At Newark, Ohio, a negro claiming to be a federal marshal shot and killed a striking shopman and wounded another. At Albert Lea, Minn., several men were seriously injured and a large number suffered minor injuries in an attack on the Minneapolis & St. Louis roundhouse by strikers and strike sympathizers. According to the report approximately eighty men stormed the roundhouse, driving the employees therein away but again losing control of the property when the employees launched a counter attack and retook the building. At Joliet, Ill., a striking shopman formerly employed by the Elgin, Joliet & Eastern was shot while doing picket duty near the property of that carrier. Striking shopmen blamed the armed guards in the employ of the railroad for the shooting and it resulted in tense ill feeling which later culminated in the disturbance described above. On August 6, a car foreman employed by the Illinois Central at Birmingham, Ala., was kidnapped and severely beaten by armed men supposed to be striking shopmen.

More Carriers Obtain More Injunctions

More injunctions restraining strikers or strike sympathizers from interfering with the work of loyal employees and new men hired to take the place of those on strike were issued during the past week to various western carriers. Among the injunctions of this character reported during the past week are included those involving the Chicago, Milwaukee & St. Paul at Madison, Wis., Helena, Mont., and Seattle, Wash., the Texas & New Orleans and the Gulf, Colorado & Santa Fe at Texarkana, Texas, the Nashville, Chattanooga & St. Louis at Chattanooga, Tenn., the Chicago & North Western at Superior, Wis., and the Los Angeles & Salt Lake at Salt Lake City, Utah. At several points strikers or their sympathizers have been arrested under the provisions of similar injunctions, for instance, 17 men being arrested at Beardstown, Ill., and Roadhouse, charged with violating injunctions previously issued to the Chicago, Burlington & Quincy and the Chicago & Alton. The men were released on bond and will be tried in the Federal Court at Springfield, Ill.

Rumors of the Spread of the Strike Again Circulated

Reports of a spread of the shopmen's strike are still being circulated, many of the leaders of other organizations announcing, as strategic moves, that their membership continue to urge the calling of a strike in sympathy with the shopmen or on new "grievances."

E. F. Grable, president of the United Brotherhood of the Maintenance of Way employees, on August 6 received a telegram from William D. Roberts of Wilkes-Barre, Pa., vice-president of the maintenance of way organization on 28 eastern railroads, asking for a sympathetic strike in behalf of the shopmen. Mr. Grable is quoted as having notified Mr. Roberts that "there would be no change in our program for the present." Somewhat similar situations have been reported from time to time by the leaders of the other organizations which had previously decided to abide by the Board's decisions and allow the shopmen to carry on their fight alone. Reports of difficulties of a similar character on individual roads in western territory have also been made during the past week, among them the threat of the strike of clerks on the Great Northern, strike balloting on seven other northwestern roads by the same class of employees, the threat of the strike of maintenance of way employees on the Chicago Milwaukee & St. Paul and a similar move by the telegraphers on the Big Four.

That the strike situation now centers in Washington is indicated by the fact that not only has B. M. Jewell, president of the Railway Employees Department of the American Federation of Labor and head of the striking shopmen, and his executive counsel directed their activities from there during the past week, but that Mr. Grable, J. G. Larson, head of the train dispatchers' organization, E. H. Fitzgerald, president of the clerks' union and several other leaders have either joined the Washington gathering or announced their intention to do so in the future.

Santa Fe Shopmen Petition President Harding and Labor Board for Protection

The loyal and new shop employees of the Atchison, Topeka & Santa Fe on August 2 urged both President Harding and Ben W. Hooper, chairman of the Labor Board, to guarantee them their positions and seniority when the shopmen's strike ends. The telegram, in the form of a resolution, outlines the events which led up to the strike, adding:

"Whereas, the members and officers of the several crafts have openly threatened to run out of the various shops all men now employed therein including foremen, when they (the crafts) return to work, and,

"Whereas, these threats linked with the press reports of peace being near have been the means of keeping the minds of the men in fear and uncertainty, thus keeping many men from returning to work and,

"Whereas, we have reasons to believe that this is the only motive that actuates the strike leaders in putting out this 'peace defensive' as they call it,

"Resolved, by the men employed in the shops of the Santa Fe railway that having confidence in the promise of the Labor Board, backed by the President of the United States and believing them incapable of permitting any organized board to deprive men who have been loyal to the government in this great crisis, of the right of employment retained or accepted under certain solemn promises as were made to the men now working on American railroads.

"Therefore be it further resolved, that a failure on the part of our government to redeem the promises made would be a betrayal of the men who remained loyal because of the belief so frequently expressed by government representatives that the crafts were striking against a decision of a government board and would destroy all faith in government."

Labor Board Agrees to Take Up Seniority Issue

The Railroad Labor Board, acting upon the President's new plan for settlement of the strike, adopted a resolution on August 7 agreeing to take up the seniority issue and render a decision on it. The Board's resolution said:

Whereas, the President of the United States recently made certain suggestions to the railway executives and the representatives of the railway employees now on strike, looking toward the settlement of the strike, which suggestions were in part agreed to by both parties, and

Whereas, the one question upon which there was such a wide divergence of opinion that the carriers declined to accept the President's suggestion was that of the reinstatement of the men on strike with seniority and other rights unimpaired, and

Whereas, the President has since suggested that the question of seniority be submitted to the Railroad Labor Board for hearing and decision, and

Whereas, the Railroad Labor Board on July 3, 1922, passed a resolution which, while it makes no express reference to seniority has been generally construed to have inferential bearing on same, and

Whereas, it has been thought that this resolution, although it does not possess the force and effect of a decision, might stand in the way of the submission of this question to the Railroad Labor Board in accordance with the suggestion of the President, now, therefore,

Be it Resolved, that the Board signify its willingness to extend to the carriers and any employees concerned ample opportunity to present in accordance with the Transportation Act and the established procedure of the Board any dispute involving the seniority question or to seek an interpretation of the rules covering said question, and to submit, on both sides, such testimony and argument, as may be deemed advisable; to the end that the Board may, after a full and fair hearing of every phase of the question involved, render a formal decision adjudicating the matters in controversy. It is the purpose of the Board to indicate by this resolution that it will as promptly and readily consider and determine the questions of seniority growing out of the present strike as it will rehear the wage and rule questions which were originally involved in the strike. The only difference in the attitude of the Board toward the wage and rule questions on the one hand and the seniority question on the other, is that as to the former, the Board would be called upon to rehear matters already formally decided and, as to the latter, to consider a question which has not been formally heard and decided, but which has been inferentially touched upon in the resolution of July 3, 1922.

An amendment to this resolution was offered by A. O. Wharton, the only member of the labor group on the Board present, to the effect that the "Board rescind the resolution of July 3, insofar as that resolution has been interpreted to affect the question of seniority." This amendment, however, was defeated and Chairman Hooper subsequently made the following explanation of his vote which also explains the position of the majority on this question:

"I voted NO on the proposed amendment because it in effect requires the Board to take action now on the question of seniority, which is the very thing that this resolution proposes that the Board shall do later, after a full hearing has been had. A resolution without this amendment means that the Board is in a position to give the question of seniority full and fair consideration regardless of the resolution of July 3."

W. L. McMenimen and Albert Phillips, the other labor members on the Board, and R. M. Barton, a member of the public group, were not present. The resolution was passed by the votes of Chairman Hooper and G. W. W. Hanger, both of the public group, and the three members of the railroad group, Mr. Wharton voting against.

Labor Board Chairman Approves President's Peace Plan

Commenting on President Harding's new peace proposals, Chairman Hooper on August 8 said:

"The President's proposition is fair and practical. It would conserve the law, would sacrifice the rights of neither party and would save the country from the further ill-effects of the strike.

"It was to be anticipated that there would be some objection to it on both sides, but such objections are not insuperable. The concurrent condemnation of opposite extremes raises a suspicion that the President must have found the safe and sane position of fairness and conservatism. The opinion already expressed by one executive that the President's recommendation seems to 'demand a complete surrender' on the part of the railways and the characterization of the proposal by a leader of the employees as 'an uncalled for attempt to help the railroads break the strike' will be hard to reconcile in the public mind.

"On many of the railroads, the President's plan can be carried out without any inconvenience whatever, on others with but slight inconvenience, and, on a small number, it would unquestionably involve some difficulty.

"It must not be overlooked, however, that there are several conditions that would contribute to the working out of such a solution. Many of the new men employed by the carriers in the haste and urgency of a strike are not competent mechanics, and will ultimately be dropped for cause. On a large number of the roads, there was not a full shop force before the strike began, many men having been laid off for months. It is estimated that 75,000 men had thus been furloughed. The rising tide of business prosperity and the consequent increase of railway traffic, coupled with the accumulated shop work resulting from the strike, will necessitate the employment of a greatly enlarged number of mechanics. The other ordinary processes of readjustment that always follow a strike would likewise operate effectively. On a very large number of the roads, in my judgment, the question of seniority would never even arise."

The Situation in the East

STRIKE CONDITIONS on the Eastern roads have, generally speaking, undergone but slight change during the past week. No serious disturbances have been reported. Traffic moves normally. The roads by continued recruiting are bringing their shop forces to higher and higher percentages of normal. Indeed so favorable have conditions become on some of the roads that they are assisting roads in other sections of the country by sending men to them. The roads which have been aided in this manner are the Chesapeake & Ohio, the Norfolk & Western, the Louisville & Nashville and the Virginian—all of which serve non-union bituminous coal regions and on which the unions have concentrated their efforts to bring about a stoppage of traffic. The New York, New Haven & Hartford has been acting as an employing agent for the Norfolk & Western and Chesapeake & Ohio and has placed advertisements in papers in its territory stating that New Haven officers will accept applications for positions on these roads.

Official figures of shop forces in Eastern territory, as of August 4, given out by L. F. Loree, president of the Delaware & Hudson, were 103,528 or 64.7 per cent of normal, as against 97,724 or 62.7 per cent on July 28. The Pennsylvania has been particularly fortunate in increasing its shop forces. On August 4 its forces totaled 46,603, or 77.5 per cent of normal. A progress report on recruiting given out by this company is given in the accompanying table.

There have been some few instances of narrowly averted accidents suggestive of attempted sabotage, the most outstanding of which occurred last Sunday on the Long Island, when a number of current-carrying third rails were taken from

tracks in the electrified zone, apparently in a malicious attempt to wreck trains and bring a stoppage of heavy Sunday traffic to the beaches. The railroad has offered a reward of $1,000 for the arrest and conviction of persons found guilty of the deed, and it is reported that strikers in the metropolitan area have offered a similar reward.

A COMPARATIVE STATEMENT OF MEN WORKING—PENNSYLVANIA SYSTEM SHOP FORCES

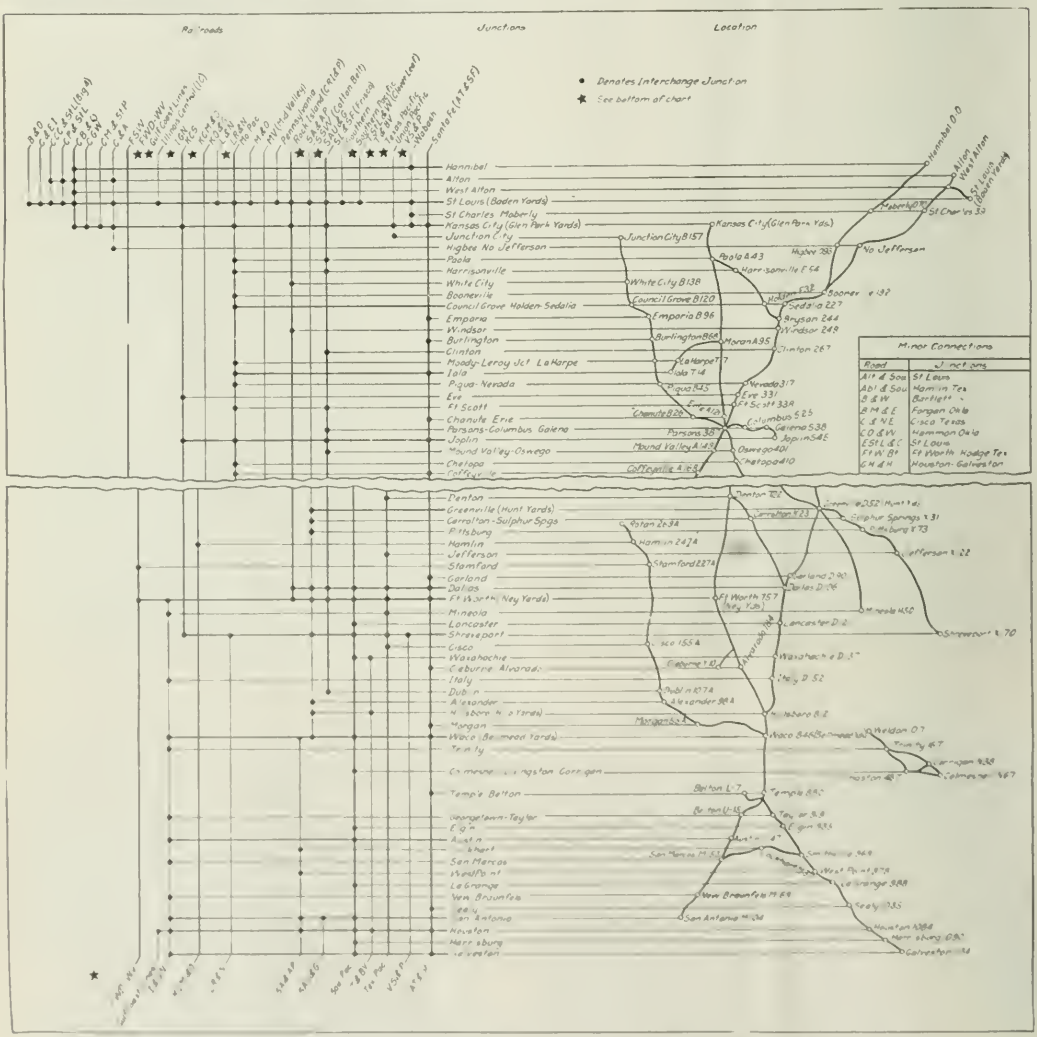
Date	Normal	No. working	Per cent working	Increase over same day of previous week	Increase over July 5th
July 8th	60,157	40,875	67.9	2,590	2,590
July 15th	60,157	41,885	69.6	1,010	3,600
July 22nd	60,157	42,368	70.4	483	4,083
July 29th	60,157	44,448	73.9	2,080	6,163
Aug. 4th	60,157	46,603	77.5	2,155	8,318

A strike of clerks on the New York, New Haven & Hartford which was threatened last week has been averted by an agreement between the management and these employees which is said to restore temporarily the working conditions which prevailed prior to July 1, but under the new rates of pay as established by the Labor Board.

Employees of the Cooke plant of the American Locomotive Company at Paterson, N. J., to the number of approximately 250, walked out on Tuesday rather than permit repairs to be made to Erie locomotives. It was said that these strikers have appealed to employees of other plants of the American Locomotive Company likewise to refuse to repair locomotives of railroads whose shop employees were on strike.

The Erie has announced the cancellation of 20 trains in the Hornell region on account of the shortage of fuel.

The Pennsylvania announced on Wednesday of this week that striking employees returning to the service would not lose their accumulated pension privileges. Seniority, the statement said, depends upon the continuity of employment, while pensions are based upon the total years of service, regardless of whether they are continuous or not.



A Conveniently Arranged Chart of Interchange Connections—Missouri, Kansas & Texas Lines

A Convenient Chart of Interchange Connection

A CHART showing all interchange connections of the Missouri, Kansas & Texas system, arranged alphabetically by the names of the roads and by locations on the home line, has been developed by R. W. Edwards, superintendent car service of the M. K. & T. lines. The chart, the form of which is shown in the illustration, is contained in the latest circular of information and instructions governing employees in the disposition of empty railroad owned freight equipment, and has been so proportioned that it occupies the two middle pages of the 8-in. by 11-in. circular.

By referring to the illustration on the opposite page it will be seen that the names of the connecting lines are listed across the top. With one exception this list has been arranged alphabetically so that any road may be quickly located. In the case of the Santa Fe, however, the fact that numerous interchanges with this road are located along the entire line led to its location at the right of the list of connections, adjoining the table of junction points, merely as a matter of convenience in the organization of the chart.

The table of junctions is arranged vertically in station order from north to south, the map of the line being distorted sufficiently to permit joining each name in the table with the corresponding location on the road by a horizontal line. These horizontal lines are continued to the left, intersecting the vertical lines extending downward from the names of the connecting roads, the names of the connections at each junction point being indicated by black circles where the horizontal and vertical lines intersect. In addition to the table of junction points the names of the junctions are shown on the map together with their station numbers, which indicate the mileage from the northern terminals in the case of main line points and the mileage from the junctions in the case of branch line points. To simplify the appearance of the chart those roads with connections nearer the southern end of the system have been star marked in the list of connections at the top of the chart and repeated at the bottom with the vertical reference lines extending up from the bottom.

The purpose of this chart is to facilitate the reduction of empty mileage in the disposition of empty foreign freight cars. It is intended for use in station and yard offices, where the nearest interchange point with any connection may quickly be located, the mileage being readily computed on the basis of station numbers. The circular containing the chart will also be distributed to carload shippers along the line of Missouri, Kansas & Texas, to whom it will prove useful in routing interline shipments.

Missouri Pacific Accident at Sulphur Springs, Mo.

Rear-End Collision on Evening of August 5, Results in Death of 37 and Injury to Over 100 People.

ONE OF THE WORST accidents in the history of the Missouri Pacific occurred at Sulphur Springs, Mo., on the evening of August 5, when passenger train No. 4, northbound from Texas, crashed into the rear of local passenger train No. 32, killing 37 and injuring over 100

Home Signal Location 232-233—Signal 232 Was Knocked Down

people. Train No. 32 had stopped for water when train No. 4, having passed a distant and a home automatic block signal set against it, crashed into it. The engineman of No. 4 jumped off and was killed; and the fireman was severely injured.

The collision occurred on the Missouri division of the Iron Mountain, 25 miles south of St. Louis. This line is double track from St. Louis to Cliff Cave, a distance of 13 miles and is single track from that point south. Trains are operated by train orders and an automatic block signal system which extends from St. Louis to Poplar Bluff, Mo., a distance of 165 miles. The track follows the west bank of the Mississippi River from Cliff Cave through Sulphur Springs to Riverside, 3.5 miles south of Sulphur Springs and is a succession of curves with only short stretches of tangent.

Approaching the point of accident from the south, northbound distant signal No. D232 is located 1,275 ft. north of mile post 24. The track is tangent to a point 396 ft. north of the signal where it curves to the left with a 2 deg. curve 1,320 ft. long. There is then 198 ft. of tangent when a 2 deg. 48 min. curve starts to the right. The accident occurred at a point 1,360 ft. from the beginning of this curve. The water tank is located on the curve 615 ft. north of the point of the accident and the Sulphur Springs station is 422 ft. north of the tank. A bridge about 85 ft. long and about 56 ft. above water spans Glaize creek. The south end of the bridge is 495 ft. south of the tank.

The single track territory where this accident occurred is

Looking South from Point of Collision

protected by automatic block signals. Three position upper quadrant home signals are used and two position upper quadrant distant signals, the latter operating from the 45 deg. position to the 90 deg. position. Home automatic block signals Nos. 232 and 233 are located 55 ft. south of the south end of the bridge. The northbound distant signal 232, mentioned above, is 3,289 ft. south of its home signal. The

control circuits of both the home signal and its distant signal overlap the next home signal in advance, the control of northbound home signal 262 at Riverside, extending beyond the next northbound home signal 232, at which point the accident occurred.

The first point at which the engineman on train No. 4 could see the water tank is 3,337 ft. south of it. The tank and standing train should also have been visible 3,112 ft. south; and the home signal, tank and all of train 32 should have been visible to the engineman on train No. 4 at a point 2,254 ft. south. A full view of the rear of the standing train could be obtained at a point 709 ft. south of the home signal location. There is 1,089 ft. of tangent track approaching distant signal D232. When train 32 stopped with the engine opposite the water tank, the end of the rear car stood approximately 80 ft. south of the home signals south of the bridge.

Train No. 32 had 10 cars, including two baggage cars, one combination baggage and mail car, one mail car, three chair cars and three coaches. Train No. 4 had a mountain type passenger locomotive and consisted of 12 steel cars including 6 baggage cars, two combination coach and chair cars, one Pullman, two dead-head coaches and a dining car.

On the evening of the accident, No. 32 arrived at Riverside at 6:48 and departed at 7:07, while No. 4 passed at 7:13. No trouble had been experienced by either train in making running time although No. 32 was 2 hrs and 11 min. late out of Riverside and No. 4 was 20 minutes late. No. 32 was delayed at Riverside longer than usual as it had an order to meet No. 41. No. 4 had been running about 45 miles an hour and slowed down to about 25 miles an hour at Riverside to pick up a 19 order which read:

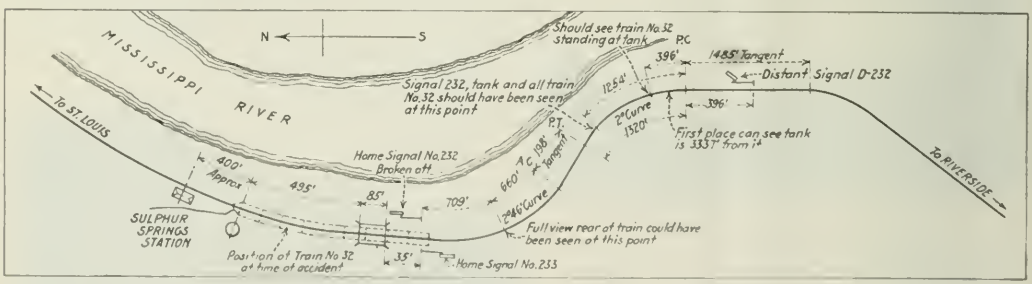
"No. 1 engine 5,306 wait at White House until 7:37 p. m. Wicks 7:40 p. m. for No. 4 engine 5,312."

No. 4 then began to pick up speed and apparently passed home automatic block signal No. 262, located about 1,380 ft around the curve north of Riverside station. This signal was in the stop position. No. 4 evidently failed to reduce speed at distant signal D232 governing the approach to home signal 232, the point of the accident. The speed of the train was estimated to be about 40 miles an hour when it struck No. 32, although just before the crash brakes were applied in emergency. No. 32 had stopped at the water tank about 30 seconds before the crash came, the fireman not having started to take water. The flagman was on the fourth car from the rear and north of the bridge.

Members of the train crews stated that the automatic signals gave the proper indication after they had passed them. They were found to be indicating properly by signalmen after the accident and all lights were burning. The mast of signal 232 was knocked down but the mechanism was found in the stop position.

The coroner's jury at the inquest held at De Soto on August 7 returned a verdict that the collision was due to the negligence of the engineman of train No. 4 in failing to observe signals. In the investigation by the Bureau of Safety representatives which began immediately after the close of the coroner's inquest members of the train crew on No. 4 stated that at the ten or twelve stops made before the accident they observed nothing unusual and that the engineman had no trouble in making the customary station stops. The fireman was too badly injured to obtain a statement at that time. The engineman had been in the service of the company for 37 years and had a perfect record. The investigation showed that the crew of train No. 32 had been lax in flagging at Riverside and Sulphur Springs. Both trains involved were of the same class and had equal rights. When No. 32 was at Riverside the conductor inquired of the operator if he should let No. 4 pass between there and St. Louis. The dispatcher, when told that No. 32 expected to let No. 1 pass at Wicks, 4.2 miles north of Sulphur Springs, said he could let No. 4 pass there. The employees involved were not on duty in violation of the hours of service law.

A Close-Up of the Wreckage



Layout of Track and Signals at Scene of Accident

The Commission has granted the motion of the Corporation Commission of Oklahoma to dismiss the proceeding involving Oklahoma intrastate rates because of the removal of the unlawful discrimination against interstate commerce which had resulted from previous action of the Oklahoma commission.

The Application of Engineering in Transportation*

Modern Operation Requires Analytical Study of Data and Formulation of Practices Therefrom

By G. D. Brooke,
Superintendent of Transportation, Western Lines, Baltimore & Ohio

WHAT IS THE TEST or criterion of an engineer? Is it the degree conferred by an institution of learning? Without any thought of disparaging the value of such a degree and with full recognition and belief in the advantages of the training of technical men in our colleges and universities, the answer is, "No!" What, then, is the measure of an engineer? The national engineering societies require as qualifications of membership from six to ten years' actual practice and some four or more years in responsible charge of work—graduation from a school of engineering of recognized standing being equal to two years of actual practice—and moreover, the ability to design engineering works. Experience then is the requisite of the engineer; and knowledge and ability gained through this experience, as evidenced by having been in actual charge of work, of having directed such work and of being competent in engineering design, are the things which measure the engineer.

The officers of our railroads, the trainmasters, superintendents, general superintendents, superintendents of transportation, general managers, and others, whatever their titles may be, who have direct charge of transportation, through their years of service or practice in transportation, through their knowledge and ability gained in the school of experience, as evidenced by the organizations, the operations, the work under their direction, have qualified as transportation engineers just as truly as have our engineers of construction, our mechanical engineers and our maintenance engineers qualified in their respective branches of engineering. And our usefulness as transportation engineers is measured by the skill with which we carry through our undertakings, by our ability to do well with one dollar that which can easily be done with two after a fashion, by our capability to comprehend and bring about the proper balance between locomotive maintenance, locomotive operation, and other transportation expenses.

Moreover, the methods of engineering are generally applicable in dealing with transportation problems. They consist briefly of surveys, observations or other means of collecting data, the marshalling of this data by means of drawings, tabulations or other convenient form, the study and analysis of the information thus prepared, the designing of structures or works or the planning of methods of procedure, and the actual construction in accordance with the designs or the execution of the work according to the plans. In some of the problems of engineering the conditions are to a large degree fixed or constant and can be met with designs or plans of work which are to a certain degree permanent. In others the conditions are gradually changing and have to be met by changes in design. In no branch of engineering is there such continual changing of the conditions as in railroad transportation. Not only is it subjected to varying physical conditions, as by the seasonal changes of temperature and other weather conditions—by which also the maintenance of roadbed and tracks are affected—but the flow of traffic is subjected to the same seasonal changes and in addition many other influences are constantly being brought to play upon it. This inherent characteristic of transportation, variability, places upon the transportation engineer the task not only of thorough study and analysis of the problems arising from the more constant conditions but also of meeting continually in an effectual and economical way new situations which, although they present themselves almost daily and without warning, are persistently different from their predecessors.

Careful Analysis Will Bear Fruit

In some classes of service the requirements of the traffic fix to a large degree the general features of the schedules, the size of the trains and the character of the equipment. This is particularly the case in passenger service and the opportunities for economies are not so great as in other branches. But even here continued and careful analysis will bear fruit. On a division where there are a number of local passenger runs it may be found feasible, by changing the lay-up points of engines and cars or by coupling up runs to reduce the number of locomotives and cars required, and even to reduce the crew expense. And as passenger travel varies with the seasons and from other causes, it will frequently be found that cars can be taken off during light periods and so save locomotive fuel and repairs to equipment and insure greater reliability in the observance of the schedules. Where a passenger train has a fast schedule, particu-

*Abstracted from a paper presented before the Western Society of Engineers, Chicago, May 18.

larly if there are a number of stops, the elimination of one car from the train will make a considerable saving in the amount of fuel consumed in making the runs. The cutting off from a six-car train of one heavy car will easily save a ton of fuel on a 100-mile run over the average profile.

An important feature of transportation is the adaptation of train operation to the requirements of the traffic. The problems to be met vary from the simple one of a slow moving traffic, as of coal or ore on some engine district reaching into the mine fields, where the business can best be handled in slow freight trains, with perhaps one or two local passenger trains per day, to the busy multiple track trunk line with a heavy and diversified traffic, requiring two or three classes of passenger trains with varying schedules, express and mail trains, two or more fast freight trains, a large volume of slow freight to be moved in tonnage trains, and the local and pickup trains which handle the way freight, do the station switching and move cars to and from local points.

Each case between and including these extremes offers a different problem. A simple one is that of an engine district having a mixed freight traffic requiring some two to three through freight trains, a local freight train, and two local passenger trains per day in each direction. It will probably be found that the best freight service can be given by running at least two freight trains daily on definite schedules, suitably spaced throughout the 24 hours, and handling any additional business in extras, run daily or every other day as required. The freight trains may be heavily loaded and the schedules slow but if they are maintained with regularity the service will be reliable and satisfactory from a traffic standpoint as well as economical and efficient in the use of locomotives and cars. Branch line trains of this kind should be scheduled to arrive at the junctions so that cars of important freight can be switched out and forwarded without excessive delay in fast freights on the main line, thus affording continuous movement to destination. With a more complex traffic situation a more elaborate arrangement of train service must be provided. The important thing is to plan the train service so as to be attractive to travelers and shippers and thereby enable the traffic department to sell transportation, to fill the empty seats and to give the freight locomotive a full load.

Large Train Loads

In recent years the value of a high train load has become to a great extent a matter of course, and many railroads have systematic methods of following this important feature of transportation. It is not possible to emphasize too strongly the important relation of the train load to the cost of moving freight. Fortunately methods of determining the proper tonnage ratings for locomotives have been established scientifically and are available in the proceedings of the American Railway Engineering Association and in other engineering and railroad literature, so that it is a comparatively simple matter to compute the train load for various speeds on the ruling grades and the adjustment factors to compensate for the frictional resistance of additional cars under varying temperatures. There remains, though, the ever-present problem of determining, under varying traffic conditions, the running time over the engine district with given speeds on the ruling grades and of ascertaining thereby the engine rating which will produce ton-miles at the minimum cost.

On a district having a small percentage of the mileage of the ruling grade, particularly if broken up into short sections, the locomotives can be rated for quite slow speeds on the ruling grade—say from seven to ten miles per hour—without seriously lengthening the time over the district. On the other hand, where much of the mileage is of the maximum grade the rating must be made for higher speeds on this grade in order that the time over the district will not be excessive. Of course the amount of interference by opposing trains and by higher speed trains in the same direction on single track lines, and by important high speed trains on multiple track lines, is a limiting factor in determining the average speed over the district, and must be weighed carefully in fixing the locomotive rating. It should be realized that the economical rating of a few months ago when traffic was very thin may not be the economical rating today with the more frequent business, nor that of today the proper rating for next fall when the volume of traffic will be heavy.

On a mountain division which moves a heavy traffic, some two-thirds of which is coal, it has been found economical to reduce the tonnage of the eastbound trains by one-third during periods of light business and to use one pusher on the helper grades instead of the two required for the heavier train load. This makes practicable the closing of two helper stations and speeds up the road movement so that overtime is virtually eliminated, resulting in a lower cost of handling the freight. When business is heavy, though, it has been found that with a given number of locomotives available a greater volume of tonnage can be moved with the heavier trains, requiring two helpers on the hills, and it has been found expedient to revert to this scheme of operation even though the cost is somewhat higher.

Through Routing of Trains

Another feature of great importance in transportation is a definite scheme of systematic switching or classification and through routing of trains. Although offering possibilities of great economies, it has not received anything like the attention during the last decade that has been accorded the development of the train load, due doubtless to the results being of a less definite nature and more difficult to reduce to figures, and to the failure of transportation men to realize fully the advantages which follow the establishment of such a scheme. Then, too, a great deal of careful and painstaking work is required and when the plan or scheme has been developed there is need of a firm hand to supervise it and to see that there are no departures from its provisions.

Detailed information as to the routing of business over and the delivery and assembling of loads and empties on each road and terminal district, the amount and character of classification already in effect at each yard, the capacity of each yard both for holding cars and for switching, the character of the traffic and the train schedules, must be gathered and prepared in tabulations, diagrams or other convenient form for analysis. And since the officer who is to work out or design the scheme should have a working knowledge of each yard and each engine district, it seems essential that he supervise and personally engage in the assembling of this information. Then, with suitable plans of the yards and terminals and track charts of all engine districts, he is in position to analyze the problem thoroughly and to draw up a tentative scheme of classification to meet both the divisional and the system requirements. After this it is advisable to call together in conference the yardmasters and the superintendents and other transportation officers in suitable groups to consider the tentative scheme and make such revisions as may be found advisable.

The completed scheme should then be published in suitable form for distribution to the officers and employees whose duty it is to carry out its provisions. The cardinal principle of systematic classification and through routing of trains is that the first classification yard that switches a car after the bill is made and it starts on its journey, places it in the classification that will take it through to the point of delivery, or to the last yard short of its destination, without another switch. Station order switching of cars for the engine districts leading out of each yard, the classification of empty cars according to their class and suitability for loading with the different kinds of freight are among its provisions.

To obtain the full benefit of the through routing of trains

it is advisable also to establish a scheme of car inspection and repairs by which the equipment will be in condition when loaded or when received in interchange to go through in the proper classification without being cut out for repairs. Then, with a sufficient volume of business, trains can be built up to move through terminal after terminal as "main trackers," requiring only the changing of locomotives and crews and such inspection as is necessary to detect unsafe defects which may have developed on line of road since leaving the last terminal.

Intensive Utilization of Cars

The economic or intensive utilization of freight cars embraces the principal factors of high average car mileage and high average car loading, which are to a considerable degree inter-dependent. There must be not only a high mileage per car per day but the unproductive mileage must also be reduced to the minimum. By unproductive mileage is meant the useless haul of cars, whether loaded or empty. When two or four or ten cars are used to move a shipment of freight where one or three or nine would have sufficed, unproductive mileage is made just as truly as where there is a cross-haul of empty cars suitable for the same class of loading. It is here that the feature of proper car loading comes in. By far the greatest percentage of empty mileage is not unproductive mileage, for the reason that in the nature of the traffic there is no possibility of securing a return load and the movement of the empty is an integral step in transporting the shipment. With the proper realization of this condition an analysis will show that the opportunities of reducing unproductive mileage are far less than seem to be generally assumed.

It would seem then that about the only way to make unproductive empty mileage is to haul empty stock cars, refrigerators or box cars east or north or to move empty coal cars away from the mining districts. And such really is the case. It is true that during the war, and the years of heavy business succeeding it, the movement of traffic was more nearly balanced and stock cars, gondolas and even flats were loaded with cement, stock cars with brick and tile, rough loading box with tinplate and other finished steel products, to quite a large extent. In fact a load could be secured for almost any car capable of being made approximately suitable even at a heavy expense. This condition reached the maximum in March, 1920, when the railroads of the country were able to reduce the empty mileage to 27.7 per cent of the total—the lowest of which there is record. But these were not normal times nor does there seem to be much likelihood of a recurrence of the balance of traffic movement which then obtained.

There are a few instances of cross-haul of box cars, rough loaders being used in one direction and good tight cars in the other, causing duplicate empty mileage, but these are exceptions. During the periods when business is falling off rapidly, considerable empty mileage is made in hauling cars to suitable points for storage. Empty mileage is also made in the movement of bad order cars to convenient shops for repairs. None of this empty mileage, moreover, is unproductive mileage, for it is made in meeting situations which arise in the most practicable way.

How, then, is unproductive mileage made? Largely through the inexperience or carelessness of agents, yard clerks and other employees who route the cars improperly. During the extensive relocation of equipment which took place in the autumn of 1920 and the following winter, there was doubtless considerable of this misrouting, for the car service rules had been inoperative for several years, during which many new employees had entered railroad service and the personnel of the yard and station forces was untrained or rusty in the handling of cars under the rules. A year later when another relocation of the same kind but of a less extent took place and these forces were well trained there was comparatively little of this misrouting of empty cars. There is even greater improvement in this respect at the present time and although if all of the unproductive movements on a large railroad system could be stated in car mileage, the figures probably would be rather startling, if reduced to a percentage of the total car mileage, the result would seem insignificant and the efficiency of car handling would be found quite high.

The attainment of a high average car mileage requires sufficient business to utilize all suitable cars, freedom from congestion in road movement, prompt handling in yards and at stations and quick loading and unloading by the shippers or the railroad's own forces. The attainment of a high average carload requires the securing of as many loads as possible in the direction of the preponderating empty movement, the distribution of the cars so as to adapt the size and capacity of the car to the character of the load, co-operation of shippers in loading the cars to either the cubic or the carrying capacity and the obtaining of such maximum loading at freight stations, warehouses and other loading points operated by the railroad.

Lengthening Locomotive Runs

If the accounts of a railroad are examined it will be found that the expenses directly affected by locomotive utilization and train operation will run around 35 per cent of all expenses and 50 per cent of the cost of maintenance of equipment and conducting transportation. From this it is apparent that a broad field is offered here for effecting real economies. A great many factors are involved, some of which are the adaptation of types of locomotives to the requirements of the service, the length of locomotive runs, the pooling of locomotives or their operation with regular or assigned crews, the manipulation of power by the chief dispatcher, and the scheduling of slow freight trains out of terminals and over the road.

Here, as in other branches of transportation work, there are many situations to be met and each requires thorough analysis to determine what is the best solution. On one division pooling will give the best results; on another the regular crewing of locomotives will be found best. The tendency of the immediate present seems to be towards longer locomotive runs in both freight and passenger service. Long runs keep the locomotives on the road and so increase the percentage of working time to the total, and reduce the number of dispatchments and hence the engine house expenses. The mileage per locomotive is increased so that the same work is done by a smaller number of locomotives and in this way the cost of locomotive maintenance is decreased. In passenger service coal burning locomotives have for years been making runs of 200 to 300 miles and locomotives in slow freight service 150 to 170 miles regularly and even as high as 187 miles on a very heavy traffic division. So there is nothing new or experimental in long runs. But a very large percentage of the freight runs have been around 100 miles, ranging perhaps from 80 to 120 miles. Now modern locomotives are capable of long periods of sustained performance and the number of comparatively short runs seems to offer excellent opportunities of coupling up runs and effecting economies thereby. A number of passenger locomotive runs have recently been lengthened on the Baltimore & Ohio, the longest resulting run being from Louisville to Toledo, a distance of 330 miles, and on one division the freight locomotives are now running 258 miles where the runs were formerly one-half that distance.

In adapting locomotives to the service on various districts the problem is usually that of using those on hand to the best advantage. The elimination of light types from heavy service and of retiring them permanently or at least so long as heavier locomotives are available is of prime importance;

almost equally so is the disposition of the occasional type which is unusually vulnerable and is constantly giving trouble on the road or spends too much of its time undergoing repairs. Then, too, it may be found that a certain type of locomotive will perform more efficiently and reliably in continuous service, or its weight and axle loads will meet possible restrictions, and hence is peculiarly fitted for use in connection with the lengthening of runs.

On every engine district having a heavy mixed traffic slow freight trains called during certain periods of the day will make better runs than those called at other hours. The chief dispatcher will be found taking cognizance of this and arranging the calls of slow freights accordingly. The full development of this idea will prove of much value where a large volume of slow freight is to be moved in extra trains and can be carried a step further by making standard schedules for the movement of the trains over the district. They can be prepared in simple form, for example, giving the running time between points where operating stops are made, as at water stations, coal docks, and helper stations, and can be printed on cards of convenient size to be carried in the pocket or in the back of the time table. These schedules set the pace for the engine and train crews and give them something definite to work to in their trips over the district.

Substantial results have recently been obtained by the establishment of schedules for the operation of freight trains with assigned locomotives and crews on the Chicago division of the Baltimore & Ohio. An analysis of the traffic on the division showed an unbalanced movement, the eastbound power requirements being the greater on account of the volume of livestock and quick dispatch freight moving in light high speed trains. The westbound slow freight was being handled in trains of full tonnage and the surplus power run light. The division consists of two districts of approximately 130 miles each and the men in engine and train service live principally at the intermediate terminal, Garrett, Ind. It was determined to give trains to all westbound locomotives and runs were scheduled so as to get the power to Chicago in time to return with the eastbound movement of livestock and quick dispatch freight trains departing between 6 p. m. and midnight.

A brief description of one schedule will make clear the method of operation: a train departs from Willard at 3 p. m. and arrives at Garrett at 11 p. m., where it changes engine and train crews; it then departs at 11:30 p. m. with the same locomotive and train and arrives at South Chicago at 7:30 a. m. On the return trip the train departs from South Chicago at 7 p. m. and arrives at Garrett at 11:30 p. m., where it changes engine and train crews, the men relieved having 24 hours ahead of them off duty; the train departs at 12:01 a. m. and arrives at Willard at 6 a. m. The engine and train crews leave Willard on the schedule at 3 p. m. and arrive at Garrett at 11 p. m., where the men are relieved and are off duty for 24 hours. The schedule requires two locomotives, four engine crews and four train crews. The men are on duty about 16 hours on the round trip and have an eight hour rest at South Chicago or Willard and 24 hours off duty at Garrett, out of each 48 hours.

The advantages are improved working conditions for the crews; running locomotives through and thereby increasing the mileage and eliminating the roundhouse work at Garrett, elimination of all overtime, the better movement of westbound loads and empties, the saving of approximately 150 car days per day, and the general toning up of the entire organization and performance of the division. Although this method of operation was not started until March 10, the mileage made by ten locomotives used in the service averaged 5,763 miles for the month, the highest made by any one locomotive being 7,032 miles. This average is about 2,000 miles greater than a similar average for the month of February. The results are considered thoroughly satisfactory.

The Toledo division of the same road has recently furnished a good example of the unusual demands frequently met in transportation. The coal production in eastern and southeastern Kentucky has been very heavy since the middle of April and a large part of the business has been routed through Cincinnati. The Baltimore & Ohio, having docks at Toledo, has received the routing of all the coal for transshipment via the lakes and also a heavy all-rail traffic. The division consists of a double track line from Cincinnati to Dayton—60 miles—and a single track line from Dayton to Toledo—140 miles—there being only two short stretches of double track north of Dayton. The heaviest previous business was handled in July, 1918, when 736 loads and 29 empties per day were moved north from Cincinnati. During the first 15 days of May an average of 931 loads and 44 empties has been moved, an increase over the previous record business of 27 per cent. The southbound daily movement into Cincinnati during the same period was 233 loads and 705 empties, a total of 938 cars.

The movement of this heavy traffic in a very satisfactory manner has been due to the ability to dispose of the all-rail business to connections freely; the control of the lake coal by temporary restrictions when the dumping at the lake port was retarded on account of weather conditions or shortage of boats, a sufficient but not an over-supply of suitable power and the systematic classification and through routing of trains on this and connecting divisions. There are three through and one local passenger trains per day in each direction over the single track north of Dayton and two scheduled fast freights and one local freight. From 17 to 21 trains per day have been required to move the freight tonnage north from Cincinnati.

The Illinois Central, in its latest newspaper advertisement to promote better relations with the public, tabulates the history of its "1921 Dollar" as follows:

Where the 1921 Dollar Came From

	Cents
Transportation of freight (44,637,466 tons; average distance per ton 270.46 miles; average revenue per ton per mile 1.015 cents)	71.71
Transportation of passengers (37,027,889 passengers; average distance per passenger, 25.25 miles; average revenue per passenger per mile 3.104 cents	16.98
Transportation of mail	1.69
Transportation of express	1.53
Sources related to freight service, such as demurrage and storage, and special service	0.49
Switching service	0.85
Sources related to passenger service, such as operation of parlor cars, excess baggage, etc.	0.56
Hotel, restaurant, dining and buffet service	0.58
Station and train privileges, and miscellaneous	0.32
Rents of equipment, road, buildings and other property, joint facilities, and miscellaneous income	2.79
Income from corporate investments	2.50
	100.00

Where the 1921 Dollar Went

	Wages Cents	Material Cents	Total Cents
Maintenance of tracks, roadbed, buildings, bridges and other structures (wages, 54.7 per cent; material, 45.3 per cent)	8.56	7.09	15.65
Maintenance of locomotives, freight and passenger cars and other equipment (wages, 62.67 per cent; material, 37.33 per cent)	11.87	7.07	18.94
Train, station and switching operations, and other transportation service (wages, 92.96 per cent; material, 7.04 per cent)	24.81	1.88	26.69
Traffic agencies, compilation and issuance of tariffs, miscellaneous traffic expenses (wages, 73.44 per cent; material, 26.56 per cent)	0.94	0.34	1.28

James M. Herbert

JAMES M. HERBERT, president of the St. Louis Southwestern and its subsidiary, the St. Louis Southwestern of Texas, died suddenly in St. Louis on August 5 from an attack of apoplexy. He was stricken while in his automobile returning from a baseball game and died before he could be removed from the car.

Mr. Herbert was a man of great energy, both physically and mentally. He was essentially a man of action, aggressive in disposition, with the ability to make decisions quickly. When he came to the Cotton Belt as vice-president on August 1, 1916, the situation required a strong hand. The property was under-maintained and the equipment was in particularly bad condition. Mr. Herbert attacked this problem with a directness that brought a marked change within a short time.

Being promoted to president on August 1, 1917, he was in charge of the property during the turbulent days of federal control which began five months later and during the equally trying period of reconstruction which has followed. These days were particularly turbulent among the roads of the Southwest where the existing order was changed more radically than elsewhere.

J. M. Herbert

Mr. Herbert was known among those with whom he came in contact as a man who possessed the courage of his convictions. An interesting illustration of this characteristic of his was afforded by his decision to reject the government guarantee of earnings during the six months' period following the termination of federal control. Standing on his belief that the property had suffered under federal administration, he chose to undertake its rehabilitation without that support and the restrictions which would have followed. That this decision required courage is indicated by the fact that during the calendar year 1919 the road had failed to earn its standard return by $2,348,755. That Mr. Herbert's confidence in the ability of the management to regain its ground was well founded is indicated by the fact that the net income of the road for this guarantee period exceeded the standard return which the road would have received by $306,754, after spending $1,593,285 more for the maintenance of the property than it was estimated that the road would have been permitted to have spent under the terms of the guaranty.

Mr. Herbert was a man who was willing to assume responsibility and who, as president, directed the management of the property in detail. Having started at the bottom in the operating department he had a thorough grasp of the problems which enabled him to establish a close contact with employees. The Cotton Belt, in common with other roads, suffered from the demoralization of its forces during federal control but with the return of the property to its owners on March 1, 1920, Mr. Herbert was successful to an unusual degree in enlisting their co-operation. As a result, during the switchmen's strike in the spring of 1920, the Cotton Belt was able to keep its freight house in St. Louis open continuously and had the situation so well in hand that it offered to send to connecting roads for freight if these roads were themselves unable to make delivery. This aggressive policy has also done much to win the support of the shippers for the road.

Mr. Herbert was born at Belmont, Pa., on January 15, 1863. He entered railroad service in 1880 as a night telegraph operator on the Wabash, St. Louis & Pacific, now a part of the Wabash System, after which he was employed consecutively on this road as station agent, yard clerk, train dispatcher, chief train dispatcher and train master to June, 1897, with the exception of a few months when he was with the Cleveland, Cincinnati, Chicago & St. Louis. From June, 1897, to June, 1898, he was train master on the Eastern division of the Grand Trunk with headquarters at Island Pond, Vt. He was then train master at Belleville, Ont., for two months and in July, 1898, he was promoted to superintendent of the Eastern division, which position he held until October 1, 1900, when he was appointed superintendent of the Colorado and Pacific divisions of the Missouri Pacific with headquarters at Osawatomie, Kans. On April 1, 1901, he was promoted to general superintendent of the St. Louis, Iron Mountain & Southern and in July of the same year he was appointed manager of the Pacific System of the Southern Pacific. From November 1, 1901, to January 1, 1903, he was general manager of the Denver & Rio Grande and the Rio Grande Western. From the latter date to December 7, 1905, he was vice-president and general manager of the Colorado & Southern and from that time to March 1, 1906, was first vice president of the same road. From March 1, 1906 to July 1, 1914, Mr. Herbert was out of railway service. On July 1, 1914, he was elected president of the Colorado, Wyoming & Eastern. On August 1, 1916, he became connected with the Cotton Belt as first vice-president, and, as stated above, was elected president one year later.

HALF A MILLION DOLLARS A DAY is the loss, as estimated by an officer of the Forest Products Laboratory, which American shippers of freight sustain by reason of the use of improper or inadequate containers for their goods, and by poor packing. Col. B. W. Dunn, chief inspector of the Bureau of Explosives, quoting this statement, says that he is extending his activities into the field of non-explosive shipments; and he would like to have shippers keep adequate records of all goods sent out, by means of which, after experience, and advice from consignees, they would discover the defects in their containers, if there be any; and the collating of such shippers' records from many places will make possible an intelligent study which would lead to the making of any improvements found desirable in the design of containers of all sorts.

Atlantic Coast Line Reports Favorable Earnings

Net Railway Operating Income for Year 1921 Was $6,860,107. For the First Half of 1922 It Is $8,845,354

The Atlantic Coast Line reports for the first six months of 1922 a net railway operating income of $8,845,354. This is more than twice the 1921 first six-months' figure which was $3,170,358. The property's standard return for operation during federal control was $10,180,915. The question now is as to whether the peak figure which was reached in 1917, namely $13,239,902, will be equaled this year.

Atlantic Coast Line traffic is fairly even throughout the year although as a rule its traffic is somewhat heavier in the spring months. The comparative evenness of traffic results from the road's serving a territory extending north and south and from the large volume of perishable freight. The road is, in fact, said to be the largest originator of perishable freight in the country. Traffic in this territory is ready for market in relation to the season. The cycle begins in November and from that month until about May the citrous fruits and fresh vegetables move from Florida. As the season advances growing areas further north begin to supply traffic.

Increased Business in 1922

In the first six months of 1922, the gross was $37,095,580 as compared with $36,732,035 in the first six months of 1921. This increase was due to increased traffic. Our latest figures are those for the five months ending May 31. In the first five months of 1922 the Atlantic Coast Line reported net ton-miles (including revenue and non-revenue) totaling 1,493,188,000 as compared with 1,443,661,000 in the first five months of 1921. Car loadings figures are available up to the third week of July. They show that traffic in July is not running quite as heavy as it did in preceding months. It continues, however, to be well ahead of last year at the same time.

It was noted above that the Atlantic Coast Line's standard return was set at $10,180,915. In 1918 it earned $11,155,520 or 5.44 per cent on its property investment. The net in 1919 was $6,539,900 or 3.07 per cent. In 1920 net after rentals was $1,380,569 or but 0.62 per cent. In 1921, exclusive of guaranty period lap-overs, the figure reported was $6,860,107 which is 2.90 per cent on the investment. These figures are interesting as a basis of comparison for 1922's figure of $8,845,354 for the six-months' period.

23.92 Per Cent Less Tons in 1921 Than in 1920

In 1921, as compared with 1920, the Atlantic Coast Line moved 23.92 per cent less tons and 24.65 per cent less ton-miles. The revenue tons carried totaled 13,180,144 as compared with 17,324,916 in 1920. The principal reductions were in products of mines, products of forests and manufactures. Products of agriculture, making up 17.11 per cent of the total tonnage, supplied 2,255,275 tons as against 2,339,316 tons in 1920. Because of the importance of products of agriculture in Atlantic Coast Line tonnage it is worth noting that tobacco made up 1.05 per cent of the total 1921 tonnage, cotton, 1.50 per cent, and fruit and vegetables, 7.17 per cent. Products of forests supplied 3,764,980 tons or 28.57 per cent of the total, this figure comparing with 4,507,861 in 1920. lumber at present is moving much better than it was moving at this time a year ago. The road originates no coal; in 1921 it carried 931,575 tons or 7.07 per cent of its total tonnage.

One of the factors in Atlantic Coast Line traffic in 1921 was the low prices, this being a factor on this road as on most Southern roads in that the amount of tonnage southbound depends so greatly upon the buying power which the products of the territory yield. Concerning this matter the Atlantic Coast Line 1921 annual report said: "The low prices received for all agricultural products have had a depressing influence upon the industry as a whole. The boll weevil depredation in South Carolina, Georgia and in some countries of North Carolina, in its effect upon the cotton crop, has been one of the chief factors in this depression." The Atlantic Coast Line in 1921 carried 54,804 tons of live stock. The encroachment of the boll weevil has led the road to give some attention to the possibilities of live stock traffic. It is rather interesting, therefore, to read in the annual report: "On account of the recent advance in the price of live stock, especially of hogs, we may reasonably expect an increase in the number of hogs raised for market. As a hog producing state, Georgia is exceeded only by Iowa."

Reduction of 15.93 Per Cent in Operating Expenses

Freight revenues in 1921 totaled $44,550,741 as compared with $48,193,387 in 1920, a reduction of $3,636,645 or 7.55 per cent. Total revenues were $66,730,768. This compared with $74,121,956 in 1920, the reduction being $7,391,188 or 9.97 per cent. The operating expenses were decreased $10,988,029 or 15.93 per cent. The 1921 figure was $58,005,833; that for 1920, $68,993,862. The operating ratio in 1921 was 91.53, which, while high, was considerably below the 1920 figure of 97.43. At present the road is operating at less than 70. The net operating revenues in 1921 totaled $5,649,935, a sizable improvement indeed when compared with the 1920 net of $1,903,094. All of the foregoing figures are exclusive of federal control period lap-overs.

With further reference to the 15.93 per cent reduction in operating expenses, the reduction in maintenance of way expenses was 19.88 per cent; in maintenance of equipment, 10.52 per cent, and in transportation, 18.32 per cent. The reduction in maintenance of way expenses is of special interest because this reduction in dollars was accompanied by a greatly increased amount of work as designated in material units. For instance, there was laid in existing tracks 208 miles of new 85-lb. rail, whereas in 1920 the figure was only 122 miles. Including relay rail, in 1921, 273 miles, or about 5.9 per cent of the total main line and branch mileage, was given new steel. The number of ties placed in existing tracks in 1921 was 1,679,820 as compared with 1,634,425 in 1920. These figures include practically no treated ties. Ballasting in 1921 totaled 449,991 cu. yd., nearly all gravel, this figure comparing with 269,977 cu. yd. in 1920. Tie plates were used to the number of 1,686,427 in 1921; in 1920, the figure was 1,306,112.

The annual report showed also considerable improvement in other directions, notably with reference to shops and shop equipment. The report gives rather an imposing detailed list of the improvements of this kind. The net charges to additions and betterments of all kinds in 1921 were $7,763,607 which compared with only $2,098,722 in 1920. Additions and betterments to equipment in 1921 totaled $6,545,325.

Corporate Net in 1921 Totaled $1,790,569

The Atlantic Coast Line in 1921 had a net corporate income after fixed charges of $1,790,569. This compared with $7,684,156 in 1920 when the road had the advantage of

standard return for two months and guaranty for six. In 1919 when its earnings from railroad operations were represented in the standard return the corporate net was $7,187,557. The company derives "other income" running from $4,000,000 to $5,000,000 annually. In 1921, the other income was $4,423,110; in 1920, it was $5,905,804. This other income is mostly dividend income—which in 1921 was $2,890,584—but there is also a large return in the form of income from funded and unfunded securities, etc. A large share of the dividend income is represented in the 367,200 shares of Louisville & Nashville of which the Atlantic Coast Line owns a majority interest. The L. & N. is now proposing a 75 per cent stock dividend, the majority portion of which will accrue to the Atlantic Coast Line. This is, naturally, one of the leading factors of interest insofar as concerns future earnings of the latter property, particularly as it is expected that the L. & N. will be able to maintain a good dividend rate even with the increased stock.

The Atlantic Coast Line fixed charges in 1921 totaled $8,212,826. The dividends are at the rate of 5 per cent on the $196,700 preferred and 7 per cent on the $68,580,200 common and total $4,810,869 annually. These are paid from profit and loss account. The company's profit and loss credit balance on December 31, 1921 was $48,704,648. The general impression one gets of Atlantic Coast Line affairs is that at present the property is in rather a favorable position, the two chief elements of which are its favorable net earnings from railroad operations in recent months and the benefit which is expected to accrue from the L. & N.'s proposed stock dividend.

Virginian Realizes on Non-Union Coal Traffic

Has Net After Rentals of $3,833,222 for 1922 First Six-Months as Compared with $4,726,886 for Whole Year 1921

COAL LOADINGS in the Pocohontas district for the week ended July 29 totaled 16,721 cars, the lowest reported for that district so far this year. This information is rather disconcerting because the Pocohontas district, the three roads in which serve largely non-union mines, has been getting out about one-third of our coal supply since the beginning of the strike. The reason for the present decline is primarily the shopmen's strike combined with which the Chesapeake & Ohio and the Norfolk & Western have had a clerk's strike of no mean proportions. Loadings in the Pocohontas region in June ran about 31,000 weekly. They reached a peak of 31,460 for the week ended June 24. The following week they were 31,331 and then they fell to 22,945 for the week ended July 8 to 19,037 for the week ended July 22 and now to 16,721 for the week ended July 29.

These figures may be regarded from two angles. The first is the fact that the country is having difficulty in keeping up its half-normal coal supply. The second point is the effect on the net earnings of the three roads in the Pocohontas district—namely the Chesapeake & Ohio, the Norfolk & Western and the Virginian. The first point is beyond question important enough. It is the second question, however, that will receive our attention in the present article, and particularly with reference to the third of these three carriers—the Virginian. The effect on net earnings will, of course, be adverse. But there happens to be a silver lining in the cloud, namely that as low as the July loadings have been they are still ahead of the loadings a year ago. There is the additional important detail that the Pocahontas district lines have been able to realize handsomely on the heavy loadings of the months preceding July. The June loadings which averaged some 30,000 cars weekly compared with loadings in the same weeks of last year of but about 24,000. Loadings in the first half of 1921—up to May at least—were not very good. For several weeks they ran only about 15,000 to 17,000. This indicates that the July condition, as severe as it may finally prove to be, can be regarded as only a temporary setback which is balanced by a long period of very excellent business.

July Loadings Off But Still Ahead of 1921

So much for the situation in its larger aspect; now as to the status of the individual road to which it is proposed to direct our interest—the Virginian. This road reported for the first six months of 1922 a gross income of $10,485,199 which compared with a gross in the first six months of 1921 of $9,596,049. For the first half of 1922 it had an operating ratio of 57.93 as contrasted with a figure for the first six months of last year of 65.03. To June 30, 1922, the net railway operating income was $3,833,222 which is a rather sizeable improvement over the figure for January to June last year of $2,917,300. In July the Virginian had a falling off in traffic similar to that of its two neighbor roads. Its coal loadings in July were 9,184 cars as compared with 12,752 cars in June. But the July loadings—strike or no strike—were still good; they compared with 9,110 in July last year. The seriousness of the situation is still further minimized by the fact that in July, 1921, there was a falling off also; June, 1921, loadings were 12,544 cars. Much seems to have been made by the strikers' publicity men as to the difficulties at the Hampton Roads coal piers. The Virginian apparently has been affected to a minimum degree. Its coal dumpings at its Sewells Point pier for July, 1922, totaled 8,366 cars or 468,159 tons. In July, 1921, dumpings were 5,802 cars or 334,828 tons.

Virginian operations are characterized by the high proportion of coal tonnage—over 90 per cent of the total tonnage is coal; and by the manner in which this coal moves in heavy trainloads to tide-water. This combination and an unusually high traffic density enable the road to realize on a plant characterized by its high engineering standards. Further than that the road has been improving its position year by year and is becoming an increasingly important factor in the Hampton Roads situation.

The improvement in the road's position is indicated in that the property had a standard return of $3,247,603. This it did not earn for the government in 1918 or 1919, in which years the net railway operating income was $1,952,872 and $2,555,230 respectively. In 1920, however, the road earned a net railway operating income of $4,776,886 and in 1921 with a sharp reduction in tonnage the figure was held to $4,726,940. We have spoken of the 1922 results to date; that they bid fair to exceed 1921 seems fairly certain.

Average Train Load 1812 Tons

In 1921 the road carried 6,376,648 revenue tons of freight of which 5,691,790 tons was coal. In 1920 the revenue tonnage was 7,784,517. The 1921 revenue ton-miles totaled 2,308,049,877 and the revenue ton-miles per mile of road were 4,387,177. In 1920 the traffic density figure was 1,440,384 which is high enough for the main line of many a busy road of two or more tracks. Of course, in the Virginian's

case it is due to coal moving in heavy trains and heavily loaded cars. The average train load in 1921 was 1,812 which was increased from 1,718 tons in 1920 even with the reduced traffic. Virginian cars include many of 120-tons capacity. The average carload in 1921 was 55.55 tons, comparing with 51.10 in 1920. The road secures an average haul on its freight of 362 miles and in 1921 its revenue per ton per mile was 0.679 cents.

The road's gross revenues in 1921 totaled $18,024,357 of which $13,743,395 was for coal and coke. In 1920 the road had a gross of $18,158,853. This shows for 1921 a decrease of but $134,496 which is explained, in view of the falling off in tonnage, by 1920 receipts per ton per mile of 0.553 cents as compared with the 1921 figure given above of 0.679 cents. The operating expenses in 1921 totaled $12,405,728 as compared with expenses in 1920 of $12,908,982, a reduction of only $368,758. The reason for such a small reduction in expenses was increases in expenses of maintenance of way and equipment which nearly balanced a decrease of approximately $1,000,000 in transportation expenses. The road operated in 1921 with a ratio of 68.83; in 1920 it operated at 71.09. The ratio of transportation expenses to gross revenues was in 1921, 30.74 as compared with 35.87 in 1920. The Virginian in the first six months of 1922 operated at 57.93 per cent as above noted.

Physical Improvement in 1921

With its increasing net income the Virginian has been improving its property to take care of increasing business. There is much said about the building of an additional pier at Sewells Point although the management does not seem ready to commit itself as to that as yet. The outstanding developments in 1921 were the completion of double-tracking on the 2.07 per cent grade approaching Clarks Gap from the west; new construction of the so-called Virginian & Western, 14.45 miles; an extension of the Winding Gulf branch, 2.05 miles; new facilities at Elmore, W. Va.; additional shop machinery at Roanoke, Princeton, etc. The road now serves 107 coal mines, 56 of which are served jointly with the C. & O. It has 234 miles laid with 85-lb. rail and 5 miles with rail of Pennsylvania 130-lb. section.

The Virginian in 1921 had a corporate net after fixed charges of $2,937,732. Including a credit of $2,308,095 for additional compensation for operation during federal control the net income carried to profit and loss was $5,245,827. In 1920 the corporate net was $3,287,462, inclusive of a credit of $513,365 for standard return for two months. The 1920 accounts did not include any credit on account of the guaranty. The balance sheet shows as of December 31, 1921, a profit and loss credit balance of $17,416,721 "after payment of $13.00 per share on account of dividends accrued on 279,550 shares preferred stock from May 1, 1912." The company's preferred stock is 5 per cent cumulative. In 1920, 7 per cent was paid on this issue; in 1921, two payments each of 3 per cent were made. The greater part of the preferred stock is closely held. No dividends have ever been paid on the 31,271,500 common shares.

Freight Car Loading

WASHINGTON, D. C.

LOADING OF revenue freight on American railroads totaled 859,733 cars during the week ended on July 29, compared with 861,124 cars during the previous week, or a reduction of 1,391 cars. This was an increase of 64,301 cars over the corresponding week last year, but a decrease of 76,633 cars below the corresponding week in 1920. As compared with the heaviest week before the shop strike the reduction was 18,123 cars.

Coal loading totaled 76,374 cars, an increase over the previous week of 314 cars, but a decrease of 73,065 compared with the corresponding week last year, and a decrease of 109,418 cars compared with the corresponding week two years ago. Coke loading totaled 9,112 cars, a decrease of 837 cars compared with the week before. While this was an increase of 4,934 cars over the same week in 1921, it was a decrease of 4,224 cars below the same week in 1920. Ore loading totaled 64,147 cars, 270 cars below the preceding week, but 34,023 cars above the corresponding week last year. Compared with the same week two years ago, a reduction of 12,212 cars was reported.

Grain and grain products totaled 59,170 cars, an increase over the week before of 1,604, but 4,360 under the corresponding week last year. This was an increase of 19,318 cars above the corresponding week in 1920. Live stock loading amounted to 27,104 cars, 351 cars below the preceding week. This was, however, an increase of 2,294 cars above the corresponding week in 1921, and 1,039 in excess of two years ago.

Merchandise and miscellaneous freight for the week ended on July 29 totaled 565,629 cars, a reduction of 1,536 cars

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JULY 29, 1922

American Railway Association—Car Service Division.

below the preceding week. Despite this decrease, however, the loading of merchandise and miscellaneous freight exceeded the corresponding week last year by 88,040 cars and even surpassed the corresponding week in 1920 by 33,869 cars.

Forest products totaled 58,197 cars, a decrease of 315 cars under the week before, but an increase of 12,435 cars over the corresponding week last year. Compared with the corresponding week in 1920, a reduction of 5,005 was shown.

Compared by districts, increases in the loading of all commodities over the preceding week were reported in the Allegheny, Central Western and South Western districts, with decreases in the Eastern, Pocahontas, Southern and North Western districts. All except the Pocahontas, Central Western and South Western districts, however, reported increases over the corresponding week last year.

Perfecting Plans for the Distribution of Coal

Various Agencies Involved Are Co-operating in Effort to Make Best Use of Limited Supply

WASHINGTON, D. C.

THE CENTRAL COAL Committee was able to turn more of its attention this week from the work of organization to its problem of trying to supply the many demands made upon it for coal. The district committees are now on duty and various orders for coal from railroads, public utilities and states have been forwarded to them from the Washington office.

On Monday preliminary plans were arranged for the movement of about 30,000 tons a week through the Cleveland Coal and Ore Exchange for trans-shipment across the lakes for the northwest and to increase the allocation as rapidly as possible until about 1,000,000 tons a week are moved to the lakes. In addition to C. E. Tuttle, in charge of distribution for the lake movement, C. P. White was appointed as a representative of the committee to have headquarters at St. Paul or Minneapolis.

It was believed that the action of the eastern railroads in sending shop employees to assist roads serving the coal-producing districts where shipments have recently been reduced because of congestion will result in an increased output. Consideration has been given to sending locomotives from other roads, but it was pointed out that men to keep the roads' own engines in condition would be of more service.

The problem of railway fuel supplies largely occupied the attention of the federal fuel distribution committee on Tuesday. The needs of some lines operating in the Middle States and in the Mid-West were said to be somewhat pressing, while railroads in the southeastern region were said to be in slightly better shape. The problem has been complicated by the fact that some railroads have sent buyers to the producing coal fields, and their competitive efforts to obtain fuel are having the tendency to raise prices.

The state of Massachusetts, through the state fuel administrator, has applied to Federal Fuel Distributor Spencer for emergency coal needs under Priority No. 2 classification. This coal is desired for the operation of various public utilities in that state and is in addition to coal supplies already provided for by contracts.

An appeal came from Iowa for coal for the operation of public utilities, some of which are said to face the possibility of an early closing-down if their fuel requirements are not met. A special appeal has been made for the vegetable-canning industry of the state. Farmers are also asking for coal to keep the wheat-threshers going. Maine canners have addressed an appeal to the committee. As the total tonnage required by the canning industry of the country is not especially large, it is not anticipated that there will be difficulty in meeting the needs of these establishments.

A quantity of coal in the possession of the War Department at Camp Grant, Ill., for which that department had no urgent need, was ordered turned over to railroads centering in Chicago.

The problem of the proper distribution of coal as between the seaboard states and the West was given consideration. The matter of striking a proper balance between eastbound shipments intended for New England and westbound shipments routed to points in the Middle West will require much study.

The fact that mechanics from northern states are now reporting for service in considerable numbers at the railroad repair shops of the Virginia and West Virginia coal-carrying lines is expected to relieve to some extent the car congestion which has been hampering coal production in that territory.

Numerous applications for coal have been made to Federal Fuel Distributor Spencer from industrial concerns in various states. These concerns are informed generally that their particular problems should be presented to their respective state fuel administrators.

Consideration was given to the re-establishment of restrictions on sky-rocketing prices of coal in Pennsylvania at a conference between the Pennsylvania State Coal Committee and administration officials on Wednesday.

The Interstate Commerce Commission on August 4 issued Amendment 1 to Service Order No. 23, effective on and after August 5, 1922. This amendment changes paragraph No. 7 in the following respects:

(1) Class 2 in the priority order, which follows the class of special orders, is enlarged by the addition of Clause (d), reading:

> (d) Bituminous coal which has passed over screens of four inches or larger opening, coke, and anthracite coal, to be shipped to retail dealers for household use.

(2) Class 4 is eliminated and a new Class 4 is substituted therefor, reading:

> Class 4: (As to all such common carriers by railroad) Coal for the production and manufacture of foodstuffs and medicines and for the manufacture of containers therefor, for daily use but not for storage, exchange, or sale.

The amended order also states that it is not intended to give any priority as between clauses a, b, c and d of Class 4, which relate to fuel for railroads, public utilities, government institutions and retail dealers, so that these classes are to be considered on a parity.

(3) Agents of the commission are designated and appointed with authority to give directions as to car service and to the matters referred to in paragraphs (15) and (16) of section 1 of the interstate commerce act, and referred to in paragraph No. 7. The agents, in addition to John C. Roth, director, E. H. De Groot, assistant director, and Frank C. Smith, chief inspector of the Bureau of Service, were to be stationed at the following points, beginning Monday, August 7: S. J. Mayhood, Thurmond, W. Va.; B. S. Robertson, Bluefield, W. Va.; C. C. Semple, Huntington, W. Va.; W. L. Barry, Norton, Va.; O. S. Reynolds, Knoxville, Tenn.; H. M. Priest, Louisville, Ky.; J. B. Ford, Birmingham, Ala.

The Car Service Division of the American Railway Association has issued a circular giving instructions to govern the

distribution of coal cars under the priority provisions of the commission's order, in part as follows:

(1) Requisitions for cars must show the number of cars required by each mine for each of the five classes enumerated in Service Order 23, Paragraph 7.

(2) Orders for cars in excess of a mine's demonstrated ability to load daily will not be accepted.

(3) Cars will be supplied for loading coal to be consigned in compliance with the above classes in the order named. No cars will be supplied on orders given under Class 2 until all requirements under Class 1 have been fully met. No cars will be supplied under Class 3 until Classes 1 and 2 have been fully met and etcetera. Available cars will be distributed equitably between mines ordering cars of the same class of priority shipments.

(4) a.—The mine tage or billing instructions must show the class of priority under which the shipment is made.

b.—Revenue billing will carry the endorsement showing the class under which coal is moving.

c.—Coal will not be forwarded from mines unless mine tage or billing instructions carry this information.

(5) Railroads will maintain daily records of:

a.—All requisitions for coal cars by classes of priority.

b.—Number of cars placed for loading at each mine

c.—Number of cars loaded and shipped by classes of priority.

Open Top Cars and Building Materials

That the greater part of the construction projects now under way will be forced to shut down for lack of construction materials unless the present coal priority order is modified was asserted by the Associated General Contractors of America in a petition of protest to the Interstate Commerce Commission. It is the opinion of the contractors that the action of the commission is so drastic as to defeat its own purpose.

The contractors are in favor of priority for coal for the first four classes established by the commission, including special purposes, government uses, public utilities, medical supplies, and domestic consumption; but contend that building materials are just as important to construction as coal is to other manufacturers, and should have equal place with it after the first four classes are served.

The petition calls attention to the fact that with the reopening of the mines the demand for cars for coal will be not less than 320,444 cars per week, of the maximum 324,000 serviceable cars, and that of these 291,000 will be suitable for the loading and transportation of coal, leaving only 33,000 open-top cars weekly for all other purposes. Going on the assumption that the coal and railway strikes will be settled, and that the present priority order stands, the contractors estimate the probable demand and supply of open-top cars, weekly during August, September, and October, will be as follows:

Commodity	Demand	Supply	Per cent supplied
Coal	320,000	291,000	91
Sand, stone and gravel	50,000	10,645	21
Ore	40,000	8,516	21
Iron and steel	25,000	5,322	22
Miscellaneous	20,000	4,258	21
Limestone	10,000	2,129	21
Coke	10,000	2,129	21

Instructions to State Fuel Committees

A letter containing detailed advice regarding the method of distribution of coal by the state fuel committees was forwarded on August 5 by Federal Fuel Distributor Spencer to the governors of the states. It stated that the federal fuel distributor will not (except for the common carriers and the departments of the United States government) act upon applications made by consumers or dealers directly to him, but will refer the applicant to his state fuel committee to the end that if his need is essential and the applicant must have emergency coal which he cannot obtain from sources within his state, the committee may then make application to the federal fuel distributor.

Governor's committees were requested to apply for coal produced in other states only through the federal fuel distributor at Washington and not to order any coal from federal fuel district committees nor producers outside of their own state.

There is no anthracite coal available for distribution by the federal fuel distributor.

Application for emergency coal to the federal fuel distributor should be made only for current use and not for storage.

Application for emergency coal should be made only for the most essential purposes following the priority classes established by the Interstate Commerce Commission in Service Order No. 23.

Emergency coal supplied on these applications made to the federal fuel distributor will be placed f. o. b. railway cars at the mines at the fair prices approved for the producing district by Secretary Hoover.

It will be the endeavor of the federal fuel distributor to place orders for emergency coal in those districts from which the supply is most available to the applicants.

John E. Benton, general solicitor of the National Association of Railway and Utilities Commissioners, has addressed a circular letter to the state commissions advising that the question had arisen whether the service orders of the Interstate Commerce Commission, made to meet the existing emergency, apply to intrastate shipments. It has been considered by the President's committee, and it is thought to be important that there shall be no doubt as to the application of the rules prescribed by those orders as to all shipments. It is thought that the question ought to be settled, so far as within the power of the regulatory authorities, state and federal, without necessity for determining the legal questions involved. It is believed that there will be no disposition anywhere at this time to do otherwise than to co-operate whole-heartedly without bringing to the front jurisdictional or other contentious questions, he said.

Commissioner Aitchison was quoted as saying, not speaking for the Interstate Commerce Commission, but for the President's Fuel Committee, that the committee desired to advise the state commissions that action on their part, so far as they have or claim car service jurisdiction, in the line of the promulgation intrastate of car service orders identical in their provisions with the car service orders already promulgated by the Interstate Commerce Commission will be appreciated, and will be helpful in the present emergency. Mr. Benton assured Commissioner Aitchison that he believed the state commissions generally, having jurisdiction, would be glad to co-operate in the establishment of common regulations, thus entirely avoiding any occasion for the question of jurisdiction arising.

It is understood that some state commissions have no jurisdiction over car service, and accordingly cannot comply with this request. At least one commission—that of Alabama—before this question arose had already adopted I. C. C. Car Service Order No. 23 in precise terms for application intrastate.

Weekly reports compiled by the Car Service Division of the American Railway Association of coal mine operations and car requirements and the open-top car situation show clearly that the worst of the effects of the shop employees' strike is concentrated on the comparatively few roads that for several months have handled practically all of the coal being produced and on which congestion and resulting car shortage had begun to appear even before the shop strike began on July 1. These are the roads regarding which there has been more or less loose talk of their being taken over by the government and the roads to which Mr. Jewell doubtless referred when he asked if the government "would constitute itself a strike-breaking agency by taking over the roads on which we have made the strike most effective."

The railroads during the week of July 22, the third week of the shopmen's strike, according to these reports placed 71 per cent of the cars required for bituminous coal loading.

or 94,627 against requirements amounting to 1v2,665. The low percentage is due to the conditions in the Pocahontas and Southern districts, which furnished only 45 and 49 per cent, respectively, of the cars required. In the Pocahontas district 20,412 cars were placed as against orders for 47,025 and in the Southern district 20,153 cars were placed against orders for 41,071. In the Southern district the percentage of cars placed to cars required was 99, in the Allegheny 129; in the Northwestern 102; in the Central Western 117, and in the Southwestern 101. Of 146 roads reporting, only 19 furnished less than 100 per cent. Of these the principal ones were the Wheeling & Lake Erie, 90; Baltimore & Ohio, 89; Chesapeake & Ohio, 58; Long Fork, 27; Norfolk & Western, 52; Virginian, 45; Carolina, Clinchfield & Ohio, 66; Interstate, 56; Kentucky & Tennessee, 25; Louisville, Henderson & St. Louis, 99; Louisville & Nashville, 85; Mobile & Ohio, 81; Southern, 52; and St. Louis-San Francisco, 99.

In the week of July 15 the percentage of cars placed to cars required was 84. The percentage for the Pocahontas district being 65, Southern, 56 and Southwestern, 79. For the week of July 8 the percentage for all roads was 107, only the Southern region being below 100, with a percentage of 70. During the week of July 22 the roads furnished 89 per cent of the number of open top cars required, 282,079 against 319,186. In the week of July 15 they furnished 96 per cent. In the week of July 25, 1921, the roads furnished 100 per cent and in the week of July 24, 1920, only 67 per cent. In the week of July 22 97 per cent of the requirements for limestone were furnished, 100 per cent for ore, 98 per cent for iron and steel, 97 per cent for sandstone and gravel, and 98 per cent for miscellaneous freight.

An increase in the number of cars loaded daily is shown by reports received from the carriers. On Monday, August 7, these reports showed a total of 16,021 cars loaded with coal. This total has only been exceeded on seven days since the miners' strike started on April 1, and then only by an average of a few hundred cars. The number of cars loaded daily with coal since August 1 follows:

August 1	11,783 cars
August 2	13,218 cars
August 3	13,177 cars
August 4	12,567 cars
August 5	12,317 cars
August 7	16,021 cars

In August, 1921, the average number of cars loaded daily with coal was 25,688 cars.

Reports show that on the Chesapeake & Ohio, Norfolk & Western and the Louisville & Nashville, the three largest coal carrying roads in the West Virginia and Kentucky non-union coal fields, 7,554 cars were loaded on Monday. These three roads averaged in June 7,373 cars daily, which was the heaviest month's coal loading in their history.

Standard Designs for Indian Locomotives

A Discussion of Requirements, Both Military and Fuel, and Comparisons with the U. S. R. A. Standards

By H. L. Cole
Secretary of the Railway Board of India

LOCOMOTIVE DEVELOPMENT in India, which so far has merely followed normal British practice, appears likely in the near future to enter upon a new phase. Considerable changes are occurring in several of the most important conditions by which locomotive design has hitherto been governed in India, and these will no doubt affect future locomotive proportions in that county to no small degree. It is nearly 20 years since the existing standard locomotive designs were initiated; and with the exception of the subsequent introduction of superheaters they present no features, barring their gage, to differentiate them from the ordinary British practice of their period.

The recent revision of the fixed structure gage, however, opens up possibilities which could not previously be considered; and these possibilities are likely to become of even greater importance in view of the projected adoption either of the central automatic coupler, or at least of draft gear much stronger than that now in use. The eventual value of these two developments cannot be overlooked as aids to the solution of the now pressing problem of traffic congestion.

Changing Fuel Conditions

There is in progress, moreover, a marked change in respect to fuel supplies. Barely a quarter of a century ago the coal requirements of Indian railways were still largely met from the United Kingdom. When the present standard engines were introduced the importation of British coal was diminishing rapidly with the development of the Bengal coal fields, and the products of the latter, although decidedly in-

Superheater Express Locomotive, Bengal-Nagpur Railway. Built by Robert Stephenser & Co.

ferior to the British coal, were good enough even with the small grates of the locomotives of that period for the moderate speeds and loads then called for. But demands on locomotive power were already becoming more exacting; and with the complete change over from British to Indian coal the necessity arose for relatively larger grate areas.

This necessity was to a certain extent recognized and provided for in the standard 4-4-0 and 0-6-0 designs of 1903; and more so in the subsequent 4-6-0, 2-8-0 and 4-4-2 engines. The development is interesting; the older 4-4-0 passenger engines on the State Railways with 17 in. by 24 in. cylinders and 17 sq. ft. of grate area, or a ratio of grate area to cylinder volume of 2.68. The 2-4-0 passenger locomotives with 18 in. by 24 in. cylinders and 20.5 sq. ft. of grate area had a ratio of 2.9. The 4-4-0 standard light passenger locomotive of 1903 with 18½ in. by 26 in. cylinders and 25.3 sq. ft. of grate area has a ratio of 3.1 and the later 4-6-0 passenger locomotives with 20 in. by 26 in. cylinders and a grate area of 32 sq. ft. has a ratio of 3.33. All these engines were designed prior to the adoption of superheaters. This increase in grate proportions was a natural expansion from these which had been based originally on experience with British coals.

At that period—only 15 or 20 years ago—there was scarcely any industrial consumption of coal in India, and rapidly as the railway demand for Bengal in place of imported coal increased, it was thought that locomotive requirements could be and would be filled by the best of Bengal coals, and for some years it was possible to a great extent to ensure this. Since then, however, a radical change has come over the whole fuel position. The available proportion of first-class Indian coal is limited. On the other hand, demands for shipping and for industries, and especially for metallurgical purposes for which it is essential to secure coals of a particular quality and with definite characteristics, have rapidly increased. It is no longer possible to pick the best local coals for railway purposes as the quantity actually available is but a comparatively small proportion of the total demand.

APPROXIMATE COMPOSITION OF SOME TYPICAL COALS

	Moisture	Volatile Matter	Fixed Carbon	Ash	Sulphur
Indian—Raniganj	5.0	30.5	54.5	10.5	0.7
Indian—Barakar	1.0	21.0	66.0	13.0	0.7
Great Britain—Yorkshire	2.0	33.0	62.5	2.7	0.8
Great Britain—South Wales	1.5	16.0	70.0	11.0	1.0
American—Pennsylvania	1.3	34.5	57.5	7.0	1.7
American—Illinois	9.5	33.0	48.0	8.5	1.0
American—Pocahontas	Dry	19.0	75.0	5.5	0.7

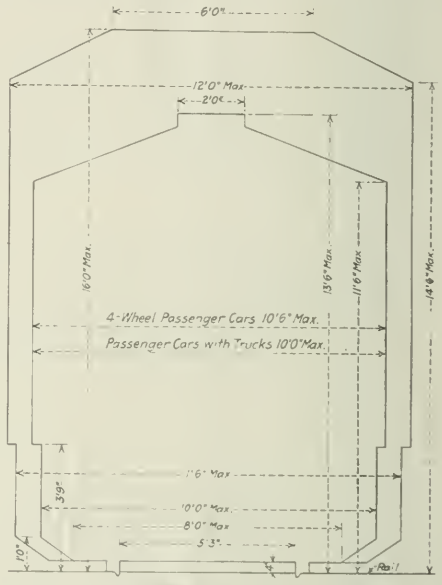
In short, railways have been forced in recent years and will certainly be forced in the future to use the poorer qualities of Indian coal in steadily increasing proportions. If efficiency is to be maintained—and we should look forward to its being steadily improved—locomotive boiler design must be adapted to the fuel conditions. In fact a stage in railway development in India has now been reached when it would appear to be a matter of imperative necessity to take account of the new conditions, and discard unsuitable or non-essential traditions.

The question of future policy in respect of standard locomotives is a live issue. "Standardization," however, like "self-determination," is a catchword, the length, breadth and depth of which are seldom clearly defined or appreciated. There can be no question as to the value of standardization as a principle, for economical production and for economical maintenance. As a practice, however, it is at least liable to result in stagnation, and to the perpetuation of obsolete designs.

The extent, therefore, to which the principle of standardization can be carried without detriment to progress or to the steady improvement of efficiency, is a matter which has important bearing on any policy that may be adopted with reference to the future development of locomotive construction and practice. There exist many important factors affecting the issue of this question, but they are substantially different in India from those that obtain either in England or in the United States.

Indian Railways in Relation to Standardization

The position of India in relation to any railway standardization program is somewhat exceptional, and this holds good in spite of the fact that there are two distinct main line gages. The meter-gage system of India, apart from its considerable mileage, is generally of a fairly high standard; neither the Burma nor the old Rajputana-Malwa meter-gage railways, for example, can be classed as light railways. Each gage, the 5 ft. 6 in. and the meter, is constructed practically to a standard that is common to all railways of that



Inner Lines Show Maximum Moving Dimensions of 1921; Outer Lines Possible Future Moving Dimensions

gage. Bridge rules also are uniform, and while occasionally variations have been permitted for particular reasons, speaking broadly it may be said, in respect to loading gages and running dimensions there has been maintained from the earliest days a consistent, well-considered, and well co-ordinated policy.

This may have been of greater or less benefit to individual railways at different times; but the result at the present day, when it is necessary to explore every possible means of reducing both the initial cost of new locomotives and rolling stock, and of increasing the possibilities of interchange, whether for frontier war concentrations or for peace-time traffic emergencies, is of first-class importance, in that it removes one of the first great obstacles in the way of a practical standardization program.

With rare exceptions, such as the Bombay and Baluchistan mountain sections, operating conditions throughout India are not marked by extreme variations. A general similarity of practice, at least in broad essentials, is no doubt partly an outcome of uniform loading gages, but it is also a natural result of a certain degree of technical co-ordination which always has been maintained between the various

railway administrations and the Government of India. The standard engines of 1903 merely replaced an older series, examples of which could be found running on lines as far apart as Madras and Peshawar. Recommended locomotive and rolling-stock designs exhibited in the old Locomotive and Carriage and Wagon Superintendents' Committee's proceedings of 1890 and onwards drafted in effect a standardization policy which appears to have been accepted as a practical working proposition.

Another not unimportant factor consists in a broad uniformity of fuel supplies in India, in the sense that the main standby is bituminous coal—variable in quality, certainly; but neither so good as British steam coal on the one hand, nor on the other hand so diversified in quality and nature as the various anthracite, bituminous, and sub-bituminous or lignitic coals in use on different American railways. The variation between the best first class and the worst second class Bengal coals is not so serious a matter as to form any real obstacle to standardization if that be desirable on other grounds. The fuel position, difficult is it may be, is not so grave as to require that the mail-train locomotives be provided with boilers suited to burn the poorer qualities of second class coal; nor will many railways contemplate obtaining under present or prospective conditions supplies of first class coal for ordinary slow-speed services. The known supply of first class Indian coal is limited; whereas the supply of second class is abundant, and only awaits development.

Military Considerations

One important factor in the consideration of a standardization policy has been touched upon already but needs emphasis. India possesses dangerous land frontiers. It is a necessary insurance, therefore, that provision should exist for the possible necessity of having to effect a great military concentration at any time and at short notice; locomotives of 5 ft. 6 in. gage cannot readily be borrowed from abroad and there would be no time to build them. But India cannot afford to maintain an idle reserve of locomotives awaiting such an emergency. The demand, should it arise, must consequently be met from existing resources; in other words, from various railways all over India. No argument is needed to elaborate the value and economy of having standard power under such conditions, or the vast amount of trouble in the thick of heavy troop-traffic, due to having a variety of power and an infinity of different detailed parts to maintain.

Standardization in Principle and Practice

If we turn to America for indications of the trend of modern practice or for specific data upon which to work out new designs, it is because American railways have been up against high labor costs and indifferent fuel longer than India has, and because India possesses neither the accumulated test results nor the resources for obtaining such results locally. The railways of the United Kingdom, on the other hand, have never suffered from poor quality fuel; the service rendered by British labor prior to the war was efficient in relation to its cost, and the results of experiments, where made, are for the most part buried in the records of the particular railways to which they pertain. Moreover, Indian operating conditions in respect of the average length of runs, high car axle-loads, and consequently the value of full train-loads and maximum engine-rating as against a rapid turn-around of very low capacity stock, are in general more similar to conditions in the United States than to those that obtain in the United Kingdom.

Outside the Indian standard locomotive scheme, it would probably have been difficult until recently to find anywhere in the world a series of engines serving so great an area and designed under circumstances so favorable to consistent practice in respect to weight, boiler and tractive effort ratios.

During the war, however, a series of standard locomotives was designed under the authority of the United States Railroad Administration; and some hundreds—nearly 2000—of those standard engines were constructed. Now the United States, in common with Great Britain, has a considerable variety of loading gages; they have also a wide variety of operating conditions, and a far greater range of fuels in actual use on railways than is the case in India. And there are roughly 70,000 locomotives in service on American railroads. Locomotive standardization, therefore, as a policy in common between American railways generally was then and is at the present time not really a practical issue.

This may serve as an illustration of the deliberate adoption of a standardization program devised specifically and solely with the object of rapid and economical manufacture, practically irrespective of the operating or maintenance con-

ditions of individual railways. From the point of view of individual railways, therefore, this standardization scheme had little to recommend it. It involved proportions unsuited to various local conditions, power below the capacity of particular lines, and details which did not duplicate those of existing engines even of corresponding dimensions. But these standardized designs did enable manufacturers to carry out a heavy production program; and that was the need of the moment—essentially a war measure.

No standardization policy, however, can be considered as really practical or satisfactory as a normal peacetime measure, if it fails to make provision for progressive improvements in designs, on a basis of added knowledge, or of modification in practice to meet changes in conditions. A certain degree of elasticity is necessary for progress; standards cannot be fixed for all time. Standardization is an expedient for the cheap production of approved designs, and for the easy and economical renewal of worn parts. It should never and need never be a device for the perpetuation of obsolete designs. It is a false conception of the practical value of standardization to refer to the policy as if it involved finality.

To the extent that a standard locomotive policy has already long been recognized in principle on Indian railways, there is indeed no need for stagnation, but there is a certain basis for a consistent forward policy. More exacting demands, denser traffic, point already to the need for heavier trainloads without sacrifice of speed. Alterations in the loading gage and the contemplated improvement in the coupler indicate substantial possibilities in that direction. The spacing of double tracks and renewal of bridges, regrettably in arrears on certain highly congested trunk lines, must certainly precede the use of the heavier trains that would help so powerfully to ease the traffic situation.

Of even more pressing importance than these, probably, is the necessity of providing for the widely extended use of fuel which has hitherto been regarded as of too low a grade for railway requirements. This will perhaps be the most potent factor in the immediate future in deflecting Indian locomotive practice from ratios and wheel arrangements which have hitherto been accepted as normal.

An examination of the table showing the general dimensions and proportions of the standard Indian locomotive indicates apparent inconsistencies. It must, however, be remarked that these designs were not brought out simultaneously, that they are all somewhat old, and that the superheater-fitted engines were not originally designed as such, but are old saturated steam locomotives altered to take superheaters.

At the same time this examination suggests the possibility of the present position leading to the adoption of modifications in view of the experience gained with the standards initiated in 1903, as well as in the light of developments elsewhere. Attention is especially drawn in this connection to the U. S. R. A. standard light Pacific and light Mikado locomotives.

In respect of adhesion, speaking broadly, Indian climatic conditions should certainly permit of an adhesion ratio not exceeding four to one in the case of normal designs, and probably 4.5 to 1 in the case of compound articulated engines. On the U. S. R. A. passenger and freight engines the ratio was approximately 4 to 1.

The U. S. R. A. light Pacific locomotive had 1.84 sq. ft. and the light Mikado 1.91 sq. ft. of heating surface per cylinder horsepower, the ratio of tractive force to combined heating surface was 9.85 for the Pacific and 11.75 for the Mikado; the tractive force multiplied by the diameter of the drivers and divided by the combined heating surface was 719 for the Pacific and 740 for the Mikado; the Pacific had 3.8 and the Mikado 50.5 cylinder horsepower per square foot of grate area; the firebox heating surface was about 8 per cent of the evaporative heating surface on the Pacific and 7.4 per cent on the Mikado. On both locomotives there was a little over 4 sq. ft. of firebox per square foot of grate and the superheater surface was between 23 and 24 per cent. of the evaporative heating surface.

The ratio of total weight to tractive effort ratio of the I. S. R. Atlantic engine is notably bad. This may lead to the rejection of the type, and the adoption of six-wheels coupled as regular passenger locomotive practice. With fares so low as those in force in India—not two cents per mile, but two to two and one-half miles for one cent for third-class passengers—loads must be good to be remunerative. Nevertheless, there appears to be as yet no necessity nor any inclination to proceed to the eight-coupled passenger engine on Indian railways. If this seems inconsistent, it should be noted that Indian 5 ft. 6 in. gage passenger cars with four wheel trucks, weigh barely 30 tons, as a rule, a fact which also supplies a reason for the relatively light engines in use as compared with modern American passenger engines.

As to future wheel arrangements, apart from the number of wheels coupled, it seems fairly certain that it will be necessary to adopt trailing radial axles in order to accommodate the larger grates that will have to be employed to utilize in the future inferior grades of coal. We may expect, therefore, to see on Indian broad gage railways in the near future, 4-6-2 and 2-8-2 types in supersession of the present standard passenger and freight engines respectively.

There appears to be no early prospect of any advance beyond the 2-8-2 freight engine, except on ghât or mountain sections, at any rate as a standard; partly because present operating conditions do not favor trains exceeding about 2,000 ft. in length, and partly because in any case very heavy preliminary expenditures on siding extensions, loops and other works will be necessary, and this can only be spread over a number of years. The coupler question is also involved, but this is already under consideration and may be settled on lines that will remove it from the list of obstacles to heavy freight movements.

WHISTLE LEVERS are being installed on the fireman's side of 175 locomotives on the Missouri, Kansas & Texas.

General News Department

L. A. Downs, vice-president and general manager of the Central of Georgia, has been elected an honorary corresponding member of the National College of Italian Railway Engineers. Mr. Downs was president of the American Railway Engineering Association last year and was a delegate from the United States to the International Railway Congress at Rome last May at which time this honor was conferred upon him.

To Operate Part of Kansas City Northwestern

Business men living in towns along the defunct Kansas City Northwestern held a meeting at Seneca, Kan., last week to consider the possibility of operating electric cars over the line, which suspended operations except at terminals in March, 1921. The north terminal of the road is at Virginia, Neb., and it is proposed to operate cars from that point to Beatrice over the tracks of the Chicago, Rock Island & Pacific. Plans for a general renewal of operations are, however, still tentative.

Southern Pacific Asks New Hearing in Dissolution Case

The Southern Pacific on July 31 filed in the Supreme Court of the United States an application for a rehearing of the case in which the court recently ordered the separation of the Southern Pacific and the Central Pacific. The court had given permission to file the petition, but no action can be taken on it until the court meets for its next term in October.

The company grouped the grounds advanced for the re-hearing under five heads and among other things urged an application of the Sherman act "in the light of the rule of reason," insisting that under the laws of California there was authority for the lease made by the Central Pacific in 1885, which, if valid, constituted the Southern Pacific proprietor of the Central Pacific for 99 years.

The petition asserted that it was not the intention of the Sherman act to "subvert titles vested before its passage" and that Congress in considering the refunding of the Central Pacific debt always looked "for a guaranty of its payment by the Southern Pacific."

The petition further stated that the Sherman law "should not be interpreted as requiring the disintegration of railroad lines which in the 50 years of their history have had a community of operation through a single management of unbroken continuity." All consolidations, leases and conveyances of California companies holding federal franchises to construct and operate railroads were made upon the basis which prevailed in the Central Pacific lease, and "have stood unchallenged from earliest times."

The Federal Refunding Committee "was clearly coupled with authority," the petition continued, "to make a settlement calling for a guaranty by the Southern Pacific predicated upon its position as lessee, inasmuch as such a settlement was in line with what had always been regarded in Congress as practically indispensable to refunding."

The opinion of the court, the petition said, "fails to do justice to the moral or legal aspects of our case under the settlement," in that it leaves out of consideration governmental action from 1885 to 1898 "indispensable to a sound interpretation of the powers conferred upon the (refunding) commission and the settlement made by it."

The opinion also "ignores the lease as the predicate upon which the guaranty was requested and given . . . claiming that it "assumes that the commission did not request but merely, unresistingly, appointed the guaranty."

The decision of the court is further criticized on the ground that "it ignores the fact that without the guarantee the government could not have obtained payment of the debt"; also that "it takes no account of the fact that without the concurrence of the Southern Pacific the Central Pacific could not have complied with the terms of the agreement of settlement which required the lease of the Southern Pacific to be subordinated to the bonds issued by the reorganized company," and that "it ignores the fact that it was the first duty of the commission to familiarize itself with the plan of reorganization and to satisfy itself that it was adequate to insure the payment of the government debt within 10 years.

The company asked an opportunity for counsel to present an argument on that part of the opinion relating to the apportionment or use of certain properties "constructed or acquired during the unified control of the two systems," contending that "propositions upon which they may be thought to rest were never presented by any pleading, never mentioned in the taking of evidence, at no time argued . . . and are not to be supported by any rule heretofore announced or applied" by the Supreme Court.

Prosperity in Steel and Lumber

The Bureau of Economics of the National Lumber Manufacturers Association reports in its monthly "Graphic Summary of Business Statistics" that the two broad bases of prosperous manufacturing in the United States—steel and lumber—are now virtually normal or better. The latest available monthly figures put pig iron production at 93, raw steel at 98 and lumber at 117 per cent of the normal, which is assumed to be the average for the last 10 years.

In a large measure 17 other significant statistics support the lumber and steel indication of returned "normalcy." Time money rates are 82 per cent of normal; call money 98 per cent; industrial dividends (volume) 100 per cent; New York bank clearings, 100; average price of twenty industrial stocks, 110; twenty railroad stocks, 93; New York stock exchange business, 157; bank clearings outside of New York, 119; business failures, 151 per cent; unfilled steel tonnage, 79; merchandise imports, 102; merchandise exports, 77; authorized capital of new corporations—for June—60 per cent; lumber shipments, 130; lumber orders, 146; Bradstreet's commodities price index, 90 per cent; bituminous coal production (despite the strike), 59 per cent; estimated cost of new buildings in 20 cities for June, 236 per cent.

Convention and Vacation Traffic Heavy

To accommodate the many conventions and the heavy vacation travel of the past spring and early summer the railroads and the Pullman Company provided 1,905 special sleeping cars for convention traffic, in addition to 1,719 extra pullmans during the few days following June 28, to handle the holiday traffic. In June, the Chicago, Rock Island & Pacific alone handled almost 50 special passenger trains which carried about 10,000 paying passengers, and comprised approximately 400 sleeping cars, coaches, etc. A better idea of the recent demand for extra equipment made by conventions, sporting events, and early summer travel may be gained from the following figures: For the Knights Templar Conclave held in New Orleans, La., 284 extra sleeping cars were used; the Investment Bankers' Association, 22 cars; the Rotary clubs' convention, 107 cars; advertising clubs, 38 cars; Shriners' convention, 688 cars; United Confederate Veterans' reunion, 117 cars; Kiwanis clubs, 23 cars; Derby Day, Louisville, Ky., 218 cars, Indianapolis, Ind., auto races, 95 cars. The reduced railroad rates from Los Angeles, Cal., to the East required the use of 253 additional cars. Figures available regarding the number of extra sleeping cars in use from the principal Eastern points during the last of June and the first part of July are distributed as follows: Northwestern territory (N. Y. C., N. Y., N. H. & H., P. L. & W., Erie) 896 cars; southeastern territory (Penna., B. & O., C. & O., L. V.) 472 cars; southern points 107 cars; Chicago, except P. R. R., B. & O., N. Y. C., Big Four, 244 cars.

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF JUNE AND SIX MONTHS OF CALENDAR YEAR 1922

Name of road.		Average mileage operated during period.	Operating revenues			Maintenance of		Operating expenses				Operating ratio.	Net from railway operations.	Operating income (or loss).	Net after rentals.	Net after rentals 1921.
			Freight.	Passenger.	Total (inc. misc.)	Way and structures.	Equipment.	Traffic.	Transportation.	General.	Total.

Railroads Handle Traffic Efficiently During Chicago Car Strike

During the Chicago street car and elevated railroad strike which began on August 1, and lasted until August 6, the railroads handled a greatly increased traffic in their suburban zones with little delay or congestion. In most cases the extra train service was provided by the abandonment of the regular suburban schedules and the substitution of shuttle service under which trains were run as fast as the traffic warranted. Some idea of the pressure placed on the larger suburban carriers may be gained from the following figures: The Chicago & North Western carries approximately 60,000 suburban passengers on a normal business day and the number of trains necessary to handle this business is 166. On August 1, the first day of the strike, the number of passengers carried by this road was 109,810, and the trains operated, 225. On August 2, the above number was increased to 134,704 passengers and 245 trains were run. A still greater number was handled on August 3, when 135,619 passengers were carried, although the number of trains operated was decreased to 243, while on August 4, the number of patrons carried was 134,822, and 242 trains were run. The Illinois Central averaged 73,500 suburban passengers daily before the strike with 378 trains. On August 1, this number was increased to 132,576 passengers and 592 trains, while on August 2, there were 146,124 passengers and 594 trains; August 3, 151,787 passengers and 610 trains; August 4, 157,022 passengers and 616 trains; and on August 5, there were 157,517 passengers and 612 trains. The Chicago, Rock Island & Pacific, which normally carries 30,000 suburban passengers, increased this number by 50 per cent after the first day of the strike. The Chicago, Milwaukee & St. Paul added 17 trains while the Chicago & Western Indiana increased its number by 15. The strike ended Sunday noon and on Monday the suburban service was approximately normal, although a great number of the strike patrons were still making use of their commutation tickets.

Collision on the Cincinnati, Lebanon & Northern

In a collision of passenger trains on the Cincinnati, Lebanon & Northern, at Pleasant Ridge, Ohio, seven miles north of Cincinnati, on August 1, three passengers and two employees were killed and three or more passengers and two employees were injured. The trains were northbound regular passenger No. 11 and a southbound excursion train. It is said that the excursion train disregarded the rule requiring it to keep clear of the regular train.

Photo by International

Shortly After the Accident on the C., L. & H.

A press dispatch from Moscow says that the offices of the Canadian Pacific Railway and the White Star Steamship line in that city have been reopened. These offices were closed by the Soviet Government and their restoration is said to have been due to representations made by the British Mission.

Traffic News

P. R. Thompson has resigned as traffic manager of the Pacific Coast Steel Company to become chairman of the transportation committee of the Peninsular Bureau of Chambers of Commerce and Civic Associations, with headquarters at Redwood City, Cal.

The Canadian roads—the Grand Trunk and the Canadian Pacific—have voluntarily accepted the terms of the order of the Interstate Commerce Commission under which, on western freight billed through to and from New England, the proportions allowed to the New England roads are to be 15 per cent more than heretofore. The Canadian roads were not parties to the case before the commission.

Potato Business on the Pennsylvania

The Pennsylvania Railroad reports that the white potato crop of the Maryland-Delaware-Virginia Peninsula, from Cape Charles, Va., to Wilmington, Del., has this year broken all previous records for both production and shipments, the total movement amounting to 16,019 carloads, an increase of 10 per cent over the previous high record. Most of the crop goes to Philadelphia, New York City and New England and to the Central Western region between Pittsburgh, Chicago and St. Louis. This year about 60 per cent of the crop went east and 40 per cent west. Nearly 20 per cent of the entire crop went into New England, an unusually large proportion.

On the heaviest single day, July 12, 661 carloads were forwarded. The car supply this year was entirely adequate. The shopmen's strike was on during the greater part of the shipping period, but neither the car supply nor the handling of the loaded cars was interfered with in the slightest degree. About 8,000 box cars were required to handle the crop, each car averaging two round trips between shipping point and market.

Coal Production

A slight increase in output marked the eighteenth week of the coal strike (July 31-August 5). Preliminary returns compiled by the Geological Survey indicate a production of 4,250,000 tons of soft coal against 3,933,000 tons in the week before. The increase is said to be due to improved car supply in the Middle Appalachian fields rather than to reopening of mines hitherto closed by the strike.

In spite of the increase in bituminous output, the eighteenth week finds production still about 1,100,000 tons short of the level reached before the shopmen's strike, for in the week ending June 24, 5,337,000 tons were raised.

Production of anthracite in the eighteenth week will be barely 30,000 tons.

The trend of production is shown in the cars loaded daily by the railroads. Loadings on Monday, July 31, were 14,768 cars, an increase over the preceding Monday of 11 per cent. The following day the total dropped to 11,783 cars, partly because of pay day. A partial recovery carried loadings on Wednesday up to 12,218 cars, and on Thursday 12,177 cars were loaded.

Detailed records of shipments from each district indicate that up to the present, mines responding to the invitation to resume operations have added little to the coal supply of the country. There has been practically no increase in output in any of the strongly organized districts, and the increase in shipments from Pennsylvania, and from the Fairmont and Kanawha districts has not been large.

The mine reports for the week ended July 22 picture conditions at the mines when the railway shopmen's strike was at its height. Congestion at important rail gateways grew worse and practically every field east of the Mississippi now producing reported increased losses through transportation. In Hazard, Western Kentucky and Southern West Virginia working time steadily decreased as rail difficulties increased.

The loss ascribed to transportation in Colorado was confined to mines in Routt County which reports unavoidable suspension of service on one railroad.

Commission and Court News

Interstate Commerce Commission

The commission has issued a decision amending after further hearings its findings in the western hay and grain rate case so as to eliminate from the findings of the original report interstate carload rates on grain, grain products and hay between points within that portion of Illinois territory included in the western group.

The Interstate Commerce Commission has issued its decision holding that the surcharge for passengers in sleeping and parlor cars which was applied to interstate traffic by its order in Ex Parte 74 should be applied intrastate in Georgia. The surcharge was put into effect on September 1, 1920, in Georgia, with the approval of the Georgia commission, but after a hearing it ordered the cancellation of the surcharge effective on December 20, 1921, and since that time it has not been applied to intrastate business.

Court News

Carrier Operating Two Lines Not Necessarily Bound to Ship by the Cheaper

Following Northern Pacific v. Solearn, 247 U. S. 477, the Springfield Court of Appeals holds that where a carrier is operating two lines between the same points, and the rate over one is less than the rate over the other, it is ordinarily the duty of the carrier to ship by the cheaper route. This duty is not absolute, however. The carrier is not bound to consider only the shipper's interest, but should consider the interest of the public and its own; and if, all things considered, it would be unreasonable to ship by the cheaper route, the carrier is not required to do so.—Stroud v. M. P. (Mo. App.), 236 S. W. 891.

Shifting Cars After End of Journey Not Interstate Commerce

Three cars with coal from Pennsylvania to Canandaigua, N. Y., were placed on the consignee's siding and two were unloaded. The middle car was in such a position that it could not conveniently be unloaded. The yard crew proceeded to readjust the position of this car and to take away the empty cars. While coupling the engine to the cars the conductor was injured because, it was claimed, of defective automatic couplers. The New York Appellate Division holds that this was not a movement of cars in interstate commerce; and there could be no recovery, under the federal act, for his death. Camp v. Pennsylvania, 193 N. Y. Supp. 31.

Coal Refused May Not Be Kept on Cars Long

The initial carrier of a shipment of coal quoted the rate charged by other carriers, but on arrival at destination it was found its tariff rate was higher. The consignee refused to accept the coal, which the railroad kept in the cars for six months and then sold for about half the freight and demurrage charges. The railroad sued for these charges; the consignee claimed that the sale of the coal was conversion entitling it to damages. The Wisconsin Supreme Court held that it is the duty of a carrier, when freight has not been disposed of within a reasonable time, to unload and store it for account of the owner; that the railroad, under this rule, was not entitled to demurrage beyond a reasonable time, that ten days was a reasonable time, and that in view of the railroad's long delay in acting after knowledge of the consignee's refusal to accept the coal, judgment for damages for conversion was warranted. The court said that, while it might have been better business management for the consignee to accept the coal, pay the illegal rate, and afterwards seek his remedy, he was under no obligation to do so. In determining the damages, the unpaid freight charges must be deducted from the market value of the coal at destination.—Waters v. Becker (Wis.), 186 N. W. 167.

Labor Board Decisions

Employees of Freight House Contractor Under Jurisdiction of Labor Board

On February 26, 1922, the Cleveland, Cincinnati, Chicago & St Louis turned the operation of its freight house at Indianapolis over to the A. S. Hecker Company, who immediately reduced the rates of pay of employees engaged in freight handling below those established by the Railroad Labor Board. The arguments advanced by the railroad and by the employees in this case were similar to those put forth in earlier cases governing contracting of shop and track operations. The Board decided that this contract is in violation of the Transportation Act, and that the freight house employees of the contractor are under the jurisdiction of the Labor Board and subject to the application of the Transportation Act; and the carrier was directed to take up with any employee the matter of his reinstatement upon application.—(*Decision No.* 1119.)

Green Bay & Western a Class I Carrier

Sixteen employees' organizations petitioned the Railroad Labor Board for the application of Decision No. 2 to the employees of the Green Bay & Western, after this road had participated in the hearing on an increase in wages for employees of the short line railroads. The employees contended that this road was not a short line railroad but a class I carrier as its operating revenues exceed $1,000,000 a year. The employees claimed that there are 53 class I roads with less mileage than the Green Bay & Western, that 26 have less capital stock, that 32 have fewer freight cars, that 33 have fewer locomotives, and that 29 carry less freight. The railway management maintained that the petition should be dismissed because the road had been a party to the short line hearing which resulted in the issuance of Decision No. 108 and that the employees' requests are exactly the same as those that were dismissed in that decision. The Labor Board decided that the Green Bay & Western is a Class I road, and that its characteristics are of a nature which exclude it from the class of short line roads. It therefore decided that the rates of pay of the employees shall be adjusted on the basis of the increase awarded in Decision No. 2, and the decrease specified in Decision No. 147, and that this decision shall be effective as of May 1, 1922.—(*Decision No.* 1123.)

One Organization to Represent Employees

For several years rules governing the rates of compensation and service of engine house employees and fuel handlers on the terminal division of the Boston & Maine have been made by agreement between the managemnt and a committee affiliated with the Knights of Labor. Since September 1, 1917, the rules covering store department employees in oil rooms and enginehouse storerooms on the Boston Terminal have been negotiated between the management and a similar committee. Under Decision No. 119, and especially principle 15 in Exhibit "B" of that decision, the railway management has considered as one class all laborers in and around shops, enginehouses and storehouses; and has found by vote of the employees that a majority of this class, taking the railroad as a whole, desired to have the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers represent them. The management accordingly proceeded to negotiate an agreement with a committee from that organization. The employees on the Terminal division contended that the separate agreement with the Knights of Labor should continue. The Labor Board decided that the management acted properly in negotiating an agreement with the maintenance of way organization. This decision, however, does not prevent employees from designating representatives of their choice to handle with the management matters affecting their wages and working conditions, provided such procedure is in conformity with the rules incorporated in the agreement entered into with the maintenance of way organization and the provisions of the Transportation Act.—(*Decision No.* 1121.)

Foreign Railway News

Electric Trains in Euston Station

The London & North Western is now running electric suburban trains into Euston station, its London terminus. This event marks the completion of an intensive development of an important suburban area in the neighborhood of London. The electrification involved a considerable amount of construction, including two tunnels, several new stations, the separation of grades at a junction where there were 17 running tracks and some heavy track construction.

British Interests Push Plan for Construction of Short Line from Tampico to Mexico City

Engineers are making final surveys for the railroad which the British interests which own the Mexican (Vera Cruz) Railway are to build from a connection with the former Hidalo & Northeastern near Cachuca to Tampico. The concession for constructing this line was granted by the Mexican government a few months ago. It is stated that all necessary financial arrangements for the rapid building of the road have been made. It will form a direct short line between Tampico and Mexico City and will follow practically the same route that was selected by engineers for the road which had been started by the National Railways of Mexico at the time the revolutionary period began nearly twelve years ago.

Westinghouse Ships Second Consignment for Chile's Electrification

A second train of electrical equipment for Chile, a part of the Westinghouse Electric & Manufacturing Company's $7,000,000 contract, left the company's East Pittsburgh plant last week. The first trainload of electrical equipment for Chile was illustrated in the *Railway Age* of July 22, page 177.

This second train was dubbed the "International Trade Special" and is shown in an accompanying illustration with a Chilean locomotive on standard gage trucks at the head. No locomotives have been shipped on this order as yet, however, but this movement will begin shortly. The contract calls for the delivery of 39 locomotives.

The equipment shipped in this consignment included 2,000 k.w. motor generator sets for installation in three sub-stations under construction at Vina del Mar, San Pedro and Llai Llai; transformers, switching equipment for three sub stations, 15 lightning arresters, three switchboards of 20 panels each and 44 circuit breakers.

New Locomotives for Swiss Federal Railways

London

The Swiss Federal Railways have recently ordered from Swiss factories 20 electric express locomotives with a maximum speed of approximately 56 miles per hour. The locomotives will take about two years to build. During the next four to five years a total of about 100 new electric locomotives are to be built for the Federal Railways.

Safety First Movement in China

The accompanying illustration is the exact reproduction of "safety-first" posters which have been placed at all the important railroad grade crossings in China. The originals are mounted on

sheet metal so that they may withstand varying weather conditions. The picture, itself, which is vivid in its description as may be noticed, was so drawn that it might appeal to and be understood by the average Chinaman of ordinary intelligence who does not possess marked alertness or wit, or is yet trained to think for himself

A Fifty-Mile Private Railroad in Mexico

One of the longest private mining railroads in Mexico is the Chihuahua & Oriente which was finished and placed in operation a few days ago. It was built by the Erupcion Mining Company and the Ahumada Lead Company and is 50 miles long. It connects the mines of these companies in the State of Chihuahua with the National Railways of Mexico and affords a direct shipping outlet for their ores. Before the construction of the line the ore output had to be hauled to the railroad shipping point by wagon. Mining operations of the two companies are being enlarged and two hundred tons of ore are being shipped daily to the smelter of the American Smelting & Refining Company at El Paso.

Train of Supplies for Chile With Chilean Locomotive at Head

Equipment and Supplies

Locomotives

THE INDIANAPOLIS UNION has ordered five 0-8-0 type switching locomotives from the Lima Locomotive Works.

THE POLISH STATE RAILWAYS have ordered 25 Consolidation type locomotives from the Baldwin Locomotive Works.

THE CANADIAN PACIFIC is constructing in its own shops three single track snow ploughs and one steel underframe flanger.

THE CHICAGO & NORTHWESTERN will receive bids until August 23 for 40 mikado type superheater locomotives and 10 Pacific type superheater locomotives.

THE NEW YORK, CHICAGO & ST. LOUIS, reported in the *Railway Age* of July 1 as having ordered 14 locomotives from the Lima Locomotive Works, has ordered five additional locomotives from the same builder.

THE E. S. TUBARAO A. ARARANGUA (BRAZIL) has ordered one mikado type of locomotive from the American Locomotive Company. This locomotive will have 16 by 22 in. cylinders and a total weight in working order of 115,000 lb.

THE PUBLIC SERVICE COMPANY OF NORTHERN ILLINOIS has ordered one 0-4-0 type switching locomotive from the American Locomotive Company. This locomotive will have 16 by 24 in. cylinders and a total weight in working order of 99,000 lb.

THE WHEELING STEEL AND IRON COMPANY, Wheeling W. Va., has ordered one 0-6-0 type switching locomotive from the American Locomotive Company. This locomotive will have 20 by 26 in. cylinders and a total weight in working order of 158,000 lb.

Freight Cars

THE UNITED SUGAR COMPANY is inquiring for 40 cane cars.

THE PACIFIC ELECTRIC is inquiring for 200 dump cars of 50 tons' capacity.

THE CANADIAN PACIFIC has ordered 250 refrigerator cars from the National Steel Car Corporation.

THE SEABOARD AIR LINE is having 900 box cars repaired at the shops of the Magor Car Corporation.

THE WILCOX COMPANY, Chicago, has ordered 50 hopper cars from the Western Steel Car & Foundry Co.

THE WHARTON & NORTHERN has ordered from the Clark Car Company 10, 30-yd. extension side dump cars.

THE WEST VIRGINIA PULP & PAPER COMPANY, New York City, is inquiring for 10 steel underframe box cars.

THE TENNESSEE, ALABAMA & GEORGIA is inquiring for 20, 50-ton box and 20, 50-ton composite gondola cars.

THE TEXAS COMPANY has ordered five tank cars of 5,000 gal. capacity from the Pennsylvania Tank Car Company.

THE MANATI SUGAR COMPANY 112 Wall Street, New York City, has ordered 50 cane cars from the Magor Car Corporation.

THE SOUTH INDIAN RAILWAY is inquiring through the car builders for 60 ballast cars, broad gage, and 210 ballast cars of meter gage.

THE CHICAGO MILWAUKEE & ST. PAUL, reported in *Railway Age* July 15 as inquiring for repairs to a number of freight cars, is expected to place orders shortly.

THE CHICAGO & NORTH WESTERN is about to place an order for repairs to 500 box cars which is in addition to the order reported in the *Railway Age* of August 5.

THE WARNER SUGAR REFINING COMPANY, New York, has ordered for the Miranda Sugar Company 150 cane cars of 30 tons' capacity from the Magor Car Corporation.

THE JACOB DOLD PACKING COMPANY, Buffalo, N. Y., reported in the *Railway Age* of July 8 as inquiring for from 50 to 100 refrigerator cars of 30 tons' capacity, will build 35 refrigerator cars in its own shops.

THE CHESAPEAKE & OHIO reported in the *Railway Age* of July 22 is inquiring for 50 refrigerator cars of 40 tons' capacity, has ordered this equipment from the American Car & Foundry Company and it will be built at the company's Berwick, Pa., plant.

THE GRAND TRUNK is having 100 refrigerator cars repaired at the shops of the National Steel Car Corporation. This road is also having repairs made to 500 coal cars and 500 box cars; the order being divided between the Canadian Car & Foundry Company and the Eastern Car Company.

THE CHICAGO, ROCK ISLAND & PACIFIC, reported in the *Railway Age* of July 15 as inquiring for repairs to a number of freight cars and the *Railway Age* of August 5 as having placed orders in part, has now ordered repairs to 1,500 composite National dump cars from the Western Steel Car & Foundry Company.

THE CHESAPEAKE & OHIO recently placed orders for repairing steel coal cars as follows: Illinois Car & Manufacturing Company, Hammond, Ind., 1,000 cars; Keith Railway Equipment Company, Hammond, Ind., 500 cars; American Car & Foundry Company, Huntington, West Va., 1,500 cars; and Richmond Car Works, Richmond, Va., 1,000 cars.

Passenger Cars

THE DIRECTOR GENERAL OF MAIL, MEXICAN GOVERNMENT, is inquiring for 15 mail cars.

THE CANADIAN PACIFIC has ordered 15 baggage cars from the National Steel Car Corporation.

THE ATCHISON, TOPEKA & SANTA FE has not yet placed an order for the 8 buffet library cars referred to in the *Railway Age* of July 1.

Track Specialties

THE MISSOURI PACIFIC is inquiring for 3,000 kegs of track spikes.

Machinery and Tools

THE LONG ISLAND has ordered from the Niles-Bement-Pond Company one 10-ton, 3-motor electric traveling crane.

Miscellaneous

THE CHICAGO UNION STATION is inquiring for 8 tractors and 200 trailers for use in the mail building.

Signaling

THE ILLINOIS CENTRAL has ordered from the Hall Switch & Signal Company 54 unit type three-color light signals.

THE EASTERN BENGAL RAILWAY, India, has ordered 406 relays from the Hall Switch & Signal Company, Garwood, N. J.

THE ATCHISON, TOPEKA & SANTA FE has ordered from the Union Switch & Signal Company the material for 121 miles of automatic block signaling; 75 miles on the Coast Lines, color-light signals, style L, 3-color, and 46 miles on the Eastern Lines; semaphores, style T-2, top-post. These semaphores, 146 of them, will be installed between Dumas, Mo., and Medill, 11 miles; Melvern, Kan., and Ridgeton, 8 miles; Neosho Rapids, Kan., and Emporia Junction, 10 miles; Wagner, Kan., and Braddock, 10 miles, and between Walton, Kan., and Newton, 7 miles. The light signals are to be installed on the double-track line between Yampai, Ariz., and Griffith.

Supply Trade News

G. S. Bigelow, Chicago representative of the Mountain Varnish & Color Works, Toledo, Ohio, has resigned.

H. F. Barrus, sales manager of the Union Twist Drill Company Athol, Mass., has resigned to enter business in the firm of **Barrus & Cullen, Ltd.**, London, England.

W. E. Farnan has been appointed director of the special committee on railroad lumber requirements of the Southern Pine Association, with headquarters at New Orleans, La.

Monroe L. Patzig, 206 Eleventh street, Des Moines, Iowa, has been appointed representative of the **Conveyors Corporation of America**, Chicago. Mr. Patzig's territory is in Central Iowa.

The Klein-Logan Company, Pittsburgh, Pa., has recently opened an eastern sales office in the Woolworth building, New York City to handle railway track tools manufactured by this company.

The Franklin Moore Company, Winsted, Conn., manufacturers of material handling machinery for industrial plants has appointed the **Scheid Engineering Corporation**, 90 West street, New York City, as its metropolitan and export representatives.

The New York City office of the **Chicago Flexible Shaft Company**, Chicago, manufacturers of Stewart industrial furnaces, which has been located at 350 Broadway since it was established early in 1920, has been removed to 16 Reade street. The office, as before, is in charge of J. W. Lazear.

The King Pneumatic Tool Company has moved into a new factory at 1735 Armitage avenue, Chicago, with more than double the capacity of the former plant. The company manufactures molybdenum steel riveting hammers, chipping hammers, rivet cutters, electric drills, and a complete line of pneumatic tools and accessories.

J. J. Hennessy and Hugh Bonham have been appointed assistant superintendents of the lubrication division, railway traffic and sales department of the **Texas Company**, New York. Mr. Hennessy's appointment is for the eastern territory with headquarters at New York City and Mr. Bonham's for the western territory with headquarters at Chicago.

Trade Publications

ELIMINATING WASTE IN BLASTING.—A 48-page, illustrated, booklet has been issued recently by the Hercules Powder Company, Wilmington, Del., devoted to the question of eliminating waste in various forms of blasting. The text takes up in detail the important factors to be considered and in conjunction with numerous illustrations, describes how the work may be handled with economy. Among the chapters are several devoted to planning, drilling, choosing explosives, firing schedules and systems, etc.

ELECTRIC FANS FOR RAILWAY SERVICE.—"The Safety Fan" is the title of a 57-page catalogue recently issued by the Safety Car Heating & Lighting Company, 2 Rector street, New York. The catalogue describes and illustrates the fans for railway cars which are made by the Safety Company and also describes the manner in which the fans can be used to best advantage. A cross indexed table shows at a glance which of the parts of the several fans and speed controls are interchangeable.

WROUGHT IRON.—An interesting and well illustrated description of the manufacture of ordinary wrought iron and staybolt iron is contained in a booklet recently issued by the Penn Iron and Steel Company, Creighton, Pa. The book tells briefly the story of the first rolling of iron bars in America, which is followed by an account of the successive stages in the manufacture of the modern product. In addition to the illustrations of rolling mills and test pieces the book contains a table of the weights of round and square bars.

Railway Construction

BALTIMORE & OHIO.—This company has awarded a contract to the Seabord Construction Company, Philadelphia, for the elimination of a grade crossing with the Lincoln highway at Lumbrook, Del. The company's tracks are to be carried over the highway on a double-track, through plate girder span. The steel for the work was fabricated by the Fort Pitt Bridge Works.

CHICAGO, BURLINGTON & QUINCY.—This company has requested a permit in the city of Council Bluffs, Iowa, to construct a brick roundhouse in that city, of which five stalls will be constructed in the near future.

CHICAGO, ROCK ISLAND & PACIFIC.—This company is now preparing plans for the construction of a passenger station at Moline, Ill., which will have terra cotta walls, brick veneer base and tile roof, and will cost approximately $100,000.

