership in the common supply, and to the possibility of deducing a formula under which each road could thereafter contribute its proper proportion to the capital investment. For example, the present supply of freight cars might be evaluated and equipment certificates issued to cover the whole capital investment, each road receiving certificates for the equipment contributed and subscribing in addition to such amount as would make up its proper contribution or receiving credit for its excess ownership.

Protection of present capital investment offers no difficulty. There is considerable difficulty, however, in determining the excess or deficiency of contribution to the total equipment in service on the part of each road. The base for derivation of



Excess or Deficiency of Car Ownership on Basis of Loaded and Empty Car Days During 1920

Cars distributed in same proportion to total cars owned by the 46 systems (1,993,577) as loaded and empty car days of the individual road bear to total loaded and empty car days of the 46 systems. Thus the Baltimore & Ohio is shown as having an excess of 6,400 cars on this basis. Its ownership was 98,717; its loaded and empty car days were 36,900,000. Total loaded and empty car days of the 46 systems were in 1920, 797,180,000 of which 36,900,000 constitutes 4.63 per cent. This per cent of the total ownership of the 46 systems—1,993,577—gives a result of 92,303, approximately 6,400 less than the actual ownership of 98,717. In other words, on this basis the Baltimore & Ohio has an excess of 6,400 cars.

a formula would appear to be that of benefits derived from use; that is, the revenue derived from the haul of a loaded car as expressed by the relation of the car mileage of the individual road to the total car mileage. This would have to be modified by the requirement for originating tonnage and again by the manner in which the road performed its part of the service of transportation, modified again by the circumstance of location and by the physical conditions of operation under which some roads must work and which are not in evidence on other roads. It seems clear, however, that a reasonable standard of movement could readily be determined for each group, and a premium established for acceleration of movement by individual roads of the group.

The situation is somewhat analogous to the problem confronting a customs smelter receiving various ores, some of which are free-smelting and some refractory.

Within reduction limits, the base rate per ton for treatment is the same for all. Each lot, however, is credited a definite sum per unit for each unit of fluxing elements in excess of the base percentage established and is likewise penalized for each unit of refractory elements above the permissible limit. The adjusted treatment charge expresses the net smelting value of the constituents of the ore.

A similar working formula could, no doubt, be deduced in this case, and be applied monthly or annually, as might be agreed. Standards of movement and values of modifying circumstances could readily be determined for each group by the roads interested, or by a general committee for all roads, as standards are now determined in interchange practice.

There are various maintenance and operating economies that would naturally follow if common interest and responsibility are added to common use of freight cars, but the unfair distribution of the financial burden alone, under the plan of individual ownership, warrants the conclusion that it is not adapted to present-day conditions of operation and should be supplanted by a method sufficiently flexible to ensure that no road would escape its share of the burden of ownership nor be deprived of due credit for beneficial use of equipment.

Agitation for Reduced Rates Termed Menace to Reviving Prosperity

THE Western Railways' Committee on Public Relations, on December 23, issued a statement declaring the reductions of freight rates made within the last year have averaged 12 per cent, and are costing the railways at the rate of at least $471,000,000 annually in freight earnings, and characterizing the agitation, especially in the Western States, for further reductions, as a "menace to the reviving prosperity of the country."

The committee is composed of the following railway presidents: Ralph Budd, Great Northern; H. E. Byram, Chicago, Milwaukee & St. Paul; W. H. Finley, Chicago & North-western; Hale Holden, Chicago, Burlington & Quincy; J. E. Gorman, Rock Island Lines; C. H. Markham, Illinois Central; C. E. Schaff, Missouri, Kansas & Texas, and S. M. Felton, Chicago Great Western. The statement, which was given out by the chairman, S. M. Felton, is as follows:

"The present agitation for further reductions of railway rates, which is especially active among the farmers in western territory, indicates a serious want of public understanding of the railroad situation, and is a menace to the reviving prosperity of the country. This want of public understanding will, it is to be feared, be increased by a statement made in President Harding's message to Congress on December 8. This statement is as follows: 'When some very moderate wage reductions were effected last summer there was a 5 per cent horizontal reduction in rates.' The appearance of this statement in the message must have been due to an unfortunate mistake, for, as shown by the latest statistics of the Interstate Commerce Commission, the reduction of rates has been more than twice the amount stated. While railway rates and earnings have been seriously reduced, the prices of all commodities have been increasing.

"September was the first month since the general reduction of freight rates was put into effect on July 1, the facts for which show the full effect of the reductions of rates which have been made within the last year. This is the case because September was the first month after the reduction of rates when the railways handled a normal amount of low grade freight, especially coal. The statistics of the Interstate Commerce Commission show that between September, 1921, and September, 1922, two months which are entirely comparable, the average freight rate per ton per mile in the entire country declined 12 per cent, or from 1.27 cents to 1.12 cents. Few people realize the great effect this has had on railroad earnings. The total freight earnings of the railways of the country from freight business in September alone were $47,773,000 less than they would have been except for this reduction in rates. Based on the freight traffic handled in 1921 the reduction of freight rates within the last year amounts to about $471,000,000 annually.

"The largest reduction in rates has occurred in western territory, because the reductions on grain, grain products and hay have been relatively larger than on other commodities. The reduction in the average rate of the western lines between September, 1921, and September, 1922, was 13 per cent. The western railways in September earned almost $22,000,000 less than they would have if the reductions of rates had not been made. Because of the reduction in rates the earnings of the western lines, on the basis of the traffic of 1921, have been reduced at an annual rate of almost $265,000,000.

"The argument has been made that rates should be reduced because they are too high compared with the prices of commodities, and especially of farm products. A statement just issued by the Bureau of Labor Statistics of the Department of Labor shows that between November, 1921, and November, 1922, the average wholesale price of all commodities increased over 10½ per cent. It also shows that within this year the average increase in the prices of farm products was 18¼ per cent. The result of these reductions in railway rates and increases in the wholesale prices of commodities is that the average rate per ton per mile in the entire country is now only 54 per cent higher than it was in 1913, before the war, while the average wholesale price of all commodities other than farm products and foods is 65 per cent higher.

"Since most of the complaints regarding high railway rates come from the farmers in western territory, it is pertinent to call attention to the fact that as compared with 1913 the average price of farm products is now higher than the average rate of the western railways. The average rate per ton per mile of the western railways in September was only 38.6 per cent higher than in 1913, while the average price of farm products in November was 43 per cent higher than in 1913. The price of corn in the Chicago market is 50 per cent higher than it was a year ago.

"The railways are suffering not only from these large reductions of rates, but also from the increases in prices which have occurred, which include, of course, increases in the prices of the things they have to buy. They are large purchasers of metals and metal products, and the average increase in the price of these things within the last year has been almost 20 per cent. They are the largest purchasers of coal, and they are paying almost 40 per cent more per ton for coal than they were when the coal strike began. They are large purchasers of lumber, and the increase in the price of southern pine within the last year has been 39 per cent, while the increase in the price of Douglas fir lumber has been 36 per cent.

"In the four months following the reductions of rates on July 1, for which complete statistics of earnings and expenses are available, the railways of the country earned almost $87,000,000 less net return than in the same months of 1921, although 1921 was an extremely poor year. In these months the western lines earned $38,000,000 less net return than in the same months of 1921. This reduction of net return was due partly to increases of expenses caused by the shop employees' strike, but mainly to the reduction of rates and increases in the prices of fuel and materials.

"The railways have never been able since the coal strike

ended to furnish the country with as much transportation as it has needed, and the shortage of transportation has been acute in the western states, where the farmers have suffered severely from it. Further reduction of rates, which would be absolutely without justification on economic grounds, would cripple the railways. All signs indicate that the demand for transportation will continue to increase, and the railways will become less and less able to cope with this demand if their rates continue to be the object of unwarranted attacks."

Many Gages Are Found Throughout the World

A Study of the Practices of the Roads of 59 Countries Show 76 Per Cent Use Standard Gage

NOTWITHSTANDING the general tendency throughout the world toward uniformity in railway details, and especially in the promotion of free inter-communication, there is one important detail with respect to which there is still a lack of universal agreement. That detail is the railway gage. The accompanying statistics of railway mileage by gages, compiled by the Bureau of Railway Economics for 59 of the principal countries of the world, show that no one gage or width of track has been adopted to the exclusion of others; the majority of the railways, however, use the so-called "standard" gage of 4 ft. 8½ in. This gage is practically universal in the United States, Canada, Cuba, Holland, Hungary, New South Wales, Turkey and Chosen.

Next to the standard gage comes the meter gage of 3 ft. 3⅜ in. This is the almost exclusive gage in Porto Rico, French Sudan, Malay Peninsula, Bolivia, and Dutch Guiana, applies to a large part of the mileage in Brazil, and is found on some mileage in nearly all the principal countries of Europe and Asia. The two next important gages in use seem to be the 5 ft. 6 in. gage and the 3 ft. 6 in. gage. The former is found chiefly in India, Spain and Argentina. The latter is standard in South Africa, New Zealand, South Australia, Queensland, Tasmania, Western Australia, Japan, and the Philippines.

The accompanying tabulation gives details as to gages on 565,088 miles of railway in the 59 countries. These 565,088 miles represent about 76 per cent of the total railway mileage of the world. Several important, and a number of unimpor-

tant, countries are not included because complete or up-to-date statistics are not easily available. Among the countries so excluded are Russia (including Siberia), Germany, Poland, Turkey in Europe, Bulgaria, the Balkans, and various possessions in Africa and elsewhere.

Of the 565,088 miles operated in the 59 countries, here covered, in 1920, 396,169 miles are of the standard gage, 54,685 miles are of a gage wider than standard, and 114,234 miles of a narrower gage, the percentages being as follows:

Standard gage,	70	per cent
Wide "	10	per cent
Narrow "	20	per cent

The three gages shown for the United States are for the Class I railways, and represent 243,413 miles of main track owned. Practically all of this mileage is 4 ft. 8½ in. gage. During recent years there has been a rapid concentration on the standard gage in the United States and at the present time only three gages are in use on Class I railways. Of these the standard gage represents 99.4 per cent of the total mileage, the remaining 0.6 per cent being divided between 4 ft. 9 in. and 3 ft.

The railway mileage of Canada is divided between two gages. Ninety-eight per cent represents standard gage, while the other two per cent is 3 ft. 6 in. gage.

The United Kingdom has 3,109 miles of the broad gage of 5 ft. 3 in. (1.676 meter), and it also boasts of the narrowest, that of 1 ft. 3 in. However, 85 per cent of the railway mileage of that country is standard gage.

On the continent of Europe the English standards and details were adopted in the first lines to be constructed, and at the present time the standard gage, whose metric equivalent is 1.435 meters, represents 76 per cent of the railway mileage operated. But as in the United Kingdom this gage is not universal. For the 11 continental European countries shown in the accompanying statement no less than 23 gages are represented. Nearly all European countries (Spain excepted) have adopted the standard gage for their main lines, while secondary or local lines have been constructed on narrow gages.

In Africa the gages are mainly 3 ft. 6 in., 3 ft. 3⅜ in. (meter) and 2 ft. 5 17/32 in. (0.75 m.). The railways there also operate 1,849 miles of standard gage.

The mileage of the railways of Australia, including Tasmania, consist of six gages. The 3 ft. 6 in. gage predominates with standard gage next in importance, while there is a small amount of mileage of 2 ft. 6 in., and 2 ft. gages still in service. A commission recently appointed to consider the unification of railway gages in Australia has recommended that the 4 ft. 8½ in. gage be adopted as standard.

In Asia, the Indian railways, the largest Asiatic system, are divided chiefly between a "broad" gage of 5 ft. 6 in. and a narrow gage of 2 ft. The greater percentage of the Chinese railway mileage is 5 ft., although 35 per cent of the mileage of that country is of standard gage. Practically all the Japanese lines use the gage of 3 ft. 6 in. (1.067 m.).

In South America there is great diversity, lines being built to gages ranging from 1 ft. 11⅝ in. (0.60 m.) to 5 ft. 6 in. In Central America and the West Indies the principal gages are 4 ft. 8½ in., 3 ft. 6 in., and 3 ft., with 4 ft. 8½ in. predominating except in Panama, where the gage is 5 ft.

Interstate Commerce Commission May Require Additional Equipment

WASHINGTON, D. C.

THE Interstate Commerce Commission announced on December 27 what promises to be one of the most important general investigations it has ever undertaken, under docket 14,489, "into and concerning the adequacy of the locomotives and cars of all descriptions owned and of the locomotives and cars used by each such common carrier by railroad, and used in the transportation of freight between points in continental United States, and into and concerning the customs and practices prevailing or desirable with respect to the ownership, use and interchange of cars with a view to promoting economical and efficient service, to prescribing and establishing such just and reasonable rules, regulations and practices with respect to car service, and to require the respondents to provide themselves with such safe and adequate locomotives and cars wherewith to perform as common carriers their car service as may upon such investigation appear to be contemplated and required by law." The order was entered on December 11. As a preliminary step the commission has by questionnaires attached to the order called upon the carriers for the following information:

(a) Freight train cars owned or leased at the beginning and close of year 1922, and number ordered but not delivered December 31, 1922.

(b) Estimated number of additional cars needed by classes; estimated cost thereof; proposed program for acquiring such cars; and proposed plan of financing.

(c) Ages of cars in service by classes, December 31, 1922, 100,000 lb. capacity and over.

(d) Ages of cars in service, 80,000 lb. and less than 100,000 lb. capacity.

(e) Ages of cars in service, 60,000 lb. and less than 80,000 lb. capacity.

(f) Ages of cars in service less than 60,000 lb. capacity.

(g) Locomotives owned or leased at the beginning and close of year 1922 and number ordered but not delivered on December 31, 1922.

(h) Unserviceable locomotives on line first of each month in 1922, by classes, and tractive power.

(i) Ages of locomotives at close of year 1922, by classes —freight, passenger, switch.

(j) Estimated number of additional locomotives needed;

proposed program for acquiring such equipment; and proposed plan of financing the purchase thereof.

(k) Commodities loaded monthly, 1922, revenue freight—carloads.

(l) Carloads of non-revenue freight loaded monthly, 1922.

(m) Freight cars on line daily, serviceable and unserviceable, by months in 1922—box, coal.

(n) Freight cars on line daily, serviceable and unserviceable, by months in 1922—refrigerator, flat.

(o) Freight cars on line daily, serviceable and unserviceable, by months in 1922—stock, all freight.

(p) Freight car surplusages, daily averages by months, 1922, railroad owned cars.

(q) Freight car shortages, daily averages by months, 1922, railroad owned cars.

(r) Freight car surplusages, daily average by months, 1922, cars owned by private companies.

A questionnaire has also been directed to all private car lines requesting information concerning freight train cars owned or leased by them, and the number of such cars ordered but not received.

All carriers by railroad subject to the Interstate Commerce Act are made respondents. The governor of each state, as well as the tribunal thereof, if any, having regulatory powers over the common carriers by railroad, have been notified of this proceeding.

The times and places for hearings will be announced later.

The Transportation Act gave the commission for the first time authority to require railroads to provide an adequate supply of equipment and the numerous complaints it has received because of the unprecedented car shortage of this fall have apparently decided the commission to see whether the remedy lies in the exercise of such powers. Such an investigation will naturally involve such additional questions as whether the need is for additional cars or a better supply of motive power or more adequate terminals which will enable obtaining greater service from the existing equipment; whether shippers should provide themselves with greater storage facilities or whether the business of the country can be better distributed through the year so that there will not be so acute a demand for cars for seasonal loading, and also, if it should be determined that more railroad equipment is required, what companies should be the ones to purchase it. When the Railroad Administration ordered a considerable number of cars and locomotives it allocated them to the companies best able to finance them rather than to those that needed them the most.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR loading during the week ended on December 16 continued to break all records for the season of the year. The total was 888,082, an increase of 162,008 over the corresponding week of 1921, and of 85,811 over 1920. The usual seasonal decline was shown, however, by a drop of 31,000 as compared with the previous week. In all districts except the Pocahontas, where the loading was less than in 1920, the figures exceeded those of both 1921 and 1920 and the same was true of all classes of commodities except coal and ore. Coal loading was 198,510 cars as compared with 134,789 in 1921 and 225,059 in 1920. Miscellaneous loading was 45,000 cars above that for 1920 and there was an increase of 14,000 cars in grain, 8,000 in live stock, 15,000 in forest products and 31,000 in merchandise.

Compiled by the Car Service Division, American Railway Association.

THE KANSAS INDUSTRIAL COURT has ordered the arrest of 46 railroad strikers at Horton, Kan., charging violations of the Industrial Court Act. The warrants were issued on the three counts of disturbing the peace, picketing and conspiracy to obstruct the operation of the railroads.

The Rich Lerma Valley, Served by the New Line

New Transcontinental Line in Northern Argentina

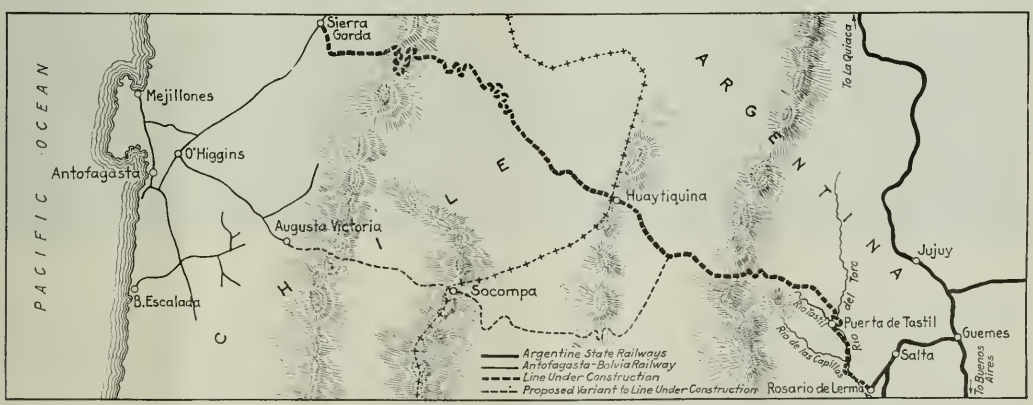
Interesting Engineering Problems Involved—Rich Agricultural and Oil Lands Made Accessible

By Richard F. Maury
Chief Engineer, Salta to Antofagasta International Railway

WITH THE OBJECT of opening up the rich northern provinces of Argentina it was recently decided by the governments interested to initiate the construction of a new trans-Andean line from the city of Salta, Argentina, to the port of Antofagasta, Chile, on the Pacific, crossing the main range of the Andes and following roughly the traditional Inca highway through the mountains. This line at its eastern terminus connects with the Argentine State Railway system, of which it will form an integral part. From many points of view it presents features of great interest, the center of the sugar district, which is in this territory, being more than a thousand miles from Buenos Aires. The fertile plains and wonderful valleys of the region make of it one of the most promising zones in the world for future development, producing as it does every class of tropical and sub-tropical products, timber, cattle and minerals.