CHICAGO UNION STATION.—This company will soon call for bids for the construction of a concrete trucking subway extending north of Harrison street, Chicago. The work will include three elevator pits and syphon basins and an extension to the Washington street tunnel of the Commonwealth Edison Company.

DAYTON, TOLEDO & CHICAGO.—This company, operating a railroad extending from Dayton, Ohio, north to Delphos, a distance of 95 miles, ceased operations on August 1. In a report to the post office department, W. H. Ogborn, receiver, stated that operations were discontinued "on account of defective bridges and tracks and the financial condition due to the strikes."

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of August 5 as calling for bids for the construction of water station, including a 100,000 gal. storage tank at Matteson, Ill., in connection with grade separation work at that point, has awarded a contract for this work to Joseph E. Nelson & Sons, Chicago. The company has awarded a contract to the Ellington-Miller Company, Chicago, for the masonry work for the Island Creek bridge included in the double tracking between Paducah, Ky., and Clark, which work will involve an expenditure of approximately $25,000; and is also inquiring for bids for alterations to its freight house at Indianapolis, including the construction of a new transfer platform and concrete pavement, this work having been noted in the *Railway Age* of July 15 as being contemplated.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—This company is calling for bids for an 18-stall brick roundhouse at Gladstone, Mich., to replace a structure recently destroyed by fire.

MISSOURI, KANSAS & TEXAS.—This company has awarded a contract to H. D. McCoy, Cleburne, Tex., for the construction of a freight house at Wichita Falls, Tex.

UNION PACIFIC.—This company will close bids August 23 for the remodeling of its passenger station and for the construction of a freight house at Sterling, Colo.

VENTILATION OF PASSENGER CARS might well engage the attention of the railway managers when they have a little leisure.

This is the season of that very serious affection, the "Summer cold," and particularly exposed to the malady are those daily travelers, the members of the commuting tribe. They arrive at the station in Summer more or less hot and moist. . . . No matter how much care they exercise, they are the helpless victims of the window next ahead of the one by which they place themselves, for it is a peculiarity of railway cars that the passenger gets the draft, not from his own window, but from that of his neighbor in front of him. Nobody, or almost nobody, gives a thought to what is suffered by the other person upon whom the gales blow. European cars, with windows that open from the top, instead of from the bottom, are better; they do not go down very far, and ventilation is effected without drafts being felt by anybody.—*New York Times.*

Railway Financial News

ALABAMA & MISSISSIPPI.—*Sold.*—The Alabama & Mississippi railroad, operating between Vinegar Bend, Ala., and Pensacola, Miss., a distance of 76 miles, was sold at auction on August 1 by order of the United States District Court. The purchase price was $142,365, and J. W. Backstrom, of Leakesville, Miss., and H. C. Turner, of Mobile, Ala., who have extensive mill interests in Greene county, Miss., through which that line passes, were the buyers. The railroad owns five locomotives, 24 freight cars and three passenger cars, and runs one train a day each way. It has been in receivership since March, 1921.

CHICAGO UNION STATION CO.—*Guaranty Not Applicable.*—The Interstate Commerce Commission has rendered a decision that the provisions of Section 209 of the transportation act providing for the guaranty for the six months' period of 1920 are not applicable to this company on the ground that its revenues were covered by those of the tenant lines. The property was operated during the guaranty period by the Pennsylvania Railroad as agent for the tenant companies.

COLORADO & SOUTHERN.—*Authority to Abandon Branch Denied.*—The Interstate Commerce Commission has denied the application of this company to abandon its Buena Vista-Romley branch, including certain mine trackage, making a total distance of 29.42 miles, on the ground that the abandonment would deprive a large section of the benefits of rail transportation and would probably result in the abandonment of the mining district and the loss of large investments heretofore made. While the operation of the line for the past four or five years has resulted in substantial losses, the commission says the record affords some assurance that the conditions which produced that result are changing and that future operations may show a more favorable return. If the improvement should not materialize within a reasonable time, the applicant may renew this application. The commission also says the offer of the company to lease the line to the shippers and others that protested against its abandonment at a rental of $5 a year should be given serious consideration.

NEW ORLEANS, TEXAS & MEXICO.—*Application for Authority to Acquire Control Denied.*—The Interstate Commerce Commission has denied this company's application for authority for the proposed acquisition of control of the Dayton-Goose Creek by purchase of its capital stock, as not being in the public interest.

NEW YORK, LACKAWANNA & WESTERN.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized this company to issue $13,639,000 of first and refunding mortgage bonds to be delivered to the Delaware, Lackawanna & Western in reimbursement of advances and in payment of a note. The company was also authorized to issue $10,000,000 of first and refunding mortgage bonds or not exceeding $5,000,000 of stock and such amount of bonds as, together with the stock, will aggregate $10,000,000, to be sold or exchanged for the purpose of paying or refunding certain construction mortgage bonds and terminal and improved mortgage bonds. The Delaware, Lackawanna & Western was authorized to guarantee the bonds and stock.

PENNSYLVANIA RAILROAD.—*Assumes Operation of G. R. & I.*—Announcement is made that the Pennsylvania has taken over and assumed the actual operation of the Grand Rapids & Indiana Ry., in accordance with its lease of that property.

TERMINAL RAILROAD ASSOCIATION OF ST. LOUIS.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $2,499,000 of general mortgage 4 per cent bonds to reimburse the treasury for expenditures. The bonds are not to be sold at present but are to be placed in the treasury.

VIRGINIAN & WESTERN.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $1,500,000 of first mortgage 5 per cent gold bonds to be sold at not less than 95, the proceeds to be applied in part payment for advances by the Virginian.

Treasury Payments to Railroads

Since last announcement, dated July 1, 1922, payments under Sections 204, 209, 210 and 212 of the Transportation Act, 1920, as amended, have been made by the Treasury as follows:

Section 204	
Butler County Railroad Co.	$18,778.17
Fernwood, Columbia & Gulf Railroad Co.	46,478.66
Knoxville, Sevierville & Gulf Railroad Co.	5,099.25
Lumpkin, Hemphill & Gulf Railway Co.	6,517.07
Mansfield Railway & Transportation Co.	14,962.09
Macon, Dublin & Southeastern Railroad Co.	18,458.53
St. John & Ophir Railroad Co.	17,977.78
Section 209:	
Alabama Central Railway Company	2,246.48
Lyon, Berry & Sullivan R. R. Co.	2,961.63
Brownwood North & South Railway Co.	1,051.27
Bernettsville & Cheraw Railroad Co.	6,319.94
Fernwood, Columbia & Gulf Railroad Co.	12,480.05
Fort Worth & Rio Grande Railway Co.	41,885.67
Illinois Central Railroad Co.	1,313,078.57
Kansas City, Clinton & Springfield Ry. Co.	31,228.29
Kansas City, Mexico & Orient Ry. Co. of Texas	84,715.19
Kansas City, Mexico & Orient R. R. Co., receiver	32,904.17
Middle Tennessee Railroad Co.	20,864.90
Port St. Joe Dock & Terminal Railway Co.	1,410.22
Quanah, Acme & Pacific Railway Co.	17,226.86
St. Louis, San Francisco & Texas Railway Co.	114,967.63
St. Louis-San Francisco Railway Co.	855,449.76
Section 210:	
Cisco & Northeastern Railway Co.	27,863.00
Tennessee Central Railway Co.	563,000.00
Section 212:	
Port Bolivar Iron Ore Railway Co.	4,000.00
Total	$3,261,014.36

The total payments to July 31, 1922, have been:

(a)	Under Section 204, as amended by Section 212 for reimbursement of deficits during Federal control:		
	(1) Final payments, including partial payments previously made	$2,789,007.82	
	(2) Partial payments to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	1,201,603.54	
	Total payments a/c reimbursement of deficits		$3,990,611.36
(b)	Under Section 209, as amended by Section 212 for guaranty in respect to railway operating income for first six months after Federal control:		
	(1) Final payments, including advances and partial payments previously made	$91,201,862.25	
	(2) Advances to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	222,102,672.00	
	(3) Partial payments to carriers as to which a certificate for final payment has not been received, as stated above	132,281,922.09	
	Total payments account of said guaranty		445,586,456.34
(c)	Under Section 210 for loans from the revolving fund of $300,000,000 therein provided		314,693,943.00
	Total		$764,271,010.70

Repayments of loans have been made by 31 roads to the amount of $81,363,500.

Trend of Railway Stock and Bonds Prices

	Aug. 8	Last Week	Last Year
Average price of 20 representative railway stocks	70.72	68.98	56.04
Average price of 20 representative railway bonds	88.71	88.36	76.15

SEVERAL HUNDRED EMPLOYEES of the Pullman Company recently entered a competition for the best definition of the word "courtesy." The three prize winning definitions are as follows: First prize, $50—Courtesy consists of giving those we meet such considerate attention that their every want will be satisfied, and that they will realize the attention is due to real interest in their comfort; second, $35—Courtesy is the spirit and essence of service, kindness and good will. The cheery word, the friendly smile, the helping hand—these are handmaidens. It is born of a gentle mind and fostered by tact; third, $15—Do all the good you can, to all the people you can, whenever you can and as promptly and politely as you can.

Railway Officers

Financial, Legal and Accounting

Z. G. Hopkins, assistant to the chief officer of the Missouri, Kansas & Texas, has been appointed manager of the newly created department of public relations, with headquarters at St. Louis, Mo., effective Aug. 1.

Traffic

J. J. Finney has been appointed chief of the tariff bureau of the El Paso & Southwestern, effective August 1.

F. S. Brooks, assistant general livestock agent of the Chicago, Rock Island and Pacific with headquarters at Kansas City, has been promoted to general livestock agent of that road with headquarters at Chicago. He will be succeeded by **A. Peterson,** division freight and passenger agent, with headquarters at Amarillo, Texas.

R. H. Miller, traveling passenger agent of the Chicago & North Western with headquarters at Buffalo, N. Y., has been promoted to general agent with the same headquarters, effective August 1, with charge over the newly established offices of the company in that city. Effective the same date, **W. W. Pontius,** city agent at Cleveland, and **J. P. Fox** have been appointed traveling passenger agents.

Engineering, Maintenance of Way and Signaling

W. P. Wiltsee, assistant engineer of the Norfolk & Western, with headquarters at Roanoke, Va., who has been promoted to principal assistant engineer with the same headquarters, was born on May 30, 1878, at Cincinnati and entered railway service in 1895 as rodman with N. D. Burke, consulting engineer at Cincinnati. He was engaged in municipal and railroad work until 1899, when he entered the employ of the government as a draftsman and instrumentman on river and harbor work. In 1900 he re-entered railway service as assistant engineer of construction and maintenance of the Cincinnati, Portsmouth & Virginia (Norfolk & Western) and in 1901 joined the Norfolk & Western as a draftsman in the office of the engineer maintenance of way and served successively as chief draftsman in the office of the engineer of construction from 1902 to 1903 and as assistant engineer on branch line developments from 1903 to 1912. On the later date he was placed in charge of extensive tidewater improvements at Norfolk and related work. He was employed in this capacity until 1916 when he was appointed assistant engineer in the office of the chief engineer in charge of engineering matters connected with maintenance of way, water supply, fuel stations, etc., which position he held until the time of his recent promotion.

W. P. Wiltsee

General

W. E. Williams has been appointed manager of the newly created department of personnel of the Missouri, Kansas & Texas, with headquarters at St. Louis, Mo.

Obituary

Burton Hanson, for the past 12 years general counsel of the Chicago, Milwaukee & St. Paul, died on August 5 at the Presbyterian hospital, Chicago, from the effects of a minor operation performed July 24, from which he was making good recovery until August 4. Mr. Hanson was born on August 27, 1851, at Rushford, Winnebago county, Wis., and was educated at the Wisconsin State Normal School at Whitewater, Wis. Following the completion of his studies, he began the reading of law in the firm of Carey & Cotterill at Milwaukee. At that time the senior partner of this firm represented the Milwaukee & Northern (now the Superior division of the Chicago, Milwaukee & St. Paul) as solicitor, and in 1879 Mr. Hanson, then also a partner in the firm, was appointed assistant solicitor. He held this position until September 1, 1883, when he relinquished his connection with the Milwaukee & Northern to become assistant general solicitor on the Chicago, Milwaukee & St. Paul, in the service of which he was promoted to general solicitor on September 15, 1895. Mr. Hanson then continued as general solicitor until January 1, 1911, when he was elected general counsel, and was actively engaged in this capacity up to his recent illness.

Burton Hanson

C. W. Jones, manager of the first district of the Chicago, Rock Island & Pacific, with headquarters at Des Moines, Iowa, died in that city on July 22 after a long illness. Mr. Jones was born on November 6, 1860, at Milton, Ind., and entered railway service in 1875 as an agent's helper on the Chicago, Rock Island & Pacific. He was employed successively as telegraph operator from 1877 to 1881; agent and operator from 1881 to 1884, and train dispatcher from 1884 to 1890. In 1890 he was promoted to chief train dispatcher and in 1892, to trainmaster. He was employed in the latter capacity until February, 1895, when he was promoted to assistant superintendent which position he held until August, 1895, when he was promoted to division superintendent, with headquarters at Herington, Kan. He was superintendent of the Eastern division, with headquarters at Horton, Kan., from October, 1897, to May, 1902, and superintendent of the Kansas division with headquarters at Topeka, Kan., from May, 1902, to August, 1905. On the latter date he was transferred to the Iowa division with headquarters at Des Moines, Iowa, which position he held until January 1, 1909, when he was promoted as general superintendent with headquarters at Topeka, Kan. On December 15, of the latter year, he was promoted to general superintendent, with headquarters at Davenport, Iowa, and on February 1, 1912, he was promoted to general manager of the third district of the Chicago, Rock Island & Pacific, and vice-president and general manager of the Chicago, Rock Island & Gulf, with headquarters at Fort Worth, Texas, which position he held until January 1, 1914, when he was transferred to Des Moines.

C. W. Jones

EDITORIAL

Railway Age

The Table of Contents Will Be Found on Page 5 of the Advertising Section

A recent study of the causes of deterioration of freight cars showed that 30 per cent of the expense for repairs was chargeable to time and the elements. As the total cost of freight car repairs in 1920 was $593,000,000, this means that rust and decay in freight cars alone cost the railroads nearly $180,000,000 during that year. This is conclusive evidence of the importance to the railroads of any measures that will prolong the life of wood and steel and indicates the savings that might be effected by the development of non-corrosive materials or of efficient protective coatings. Because of their direct interest, the railroads should take a leading part in research work bearing on these problems and should test thoroughly every promising new material or method. Preservative treatment for lumber where tried has been quite successful. Rust-resisting sheets for cars are now available and a new process of coating underframes with zinc is being used abroad. On certain classes of equipment probably each of these means of prolonging the life of material would save far more than it costs. Possibly it is too early to apply them on a large scale but every railroad should be sufficiently interested to start tests that will demonstrate just what can be expected from each. The cost of such trials would be negligible and they would pay a big return if they led to even a relatively small reduction in the cost of car repairs.

Prolonging the Life of Equipment

Behind the current strike movement is a deep-seated plan to discredit private management of the railroads. No stone is left unturned in efforts to trump up charges of inefficiency of management and to draw unfavorable comparisons with visionary results under governmental operation. This propaganda is so persistent that it can be defeated only by the operation of the railroads with consistent prudence and honesty. It is necessary to guard against anything that has even the appearance of slovenly or indifferent management. The average railroad patron gains his most vivid impression of a railroad while traveling. Of next importance is the opinion gained at the passenger station while awaiting the arrival or departure of trains, and the resultant opinion is the composite impression made on him by the demeanor of the employees, the appearance and cleanliness of the station building and grounds, and the apparent condition of the track. Notwithstanding this, it is a notorious fact that main line passenger tracks are almost invariably in a less favorable condition in the immediate vicinity of passenger stations than at other points on the line. Casual observation made recently at a summer resort station on an important double-track trunk line in the middle west indicated an exceedingly unsatisfactory condition of the track. The receiving end of almost every rail was badly battered, in one case evidencing a split head. Not more than one joint bolt in ten was tight and not a few track spikes were missing. In fact, conditions were far from normal for high speed passenger service. Subsequent observation on the train disclosed riding qualities of the line which indicated that the condition observed at the station was by no means typical of the track along the entire line. It must be said in justice to the maintenance of way officers that the demands made on the track at passenger stations are perhaps less severe than elsewhere because of the lower speeds of the trains, but the fact remains that it is at the stations that people will pass judgment on the standards of maintenance in effect on the property.

Track Maintenance Near Stations

One of the surprising developments of the shopmen's strike is the relatively small increase in the number of locomotives in need of repairs during the first two weeks after the walkout, when the roads had the smallest forces in the shops. Since more mechanics are being recruited daily, the condition of the power will probably improve. Nevertheless, if the miners go back to work, some of the coal-carrying roads may get more traffic than they could handle even if they were not handicapped by the strike. Under present conditions it would be hard to build up the shop forces to meet such an emergency. Probably the most effective method of overcoming a possible shortage of power would be to run the locomotives over two divisions. Several roads have tried this with notable success. One mechanical department officer stated that by thus increasing the mileage of the large power the road had reduced the number of engines required, cut down the cost of maintenance and decreased fuel consumption by 15 per cent. If these results can be obtained in regular operation, surely it would be worth while to try longer runs during the strike in case there is any local shortage of power.

No Prospect of Shortage of Power

To almost succeed is to fail. This truth we learn in childhood and it is illustrated every day in all sorts of contests in work and sport; yet in important matters of everyday duty we forget it, with sad results. The collision near Leeds, Mo., about ten miles from Kansas City, reported on another page, in which three passengers and an employee were killed, when an engineman ran his train past a meeting point, is a remarkable case. It could undoubtedly have been prevented if the conductor, the rear brakeman and the fireman had been absolutely sure that they knew where they were to meet the opposing train. They knew, but they did not know with that certainty which would cause them to act instantly when they saw that action was necessary. The conductor was, very naturally, reluctant to believe that the engineman was forgetting his meet order and so took time to consult another man before pulling the conductor's valve. The brakeman, equally incredulous, took time to look a second time at his copy of the order. Judging by the statements in the report, both of these men will now, undoubtedly, admit that they ought to have set the brakes at once; they could have settled their doubts afterward. As to the responsibility of the fireman, the situation appears to have been about what it always is in reports of this character; a fireman takes no special thought about meeting points until something happens

Difficulty of Checking a Forgetful Engineman

to force him to do so. The failures here noted are recalled, not for the purpose of apportioning blame, for the cultivation of cautiousness is one of the duties constantly enjoined on trainmen, and to censure for an excess of caution is delicate business; but simply to say what we said at the outset; ninety-nine and nine-tenths perfect—or even 99.99—is *not* a good percentage, when it comes to preventing collisions. There is no hope of reaching 100 per cent except by the use of the block system. The government report, by the way, says that this division of the Missouri Pacific is operated by "a manual block system;" but the order directing these two trains to meet at a side track not signaled, and unattended, was, of course, a suspension of the block system. For perfect service it is necessary to regard as essential elements of the block system (1) the beginning and the end of each block section to be unchangeable, permanent and immovable; (2) this location to be marked by a visual signal which the engineman can see, on every trip (so located that he cannot avoid seeing it if he is facing forward with his eyes open) and (3) every clear signal to give unqualified right of road to the next signal.

Is Your Oil-Burning Equipment Efficient?

Fuel oil has superseded coal and coke in many branches of industry. This is especially true in railroad shops and enginehouses where crude oil is the fuel commonly used in furnaces for heat treating, flue welding, forging and riveting. With a coal shortage impending, oil furnaces will probably be installed to a greater extent than ever before and the need for efficient utilization of oil, as well as all other fuels, is self evident. Under present conditions more or less oil is being wasted because in many railroad shops both the furnaces and oil burners have been made locally, representing the ideas of some all-around mechanic. It is not flattery but an expression of undeniable truth to say that the manufacturers of modern oil-burning equipment, having spent years studying combustion problems and developing efficient oil furnaces, know a thousand times more about such equipment than shop men who have not given the subject special study. At first blush it may appear a simple thing to connect fuel oil and air pipes to some sort of combining tube and project the resulting flame into a furnace or onto the work to be heated. Satisfactory results cannot be secured in this way, however, as has been demonstrated by costly experience. Three fundamental operations are carried to completion in every oil-burning furnace which is economical in the use of fuel. In the first place, there must be atomization or breaking up of the more or less highly viscous oil into minute particles; the second operation is to change these particles of oil into gas; the third is to supply just enough air for complete combustion. All of these operations must take place before the flame is directed on the work, otherwise heat units will be wasted and an oxidizing or reducing flame produced with undesirable effects on the work itself. It stands to reason that these three functions cannot be performed except in a suitably designed furnace and with a burner scientifically constructed. What the average railroad saves in attempting to make this equipment instead of buying it of reputable manufacturers is probably lost in a single month in fuel alone to say nothing of the loss from imperfect work. A neutral flame must be maintained in heat treating furnaces or expensive dies may be ruined; in flue-welding furnaces there is a formation of scale or carbon, resulting in defective welds which are always costly and especially so when they do not develop until placed in service. Railroad mechanical officers should take the first opportunity to examine the oil-burning furnaces, making careful tests of their efficiency and replacing them wherever necessary with reliable modern equipment.

The Sulphur Springs Collision

THE COLLISION on the Missouri Pacific at Sulphur Springs, Mo., reported in the last issue of the *Railway Age*, again shows that no matter how perfectly a signal system may be working, the signals will not prevent disaster if they are disregarded by employees. Train control probably would have prevented this accident. However, if other conditions had been different this accident might not have occurred. It is of these we speak, rather than of train control, because they exist on other roads in automatic block signal territory and steps should be taken to remove these "potential danger points."

Trains in the territory where this accident occurred are operated under two systems, one consisting of the time table, train order and telegraph or telephone, and the other the automatic block signal and interlocking system. The train order signal at Riverside, Mo., is connected into the automatic signal circuits so that when it was displayed for train No. 4 on the evening of the accident it caused the automatic distant signal to assume the "caution" position. This distant signal thus gives a caution indication when the train order signal is displayed, and also when its home automatic signal indicates "Stop" or when both the automatic home signal and the train order signal give their respective indications. One system is tied into the other.

This particular condition may account for the engineman on No. 4 running the home automatic signal, which is located around the curve 1,378 ft. in advance of the train order signal. The engineman, slowing down to about 25 m.p.h. to pick up the "19" order, may have assumed that the distant signal was at "Caution" because of the order board, and thinking No. 32 was out of the way may have been busy reading the order and passed the home automatic signal in the "stop" position without observing it. This would not, however, account for his disregard of the distant signal, which was located approximately 2.5 mi. north of the home signal at Riverside, and also of the northbound home signal at the point of the accident.

While the connecting in of train order signals to the automatic block system is considered good practice, in the light of this accident it would appear to introduce a dangerous condition, particularly when signals are located as in this case. Why is it necessary to retain two systems? It would seem that in automatic signal territory the train order signals at stations might well be a pair of home automatic signals in which their O-45 deg. control circuits are broken through a switch in the operator's office. This would enable the operator to control their indication when an order is to be delivered, and when there were no orders or the office was closed these signals would perform their function as part of the automatic signal system. It is because of the above conditions that the question is raised as to the necessity for the continued use of a double signal system, since one system can be made flexible enough to meet all requirements of train operation by signals.

In this connection it may not be amiss to quote from an editorial entitled "Is a Double Signal System Necessary?" which appeared in the *Railway Age* of April 1, 1921, in connection with the Porter, Ind., accident. The quotation follows:

"Each system is largely independent of the other and progressive managements are now directing their efforts towards the co-ordination of the two into one well rounded system. It is realized by operating officers and signal engineers that many 'potential danger points,' such as the one at Porter, Ind., exist and they realize further that 'something' should be done to eliminate this condition.

" 'Something' will be done when the railroads conclude that one flexible system is desired—not one superimposed on the other. It is difficult and sometimes unwise to change

from old established practices too rapidly, but if progress is to be made along any line old practices must give way to new. Railroad officers can well consider the advisability of requiring the automatic block signal system to be self-contained and so complete as to meet all signal requirements. In this way they will obtain greater and better operating results on the initial investment made. The proper co-ordination of signal systems will also remove 'potential danger points.'"

The Next Step

H. G. Wells in "An Outline of History," discussing the Prussian spirit shown in the world war, makes this statement. "A teacher, a professor, who did not teach and preach in and out of season, the racial, moral, intellectual and physical superiority of the Germans to all other peoples, their extraordinary devotion to war and dynasty, and their inevitable destiny under that dynasty to lead the world, was a marked man, doomed to failure and obscurity. . . Only a mind of extraordinary toughness and originality could resist such a torrent of suggestions . . . Frederick Pierce, commenting upon this in his book "Our Unconscious Mind," draws this conclusion: "Reinforce them through all the formative years with such methods and ideas as we have been describing in the quotation, and we shall have a man who may be expected to welcome war exactly as the Prussians welcomed it. To expect anything else would be blind folly from the point of view of psychology."

Let us think for a moment of what has been taking place among railroad men in this country for many years and particularly during the past five years. The propaganda which has been developed by the advocates of the Plumb Plan and the statements and editorials which have been going to the union men from their leaders and through their publications were bound to bear fruit. The present unrest and insubordination among the employees of the railroads it not to be wondered at. The situation has been aggravated by the fact that Congressional committees and the Labor Board have sat patiently listening to the most misleading and extravagant statements from the labor leaders and so-called labor experts without even challenging them or forcing the witnesses to substantiate their statements.

There is no question but what a large proportion of labor union men think for themselves and have not been in entire sympathy with the actions and statements made by their leaders, and yet dissatisfaction has not taken such form as to check the leaders or replace them.

If these conditions are allowed to continue the American railroad systems will eventually be broken down completely, with disaster to the country at large. It is high time that men with a large vision, on the railroads and in public life, should devise ways and means of offsetting malicious propaganda which has been circulated so freely among the men. This is not a simple problem. The average railroad employee is not going to read the editorials in the more thoughtful newspapers and periodicals; nor will he be apt to study treatises on economics. He must be supplied with the simple facts relating to the railroad business and his connection with it, presented in an interesting way and in language which he can appreciate and understand. He is no exception to the general public. Cartoons, pictures and the simplest kinds of charts will catch his eye and appeal to his imagination.

Educational processes of this sort are slow, but they are sure. Economists indicate that we have passed through the period of brute force (although we often revert to type, even now) into a period of competition, and that we are now entering the more advanced stage of civilization—the period of co-operation. In discussing how our citizens may be better prepared to function properly in this more advanced stage, Pierce in "Our Unconscious Mind" makes several suggestions. Naturally he starts with the education of the children, but the same principles will, of course, meet with effective results if applied generally. Following is an example. "Two or three times a week each teacher takes five minutes at the close of the day to report the most notable example of co-operation that has come to her attention, not sentimentally, but in precisely the same spirit as mention of a soldier in dispatches. The ideal held before every child is that to win honor and esteem there must be something achieved in the way of help to another. Disputes shall invariably be settled by one or more referees."

People are thinking much in these days in terms of making regulations and laws which will prevent strikes and industrial difficulties, such as those through which we are now passing. These deal with the results and do not necessarily touch or remove the underlying causes. If we are to get real results it will be necessary to go far deeper and to lay a solid foundation which will insure permanent results. This can only be done by the most scientific, thorough and intelligent educational work among the workers, throughout the communities and in the public schools. Such efforts work slowly, but they are absolutely sure of producing real and permanent results. Is it not high time that a start was made in this direction?

Lest We Forget

On October 10 the Chicago, Rock Island & Pacific will celebrate the seventieth anniversary of the operation of its first passenger train. At that time special programs will be presented over the system depicting the various stages in the development of this railway from a line of less than 40 miles, traversing only 2 counties of one state to a system of more than 8,000 miles in 14 states. This development has taken place in a period of less than three-quarters of a century. In this growth the Rock Island has been typical of the roads which now form a network of transportation arteries across the vast prairie areas west of Chicago and to only a slightly less extent those of the entire United States and Canada.

Pushing west from Joliet, the Rock Island was the first road to reach the Mississippi river, building into the city whose name it carries in 1854. It reached the Missouri river at Omaha in 1869 and at Kansas City a few years later. It acquired the Chicago, Kansas & Nebraska, comprising 1,500 miles of lines in Kansas, Nebraska, Colorado and that portion of Oklahoma then known as Indian Territory, at a foreclosure sale in 1891. At later dates it also acquired control of other roads, most prominent among which were the Burlington, Cedar Rapids & Northern, and the Choctaw, Oklahoma & Gulf. The result of this era of construction and purchase is the system of today, a collection of lines aggregating over 8,000 miles, affording the sole means of transportation to hundreds of communities and a competing outlet for an even larger number.

Anniversaries such as these impress one with the newness of our transportation system. Starting from nothing, only 90 years ago it has developed into a system which comprises more than one-third of the railway mileage of the world. It has pioneered in the opening up of vast areas for agricultural and industrial development. It has made it possible for the Kansas farmer to dispose of his wheat in the markets of the world and for the dweller in the Eastern cities to eat Oregon strawberries.

In the enjoyment of these advantages of our transportation we are prone to lose sight of the fact that they have been made possible by the courage and daring of the early pioneer who more frequently than otherwise lost more than he gained. Few of the early railways in the West escaped receivership

and reorganization with the resulting sacrifice by the original owners of a large part of their investment. The difficulties experienced by the lines which are now the main arteries of the Rock Island system in the Southwest were typical of the roads of this entire area. In thinking of the railways of today we should not forget the pioneers who laid the foundations for the present system and the fruits of whose courage we are enjoying.

Arbitration or Anarchy?

THE COAL MINERS' and railroad shop employees' strikes have caused many people not ordinarily prone to pessimism to consider seriously the question whether this country is drifting toward anarchy. It may be predicted with some confidence that this will not be the result of these particular strikes, although there are persons in high places who have expressed fear that even they may produce conditions that will cause a revolution. It is probable that these strikes finally will be settled in some way. But the controversies which caused them and incidents which have resulted from them are sufficient to make even those ordinarily disposed to be optimistic to regard the future with grave apprehension.

Developments which preceded and which have occurred during these strikes disclose differences between the employers and the labor unions which are fundamental and irreconcilable. Some of the points regarding which developments before and since these strikes began have disclosed irreconcilable differences between employers and employees in large scale industries are the following:

First, labor unions insist upon national negotiations and action. Their leaders do this principally because they believe that negotiations and action by the labor unions on a national scale will give them the maximum possible power to enforce their demands. Employers oppose national negotiations and action because they probably do give labor unions the maximum possible power and because employers naturally are unwilling to agree to a policy having the purpose and effect of giving labor unions so much almost irresistible power.

Second, the labor unions demand wages which are based upon estimates of the needs, real or imaginary, of their members and their families. Employers will not and, in fact, cannot grant what the labor unions demand, because under present conditions industry cannot produce enough to give the members of the labor unions what they demand.

Third, in seeking the maximum possible power and in making demands which it is economically impossible to grant, some of the largest and most important labor unions are trying to overthrow the present system of private ownership and management of certain industries and to replace it with some such system as the Plumb plan. Employers engaged in private industry never will long grant demands which they know are made with the purpose of overthrowing private ownership and management, and the granting of which will tend to produce that result.

Fourth, some of the largest and most important labor unions refuse voluntarily to arbitrate any controversy, and claim for themselves the right, when a government arbitration body such as the Railroad Labor Board makes an award, to accept it or to reject it and strike according to whether they like it or not. They maintain that the right to strike is a fundamental right of man. At the same time that the shop employees' unions are striking against an award of the Railroad Labor Board their leaders, with the greatest inconsistency, exaggerate and denounce the comparatively few instances in which the railways have failed to carry out orders of the board. The railways maintain that all important controversies between them and their employees should be submitted to arbitration, and of course never can agree that it is a crime for the railways to disregard an award of the Labor Board merely the exercise of a fundamental human right for the employees to disregard and strike against an award of the board.

Fifth, the labor unions maintain that when their members strike even against a decision of the Labor Board they retain unimpaired their rights to the jobs at which they have quit working, and that this carries with it the right on their part to prevent other men from taking these jobs, and the right to be restored to them when the strike is settled. Neither the railways nor any other class of employers ever can accept this principle, because its acceptance necessarily would give men disposed to work almost no incentive to do so, and men disposed to strike every incentive to do so, and render victory for the strikers practically certain in every strike.

Sixth, the labor unions claim for their members the right to put pickets at every point affected by a strike, and to have the pickets use every form of "persuasion" to keep men from working. In every important strike such picketing results in violence. The pickets may be the authors or the victims of the violence, but experience shows that where picketing is done violence is practically inevitable. Violence results in most communities in local police, United States marshals or troops being called to suppress and prevent it. In the shopmen's strike, not only the strikers but employees in train service who sympathize with them, have resented the use of armed guards to protect men who want to work, and in some cases have struck in plain violation of their contracts with the railways rather than work where there are armed guards. But employers never can agree to the labor union theory that they should not seek police or military protection for property and men who are willing to work, for this, like agreeing to the labor unions' theory regarding seniority, would be to concede victory to the strikers from the very start.

Since such irreconcilable differences exist between certain classes of employers and labor unions, it is plain that strikes in large scale industries with resulting assaults, murders, destruction of property, and most serious interference with business of all kinds, are inevitable, unless the public intervenes to prevent them.

It seems evident, therefore, that the public must make a definite choice in the comparatively near future between compulsory arbitration of labor disputes in large industries, on the one hand, and strikes having the most serious possible consequences, on the other hand. It must require the parties to these great controversies to submit their differences to determination by bodies on which representatives of the public hold the balance of power, and then compel both sides to accept the awards, or prepare for the inevitable outcome of even worse strikes than those now in progress, and that is anarchy. The great question presented to the people of the United States by the coal strike and the shopmen's strike is —Arbitration or anarchy?

It looks very much now as if in the long run the question will be decided in favor of anarchy. Employers in the railroad and some other industries are just as inflexibly determined not to yield to the labor unions as the labor leaders in these industries are to force them to yield, and unless the public will step in and for its own protection exert for industrial peace a power greater than that of either side the results in the long run will be appalling.

It may reasonably be asked, if the public, through the governments, local, state and national, will not intervene either to prevent or punish such outrages and crimes as have been committed in connection with the present strikes, how can it be hoped that it will establish a policy of compulsory arbitration and enforce the resulting awards? This cannot reasonably be hoped for unless the people of the United States can be aroused to an understanding of the significance of such developments as strikes in defiance of awards made by a government body, wholesale murder such as occurred at

Herrin, Ill., and sympathetic strikes in violation of solemn contracts against the use of police and military for the protection of property and lives, even where property already has been destroyed, and people, even including public officials, already have been shot. The difference between such a situation as already exists and that of absolute anarchy is merely one of degree and not of kind.

A man must be very prejudiced or very blind who does not see that unless the public through its government, does forcibly intervene the struggles between employers and labor unions are going to grow more extensive, more bitter and protracted, more lawless and ruinous, and that only enforcement of the principle of arbitration and enforcement of the laws against violence, whatever its pretext or purpose, can save the country from drifting sooner or later into a condition of affairs far worse than that which exists at present.

Labor Union Theory of Seniority

RAILWAYS having most of mileage in the country have accepted President Harding's proposal that the striking shop employees shall be put back to work and the seniority issue submitted to the Railroad Labor Board for determination subject to certain conditions. One of these is that the status of men now at work shall not be disturbed until the seniority question is settled. Another is that former employees who have been proven guilty of violence shall not be taken back. Railways having about 57,000 miles of line have agreed to take strikers back and submit the question of seniority to the Labor Board subject to the foregoing conditions, and also to the further condition that they and their employees shall not be deprived of the right of review by the courts of any decisions of the Labor Board which may affect agreements now in existence between the railways and their employees.

The labor unions composed of the strikers still maintain their stand that the strikers must be taken back with their full seniority rights. In this position they are given the backing of other railway labor unions, and especially of the train service brotherhoods, whose heads have been trying to mediate between the railways and the strikers. The principle upon which the labor leaders base their claim that the strikers should be taken back to work with their full seniority rights has been stated as follows by L. E. Sheppard, president of the Order of Railway Conductors: "The real issue as we see it is the status of the men on strike. We hold that they are not dismissed from the service—that they have not resigned. They are awaiting a settlement of their differences and all rights as employees are suspended, so to speak, contingent on whether or not they go back to work."

This means in substance that if an organized body of workers leave their jobs in concert for any period, however long, to compel an employer to grant demands that the strikers have made, they retain the same rights to their positions that they had before they quit work. It means, in other words, that they own their jobs as they may own property, and that like the owner of any other property they do not lose their ownership of them unless they abandon them with the avowed purpose of never trying to recover them.

Of course, this principle is the direct negation of the principle of private property as established and recognized by the laws of every country in which private property exists. It is an economic impossibility for one man or group of men to own a manufacturing plant or a railway shop, and for another group of men at the same time to own the jobs in the plant or shop. Even when the owner of a plant makes a contract with an employee the law does not give the employee the ownership of the job. The employer may discharge the employee and thereby takes the job from him at any time. The employee may sue the employer for any damages caused him by the violation of the contract, but no law will require the employer to restore the job to the employee upon the theory that the job is the employee's property.

If the labor leaders' claim is the result of any process of reasoning, the conclusion they have reached, and which Mr. Sheppard has stated, must be that the striking employees have a *moral* right to recover their jobs with all the rights and privileges associated with them before they left them. There is no question whatever that an employee has a moral right to any position in which he does his work faithfully and well and in which the financial circumstances of the employer enable the employer to retain him. But do employees, who leave their jobs in concert for the express purpose of stopping the operation of a plant and inflicting such injury upon the employer that he will be compelled to grant their demands, retain the moral right to be restored to their jobs? Do they retain moral rights to their former jobs superior to the rights to these jobs of men who stay at work or who go to work during the strike? How can men who take concerted action for the avowed purpose of so injuring an employer as to compel him to agree to their terms have a moral right to the same kind of treatment from the employer that he would have been obligated to give them if they had not concertedly taken steps to injure and coerce him? The principle stated by Mr. Sheppard is an ethical absurdity.

The simple truth is that lockouts and strikes are a form of warfare. When nations are at peace they have certain moral claims upon one another. When they go to war they cease to have any moral claims upon each other except that in carrying on warfare they should not resort to inhuman methods.

When their representatives sit down after the struggle to make peace they make it on the basis of the status which has been created by the struggle. The same thing must be recognized as true of lockouts and strikes. They disrupt all moral obligations which each party owed to the other before the strike or lockout. If neither party has won a decisive victory the settlement is a compromise in which each party concedes what it chooses to or must. If either party has won a decisive victory it dictates the kind of settlement which it believes will best promote its own interest in the long run.

No group of employers ever can or ever should accept the principle stated by Mr. Sheppard. For the benefit of all concerned, including especially the public, arbitration should be substituted for lockouts and strikes. If, however, lockouts and strikes are to occur the principle must be recognized that when they occur all relations between the employers and employees involved are dissolved, and that when the struggle is terminated, whether by agreement or the victory of one side, the new relations established will be similar to or unlike those which existed before, according to the outcome of the struggle.

To recognize the principle that men may strike at any time they like about anything they please without thereby losing anything except their wages while they are out would be to recognize a principle which would tend to cause employees to take a holiday every time they felt like it and to render it impossible to conduct any business with success. To the successful conduct of any business it is essential that the management should be able to make contracts covering long periods of time and to plan its operations so as to fulfill these contracts. Frequent interruptions of operations will render it impossible for any management to make and carry out plans covering a long period.

Acceptance of the principle stated by Mr. Sheppard would, in the long run, be as ruinous to the workers as it would be to the employers, because the welfare of the workers depends as much as that of the employers upon continuous operation and successful management.

Letters to the Editor

[*The* Railway Age *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about* 250 *words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.*]

Vacuum Brake Tests on English Freight Trains

Derby and Doncaster, England.

To the Editor:

In the article which appeared in your number dated April 1, 1922, pages 823, 824, and 825, on the tests of vacuum brakes described in our paper before the Institution of Civil Engineers, it is pointed out that the retarding effect of the vacuum brake compares unfavorably with tests with the Westinghouse brake made in America as far back as 1887.

We wish to point out that the tests on the Great Northern Railway were in no way intended to ascertain the shortest distance in which a freight train fitted with vacuum brake could be stopped; the object of the tests was to ascertain whether satisfactory stops with existing equipment could be made with what are, in this country, long freight trains consisting of up to 100 wagons. The wagons were not fitted with special apparatus to give the highest braking effect and the results, therefore, should not be compared with the Westinghouse brake as regards stopping distance.

As a matter of fact, tests made in this country and also on the continent, indicate that long freight trains fitted with the vacuum brake stop in as short a distance as trains fitted with the Westinghouse brake.

(Sir) Henry Fowler,
Chief Mechanical Engineer, Midland Railway.

H. N. Gresley,
Locomotive Engineer, Great Northern Railway.

Specialists Needed for Car Repair Work

Chicago.

To the Editor:

The methods of repairing freight cars, both wood and steel, as used on the railroads are in most cases extremely inefficient. The principal reason is lack of knowledge on the part of the men in charge who are usually loaded down with details and have so many duties that they cannot supervise the work properly. These are the conclusions I have reached after many years in the car department, based on personal observations in a large number of shops.

There are thousands of men supervising freight car repair work at salaries from $200 per month up, working under superintendents of motive power who in most cases have no first-hand knowledge of car repair methods. Railroads are paying high salaries to general officers to secure efficiency and conduct transportation at a profit, while some of the men on the mechanical staff are allowing hundreds of thousands of dollars to slip through their fingers on account of inefficient methods, lack of proper organization of freight car repairs, lack of proper knowledge of what appliances to use to get the best results and most important of all, lack of ability to recognize wasteful acts or methods, or knowledge of how to correct them if recognized.

There is a field for specialists or experts in the repair of freight cars, especially steel cars. By this I mean, men who thoroughly understand the scheduling of classified repairs on both steel and wooden freight equipment as well as the building of new equipment; men who actually know just what shop tools are necessary for the maintenance and repair of cars, who will not waste thousands of dollars for facilities where they are not needed; men who can say positively how to better conditions and output on this class of work—in short, men who have mastered the subject of car repairs.

It would pay the railroads to engage men who have the experience and knowledge to effect savings that are possible in car repair work, using such men in an advisory capacity. It is probably not necessary to make the position permanent but it would be necessary to pay what the service rendered is worth. In the past, railroads have not been willing to do this and have kept the wages of the supervisory forces at a low level. This is the reason that most of the best men in the car department enter the employ of the car builders. It probably also explains why the car builders can handle the work more cheaply than the railroads. The field is so large and the present lack of efficiency is so great that there should be a place in the railroad organizations for a man who has the ability to handle freight car repair work economically. Can the railroads be made to recognize the true value of the services of such men?

M. C. B.

Talk Money to Employees

Haileyville, Okla.

To the Editor:

The article by Grant Gibson, on the above subject, in the *Railway Age* of July 1 is certainly worthy of serious consideration by those who are responsible for expenditures on the railroads. There are very few men who work in the offices or shops, or on tracks or bridges, or in any department for that matter, that know the value of the material, tools, etc., with which they work. From a train dispatcher's standpoint, we doubt extremely if there are ten per cent of the train dispatchers who know just what the fuel on the engines costs and how much coal it requires to handle a ton of freight one mile; or what the running repairs of a locomotive per mile amount to in dollars and cents. How many of them stop to figure how much wages in money is lost by a gang of men with a work train when the work train is standing on the side track waiting for trains to pass, some of which are way off the time the work train had on them?

How much is lost in money for switch engines standing still in the yard waiting for delayed passenger trains which are off the time given the yard engines? Does the operator at a small telegraph office stop to figure how much money is lost by his causing a train to stop at his station by reason of a "19" order which he was slow in trying to make delivery? Does the agent stop to consider how much money he has lost to the company because he was late in sending in certain reports, thereby causing the division office to wire or write him for them? Sometime ago it was calculated that each letter written cost about 18 cents. We believe it would be well for the railroads to do a little more talking along the line of money and make up a few statistics to be posted in front of many employees, and supervisors for that matter, to call their attention to just what their carelessness costs the company in dollars and cents. An honest and conscientious employee knowing the facts will try to improve.

J. L. Coss,
Train Dispatcher, Rock Island Lines.

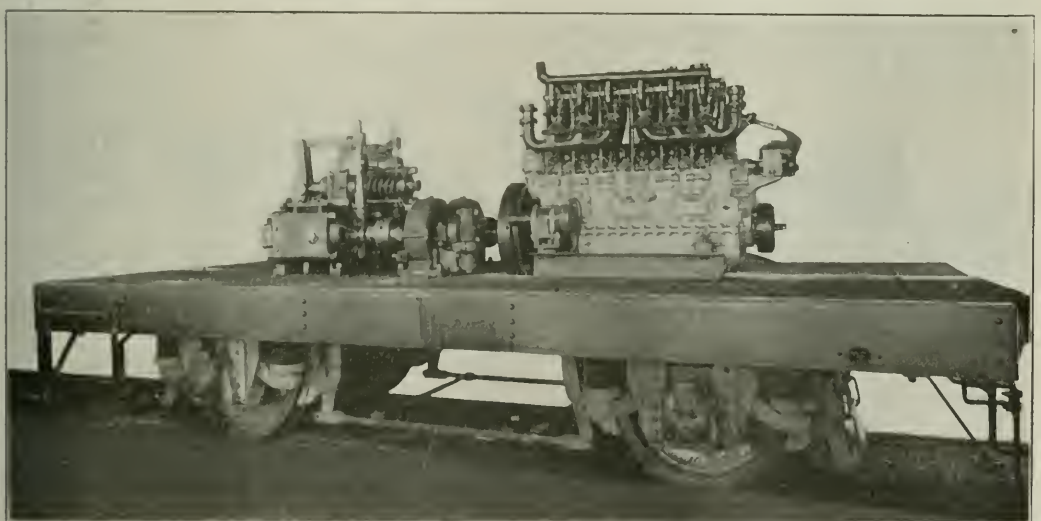
Hauling 14 Cars Weighing 645 Tons with a 150-Horse Power Gasoline Locomotive.

Gasoline Switching Locomotive with Hydraulic Drive

Universal Oil Transmission Governs Speed and Direction and Gives Remarkable Flexibility of Control

ONE OF THE MOST promising developments in the application of the internal combustion engine for railroad motive power is a gasoline switching locomotive designed by John Robson, chief engineer of The Universal Engineering Corporation, Montreal, Can., and recently built under his supervision at the plant of the Canadian Car & Foundry Company, Montreal. The most notable feature of the equipment is the arrangement of power transmission and speed control. This is effected by a Waterbury hydraulic variable speed gear, built in this country by the Waterbury Tool Company, Waterbury, Conn., which gives any speed from zero to the maximum in either direction without steps or gradations and without varying the speed or direction of rotation of the engine. The power to drive the locomotive is supplied by a 150-hp., six-cylinder Ricardo gasoline engine, the engine and transmission being arranged to give a maximum tractive effort of 12,000 lb. and a maximum speed of 12 miles an hour. The locomotive is intended for switching service and has two independently driven axles. It is 19 ft. long and weighs 53,000 lb.



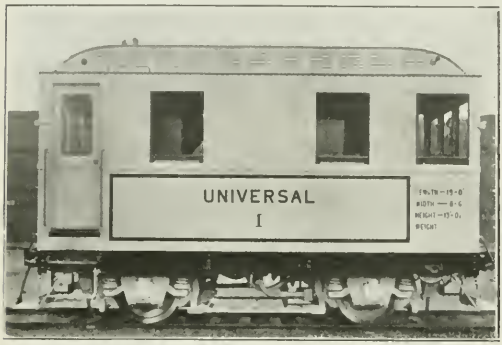
Locomotive with Power Plant and Transmission in Place, Before Cab Has Been Applied

Advantages of Hydraulic Transmission

In practically every design of railroad equipment using internal combustion engines built heretofore, the transmission of power has been effected by shifting gears and clutches, or by electric generators and motors. Neither of these methods is entirely satisfactory. While gasoline-electric equipment affords the necessary flexibility, the control is compli-

cated and the motors and generators increase the weight very greatly. Mechanical devices for changing speed by shifting gears cannot be satisfactorily designed for any large number of speed ratios and this form of transmission can be used only for small size engines due to the limited amount of power that can be transmitted through a friction clutch.

The hydraulic variable speed gear used in this locomotive is comparatively light in weight, easily and simply controlled and gives any desired speed of the locomotive while the engine is governed at a constant speed. Control of speed and

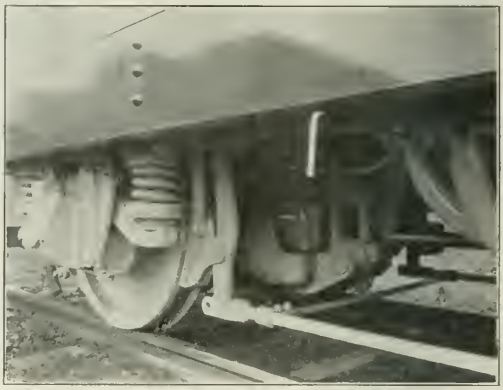


In Appearance the Locomotive Resembles a Small Electric Car

direction can be effected with a minimum of effort on the part of the operator regardless of the load on the locomotive, the flexibility and ease of control being such that complete reversal can be effected as quickly as desired without any undue peak load on the engine, thereby avoiding excessive stresses in the working parts. By the use of an automatic pressure control device the speed of the locomotive is regulated by the drawbar pull entirely independently of the operator in such a manner as to prevent overloading and possible stoppage of the engine owing to stalling.

Description of the Gear

The Waterbury variable speed gear consists of an oil pump, designated as the A-end, and a hydraulic motor, designated as the B-end. The A-end, which is driven by the gasoline engine, delivers oil to and receives it from the B-



A View Under the Body Showing Hydraulic Drive and Suspension

end, the direction of flow and the amount of oil being controlled by a regulating device. The B-end rotates at any speed up to that of the A-end and in either direction, depending upon the quantity and direction of delivery of the oil it receives from the A-end.

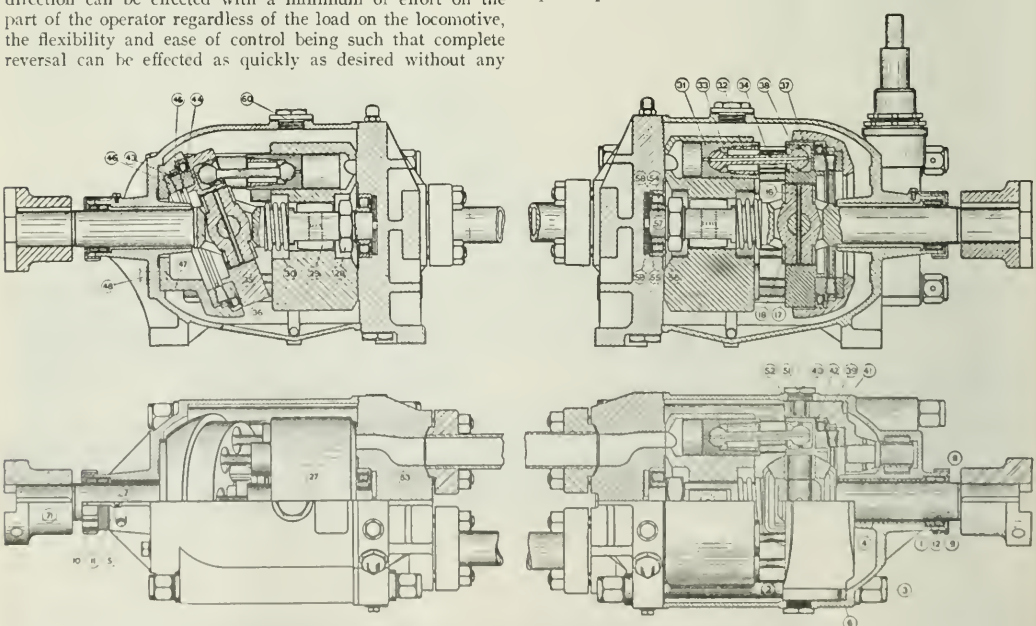


Fig. 1—Sections Through the Pump Unit (Right) and Motor Unit (Left)

The construction and operation of the gear can readily be understood by referring to Fig. 1. In this drawing the driven shaft of the A-end, which receives the power from the gasoline engine, is shown at the extreme right hand side while

the driving shaft of the B-end is at the extreme left. A cylinder barrel (27) is keyed to the inner end of each shaft. Each barrel has nine cylinders parallel to the shaft and fitted with pistons. When the barrels revolve, their inner faces slide on the valve plates (53), each of which has two ports, the ports in the A-end being connected to those in the B-end by

the shaft their planes of revolution may be at any angle with the shaft provided by the setting of the roller bearings on which the socket rings revolve.

In the B-end of the gear the socket ring runs in an angle box secured in the end of the case and making a fixed angle of 20 deg. with the shaft. Thus as the shaft, the barrel and

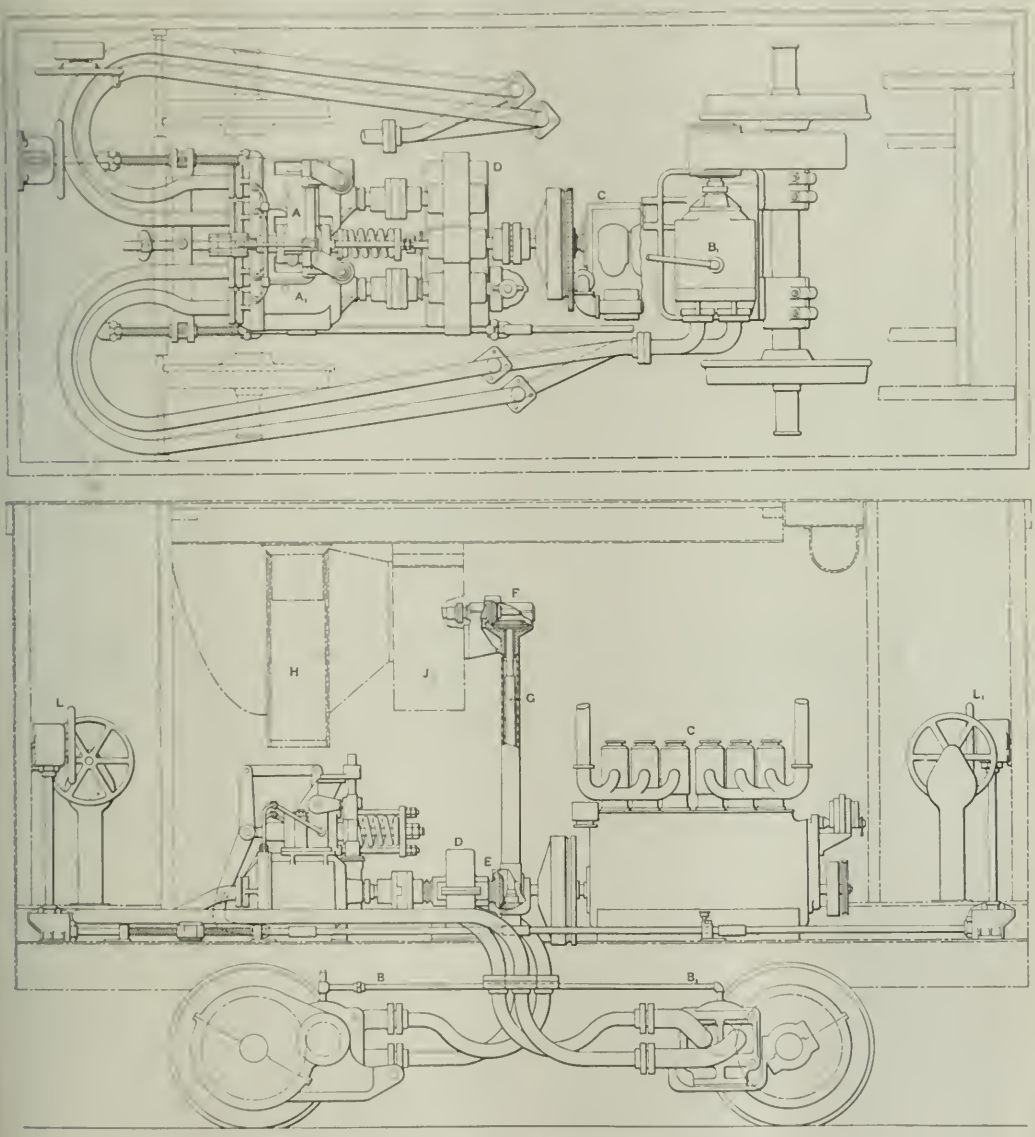

Fig. 2—Plan and Elevation of Gasoline-Hydraulic Locomotive

piping. The cylinder ports in the barrel faces register with semi-annular passages or ports in the valve plates, except at the bridges at the top and bottom of the plates. The connecting rods have one end secured in the piston and the other in the socket ring (35). The socket rings are connected by universal joints with the shaft so that while they revolve with

socket ring revolve in the B-end, the pistons will have a reciprocating motion with a constant stroke. In the A-end the angle box is hung on trunnions and may be adjusted to any desired angle while the gear is running by means of the control shaft. If the angle box in the A-end stands in the neutral position at right angles to the shaft, the pistons are

carried around with the cylinder barrels but have no reciprocating motion. No oil is therefore taken from or delivered to the passages in the valve plates. If the tilting box is inclined by moving the control shaft, the pistons begin to reciprocate, the stroke depending on the angle between the socket ring and the axis of the shaft. Every cylinder during one half of the shaft's rotation is drawing in oil from one of the passages in the valve plate which it carries over and delivers into the other passage during the next half of the shaft's rotation.

The oil from the A-end is forced into one of the passages of the valve plate of the B-end. The cylinders of the B-barrel in communication with this passage make room for the oil by sliding back from the valve plate, but they cannot do this without forcing their respective sockets in the socket rings farther from the valve plates. This can only be done by turning the socket ring as a whole in its inclined plane in the angle box. While the pistons facing the pressure passage

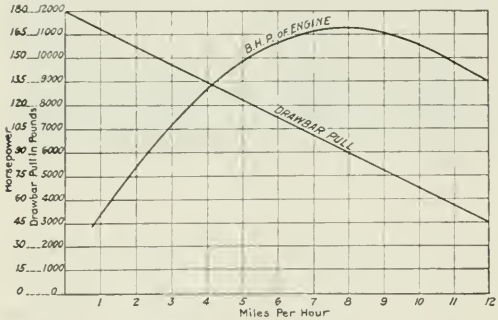

Fig. 3—Drawbar Pull and Brake Horsepower Curves

of the B-valve-plate are receding to make room for the incoming oil and so imparting rotation to the B-shaft, the pistons facing the no-pressure passage are moving toward the valve plate and delivering oil into the respective cylinders of the A-barrel. Since the receiving capacity of the B-cylinders is constant and the delivery capacity of the A-cylinders is varied at will by turning the control shaft, the speed of the B-shaft is correspondingly varied. With the engine running at constant speed the speed of the B-end depends upon the angle which the socket ring in the A-end makes with the shaft, while the direction in which the B-end revolves is governed by the direction in which the socket ring in the A-end is moved from the neutral position.

The efficiency of this type of transmission is high, ranging from 68 per cent at 25 per cent of normal speed to 82 per cent at full speed. The combined A- and B-ends weigh less than 25 lb. per horsepower transmitted. The pressures on the sliding surfaces are largely balanced so that little wear takes place and the pistons have long bearings in the barrel. In spite of the high pressures carried, leakage is negligible.

The appearance of the completed locomotive and the arrangement of the engine and hydraulic speed gear are clearly shown in the photographs. The operation will be readily understood by reference to the plan and elevation drawings.

The power for the locomotive is obtained from a six-cylinder Ricardo gasoline engine *C* with pistons of 5⅝ in. diameter and 7½ in. stroke, capable of delivering 150 brake horsepower when running at a normal speed of 1200 r.p.m. This engine drives through a double-helical reduction gear *D*, two size 50 pump units *J* and *J1*, at 345 r.p.m. From the valve plates of these pump units, piping conveys the oil which is used as a transmission medium to two size 50 speed gear motor units, *B* and *B1*, each of which is connected by spur gearing to one of the driving axles of the locomotive

The casings of the speed gears are connected by piping to a common oil reservoir placed in a convenient position on one of the bulkheads of the engine room, the oil in this reservoir being subject to atmospheric pressure only. Flexible couplings are used between the gasoline engine and the reduction gears as well as between these gears and the pump units of the speed gear in order to allow for any vibration or springing on the framing of the locomotive.

The engine is cooled in the ordinary manner by means of a tubular radiator and fan, the latter being driven from an extension of one of the reduction gear shafts through bevel gears, *E*, *F*, and the vertical shaft *G*, the radiator *H*, and fan *J*, being suspended from the roof of the locomotive, where both the inlet and outlet passages for the fan are provided. The motor units, *B* and *B1*, of the Waterbury speed gear, together with the housing for the spur reduction gear between these units and the axles, are carried on cradles with link and swivel suspension to the under side of the frame-work, as clearly shown in one of the photographs. In this way vertical movement of the axles is provided for without interference with the gearing.

The control of speed and direction is effected by means of either of two hand wheels, *L* and *L1*, placed in the driving compartment at each end, one man only being required to operate and control the locomotive, the speed of which is governed automatically by a hydraulically operated control gear, which acts independently on the control shafts of the pump units as soon as the drawbar pull exceeds a predetermined amount. By the action of a plunger and spring, the stroke on the pistons is regulated in inverse ratio to the oil pressure and in consequence it is not possible for the operator to overload the engine. The pressure range through which the control is designed to act, is from 300 lb. up to 1,200 lb. per square inch, so that on very short piston strokes a torque of approximately four times the normal can be obtained on the axles of the locomotive.

Hand operated brakes of standard pattern are provided and work by a hand wheel placed in each compartment, these brakes being used only for emergency purposes as the stopping and starting, as well as acceleration and deceleration are controlled entirely through the speed gears. For use in coupling the locomotive with freight cars, standard air connections and cylinders are provided for operation in the usual manner from the driving locomotive.

The curve illustrated in Fig. 3 shows the relation between drawbar pull and speed up to 12 miles an hour with the control hand-wheel set for full stroke on the pump units of the hydraulic speed gear, the actual stroke, speed and horsepower of the engine being regulated by the automatic adjustment of the pressure control piston.

In actual service the locomotive has shown remarkable flexibility, which is particularly advantageous in switching service where high starting tractive effort and rapid acceleration are required. The locomotive may be started under a dead load of any amount without overloading the engine. Three turns of the hand-wheel from the neutral position will bring the locomotive up to its full speed. In stopping, the locomotive is gradually brought to a standstill by turning the control shaft to neutral, and in this position the B-end is positively locked against motion in either direction.

Several trials have been made at the plant of the Canadian Car & Foundry Company which have been entirely satisfactory. The locomotive exerts a tractive effort of 12,000 lb. at starting and 3,000 lb. at 12½ miles an hour. On level track a load of 645 tons has been handled readily. In one trial the locomotive took three cars weighing 150 tons up a four per cent grade, stopping at the steepest point and starting again under full load without difficulty. The Universal Engineering Corporation intends to apply the variable speed hydraulic gear to a locomotive of similar type designed for passenger service and also to high-capacity passenger cars.

Commission Orders Increase in Divisions for K. C. M. & O.

WASHINGTON D. C.

THE INTERSTATE COMMERCE COMMISSION in a decision made public on August 14 has ordered that the divisions received by the Kansas City, Mexico & Orient out of joint rates maintained with 13 of its principal connections shall be increased on and after September 15 by amounts ranging from 10 to 30 per cent of the divisions now received by the connecting lines. The decision was rendered by Division 4 of the commission without dissent and is the result of an application filed by the receiver of the Orient and its Texas company for an increase in divisions and the diversion of traffic to the road.

The Orient alleged that its revenues were insufficient to enable it to pay operating expenses, taxes and a fair return on its property or to enable it to perform properly its function as a common carrier and contended that this condition can be remedied only by increasing its divisions or by increasing, through changes in routing, the amount of traffic it handles as an intermediate carrier. The request for changes in routing is before the commission as a separate proceeding. A series of conferences between representatives of this road and its connecting lines and the state authorities was held under the auspices of the Interstate Commerce Commission in July, at which efforts were made to find an immediate remedy for the condition of the road, but no result of these meetings had been announced prior to the issuance of the commission's decision.

Wanted Sufficient Relief to Continue Operation

The commission in its report says that the Orient asked only a sufficient measure of relief to enable it to continue operation and made no request for return upon the investment. The road has shown deficits each year since 1916 and, the commission says, the enormous increase commencing with 1918 is apparently due both to decreased revenues and largely increased expenses. It was claimed that the loss of revenue during the period of federal control was largely due to changes in the routing of through traffic and that since the termination of federal control the former conditions have not been restored. The record indicates that a substantial proportion of the through traffic of the Orient was received from the Southern Pacific and that this carrier reduced its deliveries on account of alleged unsatisfactory service of the Orient. The report points out that the Orient serves an area of about 23,272 square miles with a population of approximately 500,000 and a property value exclusive of cities and towns of $204,250,000. It refers to a statement by the commission on the application of the Orient for a loan that it is not disputed that the Orient system, or at least that part within the United States, is of essential importance in meeting the transportation needs of the public in the territory which it serves, and adds that nothing appears of record in the present case to justify any different conclusions.

The deficits in railway operating income for 1920 and 1921 were $1,407,106 and $860,740, respectively, and, according to the estimate of the Orient, the deficit for 1922 will amount to $1,590,213. For 1921 interest accruals amounted to $514,665, of which only $150,000 was paid, this being applicable to a loan of $2,500,000 to the government. No allegation of inefficient operation appears in the record against the Orient or any of the respondent connecting lines.

Various methods of increasing its revenues had been suggested. Application has been made to the Railroad Labor Board for authority to reduce wages and change rules, which, if granted, will result in an estimated saving of about $525,000. Increase in all rates is not considered feasible for the present for the reason that it is believed that sufficient tonnage would be given to competing lines by the shippers to offset any increase in revenues from higher rates and for the further reason that shippers on the Orient cannot compete with shippers on other lines in the same territory. However, the report says, this matter is receiving consideration. Increasing the volume of traffic handled by the Orient, the report says, would automatically increase its revenues and the commission believes this can be accomplished by designating this line a "differential" route on certain commodities. For instance, a differential of 1 cent per 100 pounds under the established rate on grain to Gulf ports should attract a considerable volume of tonnage. The report says this question should be made the subject of conference between the Orient and its connections and the necessary steps should be taken to accomplish this object. Five of the connecting lines are said to be favorable to the adoption of a plan of differentials.

Details of the Decision

The report continues in part as follows:

The gross revenue of the Orient per equated ton-mile is greater than that of 9 of its connections, and its earnings per car-mile are substantially smaller than 11 of the 13 connections, while the earnings per train-mile are in each instance materially less, thus evidencing a smaller and less profitable train and car load, the usual incident of a light traffic. The operating expenses per equated ton-mile are greater than those of any connection except two small roads, namely, Abilene & Southern and the Clinton & Oklahoma Western, and its expenses per car-mile are substantially greater than those of the nine larger roads, while the expenses per train-mile are in six instances materially less. The general result is that while the Orient sustained a deficit in its net railway operating income of 69 cents per train-mile, all of its connections received incomes ranging from 30 cents per train-mile in the case of the Galveston, Harrisburg & San Antonio to $1.84 per train-mile in the case of the Fort Worth & Denver City.

In other calculations the results as distinguished between freight and passenger traffic have been separately considered based upon an allocation in accordance with our plan to include all operating revenue accounts. The operating ratios of the carriers concerned in respect of all revenue received show that the freight operating ratio is less than the passenger operating ratio with exception of the Atchison, Topeka & Santa Fe, Fort Worth & Denver City, St. Louis-San Francisco, and the Texas & Pacific, for which the freight ratio is higher. In the case of the Fort Worth & Denver City, Missouri, Kansas & Texas of Texas, and Midland Valley, the two ratios are substantially equal, which is also true of the combined result of the 11 major roads used in the calculations. It also appears that the freight ratio of the Orient (1.0791) is approximately 141 per cent of the average freight ratio of the other connecting lines (0.7663) while the passenger ratio of 1.3518 is approximately 175 per cent of the average passenger ratio of (0.7718) the 11 major connections.

The disparity of 41 per cent in the case of freight service and 75 per cent in the case of passenger service would seem to indicate that the passenger fares and freight rates and divisions accorded this carrier are not sufficient to meet even the maintenance, traffic, transportation, and general expenses properly to be charged against either the freight or passenger traffic, to say nothing of taxes, equipment rental and a fair return on the property investment used in the service. As stated above, however, the Orient is seeking only such revenue as will enable it to operate the road and is asking nothing for its security holders.

It is alleged that in many instances where divisions have been established by its connections on an arbitrary basis, these connections have declined to shrink their arbitraries when the through rates have been reduced.

In *Increased Rates*, 1920, 58 I. C. C., 220, we authorized certain percentage increases in order to permit a return of 6 per cent on the aggregate value of carrier property held for and used in the service of transportation within the boundaries of each rate-making group, under normal traffic conditions. In *Reduced Rates*, 1922, 68 I. C. C., 676, we found that 5½ per cent on the aggregate value of such property would constitute a fair return after March 1, 1922. It is apparent, however, that the Orient has not received and is not receiving the share of the revenue within the group in which it is included to which it is

properly entitled on basis of the amount and character of service performed.

Other than filing statements containing information called for by the commission's order, the respondent carrier submitted no evidence at the hearing in this case.

The Orient and each of its connections is ordered to report to the commission on or before September 15 the divisions established according to the rules prescribed in the report and thereafter to jointly report the results of the applications of these divisions for business actually interchanged in 1922 and from January 1 to June 30, 1923.

At one of the conferences held since the hearing in this case the representative of the state of Texas stated that a large number of counties in that state had expressed their willingness to assess the Orient for taxation purposes at the nominal value of $100 per mile. The commission expressed the opinion that other states should follow the lead of Texas in this respect and says that in fact complete exemption from all taxes until the Orient can earn something is demanded in the public interest. This course is earnestly recommended to the respective state authorities. It is also stated that through the proper channels steps have been taken to route government freight over the Orient so far as practicable.

Report on Collision Near Leeds, Mo.

The Interstate Commerce Commission has investigated a collision between westbound passenger No. 11 and eastbound freight No. 92 on the Missouri Pacific, at Hy-tex siding, about two miles west of Leeds, Mo., on July 12, about 6:40 p. m.; three passengers and the engineman of the freight train were killed and 91 passengers, 10 employees and two mail clerks were injured. It fixes the blame on the passenger train. The trains were ordered to meet at Hy-tex, but the passenger train ran past the switch for nearly a mile. The view of the engineman is somewhat obstructed by trees on both sides of the track, the line traversing several curves; and another railroad lies adjacent to the Missouri Pacific, so that it is difficult for enginemen to tell on which track an opposing train is moving.

At Leeds the passenger train received several orders, including the one to meet the freight at Hy-tex, and also a clearance card and a block signal caution card calling attention to the meet. The trains met at 25 or 30 miles an hour. Both locomotives were knocked off the track and the first passenger car in No. 11 was telescoped by the baggage car for about 25 feet.

Continuing, the Commission's report says:

"Operator Roberts, on duty at Leeds, handed on three sets of orders to train No. 11, one to the fireman, one to the porter, and one to the flagman. Fireman Steck said he immediately handed his set of orders to the engineman, who read them and handed them back to him, and that he himself then read them. Approaching the point of accident he had been working on the fire, and on looking out on the inside of the curve saw the approaching train, called to the engineman and jumped. Porter Bryant had given the orders he received to Conductor Bonnette, who read them aloud to him and told him to watch out for the meeting points. The conductor was near the rear of the third car when he saw that the train was within a train-length of the west switch at Hy-tex and still traveling at high speed. He said he looked for the emergency cord, but did not see it right away, and then ran to the front of the car, opened the vestibule and looked out; he then ran into the car ahead and asked the porter and also Conductor Furness, who was riding as a passenger, if they had seen train No. 92; and when they replied in the negative he said to apply the air brakes; and at the same time jumped upon a seat and opened the emergency valve. Conductor Furness said he thought that at the time Conductor Bonnette spoke to him the train was within ¼ mile of where the accident occurred. Porter Bryant apparently had not been paying much attention to the operation of the train, and was still sitting down in the second car when the conductor came in. Flagman Jones said that when the train did not stop at Hy-tex he took out his orders and read them again to see if he had been mistaken, following which he also opened the emergency valve in the car in which he was riding.

"None of the members of the train crew heard the engineman sound the meeting-point whistle signal, Conductor Bonnette saying this might have been due to the noise of a train passing on the track of the adjoining railway when his own train was in the vicinity of the east switch.

"On account of serious injuries sustained by Engineman Moses of train No. 11, no statement from him could be obtained."

Conductor Bonnette and Engineman Moses, being in charge of the train, are held primarily responsible, but all the other members of the crew were aware of the contents of the order and "there is no excuse for their failure to operate their train properly. * * *"

On the Rhaetian Railway, Switzerland

Baltimore & Ohio Systematizes Terminal Operation

Has Concentrated Classification and Inspection of Cars and Lengthened Locomotive Runs

EARLY IN 1919 the Baltimore & Ohio put in effect a plan for the making up of trains to avoid intermediate switching enroute and to enable them to be moved with the minimum of break-up between origin and destination. This plan, which was described in the *Railway Age* of August 6, 1921, page 254, was extended over the entire system early in 1921. Unlike the practice which has been followed at times in the past where classification of this character has been attempted, it has not been confined to live-stock, perishable and through high-class merchandise, but has included all traffic handled by local as well as through freight trains, including empty as well as loaded cars. In other words, the system of "divisional and through classification" in effect on the Baltimore & Ohio includes livestock and perishable traffic, quick dispatch merchandise, expedite or time freight, dead freight, empty equipment (home and foreign), solid trains of coal and coke to tidewater, returning empties from the piers at tidewater to the distributing points in the coal fields, coal moving to the lakes, ore moving from the lakes to the ore-consuming districts, and limestone and dolomite from the quarries to the furnace districts.

Solid Trains Designated "Main-Trackers"

The solid trains of these various classes of traffic are designated as "main-trackers" or "trains that are made up and dispatched from a terminal for continuous movement to destination, or to a breaking-up yard, and in their movement pass through intermediate yards and terminals." Under this plan many trains operate as "main-trackers" for distances ranging from 182 to 640 miles without pulling a pin, while others stop at intermediate division yards only for the purpose of consolidation or putting on additional cars at the head or rear end.

The success which attended the operation of the "main-tracker" trains suggested the possibility of increasing the daily engine miles and thereby securing greater use of the power with a reduction in engine terminal expense through less hostling and shop attention, and ultimately discontinuing entirely, at a number of the existing roundhouses, fire cleaning and light repairs of through freight engines. Therefore, beginning about the first of the present year, the runs of through freight engines were extended to conform to the movement of "main-trackers" until now freight locomotives are operating successfully in both directions without change between.

Pittsburgh, Pa.	"	Fairport, O.	135 "
Willard, O.	"	Chicago, Ill	278 "

From the reports covering these operations it is possible to supervise closely the movement of "main-trackers" and other details involved in the strict observance of divisional and through classification regulations which have been arranged. From these reports it became evident that certain delays were occurring from time to time to these through trains because of the method of freight car inspection in vogue. A study of these questions led to the changing of the method of inspection, as a result of which a system of freight car inspection was established at originating points as well as at points enroute to final destination, conforming to the makeup and dispatchment of "main-tracker" trains in both directions. This involved the separation of the inspection into what is termed "A" inspection, which is given at originating and breaking-up points, and "B" inspection at intermediate points. The "A" inspection is such as will disclose all defects existing on equipment that can be detected without dissecting the car, while the "B" inspection is an intermediate passing inspection for safety which is given at points at which the train stands a sufficient length of time to make the inspection when changing engines and train crews. This latter inspection is for the purpose of detecting new defects that have developed since the cars received an "A" inspection.

When "A" inspection has been applied and it is impracticable, by reason of lack of men or of material, to make the needed repairs at the point where the inspection is made, the cars are side-carded, billed and forwarded to any large car repair point. When so forwarded, in order to avoid the breaking-up of "main-trackers" enroute the cars are placed in classification order for such repair points rather than for final destination.

This system of inspection has been productive of most gratifying results. It has practically eliminated the necessity for cutting cars out of "main-trackers" because of defects; has reduced the number of bad-order loads; is expediting the repair of freight equipment; admits of greater regularity in, and more economical distribution of, the car repair forces, inasmuch as the bad-order repairs are now concentrated at originating or breaking-up points; and has made possible a material saving in the cost of inspection, a much smaller force of inspectors now being necessary.

To complete the steps necessary to secure the full benefits of the classification system, the officers of the Baltimore & Ohio are working on the revision of the plan for weighing and check-weighing carload freight received from connections and originating on the line.

Detailed Instructions Issued in Book Form

To make the plan for the concentration of the classification of cars effective, detailed instructions were prepared in the form of a booklet which has been distributed to all employees concerned engaged in this work. These instructions outlined the classifications which are to be made at each terminal and the trains into which each car should be placed. Similarly detailed instructions for the "A" and "B" inspection of cars at each terminal have been prepared to govern the character of inspection which is to be given the cars passing through each terminal. In recent years working books of the New York, Baltimore, Cincinnati, Pittsburgh, East St. Louis and other terminals, including all train yards, have been prepared, in which the work as assigned to each crew in these terminals and yards is shown in complete detail.

It is not possible to gage accurately in dollars and cents, what the saving to the Baltimore & Ohio has amounted to through the adoption of the divisional and through classification and the inauguration of the improved yard and terminal operating methods, but it is believed to run into the millions annually. By reason of the greater use of power, the continuous movement of freight equipment and the diminished need for enlarged or additional yards, the capital outlay, it is felt, is less than it otherwise would be. There

have been reductions in per diem expense, in the amount of damage to equipment, and in the amount paid for loss and damage to freight. Congestion in yards and terminals is avoided, thereby contributing to the successful operation and maintenance of freight schedules.

This plan for the systematic classification of cars and for freight car inspection has been developed under the direction of the chief of yard and terminal operations of the Baltimore & Ohio, to whom we are indebted for the above information.

Coal Distribution Work Meets Varied Problems

Improvement in Car Supply on Coal Carrying Lines Increases Output. Results of Cleveland Settlement Awaited

WASHINGTON, D. C.

COMPLICATIONS IN the distribution of available coal supplies occasioned by the activities of railroads engaging in brisk competition for fuel, thereby creating a tendency toward the inflation of prices, have caused the Federal Fuel Distribution Committee to take steps looking toward the removal of this condition. Railway interests have been requested to discontinue the practice of competitive bidding for coal and to keep the central fuel committee informed as to difficulties experienced in the obtaining of urgent coal requirements at fair prices. In such cases, the committee has assured the railroads that the application of priority No. 1 orders will be used to insure the companies their equitable proportions of available fuel supplies. The message sent by Fuel Distributor H. B. Spencer on August 15 is as follows:

"General information is coming to this office that the railroads are disturbing the coal situation very seriously by bidding in the fields prices in excess of the Hoover fair price agreement. In order that this coal may be handled in an orderly manner and in such a way as to protect the railroads and others likewise vitally interested it is necessary that instructions be issued by you that no prices be offered in excess of the Hoover fair prices. Report to your purchasing committee in Washington any failure to get coal at these prices and we will arrange to put the railroads who are in a situation as to stocks requiring emergency action in priority number one."

Some Railway Fuel Put in Class 1

As the disposition of the railroads to bid for coal to the demoralization of the Hoover fair price schedule is entirely traceable to their apprehension in the matter of obtaining adequate fuel supplies, it is believed that the reasonable assurance of the maintenance of adequate stocks given in the central fuel committee's policy of placing urgent railway fuel orders in class 1 designation will allay their uneasiness and work toward the remedying of the price situation.

Authorizations for railroad fuel to come from Alabama for certain southwestern systems running out of St. Louis, and other railway lines centering in Chicago have been advanced from Class 2 priority to Class 1. The committee's policy of handling the country's more urgent fuel requirements through Class 1 priority was influenced to some extent by the necessity of allaying the apprehension of coal operators who hesitated to divert coal under contract to regular customers for the filling of priority No. 2 orders. Under a recent opinion from the Department of Justice, the placing of coal orders under No. 1 priority by the Federal Fuel Committee takes legal precedence over general contracts for coal entered into before the arising of the present emergency.

The question as to whether grain elevators should be classed as public utilities in the present coal emergency has been submitted to the central fuel committee. The operation of large elevators in Kansas City, Omaha, Wichita and other mid-western cities is a matter of some urgency at this time when shipments of western grain are near the peak. The needs of these elevators are considered by the committee as coming within the jurisdiction of the various state fuel administrations.

A governmental fuel committee, comprising members from each federal department, has been organized for the purpose of facilitating the orderly movement of government coal supplies, generally given No. 2 classification. This committee will act with the Federal Planning Committee in the allocation of coal purchases to avoid duplication and confusion. In line with this policy, the Navy Department has transferred a certain tonnage to the immigration station at Ellis Island, where supplies had been seriously depleted.

Encourages Importation of British Coal

In the matter of provision of fuel for river steamers, a differentiation is made between vessels engaged in the transportation of food supplies and mail, and those devoted to purely excursion purposes. The needs of the first-named class of vessels will naturally be given first consideration.

The Fuel Distribution Committee is inclined to encourage the utilization of stocks of British coal being received in the port of New York. Because of the fact that domestic coal being purchased by many large consumers in that territory is obtained at somewhat lower rates than that asked for English and Welsh coal, the importation of foreign coal has lagged. The Fuel Distributor feels that there is a real need for all British cargo coal, and that it should help to meet the requirements of many consumers in New York and New England.

Revised figures from the Geological Survey place the total coal production of the country for last week at 4,550,000 tons. Estimates which leave out of consideration possible new production from union mines as a result of developments at the Cleveland, Ohio, conference are for a total production of 4,200,000 tons this week, of which 3,800,000 tons should come from territory east of the Mississippi. It is estimated that 15,000,000 tons of bituminous lump coal will be needed to replace the anthracite deficiency. State Fuel administrations in Rhode Island and Massachusetts are advising many anthracite consumers that they will be compelled this season to use bituminous lump as a substitute.

A gradual improvement in the car-supply situation is noted on coal-carrying lines. Adjustment of labor difficulties on the Louisville & Nashville, where conditions have been affected by the walk-out of railway employees at Corbin, Ky., the pivotal point in the movement of coal from the Hazard field in southeastern Kentucky, is expected to facilitate coal movements on that system. Normal transportation conditions are said to have been attained on the Norfolk & Western railway, while improved conditions are reported on the Chesapeake & Ohio and the Virginian systems.

Consideration is being given to a proposition for the westward movement of Pennsylvania and Northern West Virginia coal, supplies for use in Pennsylvania to be replenished by tide-water coal from the Hampton Roads district. It is pos-

sible that some movement of coal may be undertaken by water to Montreal, Canada, or Portland, Maine, for transshipment to Canadian provinces where the fuel situation is critical. It is the general policy of the Fuel Distribution Committee to give careful consideration to Canadian requirements. In this connection, it is recognized that some coal from British Columbia is being imported into the United States.

Authorization for approximately 150,000 tons of coal for lake movement from Kentucky and the Virginias has just been granted by the central committee. The committee's program calls for a lakeward movement of 6,250 cars this week and 8,000 cars next week. This movement will for the present be accomplished by the dispatch to the lakes of all loadings in certain districts on Mondays, Wednesdays and Saturdays of each week. The demands of numerous public utilities in Indiana, Ohio, Michigan and other mid-western states must be considered in connection with this movement of lake coal.

Lake Movement Special Problem

Such new coal production in Ohio and Pennsylvania as may result from developments at the Cleveland conference is expected to help alleviate the lake coal situation. The transportation conditions of certain railroads on which these newly-producing mines are located, are, however, a factor in this situation.

The problem of expediting coal shipments to the upper Great Lake region in order to attain the necessary total coal movement to that territory before the close of lake navigation was given the serious attention of the Federal Fuel Distribution Committee, this week. It was expected that shipments aggregating 250,000 tons of coal will be made toward the lakes in the present week as compared with an estimated shipment of 140,000 tons for last week. A figure of 400,000 tons has been set for lake movement during the week beginning August 21.

The ability to supply urgent lake requirements is said to depend largely upon the coal production situation in Pennsylvania. Mines in Pennsylvania that ordinarily make shipments of lake coal are at present closed, and the question of whether Pennsylvania coal will be available in considerable quantity for early lake shipment hinges largely on the question whether the coal tonnage produced in Pennsylvania will be sufficient to take care of that state's own urgent needs and to allow of a supply for diversion to the lake country. A partial solution to the problem may be found by replacing Pennsylvania lake shipments by importations into that state of tide-water coal from the Southern Appalachian district.

Increased Loadings in Non-Union Areas

A delegation comprising members of the Northwestern Coal Dock Operators' Association and members of the Minnesota State Fuel Committee, who presented the fuel requirements of five northwestern states, were assured by Fuel Distributor Spencer that movements of coal in that direction would be made as rapidly as production would admit.

A total of 13,258 cars of coal were loaded throughout the country on Friday, August 11. This represents an increase of 753 car loadings over the same day of the previous week. Loadings of 69,000 cars were reported for the first five days of last week, an increase of 5,660 cars over the corresponding number of days of the previous week. Loadings of coal on the Chesapeake & Ohio, Friday, amounted to 1,319 cars; on the Norfolk & Western, 2,115 cars; and on the Louisville & Nashville, 1,609 cars. Coal loadings on these three lines represent an increase of more than 400 cars over the figures for Friday of the previous week.

Inquiries from Kansas and other trans-Mississippi states relative to the obtaining of coal supplies from producers in the Rocky Mountain region are being referred by the central fuel committee to the coal distribution agencies in the states now producing coal in that territory.

Representatives of a large industrial concern owning its own coal mines conferred on Monday with the Fuel Distribution Committee relative to placing the entire coal production of this mine subject to the orders of the fuel committee for use by essential industries.

Senator Swanson and Representatives Harrison and Bland of Virginia, accompanied by Maj. Alexander Forward, state fuel administrator, and a delegation of prominent citizens of the state, called upon Fuel Distributor Spencer on Monday to ask that a specific allotment of coal be turned over to the Virginia committee for distribution among essential industries in accordance with the plans of the federal organization. The suggestion was made by the central committee that an organization for the distribution of fuel supplies be formed in Virginia similar to that organized in other states to co-operate with the State Fuel Administrator.

Authorizations issued Friday by the central committee provide for the movement of 100,000 tons of coal to Toledo and Sandusky, Ohio, for shipment to Lake territory. Other authorizations issued provide for the more pressing fuel needs of public utilities in Baltimore and Detroit and for electric traction purposes in New York City. A considerable tonnage was placed at the disposal of the Delaware Coal Commission for distribution within that state in accordance with the plans of the fuel distributor.

Class 1 Priority to Be Guarded

The problem of the distribution of car supply between mines engaged in the shipment of coal classified under No. 1 priority and those shipping coal to public utilities and other consignees under previously-made contracts continues to demand the attention of the Fuel Committee. While it is desired to preserve the integrity of contracts as far as possible, the feeling is that general contracts must in a measure take secondary position to the meeting of particularly urgent coal necessities created under an exigency which has arisen since such contracts were entered into. Present plans of the Fuel Distribution Committee are that orders for Class No. 1 coal shall be so distributed as not to disturb seriously the proper distribution of cars. All orders for coal considered to be within that classification will go to the district committees who will apportion the orders among the mines in their districts. In such apportioning of orders it is expected that contracts will be observed as far as possible. In this connection it is pointed out that many operators, having in mind the maintenance of their normal business relations, would prefer to devote their energies to filling their regular contracts.

The Fuel Committee is seeking a practical method of insuring that coal ordered through a retail dealer for the use of public utilities or hospitals will not be diverted to other channels. Where it is manifest that an order for coal comes within a particular classification, it will not require any certification to the railroad to secure priority under order No. 23, of the Interstate Commerce Commission. Where, however, the consignee of a shipment does not show the character of the coal and its uses it will be necessary for the shipper to obtain a certificate from the State Fuel Administrator that the coal is to be used in Class 2 priority, and a certificate should accompany the consignee's order to the mine. This will obviate taking matters of this kind to the Washington Central Committee, as it will give the mine operator the information needed to enable him to obtain from the railroad, cars to which he is entitled in making shipments of priority coal.

An estimate of 765,000 tons of bituminous coal weekly as being required to meet the immediate needs of gas and electric public utilities and domestic consumers in the territory east of the Mississippi River is made by the United States

Geological Survey. Of this amount, New England would require 9.2 per cent; the non-coal-producing states of the coast region, exclusive of New England, 21.6 per cent; coal-producing states of the coast region, 22.9 per cent; and Ohio, Indiana, Illinois and Michigan, 46.3 per cent. Railroads in the same territory will require 2,000,000 tons weekly, making a total emergency requirement of 2,765,000 tons. Coal is now being produced in this territory at the rate of 3,800,000 tons weekly.

Railway Fuel

The railway fuel situation last week was especially acute in Michigan, on certain lines in Illinois and on some of the southwestern lines running out of St. Louis. Certain lines traversing Pennsylvania and New Jersey report seriously depleted supplies.

An extended utilization of the port of Charleston, S. C., as an outlet for Tennessee coals destined for New England is under consideration by the Fuel Distribution Committee.

An outline of the more urgent requirements of the various eastern and middle western railroads was sent last week to the district fuel committees, functioning in Kentucky, Tennessee and the Virginias. These requirements for railway fuel are already covered by contract. This movement of railway fuel is to be co-ordinated with the movement of tonnage urgently required for the upper lake country.

Authorization for considerable tonnages of coal to go from the Bluefield and Thurmond districts of West Virginia to New Jersey, for railway fuel purposes, have been issued.

Protests are being made from certain quarters against the use of railway fuel supplies for the operation of excursion trains. The point is made that this is an unnecessary use of railway fuel, which, under the Fuel Distribution Committee's plans, is given first consideration.

It was announced last week that the railway mechanical situation on coal-carrying lines in the Virginias, which had been hampering the shipment of coal, continued to improve with the importation of mechanics from eastern and western lines. The requirements of the Chesapeake & Ohio and the Norfolk & Western were said to have been practically met, and mechanics were diverted to the Virginian. Later it was stated that the Virginian had about filled its requirements for employees. Shipments of coal from southeastern Kentucky were retarded to some extent by conditions at Corbin, Ky., where more than 300 railway mechanical employees are said to have left their employment because of threats of violence. An unusual situation prevailed in the western Kentucky field, where coal production was accelerated by the existence of a 100 per cent car supply.

An opinion from the Department of Justice is that priority orders for coal issued under Classification No. 1 of the Interstate Commerce Commission have preference over other orders which operators may have on their books.

I. C. C. Worns Against Confiscating Coal

The Interstate Commerce Commission on August 14 issued the following notice to carriers: "The commission's attention has been called to the fact that railroads frequently confiscate coal which is being moved under priority of equal or higher class than coal for railroad fuel as ordered by the commission. This practice is not consistent with the spirit of the service orders of the commission and tends to defeat the efforts now being made to insure the most efficient distribution of coal. All railroads should refrain from confiscating coal consigned under Class 1 and Class 2, paragraph 7, our Service Order 23, and Amendment No. 1 thereto."

The commission also on August 15 issued a notice to the carriers directing attention to the following action of Division 5 of the commission, taken on that day:

Voted, That the Commission considers that the application of the so-called "railroad assigned car rule" as carried in paragraph 8 of Supplement 1 to Car Service Circular No. 31 of the American Railway Association, is inconsistent with the plan of priorities prescribed in Service Order No. 23 as amended of the commission as necessary to meet a national emergency, and that rule should not be invoked by railroad carriers subject to the provisions of that service order as against the priorities therein required, during the continuance of the order and emergency declared by the commission. Carriers must meet their needs for fuel in some way which is consistent with the Service Order and not in conflict therewith.

The whole subject of the propriety of the rule mentioned is before the commission in a formal proceeding, and this announcement is not to be taken as prejudging or prejudicing the decision to be made in that case, in which the record has not yet been completed.

The commission also issued Amendment No. 2 to Service Order No. 23, appointing as additional agents of the commission "for the more prompt and effectual administration during the present emergency of the authorizations, directions and requirements of paragraph 7 of Service Order No. 23" the following: John T. Marchand, J. A. Emmart, W. L. Lloyd, A. R. Layman, Delbert Garman, F. F. Engles, L. P. Green, T. L. Stevens, C. J. Bailey, C. D. Thomas, W. S. Rice and W. D. Anderson.

The commission has postponed the hearing on revised coal car distribution rules proposed by the American Railway Association, which had previously been adjourned to August 14 because so many of the witnesses required were unable to be present on account of the coal and railroad strikes.

It has been decided that legislation to strengthen the authority of the coal committee over the distribution of coal and in its efforts to prevent price increases will be necessary even with the increase in production to result from the settlement of the coal strike, but it was stated that developments of the next few days will decide what will be necessary.

The Facilities at Carbondale with the New Treating Plant and Pump House on the Right.

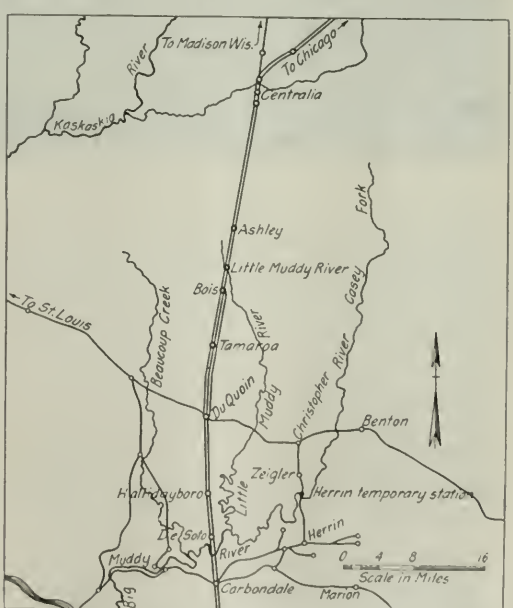
How the Illinois Central Overcame a Water Shortage

Interesting Development in Southern Illinois Affords Solution of a Serious Problem at Small Expense

DURING THE LAST few years a water supply development has been carried out by the Illinois Central in the vicinity of the coal fields of southern Illinois, which has not only solved a serious operating problem at a relatively small expenditure but also has afforded an attractive source of revenue from the sale of water as well as a protection to the company from loss of business in the vicinity affected. Necessitated by reason of a series of annual water shortages sufficiently acute to require the hauling of water in trains for considerable distance at much expense, and not only seriously interfering with the orderly and economical movement of traffic but actually threatening production of the mines in the vicinity, a program was launched in 1918 involving extensive alterations at several water stations and the installation of a new pumping station. The work was carried out over a period of years and involved a total expenditure of approximately $240,000, as a result of which the region is adequately protected against trouble from this source for several years to come and a revenue has been afforded from the sale of water to interests not having supplies of their own which has already paid a substantial portion of the entire investment.

The lines under consideration extend from Centralia, Ill., on the north to Cairo on the south, where they not only constitute the middle link of the main line but form a neck in the bottle between the main line and the important branch diverging to Freeport on the north line of the Illinois Central and the main line and the Birmingham line of the Illinois Central to the south, as well as including the terminus of the line to St. Louis. Further than this the Illinois Central system at this point passes through one of the largest coal producing fields west of the Alleghenies, where it has numerous branches and maintains an extensive switching service.

This is a region in which the subsurface water contains such a high content of scale-forming salts as to warrant its use only as a last resort. It is also an area in which the few streams carry much suspended matter and are otherwise more or less undesirable for use because of pollution from mine drainage. As a result it had become a practice for the railroads in this vicinity to obtain their supply from surface reservoirs of their own construction or the property of neighboring towns. The topography of the country lends itself to this purpose and these reservoirs have invariably afforded supplies of very satisfactory quality for locomotive use. Unfortunately, however, the region is subject to protracted periods of dry weather. This condition, in the face of the heavier demand for water not only because of the greatly increased railway traffic and mining activity and in the case of municipal supplies, due also to the increases in population,



The Main and Branch Lines of the Illinois Central in the Coal Area

precipitated a situation in which the railroads in that vicinity were confronted annually with a threatening or actual shortage of an increasingly serious nature.

Of the several points on the Illinois Central where trouble

was encountered, the situation was most acute at DuQuoin 35 miles south of Centralia. This is a junction point between the main line and the line to St. Louis, upon which business had increased approximately at the rate of 10 per cent a year for five or six years. The supply at this point was obtained from a reservoir whose capacity had been outgrown by the demand. It was a regular occurrence for it to become exhausted about September 1, and it would remain so until about the first of the year, either because there was no water available or because of the freezing during the winter of what little water remained in the reservoir.

The Principal Shortage Occured at DuQuoin

As it was essential that a supply be maintained at this point it became necessary to haul water in cars from Carbondale, 20 miles south, or from a branch line station at Sand Ridge, a distance by track of about 50 miles. As an indication of the acuteness of the shortage it was not unusual for as many as three trains of 20 cars each to be operated daily to serve the one station, and during the months of November and December, 1917, and January, 1918 (the most difficult time of the year to haul water) as many as 3,000 cars of water were hauled to this point and emptied into the reservoir. This was an expensive procedure, the cost of hauling water to the one station, in fact, exceeding $25,000 in 1917, exclusive of rentals and maintenance of equipment. Moreover, these trains seriously interfered with the normal operation of regular traffic and because of the impossibility of hauling the water in ordinary tank cars at that season of the year, because of weather conditions, the situation required the use of coal cars at a time when these cars were in the greatest demand at the mine.

An annoying situation also presented itself at Bois, midway between DuQuoin and Centralia, where the supply was obtained from the Little Muddy river and from an impounding reservoir of approximately 50,000,000 gal. capacity. While the reservoir water was entirely satisfactory in quality and the Little Muddy river a water of fair quality, and while no shortage had actually occurred at this point up to the time the water supply program was undertaken, a threatening situation existed in the fact that the creek could not be relied upon for the required supply during more than three to six months of the year, during a part of which time it also carried considerable matter in suspension. Neither could the water shed be relied upon to keep the reservoir filled to its capacity. In addition the old pumping plant had become inadequate to handle properly all the water required during normal times, not to mention the period when a shortage was encountered at other points, particularly at DuQuoin.

Hallidayboro, located 12 miles south of DuQuoin, presented a condition somewhat like that at Bois. Deriving its supply from an impounding reservoir of approximately 40,000,000 gal. capacity, from which water was delivered by a steam pump through a mile of six-in. pipe to the storage tanks, this station afforded an adequate supply of water of good quality under normal conditions, and as a matter of fact had never become exhausted. But Hallidayboro was not an economical stopping place for trains and it presented a cause for concern when by reason of shortages elsewhere, it became necessary to take more water than usual at this point.

The Quality of Water Was Also a Feature

The situation at Carbondale, the next station south on the main line, presented another aspect to the problem than that of shortage. Situated 30 miles south of Hallidayboro and at the junction of the main line with the coal branches, where it was customary for all trains to take water and where as many as 1,500 cars of coal a day were received from the coal producing section, this station was one of the most important on the system. To meet the demands made upon it, water was pumped from a steam plant on the Big Muddy river, 4½ miles west of Carbondale, through three miles of 8-in. cast iron pipe and one mile of 12-in. pipe to service tanks at the roundhouse and in the yards having a total capacity of 100,000 gal. Aside from a little trouble occasionally encountered by the pipe line being too small, this supply was adequate at all times for the demand made upon it, but the quality of the water was bad. As suggested by its name, the Big Muddy river carries large quantities of silt at certain seasons of the year but in addition to this it also carries matter in solution ranging from 1 to 7 lb. per 1,000 gal. of which from 1 to 5 lb. is scale-forming solids. Because of this, considerable trouble from leaking of flues was encountered during low water periods, by reason of which it became advisable at such times for trains to take water at less advantageous points from an operating standpoint.

A Portion of the Reservoir at Bois

Shortage in the Mine District Threatened Production

The Illinois Central maintained no water stations in the vicinity of the mines tributary to its tracks, but depended for its supply upon the towns of Christopher, Benton, Herrin and Marion, shown on the accompanying map. All of these towns were supplied from impounding reservoirs. With the normal increase which had taken place in the population of these towns, as well as the increased demand for water made upon them by the mines and the railroads, it had become a regular thing for the towns to suffer from water shortages during the late summer and early fall, and when these shortages occurred it became necessary for engines to run for water

to DuQuoin or Carbondale, the average distance ranging between 5 to 12 miles each way. With the interruption to the regular operation of trains by reason of this continual running for water during uncertain seasons, together with the facts that the supply at Carbondale was anything but satisfactory, that the supply at DuQuoin was obtained only by hauling water from other points; and that there was a tendency for the shortages of water purchased from the towns to increase with the growth of the demands made upon them, the situation was becoming a serious one.

Confronted with this state of affairs in the vicinity of the mines, and on the main line, it was evident that something more substantial in character and less expensive in kind was required to remedy the trouble than the hauling of water from points where it could be obtained, and investigations were accordingly made to this end.

DuQuoin Required a New Reservoir

At DuQuoin, where about 75 per cent of the shortage occurred, it was not possible to overcome the difficulty inexpensively. With no creek at this point and with the poor quality of the ground water eliminating it from consideration as an auxiliary supply, only two alternatives remained; one, that of deepening the existing reservoir and the other of building a new one. An investigation revealed the fact that even if the deepening of the existing reservoir was not prohibitive in cost there was no assurance that when once deepened the water shed could be relied upon to provide the additional water. It was decided, therefore, to build an additional reservoir and to replace the old pumping plant. The new reservoir was constructed in a valley adjacent to that in which the old reservoir was located. This required the construction of a dam at an expense, along with other details, of about $128,000. Supplementing this, a new pumping plant was built which consists of two 25-hp. semi-Diesel engines, belt connected to two 500 gal. per minute centrifugal pumps. In addition the six-inch pipe line was replaced by one and a half miles of eight inch pipe line, salvaged from improvement work at Carbondale, and a 100,000 gal. service tank was erected to increase the track storage to 190,000 gal.

An Interesting Solution Was Worked Out at Bois

At Bois, as has been mentioned, the water supply was obtained from a stream that could be relied upon for an adequate supply only about six months in the year and from an auxiliary reservoir, having an insufficient draining area. The problem, therefore, was one of increasing the water supply. The solution at first appeared to be one of enlarging the impounding facilities and at the same time increasing the watershed, a work which would require the constructing of a second dam across the main valley below the main reservoir and the purchasing of a large tract of land for a reservoir site, at a cost ranging anywhere from $100,000 and $150,000 over and above the cost of increased pumping facilities. In working up the plans for the new pumping station, however, the idea was conceived of so arranging the plant that the old reservoir could be filled from the stream during its high water period and then held in reserve for the period when a supply could no longer be obtained from this source.

Working on this basis, the old steam plant was replaced by a new plant, which at DuQuoin, consisted of two 25-hp. semi-Deisel engines, belt connected to two 500 gal. per minute centrifugal pumps arranged in duplicate and capable of pumping against 100 ft. head. In addition to this the six-inch line to the reservoir was replaced by a 10-in. line, an additional storage tank was provided and a water column shifted to a more advantageous location. This work, although it involved a total expenditure of only $30,000 approximately, has proved entirely adequate for the purpose, the creek affording a certain supply until about September after which the reservoir can be relied upon for a period of from four to five months. As indicating the economy of this plan over the original one of providing a new impounding facility, approximately 30,000,000 gal. of water was pumped into the reservoir from the creek at a cost not exceeding $150, while if the additional storage and water shed had been provided the interest and depreciation expense alone at six per cent would have been anywhere from $6,000 to $9,000 annually.

The Northern End of the Bois Reservoir

Having remedied the situation at DuQuoin and Bois it was found unnecessary to make immediate changes at other points on the main line, other than at Carbondale where the facilities for handling the water were increased by replacing three miles of 8-in. pipe with a 12-in. line and installing a water treating plant to remove the incrusting solids and suspended matter from that water. The total cost of the latter project approached $68,000.

The Temporary Plant Paid for Its Cost Many Times Over

This having been done, the development was completed by building a temporary station at a point about midway between Herrin and Ziegler on the Little Muddy river. At this point the river is above the principal mine drain inlets and affords a water seldom exceeding 1½ to 2 lb. of encrusting solids per 1,000 gal. as compared with 5 lb. at Carbondale. The equipment at this point consists of a steam plant of two 45-hp. boilers and a 50,000 gal. tank, constructed from material salvaged from other points at a cost not exceeding $16,000. While this plant is not located as con-

veniently as could be desired to the switch engines operating in this district it has proved a boon not only to the railroads in the vicinity but to the mines as well, by affording a suitable supply of water at times when it could not be obtained from the adjacent towns. In the fall of 1919, for example, in addition to providing all the water required by the Illinois Central, several thousand cars of water were hauled from this station to the mines, the number of which in November, 1920, alone aggregated 838 cars or about 1,000,000 gal. of water.

At a total cost therefore of about $240,000, a program was carried through which has eliminated entirely a recurring condition characterized by much running for water as well as the hauling of water in train loads with the interruption it entailed to the normal dispatch of trains as well as its expense (the total out of pocket cost of hauling water in

A New Pump House Was Built at Bois

1917 approximating $40,000 excluding the cost of rentals, maintenance equipment, etc. The work has resulted also in a great improvement in the water at Carbondale, and has worked an appreciable benefit to the company directly and indirectly by eliminating any necessity for curtailment in coal production by reason of water shortage and by affording a considerable source of revenue from the actual sale of water to mines for coal washing and steam generating purposes. To indicate the size of this business, during one month 111 tank cars of water were furnished to the mines from the new station at DuQuoin, 85 from Colterville, 118 from New Athens and 7 from Carbondale, all in addition to the 838 cars from the Herrin-Ziegler pumping plant.

These improvements were designed and undertaken under the direction of F. L. Thompson, chief engineer, A. F. Blaess, engineer maintenance of way and C. R. Knowles, superintendent of water service of the Illinois Central, and were carried forward in easy stages up to their completion in 1920.

Block Signal Statistics for 1921

The Interstate Commerce Commission has issued its annual tables, for January 1, 1922, showing the mileage of railroads in the United States operated by the block system, with collateral information concerning kinds of apparatus and methods of operation. The tables are in the usual form, with which the interested reader is familiar.

The total length of road block signaled on January 1 was 102,468 miles, which is 52.4 per cent of the mileage *of the roads reporting*, excluding lines which are used only for freight. Of the total railroad mileage of the country it is about 40 per cent.

The total now reported is made up of 63,406 miles using the manual block system and 39,062 equipped with automatic block signals. The latter figure is about 20 per cent of the length of the roads reporting and 16 per cent of the total mileage of the country.

The total automatic mileage (39,062) is 518 miles greater than was shown for January, 1921, and the non-automatic (63,406) is 66 miles greater.

A few of the larger increases and decreases in the totals reported by individual roads are shown in the bulletin, in a separate statement (see below): but comparisons with statements which were furnished by the railroads for use in the annual review of the *Railway Age* (printed January 7, page 137) indicate that there are numerous discrepancies; and there are some manifest errors. The increase in automatic mileage on the Illinois Central, given as 69.7 miles, appears to be 48½ miles too large; while the *Railway Age* table shows it to be 50 miles too large.

The mileage of road on which automatic signals are worked "normal danger" shows a large increase over 1921, but here again numerous errors apparently vitiate the totals, both of normal danger and normal clear. The Baltimore & Ohio reports an increase in normal danger of 458 miles and a decrease in normal clear of 431 miles. Errors, omissions, and corrections of former errors in the statements of several roads leave the grand total much in need of amendment.

The Delaware & Hudson reports electro-gas signals in use on 174 miles of road, 82 miles less than the year before, with a corresponding increase in electric motor signals. The Pennsylvania's mileage of position-light signals, 114 miles, is five miles greater than in 1921.

The Fort Worth & Denver City reports to the Commission that its mileage of road operated under the manual block system is 114 miles (single track) or 106 miles less than one year before, but its report to the *Railway Age* indicated 141 miles *added* in 1921. In the government report for the earlier year there was a foot note to the effect that on this road the space interval was in use only as between passenger trains following one another.

The Great Northern reports the electric train staff in use on 15 miles of road, as compared with 79 miles a year before, while the St. Louis-San Francisco has increased its staff mileage from 10 to 17. The Great Northern seems to have substituted automatic signals for the train staff.

Increases and Decreases in 1921 (Miles of Road)

Name of road	Increase		Decrease
	Automatic	Non-automatic	non-automatic
Atchison, Topeka & Santa Fe	....	37.4	....
Cedar Rapids & Iowa City	....	27.0	....
Chicago & North Western	....	56.7	....
Chicago, Burlington & Quincy	33.2	....	24.9

Tremont & Gulf	....	67.0	....
Union Pacific	65.3	....	....

Telephones. Table No. 6 shows that telephones are now used for transmission of train orders on 123,253 miles of railroad, 1,231 miles more than on January 1, 1921; while the mileage on which the telegraph is used (132,682) has decreased 635 miles. The total mileage of the roads represented in table No. 6 is 246,414. Some roads report both telegraph and telephone in use on the same divisions or sections.

Boston Switching Rates—Studies in Cost of Service

Elaborate Analysis of Operating Costs in a Large Group of Busy Freight Yards at Boston, Mass.

By John C. Owers

AN INTERESTING feature of the railroads' defense in the case of the Boston Wool Trade Association, decided by the Interstate Commerce Commissioner on June 6* consisted of cost of service studies which were made between the date of filing the complaint and the hearing.

These studies, which were first started on the New Haven, were made upon a general plan worked out by J. E. Slater, special assistant to the general manager of that company, and were adopted by the other roads. They were made to determine the actual car movement performance per engine hour in each of the yards of the Terminal district, the number of movements made per car while in transit from point to point in one terminal, or in interchange; and the expenses of operation per engine hour, including a six per cent return on the property investment.

Railroad Freight Lines in Boston and Environs

The first element of cost was ascertained by assigning men to each switching crew to record the engine movements and the number of cars moved on each occasion. These men made reports showing the number of cars handled in each movement, the tracks and yards from and to which the cars were switched, and the time consumed; and, so far as possible, the same cars were not counted more than once unless the second handling was entirely dissociated from the first.

The information secured from these reports established the number of car movements made in each yard per hour, which, for cost purposes, were expressed in decimal fractions of an engine hour per car movement.

The second factor was arrived at by observation of individual cars moving within the terminal and by studies of normal car movements made in accordance with the accepted principles of yard operation.

Determination of the cost of operation was, to the greatest possible extent, based on actual expenditures during the period of the study; but it was found necessary to allocate a considerable number of accounts, principally those of overhead.

The charge against maintenance of way was made by dividing the actual expenses of six representative months by the engine hours for the same period and multiplying the result by the engine hours for the period of the study. Maintenance of equipment charges were actual, except for back shop repairs, which were based on the average back shop expense per switch engine mile; but the items of superintendence, injuries to persons, loss and damage, stationery and printing, general expenses and similar accounts were generally allocated in the ratio that the direct charges bore to the total of the account for the operating division or for the entire road, as circumstances required.

The fixed charges were based on six per cent return on the value of the terminal property as obtained from the valuation engineers, actual tax payments and a six per cent charge on the value of the engines actually used in switching service. In setting up the land and construction valuation, all main line tracks, freight houses, docks, passenger terminals and other property not concerned in actual freight yard switching were excluded, the object being to restrict this factor to the actual investment on freight yard property.

The total expenses divided by the engine hours showed a cost per engine hour of between nineteen and twenty-one dollars for each road, and this sum multiplied by the engine hours per car movement in each yard unit gave the individual yard cost, which varied somewhat in accordance with the class of work done.

Having reached this point, the actual cost of typical switching movements was determined by ascertaining the number of handlings per car and amount of engine time per yard, and multiplying the total time by the rate per hour. In addition to the actual switching costs, a per diem charge of $1.80 was made; but in movements involving two roads only 90 cents each was allowed, this amount having been decided upon as conservative after careful consideration of the subject.

In reaching final conclusions as to the details of the studies and the various formulæ used for allocation of charges, there were several conferences between representatives of the railroads and Professor W. J. Cunningham of Harvard University, who, at the request of President Hustis, of the Boston & Maine, had an oversight of the work with a view of securing unity of method and harmony of results.

*Reported in the *Railway Age* July 15, page 130.

Yard 1 to Mass. Ave. and Southampton St.	9	12.25
Average		10.07

Key to Method of Allocation

A—For all these accounts, the actual expenses chargeable to switching in the Boston Freight Terminal Yards for this period are shown.

B—These figures are based on an analysis of the actual expenses of maintenance for the Boston Freight Terminals Yards for six representative months of the year 1919—March, May, June, August, September and November.

C—These expenses are allocated from corresponding expenses of the railroad for the calendar year; the basis of allocation being the percentage which the total of Accounts Nos. 202, 212, 214, 216, 218, 220, 231, 233, 235, 247 and 249 in this study bears to the total of Accounts 202-261, both inclusive, for the railroad for the calendar year.

D—Based on the proportion which the amount of coal used in Boston Freight Terminal switching service bears to the total amount of coal consumed on the railroad for the calendar year. This proportion was then applied to Accounts 231 and 233 for the calendar year for the railroad.

E—Based on the proportion which switching locomotive miles for the Boston Freight Terminal bears to the total locomotive miles for the railroad; this proportion being applied to the total of Account 235 for the railroad for the calendar year.

F—These expenses are allocated from the corresponding expenses of the railroad for the calendar year; the basis of allocation being the percentage which Account 308 in this study bears to the total of Accounts Nos. 308, 311, 314, 317, 320, 323, 326 and 329 for the railroad for the calendar year.

G—Running repairs and back shop repairs were computed separately. The running repairs (labor and material) are based on the actual charges against switch engines in the Boston Freight Terminal for the period of the study. Back shop repairs are based on the average cost per mile for back shop repairs for the type of switch engine working in the Boston Freight Terminal, multiplied by the actual switch engine miles of engines in the Boston Freight Terminal for the period of the study.

H—Based on depreciation rate of four per cent per year, applied to the original cost plus cost of additions for the engines working in the Boston Freight Terminal.

I—These expenses were allocated from the corresponding expenses of the railroad for the calendar year; the basis of allocation being the percentage which Accounts Nos. 373, 377, 378, 379, 380, 382, 385, 386, 387, 388, 389, 405 and 407 in this study bears to the total of Accounts 373-408, both inclusive, eliminating Accounts 390 and 391, for the railroad for the calendar year.

K—Allocated on the basis of an engineering formula for the amount of water evaporated per pound of coal burned, applied to the actual coal burned by switching locomotives in the Boston Freight Terminal, amount of water so obtained being charged out at the water rate for the city of Boston.

L—Based on the average cost per switching locomotive mile for the railroad for the calendar year, applied to the switching locomotive miles in the Boston Freight Terminal for the period of the study.

M—These expenses were allocated from the total of Accounts 451-459, both inclusive, of the railroad for the calendar year; the basis of allocation being the percentage which the total of the Maintenance of Way, Maintenance of Equipment and Transportation Expenses in the study bears to the total Maintenance of Way, Maintenance of Equipment, Traffic, Transportation and Miscellaneous Operating Expenses of the railroad for the calendar year.

N—Based on the taxes paid on assessed valuation of the Boston Freight Terminal at the present tax rate for Boston, the valuation excluding freight houses, piers, docks, coal dock and other items not directly concerned in switching operation at the Boston Freight Terminal.

O—Based on a six per cent return on the value of the land and yard facilities in the Boston Freight Terminal, the valuation excluding freight houses, piers, docks, coal dock and other items not directly concerned in switching operation at the Boston Freight Terminal.

P—Based on 6 per cent return of the original cost, plus cost of additions of locomotives used in the Boston Freight Terminal.

Note 1. In making the direct charges and allocations in the manner above described, figures are, in all cases, reduced to a basis of the eight weeks' period which is covered by the study. Note 2. The term "railroad" refers, in each case, to the New York, New Haven & Hartford. Note 3. The term "calendar year" refers to the year ending December 31, 1919.

Boston Railroad Map

The Union Freight Railroad, which is laid in the street, extending from the South station to the North station, is shown in our sketch by a dotted line. The Boston & Albany is shown in a broken line. Those parts of the line which are broken into very short pieces (parts of the Grand Junction branch) represent sections where the tracks of the Boston & Maine and those of the Boston & Albany are side by side. All of the other lines on the map belong to the Boston & Maine, or the New York, New Haven & Hartford; the Boston & Maine's lines being on the north side of the city and those of the New Haven road on the south side.

Numbers on the map mean—

1—N. Y., N. H. & H. principal freight terminal.
2—Mystic Dock, Boston & Maine.
3—Boston & Maine docks.
4—South Station.
5—North Station.
6—East Boston docks.
7—Back Bay Station.
8—South Boston Station.
9—Brookline Junction.

The yards of the Boston & Albany are: (a) at the terminus, near South station; (b) between Back Bay (Huntington avenue) and Brookline Junction; (c) near the intersection of the main line and the Grand Junction Branch; (d) at East Boston.

The yards referred to in Exhibit B, except those of the Boston & Albany and the Union Freight Railroad, are all parts of the New Haven freight terminal. The principal part of this terminal, indicated by Fig. 1 on the map, is on and near the tract called South Boston docks. These terminal tracks join the main line tracks just south of the South Boston passenger station, indicated on the map by "8." The Massachusetts avenue yard and the Southampton street yard are south of this junction.

At the time when these studies were made, the connection between the New Haven road and the Union Freight Railroad was made at the west side of South Station (4), but since then a connection has been made by way of Northern avenue bridge, the route shown by a short line of crosses, extending west from "1."

Each road has within the metropolitan district several small delivery yards which serve the industries of their particular localities. Some of these yards are merely auxiliaries to the main plant, within switching limits; others are operated as independent freight stations. The Boston & Albany's Grand Junction freight branch, connecting with the Boston & Maine and to the East Boston elevator and docks is nine miles long.

The Union Freight Railroad on Atlantic avenue accommodates numerous industries having private tracks and also handles the interchange between the New Haven and the Boston & Maine.

It has been estimated that the Boston terminal facilities provide accommodations for about 14,000 cars. The Boston & Maine has the largest plant, and can handle in the vicinity of 8,500; the New Haven, somewhere above 3,000; and the Boston & Albany the balance. The Boston & Maine terminal, which is operated as a division, is divided into 24 yards, and under normal traffic uses 45 switching crews. The New Haven plant at South Boston has 10 yard units, and under capacity operation uses 30 crews. The Boston & Albany terminal consists of several rather widely separated units, and under good business conditions, requires 25 crews. The Union Freight generally employs five crews; so that over 100 yard crews are needed to handle the city's normal traffic.

There is comparatively little car floating in Boston Harbor, although facilities for this purpose exist and are in regular use, principally between the railroads and the steamship docks.

The Interstate Commerce Commission's report on the switching rate controversy discussed at length the details of the claims made by the wool merchants and the arguments presented by the railroads. On the question of costs it said, in part:

The Commission's Criticisms

Defendants contend that the cost of switching at Boston is high and greater than at other comparable points. Studies of costs at Boston were submitted by the New Haven and the Maine, but not by the Albany. The New Haven figures include as costs not only operating expenses and taxes but a 6 per cent return on the estimated value of land, tracks, and locomotives used for switching purposes.

During the study period of eight weeks at the New Haven terminal, 42,890 loaded cars were received or forwarded at Boston, including loaded cars interchanged with connections. The total cost during that period is given as $255,413, made up of $150,057 for operating expenses plus $125,356 for taxes and the 6 per cent return. The average cost of handling each loaded car received or forwarded, so computed, was $5.95 per car. Confined to operating expenses alone it was $3.03 per car.

A striking feature of these studies is the large part of the total estimated cost which is accounted for by so-called fixed charges. In the case of the New Haven these account for 49 per cent of the total, and in the case of the Maine for 54 per cent. The great item in these amounts is a 6 per cent return on the estimated "present value" of the land used in switching operations. This present value is based upon what is said to be the market value of adjoining property, and, as much of the terminal land at Boston was acquired many years ago, it is in general vastly in excess of original cost. If the New Haven or the Maine, therefore, should earn 6 per cent upon this present value, a very handsome profit on actual investment would be realized. On the other hand, this liberality in estimating switching "costs" is in part offset by the fact that the figures were prepared early in 1920, when railroad wages were somewhat lower than they are now.

The cost figures are open to other criticisms. The controlling factor in the computation seems to be the number of cars handled in each switch movement. The observations, however, were made in winter, when the volume of business was relatively light and costs of operation probably above normal. Conditions in switching yards change continually and economy of operation necessitates increase or reduction of the switching force from time to time, with realignment of the work in each case. The interrelation of line-haul and switching traffic at Boston is such that it is exceedingly difficult, if it is possible at all, to segregate properly the expense of handling purely switching movements from the expense of switching through line-haul cars. Switching costs can probably be ascertained with approximate accuracy only through a system of accounts designed for the purpose and maintained over a considerable period of time.

The record also furnishes ground for doubt whether switching operations in Boston are economically conducted in all respects. A carload of freight for export arriving over the Fitchburg division of the Maine for delivery to ship side at the Mystic docks is switched into seven distinct yards and classified six different times during the movement to the docks from the West Cambridge yard. Defendants, however, maintain that the costs shown by their studies are conservative, and that nothing is allowed for weighing of cars, or for car maintenance, or for maintenance of main-line roadbed and track used to a certain extent in switching operations. Cost studies of this character are necessarily based upon many more or less arbitrary assumptions and at best furnish only rough approximations. Upon the whole, we think that the figures submitted by the Maine and the New Haven do not understate the real costs and are liberal, even under existing conditions, particularly when the land values used are taken into consideration. They are of especial value in indicating the relative costs of certain general classes of switching movements.

Executives and Train Service Leaders Confer

Meeting in New York Thursday Adjourns Until Friday, With Secrecy Surrounding Proceedings

As THE *Railway Age* goes to press on Friday morning developments in the railway shopmen's strike situation await the outcome of the conference between the committee of the railway executives and the leaders of the train service brotherhoods and also the recommendations which may be made by President Harding in his address to Congress.

The conference between the railway executives and the train service leaders began at the offices of the Association of Railway Executives, 61 Broadway, New York on Thursday afternoon at 2 o'clock. The first session adjourned at 6:15 and the only announcement made then was that the meeting had adjourned until the following morning. This was contained in a statement issued by Chairman T. DeWitt Cuyler of the Association of Railway Executives as follows:

"A conference was held this afternoon between a committee of the carriers and the heads of the five train service organizations, who wished it to be distinctly understood that they appeared as mediators of their own motion. A discussion of the present railroad situation, so far as it relates to the shopcraft strike took place. The questions involved were discussed with the earnest desire to arrive at a solution of the problem, if possible. No definite conclusion was arrived at, and the conference was adjourned until tomorrow morning."

Representatives at the Meeting

The representatives of the train service organizations were Warren S. Stone, president of the Brotherhood of Locomotive Engineers; L. E. Sheppard, president of the Order of Railroad Conductors; W. N. Doak, vice-president of the Brotherhood of Railroad Trainmen; E. H. Robertson, president of the Brotherhood of Locomotive Firemen and Enginemen, and F. C. Cashen, president of the Switchmen's Union of America. Representatives of the 16 other striking and non-striking railway unions, including B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, were in New York and within call, had it been advisable or necessary to bring them into the conference.

Those who represented the railway executives in the conference included T. DeWitt Cuyler, chairman of the Association of Railway Executives; W. W. Atterbury, vice-president of the Pennsylvania; Howard Elliott, chairman of the Northern Pacific; Hale Holden, president of the Chicago, Burlington & Quincy; Julius Kruttschnitt, chairman of the Southern Pacific; W. L. Mapother, president of the Louisville & Nashville; C. H. Markham, president of the Illinois Central, and A. H. Smith, president of the New York Central. Alfred P. Thom, vice-chairman and general counsel of the Association of Railway Executives, was also present. This was the same committee which presented to President Harding on Saturday the majority and minority resolutions voted at the Executives' meeting the previous day.

The results of the Thursday afternoon session of the executives and train service leaders were shrouded in secrecy. No inkling whatever is available at this time as to what had been discussed at the meeting. It is naturally to be presumed that seniority was a leading issue. The four-hour session and the fact that the meeting was carried over until the next day, without any pronouncements being made by either side gave rise to considerable optimism as to the outcome.

During the evening the train service leaders met with the shopmen's leaders for whom they have intervened. No statement was given out about the meeting.

B. M. Jewell Discusses Car Supply

B. M. Jewell, head of the Railroad Department of the American Federation of Labor, gave out a prepared statement dealing with the demands upon railroad equipment from the settlement of the coal strike and not at all with the day's proceedings.

Mr. Jewell's statement follows:

"The settlement of the coal strike will, to a large degree, determine the settlement of the railroad strike. The resumption of coal mining and the vastly increased demand for coal resulting from depleted stocks will force the railroads to move more coal in the next few weeks than ever before in history. This means a record-breaking demand for cars.

"In the face of this demand there is at the present time a record-breaking shortage of good order coal equipment. The railroads will be required by urgent necessity to repair their coal cars in the shortest possible time. This will bring the most insistent kind of pressure upon the roads to get a maximum number of skilled mechanics into their shops. It is safe to say that there will be places for one and a half times the normal number of men in coal repair shops alone.

"The normal number of cars suitable for moving coal in need of repairs is about 5 per cent of the total number on the line. Even before the strike was called, there was an unprecedented proportion of bad order cars. The American Railway Association figures show that on July 1, 14½ per cent needed repairs—nearly three times the normal number. On July 15, before the effects of the strike had become to be seriously felt, the association figures showed 15⅓ per cent in bad order—and this is a low estimate because some of the roads hardest hit by the strike refused to give out the facts. These are the latest published figures. We estimate that at the present time, however, there are from 20 to 25 per cent of the total number of coal cars in need of repairs—about 200,000 cars.

Effect Will Be Serious, Says Jewell

"Even in normal times with a low percentage of bad order equipment, there are not enough coal cars to meet the demand. The year 1920 is a typical illustration. In August, 1920, there was an average weekly shortage of no less than 44,927 cars in spite of the fact that there had been no strike, coal reserves were high and business was facing a period of depression. With reserves depleted by four and a half months' tie-up of the mines and with business approaching a boom, in addition to the normal demand, it is safe to say there would be a shortage of at least 75,000 cars a week, the moment the strike is settled, owing to the requirements of traffic alone. The abnormal number of cars now out of service for want of repairs will raise the weekly shortage of cars close to 100,000.

"The effect of this shortage on coal consumers will be serious in the extreme, even if the railroad strike is settled this week. A shortage of 100,000 coal cars a week means that 30 per cent of the coal mined will be withheld from the consumer through lack of transportation facilities. The mines produce about 1,000,000 tons of coal a week when operating at a maximum. The average coal car capacity is about forty-five tons. A shortage of 100,000 cars a week will, therefore, prevent 4,500,000 tons of coal a week from reaching the consumer—or 22 per cent of the weekly output."

President May Suggest Changes in Law

President Harding was to address Congress Thursday but postponed it until Friday because of the conference in New York. The impression prevails at this writing that he will review the facts relating to the shopmen's strike and possibly suggest some changes in the Transportation Act. One of these suggestions is expected to be that the headquarters of the Labor Board be moved from Chicago to Washington so that it may be in close touch with the Interstate Commerce Commission and other government officers.

President's Plan Rejected by Shop Crafts

Railroads Accept Conditionally. Committee of Non-Striking Labor Leaders Reopens Negotiations

WASHINGTON, D. C.

IT WAS OFFICIALLY announced at the White House on Tuesday that the President would appear before the Congress within 48 hours and place the entire strike situation before it, giving the whole story as the President has learned it through weeks of interviews, correspondence and mediation with representatives of both sides. He proposed to lay the situation fairly and frankly before Congress, and in that way before the country, but it was stated that the President was not yet in a position to say what, if any, recommendations he would make, as the character of his statement might be affected by the changing conditions as they exist at the time. It was stated that the President will not interfere with the efforts of anybody to bring about a settlement outside, but so far as the Executive is concerned there is no ground on which to stand except that which he has already taken. The announcement was made following a Cabinet meeting devoted to a discussion of the strike situation and after the President had conferred with Senators Watson and Kellogg.

The President's latest proposal for a settlement of the shop strike having failed because of its rejection by the shop crafts, although the railroads had agreed to take back as many of the strikers that have not been guilty of violence as they can find room for and to submit unadjusted questions as to seniority to the Labor Board, the principal developments at Washington during the early part of the week centered around the efforts of the labor organization executives to find a way to reopen negotiations for a settlement.

The committee of railway executives which came to Washington on Saturday to present the replies of the railroads to the President's proposal of August 7 left the city on Sunday, after having rejected a proposal that the question of seniority be submitted to arbitration outside the Labor Board, and prepared to resume their efforts to maintain service without the assistance of the shop craft organizations. They also hoped they had been able to convince the President that continued activity in Washington looking toward a compromise settlement would merely delay the collapse of the strike by encouraging the men still out to hold out a little longer.

Non-Striking Labor Leaders Acting as Mediators

Meanwhile the officers of the 17 railroad labor organizations, 8 of them on strike and 9 not striking or only "sporadically" striking, remain in Washington, the striking organizations having placed their case in the hands of the other labor leaders who are still trying to open a way for the return of the strikers to their former jobs, without any consequences to themselves in the way of impairment of seniority rights as the result of their "temporary declination to render service." Incidentally, the non-striking organizations are manifesting considerable interest on their own account in trying to prevent the establishment of a precedent that when members of a labor organization go on strike they forfeit their rights as employees.

The White House statement on Tuesday was taken as a clear indication that the President is through with acting as a mediator and offering settlement proposals and is now prepared to exercise the authority of the government to maintain law and order in the hope that with reasonable protection for the men who are willing to work the railroads will be able to maintain an adequate service.

Also the Attorney General, with the approval of the President, has taken steps to deal under the conspiracy statutes with the train and engine men who have allowed their fear of being accidentally shot by armed guards to overtake them suddenly at points where their abandonment of trains happens to be most inconvenient to the passengers or will interfere most with coal movement.

Conferences at the White House

The President's proposal that the strike be called off and the question of seniority be submitted to the Labor Board, as well as the entire situation, was considered at a meeting of the seven striking organizations—the six shop crafts and the stationary firemen and oilers—on Thursday and again at the general conference of the 17 railroad labor organization executives under the chairmanship of W. S. Stone, grand chief of the Brotherhood of Locomotive Engineers, on Friday and Saturday morning. The striking organizations then had no further conference with the President but their reply was delivered at the White House about noon Saturday by W. H. Johnston, president of the International Association of Machinists.

At 2:30 the heads of the nine non-striking organizations went into conference with the President. Secretaries Hoover and Davis, Chairman Hooper of the Labor Board, and Senator Cummins also took part in the conference. At 4:30 the committee of railway executives, headed by Mr. Cuyler, arrived and went into conference with the President, while the labor leaders were taken into another room. The labor leaders left the White House about 6:30 and the executives about 7:00, both explaining that their statements to the President would not be made public for the present, at his request.

Shopmen's Case in Hands of Brotherhood Leaders

L. E. Sheppard, president of the Order of Railroad Conductors, told the newspaper men that the representatives of the organizations not on strike had told the President "of the troubles we are having growing out of the strike, our difficulty in keeping everyone at work, the condition of affairs in the way of engines and equipment that are in bad shape," and that they also had offered their good offices if they could be of any service or act as mediators in the controversy with the shopmen. "We are quite prepared to do anything we can to help the situation," he said. "The shopmen have left their case in our hands." Mr. Sheppard said that a formal statement had been made to the President which might be made public later, and that a committee had been appointed to remain in Washington for a few days. He said the labor leaders had not seen the railway executives and did not know what they would do. He also appealed to the newspaper men to write as conservatively as possible, avoiding "sensational stuff" and to "get after the headline writers."

The labor leaders who were at the White House conference were: Warren S. Stone, grand chief, Brotherhood of Locomotive Engineers; L. E. Sheppard, president, Order of Railway Conductors; D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen; W. N. Doak, vice-president, Brotherhood of Railroad Trainmen; E. F. Grable, president, United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers; T. C. Cashen, president, Switchmen's Union; E. J. Manion, president, Order of Railroad Telegraphers; J. G. Luhrsen, president, Train Despatchers Association; and D. W. Helt, president, Brotherhood of Railroad Signalmen. E. H. Fitzgerald,

president, Brotherhood of Railway Clerks, was not included because his organization is striking on some roads.

Executives and Labor Leaders Meet

Late Saturday evening it was discovered that the railway executives and some of the labor leaders had held a conference at the Willard Hotel, which, it is understood, had been arranged by the President, and at which the proposal for outside arbitration was rejected by the railroad executives. The latter again conferred with the President for about an hour and a half on Sunday morning and then left the city. The labor leaders did not meet with the President on Sunday, but the brotherhood officers were in conference among themselves.

During the day the President gave permission for the release of the replies that had been made to his proposal and the statement presented to him by the labor leaders acting as mediators. Although the text of the shopcrafts' reply was not made public until Tuesday it was learned that they had definitely rejected the proposal and said that they could agree to no settlement that did not guarantee the restoration of seniority rights unimpaired, as proposed by the President on July 31.

Majority and Minority Reports of Railway Executives

The replies of the railroads were announced in the following statement issued by Thomas DeWitt Cuyler, chairman of the Association of Railway Executives:

"At the meeting of the railroads in New York on Friday, August 11, 1922, they with practical unanimity responded favorably to the President's call that the seniority question be left to the United States Railroad Labor Board.

"Approximately three-quarters of the mileage responded favorably to his call that all striking shop craftsmen be reemployed, and the balance that all such strikers be reemployed as far as practicable.

"The resolutions acted on by the meeting have been submitted to the President.

"The following resolutions were adopted by roads having a mileage of 151,824 miles:

"The telegram of the President, dated August 7, 1922, having been considered, and in response to his call to the carriers and the striking workmen, the following resolutions were adopted:

"Resolved, that the proposal of the President to the striking workmen to return to work, and to the carriers to assign them to work, leaving the disputed question of seniority to the Labor Board under the provisions of the Transportation Act for decision, be accepted, understanding as we do that such acceptance involves no surrender of the principles with respect to seniority adopted by the carriers on August 1, 1922, but recognizes that the proposal of the President invokes the jurisdiction of the Labor Board under the Transportation Act to pass upon the relative seniority of those loyal employees who have remained at work and those new employees who have since accepted service (the rights of both of which classes to seniority we feel bound in justice to defend before the Labor Board) with the strikers who may re-enter the service under the proposal of the President.

"Therefore, be it Further Resolved:

"(a)—All former employees who have not been guilty of proven violence against the employees or property of the railroad shall be assigned to their former positions where vacancies exist.

"(b)—Where the positions they formerly held have been filled, other employment of the same class will be found for such employees as have committed no acts of proven violence against the employees or the property of the railroad.

"(c)—If, after these men have been assigned, questions of seniority arise with them which cannot be settled locally, they will be referred to the United States Railroad Labor Board for review.

"Further Resolved, that the strike is to be called off with the understanding and agreement by all parties that no intimidation nor oppression shall be practiced or permitted as against any of the employees who have remained or have taken service, or against those who may return to service under the proposal of the President."

The following minority report was supported by roads having a mileage of 57,222 miles.

"Resolved, that the Chairman be authorized to reply to the President's telegram of August 7th, that the railroads represented at this meeting are willing that:

"(a)—All former employees who have not been guilty of violence against the employers' or the property of the railroads shall be assigned to their former positions where vacancies exist.

"(b)—If after these men have been assigned, questions of their seniority arise which cannot be settled locally, they shall be referred to the United States Railroad Labor Board for review.

"(c)—In agreeing to submit questions of seniority as provided above to the United States Railroad Labor Board for review, it is understood that neither the railroads nor their employees shall be deprived of the right of review by the courts of such decisions if they affect agreements in existence between any railroad and its employees."

At the meeting in New York on August 11 the President's proposal of August 7 was referred to a committee consisting of R. S. Lovett, W. R. Cole, Hale Holden, W. W. Atterbury, C. H. Markham, A. H. Smith, and Julius Kruttschnitt, which brought in two reports which were then debated at length in the general meeting. The vote in favor of the majority report was 191 to 79 (each road having one vote and additional votes being accorded on a mileage basis), while the vote on the minority report was 77 to 192.

The roads voting for the majority report were:

Ann Arbor.
Atchison, Topeka & Santa Fe.
Gulf, Colorado & Santa Fe.
Baltimore & Ohio.
Buffalo, Rochester & Pittsburgh.
Central of Georgia.
Chesapeake & Ohio Lines.
Chicago & Northwestern.
Chicago, Burlington & Quincy.
Colorado & Southern.
Chicago & Western Indiana.
Chicago Great Western.
Chicago, Indianapolis & Louisville.
Chicago, Milwaukee & St. Paul.
Chicago, Rock Island & Pacific.
Chicago, Rock Island & Gulf.
Chicago, St. Paul, Minneapolis & Omaha.

Committee Takes Report to President

A committee consisting of Mr. Cuyler as chairman and Howard Elliott, W. L. Mapother, Hale Holden, W. W. Atterbury, C. H. Markham, A. H. Smith, and Julius Kruttschnitt was then appointed to take the report to the President not only for the purpose of submitting it but also in order to have such conference as the President might think desirable. In presenting these resolutions it was pointed out that the majority vote of members of the Association of Railway Executives cannot bind the minority and that the different positions taken by different roads represents differences in the equities of their situations without sacrifice of principle. Many of the roads felt that with the large increase in business in sight and the accumulation of maintenance work on cars and locomotives even before the strike they could readily make use of a greater number of men than they had in service when the strike was called, while the roads that voted for the minority report have taken on so many new men and have given such definite assurances of employment to those who prove competent as to be unable to agree unreservedly to the President's proposal.

Shopmen's Case in Hands of Brotherhoods

After the reply of the railway executives had been made public Sunday afternoon and it had been stated that the President had given permission for the release of the reply of the organizations on strike and the letter from the non-striking organizations, newspaper men were told that copies were ready and that they would be given out by E. J. Manion as soon as word had been received from Mr. Stone. Mr. Stone and the other brotherhood executives were then holding a meeting of their own. Early in the evening Mr. Sheppard, Mr. Doak and Mr. Robertson, without Mr. Stone, joined some of the other labor leaders and after a consultation Mr. Sheppard informed the waiting newspaper men that it had been decided not to give out the statements made to the President. Although Mr. Stone is chairman of the labor leaders' committee and Mr. Manion secretary, Mr. Sheppard apparently was elected as the official spokesman.

"We don't know just where we are at," he said. "We are awaiting developments and don't want to say or do anything to embarrass either side. We are hoping to find some way to help the situation. Whether we can or not is problematical. We will stay here at least until Congress convenes or if the President wants to see us. We will keep the same committee here and as soon as we can make a statement that will help will make it."

Mr. Sheppard said that the railroads have worked the seniority issue "overtime." "It is only one of several fundamentals applying to men who are on strike," he said. "The real issue as we see it is the status of men on strike. We hold that they are not dismissed from service, they have not resigned, they are awaiting the settlement of their difficulties and all their rights as employees are merely suspended so to speak, contingent upon whether they go back. This applies to their right to strike, pension rights, insurance rights and seniority. Seniority is only one of the rights involved. In all disputes in years gone by we have usually gone back with all our rights by agreement and we see no reason why the policy of the companies should be changed this time. I am merely expressing one of the fundamental principles of labor organizations, the rights of those temporarily declining to give service."

Mr. Sheppard denied that the non-striking organizations had proposed arbitration of the seniority question but declined to state who had proposed it. He said they had been asked about it but considered it unwise to arbitrate the rights of men on strike.

Mr. Sheppard said "the shopmen's case is in our hands and we are not taking any chance of closing the door to negotiations. If the President wants to see us we are at his service." He said the labor leaders had been notified by Secretary Hoover that the railway executives had left the city.

On Monday the railroad labor leaders held a meeting lasting nearly all day and Mr. Sheppard and Mr. Doak called on Secretary of Labor Davis who arranged another conference with the President for five o'clock. They were with the President for about two hours and Mr. Sheppard announced afterward that he was hopeful a meeting with some of the railroad executives "not so tenacious as the others" and who might see the "fundamental rights of men on strike" are involved rather than the question of seniority, could be arranged. Mr. Stone also had a conference Monday with President Willard of the Baltimore & Ohio and on Tuesday he announced that the labor leaders had asked Mr. Cuyler for another conference with the executives.

It is understood that the labor leaders appealed to the President to use his influence to bring about another conference with the railroad executives but that he was not favorable to the proposal that he take any further action in the capacity of a mediator. He is said to have approved of the spirit shown by the railroads and to have taken the position that he cannot fairly ask any further modification of their position.

Mr. Stone asked that a special committee be appointed to meet with the executives of the five organizations of transportation employees to consider an adjustment of the shop strike controversy at New York on Thursday. Later it was announced that Mr. Cuyler had agreed to a conference. The account of the meeting will be found on another page of the present issue.

Shop Crafts Reject Proposal

The reply of the shop crafts to the President's proposal was finally given out on Tuesday, as follows:

"We are in receipt of your telegram of August 7, referring to your message to us of July 31, and our reply of August 2.

"In your telegram of August 7, you request that striking railroad employees return to work and leave to the decision of the Railroad Labor Board, after they have returned to work, the question of seniority as covered in the third paragraph of your telegram of July 31.

"This request has been fully considered by the Executive Council of the Railway Employees Department who represent the railway employees affected, and you are hereby advised that the proposal contained in your telegram of August 7, has been unanimously declined for, among others, the following reasons:

"1. On July 31, you submitted to the representatives of the railroad employees in question and to the railway managers 'the terms of agreement upon which the railway managers and united shop craft workers are to unite preliminary to calling off the existing strike.'

"Your terms of agreement above referred to were accepted by the representatives of the employees. On the seniority question your terms of agreement were, 'all employees now on strike to be returned to work to their former positions with seniority and other rights unimpaired. The representatives of the carriers and the representatives of the employees. On the seniority question there will be no discrimination by either party against the employees who did or did not strike.' This clearly provides that the seniority question was to be settled before the employees returned to work. Your proposal of August 7, is that it be agreed to, or rather disposed of, only after they have returned to work.

"This strike cannot be, and no other railroad strike has been settled until it was agreed that all employees on strike are to be returned to work and to their former positions with seniority and other rights unimpaired.

"2. Seniority was not and is not now, by right, an issue or a dispute in this strike. The authors of the Transportation Act have, on many occasions, stated that there is no penalty in the Transportation Act against employees who strike when an in-

justice is done through a decision of the Railroad Labor Board. Admittedly they have the right to strike and, therefore, they do not forfeit their standing as railroad employees because they strike. Any other construction of the law would read into the Transportation Act a penalty which is not contained therein.

"3. On August 2, we acquiesced in the terms of agreement which you declared to be just, fair and reasonable, and we are willing now, in the interest of all concerned to settle the strike in accordance with the terms of that agreement. We are, of course, unable to understand why, after we had accepted your own terms of agreement, you should now request us to accept a proposal which is directly in conflict with your former proposed agreement.

"4. Your latest proposal is impracticable and would create a chaotic condition because of the undetermined seniority status of the employees.

"Railroad employees are ever mindful of the public interest. They have accepted your own terms of agreement, which called for no sacrifice on the part of the railroad executives, but which did require that the employees make a concession of practically every issue which brought about the strike. We have repeatedly called attention to the fact that the campaign against the organized railroad employees was a part of the general "open shop" drive, and if press statements are correct, the managers of some of the railroads the last few days have frankly admitted that they do not desire at this time to settle the strike, but hope to be permitted to continue their efforts to disintegrate the organizations of railroad employees."

This was accompanied by the following statement:

"The Association of Railway Executives have again, in their letter of August 11, declined to accept the President's proposition of August 7. They have not even agreed to permit all employees now on strike to return to work.

"The railroad managements apparently intend to be the court, judge and jury for the trial and conviction of those employees whom they do not intend shall return to work."

The Fundamental Issue

The calling in of the executives of the unions not on strike has served to emphasize the fundamental issue which has developed out of the strike as to the status of employees on strike, the labor organizations adhering to the position that men on strike are still employees who are "temporarily refraining from rendering service" and whose rights are only held in suspense, while the railroads are emphasizing the repeated decisions and warnings of the Labor Board that an organization on strike has forfeited its rights and that the loyal and the new employees are the only present employees of the railroads. They insist that if the authority of the Labor Board is to be maintained it must be established that men who defy its decisions are liable to the penalty of loss of their seniority rights; otherwise the public has no more protection against strikes than it had before the Labor Board was established.

In this connection the railroads point to Decision No. 299 (Docket 845) of the U. S. Labor Board of October 29, 1921, in which it said:

"The Board further points out for the consideration of employees interested that when such action does result in a strike, the organization so acting has forfeited its rights and the rights of its members in and to the provisions and benefits of all contracts theretofore existing, and the employees so striking have voluntarily removed themselves from the classes entitled to appeal to this board for relief and protection."

The same idea was repeated in the resolutions adopted by the board on July 3, and Chairman Hooper had later issued a statement, while the roads were still giving their men an opportunity to return warning that if their places were taken the new employees would acquire seniority rights that the board could not ignore. The railroad executives in talking with the President took the position that the only way to put a stop to the constant recurrence of strikes and threats of strikes, is to provide some penalty for striking and that if they should yield to pressure and purchase peace by an unwise compromise the temptation for the organizations to strike at any time they feel dissatisfied with decisions of the board would still remain. They also explained that the roads as a whole now have approximately half of a normal shop force working overtime and that reports of the condition of equipment circulated by the labor leaders are greatly exaggerated. They pointed to the improvement in coal loading and the large volume of traffic being handled by the railroads in spite of the strike as evidence that in general the public is not suffering as a result of the efforts of the declination of the railroads to surrender.

Prompt Action in Santa Fe Case

The administration acted rather promptly to deal with the new condition created by "sporadic" strikes of train and engine employees who left their trains at places where they could cause the most inconvenience on the pretext that they were afraid of armed guards. The Attorney General took the position that this action of the train employees strongly savored of conspiracy. That "no strike anywhere or of any character can prevent the government from authorizing the agencies of law and order to protect life and property," was the official statement given out at the White House on Friday in response to questions as to the attitude of the government toward strikes against the use of armed guards, and on Saturday, after a conference with the President, Attorney General Daugherty wired to the United States attorney at Los Angeles as follows:

"Report to United States district judge any violation of injunctions and institute proper proceedings to hold violators for contempt. Investigate quickly and ascertain if abandonment of trains was result of conspiracies, by those operating them or others, to interfere with interstate commerce and handling of the mails. If proof sufficient, present matter to grand jury immediately. If grand jury not in session, present to court the necessity of calling special grand jury. Department will give you all necessary support and assistance. The interference with and abandonment of trains strongly indicates the existence of a conspiracy and the government will take all necessary steps to prevent its continuation or like conspiracies elsewhere. Advise me of results."

"It has been reported to this department from certain places, especially southern California and Arizona, on the Santa Fe system," said Mr. Daugherty in announcing this action, "that trains have been and are being abandoned by trainmen and employees. It has occurred at places most inconvenient (Needles, Calif., for instance), and not only results in interference with and obstruction to interstate commerce and the transportation of the mails, but in great suffering and distress among men, women and children who are passengers."

On Monday the telegram was duplicated to the district attorneys for the districts of Northern California, New Mexico and Arizona.

President Harding on Sunday sent a telegram to Governor Campbell of Arizona regarding the marooning of Santa Fe passenger trains at junction points in that state because of their abandonment by their crews, saying: "It is the obligation of the government to relieve the people who are thus shamefully subjected to hardships" and "If you have not the facilities for the relief which I know you will gladly bestow, then army forces at the command of the federal government will be promptly ordered to your assistance. Kindly advise whether such assistance is needed."

Possible Amending of Transportation Act Considered

On Tuesday afternoon the President conferred with Secretary Hoover, Chairman Hooper of the Labor Board, who has been in Washington since Friday discussing possible amendments to the labor provisions of the Transportation Act, and Chairman McChord and Commissioner Aitchison of the Interstate Commerce Commission. Chairman McChord is in direct charge of the commission's bureaus of safety and of locomotive inspection and was in a position to

discuss the condition of equipment as the result of reports of the commission's inspectors and Commissioner Aitchison is particularly in charge of car service matters. The commission is preparing a report in response to the Senate resolution calling for information regarding the enforcement of the locomotive inspection act, with the expectation of submitting it by August 25.

I. C. C. Advises of Progressive Locomotive Deterioration

After the conference the following correspondence between Chairman McChord and the President was given out:

"Dear Mr. President: In the administration and enforcement of the locomotive inspection and related safety appliance acts of Congress the commission has observed with concern the progressive deterioration of motive power upon certain of the important carriers of the country since July 1, 1922, and during the present strike.

"The effect of deferred repairs is cumulative and becomes increasingly felt as time goes on. The acts which we are called upon to administer leave little discretion with the commission as to enforcement when violations come to light.

"In the continuance of our enforcement of the law we are taking steps and will be compelled to continue to proceed in a manner which must bring about serious withdrawals of motive power from service. Certain violations of the acts we report to the Attorney General for appropriate legal action. With a continuance of existing conditions these will be increasingly frequent.

"Knowing your interest in the matter we felt you should be advised of the facts. Faithfully yours, C. C. McCHORD, Chairman."

"My Dear Chairman McChord: I have yours of even date, in which you call to my attention the progressive deterioration of motive power upon some of the important railroad lines of the country as the outgrowth of the prevailing strike. This growing menace to maintained transportation has been called to my attention unofficially in various ways. Under all the circumstances I know of nothing to be done except to insist upon the full enforcement of the law.

"It is a very natural thing under circumstances which exist at the present moment to waive the exactions in behalf of safety in seeking to maintain transportation. In my judgment it is better to have the service diminished rather than attempt the movement of trains on which safety is not assured so far as compliance with the law may provide it.

"I trust that your inspection forces will exert themselves to the utmost in order to be able to pass upon safe equipment, because the official sanction of the government will remove all questions of dispute. Very truly yours, WARREN G. HARDING."

Senator Cummins is reported to have prepared a more or less tentative draft of a bill to give the President full authority to take over the railroads, or any of them, if he should deem the emergency sufficient to require such action. The Senator has denied that he has been requested by the President to draft such a bill, but he admits that he has given some consideration to the form of a bill.

Train Service Men Abandon Trains in Desert Towns

The sporadic strikes of members of the train service brotherhoods at various points have been the outstanding development in the strike situation in the west during the past week. Accompanying this development, though not necessarily a part of it, has come another wave of violence composed not only of intimidation and attacks directed at individual workers, but at railroad property and in many cases at trains and other facilities being used by the public. Thus while the larger moves in the three-cornered controversy are being directed and are centered in Washington, the west, particularly the states of California, Missouri, Illinois and Arizona, is furnishing the ammunition for employees, employers and the government alike in presenting their positions to each other and to the public.

The cue for the strikes of discontented train service employees was found in the approval by the national leaders of the brotherhoods of the walkout on the Elgin, Joliet & Eastern at Joliet, Ill. The trouble at that point was briefly described in last week's issue of the *Railway Age*. The train service employees refused to work until state troops, stationed there following serious rioting a few days previous, were withdrawn. Approval of their action was received from the national officers of some organizations involved on August 10. At the same time telegrams were sent to members of some of the "Big Four" brotherhoods at points where walk-outs seemed to be impending, stating that "the men will not be required or requested to work" unless conditions against which they protest are remedied. The result of this action was to place the matter in the hands of the local organizations and it was only a matter of hours until reports began to be made of the refusal of these employees to operate trains in various sections of the west. By coincidence perhaps these reports all concerned train service employees of large roads which have largely overcome the difficulties accompanying the shopmen's strike and at strategic points where the refusal to operate trains would have far reaching effect.

The first reports of trouble of this kind relate to the Atchison, Topeka & Santa Fe, the train service employees of that road operating in and around Needles, Cal., announcing their refusal to continue work until armed guards were withdrawn from the railroad property at that point. Another report involved the same road at Bakersfield, Cal., and within a few hours several trains on the Arizona division of that road were tied up. Similarly Fresno, and Barstow, Cal., and Seligman, Ariz., and several other points were involved in later reports on the same day.

Train Service Employees Abandon Trains in Desert Towns

The most serious consequences of this action on the part of the brotherhood came from the abandonment of passenger trains at desert towns, giving the passengers on these trains no opportunity to prepare for the situation or to escape from the intense heat. Approximately twelve transcontinental trains were stalled at various desert points in the west either through the refusal of employees to operate the trains or a similar refusal at other points, which resulted in an inability to move the trains involved any farther. By August 11 east bound passenger service on the Santa Fe had been tied up, and General Manager I. L. Hibbard announced that no through trains would leave Los Angeles until the trouble on the Arizona division centering at Needles had been cleared up.

Rescue trains, manned largely by railroad officers, immediately began the task of moving several thousand passengers to points of less discomfort, the Santa Fe removing practically all of the passengers marooned at Needles on August 13. On August 15 General Manager Hibbard reported that 19 west bound trains with approximately 1,700 passengers were being held up. Of these passengers 297 were at Seligman, Ariz.; 188 at Williams, Ariz.; 236 at Ash Fork, Ariz., and about 1,000 at Albuquerque and Belen, N. M.

Santa Fe Issues Ultimatum to Brotherhood Leaders

On August 15, A. G. Wells, vice-president of the Santa Fe, in a telegram addressed to the leaders of the train service brotherhoods, warned them that if they could not get their men back to work the company might be forced to accept "the only alternative left it in its duty to the public and engage men to fill the places of those on strike."

After noting the threatened spread of the "sympathetic and

illegal" strike of the brotherhood members in northern California, the message says:

"At 7 o'clock last night our superintendent at Winslow, Ariz., was handed the following:

"'Effective 8 p. m., Aug. 13, owing to the general unsafe conditions of equipment and improper brake inspections of trains, of which we have sufficient individual protests on file and copies sent to our general chairmen, we deem it necessary to withdraw our services from the A., T. & S. F. Railway at this point until equipment is placed in a safe condition and competent men placed on inspection of trains satisfactory to the following general grievance committee of the coast lines, B. of L. F. & E., B. of L. E., O. R. C., and B. of R. T. and all men returned to work with full seniority rights.'

"It will be noted that in this ultimatum no reference is made to the objection to guards, which was the main cause of complaint in the Needles environment, but a new element in introduced, that of competent men to be employed for inspection of trains, which has no more foundation in fact than the claim of unsafe engines.

"Your attention is called to the language of the ultimatum delivered at Winslow and above quoted. It stipulates that certain conditions must be met satisfactorily to the general grievance committee of the Big Four. This warrants the deduction that the committee at Winslow is acting under the direction of the general chairmen and certainly constitutes an unwarranted and sympathetic strike approved by the four organizations in flagrant violation of your constituent obligations under the existing agreements between this company and its train and engine service employees.

"I ask you each to declare whether you will immediately order, and require compliance with your order, that they shall return to work and perform their accustomed duties, advising them that failure to comply will result in your co-operating with the company to supply men to take the places which they have vacated, or shall the company proceed at once to accept only alternative left it in its duty to the public and engage services of men to fill the places of those on strike? I desire an explicit answer on the point from you today."

Reports from the west on the same day indicated that steps would be taken to operate passenger trains through the districts affected by the train service strike, and also that practically all of the trains marooned at desert points were moving, in many cases through the efforts of company officers.

The result of Mr. Wells' telegram was the forwarding of telegrams to the leaders of the local organizations involved in the walkouts on the Santa Fe advising them that they should perform their duties as usual and that their action in striking was illegal.

Strike Fever Spreads

The strike fever spread very rapidly in the western territory after the first outbreak on the Santa Fe. Within three days walkouts were either called or threatened on the Union Pacific at Caliente and Las Vegas, Nev.; on the Western Pacific at Stockton, Oakland and Oroville, Cal.; on the Santa Fe at Prescott and Winslow, Ariz.; and Albuquerque and Raton, New Mex.; on the Missouri Pacific at Pueblo, Colo.; the Illinois Central at Memphis, Tenn.; the Wabash at Moberly, Mo.; the Louisville & Nashville at Evansville, Ind., Madisonville and Atkinson Junction, Ky., and on the Southern Pacific, Oregon Short Line, Union Pacific and Denver & Rio Grande at Ogden, Utah. At some of these points the strikes were of but a few days' duration. The engineers and firemen at Moberly, Mo., for instance returned to work on August 11 and the train service men on strike at San Bernardino returned on August 14.

The effect of these strikes was in practically all cases to tie up the divisions on which they occurred temporarily. The latest reports indicate that the most serious effect of these moves has been the discomfort and inconvenience caused to the passengers who were marooned in desert towns for several days.

The action of the national leaders of the four train service brotherhoods in regard to these sporadic strikes has again disclosed the difference of opinions which played such a large part in ending the threatened nation-wide strike of train service employees last October. Whereas the heads of the engineers' and firemen's organizations have openly approved the action of various local organizations in refusing to work, W. G. Lee, head of the Trainmen's Brotherhood has endeavored to hold his men in line, directing them to abide by their schedules with the individual railroads, instructing the local officers of the organization to do everything possible to avert a strike, and demanding conformity with the union's laws for calling strikes.

The wave of violence which came during the past week was not confined to any one point or locality but seemed to be widespread. Every day new reports of slugging, killing, rioting and bombing at many points were circulated. At San Bernardino, Cal., for instance, 23 bombs were exploded at intervals on the morning of August 11, within 200 ft. of the Atchison, Topeka & Santa Fe roundhouse at that point. No one was injured in these explosions and the property damage was comparatively light. Similarly five bombs were exploded on August 12 in the yards of the Southern Pacific at Roseville, Cal., the bombing being followed by an exchange of shots between company guards and men supposed to be strikers or strike sympathizers. On August 13 the St. Louis-San Francisco bridge over the Sac river near Ash Grove, Mo., was dynamited and at Wichita Falls, Tex., the car shops of the Wichita Falls & Northwestern were destroyed by a fire of unknown origin, destroying three locomotives as well as a number of cars. Many other instances of violence on the part of strikers or their sympathizers similar to those described here were reported during the past week. In fact, these reports have become so numerous that it is not possible to verify all of them in time for this issue of the *Railway Age*.

By August 15, traffic had been partially resumed on the transcontinental roads affected by the sporadic strikes of the train service employees and the wave of violence noted above had greatly declined.

Continued Improvement in East

Following a meeting of the Eastern Presidents' Conference on Tuesday, Chairman L. F. Loree, president of the Delaware & Hudson, issued a statement in which he said that:

"As against 103,528 shopmen working on the Eastern railways on August 4, there were working on August 11, 111,324, an increase during the week of 7,796 men. This raises the percentage of the force working to the normal force from 64.7 per cent on August 4 to 69 per cent on August 11.

"When due allowance is made for the men who remained loyal or have since returned to work, it is safe to say that in the Eastern region there are now more men on the companies' payrolls in the six shop crafts than there are out of service on strike."

The general strike situation on the roads in the east during the past week has continued the gradual improvement which has now been going on for the past few weeks. Developments have been very much subordinated to the greater interest in the more general developments at Washington and to the interest surrounding the abandonment of trains by the train service employees in the west. In the east some cases of violence continue to be reported, the outstanding instance of which was an attempt made by strike sympathizers, it is believed, to dynamite a train on the West Shore. Service continues normal except for minor delays in freight service, the causes of which are explained as being possibly due as much to difficulties of fuel supply, to congestion naturally resulting from the heavy traffic movement as to the strike itself.

In the Pocahontas district, the Chesapeake & Ohio, the Norfolk & Western and the Virginian report a rapid improvement from the serious condition they were in two or three weeks ago. In this improvement they have been as-

sisted by the shopmen sent to them by roads' recruiting men in the northeastern industrial centers. The improvement is indicated by increased loadings of coal. The volume of non-union coal moving, however, has not yet approached the high figures reached in June before the beginning of the shopmen's strike. In the south, the Southern Railway, which at first did not attempt to fill the places of its shop strikers, has now announced that it will employ other men, a statement to that effect having been issued on Monday.

Railways Deny Equipment Deterioration

The condition of cars and locomotives continues to be a leading subject of discussion between the railways and the publicity men of the shop crafts unions. The New York Central on Friday drew attention to a statement of the New York Public Service Commission at Albany, in which Charles H Vanneman, chief engineer of the commission, was quoted as follows:

"Since the first of July we have had our inspectors at the Union Station (Albany) and they have been making daily verbal reports concerning the condition of locomotives. These reports are growing much better daily. Where our inspectors have found defects they have reported them to the officials of the railroad who in turn have directed the force of mechanics kept on duty at the Union Station to make the repairs. Where this has not been possible the engine has been taken out of service and another substituted.

"Several defects have been found which would not otherwise have been noted. These defects have been remedied wherever possible where this could be accomplished without serious delay to the trains. If the repairs could be made without sending the locomotive to the shops, this course has been followed."

The Pennsylvania on Tuesday announced that in the preceding week it had made more progress in the repair of freight cars than in any week since the shopmen's strike. "The car repair situation on the Pennsylvania System is practically normal," the statement said. Continuing, it said:

A report just compiled by the motive power department of the Pennsylvania System shows that during the last week 215 more cars were repaired than were sent to the shops for repairs in that period. The number of cars shopped during the week was 16,302. The number of cars repaired and turned out for service was 16,517

In comparison with the previous week, 1,170 more cars were taken in hand for repairs, and the number of cars actually repaired was 1,418 more than the number repaired the week before.

The explanation for this improvement is in the fact that more than 48,200 shopmen out of a normal force of 60,157 are now actually at work on the Pennsylvania System.

Southern Decides to Fill Strikers' Places

Fairfax Harrison, president of the Southern Railway, which has heretofore refrained from attempting to replace its striking shop employees and which offered to make a settlement on the basis of the President's original proposal to take back the men with seniority unimpaired, issued a statement on Monday announcing the intention of the company to employ others. He said that "if it means war to run the Southern Railway, let us have it now." Mr. Harrison's statement follows:

"Every effort has been made so to operate our property that our men could honorably return to work. Every effort has been made to settle with our men; we have gone to the extent of offering the terms that they had previously agreed to accept. We have thus held out every reasonable inducement, without result.

"We must now turn to employing others, for the road must be run; we must give those we employ protection, for it may be that those we have to this time protected by keeping their jobs open, may now turn against us, even to an attempt to prevent others from working.

"Call is now being made upon every employee, upon every patron of this company, and upon every citizen along its lines, to rally to the support of the road that has served you and protect your own interests in the maintenance of transportation. With your help we can run the road, and we pledge all the resources of the company to that end. If it means war to run the Southern Railway, then let us have it now—not later."

Bomb Outrage Near New York

On Sunday night, August 13, about 10 o'clock, a southbound suburban passenger train of the West Shore division of the New York Central was damaged by an explosion at a point five miles north of Weehawken, N. J., and 20 or more passengers were injured, five of them being sent to a hospital. The train was moving at full speed and it was believed that three or more dynamite bombs were thrown against the sides of the coaches. The injuries were mostly cuts made by broken glass. A bridge which carries the New York Central over the northern division of the Erie was slightly damaged. The scene of the explosion is near a car repair shop of the New York Central.

Canadian Wage Reduction Suspended

The Canadian railways, following conferences early in the month ordered a general reduction in the wages of their shopmen to go into effect on August 15, although the employees, said to number 37,000, had threatened to strike if the reduction should be ordered before the Board of Conciliation had approved the new rates. Premier King had notified the roads that he indorsed the opinions of the Departments of Labor and Justice that the reductions cannot be enforced until the Conciliation Board acts; and on the evening of the 15th it was announced that the presidents of the Canadian National, the Grand Trunk and the Canadian Pacific had telegraphed Premier King that the cut would be rescinded and the men would be paid at their old rate. The view of the government is that a reduction of pay is a "condition affecting employment" which, under the Act of 1907 regulating industrial disputes, cannot be changed except on 30 days' notice and opportunity for governmental investigation.

TWELVE MILLION PERSONS used the Southern Pacific ferries across San Francisco Bay in six months ending June 30 last. On one day during the Shriners' convention 120,000 passengers were carried.

The Status of Railroad Electrification*

The Railroad Man's Position Is Presented to the Electrical Engineers by One of Them

By Calvert Townley
Westinghouse Electric & Manufacturing Company

When we electrical engineers have discussed railroad transportation we have always done it from the standpoint of proving how desirable it is for the steam railroads to electrify, and when we have invited our steam railroad friends to participate in our discussions, they usually refrain from courtesy or some other reason from telling us absolutely and entirely what they think of us. It has therefore occurred to me that it might be worth while for an electrical man to say a few words about the railroad man's natural objections to electrification and to give some of the reasons why he is not always willing to fall upon our necks and welcome us as saviors.

Having enjoyed for many years an association with the big railroad system which serves this community, I have had an opportunity to learn something of the railroad man's point of view from the inside.

Electrification Expensive

In the first place, electrification is very expensive. It involves not a small but a tremendous addition to the investment per mile, with the consequent difficulties not only of earning the additional interest charges thereby involved, but also those of financing—of raising the money. These are by no means minor objections. The day has gone by when the management of a railroad property can have a free hand in issuing securities. Through their various governmental agencies the public has established a strict supervision over railroad earnings, is reluctant to permit the capitalization of values created by earning power and is prone to regard railroad securities as having so stable a value that their yield must be limited to a minimum annual interest with little opportunity for the stockholders of the road to obtain large profits from courage and initiative; that is to say, stated in another way if a railroad by far-sighted and wise expenditures should be able to earn a rate of return such as is freely permitted and often applauded in private industry, such as for example as 15 per cent to 20 per cent per annum, it is most probable that this additional yield would be shortly taken away from it by a forced reduction in its rates. I am one of those who believe this public policy is founded on a misconception; is in fact practically an economic crime, because I think it is obvious that if a dollar invested in a railroad is not permitted as good a chance as one invested in a shoe factory or a flour mill, that dollar will tend to go into the factory or mill and not into the railroad, with the consequent hampering of that continued improvement and expansion of our transportation facilities so necessary to progress. I cannot escape what seems to me to be the obvious logic that if it be equitable for the public to prescribe a maximum rate of return on a railroad or any other investment, it should, as a necessary corollary, guarantee the same investment not less than a minimum return. However, our public policy has been pretty firmly established by now so that what I think about it is of only academic interest.

The art of estimating in advance the cost of new construction, no matter if practiced by the most competent engineers, has never reached or even approached perfection, therefore, where such large expenditures as those necessitated by electrification are contemplated it is always possible due to this fact and due to unforeseen contingent expenses that the estimated costs will be considerably exceeded. A combination of this contingency with the knowledge that should greatly increased profits result, the road may be deprived of them through the medium of rate reductions, may well cause the responsible executives to go slowly.

Departmentalization

Long experience has demonstrated the necessity and established the practice of well-defined and rather rigidly restricted departmentalization of railroad construction and operation; that is to say, the construction, operation, traffic and financing are each in charge of a responsible official who concentrates his attention each on his own department and who is most punctilious in keeping out of every other sphere. This practice results of course in a high degree of efficiency in the conduct of each department and is obviously dictated by a wise policy. However, it has the disadvantage of dividing the responsibility for general results and makes for a tendency to put departmental success ahead of general prosperity.

Substitutes an Unlimited Motive Power

Electrification upsets some of the fundamentals around which steam railroad practice has been built up, namely, it practically substitutes an unlimited for a limited motive power. This fact is well known to us all but it is so fundamental and so far-reaching in effect that it will bear restating and emphasizing many times. I refer of course to the fact that a steam locomotive which carries along its own boiler and is therefore in fact its own power house, is limited in the tractive effort it can exert by the steam which can be generated by that boiler, whereas the electric locomotive being only a translating device can call upon the entire capacity of all the power houses connected to the system. On account, therefore, of the large excess in such power house capacity over any possible demands of an individual train, on account also of the characteristic of electric motors to continue to exert more and more power, even to the point of self-destruction, and further on account of the possibility of operating two or more electric locomotives together in absolute synchronism with one crew and the consequent possibility of getting any desired weight on the drivers, there is practically no limit to the amount of tractive effort that may be utilized for any one train.

The consequences resulting from these facts are rather startling, for example, the long-established and accepted practice of calling two per cent the maximum grade over which a desired schedule may be made goes into the discard and much steeper grades become entirely practicable, likewise the tonnage and speed of freight trains previously limited by the power of a steam locomotive to pull is no longer so limited. Freight trains may be as long as the structural strength of the freight cars will permit or as may be handled in the yards and on the sidings. Schedule speeds may be increased to any point considered safe for the track and equipment, being no longer limited by the steaming power of the locomotive. Instead of accelerating from a standstill at the rate of one-quarter of a mile per hour per second as

*Address delivered before the Connecticut Section of the American Institute of Electrical Engineers, May 23, 1922.

is common steam locomotive practice, passenger trains may be accelerated at the rate of from one mile to one and one-half miles per hour per second.

We have always considered the above fundamental change as offering a wonderful opportunity for the improvement of traffic and they do offer such improvement but to get all the possible benefits requires the co-operative effort of the construction, operating and the traffic departments. It disturbs the existing order to a very considerable extent and redistributes the proportionate burden of expense among the different departments concerned so that any departmental head may be faced with the necessity of taking on some additional burden in his own department without any compensating advantage, i.e., the advantage goes to another department. In view of the well-established relationship between departments above referred to, railroad executives cannot be blamed if they regard such innovations with skepticism and retain a considerable reluctance toward their adoption.

Labor

The relation between railroad management and railroad labor is a source of continued and great anxiety. Owing to the meddling (and I use the word "meddling" deliberately and advisedly) of federal and other outside agencies in what may be well-meaning but is certainly a misguided effort, there has grown up an inflexibility in both the duties and the pay of railroad labor unparalleled in any other industry. Changes in operating methods are very difficult. Now electrification immediately requires a lot of changes. Not only have the engine drivers all to be educated to a new art but the duties of the fireman are revolutionized. In fact, except as a source of insurance against the death or disability of the engineer while driving his engine, the fireman is not needed at all. A new type of man, the electrical lineman and the electrical shop man is required and where a railroad operates its own power houses the power house crews are introduced. The transmission lines overlap two or more divisions of the road and confuse the duties of the division superintendents. The signal system has to be revamped. These and other features all tend to upset the existing order of relationship between the management and its labor, and the official whose duty it is to regulate these relations may be forgiven if he contemplates with extreme alarm the task presented to him.

Many if not all of the bunkers which I have mentioned are present on every railroad and you will note are not removed, even if it is known that railroad electrification would be advantageous. On top of this come all the questions of the actual virtue of electrification itself. It is perfectly true and I think now very generally admitted that all electrifications heretofore made have been successful and that no road which has electrified would now consent to return to previous conditions.

However, not more than about one per cent of the entire steam railroad mileage of the United States has been electrified as yet and the average railroad executive may be excused if he looks upon the existing examples as special cases and therefore as proving nothing with respect to his own particular problem. For example, the New Haven and the New York Central had to electrify out of New York City because of a law passed by the State of New York. The Pennsylvania had to electrify out of New York City in order to operate its subway river tunnels. The Norfolk & Western had a peculiar restricted neck to its bottle in the Elkhorn grades which would justify almost any expense to remove. In a like manner some special reason can be found for almost every large electrification project. However, it is perfectly safe to say that the attitude of mind of the railroad man has materially changed so that the question always first asked some years ago, "Can it be done?" has now been replaced by the entirely different question, "Will it pay?"

As many of you know, I have been and still am a consistent and an enthusiastic advocate of steam road electrification. In reciting the different objections of which I have spoken I do not intend in any way to indicate a change of opinion or a weakening of confidence but rather because I think it helpful to us all when we can look at any situation from the other man's point of view and because I firmly believe we can do the cause of electrification no greater harm than to ignore plain facts and out of well meaning but mistaken zeal advocate electrification where we are not reasonably sure that it will be economically right.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING during the week ended August 5, the fifth week of the shop strike, showed another drop of 8,382 cars, as compared with the week before, to 851,351. This represented a reduction of about 26,000 cars as compared with the loading before the strike, but was an increase as compared with the corresponding week of 1921 of 65,173 cars and a reduction as compared with 1920 of

Compiled by Car Service Division, American Railway Association.

84,379. Coal loading increased as compared with the week before to 79,246 cars, but with the exception of ore there was a decrease in all other classes of commodities. As compared with the corresponding week of last year there were increases in all classes of commodities except grain and grain products and coal, and in all districts except the Southwestern. Although there has been difficulty in handling all the coal offered for transportation in the Pocahontas district it is noteworthy that the loading both of coal and of other commodities was in excess of that of last year.

Despite the coal strike, reports filed by the railroads with the Car Service Division show an increase in July, compared with the same month last year, of 10.6 per cent in the number of cars loaded with all commodities. The total for July was 4,176,979 cars, compared with 3,774,964 cars during that month one year ago, or an increase of 402,015 cars. Compared with June, 1922, freight loading last month showed an increase of .05 per cent, the total for June being 4,156,396, but compared with July, 1920, a decrease of 7.1 per cent was reported.

Coal loading for the month of July totaled 393,512 cars, a decrease of 46.2 per cent compared with July one year ago, when the total was 731,615 cars, and a decrease of 59.5 per cent compared with July, 1920, when 971,968 cars were loaded. Compared with June, 1922, the total for July was a decrease of 14.8 per cent.

Loading of all commodities, other than coal, totaled 3,783,467 cars in July, an increase of 24.3 per cent over July, 1921, and an increase of 7.4 per cent over July, 1920. An increase of 2.4 per cent was also reported compared with June, 1922, when the total was 3,694,480 cars.

During the week ended July 29, loading of all commodities other than coal amounted to 98.9 per cent of the total for the week of October 15, 1920, when the largest number of cars were loaded with freight in the history of the railroads. In three out of the seven districts, however, the previous record was excelled. In the Eastern district, freight loading amounted to 102.1 per cent of the total for that district for the week of October 15, 1920, while in the Allegheny district it was 106.8 per cent. In the Central Western district loadings were 101.7 per cent. The Southern district reported total loading of 94 per cent of that for the week of October 15, two years ago, and the North Western district, 94.3 per cent. In the Southwestern district it was 93.8 per cent. Owing to a falling off in coal traffic, loading in the Pocahontas region was only 62.8 per cent of that for the record week two years ago.

The total car loading from January 1 to July 29 this year, 23,548,742 cars, was 8.5 per cent greater than the total for the corresponding period of last year, a year of depression, but was 6.7 per cent less than the total for 1920, the boom year. The loading for that period of 1920 was, however, approximately the same as for 1918. For 1921 the loading to July 29 was 21,684,806 and for 1920 it was 25,075,940.

The railroads during the week of July 29, the fourth week of the shop strike, placed a slightly smaller percentage of the cars required for coal loading than they did the week before, 71 per cent as against 72, but the requirements were larger and they actually loaded 4,166 cars, or 6.1 per cent more than they loaded in the week of July 22. While the railroads of the Allegheny, Northwestern and Central Western districts furnished more than 100 per cent of the cars required for bituminous loading, the roads of the Pocahontas district furnished only 40 per cent, the Southern district 47 per cent, the Eastern district 97 per cent, and the Southwestern district 99 per cent. The cars required for coal loading, including 508 for anthracite loading, were 142,811. The cars placed were 101,023, and the cars loaded were 71,931.

The Chesapeake & Ohio, in the week ended July 29, placed only 30 per cent of the coal cars required, the Norfolk & Western 55 per cent, the Virginian 37 per cent, and the Louisville & Nashville only 33 per cent. The actual loading on the Norfolk & Western, however, increased 1,959 cars over the preceding week.

These figures are taken from weekly bulletins published by the Car Service Division of the American Railway Association. Later figures published by the Geological Survey, based on reports furnished by the A. R. A., show a steady increase in coal production and loading for the three weeks ending August 12. For that week it is estimated that the production was about 4,800,000 tons. The drop in coal production began during the last week of June, before the shop strike, and was due largely to congestion on the roads serving the non-union coal mines. There was then a decline for four weeks to July 22, but the trend since then has been steadily upward.

The railroads also placed 86 per cent of the total number of open-top cars required, 278,609, against requirements of 323,352. They loaded 244,518, a decrease, in comparison with the week before, when they furnished 282,679, or 89 per cent of the requirements. The loadings for the previous week totalled 246,833. For limestone the roads furnished 95 per cent of the requirements, ore 100 per cent, iron and steel 98 per cent, sand, stone and gravel, 95 per cent, coke 100 per cent, and miscellaneous 95 per cent. The low percentage was attributable chiefly to the low performance of the railroads in the Pocahontas and Southern districts, 43 and 58 per cent, respectively.

Car shortages began assuming appreciable figures during the period July 23-31. The shortages in that week amounted to 24,973, as compared with 15,366 during the preceding week. The car surplus, during the same period, amounted to 174,927, a decrease of 28,395. The shortages included 16,550 box cars, and 6,633 coal cars. The surplus included 21,367 box cars and 131,267 coal cars. The principal shortage was in the Southern district, 11,426. The principal surplus was in the Eastern and Allegheny districts, 63,960 and 59,407.

Grain and grain products loading for the week of July 29 was 59,170 cars, the highest since the week of September 3, 1921, and the cumulative loading this year, to July 29, was in excess of any of the preceding years. While similar records were not maintained before 1918, according to the weekly bulletin issued by the Car Service Division of the American Railway Association, it is safe to say that the loading this year to date was the largest ever made.

How Should Grain Door Reclamation Be Handled?*

Railway Superintendents' Association Advocates Private Bureau Where Business Justifies

IT IS NOT PRACTICABLE to maintain a uniform method of gathering grain doors and of storing, re-using and shipping them back to owning lines because of differing conditions. For instance, in some cities the elevators and mills are close together and handle so much grain that the grain doors which are not re-used accumulate in sufficient quantities to justify their being shipped back to the owning roads in cars, whereas at other places the elevators and mills are scattered and a carload of grain doors will not accumulate in a year. At such places, if the grain doors are not reclaimed promptly they are chopped up or stolen and it may, therefore, pay, where these accumulations are small and scattered, to have an automobile truck collect the doors once a week or oftener.

The grain door problem is, therefore, one for local bureaus or committees to solve in view of the conditions met in each locality. In doing this, however, there are a number of considerations which any plan, to be most effective, must take into account, a statement which also applies with respect to the coopering of cars. One of these considerations is that of establishing the rules under which the reclamation and coopering of and payment for grain doors is to be performed. As an example of what should be covered by such rules and how they should be drawn up, the following rules of one city are submitted.

Rules Governing Reclamation and Coopering

1. The party of the second part shall reclaim all grain door materials belonging to the railway company from all cars unloaded at the various industries within the switching limits, and shall return the same to the railway company or shall use the same in coopering cars for said railway company. When such material shall be returned in a serviceable condition the railway company shall pay to the party of the second part 8¾ cents for grain doors 26 in. in height or less; 15¾ cents for grain doors over 26 in. in height, and 7½ cent per foot board measure for loose boards.

2.—The party of the second part further agrees to cooper all cars for the railway company, for loading bulk grain, sacked grain, seed and other similar commodities, at all industries in the switching limits; and, furnish all labor, tools, nails and burlap, and such other material as may be necessary to make said cars grain-tight, except lumber material, using burlap at the sides, ends, over king bolts and at door posts. The railway company shall furnish the necessary lumber material for coopering sides, ends and other parts of the car. The party of the second part shall receive $1 per car for cars loaded with bulk grain and other bulk commodities, and $0.40 per car for sacked grain seed, and other such commodities.

3.—The maximum price per car to be paid by the railway company to the party of the second part for coopering shall be $1.15 per car, and for both reclaiming of grain door material and coopering shall not exceed $2.05 per car. The party of the second part shall furnish all labor, tools, nails and such other equipment as may be necessary for the performance of the work contemplated by this agreement, except the grain door material as hereinbefore provided.

4.—The party of the second part shall present to the railway company on or about the first day of each month itemized bills showing the service, and the compensation therefor, during the preceding month. The railway company shall pay said bills on or before 20 days after the presentation of said bills.

5.—The railway company shall arrange with other railroad companies within the switching limits for the switching movement on cars containing door material returned under the provisions of this agreement, at the cost of the party of the second part. The party of the second part shall keep a correct record of all grain door material reclaimed, delivered to, or used for the railway company, under the terms of this agreement.

6.—The railway company shall assist the party of the second part towards reclaiming grain doors from and at industries located on the lines of the railway company within the switching limits, and the railway company shall also permit the party of the second part to reclaim grain doors for other railroads at industries and at elevators on the lines of the railway company within the switching limits.

7.—As a special inducement for the execution of this agreement the party of the second part has and by these presents does agree to hold the railway company harmless from and indemnify it against all loss, cost, damage or expense, resulting from accident, injury or death to either the party of the second part, or to any person in his employ, while engaged in the performance of the work herein specified, or while upon the premises owned or controlled by the railway company for the purpose of performing the conditions of this agreement.

8.—Either party may terminate this agreement by giving 30 days' notice in writing to the other party of its intention to so terminate the agreement; otherwise, said agreement shall remain in full force and effect.

ADDENDA

1.—The grain door agent, in coopering outbound cars with doors and lumber received from cars on an inbound carrier, is only authorized to use such material in emergency cases and with the consent of the road owning it; the outbound carrier to pay the contractor $1 per car where the car is fully and newly grain doored.

2.—All grain doors and lumber furnished by the inbound carrier, including intact grain doors, will be charged against the outbound carrier at the rate of $0.46 per foot in height; no maximum allowance.

3.—Where the grain door agent is required to place doors in automobile and furniture cars, that class of cars having doors 7 ft. or over in width, the charge for coopering is $1.17.

4.—The coopering of cars for grain and other loading to points within the switching limits must be paid for by the shipper at the rate of $2.04 per car, the Grain Door Reclamation and Cooperage Bureau to collect this amount in each case from the shipper and pay to the railroad owning the grain doors $0.86 per car, retaining for the work of reclaiming, cleaning, repairing and coopering $1.18 per car.

5.—Reclaiming grain doors at outlying points, where automobile truck is used, $0.22 per door.

These rules have been found to be thoroughly practicable and fit the conditions. There is no doubt that similar local rules should apply in all large cities.

It Is Usually Better to Do Repairing at the Elevator

In cities where there is a great deal of grain-dooring of cars, the point has been made that it is cheaper to have a grain-dooring yard and to switch the cars rather than have a shifting force to go from elevator to elevator and do the work. While this is the practice at Buffalo, in other cities it is much more profitable and satisfactory to use intact grain doors, grain doors of neighboring roads, the local bureau to have a force at each elevator, or, where there is not much business, a traveling force, to take care of the work. One trouble which always develops when cars are not coopered at the elevator is that they are often found, on arrival at the mill or elevator, to be improperly coopered, or the doors knocked out and stolen, necessitating the assignment of another car.

The sweeping of sills outside the grain door after the car is loaded is important to avoid claims. When the sill is not swept and a car goes through to its destination it is often reported by inspectors as leaking and the grain which is found on the sill is mentioned in their reports as evidence that the car was leaking before it started on its trip. This militates against the interests of the handling roads. While it is apparently a small matter, it has a large effect in the avoidance of erroneous evidence on which claims are filed.

It Pays to Watch the Coopering

It is important that a bureau, a committee of railroad officers or railroad employees check the elevators on their loading of outbound cars to see that the elevators apply and apply properly, the top boarding after they have completed the loading, otherwise a loss of grain will occur enroute, which may result in a claim against the railroad. Another feature deserving attention is the damage at elevators by misuse of equipment. With a bureau or a committee watching this, reports of damage can be made and the elevators forced to pay for the damage which they do to the interior of the car or which is done by cornering the cars when the elevator does its switching with a capstan.

Wherever there are terminals of several roads, and as many as five superintendents, there should be a superintendents' association, so that a committee of such an association can form a bureau of its own or supervise an outside bureau to see that the prices are properly gaged. The conditions are sufficiently similar in different cities so that the cost of doors and coopering can be moved up and down in accordance with analyses made from time to time by a central bureau.

The trouble about a bureau operated by the railroads is that it is not as closely supervised as a private bureau. This arises from the fact that the private bureau depends for its

*From a report of the Executive Committee of the American Association of Railroad Superintendents.

revenue entirely on the activity of the bureau officials and its employees, while in the case of the railroads the supervision is usually left to some individual railroad officer. The latter has other work to do and, being overcrowded with it, the work of the bureau is allowed to drift along without the close supervision necessary for efficient and economical operation. It is better for adjacent cities to have a bureau representative of the several roads take charge of the work so that the overhead expense which is included in the cost per car will be as small as possible. The larger the organization that can be built up, the cheaper grain doors can be reclaimed for the railroads. Where the roads have been reclaiming lumber and grain doors in a loose manner the establishment of a bureau will result in 90 per cent more lumber and doors being reclaimed than was done before its inauguration and where bureau men are established around an elevator to reclaim grain doors and recooper cars there is 90 per cent less theft.

The bureau employees work in the joint interest of the elevator and the railroad because their positions depend upon their giving satisfaction to both sides. Their work and this interest save both sides in divers ways. The grain door reclamation bureau makes all repairs. If lining is torn out, grain door material is used for repairing. If the lining is torn loose it is nailed back into place. Also if outside sheeting is found loose it is nailed tightly to the sills and if storm doors have been torn off they are replaced. Under this plan cars are repaired which would otherwise go to the repair track, thus saving track labor and avoiding delays and the movement of the car back and forth through the yards.

Another advantage of the bureau organization lies in the check obtained upon the grain loaded into the cars. Elevators ordinarily weigh grain in hopper scales. If grain is lost while being moved from the scale to the car the bureau forces thus serve a valuable purpose in having a record taken of the car to prevent claims against the railroad. While the bureau employees do not handle any of the grain that falls out of the car on the ground, when a car is loaded at a mill or elevator, they do make a memorandum of the car number, initial and the elevator, so that in case a claim is presented the bureau is in a position to protect the railroad. In some cases where inspection shows cars unfit for grain loading and the elevator is notified, but where the elevators disregard the notice, the bureau organization renders a valuable service to the railroads also by keeping a record of the car and its movement so that the railroad will not participate in claim

Gasoline Motor Car for the Burlington

The Chicago, Burlington & Quincy has recently received from the Edwards Railway Motor Car Company, Sanford, N. C., a gasoline motor car which has been put into service on the line between Atchison, Kan., and Rulo, Nebraska. The car is mounted on two four-wheel trucks, the body being 52 ft. 7 in. long and the distance between truck centers 20 ft. 2½ in. The power to drive the car is furnished by a Kelly-Springfield four-cylinder motor, with cylinders 4½ in. by 6½ in. developing 60 hp. at 1,600 r.p.m. The drive is transmitted by chains to the four wheels of the rear truck. The car has a 12-volt electric lighting system, self-starter and Westinghouse straight air system with two Edwards special air compressors.

In the passenger compartment the car seats 39 passengers and there are folding seats in the baggage compartment for six additional passengers, making a total seating capacity of 45 persons. A toilet is placed in the forward end of the passenger compartment. The driving controls and driver's seat are on the right-hand side of the motor. The total weight of the car empty is 19,000 lb. On a trial run under full load the car developed a speed of 45 miles an hour. It is stated that the gasoline consumption was 10 miles per gallon.

Train Wreck at Annandale, Minn.

General News Department

The Signal Section of the American Railway Association will hold its regular meeting on Tuesday and Wednesday, November 21 and 22 at Hotel McAlpin, New York City.

A fire on August 12 at the New York Central freight terminal at 63rd street, New York City, the principal freight yard of that road in the city, destroyed Pier D and 80 loaded freight cars, estimated loss $1,000,000. The fire is said to have been discovered first in a carload of grease.

Impact Loads on Track Bolts

Through several typographical errors the formulas on page 278 in the article on Determining the Impact Loads on Track Bolts in the issue of August 12 were given incorrectly. They should have read as follows:

$$P_1 = \frac{P}{2\pi r\left(r - \sqrt{r^2 - \frac{D^2}{4}}\right)}$$

$$P_1 = 2\pi r\, tt\left(r - \sqrt{r^2 - \frac{D_1^2}{4}}\right)$$

Ten Killed When Truck Wrecks Soo Line Train

Six passengers and four other persons were killed and a larger number injured when Minneapolis, St. Paul & Sault Ste. Marie passenger train No. 107, westbound, struck a motor truck on a highway crossing near Annandale, Minn., on August 12. The wreck was the result of the truck driver failing to heed the warnings of freight train men near by. He drove upon the track in front of the passenger train, the truck was hurled against a freight engine which was standing on a siding, and a switch-stand was knocked down so as to turn three coaches of the passenger train into the side track and against the standing freight train. The baggage car was crushed against the freight engine while several other cars were derailed. Most of the dead and injured were in the smoking car which fell over on its side. Two of the ten dead were occupants of the motor truck and two were train employees.

Dinner to S. M. Vauclain

Charles Riddell, manager of the Chicago office of the Baldwin Locomotive Works, gave a dinner in honor of Samuel M. Vauclain, president of this company, at the Chicago Club in Chicago on the evening of August 4. Mr. Vauclain was just returning from an extended tour throughout the west which he had made for the purpose of studying the general business situation. The dinner was attended by a large number of railway presidents and vice-presidents and other leading business men of Chicago.

Mr Vauclain delivered an optimistic address consisting largely of observations he had made on his trip. He expressed the opinion that fundamental business conditions are sound and that when the large strikes in progress are out of the way the country will enter a period of great prosperity. He described the trip of the "Prosperity Special" consisting of a solid train of locomotives built by the Baldwin Works for the Southern Pacific which was run clear across the continent, and which, as Mr. Vauclain remarked, entered the shops of the Southern Pacific at Los Angeles all ready for work on the very day when the road's shop employees struck. He said he had never seen such promising crops, or encountered more optimism among people, than in the west.

In concluding his remarks he referred in a complimentary way to the work done by Samuel M. Felton as director general of military railways in providing equipment for the United States forces overseas during the war, and Mr. Felton made a few brief remarks in which he told of the energy and managerial skill shown by Mr. Vauclain in turning out locomotives for the American forces with the greatest possible dispatch. Hale Holden, president of the Chicago, Burlington & Quincy, also spoke briefly.

Following the dinner Mr. Vauclain delivered an address to a large crowd in the Gold Room of the Congress Hotel on the general business situation and showed the moving pictures of the "Prosperity Special" on its flight from the Atlantic to the Pacific coasts.

Safety of Carbon Tetrachloride Fire Extinguishers

A few weeks ago a short circuit in the New York subways burned a considerable amount of paint, insulation and rubber on one of the cars filling part of the subway with smoke and fumes from which several persons were overcome. Shortly after the fire Mayor Hylan of New York blamed the Pyrene fire extinguisher for these casualties and the city departments recommended that they should not be used in subway cars. This led to a controversy over the dangers of carbon tetrachloride extinguishers. The reports of the Transit Commission which investigated the fire deal with this subject and absolve the extinguishers from blame for the noxious fumes.

The reports state that experts from the Bureau of Mines found there were apparently no serious cases resulting from the effects of possible toxic gases and that the symptoms were not characteristic of phosgene or carbon tetrachloride poisoning. These conclusions were sustained by the physician of the Transit Commission. The report further states that carbon tetrachloride is the standard fire extinguisher in general use, is approved by the National Board of Underwriters and is particularly adapted for fires produced by short circuits in electrical equipment because tetrachloride is a non-conductor and will extinguish ordinary electric arcs.

State Control Urged for K. C. M. & O.

Lieutenant Governor L. Davidson of Texas believes that state control of the Kansas City, Mexico & Orient is the only possible solution of the problem of saving the road from being junked. Not only should the state of Texas take this action, the Lieutenant-Governor declared, but he also urges that similar action be taken in each of the other states through which the road runs. Further, he said: "Both federal and state legislation exempting the road from the application of all transportation acts should be enacted, this exemption to continue so long as the road is in the hands of the states, or their agencies, legally created." He would thus modify the federal statutes on the condition that the agencies of the respective states should elect a managing agency from among their members. Mr. Davidson said, further:

"Six hundred thousand citizens are living in the towns and cities located on this railroad. There are 93 towns on it, 66 of which are in Texas. There are 735 miles of the railroad in the United States, 464 miles of which are in Texas, and there is a rural and urban population along the road equal in number, perhaps, to those in the cities. The Orient railroad must be conserved or else the state's custodianship of the citizens' welfare comes to a sorry accounting. Expediency would adopt the suggestion to deliver the Orient railroad to some line financially able to carry it for operation, and if that can be done, it is perhaps the best immediate disposition of the difficulty. A government-owned railroad, because of ensuing political management, is not the remedy. May the wisdom of the people save us from the Plumb plan or other similar socialistic schemes, and from government ownership of railroads."

Mass Meeting to Aid the Road At a mass meeting held in San Angelo, Tex., on August 7, the citizens of that community appointed a committee to urge the county commissioner to reduce the tax valuation of this railroad to $100 a mile. C. M. Reed, chairman of the Kansas public utilities commission, told the

meeting that this was one way to which the territory served by the road could aid in averting the threatened suspension of operation.

Wage Statistics for May

According to the Interstate Commerce Commission's monthly bulletin the number of employees reported by Class I railroads for May, 1922, shows an increase of 50,095, or 3.2 per cent, as compared with April. It appears largely in the maintenance-of-way group.

In the April statistics the decline in the total compensation from the preceding month was attributed to a decrease in the number of higher paid employees. Further analysis indicates that although it is true that the number of men and hours in the maintenance-of-way group increased, as against a decrease reported for the higher paid groups, the net effect of this, combined with other changes, was to leave the average earnings per hour for straight time practically the same, and the decrease in total compensation is to be attributed to the decline in the total hours worked in April, which had 30 days with 5 Sundays, as compared with March with 31 days and 4 Sundays.

Compared with April the returns for May indicate the following increases or decreases:

Executives, officials and staff assistants	D9
Professional, clerical and general	702
Maintenance of way and structures	40,795
Maintenance of equipment and stores	7,279
Transportation (other than train, engine and yard)	1,304
Transportation (yardmasters, switch tenders and hostlers)	D309
Transportation (train and engine service)	833
Net increase	50,095

A comparison of the number of employees and their compensation by months for the period covered by the new classification follows:

Month	Number of employees	Total compensation
July, 1921	1,634,872	$214,339,385
August 1921[1]	1,679,927	227,745,895
September, 1921[1]	1,718,330	233,972,822
October, 1921[1]	1,754,136	237,602,959
November, 1921[1]	1,732,353	225,304,006
December, 1921[1]	1,637,151	214,921,396
January, 1922[1]	1,552,014	205,178,639
February, 1922[1]	1,545,040	194,523,437
March, 1922[1]	1,570,158	216,704,408
April, 1922	1,578,133	203,413,071
May, 1922	1,628,228	216,672,028

[1]Excludes Detroit, Toledo & Ironton.

Illinois Central "No Exception" Month a Success

During June of this year the Illinois Central and the Yazoo & Mississippi Valley conducted a "no exception" campaign, during which time only 1,485 L. C. L. exceptions were charged to all stations on these carriers as compared with 1,933 in June, 1921, a decrease of 448, or 23.1 per cent. There were 150 carload exceptions charged to all stations during June, 1922, as compared with 374 in July, 1921, a decrease of 224 or 59.8 per cent.

The general plan of last year's campaign was followed this year. Superintendents, supervising agents, trainmasters, master mechanics, yardmasters and agents worked with the employees of all departments for the single purpose of eliminating freight claim causes. The employees were impressed daily by these supervising officers and department heads with the importance of prompt and proper handling of all freight shipments and were told that the final result desired was not only the conservation of foodstuffs and materials but the elimination of causes responsible for annual claim payments amounting to thousands of dollars. A special effort was made by platform forces to see that packages were properly marked, packed and in containers of sufficient strength to insure against damage while in transit; also to see that shipments were loaded correctly and that a waybill accompanied each shipment to insure proper handling en route and prompt delivery at destination.

A reduction was made in the number of bad order reports charged against L. C. L. shipments, the total for June, 1922, being 637, as compared with 935 in June, 1921, a decrease of 298 or 32 per cent. This reduction was accomplished largely by closer attention to the loading, stowing and bracing of the shipments and also the increased use of bulkheads in through cars at the larger platforms.

A novel feature introduced in this year's campaign was the showing of motion pictures illustrating the proper and improper methods of handling freight with the results of the latter. These pictures featured a test showing the speeds at which merchandise is damaged while being switched. This test was originally made with a specially constructed box car with one side and the roof removed. A wire screen of large mesh was placed on the open side of the car to prevent freight from falling out during the tests and also to permit the taking of the moving pictures, showing what actually occurred to the contents while the car was being switched and subjected to various shocks. Tests were made with merchandise properly trimmed down and also bulkheaded, an impact-recording device placed in the car indicating the degree of impact at various rates of speed ranging from 3 to 20 miles an hour. Up to and including the month of July, claim payments have been reduced over $1,000,000, or 60 per cent as compared with the same period last year.

Railway Revenues and Expenses for June

Reports filed with the Interstate Commerce Commission show that the 200 Class I railroads had a net operating income in June of $76,594,006. On an annual basis this represented a return of 4.78 per cent on their tentative valuation. The net operating income for those roads in June last year amounted to $51,067,115, or at the annual rate of return of 3.18 per cent, while in May this year it was 4.36 per cent.

The roads fell short $19,000,000 of realizing a return of 6 per cent on their tentative valuation, or $15,000,000 below the rate of 5¾ per cent, the figure fixed by the Interstate Commerce Commission in its rate decision.

Gross operating revenues amounted to $473,785,294, which was an increase of 2½ per cent over the same month last year; operating expenses $363,983,667, a decrease of 4½ per cent.

Fifty railroads—29 in the East, 1 in the South and 20 in the West—had operating deficits in June, compared with 56 in May.

For the first six months this year the net operating income of the railroads totaled $349,092,945, compared with $145,485,019 during the same period last year. This is at the annual rate of return on their tentative valuation of 4.43 per cent, compared with 1.85 per cent during the first half of 1921. Operating revenues for the first 6 months totaled $2,611,125,035, a decrease of 2½ per cent compared with the corresponding period last year, while operating expenses totaled $2,078,672,589, a reduction of 12.1 per cent under those for the first 6 months last year. The carriers during the first half of 1922 fell short $123,000,000 of realizing a 6 per cent return.

The commission's summary of revenues and expenses for June and for six months follows:

Item	June 1922	June 1921	Six Months 1922	Six Months 1921
Aver. miles operated.	235,128.28	234,669.97	235,162.87	234,689.95

Traffic News

The Tennessee, Alabama & Georgia resumed passenger service on July 20, after having been dormant since May 1. It has also been announced that within 90 days this road will run express trains between Chattanooga, Tenn., and Gadsden, Ala., with gasoline driven cars.

J. G. Thomas, a freight agent on the Cincinnati, Indianapolis & Western, was elected president of the American Association of Railway Agents, succeeding W. L. Heacox, of Chicago, who has resigned. The headquarters of the association are to be moved from Chicago to Indianapolis within the next few weeks.

G. Cummins, Davenport, Iowa, traffic commissioner of the Commercial Club of that city, has been elected president of the Iowa Traffic League. C. O. Dawson, traffic manager of the Jacob E. Decker packing plant, Mason City, was elected vice-president; L. M. O'Leary, Fort Dodge, Chamber of Commerce traffic manager, was elected secretary, and E. G. Wylie, Des Moines, was re-elected treasurer.

A rate of one fare for the round trip has been granted to the G. A. R. veterans to their national encampment which will be held in Des Moines, Iowa, from September 24-29. The rate applies to all members of the G. A. R., wives and dependents, widows of G. A. R. members, army nurses of the civil war, members of auxiliary organizations of the G. A. R., and dependent members of their families. Tickets will be on sale September 21 to 26, and will be honored until October 31. Stopovers will be allowed at all points within the final limit of the ticket.

The Southern Pacific has made reductions in rates on several commodities passing through San Francisco from the Far East and Hawaii to eastern points in the United States and Canada. The rate on canned pineapples originating in the Hawaiian Islands, or further west, was reduced from $1.42 to $1.15 per 100 lbs., in carloads of 40,000 lbs., and when destined to Montreal and Toronto from $1.22 to $1.05, in carloads of 60,000 lbs., and the rate of $1.50 on gall nuts has been reduced to $1.

Official List of Sailing Dates for Exporters

Dates of sailing of American-registered steamships going to foreign ports are now advertised by the Interstate Commerce Commission by means of a semi-monthly bulletin, the first number of which was dated July 20. By order of the Commission this bulletin is to be kept on file at principal freight stations throughout the country; that is to say, at all stations where, by the order of the Commission, issued last January, the railroads are required to issue through bills of lading for goods going to non-adjacent foreign countries. The list of stations printed in the January order covers the whole country, beginning with the Aberdeen & Rockfish (three stations) and ending with the Yreka Railroad. Thirty-two lines are represented in this first bulletin, and the schedules fill 25 pages, of which eleven are filled with sailings from New York. Some of the carriers give dates as far in the future as October and November. Prominent lines doing foreign business which are not represented in this bulletin are the Cunard-Anchor, the French Line, Lamport & Holt, Mallory Line, Pacific Mail and the Quebec Steamship Company.

Coal Production

The nineteenth week of the coal strike (August 7-12) opened with a decided increase in production, according to the weekly bulletin of the Geological Survey. Returns indicate an output of soft coal of about 4,800,000 net tons, or 500,000 tons more than the week before. The increase is said to be due to gradual improvement in traffic conditions on the railroads serving non-union fields and also, but only in a very small way, to increased production in fields hitherto throttled by the strike. Despite this increase in bituminous coal output the nineteenth week finds production still about 550,000 tons below the level reached before the shopmen's strike. The week, however, represents the third consecutive week of increase.

Production of anthracite in the nineteenth week will be less than 30,000 tons.

The trend of production is shown in the cars loaded daily by the railroads. Loadings on Monday, August 7, were 16,021 cars, an increase over the preceding Monday of 7 per cent. During the following days, the loadings dropped, but remained greater than on corresponding days of the preceding week.

The mine reports for the week ended July 29 indicate that traffic conditions improved in some fields, but grew worse in others. As a result of this improvement, working time increased in the Pocahontas, Tug River and Hazard districts. In Winding Gulf, New River and Western Kentucky greater congestion was responsible for increased losses. Service was resumed on the railroad in Colorado that had temporarily suspended operations.

For the season to date, the movement of cargo coal to regular Lake destinations now stands at 3,544,000 tons. This is in round numbers 9,160,000 tons below 1921, and 3,500,000 tons below even 1920, when as now the Lake movement was late in starting.

Shipments of Coal by Districts

In the Middle and Southern Appalachians, which have been the principal sources of supply, production has been curtailed by the shopmen's strike but has gradually increased during August. As indicated by this week's report, the unorganized districts of this territory gained, by relief from traffic congestion, about 200,000 tons over the output of last week. The non-union and partly organized fields of this region are now furnishing about 41 per cent of the total output in the United States, whereas they furnished 54 per cent in the week ended June 24. The districts in Pennsylvania and the Central Competitive field and those west of the Mississippi have been less affected by traffic congestion. Changes in shipments there measure better the direct influences of efforts to overcome the strike. In Pennsylvania the output since the last week of July has increased somewhat, returns this week indicating shipments larger than reported for any other week during the strike. Union districts in West Virginia also reported slight increases. On the other hand reports for this week indicate decreased production in the strongly organized districts of the Central States.

WEEKLY SHIPMENTS OF SOFT COAL FROM PRODUCING DISTRICTS, AS REPORTED BY THE RAILROADS

Net Tons, Assuming 50 Tons to the Car

District	First week April 8	Lowest week April 22	Highest week June 24	Last week Aug. 5	This week *Preliminary

Equipment and Supplies

Locomotives

THE ERIE has ordered 30 Mikado type locomotives from the Baldwin Locomotive Works.

MITSUI & COMPANY, New York, are inquiring for 2 light locomotives for export to Siam.

THE MIRANDA SUGAR COMPANY has ordered 2 Consolidation type locomotives from the Baldwin Locomotive Works.

THE MISSOURI, KANSAS & TEXAS is inquiring for 40 Mikado type locomotives and 10 eight-wheel switching locomotives. Also for 5 Pacific type locomotives.

THE UNION PACIFIC, reported in the *Railway Age* of July 29 as inquiring for 55 Mountain type and 15 Santa Fe type locomotives, and in the *Railway Age* of August 5 as inquiring for 10 Mallet type locomotives, has ordered the 55 Mountain type and 10 Mallet type locomotives from the American Locomotive Company. The Mountain type will have 29 by 28 in. cylinders and a total weight in working order of 345,000 lb. and the Mallet type will have 26 and 41 by 32 in. cylinders and a total weight in working order of 495,000 lb.

Freight Cars

THE ILLINOIS CENTRAL is inquiring for 75 caboose cars.

THE CENTRAL OF GEORGIA is inquiring for 100 flat cars of 40 tons' capacity.

THE CHICAGO, BURLINGTON & QUINCY is preparing to issue inquiries for 2,000 composite gondola cars.

THE ELGIN JOLIET & EASTERN has placed an order with the General American Car Company for 80 steel underframes.

THE UNITED ALLOY STEEL CORPORATION, Canton, Ohio, is inquiring for 17 hopper cars of 50 tons' capacity; also for 13 all-steel gondola cars.

THE KING CHEMICAL COMPANY, New York, has ordered from the General American Tank Car Corporation 1 tank car for carrying sulphur dioxide.

THE MATHIESON ALKALI WORKS, New York, has ordered from the General American Tank Car Corporation, 20 tank cars of 15 tons' capacity, for carrying liquid chlorine.

THE ELECTRO BLEACHING GAS COMPANY, New York, has ordered from the General American Tank Car Corporation 5 tank cars of 15 tons' capacity, for carrying liquid chlorine.

THE LEHIGH VALLEY has ordered repairs to 1,000 high side steel gondola cars. The order was equally divided between the American Car & Foundry Co., and the Buffalo Steel Car Company.

THE BANGOR & AROOSTOOK, reported in the *Railway Age* of May 13 as contemplating making repairs to 250 additional cars, is now making heavy repairs to 250 box cars in its shops at Derby, Maine.

THE INDIANA GAS & COKE COMPANY, reported in the *Railway Age* of August 5 as inquiring for repairs to 50 hopper cars has placed an order for this work with the General American Car Company.

THE CHICAGO & NORTH WESTERN, reported in the *Railway Age* of August 12 as about to place orders for the repair of 500 box cars, will have these cars repaired at the shops of the American Car & Foundry Co. A contract has also been given for the repair of 1,000 box cars to the Western Steel Car & Foundry Co.

THE CHICAGO, MILWAUKEE & ST. PAUL, reported in the *Railway Age* of July 15 as inquiring for repairs to 1,000 box cars and 250 gondola cars is reported to have placed an order with A. M. Castle & Company, Chicago, for 750 underframes for the box cars. This company has some material on hand and first contemplated doing its own repair work although strike conditions are said to have changed plans resulting in inquiry which is still pending with no definite move towards placing.

Iron and Steel

THE CHESAPEAKE & OHIO is inquiring for 300 tons of bridge steel.

THE BOSTON & MAINE has ordered from the Boston Bridge Works 500 tons of steel for a bridge at Biddeford, Maine.

THE CHICAGO UNION STATION is inquiring for 23 spans of structural steel to be used for the viaduct over its tracks at Roosevelt road.

THE ALASKAN ENGINEERING COMMISSION, Seattle, Wash., closed bids on August 16 for the furnishing of guard rails, switch stands, switches, frogs, cast iron and steel wheels, brake shoes, boiler tubes and repair materials for locomotives.

THE SOUTHERN PACIFIC LINES have placed an order with the Tennessee Coal, Iron & Railroad Company for 45,240 gross tons of first quality open hearth steel rails for delivery in the first half of 1923 and have also placed an order with the Lorain Steel Company for 670 gross tons of special girder rail, for delivery early in 1923. In the *Railway Age* of July 22, the order for 30,000 tons of the above rail was noted.

Track Specialties

THE WABASH is inquiring for 240,000 tie plates and 200 kegs of track bolts.

THE SOUTHERN PACIFIC has divided an order for 2,500 kegs of spikes between the Gary mill of the U. S. Steel Corporation and the Colorado Fuel & Iron Company.

THE LONG ISLAND will receive bids until 12 o'clock noon August 25 for 138 hard frogs and 12 hard frog points. Bids are also wanted on the same date for 148 open hearth frogs and separate bids for 108 hard switches, 115 open hearth switches, 65 open hearth switch points and 113 guard rails; separate bids for 2,300 twin tie plates and 1,592 intermediate guard rail tie plates, also separate bids for 638 kegs track bolts.

Machinery and Tools

THE TEXAS-MEXICAN has ordered a 79-in. driving wheel lathe from the Niles-Bement-Pond Company.

THE CHESAPEAKE & OHIO has ordered a 42-in. boring mill and a 1,100-lb. steam hammer, from the Niles-Bement-Pond Company.

THE UNION PACIFIC has placed an order with the Industrial Works, Bay City, Mich., for a 15-ton locomotive crane with 45 ft. boom.

Miscellaneous

THE CANADIAN PACIFIC has placed an order with the Industrial Works, Bay City, Mich., for a wrecking crane of 160-ton capacity.

THE NEW YORK CENTRAL has ordered a 60-in. horizontal boring machine from the Niles-Bement-Pond Company.

THE CHICAGO UNION STATION COMPANY has placed an order with the Webster Manufacturing Company for the coal and ash handling equipment to be installed in the boiler plant of the new station.

THE ILLINOIS CENTRAL has given an order to the Standard Stoker Company for 25 stokers to be installed on the 25 Santa Fe type locomotives ordered recently from the Lima Locomotive Works.

THE NEW YORK CENTRAL will receive bids until 12 o'clock noon August 21, for track spikes, fuel oil for locomotive service and metal superstructure for new passenger and baggage subway at Elyria, Ohio.

Supply Trade News

I. S. Kemp, formerly sales manager of the Vaughan & Bushnell Mfg Co., Chicago, has been elected vice-president of the Evansville Tool Works, Evansville, Ind.

G. E. A. Letourneau, manager of the Canadian Gold Car Heating and Lighting Company, Limited, 346 St. James street, Montreal, Canada, died suddenly at his home on August 5.

Frank S. Martin, senior member of **Frank S. Martin & Son**, 25 Broadway, New York City, died on July 27. **Francis A. Martin** will continue to conduct the business under the present name, and with the same staff.

At a meeting of the directors of the **Sharon Pressed Steel Company**, Sharon, Pa., on August 9, **L. B. LeBel, Edward O. Peck** and **Harold G. Mosier**, of Cleveland, and **A. E. Swan**, of Sharon, were elected directors to succeed W. L. Ulmer, W. H. Watkins, L. L. Knox and W. J. Parker, retired.

The Pressed Steel Car Company, Pittsburgh, Pa., has recently incorporated in Illinois the **Pressed Steel Car Company of Illinois**, capitalized at $5,000, and the **Koppel Industrial Car & Equipment Company**, also capitalized at $5,000. The parent company is a New Jersey corporation and the Koppel concern, a subsidiary of Pressed Steel Car, is incorporated in Pennsylvania.

Edward L. Lefler has been appointed manager of the recently organized railroad sales department of the **General Fireproofing Company**, Youngstown, Ohio, with headquarters at 325 West Madison street, Chicago, Ill. Mr. Lefler served as secretary to the vice-president of the New York Central at Boston, Mass., from April, 1907, to August, 1917. For the past five years he has devoted his entire time to selling office equipment and systems to railroads in Chicago.

American Locomotive Company

The American Locomotive Company reports for the six months ended June 30, 1922, a net loss of $966,780, as compared with a net profit of $3,901,043 in the corresponding period of 1921.

The condensed income account of the American Locomotive Company and subsidiaries for the six months ended June, 1922, compares as follows:

	June 30, 1922	June 30, 1921
Gross earnings	$7,399,934	$25,989,781
Expenses, depreciation, etc.	8,323,500	21,390,554
Gross profit	Def. 923,566	4,599,227
Interest on bonds of constituent companies, etc.	43,214	43,184
Net profit	Def. 966,780	4,556,043
Taxes	.....	655,000
Preferred dividends* (3½ per cent)	875,000	875,000
Common dividends* (3 per cent)	750,000	750,000
Surplus	Def. 2,591,780	2,276,043

* Paid from previously accumulated profits.

President Andrew Fletcher in his report to the stockholders says:

The gross earnings for the six months amounted to $7,399,934, and were the lowest of any six months' periods since the early part of 1915.

After allowing for cost of manufacturing, maintenance, administrative expenses, interest on bonds of constituent companies and $746,191 for depreciation on all classes of property there was a loss for the period ended June 30, 1922, of $966,780.

The strong cash position of the company, due to conservation of its net earnings during years of greater earnings, warranted the payment in the six months' period from previously accumulated profits of two quarterly dividends each of 1¾ per cent on its preferred stock, and two quarterly dividends each of 1½ per cent on its common stock, a total of dividends paid of $1,625,000 during the six months.

The inventory account of materials and supplies on hand and work in progress on June 30, 1922, amounted to $5,997,611, as compared with $4,751,900 on December 31, 1921.

The net current assets of the company on June 30, 1922, amounted to $39,113,392 after providing a reserve of $795,213 for shrinkage in value of notes and discount on Canadian funds, and a reserve of $868,917 for United States and Canadian income and profits taxes.

The company on June 30 had no loans payable and had in its treasury on that date in cash and marketable securities $24,448,304.

During the six months ended June 30, 1922, there was expended for additions and betterments to the plants $468,615, which has been charged to the reserves created from surplus of previous years.

The total unfilled orders on June 30, 1922, was $9,667,480, of which domestic business was 92.7 per cent and foreign business 7.3 per cent, compared with total unfilled orders on December 31, 1921, of $3,344,[illegible], of which 96.2 per cent was domestic and 3.8 per cent foreign business. The largest part of the unfilled orders on hand on June 30, 1922, was not received until the latter part of April and during June, and earnings on same will be included in the last half of this year.

There has been a very material increase in business since June 30, the amount of unfilled orders now on hand being about 100 per cent greater than on that date. We believe additional domestic business will be obtained but at present there is very little attractive foreign business offered.

Obituary

Coleman Sellers, Jr., president of William Sellers & Co., Inc., Philadelphia, Pa., died on August 15 at the home of his daughter in Bryn Mawr.

James Kennedy, president of the Angus Sinclair Company, New York City, and managing editor of Railway and Locomotive Engineering, died suddenly at his home in New York City, on August 14. Mr. Kennedy was born in Forfarshire, Scotland, in 1850. He served his apprenticeship as a railroad machinist in his native land, and came to this country in 1868, and was later foreman of the Singer Machine Company, New York. He studied at night, and graduated from the old Thirteenth street high school, New York, in 1875. He again entered railroad service with the Lackawanna & Bloomsburg, now a part of the Delaware, Lackawanna & Western at Kingston, and was later foreman at Scranton, Pa. From 1879 to 1902 he was foreman at the New York Elevated shops in New York City. For the following year Mr. Kennedy was chief cashier of the Water Department of the City of New York, and in 1904 was deputy superintendent of elections. He contributed for many years to the railroad press, and in 1905 joined the staff of Railway and Locomotive Engineering, and became managing editor in 1911. He was the author of a number of handbooks on locomotive subjects.

J. Kennedy

Trade Publications

SCHOOP METAL SPRAYING PROCESS.—The Metals Coating Company of America, Philadelphia, Pa., has recently issued a large size, 18-page, illustrated bulletin descriptive of the metal spraying process developed by that company. The bulletin discusses fully the details of the process and the equipment, showing both by text and by numerous illustrations the various forms and classes of structures, such as bridges, pipe, car frames, towers, etc., which can be treated by this process of spraying on a thin coating of such metals as zinc, lead, aluminum, tin, copper, etc., for protection against corrosion and other destructive agents.

ELECTRIC CAR LIGHTING FIXTURES.—A catalogue under the title of "Electric Lighting Fixtures" has recently been issued by the Safety Car Heating & Lighting Company, 2 Rector street, New York, which describes and illustrates electric car lighting fixtures made by that company. The catalogue is profusely illustrated in two colors and contains 85 pages. The fixtures illustrated do not cover the entire line of Safety designs. They do, however, include those which, by virtue of the demand for them, would seem to represent the majority preference of railway men and the approval of the traveling public.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company contemplates the extension of its line between El Segundo, Cal., and Wilmington Harbor.

BALTIMORE & OHIO.—This company has placed contract with the American Bridge Company for the erection of two bridges on its Parkersburg branch at Smithburg and West Union, W. Va. The new structures consist of plate girder spans, 80 and 112 ft. in length.

CANADIAN NATIONAL.—This company will replace a 2,400-ft. trestle over the Bird Tail Creek valley, 190 miles west of Winnipeg, Man., by an embankment and a 79-ft. deck plate girder span on concrete abutments 56 ft. high.

CARBON COUNTY.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a new line from a junction with the Denver & Rio Grande Western for a distance of 4½ miles in Carbon County, Utah.

CHICAGO, BURLINGTON & QUINCY.—This company will construct a low grade line from the Illinois river bottoms at Frederick, Ill., to Vermont, a distance of 15½ miles, to facilitate the handling of heavy northbound coal traffic.

KANSAS, OKLAHOMA & GULF.—The Interstate Commerce Commission has issued a certificate authorizing the construction of an extension from Baxter Springs to Military Junction, Kans., 6½ miles.

MISSOURI, KANSAS & TEXAS.—This company will accept bids until Sept. 1, for the construction of a brick and steel locomotive shop, 222 ft. by 475 ft., at Waco, Tex.

NASHVILLE & ATLANTIC.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of an extension of about 12 miles from Campaign, Tenn.

OREGON-WASHINGTON RAILROAD & NAVIGATION.—This company, in conjunction with the Oregon State Highway Commission, will construct an undercrossing on the Shaniko branch at a point about two and a half miles south of Moro, Ore.

PHILADELPHIA & READING.—This company has awarded a contract to F. W. Van Loon, Philadelphia, Pa., for the construction of a building at Eighth and Master streets, Philadelphia, which will be leased to the American Railway Express Company for its use. The plans call for a one-story structure of steel frame covered with corrugated asbestos metal. The building will be 337 ft., 6 in. long and 86 ft., 10 in. wide, supported on a concrete foundation.

PHILADELPHIA & READING.—This company has started the reconstruction of bridges No. 7 and 8 on the New York division near Bethayres, Pa. Both bridges will be constructed of steel encased in concrete and resting on concrete piers. Their lengths will be 55 ft. and 200 ft. respectively.

RICHMOND, FREDERICKSBURG & POTOMAC.—This company has awarded a contract to the Roberts & Schaefer Co., Chicago, for the construction of two 1,000-ton coaling stations to be erected at Acca yard, Richmond, Va., and Potomac yard, Alexandria.

TENNESSEE, ALABAMA & GEORGIA.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of an extension from Gadsden, Ala., to Odenville on the Seaboard Air Line and Margaret on the Central of Georgia, a total of 34 miles.

UTAH CENTRAL.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a line through or near Huntington, Desert Lake and Cleveland, Utah, to Wellington on the Denver & Rio Grande Western, with a branch connecting with the Utah Railroad, a total of about 50 miles.

Railway Financial News

BOSTON & MAINE.—*Equipment Trusts Sold.*—The Equitable Trust Company of New York, Paine, Webber & Co., West & Co., and Edward Lowber Stokes & Co., have sold $3,926,000 6 per cent equipment trust gold notes, maturing January 15, 1923, to January 15, 1935, at prices to yield from 4.75 to 5.75 per cent, according to maturity.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $1,000,000 of first mortgage 5 per cent gold bonds to be sold at not less than 70 and the proceeds used for corporate purposes.

DENVER & SALT LAKE.—*Excepted in 10 Per Cent Rate Reduction.*—The commission has rendered a decision on a petition of the receivers of the Denver & Salt Lake to be excluded from the effect of its recent decision prescribing a general 10 per cent reduction in freight rates. The commission finds that the joint interstate rates on coal over this road will be unreasonable to the extent that they exceed the rates in effect on August 25, increased by 20 per cent; but as to the rates on other traffic no protest or objection was made and the petition was granted. The commission has also issued an order according increased divisions of joint rates to this road on bituminous coal in carloads from mines on its line in the Oak Hills (Colo.) district.

EUREKA SMELTING & MINING COMPANY.—*To Purchase Eureka Nevada Railway.*—This company, recently organized to engage in a mining and smelting business, has secured an option on the Eureka Nevada Railway with the intention of soon purchasing this property. The road is of narrow gage and extends between Eureka, Nev., and Palisade, a distance of 88 miles.

FONDA, JOHNSTOWN & GLOVERSVILLE.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $550,000 of first consolidated general refunding mortgage bonds to be sold at not less than 75 or to be pledged from time to time as collateral security for notes.

GRAND TRUNK.—*Director Resigns.*—The resignation of Howard G. Kelley from the board of directors was accepted by the Canadian government on August 16. Pending the reorganization of the Canadian National board, the government appointed Major Graham Bell, deputy minister of railways, to succeed Mr. Kelley.

GULF, MOBILE & NORTHERN.—*Annual Report.*—The corporate income account for the year ended December 31, 1921, compares as follows:

	1921	1920*
Average miles of road operated	454	470
Operating revenues	$4,086,217	$4,147,960
Operating expenses	3,653,018	4,909,103
Net operating revenues	433,199	Def. 761,141
Railway tax accruals	234,057	179,718
Total operating income	98,870	Def. 1,034,097
Total non-operating income	55,721	922,541
Gross income	154,592	Def. 111,556
Total deductions from income	110,004	703,669
Surplus or deficit	44,588	Def. 815,224

*Excludes effects of federal compensation and guaranty.

KANSAS & OKLAHOMA SOUTHERN.—*Authorized to Issue Securities.*—The Interstate Commerce Commission has authorized this company to issue $310,000 of two-year, 7 per cent promissory notes, the proceeds to be used for construction, and to pledge $310,000 of its first mortgage bonds as collateral security.

LAKE ERIE & WESTERN.—*Control by Nickle Plate Authorized.*—The Interstate Commerce Commission has authorized the acquisition by the New York, Chicago & St. Louis of control of the property of the Lake Erie & Western by means of an operating contract.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—*Dividend Held Up.*—Federal Judge W. F. Booth, at Minneapolis, Minn., has issued a restraining order directing that the dividend of 2 per cent declared last March cannot be paid until the United States Circuit Court of Appeals passes on the legality of the issue.

This means no dividend will be paid at least until December 4, when the Circuit Court meets in St. Louis. Judge Booth issued his order following a notice of an appeal by the Continental Insurance Company, and the Fidelity Fire Insurance Company from his recent decision that the common stockholders were entitled to participate in the earnings.

Missouri-Kansas-Texas.—*Asks Authority to Issue Securities.*—The Missouri-Kansas-Texas Railroad Company has applied to the Interstate Commerce Commission for authorization of the issuance of its securities in accordance with the plan of reorganization which was announced last November. The new company proposes to issue the following securities: $52,942,752 of prior lien mortgage 5 per cent gold bonds; $27,230,000 prior lien mortgage 4 per cent gold bonds; $29,121,347 prior lien mortgage 6 per cent gold bonds; $57,500,000 convertible adjustment mortgage 5 per cent gold bonds; $30,000,000 of 7 per cent preferred stock, and 1,000,000 shares of common stock without par value. The company also asks authority to issue from time to time, upon surrender of the convertible adjustment mortgage bonds, such additional amount of preferred stock up to $57,500,000 as may be necessary to effect such conversion. A copy of the plan of reorganization as announced by J. & W. Seligman & Co., of New York, and Hallgarten & Co., of New York, reorganization managers, was filed with the application. The exchange of securities is to be handled by a syndicate including those two companies, Speyer & Co., and the Equitable Trust Company.

Nevada-California-Oregon.—*Increased Divisions Ordered.*—The Interstate Commerce Commission has issued an order finding that divisions of joint rates accorded the Nevada-California-Oregon by the Southern Pacific to be inequitable and directing that they be increased by 10 per cent of the divisions accruing to the Southern Pacific.

Northern Pacific.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority for an issue of $4,500,000 of 5 per cent 10-year equipment trust certificates to be used in the acquisition of cars to the amount of $6,195,000. Through an agreement with the North Western Improvement Company and the First National Bank of New York the certificates are to be purchased by the improvement company at 99.

Pennsylvania.—*The Stockholder and the Employee.*—In reply to an inquiry as to how the employees of the Pennsylvania Railroad have fared, as compared with its stockholders, by reason of the wage and dividend changes made since the pre-war period, A. J. County, vice-president in charge of accounting, has authorized the following:

In 1914 wages on our railroad averaged $850 a year per employee. Today, after all readjustments, including those effective July 1, 1922, they average $1,550. Our wages are therefore 82 per cent higher than in 1914, while the cost of living, according to government statistics, is 67 per cent higher. This means that each of our 200,000 employees, on the average, is able to buy considerably more of the desirable and needful things of life than his pre-war wages would obtain.

Our stockholders are in a different position. They number 140,000. Most of them own less than 50 shares each. The average ownership is 71 shares. Before the war 71 shares yielded an income of $213 per year. In 1921 our directors were forced to reduce the dividend on Pennsylvania Railroad stock from the rate of 6 per cent to 4 per cent per annum. This cut the return of the holder of the average number of shares to $142 per year. He is now getting one-third less dollars than in 1914, and in addition, like the employee, he has to meet the higher cost of living. This means that the actual buying power of his present income from dividends is much below that of his pre-war return.

Our management feels an obligation, which has been publicly stated, to restore the 6 per cent rate as soon as that step can be wisely taken, without risking deterioration of the property. Even then our stockholders' incomes will merely be restored as to the number of dollars, but not as to purchasing power, as long as the cost of living remains above normal.

As between the stockholder and the employee of the Pennsylvania Railroad, the burdens of the war have fallen entirely upon the former. The same condition, of course, is true of the railroads in general, and has undoubtedly been an important factor in accounting for the failure of the men, who are at present on strike against the recently authorized very moderate wage readjustments, to enlist the support of the public.

It is, and long has been, the declared policy of the Pennsylvania Railroad to pay its employees the best wages and offer them the most favorable working conditions in the country, or for that matter in the world. The stockholders of the company have consistently supported the management in this policy, in order that loyal, efficient and satisfied working forces might be maintained, and the public receive the best service possible. Most of our men are, and always have been, of this type.

In the present crisis, the great majority of our shop forces have remained loyal, wisely accepting a conservative wage readjustment which is fair to their interests, and necessary as a measure of justice both to the owners and the users of our railroad. Moreover, among our men there are doubtless [illegible] whose choice of action has been influenced by knowledge of the facts that the railroads have had to accept a reduction in freight rates, and that wages on our railroad, even in a depressed year like 1921, took over 70 cents out of every dollar paid by the public for service; whereas after paying these wages, taxes, material and supply bills, fixed charges, etc., less than two cents remained out of every dollar of revenue to pay dividends and maintain the credit of the Pennsylvania System.

Peoria Railway Terminal Company.—*Receivership.*—W. G. Bierd and H. I. Battles have been appointed co-receivers by the United States District Court for the Southern District of Illinois, Northern Division.

Seaboard Air Line.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $3,009,980 of equipment trust certificates to be issued by the Chase National Bank of New York, including $2,450,000 to be sold at not less than 97.02 and $559,980 of deferred certificates to be sold at par.

Southern Pacific.—*Authorized to Abandon Branch.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of its branch from Tulasco to Metropolis, Nev., 7.8 miles, which is owned by the Central Pacific.

Union Terminal.—*Authorized to Extend Notes.*—The Interstate Commerce Commission has authorized this company to enter into agreements with the holders of $550,001 of its 5 per cent unsecured notes for the extension of the maturity date from October 10, 1922, to October 10, 1923, and for the payment of interest at 6 per cent.

Virginian & Western.—*Acquisition of Control Authorized.*—The Interstate Commerce Commission has authorized the acquisition of control of the Virginian & Western by lease on the condition that the Virginian shall not dispose of the stock of the Virginian & Western now owned or controlled by it without the consent of the commission and that the amount to be paid by the Virginian under the terms of the lease for the purpose of maintaining the corporate organization of the Virginian & Western shall not exceed $1,000 a year.

Virginian.—*Asks Authority to Increase Dividend.*—This company has applied to the Interstate Commerce Commission for authority to change the dividend rate on $27,955,000 of preferred stock from 5 to 6 per cent, the dividend to be cumulative and calculated from August 1, 1922.

Revised Regulations Concerning Common Directors

The Commission has issued revised regulations relative to authorizations of common officers and directors under paragraph 12 of section 20a of the Interstate Commerce Act. The order supersedes the Commission's order of October 11, 1921, and revises the regulations thereby prescribed. The provisions of the former order permitting applications to be made by carriers have been eliminated and henceforth applications can be made only by the individuals concerned and each application must be confined to one person.

Dividends Declared

Canadian Pacific.—Common, 2½ per cent, quarterly; preferred, 2 per cent, semi-annually; both payable September 30 to holders of record September 1.

Chestnut Hill.—1¾ per cent, quarterly, payable September 5 to holders of record August 19.

Cincinnati, New Orleans & Texas Pacific.—Preferred, 1¾ per cent, quarterly payable September 1 to holders of record August 18.

Delaware & Bound Brook.—2 per cent, quarterly payable August 11 to holders of record August 1.

North Pennsylvania.—$1.00, quarterly, payable August 25 to holders of record August 10.

Pittsburgh, Youngstown & Ashtabula.—Preferred, 1¾ per cent, quarterly, payable September 1 to holders of record August 21.

Southern Pacific.—1½ per cent, quarterly; payable October 2 to holders of record August 31.

Union Pacific.—Common, 2½ per cent, quarterly; preferred, 2 per cent, semi-annually; both payable October 2 to holders of record September 1.

Trend of Railway Stock and Bond Prices

	Aug. 15	Last Week	Last Year
Average price of 20 representative railway stocks	70.61	70.72	55.35
Average price of 20 representative railway bonds	88.65	88.95	74.97

Railway Officers

Executive

D. Upthegrove, general solicitor of the St. Louis Southwestern with headquarters at St. Louis, Mo., has been appointed acting president to succeed J. M. Herbert, deceased.

W. F. Woodul has been elected temporary president of the re-organized International & Great Northern with headquarters at Houston, Texas. R. E. Williams has been elected temporary secretary.

P. E. Crowley, vice-president, and R. D. Starbuck, assistant vice-president, of the New York Central, have had their authority extended, effective August 7, over the Toledo & Ohio Central, the Kanawha & Michigan, the Kanawha & West Virginia and the Zanesville & Western of which properties the New York Central recently became lessee.

F. B. Sheldon, vice-president of the Toledo & Ohio Central, the Kanawha & Michigan, the Kanawha & West Virginia and the Zanesville & Western, which properties have recently been leased by the New York Central, has been given, effective August 7, the title of resident vice-president with duties to be assigned. His headquarters remain as heretofore, at Columbus, Ohio.

Traffic

I. W. Gent has been appointed general agent of the Minneapolis, Northfield & Southern with headquarters at Kansas City, Mo.

Harry L. Farrell has been appointed commercial freight agent of the Buffalo, Rochester & Pittsburgh with headquarters at New Castle, Pa.

J. M. Ball, general traveling agent, freight department, of the International & Great Northern with headquarters at Houston, Tex., has been promoted to general agent with the same headquarters.

J. A. Staus, commercial agent of the Duluth, Missabe & Northern with headquarters at Duluth, Minn., has been promoted to assistant general freight and passenger agent with the same headquarters, succeeding G. C. Ross, resigned. He will be succeeded by D. N. Jones.

L. F. Vosburgh, traffic manager of the New York Central, had his authority extended, effective August 7, over the Toledo & Ohio Central, the Kanawha & Michigan, the Kanawha & West Virginia and the Zanesville & Western of which properties the New York Central recently became lessee.

Operating

H. J. Humphrey, whose appointment as assistant general superintendent of the Ontario district of the Canadian Pacific was announced in the *Railway Age* of July 15, page 137, entered railway service in 1896 as a telegraph operator for the Intercolonial Railway. The following year he entered the service of the Boston & Maine in a similar capacity and remained until 1901 when he returned to the Intercolonial. In 1902 he went with the Canadian Pacific and a year later was promoted to train dispatcher. In 1911 he became chief dispatcher at McLeod, Alta., and the following year was promoted to car service and fuel agent of the Saskatchewan district with headquarters at Moose Jaw, Sask. In 1915 he was promoted to superintendent of car service, Western lines, with headquarters at Winnipeg, and the same year was transferred in a similar capacity to the Eastern lines with headquarters at Montreal. In 1916 he was promoted to superintendent at Farnham, P. Q., and from that time until his recent appointment served in a similar capacity at Montreal, Brownville Jct., Me., and Toronto, Ont.

R. B. Hoffman, whose promotion to superintendent of transportation of the Pacific Fruit Express with jurisdiction over car service matters east of Omaha and El Paso, Tex., with headquarters in Chicago, effective August 1, was reported in the *Railway Age* of August 5, was born on February 3, 1885, and entered railway service as an employee of the Chicago, Burlington & Quincy in June, 1900, from which time he served in the capacities of mileage and car record clerk, yard clerk, fireman and switchman on the Chicago, Burlington & Quincy and the Chicago & North Western until 1905. From 1905 to November, 1906, he was car service and transportation clerk for Armour & Company and Swift & Company and from November, 1906, to January, 1908, had charge of the car record department of the American Railway Clearing House. He entered the service of the Pacific Fruit Express on January, 1908, in charge of the car record, mileage, block diversion and block department of this company until April, 1912, when he became traffic manager of the E. L. Hasler Company. He re-entered the service of the Pacific Fruit Express in October, 1914, and from that time until his recent promotion had charge of the transportation department with headquarters at Chicago.

Obituary

G. E. Simpson, general supervisor of transportation of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, Ill., died August 16 from heart trouble.

John R. Schrader, general car foreman of the New York Central at Mott Haven, N. Y., died Friday, August 11. He was also second vice-president of the Central Railway Club.

George A. Cullen, who was passenger traffic manager of the Delaware, Lackawanna & Western until March 19, 1920, and who since that time had been vice-president of the North American Fruit Exchange, with headquarters at New York City, was found dead on August 14 in the room of a hotel at which he was staying in New York City. Mr. Cullen was compelled recently to leave his work for a rest, having been working night and day for months, causing a nervous breakdown. He was born in St. Louis and began railway work with the Wabash Railroad. He subsequently served as rate clerk on the Missouri Pacific. In 1895 he was chief rate clerk and rate sheet compiler of the Southern Passenger Association at Atlanta, Ga. He then was consecutively chief clerk in the passenger department of the Plant System, of the Western Passenger Association at Chicago, and (in 1898) general agent of the same association in charge of the immigration bureau at New York. In 1900 he went to the Delaware, Lackawanna & Western as general western agent at Chicago; six years later he was appointed general passenger agent with office at New York and in 1911 was promoted to passenger traffic manager. During the war Mr. Cullen served as the chief of a section of the United States Food Administration in Washington. As a United States Railroad Administration executive in charge of consolidated ticket offices he was credited with the successful preparation of the plan on which they are operated in the larger cities.

G. A. Cullen

Utah has joined with other Western states in requiring that motor vehicles engaged in the transportation of freight and passengers stop before crossing railroad tracks. The Public Utilities Commission of Utah recently issued an order that the stop must be made not less than 20 ft. and not more than 50 ft. from the track.

The Growing Menace of the Highway Crossing

The wrecking of a Soo Line train at Annandale, Minn., with the death of ten persons and the injury of many more as the result of a collision with a motor truck at a highway crossing, is a shocking illustration of a new menace in the highway crossing accident, namely the hazard to the patrons and employees of the railroads. Accidents of a similar nature, but with less gruesome results, befell a Pennsylvania train at Allaire, N. J., on June 16, an Erie express train at Binghamton, N. Y., on June 6, and the "Black Diamond" express of the Lehigh Valley at North Leroy, N. Y., on May 13. Under this same classification is the collision of a passenger train in California with a road roller a month or two earlier. In the early days of railway transportation the onus of the grade crossing was placed upon the railroad. Except in the far west the highways were largely built first, so the coming of the railroads was the cause of the crossing, moreover the vehicles on the former moved at a speed that was very slow as compared with those prevailing on the latter. With the beginning of the new century, these conditions have changed rapidly. Traffic on the highways has changed in volume and character so that there are now many crossings where thousands of highway vehicles pass over the tracks daily at speeds in many cases approaching that of the railway trains. However, until recently the property damage and casualties resulting from collisions of railway and highway vehicles fell almost entirely upon the latter and their occupants, but now we find that the danger is not entirely to the automobile or motor truck. Not only does the driver risk his own life and that of his companions when he fails to exercise care in crossing a railroad track, but he endangers the lives of the several hundred passengers on the train that may be approaching the crossing at that moment. Railway traffic has increased in volume and density during the last two decades, but this increase is not of the same degree as the revolutionary change which has occurred simultaneously in the use of public highways. Consequently the increase in the hazard at highway crossings is a condition for which responsibility must be placed primarily on the users of the highways.

Railway Stocks Advance

Railroad stocks and bonds are again popular in Wall Street. They are participating in the general advancing movement in which all classes of stocks or bonds have participated but, on the whole, within the past week or two they seem to have been receiving more or less special favor. On Saturday, August 19, about 20 railroad stocks reached new high prices for the year. On Monday this advance in prices continued with the result that a large number of railroad stocks and bonds not only reached their highest prices so far this year, but also their highest prices for several years. New York Central common on Monday of this week passed par, this being the first time quotations for this stock have been above par since 1916. The closing price on Monday of Great Northern preferred, 94⅜, was 3⅛ above the closing price on Saturday, 12⅜ points above the price on July 7 and the highest it has been since 1919. Chicago & North Western common, closing at 91¾, was 3⅜ points above the closing price on Saturday, 11¾ points above the price on July 7 and also the highest it has been since 1919. Common stock of the Chesapeake & Ohio, closing at 78⅝, of the Southern Pacific, closing at 95½; of the Northern Pacific, 86⅜; Norfolk & Western 119½; Baltimore & Ohio, 60¼, were among other issues which on Monday reached higher prices than they had reached for a period of several years. The manner in which railway stock and bond quotations have advanced recently is unquestionably partly due to the favorable feeling in the financial district as to the progress which is being made towards winning the shopmen's strike. It is partly the result of the manner in which the railways have handled business in spite of the strike, to the recent improvements in railroad net earnings and to the expectation that a heavy coal and grain movement will greatly increase the favorable net of many of the roads which are already reporting good figures. Underlying the whole situation, however, is the very optimistic attitude that people in financial circles have as to the present condition of the country's industry. It is of extra interest to the railway man that railroad shares should be receiving special favor, it means much for future railway financing.

Are Modern Machine Methods Fully Utilized?

Some railroad shops undoubtedly have installed a few of the best modern machine tools available but these shops are the exception rather than the rule. In most cases modern equipment is conspicuous by its absence and there is apparently a tendency to believe that work once done in a certain way should always be done that way. At least, the attitude toward new ideas and new machines is not particularly receptive. As soon as the strike is settled, mechanical department officers and shop foremen should get away from their work long enough to note the immense strides in machining methods which have been made in recent years by industrial manufacturers. The railroads certainly ought to profit by the best of these modern methods. They are not doing so at the present time according to the testimony of both railroad and machine tool men. A prominent manufacturer of internal grinding machines says: "Our experience indicates that in the majority of cases the railroad repair shops are so far behind in the matter of up-to-date machine shop equipment that it is going to be a long, long time before they get educated up to the class of machinery, such as we are prepared to offer." It is unfortunate that such a statement can be made with any degree of truth. In the case of the particular machines referred to, internal grinders have been largely developed for the automotive field, but they also have a wide field of usefulness in railroad shop work. Space does not permit mentioning internal grinding operations in detail; suffice to say that internal grinders, already installed in a few of the more advanced shops, perform truing operations on many locomotive and car parts far more accurately and in a shorter time than could be accomplished by any other method. In addition, other operations (such as grinding the bores of case-hardened bushings) never possible before the advent of the internal

grinder, can now be performed with ease. The internal grinder is mentioned only as an example of many machines which have been developed in recent years, effecting remarkable economies in machining methods. The railroads, as well as industrial manufacturers, should profit by these economies.

C. & O. Preferred Stock

The Chesapeake & Ohio announced on Monday that it has decided to offer to its common stockholders the right to subscribe at par for new 6½ per cent cumulative convertible preferred stock, series A, to the extent of 20 per cent of their holdings. The issue will amount to about $12,558,500. Action is subject to approval by a stockholders' meeting to be held September 26 and, of course, by the Interstate Commerce Commission. The announcement of this proposal to issue preferred stock is of leading interest at this time because the step takes advantage of a much more favorable financial situation from the railroad point of view in that the financing can be done through an issue of preferred stock instead of bonds. It has been necessary in too great a degree in recent years for the railroads to finance through bonded indebtedness instead of stock. The recent increase in the value of railroad common and preferred stocks—which one trusts is only in its beginnings—now puts a better aspect on the situation. We are likely, therefore, to see during the coming year an increasing tendency for railroads to finance through stock issues. The Chesapeake & Ohio intends to use the proceeds of the proposed preferred stock issue for physical improvements during the next four years. The program, with a total cost given as $16,500,000, includes new roundhouses and shop facilities, additional running and passing tracks, grade reduction, and additional terminal facilities at Hanington Roads. As *Railway Age* readers know, the Chesapeake & Ohio already has an improvement program under way, this and the new plans being necessary because of the rapid expansion of C. & O. traffic in recent years, if anything beyond the ability of the physical plant to handle with desired economy. An additional feature of interest is the earnings of the property. Profiting from serving non-union mines, the Chesapeake & Ohio had a net railway operating income in the first six months of 1922 of $9,644,657 as compared with $5,041,318 in the first half of 1921.

The Railway's Part in Developing Labor Saving Equipment

THERE HAS NEVER been a time when railway officers have been more united or more outspoken than now in their opinion that the roads must install more labor saving equipment. While this feeling has grown with the greatly increased cost of labor the need for more labor saving equipment has been realized for a long time. It exists in all departments, although there is no branch of the service where the possibilities for economies are as great as in maintenance of way work.

Nearly half a million men are employed in these operations which are largely of a character which lend themselves to mechanical performance. Yet the development of machinery to replace men has lagged. One reason for this is the fact that the roads themselves have not set about to foster this development, but have left it to private enterprise and have assumed a more or less disinterested attitude.

It is common knowledge that the way of the inventor is hard. Experience has shown that the path of the promoter of equipment of this character is scarcely less arduous. Every new device must pass through a period of development. This must be carried on under actual service conditions. It is expensive in time and in money, and it requires the sympathetic co-operation of railroad officers interested in perfecting it if success is to be attained.

Many railway men maintain the attitude that the development of labor saving equipment is a commercial problem and that they are not interested until the equipment has reached the stage where its practicability can be demonstrated. This attitude has done more than any other single influence to discourage and to delay the development of the equipment for which these men have expressed a desire and a need, and until it is changed many experienced manufacturers hesitate to make the expenditure necessary to develop a new device.

To suggest that the roads enter more fully into the development of such equipment is not a plea for aid for the manufacturers, but for the roads themselves—for the manufacturers will profit ultimately only as the equipment is able to effect a saving for the roads. The rapidity with which this equipment will be developed will depend directly upon the extent to which the roads co-operate. Mere expressions of a need will not bring equipment—co-operation will.

Future Settlement of Railway Labor Disputes

PRESIDENT HARDING in his message to Congress on the coal and railway shop employees' strikes, said that legal safe-guarding against such menaces to the public as that presented by the shopmen's strike must be left for future consideration. The language used by him indicated, however, that he believes this strike and the developments in connection with it have shown the necessity for amendments of the Transportation Act which will strengthen its labor provisions.

One thing has been made only too clear. This is that the labor provisions as they now stand will not prevent strikes. The first nation-wide railway strike in history has occurred under them. It began almost two months ago, and in spite of all reports to the contrary, there is no prospect of an early settlement of it.

The labor provisions contemplate the submission of all important railway labor controversies to the Railroad Labor Board. They do not, however, fix any penalties for violation of the decisions of the board by either the railways or the employees having been predicated on the assumption that public sentiment would cause obedience to the board's decisions. This theory has been exploded. There have been retail violations of the decisions of the board by railway companies. The shop strike involves wholesale violations of one of its decisions by the employees. The influence of public sentiment has proved smaller than the authors of the law expected.

The question presented to the public, then, is whether—first, to repeal the labor provisions entirely, and leave the settlement of railroad labor controversies to the voluntary action of the parties or to strikes; or second, to leave the labor provisions as they now are; or third, to provide penalties for violation of decisions of the board by either the railway companies or the employees.

There cannot be the slightest question in the mind of any person familiar with the present relations between the railway companies and the railway labor unions as to what would be the result of mere repeal of the labor provisions, which of course would include abolition of the Labor Board. The differences between the companies and the labor unions are now, and promise for a long time in future to be so fundamental and irreconcilable that no important controversy between them could be settled by direct negotiations. Fur-

thermore, while the companies have favored voluntary arbitration, the labor unions are absolutely opposed to it. Therefore, mere repeal of the labor provisions and abolition of the Labor Board probably would result in a series of railroad strikes which would demoralize all business and shake the country's institutions to their foundations. The labor leaders advocate repeal of the labor provisions. They want to destroy private ownership and management and believe abolition of all forms of government intervention in labor disputes would make this easier to accomplish. They are probably right, but in the struggle there would be other things destroyed besides private ownership of railroads.

Experience during the last two and one-half years shows clearly what would be the result of leaving the labor provisions of the Transportation Act as they are. On the whole, it probably would be better to leave them as they are than merely to repeal them. There is some advantage in having an important labor dispute thoroughly investigated and its merits passed upon by a government body on which the public holds the balance of power before the railways and their employees decide upon the course they are going to take, if the decision does not satisfy them. There are also disadvantages, but on the whole they probably are outweighed by the benefit derived from having the issues passed upon and clearly defined before an open break comes. The best course to take might be to leave the labor provisions as they are, provided the local, state and national governments could be relied upon, in the case of strikes, to enforce the laws against violence to property and persons. But experience in the coal and railway shopmen's strikes shows that they cannot be relied upon to do this. Therefore, while it might be better to retain the present labor provisions than merely to repeal them, the facts should be frankly recognized that their retention would be of comparatively little benefit and that probably as time went on they would exercise less and less influence on the course of labor controversies, and finally become practically a nullity.