New Line to Reduce Distance

The new line now in construction will reduce the rail haul to the sea by 435 miles, more or less, while the sea haul to



The New Transcontinental Link

prominent among which are the low rates of grade, as gradients go in the country, which have been found feasible and some rather remarkable developments which have been introduced to maintain these low gradients.

The Argentine provinces which will be served by the line are at present sparsely settled, due to the want of a port and the enormous distances that separate them from the littoral, American ports will be enormously reduced, the distance from Antofagasta to Panama being only 2,200 miles. Undoubtedly the present trade routes will be completely changed by this construction and it will be a factor of great importance in encouraging commercial relations between the United States and Argentina.

Taking as a center, Guemes, the junction point of the new

line with the State Railways, the distances to the sea and American and European ports are as follows:

From	To Antofagasta Miles	To Buenos Aires Miles
Guemes	469	931
Liverpool	6,770	6,258
New York	4,212	5,838
New Orleans	3,620	6,255
Amsterdam	7,058	6,370

Northern Argentina and eastern Bolivia will, in time, be large consumers of American products. The sugar industry, already well established, will acquire impetus with the opening up of the new route, while the existence of enormous fields of petroleum in the region has aroused the interest of American capital, boring operations on a large scale having been started. This also will be a source of traffic, while it is probable that, in time, a considerable proportion of the agricultural machinery used in the Argentina will be imported through this new channel. Trade relations will not, in any sense, be unilateral since northern Argentina can become in time one of the great corn and cattle producing areas of the world. With these facts in view, the new line is being constructed to handle a heavy traffic.

Viaduct, 950 ft. in Length and 80 ft. High, Being Built Over the Rio Toro

Maximum Grades 2.5 Per Cent

Work on the Argentine section of the line was begun with great activity in April, 1921. The original surveys included several sections of rack rail with gradients up to 7.5 per cent and normal grades of 3 per cent, but it was wisely determined to try for a 2.5 per cent line, compensated, and with relatively easy curvature (11 deg. 40 min.). New surveys now being undertaken on this basis have reached the stage where it is possible to state that these standards will not be passed at any point. The work is being done by the State Railway organization of which Domingo Fernandez Beschtedt is general manager and Arthur Acevedo chief engineer. Surveys and construction work are in charge of the writer.

The line leaving Salta crosses the rich Lerma valley for some 25 miles to intern itself in the gorge of the Rio Toro, which it follows to Puerta de Tastil, 65 miles. In the first 19 miles of the gorge of the Toro, the rise of the river bed is, in parts, in excess of the maximum grade and due to the impossibility of introducing development without recourse to rising tunnels, it was found necessary to employ two short sections of switch-back, one of 3,937 ft. and one of 2,625 ft., both placed at crossing stations to reduce operating difficulties to a minimum.

A Sharp Climb

At Puerta de Tastil the line leaves the Toro to swing west directly toward the coast and here the principal difficulty was encountered. A table land running in the direction desired on practically maximum grade was found, but between its level and the bed of the Toro there exists a vertical rise of some 2,300 ft. in an air line distance of 5 miles. Careful surveys of the region, of which a part was made by photo-stereoscopic methods employing the Zeiss photo comparator, demonstrated the possibility of attaining sufficient development within the established grade, and at one point the line makes six spirals around a group of conical hills on practically a surface line. From a scenic point of view this is without doubt one of the most remarkable stretches of rail in the world. At the top of the climb the traveler will dominate with his eye on a range of snow-covered hills, many of which exceed 20,000 ft. in altitude, while below him the line stretches away in eight distinct levels, the last being more than 2,000 ft. below.

Erecting 2-10-2 Locomotives, Built by Baldwin

The line from here follows to the west with very easy grading, with the exception of the crossing of the three dis-

tinct ranges in the Abra Blanca (13,450 ft. high), the Abra Chorillos (14,750 ft.) and the continental divide at the frontier, the point of which crossing is not yet decided.

Danger from Slides

In the period from April to December, 1921, 56 miles of very heavy grading have been finished, with a total of more than 2,000,000 cubic yards of rock and hard-pan, while 25,000 cubic yards of bridge and culvert masonry have been finished in the same time. Some heavy viaduct and tunnel work is found on the same section, as well as hillside retaining walls. The lower stretches of the line are in a zone of torrential rainfall and slides will be the worst enemy of the constructor. In places, to avoid future difficulties, the line is carried under the mud slides in cut-and-cover tunnels carried out in reinforced concrete and it is possible that in the future considerably more work of this nature will be required. Fortunately, in the higher altitudes the precipitation is very small and no difficulty will be experienced with snow, giving the new line a great advantage over the existing Transandine line in the province of Mendoza.

The work is being given out on small contracts, the railway furnishing equipment, and 5,000 men are being employed, mostly Argentine peons from the mountain districts, who are proving extremely good workers. The equipment includes 70-ton railway type, Bucyrus shovels, complete compressed air equipment for the tunnel work and a large fleet of motor trucks. Well-equipped shops are being provided for the erection and repair of locomotives and plant, while, to better the living conditions of the workers, co-operative stores have been established in which it is possible to purchase articles of good quality at cost price.

The line is of meter (39.37 in.) gage to conform to the gage of its connections and is being laid with 80 lb. rails on red quebrachi ties (2,420 per mile) and is heavily ballasted with broken stone and gravel. Santa Fe type locomotives of 146 tons are being supplied by the Baldwin Locomotive Works, the first having been erected and placed in service. The fuel used is crude oil from the Argentine fields and complete installations for storage and loading are being erected in Salta.

An Alternative Route

Work on the Chilean section has not been started, pending the decision of a variant of the original survey through Huaytiquina. The modification proposed, the possibilities of which in Argentine territory are now being studied, will pass the frontier in Socompa, considerably to the South of Huaytiquina, skirting the volcano of Socompa to connect up at Augusta Victoria (the ex-kaiser's important nitrate mine) with an existing branch of the Antofagasta & Bolivia Railway. This line of 75 centimeter (2 ft. 5½ in.) gage would be rebuilt to meter gage and put into condition to handle the heavy traffic of the transcontinental line. The proposed variant would be very advantageous to Argentina, since it would reduce considerably the total distance between Salta and the sea, while increasing the part to be constructed by the Argentina by only some 50 miles. Considerable opposition to this cut-off has been aroused in the north of Chile, since it avoids the richer mining regions and the only zone with irrigation.

Rio Toro Gorge—Railroad Embankment on One Side, Highway on the Other

Accident Investigations—July, August and September*

THE THIRTEENTH quarterly issue of the Summary of Train Accident Investigations, prepared by the Bureau of Safety of the Interstate Commerce Commission, which is for the months of July, August and September, 1922, was issued on December 20. The report covers 21 collisions and 11 derailments, besides an accident on an electric road and one on the New York & Long Branch which was not a train accident.

Below is a list of these accidents, the date in the last column being that on which a report of the accident was published in the *Railway Age*. The letter *c* indicates collision and *d*, derailment. Ten of these I. C. C. reports have already been noticed in these columns, as noted; ten others, indicated by stars in the list, are abstracted below; leaving 14, of relatively less importance, which must be omitted because of limitations of space.

Abstracts of Government Reports

Atchison, Topeka & Santa Fe, Burrton, Kan., July 8, about 4 p. m. Eastbound passenger No. 4, consisting of locomotive 1428, a buffet car, a dining car and five sleeping cars, while moving at 18 or 20 miles an hour, ran over a misplaced switch and into some cars of gasoline standing on a side track; one passenger killed and 48 passengers and employees injured. The buffet car was telescoped for half its length by the dining car. Tank cars on the siding were ignited and burned; but the cars in the passenger train were not damaged by fire. The line of road is straight, the switch target showed red and the weather was clear, but the engineman evidently did not see the target; and the fireman did not see it until he was very close to it. The switch is close to the station and close to the crossing of the St.

*Previous quarterly summaries, for 1921 and 1922, were noticed in the *Railway Age*, as below:

No. 7, 1921, July 2, 1921, page 35;
No. 8, 1921, September 3, 1921, page 459;
No. 9, 1921, December 10, 1921, page 1145;
No. 10, 1921, June 10, 1922, page 1343;
No. 11, 1922, June 17, 1922, page 1483;
No. 12, 1922, September 2, 1922, page 426.

Louis-San Francisco. The operator at the station had just returned to its normal position the gate at the St. L.-S. F. crossing, but had not noticed the switch in the wrong position. The report, quoting the fireman, says that the tank at the station is painted red and forms a background for the target, making it difficult to read the indication for any considerable distance. The inspector finds that the switch had been left in the wrong position by the conductor of a freight train of the St. Louis-San Francisco, who had been using the Santa Fe track a few minutes before for the purpose of turning his locomotive; but the conductor claimed emphatically that he went back to the switch and closed it. The speed of trains over the St. Louis-San Francisco crossing is limited by rule to 15 miles an hour; and it is held that if the engineman had obeyed this rule, the collision probably would have been avoided. It seems to have been the common practice for the Frisco people to use the main track of the Santa Fe at Burrton for turning

locomotives, without any form of protection, except that inquiry would be made of the operator if the block was clear, the line of the Santa Fe being worked by a manual block system.

Minneapolis, St. Paul & Sault Ste. Marie near Gile, Wis., August 3. Eastbound extra freight 2427 collided with westbound freight No. 151. Both locomotives were badly damaged and the fireman of train 151 was killed. Nine other employees were injured. The operator at Ironwood had neglected to deliver a meeting order to train 151. It appears that he accepted the order from the dispatcher after the train had left his station; he evidently had depended upon the conductor to come into the office, as was his ordinary practice, after finishing his switching and before departing. The operator had been in service five years and had a clear record.

Northern Pacific, Durant, Mont., August 14. Westbound freight extra No. 1747, moving at about 18 miles an hour, collided with eastbound passenger No. 2, moving at about 10 miles an hour. Both of these trains were long and heavy, but the report says that neither of the locomotives was derailed. The second car in the passenger train was telescoped by the first for about 15 ft. The express messenger on the passenger train was killed and 20 passengers and 4 employees were injured. No block signal system is in use on this line. The freight had no orders and no rights against No. 2 and every man on the train admitted overlooking No. 2, although all had time-tables and all were familiar with the road and with the regular trains of the division. The conductor said that he had consulted his time-table on leaving Butte, 13 miles east of the point of collision; but, he did not make a thorough check of it for opposing trains as he had worked on this line for years and was positive that he absolutely knew which trains were due. None of the men gave any reason for their neglect.

St. Louis-San Francisco, Horine, Mo., August 16. Southbound passenger train No. 801 collided with northbound passenger No. 806, causing fatal injury of Engineman Weston of the southbound train and Fireman Jones of the northbound. Five employees and 68 passengers were injured. Train 806 was standing on the main track waiting for the southbound, which was ordered to enter the siding, but did not do so. Engineman Weston appears to have been under the impression that the northbound train, which was late, had passed on to the double track at Southeastern Junction, 28 miles north of Horine. Weston had received an order fixing Horine as the meeting point, but he had made a remark to the fireman from which it is believed that he had misunderstood the order and had taken it as a notice that No. 806 had cleared the single track line. Weston had had considerable trouble with his injector and other things on the locomotive; this could have no direct bearing on the misinterpretation of the order, but it may have prevented him from seeing No. 806 in time to avert the collision. The fireman, who had been in the service 12 years, was a son of the engineman. The meeting order had not been shown to him. Had he insisted on a compliance with the rule and thus had read the order himself instead of taking the engineman's interpretation of it, "it is probable that the error or oversight on the part of the engineman would have been discovered in season." The engineman had been a runner 20 years. He had been dismissed once and had been disciplined for serious infractions of the rules, including two occasions when he was responsible for collisions; but at the time of this collision, "his record was clear." No block signal system is in use on this line.

Illinois Central, Daniel Boone, Ky., August 24. Collision between southbound third-class freight train No. 197 and northbound second-class freight No. 176; three trainmen and one trespasser killed and five employees and one other person were injured. This is a single track line with no block signal system in use. The northbound train had been ordered to wait at St. Charles, about two miles south of Daniel Boone, until 5:15 P. M., but it did not do so; also, the southbound train left Daniel Boone and attempted to reach St. Charles without sufficient time to clear the other train five minutes, as required by the rule. The inspector reports that there was "an utter disregard for the rules, as far as time was concerned, by all the employees involved." The operator at St. Charles recorded the departure of 176 before the train started; No. 197 disregarded the rule requiring it to keep 10 minutes behind a preceding passenger train. The operator at another station mis-stated the time of this train so as to make it appear that the 10-minute interval had been observed; and from the nature and multiplicity of these violations of rules, the inspector concludes that they are of common occurrence. The circumstances attending this collision "present an extreme case of lax operating conditions." The fireman of train 176 was inexperienced and the conductor of 197 had been promoted only five days before.

Utah Railway, Martin, Utah, August 28. Westbound extra freight No. 102 collided with eastbound extra freight No. 3 in a tunnel, 240 ft. from the end, both trains moving at low speed; one employee killed and four injured. The westbound train had an order to wait at Jacobs, east of the tunnel, until 2:35 p. m. Afterward, the dispatcher issued another order allowing the eastbound extra until 3:15 to

reach Jacobs. The westbound train, being on a descending grade, was moving at more than eight miles an hour while the speed limit in the tunnel is six miles an hour; also the line in the tunnel is on a curve of eight degrees, and one of the locomotives had no headlight because the engineman had forgotten to replace a defective bulb. The eastbound train was pulled out of the tunnel, after the collision, without delay, but the other one took fire and six cars were destroyed, together with some of the timber lining of the tunnel.

The dispatcher was performing the duties of local freight agent and was hurried; and in allowing Extra No. 3 until 3:15 P. M. to reach Jacobs, he was acting on a mistaken reading of the preceding order in his book. He discovered his mistake in less than two minutes after the faulty order had been delivered, but too late to prevent the collision.

The inspector found much loose practice. An operator signed a conductor's name to an order and allowed the conductor to sign his (the operator's) name, to a clearance card. Orders were often issued for train movements without regard to the rule requiring them to be given to all concerned in the same words; that is to say, the use of the single-order system was habitual.

Orders restricting rights of trains are sometimes issued without sending copies to the superior train. Trainmaster Thompson, about a month before, had been assigned to this district, with instructions to watch the work of the dispatchers; but being very busy in distributing cars to mines, he had not made any useful investigation of dispatching practices. Personally, he considered the single order system unsafe, but had not got around to making a change.

The inspector characterizes Thompson's attitude as amazing. He had checked the train dispatcher's order book three times but had not discovered the glaring faults to be found in it. No block system was in use, yet conductors and enginemen neglected to compare watches with each other and one engineman did not know where the standard clock was located. The train dispatcher entered the service of the Utah Railway as operator in June, 1920, and was made dispatcher a year later.

St. Louis-San Francisco, Starland, Mo., September 1. Southbound passenger train No. 805, moving at about 40 miles an hour, was derailed on a trestle bridge which had been weakened by a flood, resulting in the death of three passengers and the injury of 64 passengers and four employees. This derailment occurred about 4 a. m., and the two central bents of the bridge, which extended 11 ft. 6 in. into the earth, had been entirely washed out by a flood which occurred between midnight and 3 a. m. The section foreman had gone to bed at 1:30 a. m., concluding, from what he deemed satisfactory evidence, that the rain had not been sufficiently serious to endanger the track. Trestles have been maintained at this point for 19 years and this is the first trouble that has been experienced with wash-outs.

Northern Pacific, Parkwater, Wash., September 7. Westbound passenger train No. 41, moving at about 40 miles an hour, or faster, ran into a preceding train of one locomotive and three coaches carrying shop workmen, and moving slowly, near the station; and six employees were killed and four injured. The employees killed were the engineman and the electrician of the passenger train, the engineman and the fireman of the shop train and two shop employees. The collision occurred at 7:12 p. m. Parkwater is 4½ miles east of Spokane. The shop train had brought a load of shopmen from Spokane and discharged most of them at the shops at Parkwater, and had just crossed over to the westbound track preparatory to returning to Spokane. At this point the two main tracks are 132 ft. apart and the crossover, through which the shop train passed from one to the other, is 1,280 ft. long. The road is equipped with automatic block signals and there is a switch indicator at each of the two switches of the crossover; but except at the ends, the crossover track is not bonded; and a short train, moving from one track to the other, does not hold the main line signals against approaching trains throughout the whole of its journey through the crossover.

Between Parkwater and Spokane, the speed of all passenger trains is restricted to 20 miles an hour, the whole territory being included within yard limits. The block signal which should indicate stop for westbound trains as soon as the crossover switch is opened, is 6,228 ft. east of the point of collision; and the next signal, which at the same time should indicate caution, is more than two miles farther east.