The only course left open which holds out any promise of comparative peace in the railroad industry is to maintain the Labor Board or establish some other kind of government body to pass on railway labor controversies and to fix, by new legislation, heavy penalties for violations of its decisions by either the railway companies or the railway employees. It may be said that if the laws against violence cannot be enforced, no law to prevent strikes and other violations of decisions of a government arbitration body could be enforced. But the enforcement of the ordinary laws against violence is largely in the hands of officials in local communities where strikers and their supporters are such a large part of the total population that public sentiment either does not make itself felt, or is actually with the strikers. On the other hand, the enforcement of federal legislation requiring obedience to decisions of a federal tribunal would be in the hands of federal officials whose course would be dictated by the sentiment of the country as a whole. Now, there is no question that sentiment in the country as a whole has been against the strike of the shop employees, although it has not been in many local communities where the population is composed largely of railway employees.

The *Railway Age* has never in the past advocated compulsory arbitration of railroad labor disputes. This paper has believed that public sentiment and government officials would be so antagonistic to any party that acted in disregard of a decision rendered by a government body in a railroad labor controversy that in practically all cases such decisions would be obeyed and that at least no wholesale and protracted violations of them would occur. Experience has shown, however, that this belief was without foundation. There may be differences of opinion as to whether compulsory arbitration would work, but everybody now knows, or ought to know, that no other means intended to secure peaceful settlement of railroad labor controversies will work.

Looking Ahead

THERE IS NO QUESTION but what something is seriously wrong in the relations between the men and the managements of most of our railroads. The shopmen's strike is only one evidence of this. Regardless of the causes of this friction and unrest, the responsibility for improving conditions is strictly up to the managements. The underlying causes or forces which are responsible for the present situation have been in process of development for a long time and are natural reactions from past conditions. To correct the difficulties it will be necessary, first, scientifically to study and survey the situation to determine the underlying causes of the trouble and then by removing these causes, one by one, to bring about an improvement.

Too little attention has been paid in the past to the handling of the human element in railway work. Too much stress, comparatively, has been placed upon methods and practices and the development of equipment and apparatus, and too little on the study of human nature and the supervision and control of the men. Meanwhile many of the other industries have gone ahead in studying the personnel of their organizations, with the result that greater and greater stress has been placed upon the necessity of improving the relations between the men and the managements and in educating the men to a larger realization of their responsibilities and possibilities.

The railway executives, for instance, may have looked into John Leitch's experiments in industrial democracy, or into the methods of the Dennison Manufacturing Company, or developments of a similar nature. They have largely failed to utilize the experiences of other industries, however, on the plea that methods which could be used successfully by companies which were engaged in manufacturing were not applicable to the railroad business, and that, moreover, while an industrial concern is concentrated in a few buildings or over a few acres, a railroad organization is spread thinly over a vast amount of territory. The latter fact, however, is all the more reason why railroad managements should give more attention to matters of this kind. As far as the first objection is concerned, it is well to remember that the exact methods or practices involved in a particular scheme of organization are largely incidental in securing results, and that the important factor, after all, is the spirit back of them. One company may secure remarkable results from a certain form of organization, while another under similar circumstances may absolutely fail because those in control use the methods or practices with the idea of taking advantage of the men, while the other organization is dealing fairly with the men in the knowledge that both sides will profit from the transaction if it is honestly carried out.

It is high time that railroad managements gave more serious consideration to the development of strong personnel departments with the highest ideals. Because the difficulties which confront them are far greater than in compact, concentrated industrial organizations, it is necessary that the personnel departments be made even stronger and that they be based upon the highest ideals of successful, modern practices of dealing with men and supervising them. Railroad managements have before them many examples of successful experiments of this kind which have been made by manufacturing companies, even though it is true that only a comparatively few of the industries have awakened to the possibilities in this direction. Because the problem on the railroads is so much greater and more complicated than it is in other industries, it is important that it be tackled fairly and squarely and without any delay. This, if it goes hand in hand with the educational methods mentioned in the comments last week, entitled "The Next Step," will be productive of real and permanent results and will place the railroads on a sound basis so far as the relations with their employees are concerned.

The Coal Strike "Settlement"

As the largest purchasers of coal in the country the railways are interested in the so-called "settlement" of the coal strike recently effected by the United Mine Workers of America with certain coal operators at Cleveland. The miners struck throughout the country, except in non-union territory, on April 1 because they could not reach an agreement with the mine operators regarding wages and certain other matters. The agreement reached Cleveland on August 15 was not really a settlement, but a complete surrender by the operators. They agreed to put the miners back to work until April 1, 1923, under the same working conditions and wages as those in effect prior to April 1, 1922. No provision for arbitration was made. A "fact finding" committee is to be appointed, but there is nothing in the arrangement which binds either party to abide by the facts found, whatever they may be.

The complete and abject surrender made by the operators involved, most of whose mines are in eastern Ohio, means that reduction in the wages of the miners, and therefore reductions in the price of coal to the public, are indefinitely postponed. Since no means has been adopted for settling future controversies, it seems almost certain, if this agreement becomes the basis for agreements to open up the mines generally, that another nation-wide coal strike will begin on April 1, 1923. The public must bear the results of one coal strike which has lasted almost five months, including a very serious shortage of fuel; it must in addition pay even higher prices for coal than it would have had to pay if the strike had not occurred; and it must face the prospect of a similar struggle and resulting shortage of coal next year.

There are many operators of coal mines in the country who have not been willing to make such a pitiful surrender as was made by those who signed the Cleveland agreement. The Illinois Coal Operators Association, for example, has held out for the adoption of some plan of arbitration as a condition of putting the miners back to work at the old wages. The miners' union continues, however, to reject all proposals for arbitration, and there is grave danger that sooner or later the miners throughout the country will be put back to work at the old wages, and without any agreement for arbitration of the question of what wages shall be paid in future. The operators in Illinois and some other states find themselves confronted with state laws of such a character that they practically give members of the miners' union a monopoly of the right to work in the mines.

President Harding in his message to Congress on the coal and railway strikes recommended the creation of a commission "to make searching investigation into the whole coal industry with provision for its lawful activities and the bestowal of authority to reveal every phase of coal production, sale and distribution." Doubtless it is desirable that such an investigation should be made. Some very important facts have, however, been made clear by the two great coal strikes of 1919 and 1921. One is that a single labor organization, the United Mine Workers of America, has acquired such vast power that it can stop the production of coal by most of the mines of the country for an indefinite period. Another is that this union, rather than arbitrate, is perfectly willing to put strikes into effect which will demoralize and even bring almost to a standstill the entire business of the country and cause disaster and suffering to all its people. It has been demonstrated by actual experience that the United Mine Workers of America can put into effect and carry out strikes which will do more harm than any kind of a strike on the railroads, except possibly one by the employees actually engaged in the operation of trains.

The national government and almost every state government have asserted and exercised the right to regulate or even destroy, for the protection of the public, combinations of capital which it has been feared, reasonably or otherwise, would be able to fix prices in disregard of supply and demand. But high prices may result from excessive costs of operation due to excessive wages and inefficiency of labor as well as to the exaction of excessive profits by the capitalists.

The prices of coal help to determine the expense of operating every business. The cost of coal is an especially large item in the expense of operating manufacturing plants and railways. Therefore, if the public allows the miners to maintain a nation-wide combination which can successfully demand excessive wages, the effect upon the cost of living will be exactly the same as if it allowed the coal operators, or any other large class of capitalists, to maintain a combination to extort excessive profits.

Some years ago when the government was engaged in a great struggle with combinations of capitalists, President Roosevelt said: "We must shackle greed as we have shackled force." The words of his statement should now be transposed so that it will read: "We must shackle force as we have shackled greed." The miners have relied upon force to win their strike. They have not only struck, which is the use of a negative form of force, but they have resorted to every form of violence, which is a positive form of force, to prevent others from working where they would not work. The same things have been true, of course, of the striking railway shop employees. Force has won the miners' strike. The success of its use in this instance will encourage its use in other cases.

What does the successful use of force in such a case mean? It means simply that the stronger impose their will on the weaker, regardless of the rights involved. That is what it always has meant, and always will mean. Force settles nothing except which of two combatants is the stronger. The outcome of the coal strike has demonstrated that the United Mine Workers of America are stronger than the coal operators. Experience has shown that there is no limit to what any body of men will seek to take by force as long as the use of force is successful. Therefore, the United Mine Workers of America may be relied upon to take more and more by force as long as their use of force is successful. But in the long run what they take from the mine operators will be taken from the public, because everything the miners take from the operators is necessarily taken by the operators, in turn, from the public.

It is only a matter of time until shortage and high prices of coal will bring this fact home to the public. There will then be a struggle which the public cannot fail to recognize as being between the miners and itself. What will be the outcome of that is uncertain. The miners' union may be able to get support from other labor organizations which will enable it to triumph over even the public. In that case, the sovereignty of the labor unions will be substituted for that of the people. Those who exercise the greatest power in a country are sovereign, no matter what its constitution and laws may say.

Since a struggle between the miners and the public is inevitable sooner or later, the sooner it is precipitated the better it will be for all concerned. The public, in self protection, would precipitate it between now and April 1, 1923, by the passage of a law providing for compulsory arbitration of labor disputes in coal mines. If the public cannot compel settlement of labor disputes in the coal mines by peaceable means, if it cannot prevent protracted strikes such as those of 1919 and 1921, if it cannot prevent and punish violence such as occurred in these strikes, then the people have lost their sovereignty in the United States to the labor unions.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

The Use of Operating Statistics

St. Louis, Mo.

To the Editor:

I have read with interest the material which has recently appeared in the *Railway Age* relative to the proposed revision of the I. C. C. operating expenses classifications and requirements for operating statistics.

The Interstate Commerce Commission can only exercise a general supervision through the accounts and statistics. The analysis of such returns must necessarily be entrusted to specialists, with no direct interference with the free initiative and responsibility of local management. Present classifications were prescribed by the commission only after full investigation, consideration and co-operation with railroad accounting officers, no doubt with the thought of designing something that would clearly reveal all of the operating conditions and at the same time create a base for such detailed statistics as the commission and railroads might from time to time require.

The suggestion has been made that our present classification is much too elaborate and calls for wholly unnecessary segregation. I say unnecessary because many of the classifications are not used, but I hardly see how the present classification can be simplified without a reduction in the number and this certainty ought to be done without reducing the amount of necessary data.

To analyze readily a statement or report with its voluminous information is difficult. I am, therefore, prompted to suggest a grouping of the related factors in separate statements or charts without including factors of minor importance. The prime factors must be developed as conditions and circumstances warrant. They should be prepared and presented in a form that will enable one, without studying a mass of figures, to determine tendencies. Should the tendencies be of a character requiring investigation, then, of course, one must go to the details. There must be a constant improvement of conditions and the problem is one of securing authoritative information concerning:

1. The effectiveness of the system in use.
2. The performance which can be expected of changed methods or the introduction of new devices.
3. The cost of the change.

Naturally, to obtain this sort of information, there must be a large amount of data, both accounting and statistical.

Statistics as now compiled show the sources of income and the channels of expenditures. An equal interest in both is paramount to a healthful situation. All statistics should be used to the greatest advantage looking toward greater sources of revenue and economies in operation. Many know the extent of the earnings but I dare say few realize the magnitude of the expenditures; that is, where the money goes after it is earned. These facts may be learned through operating statistics now compiled, if advantage is taken of them. Aside from this, they are valuable for the analysis of existing conditions but, in many cases, furnish little information as to what would happen under other and different conditions. Thus the predetermination of operating results, which is most important from the standpoint of orderly and improved operation, is largely dependent upon the researches of the individual and a co-ordinated organization. Vast numbers of both related and unrelated figures are compiled, but they are not a panacea to the solution of general problems. A statement of the expenses under fixed conditions will not ultimately suffice but the change of expenses under certain varying conditions is needed. If such data were available, the study and analysis of operating results would be more truly a diagnosis, rather than a postmortem.

A carefully thought out program and diligent research and investigation through the medium of statistics will bring out numerous aspects of the economies of operation that merit attention. It is, therefore, not logical to reduce the amount of information available for use by the operating officers, particularly at a time when the slight margin between revenues and expenses makes it absolutely essential that they be provided with all the data which can be furnished at a reasonable expense. This is particularly realized when an attempt is made to determine the cost of some particular class of traffic and this feature alone, to my mind, is quite important.

It has been suggested that reports as used do not give full information as to railroad operations, which statement may have been prompted by the thought that they are not in sufficient detail or properly assembled by classes to permit proper comparison, one road with another. In the first place, this is an impracticable suggestion. Second, considering the fact that greater efficiency is always uppermost in the mind of the operating manager, a complete segregation of the several items of operating costs into a number of composite units for publication uniformly would be of no value as a comparison with like units or factors of other roads, either as to determining the efficiency of operation or as to the value of the road's securities, when the physical characteristics of the property compared were unlike and the kind, density and proportions of tonnage, besides the speed, number and weight of trains, were different.

A comparison of the operating and maintenance costs of one railroad with another, of any one of the many factors which go to make up the aggregate, even though the physical and traffic conditions of both roads were somewhat analogous, would not reveal a difference sufficient in amount to enable one to form an intelligent judgment as to the respective efficiencies or as to the wisdom of investing in the securities. This could better be determined by a comparison with the aggregate amount expended by one road in relation to its gross earnings, for the same given period, or with that expended in previous years, or with the aggregate expenditure of any road having similar physical features, due consideration being given to the respective trend and volume of traffic, weight and speed of trains, and the prevailing weather conditions, etc. Of course, the expense of all of these several factors which make up the aggregate are carefully guarded and looked after in detail by the railroad manager and any further segregation for such comparative uses is liable to involve an expense far exceeding any value they might have.

Where a diversity exists in the physical and traffic conditions, a comparison of the operation of one road with that of another has very little value in determining the efficiency of management. Even on the same road, great differences in operating results may be shown from year to year, according to economic, rate or weather conditions, affecting the trend and volume of traffic and the facilitation of operation. The ratio of operating expenses to gross operating revenue is regarded as a criterion of the efficiency of the management and comparisons between different roads of this ratio are oftentimes made with the resultant impression that the road with the lowest ratio of expense is better managed. Such an impression might be altogether wrong as there may

have been different conditions in operation and traffic affecting the one road and not the other. One of the many factors that would affect this working ratio is the commodity traffic rate. There might be a predominating class of freight traffic on the road showing the low working ratio producing a rate per ton-mile much higher than that produced by the other. The rates in effect play a more important part in the results than any increased efficiency obtainable.

Statistics are quite necessary and must be of the kind and character to establish facts. The first and primary object of these facts is their use. No statistics, however, should be compiled unless they serve a useful purpose. Neither should it be assumed that the use of statistics alone will correct the evil and produce the desired results but, on the other hand, it is a question of adapting ourselves to the operating and economic conditions and then co-ordinating all facility units. Economy means the wise spending of money or time, good stewardship and careful administration. All agents and employees, including the officers and colaborers, must have a keen sense of duty and realize that each is just as important in the operation and success of the great institution as the locomotive. The last requirement is of great importance for, unless all the different operations work in harmony, the machine, as a whole, will not run smoothly. There should be personal interest not only in individual success but in the ultimate success of the railroad.

C. D. Hicks.
Executive Department, Missouri Pacific.

The Conservatives of 1851, and of 1922

Harriman, N. Y.

To the Editor:

Do you recognize this place? Few letters from summer resorts reach your desk, I presume; but that is no reason why the bracing country air should not stir *me*. The most notable structure in Harriman is the monument to Charles Minot, superintendent of the Erie Railroad, who in 1851 sent the first train order. (It was not a "31" nor a "19"; but it was a full-fledged meet order.) The dedication ceremonies of the monument were reported in the *Railway Age Gazette* of May 10, 1912. Minot, on a westbound passenger train which had lost its right to the road, telegraphed from here to the agent at Goshen, 13 miles west, to hold the superior eastbound train; and then ordered the westbound train to proceed. He was obliged, however, to mount the locomotive cab himself because the engineman refused to act on such an unheard of order.

You may, very likely, class me (with other summer-resort writers) as one who, when loafing in a quiet mountain resort, forgets the usual business perspective and writes sentimental stuff to fill up space; but if you do, you will be wrong; for I am intensely practical. We have still to learn a part of the lesson of the Minot incident.

When we realize that, to the experienced and skilful telegrapher, the words of the person at the other end of ten or a hundred miles of wire are as personal and human as they would be to you or to me if the means of communication were a telephone instead of a Morse relay or sounder, the slowness with which that Erie engineman grasped the idea that there had been a real and reliable conversation between Turner (now Harriman) and Goshen seems almost incredible, but *we of the twentieth century are retarding progress today* in just about the same way. And this Erie engineman was not the only rusty-minded conservative of the 19th century. The telegraph had been demonstrated in 1844, and Minot had, no doubt, scores of examples in his own experience assuring him that the miracle of instantaneous communication was a reality; but the average railroad officer of that time was so unprogressive that to us today he seems to have been absolutely fossilized. As late as 1871, the superintendent of the Eastern Railroad, of Massachusetts, said that he could not bother with such a cumbersome aid as the telegraph in directing train movements.

How very dull the railroads of this country were to the advantage of the telephone! I really believe England was in some respects ahead of us. C. A. Hammond used the telephone for transmitting train orders in Massachusetts about 1883, but it was 1898 before any big road got that far; and still ten years more before the objectors were fairly silenced.

But it is your editorial of August 19, on the collision at Sulphur Springs of August 5, 1922, which I have just been reading, that has brought this question to my mind just at this time. How very absurd to put up a separate signal to stop trains for orders when you already have a signal, of the right kind and in the right place, to be used for stopping them for all other purposes. Or, to put it in another way, if the train order signal was there first, how pig-headed to keep on using it just because you love it for its honorable and venerable reputation in the past. And yet Porter, Ind., and Riverside, Mo., are only two of hundreds of such examples of wasteful and complicated arrangements which are perpetuated simply for lack of a little reasonable enterprise.

The collision at Leeds, Mo., calls attention to similar lessons. Your little homily, in connection with that disaster, on the fundamentals of the block system (August 19, page 317) only brings out what was well known in England in 1860, before we boastful Americans had even thought of using the block system; yet "progressive" American railroad presidents, who furnish baseball news by radio for passengers in their palatial trains too impatient to wait until the train reaches the next station, continue today, 62 years afterward, to try to run trains safely without any block system at all.

Surely, the old fogies are not all dead!

And the Sulphur Springs collision conveys another lesson. Refer back to your issue of April 22, 1921, page 978, and read the clear and forceful argument for the audible signal presented by J. B. Latimer, signal engineer of the Chicago, Burlington & Quincy. No one could ask for a better demonstration of the usefulness of an audible signal (either at the side of the road on a post, or in the cab of the locomotive) than the circumstances of this Sulphur Springs collision. Thirty-three passengers were killed because an engineman went past one or more signals without seeing them; and all the consolation that the traveling public can get out of this fresh illustration of conditions which are at least 33 years old is that, after studying the problem of collision prevention for 33 months (counting from the time when the United States Railroad Administration committee wrote its report on the subject), the principal railroads of the country profess themselves to be still unable to decide what to do about it! That U. S. R. A. committee examined 37 automatic train stop devices, but remained silent as to what it thought of 37 years' experience, in considerable measure successful, on the Northern Railroad of France with an audible signal. And this French signal, in an improved form, is now being introduced on all of the larger railroads of that country.

The audible signal is not so comprehensively perfect, on paper, as are some of the automatic train-stops; but who can doubt that if the Missouri Pacific had heeded the lesson from France in 1912 it would have been saved this humiliating experience in 1922?

Who denies that an appeal to the engineman's eyes and ears more than doubles the factor of safety as compared with an appeal to eyes alone?

Irry.

Executives Reaffirm Position on Seniority

Possibility Opened for Separate Agreements—Situation Reverts Back to Roads for Individual Action

THE RAILWAY executives, assembled at the Yale Club, New York, on Wednesday for their third meeting called in connection with the railway shopmen's strike, reaffirmed by a practically unanimous vote their previous stand on the seniority issue and declared their belief that mediation with the committee of the brotherhood leaders would produce no favorable results "unless the representatives of the striking shop employees are prepared to accept that position."

On the understanding, however, that the shopmen might be willing to consider the possibility of settlements with individual roads a group of about 25 carriers said to be in a position to take back all of their striking shopmen, have continued conferences with the mediatory brotherhood leaders to see if it is possible to reach any favorable results.

The action of the meeting of the Association of Railway Executives in practical effect eliminates the possibility that the strikers may be able to bring the strike to a close by a country-wide agreement including all of the railroads. It accomplishes this result because it is hardly possible that the strikers will be willing to meet the conditions laid down by the executives in their stand on seniority. The effect of the meeting is also to act in the direction of reverting the matter of the strike back to the individual roads. It indicates without much question the belief of the executives that the strike has been won and that the problem now is for each road to continue building up its forces and in general to work out its own situation in the light of its particular conditions.

One of the developments of the meeting was the announcement that the conference between the committee of executives and the leaders of the brotherhoods, the latter of which have been acting as mediators for the shopmen, came to no definite conclusion as to proposals or plans at the sessions in New York on Thursday and Friday of the preceding week. It was expected that the Wednesday meeting might bring out considerable discussion and a division of opinion among the executives. This division of opinion failed of realization. The vote in favor of the resolution reaffirming the executives' stand on seniority was 254 to 4, the only executive voting against it being S. Davies Warfield, president of the Seaboard Air Line. Mr. Warfield is chairman also of the National Association of Owners of Railway Securities.

The meeting assembled at the Yale Club at 10 o'clock Wednesday morning. After discussing the results of the conference between the committee of executives and the train service leaders—to consider which the meeting was called—the resolution was adopted and its sense reported to the brotherhood heads. They, being invited to the meeting to give their views, accepted. In stating his views, L. E. Sheppard, president of the order of Railway Conductors submitted a memorandum which suggested the replacement of the striking shopmen with status as of June 30, the day before the strike became effective. He also intimated the possibility of separate settlements. The suggestions in the memorandum were, of course, rejected. Several of the roads, however, desiring to follow out the idea of the separate agreements remained after the meeting itself had adjourned. A committee of them, with Hale Holden, president of the Chicago, Burlington & Quincy, as chairman, reassembled in the evening and discussed further with the mediators the possibilities of the suggestion made. A statement authorized by T. DeWitt Cuyler gave a complete report of the main meeting as follows:

Official Report of the Meeting

The various suggestions made by the chairman of the train and engine service brotherhoods, as voluntary mediators, in respect to an adjustment of the pending strike of the shopcrafts, were fully considered, and the following preamble and resolutions were adopted by a vote of 254 to 4:

"The committee appointed at the meeting of the railroads on August 11 having been requested by the chief officers of the five train service organizations to meet them as mediators, reported to the meeting today that conferences in accordance with this invitation were held in Washington on August 12 and in New York on August 17 and 18.

"At these conferences the position of the railroads, as reflected in the action taken on August 11, was fully discussed, but the committee has reported that the officers of the train and engine service brotherhoods were unable to bring about an agreement on the part of the shopcrafts.

"At the conclusion of the conference on Friday, August 18, an adjournment was taken to enable the committee to report the result of the conferences to their associates, which report has been made today.

"After discussion, the following resolution was adopted:

> "RESOLVED, That the committee is authorized to meet the representatives of the train and engine service brotherhoods again and state to them that the railroads adhere to the position heretofore taken, namely, that 'the striking former employees cannot be given preference to employees at present in the service, without doing violence to every principle of right and justice involved in this matter and without the grossest breach of faith on the part of the railroads to the men at present in their service. Under these circumstances it becomes apparent that the railroads cannot consider any settlement of the present strike which does not provide protection in their present employment, both to the loyal employees who remained in the service and to the new employees entering it.'
>
> "RESOLVED FURTHER, That unless the representatives of the striking former shop employees are prepared to accept that position, the railroads are unable to see wherein the efforts at mediation by the chief officers of the brotherhoods can harmonize these fundamental differences.
>
> "RESOLVED, That the railroads express their appreciation of the friendly intent and the earnest efforts that have been made by the chief officers of the train and engine service brotherhoods to compose the present situation, and express their sincere regrets that the situation has not permitted a successful termination of these efforts."

These resolutions were at once communicated to the mediators by a committee appointed for the purpose. Upon delivering and reading the resolutions to the mediators they requested that they might appear personally before the member-roads, which request was, of course, granted. The mediators thereupon joined the executives assembled at the Yale Club, and made statements embodying their views of the situation.

In the course of Mr. Sheppard's remarks, he, on behalf of the mediators, submitted a suggestion in the form of a memorandum which is fully quoted in my letter given below.

They disclaimed any knowledge as to whether this suggestion would be accepted by the striking shopmen, but requested that it be considered by the association, and also that it be presented to any individual road that might be inclined to make a separate settlement. To this communication the association directed the following answer to be made today to the chairman of the five train service organizations, which was accordingly done:

"Gentlemen:

"The carriers have carefully considered the tentative suggestion you have today made reading as follows:

> "First: All men to be reinstated in the position of the class they originally held on June 30, 1922, and as many of such men as possible are to be put to work September 1, at present rates of pay, and all employees who have

been on strike to be put to work or under pay, not later than October 1, next, except such men as have been proven guilty of destruction of railroad property or convicted of crime; ordinary cases of assault and battery the result of personal encounter are to be disregarded.

"Second: If a dispute arises as to the relative standing of an employee or employees that cannot be otherwise adjusted by the carrier and said employee or employees, the matter shall be referred to the United States Railroad Labor Board in accordance with the Transportation Act of 1920 by the organization, the employees or the carrier in the interest of any employee who may be aggrieved.

"Third: No intimidation nor oppression shall be practiced or permitted as against any of the employees who have remained or have taken service or as against those who resume service under this understanding.

"Fourth: All suits at law now pending as the result of this strike to be withdrawn and cancelled by both parties.

"The use by you in this suggestion of the term 'reinstated' goes to the root of the differences between us.

"You have repeatedly explained to our committee that this means an acknowledgment on the part of the carriers that the men returning to work under your proposition above quoted will be senior to the new men employed since July 1, 1922, and senior to the old men who remained in the service to the extent that the returning strikers were senior on June 30, 1922.

"As this acknowledgment would doubtless control the decision of the Labor Board on a dispute submitted under your second paragraph as to seniority, and oblige it to render a decision against the old men who remained and the new men who entered the service, we cannot accept it.

"THOMAS DE WITT CUYLER, Chairman."

It may be, from the suggestion above mentioned of the mediators, that they will recommend to the leaders of the striking shopmen to permit settlements with individual roads, authority to make which has hitherto been declined by these leaders.

While the basis suggested by the train and engine service brotherhood leaders interpreted as it is understood the brotherhood leaders interpret it, was not acceptable as submitted, a group of roads have determined to ascertain whether or not such modifications of it may be obtained by further negotiations between this group of roads and the mediators, as will make the proposal acceptable to at least some of the roads under their special conditions, which, in that event, would consider the making of separate and individual settlements.

Statement by Bert M. Jewell

The vote and action of the executives received the condemnation of Bert M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, in the following statement:

The Association of Railway Executives have "closed the door." The unions have offered every concession within reason to end the strike and to save the public from a breakdown of transportation; but the executives have made none. On the contrary, they have since the strike began raised an entirely new and irrelevant issue of their own—seniority; and by their refusal to recede from their position have made a settlement impossible at this time. The responsibility for what will happen now rests wholly upon them.

The shopcraft's employees voted in June for a strike to establish a living wage and decent working conditions. The Association of Railway Executives have now voted for a lockout to smash unionism on the railroads and to eliminate collective bargaining from the industry.

The men have been ready at all times to meet the executives to bring about an honorable settlement. We expressed our willingness to do so to the Labor Board in Chicago. We accepted President Harding's terms of settlement of July 31. The executives, however, have consistently and arrogantly blocked every move to end the strike. They have done so with the plain intent of eliminating unionism from the railroad shops as the first step in the elimination of unionism from the industry as a whole. They refuse, even at the President's direct request, to take back striking employees with seniority rights unimpaired, in order that they might separate free and courageous men from their jobs and thus disintegrate the employees' organization. They even try to justify their refusal on the ground of promises of permanent employment to strikebreakers which they have not made.

The shopcraft employees are now fighting for their very existence and the existence of the other railroad employees, as well as for justice and right. This last misguided action of the executives makes our victory secure. The executives today have not a leg to stand on before the people.

The 400,000 striking employees accept the challenge of the railroads. We will redouble our efforts, confident of success.

Roads Discuss Separate Agreements

Hale Holden, president of the Chicago, Burlington & Quincy, spokesman of the approximately 25 roads which continued negotiations with the brotherhood leaders acting as mediators issued a statement in the afternoon in which he said: "At the conclusion of the general meeting of the Association of Railway Executives, the officers of a considerable number of individual railroads remained in further conference over the proposition submitted by the brotherhood leaders. There was no dissent from the action taken at the main meeting."

A committee of these roads headed by Mr. Holden as chairman reassembled in the evening to go over the matter with the brotherhood mediators. Up to the time of going to press announcement of what may have taken place at this meeting was not forthcoming. After the break up of the meeting Warren S. Stone, president of the Brotherhood of Locomotive Engineers contented himself with the statement that "Mediators don't talk." Daniel Willard, president of the Baltimore & Ohio, speaking for the group, said that there would be another conference Thursday. He is quoted as adding "If you want to see us settle the strike, just give us a chance."

Until the official report of the conferences is made public it is useless to conjecture concerning the matters discussed. This is made difficult in any event because Bert M. Jewell on Wednesday evening denied that the shop leaders had authorized the brotherhood leaders to make any suggestions as to possible separate agreements. Mr. Jewell reiterated the policy of the shop leaders as being opposed to any settlement except on a national basis—thus continuing the policy followed out in the fruitless negotiations with the Baltimore & Ohio, the Southern and other roads which have offered to negotiate separately.

The roads involved in the discussion were understood to be those that are in a position to take back all of their striking shopmen. It was plainly indicated, however, that any agreement they might make would be in strict accord with the sentiments adopted by the general meeting on matters of seniority. The roads included the Chicago & North Western, the Chicago, Milwaukee & St. Paul, the Chicago, Burlington & Quincy, the Northern Pacific, the New York Central Lines, the Erie, the New York, Chicago & St. Louis and Lake Erie & Western, the Chesapeake & Ohio, the Norfolk & Western, the Buffalo, Rochester & Pittsburgh, the Norfolk Southern, the Wheeling & Lake Erie, the Lehigh & New England, the Chicago, Rock Island & Pacific, the Minneapolis & St. Louis, the Louisiana & Arkansas and the Alabama & Vicksburg and Vicksburg, Shreveport & Pacific, etc.

Conference with Train Service Leaders

On Thursday, a week ago, as briefly reported in last week's issue of the *Railway Age*, a committee of the Association of Railway Executives met at the offices of that organization the five leaders of the train service brotherhoods who had offered their services as mediators. The conference did not conclude its discussion on Thursday and reassembled Friday morning.

There were in attendance representing the railroads: T. De Witt Cuyler, chairman of the Association of Railway Executives; W. W. Atterbury, vice-president of the Pennsylvania; Howard Elliott, chairman of the Northern Pacific; Hale Holden, president of the Chicago, Burlington & Quincy; Julius Kruttschnitt, chairman of the Southern Pacific; W. L. Mapother, president of the Louisville & Nashville; C. H. Markham, president of the Illinois Central; A. H. Smith, president of the New York Central; Carl Gray, president of

the Union Pacific, and A. P. Thom, vice-chairman and general counsel of the Association of Railway Executives.

The five brotherhood leaders were Warren S. Stone, president of the Brotherhood of Locomotive Engineers; L. E. Sheppard, president of the Order of Railway Conductors; W. N. Doak, vice-president of the Brotherhood of Railway Trainmen; E. H. Robertson, president of the Brotherhood of Locomotive Firemen and Enginemen, and T. C. Cashen, president of the Switchmen's Union.

B. M. Jewell, president of the Railway Employees Department of the American Federation of Labor, and other of the labor leaders, were in town but were not called into the conference.

Like the session on Thursday the activities of the following day were shrouded in secrecy. Following the close of the conference on Friday afternoon, the following announcement was authorized by T. De Witt Cuyler, chairman of the Association of Railway Executives:

"The conference between the leaders of the five train service organizations, acting as mediators, and a committee of railway executives, has been adjourned until some day next week not yet designated. Prior to further conferences the committee of railway executives will consider further the suggestions made and consult with their associates. The discussions which have taken place have been marked by commendable public spirit and frankness on both sides, and this recess is taken without any diminution of this attitude."

The non-committal character of this statement, combined with the fact that the mediators on both sides were sworn to secrecy, gave little inkling as to what had taken place at the conference and still less as to what the next step in the mediations would be. It was made known, however, that the plan was to refer the matter back to interested parties. This information for the moment seemed somewhat inconclusive until it was found out that the procedure would be to call a general meeting of the member roads of the Association of Railway Executives; that the committee of railway heads was to report its action to the meeting for the latter's decision, and that then the matter would again be taken up with the train service leaders in further conferences. Confirmation that this would be the plan of action was forthcoming when announcement was later made that the executives' meeting had been called for Wednesday of this week.

Labor Leaders' Publicity

Practically no information whatever was forthcoming from any of those in attendance at the conference as to what matters had been discussed, as to what line the discussion had followed, or as to what decisions may have been made. Authoritative statement was made that the conference had been characterized by an attitude of friendliness and that each side had been given an opportunity to receive the views of the other and enabled to understand how far each side was ready and willing to go to bring about a settlement. Beyond this, no other information was available. The labor leaders to whom the information had been imparted by the mediators did not, however, prove so reticent. At any rate, certain of the labor representatives, who refused to permit their names to be quoted, did give the press an idea as to what had been done. Naturally, under the circumstances, they took advantage of the situation, purposely or otherwise, and painted the situation so that it would look most favorable from their own point of view. The story they gave later proved incorrect but it was the story that appeared in Saturday's papers.

Briefly the story was to the effect that the conferees for the executives had agreed to propose a settlement embodying some kind of a gentlemen's agreement whereby the strikers would be taken back with their seniority rights to be adjusted ultimately to the satisfaction of all. The details of the manner in which this is to be done were, however, lacking. Under the circumstances any guess might be in order. It was, however, pointed out that there was no idea of any 1, 2, 3 plan of seniority arrangement such, for instance, as was embodied in previous proposals that (1) the shopmen who remained on the job should outrank (2) those who struck, to be followed in ranking by (3) the new men. The plans evidently called for the returning to work of all the strikers and the retaining of the new men as well, it being felt that there would be work enough for all as a result of the recent expansion of traffic and the delayed repair work. It was also pointed out that any 1, 2, 3 plan might be impractical, particularly if all the strikers returned in a body and were given the same seniority. The idea was further amplified with the information that the plan was such that neither side could claim a victory nor would have to admit defeat on the seniority issue. The labor leaders, naturally, put the situation in the best light from their own point of view by saying that it would permit the railways to get out of a difficult position but in a manner which would permit the railway executives to save their faces.

"P. & A. Photo"

Railway Executives and Labor Leaders at Peace Parley

A Labor View

Carrying the idea further, the labor leaders gave out the impression that there was involved some kind of a concession on the part of the railway executive conferees. It was stated that the executive conferees had agreed to these concessions on Thursday but that when they returned to the meeting on Friday morning they had thought it better not to act on their own responsibility but rather to refer the matter back to their fellow executives for the opinion and action of the latter.

Naturally the foregoing was a close approach to speculation. It proved to be entirely in error but that does not

avoid the fact that it formed railroad history for one week at least.

President Harding's address, which was delivered to Congress on Friday, after a day's delay waiting for possible results from the New York mediation conference, was not, insofar as can be learned, a subject of discussion at the conference. Neither was it discussed openly by the labor leaders assembled in New York at the time. Mr. Gompers in Washington, however, took the opportunity to express his opinions—adverse to the address—to the newspaper men. A further element of interest in connection with the New York conference was the fact that but little opinion was in evidence regarded the Labor Board. Although it was a statement by Chairman Hooper and a resolution of the Labor Board which largely brought up the question of seniority, this factor seems for the moment to have been forgotten. Similarly, but little comment was made outside the conference, at least, concerning President Harding's suggestion that the seniority issue should be decided by the Labor Board.

Gompers Denounces President's Address

President Gompers had sent for the newspaper men on Saturday and denounced the President's address item by item. He said that to make the decisions of the Labor Board enforceable would amount to making slaves of the employees, and he referred to the public members of the Labor Board as representatives of the employer type of mind. When reminded that two of the three public members had voted with the labor members for the wage increase of 1920, he said it was the fashion to raise wages then but that the board had reduced wages twice since then. He referred to the 23 cent an hour rate for trackmen in some parts of the southwest as a "basic" rate, and when reminded that this applied to less than 7,000 men, he said that it showed the strikers what they might expect next. He declared that the President's address should have been deferred, because the railroad executives in New York meeting with the brotherhood committee assumed a very different attitude after they had learned its nature.

Executives Majority Vote Does Not Bind All Roads

On Monday and Tuesday of this week, prior to the meeting at the Yale Club on Wednesday, there was a more or less general impression that there would again be a sharp division of opinion among the executives. A number of the roads, particularly in the east, which have been more fortunate in meeting the shopmen's strike situation, were understood to be prepared to oppose any concessions of any kind to the strikers. What was considered as practically official announcement to this effect was contained in reports of the meeting of the Eastern Presidents' Conference in New York on Monday. The expected division of opinion, however, failed to materialize. As has been noted above, the resolution expressing the position of the executives was adopted with a dissenting vote by only one executive.

One notes more and more of a tendency to emphasize that a majority vote of the member roads of the Association of Railway Executives is not necessarily binding upon all the roads. As one authority has expressed it, it must be borne in mind that a majority vote of the executives is, insofar as concerns the particular railroad, entirely secondary to the wishes of the road's board of directors or its stockholders. This point is gradually given more significance as the difficulty is realized of trying to settle the strike in the same manner for roads which have practically won the strike as for those which have had considerably less success in this direction. This thought may also be expressed in other words by saying that there is a growing feeling on the part of many observers that a national settlement with the striking shopmen would be a mistake. It is not difficult to read an increasing adherence to this opinion in the action which was taken at the Wednesday meeting.

It would probably be putting the matter somewhat too strong to say that the question of seniority has lately been somewhat subordinate to the question of whether there should be a national settlement or not. There are many observers, however, who feel free to express such an opinion. They add that the strike has been lost as far as the men are concerned and that the issue now from the strikers' point of view is to get back to work on the best terms they can. The issue is made possible, these observers say, because of the knowledge that the railroads will need all their equipment to handle a record-breaking fall movement of grain and other commodities combined with the delayed movement of coal. It is similarly pointed out that the strikers have been somewhat encouraged or, at any rate, held back from going to work, by the continued negotiations on the part of President Harding, the brotherhood leaders, etc.

Bombing Features Western Strike Developments

The bombing of railroad property and the attempted destruction of trains and other transportation facilities featured the past week's developments in the strike situation in western territory.

Many of these instances have involved freight and passenger trains, roundhouses and other property on which members of the train service brotherhoods are employed, clearly pointing to the conclusion that they represent efforts of individuals to create conditions which will induce the train service men to follow the instructions of some of their national leaders to the effect that where their work involves extra hazards brought about by conditions resulting from the strike of shopmen they may exercise their own judgment and refuse to continue in service until these conditions have been remedied.

The most successful attempt of this kind occurred at Gary, Ind., where two train service employees were killed in a wreck, described elsewhere in this issue. Attempted wrecks were also reported at Kings Bridge, Tenn., on August 15, and at Neshota, Ala., on August 16.

The press reports during the past week have been replete with instances of the attempted destruction of railroad property through the use of bombs, dynamite or torches, instances of this character being reported at St. Louis, Mo., and Evansville, Ind., on August 15; at Birmingham, Ala., on August 16; El Reno, Okla., on August 17, and Dallas, Tex., and Grace, Ala., on August 18. In addition strikers or strike sympathizers at San Bernardino, Cal., have displayed a particular fondness for bombing the railroad property at that point, the reports of instances of this character being frequent and more or less regular.

Accompanying this wave of violence, directed both at the railroads, at the intimidation of loyal and new shopmen and at the coercion of the members of the train service brotherhoods, there has been the usual quota of slugging, rioting and similar outbreaks, although the property and personal damage has been less than in previous weeks. Since August 15 trouble of this character has been reported at San Bernardino, Cal., Cedar Rapids, Ia., Superior and Janesville, Wis., Birmingham, Mobile and Albany, Ala., Kansas City, Mo., Cincinnati, Ohio, Topeka, Kan., Colton, Cal., Pueblo, Colo., Van Buren and Little Rock, Ark., Joliet, Ill., Tacoma, Wash., Milwaukee, Wis., Gary, Ind., and Channing, Mich.

The difficulties created in the far west by the sporadic walkouts of train service employees on several of the larger trans-continental roads were rapidly overcome during the

past week, train operation through all of the districts affected by the strike being normal by the night of August 17

Effect of Sporadic Strikes of Train Service Employees Overcome

On August 16 embargoes were lifted and trains were moved again over the Atchison, Topeka & Santa Fe, the Southern Pacific and the Union Pacific, the roads chiefly affected by the walkouts of the "big four" transportation brotherhoods.

Refusal of brotherhood leaders to sanction the walkouts when the Santa Fe issued ultimatums demanding immediate explanations of the attitude of national officials of the train service unions were followed by speedy developments in untying the traffic knots in California and other western states.

Furthermore at practically all points where similar strikes have been called or threatened, negotiations have been started to settle the difficulties. Nevertheless reports continue to come in of sporadic walkouts or threatened walkouts at other points, but so far no serious inconvenience has been caused by these outbreaks.

On August 20, Warren S. Stone, president of the Brotherhood of Locomotive Engineers, and D. B. Robertson, president of the Brotherhood of Locomotive Firemen and Enginemen, declared that there was no danger of the train service brotherhoods being drawn into a sympathetic strike, even if the negotiations to end the shopcrafts' walkout resulted in failure.

"There never has been any sympathetic strike nor has any been considered," Mr. Stone said. "There are safety laws to take care of the defective equipment which would endanger the lives of the brotherhood members, and it will only be necessary to enforce these laws."

Eastern Railroads Have 71.5 Per Cent Normal Forces

The railroads in the east on August 18 had 71.5 per cent of their normal shop forces. This information was contained in a statement issued by L. F. Loree, president of the Delaware & Hudson, following a meeting on Monday of the Eastern Presidents' Conference of which Mr. Loree is chairman. The statement said:

"The normal number of railway shopmen employed by the railroads in the Eastern region is 161,339. The percentage of this number at work during the past four weeks, together with the weekly increase, was as follows:

	Number	Per Cent	Weekly Increase
July 28	97,724	62.0	....
August 4	103,528	64.7	5,804
August 11	111,324	69.0	7,796
August 18	115,745	71.5	4,421

"It was expected that the ratio of increase of August 11 would be continued on the 18th, but the occurrences of last week put a damper on recruiting. Nothing can be more destructive than to introduce a feeling of uncertainty into a situation such as this."

Pennsylvania Forces Reach 50,000

For the first time since the shopmen's strike began, the shop forces of the Pennsylvania System have risen above the 50,000 mark. Reports on August 22 from all four regions and the Altoona works show 50,022 men reporting for duty and actually working. This represents 91 per cent of a full normal week-day force. In the last week the Pennsylvania System, the announcement giving this information continues, has made a net gain of 1,733 men in its shop forces. As compared with conditions at the low point of the strike which was reached on July 5, there are now 11,737 more men on duty and actually at work.

In order to avoid any possibility of a misunderstanding between the officers of the Pennsylvania System and employees in its engine and train service, in connection with conditions which may arise through the continuance of the miners' and shopmen's strike, a conference between the representatives of the employees and the management was held in Broad Street Station, Philadelphia, on August 19. At this conference an agreement was entered into whereby any question affecting the working conditions of employees in the engine and train service must be taken up through the proper channel, with the strict injunction that "no departure from the terms of the agreement between the management and the men will be tolerated." It was also agreed that no individual employee in engine and train service shall, at any time, take it into their own hands, to deviate from the course outlined in detail in the agreement.

Copies of the agreement are now being distributed to all employees in the engine and train service on the Pennsylvania System, as well as to all officers who deal directly or indirectly with these employees. The agreement or "Memorandum of Understanding" follows in part:

"Memorandum of Understanding"

If engineers or firemen find the engine to which they are assigned is in what they believe to be a defective condition they should at once report such condition to the proper officer. If they are in the enginehouse at the time the defect is discovered they should at once call the enginehouse foreman's attention to same. If train crews find equipment in a defective condition they should at once notify the proper officers.

When employes report motive power or equipment in a defective condition the proper supervising officer will, as promptly as possible, have an investigation made of the defect. If the defect is such as to render the locomotive or car unsafe to work on, employes will not be required to perform service thereon.

If an employe reports a locomotive or car in such a defective condition that he believes it unsafe to perform service thereon, and the proper officer to whom the defect has been reported decides after investigation that the defect is such as will not render its use on the part of the employe unsafe, and so reports to the employe with instructions to the employe that he shall use the defective equipment, the employe will then perform his usual service with such equipment. The employe so using equipment which he considers is in an unsafe condition may report the matter to his local representative who should as promptly as possible take the matter up with the superintendent. The superintendent will discuss such a question with the local representative with as little delay as possible.

Where employes find motive power or equipment in a defective condition which renders its use unusually dangerous or burdensome on the employe, they should report such a condition to their local representative who should at once take the matter up with the superintendent under the "Memorandum of Understanding." The superintendent will handle such matters promptly without requiring the usual five days' previous notice.

If an employe is called for mine service and he believes conditions resulting from the strike of the miners will render the performance of such service dangerous to his personal safety, he should at once report such situation to the proper officer, who will at once investigate the complaint. Where investigation shows that the performance of such service may endanger the safety of the employe, the supervising officer will either not require such service of the employes or if the service is required of the employes, adequate protection will be furnished them.

Where it is necessary to perform mine service in known dangerous territory, performance of such service will only be required of employes during daylight hours. If an employe has reported that he believes the performance of such mine run service would endanger his personal safety and the proper officer after investigation has insisted upon the employe performing such service, such employe, if he desires further consideration of his complaint should present the matter to his local representative who should at once take the question up with the superintendent under the "Memorandum of Understanding." Questions so referred to the superintendent will be discussed by him as promptly as possible without the usual five day's previous notice.

If it becomes necessary to handle any of these complaints beyond the superintendent, the general officer to whom the complaint is referred by the general chairman handling same will, as promptly

as possible, meet and discuss the same without requiring the usual five days' previous notice.

Officers will not require train and engine service employes to do anything outside of their regular duties. . . .

New Shop Crafts Organizations

Various railroads have begun to report the formation on their lines of new shop crafts organizations in accordance with the Labor Board's resolution of July 3. The New Haven's new organization has received the name of Association of Mechanical Department Employees—New Haven system.

The Southern Pacific's organization is the Pacific System Shop Crafts Protective League.

President Pearson of the New Haven in his announcement of the new organization, includes the significant statement that the agreement between the road and the new union covers "the handling without outside dictation of all matters of mutual interest." The announcement further says that

"The rates of pay agreed upon are both higher and lower than the former flat scale of the Labor Board, providing more liberally for work requiring the greater skill or effort."

The road in its advertisements for new men gives the new rates of pay as follows: Machinists, 66 to 76 cents an hour; boiler makers, 67 to 75 cents an hour; blacksmiths, 66 to 75 cents an hour; electrical workers, 65 to 75 cents an hour; car inspectors and repairmen, 63 cents an hour; helpers, first year, 45 cents an hour.

Further details concerning the New Haven's new shopmen's organization were given out in a statement issued by the New Haven on Wednesday. The statement said that the preamble of the by-laws of the new organization reads:

"We believe that with unity, guided by intelligence, and with an intelligent association we can acquire discipline necessary to enable us to act together, concentrate our strength, and direct our efforts toward a common purpose."

The object of the association is declared to be "to promote the welfare and protect the interests of its members; to promote good feeling and constructive co-operation between its members and the officers of the company, and, by joint action, protect and promote the interests of the public."

All mechanics, helpers, and apprentices who are actively engaged in the maintenance of equipment and machinery in the motive power department of the New Haven and who are not acting in a supervisory capacity, are entitled to membership in the association. Furthermore, employees who are entitled to participate in this association and who are American citizens, 21 years old or over, shall be eligible to office in the association. One of the rules of the new association declares:

"Elections shall be by secret ballot, and so conducted as to avoid undue influence or interference with voters in any manner whatsoever, and to prevent any fraud in the counting of ballots."

The officers of the association are to serve until the next annual meeting in July, or until their successors have been elected and qualified.

There is a general board whose jurisdiction includes the New York, New Haven, Hartford, Providence, and Boston divisions, the Midland, Old Colony, Waterbury, Danbury and Central New England divisions, the Van Nest shops, and "three members from the locomotive, five members from the passenger car, and two from the freight car department at Readville." The general board is to look after the interests of the association on their respective divisions, reporting to the association as a body matters of interest in their respective jurisdictions. There is a system adjustment board which is to place before the officers of the company all matters submitted to it by a local adjustment board or the general board and report to the general board the results. This system adjustment board has authority to deal with system officers upon all unsettled disputes or grievances originating from the divisions or in the shops, and upon all matters relating to interpretations of rules, rates of pay, working conditions, and of general interest to the membership. Any agreement, it is declared, reached between the system adjustment board and officers of the company with respect to these matters, shall, upon approval by the general board, be binding upon the membership as a whole; furthermore, any disputes which cannot be settled in conference between the system adjustment board and officers of the company will be handled in accordance with the provisions of the Transportation Act.

Massachusetts Governor Offers Reward

The Governor of Massachusetts on Friday, August 18, announced that the State would pay a reward of $1,000 for the detection and conviction of persons guilty of violence towards railroad employees or of destruction of railroad property. The Governor acted on a report of the Commissioner of Public Safety who enumerated 27 or more instances of attacks on railroad employees, cutting of air hose, stone throwing and intimidation of employees' families. These acts were committed at West Springfield, Worcester, Westboro, Framingham, Lowell, Clinton, Greenfield and other places. There were seven or more instances of cutting of air hose, 18 cars in one train being thus disabled on one occasion.

In behalf of the Boston & Albany, the Superior Court, at Boston, on August 18 issued a temporary order, warning against picketing and committing acts of violence. A similar injunction was secured by the New York, New Haven & Hartford in the United States District Court at Norwalk, Conn., on August 17.

Dispatches of August 17 reported cutting of hose and other acts of vandalism at Portsmouth, N. H., and other points on the Boston & Maine.

Southern Calls for Volunteers

Fairfax Harrison, president of the Southern Railway, has issued a statement calling on the people of the South, who want justice done and to that end demand that the strike be fought out, to volunteer their active aid.

"Normal transportation will be restored when public opinion asserts itself," he said. "If that public opinion supports the determination of the striking shopmen to disregard the judgments of the tribunal set up by Congress to do them justice and agrees that they may write their own pay checks, then there may be a resumption of work on that basis, but freight rates must be again increased.

"On the other hand, the responses received to my public statement on Monday last show that the people all over the South, who pay the freight, want justice done—no more, no less—and to that end now demand that this strike be fought out.

"It remains for those who feel that way about it to volunteer their active aid in the shops and roundhouses during the crisis. The Southern will afford an opportunity to all citizens to assert themselves, and under protection, to give practical effect to their opinions in the present situation."

Mr. Harrison later announced that a large number of skilled mechanics have been imported and that others were applying for work in a steady stream. "It is apparent," he said, "that there are many men in the North and East who want to work for us and who give every evidence of large experience in railroad shops."

The governor of North Carolina sent 500 national guards on Saturday to camp in the neighborhood of its Spencer shops, where there had been threats of disorder upon the arrival of new shop workers.

After the state troops had taken over the patrol of the yards a number of the enginemen refused to work and an

agreement was reached which resulted in the withdrawal of the troops.

The company has also obtained injunctions covering the principal points on its system.

Chamber of Commerce Analyzes Effect of Strike

The Chamber of Commerce of the United States is distributing to its members a statement prepared by the Railroad Bureau of the Department of Transportation and Communication of the chamber for the guidance of the members in reaching their own conclusions regarding the railroad strike. The statement first outlines the proposals made by the President and the replies of the railroad and the unions, together with various quotations, then gives a series of statistics reflecting the effects of the strike. From an examination of reports of the American Railway Association it is shown that during the four weeks in June preceding the strike there was loaded a weekly average of 92,636 cars of coal and 843,814 cars of all commodities. For five weeks in July there was an average weekly decrease of 13,940 cars, or 15 per cent, in the number of cars loaded with coal and an average weekly decrease of 8,418 cars, or 1 per cent, in the number of cars loaded with all commodities. Similar comparisons are made of the freight car surplus, the condition of locomotives and cars on July 1 and on July 15, the percentage of cars furnished to cars required. There is also a summary taken from telegraph reports to the I. C. C. of accidents for June, July and August.

An examination of these telegraphic reports for June, July, and August, 1922, shows killed and injured as follows:

	Employees	Passengers	Both
June, 1922 (immediately prior to the strike)	86	127	213
July, 1922 (immediately following the strike)	63	30	93
First 16 days in August, 1922	64	79	143

The monthly average for this class of accidents for six months ended June 30, 1922, shows employees 88, passengers 52, both 140.

The telegraphic reports for June, July, and August, 1921, showed:

	Employees	Passengers	Both
June, 1921	154	112	266
July, 1921	111	14	125
August, 1921	111	19	130

The statement says the available statistics do not permit segregation of figures into casualties in accidents resulting from defective equipment and casualties in accidents due to other causes. For example, it is well known that the figures for the first 16 days of August, 1922, include two disastrous accidents neither of which was related in any way to defective equipment and in which more than 50 per cent of the casualties for the period occurred.

In a Recent Issue of the Pullman News, a new magazine which is being published by the Pullman Company, and distributed among its employees and patrons, a story is told of the initial trips of the first Pullman car. J. L. Barnes, the first conductor, was later a division superintendent of the Atchison, Topeka & Santa Fe, and is now retired. The car, No. 9, was a remodeled Chicago & Alton passenger coach, and the run was from Bloomington, Ill., to Chicago, over the Chicago & Alton, on September 1, 1859. George M. Pullman, its inventor, was the most observant of four passengers. In connection with this story Mr. Barnes is quoted as saying:

"I remember that on that first night I had to compel the passengers to take off their boots before they got into their berths. They wanted to keep them on—seemed afraid to take them off. I wore no uniform and was in citizen's clothes, although I had a badge. The pay was $4 a round trip or $2 a night. The three cash passengers, all men, were from Bloomington. The first month's business was poor. People had been in the habit of sitting up all night in the straight back seats, and they did not think much of going to bed while traveling."

Coal Distribution

Washington, D. C.

In order to meet the pressing need for immediate despatch of large tonnages of coal to the upper Great Lakes region from Southern Appalachian districts, the Federal Fuel Distribution Committee has put into effect a plan whereby all coal produced on Monday, Wednesday and Saturday of this week in a number of districts in Kentucky and West Virginia will be shipped to lake ports for forwarding to the Northwest and other lake territory. It is estimated that this movement should approximate 400,000 tons of coal. The districts from which these fuel supplies are to come are the Logan, Kanawha, Coal River, Big Sandy, Sandy Valley and Elkhorn, and Long Fork districts on the Chesapeake & Ohio, the Thacker-Kenova district on the Norfolk & Western; and the Eastern Kentucky and Cumberland Valley divisions of the Louisville & Nashville, excluding mines on the Cumberland Valley division at Middlesboro, Ky., and east thereof.

The Fuel Distribution Committee has received numerous requests that the movement of coal to the upper lakes be expedited. These inquirers were informed that, while, under the committee's program of movement, coal dumpings at lake ports have not yet reached considerable proportions, the lake movement is believed now to be attaining a real momentum which must be felt very shortly. As the program has had but a few days in which to operate, naturally the advanced tide of the movement has not yet been especially perceptible north of the Ohio river. An important factor in handling lake tonnages is the coal-handling capacity of the ports of Toledo and Sandusky, the natural outlets of the coal-carrying roads engaged in this movement.

The committee was informed that loadings of coal for lake movement from West Virginia and eastern Kentucky districts amounted to 2,558 cars on Monday, the first day of the new program. Indications were that the anticipated tonnage of 400,000 tons of lake coal would be reached during the week.

Reports received by Fuel Distributor Spencer from Pennsylvania indicate that production of coal in that state may be materially increased by the latter part of the week. Conferences of operators in the various Pennsylvania districts were reported as giving consideration to the matter of reopening their mines.

A plan has been devised by the Fuel Distribution Committee for certification by the state fuel administrations of the status of coal of priority No. 2 classification or below, loaded by mines for shipment to public utilities or other concerns with whom contracts for coal already exist. Some complications have arisen due to the reluctance of railroads to move such coal without definite assurance as to its classification. Under the new plan, the state fuel administrator, after the receipt of a proper affidavit from the consumer, will furnish a certificate to the effect that the coal contracted for is to be used for certain approved purposes. This certificate will be delivered by the consumer to the shipper, who must be prepared to exhibit the certificate upon request of the railroad serving his mine.

A number of authorizations for movement of coal in priority class No. 1 just issued by the fuel distributor cover the movement of coal to various railroads in Illinois, Michigan, Iowa and Indiana. The needs of quite a number of public utilities in Indiana, Michigan and Iowa have also been provided for. The problem of keeping the public utilities of the middle west going is one which has to be given very careful attention. The committtee is endeavoring for the present to keep these utilities provided with 10 to 20 days' supply of coal.

The Missouri and Kansas state fuel administrations reported that they were arranging to obtain emergency fuel

supplies as far as possible from producing coal mines in southwestern Missouri and southeastern Kansas.

The matter of the consumption of pea coal as locomotive fuel by certain eastern railroads has been brought to the attention of the fuel committee. It is the general policy of the committee to discourage the use of the smaller sizes of anthracite for steam-raising and industrial purposes at this time, as available supplies of such coal are urgently needed for domestic heating purposes.

Inquiries as to whether the forwarding from Washington to district fuel committees of authorizations for the movement of coal under Class 2 priority establishes precedence over general orders of this classification are being answered by the information that all Class 2 business should have equal attention irrespective of whether the authorization comes from the Federal Fuel Distributor. The forwarding of authorizations from Washington for the movement of coal to a consignee under Class 2 priority is merely a method of designation of the particular mine from which the coal can most practically be shipped under prevailing conditions. It is the general policy of the committee that all orders within a certain classification be given equal consideration.

The Fuel Distribution Committee has received applications for the shipment of tidewater coal under Class 2 priority to the West Indies for bunkering purposes on those islands. These applications are being denied such classification as shipments of this nature are considered by the Interstate Commerce Commission as being cargo coal rather than bunker coal.

Following the recent dispatch of telegrams to railroad officials in the eastern part of the country, calling their attention to complications in the distribution of railway fuel occasioned by competitive bidding which was causing a tendency toward price inflation, the fuel distributor has been assured by railroads that generally he may count on their full co-operation in the matter. The committee is informed that shipments of railway fuel are now proceeding to southwestern lines from Alabama, in which state some complications had arisen.

Authorizations for the movements of approximately one million tons of coal were issued on August 17 by the central fuel committee. Provision was made for large tonnages of railway fuel for railroads of the middle west, and for the fuel supplies of a number of public utilities operating in Indiana, Michigan, Illinois, and Ohio cities.

The more urgent fuel needs of a number of Canadian railroads have been presented to the Federal Fuel Distribution Committee by the Federal Advisory Fuel Committee of Canada, in session at Ottawa. The Canadian committee has asked for 125,000 tons for railway fuel for both lake and rail movement, and has given assurance that the necessary financial guarantees will be arranged. The fuel requirements of these railroads have in the past largely been supplied from Ohio and Pennsylvania, and it is the belief of the Fuel Distribution Committee that new coal production in Ohio will tend to relieve the Canadian situation materially. Some Canadian railroads own their own mines in Ohio.

The state fuel administrations of Missouri and Kansas, in a joint communication to the Federal Fuel Distributor, have called attention to the raising of prices of coal in those states, due, it is claimed, to competitive bidding for coal on the part of railroads. To meet the situation, it was requested that the provisions of Service Order No. 23 of the Interstate Commerce Commission be extended to trans-Mississippi territory. It is hoped by the central fuel committee that this situation may be corrected through the co-operation of railroads operating in these states.

The fuel situation of a number of middle western railways centering in Chicago was said to be rather acute. From Chicago came also urgent requests for coal for the use of various hospitals, schools and other public institutions. The shipment of blacksmithing coal is a matter of considerable concern in the trans-Mississippi region. An effort is being made by the committee to obtain Pennsylvania coal to meet the urgent demands of public utilities in Buffalo, N. Y.

District fuel committees were informed on Monday by the Federal Fuel Distribution Committee that the recommended fair price for coal produced in the states of Tennessee and Virginia has been raised to $4.50 per net ton f. o. b. mines. The adjustment of the price for Tennessee coal was made upon the recommendation of Governor Taylor of that state. Inasmuch as the $4.50 price had been granted in West Virginia, Kentucky and Tennessee at the request of the governors of these three states, it was thought only just that the increased price be allowed also in Virginia. The action taken sets up a uniform maximum fair price of $4.50 per ton in the four states. The previous price prevailing in the larger part of the territory was $3.50, the raise in price generally averaging a dollar per ton.

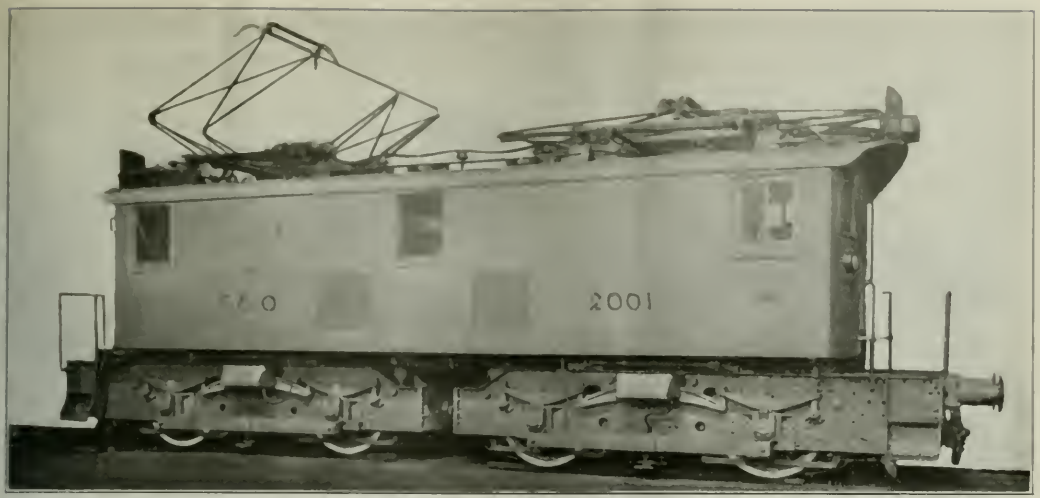
The outlook for coal production the present week is for nearly 6,000,000 tons, based on an estimated production of 1,500,000 tons from fields just being reopened.

A total movement of 600,000 tons of coal to the Great Lake region is the program of the Federal Distribution Committee for the week beginning Monday, August 28. While the details have not yet been fully arranged, it is probable that a considerable proportion of this tonnage will come from mines recently reopened in Ohio, Pennsylvania, Michigan and northern West Virginia. The fuel distributor considers that, regardless of strike settlements in the various bituminous fields, the supplying of the necessary tonnage to the lake country before the close of navigation is a serious problem. By utilizing for this movement new production from the states named, the committee hopes to relieve considerably the strain on the producers and railroads of the Southern Appalachian field. It is estimated that about 85,000 tons of coal available for lake movement is now being mined in Pennsylvania and 50,000 tons per day in the northern West Virginia field. Coal was being produced in Ohio Saturday, August 19, at the rate of 250,000 tons per week. It is expected that production in that state for this week will amount to approximately 350,000 tons.

The Geological Survey estimates that, if production is re-established in Indiana immediately, as seems probable, a maximum production of 6,300,000 tons may be expected this week. The outlook for next week is for a production of from 7,500,000 to 8,000,000 tons. These figures may, however, be considerably increased if strike settlements are made in still other fields.

On Monday, August 21, 19,043 cars were loaded with coal. This was the largest number loaded on any one day since the miners' strike began on April 1 last. Monday loadings would be at the annual rate of production of approximately 6,250,000 tons per week. This was an increase of 3,321 cars over the previous Monday. During the week ended on August 21, 85,161 cars were loaded with coal, an increase of 4,030 cars over the preceding week. The increase was due principally to new production resulting from the agreement recently reached by the miners and the operators at Cleveland.

The urgency of the railway fuel situation promises to be considerably relieved by production from coal fields now being reopened. The presence of this new coal in the market, rendering available those supplies of fuel which the railroads have normally been accustomed to obtain, naturally tends to relieve the strain on the railway fuel situation in the Southern Appalachian districts, which have for some months been the chief sources of provision of railway fuel.



Seventy-three Ton Freight Locomotive for Yard and Main Line Service, Buenos Aires & Western

Steam Road Electrifications in the Argentine

South American Republic Finds Electric Operation Profitable and Will Extend Lines to Meet Traffic Needs

By Lynn G. Riley
Control Engineer, Westinghouse Electric & Mfg. Co.

THE RECENT inauguration of freight service on the electrified section of the Buenos Aires & Western Railroad (Ferro Carril Oeste) calls attention to a field for electrification of steam roads which has great possibilities. One of the most important factors in the phenomenal development of the Argentine Republic is the extensive system of railways and their excellent condition. Many roads radiate from the capital to the inland cities and across the far-reaching pampas, and a net-work of inter-connecting lines brings good transportation facilities to the agricultural and cattle raising provinces, extending back to the Andean foothills.

Buenos Aires being the "Capital Federal" and the center of import and export activity, the city is rapidly out-growing its transportation systems and at some points the congestion in both passenger and freight traffic is reaching the limit of existing facilities.

There are present all of the conditions tending to make electrification desirable and profitable: scarcity of fuel, congestion in terminals, high cost of additional trackage, and the very probable rapid growth in traffic in the near future. While the two electrifications in this district, the Argentine Central and the Buenos Aires & Western, were both undertaken prior to those of the Paulista Railways in Brazil, and the Chilean Railways on the west coast, neither so far has been extended beyond the suburban districts.

Broad Gage Roads in Buenos Aires

There are four important broad gage railroads entering the city, which handle the greater portion of the traffic. There are also several smaller roads of varying gages and prominence.

1.—The Buenos Aires & Pacific Railroad has its station near the river front and is in direct contact with the extensive system of docks. The lines extend westward as far as Mendoza, where they connect with the Transandean railway and furnish through service to the Chilean coast.

2.—The Argentine Central Railroad has a large terminal, also near the river front, with six local tracks electrified. These lines extend west and northwest along the Rio de la Plata and to the cities of Cordoba and Tucaman.

3.—The Buenos Aires & Western terminal is located in the center of the city. The local tracks are electrified for 20 miles. These lines form an extensive net-work westward and south, extending as far as the southern borders of the province of Mendoza.

4.—The Great Southern Railroad has terminal facilities toward the east of the center of the city and in the city of La Plata where there are also extensive docks. This will probably be the next electrification in Buenos Aires. The Southern Railway system covers a large area of prosperous territory as far south as Bahia Blanca, from which place a second transcontinental line is projected.

Rolling stock, equipment and operation of all of these roads are of a high class, including every facility for comfortable express passenger service.

Electrification of Argentine Central

Suburban passenger service on the Argentine Central is of great importance inasmuch as the lines connect from the main passenger terminal, Retiro, to several residential suburbs and pass through an elaborate system of parks where large crowds congregate. In 1916 the electrification was completed from Retiro to Tigra, a distance of 16 miles,

with six tracks electrified in the terminal, four tracks through some of the parks and two tracks for the complete distance.

Normal service is handled with six-car trains and there are 90 trains per day in each direction. There are 67 motor cars and 50 trailers in service, weighing 52 tons each, and having an over-all length of 62 ft. The system is third rail at 800 volts d.c., and trains are made up of one-half motor cars and one-half trailers, motor cars being equipped with two 250 h.p. motors and automatic control. The entire electrification, the roadbed and shops have a very substantial appearance and the system is not yet being worked to its full capacity. It is probable that another branch which parellels the present electrified division, but touches several other important suburbs, will be electrified as soon as conditions warrant.

Electrification of Buenos Aires & Western

The electrification of the Buenos Aires & Western Railroad followed closely that of the Argentine Central and is quite similar in the adoption of 800 volts d.c. third rail. The terminal is at Plaza Once where the multiple-unit trains transfer passengers direct to the subway system of the Anglo-Argentine Tramways. These trains are also made of approximately one-half motor cars and one-half trailers and the cars are equipped with four 200 h.p. motors. There are a total of 47 motor cars and 45 trailers under construction. These cars weigh approximately 50 tons and are 58 feet over-all, with two side doors, and all station platforms will eventually be on a level with the car floor.

The electrified zone extends for a distance of 20 miles from Estacion Once to Moreno. In addition there is a single-track freight tunnel from the passenger terminal, connecting directly to the port and the system of dock tracks laid out in connection with the warehouses. This tunnel, as well as the dock track, is fitted with overhead wire instead of third rail, and the freight trains are handled by two Baldwin-Westinghouse locomotives.

A new power house of 18,600 kilowatts capacity, 25-cycle, in turbo-generators is located at the port. Transmission is at 20,000 volts from the main plant to the motor-generator set sub-stations.

Terminal Building of the Buenos Aires & Western at Plaza Once. Electric Suburban Trains Connect Direct With the Subways of the Argentine Tramways at This Point

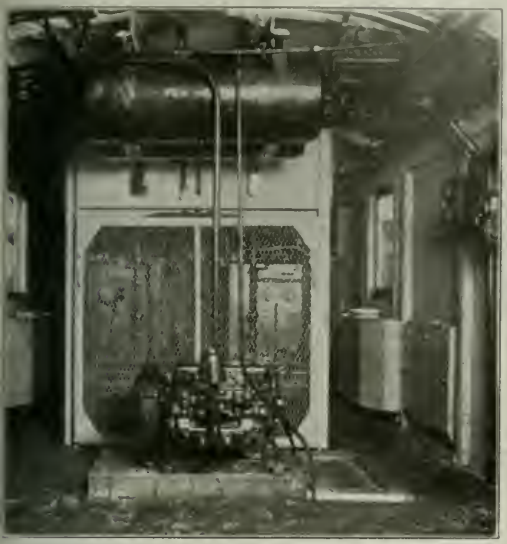
A large amount of freight is moved to and from the docks through the 2.5 miles of single track tunnel under the center of the city to the terminal at Plaza Once, and from there over the main line for a distance of 11 miles to the freight yards at Haedo. The maximum load is 600 tons and it is necessary at times to start this train on 1.4 per cent grades. On level tracks a single locomotive makes 28 m.p.h. with

Map of Buenos Aires Showing the Principal Broad Gage Railroads and Their Terminals. Buenos Aires & Pacific Railroad (Ferro Carril Buenos Aires al Pacifico); Argentine Central Railroad (Ferro Carril Central Argentino); Buenos Aires & Western Railroad (Ferro Carril Oeste); Great Southern Railroad (Ferro Carril Sud)

such a train, and 45 m.p.h. is considered the maximum speed to be attained on down grades.

Service Conditions

Two Baldwin-Westinghouse locomotives of 73 tons each are operating in this service. As shown in the illustrations,



Interior of Locomotive, Buenos Aires & Western, Showing Control Apparatus Compartment and Air Compressor

they are of the articulated truck, box cab type, with 9 ft. rigid wheelbase, and a total wheelbase of 27 ft. 6 in. The wheel arrangement is 0-4-0 with all weight on the driving axles. The over-all length is 43 ft. 2 in., the couplers are of the continental type.

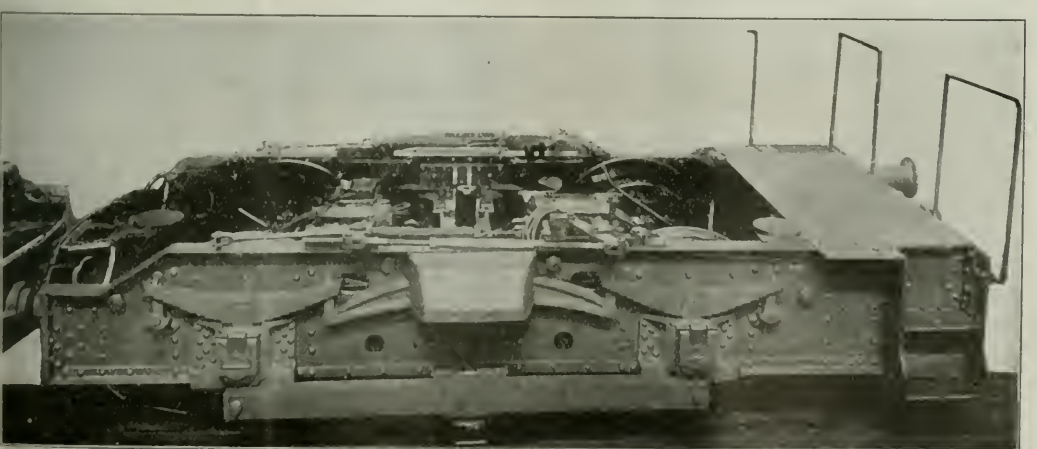
The truck side frames are of structural steel and the bolster and bumpers of cast steel. For operation on the main line each truck is equipped with third-rail shoes and fuses. Two pantagraph trolleys are provided for use in the tunnel and around the docks, for operating from the overhead wire.

Four Westinghouse motors of 230 h.p. each at 800 volts are geared at an 18:70 ratio to 48 in. wheels. The maximum tractive effort available for starting is about 36,000 lb. With forced ventilation the one-hour rating permits a tractive effort of 19,000 lb. at 18 m.p.h. and a continuous rating of 9,600 lb. at 23 m.p.h.

The next step in the extension of electric service will

Interior of Operating Cab, Buenos Aires & Western Locomotive, Showing Master Controller, Brake Valve and Instrument Panel

probably be the handling of through passenger trains with electric locomotives from the terminal to the end of the third-rail section. These trains are of 500 tons instead of 600



Detail View of Locomotive Truck, Showing Motors, Spring Equalizing System and Third-Rail Shoes

tons, but must operate at somewhat higher speed than the freight trains. The multiple-unit trains over this section have a balancing speed of 50 m.p.h.

When plans were first made for this electrification there was provision in all electrical equipment for a possible change to 1,600-volt operation. There seems to be no immediate prospect of such a change being made. A third rail in the form of an inverted L combines the advantages of under running contact shoes, with the mounting on the top of insulators, without the need for an overhung bracket. All rails are well covered with a substantial wood box-construction.

Locomotive Equipment

The main circuit apparatus for the locomotive consists of the following items:

4 230 hp. motors with forced ventilation.
2 air-operated pantagraph trolleys.
4 third-rail shoes with individual fuses.
2 main circuit disconnecting knife switches for separating the pantagraph trolleys and the third-rail circuit.
1 main fuse box mounted on the roof.

A Buenos Aires & Western Freight Locomotive in Service at the Docks of Buenos Aires. A Tunnel 2.5 Miles Long Connects from This Point to the Main Terminal

2 nine-switch electric pneumatic switch groups containing the unit switches for speed combinations and acceleration.
1 set of grid resistance.
2 drum type pneumatic reversers.
2 main motor cut-out switches.

The control circuit apparatus consists of:

2 Master controllers.
2 sets of control switches and push buttons
1 control resistor for reducing line voltage for the low voltage control.
4 12-point train line receptacles with jumpers for tandem operation of locomotives.
Miscellaneous junction boxes, lighting switches and other details.

The auxiliary apparatus consists of:

1 set airbrake apparatus, complete, with clasp brakes.
1 air compressor for brakes and control
1 blower motor for forced ventilation of the main motors.

The control is type HL Westinghouse electro-pneumatic which is the Westinghouse standard for locomotive application. All changes in circuits for applying power to and accelerating the motors are made by unit switches which are closed by air pressure and opened by a spring. The air is admitted to the switch cylinders and released by a magnet valve, controlled electrically by the master controller in the operating cab. Current for the controlling circuits is drawn from the line through a resistance which reduces the voltage to less than 100 volts for the operation of the magnet coils.

The drum type reversers, one for each pair of motors, are also electro-pneumatically controlled.

For freight service and frequent starting a large number of control notches are desirable; therefore, this control is arranged with a total of ten notches with the four motors in series parallel connection and nine notches with the motors in parallel connection. The bridge type of transition is employed in changing from the series parallel to the parallel connections. By this means full tractive effort is maintained with all motors during the transition period and there is neither slackening of speed nor surging in the train while passing over this position. Full overload protection is secured by the use of overload trip relays in the circuit for each pair of motors. A large factor of safety is provided in the capacity of the main grid resistors to take care of unusual starting conditions.

A cable reel is mounted inside the cab and carries sufficient cable with contact devices at each end to connect from the third-rail to the blade of the main knife switch for emergency operation on gaps in the third rail.

All features of the electrical equipment conform to the most modern practice in locomotive design and establish a permanent basis for extensions of the electrification. The two electrifications now in operation in Buenos Aires are looked upon as having been very well planned and executed, and frequent extensions may be expected as a part of the normal growth of the country.

The Interstate Commerce Commission has issued a modification of its order defining the limits of United States Standard, Eastern and Central time zones so as to include the territory embraced within the corporate limits of the city of Detroit, Mich., in the first zone. This was done on petition of the city of Detroit.

Flies and Rodents, constant enemies, demand a share of the attention of the purchasing agent of the Southern Pacific. During 1921, the company purchased 163 rat traps, 255 mouse traps, 30 fly traps and 16 gopher traps. The rat and mouse traps were used in storehouses, warehouses, commissaries, etc., and the fly traps in restaurants and commissary supply houses.

President Harding Addresses Congress. "P & A Photo"

The President Says the Law Must Prevail

To Use All Power of Government to Maintain Transportation and Sustain Right of Men to Work

WASHINGTON, D. C.

IN AN ADDRESS before a joint session of the Senate and the House of Representatives on Friday, August 18, President Harding gave to Congress and the country an account of his efforts to settle the coal and railroad strikes and the motives which had inspired his endeavors, announcing in vigorous but somewhat general language that he was "resolved to use all the power of the government to maintain transportation, and sustain the right of men to work." The address had been postponed one day in order not to embarrass the conference between the brotherhood leaders and a committee of railroad executives in New York but when it appeared that the first day of the conference had brought forth no results he determined to delay no longer in carrying out his announced intention of laying the entire situation before the public as he saw it after several weeks of conference and correspondence in the endeavor to bring about a voluntary adjustment. The speech had been sent to the printer on Thursday and some last revisions were made in it only an hour or two before the President went to the Capitol.

Contrary to the many predictions which had been published, the President did nothing which could be construed as "passing the buck to Congress" and as far as the railroad situation is concerned he made no proposals for legislation, saying it was not his thought to ask Congress to deal with the problem at this time and that no hasty action would contribute to the solution of the critical situation. While he declared that the decisions of the Labor Board must be made enforceable and effective against carriers and employees alike, and while it is understood that members of the Senate committee on interstate commerce who have been in consultation with the President recently have made plans for amending the Transportation Act for the future along that line at the next session of Congress, the President pointed out that the law is new and said that no perfection of it now "could be helpful in the present threatened paralysis of transportation."

That part of the President's address relating to the railroad strike is as follows:

Text of President's Address Relating to Railroad Strike

"The public menace in the coal situation was made more acute and more serious at the beginning of July by the strike of the Federated Shop Crafts in the railroad service—a strike against a wage decision made by the Railroad Labor Board, directly affecting approximately 400,000 men. The justice of the decision is not for discussion here. The decision has been lost sight of in subsequent developments. In any event, it was always possible to appeal for rehearing and the submission of new evidence, and it is always a safe assumption that a Government agency of adjustment deciding unjustly will be quick to make right any wrong.

"The Railroad Labor Board was created by Congress for the express purpose of hearing and deciding disputes between the carriers and their employees, so that no controversy need lead to an interruption in interstate transportation.

"It was inevitable that many wage disputes should arise. Wages had mounted upward, necessarily and justly, during the war upheaval, likewise the cost of transportation, so that the higher wages might be paid. It was inevitable that some readjustments should follow. Naturally these readjustments were resisted. The administrative Government neither advocated nor opposed. It only held that the Labor Board was the lawful agency of the Government to hear and decide disputes, and its authority must be sustained, as the law contemplates. This must be so, whether the carriers or the employees ignore its decisions.

"Unhappily a number of decisions of this board had been ignored by the carriers. In only one instance, however, had a decision, challenged by a carrier, been brought to the attention of the Department of Justice, and this decision was promptly carried to the courts and has recently been sustained in the Federal Court of Appeals. The public or the Executive had no knowledge of the ignored decisions in other cases, because they did not hinder transportation. When these failures of many of the carriers to abide by decisions of the board were brought to my attention, I could more fairly appraise the feelings of the strikers, though they had a remedy without seeking to paralyze interstate commerce.

"The law creating the Railroad Labor Board is inadequate. Contrary to popular impression, it has little or no power to enforce its decisions. It can impose no penalties on either party disregarding its decisions. It cannot halt a strike, and manifestly Congress

deliberately omitted the enactment of compulsory arbitration. The decisions of the board must be made enforceable and effective against carriers and employees alike. But the law is new, and no perfection of it by Congress at this moment could be helpful in the present threatened paralysis of transportation.

"Happily it is always lawful and ofttimes possible to settle disputes outside of court, so, in a desire to serve public welfare, I ventured upon an attempt at mediation. Those who had preceded me in attempted settlements had made some progress. I submitted to the officials of the striking employees and the chairman of the Association of Railway Executives, in writing, on the same day, a tentative proposal for settlement. Knowing that some of the carriers had offended by ignoring the decisions of the board and the employees had struck when they had a remedy without the strike, I felt it was best to start all over again, resume work, all to agree to abide faithfully by the board's decisions, make it a real tribunal of peace in transportation, and everybody serve the public. The barrier to be surmounted was the question of seniority. By the workmen these rights are held to be sacred, and unsurrendered by a strike. By the carriers the preservation of seniority is the weapon of discipline on the one hand and the reward of faithful employees on the other. It has been an almost invariable rule that when strikes have been lost seniority and its advantages have been surrendered; when strikes have been settled seniority has been restored.

"In the tentative proposal which I sponsored it was provided that everybody should go to work; with seniority rights unimpaired, that there should be no discrimination by either workmen or carriers against workmen who did or did not strike. I realized that the proposal must carry a disappointment to employees who had inherited promotion by staying loyally on the job, and to such new men as had sought jobs looking to permanent employment, but I wanted the fresh start and maintained transportation service, and I appraised the disappointment of the few to be less important than the impending misfortune to the Nation. It was not what I would ask ordinarily to be considered or conceded, but at that moment of deep anxiety, with the coal shortage gravely menacing, I was thinking of the pressing demands of the welfare of the whole people. I believed the sacrifice brought to the men involved could be amply compensated for by the carriers in practical ways. I believed that the matter of transcendent importance was the acceptance of the proposal to respect the Labor Board's decisions on the questions which formed the issue at the time of the strike. The public compensation would be complete in guarding by law against recurrence.

"The proposal was rejected by the carriers. Though the rejection did not end all negotiation, it left the Government only one course—to call the striking workmen to return to work, to call the carriers to assign them to work, and leave the dispute about seniority to the Labor Board for decision. When negotiation or mediation fails, this is the course contemplated by the law and the Government can have no chart for its course except the law.

"To this call a majority of the carriers responded favorably, proposing to re-employ all strikers except those guilty of violence against workmen or property, to restore the striking workmen to their old positions where vacant, or to like positions where vacancies are filled; questions of seniority which cannot be settled between the employer and employees to go to the Labor Board for decision. The minority of the carriers proposed to assign jobs to workmen on strike only where the positions were vacant. Neither proposal has been accepted.

"Thus the narrative brings us to the present moment, but it has not included the developments which have heightened the Government's concern. Sympathetic strikes have developed here and there, seriously impairing interstate commerce. Deserted transcontinental trains in the desert regions of the Southwest have revealed the cruelty and contempt for law on the part of some railway employees, who have conspired to paralyze transportation, and lawlessness and violence in a hundred places have revealed the failure of the striking unions to hold their forces to law observance. Men who refused to strike and who have brayed insult and assault and risked their lives to serve a public need have been cruelly attacked and wounded or killed. Men seeking work and guards attempting to protect lives and property, even officers of the Federal Government, have been assaulted, humiliated, and hindered in their duties. Strikers have armed themselves and gathered in mobs about railroad shops to offer armed violence to any man attempting to go to work. There is a state of lawlessness shocking to every conception of American law and order and violating the cherished guaranties of American freedom. At no time has the Federal Government been unready or unwilling to give its support to maintain law and order and restrain violence, but in no case has State authority confessed its inability to cope with the situation and asked for Federal assistance.

"Under these conditions of hindrance and intimidation there has been such a lack of care of motive power that the deterioration of locomotives and the noncompliance with the safety requirements of the law are threatening the breakdown of transportation. This very serious menace is magnified by the millions of losses to fruit growers and other producers of perishable foodstuffs, and comparable losses to farmers who depend on transportation to market their grains at harvest time. Even worse, it is hindering the transport of available coal when industry is on the verge of paralysis because of coal shortage, and life and health are menaced by coal famine in the great centers of population. Surely the threatening conditions must impress the Congress and the country that no body of men, whether limited in numbers and responsible for railway management or powerful in numbers and the necessary forces in railroad operation, shall be permitted to choose a course which so imperils public welfare. Neither organizations of employers nor workingmen's unions may escape responsibility. When related to a public service the mere fact of organization magnifies that responsibility and public interest transcends that of either grouped capital or organized labor.

"Another development is so significant that the hardships of the moment may well be endured to rivet popular attention to necessary settlement. It is fundamental to all freedom that all men have unquestioned rights to lawful pursuits, to work and to live and choose their own lawful ways to happiness. In these strikes these rights have been denied by assault and violence, by armed lawlessness. In many communities the municipal authorities have winked at these violations, until liberty is a mockery and the law a matter of community contempt. It is fair to say that the great mass of organized workmen do not approve, but they seem helpless to hinder. These conditions cannot remain in free America. If free men cannot toil according to their own lawful choosing, all our constitutional guaranties born of democracy are surrendered to mobocracy and the freedom of a hundred millions is surrendered to the small minority which would have no law.

"It is not my thought to ask Congress to deal with these fundamental problems at this time. No hasty action would contribute to the solution of the present critical situation. There is existing law by which to settle the prevailing disputes. There are statutes forbidding conspiracy to hinder interstate commerce. There are laws to assure the highest possible safety in railway service. It is my purpose to invoke these laws, civil and criminal, against all offenders alike.

"The legal safeguarding against like menaces in the future must be worked out when no passion sways, when no prejudice influences, when the whole problem may be appraised, and the public welfare may be asserted against any and every interest which assumes authority beyond that of the Government itself.

"In the weeks of patient conference and attempts at settlement I have come to appraise another element in the engrossing industrial dispute of which it is only fair to take cognizance. It is in some degree responsible for the strikes and has hindered attempts at adjustment. I refer to the warfare on the unions of labor. The government has no sympathy or approval for this element of discord in the ranks of industry. Any legislation in the future must be as free from this element of trouble making as it is from labor extremists who strive for class domination. We recognize these organizations in the law, and we must accredit them with incalculable contribution to labor's uplift. It is of public interest to preserve them and profit by the good that is in them, but we must check the abuses and the excesses which conflict with public interest, precisely as we have been progressively legislating to prevent capitalistic, corporate, or managerial domination which is contrary to public welfare. We also recognize the right of employers and employees alike, within the law, to establish their methods of conducting business, to choose their employment and to determine their relations with each other. We must reassert the doctrine that in this Republic the first obligation and the first allegiance of every citizen, high or low, is to his government, and to hold that government to be the just and unchallenged sponsor for public welfare, and the liberty, security, and rights of all its citizens. No matter what clouds may gather, no matter what storms may ensue, no matter what hardships may attend or what sacrifice my be necessary, government by law must and will be sustained.

"Wherefore I am resolved to use all the power of the government to maintain transportation, and sustain the right of men to work."

Legislation as to Coal Recommended

As to the coal situation, the President asked at the hands of Congress the authority to create a government commission independent of the industry to make a searching investigation into the whole coal industry, with provision for its lawful activities and the bestowal of authority to reveal every phase of coal production, sale and distribution, "to advise as to fair wages and as to conditions of labor and to bring protection to all and point the way to continuity of production and the better economic functioning of the industry in the future." Unless a cure is found for the

economic ills which affect the industry, he said, "we shall be faced with a like menacing situation on next April 1 on the expiration of the wage contracts which are now being made."

To deal with the conditions resulting from the coal strike he recommended immediate provision for a form of temporary control of distribution and prices through "a temporary national coal agency, with needed capital, to purchase, sell and distribute coal which is carried in interstate shipment." The purpose is to give the necessary legal authority to the present emergency coal distribution organization created by Secretary Hoover and functioning under the direction of Henry B. Spencer subject to a committee appointed by the President. President Harding said in his message that he did not mean that all interstate coal shall be handled by such a federal organization; perhaps none will be necessary, but "it will restore its capital to the public treasury and will be the instrumentality of guarding the public interest where private conscience is insensible to a public need."

This proposal does not relate to any possible employment of the national agency in relation to intrastate transactions, the President made clear. "Price restraint and equitable distribution in intrastate shipments," he said, "is a responsibility of the state's own government" and "in such voluntary activities as have been carried on thus far the federal government has endeavored to re-establish the authority and responsibility in the states which was undermined in the necessary centralization of authority during the World War."

"The almost total exhaustion of stocks of coal, the crippled condition of the railways, the distressed situation that has arisen and might grow worse in our great cities due to the shortage of anthracite, the suffering which might arise in the Northwest through failure to meet winter needs by lake transportation, all these added to the possibility of outrageous price demands, in spite of the most zealous voluntary efforts of the government to restrain them, make it necessary to ask you to consider at once some form of temporary control of distribution and prices."

President Replying to Critics

The President was plainly giving his answer to many criticisms of the course he has adopted in dealing with the two strike situations. One class of criticism which he attempted to meet was that arising from impatience because he had not taken more positive and direct action to bring about some kind of a settlement by "big stick" methods. Another class was that which blamed the President for having interfered at all and by continually holding forth the expectation of a settlement lending encouragement to the strikers to hold on a little longer.

To the first class of critics the reply is in effect that there is no big stick among the present furniture of the White House.

The idea of taking over the railroads was not mentioned, perhaps because it represents a stick rather too heavy to swing for such a situation as we have so far. The President pointed out that the Labor Board has no power to halt a strike, that Congress deliberately omitted the enactment of compulsory arbitration and that, therefore, the federal government had no direct power to require a settlement.

To the second class of criticism his answer is found in his statements regarding the seriousness of the situation and that in a desire to serve the public welfare he had ventured upon an attempt at mediation. He made no attempt to defend on its merits his original proposal that the strikers be returned to work with seniority unimpaired, referring to it as a "tentative proposal," not what he would ask ordinarily to be considered or conceded, but as one that would represent a "fresh start" by restoring the status that existed before the strike and that would have demanded a sacrifice of some of the men involved, less important than the "impending misfortune to the nation."

There is also a third type of criticism, voiced by those who condemn the President for not having followed up more actively his proclamation of July 11 in which he said that those who are not satisfied with the wages fixed by the Labor Board must not be allowed to interfere with those who are willing to accept them, instead of holding conferences with the strike leaders in an effort to compromise. To this class of critics the President replies that the duty of preserving law and order and restraining violence is primarily the function of the state and local authorities, who had not yet confessed inability to cope with the situation nor asked for federal assistance. He also attempted to distribute to some extent the responsibility for the conditions resulting from the strike, among both the companies and the unions, although he had pointed out that the strike was called by the unions against a decision of the Labor Board.

However, whereas for a time he had attempted to remain completely neutral and act solely as a mediator, recent events and a clearer understanding had led him to a point where "the simple but significant truth was revealed that, except for such coal as comes from the districts worked by unorganized miners, the country is at the mercy of the United Mine Workers."

There was no mincing of words when he referred to the "sympathetic strikes" that have developed here and there, "the cruelty and contempt of law" on the part of some railway employees, who he said have "conspired to paralyze transportation," and "lawlessness and violence in a hundred places" that have revealed the "failure of the striking unions to hold their forces to law observance," but the President endeavored to retain a neutral attitude when he said that "neither organizations of employers nor workingmen's unions may escape responsibility," and that the government has no sympathy for the "warfare on the unions," without commenting on the war against private ownership of railroads and coal mines. He referred to the ignoring of a number of decisions of the Labor Board by many of the carriers, although he pointed out that they did not hinder transportation and that the strikers had a remedy without seeking to paralyze interstate commerce. While admitting the incalculable contribution to labor's uplift made by the labor unions, however, and the public interest that the good in them be preserved, he declared that the abuses and the excesses which conflict with public interest must be checked in the same way that forms of regulation have been devised to deal with the abuses charged to the corporations.

He also referred to "the deterioration of locomotives and the non-compliance with the safety requirements of the law" as "threatening the break-down of transportation," although Chairman McChord of the Interstate Commerce Commission, who furnished his information on this subject, had qualified the statement by the words "on certain roads."

Having reached the point of calling some things by their right names, the President found a considerable body of existing law available, although there is no law against strikes. "There is existing law by which to settle prevailing disputes"—the law setting up the Labor Board as an arbiter; "there are statutes forbidding conspiracy to hinder interstate commerce"—notably the Sherman law; "there are laws to assure the highest possible safety in railway service"—the locomotive inspection and safety appliance laws. It was his purpose, the President said, to invoke these laws, civil and criminal, against all offenders alike.

The tone of the President's address undoubtedly strengthened to some extent the position of the railroad executives meeting in New York with a committee of labor leaders, who were endeavoring to induce or threaten them into a compromise. They have repeatedly told the President that if assured of adequate protection for the men who are willing

to work, and whose right to protection has been repeatedly proclaimed by the President, the strike would take care of itself and there would be no need of sacrificing the employees who had "inherited promotion by staying loyally on the job" and "such new men as had sought jobs looking to permanent employment."

Means to Maintain Full Force of Law and Order

Although it was not given out at the White House, the President has given one of the reasons why he has not ordered the use of federal troops to furnish protection to the working shopmen in a letter in reply to one from W. H. Chandler, president of the National Industrial Traffic League. "If I faced only such a condition as Mr. Cleveland had to deal with," he said, "it would be a very simple matter to handle it. I think you ought to appreciate the difference between meeting a disturbed situation in one center of population and having to deal with a like situation in perhaps a thousand localities throughout the United States. It is useless to talk about weakening. This government means to maintain the full force of law and order and such majesty of power as it possesses. Its purpose does not in any way seem inconsistent with every reasonable effort to avoid conflict."

Administration Hopeful of Settlement

After the address the Administration apparently "marked time," as far as the railroad situation is concerned, awaiting the results of the meeting in New York on Wednesday, as to which the government officers professed to be optimistic in spite of statements from New York holding forth little hope of a settlement. Alfred P. Thom, counsel for the Association of Railway Executives, called on the President on Saturday and is understood to have reported on the conferences of Thursday and Friday. On Tuesday it was stated at the White House that the President had hopes of a settlement as a result of the New York conference.

Congress Begins Work on Legislation Asked by President

Congressional leaders at once began preparations for the enactment of the legislation asked by the President providing for the creation of a coal commission and bills for that purpose have been introduced by Senator Borah and Representative Winslow, but opposition at once developed to the idea of empowering a committee to purchase and sell coal. No action is expected at this session on amendments to the Transportation Act. The President is insistent that the coal commission shall be composed only of members representing the public, inasmuch as the operators and miners have arranged for the formation of a partisan commission.

The House committee on interstate and foreign commerce held a meeting on Monday on the Winslow bill, which provides for the creation of the United States Coal Commission, composed of not more than nine members, to be appointed by the President, to submit its first report not later than January 1. Plans were made for rushing this bill through the House. Senator Borah also called a meeting of the Senate committee on labor for Tuesday to consider his bill.

Bills to carry out the President's plan for temporary price control were being drafted by the Department of Justice and were to be submitted to the President's coal committee.

A bill requiring the Interstate Commerce Commission to regulate the compensation of all railroad employees and officers and to place in the hands of the commission the functions now exercised by the Railroad Labor Board has been introduced in the House of Representatives by Representative Ward of North Carolina.

Representative Dickinson of Iowa introduced a bill providing that decisions of the Railroad Labor Board shall not become effective for 150 days.

In spite of the peace talk which had pervaded Washington for several days, on the strength of the reports that a plan would be agreed upon to take back the strikers now and postpone the seniority question until it came time to lay off some of the men several months later, the executive counsel of the American Federation of Labor on Monday addressed an appeal to all organized labor urging the moral and financial support in behalf of the organization in its railway employees department now on strike to "resist the imposition of unfair terms and conditions of employment."

Federation of Labor Appeals for Support of Strikers

"The struggle in which these workers are involved is one which is important, not only to themselves and to their organizations, but to all organized workers and to all Americans who love justice and fair dealing," the appeal said in part.

"It is essential to the well-being of the men on strike, to the well-being of all workers and to the well-being of our national industrial organization that justice shall prevail in the struggle now going on in the railroad industry.

"It must be clear that the policy which has been pursued by the railroads has been entirely in harmony with the policies of all organizations of employers, which, since the armistice, have been seeking to weaken and destroy the voluntary organizations of the workers. The railroads have been engaged in this effort from the moment government control was relinquished on March 1, 1920.

"Finally, the decisions of the board compelled resistance on the part of the workers through suspension of work. A wage of 23 cents per hour was established for section men, and this wage is the basis upon which all other wages are calculated.

"In addition to this the board ordered the abolition of the payment of time and a half for work done on Sundays and holidays. It was sought to impose grave injustice upon the workers through rulings of the Labor Board, while the railroads had consistently violated and repudiated rulings of that board from the beginning.

"The railroad shop workers are on strike in an endeavor to secure a living wage for the maintenance of the American standard of living. They are on strike for the maintenance of reasonable working conditions and for the maintenance of the right of organization.

"It goes without saying that financial assistance is needed, especially when it is recalled that most, if not all, of the organizations of employees now on strike have thousands of members engaged in other industries who have been, or who are now, also on strike. Therefore, their financial condition is at present incapable of meeting the barest wants of their needy, struggling men and their families.

"It is to be hoped that every union and its membership, individually and collectively, again will demonstrate its solidarity by coming generously and immediately to the assistance of the striking railway shop craft organizations. They are fighting the fight of all workers. They should have all of the moral and financial assistance which our movement can give, and your Executive Council earnestly hopes that your action will be as prompt and as generous as the circumstances warrant."

Secretary Weeks of the War Department has received an opinion from the acting Judge Advocate General of the Army that existing labor troubles on railroads and in mines do not constitute an emergency authorizing recruiting the regular army to war strength and that there is no authority vested in the Executive branch of the government to draft men for military and other service in time of peace. Secretary Weeks said he had asked for an opinion on these points not because the government contemplated any such action, but to clear up any uncertainty that might exist in the minds of federal officials and to put the public mind at ease on the subject.

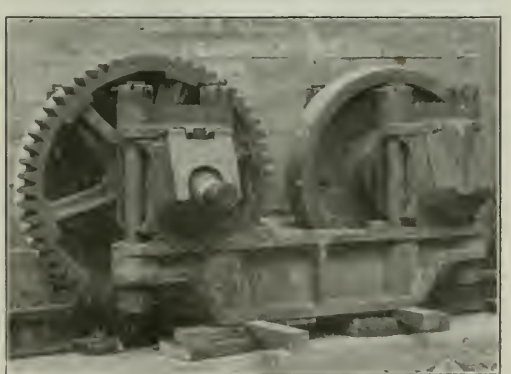
Each Half of the Table Is Virtually an Independent Unit

Twin Span Turntable Reduces Load on Center

Innovation in the Design of this Roundhouse Facility Embodies Many Novel Features

SINCE THEIR EARLIEST development turntables have been almost entirely of the center bearing type. As the weight of locomotives has grown heavier and they have assumed greatly increased lengths, the problem of the turntable has become an increasingly difficult one. It has been necessary to provide a center capable of sustaining ever-increasing loads and higher bearing pressures while the girders or trusses have had to be increased enormously in order that they could serve as double cantilevers to balance the long, heavy locomotives on a single support. Various schemes have been undertaken to overcome these difficulties, among which was a table built about three years ago by the Pennsylvania which was designed to take bearing on the circular rail as well as the center during the turning operation. In other words, the turntable was designed as a continuous girder supported at the ends as well as the center under all conditions of loading. This required that the center bearing be equipped with a means of adjustment so as to take care of any possible settlement of the center which would tend to increase the proportion of the load carried by the circle rail.

More recently a new table has been brought forth embodying a still greater departure from conventional methods. Instead of building the girder continuous across the center, two separate girder spans are provided with simple bearings at the center, thus affording a type of turntable construction in which the load carried on the center is reduced appreciably, and in which the operation of the turntable becomes largely independent of ordinary settlement of the center or variations in the level of the circular rail. Several of these tables have been built and are in operation, so that the construction may be treated as a thoroughly practical development. The construction of a turntable along lines involving such a marked departure from usual practice has imposed a great many new problems on the designer, and these have resulted in the development of many original details. These may be listed briefly as an articulate connection of the girders over the center, an original type of flat disc center bearing, heavy end trucks capable of carrying the imposed live load, turning machinery connected direct to one of the truck wheels at each end and a heavy, rigid circle rail construction insuring a circle rail of uniform elevation and alinement that will insure smooth operation of the table.



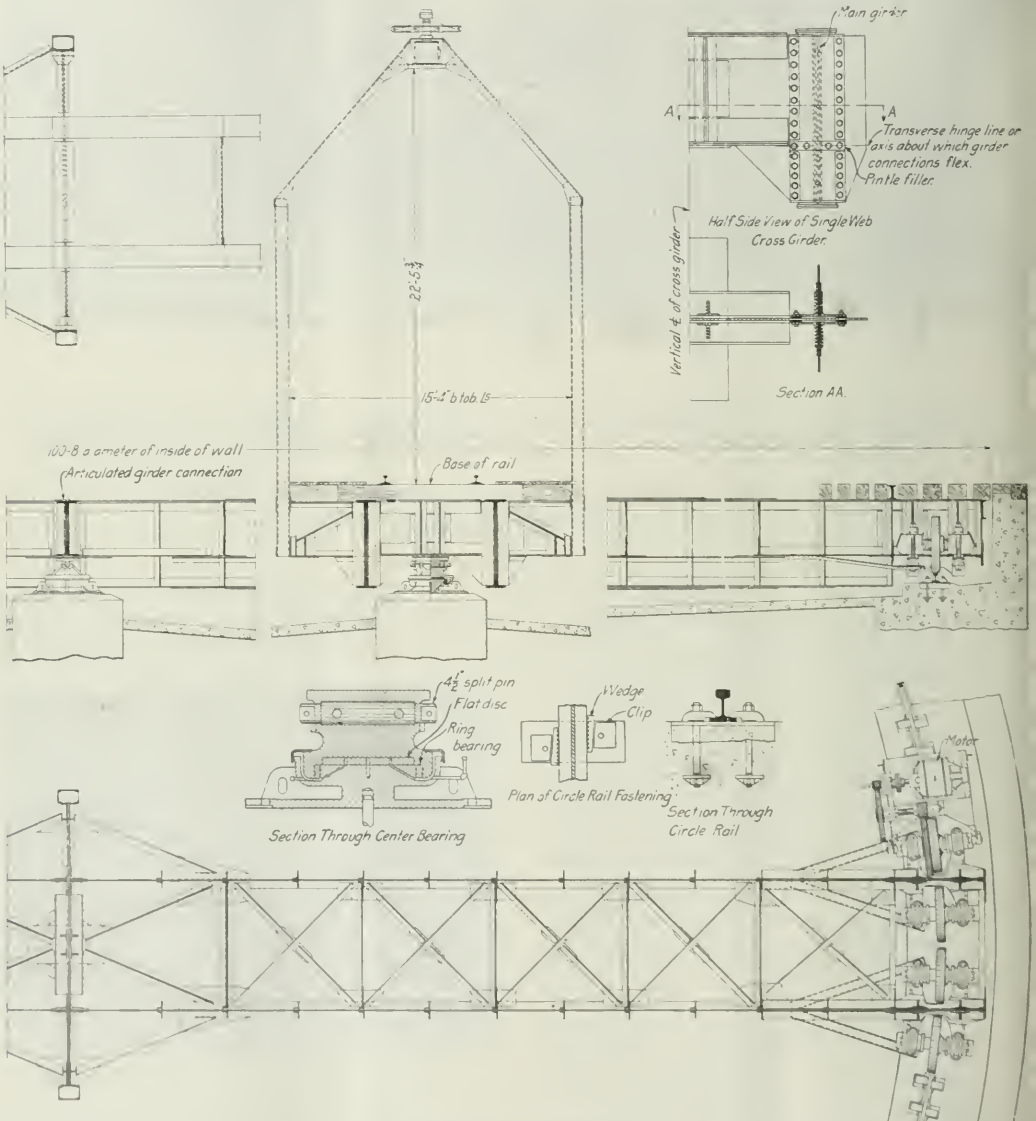
There Are Two End Trucks at Each End of the Table

The main girders of the table are framed into a cross or loading girder, in turn supported on the center bearing. The connection of the main girder to the cross girder is accomplished by means of connection angles with the addition of filler plates. This affords ample opportunity for a hinge action of the connection of the main girder to the cross girder

through the flexibility of the connection angles. As a result of this arrangement each span of the turntable is virtually provided with three points of support, one at the center, and one at each of the trucks.

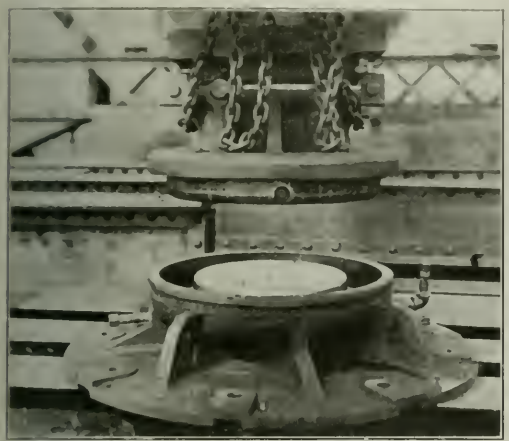
The center is bolted beneath the junction of the lateral system and the cross girder and consists of the usual bridge shoe unit of upper shoe, horizontal pin and lower shoe, set on a flat phosphor bronze disc, which in turn rests on an anchored base or distributing casting. A second phosphor bronze bearing is provided in the form of a ring surrounding a vertical point forming a part of the base casting for the purpose of transmitting the lateral and longitudinal forces to the base. The center bearing is designed to be immersed in oil and trapped so that it can run in flood waters without damage. The bearing is also arranged so that the raising of the table not more than 1/16 in. will permit the removal of the shoe and disc for inspection, replacement or repairs.

With a considerable portion of the load of the table and locomotive carried on the circle rail during the turning of the table it is obviously necessary to give careful attention to the design of the end trucks. These are of a heavy construction. The two girders of the table are supported directly on heavy cast steel truck frames of H section by



Details of the Twin Span Turntable

means of a bearing plate that provides for the radial position of the frames. This arrangement provides for thorough equalization of the girder load on the two wheels of each truck. From the truck frames the load is transmitted to the journal boxes of the wheel by means of three-inch cold rolled bolts secured through a loading cap resting on top of the journal boxes. The wheels are standard forged, pressed or rolled steel car wheels, except that the flanges have been removed and the treads have been coned to the center of the table. The journal boxes, of which there are eight for each end of the table, are standard M. C. B. journals with



The Upper and Lower Sections of the Center Bearing

standard boxes, wedges, brasses, lids, guards, waste and lubricants. In other words, the truck mechanism conforms strictly to established railroad practice.

The power for turning the table is applied directly to one of the truck wheels by a train of gears from an electric motor which is suspended in a frame attached to the end of the table. Ordinarily, two motors are provided, one at each end of the table, but the manufacturers recommend that one of these motors be held in reserve, as the table is turned readily by one motor. Each of the turning units is normally equipped with a hand power device for use in emergency. A foot brake is also provided; this and other controlling devices being placed in an operator's cab located directly above one of the motors. The current take-off is readily provided by means of a structural steel current collector arch mounted over the cross girder.

Circle Rail of Heavy Construction

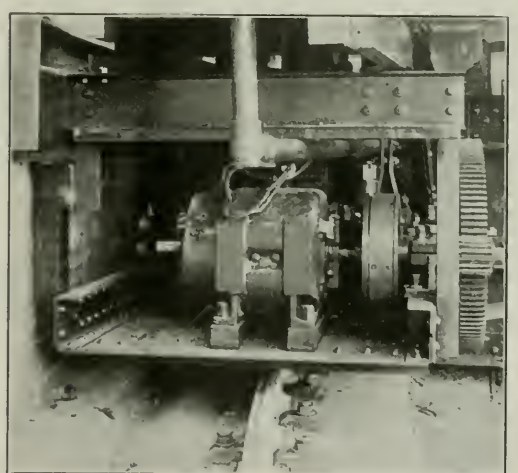
To insure a circle rail of uniform surface and alinement subject to very little deflection under load, a 130-lb. rail of P. S. section is provided with a special fastening to insure thorough anchorage and adjustment. The support for the rail consists of special steel T-ties of Bethlehem H-section imbedded in a concrete foundation. The rail is securely fastened to the ties by means of heavy clips with bolts and nuts and serrated wedges driven between the flanges of the rail and the wedge seats in each clip. This affords ready adjustment of the rail for alinement to a true circle and when the alinement has been secured perfectly, molten spelter is poured over the fastenings to hold them in position.

Advantages

Some of the advantages to which attention has been called by the manufacturer are among the following:

The table is cheaper in first cost, particularly where it is installed to replace a center bearing table designed to take shorter and lighter engines. Owing to the distribution of the load on the center and end trucks of the twin span turntable, the existing center foundation will usually be sufficient as it had to take the entire load of the old table. The girders of the twin span table are relatively shallow and it is unlikely that the pit will have to be deepened. Finally, as there is no necessity of balancing the load the twin span table will turn an engine having a wheel base practically as long as the table, so that it may be possible to use the same length of table. In short, a twin span table could be placed in the existing pit that would handle locomotives 90 per cent heavier and 20 per cent longer than the maximum capacity of the center bearing table it replaced. It is obvious that the same saving in size of table and pit occur in new installations. The twin span table is efficient in operation, as no time is lost in balancing the engine and the table can be started as soon as the engine is completely on. The friction of the journals is sufficient to hold the table stationary, so end locks are unnecessary. Because the ends of the table are supported on a very solidly constructed circular rail and are accurately level with the approach rails the usual hammer in running engines on or off the table is avoided. The flexible connection of the girders at the center makes settlement of an inch or so in the center foundation of little or no consequence.

The twin span turntable requires more power than the



The Motor and Housing. Note Also the Circle Rail Construction

balanced type but the additional cost is said to be negligible, considering the saving of time in handling engines, lesser likelihood of damaging the engines and the longer life of the table.

Patents on this type of articulated turntable are owned by the Bethlehem Steel Bridge Corporation, Bethlehem, Pa., which has developed detail plans for this table to fit various requirements. A number of tables of this type have been built for the Chesapeake & Ohio, the Atlantic Coast Lines and the New York Central and a table is now being installed on the Richmond, Fredericksburg & Potomac.

CANNED SALMON, by the shipload is now said to be moving from Japan to Europe by way of the Panama Canal. The Japanese steamer Taketoio Maru, thus loaded, recently stopped at Nanaimo, B. C., for coal.

British Revise Rail Specifications

The British Engineering Standards Association, which is an organization of the Institution of Civil Engineers, the Institution of Mechanical Engineers, the Institution of Naval Architects, the Iron and Steel Institute and the Institution of Electrical Engineers of Great Britain, has just issued a revision of its standard specifications for bull head rails, with revised standard sections for rails weighing from 60 lb. to 100 lb. per yard inclusive. The present specification is a revision of one first issued in 1904 and revised in 1909.

Among the more important modifications are the following:

(1) Two classes of rails are now included, namely, ordinary carbon and higher carbon rails, and separate chemical analyses are specified for the Bessemer and open hearth processes.

(2) The position in the head of the rail from which the drillings and the test pieces for the chemical analyses and tensile tests are to be taken is now defined.

(3) In the drop test the height of the drop for B.S. Section No. 90 has been reduced to 18 ft.; the use of crop ends is allowed and the measurement of permanent set after the first blow has been omitted. The test is required to be carried out upon the British standard falling weight testing machine.

(4) The range of tensile breaking strengths for ordinary carbon rails has been increased from 40 to 48 tons per square inch, to 42 to 53 tons per square inch, and a range of tensile strengths for higher carbon rails inserted.

(5) The testing procedure before rejection has been set out in detail.

(6) Provision is made for ascertaining the weight of the rails during rolling.

(7) The brand or mark of the Association is now only intended to indicate that the rail is of British Standard section.

(8) An arbitration clause has been included.

The sections have also been modified, the depth of the head of the 85, 90 and 95 lb. rails having been increased by 1/16 in., 5/64 in., and 1/32 in. respectively with the object of securing a longer life. A corresponding amount being taken off the foot in each case to preserve the same weight and depth of the rail.

Freight Car Loading

Washington, D. C.

Car loading showed a slight increase during the week of August 12 to 852,480 as compared with 851,351 the week before. This was an increase as compared with the corresponding week of 1921 of 44,311 cars and a decrease as compared with 1920 of 118,689. As compared with the previous week there was an increase in coal loading of 5,313, to 84,559. There were also increases in livestock, forest products, ore and merchandise, but decreases in grain and grain products, coke and miscellaneous. As compared with last year there was a decrease in grain and grain products and coal and in the Southwestern district. All other districts showed increases. The loading of all commodities except coal was 768,021, which was greater than the corresponding figure for 1920.

The freight car surplus during the period from August 1 to 8 was reduced to 153,880, while the shortages increased to 32,314. The surpluses included only 15,873 box cars while there were shortages amounting to 23,032 box cars, and there were 118,044 surplus coal cars while shortages were also reported amounting to 5,964.

The percentage of cars placed to cars required for bituminous coal loading during the week of August 5 increased to 85, as compared with 71 the week before. Only the Pocahontas and Southern regions placed less than 100 per cent, 66 and 55 per cent respectively. The percentage of orders filled for open-top cars in general also increased, from 86 in the week of July 29 to 87 in the week of August 5.

REVENUE FREIGHT LOADED

Locomotive Fuel, the Life Blood of Transportation*

How Officers in All Departments Can Help to Save Fuel —Need for Refined Locomotives

By G. M. Basford
Consulting Engineer, Lima Locomotive Works

Fuel is the very life blood of transportation. We must use it as if we thought so. We must not treat it as we are tempted to treat water in the rainy season. We must not burn it as if there were a lot more where this came from.

Before those who direct and control the use of fuel on railroads lies a wonderful opportunity for money making, money saving. Wonderful improvements have already been made. More and even greater possibilities are available.

A fortunate fact about every feature in fuel conservation is that it helps railroad operation in ways that fuel does not directly touch. No one ever does anything to make more effective use of fuel without helping the road in other ways. Therefore, to co-ordinate all these possibilities and to organize the road into a Committee of the Whole to conserve fuel, fuel officers need to be very big, broad, influential men. They need to grasp and improve to the utmost the opportunity that lies before them. It is fortunate that they now have this opportunity and this organization back of them.

Fuel must take a new place in your hands. The fuel officer who is to bring fuel to its proper eminence has many strings to his bow. The fuel officer has back of him the locomotive builders with their extraordinary experience. He has many other supporters who have spent lifetimes in developing safe, sound and sane vitalizing factors that have never yet been employed to the limit of their capacity for improving the real efficiency of locomotives. He must also have the entire railroad back of him.

When business comes on again, look out! You have less railroad today than you had five years ago. You are short about 5,000 locomotives to keep the equipment curve anywhere near the curve of growth of the nation. C. B. Peck and V. Z. Caracristi show that locomotives are not used as efficiently now as they were 20 years ago, because of lack of maintenance facilities, but we know that as machines they are vastly more efficient. It is also clear that lack of adequate shop facilities is a great factor obstructing the application of fuel saving, capacity increasing improvements to locomotives now in service, each of which should, if run at all, run as economically and as efficiently, weight for weight, as the latest new power. These unmodernized engines are wicked wasters of fuel. To fix this situation right, new shop machinery is needed. This illustrates the breadth of the opportunity of the fuel officer. Adequacy of the equipment of shops affects his fuel record in several ways. It materially affects the number of new engines needed and controls the improvement of old ones. It also controls the condition of the power that is burning up his fuel.

As a railroad officer, acquire all the knowledge of the latest locomotive progress, learn of the perfectly sane and safe possibilities of power and its use, never yet put into general practice, and knowing to your own satisfaction that big improvements may be made, you may say, "As a railroad officer I cannot afford not to see this done." To the public the new locomotive and upkeep of present locomotives are more important than the question of rates and will continue to mean more to the public as to their own pockets, but the public does not know it.

*Abstract of a paper presented before the International Railway Fuel Association, May 23, 1922.

Purchasing Agent

Why not help him by showing him what coal to buy and why let him supply unimproved real estate? Thirty-two years ago a big western road, then poor, now very prosperous, tested seven coals for main line service. Differentials in price were established. Poor local coals were discarded and truly economical coals provided. Operation of the road instantly reflected the value of the right fuel. Nothing means more than this in making long locomotive runs. Careful roads buy the coal that is cheapest in the end. They pay more to get clean coal and save by doing it. Then the coal should be uniform or locomotives cannot be kept right as to drafting. Drafting has been a difficult problem on many roads. Changing coal discourages efforts to keep front ends "right."

Yardmaster

Give this very efficient officer the kind of switch engines he needs; powerful, efficient, economical, snappy ones. Give him road engines that will clear the ladder tracks quickly. He knows, better than anyone else, the value of locomotive improvements that make for better acceleration of trains over the tracks that tie up the yard until they get away. Then watch him make up trains for an even load on the road, avoiding fleeting. Bunching trains raises havoc with fuel performance. Watch him send road engines back to the roundhouse singly, again avoiding the fleeting that clogs facilities of all kinds, particularly locomotive terminals, and piles up stand-by losses.

Do you not think that you can classify trains at terminals so as to main track some of them through other terminals? One road does this with 10 to 15 per cent of its freight trains. Avoid switching trains at terminals whenever possible. This makes for long runs.

Dispatcher

No one can do more for fuel than this officer when he has the tools to work with. Everything he does for fuel does even more for himself. He does not want to fleet trains. He wants them to get away and run. He needs efficient power, first in the yards and then on the road. He needs such tonnage rating and careful loading for all engines as will enable him to give a track for the big powerful ones to use without being checked and harassed by old unmodernized ones. He knows that it costs from 500 to 1,000 lb. of coal to stop a train and start it again, depending on how long it stands, but often he cannot help it. Take the dispatcher into the family and give him the best tools to work with. Then get him to use his engines with the realization that they are very costly and very scarce and that every lump of coal is precious.

Scheduling freights is a great improvement. Send them out at specific times worked out to suit conditions and to keep the wheels turning, avoiding delays of all trains as much as possible.

Superintendent

Knowledge and thorough knowledge of his locomotives means more to this officer than to any other on the road, even those who are responsible for locomotives themselves. Under

his command are all those who use the power. When he has the traveling engineers he controls, and is in position to revolutionize locomotive handling and operation. He can control dispatching, control condition of power, direct firing and the use of locomotive cut-off. He more than any other officer can aid in making long locomotive runs and in providing equipment, men and supervision for locomotive maintenance and terminal attention. Superintendents also control the time lost at stations that must be made up by fast running that uses so much fuel. They are charged with fuel cost. They can do more than anyone else to save it.

In the superintendent the success of the divisional organization lies. Help him. Show him how the locomotive may help him.

Track Officers

Limitations of locomotive weight are sometimes arbitrary, but the tendency toward reducing dynamic augment, through lighter reciprocating parts, renders it possible to build even more powerful, more economical locomotives without requiring heavier rail and stronger bridges. Weight limits often prevent application of fuel saving improvements. The limit to locomotive capacity has not nearly been reached, but cooperation and understanding of this problem on the part of track people will be necessary. It will pay to relocate some water plugs, to change positions of some sidings for the sake of fuel. Improved acceleration of trains with a recent locomotive improvement has already affected these matters materially on a number of roads and will affect them much more. Track officers will find that locomotive improvements, other than light parts, will help them by avoiding the necessity for heavier rail and bridges. On the other hand they will find that they may do many things with track that affect fuel. They should interest themselves in what is happening to the locomotive, particularly as to application of the booster and reducing dynamic augment.

Signal Officers

These men know the cost of stopping trains. They are helping fuel by keeping trains moving. A new and vital problem lies before them. It will be up to them to secure the necessary safety from automatic train control without unnecessary stopping of trains. Get them into the fuel family as to the effect of this new development on the operation of trains of 60 to 100 cars and also as to the possible improvement of an occasional signal location. The possibility of increased acceleration of trains will affect these locations materially.

Mechanical Officers

When everybody else thinks of fuel, when the "business of owning locomotives" is understood and appreciated, when ultimate cost replaces "first cost" in the official mind, and when necessary improvements in accounting are made, mechanical officers will surprise everybody with the savings they will render possible. They will do it with modernized existing locomotives, with new and greatly improved locomotives, with competent maintenance, with tonnage ratings that mean maximum earnings. Their problem must be understood. They must have facilities, help, encouragement and support. They are ready, but they and their problems are not understood.

Condition of Power

A well known locomotive superintendent 15 years ago did a great thing to improve condition of power. He put several men in charge of matters that make or break fuel records.

1. Front ends, drafting engines for economy as well as for steam, air leaks into front ends and condition of superheaters. One man had charge of these.

2. Valve motion, best setting of valves for every class of engine and for every service was determined and it was this man's job to see that every engine on the road had economical and effective valve setting and that it was kept that way.

3. Boilers, this man was responsible for tight boilers, for clean flues and arch tubes, for grates, arches and ash pans.

4. Running gear, every box, pin, journal, shoe and wedge, was the responsibility of this expert. He supervised the shop and roundhouse work all over the road and had lubrication in charge.

These men had authority. At times they annoyed the master mechanics, but that was the reason for their appointment. Remarkable results were reported. Any road may do this. It means little in cost, but much in fuel. This is a good way to avoid fuel loss by leaky front ends, nozzles too small, leaky superheaters, fallen arches, leaky flues, hot boxes, knocking driving boxes and other things that defeat the best fuel efforts. Today, stokers, feed water heaters, grate shakers and power reverse gear would be added to the list, making it somebody's particular business to look after every one of them systematically.

Existing engines require this. As soon as the "bloom is off the peach" new ones need it also. Large capital expenditure is needed for the necessary maintenance facilities. The public has made it difficult for poor roads to raise the money, but a great deal may be accomplished by a gradual and relatively slow process, each step of which will make the next one easier. Get rid of the fatal monthly budget. Get to an annual basis. Consider annual cycles instead of straight line oversight. Do a little this year and invest the savings of this year for the time to come.

If our shops and roundhouses had adequate machinery and facilities for handling big work quickly, if they had enough to modernize all existing engines and to keep all engines up to condition there would be a surplus of power today for any load the roads have ever had to carry. This, however, will not provide for the load that is coming. New engines will be needed before they can be designed carefully to take advantage of available improvements, and before they can be built. But remember that the new ones will soon add to the shop load. There is no time to lose in this machinery matter or the loss to the public will bring the severest charges railroads ever faced. A new way for financing machinery additions must be found. This is now receiving attention with promise of success. Last February Secretary Hoover suggested government guarantees for improvements and equipment.

Engine Failures

Records for nine years on a well known road show 84 per cent reduction in the number of engine failures per month that cause a delay of five minutes, whether made up or not. Remember that time made up on the road is mighty costly in fuel and it should count against any failure that causes it. In the nine years referred to the number of engines dispatched per engine failure increased 251 per cent. Figuring on $250 as the average cost of an engine failure, and the cost may often reach five times that amount, this road estimates a saving of a quarter million dollars per year, and relatively it is a small road. An engine failure may cost $1,200 if it delays four or more trains. The particular failure that showed this figure could have been prevented by an expenditure of $25.

Long Locomotive Runs

Stand-by losses murder fuel records. Is yours as high as 30 per cent as it was recently stated to be on one big road? Popular demand for economies and growing public sentiment in favor of the operating economies of electrification have some foundation in view of the possible continuous service of electric locomotives eliminating stand-by losses. Eight hours a day or perhaps half that, ought to be enough to condition a locomotive, leaving 16 or more, for service. It is not the fault of the engine that it does not work more

than 16 hours or that it spends more than half its life at rest. After 150 miles the engine is well warmed up for another 500 miles

Individual Fuel Records

Without individual performance records it is impossible to check tonnage performance of engines, to check up the value of vitalizing factors and to know whether the power improvements and economy they should give is really produced. A combination of four vitalizing factors should give the light government Mikado 50 per cent additional pull at 30 miles per hour for the same coal as a plain engine of the same size would use. Do we get this power? Only individual records of fuel and tonnage will show. J. N. Clark covered this question admirably before the Pacific Railway Club last year. He asks how the traveling engineer is to know what to say to 125 engineers and 140 firemen unless he knows what each one is doing?

He also asks: "How long would a large industrial plant remain a going concern if they had one item of expense amounting to 40 per cent of their operating expenses and had no idea as to whether it was sustaining a loss each month due to lack of supervision over details?" W. L. Robinson covered this subject in his paper before the New England Railroad Club in December, 1917.

By a few simple figures every run may be made a test run. We do this with automobiles. Any deficiency in miles per gallon leads to a prompt investigation because it touches our own pocketbooks. Some tests made three years ago proved 20 per cent in fuel saving by an improvement on a big engine, but it did not show on any record except that of the test. When a new type of engine goes to work it is most important to know its operating and fuel standing as compared with those that it replaced. This would help in ordering the next new ones. Those who do not know cannot wonder why new engines are ordered without consultation with them. Some general office buildings have four and five floors of accountants. Is it not possible to divert a few accountants to the vital statistics needed for locomotive operation, to make every run a test run, even if it is a rough test?

Co-operation of Engine Men

The major number of engine men take pride in their work. Their co-operation is a vital matter. They are intelligent, able men, but don't ask them to save fuel while someone else who directs their work wastes it faster than they can save it. Give them a chance to run. Give them a railroad to run on, give them track, give them signals and water plugs where they ought to be. Then show them films such as the "Fuel Conservation," films of the Southern Pacific. They would co-operate and turn their daily routine to the advantage of the company. Are your engine men with you as to fuel? Have you a right to expect them to be? Do you keep records of individual tonnage and fuel so that the good men can make a showing and so that the others will be encouraged to try?

Stationary Power Plants

Over 1,200 railway power plants offer opportunities for a lot of fuel saving. Heat losses alone account for 25 per cent of the fuel in the average steam plant without referring specially to railroad plants. Do we give careful attention to the operation of shop power plants to see what the firemen are doing? Do we train and do we check up power plant engineers and firemen? Do we keep brickwork tight? Do we apply superheaters and do we cover piping and stop the leaks of steam, water and heat? A few years ago a large manufacturing company saved ten per cent of its fuel in a large plant by merely stopping leaks. What could railroads save by covering pipes, stopping leaks and by replacing old locomotive boilers by proper boilers with superheaters for stationary plants?

Boiler Water Treatment

A very costly encumbrance is boiler scale. Many a railroad is regularly using waters not fit to be put into boilers, locomotive boilers least of all. It costs little to "doctor" those bad waters, little compared with the cost of driving heat through boiler scale which is the most effective heat resister known. For the benefit of your fuel records "medicine" these bad waters.

Personnel

It's the personnel of an organization and the skill and spirit of its members, the team work, that gets the results, good or otherwise, out of any equipment—army, navy, manufacturing or railroad. Hand in hand must go improved men, improved supervision and improvements in material. To be ready for better locomotives it is necessary to lead men to bring the present equipment and its use to a point of high efficiency. Improve the men and when they get the best work out of present machinery they will be ready for better machinery. A suitable plan for recruiting, training and promotion of men—real apprenticeship—is the thing railroads need more than any other one thing today. What are you doing about this? Ask the roads that have systematically provided apprenticeship whether it pays. Ask the Santa Fe people. Only one road has applied this year to a certain famous technical school for some of its graduates. Was it your road?

Morale

Morale is the first thing to fix. Perhaps by inspired leadership this may be accomplished. Leaders always know what they want and how to get it. Everybody sees coal come in quantities by train loads. Is it not possible by leadership to induce everybody to use it as if it were their own?

Those Next New Locomotives

To order new engines now is a big responsible job which should be approached with full knowledge of the business possibilities of locomotives reinforced by experience and willingness to take advantage of everything that will produce efficient engines that will save money. There is little danger of going too far in refinement. There is great danger of perpetuating the brutal in present locomotive practice.

Unnecessary Weight

This is the first big thing to tackle. Many big engines today are doomed to carry literally tons of unnecessary weight, and to carry them for 20 or 30 years. Think of the fuel required to drag the heavier engine around. Many engines have been built recently that were too heavy to take important fuel saving factors. Here is where the fuel officer comes in on refinement of present brutal weights. He comes in again in saving of fuel by long locomotive runs to which refinement of design and better steels will contribute. One railroad has gotten down to less than 100 lb. of weight per horsepower. Is it your road? There must be a definite weight limit or your fuel records suffer.

Undoubtedly the new engines will have trailing wheels. Boosters add to capacity, produce quicker acceleration to speed, help over critical points on grades, clear yard ladder tracks in shorter time and really put a trailer type of engine into the next class above it in starting power. It saves fuel by avoiding doubling and by putting a light engine in position to do the work of a heavier one. You should consider building Atlantics today with boosters for suburban and frequent stop service, releasing heavier engines and make a little money on such trains.

Stokers should be considered for new engines in a new way—as fuel savers. They are generally advocated to throw more coal than a man can fire. They should be used as fuel savers, enabling the fireman to use his head when he is re-

lieved from the heavy work of firing. Power grate shakers reduce the starving of a fire for air. They are needed to make long runs and to facilitate cleaning fires. New engines call for most careful attention as to lubrication. Long runs already made prove this necessity. Heat conservation by feed water heaters will add to the power of the new engine or save fuel for the same power. Feed water heaters have been demonstrated to be a success and should be considered on every new engine.

All new engines have arches, but a new and double arch is available. Through its supporting tubes water equivalent to the entire contents of the boiler will circulate every seven or eight minutes when the engine is working hard. So also the thermic syphon is available. Their effect on combustion and also their influence on improved circulation must be considered. Boiler circulation may be accelerated in several ways. New engines with necessarily big boilers should have the fuel saving advantage provided by them. With improvements of this class circulation may be so rapid as to require steam separators to prevent the superheater from being compelled to evaporate water. This question will be answered soon. To help boiler circulation, reduce boiler repairs and reduce engine failures why not use ten or 12 inch mud rings?

No engines are built in these days without superheaters, but new ones should have the advantage of higher superheat and superheated steam for the auxiliaries which altogether use a lot of steam. This should save many a ton of fuel. This is now being worked out with promise of success.

Improved valve gears and power reverse gears are necessary on big engines. Cut-off control is only now becoming appreciated as a fuel saver and power increaser. The power

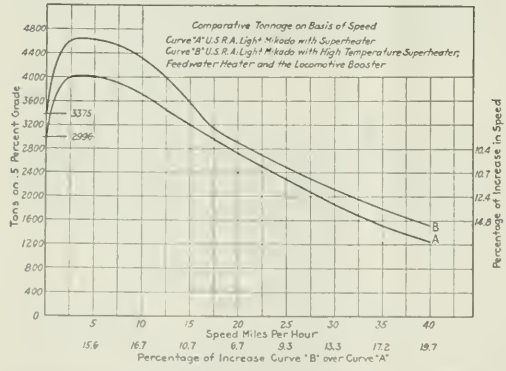

Fig. 1—Effect of Fuel-Saving Appliances on Tonnage and Speed

Curve A indicates the maximum tonnage which can be moved on a 0.5 per cent grade by the U. S. R. A. light Mikado at various speeds; while Curve B represents the possible increase in tonnage which may be obtained by equipping this locomotive with a feedwater heater, high temperature superheater and the locomotive booster.

The increased capacity, as shown by curve B, may be utilized in increased speed of operation, as indicated on the right margin of the diagram; for instance, the speed of a 1,600-ton train may be increased 14.8 per cent.

reverse gear that is to do the work on future big engines must be able to run for long periods without attention and without creeping. Such a gear is now available. For very powerful freight engines the 50 per cent maximum cut-off which has been so successful on the Pennsylvania should be taken into consideration, and after that comes the three cylinder engine to bring bearing pressures down.

This is not by any means a complete list. Skillful combination of design using these factors and others will produce locomotives that will surprise everybody. Up to the time this is written the locomotive that uses all of these, combined with skillful detail design, unrestricted as to first cost, but constructed for ultimate cost and operating economy, has not been built.

A Prediction

We think we know the locomotive. We do not. We will not until a certain thing is done that has never yet been done. Put this up right and you will get it.

Give an order to one of the three locomotive builders, or better give one to each of them, such an order as you give to electric locomotive builders. Give an order for a new locomotive for certain traffic on your road. Make no limit on price, but order the most economical engine that can be built for that work, all things considered, ton-miles per hour, per ton of locomotive metal, per dollar of locomotive maintenance and per dollar of track maintenance cost. Enlist the leaders and best engineering talent of the solid, reliable, reputable companies producing the vitalizing, capacity increasing and fuel saving factors that render the modern locomotive possible. Tell all hands, without exception, to cut out every pound of unnecessary weight and make every one of them do it. They will do wonders in this direction when they must. They have never yet been made to do it. But the builders can do more than all the rest. In all things insist on efficiency. Use alloy steels whenever possible, but do not take a chance on anything that has not abundantly made good. Above all things insist on quality material everywhere and get it, as you do when ordering electric locomotives.

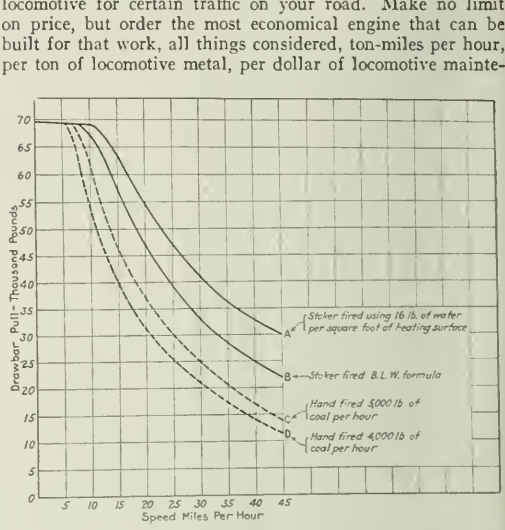

Fig. 2—How Stokers Increase Tractive Effort of Large Locomotives

The capacity of a fireman is limited to about 4,000 lb. of coal per hour over considerable periods; for short periods a man can fire at the rate of from 5,000 to 6,000 lb. per hour.

Curves D and C indicate the drawbar pull on level straight track that can be expected from the U. S. R. A. heavy Santa Fe type locomotive with hand-firing at the rate of 4,000 and 5,000 lb. per hour, respectively.

Curve B illustrates the normal output in drawbar pull of this locomotive as rated by the builders when it is equipped with a mechanical stoker; this involves an evaporation of from 12 to 13 lb. of water per square foot of heating surface and fuel consumption of about 120 lb. per square foot of grate per hour.

Curve A indicates the increase in drawbar pull over the normal capacity which may be expected when the boiler is forced to about 20 per cent beyond its normal capacity.

It will thus be seen that in emergency the stoker can be used to increase the locomotive capacity, although it should be borne in mind that such increase is obtained at a loss in efficiency.

When this engine is delivered take good care of it, but make it work every possible minute as every machine should work. Put an experienced man on the job of following the engine to see that it has a "show," as the electrical people do when they install electric locomotives. Then see to it that operation is made to fit the locomotives *as the electric loco-*

motive people do and thereby correct a lot of faults that steam locomotives have always had to endure. Keep track of the tons of freight, fuel, water and the time. Get the dispatcher to give the locomotive the rails to run on, show the men how to run it and then give the right amount of thought to its maintenance.

Then tell the chief executive the results in money saved. He will tell the "Board" the same day. That day will begin a new kind of money making railroading.

Some new, quick, deep, intensive thinking on the locomotive is needed and needed now.

This is an effort to interest real railroad men in some things they are overlooking. It is a challenge for the short-sighted gentry who refer to important locomotive improvements slightingly.

Look, think, act. When you build new engines build ten that will do the work of 20 old ones and cost less to keep up.

Who orders new engines on your road? When he orders two million dollars' worth of engines get him to see how much efficiency he can buy instead of how many engines he can get for his money without regard to their efficiency.

[Accompanying Mr. Basford's paper were numerous charts showing the effect of fuel-saving devices on tractive effort, tonnage, speed, fuel and water rates and acceleration. Two of these charts are reproduced in this abstract.—EDITOR.]

Discussion

H. C. Woodridge (Locomotive Stoker Company), said that fuel economy must be considered in connection with other operating costs as well as with considerations of revenue, calling attention to the fact that while stokers have not generally shown as good an evaporate efficiency as hand firing, they have actually reduced ton-mile fuel costs. Recent tests, however, have demonstrated that the stoker can actually increase the evaporation per pound of coal over that obtainable under comparable conditions by hand firing.

Statistics Show Increase in Timber Preservation

ALMOST HALF of the crossties now purchased by the railroads of the United States are subjected to preservative treatment before insertion in the track. This is the most important fact to be gleaned from the statistics on timber preservation in the United States for 1921, prepared by the United States Forest Products Service in co-operation with the American Wood Preservers' Association. The number of crossties treated in 1921 was 55,383,515 ties as compared with 44,987,532 in 1920, the previous maximum record. It is interesting to note that in spite of this marked increase in the treatment of railroad ties there was a decrease in the treatment of timber used for other purposes. Thus, expressed in cubic feet, there was an increase in the treatment of ties to the extent of 31,188,000 cu. ft., whereas the increase in the treatment of all timber was only 28,334,000 cu. ft.

Excluding ties there were only two classes of material in which there was any increase in the volume of timber treated,

CUBIC FEET OF TIMBERS OF VARIOUS CLASSES TREATED IN 1920 AND 1921

Classes	1920	1921
Crossties	134,962,596	166,150,545
Piles	8,092,546	5,581,999
Poles	10,309,746	10,959,256
Wood blocks	6,741,410	6,202,904
Crossarms	318,707	108,715
Construction timber	11,645,811	11,826,708
Miscellaneous lumber	1,238,689	753,101
Total material treated	173,309,505	201,643,228

namely, poles and construction timbers, and in each of these cases the increase was nominal. This comparison can be checked rapidly from an examination of the table showing the quantities of timbers subjected to treatment in 1920 and 1921, subdivided between crossties, piles, poles, wood blocks, crossarms, construction timber and miscellaneous lumber. A broader view of the growth of timber preservation is to be had from the larger table showing the quantities of timber treated and the consumption of the two principal preservative materials from 1909 to 1921, inclusive. Further evidence of the growth of the industry is to be had from the fact that 122 plants were in active operation during 1921, or 10 more than in the previous year.

In the preservation of wood in the United States in 1921 the treating plants consumed 76,513,279 gal. of creosote, 1,060,753 gal. of paving oil, 1,810,294 gal. of miscellaneous preservatives and 51,375,360 lb. of fused zinc chloride. The zinc chloride consumption in 1921 was the largest so far reported by the industry and represents an increase of 1,657,431 lb. over the quantity used the year before.

The quantity of creosote used during the year constitutes an increase of 7,755,771 gal. over that consumed in 1920, while the 1,060,753 gal. of paving oil reported was less by 788,158 gal. than the 1920 consumption. The quantity of miscellaneous preservatives used in 1921 was greater by 38,210 gal. than in the year previous. The restoration of the foreign creosote industry to its pre-war status is indicated by the large increase in the consumption of foreign oil, which amounted to 28,242,307 gal. in 1921 as compared with 9,575,680 gal. in 1920. However, although the quantity of domestic oil used in 1921 was less than in 1920, it is still considerably larger than the volume of imported oil.

WOOD PRESERVATION 1909-1921, TOGETHER WITH CONSUMPTION OF CREOSOTE AND ZINC CHLORIDE

Year	Total Material treated, cubic feet	Number of crossties treated	Creosote used, gallons	Zinc chloride used, pounds
1909	75,946,419	20,693,012	51,426,212	16,215,107
1910	100,074,144	26,155,677	63,266,271	16,802,532
1911	111,524,563	28,394,140	73,027,335	16,359,797
1912	125,931,056	32,394,336	83,666,490	20,751,711
1913	133,613,888	40,260,416	108,378,359	26,466,803
1914	159,582,639	43,846,987	79,334,606	27,212,259
1915	140,858,963	37,085,585	80,859,442	33,269,604
1916	150,522,982	37,469,368	90,404,749	26,746,577
1917	137,338,586	33,459,470	75,541,737	26,444,689
1918	122,612,890	30,609,209	52,776,386	31,101,111
1919	146,056,994	37,567,927	65,556,247	43,483,134
1920	173,309,505	44,987,532	68,757,508	49,717,929
1921	201,643,228	55,383,515	76,513,279	51,375,360

The consumption of domestic creosote aggregated 48,270,972 gal. in 1921, a decrease from quantities slightly in excess of 59 million gal. each for 1919 and 1920.

Of the total number of crossties treated during 1921, 35,819,931 were hewed and 19,563,584 were sawed. The crossties treated in the largest quantity were yellow pine, the total number reported being 21,511,719. Oak ties ranked second with 12,838,157 and Douglas fir ties were third with 4,960,115. Other ties treated in any quantity were western pine, beech, gum, tamarack, maple, birch, elm and hemlock.

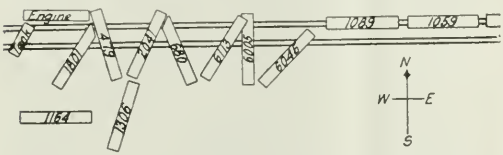
A total of 22,046,466 crossties were treated with creosote in 1921 and 30,265,947 with zinc chloride. The number of ties impregnated with the zinc-creosote emulsion was 3,061,234, while 9,868 were subjected to treatment with miscellaneous preservatives. In treating ties with creosote an average absorption of 7.21 lb. per cu. ft. was obtained. Where zinc chloride was used the average quantity of preservative that was forced into the wood was 0.48 lb. per cu. ft. With the use of the zinc-creosote emulsion the injection amounted to 0.49 lb. of zinc and 2.75 lb. of creosote. Practically all of the wood-preserving processes used commercially were employed in the treatment of crossties.

THE ANNUAL CONVENTION of the Chief Interchange Car Inspectors' and Car Foremen's Association which was to have taken place at Chicago, August 22-24, has been postponed and will be held at the Hotel Sherman, Chicago, November 6-8.

Michigan Central Express Wrecked by Removal of Track Spikes

MICHIGAN CENTRAL westbound train No. 39, a New York-Chicago express due to arrive at Chicago at 9:45 p. m. Saturday, August 19, consisting of 22 express cars and a coach, was derailed and wrecked 1¼ miles east of Gary, Ind., at 2:18 a. m. Sunday, August 20. The accident was caused by some unknown person or persons maliciously pulling 27 or more spikes from the outside of the south rail on the westbound main track. The engineman and fireman were buried under the engine and killed and two express messengers were injured.

The train was running approximately 45 miles an hour



Approximate Location of Engine and First Eleven Cars

at the time of the accident, and when it left the rails about 395 ft. of track was torn up and the locomotive half buried itself in the sand. After the engine turned over, the first car went nearly 200 ft. beyond it before going into the ditch. Four additional cars were derailed. The line, which is double track, passes through the sand dunes of Indiana and is tangent within the range of vision from the point of the accident.

Soon after the accident, James H. Connelly acting captain

International Newsreel Photo

View from the South East

of police of Gary and P. E. Pfeifer division superintendent of the Michigan Central, in investigating the cause of the accident, found that at least 27 spikes had been removed from the ties, the track being so badly torn up that it was impossible to determine how many more had been taken out.

The marks of the claw bar were plainly visible on the spikes and its impression on the ties was very clearly indicated. The first two cars which remained upright (the trucks only being derailed), stood at the point where the spikes had first been removed, and three ties were found to have spikes in them, although from their appearance, attempts had been made to remove them, as they were raised slightly.

The last passenger train westbound prior to the accident was No. 23 from Buffalo, N. Y., which was due at Gary at 8:00 p. m. Saturday. Westbound freight extra 7878 passed Garry at 12:38 a. m. No. 45, another passenger train from Buffalo, was due at Gary at 5:22 a. m. while No. 47, a train from Grand Rapids Mich., was due at 6:10 a. m. From the fact that extra 7878 passed the point of the accident at 12:38 a. m. and the accident occurred at 2:18 a. m., it appears that the spikes were removed some time during the one hour and forty minutes intervening between the time the extra left Gary and the time No. 39 arrived. From the investigation it appeared that after the spikes were removed the rail had been thrown out slightly to spread the gage.

At the inquest, which was held at Gary on August 21, the coroner stated that the wreck was the result of a deliberate

"P. & A. Photo"

Overturned Engine; the Tender Has Been Removed

plot, recording the deaths of the engineman and fireman as homicide. The verdict of the coroner's jury was that "The wreck was deliberately planned by a person or persons unknown and therefore the deaths were homicide." This verdict was reached after several witnesses had testified that a number of spikes had been pulled from the outside of the rail, which resulted in their spreading as the express train passed. The coroner's investigation developed the fact that no engine trouble had been experienced although such reports had been circulated.

J. P. Rooney, head of the bureau of investigation of the Department of Justice in Chicago, acting under instructions from Attorney General Daugherty at Washington, began a federal investigation of the causes of the wreck. In addition, Indiana state officials, railroad officers and other agencies are carrying on investigations. Operatives of states attorney Crowe of Illinois, raided the offices of William Z. Foster of the Trades Union Educational League after the accident to determine whether he was implicated directly or indirectly with the accident as he has been reported as being active in disseminating "red" propaganda among striking railway workers. However, the states attorney dropped his investigation after he learned that W. Z. Foster had been under such close surveillance by government agents during the rail strike and that it was almost impossible for him to have had any direct part in this occurrence.

Guard Against Physically Unsound Employees

Greatly Increased Liability of Railroads Under Present Laws Demands More Perfect Health Control

By John Leeming, M. D.
Medical Counsel, Chicago Surface Lines, and Consulting Physician, Chicago, Burlington & Quincy, Chicago

DO RAILROAD COMPANIES fully realize the risk they assume in the employment of their help? My experience leads me to believe that in the light of recent legislation this subject has not been sufficiently studied, nor its far-reaching effects fully comprehended. I submit the broad general statement that a railroad company should employ men only who are physically and mentally 100 per cent sound. No employer of labor will deny that efficiency depends largely upon a sound mind and a sound body, but desirable as efficiency may be, there are other reasons why perfect health is necessary in the workmen from the track worker to the locomotive engineer. A man in perfect health is more valuable to himself and his family and better able to render efficient service to his employer. Good health favors contentment, both individually and collectively, but when the subject is considered in the light of the various workmen's compensation acts, physical soundness is not only desirable, but as a matter of protection to the employer, a necessity.

Previous Health of Employee No Defense to Employer

The principle which underlies legislation of this character is that the employment in which the workman has been disabled owes him a living if the disability is due to an injury arising out of and in the course of the employment. A large number of cases which have caused endless trouble, litigation and great expense to the employer have proven to be cases where prior conditions of health had a serious bearing upon the question of compensation. There are any number of illustrations of a workman being employed with certain defects which are not absolutely disqualifying for service, but which, under the influence of an accident, may develop into a total and permanent disability. It appears to be well established in most jurisdictions that if a man is employed with certain latent or minor defects which are not in themselves disabling, and he suffers an accident "arising out of and in the course of his employment" and this accident so aggravates his prior condition that he is disabled, he is entitled to compensation notwithstanding the previous defect.

In Illinois it seems to be settled that so far as pre-existing disease is concerned, if the disease is aggravated or accelerated by an accidental injury in the course of the employment, an award will be predicated upon the effect of the injury upon the particular employee in his condition of health as it existed at the time of the injury (279 Ill., 235). The presence of a pre-existing disease is not of itself the basis of an award. "It is because of the injury acting as a cause of disability or aggravation of the disease, rendering the disability greater that makes compensation payable for the condition as it exists by reason of the injury." (Centralia Coal Co. vs. Industrial Commission, 301 Ill. 318).

The practical and important question which, therefore, presents itself to all employers of labor who are operating under the terms of workmen's compensation acts is: What latent or other defects are disqualifying, first, for competent and efficient service, and second, in anticipation of possible accidents occurring during and growing out of the employment. There should be no grading in selecting employees so far as physical health is concerned. All workmen should be 100 per cent sound, as determined by a competent medical examiner. A life insurance company will not accept a risk on any other basis and as railway companies, under the industrial laws, have to assume important risks, they should in self protection act on the same basis.

Railroad Protection Lies in More Thorough Examination

The important question which, therefore, presents itself, as indicated above, is to determine first by physical examination the positively disqualifying defects which will interfere with the worker's efficiency. This phase of the subject requires very little comment because the employment man in any large organization if instructed to do so could easily determine objectively the existence of the well recognized defects, such as, color blindness and other visual defects, impaired hearing, structural heart disease, pulmonary or bone tuberculosis, palpable deformity, organic diseases of the nervous system, over-weight, under-size and weight, etc.

The second phase of the subject, however, is one upon which I desire to direct special attention for the reason that it is one which in my experience and observation has been very much neglected in the past, and also because the disqualifications are of a character that are much more difficult to detect. I refer to what I have termed latent defects and the existence of certain blood diseases which do not manifest themselves to an ordinary or casual medical examination. Such underlying conditions, by a comparatively slight injury, may be so aggravated or roused up as to constitute a prolonged or even permanent disability. This opens up a big field and to go into the subject in any sort of detail, would carry one entirely beyond the permissible space of this article. A few suggestions will indicate the writer's trend of thought and should be entirely sufficient to lead an interested reader along the lines of study suggested.

Look for Latent as Well as Obvious Defects

What defects, inherited weaknesses, predispositions, constitutional states, etc., should be looked for in the thorough medical examination I am advocating? What underlying conditions might exist without exhibiting marked objective or apparent evidence that could be roused up by injury into a serious trouble resulting in prolonged disability, or possibly a fatal termination? Constituting one such condition, there is hernia. Many men are ruptured. Authorities are sponsors for the statement that one in every 25 male adults is affected in this way. Such ruptures are usually of long-standing and in most cases when properly supported are not disabling. Wherever located, an accident accompanied by an involuntary muscular movement in an effort to save one's self from falling, may so operate to bring about an acute and complete hernia, with possible disastrous results and prolonged incapacity for work.

As a second consideration there are the varicose veins of the legs, a condition which is not unusual in men. Neither is it disqualifying for work if the affected limb is properly supported. But if a workman with this defect sustains an abrasion or bruise in the region of his diseased veins they are very likely to become ruptured and a condition arise which results in a prolonged if not a permanent disability.

The condition indicated by high blood pressure is a third defect to be considered among these latent defects. In the physical examination of every applicant for service, the blood pressure should be taken and if it is more than "100 plus the man's age," a close investigation should be made to ascertain its cause and if the cause cannot be discovered and the condition remedied, the employment of such an applicant is a dangerous risk for the employer to assume.

There is a fourth class of defects to be considered in those disorders known as "Focal Infections." It refers to the presence in certain cavities of the body, of infectious or poisonous material which, not readily remedied by natural processes, is absorbed into the circulation, with the result frequently, of setting up inflammatory action in the muscles, joints, bones and other important structures. The follicles of the tonsils, root cavities of the teeth and the sinuses connected with the upper air passages are the most common sites of such infection and thousands of cases of chronic rheumatism, persistent neuralgia and other painful and disabling troubles have been permanently cured by the discovery and removal of such real underlying causes. Many apparently able-bodied men are, without their knowledge, carrying about with them some of these undiscovered foci of infection. Their general good health has enabled their systems to develop an immunity against this poison, but let such an individual sustain an injury to a joint, a sprain of his back, a bruise over some nerve, and the lowered resistance thus induced by the injury favors the development of a condition which will persist and disable until the real cause of the trouble is removed.

Venereal disease is another of these latent defects which invite serious consideration by railroads. The public would be appalled if it knew the prevalence of certain forms of such disease that prevail in many apparently healthy individuals. In fact, many such individuals do not know it themselves, and in such cases an injury, especially to bones, or joints, or the covering of bones where this underlying taint is present, proves to be disabling in the form of inflammation of the bone covering, etc., until a course of specific "blood treatment" is used.

Tubercular tendency is a sixth of the conditions to which I refer, a condition which is common but difficult to detect. It requires careful investigation. Many cases of tuberculosis of the knee joint, hip joint, spinal column and other parts of the body have been attributed to comparatively slight injuries to the parts involved which, owing to the underlying predisposition, were unable to survive the effects of the injury and a permanent disability has thereby ensued.

Finally there should be considered functional heart affections and functional nervous states. A rapid pulse, the evidence of an irritable heart, is very common in many otherwise healthy individuals from a variety of causes such as excessive use of tobacco, disturbances of gland secretion, prolonged indiscretion in diet, etc., in the presence of which the power of resistance against injury and the ability to recuperate following injury is materially impaired. Functional nervous state is a condition, which is either inherited or acquired and calls for careful attention. A plaintiff's expert once said, in reference to a case of this type: "Such an individual is a very bad one to receive an injury." These are the cases which fill our court calendars with the so-called traumatic neurasthenias and traumatic hysterias and in which employees after a trivial injury develop persistent, disabling and long continued neuroses, for which the employer is held liable under compensation acts.

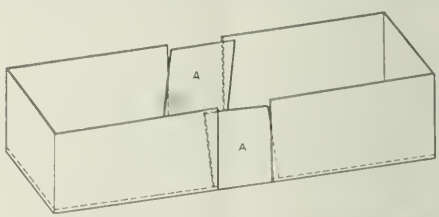
Life Insurance Methods None Too Complete

These suggestions show the position in which the employer of labor finds himself if he has men working for him who have these and other quiescent or latent defects. Failing to take the necessary steps to ascertain the fitness and capacity of the employee, he therefore assumes the increased risk under the compensation acts of employing or retaining men, who under the influence of a trivial accident may be disabled for months or years. Such men are undoubtedly bad cases to suffer from accidental injury "arising out of and in the course of" their employment, and while the suggestions indicated could be greatly elaborated and much of a similar character added in reference to other underlying defects, enough has been said to justify the statement made at the outset that in the employment of men in all branches of labor connected with railroad work, a thorough, complete and exhaustive examination is requisite—just as complete and thorough as that required by a life insurance company. The employment man of a railroad company would do well to have printed in large type for his guidance the recent opinion of an arbitrator that "This man's prior trouble was no doubt aggravated by the accident in question and his disability is no doubt due to such aggravation—the employer either knew of the pre-existing condition when the man was hired or it was his business to have discovered it."

A New Design of Liner for Grain Cars

LEAKAGE OF GRAIN from defective cars is a serious source of loss to the railroads. All roads endeavor to make equipment offered for grain loading as tight as possible, and a considerable proportion of the cars are lined with paper or burlap. Formerly, paper for lining cars was furnished in rolls, but this method of coopering is slow and expensive and prepared linings shaped to fit the floors, sides and ends of the cars have come into use in recent years.

An improved car liner of this type has recently been placed on the market by E. C. Unser, River Edge, N. J. The principal features of this liner are the one-piece construction and the simplicity of application. The complete liner is made in two sizes, 40 and 50 ft. long, which will fit any length of car. It is furnished so that it can be



The Liner Is Made in One Piece with Overlaping Flaps at the Doors

placed on the floor of the car and rolled out lengthwise, the sides being then lifted and fastened against the walls of the car. The operation of lining a car can be completed in a few minutes.

The two standard sizes of liners are adapted to the varying widths and lengths of cars by folding either longitudinally or transversely to fit the inside dimensions of the body. Special provisions are made in this liner for loading and unloading. Two separate sections, AA, at each doorway overlap the sides. When loading the ends of the car one doorway can be closed while the door covering on the side from which the car is loaded is folded out of the way and gradually raised as the level of the load rises and the grain doors are put in place.

These liners are made of heavy kraft paper and are suitable for protecting loads of sugar, salt, lime, paper, flour and other mill products as well as grain.

General News Department

The Central Railway Club, announces that the September meeting of the club has been postponed until further notice.

W. R. Rowe has been appointed general traffic manager of the Automotive Equipment Association, with headquarters at Chicago.

The Southern Hardwood Traffic Association has opened district offices in the Conway building, Chicago, in charge of W. E. Wherity, district manager.

The Atchison, Topeka & Santa Fe loaded 6,831 cars of revenue freight on August 22, an increase of 239 cars over the best previous record on October 25, 1921.

H. R. Gillespie has been appointed traffic manager of the Moore Refining Company, with headquarters in Chicago. This company has bought the properties of the Milliken Refining Company at Arkansas City, Kan.

The bill authorizing the Interstate Commerce Commission to require railroads to issue interchangeable mileage book tickets and scrip books and to fix the rate per mile and the denomination, became a law on August 18 by the signature of President Harding.

Arthur S. Tuttle has been appointed chief engineer of the Brooklyn-Richmond freight and passenger submarine tunnel to be built by the City of New York. H. H. Smith has been appointed deputy chief engineer on the same project. Some of the other engineering appointees are D. W. Coe, W. J. Shea, F. H. Phipps, J. B. Snow, C. D. Drew, W. M. Griffin, C. K. Conard, W. C. Lancaster and J. H. Quimby.

The Traffic Club of Atlanta, Ga., has re-elected the following officers: president, G. E. Boulineau, general freight agent, Georgia, and Atlanta & West Point; vice-president, J. W. White, traffic manager International Agricultural Chemical Corporation; second vice-president, S. Linthincum, traffic manager, Empire Cotton Oil Company; and secretary-treasurer, S. W. Willson, southern freight agent, Philadelphia & Reading.

The Chicago Chapter of the American Association of Engineers will start a class in railroad management on September 11. This course is designed to inform the student regarding the work of the station agent, yardmaster, trainmaster, superintendent, section foreman, master carpenter, roadmaster and division engineer. This is a repetition of a course which was conducted last year in which about 20 members of the association were enrolled.

Coal Loaded on Monday last, August 21, amounted to 19,043 cars. This statement, supplementing that of the Geological Survey, printed elsewhere, comes from the Association of Railway Executives. This total is 3,321 cars more than on Monday the 14th. Reports received by the Car Service Division show that the increase in loadings was due principally to a resumption of mining in the Ohio bituminous fields resulting from the agreement recently reached at Cleveland.

The Pennsylvania Railroad reports that between August 5 and August 9 it transferred 75,000 bushels of wheat from an elevator in Buffalo to a ship in the Delaware River within 72 hours. On Saturday afternoon the wheat was in the elevator at Buffalo. That evening it was loaded into 47 freight cars (48 tons to the car), which were made up into a solid train (about 3,500 tons). The train left Buffalo Sunday morning, and reached the Girard Point elevator, Philadelphia, late Monday afternoon. The grain inspectors worked all night, and at 7 o'clock Tuesday morning the work of loading the grain into barges, to be floated up to the I. M. M. steamer Maryland, at Pier No. 53, was started. The first barge left at 10 a. m. By Tuesday evening—exactly 72 hours after the loading of the cars in Buffalo—the entire cargo was aboard ship, ready for sailing. In that time the grain had been handled through four elevator operations and had made a journey of 416 miles by rail.

International Railway Congress

The Permanent Commission of the International Railway Association has announced that the next congress will be held in London during the latter half of 1925. This time is selected in order to participate in the centenary of the first English railway. The questions to be discussed will be limited to three for each of the five sections; way and works, locomotives and rolling stock operation, general, and light railways.

A. S. C. E. Fall Meeting at San Francisco

The American Society of Civil Engineers will hold its fall meeting at San Francisco, Cal., on October 4 to 9, inclusive, with headquarters at the Palace hotel. The program will be devoted to the consideration of the water power problem with technical meetings on Wednesday and Thursday, October 4 and 5 and with an excursion to Don Pedro, Hetch Hetchy, and the Yosemite Valley on October 6-9. Arrangements have been made for special cars to leave Chicago on the Overland Limited of the Chicago & North Western on Saturday evening, September 30.

Coal Production

Coal production during the week of August 14-19 from the mines that were already working is estimated by the Geological Survey about 4,300,000 tons. It was said to be unlikely that the union mines reopening in Ohio and elsewhere will raise the total output for the week much above the 4,576,000 tons produced the week before. For while mines long closed by the strike are reopening there was a recurrence of acute railroad disability in certain of the non-union and open shop fields. Loadings on Monday, August 14, according to the railroads, were 15,722 cars, a decrease of 3 per cent as compared with the week preceding. Thereafter they declined steadily to 12,530 cars on Wednesday. The loadings on Thursday, 13,463 cars, gave the first indication of shipments from mines reopened under the Cleveland agreement.

Car supply improved in certain districts of Southern West Virginia and Kentucky, but in Harlan County and adjacent fields of Southeastern Kentucky and Tennessee, transportation was for a time almost completely blocked. Western Kentucky also reported acute transportation loss.

There was no compensating increase in shipments from the non-union fields of Pennsylvania.

Final returns show production of all coal in the nineteenth week of the strike as 4,605,000 tons including 29,000 tons of anthracite. In the corresponding week of 1921 the output of bituminous was 7,770,000 tons and of anthracite, 1,770,000 tons, a total for all coal raised of 9,540,000 tons; the year before that the total was 12,280,000 tons. Considering anthracite and bituminous coal as a common source of supply, the present weekly output is five or six million tons below normal.

The mine reports confirm previous statements that the increase in production in the week ended August 5 was due largely to improvement in transportation. Losses in Colorado ascribed to transportation were practically confined to the railroad that recently resumed service after a suspension of several weeks.

The mine operators' statements show conclusively that the gradual increase in production was not due to the opening of mines in the strongly unionized districts, but rather to improved car and labor supply in the non-union and partly organized fields.

Operating Statistics of Large Steam Roads—Selected Items for the Month of June, 1922,

Region, road and year	Average miles of road operated	Train-miles	Locomotive-miles: Principal and helper	Locomotive-miles: Light	Car-miles: Loaded (thousands)	Car-miles: Per cent loaded	Ton-miles (thousands): Gross. South African Railways to Extend Lines

After two years' postponement, owing to the depressed state of trade and the consequent financial stringency, a program of new railway construction has been put before the Union of South Africa Parliament by the Minister of Railways, according to the Times (London) Trade Supplement.

This program includes 851 miles of track, estimated to cost over £4,000,000, and if account is taken of the line from Windhoek to Gobabis in the South-Western Protectorate, the construction of which was undertaken for the relief of unemployment, the total length of line being, or to be built, exceeds 1,000 miles. As electrification work, to cost over £4,000,000, is in hand on the Natal main line, as well as sundry minor deviations and betterments throughout the system, the chief engineer and his staff are likely to have plenty to do for several years to come.

Most of the new railways will be light branch lines serving agricultural districts that at present have no railway communication. In some cases they will be prolongations of existing spurs, but in others they will be new branches off the main system. They will all be on the normal gage of 3 ft. 6 in., except three, which are to be of 2 ft. gage.

Among them the Franklin-Kokstad, and Franklin-Matatiele extensions—25½ and 47½ miles in length respectively—are of interest, as forming links in the long projected direct connection between the Cape and Natal provinces. For seven years Franklin has been the terminus of a line 140 miles long, which leaves the Natal main line at Mason's Mill, about a mile from Pietermaritzburg. Although Kokstad is a town of 3,500 people the railhead has remained 22 miles away by road, and the fact that this extension is now to be put in hand, in addition to one of about double the length, to link up the neighboring East Griqualand village of Matatiele, suggests that future policy regarding the routes to be followed by the Cape-Natal connection has now been settled and that the two systems will be linked together within the next decade.

There are two spurs of the Cape Eastern main line running towards East Griqualand. That nearer to the coast extends from Amabele Junction, 51 miles from East London, to Umtata, and is 175 miles long. It traverses very difficult country, looping over itself and twisting about so much that the bee-line distance is exceeded by fully 75 per cent. It seems evident that the Kokstad fork of the line coming from Natal is destined to be linked up with the Umtata dead end. The latest survey of the route from Kokstad to Umtata gives a distance of 151½miles. If this gap is bridged the total distance from Durban to East London, via Kokstad, will be about 610 miles, compared with 916 miles by the present route via Bloemfontein and Ladysmith. Between Port Elizabeth and Durban the saving would be only 17 miles, and between Cape Town and Durban, the present route is 150 miles shorter than that via Umtata and Kokstad.

The termini of the new lines from Touws River to Ladysmith (89 miles) and Oudtshoorn to Calitzdorp (34 miles) will be only about 30 miles apart, and their general alinement is such that if they are eventually extended to meet one another they may form an important cross connection between the Cape Western and Midland main lines and one which will shorten the distance between Cape Town and Port Elizabeth by perhaps 30 miles, as compared with the route via Worcester and Mossel Bay. Touws River is 160 miles from Cape Town on the Western main line and is the point to which it has been suggested that that line should be electrified.

The branch from Fort Beaufort to Bredasdorp will assist to open up the somewhat isolated area towards Cape Agulhas in the extreme south of the Continent. Bredasdorp will, indeed, be the most southerly railway station in Africa, though about 20 miles north of Cape Agulhas itself.

The railway from George to Knysna (42 miles) will place Knysna—which shares with Port St Johns at the mouth of the Umzimvubu river the distinction of being one of the two ports of any consequence that are not linked up with the Union railway system—in connection with the Mossel Bay-Port Elizabeth route.

The narrow-gage line from Upington (on the Orange river, where the railway that connects the Union with the South-West Protectorate crosses) to Kakamas will follow the south bank of the Orange and give railway facilities to an irrigation area that has been attracting settlers in recent years. A few miles below Kakamas are the great Aughrabies Falls, where the river drops 400 feet. Though, like the Victoria Falls, they are too far from an industrial area to offer much immediate inducement as regards power development, it is possible that they will eventually be utilized for railway electrification and industrial purposes.

The Ermelo-Lothair line, which will be about 27 miles long, is at first glance purely an agricultural feeder. In view of the fact that it heads eastward, it may, however, possess some significance in connection with the manœuvring that is in progress between the Union and the Mozambique administrations regarding a renewal of the convention regulating traffic, customs matters, and labor recruiting. It has been stated that if the convention is not renewed the Union will develop Kosi Bay, on the northern Zululand coast, as a rival port to Lourenço Marques, and to do so the first step would be to provide a railway to the bay. It has been assumed that such a railway would connect with the existing system near Piet Retief, and the Ermelo-Lothair line does not fit in very well with either the Kosi Bay plan or the older scheme of building a railway across Swaziland from Breyten, to link up with a short section built several years before the war by the Portuguese on the strength of an assurance from Lord Milner—then Governor of the Transvaal—that the Transvaal railways would be extended to meet it. There has been much controversy about the failure to carry out that promise, but the fact appears to be that, in so far as reduced mileage was an inducement, it has ceased to have much weight, the Apex-Witbank cut-off having so shortened the distance from Johannesburg to Lourenço Marques that the Swaziland line would be practically as long as the existing route.

Relief Administration Tells of Railway Improvement in Russia

Russian railroad transportation is coming back, according to the American Relief Administration. Trains are being speeded up, time tables revised and freight is being moved at a rate which a few months ago seemed impossible.

The Relief Administration, whose huge shipments of corn and other foodstuffs into the famine districts taxed the capacity of the roads for months, has all but completed its grain shipments and from now on will confine its traffic chiefly to child-feeding commodities and medical supplies.

From 50 cars sent out in August, 1921, by the Administration, the number had risen in March to 8,585 and although the opening up of navigation on the Volga and its tributaries decreased the rail shipments, permitting to date the movement of some 46,000 metric tons of grain by water, rail shipments have continued heavy, amounting to 5,710 cars in April and 7,846 cars in May.

Each month from August, 1921, up to and including March, 1922, showed an increase in the number of cars dispatched and each month during that period, with the exception of February, showed an increase in the number of cars arriving at their destination. But the number of cars arriving did not keep pace with the number dispatched. In other words, at the close of each month there was an increased number of cars en route.

Not until April did the tide turn. In that month 5,710 cars were dispatched into the famine districts from the ports and from the warehouse centers and 7,197 arrived at their destination. At the end of March there were 8,684 cars en route, or 99 more than had been dispatched in any single month since the operation began late in August, 1921. But the end of April saw the number of cars en route reduced from 8,686 to 7,197, and although 7,846 cars were dispatched in May the end of May saw the number en route reduced to 6,783.

The chief of the transportation department of the Administration, Philip Matthews, says that present indications point to a reduction of the number of food cars en route as of the end of June to 3,000.

He also predicts that figures will show that by the first of July not more than 10,000 tons of the grain shipped from the United States for the American Relief Administration remained unevacuated from the ports. Shipments will, of course, continue after that date, of the remaining grain and also of the child-feeding commodities, such as white flour, cocoa, vegetable fats, rice and beans.

Equipment and Supplies

Locomotives

THE UNION PACIFIC has ordered 15, 2-10-2 type locomotives from the Baldwin Locomotive Works.

THE WABASH, CHESTER & WESTERN has ordered 2 Consolidation type locomotives from the Baldwin Locomotive Works.

THE TENNESSEE, ALABAMA & GEORGIA has ordered 1 Consolidation type locomotive from the Baldwin Locomotive Works.

MCKELVEY BROTHERS, Hollidaysburg, Pa., has ordered 1, 50-ton superheated Shay locomotive from the Lima Locomotive Works.

THE NEW YORK CENTRAL is having repairs made to 50 locomotives of various types, at the shops of the Rome Locomotive Works.

THE MISSOURI, KANSAS & TEXAS has placed an order with the Lima Locomotive Works, Inc., for 40 Mikado and 5 Pacific type locomotives.

THE LOUISVILLE & NASHVILLE has ordered 30 Mikado type locomotives from the American Locomotive Company. These locomotives will have 26 by 30 in. cylinders and a total weight in working order of 295,000 lbs.

Freight Cars

THE CENTRAL OF NEW JERSEY is having 200 steel hopper cars repaired at the shops of the Pressed Steel Car Company, and 300 at the shops of the Standard Steel Car Company.

THE PHILADELPHIA & READING, reported in the *Railway Age* of July 10 as inquiring for 100 refrigerator cars, has ordered this equipment from the American Car & Foundry Company.

THE POLISH GOVERNMENT has ordered 7,000 freight cars from the War Department of the United States Government. These cars were originally built for overseas service during the war.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE reported in the *Railway Age* of July 22 as inquiring for 300 composite gondola cars of 50 tons' capacity, has ordered 300 cars from the Pullman Company.

Passenger Cars

THE ATCHISON, TOPEKA & SANTA FE, reported in the *Railway Age* of July 1 as inquiring for 8 buffet library cars, has ordered this equipment from the Pullman Company.

Iron and Steel

THE NEW YORK CENTRAL is buying 200 tons of fabricated steel for improvements at Elyria, Ohio.

Signaling

THE SOUTH SIDE ELEVATED RAILROAD, Chicago, has ordered from the Union Switch & Signal Company an electro-pneumatic interlocking for Jackson Park; Model 14 machine with eight working levers. All principal routes will be protected by electro-pneumatic train stops.

THE NORTHWESTERN ELEVATED of Chicago has ordered from the Union Switch & Signal Company an electro-pneumatic interlocking for Howard Street Terminal; Model 14 machine with 23 working levers for 43 signals and eight automatic stops, and 19 levers for switches. The signals are the low type standard on the Northwestern Elevated. Alternating current track circuits will be used for control and indication instruments.

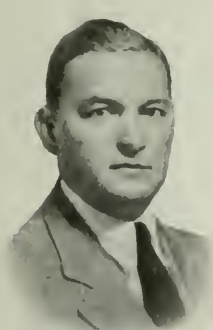
Supply Trade News

The office of the **Hardwood Manufacturers' Institute** was removed on August 16, from Memphis, Tenn., to 1020 South Wabash avenue, Chicago.

The Florandin Equipment Company has been organized by C. H. Florandin, with offices at 110 West Fortieth street, New York, to act as representatives of the Conveyors Corporation of America, Chicago. Mr. Florandin for several years was eastern manager of the Conveyors Corporation before forming his own organization.

G. B. Pierce, who has been connected with the **Westinghouse Air Brake Company** for the last 12 years as a mechanical expert, at the St. Paul office, has been promoted to air brake engineer and transferred to the Orient where he will act in that capacity both for the Westinghouse Air Brake Company and the Westinghouse Traction Brake Company, in a territory covering Japan, China, Manchuria and Korea. Early in September Mr. Pierce will sail for Japan to associate himself with W. G. Kaylor, manager of the Westinghouse Air Brake interests in the Orient, with whom he expects to make his headquarters in Tokyo. Mr. Pierce was formerly in railroad work. Having served as a fireman, he became an engineman on the Montana division of the Northern Pacific in 1901. He later served as acting road foreman of engines on the same division and for three years was a member of the local examining board on transportation rules at Livingston. In 1910 he left this road to join the Westinghouse Air Brake Company.

H. A. Matthews, formerly sales manager of the railway division of the U. S. Light & Heat Corporation, Niagara Falls, N. Y., has been elected a vice-president. Mr. Matthews entered the railway supply business in 1912 with the U. S. Light & Heat Corporation at Chicago. Prior to that time he had been employed by the Lake Shore & Michigan Southern as clerk to the general superintendent at Cleveland, and later entered the services of the Pullman Company. For seven years he was secretary to the president of the Pullman Company, which position he held up to the time he joined the U. S. L. forces at Chicago. In 1917 he was transferred to the factory at Niagara Falls and placed in charge of the railway sales department.



H. A. Matthews

The New York Air Brake Company's plan for refinancing contemplates an authorization of 100,000 shares of Class A preference stock without par value and 300,000 shares of common stock without par value. Of the latter 200,000 shares are to be exchanged for the now outstanding $10,000,000 common stock of $100 par value at the rate of two shares for one, the remaining 100,000 shares being reserved for Class A preference stock. A banking syndicate is being formed to underwrite the new Class A preference stock which will be offered to stockholders at $50 a share. Class A stock will be entitled to receive cumulative quarterly dividends at the rate of $4 a share per annum. After the common stock has received $4, the two classes share equally in any additional dividends. Preferred stock is redeemable after January 1, 1926, in whole or in part, at $60. It is convertible at $50 a

share into common stock at $50 a share. Edward B. Smith & Co. and Dominick & Dominick are the bankers handling the financing. The proceeds of the financing plan estimated to raise about $5,000,000 will be used to liquidate all loans from banks and for additional working capital. The company has done no new financing since 1904 at which time the amount was increased to $10,000,000 of common. The company has outstanding $3,000,000 of first mortgage bonds due in May, 1928. The company's sales for the first six months of 1922 are reported by the bankers to have been $2,620,000 as compared with $2,400,000 for the entire year 1921. Unfilled orders on hand are the largest in the history of the company.

Obituary

Edward S. Shepherd, president of Crerar Adams & Co., Chicago, died at his home in that city on August 21. Mr. Shepherd was born in Orleans, N. Y., on May 28, 1845, and entered railway service in the purchasing department of the Illinois Central, with headquarters at Chicago, in 1865. He served this company four years and in 1869 entered the service of Crerar Adams & Co. as a salesman. He served in that capacity until 1877. During that year he was made a junior partner in the company and in 1890 was elected president which position he has occupied for the past twenty-three years.

E. S. Shepherd

Coleman Sellers, Jr., president of William Sellers & Co., Inc., Philadelphia, Pa., who died on August 15, as was mentioned in the *Railway Age* of August 19, was in his seventieth year and had been ill for several months. His connection with the Sellers house, then a partnership, began in 1873 immediately after his graduation from the University of Pennsylvania. After serving a practical course in the shops for several years, he took a position in the drafting room of which he soon became the head. He was appointed assistant manager in 1887, becoming at the same time a director of the company. He was elected engineer in 1902 and president in May, 1905, which last office he held continuously until his death. He also was a man of liberal ideas, and while his principal inclinations and activities were in mechanical and engineering lines, he took keen interest in many other directions, scientific, literary, educational and the arts, and was active in the civic life of Philadelphia. He was long active in the affairs of the Franklin Institute, of which he was vice-president at the time of his death. He was a member of the Board of Commissioners of Navigation of Pennsylvania, to which he was appointed in 1907. He was active in the affairs of the American Society of Mechanical Engineers, the American Society of Naval Architects and Marine Engineers and the Engineers Club of Philadelphia of which he was one of the founders. He was president of the Chamber of Commerce from 1909 to 1913. He served as chairman of the local draft board during the early stages of the war.

Coleman Sellers, Jr.

Frank Burr Smith of Milford, Conn., works manager of the Bullard Machine Tool Company, Bridgeport, died on August 16 at Grace hospital, New Haven. Mr. Smith was born at Fairfield, Conn., on November 22, 1872, and obtained his early education in the public and high schools of Bridgeport. He entered the employ of the Bullard Machine Tool Company at its old Broad street plant in 1890 as a machinist apprentice and upon completion of his apprenticeship he was connected with its engineering department. He subsequently served in different machine shops and at one time was connected with the Atlantic Iron Works of Boston, and later was with the Laird Gold Production Company as mechanical engineer. In 1903 he went to the DeLaVergne Machine Company, as expert erection and installation engineer. He returned in 1911 to the Bullard Machine Tool Company, and represented this company in a sales capacity, making his headquarters successively at Chicago, Cleveland and Philadelphia. The last year of his sales work was spent in England. He became manager of the employment and industrial relations department at the Broad street plant, and when that plant was disbanded in 1920, and all manufacturing was transferred to the Black Rock plant, he was made works manager and continued in that capacity until his death.

Trade Publications

DRINKING WATER SYSTEMS.—A folder entitled "A Neglected Source of Economy," has recently been issued by the Armstrong Cork & Insulation Company, Pittsburgh, Pa., which deals with the savings that can be effected in shops by the use of refrigerated drinking water systems.

DIRECT DRIVE AXLE GENERATOR.—Specifications and description of a direct drive axle generator and system for the electric lighting of railway cars are contained in a 16-page bulletin published by the Products Distributing Corporation, 360 Madison avenue, New York, N. Y. The equipment described in this bulletin will be offered to the railroads by the above company and will be built by the Wagner Electric Company, St. Louis, under the E. M. Fitz patents. The booklet is profusely illustrated with photographs and line drawings and contains brief specifications and descriptions of the equipment. A blue print insert is included on which curves are shown giving the characteristics of the generator.

ELECTRIC TRACTION.—Progress in Steam Railway Electrification is the title of bulletin No. 44016 issued by the General Electric Company, Schenectady, N. Y. The bulletin contains 20 pages and is illustrated with photographs. It reviews some of the more important electrifications throughout the world for which the General Electric Company has supplied the apparatus, either in its entirety or in the more important parts. This includes the Baltimore and Ohio, the Paris-Orleans, the New York Central, the Great Northern, the Michigan Central, the Victorian Railways in Australia, the Canadian Northern, the Butte, Anaconda & Pacific, the Chicago, Milwaukee & St. Paul, the Bethlehem Chile Iron Mines in Chile, the Spanish Northern, the Imperial Government Railways of Japan, the South Manchurian Railway and the Central of Paulista in Brazil.

TRAIN LIGHTING EQUIPMENT.—The Safety Car Heating & Lighting Co. has recently issued two new catalogues and an elaborate folder which will be of interest to anyone connected with train lighting work and of especial interest to the users of safety equipment. One of the catalogues bears the title, "Operation of Under-Frame Car Lighting Equipment" and the other, "Pintsch Gas Car Lighting Fixtures." Both catalogues are profusely illustrated and contain 60 and 52 pages respectively. A novel and useful feature has been introduced in the Under-Frame catalogue, which consists of cross-indexed tables which show at a glance which of the various generator parts can be used interchangeably on two or more of the ten types of generators manufactured by the Safety Company.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, which was reported in the *Railway Age* of April 22 as authorizing the construction of a new division office building at Newton, Kan., has awarded the contract for this structure to Swanson Bros., Topeka, Kan. The building will be 70 ft. by 160 ft. and will be three stories high, costing approximately $200,000.

CANADIAN PACIFIC.—This company has prepared plans for new stations at Napinka, Man., and Chaton, Alta. A new detention shed will be erected at Coutts, Alta., and the roundhouse at Medicine Head, Alta., and Calgary will be enlarged. This company is also planning to install two 90-ft turn tables at Brandon, Man., and North Bend, B. C., and a coaling plant will be constructed at Secretan, Sask. A transfer barge will be constructed on Kootenay Lake, B. C., and the temporary wharves at Nelson, B. C. will be made permanent.

CHICAGO, BURLINGTON & QUINCY.—This company will accept bids until September 1 for the construction of a one-story brick freight house, 20 ft. by 60 ft. at Zeigler Junction, Ill.

ILLINOIS CENTRAL.—This company has awarded a contract to the Ellington-Miller Co., Chicago, for the altering of its freight house at Indianapolis, Ind., at an estimated cost of approximately $40,000. This company has also awarded the contract to the Ellington-Miller Co. for alterations to its fruit sheds at Mound, Ill.

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of August 5 as calling for bids for the construction of 12 water treating plants, has awarded contracts for those at Galena, Ill., Amboy, Ill.; Fort Dodge, Ia., and Council Bluffs to Joseph E. Nelson & Sons, Chicago, and those at Wall Lake, Ia.; Logan, Rockwell City and Denison to the Railroad Water and Coal Handling Company, Chicago.

IRON COUNTY.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a line from a connection with the Los Angeles & Salt Lake at Lund, Utah, for a distance of 22.6 miles southeasterly through Iron County, Utah.

LOS ANGELES & SALT LAKE.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a branch from Lund to Cedar City, Utah, 32 miles.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—This company closed bids August 14 for the construction of a passenger station at Menasha, Wis., and a 21-stall roundhouse at Gladstone, Mich.

THE MISSOURI, KANSAS & TEXAS.—Contracts have been awarded to the Graver Corporation, Chicago, for one 15,000-gallon per hour Graver Type "K" ground operated water softener with storage capacity at top of softener capable of holding 100,000 gallons of treated water for installation at Glen Park Yards, Kansas City, Kan.; one 10,000-gallon per hour Graver Type "K" ground operated water softener for installation at Nelogony, Okla.; one 5,000 gallon per hour Graver Type "K" ground operated water softener for installation at Eufaula, Okla., and for four standpipes 14 ft. diameter by 32 ft. high and one 18 ft. diameter by 32 ft. high for installation in Texas.

SAN FRANCISCO-SACRAMENTO.—This company, in conjunction with the California State Department of Public Works, will construct an overhead crossing over its tracks near Denverton, Solano county, Cal., at an estimated cost of $26,000.

THE UNION PACIFIC.—Contracts have been awarded to the Graver Corporation of Chicago, for one 30,000-gallon per hour Graver Type "K" ground operated water softener for Granger, Wyo. This treating plant will be equipped with two standard Graver pressure filters 8 ft. diameter to 12 ft. long. The contract also covers the reconstruction of five present treating plants to the improved Graver Type "K" design.

Railway Financial News

BALTIMORE & OHIO.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligations and liability in respect of $6,750,000 of equipment trust certificates to be issued by the Girard Trust Company of Philadelphia to be sold at not less than 96.4.

BIRMINGHAM & NORTHWESTERN.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $750,000 of 4½ per cent refunding gold bonds for the purpose of refunding maturing bonds and providing security for a loan from the Interstate Commerce Commission.

Acquisition.—See Gulf, Mobile & Northern.

CHESAPEAKE & OHIO.—*Preferred Stock Issue.*—A special meeting of stockholders will be held at Richmond, Va., on September 26 to approve a plan to offer to common stockholders the right to subscribe at par to 20 per cent of their holdings for approximately $12,558,500 of new 6½ per cent cumulative preferred stock, series A. The proceeds will be used to finance additions and betterments. The offering has been underwritten by Kuhn, Loeb & Co., and the National City Company. It is subject to the approval of the Interstate Commerce Commission. This issue is the first of a total of $30,000,000 over a term of years.

A circular to the stockholders says in part:

In the annual report of your company for 1921 reference was made to the comprehensive budget prepared by your officers of additions, betterments and improvements which should be made during the next four years in order to adequately and economically accommodate the present day maximum volume of traffic, provide for anticipated growth and render its facilities more nearly equal to those of your principal competitors. Among the principal items included in this budget are the extension of your terminal facilities at Hampton Roads, the enlargement of your shop and round house facilities, and such additions to your main line and passing tracks, including the reduction of grades, as will render practicable the economical and expeditious handling over your entire main line of the maximum train load which can be moved with modern power of the type in use upon your lines. The present estimate of the probable cost of this work, including incidental operating charges of about $1,150,000, is about $16,500,000, expenditure of which will be spread over the next four years. It is estimated that the making of these expenditures will realize an annual saving in operating expenses, based upon 1920 performances, of nearly $4,000,000. Your directors believe that the present is a favorable time for arranging the necessary financing of this work, and in connection therewith for making suitable provision for the future capital requirements of your company.

GULF, MOBILE & NORTHERN.—*Asks Authority to Purchase Road.*—This company has applied to the Interstate Commerce Commission for an order approving the acquisition by purchase of the property of the Birmingham & Northwestern, and also for authority to issue $300,000 of capital stock for the purpose.

MEMPHIS, DALLAS & GULF.—*Sold.*—This road was sold in sections on August 15 under court order to Sears Lehmann, of St. Louis, Mo., who represented different interests. The road formerly operated between Hot Springs, Ark., and Dalark, 125 miles, until recently when the Interstate Commerce Commission authorized the receiver to abandon 51 miles.

NASHVILLE, CHATTANOOGA & ST. LOUIS.—*Asks Authority to Sell Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue and sell $747,000 of first consolidated mortgage 5 per cent gold coupon bonds dated April 2, 1888, and due April 1, 1928, to provide for the payment at maturity of bonds of its Jasper and Centreville branches. The bonds are to be sold on a 6 per cent basis.

NEVADA-CALIFORNIA-OREGON.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of 16 miles of this company's railroad between Hackstaff and Wendel, Calif. The company had applied for a certificate to abandon its entire line, but the commission instituted an investigation on its own motion of the divisions received of joint rates and last week issued an order increasing the division on traffic interchanged with the Southern Pacific at Wendel. In that proceeding it reached the conclusion that the road as a whole cannot be abandoned, but that portion of the southerly 16 miles between Wendel and Hackstaff where traffic was interchanged with the Western Pacific may be abandoned.

PENNSYLVANIA.—*Asks Authority to Lease Subsidiaries.*—This company has applied to the Interstate Commerce Commission for authority to lease for 999 years the properties of the Toledo, Columbus & Ohio River; Cleveland, Akron & Cincinnati; Cincinnati, Lebanon & Northern; Pittsburgh, Ohio Valley & Cincinnati; Englewood Connecting; South Chicago & Southern; Indianapolis & Frankfort; Louisville Bridge & Terminal Co.; Wheeling Terminal Company and Ohio Connecting.

Panhandle Lease Opposed.—The Continental Insurance Company, of New York, has filed a bill in equity in the Federal Court at Philadelphia, seeking to restrain the 999-year lease of the Pittsburgh, Cincinnati, Chicago & St. Louis to the Pennsylvania. The complainant contends that under the proposed lease the Pennsylvania is to pay a rental to the Panhandle sufficient to cover the operating and fixed charges, and the common stockholders are to receive dividends of 4 per cent for five years and 5 per cent thereafter. It is asserted that earnings last year were sufficient to pay 6 per cent.

Dividends Declared

Fonda, Johnstown & Gloversville.—Preferred, 1½ per cent, quarterly, payable September 15 to holders of record September 5.

New Orleans, Texas & Mexico.—1½ per cent, quarterly, payable September 1 to holders of record August 25.

Erie & Pittsburgh—1¾ per cent., payable September 9 to holders of record August 31

Trend of Railway Stock and Bond Prices

	Aug. 22	Last Week	Last Year
Average price of 20 representative railway stocks	73.64	70.61	54.54
Average price of 20 representative railway bonds	89.67	88.65	75.34

FREE TRANSPORTATION BY EXPRESS COMPANIES of merchandise for their employees is unlawful; and this point, decided by the Commission in 1918, and by the Supreme Court in 1909 is reaffirmed in a decision handed down on July 10, last. The case of 1918 was reopened at the request of the American Railway Express Company, which asked to have the benefit of an amendment to the law, made in 1910, under which the prohibition of free passes was modified by a provision that it should not prohibit the privilege of "passes or franks . . ." This was the first use in the law of the term "frank." The proviso was introduced, however, for the benefit of telegraph and telephone companies, and the Commission holds that it does not apply to franks issued for the transportation of merchandise. Although the word is one commonly used for merchandise passes, Congress in discussing the bill which became law in 1910, rejected a clause allowing express companies to carry packages free for employees.

After an Accident Near Laurel, Md.

Railway Officers

Executive

C. W. Snider has been elected secretary of the Wichita Falls & Southern, succeeding **L. F. Linney**. **O. B. Womach**, auditor, has also been appointed assistant secretary.

Financial, Legal and Accounting

A. E. Delf, assistant comptroller of the Duluth, South Shore & Atlantic, has been promoted to comptroller with headquarters at Marquette, Mich.

W. C. Chisholm, general solicitor of the Grand Trunk, has been placed at the head of the legal department, succeeding W. H. Biggar, vice-president and general counsel, deceased.

H. H. Larimore, assistant general attorney of the Missouri Pacific with headquarters at St. Louis, Mo., has been appointed general attorney and interstate commerce counsel with the same headquarters.

C. G. Hurlbut, traveling agent of the Chicago, Milwaukee & St. Paul, with headquarters at Minneapolis, Minn., has been appointed assistant freight claim agent, with headquarters at Seattle, Wash., succeeding **H. Schroeder**, resigned.

W. F. West, an attorney with the New York, Chicago & St. Louis, with headquarters at Cleveland, Ohio, has been appointed general solicitor with the same headquarters. **E. M. Smith**, has been appointed general land and tax attorney, with headquarters at Cleveland. **C. C. Collister** has been appointed general attorney.

NEW GRAND TRUNK EXECUTIVE

At a meeting of the board of the Grand Trunk Railway System held in Montreal on August 17, W. D. Robb was appointed ranking vice-president of the company with the title of vice-president and general manager. Mr. Robb will take up the duties of Howard G. Kelley, whose resignation as president of the railway is announced.

H. G. Kelley

The official statement issued at the close of the meeting of the board was as follows:

"The chairman, Sir Joseph Flavelle, laid before the meeting a copy of an order-in-council approved on the 14th of August, 1922, accepting the resignation of Mr. Howard G. Kelley as a director of the company, and appointing Graham A. Bell, deputy minister of railways, in his place. Inasmuch as Mr. Kelley's resignation from the board of directors has, under the railway act, the effect of rendering vacant the position of president of the company, it was thereupon resolved that W. D. Robb shall be the ranking vice-president of the company with the title of vice-president and general manager, and shall exercise the authority and perform the duties hitherto exercised and performed by the president."

Howard G. Kelley has been connected with the Grand Trunk System since October 1, 1911, and president since September 1, 1917. He was born on January 12, 1858, at Philadelphia, Pa. He graduated from the Polytechnic College of Pennsylvania and began railroad work in 1881 as assistant engineer on location and construction of the Northern Pacific. In 1884 he left

that road and engaged for a time in [illegible]. Three years later he joined the St. Louis Southwestern as resident engineer and superintendent of bridges and buildings. Two years after he was made chief engineer. On March 1, 1898, he became consulting engineer of the St. Louis Southwestern and also chief engineer of the Minneapolis & St. Louis. On July 4, 1907, Mr. Kelley was appointed chief engineer of the Grand Trunk System and on October 1, 1911, was elected vice-president in charge of construction, operation and maintenance. On September 1, 1917, he was elected president of the Grand Trunk. He also became, at the same time, president of the Grand Trunk Pacific and chairman of the board of the Central Vermont. In May, 1920, Mr. Kelley became chairman of the committee of management for the co-ordination of the Grand Trunk Railway with the Canadian Government System.

W. D. Robb is the first native born Canadian to be called upon to occupy the chief executive office on the Grand Trunk Railway System. He is also the first chief executive of the Grand Trunk to have risen step by step, with unbroken service, from an apprenticeship in the company. Mr. Robb was born at Longueuil, Quebec, in 1857, his father having come to Canada from Scotland to join the Grand Trunk in its construction stage. He received his early education at Sherbrooke Academy and at St. Francis College, Richmond, Que. He began his career with the Grand Trunk in 1871 as an apprentice machinist. He was appointed night foreman at the Montreal shops in 1883, and was promoted to the position of foreman at Belleville in charge of the motive power and car department in the same year. In 1897, he was appointed master mechanic of the middle division with headquarters at London, Ont., and in 1901 was made acting superintendent of motive power at Montreal. Mr. Robb was promoted to the office of superintendent of motive power in 1902, a position which he occupied until his appointment in 1917 as vice-president in charge of motive power, car department and machinery. His jurisdiction was extended in 1918 to take in the operating, maintenance and construction departments of the system.

W. D. Robb

Operating

O. W. Stewart has been appointed acting trainmaster of the Chicago, Milwaukee & St. Paul, with headquarters at Red Wing, Minn., succeeding **F. M. Corbett**, transferred.

J. A. Shepherd, assistant to the general manager of the Kansas City, Mexico & Orient, has been appointed superintendent of car service with headquarters at Wichita, Kan.

W. D. Dilley, assistant superintendent of the Louisville, Cincinnati and Lexington division of the Louisville & Nashville with headquarters at Louisville, Ky., has been promoted to superintendent with the same headquarters, succeeding **C. W. Bradshaw**.

Traffic

W. C. Thorn, city passenger agent of the Great Northern with headquarters at St. Paul, has been promoted to district passenger agent with the same headquarters.

J. E. Roberts has been appointed freight claim agent of the Southern Pacific of Mexico with headquarters at Guaymas, Sonora, Mexico, succeeding **L. W. Mayhood**.

F. D. Wilson, traveling freight and passenger agent of the Union Pacific with headquarters at Reno, Nev., has been promoted to general agent with the same headquarters.

P. B. Miller has been appointed general agent of the Green Bay & Western; the Kewaunee, Green Bay & Western and the Ahnapee & Western, with headquarters at Seattle, Wash.

C. C. Treueb, city passenger agent of the Pennsylvania, with headquarters at Chicago, has been promoted to division passenger agent with headquarters at Detroit, Mich., effective September 1. **A. B. Smith**, district passenger representative with headquarters at Chicago, has been promoted to division freight agent with headquarters at Wheeling, West Va.

Mechanical

W. R. Meeder has been appointed master mechanic of the Missouri & North Arkansas with headquarters at Harrison, Ark., effective August 12, succeeding C. W. Bugbee, who has resigned.

F. W. Boardman, fuel supervisor of the Texas & Pacific with headquarters at Dallas, Tex., has been appointed general master mechanic with the same headquarters. He is succeeded by **L. E. Dix.**

H. Englebright, master car repairer of the Southern Pacific at West Oakland, Cal., has recently retired from active service after 52 years of continuous service with the same road. Born in New Bedford, Mass., June 10, 1852, Mr. Englebright was taken by his parents to California at the age of five when the gold mines were still the dominant industry in that state. He entered the service of the old California Pacific as a blacksmith apprentice in 1869 and worked at this trade at various points until 1892 when he was appointed roundhouse and car foreman at Fresno, Cal. He was appointed general car foreman at San Francisco in 1898 and master car repairer at Oakland, Cal., in 1900, which position he held continuously until his retirement after an interesting experience which has seen the linking of the west to the east by the first transcontinental line, the development of motive power from 35-ton to 225-ton engines and the introduction and subsequent universal use of the automatic air brake, of which device he has made a particular study.

H. Englebright

Engineering, Maintenance of Way and Signaling

E. B. Sloan has been appointed chief engineer of the Southern Pacific of Mexico with headquarters at Empalme, Sonora, Mexico, succeeding C. K. Bowen, resigned.

H. C. Phillips has been appointed valuation engineer of the Midland Valley, with headquarters at Chicago and Muskogee, Okla. **L. A. Hodgson** has been appointed assistant valuation engineer, with headquarters at Muskogee, Okla., effective August 9.

J. B. Pope has been appointed consulting valuation engineer of the Southern Pacific with headquarters at San Francisco, Cal. **G. E. B. Welles** has been appointed engineer of land valuation. **J. H. Baker** has been appointed assistant engineer of valuation.

E. M. Hastings, principal assistant engineer of the Richmond, Fredericksburg & Potomac, has been promoted to chief engineer with headquarters at Richmond, Va. **C. E. Dare** has been appointed engineer maintenance of way with headquarters at Alexandria, Va., effective August 15.

Purchasing and Stores

George Kefer, chief clerk in the purchasing department of the Long Island, has been appointed purchasing agent succeeding H. B. Hodges, retired. Effective September 1.

Harrison B. Hodges, purchasing agent for the Long Island at Jamaica, N. Y., who will retire on September 1 under the pension rules of the company, has been purchasing agent of this road for the past 25 years. He was born at Barre, Mass., on August 14, 1858, and after completing his grammar school education he attended the Boston Latin School and then specialized in the study of chemistry at the Universities of Leipsic, Heidelberg and Bonn in Germany. He also studied the engineering side of chemistry and building construction at Polytechnicum in Aix-la-Chapel. He was then for five years instructor in chemistry and German at the Harvard University. In 1886 Mr. Hodges began railway work as chemist and superintendent of tests on the Union Pacific, remaining with that road until 1892 when he went to the Baltimore & Ohio as engineer of tests. In 1895 he was appointed superintendent of tests on the Southern Railway and on January 1, 1897 he became purchasing agent of the Long Island Railroad.

H. B. Hodges

Obituary

George E. Simpson, general supervisor of transportation of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, whose death on August 16 was reported in the *Railway Age* of August 19, was born on May 25, 1847, at Concord, N. H. Upon completing his course of study in the public schools of that city, he entered railway service with the Chicago, Burlington & Quincy as ticket agent and operator, with headquarters at Buda, Ill. He was promoted to chief train dispatcher, with headquarters at Galesburg, Ill., and held this position until May 1, 1882, when he became superintendent of telegraph of the Chicago, Milwaukee & St. Paul, with headquarters at Milwaukee, Wis. On October 1, 1888, he was promoted to superintendent of transportation, with headquarters at Milwaukee and Chicago. February 1, 1913, he was made supervisor of transportation, with headquarters at Chicago, which position he held until the time of his death as noted above. Mr. Simpson was a member of the general committee on transportation of the American Railway Association and was also a member of the executive committee of the Western Demurrage & Storage Bureau.

G. E. Simpson

Roy L. Stall, assistant general passenger agent of the Pennsylvania with headquarters at Pittsburgh, Pa., died suddenly in that city on August 22. Mr. Stall was formerly stationed in New York as district passenger agent for several years.

H. G. Herbel, general attorney of the Missouri Pacific, with headquarters at St. Louis, Mo., died August 11 after a short illness.

W. A. Drake, assistant to the vice president of the Atchison, Topeka & Santa Fe, with headquarters at Prescott, Ariz., died August 19.

William Cross, formerly assistant to the second vice president of the Canadian Pacific, with headquarters at Winnipeg, Man., died at his home in that city on August 16. Mr. Cross was born in 1842 at Birkenhead, England, and entered the employ of the Canadian Pacific in 1863. From that date to 1882 he was consecutively journeyman and foreman of the erecting shops at Montreal. He was then promoted to master mechanic of the Eastern division where he remained until 1887 when he was transferred to the Western division. From April 1, 1900, to November 1, 1901, he was consulting mechanical engineer of the same division. On the latter date he was appointed engineer of tests and continued in this capacity until February, 1904, when he was promoted to assistant to the second vice president in charge of mechanical matters west of Ft. William, Ont. He retired on January 1, 1908.

Edwin Chamberlain, assistant engineer of the Philadelphia & Reading, died on August 15. Mr. Chamberlain was born in Philadelphia, Pa., on September 30, 1854. He was educated in the public schools of Philadelphia, the Lackawanna School, Scranton, Pa., and entered the scientific department of Lafayette College, Easton, Pa., in the class of 1880. In the fall of that year he entered the service of the Philadelphia & Reading, engineering department, and in March, 1883, he was appointed division road master at Reading, Pa., subsequently serving as division engineer until 1886. He was then transferred to the Philadelphia division where he remained until January, 1887, when he was transferred to the chief engineer's office and made surveys for the extension to Bound Brook, N. J. In 1888 he left railroad work but the following year returned in charge of location and construction work of various extensions of the Reading. In 1892 and 1893 he was engaged upon surveys and report for an electric railroad between Trenton and Paterson, N. J., and between Raritan and New Brunswick, also reconnaissance and report for a steam road between Mahaffey and the Youghiogheny river in Indiana and Westmoreland counties, Pa. He subsequently served as city engineer at Reading, Pa., and from 1897 to 1898 was engaged on the enlargement and improvement of the water supply of the City of Binghamton, N. Y. He returned to the Reading in December, 1899, making surveys for the Reading Belt Railroad, and had charge of the construction work. From 1902 to 1904 he had charge of the construction of the Norristown Connecting Railroad, including the bridging of the Schuylkill river at Norristown, and then for two years was in charge of the construction of the New York Short Line between Cheltenham and Neshaminy Falls, Pa., together with the relocation and double-tracking of the Philadelphia, Newtown & New York between Olney and Cheltenham. From 1906 to the time of his death he was engaged in the elimination of grade crossings in Philadelphia.

E. Chamberlain

Frederick G. Sherman, superintendent of telegraph of the Central of New Jersey, with headquarters at Jersey City, N. J., died on August 20 at his summer home in Pulaski, N. Y.

Some Things That Must Be Done

THE RAILROADS and the public are approaching a transportation crisis. This is chiefly due to the general resumption of bituminous coal mining after a general suspension of it for almost five months. The railway shop employees' strike will make the problem presented more difficult to solve but it would be difficult without any railway strike.

The railways apparently will be called upon to move as much or more traffic as ever before, and under very unfavorable conditions. If the strike in the anthracite mines continues they will have added to their other embarrassments the necessity of supplying with bituminous coal the eastern territory which is accustomed to using anthracite. This will complicate the situation by making it necessary to move a large volume of coal over new routes.

If the public interest is to be adequately served there must be the closest and heartiest co-operation between the railways themselves and between them and shippers and consignees. The available facilities of each individual railway must be used with the utmost efficiency, and through proper co-ordination of effort the greatest possible results must be secured with their facilities as a whole.

The solution of the problem will require that certain specific things be done. Any railways, shipper or consignee that does not do all of these things that it or he can do will assume the responsibility of interefering with efforts to deal effectively with a situation which concerns the welfare of all.

1. Every effort must be made to move without delays perishable products and foodstuffs which would deteriorate and be partially or wholly lost if prompt and sufficient transportation were not afforded them.

2. Fuel must be moved to the maximum capacity of the railways.

Service Order No. 23 of the Interstate Commerce Commission fully authorizes preferred movement for these commodities and no valid excuse could be offered for not giving them such movement. If it is necessary for any railway, in order to handle all the perishables and fuel offered to it, to divert traffic to other lines, this should unhesitatingly be done. It would be a crime against the welfare of the railroads and the American people for any railroad to allow the movement of perishables and fuel to be interfered with by attempts on its part to handle traffic which it could not handle satisfactorily and which neighboring lines could handle satisfactorily.

3. Refrigerator and coal cars should be unloaded promptly regardless of expense and regardless of the free time allowed by demurrage rules. For a consignee under present conditions to delay the unloading of cars merely because he has the legal right to do so under the published tariffs would be a crime against the public welfare.

4. The railroads should move cars promptly after they are unloaded, especially refrigerator and coal cars. They should do this to afford proof to shippers and consignees that they are making every effort to utilize equipment with the greatest efficiency. For a railway to prevail upon a shipper to unload a car promptly and then allow it to stand around for twenty-four or thirty-six hours or even longer, as often has been done in the past in periods of heavy business, would afford very persuasive evidence to shippers and consignees that the railways were not doing their best.

5. Empty cars, no matter where they are, should be moved as promptly as loaded cars. Unless this is done the maximum possible use cannot be obtained from all the serviceable cars available.

6. Cars should be loaded to their maximum capacity in disregard of prescribed carload minimums and trade customs. Under present conditions the necessity of utilizing the full capacity of every serviceable car is too obvious for discussion.

7. Individual railroads should refuse to allow their lines, yards and terminals to become burdened with more cars, whether loaded on their own lines or received from connections, than they can keep moving satisfactorily. Study of the freight car statistics of individual railroads in past periods of heavy freight movement demonstrates one fact beyond question. This is that in every such period some railways have allowed to accumulate on their tracks more cars than they could keep moving. Congestion has resulted and the number of ton-miles of freight movement secured by these railroads has been reduced far below the maximum they could have secured if they had not let so many cars accumulate on their lines. The managements of many railways have been seriously at fault because they have not had the intelligence or the courage, after they have begun to get more cars on their lines than they could keep moving, to refuse to load more cars or to receive more from connections until they could get existing congestions cleared away. Past experience demonstrates that times come when the most efficient utilization of cars demands that individual railways shall refuse to attempt the impossible task of trying to handle more cars than they have locomotives, tracks and yards for handling.

8. The railroads as a whole, and every individual railway, should adopt means of keeping the public as a whole and the public along their own lines reasonably well in-

formed as to their situation from week to week, and even from day to day. If the shipper understands that a railroad actually is handling as much freight as it ever did before, or that it is making reasonable progress with its repairs to equipment, he will be less inclined to find fault or to go to governmental agencies to secure explanations or the correction of seeming deficiencies. A great many complaints about railroad service go to the Interstate Commerce Commission and state regulating bodies which would never go there if local railroad officers and agents were furnished sufficient information and instructed to give that information to railway patrons. This is a work in which the traffic departments of the railways could well specialize during the next few weeks or months.

Farmers and business men are greatly disturbed about present and prospective transportation conditions. We think they exaggerate the extent to which the shop employees' strike is interfering, or will interfere, with the handling of traffic, but whether this is the case remains to be seen. If the railways should fail to do the very best they can under the prevailing conditions, or fail to secure the utmost co-operation from shippers and consignees, the results might be very serious to both the railways and the public. On the other hand, if, in spite of all the adverse conditions, the railways should succeed in handling satisfactorily the enormous business that is coming, it would be a triumph for them which would confer such great benefits on the public that it could not fail to win the public's gratitude and appreciation.

The situation has its dangers, but it affords a great opportunity. Let no ground be given for the charge that in this emergency the railroads "broke down!"

Poor Tools Always a Handicap

Railroad shops have always been more or less handicapped by machine tool equipment, inadequate as to amount, power, or time-saving features of operation. This lack of modern machine tools is felt with unusual keenness at the present time because the striking shop men, familiar through long experience with the limitations of the old equipment, could get results of a kind, whereas the new men are still in the process of learning these conditions and cannot, therefore, be expected to get the same production. This point is well illustrated by the case of a certain large planer which has been in railroad shop service many years and developed a decided tendency to plane taper. In short work the taper is hardly noticeable but in planing work six feet long, for example, there is a taper of at least $\frac{1}{8}$ in. The machinist who, previous to the strike, operated this planer for many years was accustomed to make allowance for the taper-cutting tendency of the machine by shimming up the work at one end an amount equivalent to $\frac{1}{8}$ in. in six feet. The amount of time lost in this shimming process and taking trial cuts can be readily imagined, and when finally done the work was probably less accurate than if performed on a modern planer. Obviously, an operator unfamiliar with the vagaries of the old planer would find it difficult, if not impossible to do accurate planing and it would not be strange if important work was occasionally spoiled. Is there any excuse for the continued use of railroad shop machine tools of which the operators must learn the individual peculiarities before they can produce even moderately accurate work? Railroad mechanical officers are confronted by many pressing problems and not the least of these is the necessity of procuring modern shop machinery to replace some of the present equipment which is fit only for the scrap pile.

An Incentive for Fuel Economy

The settlement of the coal strike makes it certain that the price of coal will remain high for some time. This is an unpleasant fact, but one which cannot be ignored. The higher the price of fuel, the more the railroads can afford to spend to save it. The prospects of shortage should lead every road to attack the problem of fuel economy with renewed energy. Of course, railroad officers have many other things on their minds just at this time, but unless the matter is given attention now it is likely to be overlooked. An effective system of supervision to promote economy in the use of fuel should be organized if it does not already exist. Many of the employees will feel the need of fuel in their households this winter. Could there be any more opportune time for arousing interest in fuel saving? Equipment too should not be overlooked. Even if the shops cannot now apply betterments that would reduce fuel consumption, a definite program should be laid out which can be put into effect without delay when shop conditions return to normal.

Money Saved by Using Form 19

One way to save coal is to avoid unnecessary stops of heavy freight trains; and E. W. Weston's report of saving 500 tons a day in this way, on the Northern Pacific, is just as good a lesson today as it was when printed in the *Railway Age* February 18, 1922, page 418. It ought today to be a better lesson than it was then, for our relish for lessons in coal saving is much keener. There is another reason for avoiding stops, namely, to get the merchandise in the cars to its consignees in quicker time, and to avoid detaining passenger trains and other freight trains. The only thing that was done on the Northern Pacific to accomplish the remarkable saving in money and improvement in service was to abolish the rule requiring trains to stop for conductors to go into the station office to endorse train orders, which orders could be delivered just as well to a train in motion. Five unnecessary stops in each freight train trip was the estimate of what the use of Form 31 would cost on the Northern Pacific. The use of Form 19 for all train orders is recommended by a good number of good men. Using this means of speeding up your freight trains may save you $10,000 in freight revenue between now and next Christmas, saying nothing of coal.

Business As Usual

Strikes, a war, government operation, an industrial depression and more strikes have made the life of the railroad man a case of "one damned thing after another" for such a long time that it is almost accepted as the normal condition. However, it serves to place some men in the state of mind where they feel that they must devote all of their waking hours to emergency or routine duties and that they cannot spare time for retrospect, study or any other considerations designed for

the improvement or advancement of either their individual capabilities or those of the properties which employ them. It is this attitude which raises the recurring question as to the wisdom or propriety of holding the annual conventions of the established associations of railway officers and as a direct result of this feeling certain of the conventions have been abandoned in the last six or seven years. So also at present there is a tendency in some quarters to assume a weak-kneed attitude with respect to the two coming conventions of maintenance of way officers, namely those of the roadmaster's and the Bridge and Building associations, notwithstanding the fact that neither of these organizations has missed an annual meeting since it was organized. It is true that all efforts at the settlement of the shop strike have been abandoned, but this does not present a situation on the railroads that is more critical than many others which have obtained coincident with previous meetings of these associations of supervisory maintenance officers. Nevertheless, some of the members of these associations may have a feeling that they would be remiss in their duty to the properties if they should absent themselves for the purpose of attending these meetings. It is therefore incumbent on the higher officers to take such steps as are necessary to insure that no misunderstanding exists with respect to the attitude of the managements concerning the matter of participation in the conventions.

220 Locomotives in August

The month of August does not usually supply any considerable amount of equipment buying. There seems to be a tendency for the big orders to be placed in the spring or fall months. Why this should be is a question; but that it is the case is nevertheless true. August this year proved to be no exception as concerned car orders, but it was very much of an exception in the case of locomotive orders. The orders reported for the month totaled 220 locomotives, 576 freight cars and 22 passenger cars. The 220 locomotives made the month the best so far this year with two exceptions—April and July—and they brought the year's total of locomotive orders in the first eight months of the year to 1,055. This figure is far from breaking any records but considering how slowly locomotive buying picked up earlier in the year it is not bad. It is unfortunate that freight car orders were not forthcoming in greater volume; we shall hope for better results in September. The equipment orders for August and for the eight months including August are tabulated as follows:

Car and Locomotive Orders

	Locomotives	Freight cars	Passenger cars
January	5	7,960	235
February	8	14,721	160
March	76	5,550	25
April	272	30,507	540
May	99	18,337	235
June	22	11,097	37
July	353	15,675	120
August	220	576	22
Total 8 months	1,055	104,423	1,374

The locomotive orders in August included large purchases by a number of important companies. Among the leading items were: Baltimore & Ohio, 15 Pacific; Erie, 30 Mikado; Union Pacific, 55 Mountain, 10 Mallet and 15 Santa Fe; Louisville & Nashville, 30 Mikado, and Missouri, Kansas & Texas, 40 Mikado and 5 Pacific type locomotives. There are a number of important locomotive inquiries still pending.

One Way To Raise Wages

Wages in terms of money is one thing; *real* wages in terms of the necessities, conveniences and luxuries which may by purchased by them is quite another. As the *Railway Age* has repeatedly said, production in this country today—and it is true to a much greater extent in most other countries—is inadequate; so inadequate, indeed, that many people are forced to live at a standard so low that they are restricted to the bare necessities of life. To prove this it is only necessary to take the figure for total production in this country for any one year and after subtracting from it the cost of carrying on the government, a reasonable allowance for the expansion and development of new industries, and a sufficient amount to maintain educational and the cultural interests, to divide the remainder by the number of families in the country. The resulting figure, considering that the products are not evenly distributed, indicates that many families are living at an extremely low standard. This is against the best interests of the community and of the individuals in it.

It is in the interests of all of us that workers should have sufficient means and leisure time to improve themselves to a standard which will at least make them good citizens. Superficial thinkers advocate raising wages to bring this about. It is true, of course, that this may temporarily help any one class that may be given an increase in wages, but, how about those who do not receive an increase? Mere raising of wages does not insure any greater production; in fact, ofttimes it is accompanied by a decrease in production. If the raising of wages does not result in increased production, then the fact still remains that enough goods are not being produced to provide a reasonable amount for all of the people and those on the lower scale must still suffer, even though there may have been a general increase in wages and these classes may have participated in the same ratio as the others.

If raising wages will not supply the remedy, what will? Waste and lost motion must be eliminated from industry to as great an extent as possible, and the employees must be led to an appreciation of putting forth their best efforts to increase production. This will in effect increase the *real* wages, regardless of the money wages, and make it possible to raise the standards of living.

Strikes—attempting to settle things by force—are frequently resorted to by the workers, but they are a prolific source of loss of production and are tremendously costly to all concerned, including the innocent by-stander. They may have been quite necessary in the past to awaken communities to abuses and to bring about better standards in industries, but surely the time has come when the average of intelligence in this country is such that better ways of settling disputes may be found—must be found, indeed, for strikes border too closely upon anarchy for this day and age.

The Journal of Commerce (New York) has suggested that "What we really need in all our industries and especially in the public utilities, is a baptism of understanding of economics, a better realization of the natural law which governs business enterprises." This is all very true and sounds simple enough. As a matter of fact, however, the problem of getting all of the executives and workers to understand the simple economics underlying the industrial situation, and then to conduct themselves accordingly—for their own sakes as well as in the interests of the community at large—is stupendous and has many serious complications. It cannot be worked out in a day or in a generation. It must be worked out, however, even though the progress may be slow, if we are not to invite the same sort of disaster that has taken place in other countries where these fundamental truths have been misunderstood or disregarded.

The development and efficient operation of the railroads

is vital to the welfare of the country. The item of labor is a larger factor in transportation than in most other industries. The problem of supervision is far more difficult than in other industries because of the great variety of classes of workers involved and the fact that they are spread over comparatively vast territories. Because the human element is so important in this great industry, which is so necessary to the continued prosperity of the country, it is exceedingly important that all of the employees—from the chief executives to the laborers and apprentices—should appreciate their full responsibilities as workers and as citizens, and function with the greatest possible efficiency.

What is the quickest and shortest way in which this may be accomplished? Unfortunately there are no short cuts which will give permanent results, although there are some things which because of their importance may be given precedence in working out the problem.

One thing is vital, and that is, that the managements become fully awakened to the necessities of studying the personnel and directing it according to the best thought and the best modern practices. Some industries in this country and abroad have gone a long way in blazing a trail in the right direction. Unfortunately many of the railroad managements —most of them in fact—have been so hounded with problems of regulation and legislation, finance, etc., that they have to a large degree overlooked the vital importance of giving special attention to this larger question of personnel. If the managements can first be fully awakened to the importance of this question and then will install strong personnel departments which will report direct to the chief executive, and see that the best thought and methods which have been developed in other industries are adapted and applied to the railroads, then we shall have gone a long way toward final solution of the problem.

Equipment Acquired and Retired in 15 Years

WITH THE RAILWAYS apparently about to be called upon to handle the heaviest traffic in their history it is highly pertinent to consider how much the equipment they have in service has been increasing within recent years as compared with earlier years. Because of the shop employees' strike much is being said now about the condition of the equipment they have. There is no question that there are excessive numbers of locomotives and cars in bad order. This was true before the shop employees' strike began, and of course the amount of bad order equipment has increased since then. The large amounts of bad order equipment when the strike began were due to the fact that for a long time previously the earnings of most railways had been so small relatively to their operating expenses that they had to retrench sharply in every way possible, including the repairs to equipment.

But the difficulty the railroads apparently are going to have in handling all the traffic offered them is only partly due to the excessive amount of equipment in bad condition. It is going to be much more largely due to the relatively small increases that have been made for several years in the numbers of locomotives and cars in service. Some statistics which have just been compiled by the Bureau of Railway Economics from the records of the Interstate Commerce Commission, showing the numbers of new locomotives and cars put into service and the numbers retired from service during each of the last 15½ years, strikingly indicate how much the increase in the amount of equipment has declined since the policy of restrictive regulation of railways was put into effect by the federal and state government 16 years ago.

For purposes of comparison we have divided the statistics regarding the equipment acquired and retired during the last 14½ years into those for two almost equal periods. One of these is the period of seven years, 1908-1914, inclusive; the other the period embracing the years ended June 30, 1915, to December 31, 1921, inclusive, making 7½ years. The accompanying table gives the statistics regarding the equipment installed and retired during these two periods. The figures show that the numbers of locomotives, passenger train cars and freight cars retired in the two periods did not differ widely, although the numbers of each class of equipment retired in the second period was less than in the first period. There were, however, heavy declines in the amount of equipment in service in the second period as compared with the first period. These were, of course, entirely due to the fact that there were very heavy declines in the numbers of new locomotives, passenger train cars and freight cars put in service in the second period as compared with the first period.

The net results were as follows:

In the seven years ended in 1914 the number of new locomotives put in service exceeded the number retired by 10,579, while in the period of 7½ years ended with 1921 the number

EQUIPMENT INSTALLED AND RETIRED DURING THE PERIOD JULY 1, 1907, TO DECEMBER 31, 1921

I Increase. D Decrease

* Obtained by taking one-half of returns reported for the year ended December 31, 1916.

SOURCE: For years 1908 to 1920 from summaries of the Interstate Commerce Commission. Data for the year 1921 compiled from annual reports of the railways to the Interstate Commerce Commission.

of locomotives put in service exceeded the number retired by only 1,912. In the first period the net increase in the number of passenger cars in service was 9,517 and in the second period only 2,229. In the first period the net increase in the number of freight cars in service was 548,902, while in the second period it was only 41,097.

When statistics showing this same general tendency have been cited in the past it has frequently been answered that while the increase in the numbers of locomotives and cars within recent years have been smaller than formerly, the average power of the locomotives and the average capacity of the cars put in service have been greater than formerly. The fact is, however, that the average tractive power of locomotives and the average capacity of freight cars were increasing as fast in proportion in the seven years ending with 1914 as in the seven years ending with 1921. Therefore, these statistics regarding the relative increases in the numbers of cars and locomotives reflect with approximate accuracy the relative increases in the total tractive power of locomotives and the total capacity of cars.

The railways in 1916, after a period of depression, were called upon to handle a vastly increased business. They had with which to handle this business about 6,300 more locomotives and about 201,000 more freight cars than they had five years before. The railways in 1922, after another period of depression, are again called upon to handle a greatly increased business. At the beginning of the present year, however, they had only 3,500 more locomotives and only about 57,000 more freight cars than they had five years before. The development of the railways already had seriously slowed down before the big increase in business came in 1916. In consequence, in spite of the increase in facilities which had occurred in preceding years, they found it extremely difficult in the years from 1916 to 1920 to handle all the business offered to them. But the decline in their development has been much greater since 1916 than in the years immediately preceding 1916.

In view of the large amount of equipment now in bad order and of the relatively very small net increase in the amount of equipment in existence which has occurred within recent years it is plain that if the increase in traffic now coming is to be anywhere near as large as that which began in the latter part of 1915 the railways will find it extremely difficult, if not actually impossible, to cope with it. If this should prove to be the case it will be futile, and worse than futile, to attribute it entirely, or even mainly, to the relatively large amount of equipment now in bad order. The situation with respect to bad order equipment can and probably will be remedied in a comparatively short time. Remedying the serious deficiency of equipment actually in existence will present a much more difficult and important problem. It is but a part of a proportionately great deficiency of facilities of all kinds, including main tracks, sidings, yards, terminals, shops, stations, and so on. This larger problem can be solved only by allowing the railways as a whole to earn net returns over a period of years sufficient to enable them to raise very large amounts of new capital.

The problem presented by the excessive amount of bad order equipment undoubtedly will be solved within a comparatively short time, although probably not in time to prevent its existence causing a great deal of trouble during the rest of the year 1922. The problem presented by the necessity for a very large increase of railway equipment and facilities of all kinds cannot and will not be solved this year, and will not be solved for years to come, unless the policy of regulation followed in future is very different from that which has been followed during the 15 years in which has occurred the decline in the expansion of the railways reflected by the statistics regarding the equipment put in service and retired that are presented herewith.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

A Good Suggestion

Hailevville, Okla.

To the Editor:

In sorting out an accumulation of *Railway Ages* a few days ago it occurred to me that those which I did not care to file away would make good reading for the track and bridge foreman and laborers along the railroad. On this division there are about 50 gangs, so I bundled up three copies in each package and marked them for the foremen at the different places.

The average foreman is desirous of improving his education in railway work and there is no better information to be found than in the pages of the *Railway Age*. Some of these men are in isolated places, housed in box cars and do not have an opportunity to secure such reading matter. I do not know what disposition the superintendents make of their *Railway Ages*, but I believe it would be a good plan if, after they have served their purpose, they would pass them along to others who do not have the opportunity to read such a valuable periodical on railway work.

J. L. Coss,
Train Dispatcher, Rock Island Lines.

Looking Forward—With Results

Philadelphia, Pa.

To the Editor:

To study human nature and to improve himself in the details of disciplining his subordinates are primary duties of a railroad superintendent; if he is not fairly competent in these features he is not a good superintendent. The injunction to energetic progress in this direction is, I take it, the salient point in your editorial of August 26 on "Looking Ahead." Looking ahead is all right for an editor; it is his duty to look, and to proclaim what he sees. But it is the duty of the railroad officer to *move* ahead; to do something. An operating officer is a commander of ranks of men who are moving ahead, whether he will or no; if he does not direct them in the right way they will progress in some other way. To wait to see which way the rank and file desire to be led is fatal. The politician may pursue this policy, but the business man or the engineer cannot. I am reminded of a word of Dwight L. Moody, the great evangelist of the last century. He was equal to a major general as a commander and leader. Being told by church officers that for two years they had been aiming to accomplish a certain object, he said, "Isn't it about time you fired?"

Isn't it about time that the superintendents and foremen to whom you are preaching took pencil in hand and, as they look ahead, put down on paper what they see—and what they are going to do about it? One can look too far ahead. It may be a salutary exercise to set the first day of next month as the time to put into actual practice some good resolve that thus far has been only a vague intention. Bismarck, another great general of the 19th century, said that he was able to decide great questions, because he had to. He did not ascribe his success to genius. The time came when he was forced

to reach a decision, and he decided. An important duty of a general manager may be to force his subordinates to bring certain perplexities to a head at a definite time.

I write from the standpoint of a representative of the people. In conducting inquiries into railroad practices, there is a constant dampener in the almost universal plaint of railroad officers that their plans for future improvement are delayed by all sorts of obstacles, which they profess to deplore but which they do not seem to combat with any reasonable vigor. The proper function of a railroad commissioner is not to drive the railroad manager, but to arouse him (where he is lazy or neglectful) to drive himself. As I read your little lecture I queried whether you were not directing your readers' eyes too far into the future. Please tell them some specific thing to do right now! For example, that trainmaster or locomotive foreman who, for a year, has shown that he is never going to be a strong man, and whose conduct and policies have given frequent evidence of a softness which will forever postpone decided success—what is going to be done about him? If he is going to be asked to resign, or if he must be transferred to some other position—*When will action be taken?*

One who investigates railroad practice from the outside finds himself very often in contact with officers who seem to have studied human nature and who know what good discipline requires, but whose arm that ought to put good discipline in force, with a human touch, seems to be partly paralyzed. Please, Mr. Editor, go out among your readers and find out what answer they are making to the express or implied criticisms in your editorial.

COMMISSIONER.

A Lawyer's Reflections on the Recapture Clause

NEW YORK.

TO THE EDITOR:

Your Washington correspondent in a recent issue (*Railway Age*, July 15, page 106) speculated interestingly as to the recapture basis under the Transportation Act, 1920. It was suggested that the 6 per cent provision of clause 6 of Section 15-a of the Interstate Commerce Act may be held to be subject to fluctuation; that changes in the "fair return" may reduce or increase this 6 per cent. It was suggested that the recent fixing of the fair return at 5¾ per cent could conceivably operate to reduce the 6 per cent in clause 6 to 5¾ per cent; but reasons were advanced for a contrary holding.

No lawyer's opinion can settle this problem. It will doubtless get judicial interpretation in the course of time. But a lawyer's reflections may be of interest to some of your readers.

1. By ordinary canons of statutory interpretation, clause 6 would be read by itself. The 6 per cent is there expressed as a flat rate. No relationship between it and the "fair return" is implied. The figure 6 stands squarely on its own base as a fixed unchangeable integer.

2. Your correspondent hints that clause 5 (which provides that income "*so* in excess of a fair return" shall be held in trust for the United States) might subject to recapture one half of the income in excess of a fair return, rather than that in excess of 6 per cent. While the word "so" may lend momentary support to that theorem, the proposition would seem to fall when it is remembered that the thing to be held in trust is "*such part* of the excess, *as hereinafter prescribed*." "Such part" must be, or ought to be, one-half of the excess not only above a fair return but also above 6 per cent, as prescribed by clause 6, immediately following.

3. His reference to the second sentence of clause 9 discloses a real difficulty in statutory construction. A court would be in duty bound to give clause 9 some meaning, if at all possible. If excess income be based on a flat 6 per cent, then there would need to be no computation or adjustment to determine excess income in a year in which the "fair return" had been changed. It seems difficult to give this sentence any rational meaning. It would be, under ordinary circumstances, an unwarrantable extension of the court's power to interpret statutes for a court to hold that this sentence in clause 9 turned the fixed figure "6 per cent" in clause 6 into a flexible fluctuating figure. I must confess my present inability to make any reasonable disposition (except by my paragraph 5, below) of that portion of the second sentence of clause 9 which relates to calendar years subsequent to 1920. It looks as if the legislative mind had thought that there would have to be a new computation of excess income whenever the fair return was changed; but it was in error in so thinking where the fair return is reduced below 6 per cent.

4. Your correspondent states that "the commission has as yet made no ruling, etc." Categorically, this is accurate. Inferentially, however, a ruling has been postulated in "Reduced Rates, 1922" (No. 13,293, decided May 16, 1922, at page 682), the commission saying:

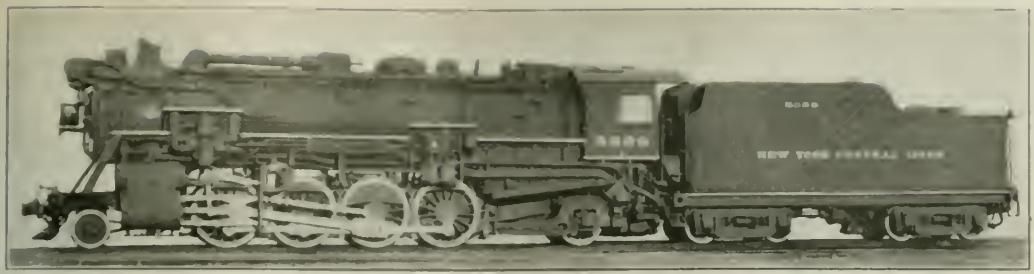
> "Paragraph (6) of section 15a provides for the disposition of net railway operating income *in excess of 6 per cent.* . . . . . One-half of the excess goes into a reserve fund" etc.

Here, at least, the commission did not intimate that the recapture basis is flexible

5. One would be deficient in a sense of humor not to mention another possible area of speculation, viz.: Suppose that the commission should fix the fair return at 8 per cent (or any rate in excess of 6 per cent). Would the recapture still be one-half of the excess over 6 per cent? Logically, would it not have to be so, on the grounds above discussed? Perhaps. But it might equally well be argued that, reverting to clause 5, the thing held in trust for the United States is that "in excess of a fair return;" and that "such excess" in clause 6 means the excess above a fair return (clause 5) no less than it means the excess above 6 per cent (clause 6). In other words, the 6 per cent is, for recapture purposes, a minimum but not a maximum. If the fair return is fixed at 6 per cent or less, recapture relates to excess above 6 per cent; but if the fair return is fixed *above* 6 per cent, the carrier must get its full fair return before the recapture provisions come into play. This branch of the discussion is doubtless academic: nothing but another world war or other universal calamity would be likely to lead the commission to entertain consideration of a fair return exceeding 6 per cent.

ROBERTS WALKER.

CROSSING CROSSINGS INCAUTIOUSLY continues to be a popular amusement. The Pennsylvania Railroad has just completed another check upon automobile drivers at selected crossings in Pennsylvania, New York, Delaware, Maryland, and Virginia, noting the circumstances of 831 cases of gross negligence. At one crossing, during a period of 17 hours, 73 cars, bearing license tags from five different states, averaged 37 miles an hour when running across the railroad tracks and in two instances they were making almost a mile a minute. At another crossing nineteen new and inexperienced drivers were observed; fifteen tried to "beat" other automobiles across the railroad tracks and one car was driven 25 miles an hour in the dark without lights. It was not possible to tell how many cars had defective brakes, but four recent accidents at crossings on the Pennsylvania were ascertained to be due to this cause.



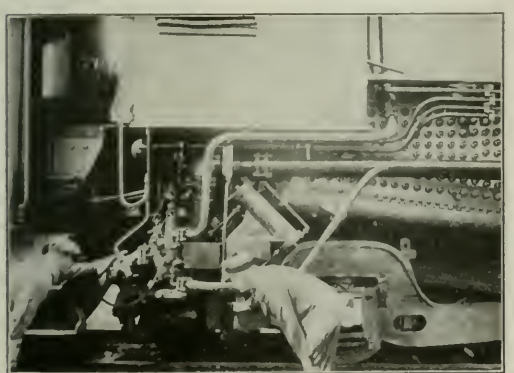
Left Side View of Michigan Central No. 8000

Michigan Central Mikado Has Many Special Features

Modern Appliances Co-ordinated to Give Maximum Efficiency—Refinements in Design to Reduce Weight

Few locomotives built in recent years have created as much interest as the special Mikado type, No. 8000, built for the Michigan Central by the Lima Locomotive Works, which was described briefly in the *Railway Age* of July 22, 1922, page 171. Further details including drawings, have now been made available.

As outlined in the earlier article, the object of the design was to provide the maximum hauling capacity with the minimum fuel consumption and without exceeding the allowable limit of weight. The Michigan Central was already using a very well designed Mikado, designated as type H17E, and the problem of effecting a marked improvement over the performance of this locomotive was a difficult one. That a satisfactory solution was found is indicated in Table I.



Rear of Locomotive, Showing Stoker, Booster and Grate Shaker

It will be noted that with an increase of 1.8 per cent in total weight, the maximum tractive force without the booster has been increased 7.6 per cent and with the booster, 26.3 per cent. The weight per cylinder horsepower, based on Cole's method, has been decreased 5.1 per cent. This does not take into account the improvement in performance due to the feedwater heater, high degree superheat and the operation of auxiliaries with superheated steam. The estimated performance curve shows a maximum of 3,070 cylinder horsepower, an increase of 17.0 per cent and a decrease of 12.8 per cent in weight per cylinder horsepower.

The figure for the boiler horsepower of No. 8000 by Cole's method is an approximation because only incomplete data are available regarding the evaporation from 3¼-in. boiler tubes. The figures are given to afford a comparison of the two boilers on the basis of a steam consumption of 20.8 lb. per horsepower hour. While any prediction of the water rate for this locomotive is subject to error, 18 lb. per horsepower hour does not seem too low. At this rate the estimated boiler output would be 3,160 hp. and since the feedwater heater increases the steaming capacity, the evaporation should be fully up to the cylinder requirements.

TABLE I—COMPARATIVE DATA FOR CLASS H17E AND NO. 8000

	Class H17E	No. 8,000	Increase Per Cent
Weight on drivers, lb.	246,000	245,500	0.2*
Total weight, lb.	328,000	334,000	1.8
Cylinders, diameter and stroke	27 in. by 30 in.	28 in. by 30 in.	...
Tractive effort without booster, lb.	59,000	63,500	7.6
Tractive effort with booster, lb.	.....	74,500	26.3
Cylinder horsepower, maximum (Cole)	2,624	2,824	7.6
Weight per cylinder horsepower (Cole), lb.	125	118	5.1*
Cylinder horsepower, maximum, estimated from performance curve	.....	3,070	17.0
Weight per cylinder horsepower, estimated lb.	.....	109	12.8*
Boiler horsepower, maximum (Cole)	2,420	2,735	13.0
Weight per boiler horsepower (Cole)	135	122	9.6*

*Decrease.

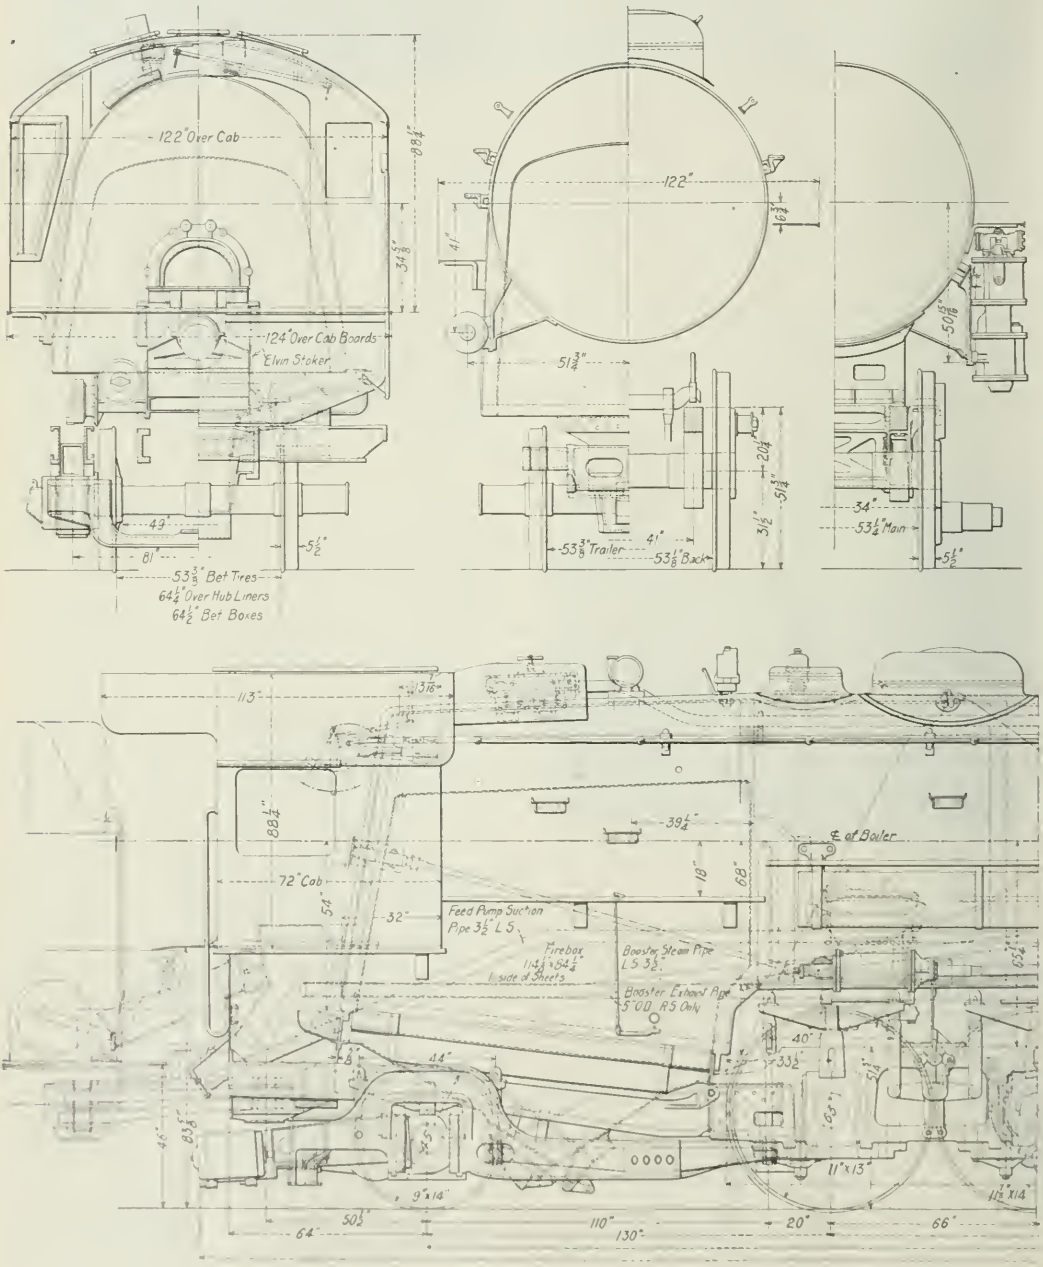
Another primary consideration in the design of No. 8000 was fuel economy, not necessarily the burning of less fuel than previous locomotives, but the ability to obtain greater drawbar output for the fuel consumed. This object was attained by incorporating into the design well-known fuel-saving devices properly proportioned with respect to the locomotive and its appliances to give the best results.

The Superheater Company's type *E* superheater is used and provides steam for all auxiliaries as well as the cylinders. This design of superheater permits of using but one size of tube and the entire boiler is equipped with 3½-in. tubes. A large proportion of these tubes contain superheater units and the steam is raised to a higher temperature than is obtained from the usual type *A* superheater. The design also provides a greater total steam area through the units than the type *A* and at the same time permits of greater gas area through the tubes. In view of this greater gas area, more heat is absorbed from the gases before they pass into the smokebox and consequently there is a better boiler and superheater performance and less heat is lost through the stack. The damper usually found in the type *A* superheater has been omitted because the throttle is ahead of the superheater and protection to the units is afforded by the flow of steam through them for the blower and the other auxiliary apparatus when the main engine is shut off. A removable

plate is applied to the smokebox over the superheater header to facilitate the tightening of joints when assembling the superheater. The Superheater Company's feedwater heater is applied which utilizes a portion of the exhaust steam to heat the feedwater from tank temperature to about 225 deg. F., the condensate being returned to the tender.

The firebox is supplied with coal by an Elvin stoker and is equipped with the American Arch Company's type *P* double firebrick arch, consisting of two sets of refractory brick supported on two horizontal rows of arch tubes, each comprising four 3½-in. tubes. This design of firebrick arch is new. Its purpose is not only to ensure complete combustion, but to improve water circulation in the boiler, the chief object of the double rows of arch tubes.

Additional economy of steam is secured by the use of superheated steam in the auxiliaries, including the air com-

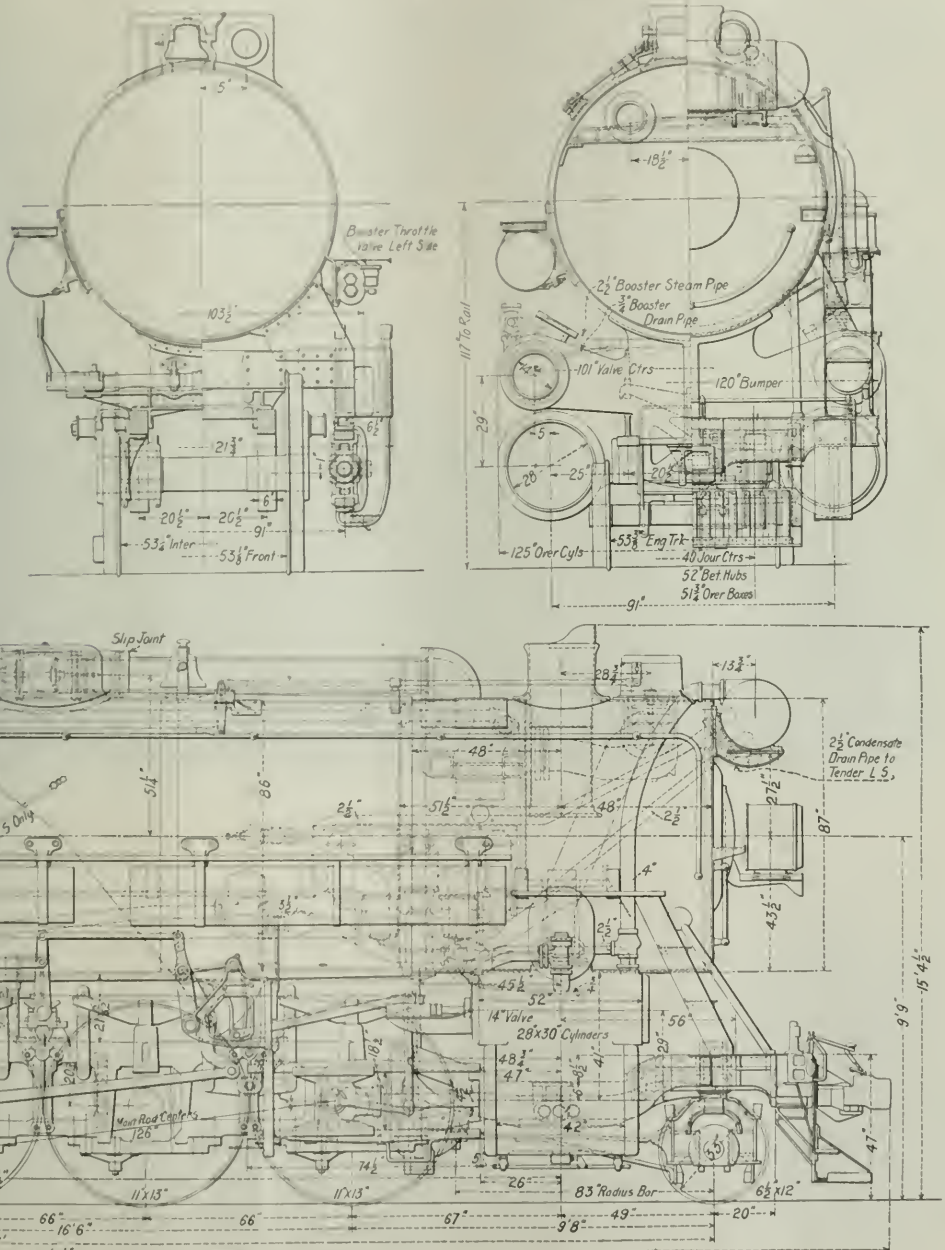


Side Elevation and Sections of

pressor, feedwater pump, blower, turbo-generator, stoker and locomotive booster. These accessories at times use more than 25 per cent of the steam from the boiler. The consumption per unit of work done is quite high and the saving by superheating the steam should be relatively large.

Reduction of Weight and Dynamic Augment

Careful attention was given to all the details of design to eliminate every pound of unnecessary weight. Little opportunity for reduction was found in the boiler or frames, but surprising savings were made in some of the minor details. For example, by refinement in design, the foundation brake rigging was cut down 1,800 lbs. without sacrificing strength. The use of magnesia lagging saved several hundred pounds. One of the reasons for the selection of the Elvin stoker was its relatively light weight.



Michigan Central Mikado Locomotive

To keep down the weight of the locomotive, the axles and main crank-pins were made hollow and Lima special quality steel, which is a chrome-vanadium steel heat treated by annealing, was used in main and side rods. Great care was also exercised in the design of the reciprocating parts so that not only was a saving made in the static weights, but it was also possible to reduce the dynamic augment, or pressure at the rail due to excess counterbalance. Table II indicates the relative dynamic augment of Class H7E, and No. 8000 at operating speeds of 30, 40 and 50 miles per hour. The reduction of 52 per cent in the maximum dynamic augment shows the advantage of the high-quality steel used in the running gear.

Table II—Dynamic Augment of Class H7E and No. 8000

	30 m.p.h.		40 m.p.h.		50 m.p.h.		Decrease,
Wheels	H7E	8000	H7E	8000	H7E	8000	per cent
Front	3,430	1,920	6,100	3,420	9,520	5,340	44
Intermediate ..	4,040	1,920	7,180	3,420	11,200	5,340	52
Main	2,040	1,470	3,630	2,610	5,680	4,080	28
Back	3,510	1,860	6,240	3,300	9,750	5,160	47

Special Features of Construction

In order to attain the objects sought in the design of No. 8000 many innovations were made in the construction. The special features are the subject of patents now pending.