The route of the shop train being wholly within yard limits, the train is regularly moved without written orders. By rule, the shop train must protect against regular passenger trains, but the only precaution taken when passenger trains are late is for the conductor to examine a blackboard on which is kept a memorandum of telegraphic advices received indicating when trains are expected to arrive. Approaching Parkwater from the east, the line of road is straight, and parallel to it is a highway on which many automobiles travel; and employees said that often it was impossible to tell, when seeing an approaching headlight, whether it was on a train or on an automobile. In the present case, the men of the shop train saw a headlight approaching and concluded it was a freight train. No flag was out, and all efforts to move the shop train out of danger or to stop the passenger train, were too late. There is a rule requiring that when making a crossover movement at least one of the switches must be kept open; but the trainmen did not know of or did not realize its importance. Train 41 had been reported late and was not expected at Spokane until 7:35.

The engine of the passenger train was overturned, as was one of its cars and the engine of the shop train, which was at the east end, pushing the cars, was wrecked, together with the car next ahead of it.

The report gives the primary cause as the occupying of the main track within yard limits without authority or proper flag protection; and the secondary cause, the failure to keep one of the crossover switches open all the time the crossover was being occupied. The inspector thinks that train 41 received a clear home signal because the shop train at that moment was on the unbonded section of the crossover, No. 41 having passed the distant signal at clear before the shop train entered the crossover. Hand signals were given to stop the shop train after the impending danger was discovered, and it is impossible to explain why these were not heeded by the engineman.

The inspector says that proper vigilance on the part of the officers of the road would have disclosed that the information posted on the blackboard was being improperly used to dispense with flag protection and that the switches at the crossover were not being operated according to the rules. The cars of the shop train were being pushed ahead of the engine, yet the conductor, on the front of the leading car, had no means of applying the air brakes, except by going inside of the car.

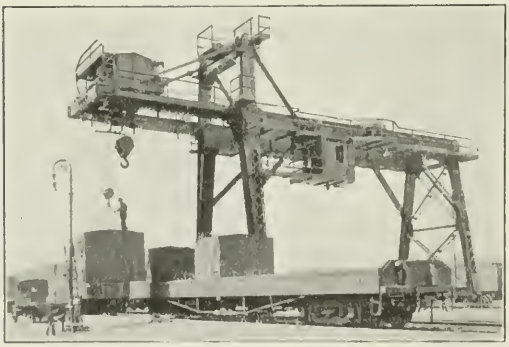
Chicago & Northwestern, Clintonville, Wis., September 17. Westbound passenger train No. 141 collided with eastbound freight extra 1875 which, while most of its cars were on a side track, was switching on the main track, on the time of the passenger train. Its locomotive fouled the main track at the east switch of the passing track at the time of the collision. The fireman of the passenger train was killed and 26 passengers and two employees were injured. The inspector found much loose practice in the management of the freight, the principal excuse for encroaching on the time of the passenger train being that the station operator had said to one of the brakemen that 141 was about 30 minutes

late. The east switch was set for the side track and the distant signal was set against the passenger train, but the engineman disregarded it. He said that he had often found these signals set against him when the switch was straight. There are 111 signals of this kind on this division and surprise tests are made; but no record of these tests is kept. The superintendent said that no case had come to his attention where an engineman had disregarded a caution indication at a distant switch signal.

Southern Pacific, Montalvo, Cal., September 22. Side collision about 8:35 p. m.; one engineman and one fireman killed; 29 passengers and seven employees injured. Eastbound passenger train No. 38, moving from a wye to the main line, fouled the main line just as eastbound passenger No. 78, a heavy train, came along at 40 or 50 miles an hour; and both locomotives were overturned. There was a dense fog at the time. The engineman of No. 38 said that after stopping at the approach to the main line to give time for a brakeman to run forward and look at the switch indicator, he started along, having been told by the fireman to come ahead; the supposition being that the fireman had received a hand-motion signal from the brakeman; but the fireman was killed in the wreck, and the brakeman says that he had not given any signal. He said that he had not yet reached the switch indicator when the collision occurred. The brakeman thinks that the locomotive had drifted over the fouling point of the main line before coming to a stop. The only way to give credence to the engineman's statement is to assume that the fireman had seen a motion of some light which he took for a proceed signal; the brakeman says that he was carrying his lantern in such a position that it could not have been seen by the fireman.

Gantry Crane for Handling Heavy Freight

An electric gantry crane has been erected by the Niles-Bement-Pond Company in a busy freight yard near New York, as shown in the illustrations. This crane, embodying modern features of construction through-

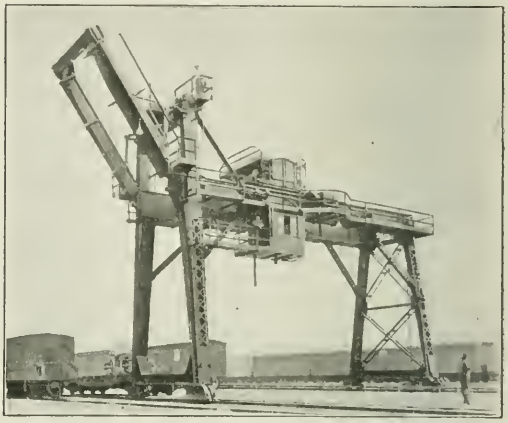


New 40-Ton Niles Gantry Crane Unloading Container Car Section

out, covers three tracks with two driveways, approachable from either direction, with trackage space for 15 cars at the crane. With a lifting capacity of 40 tons, the crane furnishes ample facilities for handling heavy freight, such as structural iron, building materials, machinery, boilers, steel freight containers, transformers, etc. An auxiliary hoist is provided, having 10 tons capacity.

The span, center to center of the runway rails, is 49 ft. 3 in. With the cantilever extension at one end, the effective reach of the main hoist is increased 19 ft. 6 in., and the effective reach of the auxiliary hoist 21 ft. 11 in. The lift of the hook above the runway rails is 23 ft. The main and auxiliary hoist motors are each 50 hp. The trolley and bridge motors are 10 and 80 hp. respectively. The speeds with maximum full load are: main hoist, 10 ft. per min.; auxiliary hoist, 40 ft. per min.; trolley, 100 ft. per min., and bridge, 80 ft. per min.

The cantilever extension is of the elevating type, being



Gantry Crane with Cantilever Extension Placed in Raised Position

motor-operated from the cage, and is readily elevated to clear any obstruction. Platforms are furnished on both girders running the entire length, including the cantilever extension. A platform is also placed at the top of the shear legs for access to the cantilever elevating mechanism and one on each side of the trolley, which is enclosed for outside service, as is also the cage. The top of the trolley housing is arranged so that any part can be opened on hinged joints, allowing easy access to the trolley mechanism for oiling, etc., or the entire house can be easily removed. The cross platforms are easily lowered on hinged joints, allowing unobstructed access to main and auxiliary hoist drums and gears.

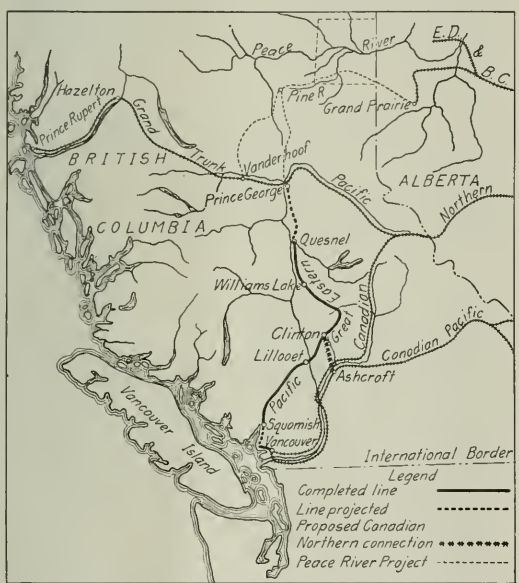
The trolley frame is a self-contained built-up steel structure, with all the mechanism and motors mounted. The trolley is designed to incorporate such improved features of construction as complete lubrication, large wearing surfaces, ample strength and rigidity, self-contained units, easy accessibility and easy handling. The cage is of plate steel construction, special provision being made for mounting the controlling apparatus with concealed wiring. The back of the switchboard is reached through large doors, which, when opened, expose the entire board, allowing ready access to all wiring connections. The crane travels on eight wheels, four at each end. Two of the wheels at each end are driven and the others trail.

The installation of cranes of this type insures the prompt unloading and placing on trucks of all classes of heavy freight from any one of 15 cars available in the shortest possible space of time, thereby solving in a large measure freight congestion at terminal warehouses. There is an important saving of time and cost in handling heavy freight, and in addition it is moved more promptly to the consignee's premises.

Abandonment of Pacific Great Eastern Is Urged

J. G. Sullivan Advises Giving Up Line Unless People Are Willing to Pay Large Annual Deficit

CONTRARY to the advice of the counsel it employed, the province of British Columbia has decided to continue the operation of the Pacific Great Eastern, a province owned line, extending from Squamish, B. C., a small village on Howe Sound, to Quesnel, in the heart of the Cariboo placer mining district, a total distance of 362 miles, and to proceed with a program of extensions and betterments. John Oliver, minister of railways of that province, recently announced this decision before a Liberal convention, stating: "We come of good old British stock and if we can't go through with the maximum of efficiency, we'll muddle it through in the good old British way." He declared that



The Pacific Great Eastern and Adjacent Lines

the Pacific Great Eastern would not be abandoned and that work would be carried on for another year to the end, in order that the taxpayers' investment of $40,000,000 should not be wholly lost. "I'll take my chances. I'll not abandon the road until I have taken stock and have satisfied myself that we cannot redeem the situation," said the premier.

This step taken by the "Oliver" government is considered one of the most important in the history of that province, noteworthy because the decision reached by the administration was in the face of adverse reports submitted by the three experts who were engaged last spring to investigate the P. G. E. and to determine both its present economic and its potential value. According to one of the investigators, J. G. Sullivan, consulting engineer, Winnipeg, Man., and formerly chief engineer of the Canadian Pacific, western lines: "If the people of British Columbia are not prepared to continue paying from $2,500,000 to $3,000,000 per year on the investment already made, an amount that will be necessary for the next ten years, it is recommended that the line be abandoned at once and what salvage possible be recovered." W. P. Hinton, another investigator, a former general manager of the Grank Trunk Pacific, had very little to say in favor of continued operation, and J. S. Dennis, director of colonization of the Canadian Pacific, stated that the railroad in question could not be expected to pay operating and maintenance costs for many years to come. Inasmuch as all three of the reports presented are somewhat similar in nature and language, this article has been limited to that of Mr. Sullivan, who discusses in detail both the economic and the engineering features of the P. G. E., the substance of which is abstracted below.

Physical Features Adverse to Construction

The physical features of the territory which the Pacific Great Eastern traverses are unfavorable to the construction of a railroad, due largely to the prevalence of much clay, sand, gravel and like materials. Sheer cut banks and the unstable condition of the above materials when wet forced the location out of the valley of the Fraser river (the natural location where low grades might be obtained) to high levels. In climbing out of the valley of the Fraser river and dropping into the valleys of other water-sheds sheer rock bluffs, with rugged contours, were encountered, necessitating comparatively heavy tunneling and a large number of rock cuts, or a loose foundation of clay, sand and gravel, which increased the cost of construction and made maintenance expenses very high. This, combined with the adverse financial conditions at the time of construction, made it impossible to build a line cheaply.

The line is constructed and in operation from North Vancouver to White Cliff, a distance of 12.7 miles, and from Squamish to Quesnel, a distance of 350 miles. From White Cliff to Squamish, a distance of about 29 miles, no construction has been undertaken. This portion of the line follows a very rugged shore of rock bluffs, the cost of construction of which is estimated at $3,500,000 to $4,000,000. From Quesnel north to Prince George the grading is completed with the exception of cleaning out slides that have occurred since the line was first graded some six year ago. The track is laid from Quesnel to Cottonwood river, a distance of 17.5 miles, and also from the junction with the Grand Trunk Pacific (about one mile east of Prince George), to Red Rock Creek, 18 miles south, leaving a gap of 45 miles without track. The track fastenings and ties required for this work are on the ground. The Cottonwood river is to be crossed by a steel viaduct, requiring about 1,225 tons of steel, of which amount 1,130 tons have been fabricated and are now stored at Walkerville, Ont. The cost of this steel and fabrication has been paid for, but before the work can be undertaken, an additional 95 tons must be purchased and reinforced concrete foundations built. In addition, some 8,000,000 ft. b. m. of timber remains to be built in trestles, nearly all of the timber for which is on the ground and paid for excepting about 840,000 ft. b. m. of stringers. The cost of the work necessary to complete the gap and put the line in good operating condition is estimated at $500,000 to $600,000, without taking into consideration about $1,500,000 for new equipment that would also have to be bought, the entire expenditure totaling over $2,000,000. To complete both gaps between North Vancouver and Prince George will require about $6,000,000 of new capital.

The line as built is in accordance with good branch line

standards, having 70-lb. rail on grades of 2 and 2.2 per cent and 60-lb. rail on the lighter grades, all liberally supplied with a good type of tie plates on curves. The bridges and culverts are of wood. On this road 27 wooden spans have also been constructed, varying in length from 60 ft. to 150 ft. with a total length of 3,180 ft. In addition, 27,000,000 ft. b. m. of timber is already in place in wooden trestles and culverts with about 8,000,000 ft. additional b. m. to be placed before the completion of the Quesnel-Prince George gap. To renew the wooden structures with permanent work, such as steel viaducts and trusses, concrete culverts and fills, will cost in excess of $8,000,000. The only alternative is to renew in wood at an enormous maintenance cost and the extra cost of maintenance will about balance the interest charges for more permanent construction.

Financial Condition

The total par value of the outstanding debt is $44,226,403, of which amount $5,925,135 is held by the company. The interest charges for the year ending December 31, 1921, amounted to $1,911,913. The total investment in road and equipment on December 31, 1921, was $38,438,590. This is the net sum on the company's books after $5,618,248 has been credited, this amount being waived in claims against the province. The Government took over the railway and subsidiary companies on the receipt of $750,000 in cash. The assets of the subsidiary companies, the Pacific Coast Eastern Development Company and those of the Pacific Great Eastern Equipment Company, consisting of lands, townsites, docks and wharves, locomotives, cars and stores of various kinds were turned over to the P. G. E. In addition the contractors waived claims to $245,000 in unpaid estimates and $1,647,583 of retained percentages on progress estimates, the whole totaling $5,618,249, which has been credited to the various accounts. Of the $38,438,590 investment, $10,543,530.79 was expended in paying interest charges and the deficit in operating revenues during construction.

The rolling stock of the P. G. E. consists of 12 locomotives adequately assorted for this class of road, although the heaviest engines are about up to the limit that the standard of construction will sustain. Two gas-electric cars and two gas motor cars operate out of North Vancouver. There are 12 passenger, 1 combination and 2 baggage cars in passenger service, and 258 miscellaneous cars in freight service, in addition to 68 cars in company service, the majority of these cars being used for construction purposes. The management claims that the present equipment is sufficient for operation as far as Quesnel, but that if the line is put into operation between Quesnel and Prince George, extra equipment will be necessary.

Revenues and Expenses

During 1921, the Pacific Great Eastern handled 53,351 tons of freight for a total of 4,634,231 ton miles and at a rate of 5.7 cents per ton mile, the revenue per mile of road operated being $844.70. During the same year the company carried 15,290 passengers 1,462,871 passenger miles with total receipts from this business of $63,890, equal to a rate of 4.3 cents per passenger mile. The passenger earnings per mile of road operated were $323.86.

Average number of tons of freight per loaded car mile	16.98
Average number of tons of freight per train mile	89.26
Total gross income from all sources	$484,327.00
Total gross corporate expenses	2,689,205.00
Net corporate loss	$2,204,878.00

Of this amount $1,911,913 was charged to interest during construction and $292,965 to operating loss. As $88,632 was earned from rent of equipment in construction during the year the actual loss or deficit in operation for the year should be increased by that amount.

If the road is to be completed between North Vancouver and Prince George it will require $6,000,000 of new capital, and an additional $8,000,000 within the next ten years to replace wooden structures. Adding this to the present investment of $38,438,950 will give a total final investment of $52,538,950 for 470 miles of line, or nearly $112,000 per mile, the interest charges on which will be over $5,500 per mile of road. If the Quesnel-Prince George gap only is completed, the new capital investment will only be $10,000,000, making a total of $48,438,950 for approximately 440 miles of road, or $110,000 per mile of road, and the interest charges will be nearly $5,500 per mile of road. If no more construction is done and the line from Quesnel to Prince George is abandoned, there should be at least $250,000 salvage, and to replace the wooden structures south of Quesnel should not require over $6,500,000. In this case the total investment would be $44,688,950 for 360 miles of road or an investment of $124,000 per mile, and the interest charges would be over $6,100 per mile of road. Therefore, regardless of what action the company may decide upon, it is faced with an ultimate interest charge of about $5,500 per mile of road, which some one, either the taxpayers of British Columbia or the patrons of the road, must pay in addition to the cost of operating the road.

Inasmuch as the Canadian National has a much shorter and much cheaper line to operate to Vancouver than via the P. G. E. connection, no business of any moment can be expected from that source, and the P. G. E. must depend almost entirely on business developed along its own lines. During 1921 the outbound freight from the line amounted to 36,505 tons. As a local line between Vancouver or Squamish and Prince George, the country will not produce enough traffic at any reasonable rate to pay operating expenses, plus a fixed charge.