The boiler is of the straight-top type and carries 200 lb. per sq. in. pressure. The barrel has an outside diameter of 86 in. at the first ring and contains 253, 3¼-in. flues, 20 ft. long. The firebox has a grate area of 66.4 sq. ft. There is no combustion chamber but, as mentioned above, a double arch is applied on eight arch tubes. One of the interesting details is the large mud-ring corners which have a radius of 12 in. This easy curve makes it possible to apply rivets instead of patch bolts, improves the circulation around the firebox and facilitates inspection and cleaning. The heating surface of the firebox and arch tubes is 291 sq. ft. and of the flues, 4,287 sq. ft.

To insure that dry steam is delivered to the superheater, a steam separator is placed at the highest point in the dome. Any entrained moisture is removed from the steam before it enters the dry pipe and is returned to the boiler.

New Throttle Arrangement

The throttle valve, instead of being located in the dome, is placed in the top of the smokebox just ahead of the stack, shutting off the steam from the cylinders but not from the superheater. On account of this arrangement an outside dry pipe with a shut-off valve as clearly shown below, is used so that the steam can be shut off and the throttle ground without blowing down the steam pressure on the boiler. To reduce the number of joints, the dome and the back end of the dry pipe are made integral of a steel casting.

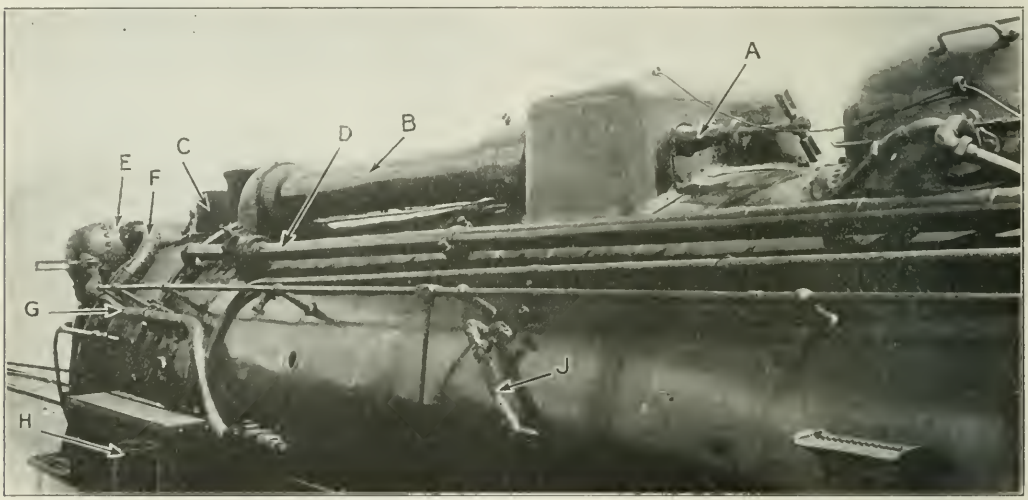
The steam after flowing through the dry pipe and superheater tubes, passes to the right side of the superheater header, which has a main outlet leading to the throttle which supplies the main cylinders and the booster and a smaller connection to the superheated steam pipe to the turret which supplies the other auxiliaries. The throttle valve is located at the top of the smokebox where it is readily accessible. It is of the usual double-seated poppet type with top lift operated by outside rigging. The expansion of the boiler tends to change the setting of the throttle valve and to overcome this the Jones compensating arrangement has been applied.

The cylinders and valves are in accordance with the usual practice with the exception of the valve travel which has been increased to 8¾ in. by a special design of Baker valve gear controlled by the Franklin type D Precision power reverse gear. The booster, which adds 17.3 per cent to the starting tractive effort of the locomotive, is the latest design type C-1 using superheated steam. The exhaust steam from the booster is discharged out of the stack, thus creating additional draft and increasing the steaming capacity of the boiler at low speeds.

The feedwater heater is carried on brackets secured to a permanent top section of the smokebox front. This elevated location of the heater enables the water condensed from the exhaust steam to flow to the tender by gravity. The arrangement of the smokebox front avoids any difficulty in removing it to reach the front end netting or superheater.

Superheated Steam for Auxiliaries

Reference has already been made to the use of superheated steam in the auxiliaries. Special arrangements have been made so that if necessary, saturated steam can also be used. Two turrets are mounted over the firebox just ahead of the cab. The left-hand turret is connected to the superheated steam pipe leading back from the header and



Forward End of Boiler from Left Side

A, Shut-off Valve; *B*, Outside Steam Pipe; *C*, Throttle; *D*, Superheated Steam Pipe to Turret; *E*, Feedwater Heater; *F*, Exhaust Steam Pipe to Heater; *G*, Feedwater Discharge Pipe from Heater; *H*, Feedwater Pump; *J*, Drain Pipe from Steam Separator.

carries transverse pipes leading to the right turret. The right turret has a connection to the saturated steam space in the boiler which is normally shut off. A stop valve is located in the superheated steam pipe to the turret just back of the point where it issues from the smokebox, so that by opening the valve between the right turret and the boiler and closing the valve in the steam pipe, saturated steam can be used. It is of interest to note that no changes in the design of the auxiliaries were necessary to adapt them for superheated steam, the only modifications being in the use of materials that would withstand the higher temperatures.

The tender has a capacity of 10,000 gal. of water and 16 tons of coal. It is carried on Commonwealth four-wheel trucks and has a Commonwealth cast-steel tender frame.

The accessories used on this locomotive include the Commonwealth-Franklin engine truck, type B Delta trailing truck with constant resistance centering device, Franklin radial buffer and unit safety drawbar, Pyle-National type K-2 headlight generator, Franklin grate shaker, Franklin adjustable wedge and driving box spreader and cellar, Franklin sprinkler and McLaughlin flexible joints.

The dimensions, weights and factors are as shown in the tabulated data sheet:

LOCOMOTIVE DATA SHEET

Railroad	Michigan Central
Type of locomotive	2-8-2
Service	Freight
Track gage	4 ft. 8½ in.
Cylinders, diameter and stroke	28 in. by 30 in.
Valve gear	Baker
Valves, kind and size	Piston, 14 in. dia.
Maximum travel	8½ in.
Outside lap	1¼ in.
Exhaust clearance	⅛ in.
Lead in full gear	⅜ in.
Weights in working order:	
On drivers	245,500 lb.
On front truck	30,000 lb.
On trailing truck	58,500 lb.
Total engine	334,000 lb.
Tender	199,700 lb.
Wheel bases:	
Driving	16 ft. 6 in.
Rigid	16 ft. 6 in.
Total engine	37 ft. 0 in.
Total engine and tender	71 ft. 6½ in.
Wheels, diameter outside tires:	
Driving	63 in.
Front truck	33 in.
Trailing truck	45 in.
Journals, diameter and length:	
Driving, main	11½ in. by 14 in.
Driving, others	11 in. by 13 in.
Front truck	6½ in. by 12 in.
Trailing truck	9 in. by 14 in.
Boiler:	
Type	Straight top
Steam pressure	200 lb. per sq. in.
Fuel, kind and B.t.u.	Bituminous coal, 14,000 (appr.)
Diameter, first ring, outside	86 in.
Firebox, length and width	114⅛ in. by 84¼ in.
Height, grate to crown sheet, back	68½ in.
Height, grate to crown sheet, front	87 in.
Arch tubes, number and diameter	8—3½ in.
Combustion chamber	None
Tubes, number and diameter	253—3¼ in.
Tubes, length	20 ft. 9 in.
Tubes, spacing	¾ in.
Tubes, inside diameter	2,982 in.
Gas area through tubes	26 sq. ft.
Net gas area through tubes	9.47 sq. ft.
Grate type	Table
Grate area	66.4 sq. ft.
Heating surfaces:	
Firebox, total arch tubes	291 sq. ft.
Tubes	4,287 sq. ft.
Total evaporative	4,578 sq. ft.
Superheating	1,[illegible] sq. ft.
Comb. evaporative and superheating	6,[illegible] sq. ft.
Tender:	
Style	Rectangular
Water capacity	10,000 gal.
Fuel capacity	16 tons
Special equipment:	
Brick arch	American Arch Co., double arch
Superheaters	Superheater Co., Type B
Feedwater heaters	Superheater Co.
Stokers	Elvin Mech. Stoker Co.
Booster	Franklin Ry. Supply Co.
General data, estimated:	
Rated tractive force, 85 per cent	63,540 lb., with booster 74,500 lb.
Cylinder horsepower (Cole)	2,824
Boiler horsepower (Cole) (est.)	2,735
Speed at 1,000 ft. piston speed	37.5 m.p.h.
Steam required per hour	58,700 lb.
Boiler, evaporative capacity per hour	56,900 lb.
Coal required per hour, total	9,180 lb.
Coal, rate per sq. ft. grate per hour	138 lb.
Weight proportions:	
Weight on drivers ÷ tractive force	3.86
Weight on drivers ÷ total weight engine	.735
Total weight engine ÷ cylinder horsepower	118
Total weight engine ÷ boiler horsepower	122
Weight per sq. ft. of combined heating surface, lb.	52.5
Boiler proportions:	
Boiler horsepower ÷ cylinder horsepower	96.9 per cent
Comb. heating surface ÷ cylinder horsepower	2.25
Tractive force ÷ comb. heating surface	9.99
Tractive force × dia. drivers ÷ comb. heating surface	630
Cylinder horsepower ÷ grate area	42.5
Cylinder horsepower ÷ net gas area of tubes in sq. ft.	298
Firebox heating surface ÷ grate area	4.38
Firebox heating surface ÷ evap. heating surface	6.36 per cent
Superheating surface ÷ evap. heating surface	38.9 per cent
Tube length ÷ inside diameter	80.5

Engine No. 8000 has been in operation since about the first of June between Detroit and Toledo, and between Toledo and Jackson, Mich. The Michigan Central Railway is preparing to make exhaustive tests of the engine, data from which will be available at a later date. So far the engine has exceeded the expectation of the builders, both in developing high drawbar pull and in economy of operation.

On June 24, 9,254 tons in 138 cars were hauled from Detroit to Toledo, without help, a distance of 47.6 miles in 3 hr. 31 min., no trouble being experienced in starting this train with booster in operation; in fact, for the first 10 miles the tonnage was 9,394 tons in 140 cars, 2 cars being set off on account of hot boxes. On June 30, 10,039 tons were hauled over this division in 147 cars, no assistance being required to start or haul this train.

No trouble has been experienced in maintaining full boiler pressure when operating at maximum capacity.

The evaporation per pound of fuel is phenomenal, as for three of the full tonnage runs made between Detroit and Toledo, the total water divided by total fuel averaged 9.7 lb. which indicates a combined efficiency for the boiler and superheater of about 77 per cent.

Right Side of the Locomotive, Showing Removable Plate Over Superheater Header and Outside Throttle Rigging

Net Increase in Equipment in 15½ Years

A TABLE comparing the number of cars and locomotives installed on the railways of the United States during the 15½ years from June 30, 1907, to December 31, 1921, with the number retired each year has been compiled by the Bureau of Railway Economics from statistics of the Interstate Commerce Commission and annual reports of the roads to the commission for 1921. This shows a net increase of 16,229 locomotives, 13,504 passenger train cars, 581,945 freight train cars and 54,116 company service cars.

EQUIPMENT INSTALLED AND RETIRED DURING THE PERIOD JULY 1, 1906, TO DECEMBER 31, 1921

I Increase. D Decrease. * Obtained by taking one-half of returns reported for the year ended December 31, 1916.

figures represent the period before the new production resulting from the Cleveland settlement of the bituminous coal strike was attained.

The car surplus continued to decrease during the period, August 8 to August 15, to a total of 140,253 cars, which included only 10,453 box cars and 111,521 coal cars. There were, however, shortages amounting to 37,172 cars, of which 13,215 were in the Southern district and 8,574 in the Central Western district.

The number of cars furnished for coal loading during the week of August 12 was 82 per cent of the requirements, as compared with 86 per cent the week before. The number of cars loaded, however, was greater than the week before, 84,471. The cars required were 143,995 and the cars placed were 118,725.

The percentage of open top cars placed for all kinds of loading was 89 as compared with 87 the week before.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING during the week ended August 19, the seventh week of the shopmen's strike, showed an increase of 3,639 cars as compared with the week before, to 856,219, in spite of a reduction in coal loading of 2,600 cars. This was within 21,000 cars of the loading during the last week before the shop strike and represents an increase of 41,072 cars as compared with the corresponding week of 1921, although a decrease of 111,884 cars as compared with the corresponding week in 1920. As compared with the previous week, increases were shown in the loading of livestock, forest products and particularly miscellaneous freight, but decreases were shown in the loading of grain and grain products, coal, coke, ore and merchandise. As compared with the corresponding week of last year increases were shown in the loading of all classes of commodities except grain and grain products and coal and there were increases in all districts except the Central Western and the Southwestern. These

Negotiations for Separate Agreements Fail

Executives of 52 Class I Railroads Which Continued Mediations Unable to Reach Strike Settlement

Efforts of the executives of 52 Class I railroads to come to some kind of an agreement with their striking shopmen ended in failure on Friday, August 25, when the committee representing the executives which had met with the five train service leaders announced that the conferees had been unable to reach an agreement which was satisfactory to the shop leaders.

The negotiations broke on the usual issue of seniority, and there was again in evidence the lack of desire on the part of the shop leaders to enter into separate agreements.

The railroads offered to take back all the strikers, except such as had been proved guilty of acts of violence and to give them the positions of the same class as those held on June 30 at Labor Board rates of pay and at the same points; as many men were to be put to work before September 1 as possible and all before October 1. The executives' proposal contained the provision: "The relative standing as between themselves, of men returning to work . . . will be restored as of June 30, 1922, and they will be called back to work in that order as defined above." The executives further agreed that if after the men returned to work there remained any unsettled disputes that could not be adjusted by the carrier and the employees they should be referred to a commission consisting of the five train service brotherhood leaders and five executives, decision to be by majority vote. The agreement offered was with the understanding that "the terms shall be carried out by the officers of the companies and the representatives of the employees in a spirit of conciliation and sincere purpose to effect a genuine settlement of the matters in controversy." The railroads were, however, unable to agree to any program or method of adjustment which could affect the privileges of employees of the shop crafts who did not take part in the strike or those who had been employed since July 1.

The shop leaders did not find these concessions sufficient. Their rejection of the executives' offer was on two grounds—one relative to seniority and the other for the reason that to accept the terms of these roads would result in the desertion of the men on the other roads not involved in the discussion with the group of 25 systems. Their communication embodying the rejection said: "To accept or submit for acceptance the present proposal that carries no visible guarantee or assurance of protection of the rights or standing of the men as railroad employees held by them prior to strike and learned by years of continuous and efficient service, would mean that we ask the men on less than one-third the roads affected to return to work yielding to every demand of railroad management, receiving only such standing as employees as might be granted by managements after their return or later determined by the commission provided for in the proposal. . . ."

Negotiate With Brotherhood Leaders

Following the general meeting of the member roads of the Association of Railway Executives on Wednesday, which, by a vote of 254 to 4, had reaffirmed the executives' previous stand on seniority, 25 or more roads—representing with subsidiaries 52 Class I carriers—continued negotiations with the five brotherhood leaders.

These roads announced, as was reported in last week's *Railway Age*, that they proposed to make no agreement which would contravene the seniority stand of the association as a whole. It was stated that these lines were in a position to take back all of their men who had been on strike. The conferences with the five train service leaders, acting as mediators, began Wednesday evening. They continued all day Thursday and broke up about Friday noon, with the announcement that the results had been nil.

The carriers, in what came to be called the "rump convention," were represented in the conference by a committee of five. The chairman was Daniel Willard, president of the Baltimore & Ohio, and the other four were Charles Donnelly, president of the Great Northern; N. D. Maher, president of the Norfolk & Western; A. H. Smith, president of the New York Central, and Hale Holden, president of the Chicago, Burlington & Quincy. Others of the executives joined in the discussion. The train service leaders were the same five that conferred the preceding week with the committee representing the executives as a whole.

The first official announcement that the conferences, like the other conferences preceding them, had resulted in failure was contained in a statement by Daniel Willard, chairman of the executive committee. It was followed by a statement of the train service leaders issued in the form of a communication to the executives and the shop leaders. The shop leaders also made public a report which they were about to send to their rank and file The report reviewed the situation as a whole. It said that the shopmen had gone the full limit in the interest of peace. It concluded with this statement: "If we must fight, we'll show we know how. Now that the issue is again clearly defined and false hopes of early peace dissipated, the fight must be renewed with increased vigor and every man must do his full part to bring it to an early and successful conclusion. What will be your answer to the challenge?"

Would Take Back All Employees

The statement issued Friday by Daniel Willard, president of the Baltimore & Ohio and chairman of the committee representing the 25 roads, reviewed the situation as follows:

Following the general meeting of the Association of Railway Executives held in New York day before yesterday, a group of railroad presidents representing 52 companies with an aggregate mileage of 85,000 miles of line, continued in conference with the leaders of the five train and engine men's brotherhoods who had been acting as mediators for a further discussion of the shop crafts' strike. Conferences between a small committee representing these railroads and the brotherhood chiefs were held at the Yale Club, New York City, Wednesday evening, during a large part of Thursday and this forenoon. These railway executives, mindful of the increasing demands for transportation incident to the season of the year and anxious on that account to do everything that might be possible and practicable to bring about a settlement of the existing controversy, were hopeful that a further discussion might develop some plan or method for settlement which would not require the sacrifice of principles deemed fundamental by either party to the controversy.

Having in mind the normal requirements of the carriers for men of the shop crafts at this season of the year, together with the increased requirements resulting from a reduced working force for nearly two months, these companies, while unwilling to agree to any program or method of adjustment which would affect the rights or privileges of employees of the shop crafts who did not take part in the strike or those who had been employed since July 1, were willing to pledge themselves to find employment for all of the striking employees not guilty of proven acts of violence at their usual class of work, at the rates of pay fixed by the United States Railroad Labor Board and at the same terminal point.

With this important phase of the controversy disposed of there remained only the problem of reaching an understanding concerning the future relations between the railroad employees themselves

and between the employees who had been on strike their employing companies.

The railroads disclaimed any desire to take advantage of the situation to curtail the pension rights or other privileges which the striking employees had earned by virture of their term of service with the company and the roads in this conference agreed to take back all employees with such privileges unimpaired. These railroad companies felt at liberty to do this because such action on their part would not in any way affect or prejudice the rights or privileges of others who did not participate in the strike.

The railway executives also agreed that if after the men returned to work there remained any unsettled disputes growing out of the situation which the companies and the representatives of the employees were unable to settle in direct conference, such matters should be referred for final determination to a commission of ten members to be made up of the chief executives of the five train and engine men's brotherhoods who were acting as mediators, and five railway executives experienced in matters such as would naturally come before a committee of that kind.

The railway presidents also proposed that if an agreement could be reached along lines substantially as indicated above, they would endeavor to carry out the agreement in a spirit of conciliation and sincere purpose to effect a general settlement of all matters in controversy resulting from the strike. The railway executives were certain that, while making substantial concessions to the men on strike, such a settlement as proposed would in no way sacrifice the rights or privileges of the loyal men now employed on the properties represented.

The committee of mediators worked earnestly and helpfully with the carriers in an effort to bring about an acceptable adjustment. The railway executives who took part in the conferences sincerely regret the representatives of the striking employees, although definitely assured the substance of all that they asked for, were unwilling to agree to a settlement except under conditions which the railway executives were unwilling and unable to accept.

It is difficult to imagine any fairer basis of compromise than the one developed at yesterday's conference and agreed to by the carriers represented. It must be assumed, therefore, that the present controversy cannot be settled by that method.

52 Class I Carriers—85,000 Miles of Line

The following railroads participated in the conference and agreed to the proposition submitted by the carriers and declined by the striking employees.

Alabama & Vicksburg
Baltimore & Ohio
Buffalo, Rochester & Pittsburgh
Chesapeake & Ohio Lines
Chicago & Northwestern
Chicago, Burlington & Quincy
Colorado & Southern
Wichita Valley
Fort Worth & Denver City
Chicago, Indianapolis & Louisville
Chicago, Milwaukee & St. Paul
Chicago, Rock Island & Pacific
Chicago, St. Paul, Minn. & Omaha
El Paso & Southwestern
Erie
Hocking Valley
Lake Erie & Western
Louisiana & Arkansas
Minneapolis & St. Louis
New York Central Lines
Cleve., Cin., Chicago & St. L.
Michigan Central
New York Cent. incl. B. & A.
Pittsburgh & Lake Erie
New York, Chicago & St. Louis
Norfolk & Western
Norfolk Southern
Northern Pacific
Seaboard Air Line
Trinity & Brazos Valley
Virginian
Wheeling & Lake Erie
Winston-Salem Southbound

[The foregoing list does not include the names of subsidiary companies.]

Report of the Mediators

The train service leaders on Friday addressed a communication to Chairman Willard and to Bert M. Jewell, president of the Railway Department of the American Federation of Labor. The statement was signed by L. E. Sheppard, president of the Order of Railway Conductors; W. N. Doak, vice-president of the Brotherhood of Railroad Trainmen; W. S. Stone, grand chief of the Brotherhood of Locomotive Engineers; D. B. Robertson, president of the Brotherhood of Locomotive Firemen and Enginemen, and T. C. Cashen, president of the Switchmen's Union of North America.

The communication said:

The undersigned together with the chief executives of the other standard recognized railroad labor organizations not on strike, on invitation of the representatives of the shop men and others on strike which began July 1st last, offered their good offices as mediators in the controversy with the hope that a mutually acceptable settlement might be reached with regard to the one particular question which seemed to be the only stumbling block, viz: The fundamental rights of men on strike and their seniority standing when they resumed work

The offer was accepted and an interview was sought with President Harding and conferences with the President were held on the 12th inst., the question being presented to him from all angles. The President met a committee representing the Railway Executives' Association following his meeting with us on the 12th He also met them on Sunday, the 13th, but no progress toward settlement was made, but we were advised from the White House that the committee representing the railway executives were willing to meet the chief executives of the train and enginemen's organizations since which date mediation has been conducted by those whose signatures appear hereto.

The nine chief executives also met President Harding on the afternoon of the 14th and inasmuch as nothing had been accomplished at the Washington meeting the mediators came to New York and conferred with a committee of the railway executives on the 17th and 18th insts., but these efforts brought no satisfactory results.

Fully appreciating the seriousness of the situation confronting the people of the United States and with the determination to use every possible effort and every ounce of energy at our command we requested a conference with the entire body comprising the Railway Executives' Association which was at once arranged for, to be held in New York the 23rd.

At this meeting we presented the subject as briefly but as explicitly as we could, and made a recommendation for consideration by the entire body. Coupled with the recommendation was a request that if it were not accepted we would be glad to meet such members of the executive association as might look upon it with favor, or who would meet with us in further efforts to reach a solution of the problem. We were later advised that the recommendation was declined practically unanimously but that the chief executives representing 52 railroads with approximately 85,000 miles of track, were willing to meet us to give further consideration to the subject.

Conferences with a committee consisting of six railroad presidents, representing this group, were held on the evening of the 23rd, also two conferences on the 24th and again this morning, without avail.

While our conferences with both sides were most pleasant, we found we could not present a recommendation acceptable to both, because both parties insisted throughout that their respective contentions were based on principles which could not be set aside and which must be observed at all cost.

We reluctantly notify all concerned that we consider further efforts futile and with much regret announce that we have nothing more to suggest.

Shop Crafts Strike Committee Reports to Men

The report of the conferences sent out to the rank and file of the striking shopmen by the shop crafts strike committee was a detailed review of the situation as a whole, having special interest because it contained the text of the railway executives' offer and the shopmen's reply. The report follows:

In accord with our previous information to you the Railway Executives' Association met in New York City on August 23 in response to call of its executive committee to consider the proposals made on our behalf by the chief executives of the transportation organizations acting as mediators. . . .

After lengthy argument to the effect that a solid front on their part would break the morale of the men on strike and they would flock back to work, the executives voted to reaffirm their declaration of August 2—when in reply to President Harding they stated that they would not agree to the strikers returning with their seniority and other rights unimpaired.

However:—Within 24 hours after this declaration was adopted the executives of 52 Class I roads from the big meeting were giving consideration to ways and means of reaching a settlement without stating that they yielded on the seniority question. We may well question the good faith of any statement that they wished to really give the men their seniority rights as they positively refused to agree to a proposition that all strikers be *reinstated* claiming that reinstatement carried with it all seniority and other rights.

Several conferences were held, the mediators going from one meeting to the other, covering three days, with night sessions by both parties. Out of these sessions there developed the following as the final and maximum offer of the railroad executives.

Text of Executives' Maximum Offer

"1 In order to bring to an end the existing strike of shop employees upon the undersigned railroads and relieve the country from the adverse defects thereof and to expedite the movement of essential traffic, the following memorandum of agreement is made upon the understanding, which the parties hereto accept, that the terms hereof shall be carried out by the officers of the companies and the representatives of the employees in a spirit of conciliation and sincere purpose to effect a genuine settlement of the matters in controversy referred to below.

"2. All men to return to work in position of the class they originally held on June 30, 1922, and at the same point and as many of such men as possible are to be put to work September 1 at present rates of pay and all employees who have been on strike to be put to work or under pay not later than October 1 next, except such men as have been guilty of proven acts of violence.

"3. The relative standing as between themselves of men returning to work and men laid off, furloughed or on leave of absence, including general chairmen and others who were as of June 30, 1922, properly on leave of absence, will be restored as of June 30, 1922, and they will be called back to work in that order as defined above.

"4. If a dispute arises as to the relative standing of an employee or employees or if any other controversy arises growing out of the strike that cannot be otherwise adjusted by the carrier and said employee or employees, the matter shall be referred by the organizations parties to this agreement, the employees or the carrier in the interest of any employee who may be aggrieved to a commission to be established and constituted as hereinafter provided, for final decision by a majority vote.

"5. The commission referred to in paragraph 4 hereof shall be composed of the five chief officers of the train service brotherhoods and five railroad officers, experienced in matters of this kind and selected from among the railroads agreeing hereto. This commission shall be constituted forthwith upon the signing of this agreement and shall have jurisdiction to decide all cases that may be referred to it on or before May 21, 1923, but not thereafter.

"6. Inasmuch as this agreement is reached for the purpose of composing in a spirit of compromise this controversy with those crafts on strike on the railroads signing same, all parties hereto agree that neither this settlement nor any decision of the commission above provided for shall be used or cited in any other controversy between these parties or between the railroads signing the same or any other class or classes of their employees in any other controversy that may hereafter arise.

"7. Both parties pledged themselves that no intimidation nor oppression shall be practiced or permitted against any of the employees who have remained at work or have taken service or against those who resume work under this understanding.

"8. All suits at law now pending as the result of the strike to be withdrawn and cancelled by both parties."

Reply of Shop Craft Representatives to Proposal Submitted by Committee of Railroad Executives

After fully discussing every possible angle and phase of the situation the following reply was made:

"We have the proposal providing the terms which are suggested as a basis on which only part of the men on strike on certain railroads may return to work. Consideration of a proposal of this nature must necessarily embrace a serious consideration of the cause of the existing conditions and all matters leading thereto, as well as the effect of any steps taken at this time, as they will affect the welfare of the men involved and the peace, stability and efficiency in the railroad industry.

"The strike occurred because of conditions intolerable to the men, coupled with excessive reductions in wages. In accepting the proposal of President Harding, of July 31 of this year, the representatives of the men involved agreed to resumption of work without a settlement of either of the two remaining issues that were originally involved in the difficulty, namely those concerning wages and working conditions. In agreeing to resume work, and leave these matters to the Railroad Labor Board for rehearing, the men made all the concessions that should be required or expected of them in the interests of peace in the industry—the other issue involved in the strike, that of contracting out of shops and work, having been declared illegal by the Railroad Labor Board and all other government authorities that considered the matter. The question of the standing of the men on strike as railroad employees was not an issue until injected by the railroad managements, and only became an issue when railroad managements refused the terms of agreement proposed by President Harding.

"To accept or submit for acceptance the present proposal that carries no visible guarantee or assurance of protection of the rights or standing of the men as railroad employees held by them prior to strike and earned by years of continuous and efficient service, would mean that we ask the men on less than one-third of the roads affected, to return to work yielding to every demand of railroad management, receiving only such standing as employees as might be granted by managements after their return or later determined by the commission provided for in the proposal, and that the employees of less than one-third of the mileage now involved returning to work under such conditions, would leave the remaining employees of more than two-thirds of the mileage out of railroad employment and by returning to work would in that measure destroy the effectiveness of the strike as of today. Even on the roads represented the proposal does not contemplate the return to work of all men on strike. It only includes those who come under the heading of shop crafts, while it is known and agreed that many men other than those coming under this designation are at present on strike.

"There is no intent on our part to question the integrity of the officials of the roads now conferring, but it must be obvious to all that definite action can be taken only on matters clearly defined in any proposal made. Our first concern must be the interest of all the men involved. We, the representatives of the men on strike, cannot recommend to the men the acceptance of this proposal without deliberately sacrificing the interests of the men involved. We fully appreciate the help, interest, and efforts of the transportation organization executives in their capacity as mediators, and we regret it if compelled to report to our people that their splendid efforts failed, because of the arbitrary position taken by the carriers, to produce some clear concrete proposition that we can present to and conscientiously present to the men we represent for acceptance."

Conditions Favorable for Success, Say Leaders

The leaders of the so-called stand-patters among the executives have boasted that as soon as the men see how competent the roads are they would come running and crawling back begging for their jobs under any conditions that the executives chose to make.

We believe the railway executives are mistaken, and this mistake is in some measure due to the fact that the news of the conference and of possible peace have deterred our membership from actively prosecuting the strike, and the executives mistake this well intended inactivity for apathy and indifference. Despite the boast of the executives, we know, and government reports show, that the number of bad order cars and engines is increasing daily and at an alarming rate. With honest and adequate inspection enforced the number would be doubled overnight.

The best trains on all roads are arriving later each day, accidents due to defective equipment are increasing and causing public alarm and attracting government notice. The strike is just now becoming really effective.

The coal miners have just won their fight lasting 20 weeks. The coal dug will be an added burden to be carried by the roads. The textile workers of Lawrence, Mass., have just won their three-months' strike against reduction in their wages. The labor union crushers are having poor luck in their country-wide campaign. All industry is on the up-grade. Material of all kinds is in demand and the harvest must be moved.

If there was ever a strike that had every favorable condition surrounding it, this is it. If this can be lost now, no strike could ever be won.

Roads Declined to Desert New Men

Daniel Willard, president of the Baltimore & Ohio and chairman of the group representing the 52 roads willing to make a separate settlement, in a statement issued Monday, supplemented the report of the conference which he issued after its close on Friday. In this statement he included the following:

Having in mind the normal requirements of the carriers for men of the shop crafts at this season of the year, together with increased requirements resulting from a reduced working force for nearly two months, these companies were willing to pledge themselves to find employment for all of the striking employees not guilty of proven acts of violence, believing that the requirements of the situation would afford ample work for all for many months to come. It should be clearly understood, however, that at no time did any of the railroad presidents agree, nor would they agree, to make any settlement that would in any sence adversely affect the rights or the privileges of the old men who did not go on strike, or the new men who had been hired since the strike began. . . . .

The railway managers felt that the seniority rights which had been gained by the employees who remained in the service under well established rules were as much a part of their compensation as the money which they had received in wages, and they were not willing, under any circumstances, nor did they feel they had a right, morally or legally, to take from the men who had remained at work any part of their compensation, whether represented in money earned or privileges acquired. I think it must be admitted that the railroad executives of the minority group in their efforts to reach an agreement made every reasonable concession possible in order to accomplish that result. They were not willing, however to look upon their promise to the men already in the service, whether the promise was verbal or in writing, as a scrap of paper to be thrown aside at will. Short of that one thing, they were willing to grant every other concession which the men requested. It must be apparent, therefore, that no compromise settlement of

the situation is possible unless the railroad executives are willing to accept the policy that a promise or contract is something to be broken and not something to be kept.

Why Were the Concessions Rejected?

Observers profess to find it difficult to understand the unwillingness of the shop crafts leaders to accept the concessions offered by the group of 52 railroads. The shop leaders' rejection of the offer was apparently predicated on two grounds. One was that the concessions were in such form as not to concede to the strikers the entire seniority issue. The other—and there are many who give this factor increasing importance—is the lack of desire on the part of union leaders to make anything but a national settlement of the strike. The impression is that the shop leaders are gambling on the hope that equipment deterioration or congestion will continue to increase until the public becomes aroused or until conditions otherwise become so acute that the railroads will have to submit as a whole, the weaker roads requiring the other roads to come in with them on a national agreement.

It is also pointed out that for the shop leaders to have agreed to settle with the 52 roads would have been an admission of defeat not only as relates to the other roads not parties to the settlement, but as relates also to the broader issues of negotiations on a national basis, national agreements, etc., which have played leading parts in the shop crafts' program. The view expressed in the strike committee's statement to their rank and file reflects this view in that it mentions the idea that to give in to one-third the roads would mean the desertion of the men on the other two-thirds of the roads. This feature of the shop leaders still adhering to their desire for a national settlement is given great importance in many quarters. Many who earlier in the strike expressed the opinion that it was a strategic mistake from the union's point of view to have called a strike at all now supplement this opinion with the belief that the rejection of the offer of the 52 roads last Friday was a similar strategic mistake.

With reference to the mistake embodied in the strike call, they have hitherto pointed out that the inadvisability of the strike was promptly shown by the manner in which the original issues in the strike were dropped and made secondary to a new issue—seniority. The new development resulting from the rejection of the possibility of separate settlements is the opinion that the shop leaders are continuing to play a losing game. The idea is expressed that the number of roads that are in a position to take back all of their strikers is steadily decreasing as recruiting continues. Some of the roads are in a very good position and as time goes on they are reaching a better position and, in addition, are being joined by other roads which earlier in the strike and for one reason and another did not have a great success in bringing their forces up to normal.

The roads that are in most favorable condition are now at the point where they have established company unions or where they are in a position which approaches open shop conditions. It is very difficult to believe that conditions on these roads will do else than improve, in which case the effect on the shop unions will be decidedly adverse. Analysis of conditions such as these, the observers believe, indicates that Jewell and his strike committee would have made much the wiser decision had they secured such settlements as they could have made and salvaged as much as they could of the structure which they have now succeeded in tumbling about their heads. The impression on the part of these observers is that, at least, the shop strike committee is following very poor strategy. Some of the observers go so far as to declare that the shop leaders are carrying out a program which will prove detrimental to later unionism as a whole, simply in order to save their own faces in the situation which has arisen. One executive to whom these ideas were taken supplemented them by saying that it was his belief that before the thing was over the railroad shop unions would be back where they were 25 years ago and that by their unskillful activities they would have lost all the gains which they succeeded in securing over a long term of years and during Federal control in particular.

It is a general opinion that a compromise settlement of the strike has now become no longer possible. The strikers' leaders still express optimism—in public, at least—and speak with a measure of enthusiasm of the spirit which existed among the strikers in the East, as well as in the West. The executives, however, are more inclined to believe that developments will result in the gradual dying out of the strike, rather than in a settlement of it. In other words, they expect that forces will gradually be recruited to normal and the strikers finally will either return to work or seek employment elsewhere. This would have been possibly a too optimistic view even one week ago, but every tendency at present seems, it is believed by observers, to be in that direction.

Some Delays to Fast Freight

As the strike closes its ninth week, there is evidence that the walkout of the shopmen is having some effect on railway service, although, in general, reports are that in most centers conditions are gradually improving. Passenger trains, however, are still running late on many roads; fast freight service is not being handled absolutely on schedule and there has been congestion—in most cases temporary in character—at various terminals. Investigation shows that perishables and live stock from Chicago, which should be given third-morning delivery at New York, are arriving one day behind schedule. Other fast freight between Chicago and New York has a schedule calling for fourth-morning delivery at New York; this schedule is not being met. In the case of slow freight service congestion is reported at various places, but on the whole complaints of delayed movement are not being heard as yet in sizeable quantity. It is to be presumed that the delays to passenger and fast freight trains result to some extent from engine trouble, although it is difficult to determine how much may be due to that cause and how much to increasing demands for transportation service.

It is pointed out, however, that in the majority of instances traffic is being handled without undue difficulty, and certainly with less difficulty than the recent complications of strike and increasing traffic might be expected to warrant.

Federal Inspection Shows Equipment in Good Condition

The report of the condition of locomotives made by the Bureau of Locomotive Inspection of the Interstate Commerce Commission, as reported to the Senate on Tuesday, showed that the statements given out by the labor leaders to the effect that equipment was being operated in unsafe condition are wholly without foundation. The inspectors examined 4,885 locomotives at 717 different points. Of these, 2,456 showed conditions that are noted as defects under the Inspection Act. Only 169 were found to be not safe to operate and were ordered taken out of service. Of the remainder, the report stated that 992 locomotives had more or less serious defects and 1,295 had defects which would not give cause for immediate concern, but, in ac-

cordance with sound mechanical practice, should undergo repairs.

In reporting the results of the inspection the commission said: "The reports of our inspectors indicate a very general let-down in the matter of inspection by the carriers, which gives cause for concern." The opinion was expressed by one mechanical officer that it is hard to see how the commission reached this conclusion from the reports of its inspectors if any comparison was made with the reports for preceding years. The per cent of locomotives found to have minor defects in July of this year was 60.1, which is not much higher than usual. In the fiscal year 1918-1919 the percentage was 58; in 1919-1920, 52, and in 1920-1921, 49.7. If the roads were using equipment in unsafe condition, it would certainly be disclosed, it is pointed out, by the per cent ordered out of service. The reports for July show that 4.14 per cent of the locomotives inspected were ordered out of service, but in 1920-1921 the inspectors condemned 6.44 per cent; in 1919-1920, 7.65 per cent, and in 1918-1919, 7.41 per cent of the locomotives inspected. This is considered as indicating conclusively that fewer locomotives are being operated with serious defects at the present time than has been the case in previous years.

Locomotives to Be Repaired by Industrial Concerns

A new development in the strike during the past week or two has been the placing by various roads of contracts for equipment repair work with outside industrial concerns other than the regular car and locomotive builders. In most cases these contracts to outside concerns supplement repair work done in the railroad's own shops and repair contracts lately let to the regular builders.

One road which has entered upon an extensive program of this kind is the Erie. That road has recently been reported as having contracted with the Baldwin Locomotive Works and the American Locomotive Company for repairs to locomotives. It has let a number of contracts for heavy car repairs with various car-building plants and is about to let further contracts which will bring the total number sent to outside shops to 8,800. The new development is the sending of locomotives to industrial plants for heavy repairs. The Erie requires heavy repairs to about 75 locomotives monthly. Its own shops are now turning out about 25 monthly. The locomotive builders and the other industrial concerns which are undertaking to do locomotive repair work will take care of 50 more, with the result that the requirement of 75 will be met irrespective of whether improvement in the strike situation continues or not.

Other roads are understood to be taking care of part of their locomotive repair requirements similarly.

Buffalo & Susquehanna Offers Seniority

The Buffalo & Susquehanna, in a letter signed by President E. R. Darlow and dated August 24, has added its name to the list of roads willing to make a separate settlement and because it has as yet made no attempt to fill the places of its strikers, it is able to concede the seniority issue. The letter addressed to the former shop employees, said:

About four-fifths of the traffic of the Buffalo & Susquehanna being coal and coke, and there having been practically no such traffic since April 1, as a consequence of light earnings, it had been necessary to reduce the force prior to July 1, and when the shop crafts' strike came, it anticipated a further reduction of the forces for the same reason. Because of the absence of this traffic, and having in mind the fact that a majority of our employees are permanent residents of Galeton, many of them owning their own homes, the management did not take any steps to employ new men; and as all of the old men left the service, the question of the seniority status of such men as may come back into the service is not affected by the status of men who remained in the service or were employed subsequent to the strike; so that the former employees are now out of service because of a failure to settle a dispute on other railroads which has no application to this railroad.

6,499 Men Recruited on August 26

The total number of shopmen recruited by all the country's railroads on August 26 totaled 6,499, which was the largest number of men recruited on any single day since the beginning of the strike. The total exceeded by 624 the recruiting for the best previous day. Several railroads report that a large number of their new recruits are union men on strike on other roads. The forces in some of the shops are reported as having a percentage of 50 per cent of strikers from other roads.

Shop forces on the Eastern roads were reported as having reached 74.9 per cent of normal on August 25, this being a gain of 6,145 over the preceding week. L. F. Loree, president of the Delaware & Hudson, in his capacity as chairman of the Eastern Presidents' Conference, issued a statement following a meeting of the conference on Monday, as follows:

"The railroads in the Eastern district report their shop forces for the past five weeks to have been as follows:

	Number	Per cent	Weekly gain
July 25	97,724	62	...
Aug. 4	103,528	64.7	5,804
Aug. 11	111,324	69.0	7,796
Aug. 16	115,745	71.5	4,421
Aug. 25	121,890	74.9	6,145

"About 40,000 additional men will be required to bring the force up to the full roster of July 1. It is conservative to say that in four or five weeks all the places will be filled, even were the men now on strike not to seek re-employment. With the present force working 60 hours a week, as against the old force working 40 hours a week, the roads are getting more than a million man-hours of work more now than they were before the strike.

"The constant criticism of railroad operations has had the effect of preventing their really fine performance from being recognized. Last week they moved all the coal offered, about 54 per cent of a normal production. They moved 10 per cent more traffic than in the corresponding week in July. They had 4,918 locomotives in good order stored ready for service and 153,880 surplus freight cars on hand in good order. This was for the whole country. The situation in the East was better than the average."

The number of shopmen reporting for duty on the Pennsylvania System on August 29 rose above 93 per cent of a full normal working force. The reports from all regions show 51,132 men on duty, an increase of the past week of 827, and a gain as compared with the low point of the strike which was reached July 5, of 12,847.

The Erie on August 29 had 7,196 shopmen at work, 68 percent of its force on June 30, prior to the strike. The total includes 2,074 men who did not go on strike and 325 strikers who have returned to their jobs.

The Baltimore & Ohio, which was one of the roads which held the strikers' places open for some time after most of the other roads, but which began to fill them after negotiations looking to a separate settlement failed, reported on August 28, 60 per cent of a normal force. At Mount Clare shops 1,600 men are employed and something over 50 per cent of normal heavy repairs were turned out during August. The Baltimore & Ohio is still having difficulties handling traffic and has diverted considerable business to other roads.

Southern Has 36 Per Cent Normal Forces

The Southern Railway, which did not begin recruiting to fill the places of its strikers until August 15, reported on August 24 that it had 36 per cent of a normal force. In a statement issued August 24, President Fairfax Harrison said:

"Since we began recruiting August 15 the Southern Railway system has every day added to the skeleton force it had in its shops and round houses and now has all told 4,165 shopmen at work. This is 36 per cent of a normal force, but, what is more important, there are at work 20 per cent of normal roster of skilled craftsmen. All new men are rigidly examined for mechanical ability before they are employed, but there seems to be no lack

of candidates able to pass the tests, especially since the failure of the last negotiation for settlement of the strike. More new men will be added every other day."

Strike Conditions in Western Territory Show Continued Improvement

Continued improvement in conditions resulting from the shopmen's strike has been reported by practically all of the western carriers during the past week. The western lines on August 25 reported that 88,911 men were employed in their shops, an increase of 30,838 men since August 1, when the number employed was 58,073. The shop forces on that date were approximately 56 per cent of normal, the total number of shop employees on the western lines before the strike began being about 159,000, according to the Western Presidents' Committee on Public Relations.

"As these figures show," an announcement made on August 27 said, "there is a steady increase in the number of men at work. There are a few places where service is being interfered with by walkouts of employees in violation of their contracts, but it should be noted that the real interferences with operation are not due to the shop employees' strike. Except where these conditions exist the railways are handling all the traffic offered and on almost all western lines car loadings are substantially larger than they were a year ago or than they were this year before the shop employees' strike began."

The last week has not been without the usual quota of rioting, slugging, bombing and attempted intimidation directed at both the men now at work in the shops and members of the train service organizations who are free to determine whether or not their work now involves additional hazard. While the damage both personal and property from these outbreaks has been considerably smaller than it has been in previous weeks, this has been due more to fortunate circumstances than to any change on the part of those bringing about the disturbances.

Interest has been centered during the past week on the Chicago & Alton because of trouble at several small terminals. For some time minor disturbances have been reported at Roodhouse, Ill., on that road, culminating on August 25 in the attempted bombing of railroad property there. As a result of these developments members of the train service brotherhoods, particularly the trainmen and firemen, refused to continue work on the ground that these conditions made their work unsafe. Their action temporarily tied up the road and resulted in practically isolating Roodhouse and the surrounding villages. No serious inconvenience was caused, railroad officers handling the only passenger trains affected to other division points from which they continued to their destinations. The walkout did, however, result in curtailing both freight and passenger train movements and necessitated the rerouting of traffic for several days. The trouble at Roodhouse was ended on August 29 when members of the striking brotherhoods agreed to return to work after the national officers of the trainmen's and the engineer's organizations had instituted investigations of the unauthorized walkout and the trainmen were threatened with the loss of their union charter.

The agreement under which the strike at Roodhouse was ended provided that for the present night work would be eliminated as far as possible and that the men would not be required to take out locomotives which they believed to be defective.

Another cheerful report told of the end of the sporadic strike of train service employees at Joliet, Ill., on the Elgin, Joliet & Eastern. This settlement was based on the offer made to the strikers two weeks ago to the effect that the state militia on guard there should be withdrawn a short distance from the gate leading to the shops.

Similarly, train service employees of the Missouri Pacific who have been on strike at Jefferson City, Mo., agreed to return to work after having been out for several days. At Slater, Mo., where the train service employees of the Chicago & Alton have been out since August 26, conferences are being held and it is expected that the men will return to work immediately.

While the reports of settlement of these unauthorized walkout have exceeded the announcements of new moves of a similar nature, there are still several points in western territory where the men have either left the service or are threatening to do so.

The bombing of railroad property and the homes of loyal employees continues to be a pastime of strikers or strike sympathizers. Among the reports of this character which have appeared in the press during the past week are the following: a Chicago, Burlington & Quincy bridge at Spanish Lake, Mo., the Chicago & Alton shops and roundhouses at Roodhouse and Venice, Ill., the bridges of the same road near Roodhouse, the shops of the Chicago & Eastern Illinois at Danville, Ill., and the homes of loyal employees at Garrett, Ind., San Barnardino, Cal., and Montgomery, Ala.

Rioting, slugging and various forms of attempted intimidation have likewise been reported at New Orleans, La., where an Illinois Central work train was stoned, and at Herington, Kans., Shawnee, Okla., Little Rock, Ark., and Garrett, Ind.

Frequent reports of attempts to wreck trains have been made during the past week from various points in western and southern territory, but fortunately none of these attempts have resulted in great damage or in loss of life. Attempts to destroy property by bombing were reported at Sheboygan, Mich., Baring Cross, Ark., and Princeton, Ky.

Conditions on the Western roads were described on August 30 by the Western Presidents' Committee on Public Relations as follows:

"The opening of the coal mines in this territory has been followed by a relatively very large increase in the amount of coal being moved by the railways. The Illinois Central, the Chicago, Burlington & Quincy and the Chicago & Eastern Illinois under normal conditions originate a large coal traffic The total amount of coal loaded by these railways on August 22 was 1,202 cars. On August 26 this had increased to 2,679 cars and on August 29 to 3,924.

"The Western railways continue to report substantial increases in the number of men at work in their shops. The number of shop employees on August 29, the latest date for which the figures are available, was 92,229, an increase of 34,154 men since August 1. The number of shop employees of the Western railways is now 59 per cent of what it was before the shop employees' strike began."

Men Arrested in Connection with Gary Wreck

Four striking shopmen are under arrest and two others are being sought in connection with the Michigan Central express train wreck at Gary, Ind., on August 19, as reported on Page 392 of the *Railway Age* of August 26. Since the wreck, Federal, State, city and railroad police have been working on the case, and it is reported that the $5,000 reward offered by the Michigan Central for information which would lead to the arrest and conviction of the men responsible for the wreck resulted in a tip to the offices of the railroads' police forces which led to several arrests.

It is reported that a confession has been obtained from one of the men under arrest, in which he alleged that leaders of one of the shop craft local organizations told the men to "go out to Gary or somewhere in that neighborhood and jimmy up the track to cause trouble and make it appear that equipment is in bum condition and that it is dangerous for train crews to ride trains." According to the report, this man also claimed that plans had been made to wreck the Twentieth Century near Elkhart, Ind. These developments are being watched with interest by railroad officers.

M. of W. Employees Demand 48 Cent Minimum Rate

Labor Board Refuse E. F. Grable's Request for Approval of the "Living Wage" Principle

A DEMAND that the Railroad Labor Board immediately adopt the principle of the "living wage" and that the minimum rate of pay under this principle be set at 48 cents an hour, was served upon that body at the opening of the hearing on the wages and working conditions of maintenance of way employees on August 28. E. F. Grable, president of the maintenance of way employees' organization, and W. J. Lauck, "economist" for that organization, presented the demand, the former inferring that it must be met "regardless of all other considerations," and the latter analyzing the Transportation Act in an effort to prove that the term "just and reasonable wages," as used therein, was meant to be and is synonymous with a "living wage."

Mr. Grable, in opening the case for the maintenance of way men, painted a picture of the "dismal and hopeless" lives that the members of his organization have been forced to lead and their "struggle for actual existence" under the rates of pay fixed by the board, adding:

"These conditions cannot longer continue. If the board is to measure up to the standards of justice and equity upon which it was founded, it cannot give further sanction and approval to such conditions. To do so, would make it a by-word among railway employes. It would become the symbol of shame and hypocrisy —a mockery of justice. No matter what the financial condition of the railways may be; no matter what the alleged problems of post-war reconstruction, deflation, or railway financial rehabilitation may be, the necessity of the maintenance of way employes receiving living wage cannot be longer evaded or ignored.

"Our primary object in appearing before you today is not, therefore, to enter into any abstract argument as to the principle of the living wage. On the contrary, we assert our right to a living wage. We now know that the Transportation Act guarantees us this right. We are asking you merely to comply with the law, and to give us what according to the law is ours and of which we have been deprived during the past two years. Our conviction is, in the light of developments since we last appeared before you, that if we are again denied a living wage, that it will be incumbent upon this Board to demonstrate to the Chairman of the Senate Committee on Interstate Commerce, and to the President of the United States why it is not applying the law according to the purpose and intent of those who framed it. We are convinced that it is no longer a matter of argument but the plain duty of the board to accept and give a practical application to the living wage principle."

The board, Mr. Grable charged, has taken the "standards of compensation as it found them to be just, reasonable and adequate," and has merely increased or decreased these rates as the cost of living rose or fell. This, he contended, proves that "there has been no recognition of the 'living wage' in principle." To support his contention that the board has erred in not recognizing this principle, Mr. Grable said: "Senator Cummins, chairman of the Senate Committee on Interstate Commerce and the author of the Transportation Act, has publicly declared that it is the intent of the law to give the humblest worker the right to a living wage and, in order to avoid any possible misunderstanding or interpretation, he had prepared and would submit an amendment of the law clearly setting forth this purpose of the law for the guidance of the board."

Mr. Grable's specific request for a minimum wage of 48 cents an hour would place the yearly wage of section men at $1,175.04 per year, which he maintained is an "extremely moderate request."

"The railroads can afford to pay this wage," Mr. Grable said, "without any dislocating effects and without any financial disadvantages accruing to stockholders or shippers. It could have no injurious effect upon private industry. This request, in brief, is not only just and reasonable, but merely within the range of practical application. We are expecting for this reason to have the full amount of the minimum rate of 48 cents an hour awarded to us by the board. Because we are so restrained in our attitude and because our request is so reasonable and conservative, no smaller amount will be satisfactory."

The last wage decision of the board affecting maintenance of way employees was a "colossal blunder," according to Mr. Grable, and "indefensible from the standpoint of economical and efficient railway operating policy."

"The Board," Mr. Grable added, "we believe, should now come forward with real courage, acknowledge its blunder and at least place our membership on a subsistence level by awarding a minimum rate of not less than 48 cents an hour. The entire country will approve of such action."

A "Just and Reasonable" Wage Means a "Living Wage"

Mr. Lauck formally requested the board to accept the "living wage" principle, make it the basis of its action in the present case and hand down a formal ruling before proceeding further. In explaining his request for this ruling, he said that it meant "that the board accept and make the basis of its decision in this case, as well as part of its general policy in fixing the wage rate of railway employees, that (a) adult workers of the lower grades, unskilled railway employees, be awarded rates of pay which will enable them, under normal conditions, to earn yearly an amount sufficient to permit them to maintain standards of living that are approved as healthful and decent and that are promotive of genuine industrial economy and efficiency; and (b) that proper differentials above this minimum living wage be paid for added skill, responsibility, training and hazard."

A large part of Mr. Lauck's supporting arguments dealt with an attempt to construe the terms "just and reasonable," as applied to wages, to mean the "living wage" and that changes in the cost of living and other similar factors should not be taken into consideration until this "living wage" has been established in the railroad industry. The inference from his remarks was that the labor board had never followed the instruction given it in the law as he interpreted it and that the board, therefore, must now set to work to establish initial basic rates, "just and reasonable" wages, or the "living wage," the terms meaning the same thing, according to his interpretation.

The seven "relevant circumstances" enumerated in the Transportation Act as factors which should be considered by the board in fixing "just and reasonable" wages "assume the prior existence of some substantially 'just and reasonable' wage system and themselves provide merely for changes to meet changing conditions and for the correction of maladjustments in particular instances," it was Mr. Lauck's contention.

Mr. Lauck Asks Board to Make Up "Deficiencies" in the Law

After expressing his approval of the Transportation Act as a "sound and acceptable" law, Mr. Lauck pointed out that, whereas those clauses in the law aimed at the protection of property interests in the railroads are specific, those meant to protect the right of railroad labor are not so definitely expressed or developed with so much detail. "De-

ficiencies in the labor provision of the act" could be overcome, he said, first, by the passage of an amendment by Congress and, second, by rulings of the board, such as the "living wage" ruling requested by the employees.

"These rules would, of course, consist of pronouncements to the effect that the board had accepted certain principles and standards which, in his opinion, were sanctioned by the law and which it would accept as a basis for its future action," he added.

The action of the board in announcing 16 fundamental principles to guide the carriers and their employees in forming new working rules to take the place of the national agreements was cited as a precedent which the board could use to justify its compliance with the employees' latest request, Mr. Lauck contended.

In closing his brief, he attacked the arguments which have been made before by both the board and representatives of the railroads against the application of the "living wage" principle in the railroad industry, charging that "the opponents of the living wage have adopted an indirect method of attack and make much of alleged impracticabilities or the inability to pay living wages out of the national income, point out discrepancies in the alleged size of families, raise the question as to whether single men should receive as much as married men, declare that there is a fundamental danger in awarding wages which will probably be spent extravagantly or foolishly, and adopt similar arguments for mere extreme sophistries, in order to raise a smoke cloud of doubt and disfavor around the principles involved." He admitted at the same time that the "living wage" is not paid by private industries and that, therefore, it is necessary, in attempting to formulate a "living wage," to consider "what should be" and that "theoretical budgets" must be used.

Mr. Lauck Analyzes Railroad Arguments for Wage Cuts

The bases on which the railroads have argued for wage decreases in past hearings were attacked by Mr. Lauck in his brief. He said:

The argument of the railroads for lower wage rates is in three parts:

(1) That the Transportation Act requires the railroads to be operated in the most "efficient and economical" manner and this in turn requires them to reduce wage costs wherever possible.

(2) That the cost of living has declined more rapidly than wage rates.

(3) That railroad wages are above the level paid in outside industries for similar work, and that the railroads, if given a free hand, could employ men at lower rates than now being paid.

First, as regards the requirement of the Transportation Act that the railroads be conducted in an "economical and efficient" manner. What this means, of course (as appears when the Transportation Act is read as a whole), is simply that the railroads shall be run as economically as possible consistent with the payment of just and reasonable wages to their employees. Whatever wages the board decides are "just and reasonable" thereby become *ipse facto* "economical," within the intent of the Act.

Second, as regards changes in the cost of living, as previously pointed out, a change in prices or living costs is a "circumstance" to be considered by the board in adjusting wages, only when the original wage rates themselves are found to be "just and reasonable." It is at best a matter of argument whether wages, even if well above a living wage, should be reduced with every decrease in the cost of living. Notable authorities, indeed, have held that the maintenance of existing wages when cost of living decreases offers the simplest and easiest way by which labor may be given due participation in the constantly increasing productivity of modern industry.

Third, as regards wages in other employments. The railroads' demand for wage reductions of the maintenance of way and other employees rests primarily on their claim that wages in other industries are lower than on the railroads, and that if given a free hand they could recruit their forces at lower rates than now being paid. We do not admit these claims. Wages in other large basic industries, where wage adjustments are made through collective bargaining or through the action of voluntarily chosen arbitration tribunals, have as a rule undergone no significant declines. But even if these claims were true, we deny that they would be pertinent. For to argue that railroad wage rates should be reduced because the same men or other men might be hired at lower wages than now being paid, is to attack the whole theory of arbitration. It is a frank appeal to the old law of supply and demand, and we connot have wages determined by "supply and demand" (which means strikes, lockouts, and other forms of industrial warfare) and, at the same time, have a peaceful settlement of wage disputes by means of arbitration. If the matter is to be left to "supply and demand" then arbitration must be thrown overboard and the parties left absolutely unfettered to fight out their battle in the old tooth and claw fashion. If the matter is to be settled by arbitration, then the law of supply and demand must be thrown overboard.

It is, of course, proper that the wages paid in outside industries should be considered by the board as one of the "relevant circumstances" prescribed by the Transportation Act in determining what wages are "just and reasonable." But this factor must not be accepted as a controlling *principle*, and its use is always subject to these qualifications—first that the lowest paid worker receives a living wage, second that fair differentials for skill, hazards, etc., are observed, and, third, that comparison be made only in those cases where the wages in the other industries and employments have been fixed by fair and honorable means, such as collective bargaining and arbitration boards.

Mr. Lauck's testimony precipitated a lengthy discussion between the witness and Jacob Aronson, and J. G. Walber, representing the Eastern roads; Dr. C. P. Neill, representing the Southeastern carriers; J. L. Coleman and J. W. Higgins, representing the Western roads. Mr. Aronson developed the fact that Mr. Lauck was requesting the board to accept and definitely approve a principle without first ascertaining whether that principle could be applied to the industry. Dr. Neill brought out the fact that Mr. Grable had approved the submissions to the board by the individual railroads and their maintenance of way employees, that the dispute involved in each one of these submissions was the request of the employees for the restoration of the rates of pay in effect under the board's Decision No. 2 and that, therefore, the latter's new request for a minimum wage of 48 cents an hour could not be taken up by the board under the law, because no such demands were made by the representatives of the employees on the individual carriers.

M. of W. Workers Prefer No Overtime

In taking up the subject of primitive overtime after the ninth and tenth consecutive hours of work, a dispute involved in many of the submissions to the board, Mr. Grable cited the history of the overtime rules during the past four years, adding:

"We have no desire for any overtime, no matter what the rate. We do not care to work on Sundays and holidays and, if it were possible, or rather if it were practicable, we should be glad to have this board absolutely forbid all overtime and all work on Sundays and holidays. We realize, however, that an absolute prohibition of all overtime and Sunday work is impracticable, but it should be restricted to the very lowest minimum and it is for this purpose that we request the punitive rate of time and one-half."

Mr. Grable contended that "when a railroad knows it can have the services of an employee at any time for an additional two hours beyond the eight hours of the basic day without paying more than the regular pro rata rate, the railroad will make absolutely no endeavor so to arrange the work as to obviate the necessity for the extra time.

"The basic eight-hour day," he said, "is lost to us and its benefits are destroyed when the railroad can command our services for an extra two hours on week days and for 10 hours on Sundays and holidays without paying more than the regular pro rata rate. Our rest is gone, our recreation is lost, our family life rendered impossible under these conditions."

At the opening of the hearings, the question of whether or not the maintenance of way employees of certain Eastern carriers can properly be before the board in this case inas-

much as they have gone on strike without the sanction of their national organization and in violation of their agreements, was raised by Mr. Walber. In addition, Mr. Walber pointed out that some of the roads have formed new organizations of their employees to the practical exclusion of membership in the national union. Chairman B. W. Hooper of the board requested Mr. Grable to answer the point raised by Mr. Walber. The objecting roads included the New York, New Haven & Hartford, the Philadelphia & Reading, the Pittsburgh & West Virginia, the Delaware, Lackawanna & Western, the Grand Trunk, the Monongahela, the Pere Marquette and the Buffalo, Rochester & Pittsburgh.

Board Declines to Approve "Living Wage" Principle

The employees' request for approval of the "living wage" principle was flatly turned down by the board when it announced at the opening of the hearings on August 29:

It is superfluous for the board to announce in advance the principle or theory upon which it will fix wages in the pending dispute. It may be assumed by the parties in this case that the board will give full consideration to every circumstance set out in the statute for its guidance, but it will not go beyond that. The Transportation Act requires the board to establish wages that are "just and reasonable." It is within the province of the parties herein to make such contentions as they may respectively see fit as to what will constitute a "just and reasonable" wage. If the wage which the motion defines as the "living wage" should be demonstrated to be a "just and reasonable" wage, the board would adopt it; otherwise it would not. The board will neither limit nor enlarge the right of either party to present to the board his conception of what constitutes a just and reasonable wage within the meaning of the law.

This move evidently disrupted the plans of Mr. Grable and his associates, for he immediately asked for a recess in which to reconstruct his case.

This request was granted.

A. O. Wharton, the only member of the labor group on the board in Chicago at the present time, sponsored, in an executive session, a resolution embodying the request made by Mr. Grable. However, his vote was the only one cast in favor of this declaration in favor of the "living wage," all of the other members voting against it.

Grable Appeals to Washington

Following the rejection of the employees' demand for approval by the board of the principle of the "living wage," Mr. Grable appealed to Senator Cummins for the enactment of an amendment to the Transportation Act which would compel the board to specifically recognize this principle.

"We believe that the board's interpretation of the Transportation Act," Mr. Grable said in his telegram to Senator Cummins, "is absolutely wrong and we believe you will agree with us in this. We realize now, however, that the only way in which justice can be obtained is by action on the part of Congress."

Chairman Hooper, subsequently explaining the board's decision on the question of the "living wage," said:

"The issue raised by Mr. Lauck, statistician in the employ of the railway labor organizations, is largely a matter of phraseology. The Transportation Act directs the Railroad Labor Board to fix wages that are 'just and reasonable.' This the board has always endeavored to do, as it will in the pending case.

"Mr. Lauck says that a 'just and reasonable' wage must necessarily be a 'living wage.' Very well then; when the board has fixed a 'just and reasonable' wage it will be a 'living wage' and Mr. Lauck will have what he asks for though it be called by a different name.

"The board's ruling will have absolutely no practical effect on the development of the employees' case in the hearing now in progress. They will be permitted to introduce identically the same proof as though this question of terminology had not been raised and it will be accorded the same careful consideration."

When the hearings were resumed on August 30, Mr. Lauck and J. C. Smock, vice-president of the maintenance of way men's organization, began the presentation of their case repeating to a large extent the argument made at the opening hearing. Mr. Smock presented evidence to the board to show that his organization had been doing everything in its power to keep the membership on certain Eastern roads at work and to end the sporadic walkouts of maintenance of way employees.

During the course of the testimony the employees put in the record a file of letters written by business men to Chairman Hooper, urging the readjustment of the rates of pay of these employees. Upon being questioned as to the manner in which these letters came to be written the representatives of the employees were forced to admit that the representatives of the men had been instructed to influence their local business men to write these letters and that the material which they should contain emanated from the headquarters of the union.

Accident Investigations— April, May and June

THE TWELFTH quarterly issue of the Summary of Train Accident Investigations, prepared by the Bureau of Safety of the Interstate Commerce Commission, which is for the months of April, May and June, 1922, was issued on August 23.

This report covers eight collisions and seven derailments, as follows:

Collision	Chic., R. I. & Pac.	Plains, Kans.	April 19
Derailment	Baltimore & Ohio	Philo, Ohio	April 22
Collision	St. Louis-San Francisco	Girard, Kans.	April 25
Collision	Galv., Harrisb'g & S. A.	Lobo, Tex.	May 6
Derailment	Kansas City Southern	Allene, Ark.	May 14
Collision	Chic., R. I. & Pac.	Keats, Kans.	May 20
Collision	Ulster & Delaware	Grand Gorge, N. Y.	May 26
Collision	Atchison, Topeka & S. F.	East Ft. Madison, Ill.	May 29
Derailment	Southern	Middleton, Tenn.	June 7
Derailment	Pennsylvania	Brilhart, Pa.	June 7
Derailment	Louisville & Nashville	Hilberta, Ala.	June 15
Collision	Carolina, Clinchfield & O.	St. Paul, Va.	June 18
Derailment	Canadian Pacific	Lake View, Me.	June 22
Derailment	Virginian & Western	Glen Rogers, W. Va.	June 22
Collision	Norfolk & Western	Crumpler, W. Va.	June 30

Following are abstracts of these reports:

The trains in collision on the Chicago, Rock Island & Pacific near Plains, Kans., on April 19 were westbound passenger No. 311 and eastbound passenger No. 312, each consisting of a locomotive and three cars. The collision occurred in clear weather about 2:35 a. m. Moving between 20 and 40 miles an hour, the trains collided on a straight line; and in each train the baggage car was telescoped by the tender for the full length of the tender; but the passenger cars were not damaged. The locomotives were damaged but remained upright. Both enginemen were killed, and six persons were injured. Improper handling of a train order is given by the inspector as the cause of the collision; but the fact that both locomotives carried electric headlights introduces a question as to why neither engineman saw his danger in time to bring his train to a stop. The firemen apparently were able to give no information, and the reason for this failure is a matter of conjecture. Each fireman said that he knew nothing of the approach of the opposing train until he felt the application of the air brakes, at which time the opposing train was only a few rods distant.

The train derailed on the Baltimore & Ohio near Philo, Ohio, on April 22 was eastbound passenger No. 58, consisting of a locomotive and three cars. Moving at about 35 miles an hour, it was thrown off the track at a highway crossing, and the engine and first two cars fell down a 30-ft. bank. The engineman was killed and 13 passengers and 4 employees were injured. The crossing is on a curve of 2½ deg. and the cause of the derailment was dirt on the track, which appears to have been scraped upon or close to the crossing by a road scraper, being afterwards packed down by passing automobiles.

The trains in collision on the St. Louis-San Francisco at Girard, Kans., on April 25, were a southbound extra, consisting of 18 circus cars, which had just stopped for a crossing and was moving at about eight miles an hour, and southbound passenger No. 111, which ran into the rear of the circus train at about 15 miles an hour. One passenger was killed and 12 passengers and two employees were injured. The collision occurred at about 2:37 a. m. in a dense fog. The inspector finds that the extra was occupying the main track on the time of the superior train without proper flag protection. The extra had passed Farlington, seven miles north, with too little time to clear the passenger train at Girard, no block system being in use. The collision occurred within yard limits. The assistant superintendent was on the circus train, but he overlooked train No. 111; he said he was thinking about clearing a northbound train due at Girard at 3:20 a. m. The conductor and the flagman had not forgotten the passenger train, yet they had not thrown off any fusees and (the line being straight) apparently depended on seeing the headlight of the passenger train as well as if there had been no fog. The engineman and the fireman knew that they were on the time of the passenger train, but no whistle was blown to send out the flagman and they said they had full confidence in the competency of the men riding at the rear of the train. At the last minute a fusee was thrown off but it was only 300 ft. in the rear of the point of collision.

The collision on the Galveston, Harrisburg & San Antonio, near Lobo, Tex., on May 6, causing injury of 50 passengers, 12 employees and two sleeping car porters, occurred about 9:31 p. m., and was due to a string of freight cars becoming uncontrollable on a steep grade, and colliding with westbound passenger train No. 101, the freight cars at that time being in motion at about 20 miles an hour, while the passenger train was running at about 10 or 15 miles an hour. An eastbound freight train, entering the passing track at Fay, was obliged to push 13 cars of ballast forward some distance in order to clear the main track; and in the movement, nine cars of ballast became separated and ran down the grade on the main track. The inspector puts the responsibility primarily on the leading brakeman of the freight who should have made sure that the ballast cars were secure before allowing them to be moved forward. When he felt that there was something wrong, he got off and ran to one side, to get out of range of the locomotive headlight in order to see what had happened; and the cars got away from him. He had coupled the air hose between the locomotive and one of the ballast cars, but took no action to see whether or not the brake was working throughout the whole string. The conductor had been notified that the ballast cars would be in his way, but he did not pay personal attention to their movement; and he admitted that the brakeman was not entirely competent. There was no derail at the outgoing end of the passing track, the rule being to install these only where cars are regularly stored and where the grade is descending 26 ft. per mile or more.

The derailment on the Kansas City Southern, near Allene, Ark., on May 14, occurred about 11:30 p. m., and resulted in the death of the engineman and the injury of five other persons. Northbound passenger train No. 2, moving at about 40 or 50 miles an hour, was thrown off the track by the turning over of a rail, caused, according to the report, by the excessive speed over uneven track. For 800 ft. south of the point of derailment, the track was level in only two places and the maximum variation in height was 1⅝ in.; while the gage for this distance was from ⅛ in. to 1 in. wide. The section master said that the roadbed in that region was spongy in character. The locomotive was 4-6-2 type weighing 129 tons.

The trains in collision on the Chicago, Rock Island & Pacific at Keats, Kans., on May 20, were eastbound third-class freight No. 86, and eastbound second-class freight No. 994, the last named running into No. 86 while it was standing at the station, about 6:15 p. m. Two passengers were killed and three employees and one trespasser were injured. No block system is in use on this section of the road and the inspector says the cause of the collision was the failure of the flagman of the standing train properly to protect his train.

The collision on the Ulster & Delaware, near Grand Gorge, N. Y., on May 26, was between a work train, extra No. 21, and freight train extra No. 22, both headed eastward. The freight train ran into the work train and six workmen riding in the rear car of their train were killed. The work train was moving slowly backward. This train was not protected by flag. The conductor was occupying the main track under authority of two train orders, in the reading of which he had become confused. The second order changed the hour at which he must send out a flag

against the freight train, but he got some wrong impression in reading the two orders. The inspector finds that the railroad has no proper system for the examination and instruction of employees except when they enter the service or when they are promoted. The engineman of the work train had a correct understanding of the contents of the train orders but instead of conferring with the conductor as to the details of execution, he took it for granted that the conductor had provided proper protection before beginning the westbound movement. The fireman and the brakeman appear to have been ignorant of the second train order. "The necessity for close co-operation and thorough understanding between members of a crew applies with particular force to a work train."

The collision on the Atchison, Topeka & Santa Fe at East Fort Madison, Ill., on May 29 about 4:07 a. m. was between westbound passenger No. 1 and eastbound passenger No. 2, fourth section; the engineman of No. 1 and the fireman of the eastbound train were killed and 48 passengers and three employees were injured. The collision occurred at the switch at the east end of the single track which extends across the Mississippi river. The eastbound train was just entering the double track when it was struck by the westbound, which had passed a distant and a home signal, and a train order signal, all set against it. The eastbound train was moving at about 20 miles an hour and the westbound at about 30 miles an hour. The fireman of No. 1 said that the engineman saw the home signal and the train order signal; but for some unknown reason, says the report, "he took no effective measures toward bringing his train to a stop * * * He may have been so incapacitated as to be unable to take the proper steps. When the fireman directed the engineman's attention to the signal indications there was still time for the engineman to have stopped the train. The engineman acknowledged the indications to the fireman and had his hand on the brake valve," and so the fireman did nothing to stop the train. There was no evidence that the engineman had been in other than good physical condition up to the time the train approached the point of collision.

The train derailed on the Southern Railway near Middleton, Tenn., on June 7 was westbound extra freight train No. 567. About 2 a. m., while traveling at 25 miles an hour, the locomotive and 14 cars was thrown off the track at a washout and the fireman was killed. The inspector finds that the trouble was due to heavy rain of which the train dispatcher was notified as early as 8:15 p. m.; but the freight train was not given any warning. The station operator did not wish to offend the dispatcher by repeating his warning and he notified Grand Junction, west of Middleton, on another wire, requesting that eastbound trains be warned. The operator failed to notify the track foreman for which he is censured. This foreman had retired to bed about 8 o'clock being exhausted by hard work and worry incident to illness in his family, and so knew nothing of the heavy rain until he was called at 2:40 a. m. on account of the derailment. The operator who came on duty at 11 p. m. assumed that, as it had rained about three hours, the necessary precautions had already been taken. The inspector cannot decide the point in dispute as to whether the dispatcher had again been warned at 11:10 p. m.; but as there had been a washout at the same place only a short time before he should have exercised particular care. The railroad company is also held at fault for neglecting the drainage of the roadbed, the waterways having become clogged. If the drainage had been put in good condition the derailment "undoubtedly would not have occurred."

The train derailed on the Pennsylvania Railroad at Brilhart, Pa., on June 7 was westbound passenger No. 975, drawn by engine 1387. Moving at about 40 or 45 miles an hour, it was thrown off the track by some obstruction on the rail, and the locomotive was overturned. The fireman was killed and seven passengers and eight employees were injured. The locomotive, class K-2 of the 4-6-2 type, had on its front truck a transverse tie-rod, behind the leading wheels, used to overcome lateral movement in the brake shoes; the rod became broken or detached and dragged on the road bed. A careful search was made for a missing bolt, cotter key and nut, by which it was fastened to the left brake shoe, but nothing was found. The inspector concludes that this dragging rod probably threw a piece of ballast or some other substance up, and on to the rail, causing the derailment of the rear wheels of the truck.

The train derailed on the Louisville & Nashville at Hilberta, Ala., on June 15 was northbound passenger train No. 4, first section. Moving at about 50 miles an hour, it was derailed by running over a misplaced facing point switch and two employees of a warehouse near the side track were killed and three others were injured. On the train 53 passengers and 7 trainmen were injured. The locomotive was overturned and the warehouse badly damaged. The switch had been left in the wrong position by a trackman, and he and his foreman, who was nearby are held responsible for the derailment. The whole gang of trackmen had passed the misplaced switch without noticing it. The man at fault had carefully returned the switch key to the foreman without having closed the switch.

The trains involved in the rear collision on the Carolina, Clinchfield & Ohio, at St. Paul, Va., on June 18 were freight trains Nos. 301 and 706, the latter running into No. 301 at about 10 miles an hour. The leading train was at a standstill. One employee was killed, a brakeman of the 706, who was riding on the pilot of the locomotive. The collision occurred within the yard limits where, because of curves and trees, the view is short; and the view is also bad from the type of engine involved, which was 2-8-8-2. On account of the shape of the locomotive, the engineman was depending on the fireman; and, the conclusion of the inspector is that the collision was due to the failure of the fireman to notify the engineman that the main track was occupied. The fireman saw the standing cars and knew that there was no track of any kind alongside of the main track; yet, for some reason, he was under the impression that the cars were on a passing track and that the main track was clear. The failure of the brakeman on the pilot to warn the engineman or to save his life by jumping off cannot be explained; it is probable that he was either asleep or had become unable to take care of himself.

The train derailed on the Canadian Pacific near Lake View, Me., on June 22, was eastbound passenger No. 16. Moving at about 30 miles an hour it was derailed by a rock which had fallen from the top of a cut and lodged on the track. The locomotive was thrown against the wall of the cut and was stopped about 156 ft. beyond the point of derailment. The fireman was killed and one other employee was injured. The conclusion of the inspector is that heavy rains during the past two weeks probably had washed away the earth supporting the rock, which measured about 840 cu. ft. The track foreman, who had been in charge of this section for 25 years, had never known of any trouble in this vicinity from falling rocks.

The train derailed on the Virginia & Western near Glen Rogers, W. Va., on June 22, was a work train, moving at about 12 or 15 miles an hour with three cars ahead of the locomotive, and 10 cars behind. Two employees were killed and three injured, the killed having been riding on the leading car. The derailment was caused by a broken flange, the break being due to an old defect, the presence of which could not have been discovered by ocular inspection, although, says the inspector, its presence probably would have been discovered by a hammer test.

The trains in collision on the Norfolk & Western at

Crumpler, W. Va., on June 30 were a freight train and a locomotive without train; one employee was killed and eight were injured. This collision occurred on the North Fork branch, seven miles long, where extra trains register "on" and "off" the branch (at the junction) and thereafter adjust their rights to the road by means of telephone messages between conductors. Conductors of inferior trains make use of commercial telephones in the offices of the coal companies along the branch. They make no records of their conversations and the engineman depends on what he is told by the conductor. The collision occurred on a steep descending grade, where the view is very restricted. The damage to locomotives and cars was not great, but one engineman was killed. As the conductors had no record of their conversations, the inspector is unable to determine which of them is at fault. The report says that "greater safety in train operation on this branch undoubtedly would be provided by the adoption of standard methods as contained in the operating rules of the American Railway Association."

I. C. C. Finds Only 4 Per Cent of Locomotives Inspected Unsafe

WASHINGTON, D. C.

THE REPORT submitted by the Interstate Commerce Commission to the Senate on August 29 in response to its resolution asking whether the safety appliance and locomotive inspection acts were being violated, fails to find anywhere near as serious a condition as has been proclaimed by the labor leaders, although its inspectors' reports, the commission says, "indicate a very general let down in the matter of inspection by carriers which gives cause for concern." The commission says it is impossible to report the exact condition of all locomotives from day to day, but of the 4,085 locomotives and tenders inspected on 162 railroads during July, 2,456 disclosed defects more or less serious, but only 169 or 4 per cent were found not safe to operate and ordered withdrawn from service. Of the others, 992 were found to have defects less serious in character, but in need of prompt attention, and in 1,295 cases there were defects not such as to give cause for immediate concern, but such as in accordance with sound practice should have attention. The report, after quoting the Senate resolution, No. 327, is as follows:

The Locomotive Boiler Inspection Act approved February 17, 1911, has as its purpose the promotion of the safety of employees and travelers upon railroads, by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereto, making it unlawful to use any locomotive engine propelled by steam power in moving interstate or foreign traffic, unless the boiler of such locomotive and appurtenances thereof are in proper condition and safe to operate without unnecessary peril to life or limb. The act provides that all boilers shall be inspected from time to time in accordance with the provisions thereof, and be able to withstand such test or tests as may be prescribed in the rules and regulations provided therefor.

By act approved March 4, 1915, the original act has been made to apply to and include the entire locomotive and tender and all parts and appurtenances thereof. The provisions of the act as amended apply to any common carrier or carriers, their officers, agents, and employees, engaged in interstate or foreign commerce.

As required by the act, the United States was divided by us into 50 locomotive boiler-inspection districts and one inspector assigned to each of such districts. It is required that each inspector shall make such personal inspection of locomotives under his care from time to time as may be necessary to fully carry out the provisions of the act and as may be consistent with his other duties, but he shall not be required to make such inspections at stated times or at regular intervals.

It is further provided that whenever any district inspector shall, in the performance of his duty, find any locomotive not conforming to the requirements of the law or the rules and regulations, he shall notify the carrier in writing that the locomotive is not in serviceable condition and thereafter such locomotive shall not be used until in serviceable condition.

Specifically, as to the matters included within the Senate Resolution:

Instances have been brought to our attention where, in our opinion, the act, as amended, referred to in Resolution 327, recently has been violated. It is impossible for us to accurately report the extent of such violations.

Inspection of locomotive boilers is at present being made in all federal locomotive boiler-inspection districts by our inspectors, but all inspections by the carriers as contemplated in section 5 of the act are not being made by and upon all common carriers engaged in interstate commerce. The reports from our inspectors indicate a very general letdown in the matter of inspection by the carriers which gives cause for concern. The carriers report various reasons for not making these inspections. Some of the reasons assigned are as follows:

"No monthly inspection made of this engine since 6-16-22 account of not having competent inspectors in the service due to walkout of the shop crafts.
"Unable to make inspection account insufficient help due to strike.
"Not inspected account strike.
"Inspection not made July.
"Unable to make inspections or tests account strike conditions."

There are approximately 70,000 locomotives within the general purview of the act. A determination as to the extent to which the act currently is being violated would involve ascertainment of the condition of each locomotive and information as to the use being made thereof. The condition varies even as to the same locomotive from day to day. It is not possible for us to make this determination. The locomotives referred to are housed or repaired at approximately 4,600 different points and are operated on more than 265,000 miles of track. We are permitted by the act to have 50 district inspectors. During July last they made 717 separate inspections covering 4,085 locomotives and tenders on 162 railroads. The July activity of our inspectors is typical. The act does not contemplate that our inspectors shall inspect all locomotives. Section 6 of the act provides that the inspectors' "first duty shall be to see that the carriers make inspections in accordance with the rules and regulations established and approved by the Interstate Commerce Commission, and that carriers repair the defects which such inspections disclose before the boiler or boilers or appurtenances pertaining thereto are again put in service."

The services of our inspectors are general in character, and they are given such direction as is designed to bring about a compliance with requirements by the carriers.

In pursuance of the duty of inspectors to see that requirements are complied with, and that equipment is kept in safe condition, the inspectors deal with the varying situations and conditions in that manner which is deemed likely to accomplish the best practical results. The exercise of discretion and judgment is always involved. Obviously a locomotive may be defective and in need of repairs and yet be in a condition in which it is "safe to operate . . . without unnecessary peril to life or limb." In many instances defects discovered and brought to the attention of carrier representatives are immediately repaired without retiring the locomotive. Under section 6 notice is given of the more serious defects and the locomotives are required to be retired.

While we are not in position to make report regarding the condition of all locomotives and the extent to which the requirements as to inspection and repairs are not being complied with currently, there are indications as to conditions generally and certain deductions and conclusions may be drawn from the conditions disclosed by the work of our inspectors during the month of July last. At 717 different points they made personal inspection of 4,085 locomotives. Of these, 2,456 disclosed defects of the varied character mentioned above and more or less serious; 169 were found to be in such condition that they were not "safe to operate" and notices were served upon the carriers under section 6 of the act requiring them to be withdrawn from service. Of the others, 992 were found to have defects less serious in character but in need of prompt attention. In 1,295 cases, defects, though not such as to give cause for immediate concern, were such as, in accordance with sound practice, should have attention.

It will be noted that it is the "use" of a locomotive not found to be in proper condition and safe to operate, and not the condition itself, which is a violation of the law. The withdrawal of locomotives for repairs, the restoration of locomotives to service, and the use of reserved or surplus locomotives, are factors contributing uncertainty when considering the condition of locomotives in service to which the act applies.

When considering the extent of our inspection, cognizance should be taken of the fact that the act limits the number of inspectors to 50, and that the amount directly appropriated to carry out its provisions for the current fiscal year is $290,000. This sum may be spent in monthly allotments of $24,166.66, as provided in the Antideficiency Act of February 26, 1906. The amount expended during the month of July, 1922, in carrying out the requirements of the act was $24,025.63.

A Study for the Front Elevation of the New Illinois Central Station at Chicago

Factors Governing the Design of Passenger Terminals*

An Analysis of the Operating Conditions Which Influence the Plans for a Large Station

By A. S. Baldwin
Late Vice-President, Illinois Central

RAILROAD PASSENGER SERVICE may be divided into two general classifications, suburban and through. Suburban service is that which has for its primary purpose the carrying of passengers between residential and business districts. This service, which in many respects resembles surface, elevated, or sub-surface street railway service, exists in large cities only. The distance traveled rarely exceeds 30 miles. Some suburban trains carry baggage, mail and express for local points served, mainly to relieve through trains of that burden, but as a general practice suburban trains carry passenger coaches only.

Through passenger service is designed to meet widely different requirements. The territories served generally cover large areas and the distances traveled are great as compared with suburban service. On some railroads, trains, exclusive of locomotives, move as units distances of 2,000 to 2,500 miles. This condition has resulted in the use of cars fitted with many comforts not required for short distance travel. Baggage is carried on trains with passengers. Sleeping, dining, and in many cases, observation cars are usual features of passenger train equipment. It is readily apparent that, with such a variety of cars, many of which must be turned at the terminal before a return trip can be made, and with the many movements necessary for repairing, cleaning, inspecting and supplying locomotives and empty rolling stock, arrangements for reducing switching movements should be given careful consideration.

General Types of Passenger Terminal Stations

Passenger terminals may be classified, with reference to the arrangement of their approach tracks, station tracks and station, into the following general types: (1) Sub Terminals; (2) Through Terminals; (3) Loop Terminals; (4) Combinations of the above.

A stub terminal is one in which the station tracks are connected at one end only. Generally the tracks terminate at a station headhouse or at a concourse leading to it, thereby enabling passengers to reach trains without crossing tracks or using stairs. The advantages in having a station located as near the heart of a city as practicable, or in having it adjacent to a thoroughfare, beyond which tracks can be extended have resulted in the construction of a large number of stub stations. The Jersey City station of the Central Railroad of New Jersey, the St. Louis, Mo., Union station, and South station, Boston, Mass., are of this type.

The *through terminal* has its station tracks connected at both ends. In this type it is necessary for passengers to use stairs, ramps, or elevators in order to avoid crossing station tracks at grade. The Pennsylvania Station in New York City, is an example of this type.

The *loop terminal* is a form of through terminal in which trains generally enter the station from the same direction, the main tracks converging from either end of the passenger platforms so as to form a loop or part of a circle, thereby permitting forward movement of trains from the point of entrance to the loop, through the station, to point of departure with the train reversed in direction. This type offers peculiarly favorable opportunities for the location of engine terminal and coach yard facilities. It is frequently used in street car terminals, but on account of the area required for the curves of long radii, its use for steam railroad operation is limited. The Broad Street station, Richmond, Virginia, is an example of this type.

Combinations of the three types of terminals mentioned are quite common and can frequently be made to advantage. The Union station, Washington, D. C., and the Grand Cen-

*Abstracted from a report prepared before the International Railway Congress in Rome in May, 1922.

tral station, Memphis, Tenn., are examples of combination through and stub terminals. The Grand Central Terminal, New York City, is an example of a combination stub and loop terminal, and is of particular interest in that it is not only the largest station, but also the only important double deck passenger station in America. The Union Station, Kansas City, Mo., is of the through type, but has station tracks and platforms of sufficient length to accommodate two trains. It can be operated either as a double stub terminal or with two trains on the same track operating in the same direction. The stairways are in the middle of the platforms. A double stub terminal with station tracks extending in opposite directions, but abutting a common passenger concourse, is now being constructed for the Chicago Union Station Company, Chicago.

In a stub terminal, every locomotive and car handled must, of necessity, pass in and out the one throat. This is not the case in through and loop terminals, where movements are generally continuous through the terminal and the interference from conflicting movements are reduced to a minimum. The through terminal, operated in both directions, has some disadvantages as compared with one operated in one direction only, but the interference is less than in the stub terminal.

The objections to the excessive throat movements in a stub terminal may be mitigated by providing a flexible and adequate throat arrangement. The number of throat or approach tracks required can be determined only after a thorough study of the individual terminal requirements. The tendency in design has been to favor a liberal number of throat tracks. If an adequate throat is not provided, even though there may be enough station tracks to handle the trains, congestion results.

The excessive back up and crossover movements necessary in a stub terminal tend to restrict its capacity. In through and loop terminals, the movement being in one direction, a train can follow the one preceding, while in the stub terminal a station track must be cleared by one train before another train can occupy it, consequently the capacity of through and loop terminals is considerably greater than that of stub terminals for the same number of station tracks.

Through trains, due principally to the time required to load and unload baggage, mail and express, require more standing time at station platforms than do suburban trains, consequently more suburban than through trains can be handled on a track in a given time.

The advantages of the through over the stub terminal, so far as capacity is concerned, decrease as the standing time of the trains in the trainshed increases, because the delay of clearing the station represents a smaller proportion of time per cycle of operation. For this reason, the objection to a stub terminal for through passenger service is not so great as for suburban service where the loss of time getting in and out of the terminal represents a large proportion of the total time involved.

Terminal	Year completed	Relation of through train to total trains handled	Number of approach tracks	Number of station tracks	Ratio of station tracks to approach tracks
Grand Central, Chicago	1890	100%	5	10	2.00
South Station, Boston	1898	55 —	8	28	3.50
Union, St. Louis	1904	86 —	6	32	5.33

C. & N. W., Chicago	1911	27 —	6	16	2.67
C. R. R. of N. J., Jersey City	1914	20 —	9	20	2.22
Can. Pac., Montreal	1914	86 —	4	11	2.75
Lehigh Valley, Buffalo	1916	100 —	3	9	3.00

Ratio of station tracks to approach tracks

The advantages of the through and loop terminals over stub terminals for switching movements are apparent. This is emphasized in the stub terminal if arriving trains head into the station, which is the general practice. If the train is broken up on the station tracks by a switch engine, baggage, mail and express cars cannot be switched to other tracks for handling until the coaches are unloaded and removed. The road engine cannot be released until the entire train

[1] At times Upper Level tracks are used for suburban trains and Lower Level tracks for through trains.

(1) Seven tracks worked to capacity, and fourteen tracks to sixty per cent of capacity.

Capacity of terminals

has been removed. This causes delay and excessive switching through the throat. If trains back into the station, time is lost in turning, and expense of maintenance is increased. In the case of a through terminal, or a stub terminal where trains back in, the road engine can be released at once and baggage, mail and express cars switched to other parts of the terminal, while coaches are being unloaded. In some through terminals the road engine, upon arrival, is disconnected and proceeds to the engine terminal and switch engines, operating from opposite ends, can then begin to break up the train. This method of operation clears the station tracks in minimum time.

From the foregoing discussion, the advantages of combining a loop with a stub terminal, such as the Grand Central Terminal, New York, become apparent. In that station incoming suburban trains, using the loop, proceed to the unloading platforms and then pass around the loop to loading platforms or to the yards as occasion demands. This operation permits following trains to use the same station tracks at much shorter intervals than would be possible if the loop were not provided and leaves the stub tracks for trains which cannot be so quickly discharged, or for outbound trains. The track design permits inbound trains after they have passed around the loop to occupy the stub tracks by a back-up movement; they can then be loaded and made ready for departure without the usual switching movements required for turning equipment in a stub terminal. The location of the stub tracks on the inside of the loop is advantageous in that it combines many benefits of a loop with those of a stub terminal and affords economical utilization of space.

Adequate Station Facilities

Adequate station facilities are essential for the elimination of unnecessary switching movements. It is the general practice to handle baggage, mail and some express on station platforms. From 20 to 30 minutes are required to unload a carload of baggage. The capacity of the station, therefore, can be increased by removing trains to an auxiliary storage yard immediately following the disembarking of passengers, which usually requires from three to five minutes. The train may back into the trainshed and unloading be completed after the rush period is past. Replies to the questionnaire indicate that this practice is employed in but three of the terminals reporting. In the case of fourteen other terminals, the station tracks are released for incoming trains by switching the partly unloaded baggage and express cars to other tracks used for that purpose. This practice will increase as demands upon the terminals, and resulting necessity, for releasing tracks quickly, increase. Provision of adequate facilities for this purpose will reduce switching movements by eliminating the necessity for handling cars into and out of the terminal. The capacity and flexibility of a station are increased if a track arrangement is provided which will insure double-track movements into and out of the station for all tracks. It has been the practice in some of the more recently constructed terminals to provide ladder tracks, wherever practicable, in order to afford parallel movements in the same or opposite direction. This increases the capacity of the terminal, permitting a greater number of simultaneous movements and making possible more intensive terminal operation.

Ladder tracks, turnouts and crossovers are costly. The number to be provided depends upon the number of switching movements required and the nature and volume of traffic and must be determined by the needs of each individual case.

Operation of some of the older passenger terminals is seriously handicapped by short station tracks. Trains have increased in the length through steady increase in the length of cars and number of cars per train. Cars 84 ft. in length are being used, and at times 15 or 16 cars of an average length of about 70 ft. are handled in one train. To meet this situation at stations having short tracks, the long trains are sometimes divided into sections and placed on two tracks. This involves extra switching to assemble the train, loss of time in pumping air and testing train lines, confusion to passengers and other objectionable features. In some terminals only a few of the middle trainshed tracks are of sufficient length to accommodate the longest trains. The necessity for handling trains on assigned tracks will limit the flexibility of the terminal. It is apparent that station tracks should, if practicable, be sufficiently long to accommodate the longest trains, although some short tracks can be used to advantage for short trains.

The unusual double throat arrangement of the St. Louis Terminal arose through the necessity for lengthening the station tracks, on account of the increase in length of trains. Originally there was but one throat which resulted in short outer tracks on each side of the trainshed. By dividing the approach into two throats the outside tracks were materially lengthened.

Internal crossovers, between two trainshed tracks and outside the limits of the interlocking plant, are under some circumstances, of value in reducing switching movements. Three such crossovers exit in the St. Louis Terminal, and six in the Washington Terminal. These are located from 300 to 400 ft. from the bumping posts and between adjoining tracks. They are used for placing in or taking out cars without moving the entire train. In the Washington Terminal, there are also crossovers at the head end of some of the station tracks which permit switching movements outside the limits of the interlocking plant. Due to the requirements at Washington, for unusually frequent transfer of cars from one train to another, these crossovers are of value in reducing switching movements.

A notable feature at the Washington Terminal is a turntable, located adjacent to the trainshed, used for turning railroad officers' business and privately owned cars, postal cars, and other passenger equipment, also for turning certain road locomotives which are operated on short turn-around schedules and do not have sufficient layover to permit running to the engine house for turning. The operating officers advise that the turntable is well located, and a decided advantage to operation.

In the suburban terminal of the Illinois Central at Chicago, internal crossovers are an essential feature of the track arrangement. The motive power is steam, but the engine and tender are combined in one rigid unit, operating equally well in either direction. This feature, common to many suburban steam locomotives, reduces switching movements and avoids the necessity for turning locomotives. By means of the internal crossover arrangement the locomotive on an incoming train can be released at once if the adjacent track is not occupied. It can then move around the train, connect with the opposite end and be ready for an outbound trip without switching the cars. In the meantime, passengers can occupy the cars and the train be ready for an outbound trip when the locomotive is reconnected. The throat arrangement of this terminal is restricted and the greater part of all movements both in and out must of necessity pass over a single throat track.

In 1920 during a street car strike, trains were operated continuously for several days into and out of this terminal at the rate of 544 in a 12 hour period, an average of 7.6 trains per track per hour; this was accomplished notwithstanding the fact that the terminal has a single track throat, is stub-ended, and operated by steam equipment which has to be supplied with water, sand and coal, and have fires cleaned. This would not have been possible without the crossover arrangement at the end of the tracks. This terminal is not interlocked.

In some of the older terminals, curves of shorter radii were used than are desirable with the long-wheel-base engines now being operated. On account of the delay and inconvenience resulting from switching on curves, it is desirable to have straight tracks where it is necessary for a large amount of switching to be done.

Head End Equipment

A large percentage of the movements of empty rolling stock at passenger terminal stations is due to handling what is ordinarily referred to as head end equipment, consisting of baggage, mail and express cars. The loading and unloading of these cars from the station platforms without switching them to facilities provided for their exclusive use will reduce switching movements.

The articles handled in baggage cars consist principally of trunks, boxes, chests, suitcases, hand-bags, bicycles, baby carriages and corpses. Ordinarily the passenger delivers his baggage to the station shortly before leaving time for his train and demands it upon arrival at destination. This precludes the separation of baggage facilities from the station.

It is not generally customary to operate exclusive baggage trains, consequently, the logical place to handle baggage is on the station platforms. If proper facilities are provided, a considerable part of the baggage can be unloaded simultaneously with the disembarking of passengers. This, however, can not be accomplished if baggage cars are filled to capacity, as from 20 to 30 minutes are required for unloading them. Handling baggage may thus become the factor controlling the capacity of station tracks. Replies to the questionnaire indicate that the practice of switching baggage cars to special tracks assigned to that service is followed to but a small extent and by only 7 of the 22 terminals reporting, it being the general practice to handle baggage on trainshed tracks. As this is desirable for reducing switching movements, sufficient station tracks should be provided, when practicable, to permit this method of operation.

Mail can be handled in a building separate from the passenger station. The requirements of mail service, however, demand that it be handled with dispatch so as to insure prompt transfer of this traffic between trains and postal stations.

The postal business, since the inauguration of parcel post in 1913, has grown rapidly. The practice of shipping the greater part of the mail in pouches of a uniform size permits effective handling by means of chutes and conveyors, but the cost of equipping every platform in a trainshed with mechanical equipment would not be justifiable. Mechanical equipment must, therefore, be confined to special tracks on which most of the mail can be handled. The greater part of less than carload mail can be unloaded while baggage is being handled, but it is usually more economical to switch carload mail to tracks equipped with chutes and conveyors. The large amount of mail handled at many terminals has brought about the construction of postal sub-stations connecting with or adjacent to the station facilities. This arrangement results in economy of operation through relieving congestion and expediting the handling of mail.

In the Grand Central and Pennsylvania terminals at New York City, mail is handled from and to the postal sub-stations direct by mechanical means. Special tracks are assigned to mail service. While this increases switching movements, it is not so objectionable as might be supposed because a large part of the mail in these terminals is handled in solid mail trains which require no additional switching. Mail carried on regular passenger trains in less than carload lots is handled largely on station platforms in the same manner as baggage. In the Chicago & North Western station, Chicago, there are four conveyors on which arriving mail can be thrown and conveyed to the mail room located beneath the tracks. These four conveyors serve eight tracks. It is possible to handle practically all the arriving mail on these tracks, which results in a minimum of switching. There is a growing tendency to operate solid mail trains on special station tracks equipped with mechanical means for handling, which reduces switching movements.

The express business has been growing rapidly during the past few years and is approaching the character of package freight. The movement of express is not associated with passenger travel and could as well be handled in facilities separated from the passenger station, were it not that express matter is usually handled on passenger trains. The rapid growth of express business has seriously interfered with the operation of some passenger terminals. This has resulted in a tendency to separate express business from the passenger terminal which is advisable where the volume of express business is sufficient to justify doing so.

Of the 22 stations covered by replies to the questionnaire, two only, the Chicago and North Western at Chicago and the Pennsylvania at New York, have adopted the practice of handling express in separate terminals. At Buffalo, New York, an express terminal, similar in operation to a less than carload freight house, has been constructed, and in this express terminal most of the express packing business for that city is handled.

In many terminals express is handled on practically all trains, the express matter not being of sufficient volume to justify the operation of trains exclusively for that business. It is, therefore, desirable to consider methods of handling express at passenger terminals from which its elimination is not practicable. The method is largely dependent upon the amount of express handled.

In most large stations the volume of express business is so great that it cannot be handled properly without providing special facilities separate from the station for its exclusive use. The express building should be located near the station and in direct connection with the station platforms by means of tunnels and elevators. The plan of South Station, Boston, affords a satisfactory illustration. With this arrangement so much as practicable of the less than carload express can be handled on station platforms and trucked to the express building, thereby reducing switching movements. The cost of handling in this manner will probably be greater than the cost of switching to the express building, if cars are filled to capacity, but less if the cars are only partially filled. A track arrangement somewhat similar to the one used at South Station, Boston, may be used, wherein one of the station tracks is made to extend through the station track ladder, parallel and adjacent to the throat tracks, in order that express cars on the same side of the throat as the express building can be switched to the express tracks without necessitating their being handled through the throat.

Two general methods of locating tracks serving express buildings are used and their arrangement has a direct bearing on the number of switching movements. One plan consists of two or more tracks parallel to the side of the express building; this requires that cars on these be placed with doors opposite in order to permit trucking through cars to the express building, as in freight house operation. With this arrangement, it is inconvenient to remove cars from the tracks until the loading or unloading of entire setting is completed. In the Central of New Jersey Terminal at Jersey City crossovers have been provided between the tracks to facilitate switching. The other plan is illustrated in South Station, Boston, where short tracks are utilized, connected with one or more lead tracks which permits switching on any track without disturbing the cars on other tracks. It is possible by this arrangement to so design a yard that express can be handled to and from any car without having to spot or to truck through cars. From

the standpoint of switching movements, as well as terminal operation, the last mentioned scheme seems desirable, especially where a large number of cars are to be handled. The plan adopted in the Jersey City station is adapted to terminals where the express business is not so large. A combination of these two schemes was used in the St. Louis Terminal.

Due to the increasing tendency to operate solid express trains, an important feature to consider in connection with design of express facilities is provision of tracks of sufficient length to handle solid express trains without unnecessary breaking up and switching. If practicable, a connection should be provided whereby trains can head directly from the main tracks into the express yard without moving first into the terminal and then back to the express yard. Switching movements can be materially reduced on outbound as well as inbound trains if a run-around track is provided to permit the engine to be moved to the rear of the train. An important feature to be observed in the design of such facilities is to so arrange them that they can be reached by a direct forward movement.

Advantages of Trucking Platforms

It has been emphasized that elimination of switching movements is effected by handling baggage, mail, and express on station platforms. This, under usual conditions, is objectionable on account of interference with passengers, or delay in handling baggage, mail, and express while passengers occupy the platforms.

The trouble is eliminated in some stub stations by requiring all trains to back in, as at the St. Louis Terminal where tunnels are provided which permit trucking without interference with passengers or crossing tracks at grade. It has been eliminated at Richmond, Virginia, through use of a loop, which allows baggage and express cars to stand beyond the ramps on which passengers gain access to the station. In some stations interference is avoided by delaying the unloading of baggage, mail and express until passengers have passed the head end of the train. This latter method, however, tends to increase the unloading time and to correspondingly decrease the capacity of the terminal. In some of the more recently constructed stations trucking platforms have been provided, each track having on the one side a platform for handling passengers, and on the other a platform for handling baggage, mail and express. Such construction takes up more room than the usual arrangement of a platform to each pair of tracks, but not so much as might be supposed, on account of the fact that through the elimination of trucking, the passenger platforms can be made narrower than would be otherwise necessary, and again the passenger platforms may be used without inconvenience for columns supporting the trainshed. In a recent design for a station it was found that under the usual method of a pair of tracks for each platform, 30 tracks could be obtained, whereas the introduction of trucking platforms afforded in the same space 28 tracks. The use of trucking platforms resulted in a reduction of but seven per cent in the number of tracks, whereas the operation would have been so greatly facilitated, through the expedition with which trains could be handled, as to far more than compensate for that loss. The trucking platform can be used also for such facilities as air, water, ice, etc., thereby reserving the passenger platform for exclusive use of passengers.

The station of the Denver Union Terminal Railway Company, has trucking platforms and that company advises that they have proven very satisfactory. The operating officials recommended that trucking platforms should be used even in restricted territory where the extra platforms would limit the number of station tracks. They claim an increased terminal capacity as station employees can work unhindered by passengers, thereby permitting the handling of baggage, mail and express in less time than would otherwise be possible, increasing the capacity of the terminal to such an extent as to overcome the reduction in station tracks. This condition would obtain only in passenger terminals where there is a large amount of baggage, mail and express handled. The Grand Central Station of the Illinois Central at Memphis, Tenn., is an illustration of a station having part through and part stub tracks, with trucking platforms for through tracks and elevators with subway connections for baggage.

Yards Located on Side of Throat

In a terminal of considerable magnitude, particularly if express facilities are provided adjacent to the terminal, as at South Station, Boston, it may be desirable to locate yards on either side of the throat. This arrangement may be of value in facilitating switching movements, particularly if one of the station tracks is extended through the ladder tracks, parallel to and outside the throat, thereby permitting the handling of cars from several station tracks without occupation of the throat. With such auxiliary yards, cars may be assembled and switching done without interfering with movements through the throat. Switching movements, which might handle two or three cars from the station to the coach yard, can thus be eliminated by consolidating a number of cars in auxiliary yards, and handling them as one unit to the coach yard. The auxiliary yards may also be used to advantage if the terminal is taxed to capacity and it becomes necessary to remove some of the trains from the trainshed tracks before baggage, express and mail are entirely unloaded, to make room for arriving trains. The partially unloaded trains may be stored temporarily in the auxiliary yard until the rush period is passed. These auxiliary yards may be used to advantage as storage for engines of outbound trains awaiting departure.

Separation of Through and Suburban Services

There are advantages to be gained by the separation, when practicable, of through and suburban service. The requirements of the two are, in most cases, dissimilar and may be better accommodated in separate terminals, unless the peak loads of both occur at different periods of the day, in which event the same facilities may be used for both services. In most large terminals, however, the rush periods of both occur simultaneously. The requirements for waiting room space and baggage, mail and express facilities for suburban service are practically negligible as compared with requirements for through service. It is, therefore, possible to provide adequate facilities for suburban business at relatively small expense, as compared with requirements for through service.

With separation of the services, it may be practicable to extend the suburban service into the business district of the city and to construct the through passenger terminal, which must of necessity cover considerable area, farther from the business district, and on land of less value. The elimination of the frequent movements of suburban service through the throat will relieve congestion and make more desirable operating conditions for both services.

Location of Coach Yards

The design and location of coach yards have a direct bearing on the number of switching movements of locomotives and empty rolling stock. As mentioned, coach yards should be as close to the terminal as practicable. Many large terminals are union stations and individual coach yards are owned by tenant lines thus preventing the most economical development. In the case of some terminals, such as the Grand Central and the Pennsylvania Stations at New York, the extreme cost of land precluded the consideration of a site for these facilities adjacent to the station. The logical location of coach yards relative to the station depends large-

ly on the type of terminal. In the case of a stub terminal the coach yard must, of necessity, be on the same end of the station as the main approach tracks. Crossover movements, with resulting interference in the throat, may be eliminated by locating sections of the coach yard on both sides of the main tracks provided the terminal is of sufficient size to justify two yards, otherwise engine and coach facilities should both be on the same side of the main approach tracks. When the terminal is of sufficient magnitude to justify independent coach leads these should preferably be designed to extend by the throat and into the terminal as was done in the Central of New Jersey Station at Jersey City.

In the case of a through terminal or of combinations of the different types, the location of coach facilities must be considered in connection with each individual problem.

The design of the coach yard influences the number of movements of empty rolling stock. Where practicable, coach yards should be connected at both ends. This permits switching from either end and continuous movements through the yard, eliminating back-up movements. The tracks should be long enough to accommodate practically all of the longest trains. If this is not done, a number of switching movements necessary to cut trains will result. It is believed by some that a coach yard stubbed on one end is advisable, particularly where sleeping cars are cleaned, in order to permit trucking supplies to platforms located between the tracks without the necessity for crossing the lead tracks. This makes a desirable arrangement for employees, but is objectionable from the standpoint of reducing switching movements. It is desirable to equip all tracks with air, water, steam and charging facilities, when practicable, as considerable additional switching results if tracks are not so equipped.

A practice has been adopted in a few terminals of providing separate facilities for dining cars, which requires that diners be switched to a commissary track for supplies. This increases switching movements. All of the replies except two recommend that dining cars be supplied at their regular position in the trains.

An efficient method of marking bad order cars to reduce switching has been adopted in some terminals. Two kinds of colored tags or cards are used, one white, indicating light repairs which can be made on the coach yard tracks, the other red, indicating heavy repairs for which cars must be sent to the repair tracks. If a white card is attached, the car is switched with others to the coach yard, but where red tags are used, the cars are set aside for transfer to the repair yard. By setting out bad order cars at the time the train is being put into the coach yard, unnecessary switching is eliminated.

Turning of Equipment

One of the most important features in terminal design and operation to be considered in discussing reduction of movements of locomotives and empty rolling stock is that of turning of equipment. If turning cannot be done expeditiously, unnecessary switching movements result. This can best be illustrated by a study of the manner in which turning of equipment may be accomplished in a stub terminal where no special provision has been made for this movement. It is the usual practice to locate baggage, mail and express cars on the front end of the train, immediately behind the locomotive. Before an arriving train can be made ready to depart from the terminal it is necessary to reverse its direction. If a wye or loop is not available for that purpose it becomes necessary to switch the cars to a turntable, reverse their direction and again handle them back to the coach tracks. If a wye is used for turning and is located some distance from the terminal, as is frequently the case, the cars to be turned are assembled in cuts and handled to the wye and then back to the storage yard, after which it becomes necessary to switch these cars to their respective tracks. This involves a large amount of switching. It is often practicable to so design a terminal as to largely eliminate such switching movements. The loop arrangement is, where practicable, ideal. The Grand Central Terminal, New York City is a good illustration. The Pennsylvania Terminal when considered in connection with Sunnyside Yard is perhaps the best example of an American through terminal in its provisions for turning equipment. If it is not practicable to have a loop in connection with a terminal the next most efficient method for turning is the use of a wye.

In the Union Station, St. Louis, the wyes are located immediately back of the station, and trains can be turned upon arrival or departure as desired. If a wye is used for turning of equipment, it should, if practicable be located between the station and the coach yards in order to effect the movement without unnecessary switching.

Engine Facilities

Regardless of whether movements are accomplished by road or switch engines, it is essential, in order to eliminate conflicting movements, to locate the engine facilities on the same side of the main track as the coach yards and as close as possible thereto. It is desirable to have independent leads connecting the engine facilities with the throat of the yard, where practicable, as was done in the case of the Jersey City Terminal.

Engine facilities should be arranged to permit the proper sequence of operation, so that back-up or crossover movements are not necessary in utilizing the various facilities. The usual practice is to locate cinder pits in front of the engine house, so that fires may be cleaned before the engine enters the house. It is customary to provide coal, sand and water facilities on the departure track so that engines can be supplied before proceeding to the station. On some of the older installations it is necessary for engines to make three separate stops for these supplies. In modern plants, it is the usual practice to secure coal and sand at the same location, and at some terminals water columns are provided so that engines may be supplied with coal, water and sand at one setting.

The operation of most locomotive terminals makes receiving and departure tracks for engines essential, as the work can then be accomplished with a smaller force of employees. The large number of engines necessary for the peak load can be accumulated in the auxiliary yards and worked in or out as fast as the number of employees will permit.

Right hand operation is the usual method, although sometimes this induces crossover movements. For this reason, it may be advantageous to reverse the method of operation within the terminal limits. In the case of the Jersey City terminal, left hand operation between the station and the engine facilities was adopted.

Electrification

Electrification of a terminal, as a means of reducing movements of locomotives and empty rolling stock, has been effective in certain stations where adopted for that purpose. A notable example of this is the Broad Street terminal, Philadelphia. The two types of passenger service which have been referred to as through and suburban are in most cases so different in character as to justify different types of motor equipment. These will be discussed separately.

In through service, the electric locomotive is used to a transfer point. Beyond this point, frequently located at less than a full operating division distance from the terminal, a steam locomotive is substituted. The advantage of electrification of through passenger service, so far as reduc-

tion of movements of locomotives and empty rolling stock at passenger terminal stations is concerned, is that the electric locomotives can be operated equally well in either direction. This eliminates the necessity for all movements which would otherwise be required to turn locomotives. An electric locomotive does not require the ordinary coal, cinder and water facilities, and consequently all movements necessary in connection with these facilities are eliminated.

In suburban service it is the general practice to carry the electrification to the limits of its operation, which makes possible the use of a rolling stock adapted solely to suburban traffic. This permits multiple unit equipment in which the cars equipped with motors may be grouped in trains without regard to end relation or sequence and controlled from either end of the train. Where the service does not justify the use of all motor cars, trailers, not so equipped, can be interspersed through the train and can be equipped with control apparatus that will permit the operation of the train from the trailers as well as from motor cars. The use of multiple unit equipment eliminates the switching movements necessary in transferring locomotives from one end of the train to the other, likewise the other movements incident to taking care of separate motive power. There is a gain in the capacity of the terminal due to the quicker acceleration of trains and shorter length of track occupied when there is no locomotive; and a number of trains may be stored on one track and dispatched therefrom without switching.

A small amount of switching may be required where trailers are used and likewise for sending motor cars to inspection pits for periodic inspection.

The trains, due to the fact that each car contains its own motive power or control, may be made of any practicable operating length, which in the case of steam operation is limited by the tractive effort of the locomotive. With the reduction in number of trains or increase in train length possible with electric operation, the number of switching movements and resulting terminal congestion are correspondingly reduced.

President Wants Emergency Authority

Would Not Desire, However, to Take Over Roads or Mines Except as Last Resort in Case of Grim Necessity

WASHINGTON, D. C.

WHILE PRESIDENT HARDING feels that if Congress is not to be in session he should be authorized to meet the situation in a great national emergency by a grant of power to take over temporarily for government operation the anthracite coal mines and perhaps certain railroads or systems, it was officially stated at the White House on Tuesday that the "last thing in the world" the President would want to do would be to exercise such power except "as a last resort in the case of grim necessity" and that to take over all the roads would be "unthinkable." He does not believe in government operation and if such authority were granted and exercised, which the President "hopes and prays" would never be necessary, it would be only under specific limitations depending on the conditions as they existed. However, it was made clear that the President has not asked Congress for such authority and does not intend to ask it in any formal way. If he had intended to, it was stated, he would have done so in his address to Congress on August 18.

However, while it is still the judgment of the President that he ought to be fortified with such authority if the Senate is going to take a recess, even if the House remains in session, it now appears unlikely that Congress will be willing to grant general power to the President to determine whether or not a sufficient emergency exists. This is partly due to opposition to the plan which crystallized on Saturday as the result of what is characterized at the White House as "unfortunate publicity," for which, however, the President did not criticise the press, following Senator Cummins' brief announcement that the government was considering taking over the mines and perhaps some of the railroads unless the situation should speedily improve.

A rather more complete and detailed explanation of the President's position on the question of government operation than is sometimes afforded was given on Tuesday. It was pointed out that while there is a popular impression that the President has the authority to do almost anything the public wants done, and while if the public welfare demanded it there probably would not be serious opposition to the taking over of the mines or certain roads temporarily, it would require rather a stretch of authority. The President regards the bituminous coal situation as "in the clear" since 90 per cent of the mines have signed up and approximately normal production is expected by another week and while he had no definite assurances he thought the anthracite strike would soon be settled. The government intends to press the enforcement of the laws, it was stated, and it was felt that perhaps the railroads have not yet completely demonstrated the performance of which they are capable, but if the fuel situation should be menaced by a paralysis of transportation the administration would regard it as its duty to take over the mines or certain roads. He was represented as believing that the grant of such authority would not have any effect on promoting a settlement of either of the strikes and that it might even delay it, but from his conversations with union leaders he does not believe they have the slightest wish for such legislation because they do not want the government to take only a few of the roads or perhaps only one road or system.

Careful consideration was given for a time to a plan for having certain roads taken over by federal receivers on the ground of inability to furnish adequate service but the President was convinced that while such a step would avoid the difficulties incident to compensating the roads which were experienced by the Railroad Administration it would not solve the problem as many roads are now in the hands of receivers and their situation is no different from that of the others.

The plans of the administration appeared to have marched up a hill and then marched down again between Friday night and Monday morning. At present writing the announced policy is to concentrate all efforts on promoting the movement and equitable distribution of coal at fair prices while awaiting the results of the latest efforts of Secretary Davis and Senator Pepper to bring the anthracite operators and the mine union together, and to learn the degree of success of the railroads in handling the bituminous coal production before talking further about government operation. The proposal that Congress enact legislation authorizing the President, if in his judgment the emergency should require it, to take over the mines or railroads has been temporarily abandoned and Congress or at least the House now proposes

to stay on the job to determine for itself whether the emergency develops.

For about 24 hours the earnest and persistent efforts of the President and of his various advisors to bring about peaceful, if not amicable, and immediate, if only temporary, settlements of the anthracite coal and railroad strikes seemed to have stumbled upon another form of encouragement to the strikers to hold on a little longer.

After a conference on the evening of August 25 at the White House between President Harding, Chairman Cummins of the Senate committee on interstate commerce, and Attorney General Daugherty, Senator Cummins announced that the anthracite operators and miners would be given one more opportunity to settle their differences but that unless there was a settlement within a few days he would introduce a bill authorizing the government to operate the mines. Also, he said, the railroads would be given a "reasonable" time in which to demonstrate their ability to furnish adequate service and those unable to do so would be taken over. He expressed confidence that legislation for such purposes could be rushed through Congress.

The announcement caused surprise because earlier in the day it had been stated officially at the White House that the President believed that further conferences on the anthracite situation would result in an adjustment and that the administration had no "new steps" in contemplation with reference to the railroad situation. It was understood that the President and his advisers felt that the railroad situation was less acute than that involving the anthracite supply, but that the temporary settlement of the bituminous strike had transformed the problem from one of production to one of transportation and distribution.

The announcement, however, or at least the way in which it was published, created a stronger impression than was desired by the President as to his intentions and it was soon apparent that it had caused surprise and concern among Republican leaders, some of whom went at once to the White House on Saturday morning to get the story at first hand, and on Saturday evening newspaper men were called to the White House and given a more detailed explanation. They were told by a White House spokesman that while President Harding wants Congress to give him the authority, whenever he may see fit to proclaim that a national emergency exists, in the event conditions should become so serious as to require it, he merely wanted the legislation before Congress recesses, as it was expected to do shortly, so as to be prepared for any condition that might arise while Congress is not in session, and that neither the introduction nor the passage of such legislation would indicate any determination on the part of the administration to make use of the authority, except in the case of an extreme emergency which he did not foresee. The President was still confident that such an emergency as would require such drastic action will be avoided.

The President in his public statements and in his talks to newspaper men has carefully refrained from uttering threats as to what he would do in any given situation and he has frequently taken the position that he prefers to give publicity to what he has done afterward than to what he may do in advance, because of the natural tendency of newspaper speculation. Occasionally, however, the efforts to maintain secrecy as to what the administration proposes to do have resulted in information reaching the press in the form of vague hints which readily lend themselves to exaggeration, that might have been prevented by a more definite statement.

Further conferences on the industrial situation were held during a week-end trip on the President's yacht, the Mayflower, on which Secretaries Hoover and Fall, Attorney General Daugherty and Senators Cummins and Kellogg were the guests of the President and after their return on Monday, Senator Cummins indicated that he might withhold the proposed bills for a while to await developments. At conferences on Monday also, it was decided that Congress should not adjourn but that the House should take a series of three-day recesses.

Strike-Questions Debated in Senate

A demand for prompt and "drastic" action by the government to settle the railroad and anthracite coal strikes was precipitated in the Senate on August 24 by the introduction of bills requested by the President in his address to Congress on August 18 to create a coal investigating commission and to provide for a temporary restraint of coal prices. This was shortly after the announcement that the conferences between the anthracite operators and the mine union and the committee representing the Association of Railway Executives and the brotherhood leaders had failed to result in a settlement of either strike.

The only definite suggestion made in the debate for settling the strikes was that the government take over the coal mines or railroads or both, but there was less definiteness as to just how the government would proceed to induce the strikers to return to work after it took them over, particularly in the case of the anthracite miners, who are practically all unionized.

A joint resolution authorizing the President to take over and operate the coal mines, part or all of whose products are transported in interstate commerce, was introduced in the Senate on August 24 by Senator Walsh of Massachusetts. A bill to restrain profiteering in coal by authorizing the Interstate Commerce Commission to use its priority powers to give preference in car supply to fair price coal was also introduced by Senator Cummins and the Senate also began consideration of bills to create a coal investigating commission.

The resolution was introduced by Senator Walsh after a heated debate in which he and others had criticized the President for failure to settle the coal and railroad strikes and had demanded immediate action. Senator Cummins had replied with a defense of the President's course, pointing out that he had no power to settle a strike but had been using all his influence to bring about a settlement by mediation and asserting that if senators thought the President ought to have the power to take over the mines, the inaction was theirs if they failed to initiate the necessary legislation.

The discussion of government operation of the coal mines was continued on August 25 when Senator Edge of New Jersey introduced a bill giving the President blanket authority to acquire title by condemnation or otherwise to any or all of the coal mines of the United States for such period of time as he deems necessary, and to distribute the coal therefrom. The bill also provided for an appropriation of such amount as might be necessary.

Apparently there was an idea in the minds of some of those who talked of government operation that a bluff in that direction might be sufficient to force a settlement, in spite of the well-known fact that both the miners' union and the railroad unions have repeatedly advocated government ownership and would naturally decline to settle if that result were to be the alternative. "Emphatic approval of the federal threat to seize and operate the hard coal mines in the event operators and miners fail to reach an agreement was voiced by President Lewis of the United Mine Workers," according to a press dispatch on Saturday.

Also some of those who talked as if government operation were a panacea apparently failed to recall that there was a rather extensive strike of shop employees—although it was declared to be unauthorized—in the summer of 1919 while the government was still operating the railroads and that the government settled it by allowing a small increase in wages, inserting in the Transportation Act a provision for

the creation of the Labor Board to pass on a further increase and turning the railroads back to private management with the wage demand still unadjusted.

The debate in the Senate indicates that a good many of our most prominent statesmen have paid more attention to fears as to what might happen if there were no anthracite this winter than they have to the fact that the railroads have continued throughout the shop stripe to handle over 850,000 carloads of freight a week, and that, although there has been some car shortage, commodities other than coal have been moving in greater volume than ever before at this season of the year. It was also apparent that some senators who are willing to go so far as to characterize strikes as criminal are not yet ready to withhold criticism from the railroad managements that are trying to make strikes unhealthy by standing firmly for the principle that a man cannot be a striker and retain a first lien on his job at the same time.

Bills for Investigation of Coal Industry and to Restrain Profiteering

The House had passed on August 23 the Winslow bill, to create the United States Coal Commission to secure information in connection with questions relating to interstate commerce in coal, one of the measures proposed by the President in his address to Congress on August 18. The Senate committee on education and labor had considered a somewhat similar bill introduced by Senator Borah but had written a substitute for it which it was proposed to substitute for the House bill.

The Cummins bill, intended to meet the President's suggestion for some form of temporary control of prices, was drafted under the direction of the Presidential Fuel Committee, composed of representatives of the Departments of Commerce, Interior, Justice and the Interstate Commerce Commission and submitted to the President by Secretary Hoover.

In his letter to the President, Secretary Hoover enclosed three draft measures offering alternative bases for mitigation of profiteering and for better distribution of coal during the present emergency. He said he had been advised that any direct legislation for the repression of extortionate prices has no constitutional basis and that the three alternatives are: Voluntary agreement with operators and distributors of coal, extension of the powers of the Interstate Commerce Commission to give priority to the movement of non-profiteering coal, and, third, for the federal government to enter the business of purchase and distribution of coal and by such competition to "put the balance wheel in the price situation." The third plan was the one which has been urged by the President in his address. Secretary Hoover said the necessary legislation for the latter two alternatives had been drafted, but that the commission prefers the draft in which federal authority is exerted through extension of the priority powers of the Interstate Commerce Commission as being less cumbersome, requiring less extension in the federal organization and being more expeditious of application than the alternative plan through actual government possession of coal.

"The committee is in agreement, he said, that the exertion of such powers in times of peace is highly distasteful, and can only be justified as a measure necessary to provide for the effect of a famine in so necessary a commodity.