Questions of Abandonment—Construction—Leasing

Owing to the nonproductive nature of the country for a distance of over 100 miles south of Clinton, a plan is being considered by the province whereby that portion of the line would be abandoned and an extension constructed from Clinton to Ashcroft to connect with either the Canadian National or the Canadian Pacific. The total receipts from freight, both forwarded and received, on this section during 1921 (after the line has been in operation for a number of years) did not exceed $400 per mile. There are over 8,000,000 ft. b. m. of timber in trestles and about 1,000,000 ft. b. m. in truss spans on this section that will have to be renewed within a few years, besides the timber foundations at the crossing of the Fraser River at Lillcost. The cost of the proposed line will not be less than $3,500,000, which will increase fixed charges by at least $175,000 per year. Nevertheless, it is advisable that the entire line south of Clinton should be abandoned, providing the timber interests at the south end cannot raise enough money to purchase any portion of the south end cut of Squamish at a cost of from $15,000 to $20,000 per mile. If this portion of the line will not pay interest on that sum it should be abandoned. The salvage should amount to about half the cost of the Clinton cutoff. The savings in operating expenses and in renewals on the abandoned line would show a substantial reduction over the interest on half the cost of the Clinton-Ashcroft line.

It is also advisable that the line between Quesnel and Prince George be abandoned because an expenditure of $2,000,000 would be required to complete this line and to acquire sufficient rolling stock to meet the operating expenses and the traffic to be derived from the completion of this route will not justify the necessary construction. This same argument holds true in reference to the proposed extension from Prince George to the Peace river country.

It has been suggested that one of the larger connecting lines might be induced to take over the Pacific Great East-

ern and operate it as a feeder line. The road, however, with its limited traffic collected from the local inland points, is of no value to a trunk line. In 1921, the total inward and forwarded freight handled through Vancouver for the P. G. E. was only approximately 36,000 tons. If it is assumed that the 36,000 tons would be hauled an average distance by a trunk line of, say 450 miles, and that the rate received would be 25 per cent greater than the average rate per ton mile, say 1.5 cents, then the 16,200,000 ton miles this traffic would make on the above assumptions, would bring in a revenue of $243,000, a sum less than two-thirds the deficit in the cost of operating the P. G. E. in 1921. The P. G. E. has no strategic advantages, excepting the possibility that if there should ever arise a demand for an Alaskan rail connection, the line would become a link.

Mr. Sullivan's Conclusions

In the concluding words of his report, Mr. Sullivan states that it is impossible for the Pacific Great Eastern to meet expenses in the near future. It certainly cannot be done if the present method of financing is followed, that is, charging to capital the accrued interest and deficit in operating expreses, for the interest charges will increase faster than the business. The results of the investigation show that the total indebtedness at the end of ten years will be nearly doubled without taking into account the extra expenditure that would be necessary to purchase sufficient new equipment to handle a greatly increased business.

Among the suggestions by Mr. Sullivan in addition to those referred to above are the following:

"Abandon the operation of steam trains for passenger and express business and replace them by gas driven motor cars. To raise money for the necessary expenditures, sell some of the locomotives now owned by the company, cancel mail contracts for the winter months and close down that portion of the line where snow trouble occurs during the winter months. Operate a freight train as often as there is business to warrant during the summer months, be that one a fortnight or one a month. Do not send out an engine unless there is a full load at least in one direction. Raise rates, both passenger and freight, to all that the traffic will bear, that is, meet competition. Stop hauling freight at less than cost, to say nothing of paying interest charges. Encourage development as much as possible by giving commodity rates to low grade freight as long as it can bear a rate slightly above cost."

Victorian Railways Consolidate Departments

Signal and Telegraph Branches Combined In One Organization to Prevent Overlapping of Duties

A SEPARATE SIGNAL and telegraph branch has been formed by the commissioners of the Victorian Government Railways, Australia, which was made effective July 1, 1922. The branch comes under the control of the chief engineer of signals and telegraphs, F. M. Calcutt, who reports direct to the commissioners. Prior to the formation of the branch, the signal department was a division of the way and works branch, and came under the engineer of signals reporting to the chief engineer of way and works; and the telegraph department from 1919 has been a section of the electrical engineering branch under the chief electrical engineer, but before that date it was a separate branch under a telegraph superintendent. Owing to the overlapping of duties between the two branches and to provide more efficient and economical working, it was decided to form a separate branch to be responsible for all matters pertaining to traffic protection on the railways.

Organization of the Branch

The accompanying chart shows the organization of the new branch. The clerical staff is in charge of a chief clerk. The engineering staff comes under four headings. The technical and drawing office staff engaged on mechanical signaling and interlocking, power signaling and all kindred electrical circuit work, and mechanical and electrical design is under the supervision of the office engineer. Immediately under the office engineer are a circuit checker and a locking checker, who are responsible for the correctness of the circuit and locking plans issued, and an officer in charge of each division of the drawing office work. The installation of power and automatic signaling is in charge of the power signal construction engineer, who has under him the signal supervisors and the staff required for this purpose.

The maintenance of all apparatus connected with the branch is in charge of the signal and telegraph maintenance engineer. The telephone and telegraph engineer and the power and lighting engineer report to the maintenance engineer on all technical details connected with their portion of the work. The state is divided into eight districts for maintenance purposes, and each district is in charge of a signal and telegraph supervisor. The arrangement of the maintenance staff is shown in the chart.

A bonding supervisor is located in the metropolitan area and is responsible to the maintenance engineer for installing and maintaining the traction bonding and the overhead structure, ground connections, etc., the staff required for this purpose coming under his charge. A testing officer is under the maintenance engineer for conducting all electrical tests connected with signaling and kindred matters. All large construction work, as well as some of the larger maintenance renewal work, is carried out by construction supervisors, who have their headquarters at Melbourne.

Facilities Handled

The signal and telegraph branch is responsible for the installation and maintenance of:

Signaling and interlocking appliances, telegraphs, telephones, and the pole lines and wires required for these purposes.

Traction bonding, cable trunking and overhead structure and ground connections required for the Melbourne electrified railways. Electric bells (with the exception of those used in the railway power-houses and the different substations), electric clocks and clock controls, train describers, train departure clocks and indicators, fire alarms and time recorders.

Gas, lux and kerosene lighting at stations, road crossings, depots, etc., including stationary Pintsch gas holders and gas pipe lines.

Outside the electrified area, all electric lighting and (with a few exceptions) all electric power required for railway purposes.

The erection and maintenance of signal boxes and all buildings required by the signal and telegraph branch, as

well as the painting of signal masts and fittings, will continue to be carried out by the way and works branch.

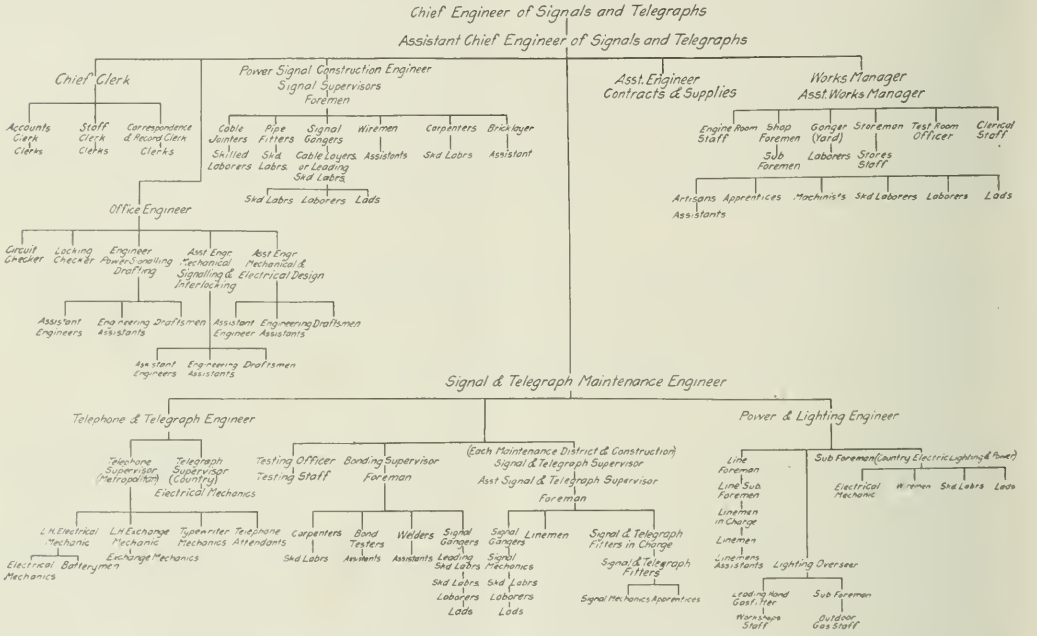
Apparatus in Service

On June 30, 1921, there were on the 5 ft. 3 in. track gage lines 8,102 interlocked levers over a route mileage of 4,274 miles, 3,944 miles of which were single track, with 5,801 signals, 5,012 switches, and 1,087 lock bars. Train protection appliances were installed on 3,520 miles, there being 582 electric staff and tablet instruments, 317 Winter's block instruments, etc., and 1,092 track circuits. Within the Melbourne suburban area there were in service on June 30, 1922, 359 left-hand, upper-quadrant, three-position signal mechanisms and 75 color-light signals, with 296 train stop mechanisms, on 38 miles of double track.

A 2,200-volt a.c. signal transmission and 110-volt a.c. signal operation circuits are used on the 1,500-volt d.c. operated traction system. One electro-mechanical interlocking frame, containing 32 levers, has been in service for the past six years; and an electric interlocking frame, containing 55 levers, is being installed in the central area, where the traffic is exceptionally heavy. At present one electric switch mechanism—operating with 110-volt a.c. energy—is in service, which has been installed for experimental and observation purposes prior to equipping a large plant with such mechanisms. The test has proved satisfactory. A section of single-line automatic signaling is in service for 3.5 miles between Upper Fern Tree Gully and Belgrave on the 2 ft. 6 in. narrow gage railway.

Telegraph and Telephone Equipment

On June 30, 1922, there were 7,719 miles of telegraph and telephone wire, with 2,738 miles of wire used for electric staff and block working, electric bells and signal repeaters. In addition to the railway wires, there were 7,678 miles of postal wire carried on the railway poles and maintained by the railway. There were 876 miles of railway telegraph and telephone wire carried on postal poles and maintained by the Commonwealth Government postal department. There are 3,686 miles of pole line on railway property. There are nearly 400 telegraph stations in operation, and, excluding automatic telephone exchange connections, there are 3,700 telephones. An automatic telephone exchange, with a capacity of 500 lines, is located in the head offices of the railway administration at Melbourne, and this has been in service for the last 10 years, being one of the heaviest worked switchboard installations in Australia and having a switching capacity of 40 per cent. Another automatic telephone exchange, having a capacity of 50 lines, has been installed in the principal railway sub-station for the exclusive use of the services required by the electrified railway system.



Organization Chart Showing Definitely the Division of Duties

Shops and Stores

It is the policy of the railways commissioners to manufacture such material as can be economically done, with the exception of all appliances which are highly specialized. At the signal shops located at Newport, seven miles from Melbourne, all interlocking frames, signal fittings, a large portion of the apparatus required for power signaling, etc., are manufactured. The telegraph workshops now located at Melbourne are to be transferred to Newport and combined with the present signal shops to form the signal and telegraph workshops. The workshops are under the control of the works manager, who reports to the assistant chief engineer of signals and telegraphs. The works manager, who has an assistant, is responsible for the manufacture and repair of materials, and supervises the requisition and issue of all stores connected with the branch. About 510 men are employed at present in the combined shops. An assistant engineer, reporting to the assistant chief engineer, is in charge of all contracts between the branch and outside firms. He is responsible for the preparation of all specifications for public tender, and co-operates between the different engineers and the workshops for the prompt supply of material.

The Fundamentals of Good Organization*

These Must Be Kept Clearly and Constantly in Mind to Insure Efficient and Economic Operation

By R. N. Begien
General Manager, Western Lines Baltimore & Ohio, Cincinnati, O.

MAXIMUM EARNINGS and minimum expenses are impossible unless a railroad is carefully organized, and officers and men thoroughly understand that deviation from the rules of proper procedure will not be tolerated. Every officer should understand clearly for what duties and results he is held responsible. He should not be excused from such responsibility on any pretext whatsoever. His superior should deal with him only, and he should never run around or ignore any officer, subordinate or superior. If responsibility is definitely fixed from top to bottom and a definite plan of action is made, an organization of ordinary men will accomplish far better results than the same number of brilliant men, each working hard to carry out his own ideas.

It is not possible to realize a high standard unless it is known what constitutes it. In a railroad organization some one has to fix the standard. Only one person can do it and he is the chief executive. It is important, therefore, that he should be a man who knows what a high standard is. If he selects a staff of men who are able to measure up to his ideals and who know what they are, he has made good progress.

Each man of the staff has his own special department, but he must conduct his department in such a way as to meet the standards of his chief. If an executive has selected his aids with a view to having them carry out his plans and ideas it may be necessary to go only into the question of standards, without consideration of methods of attainment. Instruction in method is generally necessary, however. Promotion generally comes to a man as soon as he has learned the importance of correct standards and organization, so that new men have to be educated constantly. Above all, a subordinate should never see that the standard of his chief has been lowered.

An Accurate Sense of Justice

An accurate sense of justice is a valuable asset for any man. Without it a man is disqualified for an executive position. Some men have an excellent idea of justice when they are calm, but become unjust when they are disturbed in mind. A superior should never frighten a subordinate. If the chief makes no impression on his subordinate, then it is evident that the latter has but little regard for what he says. If his remarks do make an impression they will probably be passed on to subordinates.

If the chief is cross or excitable he usually says things he does not mean and leaves his subordinate with an uncertain feeling of what is required. He does not fill his man with a desire to accomplish much good, but he does often make make him realize that his job hangs by a thread. He thus has a confused man who is frightened. Such a man will usually pass it on to his subordinates and it will go on down the line. The length of time that it takes to disorganize a job will be in direct proportion to the number of times the "boss" explodes.

An organization of more than 10,000 men needs only about six steps from the top to the bottom. It will be conceded that one man is capable of supervising the actions of ten men. In addition he can educate them in the standards of his chief.

Look at this—

1	Chief officer
10	Vice chiefs
100	Heads of departments
1,000	Sub-heads
10,000	Bosses
100,000	Men
111,111	Total

Some railroads have more steps than shown; some have less. Thus the laborer on a section has only five steps to the presidency of a railroad. As there are only six grades from top to bottom, only four men have to interpret the words of the president before the man on the track is working according to the standards laid down by the president.

The selection of the subordinates in sequence is a most important matter. If a 100 per cent officer selects 100 per cent assistants the result is 100 per cent performance. If a 90 per cent general superintendent selects a 90 per cent superintendent, and he selects a 90 per cent division engineer, who employs a 90 per cent supervisor, who hires a 90 per cent foreman and 90 per cent men, the result is a 53 per cent result.

It should be remembered that the highest officer is the standard bearer and his men are rarely ever any bigger than he is.

In other words, it is hardly possible for a 90 per cent officer to have a 100 per cent assistant for any length of time. They would probably change places if the relation was true, unless the chief raised his own standard to 100 per cent.

Men are largely what we expect them to be. It is perfectly evident to anyone who gives the matter thought, that if a subordinate feels that a mediocre performance is satisfactory to his chief, he has no incentive to produce more than a mediocre performance. Much can be gained by expecting a great deal of subordinates, as they will then make an effort to realize what is expected.

The Principal Function of a Railroad

A railroad is a highly organized body. Unless care is taken in placing competent supervision in every part of the organization, the effect will be felt in other parts of the organization. An expensive and expert staff may evolve fine plans for economy, but they can not be carried out by a disorganized force. Proper organization will make expenses lower and earnings better at once, for it will then be possible to carry out a plan. It is important to remember that if a feasible plan cannot be carried out it is nearly always due to defective organization. For example, a bridge gang repairing a bridge may delay operations to the extent that the effects are felt over the entire railroad.

It is not unusual for a bridge gang or in fact for those who supervise bridge gangs, to feel that the railroad is operated very largely for the purpose of supporting the bridge gang, while we all know that the work of these gangs is entirely subordinate to the principal function of running a railroad—the handling of cars. From an economical standpoint it is always cheaper and better to delay the work of a

*From a paper read before the convention of the American Railway Bridge and Building Association at Cincinnati, O., on October 18.

bridge gang than to allow the bridge gang to delay the work of the railroad in serving the public.

It is not enough that an officer or a sub-officer is competent in the discharge of his own immediate duties. It is his chief duty to see to it that his force is competent, able and willing to do the things that are assigned to them to do in the best possible manner, and if he does not have such men he is negligent in the most important part of his duties.

Men should not be replaced indiscriminately, as it is often a fact that little good is accomplished by making a change. It should first be determined that a more suitable man than the one at present occupying the position is available, and the one who is now occupying the position cannot be made available by proper instruction. If men are made to feel that nothing but a high standard of performance will be satisfactory, they are bound to improve.

Therefore it is important to do the following things: (1) Study the staff with a view to knowing that they are performing their duties properly; (2) If they are not performing their duties properly ascertain if they can be instructed in such a way as to improve them; (3) If they are not suitable men for the positions which they are now occupying, and cannot be made to be suitable men, find out if there is any one who is suitable, or can be made suitable; (4) Impress subordinates with the fact that they should expect the same things of their subordinates as is expected of them; (5) Make subordinates feel responsible for the results in their departments. Encourage them in every possible way to take responsibility onto themselves. Do not spare praise in cases of successful administration, and in cases of failure try to find out what is the matter and help them work out a solution of the problem.

Every officer should understand it is not sufficient merely to state that the cause of some failure to perform a duty properly was that some of his subordinates did not carry out instruction. If the organization is a proper one excuses of this kind will gradually disappear.

In a divisional organization, the superintendent should assign each member of his staff to definite duties and definite territories wherever possible. The object of such assignments is for the better delegation of work and for the fixing of specific responsibility.

Strictly Up to the Chief

The chief of each branch must feel that the results to be secured are strictly up to him. On the other hand, he should not be hampered in his work, and excepting that he should conform to certain standards which are laid down by his superior officers, he should be allowed to use his judgment, which is equivalent to asking him to exercise his ingenuity.

No officer should fall into the habit of dodging an issue. In his dealings with subordinates or others he should never speak of having referred a question at issue to anyone for a decision. To others his own judgment is the only one that should be asked for or should be given. If it should become necessary for him to ask for a ruling or advice, that should be a matter strictly between him and his superior officer.

It is important that new officers and employees be instructed in their duties before being allowed to fill a position. One naturally thinks that all new officers and employees are instructed in their duties prior to appointment, but it is too often the case that this is not a fact. It is true that some classes of employees are handed books of rules, and are examined upon them, but that does not constitute instructions in their duties. Good men often fail to fill positions on account of the fact that they are not instructed. Failure may occur on account of being over-zealous, or of being backward to the point of laziness.

If a man is fit to be advanced at the start he generally is able to advance further and it is a serious reflection on his superiors if he fails. He must not be allowed to fail; it is the duty of his superior to train him and it should be impossible for men to be good men for a time and all of a sudden be discharged or demoted as unfit.

Notwithstanding the importance of organization, the personnel is, generally speaking, the last thing which should be disturbed. Where improvement is demanded it is better to mold the existing personnel into a proper organization and then see if the men can be brought up to the standard as individuals. Where there is disorganization it should be remembered that men of ability are often not able to work to any degree of efficiency on account of this. When the form of organization is improved the efficiency of the individual has a chance to assert itself.

It is necessary for every executive to form habits of thoroughness and concentration that will make it possible to compare values carefully. It is far easier to let things go along as they are than to organize and put into effect new ideas, but new ideas must be carried out. When an officer thoroughly realizes that betterments are possible in almost all operations he has reached a satisfactory starting point. It is certain that if his mind is made up that present conditions cannot be improved, he will waste a lot of time trying to prove that he is right. The first thing that an officer needs is the desire to accomplish things. A great personal desire to accomplish something is the strongest moving impulse that is known. It is greater than fear of punishment or hope of reward.

Some men are skilful in carrying out their own ideas but have difficulty in getting into the proper frame of mind to carry out the ideas suggested by another. It is less difficult to get an idea carried out if by the power of suggestion a man may be led to believe that he himself originated it.

Dealing With Employees

Discipline should be firm but not harsh. Adhere rigidly to the contract if there is one. In dealing with organized labor do not adopt an air of antagonism. Organized labor is here to stay, and there are features in its favor that may be and can be turned to the advantage of a railroad company, or any other company employing it. The wide influence of these organizations holds down complaints from individual employees and has standardized practice in the discipline of men that is not without benefit to the employer.

Rates of pay and working conditions may be subject of controversy, but the local officer is chiefly concerned with the administration of the rules as laid down in the contract. In dealing with committees, courteous treatment and a disposition to hear their side of the case fairly will help the relation of officers and employees materially. It is not strange that the interpretation of the contract should be the subject of dissension. The contracts and their interpretations have grown in size and complexity. It should be remembered that thousands of lawyers make a living by telling citizens what their rights are under the Constitution of the United States and its various branches and interpretations. It could hardly be supposed that a few railroad men could draw up anything as complicated as a wage schedule without serious complications and differences of opinion.

The foregoing is largely fundamental; but it must be realized that until the fundamental conditions have been made correct it will not be possible to plan economies and carry them out successfully. Even then it should be remembered that large organizations absorb changes slowly. To get best results take up one thing at a time and correct the trouble in that. With each difficulty overcome other things will be benefited. Work slowly enough to observe fully the effect of innovations. Do not expect results too quickly.

It is possible that officers think a great deal of their own attitude toward men of the rank and file and pay too little attention to what employees think of the officers and the company in general. It is certain that if a man likes his officers

and is proud of the company for which he works, he will do much better work and form a better part of the whole organization than if he is dissatisfied and displeased with his "boss."

The rank and file know but little of the officers at the head of a large organization. They deal entirely with their foremen and it is generally the foreman, or his boss, who gives a man his idea of the company or concern he is working for. Since the man under discussion, in many instances, is the one who performs the manual work, for the purpose of getting results it is most important that he should be handled well and be in a proper frame of mind.

The laboring man prizes most good working conditions, a steady job, a boss who knows how to handle men properly, and delivery of his pay envelope with regularity. In times of stress I have seen labor troubles of considerable size generated by failure of the paymaster to deliver the pay envelope on time, and it is worth the earnest thought of men in charge of organization to make a plan that will result in the men being paid with regularity.

Motor Truck Competition

The Houston, Tex., chapter of the American Association of Engineers has arranged for a series of addresses on the motor truck as a competitor of the railways. The first of this series was presented on October 11, by J. D. Fauntleroy, state highway engineer of Texas, who spoke from the standpoint of the highway builder. Other speakers scheduled include Julius Kruttschnitt, chairman of the executive committee of the Southern Pacific, who will present the views of the railway executive; F. J. Feight, president of the Teche Transfer Co., Jeanerette, La., who will present the truck users' view, and J. B. Culbertson, president of the Wichita Motors Co., Wichita Falls, Tex., who will speak from the standpoint of the truck builder. An abstract of Mr. Fauntleroy's paper follows.

We have no exact figures as to the total number of trucks which are operated in the state for the purpose of carrying freight, but the following figures are interesting. Smith county reports that truck traffic has increased 100 per cent since its highways were improved two years ago. Four large grocery houses are now handling 60 per cent of their outgoing freight in trucks. One large concern with 14 branch houses uses trucks extensively in handling its goods between branch houses in trucks operated by the firm. Only 40 per cent of its goods are handled by railroads or by wagons. Another large wholesale firm handles 65 per cent of its outgoing freight in trucks and also delivers to customers in trucks, because it is claimed that in this manner it can make much faster deliveries than can be secured by railroads.

El Paso county reports that for the past two years a truck line of four trucks has operated regularly between El Paso and Las Cruces, N. M., 48 miles, and has given good service, picking up inbound and delivering outbound freight of any class, such as milk, calves, potatoes or manufactured products. The delivery is from farm to store or vice versa. Deliveries are prompt. On account of this truck line we are informed that the Santa Fe now handles freight between these two points only in carload lots.

The operation of trucks has had an appreciable effect on the freight traffic of the railroads. All material used in building the Alamo Gordo road was hauled in trucks, as that method was cheaper than the railroad haul. All cement used in the construction of the Anthony-Las Cruces highways was hauled in trucks direct from the plant at a considerable saving. All lumber dealers in El Paso make delivery of materials by trucks to any place in the county. Oil companies in like manner use trucks to deliver gasoline and oil to any point desired in the county. Coca Cola is delivered in the same way. All local hay is brought in trucks or by wagons and no hay is shipped by rail to El Paso except for rebilling to other points. This applies to practically all other farm products. On a rough estimate it appears that the local freight business done by the railroads today is 10 per cent of the total local freight handled within a radius of 100 miles of El Paso.

Motor Trucks Perform Valuable Service for Short Hauls

There are approximately 26,000,000 food producers in the United States who are trying to feed themselves and also the other 79,000,000 American citizens. We should therefore welcome any new means of transportation that will simplify the transportation of food products to consumer and thereby tend to lower the cost of living, for at present the original producer gets only 35 cents out of every dollar which the consumer pays for his goods. It appears that, especially in the case of fruits, vegetables and other perishable products, the motor truck has a special and very necessary function to perform and if it can cheapen the price of food to the consumer and at the same time cut out the middleman so as to give the producer a better price for his products, it will be entitled to fair treatment by our lawmakers.

It is interesting in this connection to consider that the Public Service Commission of Nevada, in the case of the Virginia & Truckee Railway Company vs. Ginocchio Brothers to restrain the latter from operating a truck line along a road parallel to the railroad and competing with it, ruled that railroad freight service for short distances in less than carload lots has become wasteful and obsolete and it welcomed the addition of the truck service for agriculture, live stock and mining sections of the state and recommended that the railroads install similar facilities.

While the use of motor trucks for carrying freight undoubtedly has proved beneficial to many merchants and their customers, it also has its corresponding disadvantages. For example, many gravel and iron ore roads, which were built with the expectation of carrying ordinary farm traffic and a reasonable amount of auto traffic, have been damaged and some of them almost destroyed in a short time by the use of heavy trucks. The result is that we have roads now in a bad condition of repair which will require large expenditures to put them in proper shape and for which no funds are in sight. Nevertheless, the bonds which were voted and sold to pay for these roads will not be retired for perhaps 25 or 30 years. The condition is a very serious one.

The state legislature has prescribed laws regulating traffic upon highways, but the enforcing of these rules rests with the commissioners' courts of the different counties and in many instances it seems that little or no effort is being made to carry out the intention of the legislature. It appears that if the roads are to be adequately protected from destruction by heavy trucks and by overloaded trucks some means must be found to enforce the traffic regulations, probably by giving some central body the necessary authority to see that the laws are enforced.

The State of Maryland finds itself in a peculiar condition in that it has the most complete system of improved highways of any State in the Union, but it is surrounded by states whose highways are in more or less completed conditions. Also located around Maryland and near its borders are many large manufacturing cities. As a result a tremendous truck traffic has grown up on the Maryland roads and these trucks are frequently licensed in adjoining states. The general tendency of these trucks is to be overloaded. As a result Maryland authorities found their roads in imminent danger of destruction by these foreign owned trucks. It was decided to try the experiment of weighing each heavily loaded truck to see if it was overloaded and if it was overloaded to fine the owners and to compel the overloaded trucks

then and there to remove part of their loads so as to come within the limits prescribed by the law. Of course the truck drivers cursed and swore, but the highway policeman, after testing the load by means of small portable scales, compelled the drivers to unload a portion of their load alongside the road, where it would lay unprotected until the driver could arrange to haul it to some nearby store or farm house for storage. In a little while there were no more complaints, as one experience of unloading was enough for any driver.

The State Highway Commission of Maryland informs me that in 1918 heavy trucks were permitted to operate over the main highway running north and south through Baltimore and that many of these trucks were overloaded. As a result the road was practically destroyed and had to be reconstructed at a cost of $600,000. If all of the loads carried over the road during this period by these trucks had been within the legal limit the road would not have been destroyed but could have been maintained at a reasonable cost. He estimated that by overloading these trucks instead of using more trucks with lighter loads the truck owners had saved about $16,000, whereas the cost to the state of reconstructing the road was $600,000.

Another matter which is worthy of serious consideration is the fact that many of our main highways parallel railroads and the construction of such highways is largely paid for by the proceeds of district highway bond issues. The railroads, being in the district, necessarily will pay their proportional part of the cost of building these highways. The fees which the trucks pay are in many instances totally inadequate to repair the damage done to the roads by the use of the trucks, so we have the peculiar condition existing that the railroads are helping to pay for the improvement of highways which parallel their lines and which are being destroyed by trucks whose business it is to take traffic away from the railroads.

Motor Trucks Must Pay Their Share of Highway Costs

It seems to be the opinion of many thinking men that not until the truck operator shall contribute his due proportion to the cost of highway construction and maintenance, can his right to use the highway be considered equal to that of the ordinary taxpayer. This is the conclusion of the Public Utilities Commission of Colorado in a decision rendered on March 8, 1922. The Colorado Commission held that through abuse of the highways by inadequately taxed buses and trucks, "the 137,336 passenger car owners of the State are grievously wronged" and "the farmer and city home owner pays the bills."

In a similar decision, June 14, 1921, the Public Service Commission of Pennsylvania declared, "public interest would immeasurably suffer" if auto lines were permitted to engage in destructive competition with the railroads that were providing reasonably adequate service to their territories. The Pennsylvania Commission, in a decision on March 16, 1921, refusing to permit an auto line to parallel an electric railway, pointed out that the proposed competition would mean either increased rates or impaired service for the patrons of the electric line.

These decisions are important because they enunciate first principles relating to the regulation and taxation of highway carriers and have a vital bearing on conditions in every western state today.

It may not be amiss to state in this connection that the use of highways by jitneys and bus lines is also having a very serious effect upon the revenues of the railroads. We are informed that due to the general use of jitneys and buses over an improved highway which parallels the Katy railroad, the passenger receipts were $1,500 less at one station in June of this year than in June, 1921.

Our whole system of transportation is in more or less of a transition stage, but the railroads have been of greater value in developing the agricultural, manufacturing and mining resources of our country than any other one factor and their continued operation on a paying basis is essential to the very life and prosperity of our people. The auto has also come to stay and the proper use of the motor truck is going to aid very greatly in the future development of our State.

Both railroads and motor trucks have certain special functions to perform and there appears to be no reason why these functions cannot be performed without conflict and, moreover, to their mutual benefit. The railroads themselves should use motor trucks to a large extent.

New Laws Enacted in 1922

J. E. Fairbanks, general secretary of the American Railway Association, acting in behalf of the committee on the relation of railway operation to legislation, has issued a circular giving abstracts of laws of interest to railroads enacted during the year 1922 in the 11 states where the legislatures were in session; and also abstracts of bills introduced but not passed. An abstract in tabular form of the information gathered shows, under 32 heads, 228 laws introduced and 49 enacted. The largest number of laws passed on any one subject was nine, on taxes; there were six under the head of claims, personal injury, etc. From the abstracts of laws passed we condense the following notes of those which are of more general interest:

Georgia changed the name of its railroad commission to the Georgia Public Service Commission, and provided for a tax on public service corporations to support the commission.

Kentucky adopted two laws providing for the elimination of grade crossings and apportionment of the cost of such work; increased the penalty for train wrecking to not less than five nor more than 20 years; gave the state commission increased powers with respect to the regulation of common carriers.

Louisiana adopted a law regulating the jurisdiction of courts over claims for loss or damage to freight.

Maryland repealed the full crew law.

Massachusetts modified the regulation relative to the abandonment of passenger stations, allowing the Department of Public Utilities to authorize exceptions.

New Jersey repealed its full crew law, revised the law concerning passes for officers of the state, empowered the Public Utilities Commission to fix prices of securities to be sold, removed the necessity for municipal approval of railroad police officers and changed to December 10 the date for fixing valuations of railroad property.

New York amended the law relating to cabooses and coal jimmies, amended the law relative to the inspection of locomotives and added a requirement that small concerns operating locomotives shall have them inspected the same as is required of railroads.

Rhode Island adopted a law regulating the operation of jitneys.

South Carolina consolidated the Railroad Commission with the Public Service Commission.

Virginia made changes in its tax laws, and adopted a bill requiring vehicles approaching certain railway grade crossings to be stopped before passing over them.

"Stop That Leak" is the slogan of a campaign which has been started in the Baltimore & Ohio Employees' Magazine to reduce expenses. Officers in all departments are pointing out opportunities for economies in their various fields, and employees are being urged to contribute suggestions.

General News Department

The Pennsylvania reports encouraging progress in repairing freight cars, the output of the shops having increased in six months so that the number of cars requiring repairs was reduced to about nine per cent of the total number owned. In November the daily average number of cars awaiting repairs was 25,056 or 11,614 less than in June.

The Signal Section of the American Railway Association, which holds its next meeting at the Drake Hotel, Chicago, in March, announces that the sessions will occupy three days: Tuesday, Wednesday and Thursday, the 13th, 14th and 15th. Secretary H. S. Balliet expects to mail the committee reports to members on February 12.

The Illinois Central extended Christmas and New Year's greetings to its patrons through the distribution of holiday cards, which were handed to all passengers at the ticket gates. Officers of the road also sent out cards with their letters. They expressed appreciation for patronage and asked continued patronage, confidence and friendship.

Payment of dividends by railroad companies, except after a certificate has been obtained from the Interstate Commerce Commission to the effect that an inspection has been made and the equipment found adequate for the requirements of traffic, would be prohibited by a bill which has been introduced in the Senate by Senator Johnson of California.

Passenger train No. 16 of the Chicago, Burlington & Quincy was derailed three miles east of Saxton, Mo., on December 12, by malicious misplacement of a rail. The rail had been taken out, at one end, and spiked down six inches out of line. A section house had been broken into and a claw-bar and wrench taken out. Although seven of the eight cars of the train left the track, only three passengers were injured and these but slightly.

The Atchison, Topeka & Santa Fe has prepared plans for the construction of a large office building to accommodate its general offices in Chicago on land owned by the company on the east side of State street, south of Roosevelt road. The company's present lease of three floors in the Railway Exchange building will expire in 1923 and it is now considering whether to remain at its present location, to become tenants in the new west side Union Station office building, or to construct its own building.

The Interstate Commerce Commission has announced that the hearing set for January 17 on its consolidation plan as applying to several western systems will be interrupted for two days on account of the argument before the full commission on January 19 and 20 on the application of the Southern Pacific to acquire control of the Central Pacific. On January 17 and 18 evidence will be received with respect to Systems No. 14 and 15 and commencing on January 22 evidence will be received with respect to Systems Nos. 13, 16 and 17 of its tentative plan.

"Company unions" have been formed on the Chicago & Eastern Illinois by shopmen, signalmen and telegraphers; and, in conjunction with officers of the road, have agreed on wages and working conditions. These organizations are the Chicago & Eastern Illinois Association of Mechanical Department Employees and the Chicago & Eastern Illinois Association of Signal and Telegraph Department Employees. The wages agreed upon are in accord with the rulings of the United States Railroad Labor Board, but with provision for graduating the rates of pay according to the skill and experience of various classes of mechanics.

Railway officers and railway supply men of Chicago are participating actively in the campaign of the Chicago Safety Council to secure financial support for that organization, which proposes to spend $100,000 during 1923. F. A. Poor, president of the P. & M. Company is general chairman of the drive. W. E. Sharp, president of the Grip Nut Company, is chairman of the railway supply division conducting the campaign among the railway supply companies. J. G. Rodgers, vice-president of the Pennsylvania, is supervising the work of the steam transportation division, which includes safety officers of nearly all the railroads entering Chicago. The Chicago Safety Council has co-operated with the railroads at every opportunity to minimize accidents. It directed the recent Careful Crossing Campaign of the American Railway Association in Chicago, and plans to conduct three safety instruction classes for railway foremen in 1923.