"We are deeply impressed with the fact that, due to the almost total exhaustion of coal stocks and the inevitable and growing shortage in transportation, the difficulties of the country will be very great, even with the resumption of coal production, and unless there is legislation enacted that will curb profiteering and will give control to distribution, there will be great suffering and difficulties during the period of readjustment.

"The federal fuel distribution set up by the committee under Mr. Spencer upon a basis of voluntary co-operation between government departments, state agencies and the majority of operators of coal mines, is without funds for even incidental expenses, and without this agency it would be impossible at the present moment to maintain the essential public utilities and other services in the country. Even this service must shortly be abandoned unless provision is made by appropriation, and they cannot expect to be successful in the rapidly tightening situation and in the face of reduced transportation facilities unless its authority is increased."

Text of the Cummins Bill

The text of Senator Cummins's bill to control coal prices and distribution is as follows:

"A bill to declare an emergency respecting the production, distribution and price of coal and other fuel, to create an additional agency of the United States with respect thereto, to enlarge the powers of the Interstate Commerce Commission in establishing priorities and embargoes in the transportation of coal and other fuel in interstate commerce in order to prevent the exacting of unreasonably high prices for these commodities, and for other purposes.

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

"That by reason of prolonged interruption in the operation of a substantial part of the coal mining industry in the United States and of impairment in the service of certain common carriers within the jurisdiction of the Interstate Commerce Commission and engaged in commerce among the states, a national emergency exists which threatens to obstruct and hamper the operation of the United States and its several departments, the transportation of the mails, the operation of carriers engaged in commerce among the several states and with foreign countries, and to furnish an opportunity for the disposition of coal and other fuel at unreasonably high prices.

"2. The powers of the Interstate Commerce Commission under an 'Act to Regulate Commerce,' approved Feb. 4, 1887, as amended, including the Transportation act of 1920, and especially under Section 402 of said Transportation act, are, during the aforesaid emergency, enlarged to include the authority to issue orders for priorities, embargoes and other suitable measures in favor or against any carrier or region, or person, or corporation, and to take any other necessary and appropriate steps for the priority in transportation and for the equitable distribution of coal or other fuel, so as best to meet the emergency and serve the public interest, and to prevent upon the part of any person, partnership, association, or corporation the purchase or sale of coal or other fuel at prices unjustly or unreasonably high.

"3. For the purpose of assisting in carrying into effect the orders of the Interstate Commerce Commission made under existing laws, or under Section 2 hereof, there is hereby created and established an agency of the United States to be known as 'The Federal Fuel Distribution Commission,' and there shall be appointed by the President a federal fuel distributor who shall ascertain:

"A—Whether there exists within the United States, or any part thereof, shortage of coal or other fuel and the extent of such shortage.

"B—The fields of production of coal and other fuel and the principal markets to which such production is usually transported and distributed, and the means and methods of distribution thereat;

"C—The prices normally and usually charged for such coal and other fuel, and whether current prices, considering the costs of production and distribution, with fair profits, are just and reasonable;

"D—The nature and location of the consumers, whether persons, firms, corporations, municipalities or communities, which should receive priority in transportation and distribution under the acts to regulate commerce administered by the Interstate Commerce Commission, including the Transportation act of 1920, in time of shortage of coal and other fuel or the transportation thereof, to the end that an equitable distribution of coal or other fuel may be secured so as to best meet the emergency and serve the public interests.

"The Interstate Commerce Commission is hereby directed to receive and consider the recommendation of the Federal Fuel Distributor, based upon his reports upon the foregoing subjects and other information which it may secure in any manner authorized by law.

"4. The Federal Fuel Distributor may make such rules, regulations and orders as may be necessary to carry out the provisions of this act, and may co-operate with any department or agency of the government, any state, territory or department agency or political sub-division thereof, or any person or persons, and may avail himself of the advice and assistance of any department, commission or board of the government, and may appoint or create any agent or agency to facilitate the power and authority hereby conferred; and he shall have the power to appoint, remove and fix the compensation of such officers and employees not in conflict with existing laws, and make such expenditures for rent, travel and other operating expenses as shall be necessary for the due and effective administration of this act.

"5. Whenever the President shall be of the opinion that the

national emergency hereby declared has passed, he shall by proclamation declare the same, and thereupon this act shall no longer be in force or effect.

"6. For the enforcement of the provisions of this act, including personal services and every other expense incident to the enforcement thereof, there is hereby appropriated out of any money in the Treasury not otherwise appropriated, the sum of $250,000, or so much thereof as may be necessary."

The committee on interstate commerce held a meeting to consider the Cummins bill on Saturday but there was not a full attendance and Senator Pomerene and others were reported as insistent upon having hearings on the bill before voting to report it out. On Monday, however, the committee voted a report without recommendation on the bill with amendments limiting it strictly to one year and to interstate commerce. A bill similar to the Cummins bill enlarging the emergency powers of the Interstate Commerce Commission was introduced in the House on August 26 by Representative Winslow, but after a discussion in the committee on interstate and foreign commerce it was decided to hold a hearing on Monday. After the hearing the committee voted to report the bill favorably.

Secretary Hoover and Commissioner Aitchison appeared before the House committee in support of the bill. Mr. Hoover said that the theory that unchecked prices may lead to increased production has no application to the present situation because the total production of coal will be limited by the capacity of the transportation machine and would not be enhanced by increased prices. He expressed the opinion that a distribution of 9,000,000 tons a week would prevent any general closing up of industry. Mr. Aitchison said that the present powers of the Interstate Commerce Commission are not broad enough to let it give or refuse cars on the basis of their compliance or non-compliance with fair price levels.

Mr. Hoover said that production of anthracite is now 36,000,000 tons behind and that this cannot be recovered. Therefore an enormous burden will fall upon the bituminous producers and with the deteriorated condition of railroad equipment it would be impossible to move anywhere near sufficient coal to meet all needs. A production of 10,000,000 tons a week, he said, would give the government agency 5,000,000 to 6,000,000 tons a week for distribution, whereas it has had only about 1,000,000 tons.

J. D. A. Morrow, vice-president of the National Coal Association, and Edgar Wallace, legislative agent of the American Federation of Labor, opposed the price-control features of the bill.

Senator Calder, of New York, had begun the debate in the Senate on August 24 by declaring that the anthracite operators and the miners should be given 48 hours' notice that they must settle their differences and that if they fail to do so Congress should give the President authority to take over the mines. Senator Walsh said that if the President does not already possess such authority he should have suggested it to Congress. Senator Cummins pointed out that he had had no power to settle the strikes but had sought to bring about a settlement by mediation and had not asked for legislation because the negotiations were still in progress. After he had declared repeatedly that if Senators thought the President should be given authority to take over the roads or the mines, it was their duty to initiate the legislation without waiting for the President to ask it, Senator Walsh introduced his resolution.

Senator Lenroot, of Wisconsin, said it seemed to him that the time had come when the power should be given to the President, to be exercised by him in his discretion, to take over the railways, or any part of them that he may deem necessary, and to take over the anthracite mines, if he deems necessary "so that the government may be put in the place of one of the parties instead of merely being a mediator." He said he should prefer, however, that the President would himself ask that the power be given him.

Senator Borah, of Idaho, said he would be very sorry if as a result of the day's debate, the country should receive the impression that Congress was going to settle the coal strike. The states should co-operate, he said.

Senator Cummins took part in the debate mainly to answer criticisms of the President for inaction. He said he had introduced a bill at the request of the President to deal with the immediate emergency and that at the next session of Congress will come the time for the discussion on the question "as to what place unionism should occupy in the civilization of the United States."

"I have long believed," he said, "that it ought to be a crime for employees to strike wherever the government undertakes to adjudicate for them the disputes which arise between them and their employers. That is the final remedy, in my opinion. I do not think our civilization can long endure if a body of artisans, composing the whole number of artisans in that class in the country, can leave their employment by concert and conspiracy at the same time."

"But that is not the question now," he said. "We are now confronted with a situation that needs temporary legislation." He said that Senators Calder and Walsh were not at fault for not introducing bills authorizing the taking over of the anthracite mines "because we have all been in that attitude of hope and expectation, believing that the difficulties would disappear. But it is apparent now that they will not disappear and that all authority which the Constitution enables us to give to the executive or to other departments of the government must be given to meet the extraordinary emergency which has appeared and which is now more critical and menacing than it has ever been before."

Senator Nelson, of Minnesota, declared that "the root of this whole difficulty is unionism. It is not necessary to have the government operate the anthracite mines. Throw the mines open, allow them to run under the open-shop principle and protect them in that and you will have an abundance of coal, and you will get it at a lower price than when there is union mining."

Senator Cummins admitted that his bill would not produce any anthracite coal. He said he still had a lingering hope that the operators will come to an agreement with their employees, but that "if it is believed that the President by taking over the mines can secure men who will produce coal, then he ought to be given the power to do it. However," he said, "it is still to be doubted whether the President would be any more successful in hiring men to enter the coal mines than the operators have been, because he will either have to agree to their terms or he may not be able to secure the men."

Senator Cummins said he thought both sides are to blame in the anthracite strike and the railroad strike, and that they ought to have been composed long ago, but that the President had no power whatsoever to do so and had used all the influence he had as a mediator in the effort to do exact justice between the parties, "hoping that it would not be necessary to resort to the extraordinary measures which are now proposed and with which I am in full sympathy."

The Borah bill, as amended in committee, differs from the House bill in that it provides for a commission of five members to be appointed by the President, while the House bill provides for nine to be appointed by the President with the restriction that no one interested in the coal industry may be appointed. The original Borah bill had provided for representation of both operators and miners but this was omitted at the request of the President, who desired a commission representing only the public. The new Borah bill is also more specific than the House bill in naming the subjects to be considered by the commission in its investigation, including "the causes which from time to time induce strikes," and recommendations as to "standardizing the mines upon the basis of their economic productive capacity and regard-

ing the closing down of mines which, by reason of their natural limitations, or other conditions, fall below the standard." It also calls for a report as to the advisability or wisdom of nationalizing the coal industry.

Consideration of the Borah bill was taken up in the Senate on August 25, the bonus bill being displaced for that purpose, but on August 26 it was again set aside until Tuesday.

While there seemed to be general approval of the purpose of the bill, several senators expressed impatience for immediate action. Senator Robinson, of Arkansas, said he would join with others "now or tomorrow to provide by solemn legislative act that anyone conspiring to hinder, prevent or restrain interstate commerce in the transportation of coal shall incur a severe penalty, and to "make that law applicable to mine owners, to mine operators and to mine workers." That, however, he said, would not mine coal and there ought to be a settlement now.

Senator Fletcher of Florida, calling attention to the President's statement that the country is at the mercy of the United Mine Workers, said that such a situation ought not to be allowed to last 24 hours, much less until Congress meets in December. "In other words," he said, "here is a group of people at the throats of this government and this whole country and we will argue the question with them next December, if we live!"

Senator Townsend, of Michigan, said that all anyone now hopes for is a temporary solution which will tend to relieve the public, but what Congress ought to do is to enact some legislation which would afford a reasonable method for the prevention of the strikes which periodically occur.

The Cummins and Winslow bills were reported to the Senate and House, respectively, on Tuesday and debate was begun in the House. In his report to the Senate, Senator Cummins said in part:

"It may be that the law as it is conferred upon the commission what Section 4 of this bill explicitly grants, but the commission or some of its members are in doubt about it and if the Congress believes that the commission ought to exercise the power of controlling the transportation of coal so as to prevent both coal operators and coal dealers from exacting excessive prices for coal, then there ought to be no hesitation in clothing the commission with undoubted authority upon the subject.

"The present situation is an exceedingly grave one; at this time there is sharp coal shortage, of which some operators and many dealers are taking advantage. Inasmuch as the strike in most of the bituminous fields has been brought to an end, the bituminous coal production will constantly increase, and if it be assumed that the railroads could move promptly the coal that will be mined, it might be that the opportunity for extortion would shortly disappear. The fact is, however, that some of the railroads which carry a large part of the coal traffic are by reason of the railroad strike unable to move the coal that is actually being produced to the points of destination and therefore unless the railroads can speedily increase their facilities a coal shortage in many parts of the country is bound to continue and we will be in the same position as if coal were not being produced.

"It is to be observed that the action of the commission under the authority which it has, or authority which this bill gives it, is directed solely to interstate railroad carriers and will operate to prevent the transportation of coal under certain conditions, the control being confined to interstate shipments. The transactions wholly within a state must be dealt with by the state authorities. Sections 3 and 4 of the bill authorize the President to appoint a federal fuel distributer and this distributer does nothing more than to help carry out orders of the Interstate Commerce Commission to make the necessary investigation and to recommend to the commission the priorities and embargoes which in the opinion of the distributer should be issued and established."

In the House there were some suggestions that the President ought to be granted the emergency power he desires to take over mines or railroads and Representative Johnson of South Dakota said he would offer an amendment to the Winslow bill for that purpose. Representative Mondell, said, however, that Congress would be in session and that in his opinion it is not likely to take any action looking to the taking over of the mines or railroads in time of peace except in the face of an emergency so immediate and pressing that such action would constitute the only way out.

Attorney General Instructs Vigorous Prosecution

As a result of renewed reports of violence in various parts of the country, the attorney general on August 29 sent to all United States district attorneys a telegram instructing them promptly and vigorously to prosecute violators of injunctions obtained by railroads. He also announced the appointment of Hiram C. Todd as an assistant to the attorney general to take charge of the situation in the western states, with headquarters at Los Angeles. The telegram sent to the district attorneys read:

"In cases where injunctions have been violated, you are instructed under the direction of the court to promptly and vigorously prosecute the violators and urge the court to make sentences sufficiently severe to prevent repetition of such violations and as a deterrent to others. Transportation and the mails must no longer be interfered with and the laws must be enforced impressively. Report all such proceedings to me."

The attorney general has received numerous reports that the condition in which many locomotives is reported represents something more than ordinary wear and tear or shortage of repair work and he is said to have considerable evidence of sabotage in certain places such as sand in the bearings of locomotives, and reports received by the department indicate that locomotives which the Santa Fe employees refused to take out of Needles were in entirely safe condition for use.

William Jennings Bryan arrived in Washington on Monday prepared to offer his advice to the government to take over coal mines and railroads temporarily to "put an end to an intolerable situation." He delivered a letter to Senator Walsh expressing approval of his resolution to authorize the President to take over the mines, and also talked with various other members of Congress about it.

Zinc as a Sheet Metal in Building Construction

One of the rather remarkable results of intensive manufacture incident to the war has been the introduction of sheet and strip zinc as a building material. The development has been commercial rather than metallurgical since zinc, which is now coming into common use for building purposes in this country, has actually seen service on buildings in Europe for over a hundred years. In other words, it has been a case of finding new uses for an old material.

Zinc has a number of properties which commend it for the outer covering of buildings, particularly for such uses as roofs, gutters, corrugated siding, down spouts, weather strips, etc. It does not corrode or rust like iron or steel. It is cheaper than any of the other non-ferrous metals and it is readily worked into the various shapes necessary for its convenient use. Zinc has strength in tension of about 21,000 lb. per sq. in. Its ductility is less than that of soft steel but not enough less to cause any difficulty in crimping, curving or otherwise working the material. When zinc oxidizes on exposure to the elements the effect is to give it a coating of a silver gray color that is not only pleasing in ap-

pearance but serves to protect the metal underneath. Therefore, the occasion for painting is done away with entirely as regards protection and also in many cases for considerations of appearance. This elimination of the painting in some cases makes the zince as cheap as steel.

The service which zinc sheets are giving because of its properties has led to its recognition as a building covering by a number of the railroads. The new pier of the Erie at Weehawken will be covered entirely with this material. It has also been specified as a covering for coaling station structures by the Illinois Central; the Burlington; the Chicago, Great Western; the Central of Georgia and other roads. The Chicago & North Western is applying zinc shingles to a signal tower in Chicago and is using corrugated siding and roofing on a coaling station at the same point.

Zinc has two properties which require the observance of certain precautions in their use. It has a coefficient of expansion of 2.6 times that of steel; therefore, it must be applied in a manner that allows adequately for change of size of the sheet with changes of temperature. By the development of certain forms of expansion joints that now thoroughly establish standard practice, this introduces no problem to the erector. In cases where zinc comes in contact with other metals with the presence of water, electrolytic action takes place which tends to dissolve the zinc. Therefore, where zinc is used in gutters, down spouts and other places where it is subject to moisture, care must be taken to see that the zinc does not come in contact with other metal. On the other hand, it has been found entirely practicable to cover structural steel frames of buildings with zinc corrugated siding and zinc roofing without taking any of these special precautions.

As mentioned before, the zinc strips and zinc sheets are being used for a variety of purposes. One application which is receiving the particular attention of one manufacturer, the New Jersey Zinc Company, is gutters and down spouts which are used extensively. A large amount of interest is being given also to the design of exterior coverings of buildings from roof to ground line, while a development which is receiving the particular attention of another firm, the Illinois Zinc Company, is zinc shingles. These have an interlocking design not unlike the interlocking roofing tile but with the advantage that they are nailed to the roof boards like ordinary shingles. Owing to the fact that these shingles weigh no more than the ordinary wooden shingles, the roof construction need be no stronger than that ordinarily provided.

W. A. Webb Becomes Head of South Australian Railways

William A. Webb, formerly general manager of the Missouri, Kansas & Texas Railway, has been appointed chief commissioner of the State Railways of South Australia. He will sail early in October for Adelaide, South Australia, where his headquarters will be.

The chief commissioner of the railways of South Australia is their active manager. This is one of several notable cases in which foreign railways have come to the United States for managers. The last case of the kind which attracted widespread attention was that in which Henry W. Thornton, general superintendent of the Long Island Railroad, was appointed general manager of the Great Eastern Railway of England. He is now Major General Sir Henry Thornton, having acquired his military title as head of the British transportation forces during the war.

The State Railway System of South Australia has a total of 2,333 miles of line. Of this, 1,124 miles has a 5 ft. 3 in. gage, and 1,209 miles has a 3 ft. 6 in. gage. They have never been very prosperous, and in the year ended June 30, 1921, incurred a deficit of $2,733,550 after interest. The South Australian Railways form an important connecting link between the railways of the states of New South Wales and Victoria on the east and Western Australia on the west. The north-south transcontinental line from Port Darwin will, when completed, depend upon this system for connection with the other railways of the continent. One of the most important problems with which Australia's railways are now faced, beside that of insufficient earnings, is the unification of gages which are now so varied that transshipments are frequently necessary.

The state of South Australia lies in the south-central part of the continent and has an area of 380,070 square miles—about equal to that of Texas, Oklahoma and Louisiana combined. The topography of the state is varied—in one part there are mountains and there are also a number of rather large lakes; the predominant landscape, however, is the high plain, which in the extreme north and west becomes a desert. The state is predominantly agricultural, wheat and grapes being the most important crops. Other important products are wool and copper. The state has a population of about 450,000 and Adelaide, its capital city, has 190,000.

Mr. Webb was born at Eaton, Ohio, on May 16, 1878, and received a high school education there. He entered railway service with the Colorado Midland on October 16, 1890, and until November, 1900, served consecutively as messenger, roadmaster's clerk, trainmaster's clerk, telegraph operator, clerk and stenographer to superintendent, chief clerk to superintendent and stenographer to the president and general manager. In November, 1900, he went with the Colorado & Southern as secretary to the president and general manager, which position he held until May, 1903. He was then appointed chief clerk to the vice-president and general manager, which position he held until he was promoted to that of assistant to the vice-president in October, 1905.

He remained in this position until June, 1911, when he became general manager of the Texas Central. On May 22, 1912, he became assistant to the president of the Missouri, Kansas & Texas. He subsequently served as general superintendent, vice-president and general manager and chief operating officer of this railway, and in 1918 became general manager, under Government control of the Missouri, Kansas & Texas, the Wichita Falls & Northwestern, the Fort Worth & Denver City and the Houston & Texas Central, and later had his jurisdiction extended to the Abilene & Southern and the Union Terminal of Dallas, with headquarters at Dallas. In 1919 he became a member of Railway Board of Adjustment No. 1 of the United States Railroad Administration, with offices in Washington. On the return of the railways to private operation on March 1, 1920, he became vice-president and general manager of the St. Louis Southwestern. He resigned this position on May 10, 1921, and subsequently was elected to the position of president of the Cambria & Indiana Railroad, with office at Philadelphia.

As this brief biography of Mr. Webb shows, he has had long experience as an operating officer and operating executive on railways in the West and Southwest. It is probable that conditions in that territory resemble those in the state of South Australia as much as they do in any part of this Country.

It is believed that this is the first case in which a railway man who has received all his training in the United States has become the manager of a system of state railways, although some years ago Sir Thomas Tait, formerly general manager of the Canadian Pacific, became chief commissioner of one of the systems of state railways in Australia.

Coal Loading Shows Rapid Increase

WASHINGTON, D. C.

THE SETTLEMENT of the coal strike in most of the bituminous mines has resulted in a large increase in coal loading. Whereas during June the average daily loading was 15,540 cars, the loading on August 21 reached 19,048 cars. There was the usual reduction during the next three days to 17,772 on Tuesday, 18,169 on Wednesday and 18,784 on Thursday, but on Friday there was an increase to 21,866 cars and on Saturday to 22,178. For the week the total was 117,730 cars or approximately 6,500,000 tons. The highest previous loading since the coal strike was about 94,000 cars.

Coal loading for last Friday in the Allegheny district was 11.6 per cent in excess of the average daily loading for August last year, while in the Pocahontas district, an increase of 15.4 per cent was shown. Coal loading last Friday in the Southern district exceeded the daily average for August one year ago by 5.8 per cent. In the Eastern, Northwestern, Central Western and Southwestern districts, however, decreases compared with the daily average one year ago were reported. The three districts showing increases in production, however, are those in which non-union mining has been carried on throughout the suspension of work in union fields and in which earliest settlements were made. Practically all the railroads in those districts show a heavier movement than during the corresponding period last year. The districts showing decreases in coal production, however, are confined to producing territories where there was almost complete suspension of mining and where settlement was last made or had not yet been effected. The decreases shown are due entirely to lack of mining production and not in any way to any transportation deficiencies. Approximately 7,000 carloads of coal were consigned to lake ports last week. Because of the general resumption of bituminous mining it was announced on Monday, no more coal will be directed by the federal fuel distributor to the different states—except the Upper Lakes—under emergency orders under Class 1 priority unless the situation should again warrant such forced measures. All coal will be permitted to move as far as practicable under the Interstate Commerce Commission classified priorities. Thus the federal fuel distributor will issue no more No. 1 priority orders for coal to move to state organizations except possibly in connection with a plan for lake shipments. Coal shippers holding priority No. 1 orders placed through the federal fuel distribution agencies are expected to complete shipments on such orders unless by mutual agreement between shippers and the consignee. The issuance of emergency priority orders of Class 1 for railroads will continue until such time as the Interstate Commerce Commission has provided other plans for caring for the railroad requirements.

A new plan was being worked out under the Interstate Commerce Commission to secure an assurance of reasonable lake movement up to the capacity of lake transport.

The agreement as to price restraint with the non-union operators expired on Monday with the resumption of the union bituminous mines and the various district and general committees will cease to function as of September 2. About 70 per cent of the non-union operators have held to this agreement, and it is felt that the public has been saved a very large sum.

Pending the action of Congress and the state authorities, the only restraint upon price is the schedule of fair prices declared by governors or state coal commissioners in some of the states, to which it is earnestly hoped the operators and dealers will conform. These prices are about $4.50 per ton maximum in the Kentucky, Tennessee, West Virginia and Virginia fields, $3.75 for Pennsylvania thick vein and $4.75 for thin veins. Standards have not yet been set in other states.

The legislation before Congress can only control the price of coal moving over state lines, that is in interstate commerce. The price of coal produced and consumed in a state, together with the charges which wholesalers and retailers within the state may make, the latter including even interstate coal, should be controlled by the state authorities. Therefore, there can be no real control of profiteering unless the state authorities act.

Owing to the rapidity with which operations are being resumed in various bituminous fields, the United States Geological Survey estimated the present week's coal production at 8,000,000 tons. Revised estimates for last week are for a production of 6,400,000 tons. Coal was being produced Friday, August 25, at the rate of 7,400,000 tons weekly.

Authorizations were given by the Federal Fuel Distribution Committee for movement to the Great Lakes of all coal loaded in certain districts in West Virginia and eastern Kentucky on Monday, August 28. The districts included in the order are the same as those covered by the committee's program for lake shipments on Monday, Wednesday and Saturday of last week.

Notwithstanding the factor of a greatly increased production of bituminous coal, the Fuel Distribution Committee considers that the movement of a sufficient tonnage of coal to the Great Lakes region before the close of navigation is a serious problem. A program for facilitating the movement of the required tonnage is now being considered and will probably be announced very shortly. The tonnage of coal now at the head of the Great Lakes is from force of circumstances considerably lower than the amount of such stocks at this period in 1921 or in 1920.

Authorization has been placed in the Bluefield, West Virginia, district for the movement of a considerable tonnage of coal to the State Fuel Administration of New York, for distribution in that State to meet emergency needs. This coal will move to tidewater at Hampton Roads, Virginia.

The effect of a sharply increased coal production from fields recently reopened was manifested in the decreasing number of applications for emergency coal being received by Fuel Distributor Spencer. At the beginning of last week these applications were being received in great numbers. With the reopening of various coal fields many of these applications were returned with the advice to the applicants that their fuel requirements can no doubt best be taken care of in their own states.

A considerable number of authorizations for coal to be shipped from Kentucky and West Virginia districts to gas and electric light public utilities and ice plants in Indiana, Michigan, Illinois, Virginia and Ohio, and to canneries in Indiana and Michigan have been made by the Federal Fuel Distribution Committee.

At the request of Governor Baxter of Maine, a considerable tonnage of coal from southern West Virginia will be moved to alleviate the critical domestic fuel shortage in that state.

On representation of the district coal committee at Birmingham, Alabama, that the movement of railway fuel in that state could at this juncture probably best be handled on a pro-rata basis, Fuel Distributor Spencer has authorized the cancellation of Class 1 priorities for railway fuel heretofore placed in that state. The district committee at Birmingham, has been advised that, if the pro rata plan of distribution does not take care of railway fuel requirements, Class 1 priorities will be issued for all railway coal to come from Alabama.

The increase in production of bituminous coal, and the opening of fields recently closed, near to important markets, have made it possible for the Interstate Commerce Commission to rearrange the list of priority uses embraced in Service Order No. 23, as previously amended. By further amendments issued on August 29 the emergency uses are all embraced in Class 2; Class 1 is reserved for such extraordinary

cases as may be designated from time to time by the commission; all other uses fall within Class 3.

Certain pressing needs of the railroads and of the portion of the Northwest which must practically be served by water before the close of lake navigation will be met by proper assignments of particular shipments to Class 1.

The commission says that certificates from state fuel administrators or committees as to the character of use and bona-fides of the transaction will be deemed sufficient evidence for the carriers in carrying out the direction for priority as to coal for domestic and building heating purposes, as well as other evidence of the right of a particular shipment to be placed within the priority class.

Amendment No. 4 to service order No. 23 is as follows:

It is ordered, That paragraph numbered 7 of the said Service Order No. 23 adopted July 25, 1922, as subsequently amended, be, and it is hereby, further amended and supplemented to read as follows, effective on and after August 30, 1922:

7. That in the supply of cars to mines upon the lines of any coal-loading carrier, such carrier is hereby authorized and directed, to place, furnish, and assign such coal mines with cars suitable for the loading and transportation of coal in succession as may be required for the following classes of purposes, and in following order of classes, namely:

CLASS 1. For such special purposes as may from time to time be specially designated by the commission or its agent therefor. In designating special purposes under this reservation, the commission or its agent will designate the class of relative priority which such special purpose or particular shipment or shipments shall receive.

And subject thereto in order of priority:

CLASS 2. For fuel for railroads and other common carriers, and for bunkering ships and vessels; for public utilities which directly serve the general public under a franchise therefor, with street and interurban railways, electric power and light, gas, water, and sewer works, ice plants which directly serve the public generally with ice, or supply refrigeration for human food stuffs; hospitals; for the manufacture and production of food stuffs and medicines and for the manufacture of containers therefor; for the United States, state, county, or municipal governments, and for their hospitals, schools, and other public institutions—all to the end that the foregoing may be kept supplied with coal for current use for such purposes, but not for storage, exchange, or sale; for bituminous coal consigned to a pool or pools of lake cargo or bunkerage coal at any port upon Lake Erie for transshipment by water to ports above Lake Erie; bituminous or anthracite coal, or coke for household use and for the heating of buildings. It is not intended by this paragraph to give any priority as between the classes of persons and uses mentioned herein.

CLASS 3. Other purposes.

No coal embraced in Classes 1 or 2 shall be subject to reconsignment or diversion except for some purpose in the same class or a superior class in the order of priority herein prescribed.

For the more prompt and effectual administration during the present emergency of the authorizations, directions, and requirements of this paragraph No. 7, the following persons are designated and appointed as agents of the commission with authority to give directions as to car service and to the matters referred to in paragraphs (15) and (16) of section 1 of the interstate commerce act, and referred to in this paragraph No. 7, viz.: John C. Roth, director, and E. H. DeGroot, assistant director; Frank C. Smith, chief inspector of the Bureau of Service of the commission, and S. J. Mayhood, B. S. Robertson, C. C. Semple, W. L. Barry, O. S. Reynolds, H. M. Priest, J. B. Ford, John T. Marchand, J. A. Emmart, W. L. Lloyd, A. R. Layman, Delbert Garman, F. F. Engles, L. P. Green, T. L. Stevens, C. J. Bailey, C. D. Thomas, W. S. Rice, W. D. Anderson, W. B. Moore, J. Patterson, J. F. Stewart, John E. Barr, Wm. J. Kiniry, T. J. Davis, T. F. Sullivan, and the directions so given by them shall be regarded as directions of the commission.

Arrangements for the pooling of lake coal in accordance with the revised plans of the Federal uFel Distribution Committee had practically been completed on Wednesday. The original intention was to have the pool go into effect September 1, but the perfection of details may necessitate delaying actual operations for three or four days. Dumpings of coal at lower lake ports for shipment to upper lake territory last week amounted to 240,000 tons. Reports covering the first two days of the present week indicate total dumpings for this week amounting to 400,000 tons. It is understood that agreements for the shipment of lake coal to the amount of several million tons have been arranged between coal operators in Ohio, Pennsylvania, West Virginia, Kentucky and the lake shippers.

B. S. Robertson of the Interstate Commerce Commission has been designated to represent that commission and the Federal Fuel Distribution Committee at Cleveland, in the passing upon applications from lake shippers for permits for the movement of coal under the new lake program.

With the readjustment of the system of fuel distribution, following the promulgation of the recent amendment to Interstate Commerce Commission, Order No. 23, it is expected that coal under contract or purchase will move generally through its usual channels in accordance with its priority. Where the use for which the coal is to be put is not clearly shown by the order or billing, the state authorities can issue certificates giving this information. This action will automatically determine the classification of the coal under Order No. 23. The co-operation of the Federal Fuel Distribution Committee may be obtained by the state authorities in cases where urgently needed fuel supplies cannot be obtained by the means above outlined.

The Coal Operators' Advisory Committee, headed by C. E. Bockus of the Virginia Coal & Coke Company, which has been assisting the Federal Fuel Dustributor, disbanded on Wednesday. Although it is expected that the various district coal committees will disband after this week, it is probable that the naval and Interstate Commerce Commission representatives will remain at their stations for some time for the purpose of adjusting various details.

A new high record was established on Monday, August 28, when 30,054 cars were loaded for shipment. This exceeded by 7,876 cars the number loaded on Saturday. Loadings on Monday were equivalent to a weekly production of approximately 10,000,000 tons. There was an increase over the preceding day in all districts and the total for Monday exceeded by 6,366 cars the average daily loadings in August last year, when there was no railway strike in effect, while except in the Northwestern and Central Western districts, where there was only a slight difference, loadings on Monday in all districts exceeded by a considerable margin the average daily loadings in the same districts in August last year.

Loadings on Monday were nearly twice the average daily loadings in June, 1922, each district exceeding the daily average for June except the Pocahontas, where loadings on Monday totaled 5,785 cars, while the June average was 5,872 cars.

Coal loadings by districts on Monday were as follows:

District	Cars
Eastern	4,052
Allegheny	8,702
Pocahontas	5,785
Southern	5,228
Northwestern	922
Central Western	3,968
Southwestern	1,397
Total	30,054

Belief that the railroads would be able to handle enough coal to supply current needs this winter was expressed by Secretary Hoover. He pointed out that the best performance of the roads for a week in the past was about 13,500,000 tons, while for the next six weeks they might be called upon to haul 17,000,000 tons a week if they could do so. This total could be cut down, however, by confining distribution to current requirements. One of the difficult problems arises from the accumulation of some 20,000 to 25,000 loaded cars on the Southern coal carrying roads while somewhere between the non-union coal fields and the Northwest there is approximately 600,000 tons of coal consigned to the lake region under priority orders. It is hoped to move 1,200,000 tons a week to the lake ports before the close of navigation but it is regarded as certain that all-rail shipments to the Northwest will be necessary during the winter.

General News Department

Three Men Burned to Death was the tragic result of a highway crossing disaster at Rockwood, Mich., one day last week.

Electrification of Montreal Harbor Railway Proceeding Rapidly

Electrification of the Harbor Railway Terminals, Montreal, with a total trackage of 58 miles, is proceeding, and it is expected that by the end of September 42 miles will have been electrified. The remaining 16 miles will probably be completed next season, according to a statement issued by M. P. Fennell, manager of the Montreal Harbor Commission. Electric locomotives of a type especially suited for harbor work will be purchased by the Commission.

International Commerce Chamber to Meet in Rome

The second general meeting of the International Chamber of Commerce will be held in Rome, Italy, from March 18 to 24, 1923. Present indications are that from two to three hundred American business men will be in attendance. Opportunity will be afforded to Americans in attendance to take numerous side trips to study economic conditions in Mediterranean countries, the Near East and Western Europe. Further details can be secured from L. C. Zapf, secretary, American Section, International Chamber of Commerce, Mills building, Washington, D. C.

New York Railroad Club Meeting

H. C. Pearce, director of purchases and stores of the Chesapeake & Ohio, will present a paper at the meeting of the New York Railroad Club on Friday evening, September 15, on "The Real Functions of the Department of Purchases and Stores." He will discuss the purpose, scope and organization of the purchases and stores department, or the "service of supply" as it is frequently called. The necessity of conserving the material resources will be touched upon, with suggestions as to how it may be accomplished and at the same time improve the promptness and efficiency of the delivery of material to the user.

Transportation Day at Canadian National Exhibition

Thursday, September 7, has been set aside as Transportation Day at the Canadian National Exhibition, which opened at Toronto, Ont., on Saturday, August 26. The exhibition has a number of transportation exhibits and a special program will be arranged for railway men on September 7.

The Canadian National Railways is exhibiting four different types of self-propelled motor coaches and is directing special attention to the importance of these coaches in improving branch line service. The Canadian National Railways is also exhibiting a complete transcontinental train of steel equipment, consisting of a Pacific type locomotive, baggage car, colonist car, first-class coach, tourist sleeper, dining car, first-class sleeper, compartment-observation car and a mountain observation car.

Steel Treaters and Drop Forgers Will Meet in Detroit

Final arrangements are being made for the fourth international steel exposition and conventions of the American Society for Steel Treating and the American Drop Forging Institute to be held in the General Motors building, Detroit, Mich., Oct. 2-7.

The exposition will be the largest ever held as practically all of the floor space has been sold and many exhibitors who desired to be present cannot be accommodated. There will be quite a number of exhibitors not present at previous shows due to the fact that the Drop Forging Institute is holding its annual convention simultaneously and in the same building with the American Society for Steel Treating.

The General Motors building is especially adapted for exhibition purposes. In the large exhibition hall, there are 30,000 sq. ft., while the two wings on the same floor leading to the exhibition hall have 20,000 sq. ft. of additional display space. Arrangements have been made so that in one section of the hall gas furnaces will be in operation, while electrical furnaces and other equipment requiring power will be displayed throughout the hall. Practically all of the exhibits will be in operation.

At the three previous expositions held in Chicago, Philadelphia and Indianapolis, the attendance has been in excess of 10,000, and it is expected that because of the great interest in Detroit as a heat treating center as well as a market for steel products, the attendance will be in excess of 15,000.

Proposed Penalties for Obstructing Interstate Commerce

A bill making it a felony under the federal laws for any person or persons willfully, by physical force, or intimidation by threats of physical force, to obstruct or retard the orderly conduct or movement of interstate or foreign commerce or the make-up or disposition of locomotives and cars, was introduced in the Senate on August 23 by Senator Sterling of South Dakota. The bill would also impose penalties for willful attempts to destroy, injure or impair any of the tracks, switches, roundhouses or terminal facilities of any railroad used in interstate commerce with the intent to interfere with commerce, and make persons chargeable with such interferences chargeable with murder in the event that lives are lost as a result.

Passengers Relieved by Wig-Wag Signals

Southbound passenger train No. 3105 of the New York, New Haven & Hartford was derailed on the afternoon of August 24 about four miles north of Newport, R. I., and three of the twenty passengers on the train were slightly injured. The road at this point runs along the shore of Narragansett Bay and the first relief that was secured for the train came from a vessel of the United States Navy, which sent a crew of 30 men. Naval radio telegrapher F. C. Burst, had just alighted from the train, at the last preceding station; and, seeing the trouble he ran to the scene of the accident. Mounting the roof of one of the cars he attracted the attention of the men out in the bay by wig-wag signals. Lieutenant Matthews, who came with the relief crew, took all of the passengers to Newport on the Navy launch, before the doctors and ambulances had arrived. The locomotive of the train did not leave the rails; and the tender and the three cars were not much damaged.

Labor Opposes Kellogg Alien-Protection Bill

Representatives of organized labor at hearings before a Senate committee on August 23 and 24 vigorously opposed the enactment of the Kellogg bill authorizing the federal government to punish offenses against aliens in violation of treaty rights, which was urged by the President in his address to Congress on August 18 in order to give the government power to deal with such cases as the Herrin massacre in the event of failure of state and local authorities to act. Edgar Wallace, legislative agent of the American Federation of Labor; N. P. Alifas, of the International Association of Machinists, and A. S. Lovell, vice-president of the Brotherhood of Locomotive Engineers, objected to the bill on the ground that its purpose was to "put the federal government in the business of strike-breaking on the pretense that the rights of aliens may be affected." Mr. Lovell said that thousands of aliens are killed each year through railroad accidents and that the bill would make possible huge bills for compensation against the federal government.

A Billion and a Quarter

James C. Rogers, the veteran general paymaster of the Pennsylvania Railroad, who, as announced in the *Railway Age* of July 8, page 91, was retired on pension on July 1, had been connected with the general offices of the Pennsylvania and of the Philadelphia, Wilmington & Baltimore since November 1, 1869. Until the merger of the last named road with the Pennsylvania, he was employed mainly in the treasurer's department, and he entered the same department in the larger company. In 1905, he was assigned to the work of introducing the cash system of payment of wages on the Pennsylvania lines east of Pittsburgh and Erie. This work occupied his time for five years, involving as it did the training of many paymasters and clerks and the supervision of the construction of pay-cars. In January, 1919, under the United States Railroad Administration, the payment of wages by checks was resumed. During the ten years up to that time, there was paid out from the pay-cars one billion two hundred and fifty-two millions of dollars. The losses resulting from errors in payment from the pay-cars during this ten-year period averaged $558.27 a year, a showing which is regarded as attesting the high quality of the work of the paymaster's department, as carried on under Mr. Rogers' direction. This is equal to one dollar in every $224,000 paid out, or less than one two-thousandth of one per cent. Mr. Rogers has been general paymaster of the Pennsylvania System since 1920. He is also president of the Veteran Employees' Association of the general offices at Philadelphia, and he will continue in this position.

Earnings for July

Incomplete reports so far filed with the Interstate Commerce Commission show that 104 out of 200 Class I railroads had a net operating income in July of $46,263,000, compared with $43,938,000 for those same roads in July last year. Complete reports for all the Class 1 roads are expected to be available in about a week.

Operating revenues for the 104 roads totaled $272,628,000, a decrease of 2.6 per cent under those for the same month last year, while their operating expenses amounted to $207,087,000, a reduction of 5.2 per cent compared with those for the same roads during July, 1921. The 104 roads represent a mileage of 141,380 miles.

Incomplete reports for 57 railroads in the Eastern district, representing 43,430 miles, show that those roads had a net operating income in July of $15,970,000, compared with $20,510,500 for the same carriers last year. Their operating revenues totaled $132,116,000, a reduction of 5.3 per cent compared with July, 1921, while their operating expenses amounted to $106,666,000, a decrease of 4 per cent under those for the same month in 1921.

Sixteen railroads in the southern district with a mileage of 18,780 miles had a net operating income of $4,435,800, compared with $3,459,000 for the same roads in July last year. The operating revenues for those southern roads totaled $30,604,000, an increase of 2.10 of 1 per cent over July last year, while their operating expenses amounted to $24,792,000, a reduction of 3.2 per cent compared with the operating expenses of the same carriers in July one year ago.

Reports for 31 railroads in the western district, representing 79,169 miles, gave their net operating income as $25,856,700, compared with $19,900,000 in July last year. Their operating revenues totaled $109,907,000, which was practically the same as that for July last year, while their operating expenses were $75,628,000, or a reduction of 7.5 per cent under the same month one year ago.

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings:

Air Brake Association.—F. M. Nellis, 165 Broadway, New York City. Next convention, May 1-4, 1923, Denver, Colo. Exhibit by Air Brake Appliance Association.

Air Brake Appliance Association.—J. F. Gettrust, The Ashton Valve Company, 318 W. Washington St., Chicago. Meeting with Air Brake Association.

American Association of Demurrage Officers.—F. A. Pontious, Supervisor of Demurrage and Storage, C. & N. W. Ry., Chicago.

American Association of Dining Car Superintendents.—L. A. Stone, C. & E. I. Ry., Chicago. Annual meeting, Oct. 17-20, San Francisco, Cal.

American Association of Engineers.—C. E. Drayer, 63 E. Adams St., Chicago.

American Association of General Baggage Agents.—E. L. Duncan, 332 So. Michigan Ave., Chicago.

American Association of Passenger Traffic Officers.—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York. Annual meeting, October 10 and 11, Seelbach Hotel, Louisville, Ky.

American Association of Railroad Superintendents.—J. Rothschild, Room 400 Union Station, St. Louis, Mo.

American Electric Railway Association.—J. W. Welsh, 8 W. 40th St., New York.

American Railroad Master Tinners', Coppersmiths' and Pipe Fitters' Association.—C. Borcherdt, 202 North Hamlin Ave., Chicago, Ill.

American Railway Association.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.
Division I.—Operating. J. C. Caviston, 30 Vesey St., New York, N. Y.
Freight Station Section (Including former activities of American Association of Freight Agents). R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.
Medical and Surgical Section. J. C. Caviston, 30 Vesey St., New York.
Protective Section (including former activities of the American Railway Chief Special Agents and Chiefs of Police Association). J. C. Caviston, 30 Vesey St., New York, N. Y.
Safety Section. J. C. Caviston, 30 Vesey St., New York.
Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 30 Vesey St., New York, N. Y. Annual meeting, September 19-21, 1922, The Antlers, Colorado Springs, Colo.
Division II—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.
Division III—Traffic. J. Gottschalk, 143 Liberty St., New York.
Division IV—Engineering. E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Exhibit by National Railway Appliances Association.
Construction and Maintenance Section. E. H. Fritch.
Electrical Section. E. H. Fritch.
Signal Section (including former activities of the Railway Signal Association). H. S. Balliet, 30 Vesey St., New York, N. Y. Next meeting, November 21 and 22, Hotel McAlpin, New York.
Division V—Mechanical (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Exhibit by Railway Supply Manufacturers' Association.
Equipment Painting Section (including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Next meeting, which was scheduled to be held Sept. 5-7, has been postponed.
Division VI—Purchases and Stores (including former activities of the Railway Storekeepers' Association). W. J. Farrell, 30 Vesey St., New York, N. Y.
Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.
Car Service Division—C. A. Buch, 718 18th St., N. W., Washington, D. C.

American Railway Bridge and Building Association.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next convention October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.

American Railway Development Association.—A. Leckie, Industrial Agent Kansas City Southern Ry., Kansas City, Mo.

American Railway Engineering Association.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Exhibit by National Railway Appliance Association.

American Railway Master Mechanics' Association.—(See American Railway Association, Division V.)

American Railway Tool Foremen's Association.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

American Short Line Railway Association.—T. F. Whittelsey, Union Trust Bldg., Washington, D. C.

American Society for Steel Treating.—W. H. Eiseman, 1600 Prospect Ave., Cleveland, Ohio. Annual convention, Oct. 2-7, 1922, General Motors Building, Detroit, Mich.

American Society for Testing Materials.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

American Society of Civil Engineers.—Prof. J. H. Dunlap, University of Iowa, Iowa City, Ia. Regular meeting 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York. Fall meeting, October 4-9, Palace Hotel, San Francisco, Cal.

American Society of Mechanical Engineers.—Calvin W. Rice, 29 W. 39th St., New York.
Railroad Division—A. F. Stuebing, Manager Editor, Railway Mechanical Engineer, Woolworth Bldg., New York.

American Train Dispatchers' Association.—C. L. Darling, 1310-1311 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

American Wood Preservers' Association.—S. D. Cooper, A. T. & S. Fe R. R., Topeka, Kan. Next meeting, January 23, 1923, New Orleans, La.

Association of Railway Claim Agents.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn.

Association of Railway Electrical Engineers.—Jos. A. Andreucetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.

Association of Railway Executives.—Thomas De Witt Cuyler (chairman), 61 Broadway, New York, N. Y.

Association of Railway Supply Men.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.

Association of Railway Telegraph Superintendents.—(See American Railway Association, Division I.)

Association of Transportation and Car Accounting Officers.—(See American Railway Association, Division II.)

Bridge and Building Supply Men's Association.—D. I. Higgins, American Valve & Meter Company, 332 S. Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Ass'n.

Canadian Railway Club.—W. A. Booth, 53 Rushbrook St., Montreal, Que.

Car Foremen's Association of Chicago.—Aaron Kline, 626 North Pine Ave., Chicago. Regular meetings, 2d Monday in month, except June, July and August, Great Northern Hotel, Chicago.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS.—M. ... Secretary, 6-4 Federal Reserve Bank Bldg., St. Louis. ... last Tuesday in month at the American Hotel Annex, St. ...

CENTRAL RAILWAY CLUB.—Harry D. ... 2 ... St., New York. September meeting has been postponed.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill. Annual convention, ... Hotel Sherman, Chicago.

CHIEF INTERCHANGE CAR INSPECTORS AND CAR FOREMEN'S ASSOCIATION.—D. B. Wright, 34th St. and ... Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooler, Union Central ... Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, ... F St., N. W., Washington, D. C.

FREIGHT CLAIM ASSOCIATION.—(See American Railway Associations, Division VII.)

GENERAL SUPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday, preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George P. White, 747 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Wabash Ave., Winona, Minn. Next convention, September 5-8, Hotel Sherman, Chicago.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 376 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTERS' CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James B. Walker, 49 Lafayette St., New York. Next convention, September 26, 1922, Detroit, Mich.

NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York.

NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition at convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wallner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Noxon, 600 Liberty Bldg., Broad and Chestnut Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.

RAILWAY CLUB OF PITTSBURGH.—J. D. Conway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh, Pa.

RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electrical Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va. Next meeting October 10-13, 1922, Pittsburgh, Pa.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A. Division IV, Signal Section.)

RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division VI.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Church St., New York.

RAILWAY TREASURY OFFICERS' ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa. Annual meeting, October 19 and 20, Asheville, N. C.

ROADMASTERS' AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, C. & N. W. Ry., Sterling, Ill. Annual convention, September 19-21, 1922, Hotel Statler, Cleveland, Ohio. Exhibit by Track Supply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Frauenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill, P. O. Box 1205, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—L. L. Carrier, Car Serv. Agt., Tenn. Cent. Ry., 319 Seventh Ave., North Nashville, Tenn. Next meeting, October 19, St. Augustine, Fla.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, 9 N. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hillburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, 1177 East 98th St., Cleveland, Ohio. Annual convention, October 31-November 3, Hotel Sherman, Chicago. Exhibit by Railway Equipment Manufacturers' Association.

WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago. Regular meetings, 3d Monday each month except June, July and August.

Traffic News

Railroads during the first six months of this year handled 170,209,000,000 net tons of freight, as compared with 163,587,000,000 in the first six months of 1921, according to the monthly bulletin of operating statistics published by the Interstate Commerce Commission. For June the number of net ton miles was 29,049,000,000 as compared with 28,146,000,000 last year. The average percentage of unserviceable locomotives for the first six months was 23.4 and of cars 13.8. The average car miles per day was 22.7 as compared with 21.5 last year and the net tons per loaded car 26.4 as compared with 28, and the net ton miles per car a day 390 as compared with 374. The net ton miles per mile of road per day averaged 4,027 as compared with 3,880.

Coal Production

Shipments from mines opening under the Cleveland wage agreement have already materially increased production of bituminous coal, the Geological Survey announced in its bulletin of August 26. An output of at least 6,000,000 tons for the week of August 21-26 was already assured by the reports for Monday, Tuesday and Wednesday, and additional tonnage from other districts that are known to have signed the agreement may raise the total to 6,250,000 tons. Production of anthracite, however, remained practically zero.

The sharp increase in output is indicated by the statement of cars loaded daily. On Monday, mines in Eastern Ohio and parts of Central Pennsylvania were shipping coal, and the loadings for that day were 19,043 cars, an increase of 3,340 cars over the preceding Monday. Loadings on Tuesday declined somewhat but on Wednesday and Thursday increased again, largely exceeding those of the week before. These increases were due to first shipments from Illinois and other western districts which carried the total up to 18,748 cars on Thursday. On Friday the loading was 21,866 cars. The increase came almost exclusively from mines formerly closed by the strike. In the Middle and Southern Appalachians, transportation difficulties still limited output and shipments were but little larger.

Interchangeable Mileage Ticket Investigation

The Interstate Commerce Commission has announced hearings, to be begun at Washington on September 26, before Commissioner Meyer, with a view to the issuance of such orders as may be necessary to carry out the provisions of the interchangeable mileage ticket law, approved by the President on August 18. The principal section of the law reads:

"The commission is directed to require, after notice and hearing, each carrier by rail, subject to the Interstate Commerce Act, to issue at such offices as may be prescribed by the commission interchangeable mileage or scrip coupon tickets at just and reasonable rates, good for passenger carriage upon the passenger trains of all carriers by rail subject to this act. The commission may in its discretion exempt from the provisions of this amendatory Act either in whole or in part any carrier where the particular circumstances shown to the commission shall justify such exemption to be made. Such tickets may be required to be issued in such denominations as the commission may prescribe. Before making any order requiring the issuance of any such tickets the commission shall make and publish such reasonable rules and regulations for their issuance and use as in its judgment the public interest demands; and especially it shall prescribe whether such tickets are transferrable or non-transferrable, and if the latter, what identification may be required; and especially, also to what baggage privileges the lawful holders of such tickets are entitled."

Willful refusal to issue or accept the tickets is subject to $1,000 fine. At the hearing the carriers' proposals will be heard first, to be followed by cross-examination and then the direct testimony of commercial and other organizations and individuals and cross-examination thereon. Each carrier seeking exemption must file with the commission a written statement to that effect on or before September 15.

Commission and Court News

Interstate Commerce Commission

The Interstate Commerce Commission has rendered its decision as a result of its investigation of the rates on bunker coal in which it holds that the maintenance of lower rates on coal for delivery at ports to vessels whether as cargo or for bunker purposes is not in violation of the fourth section of the interstate commerce act or otherwise unlawful.

Court News

Power of I. C .C. to Award Reparation for Overcharges

On a hearing before the Interstate Commerce Commission of a petition for reparation for unreasonable rates "heretofore and hereafter charged to petitioners," evidence having been taken without objection as to shipments both before and after filing of the petition, the Circuit Court of Appeals, Third Circuit, holds the commission had power to award reparation for overcharges after as well as before filing petition.—Lehigh Valley v. G. B. Markle Co., 279 Fed. 261.

Insufficient Evidence of Unusual Jolt of Train

In an action by a female passenger for injuries alleged to have been caused by being thrown against the side of a seat by an unusual movement of the train, the Missouri Supreme Court holds that her characterization of the jar as "an awful jolt and jar," and "the worst jar I ever witnessed on the train in my life" was of slight, if any, assistance in determining the real character of the jar; and her evidence that the jolt "threw" her against the seat was insufficient to show an unusual movement, in the absence of evidence that anything else in the car was disarranged or that any other passenger had suffered inconvenience.—Elliott v. Chicago, M. & St. P. (Mo.), 236 S. W. 17.

Failure to Give Notice of Claim for Loss Bars Recovery—Goods Stolen

The Circuit Court of Appeals, First Circuit, holds that where the consignee has failed to give the notice of claim required by the bill of lading (Act of March 4, 1915) claim for recovery is barred except for negligent delay in delivering the property, or negligence while loading or unloading it or in transit, resulting in the consignee's loss.

The fact of nondelivery does not suffice to show neglect where it appears that the goods were stolen and the circumstances attending the theft do not authorize an inference of lack of reasonable precaution. The party asserting negligence must prove it.—Gillette Safety Razor Co. v. Davis, 278 Fed. 864.

Burden of Proof in Fire-Setting Cases

In an action for damages for the burning of plaintiffs' seedhouse by sparks the North Carolina court held the defendant entitled to a new trial for error in imposing on the defendant the burden of rebutting the prima facie case by a preponderance of the evidence. The court said: "When the plaintiffs proved that the property had been destroyed by fire escaping from the defendant's locomotive, they made a prima facie case of negligence for the consideration of the jury; or, as Mr. Justice Pitney says, such proof furnished circumstantial evidence of negligence; but it did not impose upon the defendant the burden of rebutting the prima facie case by the preponderance of the evidence.—Sweeney v. Erving, 228 U. S. 233. . . . Standing alone, the prima facie case warranted but did not compel the inference of negligence; it furnished evidence to be weighed but not necessarily to be accepted, it made a case to be decided by the jury but did not forestall the verdict."—Bertie Cotton Oil Co. v. Atlantic Coast Line (N. Car.), 110 S. E. 660.

Foreign Railway News

British Concern Gets Order for 21 Locomotives

The British firm of Sir W. G. Armstrong, Whitworth & Company has, according to The Engineer (London), received from the Bengal North Western Railway an order for 21 locomotives.

English Coal Strike's Cost to Railway Employees

LONDON.

According to the financial report of the National Union of Railwaymen, the miners' strike of last year cost the railwaymen's organization nearly £750,000 ($3,645,000 at the normal rate of exchange) in unemployment payments.

Two Swiss Railways Electrified Throughout

The St. Gotthard line in Switzerland is now completely electrified for both freight and passenger service. The line extends from Lucerne to Chiasso on the Italian border, a distance of about 180 miles. Grades of 2.5 per cent are common and there are many tunnels, the longest of which is 9¼ miles. Completion of the electric operation of the Rhaetian Railways in Switzerland was celebrated in May of this year.

Indian Railways to Buy Locomotives and Cars

The East Indian Railway, according to Modern Transport (London), will during the fiscal year 1923-24 add 37 locomotives to its supply of motive power and contemplates similar additions annually for the next few years. From 2,000 to 3,000 goods wagons will be acquired annually during the next five years and 136 passenger cars will be purchased before March, 1923. The road is also doing a considerable amount of double tracking.

The Bengal-Napur Railway will spend 1,567,000 rupees for passenger cars and 11,630,000 rupees for goods wagons (one rupee equals 32.4 cents at par).

Railway Consolidation Making Rapid Progress in Britain

The amalgamation of all the railways of Great Britain into four non-competitive companies is proceeding rapidly. The most recent announcement of this nature was a plan for the consolidation of the six companies making up the Eastern group. These companies are the North Eastern, the Great Central, the Great Eastern, the Great Northern, the North British and the Great North of Scotland. In the case of the amalgamations, as with those previously announced, consolidation is effected, not by lease or acquisition of stock, but by the exchange of stock of the old companies for stock of the amalgamated company—an exchange effected generally on the basis of earning power of the stocks rather than on their par values.

Australian Road Uses Motor Cars

LONDON.

The Victorian Railways, Australia, have adopted the rail motor car to handle passenger traffic on short spur lines and over other sections where it is uneconomical to provide a service of steam trains, says the Times (London) Trade Supplement. Experiments in the past have been made with steam and gasoline cars but for various reasons these have failed to give satisfaction. In the new system an ordinary motor-truck chassis is used as the power unit, the steering gear being removed and standard railway tires fitted to the wheels. The car, which has been designed to provide the maximum of floor space, has a seating capacity for 43 persons and all unnecessary tare weight has been eliminated. It is open at the sides but is provided with blinds which can be lowered for protection against inclement weather. The seats all face to the front and are of the usual tramcar type, and while they afford little lodgement for dust, provide ample comfort for short journeys. Hand luggage and parcels can be accommodated under the seats and the doors have been arranged near the front end so that the driver may be able conveniently to collect fares

and issue tickets to passengers. A trailer built on similar lightweight lines has also been constructed and will be attached to the rail motor-car as traffic requirements warrant. Both the motor car and the trailer are lighted by electricity. The maximum speed will be from 25 to 30 m. p. h., but the average speed will be considerably less, depending on the frequency of stops.

Improvements Undertaken by Cuba Northern

Improvements are being carried out by the Cuba Northern at Moron, Cuba, to include the construction of a locomotive repair shop, car and coach shop, transfer table, smith shop and foundry, power house and saw mill. A contract for the construction and all necessary tools has been given to the Baldwin Locomotive Works. All the buildings will be of steel frame with galvanized sides and the improvements will cost about $675,000. The shops are to be ready for operation by November 1, 1922. The Cuba Northern has given a contract also to the Frederick Snare Corporation for erecting at Port Tarafa, one of the company's terminals, two sugar warehouses of the same type of construction as the buildings at Moron.

Spanish Railway Officials Here to Study Electric Traction

Senor Don Jose Moreno Ossorio, general manager of the Norte Railway in Spain, and several other Spanish railway experts who are working out plans for the proposed electrification of the Norte Railway are in America on a tour of inspection. The other members of the inspection party are Don Mario Viani Caballero, chief engineer of the motive power department, Norte Railway; Prof. Don Jose A. Perez Del Pulgar, professor of electrical engineering, Instituto Catolico de Artes e Industrias; and R. F. Hamilton, consulting-engineer of the Sociedad Espanola de Construccion Naval, which represents the Westinghouse Electric International Company in Spain.

The initial electrification on the Norte system, which is one of the largest in Spain, will include about 40 miles of line running from Ujo through the mountainous Pajares section in the north. Three thousand volts direct current will be used in this section, and water power will be purchased from the Electra de Viesco Company in Asturias. More extensive electrification is planned for the future on the Madrid-Venta De Banos section of the railroad.

Spanish Railroad Officials at Westinghouse Plant

The accompanying photograph was taken in the plant of the Westinghouse Electric and Manufacturing Company at East Pittsburgh, Pa. The members of the party are: left to right, rear row—N. W. Storer, general engineer, Westinghouse Electric & Manufacturing Company; Don Jose Moreno Ossorio, general manager, Norte Railway; Don Mario Viani Caballero, chief engineer, Norte Railway; left to right front row—R. F. Hamilton, Sociedad Espanola de Construccion Naval and Prof. Don A. Perez Del Pulgar.

Equipment and Supplies

Locomotives

THE MISSOURI PACIFIC has ordered 25 Mikado type locomotives from the American Locomotive Company.

THE MISSOURI, KANSAS & TEXAS has ordered 10, eight-wheel type switching locomotives from the American Locomotive Company.

THE LONG ISLAND RAILROAD is inquiring for six locomotives of a type suitable for heavy passenger service in the summer and for freight service in the winter.

Freight Cars

THE NEW YORK, NEW HAVEN & HARTFORD is inquiring for 6 caboose cars.

THE BALTIMORE & OHIO is inquiring for 1,000 steel hopper cars of 55 tons' capacity.

THE BELT RAILWAY OF CHICAGO is inquiring for 150 hopper cars of 55 tons' capacity.

THE PITTSBURGH & WEST VIRGINIA is inquiring for 6 steel-underframe caboose cars.

THE ST. LOUIS-SAN FRANCISCO is inquiring for 500 hopper car bodies of 50 tons' capacity.

THE CINCINNATI, INDIANAPOLIS & WESTERN is inquiring for from 200 to 300 high side gondola cars of 50 tons capacity.

THE AMERICAN OIL COMPANY, Baltimore, Md., has ordered 5 tank cars of 10,000 gal. capacity from the Standard Tank Car Company.

THE PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla., has ordered 75 insulated tank cars of 8,000 gal. capacity from the Standard Tank Car Company.

THE CHILE EXPLORATION COMPANY, New York City, is inquiring for from 20 to 25 hopper bottom dumping ore cars for export. These cars are to have a capacity of 50 tons.

THE PACIFIC ELECTRIC, reported in the *Railway Age* of August 12 as inquiring for 200 dump cars of 50 tons' capacity, has ordered 200 National dump cars from the American Car & Foundry Co.

THE TENNESSEE, ALABAMA & GEORGIA, reported in the *Railway Age* of August 12, as inquiring for 20 box cars and 20 gondola cars is now asking for 25 box cars of 40 tons' capacity and 25 gondola cars of 50 tons' capacity.

THE JACOB DOLD PACKING COMPANY, Buffalo, N. Y., reported in the *Railway Age* of April 8 as inquiring for from 50 to 100 refrigerator cars, has renewed its inquiry for from 50 to 100 beef refrigerator cars with steel underframes. These cars are to have a capacity of 80,000 lb.

Passenger Cars

THE RICHMOND, FREDERICKSBURG & POTOMAC is asking for prices on six cars for passenger service.

Iron and Steel

THE GRAND TRUNK has contracted with the American Bridge Company for 200 tons of fabricated steel for bridges in Michigan.

Machinery and Tools

THE MISSOURI PACIFIC has ordered 1 2,500-lb. single frame steam hammer from the Niles-Bement-Pond Company.

THE LOS ANGELES RAILWAY CORPORATION has ordered a No. 1 car wheel lathe from the Niles-Bement-Pond Company.

Supply Trade News

The Compagnie des Appareils P. et M., has been organized with headquarters at No. 7, Rue Scribe, Paris, as the French agency for the selling of the rail anti-creepers of the P. & M. Company with which company it is associated.

H. A. Matthews, announcement of whose appointment as a vice-president of the **U. S. Light & Heat Corporation,** Niagara Falls, N. Y., was made in the *Railway Age* of August 26, will continue to have charge of sales in the railway division, his full title now being vice-president, sales, railway division.

Fay, Spofford & Thorndike, consulting engineers, 200 Devonshire Street, Boston, Mass., have admitted to partnership John Ayer, Bion A. Bowman, Carroll A. Farwell, Ralph W. Horne, Ralph T. Jackson, George L. Mirick, Barzillai A. Rich, and Warren D. Trask, who have been long associated with the above firm.

Trade Publications

INSULATING COMPOUNDS.—A small 16-page booklet has just been issued by the Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., which describes the insulating and soldering compounds manufactured by that company. The materials treated in the publication are baking varnishes, air-drying varnishes, insulating compounds, finishing materials, insulating glue, soldering flux, and lubricating oil.

TWENTY-FIVE THOUSAND is the number of men, according to a Montreal dispatch, who have gone from that region to western Canada to work in the harvesting of Canada's great wheat crop. Of this number about 18,000 went over the Canadian Pacific and the balance by the Canadian National and Grand Trunk Railways. It is said that probably 80 per cent of those who go west for harvesting return to eastern Canada before the middle of the winter.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company has awarded the contract to the Truscon Steel Company, Chicago, for the sash for the new boiler and tender shops at Albuquerque, N. M.

ATCHISON, TOPEKA & SANTA FE.—This company, which was reported in the *Railway Age* of August 5 as receiving bids for a new boiler shop at Albuquerque, New Mexico, has awarded the contract to C. A. Fellows & Co., Los Angeles, Cal.

BALTIMORE & OHIO.—This company has awarded a contract to the Vang Construction Company, Cumberland, Md., for the erection of a 65-ft. through plate girder span highway bridge over its tracks at Collingdale, Pa. A contract has been awarded to the Seaboard Construction Company, Philadelphia, Pa., for the erection of a bridge over Elk creek, Clarksburg, W. Va. The structure will consist of two 60-ft. deck plate girder spans with timber trestle approaches. To the same company has been awarded a contract for a 78-ft. through plate girder highway bridge at West Alexander, Pa.

CHICAGO, BURLINGTON & QUINCY.—This company, which was reported in the *Railway Age* of April 22 as preparing plans for the construction of shop facilities at Denver, Colo., has awarded a contract for this work to the Stearns-Rogers Company, Denver.

CHICAGO, ROCK ISLAND & PACIFIC.—This company, which was reported in the *Railway Age* of August 12 as preparing plans for the construction of a one-story passenger station 40 by 330 ft. at Moline, Ill., will accept bids September 5.

ELGIN, JOLIET & EASTERN.—This company will construct a 75 ft., double track deck plate girder span with ballast floor and a 25 ft. approach span across the Grand Calumet river at Gary, Ind.

ILLINOIS CENTRAL.—Through an error, it was reported in the August 26 issue that the contract for altering this company's fruit sheds at Mounds, Ill., had been awarded to the Ellington & Miller Co. This contract was instead awarded to Joseph Nelson & Sons, Chicago.

ILLINOIS CENTRAL.—This company has awarded a contract to Mortimer & Lindstrom, Chicago, for the construction of a 12-in. and a 15-in. sewer in connection with the rearrangement of sewers across the right-of-way between Twenty-fifth and Fifty-first streets, Chicago. This company has also awarded a contract to the Underground Construction Company, Chicago, for the construction of a circular brick sewer, 7-ft. in diameter, on Rhodes avenue, and a contract to the Great Lakes Dredge & Dock Company Chicago, for driving 1,100 ft. of new breakwater between Twenty-ninth and Thirty-first streets, Chicago.

UNION PACIFIC.—This company has awarded a contract to the Graver Corporation of Chicago, for the erection of a 200,000-gal. steel water storage tank at Ogallala, Neb., and an 800,000-gal. steel water storage tank at Council Bluffs, Ia.

VANCOUVER HARBOR TERMINAL RAILWAY.—Consul General F. M. Ryder, Vancouver, B. C., reports that plans for the construction of the first section of this railway, which is to connect the Great Northern with various piers and docks at an estimated cost of $80,000 have been made. The project is under the direction of the Vancouver Harbor Commission and it is not thought likely that work will be undertaken on the project until a new harbor board can be named.

THE PENNSYLVANIA RAILROAD reports that its surprise checking, conducted during the month of July, in the Eastern Region, shows that efficiency in train operation has not been impaired, in the slightest degree, by the shopmen's strike. The records show a perfect performance in more than 99.9 per cent of the cases. A total of 33,807 tests were made, and but 38 failures were recorded. Eight divisions had absolutely perfect scores. They were the Philadelphia, Cumberland Valley, Cresson, Trenton, Baltimore, Norfolk, Elmira and Schuylkill Divisions.

Railway Financial News

BUFFALO CREEK & GAULEY.—*Asks Authority for Equipment Trust Certificates.*—This company has applied to the Interstate Commerce Commission for authority to issue $340,000 of 6 per cent equipment trust certificates and $86,000 of additional capital stock.

CHESAPEAKE & OHIO.—*Trackage Rights Authorized.*—The Interstate Commerce Commission has issued a certificate authorizing this company to operate by means of trackage rights over a line of the Norfolk & Western between Waverly and Valley Crossing, Ohio, 62 miles.

CHICAGO & ALTON.—*Receivership.*—Judge George A. Carpenter, in the Federal Court at Chicago, on August 30, appointed W. G. Bierd, president of the Chicago & Alton, and W. W. Wheelock, an attorney, receivers for the road. Silas H. Strawn, who was named as counsel for the receivers, issued the following statement:

The Chicago & Alton has for several years been unable to meet all of the interest on its six per cent general mortgage bonds, but the holders of these bonds have permitted the interest to remain unpaid in the hope that general railroad conditions ultimately would adjust themselves in such a way as to restore the property to an assured and reasonable prosperity.

The directors, however, have been hopeful that these conditions soon would approach more nearly to normal, or would, in part at least, be met by offsetting factors of a helpful character. But such excessive costs bear particularly heavy on short railroads with expensive terminals, such as the Alton, which operates a little more than 1,000 miles and has terminals in the three great cities of Chicago, St. Louis, and Kansas City, with an average freight haul of only 185 miles and an average passenger haul of only 65 miles.

The receivership at the present time, however, was precipitated by the great falling off in earnings due to the coal strike and also to the further long continued and extra expense due to the shopmen's strike. The company's normal coal traffic is heavy, and practically all mines on its line had been closed since April 1, thus entailing heavy loss in revenue, and at the same time it has been compelled to buy much of its fuel coal from Southern fields, which, with added freight charges paid foreign lines, cost it two or three times the former price.

A committee to protect the interests of the holders of the Chicago & Alton's $22,000,000 3½ per cent first lien 50-year gold bonds, due 1950, was formed at New York. The committee consists of the following members: F. H. Ecker, vice-president of the Metropolitan Life Insurance Company, chairman; J. H. Perkins, president of the Farmers' Loan and Trust Company; J. V. E. Westfall, vice-president of the Equitable Life Assurance Society; Bertram Cutler, of New York, and Asa S. Wing, president of the Provident Life and Trust Company of Philadelphia.

The Farmers' Loan and Trust Company will act as depositary for the committee.

CHICAGO RIVER & INDIANA.—*Asks Authority to Assume Liability.*—This company and the New York Central have jointly applied to the Interstate Commerce Commission for authority to assume liability in respect of $414,700 of equipment notes of the Chicago Junction.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Authorized to Acquire Road.*—The Interstate Commerce Commission has issued a certificate authorizing the acquisition of part of the road of the Chicago & Indiana Coal Railroad extending from Brazil, Ind., for a distance of 25.76 miles in Parke County, Ind. This line is a part of the coal railroad division of the Chicago & Eastern Illinois which was recently abandoned.

GULF COAST LINES.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Gulf Coast Lines Show Increasing Prosperity."

INTERNATIONAL & GREAT NORTHERN.—*Asks Authority to Issue Securities in Reorganization.*—This company has applied to the Interstate Commerce Commission for authority for the issuance of securities in accordance with the plan of reorganization of the International & Great Northern, announced under date of June 1 by J. & W. Seligman & Co., and Speyer & Co., reorganization managers. It is proposed to issue $20,000,000 first mortgage 30-year 6 per cent gold bonds dated July 1, 1922, $17,000,000 30-year 6 per cent adjustment mortgage bonds dated January 1, 1923, $7,500,000 of common stock and $2,400,000 of 6 per cent notes maturing March 1, 1930, to the director general of railroads.

Charter Granted.—A new charter of the International & Great Northern has been filed in the secretary of state's office of Texas which provides that the general offices will remain at Palestine, although efforts were made to have this requirement removed. Walter F. Woodul is president with headquarters at Houston, Texas.

PITTSBURGH & WEST VIRGINIA.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to increase its capital stock by the issuance of $4,500,000 of preferred stock to reimburse the treasury for expenditures.

ST. PAUL UNION DEPOT COMPANY.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for approval of its first and refunding mortgage to secure an issue of $20,000,000 of first and refunding mortgage bonds and for the issuance of $15,500,000 of such bonds to be guaranteed by the companies which own the stock of the depot company.

UPPER MARION & PLYMOUTH.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to issue $350,000 of common stock for the purchase of equipment.

VIRGINIA.—*Authorized to Increase Dividend Rate.*—The Interstate Commerce Commission has authorized an increase in the dividend rate on $27,955,000 of preferred stock from 5 to 6 per cent.

Trend of Railway Stock and Bond Prices

	Aug. 29	Last Week	Last Year
Average price of 20 representative railway stocks	73.09	73.64	53.30
Average price of 20 representative railway bonds	89.51	89.67	75.39

Dividends Declared

Boston & Albany.—$2.00, payable September 30 to holders of record August 31.

Pittsburgh, Ft. Wayne & Chicago.—Common, 1¾ per cent, quarterly, payable October 1 to holders of record September 9; Preferred, 1¾ per cent, quarterly, payable October 3 to holders of record September 9.

A MICHIGAN CENTRAL passenger train bound from Toledo to Detroit, crashed into a motor truck loaded with turpentine and gasoline. The engineman and the fireman met death when they leaped from the engine into the flames that burst from the ruptured steel drums which contained the explosive fluids, and the driver of the truck died from burns five hours afterward.

Railway Officers

Operating

C. L. Strom has been appointed trainmaster of the Chicago & North Western with headquarters at Benld, Ill.

H. P. Miller, general yardmaster of the Pennsylvania, has been appointed assistant trainmaster with headquarters at Ft. Wayne, Ind.

W. L. Whiter, transportation inspector of the Pennsylvania, with headquarters at Ft. Wayne, has been appointed assistant trainmaster, with the same headquarters.

Charles H. Gaffeney, chief clerk to the superintendent of telegraph of the Central of New Jersey for the past 20 years, has been appointed superintendent of telegraph, with headquarters at Jersey City, N. J., to succeed F. G. Sherman, deceased. Mr. Gaffeney will also act as superintendent of telegraph for the Western Union Telegraph Company at Jersey City.

Traffic

C. E. E. Ussher, passenger traffic manager, rail lines, of the Canadian Pacific with headquarters at Montreal, has been promoted to general passenger traffic manager, a new position, with the same headquarters.

C. B. Foster, assistant passenger traffic manager with headquarters at Montreal, has succeeded Mr. Ussher as passenger traffic manager, rail lines. Mr. Ussher was born on December 29, 1857, at Niagara Falls, Ont., and entered railway service in 1874 as a clerk in the office of the auditor of the Great Western (now the Wabash). From 1876 until 1880 he was a clerk in the general passenger office of the same road and, from the latter date to 1883, chief ticket clerk of the Wabash, St. Louis & Pacific (also now a part of the Wabash). For a few months during 1883 he served as a rate clerk for the Chicago & Atlantic (now Chicago & Erie) and from then until 1886 engaged in private pursuits in Hamilton, Ont. He then became chief ticket clerk for the Canadian Pacific and, in 1889, was promoted to assistant general passenger agent. In 1898 he became general passenger agent, eastern lines. Nine years later he was promoted to assistant passenger traffic manager and, in 1910, to passenger traffic manager, which position he was holding at the time of his recent advancement. Mr. Foster was born on September 30, 1871, at Kingston, N. B., and was educated in the public schools. His entire railway service has been with the Canadian Pacific, his first position, which he took in 1891, being stenographer to the division passenger agent at St. John, N. B. In 1893 he became traveling passenger agent and, in 1899, chief clerk in the passenger department. In 1902 he was promoted to district passenger agent and, in 1908, to assistant general passenger agent, Western lines. In 1910 he was promoted to general passenger agent, Western lines, and several years thereafter to assistant passenger traffic manager, which position he held at the time of his recent promotion.

C. E. E. Ussher

C. B. Foster

Allan Cameron has been appointed Oriental manager for the Canadian Pacific railway and steamship lines with headquarters at Hong Kong, China.

Purchasing and Stores

George Kefer, whose appointment as purchasing agent of the Long Island with headquarters at Jamaica, Queensborough, New York City, was announced in the *Railway Age* of August 26, was born in New York City on November 22, 1870. His early education was obtained in the public schools of Whitestone, Long Island. After graduation in 1885 Mr. Kefer entered the employ of the Long Island Railroad as a messenger in the accounting department, then located at Long Island City. He subsequently served in various clerical capacities in the same department. On November 1, 1889, he was appointed chief clerk to the purchasing agent, which position he held for about 33 years until his recent promotion to purchasing agent as above noted.

G. Kefer

Obituary

W. B. Deveny, shop superintendent of the Atchison, Topeka & Santa Fe, with headquarters at Topeka, Kan., was killed in an automobile accident on August 22.

A. E. Killam, formerly for many years general inspector of bridges and buildings of the Intercolonial Railway and president of the American Railway Bridge and Building Association in 1913, died at Moncton, N. B., on August 20, at the age of 88.

Burwell Boykin McCaa, auditor freight accounts of the Seaboard Air Line died on August 16 at Norfolk, Va. Mr. McCaa was born at Gainesville, Fla., in November, 1863. He entered the service of the Florida Transit Company, now a part of the Seaboard Air Line, in 1881, and has been in the continuous service of the Seaboard Air Line and its predecessors for over 40 years. In 1894 he was appointed traveling auditor at Jacksonville, Fla., remaining in that position until 1905 when he was promoted to auditor freight accounts, with headquarters at Portsmouth, Va. He also served for several years on important committees of the Railway Accounting Officers' Association of America.

F. G. Sherman, superintendent of telegraph of the Central of New Jersey whose death on August 20 was reported in the *Railway Age* of August 26, was born in 1855 near Beloit, Wis. In March, 1873, he began railway work as a night operator on the Chicago, Burlington & Quincy, subsequently serving as operator and station agent until 1882 when he went to the Chicago, Milwaukee & St. Paul as operator and agent. In 1884 he returned to the Burlington as dispatcher at Aurora, Ill., and in September, 1899, entered the service of the Philadelphia & Reading as train dispatcher. Three years later he was appointed assistant trainmaster of the Central of New Jersey and in October, 1910, was promoted to superintendent of telegraph.

Representatives of the Association of General Contractors, at a hearing before the Interstate Commerce Commission at Washington on August 25 urged a modification of the commission's Service Order No. 23 to give shippers of building materials an equal opportunity in the use of open top cars, with users of coal for commercial purposes.

The Five-Cent Differential

In many railroad shops and roundhouses it is customary to pay gang leaders and assistant foremen a differential of five cents an hour over the maximum mechanic's rate. This small differential and the fact that gang leaders and assistant foremen are on an hourly basis, with pay reductions for all time off, proves insufficient incentive to make men in the ranks aspire to these positions. Moreover, such men as do accept supervisory positions on an hourly basis of pay feel that their interests are more closely allied with the shopmen than with the managements, their sympathies being to a great extent with the former. That this condition is a reality and no mere supposition was forcibly illustrated at an important eastern terminal where, on the first day of the shopmen's strike, the entire plant was deserted except for two men, the master mechanic and general foreman. An entirely new organization had to be developed and that without the help of assistant foremen or gang leaders. The railroad in question is certainly paying a big price for its failure to put these men on a monthly rate and unite their interests with that of the railroad. Railroad shop foremen have seldom been trained, encouraged or paid in proportion to the importance of their work. This has a bad effect in normal times by reducing the incentive to become foremen. It is a common occurrence to hear a capable mechanic, who has shown evidence of executive ability, absolutely decline to accept a position as gang leader or assistant foreman on the ground that the additional responsibility and work involved would be in no way paid for by the five-cent differential over his present rate. Lower supervisory officers paid on this basis can hardly be blamed for a lack of enthusiasm and loyalty to roads which value their services so lightly.

Results of Careful Crossing Campaign

The fact that 35 more persons were killed in grade crossing accidents on 66 of Class I roads in June and July, 1922, than in the same period in 1921 is no discouragement to the Careful Crossing campaign, but should be considered more as an indication of what would have happened if no campaign had been inaugurated. Although 1,300,000 posters were issued, an equal number of automobiles was sold in the same period. Considering that there are some 10,700,000 licensed automobiles in service in this country, the campaign has only begun to take effect. Publicity to the extent of some two miles of newspaper columns has been produced in the leading city newspapers and this together with the personal efforts of local railroad employees in speaking before public gatherings is only now starting to show favorable results while the slogan "Cross Crossings Cautiously" is just beginning to find a fixed place in the mind of the automobile driver. The railroads cannot afford to slacken their effort at the end of the four months' drive on September 30, but should make plans to carry on indefinitely this work which has been started so efficiently. The entire cost of the campaign to date is reported to be only $50,000, a small sum compared with the damages which the railroads would have had to pay for only a few of the accidents that have been prevented. The railroads have a vital interest in saving lives and damages and safety agents and claim agents should be encouraged to make plans for the coming year that will insure the Cross Crossings Cautiously campaign the continued enthusiasm of the public for in such lies the success of one of the most serious and comparatively expensive features of railway operation today.

Blame for Violence

The leaders of the striking shopmen decry violence and think it unfair that their organizations should be condemned for the illegal actions of a few individuals. But how is a union to be judged otherwise than by the control it exercises over its members? No employer could afford to enter into a contract with a union which could not keep its members from constantly walking out on outlaw strikes. There is no strength whatever in a union except that which it has from the collective action of its members. If members cannot be kept from doing things not authorized by the union as a whole acting through responsible officers then the term "union" is a misnomer. The transportation brotherhoods would not now stand very high in the eyes of anyone if they had not been able to put a stop to the sporadic walkouts which caused so much trouble a few weeks ago. As it is, by vigorous action of the officers, these unions have escaped with but little public condemnation and with the ability of their leaders to control their members unquestioned. The leaders of the striking shopmen apparently do not realize, however, their interest in bringing to justice the perpetrators of acts of violence. Only by proving their ability to keep their membership from such acts which are, it is to be hoped, considered contrary to the policy and best interests of the unions, can they convince anybody that the organizations they head are real unions rather than leaderless mobs. The blaming of organizations for illegal acts of a few individuals is not so unjust as the strike leaders would have it believed. Let them and their law-abiding members convince the public that they are doing their utmost to detect and bring to justice all the lawbreakers within their ranks and less of blame for their organizations will be heard when illegal acts occur. The mere denouncing of violence is unconvincing; an earnest effort to bring criminals to justice would have a force beyond that of words.

Locomotives as Important as Cars

Since the coal strikes have been settled, there has been considerable comment both among railroad men and in the newspapers regarding the possibility of a serious car shortage. Shippers naturally regard the car supply as an index of the general condition of the railroad, but operating officers recognize that it is only one factor in handling traffic and an ample supply of serviceable locomotives is quite as important. If the shopmen's strike continues for some time, the problem of repairing locomotives is likely to be more troublesome than that of keeping cars in service. It is comparatively easy to recruit and train car repairers, but locomotive work requires more skill and experience. For that reason, it is not unlikely that when cold weather comes the

supply of serviceable locomotives will be the limiting factor in determining how much business the railroads can handle. Within three months there will probably be snow storms in the northern states, and traffic will be near the peak. Roads that are short of power should look ahead now and decide whether they will have ample capacity in their own shops or whether it will be advisable to make contracts for repairs.

Strikes and Public Opinion

The New York Times of Sunday carried this paragraph in its railway strike story: "Commenting on the effectiveness of the strike in the Metropolitan district, John J. Dowd, chairman of the Central strike committee, yesterday called attention to the weekly review of the State Bureau of Farms and Markets, which said: 'The food supplies of New York City in the last week showed the effect of demoralized railroad transportation in considerably reduced receipts and increasingly late arrival of trains.'" There is a saying—or would belief be a better word—that strikes of employees of public utilities are won or lost depending upon the effect of public opinion. There must be either something wrong with this saying or with the shop strikers' publicity. It does seem difficult to understand how the shopmen hope to curry the public's favor by showing that their strike is handicapping the transportation of this same public's essential food supply. They say that kicking and abusing a dog makes the unfortunate canine love its master all the more. Public opinion certainly is not on the side of the strikers in the present difficulties. Maybe the public has not been abused and kicked around enough. And then again, maybe the public is not like a dog, nor the striking shopmen the public's master.

Another Big Week

The *Railway Age* last week pointed out that the orders for locomotives reported in its issues for August totaled 220—making August, normally a month characterized by mid-summer dullness in equipment purchases, the best month so far in 1922 with two exceptions, April and July. Hardly was last week's issue on the press when orders were reported as having been placed by several roads totaling in number—exclusive of orders previously reported—225. All these orders will be found in this week's equipment and supply column, and possibly some additional orders reported between the time this is written and the time of going to press. This will give us a single week, at a time of the year when one should least expect it, better than all but two of the months so far this year. The week will be the best week we have had thus far this year and not the least factor of interest is that the total of 225, even without later additions, will approach the total for all 52 weeks of last year—namely 239. August and early September are not usually good months in locomotive purchases. However, there is no question, as there has been no question for quite an extended period of time, that the locomotives are urgently needed. Presumably prices are favorable. Fortunately, also, the net earnings of the carriers are at last such that equipment purchases can be more readily financed. The orders in the total of 225 include 100 Decapod and 15 Pacific for the Pennsylvania; 40 Mikado and 10 Pacific for the Chicago & North Western; 21 Mikado (in addition to 25 previously reported) and 4 Mountain for the Missouri Pacific; 12 Mikado for the Louisville & Nashville; 4 Mikado and 3 Pacific for the Monon and 9 locomotives on smaller orders.

Remember the Lessons of 1920

In the summer and fall of 1920 the railways were called upon to handle the heaviest traffic in their history. Under the stress of necessity they rendered more service than ever before. By reason of the demands made upon them, they set out to reach the goals of 30 miles per car per day and 30 tons per car set by the American Railway Association, and actually reached the average of 28.5 miles per car per day and 31.2 tons per car. By these measures they increased the capacity of the railroads of the country equivalent to nearly a million cars without the expenditure of any money for facilities, but by merely using more intensively those which they already possessed. With the removal of this pressure with the decline of business, car loading and car movement decreased accordingly. After months of light traffic the railways are again confronted with a freight movement which bids fair to equal or surpass that of 1920. With the country extremely short of coal only 60 days in advance of winter and with a grain crop of record proportions, in addition to a large movement of miscellaneous traffic, it is evident that the roads are facing a task of the first magnitude if they are to escape congestion and embargoes. There is now no time for delay. Present conditions demand that the lessons of 1920 be recalled and that measures which aided then be put into effect now before the facilities are congested.

The Marine Borer Again

At one time it was commonly understood that wood-destroying borers were to be encountered only in marine waters coming under the general classification of tropical or semi-tropical. The prevailing opinion had it that they were a serious menace to timber structures only along the South Atlantic seaboard, the Gulf Coast, and certain portions of the Pacific Coast. However, investigations made during the last five years have disclosed an increased activity of these forms of marine life, both in the way of intensified destruction in their usual haunts and in the extension of their manifestations to waters which had previously been assumed to be free from their inroads. Of most alarming proportions was the destructive action experienced in San Francisco bay during 1919 and 1920, which served largely to upset the prevailing understanding with respect to the activities of the borers, as well as the degree of immunity to be afforded by well-known protective measures. In a sense the problem of the marine borer had assumed the same perplexing character that has been encountered in the study of the action of sea water on concrete. Both vitally concern the railroads as large owners of waterfront property. The experience at San Francisco led to the formation of a committee of investigation which has been expanded through the agency of the National Research Council to an organization of national scope. Recently attention has been directed to New York harbor and the adjacent waters, with the result that both teredo and limnoria have been discovered in a number of locations. While there is nothing in the present outlook there to indicate any prospect of repeating the alarming results experienced in San Francisco bay, and although the scientific investigations have not yet been carried to a point where definite conclusions may be formulated, the investigations now under way will be worth many times what they cost by reason of the facts to be ascertained and also because they will be instrumental in disclosing possible defective conditions before they have progressed far enough to assume dangerous proportions. Moreover, those who are responsible for the prosecution of this nation-wide study are confident that increased knowledge of the subject will lead to the perfection of preventive measures.

The Injunction in the Shop Employees' Strike

THE INJUNCTION obtained by Attorney General Daugherty from the federal court at Chicago in relation to the shop employees' strike is one of the most sweeping and important ever issued. There can be no question about its effect on the strike. Some evidence regarding that is already available. It was issued a few days before Labor Day. If it had not been issued, Labor Day probably would have been marked by more violence than any preceding day of the strike. Reports show, however, that Labor Day was a quiet day in the strike. The assertion of the power of the federal government still commands respect even in communities where sympathy with the strikers is so prevalent that local authorities have refused to give protection to railway employees and property. The additional protection afforded to men who are willing to work will cause a rapid increase in the number of men employed in the shops and hasten the end of the strike.

The injunction forbids roughly two classes of acts. First, it forbids issuance by the labor leaders of any instructions or public statements to members of their unions to induce them to do or say anything to cause any railway employee to leave his work or to cause any person to abstrain from entering the employment of a railway. Officers and members of the unions are restrained from picketing or in any manner, by letters, circulars, telephone messages, word of mouth or interviews, encouraging any person to leave the employ of a railroad, or to refrain from entering such employ. Interference with employees, going to or returning from work by opprobrious epithets, jeers, taunts or entreaties is forbidden.

Second, the injunction prohibits conspiracies or agreements to hinder transportation, interference with or obstruction of railway operation in any way, trespassing on railway property and every form of intimidation or violence.

Many persons will question the wisdom of or justification for the sweeping prohibitions of the class of acts first mentioned. Whether from a purely legal point of view they infringe upon the rights of free speech and the freedom of the press is one question. The courts are the bodies to determine that. Whether as a matter of public policy it is desirable to forbid such acts is another question. The plain purpose of the labor provisions of the Transportation Act is to prevent labor controversies from resulting in interruptions of transportation by reason of lockouts or strikes. The Attorney General's statement asking for an injunction and the phraseology of the injunction order do not deny, and therefore tacitly concede, the legal right of the shop employees to strike. But if they have a legal right to strike, have they not also the legal right to do everything of a peaceful character which may help them to make the strike successful?

Regardless of the legal questions involved, if the right to strike be conceded, can it then be right or wise to prohibit the labor leaders from issuing statements or instructions to their members, or their members from acting in accordance with these statements and instructions as long as the leaders and the men do not resort to or incite intimidation and violence? It is obvious that to prohibit free communication between the leaders and the members of their unions and to prohibit the strikers from trying peacefully to persuade men not to work, is an invitation to labor leaders and those in sympathy with them to denounce the government and courts for denying the right of free speech and to include in their denunciations the owners and managers of the railways as having induced the government and courts to take this action.

Of course no similar questions can be raised from either the standpoint of law or public policy regarding the action of the government and the courts in taking drastic action to stop intimidation and violence in connection with the strike. It is perfectly useless for the labor leaders to deny, as some of them do, that the strikers have, throughout the country, resorted to intimidation and violence in every form. The evidence regarding what they have done is so voluminous and conclusive that to deny what it plainly shows discredits those who make the denials, and makes most people feel that their denials really amount to a defense and encouragement of the very class of acts which they deny are being committed. It is the duty of every government to suppress intimidation and violence in every form and for whatever purpose. When the purpose of intimidation and violence is that of interrupting interstate transportation and inflicting incalculable loss and suffering not merely on the railways but on every class of the public, the duty of the federal government, whose authority and power are the only authority and power extending throughout the entire country, to step in and suppress the intimidation and violence becomes plain beyond all question. The strikers by their own conduct, whether incited and approved by their leaders or not, have compelled the government to choose whether it would take the step it has taken or abdicate its most important functions.

It is a notable fact that in the statements the labor leaders have issued denouncing the injunction, they have sought to justify their denunciations solely by criticisms of it based upon its alleged attack upon the rights of free speech and the freedom of the press. If the injunction had been directed only against intimidation and violence and incitements to them, it would have been much more difficult for the labor leaders to have influenced any considerable number of people by their complaints against it. Neither they nor any other persons except avowed revolutionaries attempt to justify the use of threats, assaults, arson, and murder in labor disputes.

What the government really is aiming at, of course, is to stop intimidation and violence for the purpose of interrupting transportation and everything said or done having this object. The sweeping prohibitions of the injunction can be justified only upon the ground that if it were made less sweeping it would not accomplish the vital object it is meant to attain.

The Coal Shortage and the Railroad Strike

WITH THE COUNTRY threatened by, and, indeed, already experiencing, a serious coal shortage, it is most important that the responsibility for the situation should be apportioned fairly by the public among those to whom it belongs. No facts available will help the public more to apportion this responsibility than the following: In the week ended August 19, the last week before the termination of the coal strike had enabled work in the bituminous mines to be generally resumed, the amount of bituminous coal produced and transported was 4,609,000 tons. In the week ended September 2, the second week after the coal strike was ended, the total amount of coal produced by the mines and transported by the railways was about 9,500,000 tons, an increase of over 100 per cent. The *Railway Age* said in an editorial in its issue of August 5: "If the coal strike should end today the railroads could immediately increase by 100 to 150 per cent the amount of coal they are transporting, regardless of the shop employees' strike." The results have completely vindicated this estimate already.

Since the railways in such short time have, in spite of the shopmen's strike, proved able to make possible a production of such a largely increased tonnage of coal, is there still danger of a serious coal shortage, and, if so, why?

There is still danger and the reason for it is to be found

in the developments which have occurred in connection with the coal strike and the railway shop employees' strike. The coal strike began on April 1, almost 23 weeks ago. Before it began the mines were producing and the railways were moving an average of 10,700,000 tons of coal a week. The coal strike immediately cut this production down to less than 3,600,000 tons a week and up to the time the railroad strike began on July 1, the coal strike had prevented it from being increased to more than 5,250,000 tons a week. After the railroad strike began production declined to 4,200,000 tons a week, and, as already shown, up to the time the coal strike was ended, production was running at the rate of only about 4,600,000 tons a week. In the 20 weeks that the coal strike was in full effect the total production of coal was only approximately 90,000,000 tons, whereas, if the coal strike had not occurred it could easily have amounted to 180,000,000 to 200,000,000 tons. Therefore, the country today lacks approximately 90,000,000 tons of coal which it could have had if the coal strike had not occurred.

It is the deficiency of production, due to the coal strike, which is almost entirely, if not entirely, responsible for the present and prospective shortage of coal. For this deficiency of production the coal operators, the miners and the Government can divide between themselves the blame. None of the blame for it can fairly be laid upon the railroads.

What of the future? Can the railways, in spite of the shop employees' strike, transport enough coal fully to make up for the shortage that has accrued? All past experience, as well as existing conditions, indicate that they cannot. It is estimated the the coal mines of the country, if worked to their capacity, could produce about 19,000,000 tons of bituminous coal a week. The railways, if we may judge by past experience, cannot, when working to their capacity, transport an average of 12,000,000 tons a week. The railways have an extraordinary amount of equipment in bad order, and there will be for some time to come conditions which probably will make it impossible for them to move coal to their normal maximum capacity. While favorable weather conditions prevail, they may be able to move an average of 11,000,000 tons a week. It is not reasonably to be expected that they will be able to do much better than this on the average. It is impossible to have such a strike as the shop employees without having it interfere to some extent with transportation efficiency. This is merely another way of saying that in the railroad business, as in every other line of human endeavor, it is impossible to make an omelet without breaking eggs. If the railroads succeed in moving an average of 11,000,000 tons of coal a week, they will deserve not criticism, but the country's congratulations and thanks.

If they are unable to do better than this, how will the country fare? The total production of coal for the year 1922 up to September 2, was 223,521,000 tons. After that week there remained 18 weeks of the present year. If the railways should move during these weeks an average of 11,000,000 tons a week, this would make the country's total bituminous production for the year about 422,000,000 tons. This would be 20,000,000 tons larger than in 1921, but it would be 115,000,000 tons less than the average annual production in the four years ended with 1920. The result probably would be that throughout the fall and winter the country would be without substantial surplus supplies and that local and sporadic shortages constantly would develop; but if the available coal were well distributed, and domestic consumers and essential industries were given priority, the country could get through until spring without any real suffering and without serious interference with general business.

Based on past experience and present conditions, the *Railway Age* believes that this will be the outcome. The prospects certainly do not encourage optimism, but at the same time they do not justify deep pessimism because there is reason to believe that there will be closer co-operation and less friction between the railways, the coal operators and the coal dealers, due to the influence exerted by the government coal distributor and the Interstate Commerce Commission, than there have often been in the past. In the absence of such co-operation there probably would be serious trouble and all the influence of the government and public opinion should be exerted to bring about this essential co-operation.

Six Collisions

The Interstate Commerce Commission issued on August 28 its report on the cause of the collision of passenger trains at East Fort Madison, Ill., on May 29, when 48 passengers were injured; from which it appears that the engineman of the westbound train (who was killed) ran past three fixed signals, taking no effective measures to apply the brakes; though it seems, from the testimony of the fireman, that he was awake, saw the signals, had his hand on the brake-valve, and acknowledged the communications of the fireman. As is well said by Chief W. P. Borland, in the report, this is a case which shows that the use of automatic train stop apparatus is necessary to guard against the occurrence of similar collisions in the future.

And by a somewhat unusual succession of collisions, this same point has been demonstrated twice since then; two collisions, in each of which the engineman knew where he was going (had not "lost his bearings"), was wide awake, and had the benefit of practically all the aid that could be expected from the monitorship of the fireman. These three collisions, with three others of somewhat similar character, are tabulated as follows:

1. East Ft. Madison, Ill.; A. T. & S. F., May 29. Passengers injured, 48; engineman at fault was killed. Abstract in *Railway Age*, September 2, page 427.

2. Leeds, Mo.; Missouri Pacific, July 12. Passengers killed, 3; injured, 91. Engineman injured and no statement made by him. Mistake by all hands in reading train order; the reading evidently was perfunctory. Fireman was busy firing. Abstract in *Railway Age*, August 19.

3. Alsuma, Okl.; Missouri, Kansas & Texas, July 19. Passengers injured, 19. Wrong reading of train order by all members of freight train crew, and they met a passenger train, which they assumed had been annulled.

4. Logan, Mo.; St. Louis-San Francisco, July 22. Passengers killed, 5; injured, 107. Engineman of passenger train No. 9, who was killed, ran past distant and home block signals. Fireman not blamed by inspector. Reported in *Railway Age*, July 29, page 217.

5. Lester, Ohio; Pennsylvania System, August 1. Passengers killed, 4. Engineman said he misread his watch, and he passed from double to single track and met opposing train. Every member of crew knew that he was encroaching on the superior train's right, but none took action in season. Reported in *Railway Age*, August 12, page 310.

6. Ellwood City, Pa.; Baltimore & Ohio, August 6. Passengers injured, 31. Engineman of passenger train No. 9 ran with speed not under control even after having slackened at a cautionary automatic block signal (a grade or "tonnage" signal) indicating that he was in the same block with the freight train preceding. Fireman not blamed by inspector.

Numbers 4 and 6 are almost exactly like Ft. Madison, while numbers 2, 3 and 5 are like that case in that the fireman's monitorship proved of no benefit. The recognized safeguards are (1) visual block signals, (2) visual and audible block signals, and (3) block signals supplemented by automatic brake-setting apparatus. These three collisions (2, 3 and 5) occurred on lines having none of these safeguards. An audible signal either in the cab, like those on the Northern of France or the Great Western of England; or on the roadway, like those on the Boston & Albany, would arouse a sleepy or absent-minded engineman, or a fireman absorbed in his firing; but here were enginemen who failed, disastrously, when wide awake and, it seems, were fully cognizant of their surroundings. Advocates of automatic stops will have no lack of "frightful examples" in current collision records to enforce their arguments.

The advocate of automatic stops, however, will also have to look at this record in another aspect. It is quite generally agreed that such a refinement as the automatic stop should

be introduced first on the busiest lines. The device is designed as a safeguard against disasters due to inattention on the part of enginemen (and against nothing else) and it is on the busiest lines that there will be the largest number of enginemen; the most frequent chances of error. But these collisions occurred on lines that hardly come within that class; and four of them were on lines not yet equipped with automatic block signals. The sixth was on the Baltimore & Ohio main line to Chicago, but not on the section named in the Interstate Commerce Commission's order requiring stops to be installed. Number 1 was on a main line of the Santa Fe; but on a section which has no automatic signals. Number 4 was on a line covered by the I. C. C. order, but it is single track. The other three lines probably would be put by the Commission near the bottom of its list, one of them (No. 3) being a line of a company not named in the I. C. C. order. In short, the problem of "selecting" the locations where signals shall be reinforced by automatic stops—to adopt the phrase used in the British report—is a perplexing one. The reader who goes through the full reports of the Bureau of Safety on these collisions will find a variety of circumstances that may well puzzle the wisest governmental authority.

The one point that is clear is that the fitting of all danger points with automatic apparatus will be a work of years; and that, therefore, the duty of correcting our faults by well-known existing methods presses, today, the same as ever. Surprise checking still calls for the attention of every superintendent. Surprise checking is not a cure-all; but it has the merit of *helping to promote all other disciplinary measures.* The trainmaster who keeps this feature at high efficiency is not likely to forget or put in the background any important feature of train-safety. In this connection everyone should recall—and answer (to himself)—the complaint of a well-known officer of an Eastern trunk line; that he needed ten times more surprise checking than his appropriation allowed for. Was he right?

What Causes Inefficiency On the Railroads?

RAILROAD EXECUTIVES must take more aggressive and scientific steps to improve the relations between the men and the managements. The effect of the very best facilities and equipment can be completely nullified unless the men who operate them understand clearly just what is expected of them and are interested in their work and encouraged to put forth their best efforts. No greater gain can be made in efficiency and increased production than by securing a greater degree of interest and co-operation from the workmen.

"If we wish men to get on with their work wholeheartedly instead of devoting 60 per cent of their time doing their work and 40 per cent 'doing the boss,' then real grievances must be removed." These are not the words of a visionary or a theorist. They come from the head of a large manufacturing industry in Great Britain—a man noted for his sound common sense and for the splendid progress that he has made in securing the hearty co-operation of his employees. They are quoted from the book "The Human Factor in Business," by B. Seebohm Rowntree, who was also director of the welfare department at the Ministry of Munitions during the war.

There is unquestionably something seriously wrong in the industrial and transportation world today. No one will deny this.

We have suggested that conditions on the railways might be improved substantially through the development of something corresponding to the personnel departments that have given such an excellent account of themselves in certain of the larger and more progressive industrial organizations. Before considering the scope and duties of such a department it might be well to analyze conditions and determine the fundamental causes which lie at the bottom of most of the troubles in the industrial world today.

W. L. Mackenzie King, now Premier of the Dominion of Canada and formerly Minister of Labor of that country, has for many years been a close student of the industrial problem and has written a book entitled, "Industry and Humanity," a study in the principles underlying industrial reconstruction. In the introduction to this book he says: "The existing attitude of capital and labor toward each other is too largely one of mistrust born of fear. * * * * * If industry is to serve humanity, this attitude must be changed to one of trust, inspired by faith." In a later chapter (which discusses "the fears which circumscribe the freedom of effort" of labor, capital, management and the community), after outlining the fears which confront labor and capital, this significant statement appears: "It is worthy of note that as capital's fears of labor diminish, there appears to be a corresponding diminution in the fears by labor of capital, and *vice versa.* Remove all likelihood of strikes or attempts at restriction of output, and immediately the stimulus to investment of capital is increased, with corresponding increase in labor's opportunity of employment and reward. Similarly, remove the fear of unjust exactions by managements and capital, and of a reduction in remuneration where effort is increased, and immediately fresh stores of energy are released by labor, with certainty of gain to investment."

Mr. Rowntree in his book, "The Human Factor in Business," sums the situation up in this way: "It is coming to be generally realized that something must be done to render the economic position of the manual workers more secure. Although an appreciable number of them are in situations which hold out every prospect of permanency, the majority have constantly hovering over them a cloud of uncertainty with regard to the future. At any time they may be discharged at a week's or possibly an hour's notice, and since any reserve they have laid up is likely to be very slender, in times of trade depression they may be plunged with their families into serious want and privation. Even those who escape this tragedy, if they live to old age, will almost inevitably find themselves in very straitened conditions."

The fluctuations in business are not easily controlled. Much has been done in this country through the federal reserve banks and the prevention of crop failures to prevent extreme fluctuations, and much thought is being given by economists, financiers, engineers and others to developing measures which will overcome, at least to some extent, the cyclic business depressions. The individual industries, however, can do much to stabilize employment, at least in their own organizations, regardless of the larger measures which may be adopted by the country or communities as a whole.

Railroad employees feel the result not only of these fluctuations in business, but also, in some departments, of the seasonal changes. Much can be done to relieve these on the railroads if the problem is gone after in the right way. The difficulty is that it has not been given the real attention that its importance deserves. There are many things that can be done by a railroad or an industrial organization to insure greater permanency of employment. These matters, however, cannot be handled in a haphazard way, but require the most painstaking and thorough study and attention on the part of men who are specially fitted to handle them; these men, moreover, must have the hearty support and backing of the chief executive and the board of directors.

It is claimed by some that a railroad or a corporation is not justified in going so far as this to protect its employees. They will point out, for instance, specific instances of men

who have been well treated, who have not shown an appreciation of this treatment when emergencies came and it was assumed that they would put forth extra efforts or stand loyally by their employers. Such cases, however, are possibly the exceptions that prove the rule. At any rate, there are not a few instances of large companies whose principal strength today lies in the fact that they have unusually loyal bodies of employees who are putting forth their best efforts and who have been encouraged to do so through the liberal policies of the companies in dealing with them.

Fear, as Mackenzie King has said, lies at the very root of the unrest in the transportation and industrial world today. It must be banished; it has been to a large degree in some organizations. Why not in all? Ought not the railroads, because they are large employers, because their difficulties in dealing with men so widely scattered are so pronounced, and because their further development and progress are so vital to the country, deal more definitely and aggressively with the problem of getting the best and most loyal service from their employees? If they do not, what may it not cost them in the future in friction, strife and inefficiency?

New Books

The Invention of the Track Circuit. 113 *pages, 6½ in. x 9½ in. Paper covers; illustrated. Published by the Signal Section of the American Railway Association, H. S. Balliet, Secretary, 30 Vesey Street, New York. Price* $1.50.

This is a historical sketch designed as a memorial of Dr. William Robinson, the inventor of the track circuit, and it was published on August 20, the fiftieth anniversary of Robinson's original patent. It is the work of a committee —H. S. Balliet, K. E. Kellenberger and H. M. Sperry— appointed by the Signal Section at its meeting in June, 1921, in connection with resolutions adopted in memory of Dr. Robinson whose death occurred at Brooklyn, N. Y., on January 2, 1921.

The track circuit—the transmission of the electric current through the rails of a mile of track, as a means of giving a train of cars complete and ideal automatic control of a stop-signal at the rear to protect it against following trains—is a wonder, today, as it was fifty years ago, and the authors of this sketch have not needed to add any romance to the subject. It is a romance ready-made; while at the same time the story is an every-day fact. As showing the universal importance of this element in the signaling field—and therefore in the general scheme of the safety and celerity of train movement—the governmental statistics are quoted, showing, as of January 1, 1921, over 60,000 miles of track in the United States equipped with automatic block signals; which means 60,000 (more or less) delicate electro-magnetic instruments—track relays—in service day and night guarding the safety of passengers and trainmen and millions of dollars in property. In the New York subways alone, the operations of these instruments in a single day mount to numbers almost incomprehensible. The total of the individual passengers thus protected is *quite entirely* incomprehensible.

The book is divided into four parts. The first is a story of Dr. Robinson's activities made up largely from his own writings; the second is a notice of William A. Baldwin, who was general superintendent of the Philadelphia & Erie, now a part of the Pennsylvania System, and who was the first to recognize the importance of Robinson's invention and to give him a chance to try it in service. Robinson made an exhibition at the American Institute Fair in New York City in 1870 and, after the fair, sent his left-over circulars to railroad men in different parts of the country; and Baldwin's response to this circular led to the first installation at Kinzua, Pa. Theodore N. Ely, afterward chief of motive power of the Pennsylvania Railroad, was at that time assistant to Mr. Baldwin and had a share in making the arrangements for operation.

Part 3 is a description of the track circuit and its uses with all modern additions and modifications, written by J. P. Coleman of the Union Switch & Signal Co.

Part 4 is a short sketch by T. S. Lascelles, of London, telling of the introduction of the track circuit in Europe. Mr. Lascelles says that W. R. Sykes, the well-known inventor of the controlled manual block signal apparatus, experimented with the track circuit perhaps as early as did Robinson of this country. However, for well-known reasons, the track circuit made no progress in Europe and not until Americans introduced automatic signals there, many years later, was anything serious along practical lines accomplished.

The first part of this book contains an interesting compilation of facts not very generally known. The first installation was open circuit; but Robinson was the most severe critic of his own work and he soon arranged a closed circuit, and made other improvements. He seems to have been an early experimenter in the use of fibre for insulation, and about 1876 he devised a successful channel pin for fastening bond wires to rails. The second installation was at Irvine, Pa., and in both cases there was not only a visual signal but also a loud gong, which no engineman could pass without hearing it.

In December, 1875, Mr. Robinson moved from Pennsylvania to Boston and he made a small installation on the Boston & Lowell; and he started the company that subsequently became the Union Switch & Signal Company. In the three following years he made installations on the Boston & Providence and the Old Colony.

Robinson was born in Ireland, in 1840, and was graduated from Wesleyan University, Middletown, Conn., in 1865. He made other important inventions.

Railway Electric Traction, by F. W. Carter. 6 in. by 9 in., 412 pages, 204 illustrations including 13 insert plates. Bound in cloth. Published by Longmans, Green & Co., Fourth Ave. and 30th St., New York.

The book was written in England but the text is in no way confined to English methods as all of the principal installations of heavy electric traction throughout the world are discussed. There are ten chapters and an appendix. The first chapter is introductory and deals with the reasons for adopting electric traction and the relative merits of direct and alternating current systems. The author declares himself in favor of the direct current system. The Locomotive is the title of chapter II which is the longest one in the book. The design of the locomotive with relation to the effect on track is discussed extensively. Chapter III bears the title "Railway Motors" and is quite exhaustive. Motor control is presented in considerable detail in chapter IV. Chapter V deals with the distribution system including several types of third rail and overhead construction. Methods for determining sag, tension, etc., are included. Chapter VI deals briefly with power equipment. Systems of electrification are outlined in chapter VII. Chapters VIII and IX include a discussion of such subjects as train resistance, methods for calculating speed, time, and distance, energy requirements, etc. Power Supply is the subject of chapter X which deals broadly with sub-stations and power plants. The appendix consists of a table of locomotive statistics which includes most of the principal electric traction systems in the United States and Europe and gives data concerning the general characteristics of the various locomotives used.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

Revision of Operating Expense Classification

New York.

To the Editor:

The proposed revision of the operating expense classification, offered for the consideration of the Railway Accounting Officers' Association at the latter's annual meeting in June, is drastic. It would reduce the number of primary accounts from 197 to 69. The recommendations bear the mark of careful study. The extent of the revision it is explained is the reduction of accounting expense and the presentation of the figures in a simple, logical form so that essential facts may not be obscured by meaningless detail.

Any figures that should be compiled at all will bear the expense involved many times over. If the question of expense can be seriously raised the figures are not statistics but mere idle compilations and worthless at any cost. It would clear the air if the question of cost were never permitted to enter (except, of course, that the compilation should be by the cheapest method possible), but in its place were sharply raised the question only, are the figures useful; do they play real part in determining action. This is the only criterion.

It is not plain from the report at hand whether the committee recommends the entire abolition of the figures eliminated or only their elimination from the statistics required by the I. C. C. If there is no reduction in the compilations the saving by cutting figures out of the I. C. C. statistics is not great. If it is urged that the irregular detail clutters up and obscures the general presentation to which the I. C. C. figures should be confined, the remedy is by classifying the figures objected to in a subordinate order of detail where it applies. It is of course obvious that certain figures which may be significant on a particular road have no place in the statistics of roads as a whole. An illustration of this is "Coal and ore docks" or the sub-division of enginemen into steam locomotive enginemen and motormen. But the eliminations are not confined to figures of this character.

It is important to keep clearly in mind the purpose which any railroad statistics for the public are to serve. In the first place the statistical schedule prescribed is a device for identifying and verifying beyond cavil the final figure of net railway operating income. That is, the statistics are an auditing facility. Not unless there is reasonable assurance that reserves adequate and not too great have been set up for depreciation and contingencies is the net income figure even approximately reliable. To cover depreciation on all the several kinds of property into a single account is to merge essential distinctions into a general blur that baffles verification. If the depreciation charge is to be made at all it must be specific to the several kinds of property and must continue to be compiled in this form before reduction to a composite figure. We are aware there is a "no depreciation charge" school but we believe its position is untenable. Be that as it may the "no depreciation charge" theory does not prevail in this instance but it is only urged that the individual depreciation charge for each class of property need not be reported. In the plan for simplification proposed, of the 128 accounts abolished, 50 (40 per cent of the whole reduction) are had by destroying the identity of the depreciation charge and therefore come under the general objection here urged.

In the next place, railroads have been seriously criticized for their lack of cost accounts. Only as recently as within the last year has there been sharply raised the issue whether maintenance of equipment by outside shops was a measure of economy or of strategy, and in far too many cases the railroads had not at hand their own cost accounts to meet malign insinuations. But apart from such extraordinary situations railroads should have their costs currently to know at all times whether they are doing their work in the cheapest possible way. The writer is fully aware of the difficulties and the limbo of easy fallacies where so large and so variable a proportion of the unit cost is "overhead." But the administrative possibilities now coming to be so well understood by industrial managers is unknown to most railroad managers. To consolidate all the 10 accounts of building maintenance into a single head is to set up a figure that has no significance and at the same time precludes any cost accounting where buildings are involved. But on the other hand the consolidation of "Underground power tubes," "Tunnels and subways," "Right of way fences," "Snow and sand fences," "Crossings and signs," "Wharves and docks," "Coal and ore wharves" we believe to be legitimate where figures for several roads are taken together, because these are irregular parts of the transportation plant depending on local conditions and cannot be set against aggregate line mileage or aggregate performance.

So also the creation of the consolidated account "Other roadway and track maintenance" seems altogether excellent. The consolidation of the items of "Electric power system" is doubtful because while the mileage thus equipped is at present inconsequential it will soon be greatly enlarged and the detail is necessary to analyze the expense of such maintenance. The comment that separation of the labor cost of applying ties, rails, ballast and other track materials is a practical impossibility we do not believe well taken in view of the long experience on some roads in doing this very thing accurately on the basis of actual time spent.

The tender regard of "insurance" as an item in the classification we believe unjustified. It is properly a manager's memorandum by which he watches the rate of the insurance charge and the variation in the amount of insurance carried, but the cause of the insurance expense is neither the rate of charge nor essentially the proportion of insurance carried, but the aggregate of things exposed to risk and the extent of that risk. And on the function performed should be laid the burden of any risk incidental to their use. "Insurance" is a mere average of risk costs.

The old offenders "Stationery and Printing" and "Other expenses" are at last given the *coup de grace* which they have so long richly deserved. But the general casualty account does not commend itself. We believe each department, representing as it does assignment of function, should assume the burden of all its casualties. There is much to be gained by an expert oversight of all casualties and such supervision could very well be erected into a department as that of the Mechanical Engineer or the Superintendent of Tests; but the department where the casualty occurred should not be permitted in the general accounts to pass over its costs of this character merely for the purpose of creating a statistical entity called casualties. These are not casualties of the road at large but they are specifically referable to the several functions that affect the operation of the property.

In the "Transportation" accounts there has been a reduction from 50 to 15. Of the 35 accounts thus eliminated from "transportation," 5 have been transferred to the new general head "Casualties," 2 to "Miscellaneous operations," 4 have been eliminated altogether and 30 have been consolidated

to 6. Taking up these consolidations by turn, the merger of 4 accounts to "Station service" appears to be eminently correct and also the elimination of the distinction between electric motor and steam engine drivers, both on the road and in the yard. The consolidation of "Despatchers" with "Superintendence" is questionable. The remaining consolidations respectively on the line and in the yard abolish the time honored "locomotive performance sheet" items by merging their amounts respectively with train service and yard service expense. With due allowance for the exaggerated importance sometimes attached to these figures by themselves we believe they should not be allowed so easily to pass into the discard. In cases of the road expense the grouping of engine and train service expense has definite advantages but the inclusion in the same item of crossing protection and drawbridge operation is undesirable. In case of the yard expense the merger of yardmasters, clerks and switch tenders with engine expense is open to objection on similar grounds.

The transfer of "Operating sleeping cars" to "Miscellaneous operations" is correct but the elimination of "Express service" we believe is a mistake. The changes in "Traffic" and "General Expense" are admirable.

Behind these running comments lies the idea that the science of disbursement accounts and statistics is in its infancy. Its possibilities in "disciplining a property" as William Mahl used to say—holding it in economic balance and co-ordination at all times—are little realized. With the passing of competition in rates, with the progressive merger of the less to the greater unit in all the processes of the transportation operation there is grave economic menace, through loss of identity of the forces and values committed to a result desired, in sodden perfunctoriness.

A grave illustration at the instant is the "national agreement" whereby labor has endeavored to protect itself by limiting its adaptability on the theory that in no other way can it be secured against economic aggressions of mass capital. We believe a more exhaustive analysis of situations and processes is vital to all interests and the way to such philosophic insight to the problems is by cost accounting and statistics. A grave responsibility is now laid upon the Interstate Commerce Commission that railroads be not permitted to degenerate to the "cost plus" basis of operations for which the public foot the bills in helpless impotency.

J. Shirley Eaton.

Get Better Service From Freight Cars

Brookfield, Mo.

To the Editor:

To all appearances the shopmen's strike has about spent itself and with the advent of newly mined coal we will again be on the road to a rush business and incidentally to the worst car shortage we ever had, especially so far as coal cars, box and stock cars are concerned.

During and after government control I had many opportunities to study car shortages in various forms and in various places. I invariably found that inefficient distribution of the freight cars was a material factor in the shortage. Regardless of hard work and efforts on the part of officers pointing out different ways and methods of remedying conditions by circulars and words, the men behind the gun distributing the cars fell down and the railroads and the public suffered.

Henry Ford's success lies in the perfect system of distribution of his products, by experts. He does not apply two cars on one order unless he can sell both. We are applying two and sometimes three and more cars on orders for one. It is wastage.

We know the empties must go to the loads, but we also know that empties do not have to move in both directions, nor do more empties have to move towards the loads than can be used.

It is the wasted surplus of cars moving aimlessly around; cars furnished at a station where a car is unloading; conflicting tide orders; cars moving around unknowingly picked up by locals, and odds and ends of that nature, that I speak about, which if efficiently distributed will increase the loading, I should think, 25 per cent without a new car being built. Don't be skeptical and say it can't be done; I have done it and can demonstrate it to any doubter.

We pick out the cream of employees for positions as traveling passenger and freight agents, trainmasters and traveling auditors, but the man who distributes the freight cars slides into his job to fill a vacancy by the seniority route as any ordinary clerk. It is wrong—the very life blood of the railroad is at stake in furnishing cars and in furnishing them promptly. While looking into such matters at New York, Detroit, Buffalo, Denver, Minneapolis, Kansas City, St. Louis, Chicago and Ft. Worth, I got a fair idea of our troubles in distributing cars; there were as many methods as there were division points. Superintendents and other officers were too busy to give such matters much attention and when a car shortage occurred it was taken for granted it was so. It was not so. It was a case of inefficient distribution by incompetent men—men who had no training in the intricate workings of industrial switching and loading in our great switching terminals, or workings of local and through freights, and no knowledge of the shippers on the line and various characteristics of stations and agents, and who did not know the difference between a car with a hot box and one with a drawbar out, etc.

The railroad manager, who will rid himself of mediocre car distributors and put men on the job full of pep and energy and experience, and have them do nothing but see that no cars move aimlessly around, will have the satisfaction of being able to give 100 per cent service to the public with the cars available.

We are distributing cars today as we did 50 years ago, but our locomotives and other railroad tools have changed, so why not change the distribution of cars from a basis of incompetency to a basis of efficiency?

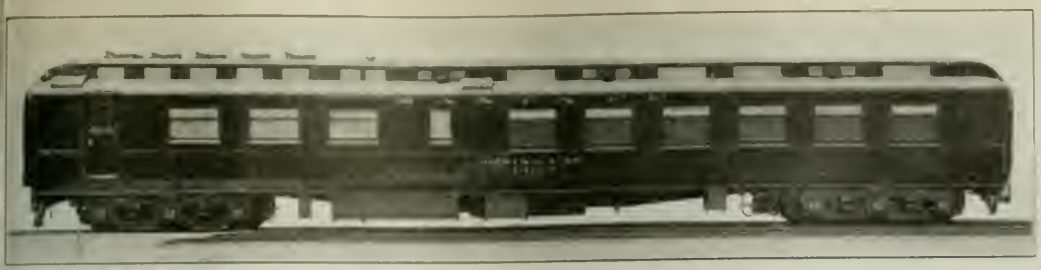
If you travel on freight trains you will learn from conductors and trainmen the facts outlined above.

The general office car distributor doesn't know the division car distributor, or his methods, in nine out of ten cases. Not one per cent of them have ever traveled over the road or seen the agents or shippers or the local conductor with whom they do business every day and who could give them hundreds of pointers. In some places the chief dispatcher attempts to use 30 minutes of his time for the distribution of cars; the result is failure.

If a railroad loads 1,500 cars a day and is short 500, it is losing at least 300 cars per day by improper distribution. It is of no use to send inexperienced inspectors out to inspect and check up what everybody knows. The science of proper distribution of cars is something that should be taken into consideration and which will greatly minimize our car shortages at no extra expense.

H. R. Dreyer.

Forty-five Thousand Dollars is the sum said to have been paid by the Philadelphia & Reading Railway in settlement of the claim of Miss Anna Fitzpatrick, who was hurt in the collision at Woodmont, Pa., last December. Sitting, with her sister, in the car next to the locomotive, her feet were crushed, and she sustained other injuries, while her sister was burned to death. The injuries to the feet kept Miss Fitzpatrick in the hospital 256 days and it is expected that she will have to have the attendance of physicians and nurses for a year longer.

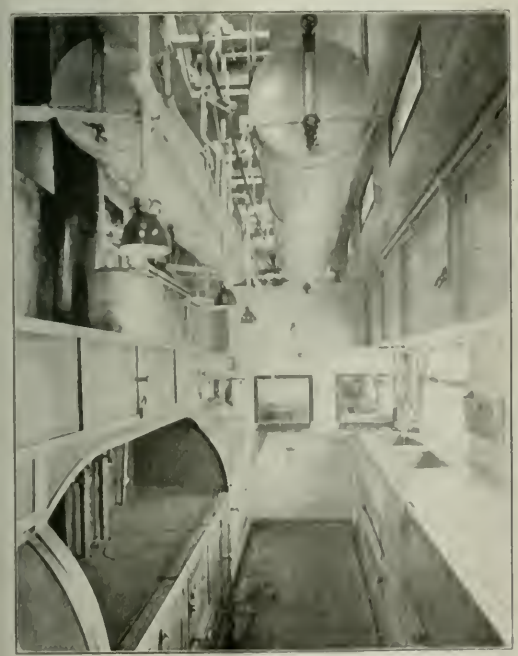


Santa Fe Dining Car from the Kitchen Side

Steel Diners for the Atchison, Topeka & Santa Fe

The Cars Are 86 ft. 6 in. Long Over End Sills and Weigh 171,000 lb.—Tables Seat 36 Persons

THE ATCHISON, TOPEKA & SANTA FE has recently placed in service eight all-steel dining cars. These diners, which were built by the Pullman Company, are without vestibules, are 80 ft. 6 in. long over the end sills and have a weight of 171,000 lb. in working order. The dining rooms are 38 ft. 8 in. long and have six single and six double tables with a seating capacity of 36. The tables are spaced 6 ft. 5 in. from center to center, which is 2 in. greater than the spacing on the older diners of this road.