Hall Three-Color Signals

The Hall Switch & Signal Company has received orders for its color-light signals—a single lens serving for all three colors—from the New York Central (lines west) eight signals; the Michigan Central, three signals; the Toledo & Ohio Central, one signal, and the Baltimore & Ohio, two signals.

Society of Terminal Engineers

The Society of Terminal Engineers will discuss the illumination of piers, warehouses and railroad terminals and yards at its meeting on January 9, at 8:00 p. m., at the Engineering Societies Building, New York. G. T. Johnson, electrical supervisor of the New York, New Haven & Hartford, will speak on the illumination of terminals and yards, giving special attention to the installation at Cedar Hill. H. E. Mahan, illuminating engineering laboratory, General Electric Company, will discuss the illumination of piers and warehouses.

Nine Thousand Foreign-Born Citizens

Of the 12,907 foreign-born employees on the Eastern Region of the Pennsylvania Railroad a total of 9,249 or 70 per cent have either become naturalized American citizens or have obtained their first papers. Forty-eight nationalities are represented; Italians. 5,707; English, 1,610; Irish, 1,444; German, 696; Austrian, 586; Polish, 528; Russian, 511; Hungarian, 338; Norwegian, 177; Spanish, 172; Swedish, 148; Scotch, 139; and Czecho Slovak, 102. The following show less than 100 each: Armenian, Mexican, Portuguese, Canadian, Danish, West Indian, French, Swiss, Jugo Slav, Greek, Syrian, South American, Dutch, Welsh, Roumanian, Belgian, Turkish, Cuban, Lithuanian, Finnish, Bohemian, Australian, Ukranian, Bulgarian, Serbian, East Indian, Macedonian, Galician, Arabian, Porto Rican, Egyptian, Costa Rican, African, Central American and Japanese.

It is the policy of the Pennsylvania to assist all foreign-born employees who wish to take advantage of instruction in English and the fundamental principles of American government.

Unequal Taxes in Nebraska

The Chicago, Burlington & Quincy, the Chicago & North Western and the Chicago, St. Paul, Minneapolis & Omaha, have been denied a Federal court order enjoining the collection of their taxes for 1921 in Nebraska, based on appraisals and valuations which they claim were discriminatory. The roads claim that their taxes have been assessed on valuations as high as 40 per cent greater than the actual value of their property, while other property in the state was assessed at only 65 per cent of its actual value. The opinion denying the order held that the roads should have exhausted all means provided by state law for correcting the assessment before coming into Federal court for relief. Reference was made to the provision in the Nebraska law for appeal to the State Supreme Court in tax cases after the state board of equalization has acted, which action the roads had not taken.

Readjustment of Wages on U. P.

An agreement has been reached between the Union Pacific and representatives of the Miscellaneous Employees' Association of that system whereby it will pay wages ranging from two to ten cents an hour over those established by the United States Railroad Labor Board to employees performing work of a high degree of skill. For work semi-skilled in nature and other grades requiring but little skill, the rates of pay are less in some instances than rates established by the Labor Board. A complete set of rules governing working conditions was also agreed upon, which are similar to those contained in agreements recently entered into between the Union Pacific and the Shop Employees' Association of that road.

Butler, McChord and Eastman

The Senate on December 21 confirmed the appointment of Pierce Butler as an associate justice of the Supreme Court by a vote of 63 to 7. Those voting against the confirmation were Senators Harris, Heflin, LaFollette, McKellar, Norris, Sheppard and Trammell. In opposing the confirmation, Senator LaFollette is said to have used a letter from John H. Gray, former valuation analyst of the Interstate Commerce Commission, saying that Mr. Butler had caused his dismissal from the faculty of the University of Minnesota because of the attitude he had taken on railroad valuation questions while with the commission. The Senate also confirmed the re-appointment of C. C. McChord and Joseph B. Eastman as members of the Interstate Commerce Commission.

Coal Production

The rate of production of soft coal has declined since the second week of December, according to the Geological Survey Bulletin. Revised estimates for that week show 11,495,000 tons including lignite, coal coked, mine fuel and local sales, whereas the preliminary estimate for the week ended December 16 stands at 10,518,000 tons, and for the week of December 18-23 at 10,000,000 to 10,300,000 tons. The decline began on Tuesday, December 12, when the output was limited by observance of Miners' Election Day in some union districts, and has continued since that day for causes which are not yet apparent.

Production of anthracite in the week ended December 16, including mine fuel, local sales and washery and dredge output is estimated at 2,197,000 net tons, the highest week's output for the year 1922.

The total mine output of bituminous coal in November is estimated at 45,300,000 net tons. This is 8,495,000 tons, or 23 per cent more than the November, 1921, production.

The Lake season is now virtually closed. Cumulative dumpings of cargo coal (bituminous) over Lake Erie piers in the 1922 season to December 17 total 18,500,055 tons which is 17.5 per cent less than in 1921 and 1920, and 15 per cent less than in 1919. It is noteworthy, however, that of the total cargo coal reported for 1922 1,179,417 tons, or 6.4 per cent, has gone to Lake Erie destinations not ordinarily taking "Lake" coal. Therefore, on the basis of regular movements the present season is 22.5 per cent behind 1921 and 1920 and 20 per cent behind 1919.

Constitutionality of Recapture Law Contested

The first suit to test the constitutionality of the so-called recapture provisions of the transportation act has been instituted in the United States district court at Beaumont, Texas, by the Dayton-Goose Creek Railway, which has filed a petition for an injunction to restrain the Interstate Commerce Commission from instituting proceedings to collect from the company $10,833.12 for 1920 and $16,833.49 for 1921, representing one-half of this company's net in excess of 6 per cent upon its value. The petition states that this law is in violation of the fifth amendment to the constitution and declares that its rates were fixed both by the Interstate Commerce Commission and by the Texas Railroad Commission as reasonable rates and that the commissions could not have declared lower rates to be reasonable. It also makes the point that part of its net operating income was not derived from freight or passenger service, but from profits accruing to it from rentals, leases, trackage rights and interest; also that it does not know how much of its net income it may be able to retain as it may eventually be reduced as a result of litigation over rates, damage suits, etc.

Dearborn Station Damaged by Fire

Dearborn Station, Chicago, operated by the Chicago & Western Indiana and used by the Atchison, Topeka & Santa Fe, the Chesapeake & Ohio, the Chicago & Eastern Illinois, the Erie, the Chicago, Indianapolis & Louisville, the Grand Trunk and the Wabash, was damaged by fire to the extent of $300,000 on December 21. The fire was caused by crossed wires and started in the ceiling over the second floor at 3:30 p. m., spreading rapidly to the third floor and loft. The fire was confined to the upper floors of the building which were used for offices and the storage of records. It spread so rapidly that within half an hour the entire upper portion of the building was in flames. The train shed was not damaged and no mail or baggage was lost. As soon as the fire was under control, arrangements were made to handle the heavy holiday traffic with a minimum of inconvenience and delay. By 7 p. m. trains were being handled on schedule and an annex ordinarily used for the accommodation of suburban passengers was used for regular passenger traffic. On December 23 the debris had been cleared so that passengers were able to enter the train shed through the main floor of the building. The baggage and waiting rooms were restored to service on December 24. The station was built in 1885 at a cost of from $400,000 to $500,000, and was considered one of the largest and best appointed stations in the country at that time.

Illinois Central Urges More Intensive Use of Railway Facilities

In an article appearing in the Illinois Central Magazine for December this company points out that relief from the present transportation shortage can be secured only through the more efficient use of present limited facilities. Quoting from this article, relief may be brought about by the loading or unloading of cars the same day they are delivered instead of holding them over into the following day. This company is endeavoring to load cars as heavily as possible. It has been found that only three-fourths of the full capacity of freight cars, except coal cars, is being utilized, which means that one-fourth of the capacity of such cars is being wasted. The co-operation of patrons in assisting in the correction of this condition is solicited. In October, lumber loadings on the Illinois Central were only 58.6 per cent of the capacity of the cars, mixed seed 54.9 per cent, cement 76 per cent, cotton seed products 56.2 per cent, flour and meal 59 per cent, sugar 52.2 per cent and stucco and plaster 75.3 per cent. Coal car loading exceeded 95 per cent of the maximum capacity, wheat and corn 90 per cent and stone, sand and gravel nearly 96 per cent. That the railway is attempting to do its part is indicated by the fact that a record of 45.75 miles per car per day was made in October of 1922, as compared with the previous high record of 44.59 miles per car per day established in October, 1920.

A Bill to Protect I. C. C. Against Influence

A bill to make it unlawful "to attempt to influence the determination of any proceeding before the Interstate Commerce Commission or any examiner thereof, excepting under the rules and regulations of the commission governing its proceedings in the orderly administration of the interstate commerce law" has been introduced in the Senate by Senator La Follette. The bill provides that:

"Every person who attempts to influence the action of the Interstate Commerce Commission or any member thereof, in making or refraining from making any ruling, conclusion, finding, recommendation, report or order in the determination of any proceeding before the commission or any examiner thereof, by writing or sending to the commission or any member thereof or to any examiner thereof any letter or any written or printed communication, circular, paper, or by writing or printing or circulating or causing to be printed and circulated any communication, matter or thing addressed to the commission or any member thereof or any examiner thereof, or by communicating with the commission or any member thereof or any examiner thereof in any

other manner with like purpose and intent in relation to such ruling, conclusion, finding, recommendation, report, order or proceeding pending before the commission or examiner thereof, excepting under the rules and regulations of the commission governing its proceedings in the orderly administration of the Interstate Commerce law and acts amendatory thereof, shall be deemed guilty of a misdemeanor and upon conviction shall be punished by a fine of not more than $2,000 or imprisonment for a term not exceeding one year, or by both fine and imprisonment, in the discretion of the court."

W. H. Johnston Asks Investigation of Strike Expenditures

William H. Johnston, president of the International Association of Machinists, on December 23 filed with the Interstate Commerce Commission a petition requesting the commission to investigate the expenditures by railroad companies for the maintenance of their equipment since July 1, 1922.

"The present freight and passenger rates were originally determined by you on the assumption that adequate standards of economical and efficient operation would be fulfilled by the carriers," he said. "Consequently, if at any time they are not fulfilled, it becomes the duty of your honorable body to act in a way which will record the facts of the situation and effect the necessary remedies. Especially is such action on your part appropriate and necessary at this time, in view of the persistent demand by the agricultural and other shipping interests of the nation for reduced freight rates. I charge that progress toward such reduction has been effectively and consistently blocked by the carriers in recent months as a result of their costly and utterly unwarranted labor policy."

Mr. Johnston said that there exists today not only a depletion of usable cars, coupled with a serious decline in railroad earnings, but also a condition of deferred equipment maintenance which is likewise very serious in view of the coal shortage and the increasingly severe winter weather. He charged that this situation is "the direct result of those very faults of management which the Interstate Commerce Act has made a primary factor in the determination of railroad rates and which the commission, in accordance with this act is authorized to remedy." He calls the present state of affairs "tantamount to a lockout."

"Green Caps" at Pennsylvania Station

The "Message Exchange" introduced at the Grand Central Terminal, New York city, last July, is now in operation also at the Pennsylvania Station, New York, with "Green Cap" messengers circulating among passengers in the waiting rooms and concourse. The announcement issued by the railroad company lists the things that the Exchange and its messengers will do, among which are:

If a patron has failed to telephone an important message to his home or elsewhere, his message can be taken by a messenger. If a reply to the message is required, the Message Exchange will get the answer.

Messages may be left to be called for.

Travelers may have letters and telegrams addressed to themselves in care of the Message Exchange. * * * On request, the Message Exchange will require positive identification of persons to whom valuables are delivered.

Messengers will deliver messages, bags and parcels of all kinds between any two points in Greater New York.

A "Green Cap" will page anyone throughout the Pennsylvania Station. This service can be obtained by telephoning Pennsylvania 0114.

Railroad patrons can have railroad and Pullman tickets purchased and held for them.

The booth is open from 7 a. m. until midnight. For the present its working force consists of a day and a night telephone operator and four messengers. The Exchange during its first two days accommodated approximately one hundred railroad patrons.

The Grand Central announcement said that for all ordinary service the charge would be uniformly ten cents each. The present announcement simply says that a nominal charge will be made.

Traffic News

The navigation season on the upper Great Lakes ended on December 22, when the locks at Sault Ste. Marie, Mich., were closed for the winter.

The Interstate Commerce Commission on December 20 issued a service order directing the Pennsylvania Railroad to place three cars a day for 15 consecutive days at the mine of the Commercial Coal Mining Company, Twin Rock, Pa., for coal consigned to the government fuel yards at Washington. These yards supply all public buildings in Washington.

The Chicago, Burlington & Quincy, the Great Northern and the Northern Pacific, are planning a $1,000,000 campaign to advertise the institutions, the economic resources, the development, the history and the future of the northwest. Officers are now traveling through this territory collecting information which will be used in the campaign. The campaign will be handled through the Burlington offices. A motion picture scenario laid in Colorado, Yellowstone Park and Glacier Park has been completed and will be displayed in cities throughout the United States.

Christmas holiday traffic on the railroads centering in New York City was this year heavier than ever before. The different roads reported estimates of from 20 to 30 per cent above the normal average number of passengers passing through the station on ordinary winter days. The New York Central sent out many extra trains, including 75 extra sleeping cars. An officer of the Pennsylvania said that 50 more Pullman parlor cars could have been used if they could have been found. Similar increases in the aggregate number of passengers were reported also at Philadelphia.

Advice how to fight the boll-weevil is the subject of the latest advertisement published by the Central of Georgia Railway in the daily and weekly newspapers published along its lines. The agricultural department of the road will supply any farmer with all available facts and figures as to how the weevil has been fought, and the results. The only advice given in the advertisement is the naming of the best weapons, which are "hard work and common sense." These must be supplied by the farmer himself, but the railroad, without attempting to say what method is best, and without recommending one plan above another is ready to do what it can. Pamphlets may be obtained on application and personal interviews may be had with the department's agricultural agents at Cuthbert, Griffin, Milledgeville and Columbus. This railway organized its agricultural department in 1911 and has established test farms, has assisted boys' clubs for crop growing and stock raising and has distributed pure-bred sires, cattle and swine, throughout its territory; it has shown how tobacco and other money crops may be grown to bridge over the lean years while the farmer is learning to live with the weevil; it has conducted farm tours through the west; aided in the construction of correctly designed storage houses for sweet potatoes, and is now promoting test pastures to show that permanent pasturage is possible.

Car Service Division Appoints Agricultural Representative

To enable the Car Service Division of the American Railway Association to keep more intimately advised regarding the transportation requirements of the farming communities of the country, it has appointed Elmer Knutson, of St. Cloud, Minn., as agricultural representative, whose function will be to keep in touch with farm needs so far as freight transportation requirements are concerned. He will analyze the movement of agricultural products and will co-operate with farm organizations throughout the country in anticipating car requirements. He will spend most of his time in the agricultural sections of the country. Creation of this office is part of the general plan of the Car Service Division to bring about closer co-operation between shippers and carriers.

Commission and Court News

State Commissions

The Railroad Commission of California will apply to the California Supreme Court for a rehearsing in the Los Angeles terminal case in which the court denied the commission authority to order the construction of a union passenger station. The Supreme Court annulled the order of the commission directing the Southern Pacific, the Atchison, Topeka & Santa Fe and the Los Angeles & Salt Lake to join in the construction of a station as part of a plan for eliminating grade crossings. The Supreme Court, while conceding the power of the Commission to order the elimination of grade crossings, held that the Interstate Commerce Commission possessed exclusive power over all extensions to railroad facilities, including terminals. In the event that the order of the Supreme Court becomes final, the California commission will initiate proceedings before the Interstate Commerce Commission to accomplish the result sought.

Court News

Railroad Company Not Liable for Work Contracted While Under Federal Control

Where a railroad was under federal control when an agreement for construction formerly made was modified and performed, partly by the contractor and partly by the railroad after the contractor's abandonment of the work, the Tennessee Supreme Court holds that the railroad company was not liable for the amount due the contractor under the modified agreement nor for the rental of the contractor's equipment taken and used after the abandonment.—Johnston v. Cincinnati, N. O. & T. P. (Tenn), 240 S. W. 429

Alabama Cattle Guard Statute

The Alabama Court of Appeals holds that under the 1907 statute requiring the erection of cattle guards for plantation roads when demanded and shown to be necessary, two things are essential to recover damages (1) the cattle guards and crossings must be on plantation roads, either present or prospective; (2) there must be a demand by the owner or person in possession, accompanied by a showing that such guards are necessary to prevent depredation of stock upon his land, and that the crossings are necessary for the proper use of the land.—A. T. & N. v Norwood, etc. Stock Co. (Ala. App.) 92 So. 199.

Consignee, Agent of Shipper, Liable for Deficiency in Freight Though B. L. said P. P.

Goods were shipped to the shipper's agent, on a straight bill of lading reciting that the freight had been prepaid. On arrival it was found that the full lawful freight had not been prepaid, and a small additional amount demanded was paid by the consignee "to avoid delay and confusion." Some months later it was discovered that $93 additional was lawfully due, and on the consignee's refusal to pay this, the railroad sued him. The consignee contended that the rule that the consignee accepting the goods is to be treated as assuming the charges cannot apply if the contract of shipment is that the freight is to be prepaid, especially when the railroad knows that the consignee is the shipper's agent. None of the cases in the higher federal courts involves a prepaid shipment, but the federal district court for the Northern District of Georgia in the present case arrives at the conclusion that the consignee cannot accept delivery without incurring liability for the carrier's charges, known or unknown, supposed to be prepaid or otherwise, and no matter what the consignee's actual relation to the shipper is. If by the shipper's omission the consignee is thus made liable for a charge which as between him and the shipper should not be borne by him, his recourse is on the shipper. —Western & Atlantic v. Underwood, 281 Fed. 891.

Ownership of Condemned Land Not Used for Railway Purposes

Certain lands of plaintiff's predecessor in title were condemned in 1879 for railway purposes. Hitherto the defendant company has not used or needed all the land condemned, and a portion of it has been continually occupied and used by the plaintiff and his predecessors. The Kansas Supreme Court holds that, as plaintiff and predecessors were strictly within their rights there has been no adverse, hostile, inconsistent use to the prejudice of the company so as to give rise to a right founded on 15 years' adverse possession, and an action by the fee title holder to quiet the title against the railroad company cannot be maintained.—Harvey v. Missouri Pacific (Kan.), 207 Pac. 761.

Sufficient Excuse for Failure to Furnish Cars

In an action for failure to furnish cars, it was shown the cause of the failure was an unusual demand for cars after a switchmen's strike, which had practically stopped shipments during the preceding months. The Wisconsin Supreme Court holds that a finding that the railroad could, in the exercise of reasonable diligence have furnished the cars without jeopardizing its other business was not warranted. It is undoubtedly the duty of the railroad to notify the shipper within a reasonable time if it cannot furnish the cars at the time and place requested; but where there is no causal relation between failure to give such notice and the damages sustained, it is immaterial that the notice was not given. —Richland Equity Shipping Assn. v. Rock Island (Wis.) 188 N. W. 625.

Underwood & Underwood

When a Train Is Approaching the Four Lights Below the "Railroad" Sign Show "Stop" in Red Letters in the Crossing Signal Developed by A. B. Ramsdell, Assistant Vice-President of the Rock Island

Equipment and Supplies

Locomotives

THE LEHIGH & NEW ENGLAND is inquiring for three Consolidation type locomotives.

THE LOUISVILLE, HENDERSON & ST. LOUIS is inquiring for five Pacific type locomotives.

THE HOLTON INTER-URBAN has ordered one Prairie type locomotive from the American Locomotive Company.

THE NARRAGANSETT PIER RAILROAD has ordered one 8-wheel locomotive from the American Locomotive Company.

Freight Cars

THE UNITED GAS IMPROVEMENT COMPANY, Philadelphia, Pa., reported in the *Railway Age* of December 16 as inquiring for 150 coal cars of 50 tons' capacity, has ordered this equipment from the American Car & Foundry Co.

THE GREAT NORTHERN, reported in the *Railway Age* of December 9 as inquiring for 500, 75-ton steel ore cars, has divided equally an order for 1,500 ore cars between the Pressed Steel Car Company and the Cambria Steel Company. This company is now inquiring for 1,000 U. S. R. A. standard, double-sheathed box cars.

THE SOUTHERN PACIFIC, reported in the *Railway Age* of December 2 as inquiring for 5,000 cars, has ordered 3,700 box from the Standard Steel Car Company, 350 flat from the Ralston Steel Car Company, 550 stock from the Pullman Company. The railroad company will build 300 flat cars and 100 caboose cars in its own shops.

Passenger Cars

THE UNION PACIFIC contemplates coming in the market soon for about 50 cars for passenger service.

Iron and Steel

THE LOUISVILLE & NASHVILLE has ordered 1,599 tons of structural steel for its Rigolets bridge in Louisiana.

THE MISSOURI PACIFIC has ordered two through riveted spans, 700 tons, from the Virginia Bridge & Iron Company.

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS will receive bids until January 3 for plates, shapes, nails, wire, cable, axles and tubes.

Track Specialties

THE LONG ISLAND received bids until 12 o'clock noon, December 29, at Jamaica, N. Y., for 420 kegs of track bolts 1,350 kegs iron track spikes, 36 open hearth frogs, 2 hard frogs, 24 switches and 2 pair alloy tipped switch points.

Miscellaneous

THE NORFOLK & WESTERN received separate bids until 12 o'clock noon, December 27, at Roanoke, Va., for its requirements from January 1 to June 30, 1923, of locomotive steel tires, wire fencing, steel springs, and from January 1 to March 31, of couplers and repair parts. Bids were also received on the same date for 101 cast steel truck bolsters. The company is also asking for separate bids until 12 o'clock noon, January 3, for 550 sheets finished steel, 12 cast steel truck bolsters, 8,000 switch plates, 300 bars bevel reinforcing steel, 100 cast steel side frames, requirements of brake shoes from January 1, 1923, to March 31, 1923.

Supply Trade News

The **W. S. Murrian Company,** Knoxville, Tenn., has been appointed field representative for the southern part of the United States of the **Mahr Manufacturing Company,** Minneapolis, Minn.

H. A. Hutchins district manager of the Chicago territory for the Thew Shovel Company has become associated with the main office of the **Northwest Engineering Company,** 1220 Steger building, Chicago.

The **George Oldham & Son Company,** Baltimore, Md., has opened a branch office in the National building, 1404 E. Ninth street, Cleveland, Ohio. This office is in charge of **W. W. Davidson** and **C. M. Hartzell.**

The **Lehigh Portland Cement Company** has awarded a contract to Dwight P. Robinson & Company, New York, for the design and construction of a Portland cement plant at Birmingham, Ala., having an annual capacity of 1,000,000 barrels of cement.

The **Globe Steel Tube Company,** Milwaukee, Wis., has opened a southeastern district sales office at 716 Continental building, Baltimore, Md., and **R. R. Lally,** formerly of the National Tube Company, has been appointed district sales agent.

Edwin L. King has been appointed district sales manager for the Reading Steel Casting Company, Inc., Reading, Pa.; Pratt and Cady Company, division Reading Valve and Fittings Company, division, Bridgeport, Conn., with headquarters at 208 South La Salle street, Chicago, to succeed M. L. Chase, resigned.

L. R. Phillips has been appointed district sales manager of the **Detroit Seamless Steel Tubes Company,** Detroit, Mich., and will establish an office in Chicago on January 1. For the past 20 years Mr. Phillips has been associated with the National Tube Company, 17 of which were with the Chicago office, and the latter three with its St. Louis office.

O. D. Street, general manager of distribution of the Western Electric Company, Schenectady, N. Y., has resigned to organize a company of consulting specialists to deal with questions affecting management and distribution. Mr. Street was connected with the Western Electric Company for 22 years, most of the time in an executive capacity.

The **Gibb Instrument Company,** Bay City, Mich., has taken over, under exclusive license, the manufacture and sale of the automatic and semi-automatic electric arc welding machines developed and heretofore manufactured by the Fred Pabst Company of Milwaukee, under various letters patent, and have contracted to act as selling agent for the Pabst line of patented covered electrodes.

John J. Gault has joined the sales force of the **Bucyrus Company,** South Milwaukee, Wis. Mr. Gault's headquarters will be at 622 McCormick building, Chicago. He formerly served as assistant engineer of the Chicago & North Western, engineer maintenance of way of the Chicago & Alton, construction engineer for the United Fruit Company and assistant engineer of the Chicago, Milwaukee & St. Paul and later with the International Harvester Company as locating engineer on a railroad project.

Walter C. Doering has resigned as vice-president of the Southern Wheel Company, St. Louis, Mo., effective January 1, to engage in the railway supply business in St. Louis. Mr. Doering has been connected with the above company and its predecessor the St. Louis Car Wheel Company since January, 1900. Among the concerns that Mr. Doering will represent, are the American Brake Shoe & Foundry Company, New York, the Bradford Draft Gear Company, New York

and Chicago, and the Republic Railway Equipment Company, Chicago. His offices will be located in the Railway Exchange building, St. Louis.

Obituary

William R. Walker, assistant to the president of the United States Steel Corporation, died on December 22 in St. Luke's Hospital, New York City. Mr. Walker was born in La Porte, Ind., on November 26, 1857. He had been identified with the Steel Corporation since its formation.

Fred A. Marsh, general purchasing agent of the Link-Belt company, died on December 11 at his home in Chicago at the age of 52 years. Mr. Marsh was a member of the Link-Belt organization for over 33 years. He was one of the organizers of the Purchasing Agents Association of Chicago, and served as its first president; he has been for some years a director in the National Association of Purchasing Agents.

Railway Construction

Baltimore & Ohio.—This company has awarded a contract recently to the American Bridge Company covering the fabrication and delivery of approximately 750 tons of steelwork for bridge superstructures. The order in question consists principally of deck plate girder spans, but includes a number of short "I" beam spans and one through plate girder span. The majority of these new bridges are to be placed on the line paralleling the Ohio river between Benwood and Brooklyn Junction, W. Va. The material is to be delivered early in the coming spring, and the erection is to proceed as soon as the steelwork reaches the respective bridge sites and the weather conditions become suitable for field operations.

Belt Railway of Chicago.—This company, which was reported in the *Railway Age* of December 16 as receiving bids for the construction of a brick freight house at Chicago to cost $75,000, has awarded the contract for the work to Rowley Brothers Company, Chicago.

Chicago & Western Indiana.—This company has awarded a contract to the E. W. Sproule Company, Chicago, for the reconstruction of Dearborn Station, Chicago, which was recently damaged by fire.

Chicago, Burlington & Quincy.—This company is considering plans for the construction of a union station at Clinton, Iowa, to serve the Chicago, Burlington & Quincy, the Chicago, Rock Island & Pacific and the Chicago, Milwaukee & St. Paul. The structure is expected to cost approximately $40,000.

Chicago, Milwaukee and St. Paul.—This company contemplates terminal improvements at Sioux Falls, South Dakota, including increased trackage and alterations to freight and passenger stations.

Chicago, Rock Island and Pacific.—This company is surveying a new line from Waurika, Oklahoma, to Healdton, a distance of approximately 15 miles.

Eastern Maine.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a new line from Houlton to Bancroft, Maine, 31 miles, with a branch of 3 miles to the Canadian border, and also for authority to issue $2,000,000 of capital stock.

Illinois Central.—This company is receiving bids for the laying of 38 miles of second track from Central City, Ky., to Dawson Springs, which will follow a new route for a short distance. The construction of yards and terminal buildings at Central City is included in the project, which is estimated to cost approximately $3,000,000. This company closed bids December 28 for the construction of wash room facilities at Memphis, Tenn., consisting of a two-story brick building to cost approximately $60,000. The company will close bids on January 3 for the construction of a gravel washing plant at Freeport, Ill., to have a capacity of 2,000 cu. yd. per day.

Illinois Central.—This company, which was reported in the *Railway Age* of December 23 as contemplating the construction of a single track line from Edgewood, Ill., to Fulton, Ky., approximately 175 miles, has completed plans for this work. The maximum grade will be 0.3 per cent. There will be no large bridges but there will be one tunnel, one mile long, in the Ozark Mountains of Southern Illinois. The line from Edgewood, Ill., to Akin and from Fulton, Ky., to Metropolis, Ill., will be constructed first. The total cost of the work will be approximately $13,000,000.

Kansas City Terminal.—This company plans the construction, jointly with the city of Kansas City, of a viaduct near Chestnut and Guinotte avenues, Kansas City, Mo., approximately 1,500 feet long, crossing the tracks of the Chicago & Alton, the Missouri Pacific, the Kansas City Terminal and part of Guinotte avenue.

Louisville & Nashville.—This company has awarded a contract to the Missouri Valley Bridge & Iron Company, Leavenworth, Kan., for the construction of piers for a bridge at Rigolets, La. This company has begun with company forces the construction of 15 miles of second track on its Cumberland Valley division between Bailey, Ky., and Walls End.

New York Central.—This company contemplates the construction, jointly with the city of Cleveland, of a new bridge in that city; estimated cost approximately $100,000.

Pennsylvania.—This company has awarded a contract to the H. E. Culbertson Company, Cleveland, O., for the construction of trestle work in connection with the elevation of its tracks through the city of Cleveland.

Southern Pacific.—This company plans the construction of a bridge across the Colorado river at Yuma, Ariz., in a new location to cost approximately $2,000,000.

St. Louis-San Francisco.—This company, which was reported in the *Railway Age* of December 16 as having closed bids for the construction of a round house at Muskogee, Okla., has awarded the contract for this structure to C. E. Hamilton of St. Louis, Mo.

St. Louis-San Francisco.—This company is contemplating the construction of a new line from Sipsey, Ala., to Arkadelphia.

St. Louis-San Francisco.—This company contemplates the construction of a new freight house at Fayetteville, Ark. It is also considering remodeling the present passenger station.

Wabash.—This company contemplates the construction of a locomotive repair and machine shop at Decatur, Ill.

Kadel & Herbert

Christmas Trees Being Taken from Railway Piers at New York

Railway Financial News

CAROLINA, CLINCHFIELD & OHIO.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $9,500,000 of first and consolidated mortgage 6 per cent bonds to be sold at not less than 91½, the proceeds to be used in paying off loans aggregating $8,000,000 from the government and in reimbursement for expenditures amounting to $1,500,000.

CHESAPEAKE & OHIO.—*Guaranty Certified.*—The Interstate Commerce Commission has issued a certificate placing the amount of this company's guaranty for the six months' period of 1920 at $4,378,841, of which $1,078,841 is still to be paid.

CHESAPEAKE & OHIO.—*Option on Stock Extended.*—The Wall Street Journal says:

The Van Sweringen interests will acquire the Huntingdon holdings of Chesapeake & Ohio common stock at $80 a share, if their recently acquired option is exercised according to bankers close to the Cleveland railroad operators. As the option is understood to cover about 30 per cent of the outstanding stock of the road, the total amount involved will be about $16,000,000. The road has outstanding common stock of a par value of $62,792,600.

Apparently the Van Sweringens are having some difficulty in finding the cash to finance this transaction. It was learned that their option, which originally expired on January 1, 1923, has been extended for two weeks to give the intending purchasers time to complete their arrangements.

CHICAGO, ROCK ISLAND & GULF.—*Guaranty Certified.*—The Interstate Commerce Commission has issued a final certificate placing the amount of this company's guaranty for the six months period of 1920 at $273,076.

CHICAGO WAREHOUSE & TERMINAL COMPANY.—*Asks Authority to Issue Notes.*—This company has applied to the Interstate Commerce Commission for authority to issue $150,000 of 5 per cent notes to be sold to the Chicago, Burlington & Quincy, the proceeds to be used in the construction of new tunnel and elevator shafts necessitated by the removal of the Burlington freight station facilities in Chicago to a point immediately south of the present location.

DETROIT & MACKINAC.—*Authorized to Sell Bonds.*—The Interstate Commerce Commission has authorized this company to sell $450,000 of first lien bonds at not less than 80.

INTERNATIONAL-GREAT NORTHERN.—*To Offer Bonds.*—This company will offer $13,462,000 6 per cent bonds on January 3 through a syndicate composed of Speyer & Co. and J. & W. Seligman & Co. They mature in 30 years and are secured by a direct first lien on the 1,159 miles of track, of which 1,106 miles are owned in fee. The total issue is of $20,000,000, of which $3,788,000 were exchanged for first mortgage bonds of the old company taken over in the reorganization and $2,750,000 were pledged with the director general of railroads as collateral for a 6 per cent. loan of $2,400,000 due March 1, 1930.

KENTWOOD & EASTERN.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment as to interstate commerce of this company's line from Kentwood to Scanlon, La., 16.53 miles.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—*Equipment Trusts Sold.*—Dillon, Read & Co. and the National City Company have purchased $2,360,000 5 per cent equipment trust certificates, series K. issued under the Philadelphia plan. All the certificates have been sold privately at prices to yield from 5 to 5.20 per cent.

NIAGARA JUNCTION.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized this company to issue 10,000 shares of capital stock without par value in place of 1,345 shares of preferred stock and 1,600 shares of common.

PENNSYLVANIA COMPANY.—*Extra Dividend.*—This company, the capital stock of which is owned by the Pennsylvania Railroad Company, has declared its usual semi-annual dividend of 3 per cent and an extra dividend of 20 per cent, payable out of its accumulated surplus on December 30, to stockholders of record December 27.

The extra dividend is a further step in liquidating the Pennsylvania Company, which has been in progress since 1917 when it relinquished the operation as lessee of the various lines in the Pennsylvania System West of Pittsburgh, which obligations were assumed by the Pennsylvania Railroad Company.

VIRGINIAN.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $2,074,000 of first mortgage 5 per cent, 50-year gold bonds to be sold at not less than 95 to reimburse the treasury for expenditures for additions and betterments.

Dividends Declared

Louisville & Nashville.—3½ per cent, semi-annually, payable February 10 to holders of record January 15.

Northern Pacific.—1¼ per cent, quarterly, payable February 1 to holders of record December 29.

Reading Company.—Common, 2 per cent, payable February 8 to holders of record January 16; 2nd preferred, 1 per cent, quarterly, payable January 11 to holders of record December 29.

Trend of Railway Stock and Bond Prices

	Dec. 26	Last Week	Last Year
Average price of 20 representative railway stocks	64.88	63.83	56.30
Average price of 20 representative railway bonds	85.02	85.10	80.31

Maroggia Bridge, St. Gotthard Railway, Switzerland

Railway Officers

Executive

W. S. Andrews has been appointed assistant vice-president of the Southern.

E. Fox, general traffic manager of the El Paso & Southwestern, with headquarters at El Paso, Tex., has been promoted to vice-president in charge of traffic, with the same headquarters.

C. E. Spens will conclude his work as federal fuel distributor on December 31 and return to his duties as vice-president in charge of traffic of the Chicago, Burlington & Quincy, with headquarters at Chicago, from which he has been on leave of absence.

Traffic

E. H. Potter has been appointed general agent, freight department, of the New York Central, with headquarters at South Bend, Ind.

G. Byrne has been appointed general agent of the Cleveland, Cincinnati, Chicago & St. Louis and the Evansville, Indianapolis & Terre Haute, with headquarters at Terre Haute, Ind., succeeding A. T. Kingsley, who has resigned to take up other work.

F. N. Westerman, assistant general passenger agent of the Southern, with headquarters at Cincinnati, Ohio, has been transferred to Washington, D. C., in the same capacity. **E. G. Irwin**, chief clerk in the passenger department at Cincinnati, has been promoted to assistant general passenger agent, with the same headquarters, succeeding Mr. Westerman.

C. S. Morse, district freight agent for the Canadian Pacific, with headquarters at Toronto, Ont., has been transferred to Ottawa, Ont., in the same capacity, succeeding **F. P. Tucker**, who has been transferred to Detroit, Mich. **G. C. Cochlan**, district freight agent, with headquarters at Detroit, Mich., has been transferred to Toronto, Ont., succeeding Mr. Morse.

W. J. Tremaine, assistant general freight agent of the Alabama & Vicksburg and the Vicksburg, Shreveport & Pacific, with headquarters at Vicksburg, Miss., has been transferred to New Orleans, La., succeeding H. J. Niemann whose promotion to general freight agent was reported in the *Railway Age* November 18. **J. F. Hardin** has been promoted to assistant general freight agent with headquarters at Vicksburg, Miss., succeeding Mr. Tremaine.

W. C. Barnes, freight traffic manager of the El Paso & Southwestern, with headquarters at El Paso, Tex., has been promoted to traffic manager, with the same headquarters. **G. King**, general passenger agent, with headquarters at El Paso, Tex., has been promoted to assistant traffic manager, with headquarters at San Francisco, Cal. **W. S. Dawson**, assistant general freight agent, with headquarters at El Paso, Tex., has been promoted to general freight agent, with the same headquarters. **J. D. Mason** has been promoted to general passenger agent, with headquarters at El Paso, Tex., succeeding Mr. King. **H. D. McGregor** has been promoted to assistant general passenger agent, with headquarters at El Paso, Tex. **C. F. Arnold** has been appointed general agent, with headquarters at San Francisco, Cal.

A. Cotsworth, Jr., assistant general passenger agent of the Chicago, Burlington & Quincy, with headquarters at Chicago, Ill., has been promoted to general passenger agent, with headquarters at Omaha, Neb., succeeding **L. W. Wakeley**, who has been transferred to Chicago as assistant to the passenger traffic manager. Mr. Cotsworth was born on March 18, 1882, at Burlington, Iowa. He entered railway service in February, 1900, as an office boy in the general passenger department of the Chicago, Burlington & Quincy at Chicago, Ill. During the next six years he served in various clerical positions in the same department, and on February 1, 1906, was promoted to chief clerk in the department. He was promoted to assistant general passenger agent on March 1, 1920, and held this position until the time of his recent promotion to general passenger agent, as noted above.

Harvey Allen, whose promotion to assistant general freight agent of the Missouri, Kansas & Texas, with headquarters at St. Louis, Mo., was reported in the *Railway Age* of December 9, was born on February 28, 1889, at Evansville, Ind. He attended Staunton Military Academy at Staunton, Va., and Washington and Lee University at Lexington, Va., until November 12, 1907, when he entered the service of the Missouri, Kansas & Texas as a clerk in the local freight office at St. Louis, Mo. He was transferred to the claim department in February, 1909, and was promoted to rate and tariff clerk in June, 1910. He served in various capacities in this department until he was promoted to clerk to the assistant general freight agent at St. Louis, Mo., in October, 1916, and held this position until October, 1919, except for a period of 15 months when he was in the engineering corps of the army. In October, 1919, he re-entered railway service as chief clerk in the general freight office of the Missouri, Kansas & Texas at Dallas, Tex., and held this position until he was promoted to division freight agent at Oklahoma City, Okla., in July, 1920. He was serving in this capacity when he was promoted to assistant general freight agent in December, 1922.

Mechanical

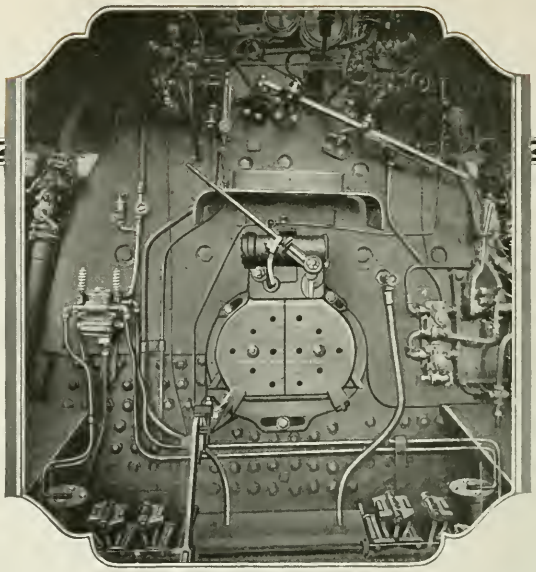
C. E. McCloskey has been appointed master mechanic of the Gulf Coast Lines, with headquarters at Kingsville, Tex.

Obituary

W. W. McCauley, assistant general superintendent of transportation on the Northern Pacific, died at St. Paul, Minn., on December 25.

Alexander Hilton, vice-president in charge of traffic of the St. Louis-San Francisco, died at St. Louis, Mo., on December 25, following a nervous breakdown.

A Dining Car in Norway



Franklin Automatic Firedoor
Butterfly Type

SHUT THE DOOR

NO ONE would build a locomotive and leave off the fire door.

Everyone knows that enough cold air will kill any engine.

To keep out steam-killing cold air is the purpose of the Franklin Automatic Fire Door.

With a good fireman, there's just enough time to get the scoop out and the firedoor is closed.

Franklin Firedoors make freer steaming engines and at the same time save coal.

Franklin Railway Supply Company, Inc.

332 So. Michigan Avenue, Chicago, Ill. 1209-12 Praetorian Bldg., Dallas, Texas. 774 Monadnock Bldg., San Francisco, Cal.

Franklin Railway Supply Company of Canada, Limited, Montreal
Export Department—International Railway Supply Co.—30 Church St., New York

"On the Lehigh and New England Railroad"

Total Weight of Engine, 301,500 pounds; Weight on Driving Wheels, 279,000 pounds; Diameter of Driving Wheels, 61 inches; Boiler Pressure, 210 pounds; Cylinders, 27x32 inches; Maximum Tractive Power, 68,200 pounds.

Consolidated locomotive No. 301, one of several of this type recently delivered to the Lehigh & New England Railroad is the heaviest and most powerful consolidated locomotive ever built.

> "Two of these locomotives are assigned to a region where they are handling heavy coal trains a distance of fifty-four miles, encountering .5% grade, hauling 3500 tons at a speed of approximately twenty miles per hour.
>
> Their performance is highly satisfactory, negotiating all grades and curves with ease, steaming freely without excessive coal consumption. Two others, working out of Pen Argyl on a 2.75% grade, haul 690 gross tons with similar results."

The remarkable results obtained by these locomotives point with particular clearness to the efficiency of Alco engineering methods.

To retain consolidation arrangement but increase its power to the capacity usually only found in a widely different type was the objective.

Working in close co-ordination with the Mechanical Department of the railroad, Alco Engineers succeeded in enlarging the capacity of this type without departing from established methods of weight distribution or altering arrangement of consolidation design.

In this instance as in many others, a need was supplied—without supplying more than was needed.

Alco service has often demonstrated that there is a vast difference between—

getting all you need
and
needing all you get.

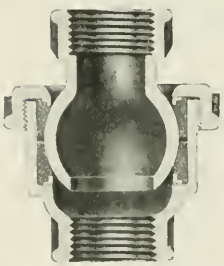
When Winter Comes



THEN is the time that the proper heating of coaches and Pullmans in station sidings, coach yards and terminals counts—counts big in securing the good will of the traveling public and in obtaining increased patronage for your road.

The rigor of the coldest winter weather will find your passenger cars warm and comfortable, if you use

BARCO
Station and Coach Yard Connections

Zero weather, snow, ice, or high pressure cannot hurt Barco All Metal Connections nor cause them to burst, leak or fail—while the Barco Universal Ball Joints always furnish a free and unobstructed passage for steam, regardless of the exact position of the car and without requiring accurate spotting of trains.

And think of the savings in hose renewals made possible by the use of Barco metallic connections. This item alone quickly pays for their installation.

Why not let us solve your terminal car heating problems? Complete information gladly furnished—write for it.

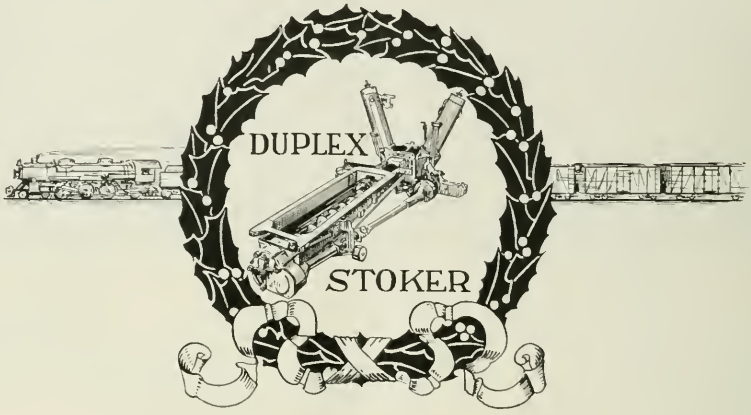
A Resolution!



TEN years ago we resolved to build a locomotive stoker that would embody every quality shown by study and experience to be required in performing the tremendous task of firing *any* locomotive to full capacity—

Under all conditions which might arise in the course of a normal road trip;

Crushing its own coal as it went;

Distributing fuel in a manner to obtain the most efficient and scientific combustion;

Rugged enough to stand up under *years* of gruelling service;

Practical, economical, dependable, *satisfying;*

A stoker for which no job would be too big!

Our resolution culminated in the DUPLEX STOKER, and proof that we have successfully met every requirement laid down for perfect stoker performance is found in the fact that

5,000 of our Stokers are now in Service on 78 Railroads

—"because the Promise has been performed"

New Year Greetings

¶ To our friends the railroads, and our contemporaries in the railway supply field, we extend best wishes for the New Year.

¶ On the threshold of another twelve-month business cycle, we take pleasure in thus publicly renewing our pledge of 53 years' standing to give our customers and our friends in the future the same degree of loyal co-operation and unselfish service which it has been our constant endeavor to render in the past.

¶ May Nineteen Hundred and Twenty-Three hold a full measure of happiness and prosperity for us all.

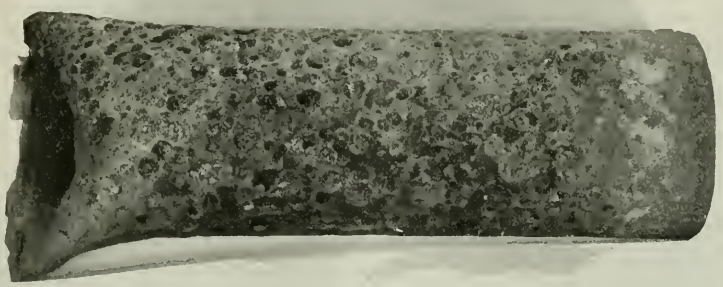
PARKESBURG TUBES

are REAL Charcoal Iron Boiler Tubes



A lower priced tube—not a cheaper one. A genuine charcoal iron tube, at a slightly higher price per foot, would have given longer and lower cost service.

Buying *for* Service

AN important railroad recently ordered forty locomotives at a total expenditure that would have purchased sixty locomotives of the same class, but less efficient.

Forty of these better locomotives will do more than sixty weaker ones. Forty locomotives require less maintenance than sixty.

A number of large roads buy boiler tubes on the same basis. They pay a little more per foot for genuine charcoal iron tubes because they know that charcoal iron tubes give longer service life with few replacements and less maintenance cost.

Locomotives or boiler tubes—it pays to pay a little more for a better article.

For corrosion-resisting charcoal iron tubes that last beyond the life of ordinary tubes, specify Parkesburg Charcoal Iron Boiler Tubes.

"For Every Locomotive," a little folder with an interesting story of the Charcoal Iron Boiler Tube, will be sent you on request. Write for a copy.

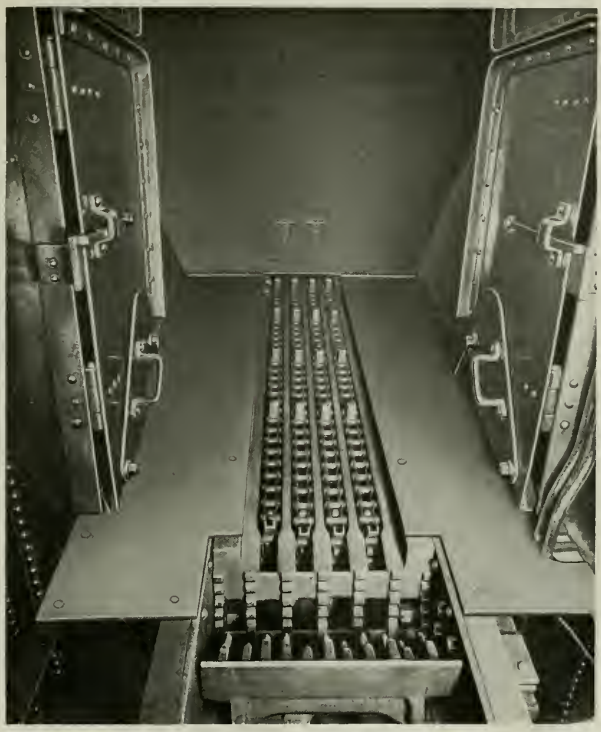
EXPORT AGENTS

Wonham, Bates & Goode Trading Corporation, New York



View looking into the tank of a locomotive equipped with an Elvin Mechanical Stoker, the front deck plate and cover over the coal breaker being removed to more clearly illustrate the operation.

Coal Crushing

Elvin Mechanical Stokers do not crush coal already small enough for stoker use. Such coal passes through slots direct to the conveyor. The Elvin breaker *breaks lumps* only and does it in plain view ahead of the coal gates, where foreign matter can be easily removed if necessary.

Approximately three Horse Power only is required to run the stoker and appurtenances under full load.

Elvin Mechanical Stokers fire less coal in a manner that secures more work from your locomotive—and *keep doing it!*

POSITION OPEN

SALARIED positions $2,500 to $25,000 upward; executive, technical, administrative, engineering, manufacturing, professional, managing, financial, etc., all lines. If you are qualified, and receptive to tentative offers for a new connection, you are invited to communicate in strict confidence with the undersigned, who will conduct preliminary negotiations for such positions. A method is provided through which you may receive overtures in confidence, without jeopardizing present connections, and in a manner conforming strictly to professional ethics. Send name and address only; preliminary particulars will be sent without obligating or compromising you in any way. R. W. Bixby, Inc., 402 Lockwood Building, Buffalo, N. Y.

WANTED in New York City by private company, clerk for checking A. R. A. repairs. State age, education, experience, salary expected. Address Box 443, Railway Age, Woolworth Building, New York City.

SALES MANAGER AND EXECUTIVE

Sales Manager and Executive desires to change his position. Has had many years' experience directing sales organization in steam railway and industrial sales. Has also had considerable experience in merchandising. Correspondence invited and will be kept confidential. Address Box 440, care Railway Age, Woolworth Building, New York, N. Y.

EXECUTIVE

An Executive with thorough training seeks real activity and responsibilities. Long service with two large manufacturing companies earned consistent advancement to position of General Manager and in such capacity he successfully directed a 1400-man organization including operations of a large factory. The automobile accessories and railway supplies manufactured were nationally distributed. Highest references business and personal—a record of achievement and ability to grasp and solve problems. Address Box 442, Railway Age, Woolworth Building, New York City.

POSITION WANTED

POSITION WANTED—Electrical engineer with broad experience in telegraph, telephone and signal construction and maintenance. Position with central, western or foreign railway. Address Box 441 Railway Age, Woolworth Building, New York City.

AMBITIOUS young man 34 years of age wants supervisory position in Passenger Car Department, with some up-to-date railroad. Has long experience in both mechanical and engineering department. Reference furnished. J. L. Williams, Passenger Car Dept., N. & W. Ry., Roanoke, Va.

EDUCATIONAL

SEND for Free Special Bulletin and learn how to increase your knowledge of practical railroad work and fit yourself for promotion. The Railway Educational Bureau, Omaha, Nebr.

If you have second-hand equipment to sell, your advertisement should appear in the—

"Get Together Department"

Take advantage of it.

BOX CARS

125 65,000 lb. Capacity BOX CARS; ALL REBUILT, in strictly first class condition; ready for immediate shipment.

GONDOLA CARS

25 100,000 lb. Capacity ALL STEEL, Double Hopper cars.
25 100,000 lb. Capacity, ALL STEEL, Flat Bottom cars.
80,000 lb. and 100,000 lb. NEW STEEL FLAT CARS.

LOCOMOTIVES

5 to 100 tons in weight, ALL TYPES, for all classes of service. Have over 50 rebuilt and ready for IMMEDIATE SHIPMENT.

SOUTHERN IRON & EQUIPMENT CO.
ATLANTA (Established 1889) GA.

Use the Classified Section, when in need of a man or looking for a position.

36" Gauge Equipment for Sale
1 50-Ton Shay Locomotive.
1 35-Ton Brooks Mogul Locomotive.
5 35-Ton Cooke Consolidation Locomotives
1 18-Ton Davenport Saddle Tank Locomotive.
3 28' Box Cars, 30 m. cap.
3 30' Flat Cars, 40 m. cap.
MORSE BROS. MACH. & SUPPLY CO., Denver, Colo. 3

FOR SALE

70 ton (140,000) 41 ft. Flat Car.
3—Western 16 yd. Air Dump Cars.
35—Side Dump Ballast Cars.

Walter A. Zelnicker Supply Co.
St. Louis

FOR SALE ALL STEEL GONDOLA CARS

110,000 lb. capacity.

Twin hopper bottom
or
Flat Steel Floors.

Air Brakes.

Standard Safety Appliances.

Completely Rebuilt and Meeting all I. C. C. requirements.