The Kitchen, Looking Toward the Pantry

Daylight View of the Dining Room

Essentially the design of these cars is the same as that of the other all-steel equipment of the Santa Fe, the first of which was built in 1914. The underframe is designed to carry the load and consists of fish-belly center sills built up of plates and angles, channel side sills, and bolsters and cross bearers built up of channel pressings and cover plates. One of the principal differences in the design of the present cars is the use of structural channel sections for the side sills to replace the built-up sections employed in the first steel coaches. The body frame members are largely of pressed steel. The corner posts and side plates are of rolled Z-section; the balance of the side posts and cripples are of pressed Z-shapes. The belt rail is a continuous piece of

4-in. by 1[illegible]-in. rectangular section, with pressed Z-section window sills; the deck sill is a special angle pressing with a long horizontal flange; and the deck plate and carlines are channel pressings, the latter with closed ends. The sides of the cars are sheathed with ⅜-in. steel sheets.

The entire car body is insulated with a ½-in. layer of Insulite. This is applied on the car body between the posts and carlines against the outside sheathing and roof sheets. The underframe is covered throughout with a floor of No. 16 galvanized steel coated on both sides with Lucas car roof cement. The Insulite is then laid and covered with a heavy coat of petroleum asphalt, mopped on hot. On this are placed the transverse nailing strips for the floor. In the dining room the floor consists of a single thickness of ⅞-in. tongued and grooved yellow pine flooring. A double floor of the same material is laid in the kitchen while the single wood floor in the corridor is covered with Flexolith and surfaced with ¼-in. rubber tiling. The thickness of the nailing strips in the kitchen and corridor is reduced so that the surface of the floor is flush throughout all the several divisions of the car.

The interior finish of the dining room is of wood throughout and is built up of five-ply veneer Mexican mahogany. At all bearings, both on the sides and ceiling, the wood is backed with heavy canton flannel to prevent creaking. The steel interior finish in the kitchen, pantry and hallway is of 1/16-in. sheet steel, and is backed with one course of No. 12 fireproof duck, secured to the sheets with glue.

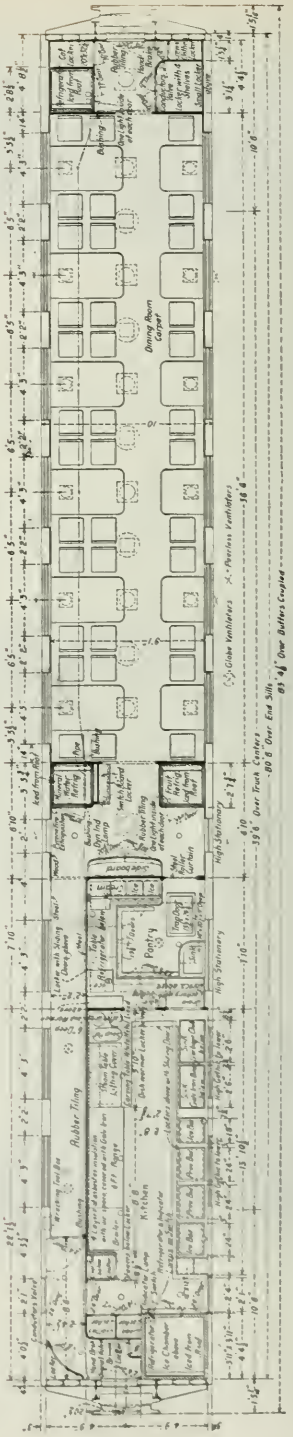
The arrangement of facilities in the car is clearly shown in the floor plan drawing. There are four refrigerators iced from the roof, the largest one located in the kitchen at the end of the car. Two of the others are located against the partitions at the kitchen end of the dining room, one on either side of the car, and the third at the opposite end of the dining room. In addition to the ice boxes in the kitchen and pantry, a large icebox for meat storage is located under the car to which access is had through a trap door in the pantry floor.

Side doors with 2-ft. 1-in. openings are located on either side of the car, 4 ft. 4½-in. back from the end. One of these doors opens directly into the kitchen, and the other into the corridor, with the door from the corridor into the kitchen directly opposite. The outside door on the kitchen side is in two sections arranged so that the upper section may be opened independently of the lower.

Power for the electric lights and fans is furnished by the U. S. L. axle light system, with truck suspended generator. The dining room is lighted by six center fixtures and six fixtures in the ceiling of the lower deck on each side. Safety fixtures are used throughout, those in the center being enclosed in 12-in. bowls, and those on the side in 8-in. bowls. Five ceiling fans of the revolving shutter type are placed between the ceiling lamps.

The Vapor Car Heating Company's thermostatically controlled vapor system is installed for heating the car, and three types of ventilators are used. The dining room is served by four Peerless ventilators opening through the deck sash, and two similar ventilators are also placed about the hall between the dining room and pantry. Globe ventilators are placed in the roof over the corridor and the pantry, two in the corridor and one in the pantry. Five adjustable hinged ventilator hatches, each arranged for operation in either direction are placed on the center line of the roof over the kitchen. These ventilators are directly over the range and steam table and provide a capacity for the movement of large volumes of air.

The cars are carried on six-wheel cast steel trucks with 5½-in. by 10-in. journals. They are fitted with Barber roller center plates and side bearings, and Simplex clasp brake rigging. The airbrake equipment is of the Westinghouse UC type.



Floor Plan of the Santa Fe Dining Cars

Coal Priority Bill Passed by the House

Will Control the Price of Coal at the Mines Through the Regulation of Coal Distribution

THE WINSLOW BILL to provide for federal regulation of coal distribution and an indirect control of the price of coal at the mines for the period following the strike settlements, during which there will be a general scramble for coal which would otherwise lead to a runaway market, was passed by the House on August 31 by a vote of 214 to 61 and the similar bill introduced by Senator Cummins was taken up in the Senate on September 1.

Under the House bill an attempt is to be made to prevent undue profiteering on the part of coal operators at least by authorizing the Interstate Commerce Commission "to issue such order or orders for priorities in car service, embargoes and other suitable measures in favor of or against any carrier or region, municipality, community, person, copartnership or corporation, and to take any other necessary and appropriate steps for priority in car sevice and in the equitable distribution of coal or other fuels so as best to meet the emergency, prevent extortion in prices charged for coal and other fuel, and promote the general welfare." The text of the Cummins bill was published in last week's issue.

Does Not Actually Fix Prices

No one is authorized by the bill to actually fix prices; the federal fuel distributor is to report to the commission, among other information, the prices normally and usually charged for such coal and other fuel, and whether current prices, considering the costs of production and distribution, are just and reasonable." On the basis of the information furnished cars may be allowed to be supplied for the shipment of coal at what the commission on the recommendation of the fuel distributor thinks is a fair price, and cars may be withheld from, or an embargo may be laid against, shipment for which an unreasonable price has been charged, or even apparently for which an unreasonable price has been offered, the purpose being to prevent the running up of prices by those who would bid against others for the opportunity to stock up with coal as well as by those who would take advantage of the opportunity to demand high prices. The prevention of retail profiteering is left to the action of state authorities.

Tired of Being Held Up

It might perhaps be inferred that the authors of the bill had possibly given some credence to the idea that coal strikes are not entirely one-sided affairs but that the desire to convert coal from a drug on the market to a highly prized and eagerly demanded luxury has something to do with them. In fact one of the reputed authors of the bill is understood to have unbosomed himself recently of the statement that he was getting tired after 30 or 40 years "of this business of scaring the American people to death and freezing them to death in the middle of August."

Almost frankly the bill uses the pretense of regulating interstate railroads in the use of their cars to accomplish a regulation of the price of fuel. But in case the commerce clause of the Constitution is not sufficient foundation for it, the preamble of the bill attempts to call into play the general welfare clause, the public health clause, the postoffice clause and the army and navy clauses. Congress is made to say that a national emergency exists, "which endangers the public health and general welfare of the people of the United States, injures industry and business generally throughout the United States, causes extortion, limits the supply of heat, light and power, threatens to obstruct and hamper the operation of the government of the United States and of its several departments, the transportation of the mails, the operation and efficiency of the army and navy, and the operation of carriers engaged in commerce among the several states and with foreign countries."

Many of the opponents of the bill in Congress asserted that it would operate to restrict the production of coal rather than increase it by shutting off the mines whose cost of production is above the average and because operators might not want to ship coal, under a priority order, to a consignee who might be slow in paying for it. However, the advocates of the bill point out that as much more coal can be produced than the railroads can handle, the available transportation service should be conserved for those who can and will sell it at a reasonable price. If the wagon mines cannot operate profitably on the price which Mr. Spencer and the Interstate Commerce Commission consider fair, or if an operator thinks he would rather hold his coal in the ground than sell it for those prices, there will be that many more cars for the others.

Hoover Favors Bill

Secretary Hoover, one of the chief sponsors of the bill, says that while high prices might under other conditions enhance production, the present problem is no longer one of production but of distribution. There will be much competition among producers, but the producer who has his coal in a car would have some degree of monopoly, at least he would have a monopoly of that car unless its use were regulated. It is understood that this time, having learned a lesson in 1920, the Interstate Commerce Commission does not propose to assign cars to people to use them in buying coal. It now proposes to see that the coal is bought by someone before the cars are assigned, and the prices will probably be based on those on which Secretary Hoover reached a voluntary agreement with a majority of the operators who were then producing coal.

Numerous amendments to the bill were offered but, with the exception of committee amendments, most of them were voted down or ruled out on points of order as not germane. One of the committee amendments was to insert in the preamble the words "and by reason of the disturbance in industrial conditions caused by the World War," as one of the justifications for the exercise of emergency authority. An amendment proposed by Representative Anderson to substitute a provision for the purchase of coal by a government agency was one of those held to be not germane. Representative Sanders' amendment to strike out reference to prices was defeated 76 to 36.

Other unsuccessful amendments proposed to limit the period of the bill to six months or a year, to fix the salary of the fuel distributor at $7,500, to provide that the Interstate Commerce Commission should exercise the powers granted without the aid of a fuel distributor, to provide that the price should be reasonable "to the ultimate consumer," to strike out the reference to "extortion" in the bill, and to reduce freight rates on coal by 50 per cent. Many of the amendments to tone down the effectiveness of the bill were offered by representatives from coal-producing districts, who warned those who voted for the bill that it would soon lead to the fixing of prices for commodities manufactured in other districts. One or two voices were raised to express disagreement with the idea of regulating prices downward in a period of scarcity without any provision for holding up

prices at time of dull market condition. An amendment offered by Representative Sanders was adopted providing that except as to prosecutions for offenses, the provisions of the act shall cease to be in force and effect January 1, 1924.

Borah and Cummins Bills in Senate

Discussion in the Senate of the Borah bill to create a coal investigating commission and of the Cummins bill to prevent profiteering by use of priority orders brought out much conflict of opinion. Senator Dial of South Carolina, who has a number of plants that use coal in large quantities, complained that he was unable to get coal which he had contracted for at $1.90 a ton because the operators notified him that Mr. Hoover had raised the price to $3.50 and that later the coal was diverted to other states under priority orders of the Interstate Commerce Commission. When Senator Kellogg reminded him that for a time only 4,000,000 tons of coal a week were being produced, and that public utilities and public institutions needed most of that, he said: "I think you might as well stop the public utilities as turn our labor out of employment and let them perish."

Senator Sutherland of West Virginia objected to regulation of the coal industry, saying that the entire trouble practically is one of transportation and that transportation is a "fine example of a government regulated industry."

Senator Kellogg replied that the roads had been in a position from April 1 to July 1 to handle the maximum of coal and they did not have it to handle, and that even if they were not crippled by the strike they could not transport all the coal in three months that should be produced and transported in six months.

Senator Reed of Missouri said the Interstate Commerce Commission was misusing its power in releasing 96,000 open top cars with sides less than 42 inches from its preferential coal order. He said the commission should exercise its power to divert the cars to the coal business instead of facilitating the handling of building materials.

Cummins Bill Under Discussion

The Borah bill was temporarily laid aside on Friday and the priority bill was taken up, the House bill being placed on the calendar without being referred to the committee on interstate commerce because it had already considered the similar Cummins bill. Senator Cummins moved that his bill be substituted for the House bill. In explanation of the bill he said that a majority of the members of the Interstate Commerce Commission felt that it was beyond their power to issue priority orders giving preference on account of the price of coal and that he would not be willing to give them that authority as a permanent matter. It should be limited to the emergency and even the President ought not to have the power to determine when the emergency exists. That, he thought, was for Congress to determine. However, he had no doubt that Congress, under its right to regulate commerce, if there was a starving community in one part of the country, could say that there shall be no cars loaded for any other purpose than to transport food, and that similarly it may say that only those operators who are willing to sell their coal to a community without coal at a fair price shall be allowed cars.

Senator Reed declared that this was merely a subterfuge to fix a price and that if Congress possesses such a power and starts to use it, "we may as well understand that we will have opened a door through which may come a lot of trouble That power, of course, we can declare at any time, whether there is an emergency or not. There is nothing in the Constitution about emergencies."

Senator Underwood said that instead of attempting such legislation now the government should have taken action long ago to stop the railroad strike. Senator Underwood's objection that no legislation is now proposed to deal with the railroad strike and his statement that the remedy lay in an anti-strike law, such as had been passed by the Senate at the time the Transportation Act was being framed, brought out an interesting statement from Senator Cummins that the Senate conferees at that time had not yielded on the anti-strike provisions until information had come to them that President Wilson would veto the bill if they were left in it.

"We put teeth in that bill," said Senator Underwood, "but when they carried it to conference they brought back an empty shell. The power to enforce the decree of a court is the only thing that makes the decree of value."

Wilson Threatened to Veto Anti-Strike Law

"For two months or more the Senate conferees attempted to maintain the Senate provisions in that respect," said Senator Cummins. "The House was adamant upon that subject, and although I am now betraying a secret which possibly is not generally known, it was not until the information came to the Senate conferees that if the bill was passed with the anti-strike provision in it, it would be vetoed, that the Senate conferees yielded to the House demands, and allowed the bill to pass without the provisions in it which I think are absolutely necessary to any effective railway regulation."

Senator Underwood replied that he did not criticise the chairman of the committee on interstate commerce, that he may have been compelled to yield in 1920, but that "when he surrendered he left the door wide open, and failed to put up the only barrier in front of a great transportation strike which can save the people of the United States from the dire conditions which are confronting them today."

Senator Cummins added that he had no direct word from President Wilson but that after the Senate had provided for a Labor Board of five members, all representing the public, and had made it unlawful to enter into a conspiracy or strike in order to coerce employers in disregard of the decision of the Labor Board, "gentlemen whom I shall not name but who were high in the councils of the labor people and of the Railroad Administration indicated to me that unless we yielded upon those points the President might find it difficult to sign the bill. It was at the very last minute that we changed the composition of the Labor Board, providing three members to represent the public, three to represent the railroads and three to represent the men."

Senator Cummins said he intends to introduce anti-strike bills at the next session of Congress, but that it would be impossible to control the present strike by any such legislation.

Senator Reed, who kept insisting that the bill would not accomplish the desired purpose and insisted that the important thing was to settle the railroad strike, ventured to "guess" that the freight engines and the cars necessary to transport the coal could be put in condition in two weeks time, although he thought Senator Cummins was understating it when he said that possibly 20 per cent of the engines and cars are in bad order.

In reply to objections because the bill does not reach dealers who may profiteer, Senator Cummins said it would reach the dealer who is shipping coal from one state to another just as completely as the operator will be reached, but that the remedy for retail profiteering is with the states.

Discussion of the Cummins bill was continued in the Senate on Tuesday and Wednesday. Senator Cummins in a long discussion pointed out that an important difference between the two bills was that this applied only to interstate shipments, while the House bill would cover also shipments within a state.

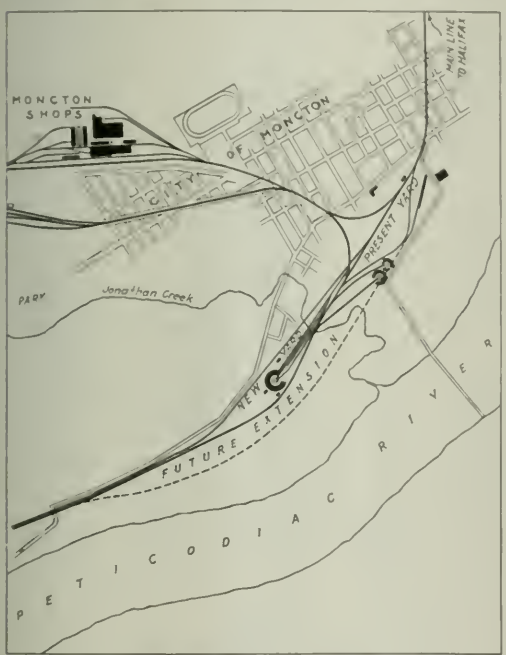
Senator Robinson made a long speech on Wednesday attacking the injunction obtained by Attorney General Daugherty.

Canadian National Increases Facilities at Moncton*

New Engine Terminal Provided as Part of Plan for Extensive Improvement at That Place

By S. B. Wass,
Terminal Engineer, Canadian National Railways, Fort William, Ont.

THE CITY OF MONCTON is situated on the Canadian Government Railways at the junction of the main line from Halifax to Montreal and the line from the city of St. John, and is also the eastern terminus of the Transcontinental Railway, which makes it the gathering point for traffic from the west to Halifax, Sydney and all points east of it, as well as the breaking up point for traffic in the opposite direction. By reason of this fact it is the most important



Map of the Moncton Yard

railway junction point in the Maritime Provinces, and requires adequate facilities for handling traffic rapidly and efficiently, and also for distributing empty cars and equipment of all descriptions to points where needed. For a number of years the yard has been too small to provide the necessary working capacity; and the tracks too short to accommodate the long trains hauled by the new large locomotives. The roundhouse and other facilities, which were old, were too small and without proper acilities or making the running repairs to the present-day large locomotives.

Layout of the Yard and Its Approaches

The old connection with the main line and trans-continental line, with the yard, is near the east end, and is by means of a wye connection, which resulted in a great deal of terminal detention. To eliminate this condition, and so simplify yard movements, a diversion was constructed from Mile 3.5 on the north main line to Mile 2.5 on the St. John subdivision, thence parallel to the St. John sub-division to the yard. By this means all traffic enters the yard from the west, making a simple east and west yard, except for the transfer to the Moncton shops, which traffic, being only local, is small.

A very complete ultimate layout has been designed, which includes east and west receiving yards, classification yards, which may be equipped with humps if required; east and west departure yards, transfer and storage tracks, new car repair facilities, new engine facilities, etc, so located that the construction of any additions or extensions required to meet traffic conditions may be carried on without materially interfering with traffic. This yard is arranged in units, so that it may be constructed and operated in sections as the traffic demands. The conception and design of this general layout originated with Collingwood B. Brown, recently chief engineer, Canadian Government Railways, and now engineering assistant to the vice-president, Canadian National Railways, Toronto. All of the expenditures and construction up to date have been in accordance with this ultimate layout.

Construction Work

The actual work of construction was commenced in the season of 1919, and consisted of three parts:

(1) The acquiring of additional land which was required on both sides of the present yard to provide for present and future requirements, and to avoid farm crossings.

(2) The construction of the diversion from the main line to the north, referred to above. The maximum grade used was 0.6 per cent, compensated for curvature, and involved the raising of the St. John sub-division to a height of 6.5 feet at the under crossing of the Salisbury road, Mile 1.8, and extension of this bridge from a single-track to a three-track structure. The contract for this work was awarded to the Dominion Construction Company, Ltd., and Wheaton, late in the season of 1919, and the work was completed early in 1920. A considerable saving in operating expenses was effected during the first winter by the use of this diversion for freight movement, although the old line was continued for passenger traffic use.

(3) The old freight shed was very inadequate for the local and transfer traffic. A new shed with additional trackage, arranged to conform with the new layout, was constructed. The structure is 400 ft. long by 40 ft. wide, of brick and structural steel construction. The contract for this work was awarded to engineers and contractors of St. John, and the work was completed early in the season of 1920. A transfer platform 500 ft. long was also constructed conforming to the new layout.

Construction Work During 1920

The engine house, coaling plant and other engine facilities are located on the high ground, where the foundation is good, just west of Johnathan creek, which crosses the yard at about Mile 0.6 and flows across the marsh, the level of which is approximately 25 ft. below the grade elevation.

* Abstracted from a paper presented at the meeting of the Engineering Institute of Canada at Winnipeg, Man., on September 7, 1922.

This marsh has an average width of about 400 ft., the Johnathan creek culvert being located at its extreme west side. The ground west of the culvert for a distance of 5,000 ft. was generally above grade ranging from zero to 15 ft., which necessitated considerabe excavation. The material was required partly to widen the embankment at the extreme west end of the yard, but mostly to make the embankment over the Johnathan creek marsh.

An extension of the Johnathan creek culvert under the old yard was also necessary. In order to have the site ready for building during the season of 1921, the construction of the culvert extension and grading for the site of the building was performed in 1920, so far as it could be done. A contract for this work was awarded to the Dominion Construction Company, Ltd., and Wheaton, and the work was completed by the end of 1920, about 95,000 cu. yd. of material having been excavated.

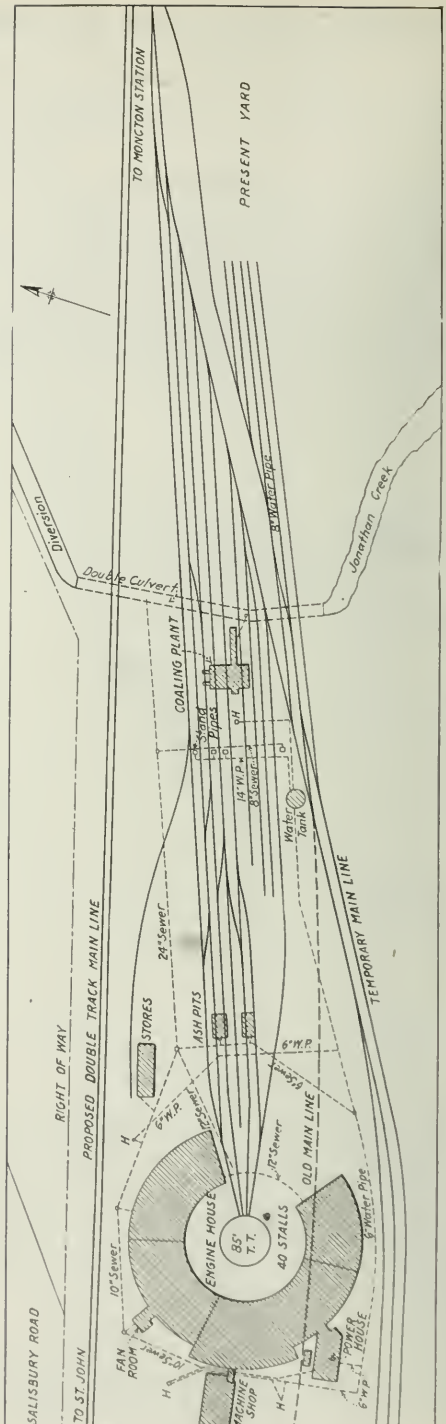
Work During 1921

The work during 1921 consisted of continuing the grading, diverting the main line, and construction of building and service tracks. It will be seen that a locomotive approaching the facilities will, under ordinary conditions, obtain the necessary attention in the following order: Coaling and sand, water, fire cleaning, housing. Three inbound and three outbound tracks have been provided, all of which are served by stand-pipes for water. Coaling facilities are provided on the three inbound tracks, and by means of cross-overs locomotives on two of the outbound tracks may be coaled with very little interference with the inbound locomotives. Four tracks have been provided with ash-pits and sufficient cross-overs have been provided to facilitate any desired movement of the locomotives. Fifty tracks to the turntable have been provided for; four are running tracks to and from the turntable, forty are entrances from the turntable to the forty-stall house, which is now constructed, and space or an additional six-stall section when required. All buildings except the water tank and coaling plant are constructed of brick on concrete foundations with mill type frames of fir, except the machine shop, which has a structural steel frame. This is one of the largest layouts for a single engine house in Canada.

As much of this work had to be performed in the present yard, without interference with traffic, it was decided to do it by the railway's own forces under the supervision of A. F. Stewart, chief engineer, with S. B. Wass, construction engineer, and E. R. Evans and H. L. Curie, assistant engineers, directly in charge of the work.

Sewer System

As the buildings were all located on the natural ground, composed of hard pan, very impervious to water, it was important that drainage be provided for the foundation excavations at the earliest possible moment, and the most effective method was to get the permanent sewerage system installed. The main sewer, extending from the outlet to the manhole opposite the ash-pits, is of 24-in. double strength, vitrified clay pipe 798 ft. long, placed 14 ft. below grade so as to drain the ash-pits. From this main sewer, branches of smaller sized pipe are carried to the turntable pit, engine wheel drop pits, and all other facilities requiring drainage. The total amount of excavation for sewer trenches was 4,960 cu. yd. in hard-pan material merging into rock, so that hand labor was considered to be too slow. Several alternative methods were discussed and it was finally decided to try a Marion railroad ditcher which was available. This machine was supported over the top of the trench on old bridge stringers and in one operation excavated the trench in front of it and deposited the material behind itself, the pipe having been laid and jointed by men working directly underneath the machine.



The New Engine Terminal

So successful was this method that frequently 55 lin. ft. of completed sewer was laid in a working day, and an average of 32 ft. per day was maintained during the whole operation

The Terminal Buildings

The engine house contains 40 stalls, 33 of which are 100 ft. in length with 65-ft. pits, and seven are 120 ft. long with 80-ft. pits. The house is divided into two sections of seven 100-ft. stalls; one section of seven 120-ft. stalls; one section of nine 100-ft. stalls, and one section of 10 100-ft. stalls. Three of the long stalls are provided with drop pits for driving wheels, and two with drop pits for tender wheels, so located that any pair of wheels on any of the railway's existing locomotives may be changed. The drop pits are all equipped with Taylor-Arnold pneumatic jacks. Each stall is provided with steam blower, with Barco connection, blow-off pipe, wash-out and boiler filling pipe, cold water connection and compressed air, all of which systems are connected with the power house, where the various pumps, hatwell, etc., are located.

The machine shop, 84 ft. long by 53 ft. wide, is located at the back of the long stall section of the roundhouse and connected to it by a passage way. It is provided with machines for light repairs, tool room and forge, with jib cranes for handling heavy parts, and a narrow-gage push-car track between the machine shop and the roundhouse stalls.

The stores and office building is 100 ft. long by 30 ft. wide. The foreman's office is in the west end of the building, and adjoining it are the booking and registering room, locker room, wash room, shower bath, etc. The oil cellar, fully equipped with storage tanks, and 10 self-measuring and registering oil pumps, is in the central portion of the building. The east end of the building, to be used for miscellaneous supplies, is fitted with racks and shelves, and surrounded with an eight-foot platform with ramps. This building is heated by low-pressure steam, supplied by the power house boilers.

The power house is attached to the back of the twelfth stall of the engine house and is 87 ft. by 44 ft. It is divided into two parts by a brick wall, the back part of which contains two 250-h.p. Babcock and Wilcox water-tube boilers, which were in use in the old power house, but have been retubed, thoroughly cleaned and repaired. The other part contains the air compressor, feed-water, wash-out and vacuum pumps, and steam-driven fan and heater coils. A hot-well is located just outside the power house for storage of hot water. This hot water is used for feedwater for refilling locomotive boilers, thus effecting a great saving in fuel.

The electric current is obtained from the railway power plant at the Moncton shops. It is used for operating the coaling plant and motors in the machine shop, in addition to a complete lighting system throughout. The lights in the engine house are so arranged with reflectors on the posts that an abundance of light may be obtained for work on any part of the locomotive, but economy may be effected by turning off those not required, as each stall is supplied with separate switches.

A mechanical coaling plant of 350-ton storage capacity, equipped to elevate coal at the rate of 50 tons per hour, was installed. It is provided with three coaling tracks, and one hopper track for receiving coal. It is operated by electric power from the railway system. The machinery was supplied and installed by Williams & Wilson, Ltd., of Montreal, under contract, but the construction of the building and all other work was done by the railway forces. Facilities are also provided for sand storage and supplying sand to locomotives at this plant.

Water is obtained from the city water supply and a steel tank of 150,000-gallon capacity is provided as a storage reservoir. Four 10-in. standpipes are provided for watering locomotives. The steel water tank was supplied and erected by the Dominion Bridge Company on a concrete foundation constructed by the railway forces.

Two double-track ash-pits, 40 ft. long, were provided. These pits are 12 ft. deep and so arranged that they may be operated as dry or flooded pits. They are constructed of reinforced concrete walls, lined with fire brick, with the sloping wall of steel rails under the tracks. The space between the two tracks, over the deep part of the pit, is covered with a wooden platform which is removed when the cinders are being taken out of the pits. The ashes are removed from the pits by a coaling crane with a clam-shell bucket. This crane is also used to load coal from storage piles or to coal locomotives in case the plant breaks down.

Construction

As all the buildings were required for operation at the same time, it was decided to carry on the constuction of them simultaneously and thus prevent the work from becoming congested For purposes of organizing a construction force, a fairly close estimate of the quantity of each class of work to be performed was made and from it an approximate estimate of the number of men and time required to perform each was obtained. By keeping in view the natural sequence of the work, a program was worked out by which the foundation work was kept well ahead of the concrete work, the concrete work ahead of the brick work, the brick work ahead of the carpentry, painting, piping, etc., and throughout the whole work there was very little interference of one class of work with another, so that a gang once organized to perform certain classes of work was kept up to full strength until the work was practically finished.

Bills of material were also prepared, orders were placed for these as early as possible and arrangements made for delivery in accordance with the general program of the work. By keeping daily records of material on hand, and by keeping the persons supplying the material daily advised of the material situation at the work, no serious delay was caused for material, although in some cases the men had to be shifted to another part of the work for a few days. This was true in the case of the steel window lintels, reinforcing for the concrete floor in stores building, pipe fittings and electrical supplies. Notwithstanding this, the general program of the work was very closely adhered to.

During the season 7.03 miles of permanent track with 43 switches were laid. This work could not be done continuously, but the layout was located on the ground, and wherever possible service tracks were laid in the position of permanent ones. A large amount of old track had to be taken up and shifted, and the locomotive crane was very useful in handling this material.

Transferring from Old to New Facilities

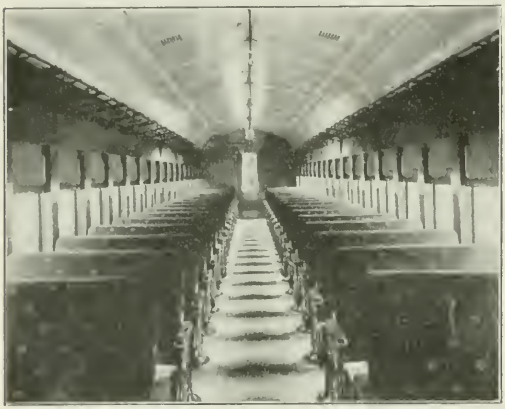
It was necessary to continue operation at the old facilities until the new ones could be used. About one-half of the machines in the old shop were belt driven, and these were installed in the new shop, while the motor-driven machines were left in the old shop until after the transfer had been made.

The transfer of the turntable naturally was the governing feature, and this was accomplished without any interference with traffic. The table was put out of service at the old house at 8 a. m. December 17, and was raised out of the pit without removing deck or rails, by a 75-ton wrecking crane, by a rather unique method. The crane lifted one end of the table, blocking was placed under the center, the table was then tilted over the blocking and the opposite end blocked up. By repeating this several times, the table was raised high enough to permit car trucks with especially constructed bolsters to be pushed under the table. By this

means the table was transferred to the new site by 4 p. m., where it remained till the following morning. During the night the crane was taken away on other service, and it returned at 11 a. m. By reversing the tilting process the table was lowered into the new pit, and at 4.30 p.m. December 18 the first engine went into the new house.

Steel Suburban Passenger Cars for the Philadelphia & Reading

THE PHILADELPHIA & READING is now receiving deliveries on the lot of 45 all-steel passenger and five all-steel combination passenger and baggage cars for suburban service which were ordered in February from the Harlan plant, Wilmington, Del., of the Bethlehem Shipbuilding Corporation, Ltd. With the placing in operation of these cars, the Reading is now using specially designed all-steel equipment for suburban traffic, a departure from the practice of using the older types of equipment in suburban service or on branch lines.



Interior of Suburban Coach

These suburban-type cars are designed for the same strength as main line cars and are of standard all-steel construction throughout. New main line all-steel cars for this road were described in the *Railway Age* of July 15, 1922, page 117. A noticeable feature, however, is the construction of the roof, which is of the single deck type, with 16 ventilators placed on top. This construction makes possible an unusually light and airy car.

There is but one saloon in each car, thus increasing the space for seats to a maximum providing a seating capacity of 48, six more than the Philadelphia & Reading standard main line coaches of the same length. The omission of the second saloon also has the advantage of widening out the aisle at the door, permitting quick emptying of the car. The saloon bulkheads are steel.

The coaches are of the wide vestibule type and are 63 ft. in length over the underframes. They are electrically lighted with Safety Car Heating & Lighting Company's body suspension equipment, and are heated by means of the thermo-jet system. The seats are Hale & Kilburn Walk-over design upholstered in Philadelphia & Reading standard plush. Four-wheel type trucks with 36-in. wrought steel wheels and clasp brakes are used, and the axles have 5½-in. by 10½-in. journals. Gould couplers, buffers and draft gear and Westinghouse air brakes are part of the equipment.

The interior finish of the coaches is painted mahogany color. The ceilings are finished in old ivory and striped to harmonize with the interior of the car. The sides, ends and roof are insulated with three-ply salamander, and the headlining is agasote.

APPEALS WITH NO HEART IN THEM.—J. O. Hackenberg, superintendent of the Pennsylvania Railroad at Buffalo, N. Y., speaking recently at a Sunday meeting of employees said, in part: Far too many railroad men today know the superintendent only as initials on a train order or a name on a discipline notice, and if I can convince you that he is a human being, with the same weaknesses, troubles and cares that each of you have, my visit to you will have been worth while. . . . I know and you know that I know, there have been cases where men have been fairly disciplined, getting what they justly deserved, where your chairmen have been instructed to appeal. No right thinking chairman can have his heart in such an appeal and many times it is lost simply because it was wrong. If you men would get behind the discipline and give it your full moral support, I am safe in saying that most of the need for discipline would disappear. Think this over, and the next time John Doe is disciplined and asks your support in having the discipline annulled, ask yourself the question, "Was John actually guilty?" and if he was, how many men did John take a chance of wrecking when he broke the rules? When a superintendent disciplines a man, it isn't because he enjoys it, but to try to keep a railroad safe. The man who deliberately takes a chance with his own life and limbs certainly will, with less hesitancy, take a chance with yours. When you sit on an engine and see a man take a foolish and needless chance, without going after him about it, you are simply adding to your own risk.

New All-Steel Suburban Coach for the Philadelphia & Reading

Safety Council Holds Annual Meeting in Detroit

Results of Careful Crossing Campaign and Safety Education of Children Chief Topics Discussed

THE ELEVENTH annual congress of the National Safety Council, which was held in Detroit, Mich., August 28 to September 1, extended well-merited recognition to its Steam Railroad section by the election of Marcus A. Dow, general safety agent, New York Central Lines, to the presidency of the Council. The Railroad section, which is one of 21 industrial branches of the congress, devoted the major portion of its deliberations to a discussion of the highway crossing hazard, which has been given special attention in the "Careful Crossing Campaign" instituted on June 1. In the absence of Isaiah Hale (A. T. & S. F.), chairman, A. O. Ridgway (D. & R. G. W.), vice-chairman, presided at the sessions of the Section which was attended by about 80 railroad safety officers representing 27 steam roads.

The chairman, in his annual report, cited as strong evidence that the safety first movement is effective in reducing train service accidents, the fact that the Brotherhood of Railroad Trainmen has been able to increase the brotherhood life insurance from $2,000 to $2,700 without increasing the cost to the insured. Mr. Hale's report supported this statement by figures taken from the Interstate Commerce Commission Accident reports for the last six years.

Fred Meyers, terminal superintendent of the Wabash, Detroit, in a paper on "Accident Prevention from the Standpoint of the Operating Department," cited a number of operating rules which, properly enforced, would put a real "kick" in the safety requirements. He suggested that in some cases there had been too much "safety organization" and not enough individual effort to place each man on his own responsibility. He has also found the committee men of the brotherhoods to be of great assistance in convincing the men that this safety movement was all for their personal welfare; they aid in eliminating long established dangerous habits. In a discussion of this paper, T. A. Carroll (Penn.) explained that as a means of getting home to each man, different divisions of that road had issued small bulletins entitled "Fusee," "Life Preserver," etc., covering the details of accidents and methods of preventing them. Bulletins detailing actual incidents on the home road seem to receive more attention than abstract statements.

W. F. Braden (B. & O.), presented a paper on the "Relative Importance of Supervision and Propaganda in Railroad Safety Work," in which he selected the Careful Crossing Campaign as the most striking example of successful propaganda launched recently by the railroads. He pointed out that in railroad safety work the psychology behind propaganda was, that a knowledge of danger was most readily impressed on the average railroad employee through the sense of sight; that is, by means of bulletins. The visual impression is strengthened by three qualities, exaggeration, motion and unusual conditions shown in the picture. In 100 tests the eye was found to make only 18 mistakes, whereas the ear made 34. The conclusion was that the average shop foreman, in his haste to turn out work, can not with his ordinary limited vocabulary hope to accomplish as much for the safety of the men by continued talks, as is possible by the use of the "universal language"—pictures and bulletins.

Progress Report on Careful Crossing Campaign

According to reports from 66 of the Class 1 roads 352 people were killed at highway grade crossings on these roads during June and July, 1922, an *increase* of 35 over the number for the same months in 1921. These figures were presented by H. A. Rowe, claim attorney of the Delaware, Lackawanna & Western, who is credited with originating the famous "Cross Crossings Cautiously" poster. Continuing, he stated that several roads had reported a reduction in such accidents, among which were: the Chicago & North Western, having 4 less deaths and 12 less injured in June and July, 1922, than the same period for 1921; the Baltimore & Ohio with 10 less killed and 9 less injured; the New York Central 1 less killed and 28 less injured; the Central of New Jersey, 13 less killed and 23 less injured.

Mr. Rowe also reported the results of a check on 300 average crossings made July 15 and 16, this year. Of 306,306 automobiles observed the drivers of only 156,607, or about 50 per cent, looked either way, and only 26,453, or about 9 per cent slowed down to less than 20 miles an hour. The speaker stated that 1,300,000 standard "Cross Crossings Cautiously" posters had been used in the campaign and that in this period an *equal* number of (new) automobiles had been sold. In the face of such odds Mr. Rowe felt that the fact that deaths and injuries have been restricted to even approximately the 1921 record was a great credit to the campaign. The death of 1,800 persons and injury to 5,000 annually for the past five years in railroad crossing accidents has begun to bring the nation to realize that instruments of death and torture are being promiscuously placed in the hands of incompetent persons, exposing innocent passengers on trains and in automobiles to the mercy of ignorant, heedless and criminally reckless drivers. Mr. Rowe advocated a united movement for the inauguration of legislation to establish a "standard of ability" to be required of automobile drivers. The speaker advocated a movement to influence local newspaper writers not to make a hero of the automobile driver involved in an accident but to place the blame where ie belongs, thereby convincing the public that any driver not observing caution is a fool, not a hero.

T. A. Carroll (Penn.) in discussing this paper said that there had been a gratifying degree of publicity. In 151 newspapers in the larger cities he had found 969 column-inches of copy on the careful crossing campaign and, including editorials and copied articles in smaller papers some two miles of copy had been produced on the subject. Considering that there is a combined circulation of some 89,000,000 copies of these papers it is fair to conclude that the American people have had this subject brought effectually to their attention. The slogan has been used in several cartoons published in prominent newspapers. This slogan is a real asset; it will stick as long as railroads cross highways. But the campaign is now only well started and requires the best efforts of all to keep it properly before the public. He closed by saying that the campaign has cost $50,000, a small amount compared to the good acomplished.

Safety Education Through the Public Schools

Marcus A. Dow (N. Y. C.) stated that just after the campaign had been started there was an increase in crossing accidents on the New York Central for two weeks and that no favorable results were noted until the first two weeks in July, but a reduction would be shown for the first half of August. The 10,000 local station agents on the New York Central have presented the standard N. Y. C. careful crossing speech to over 2,000,000 people. Mr. Dow urged the railroads to continue the campaign without abatement.

The work of planting safety habits into the lives of school

children was explained in detail by several speakers. L. G. Bentley (C. & O.) said that school children in the territory adjacent to the Chesapeake & Ohio were being taught to keep off the railroad right-of-way and cars. Personal work of safety agents among the children by the telling of interesting and vivid stories in the school rooms has accomplished gratifying results. Mr. Bentley has personally delivered his story of "Bill Day, the Boy Athlete" to 50,000 school children, and he received promises from these children to keep off the railroad. J. T. Broderick (B. & O.) stated that a three-year campaign in the homes and schools along the Baltimore & Ohio has resulted in a reduction of 20 per cent in persons killed and 34 per cent in injured. How children are taught to keep off railroad tracks in Detroit was explained by Miss Harriet E. Beard, supervisor of safety, Detroit Public Schools. A short one-act play enacted by the children demonstrated methods of arousing interest in safety and of impressing the children with the serious consequences of tresspassing on railways.

A systematic and efficient perodical examination of the eyes of all workmen was advocated by R. M. Little of the National Eyesight Conservation Conference. He claimed that over half of the employees of the average industrial plant have defective vision and as a result are nervous, restless and careless, this condition is a constant source of hazard. It can be remedied by glasses properly fitted.

he will resent the warning. On the other hand, the straight-from-the-shoulder request (or order), appeals to him and he will promptly obey, in the majority of cases. In closing Mr. Love emphasized the importance of co-ordination—let the eye follow the hand. Many men are prone to trust their hands in one direction while looking in another. Men should be trained to watch where they put their hands.

L. G. Bentley, general safety agent, Chesapeake & Ohio was elected chairman of the Steam Railroad section of the National Safety Council for the ensuring year. John Fitzhugh (G. C. & S. F.), vice-chairman and L. P. Green (M. St. P. & S. S. M.), Minneapolis, Minn., secretary.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR loading during the week of August 26 was the largest since October 21, 1921, amounting to 890,838, as compared with 828,883 in the corresponding week of 1921 and 1,001,308 in 1920. This was an increase of 34,679 cars over the previous week and of about 23,000 as compared with the highest previous week this year before the shop strike. The increase was mainly due to the increase in coal loading, following the Cleveland agreement, which amounted to about 30,000 cars more than during the preceding week. The loading of grain and grain products and ore was slightly less than the preceding week, but all other classes of commodities showed increases.

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDING SATURDAY, AUGUST 26, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Misc. L.C.L.	Miscellaneous	Total revenue freight loaded: This year 1922	Corresponding year 1921	Corresponding year 1920

One of the interesting papers presented was "Simplicity in Accident Prevention Work," by A. B. Love (A. C. L.). Mr. Love explained that although the use of safety devices is good, the ultimate goal is to bring "the workman to a full realization of his personal needs and to the grave responsibility he assumes for his dependents, as well as the influence he wields over fellow-workers." Mr. Love called for better signs and posters. Placards displayed in shops or other places frequented by workmen should be brief, simple and clear, otherwise "they become so much wall decoration—nothing more." Instead of putting up a sign reading "The Best Safety Device Known is a Careful Man" substitute one like "Watch for Overhead Obstruction Here"; or "Keep Aisles Clear"; or "Do Not Leave Tools Where They May Fall Upon Some One." The first mentioned sign creates in a man's mind the idea that if he suffers injury he will not be considered careful, and will not be given credit for certain qualities which are attributable only to careful men. Thus

THE DAY'S WORK ON THE NEW YORK CENTRAL.—This is the title of a display advertisement recently published by the New York Central reading as follows: From midnight to midnight the New York Central Lines haul 100,000,000 ton-miles of freight. A ton-mile, the measure of transportation, is one ton moved one mile. A hundred million ton-miles are equivalent to moving a ton a distance greater than from the earth to the sun; or of moving 4,000 tons [a train of 80 large cars] around the world. In the same twenty four hours the passenger trains record 10,000,000 passenger miles, the equivalent of carrying more than 10,000 passengers from Chicago to New York. The day's work of the New York Central Lines is about one-tenth of the rail transportation of the United States, and is greater than that of all the railroads of England and France combined.

U. S. Gets Blanket Injunction Against Shopmen

Restraining Order Covers Many Strike Activities—A. F. of L. Threatens to Fight Enforcement

ONE OF THE MOST important moves in the shopmen's strike and probably the most far reaching and significant action ever taken in an industrial conflict by the United States government came out of a clear sky when Harry M. Daugherty, attorney general, appeared on Friday before Judge James H. Wilkerson of the Federal district court at Chicago, asking for and receiving a temporary injunction restraining all striking railroad employes over the country from interfering in any way with the operation of trains. The injunction names all of the officers of the Federated Shop Crafts and their system organizations, 250 men in all, and briefly restrains these leaders from:

From the World, N. Y.

A Common Target

Issuing any instruction or public statement to members of their organizations to induce them to do or say anything to cause any railway employe to leave his work or to cause any person to abstain from entering employment of a railroad.

Using funds of unions in furtherance of any act forbidden in injunction.

All officers and members of unions or their agents are restrained from:

Engaging in picketing.

In any manner, by letters, circulars, telegrams, telephone messages, by word of mouth or by interviews, encouraging any person to leave the employ of a railroad or to refrain from entering such employ.

Interfering with or obstructing any railway.

Hindering inspection, repair or equipment of locomotives or cars.

Conspiring or agreeing to hinder railroads in the transportation of passengers, property and mails.

Interfering with employees going to or returning from work, "by displays of force or numbers, threats, intimidations, acts of violence, opprobrious epithets, jeers, taunts or entreaties."

Loitering at or near places of ingress and egress for employees.

Trespassing on the premises of any railroad, or any other place except "where the public generally are invited to come to transact business."

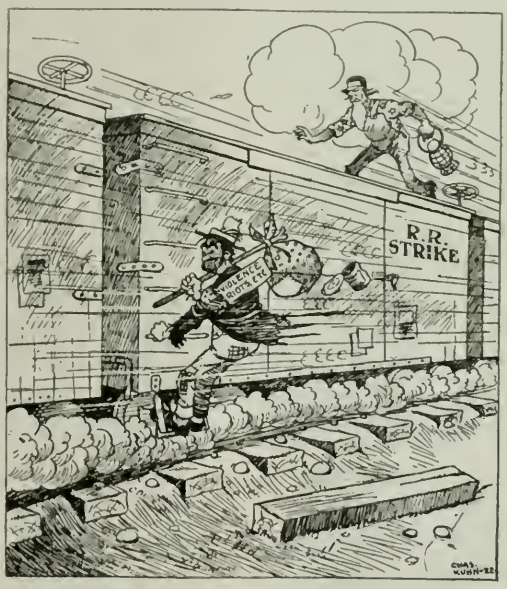
Doing any injury or bodily harm to any employee of a railroad.

Judge Wilkinson set September 11 as the date on which hearings will be held on the plea of the government for a permanent injunction.

The Government's Case

In presenting the government's case to the court Attorney-General Daugherty outlined the reasons underlying the government's application for an injunction in part as follows: The equipment of the railroad companies is so materially affected by acts of vandalism and inattention that the service of the companies is generally seriously impaired, and, in some instances, the railroads have abandoned the running of trains altogether.

"The railroad labor board is an agency of the government of the United States. In this particular contest, both parties submitted the differences in dispute to the regularly constituted governmental authority to hear disputes and render decisions thereon. The railroads were willing to comply with the decision which was the cause of the strike, but the defendants not only repudiated the decision but repudiated the labor board and its authority, and holds the labor board and the government of the United States in contempt."



From the Indianapolis News

Hookin' a Ride

Authority in the laws of the country to uphold the granting of the injunction are "ample" Attorney-General Daugherty said, citing the ruling of Judge Brewer in the Debs case as a precedent.

"I do not appear here as a representative of the railroads; I appear here by virtue of law requiring me to do so, representing

the government of the United States and the people of the United States. The government of the United States will never lift its hand against or touch a torch to the welfare of labor in its legitimate pursuit or to deny it what it is entitled to. The United States could not have been developed but for labor. Without that which labor produces the people of the United States cannot be prosperous, and, in fact, they cannot live.

Tomorrow it will be said by some persons that this proceeding is intended as a death blow to the unions. In my judgment, this movement is necessary for the protection and the preservation of the unions themselves.

Government Not Opposed to Labor Unions

The government of the United States is not opposed to labor unions if they perform such functions as can be performed in lawful America. Never, while the labor unions limit their activities to legitimate acts and lawful pursuits not injurious to society, at least while I speak, and to the extent that I can speak, for the government of the United States, shall a blow be struck at them. But it may be understood that, so long, and to the extent, that I can speak for the government of the United States, I will use the power of the government of the United States within my control to prevent the labor unions of the country from destroying the open shop. When a man in this country is not permitted to engage in lawful toil, whether he belongs to a union or not, with full protection and without interruption, the death knell to liberty will be sounded and anarchy will supersede organized government.

There are many who believe, on account of the arrogance of certain officials of labor unions, that the unions themselves should be destroyed. I do not think they should, but I think they should be corrected and restrained. If the acts of violence and murder are inspired by the unions, then it is time for the government to call a halt. No organization or association, no matter how well organized or how powerful it may be, can hold its constitution or its laws supreme over the government, the constitution and the laws of the United States of America.

No union, or combination of unions, can, under our laws, dictate to the American union. When the unions claim the right to dictate to the government and to dominate the American people and deprive the American people of the necessities of life, then the government will destroy the unions, for the government of the United States is supreme and must endure.

The right to work in this country is as sacred as the right not to be compelled to work, if a man is not disposed to do so, and every man must be made equally secure in his choice. I take notice of the fact that, in the legislative branch of the government, the situation is deemed so serious that the taking over of the railroads by the government is considered necessary.

I do not believe that time has yet come. The government has not reached the point where it will admit its inability to protect the rightful owners of property in their right to use that property for the general welfare of the whole people, and to require the owners of the railroads to furnish that service which is essential to the life of commerce, to the life of industry, to human life, and even to the very life of the government itself.

These defendants, considering the temperament of the people of the United States, can do no wiser or more beneficial thing for union labor than to consent that this temporary restraining order, if it should be granted by the court, be made permanent.

Service Should Not Be Interrupted

I am not in this capacity before this honorable court pleading any cause of the railroads as their advocate, except as may be necessary to the welfare of the American people. The railroads are built under pledge to operate their lines. Representing the American people in this proceeding, I demand that the operation of the railroads shall not be interrupted in the service the government requires them to perform.

The dispute between the employers and employees is not involved in this proceeding. We have passed beyond that point. A governmental body entitled to recognition and obedience has decided that dispute. I am not taking sides between the disputants at this time as an advocate of either.

It so happens in this instance that the railroads are willing to render the service the government requires they shall render. They are trying to serve the American people. They are trying to observe the law. They are endeavoring to furnish transportation. On the other hand, the defendants are preventing transportation and are offending against the law, as alleged in this bill, and by acts of violence are antagonizing and opposing the government of the United States.

But even though this widespread violence, this destruction of property, this threatening of starvation, and the hazarding and taking of human life as set forth in the complaint and situation were not present, no organization, no matter what its purpose or how powerful its plans and pursuits, can interfere with government and interstate commerce.

The underlying principle involved in this situation and this action is the survival and the supremacy of the government of the United States.

Has Received Requests for 40,000 Deputy Marshals

Adding to his prepared statement the attorney general told the court that because of lawlessness and violence against railroad property and railroad workers, his department had received urgent requests for no less than 40,000 deputy marshals to keep down the strike disorder. Already 5,500 marshals have been assigned, and in addition, special service men of the department have taken up similar work throughout the country, the attorney general said. The cost of such special service, he said, already expended was more than $1,000,000 for the first eight weeks' duration of the strike.

In California alone, Mr. Daugherty said, more than $75,000,000 worth of fruit and produce already had been destroyed because of the failure of transportation systems to move the crops. In Somerset, Ky., he said 25,000 cars of bituminous coal were congested in the railroad yards. Vandals had tampered with more than 5,000 cars there, he said, and as a result the nation was faced with suffering for want of coal. Fifty per cent of the engines of the nation's railroads have been rendered useless by lawless activities since the strike began, he said, and 1,000 mail trains canceled.

Jewell Issues Statement

As soon as news of the injunction granted Attorney General Daugherty reached him, B. M. Jewell, head of the Federated Shops Crafts, went into conference with his attorney, and later issued the following statement:

Enforcement of the injunction obtained by the attorney general against lawlessness and violence in connection with the shop crafts strike will be aided by every power of the shop crafts organization.

It can hardly be assumed that the federal court has intended to restrain, or has restrained, those lawful acts necessarily involved in carrying on the legitimate work of labor organizations, some or all of whose members are engaged in a legally conducted strike to accomplish lawful purposes. Such acts, including peaceful picketing, as have been repeatedly and recently held to be lawful by the Supreme Court of the United States, cannot be assumed to come within the provisions of the restraining order entered by Judge Wilkerson.

At least until advised that the constitution of the United States and the decisions of the Supreme Court are no longer to be relied upon as the law of the land, the officials of the organizations of railway employees will continue to perform their legitimate duties to their members, to aid them in the lawful pursuit of their lawful purposes, and to do all in their power, in conjunction with the officers of government, to restrain and to punish every unlawful act of those who are rightfully involved or who without right involved themselves in the operation of the railroads.

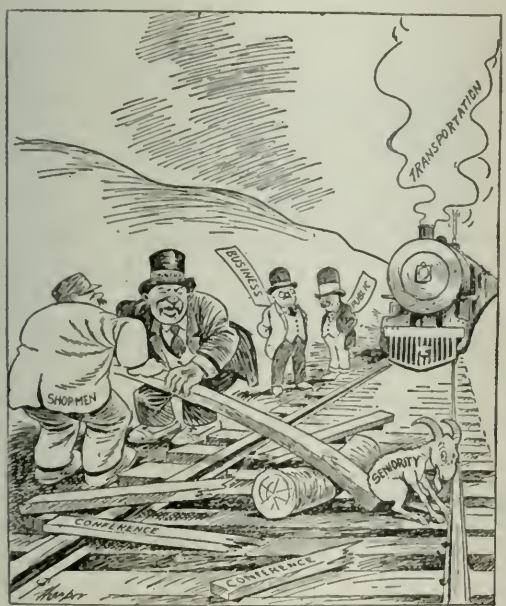
The Attitude of the Government

WASHINGTON, D. C.

The sweeping injunction obtained by Attorney-General Daugherty at Chicago on September 1 is in accordance with President Harding's repeated declaration of his purpose to enforce the laws to maintain transportation service. The President feels that the action was entirely justified by the situation and it has been announced at the White House that he is determined to make transportation as efficient as possible, now that the settlement of the coal strike has changed the fuel problem from one of production to one of distribution by reason of the heavy burden placed upon the railroads by the necessity for trying to make up for the lost production of the five months' strike.

If the injunction is not sufficient the President is prepared to take such other steps as may be necessary. This is taken to mean prosecutions for violations, although by some it has been interpreted to mean use of federal troops. In reply to a question as to whether any action was contemplated against the railway executives, it was stated at the White House that the President thinks they are "doing the best they know how at present," and that, if any action had to be taken in that direction, it would involve the railroad properties rather than the executives.

The injunction step has been under debate in the Cabinet for some time but it is understood the President was unwilling to approve of it until he had exhausted every effort to bring about a settlement by mediation and until the issue had been laid clearly before the public in such a way as to demonstrate plainly that the President was not being influenced by sympathy with either side and had not joined in any alleged campaign to "break the unions," but had waited until he



From the Birmingham Age-Herald

Looks As Though They'll Have to Wire Uncle Sam for the Wrecker

was forced to act to prevent the available fuel from being kept from the public by unlawful interference on the part of strikers in their efforts to keep others from taking "their" jobs. The injunction gives the federal government an opportunity to act where state and local authorities have been slow to prosecute cases of violence.

While the preparations of the government to use injunction proceedings to prevent a strike of train service employees last fall was instrumental in pointing a way to a calling off of that strike, the administration did not feel so sure of itself about July 1 in connection with the shopmen's strike, for two reasons. In the first place there was a rather general feeling that the strike threat was a bluff to see whether the Labor Board would yield, and in the second place it was not so clear that it could be argued before a court that a shop strike, conducted peacefully and consisting only of a withdrawal of men from service, could seriously interfere with interstate commerce. After the strike actually became effective an injunction could not return the men to work, but now that the railroads have been able to build up a sufficient force to carry on operations it is believed that it is only necessary to prevent interference with them. It is apparently the President's idea that if, with the injunction enforced and protection afforded, any railroad is not able to perform the necessary service with such assistance as its neighbors can afford it, then it will be time to consider the drastic step of government operation which the President has said he would undertake only as a last resort.

In reply to a question as to the possible effect on the strike of a reversal of the Labor Board's resolution of July 3, the President was represented as believing that no exigency would justify the board in determining its attitude or adopting any course under the menace of a strike.

That the strike situation was regarded by the administration as having probably passed the critical stage was indicated by an announcement on Friday that the Cabinet meeting that day had not discussed the strike, for the first time for several weeks, but had devoted its attention to other matters.

Newspaper stories regarding the status of A. O. Wharton as a member of the labor group of the Railroad Labor Board, under leave of absence as president of the Railway Employees' Department of the American Federation of Labor, have failed to cause any perturbation on the part of the President. It is understood that he was informed of the situation after the strike began, but not in any formal way, and it was pointed out at the White House that at the time of Mr. Wharton's renomination he was represented to the President as one of the ablest members of the board and there was no opposition to his appointment.

At the White House on Tuesday it was stated that the government does not intend to abridge the liberties of anyone under the Constitution, the idea being merely to prevent interruptions to interstate commerce.

Samuel Gompers on the Injunction

News of the Chicago injunction was met by Samuel Gompers, president of the American Federation of Labor, with violent denunciation and a rather indefinite threat of a "general strike." He said the federation has no authority to call a strike and he did not know what would be done, but that the matter of recommending a general strike would be taken up at a meeting of the executive council of the federation on September 9. It would then be his duty, he said, to bring to the attention of the executive council the numerous demands for such a strike received from various local organizations. He declined to say whether he would make a recommendation and while he said that the injunction would "stir up a hornet's nest" and hinted at action by the brotherhoods and other railroad labor organizations, he refrained from predicting what they would do. He attacked the injunction as an invasion of constitutional rights and a "process for the manufacture of radicalism and Bolshevism," and Attorney General Daugherty as acting as attorney for the railroads. Mr. Gompers discussed the injunction almost as if it were an injunction against striking, saying that strikes are not unlawful, and that all the shopmen have done is to "stop work and nothing else." It is the view of the federation, he said, that such injunctions should be treated as scraps of paper but he declined to say whether he would advise such a course on the part of the men enjoined.

The following telegram addressed to Mr. Jewell, signed by Mr. Gompers, was made public on September 2, at the headquarters of the American Federation of Labor: "At the meeting of the labor legislation representatives, July 21, a resolution was adopted conveying to you and through you to the striking railway shopmen the pledge of our sympathy and support to the fullest extent within our power. At the

meeting of the same conference this evening it was decided to ratify and emphasize the declaration made July 21 and pledge anew our sympathy and support and the best wishes for the success of the striking railroad shopmen in the attainment of their just cause."

W. H. Johnston, president of the International Association of Machinists, said the injunction would not cause the slightest abatement of efforts to win the strike. "We will ignore the injunction," he said. "It will give the men greater zeal to fight their battle." Mr. Johnston was also outspoken in his denunciation of the injunction, before it had been served on him, in a speech at a meeting of the former employees of the Washington Terminal Company.

Injunction Discussed in Senate

The dispatches also quoted Secretary Scott as saying that injunction and of Attorney-General Daugherty in asking for it was the subject of considerable criticism in the Senate on Wednesday.

Senator Robinson of Arkansas brought up the question in a prepared speech. Senator Watson of Indiana took issue with some of his statements and defended the course of the administration. He contended that until Judge Wilkerson had had the opportunity to hear argument on September 11 for and against making the restraining order permanent, an open discussion of the matter in the Senate was questionable.

Mr. Robinson conceded that it was proper for a judge to issue an injunction to prevent injury to persons and property during the prevalence of a strike, but he thought that the temporary order went too far, and that it infringed the constitutional guarantees of free speech, freedom of the press and the right of the people peaceably to assemble.

There seemed to be little disposition on the part of Senators to take part in the debate. Their frame of mind appeared to approximate that of Senator Watson in deprecating discussion pending the hearing on the application for a permanent injunction.

Shop Leaders Will Have Day in Court on Monday

Attorney General Daugherty complained in a statement issued Wednesday that many of the leaders of the striking railway shopmen have disappeared before they could be located by Federal process servers. He declared also that if labor leaders feel they have been deprived of the right of free speech, they will have full opportunity to express themselves in court on Monday "under circumstances that will give the greatest value to their utterances."

The statement said in part:

The Government will consider in due time what proceedings shall be taken against the few misguided labor leaders who have made incendiary speeches with the purpose of defeating the administration of justice. The rank and file of labor organizations are loyal and law-abiding citizens, and I am satisfied that they will be content to submit the issues in the Chicago injunction suit to the orderly processes of law and to abide by the decisions of the courts as to what is the law of the land.

A few misguided labor leaders—some of them avowed Bolsheviki—who have shown a contempt for the courts and the processes of law, need not complain that they are denied the full privilege of free speech. It is my intention, if it shall prove necessary to proceed with the equity suit, to give them the fullest opportunity of free speech and under circumstances that will give the greatest value to their utterances, for I propose, when the court next hears this case, that the leading defendants shall have the fullest opportunity to take the stand and testify under oath as to whether or not they are responsible for instigating and carrying on the unquestioned conspiracy to paralyze transportation in this country.

Daugherty Wants to See Correspondence

If they are reluctant to tell their side of the story, I shall be disposed—although the Government's evidence will make it unnecessary—to call the leading defendants to the witness stand, and they will then have, as I said, the fullest opportunity of free speech and under the most satisfactory conditions.

In this proposing to put before the country not only the Government's case, but any possible defense, I am somewhat hampered by the fact that the government's process servers have had great difficulty in locating the leading officials of the shop crafts organization. No lawyer has yet formally appeared for them in the Chicago suit, and this is disappointing, as I desired to serve notice upon him to bring into court next Monday all the books, letters, telegrams and other documentary data of his clients, so that the public could judge whether or not they continuously attempted to paralyze interstate commerce and thus starve the community in order to enforce by coercion their demands.

I am today instructing the United States attorney at Chicago to serve notice on the counsel for the defendants when such counsel is selected, to produce those of his clients who are the leading officials of the shopcrafts' organizations, together with all their books, correspondence, financial accounts, check books, and other documentary data. I must presume that they will welcome this opportunity to put their case before the court and thus the public, and I give little credit to the rumors that any of these defendants have gone to Canada and taken with them the records of their activities. Such a course would be foolish, as the Government is not without duplicates of much documentary evidence and can readily subpœna the telegraph companies to produce the telegrams.

If this minority of labor leaders who have denounced the actions of the courts are not willing to come into court and tell their side of their story on the solemnity of their oaths as witnesses, then the public, which only desires fair play, is likely to draw its own conclusion.

Collapse of Strike in Sight, Says Cuyler

On September 1, the railroads had approximately 305,000 employees engaged in the maintenance of cars and locomotives, as against about 400,000 in June, 1922. This is characterized in a statement issued Wednesday by T. DeWitt Cuyler, chairman of the Association of Railway Executives, as "the best evidence that the collapse of the strike is in sight." Mr. Cuyler's statement continued:

During the past week the railroads have been recruiting their forces at the rate of some 5,000 or 6,000 men per day. It is estimated that at least half of these are the older and more experienced men among the strikers. They are voluntarily returning to work on terms which do not violate the obligations of the railroads to either their loyal employees or to the new employees.

In many cases it was July 10, and in others July 17, before the railroad companies set about seriously to recruit their forces. Prior to those dates they generally held the positions of their striking employees open for them without loss of seniority and other rights. On July 10 the railroads had at work in their shops and roundhouses approximately 155,685 men. On July 20 the total number of these employees was only 162,749

From this it may be seen that practically the entire progress made in recruiting new employees has been since July 20. On July 31 the railroads had 191,440 employees of this class; on August 15 237,340; on August 31 approximately 292,000.

These figures do not include returns from some 50 railroads, which it is estimated have at least 13,000 men at work, making a total for the entire country of approximately 305,000.

Since the rights of the loyal men who remained at work and of new men engaged during this difficult period have been prominent in public discussion, it is interesting to note that there were about 155,000 loyal employees, and that about 150,000 new employees have been added.

Reviewing the situation more generally, the statement said:

The maintenance of equipment was materially improved in August, and will be still further improved in September.

The car loading figures issued weekly show that during the two months of the present strike the railroads have loaded with revenue freight over 500,000 more cars than they loaded during the same eight weeks of 1921, when there was no strike.

For the week ending August 25 bituminous coal production was increased to about 6,700,000 tons, from about 4,500,000 tons the preceding week. The probability is that the week ending September 2 will show that the railroads loaded over 9,000,000 tons which is more than an average weekly output.

While obviously, the commerce of the country cannot be carried with the same speed and facility as would have been possible had

no strike taken place at the same time the railroads are providing transportation for all essential purposes. Evidence of the ability of the roads to render effective transportation was furnished on Labor Day when the volume of business, the greatest in the history of the roads, was handled without friction and with only the usual delay incident to heavy travel.

The railroad companies deeply appreciate the support which has been given them in the present strike by the public opinion of the country.

If the people of the United States will continue to evidence their good will just a little longer, they will see the present strike terminated in such a way as to add greatly to their protection against unwarranted attempts to interrupt transportation in the future.

Recruiting of shop employees gave the railways a net increase in their number of shopmen of 2,419 on September 1, and of 1,144 on September 2. On Labor Day there was a further increase of 3,317. These figures are somewhat below

Photo by International

The Ruins of the Pennsylvania's Car Shops at Pittsburgh, Destroyed by Fire, Believed Incendiary, Killing Seven and Injuring Many

the totals which have reported for some of the preceding days of the strike.

Eastern Roads Have 79 Per Cent Normal Forces

L. F. Loree, chairman of the Eastern Presidents' Conference, in a statement Tuesday, announced that further gains had been made by the eastern roads in recruiting men to take the places of the striking shopmen. He said:

"The railroads in the eastern district report their shop forces for the last six weeks to have been as follows:

		Per cent.	Weekly gain
July 28	97,724	62.0	....
Aug. 4	103,528	64.7	5,804
Aug. 11	111,324	69.0	7,796
Aug. 18	115,745	71.5	4,421
Aug. 25	121,890	74.9	6,145
Sept. 1	130,910	79.86	9,020

"Any suggestion to the men not on strike is likely to be regarded by them as criticism, but without any criticism of their conduct or attitude, and solely from the point of view of one who has worked with them for more than 55 years, I cannot but feel that in view of the above showing those of them who desire to continue in the railroad service would be well advised if they availed themselves of what opportunity is left to secure positions."

Equipment Conditions

Bad order cars on August 15 totaled 335,575, or 14.8 per cent of the total cars on line. This was an increase of 10,992 cars over the total on July 1, when the shopmen's strike began, but a decrease of 9,438 cars from the total on August 1. The July 1 figure was 324,583 cars in bad order, or 14.3 per cent; the August 1 figure, 345,013 cars, or 15.3 per cent.

Commenting on these figures compiled by the Car Service Division of the American Railway Association, a statement of the Association of Railway Executives said:

The total number of bad order freight cars on August 15 last was 46,865 less than the total in need of repairs on August 15, 1921, and 3,247 less than on June 1, 1922, at which times no strikes of railway employees were in progress.

These tabulations are based on reports received directly by the Car Service Division from roads representing 98.6 per cent of the total mileage of the Class 1 railroads and owning 99.3 per cent of the cars on line.

The carriers in four (Eastern, Allegheny, Southern and Central Western) out of the seven districts, reported reductions in the number of cars in need of repairs on August 15, compared with August 1, while there were slight increases reported in the other three districts.

Despite the shopmen's strike, there was a decrease of 2,394 bad order cars in the Eastern district on August 15, compared with July 1. The total for that district on August 15 was 106,181, or 17.9 per cent of the cars on line in that district, while on July 1 it was 108,575, or 18.3 per cent. The Southern and Central Western districts had only slight increases on August 15, compared with July 1. Small increases were reported in the other districts.

The number of bad-order cars and percentage of bad-order cars to cars on line on August 15 compared with July 1 follows:

Districts	August 15 Cars	August 15 Per Cent	July 1 Cars	July 1 Per Cent
Eastern	106,181	17.9	108,575	18.3
Allegheny	63,575	13.7	59,973	12.6
Pocahontas	13,056	13.4	10,694	10.7
Southern	51,086	17.2	50,953	17.8
North Western	44,231	13.7	39,055	12.3
Central Western	35,700	11.2	35,754	10.7
South Western	21,746	13.1	19,579	12.4
Total	335,575	14.8	324,583	14.3

The number of bad-order cars and percentage on August 1 follows:

Districts	Cars	August 1 Per Cent
Eastern	108,919	18.4
Allegheny	64,149	13.6
Pocahontas	12,541	13.0
Southern	53,762	18.6
North Western	43,140	13.3
Central Western	40,844	12.7
South Western	21,658	13.1
Total	345,013	15.3

Labor Day Rush Handled Without Difficulty

Shippers are continuing to report delays to fast freight traffic, which on most roads is not being moved according to schedule. The shop strikers' publicity is making much of delays in fast freight deliveries and pointing out that the food supplies are being endangered by the failure of the railways to operate their trains on schedule. The railway officers, however, point out that the delays are in no case serious and that in no wise is the movement of food supply in danger. They admit that the strike is unquestionably having some effect, but point out also that a great deal of the difficulty is due to the congestion resulting from increased traffic.

A real test of the effect of the strike was offered to the railways over the week-end in the form of a record-breaking holiday passenger traffic.

The Pennsylvania reported that the number of passenger trains moved to and from the Pennsylvania Station, New York City, on Saturday, September 2, was the largest in the history of this station—883 trains. This includes the business of the Long Island Railroad, which was very heavy. The number of coaches, parlor cars and baggage cars in

these trains was 6,587 and the estimated total number of passengers was 300,000.

Between Philadelphia and Atlantic City, the railroads carried their usual crowds; and, in addition, had to run all available ferry boats between Philadelphia and Camden because of the rush of automobiles returning from Atlantic City On Monday evening, automobiles entered the Pennsylvania ferry shed at the rate of 700 an hour. The Pennsylvania ran 12 boats and the Reading eight.

The Pennsylvania, reporting on New Jersey seashore travel, gives a total for the four-day period, September 1-4, to and from Atlantic City, Ocean City, Wildwood, Cape May and other points, of 189,000 persons, an increase over last year of 23,460, or 14 per cent.

During the same period between New York and Philadelphia, in both directions the total number of passengers was 162,226, an increase of 10,834, or 7 per cent, while between New York and northern New Jersey resorts the total was 59,065 passengers, an increase of 2,832, or 5 per cent.

The New York, New Haven & Hartford found it necessary to provide for the holiday traffic 335 extra coaches, 112 extra parlor and sleeping cars and 45 locomotives. The company's statement says that passenger trains were moved reasonably on time, and this in spite of two unusual and heavy rain storms. At the same time, the number of freight trains moved on Sunday and Monday totaled 34,663 cars, nearly 4,000 more than in the same period last year; freight business did not have to be delayed in order to operate the passenger trains. The mechanical departments, largely organized since the beginning of the strike on July 1, "functioned in a manner that would have been creditable to a group of older and more experienced men," the statement went on further to say.

An officer of the Boston & Maine, telling of the large number of extra trains between Boston and Portland, Maine, and elsewhere, said that summer camps, largely maintained for boys and girls, produced this year more than 25,000 passengers for the road. This camp business has grown up mostly within the past ten years. There are more than 300 such camps on the lines of the Boston & Maine and the Maine Central.

Baltimore & Ohio to Pay Bonuses

The Baltimore & Ohio announced on Monday that beginning with September 1 all skilled mechanics will be paid a bonus of $1 a day as compensation for the abnormal conditions under which they are working at the present time. The company plans to erect barracks for shopmen at Brunswick, Md.; Cumberland, Md., and Benwood, W. Va. At Grafton, W. Va., the company has bought a hotel for a similar purpose.

Eight Shopmen Burned in Pittsburgh Fire

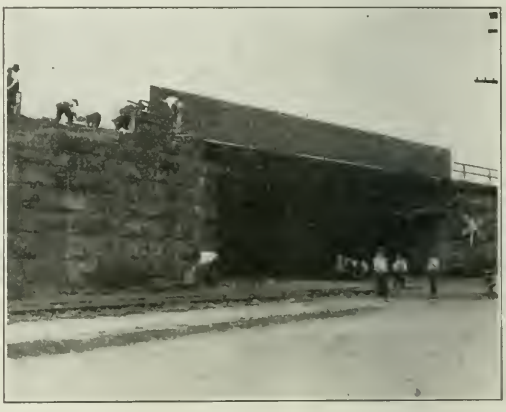
In a fire at Pittsburgh, Pa., on Sunday morning, September 3, eight shopmen, employees of the Pennsylvania Railroad, were burned to death and eleven others severely injured. The building, a structure 175 ft. by 300 ft., was a repair shop and commissary and was being used temporarily, in the second story, as lodging quarters for new employees engaged since the strike. The fire was discovered by a negro cook about 4 a.m. and spread rapidly. While police and others were doing their best to rescue the victims of the fire, a large crowd of men, said to be strikers, stood on a cliff overlooking the building and hurled stones at the injured and their rescuers until driven away by police. The loss sustained by the railroad is estimated as follows: Building, $50,000; supplies, $150,000; damage to an oil house, tracks and cars, $10,000.

A bridge of the Pennsylvania Railroad was dynamited at Wilmington, Del., on the night of August 30 and some damage done to the tracks, but none to the bridge. The bridge was not a main-track bridge, but was on a side track leading to the Pullman car shops.

Sentenced to Six Months

In the United States District Court at Nashville, Tenn., on August 30, G. E. Ryman, a striking shopman, was sentenced to six months' imprisonment and to pay a fine of $500 in court, Ryman having been found guilty, by a jury, of violating the injunction granted the Tennessee Central against striking employees. Ryman appealed and was released under a bond of $1,500, the court allowing 20 days in which the case might be appealed. On August 31, three men were fined $250 each in the same court for violating the injunction granted to the Nashville, Chattanooga & St. Louis. All three appealed and were released on bonds of $1,000 each. The men had attacked an employee of the road; Ryman had used incendiary language and had struck an employee who disputed him.

In the federal court at Lynchburg, Va., on September 4 an attachment was issued for the arrest of L. A. Taliaferro, a barber, of Clifton Forge, on the charge of conspiring with



P. & A. Photo

Workmen Repairing Pennsylvania Bridge at Wilmington, Del., After It Had Been Damaged by a Bomb

Chesapeake & Ohio strikers to annoy railroad employees. It is alleged that Taliaferro posted a notice in his shop which read: "Scabs not served here." A similar process was taken out against a man in Roanoke on the charge of intimidating Norfolk & Western employees.

Canadian Wages Reduced

The Board of Conciliation, at Ottawa, Ont., has recommended that the shopmen of the Canadian Railways, numbering 35,000, accept temporarily the reductions in wages which have been proposed by the railroad companies, ranging from five cents to nine cents an hour.

Pennsylvania to Enlist Co-operation of Shippers

Instructions to take immediate measures with a view to enlisting the co-operation of all shippers and receivers of freight, on the Pennsylvania Railroad System, in getting more work out of each coal car than was ever before thought possible, have been issued by General W. W. Atterbury, Vice-President in Charge of Operation. The appeal is based upon the urgency of the situation arising out of the coal shortage, and the approach of winter. General Atterbury has addressed the following directions jointly to the four Regional Vice-Presidents of the Pennsylvania System:

With the resumption of mining in both the bituminous and anthracite fields, the most essential work ahead on our Railroad is that of moving coal.

As a vital part of our plans, I wish each of you to take at once whatever steps are required to impress upon our patrons, in your respective regions, the urgency of the situation, and particularly, the absolute necessity for loading and unloading coal cars with the greatest possible promptness.

We are faced with the most serious coal shortage in the country's history. To avert or minimize widespread suffering and loss, we must make up as much of that shortage as possible before winter sets in.

Coal cars must be kept moving to and from the mines faster than ever before. We must get more service out of every car than has ever before been attempted. To make success possible, loading and unloading must be done in absolute minimum time and everyone using coal equipment must be made to realize the moral duty of releasing the cars as swiftly as possible, in order that they may be returned to the mines for more coal with the least possible delay.

I am confident that when the vital importance of this matter is made clear to our patrons, we shall receive their full support and co-operation.

Strike Developments in Chicago and the West

While the latest moves of the government in the strike situation have taken all the front page space during the past week, there have been buried in the inside pages innumerable reports of violence directed at the destruction of railroad property or the intimidation of those who are now working. Throughout western territory the bombing of railroad structures and tracks and the homes of loyal employees, the

Photo by International

A Derailment at Waukesha, Ill., Thought to Have Been Caused by Malicious Tampering with the Roadbed

attempted destruction of bridges by fire, the efforts to wreck trains, and the usual riotings have accompanied the ninth week of the shopmen's strike.

On August 31, a Pennsylvania bridge at Wilmington, Del., and bridges near Indianapolis, Ind., and Cincinnati, Ohio, were dynamited. Several attempts were made to wreck trains, although the property and personal damages were comparatively slight, at Waukesha, Wis. The derailment of a Chicago & North Western train resulted in the death of an employee and the injury of several others. A Big Four passenger train was derailed near Brownsville, Ind., and one woman passenger injured. The most serious wreck attributed to the part played by strikers was the wrecking of a St. Louis-San Francisco passenger train near Cape Girardeau, Mo., resulting in the loss of two lives and injuries to a number of the passengers. The train crashed through a damaged trestle.

Rioting, slugging and similar instances of violence were also reported during the past week at Augusta, Ga.; Sedalia, Mo.; Memphis, Tenn.; La Crosse, Wis.; Algiers, La.; Council Bluffs and Clinton, Iowa and Missoula, Mont. At Memphis, Tenn., a non-union shop worker was murdered as he was on his way to work in the St. Louis-San Francisco shops. At Cleveland, Ohio, one striker was killed as he attempted to take the life of a non-union worker in the vicinity of the New York Central shops.

A comparatively new form of violence was introduced into the strike with the burning of seven bridges on the St. Louis Southwestern between Texarkana and Stamps, Ark. A similar attempt was also made on the Atchison, Topeka & Santa Fe near Tecumseh, Okla.

A threatened walkout by train crews at Parsons, Kan., was averted when guards were removed from inside the Missouri, Kansas & Texas yards. Firemen refused for a time to move two trains on the Southern railway at Asheville, N. C., because of the altercation between a hostler and a guard, and Louisville & Nashville trainmen were taking a strike vote at Corbin, Ky., following alleged insults by guards.

The issuance of federal injunctions to restrain strikers or their sympathizers from interfering with the operation of trains has continued as have the arrest and conviction under previous injunctions of former shopmen.

Further Move Toward Ending Strike on 52 Roads Rumored

Associated Press dispatches on Wednesday were authority for a statement that a call for an immediate meeting of the policy committee of 90 in Chicago, probably on Monday, was sent out Wednesday night by John Scott, secretary of the striking railway shop crafts unions.

The telegraphic appeal was in code and was addressed to the regional general chairmen of the organization in all parts of the country. The meeting was called, it was intimated, to consider plans for a settlement of the strike on separate roads representing about one-third of the country's mileage. It followed reports of conferences between B. M. Jewell, head of the strikers, and rail executives in the East.

In discussing the meeting of the union Executive Committee, Mr. Scott said that it was hoped that the sessions would result in settlement with at least 52 Class I roads. He said that the expense entailed in assembling the strike leaders would not have made it worth while to issue a call unless there was a possibility of a settlement being reached.

The dispatches also quoted Secretary Scott as saying that seven representatives of the striking Federated Shop Crafts, were in Baltimore for a conference with railroad executives on a proposition to end the strike. Mr. Scott intimated that a proposal on which it was hoped the strike could be halted had been prepared, but he would not outline it. The conference, he is quoted as saying, was to have been kept secret.

The story that such secret conferences were to be held persisted in spite of denials by various executives in Chicago, by officers of the Baltimore & Ohio and by Thomas DeWitt Cuyler, chairman of the Association of Railway Executives.

A. F. of L. Executive Council Meets

Leaders of the American Federation of Labor, assembled in Atlantic City prior to the opening of the session of the executive council, scheduled for Saturday, gave every indication that it was their intention to have the Federation join in contesting in the courts the injunction against the shop unions. It is understood that leaders of the transportation brotherhoods will be asked to attend the meeting of the council to review their acts as mediators between the shopmen and the railroads. Feeling in the Federation is said to be most bitter against the transportation brotherhoods, which are not members of the Federation, because of their alleged lack of interest in the success of the shop strike.

Labor Board Concludes Hearing on Maintenance Wages

HEARINGS before the Railroad Labor Board on the demands of maintenance of way workers for the establishment of a "living wage" and a minimum rate of pay of 48 cents an hour were completed on September 1 with comparatively brief presentations by representatives of the eastern, southeastern and western carriers. Throughout the railroad testimony there runs a note of conciliation, the only extended defense put forth being directed at the living wage theories expounded by W. J. Lauck, Arthur Sturgis and J. C. Smock.

The testimony of the employees was abstracted in last week's *Railway Age*. That of the eastern and western roads follows:

Jacob Aronson Appears for Eastern Carriers

The cost of living has not increased sufficiently in the last three months to warrant any changes in the wages of maintenance of way employees on the eastern railroads, according to the presentation made before the Board by Jacob Aronson, counsel for the eastern carriers. Section laborers in the eastern territory, he said, are now receiving an average of 37.1 cents an hour, although the average for the United States is 32.7 cents under the decision of the Labor Board which became effective July 1. "This average rate for July, 1922," Mr. Aronson added, "is 123.5 per cent increase over the average hourly rate of 1915, leaving these classes of employees 33.7 per cent better off than they were in 1915, after making due allowance for the reduction in their wages on July 1.

"For section foremen, the monthly wage of $147.58 in July, 1922, represents an increase of 107.4 per cent over 1915. The purchasing power of the earnings in July, 1922, leaves these employees 24.3 per cent better off than they were in 1915.

"The average hourly rate of 62.1 cents in July, 1922, for mechanics included in maintenance of way service, is an increase of 121.8 per cent over 1915, leaving this class 32.9 per cent better off in purchasing power after making due allowance for the reduction in their wages on July 1."

The exhibits accompanying Mr. Aronson's testimony covered a total of 95,254 employees in the maintenance of way department and showed that the present rates of pay for these classes of employees on the railroads, compared favorably with rates prevailing in outside industries in eastern territory.

Counsel for the maintenance of way employees frequently referred to the recent increase of 20 per cent in wages granted by the United States Steel Corporation. Mr. Aronson drew attention to the fact that the hourly rate of pay of the steel corporation including the recent increase will be 36 cents an hour, whereas the present average hourly rate of maintenance of way employees is 37.1 cents. The average hourly rates of the railroads in the eastern territory are 123.5 per cent greater than in 1915 as compared with an 80 per cent increase in the average hourly rates paid by the steel corporation. Mr. Aronson emphasized also the fact that the steel corporation's prices have increased 17 per cent since February 1 this year, while frieght rates on the railroads were decreased 10 per cent by the recent ruling of the Interstate Commerce Commission.

The assertion that the average American family needs a definite minimum wage was attacked by Mr. Aronson on the broad general grounds that the average American family does not consist of five persons as arguments presented by labor witnesses indicate; that the average workman does not support a family of that size; that the grounds upon which such an assumption are based are wholly inaccurate, and finally, that there is no such thing as a standardized cost of living.

Instead of the average American family containing five persons dependent upon the wage earner Mr. Aronson showed with figures from the United States census for 1920 that the average family really is 4.4 persons regardless of age, and that there is actually an average of 1.4 dependent children for each of the 24,351,756 families in the United States. He said also that instead of only one male worker supporting a family of five, there are actually 1.36 male workers per family or a total of 33,059,793 for the 24,351,756 families.

American railroads, Mr. Aronson said, had approximately 1,658,000 employees in the last six months of 1921. Upon the theoretical basis of 1.36 male workers to a family, assumed by the labor witness there would be 1,213,235 families. Counting three children to the family, Mr. Aronson pointed out, would result in 3,639,705 children or 10.4 per cent of the children of the entire United States; 1,650,000 workers are about 5 per cent of the male workers of the country.

To construct wage schedules on these theories, Mr. Aronson declared, would require more money than all industries earn, and on the railroads would call for revenues beyond anything the public could stand. Reductions in living costs would be impossible in such conditions. "To compare living costs in different communities," Mr. Aronson said, "uniform bases must be used, but such comparisons could have no practical value. When this country adopts a principle that wages of all workers shall contain provisions for perhaps a desirable increase in the size of families, applicable alike to all employers and workers, we respectfully submit that some entirely different methods will have to be invoked for calculating wage schedules than are now being demanded."

J. W. Higgins Appears for Western Roads

That section men usually are nearest the line at which income circumscribes the standard of living and the belief that this might be overcome if wages were fixed with regard to local conditions, was frankly admitted by J. W. Higgins representing the western railroads.

This consideration for the difference in expenses in different localities, Mr. Higgins said, might well prove to be a satisfactory method for arriving at a just and reasonable wage. This, Mr. Higgins conceded, although denying that there had been any increase in the cost of living sufficient to warrant the advances demanded by the maintenance of way employees.

"Most of the employees in the maintenance of way department are so-called unskilled laborers," Mr. Higgins said. "This class of labor throughout the industrial world is the first to react to business conditions and their wage scales are the first to go up and the first to come down under pressure of economic influences. The Labor Board recognized this conditon in a former ruling (Decision 1074) when the majority opinion said: 'In this connection it must be remembered that the carriers are at liberty to pay any class of employees a higher wage than that fixed by this board whatever the so-called labor market compels, provided, as the Transportation Act states, that such wage does not result in increased rates to the public.'

"That the scale of wages paid in outside industries has a direct influence on the railroad employees cannot be denied. There is also a great variation in the wage scales for similar kinds of work in industries in various parts of the country showing that recognition is given to local influences, living costs, etc. In the wage hearings last April 1 urged the board to give careful consideration to the matter of fixing territorial wage scales that would comprehend the different conditions in various sections of the country and pointed out

that certain territorial and local differentials existed in wage rates prior to federal control, which would facilitate building up rates for each locality thinking the board would take as a basis the rates of pay for track laborers that were in effect on the western railroads in December 1917, and add thereto an amount sufficient to compensate for the changed cost of living since that time. This suggestion was advanced on the theory that pre-war rates were the result of natural influences and that the differentials prior to federal control were accordingly fairly well-established, both as between localities and as between different classes of employees."

Such a course is necessary, Mr. Higgins declared, if it is the intention of the board to restore the wage relationship that existed prior to the war. "We know that pre-war differentials which were so seriously disturbed during federal control," he continued, "due to war conditions, will never return so long as wage adjustments continue to be made on a flat basis of so many cents an hour or a day, regardless of local conditions.

"There has been no change in the attitude of the western railroads in the wage hearing last spring, Mr. Higgins said, with respect to varying wage rates in different localities, and subscribing to a minimum wage that would assure a subsistence of the worker and his family in health and reasonable comfort according to the cost of living fixed by the custom in respect to localities. While it does not appear to us that there have been changes of sufficient importance in the brief period since the last wage hearing to warrant a reduction of the wages fixed at that time, the western railroads are ready to co-operate with the board and the maintenance of way employees if and when conditions favor wage readjustment, or if in the judgment of the board this rehearing" shows that a change should be made.

Referring to the employees' requests for changes in working rules, Mr. Higgins declared that in the opinion of the western roads there had been no changes in the conditions of employment in the maintenance of way department that would warrant the granting of the change now requested.

Bituminous Coal Production Picks Up Rapidly

Problem in Soft Coal Fields is Now Largely One of Transportation—Some Coal Car Shortages

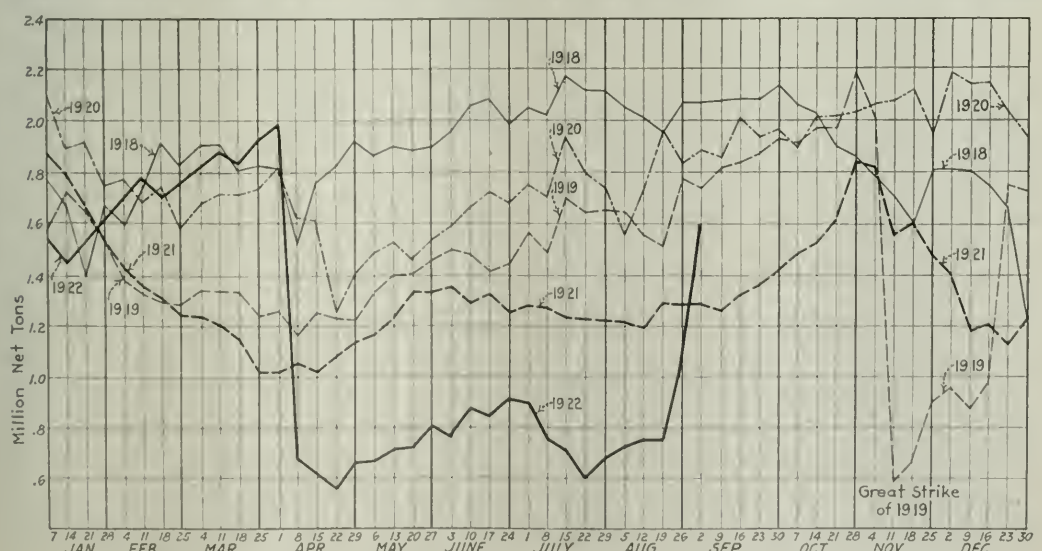
WASHINGTON, D. C.

SOFT COAL PRODUCTION shot upward almost as suddenly last week as five months ago it had plunged downward, when district after district accepted the Cleveland wage agreement and resumed work. Late returns for the week of August 21-26 indicate an output of 6,700,000 tons of bituminous coal and the week of August 28-September 2 will show 9,200,000 or possibly 9,700,000 tons, according to the Geological Survey bulletin. The anthracite mines, however, are still idle.

The rapid gain in output is indicated by the statement of cars loaded daily. Following a sharp increase on Friday and Saturday as coal began to flow in volume from the mines of Illinois and Indiana, last week opened with loadings of 30,054 cars on Monday. A decline to approximately 28,000 cars on Tuesday and Wednesday marked the first tightening of car supply. On Thursday additional shipments began from Western Pennsylvania, and loadings reached 29,027 cars.

	1st week	12th week	18th week	19th week	20th week	21st week	22nd week
Monday	11,445	15,311	15,102	16,229	15,703	18,601	30,054
Tuesday	11,019	16,622	11,416	13,729	13,032	17,801	28,153
Wednesday	11,437	17,032	12,447	13,368	12,531	18,524	28,211
Thursday	11,099*	16,432	12,380	13,277	13,521	19,388	29,027
Friday	11,296	16,073	12,669	13,539	13,718	22,882	.....
Saturday	8,888	13,993	12,405	11,009	13,524	23,070	.....

From the detailed statistics of shipments it is seen that this increase came almost exclusively from mines opening



Estimated Average Total Production Per Working Day Bituminous Coal Including Coal Coked

under the Cleveland agreement. The non-union districts of the Middle and Southern Appalachians were still limited by railroad disability and in spite of a slight increase in car supply produced only 65 per cent of the rate attained before the shopmen's strike.

Shortage of Coal Cars

"In fact complaints of lack of cars have already been received from the union districts of Eastern Ohio and Northern West Virginia," the bulletin says. "The limiting factor in production of bituminous coal has thus changed over night. A week ago it was the supply of mine labor; today it is transportation. The first response of the railroads to the demand for more service has been favorable, partly because they had a surplus of 112,000 empty coal cars when the union mines resumed work. Whether the roads can maintain the present rate of coal movement when the surplus of cars is exhausted remains to be seen.

"Even in the bituminous mines, the strike is not yet entirely over. Some thousands of men are still out in the non-union fields of Pennsylvania, particularly the Connellsville coke region, in the Georges Creek field, and in the union districts of West Virginia."

In few districts did operations controlled by the agreement begin shipping during the week of August 19. A number of mines in the Number 8, Cambridge, and other districts of Eastern and Northern Ohio were working on Friday and Saturday. In Southern Ohio, 59 mines out of a total of 458, were at work by the end of the week but only 17,000 tons were loaded. Shipments began also from a few mines in Pennsylvania, but from the other districts that have since gone to work no coal was obtained during the week of August 19.

In the districts hitherto at work little change occurred. Transportation service was on the whole less satisfactory in the non-union fields of the Middle Appalachians. Among the districts to report larger losses on account of railroad disability were Pocahontas, Tug River, Logan, Eastern Kentucky, Western Kentucky, and Alabama. In the Winding Gulf, New River and Kenova Thacker districts there was some improvement. The districts to report greatest loss through transportation were Harlan, Hazard and Winding Gulf.

Bituminous Production for 1922 to Date

The estimated production of bituminous for the calendar year to August 26 was 223,521,000 net tons as compared with 255,147,000 in the corresponding period of 1921.

Shipments of bituminous coal through Hampton Roads decreased in volume during the week ended August 26. Dumpings for the week of August 26 totaled 310,593 net tons, as against 334,974 tons the week before. Cargo coal for New England increased, whereas coal for other coastwise destinations, for export, and bunker decreased.

The result of the Federal Fuel Distributor's orders was a great increase in soft coal loaded into vessels at Lake Erie ports during the week ended August 27. According to reports from the Ore and Coal Exchange, a total of 258,598 tons was dumped as against 170,640 tons in the week preceding. Of the total 229,770 were cargo coal and 28,828 were vessel fuel. The rate of dumpings is 33 per cent of that in the corresponding week a year ago. The total quantity of cargo coal forwarded during the present lake season now stands at 4,904,994 tons but of this 883,659 tons has gone to destinations not ordinarily taking lake coal. The quantity sent to the regular lake markets is only 4,021,335 tons as against 16,150,110 in 1921 and 10,927,994 in 1920.

A steady increase in dumpings has continued during the week of August 28 September 2. The tonnage dumped on Monday, Tuesday and Wednesday was 74 per cent greater than on the corresponding days last week.

The all-rail movement of coal to New England through the six principal gateways over the Hudson river increased to 917 cars of bituminous coal and 226 cars of anthracite during the fourth week of August. In addition to this movement, eight cars of bituminous coal and one car of anthracite were forwarded through Rouses' Point. The total all-rail forwardings this year to August 26 amounted to 110,632 cars divided as follows: 50,560 cars of anthracite and 58,553 of bituminous coal through the principal gateways; 223 cars of anthracite and 1,296 of bituminous coal through Rouses' Point.

Shipments by Districts

In the following table the shipments from the coal-producing districts on each of the first three days of the week of August 28-September 2 are compared with the average daily shipments the previous week and in the week of highest production during the strike (June 19-24).

Shipments during the first half of the week were at a rate 47 per cent in excess of the daily average for the preceding

Wyoming, Mont. and N. Dak.	1,467	10,584	37,800	35,600	35,200
Washington	3,450	3,708	3,400	4,500	3,500
Michigan	.....	1,475	3,400	4,100	3,650
Total, East of Miss. River	727,750	889,257	1,361,550	1,252,700	1,255,250
Total, West of Miss. River	66,810	91,309	135,100	145,900	144,900
Grand total, bitum. shipped	794,560	980,566	1,496,650	1,398,600	1,400,150

week and 81 per cent over that for the week June 19-24.

The districts showing notably increased shipments were Central Pennsylvania where the daily rate is now about double that of the previous week; Western Pennsylvania where the increase is about 40 per cent; Ohio, about 33 per cent; Indiana-Illinois, about 300 per cent; and the Iowa-Missouri-Kansas-Oklahoma-Arkansas-Texas region, about 120 per cent. Increases at these rates can not be expected to continue. There are already indications in Eastern Ohio and Northern West Virginia that shipments will be checked by transportation difficulties on certain important roads.

Shipments in the Middle and Southern Appalachian regions averaged during the first half of the week about 10 per cent higher than the previous week. This was due to the large increase on Monday, after which on Tuesday and Wednesday shipments dropped off to less than the average for the preceding week and in some districts, to less than

shipments on corresponding days of that week. Shipments have declined most in the southernmost districts of West Virginia, in Eastern Kentucky, and Alabama. Mining in this region is suffering severely from transportation difficulties, and shipments are now at least 700,000 tons less per week than during June.

In Western Kentucky shipments on Monday will average about 15 per cent under the previous week, on account of transportation difficulties, and are below the rate attained prior to the shopmen's strike.

The Colorado output is declining on account of railroad difficulties. Other far western states show increased shipments.

Coal loading totaled 26,826 cars on Friday, September 1. This was a reduction of 2,201 cars compared with the preceding day, but 2,269 cars in excess of the average daily loadings for September last year, and 9,763 cars above the average daily loadings for August this year. The Eastern and Northwestern districts reported increases in the number of cars loaded with coal on Friday over the previous day, but small reductions were reported in coal loadings in the other districts compared with the day before.

Coal loadings on Saturday, September 2, totaled 25,157 cars. This was a decrease of 1,669, cars under the preceding day. Loadings on Saturday, however, are generally less than on other week days owing to a short day being observed at most mines. Coal shipments last Saturday, however, exceeded the daily average in September last year by 600 cars, and the daily average in August this year by 8,094 cars.

A total of 167,428 cars were loaded with coal during the week which ended on September 2. This was the largest number of cars loaded during any one week since the strike of miners began on April 1 last and also exceeded the preceding week by 49,616 cars.

Lake Movement of Coal

Details of the new program adopted for the expedition of the movement of coal to the upper Great Lakes region were given in a circular issued by the Federal Fuel Distributor as follows:

"Amendment No. 4 to Service Order No. 23 of the Interstate Commerce Commission transfers lake coal from Class 3 to Class 2 and covers all bituminous coal consigned to a pool, or pools, of lake cargo, or bunkerage coal, at any port on Lake Erie for trans-shipment by water to ports above Lake Erie. Pool coal will be consigned to the Ore & Coal Exchange at Lake Erie port, under the rules of the Ore & Coal Exchange, may not be so consigned until a permit has been issued by the Ore & Coal Exchange admitting the coal to the pools.

It is expected that since lake coal is in Class 2 priority of Amendment No. 4 to Service Order No. 23 transportation will be available to move a large part of the coal purchased by lake forwarders. However, if due to short car supply or other causes, the coal under purchase to the lakes is not forthcoming under Class 2 priority in quantities sufficient to meet the lake program it is expected that immediate steps will be taken to protect the deficiency in such movement. This deficiency protection will be effected by advancing from Class 2 into Class 1 enough of the lake tonnage purchased to produce the total tonnage which has been allotted for each week.

When it is ascertained by the joint representative of the Interstate Commerce Commission and the Federal Fuel Distributor at Cleveland how much additional coal it is necessary to move to lake under Class 1 priority in any given week, requests should be made by the lake forwarders through the Ore & Coal Exchange, properly supported by evidence of the purchase of the coal for the issuance of permits by the representative of the Interstate Commerce Commission at Cleveland to grant Class 1 priority for specific tonnages from specific operations in sufficient amount to bring the total movement up to desired amount within the current capacity of the carriers and the Lake Erie docks to handle. Coal shipped under such permits must be shipped within 10 days from date thereof."

The new program was put in operation on Monday, September 4, and it was hoped that 1,000,000 tons of coal might be started lakeward this week. Loadings for the lakes during the last week were estimated at 800,000 tons. Owing to the uncertainty of weather conditions during the month of November, which might seriously hamper the trans-shipment of coal at lake ports, it is deemed advisable to push the lake movement with all possible dispatch for the next few weeks. B. S. Robertson, of the Interstate Commerce Commission, has been designated as the joint representative of that organization and the federal fuel distributor at Cleveland.

Car Service Orders

The Interstate Commerce Commission on August 31 issued its Service Order 24, which directs all common carriers by railroad, west of the Mississippi river, to give priority and preference to the movement of food for human consumption, feed for live stock, perishable products, and fuel, and to the return of empty cars intended to be used for the transportation of those commodities.

A few days ago the commission granted an informal hearing to representatives from the Pacific Coast on their petition for preference and priority in the movement of empty refrigerator cars, primarily to take care of the fruit crop from that section.

This order is intended to insure the prompt movement of the commodities specified, and to expedite the movement of empty refrigerator, tank or other cars to originating territories.

When carriers find themselves currently unable promptly to transport all freight traffic offered them, the commission will expect the carriers to bring to its attention for appropriate action any instances which, in their opinion, are of such a character as to warrant any deviation from the general directions as to priority in movement.

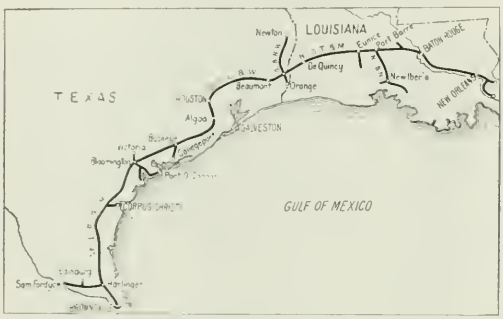
Open Top Cars

On September 1 the commission also issued Amendment 5 to Service Order No. 23, which permits the use of open top cars 42 inches or less in height for the movement of commodities other than coal. In this connection Commissioner Aitchison wrote a letter to R. C. Marshall, who had filed a petition on behalf of the Associated General Contractors for modification of Service Order No. 23 in order to allow a greater use of open top cars for building materials. Commissioner Aitchison says that under Service Order No. 23 approximately 62,000 open top cars less than 36 inches in height were exempted from being preferentially loaded with coal and Amendment 5 will release approximately 34,000 additional open top cars from this preferential loading. The commission feels that this will to a considerable extent relieve the construction interests as well as others primarily dependent upon the use of open top cars for the movement of their commodities. This action on the part of the commission, he says, should not be taken as its final word on the subject, but with the present and necessary demands for coal it does not feel that it can consistently go further at this time. It will continue to keep in daily touch with the situation and as soon as it feels that the situation warrants, action will be taken to relax the service order. Meanwhile, it asks to be kept informed of the general situation and of any exigencies which might require special attention.

Gulf Coast Lines Show Increasing Prosperity

System Serves as Distributor of Traffic to Gulf Ports—Is Realizing on Development in South Texas

THE NAME "GULF COAST LINES" is used to identify the railway system operated by the New Orleans, Texas & Mexico Railway Company and the latter's subsidiary companies, extending from New Orleans along the coast of the Gulf of Mexico to the Mexican border at Brownsville, Tex. The system was formerly a part of the old St. Louis & San Francisco organization and received a share of the unpleasant publicity surrounding the sins of the old Frisco management which culminated in the receivership in 1913. The Gulf Coast Lines were separated from the Frisco system in the receivership. The system—or rather the parent New Orleans, Texas & Mexico—was



The Gulf Coast Lines

reorganized, effective March 1, 1916, and has been under its present management since that time, except, of course, as concerns the federal control period.

Under the present management the history of the system has been one of gradually increasing prosperity, the extent of which would seem sufficient, it is believed, to justify the paying of rather more attention to the property than has on the whole been paid to it. The signs of this prosperity may be bodied in the statement that the Gulf Coast Lines earned for the government considerably more than their standard return. In the last four months of 1920, two of the constituent companies—the St. Louis, Brownsville & Mexico and the Beaumont, Sour Lake & Western—were included in the country's small list of roads which earned net railway operating income of more than 6 per cent upon their investment. The parent New Orleans, Texas & Mexico paid an initial dividend on its common stock in December, 1920. In 1921 it paid 6 per cent and it is now on a 6 per cent basis.

A Number of Related Corporations

The Gulf Coast Lines consist of a number of related corporate organizations controlled by the parent New Orleans, Texas & Mexico through stock ownership or lease. An additional feature is the proportionately large mileage of line operated under trackage rights, a factor of special importance because it is in this manner that the lines of the various individual companies are brought together to form a through route. The make-up of the system is in brief as follows:

The New Orleans, Texas & Mexico operates the lines in the state of Louisiana, including that part of the main line between Anchorage (opposite Baton Rouge) and DeQuincy. Access to New Orleans is secured by a special traffic and operating agreement with the Yazoo & Mississippi Valley, under which the latter company handles the traffic between Baton Rouge and the terminals at New Orleans on schedules, rates and practices prescribed by the New Orleans, Texas & Mexico in the same manner as if the latter operated its own line into New Orleans.

The Beaumont, Sour Lake & Western is controlled by ownership of all its capital stock. Its line is from Beaumont, Tex., to the outskirts of Houston and connection with the lines of the parent company is obtained by trackage rights on the Kansas City Southern between DeQuincy and Beaumont.

The St. Louis, Brownsville & Mexico, similarly controlled by ownership of all of its capital stock, owns the line from Algoa, Tex., south of Houston, to Brownsville with an important branch up the Rio Grande valley. The Gulf Coast Lines operate into Houston over the Houston Belt & Terminal, a half interest in which is owned by the St. L., B. & M. and the B. S. L. & W. Between Houston and Algoa trackage rights are used over the line of the Gulf, Colorado & Santa Fe.

The Orange & Northwestern, controlled by ownership of all its capital stock, operates a line between Orange, Tex., and Newton, Tex. The Louisana Southern is a leased line, the mileage of which is south of New Orleans.

The mileage as thus outlined, including branches, totals 1,015 of which 823 is owned, 99 is trackage rights and 93

Views on the Gulf Coast Lines in Southern Texas

represents the special arrangement with the Y & M V. In Gulf Coast Lines reports of operating statistics the latter 93 miles is not included and the statistics are figured on a mileage of 922.

The foregoing analysis does not, however, include the entire system. Another unit is the separately operated New Iberia & Northern, and a second, the San Benito & Rio Grande Valley, the earnings of both of which lines are reported separately.

Some Leading Features

The fact that the Gulf Coast Lines serve the coastal plain bordering the Gulf of Mexico is reflected in several interesting and important characteristics. The first is that the territory is a rich one which, further, has probably only seen the beginning of its ultimate development agriculturally or industrially. A second feature is that the system's lines cross at right angles the lines of nearly all the carriers which serve the Gulf ports. This does not mean that the Gulf Coast Lines do not meet competition from these other lines; as a matter of fact, they meet a great deal of competition. It does mean, however, that the Gulf Coast Lines are much in the nature of a distributing facility. Most of the various other lines serve individual ports. The Gulf Coast Lines have access in one way or another to them all, and this is one of the most important factors in the value of the system's location. The third important factor is that serving a comparatively flat country, as it does, the Gulf Coast Lines have no difficult grades. Its maximum grade is but 0.3 per cent. The result is a great assistance to economical operation—comparatively heavy train loading being secured with the use of small motive power units. It might be expected that a line lying so near the Gulf coast would be subjected to damage from the severe storms which are somewhat too frequent. It happens, however, that the lines are far enough from the coast to be given sufficient protection. A real handicap is the peculiar character of some of the rivers crossed, whereby these streams are narrow rivulets at dry seasons of the year and raging floods at other times. The Gulf Coast Lines, however, do not seem to have suffered as much on this score as some of the other lines serving this territory.

A Distributing Facility

The Gulf Coast Lines receive from connections considerably more traffic than they originate. In 1921, for instance, of a total of 2,914,784 revenue tons, 1,816,540 was received from connections. Some of this traffic received from connections is, of course, that consigned to Gulf Coast Lines' local stations. A larger proportion would be that received from the north and south lines for movement to other ports than those they themselves serve. Tonnage of this kind would be that, for example, delivered by the Kansas City Southern at DeQuincy, La., for delivery to New Orleans, etc. The density of traffic on the line east of Houston is greater than on that west. The movement is predominantly eastbound, which conditions show the importance of the traffic moving to New Orleans and received from the various connecting lines.

The traffic carried was divided in 1921 and 1920 as follows:

Products of	1921 Originating on line	1921 Received from connections	1920 Originating on line	1920 Received from connections
Agriculture	301,071	477,993	268,921	511,128
Animals	27,663	11,712	32,6[illegible]	22,339
Mines	275,622	609,001	271,919	964,589
Forests	332,210	226,654	42[illegible]	456,252
Mnfrers. and misc.	171,270	451,46[illegible]	141,58[illegible]	567,66[illegible]
Mdse.	47,406	[illegible]	69,0[illegible]	56,5[illegible]
Total	1,098,244	1,816,54[illegible]	[illegible]	[illegible]
Grand total	2,914,784		3,774,91[illegible]	

Agricultural Possibilities

The territory served by the Gulf Coast Lines is characterized primarily by its possibilities from the standpoint of agriculture. The road, it will be noted from the foregoing figures, originates also a large tonnage of products of forests. This traffic is derived from the area in eastern Texas and western Louisiana. There is a large area devoted to grazing, notably along the east shore of Texas. The cattle industry has been especially hard hit in the past two or three years; the herds are at present unusually large but the live stock tonnage has, in consequence, been unusually small. In normal times the cattle move to Fort Worth, being turned over to connecting carriers at Houston or other points. The agricultural territory is found in central Louisiana, west of Baton Rouge, and to a certain extent, at various other points along the greater part of the system's mileage. Some of the land remains to be brought into production either through irrigation or through drainage. There is a large area, notably in southern Texas, which has been held from cultivation because of the hesitancy of some of the owners to break up their large holdings for this purpose.

The Rio Grande Valley

The most striking development, however, is that which has been taking place in the Rio Grande valley in the extreme south, or the area lying along the main line to Brownsville and the branch from Harlingen to Sam Fordyce. The climate in this particular section is dry and crops can be raised only with irrigation. There have been a number of irrigation developments of imposing size, the purpose of which has been to bring the water up from the Rio Grande and distribute it to the higher levels bordering the river on the Texas side. The valley has a rich soil and with a proper water supply it has been able to derive advantage from the fact that it is able—being so far south—to bring vegetables into the northern markets one or two months before any other sizeable area in the country has begun to secure its crops. Thus the Gulf Coast Lines is called upon as early as January to move a large tonnage of cabbage, spinach, beets, etc., to northern markets such as Kansas City, Chicago and even New York. Further than that, it was recently discovered that the valley was especially suitable for citrous fruits. The visitor in the valley will see many groves—of from 5 to 25 acres, as a rule—of young orange, grape fruit or lemon trees. The fruit is of high grade and should become an increasingly important factor as the progress already started is continued. The territory in the Rio

GULF COAST LINES

Year	Average mileage operated	Revenue freight tons.	Net ton miles*	Total railway operating revenue	Total railway operating expenses	Net railway operating revenue	Net railway operating income	Operating ratio	Net tons per train*

*Including non-revenue freight. †U. S. Railroad Administration 1918, 1919, and Jan. and Feb., 1920.

Grande valley and in south Texas generally is building up rapidly and should become an increasingly valuable asset in Gulf Coast Lines operations.

At Brownsville, the Gulf Coast Lines connect with the line of the National Railways of Mexico from Matamoros to Monterey. The route into Mexico via Brownsville has possibilities which at present are not being realized because of Mexico's unstable condition. The Gulf Coast Lines operate through Pullman cars from Houston to Mexico City, Monterrey and Tampico and there is some interchange of freight.

Revenue Train Load of 628 Tons

The Gulf Coast Lines average revenue train load of 628 tons in 1921 was high considering the character of the traffic handled. It was, in fact, one of the highest figures reported by the roads in the southwestern region. It reflects primarily the fact that the worst grades on the Gulf Coast Lines are only of 0.3 per cent. The road uses comparatively small locomotives. Its more important power includes 5 Russian decapods and 20 Consolidations. The average tractive effort of its total of 49 road freight locomotives is

One of the Gulf Coast Lines River Crossings

only 33,347 lb. Smaller locomotives are used on the other lines south of Houston. East of Houston the method of operation is to start trains from that point with 2,500 tons and to pick up to 3,500 at DeQuincy.

The road has 85-lb. rail on its busier eastern end, although there is about 65 miles of 75-lb. rail still in track. West of Houston there is 75 or 80-lb. rail except to the south, where there is considerable mileage of 65-lb. rail. Shell and gravel ballast is used although there is some non-ballasted track in the south. Formerly cypress ties were used without tie plates. More recently the road is putting in treated pine and red oak ties. The system maintains shops at Kingsville, Tex. These have recently received an amount of new equipment and machinery but they are otherwise of a mediocre character.

In 1921 the Gulf Coast Lines had a traffic density of 538,573 revenue ton-miles per mile of line. In 1920 the figure was 725,879. It has already been noted that the traffic density is much greater east of Houston than west. The road secures an average haul on its revenue freight of 170 miles and its earnings per ton-mile in 1921 were 1.64 cents. Revenue car load in 1921 was 23.32 tons.

The Gulf Coast Lines in 1921 had a net railway operating income of $2,141,708. Excluding an item of $388,246 representing lap-overs from the guaranty period of 1920, the figure would have been $2,529,954. The size of these figures is indicated by the fact that the property had a standard return of only $1,061,001. It is interesting to observe that the latter figure has been exceeded in every year since 1916. In 1917 the property had a net railway operating income of $2,082,971; in 1918, of $1,932,868; in 1919, of $1,202,738, and in 1920, totaling $1,686,956.

The 1921 net was secured with a decrease as compared with 1920 of 13.1 per cent in freight revenues and of 17.5 per cent in total revenues. The decrease in operating expenses, however, was 26.2 per cent. In 1921 the property had an operating ratio of 74.08 per cent as compared with 82.84 in 1920. The 1921 ratio of transportation expenses to total revenues was 33.33; the 1920 ratio, 35.36 per cent.

Corporate Income Account Figures

The 1921 figure of net railway operating income, $2,529,954—excluding lap-over items from the 1920 guaranty period—was after the deduction of $32,441, debit balance for equipment rentals, and of $252,197, debit balance for joint facility rents. In 1920 the debit equipment rents balance was $582,126 and the debit joint facility rent balance, $320,694. That the Gulf Coast Lines should pay out more than they receive for freight car hire is due to its being a terminal road and it also reflects the cost of securing cars for the early perishable movement from the Rio Grande valley and other agricultural areas. Car supply would naturally be expected to be a problem under the circumstances. The debit joint facility balances indicate the cost to the Gulf Coast Lines for its large mileage of trackage rights.

The Gulf Coast Lines, as has already been noted, included in the 1921 income account a charge of $388,246, representing lap-overs from the guaranty period. After the deduction of this charge, the net railway operating income reported for the year was $2,141,708. Non-operating income was reported as $861,946, including an item of $721,033 "balance of rental received from the United States government for 1918, 1919 and 1920." The gross income was $3,391,901. The fixed charges were $1,190,387, of which $1,114,390 was interest on funded debt. The road used $890,848 for its 6 per cent dividends; $323,107 was appropriated for investment in physical property and the balance carried to profit and loss was $987,559 or, excluding the guaranty period lap-over item mentioned, it was $599,312. In 1920 the road carried to profit and loss a credit balance of $381,528 after appropriating $297,370 for dividends, and $694,210 for investment in physical property.

Just now, the Gulf Coast Lines are showing better figures than were shown in 1921. For the first six months of this year the property had a net railway operating income of $1,243,209, which total was $476,490 better than the figure for the first six months of 1921. This would seem to indicate that the 6 per cent dividends should again be handily earned this year as they were in 1921.

Forty-One 40-Ton Box Cars Rebuilt At North Little Rock Shops of the Missouri Pacific During August—Showing How Even Heavy Repair Work Is Progressing in Spite of Strike

General News Department

W. H. Woodin, president of the American Car & Foundry Company, New York, was appointed fuel administrator of the state of New York on September 5 by Governor Miller under the act of the extraordinary session of the Legislature. Mr. Woodin will serve without compensation and will succeed the Governor's advisory coal commission.

The Canadian National will soon inaugurate freight and passenger service on its branch line between Victoria, B. C., and Sooke Harbor. This line, which was originally constructed to tap large timber territory, has not been in operation since early in the World war. Plans are now under way for its reconstruction and it is expected that gasoline-driven passenger cars will be placed in operation by the last of this month.

The Engineering Institute of Canada held a general professional meeting at Winnipeg, Man., on September 5-7, with headquarters at the Fort Garry Hotel. The program on Tuesday included descriptions of the Winnipeg hydro-electric plant and the Manitoba Power Company's development at Great Falls. On the following day these plants were visited by special train. On Thursday papers were presented on the construction of the Moncton yard and engine facilities of the Canadian National by S. B. Wass and on automatic grain car unloaders for the Canadian National Railways at Port Arthur by Fred Newell.

The Pennsylvania Railroad and its employees took a prominent part in Atlantic City's annual pageant, this week, being under charge of the First Aid corps of the Atlantic division. The railroad company's police, leading, were followed by the bearers of the First Aid corps banner, the marshal and his aids, the Pennsylvania Railroad band of 40 pieces, from Philadelphia, and a float in the form of a huge rolling chair, pushed by six red-cap porters. The top of the float represented the upper portion of a day coach, on which were seated seven girls, all employees of the Atlantic division. The railroad was represented also by a male chorus of 45 voices, made up of employees of the car service department at Philadelphia, the Altoona band of 75 pieces, and the Altoona shops glee club, 75 voices. The Pavonia shops, near Camden, N. J., were closed all day September 7, and for the benefit of the shopmen and their families, a special train was run from Camden to Atlantic City and return. For the Altoona employees and their families, a special night train was run, leaving Altoona on September 6.

Roadmasters Postpone Convention

Owing to the unsettled conditions on the railways and the special demands which are being made upon the officers of the maintenance of way department, the executive committees of the Roadmasters and Maintenance of Way Association and of the Track Supply Association decided at a meeting held in Chicago on September 3 to postpone the convention and exhibit from September 19-21 to November 21-23. The convention will be held at the Hotel Statler, Cleveland.

New York State Opens Grain Barge Terminal

The New York State grain elevator at Gowanus Bay, Brooklyn, N. Y., is now ready for operation and receives grain from barges and delivers to barges or lighters. The opening of this State canal elevator was celebrated at the Gowanus Bay Terminal on the afternoon of September 1. 4,000 invitations having been sent out from the Department of Public Works. The principal speakers were Nathan L. Miller, Governor of New York, and Julius H. Barnes, President of the United States Chamber of Commerce. Mr. Barnes is one of the largest shippers of grain in the country, and operates a fleet of modern vessels on the canal. The elevator occupies a space of about 430 ft. long by 70 ft. wide, facing on the Henry Street slip. Water alongside the pier has been dredged to a depth of about 35 ft. so that any steamer arriving in New York can be accommodated. The elevator is of steel and concrete. It has 18 rows of bins, three in a row, making 54 bins, 20 ft. in diameter, with a capacity of 26,000 bushels each; 34 interspace bins and 38 outer bins. All the bins are 95 ft. deep and the total capacity is over 2,000,000 bushels.

Safety on the Pennsylvania

The Pennsylvania System operated throughout the year ended May 31, 1922, without a passenger being killed in train accident. The number of passengers carried totaled 152,000,000, approximately one-seventh of the passenger business of the railroads of the country. The Pennsylvania System embraces 27,000 miles of track, 271,000 freight cars, 8,000 passenger cars and 8,000 locomotives. The management will continue to do its utmost to maintain its record for safety, and, in turn, all persons who drive automobiles are earnestly requested to co-operate in the Careful Crossing Campaign by observing the following precautions before crossing tracks: 1. Slow down. 2. Shift into lower gear to prevent stalling on tracks. 3. Look in both directions. 4. Listen. 5. Do not try to beat a train over a crossing. Stop if train is approaching. 6. After a train has passed make sure that no others are approaching in either direction. 7. Be doubly careful at night and on strange roads.

Study Marine Borers in New York Harbor

The investigation of marine borers, which had its inception with the organization of the committee to study conditions in San Francisco bay, has been extended to New York harbor and adjacent waters under the general supervision of the National Research Council and a special committee of 40 members directly interested in the metropolitan area. This includes representation from the United States Army, the Bureau of Yards and Docks of the Navy, the Lighthouse Service and several departments of the City of New York, as well as representatives of the engineering departments of several railroads. The investigation covers the collecting of data, by means of a questionnaire, concerning the experiences of all owners of dock property, the placing and study of test pieces in the waters at various points, a biological survey and studies of water temperature, salinity, polution, etc. The investigations made thus far have disclosed the presence of live toredo and limnoria at a number of locations. The study is being supported by contributions of labor and funds from various properties interested and is carried on in co-operation with studies made by scientific departments of the federal government, the railroads, universities, etc.

Southern Pacific Asks Modification of Train Control Order

The Southern Pacific has filed a petition with the Interstate Commerce Commission for a modification of its automatic train control order, which requires installation on a full passenger division between Oakland, Calif., and Sacramento. The company asks to substitute for a part of this mileage that part of its main line between Oakland and Tracy via Port Costa, which is of substantially the same mileage and embraces 24 miles of the location designated by the commission between Oakland and Port Costa. At that point the lines diverge, one to Sacramento and the other through Tracy to Los Angeles. The location designated in the commission's order is entirely double track. The proposed substitute would consist of 24 miles of double track from Oakland to Port Costa and 57 miles of single track from Port Costa to Tracy. The petition states that the problems in applying the automatic train control to single track are far more complex than in the case of double track and the company desires to ex-

periment on both. The substitute location would include the busiest piece of double track on its line, and the combination of double track and single track, in the opinion of the company, would constitute the most useful test.

Ticket Scalping Prevalent on Pacific Coast

Professional ticket scalpers have become so numerous in California this summer because of the greatly reduced fares that the railroads have been forced to take drastic legal measure to rid the state of these unlawful agents. H. A. Koach of the Railway Ticket Protective Bureau with headquarters at Chicago, is now in Los Angeles in charge of this work. Three arrests were made last week and it is said that a number more are contemplated. Ticket scalpers, it appears, flourish in California better than elsewhere. They are to be found, it is said, profiting to the extent of $20 to $150 per day through their purchase of the return portions of tickets from the tourists who decide to remain on the Coast. Men and women alike are operating in this business.

Coastwide newspapers are co-operating with Mr. Koach in refusing to publish "blind advertisements" for the scalpers and, at the same time, are warning their readers that by purchasing fares in the illegal way they are violating the Interstate Commerce Act, and subjecting themselves to fine and imprisonment. Many innocent people this summer have been forced to surrender their scalped tickets and sustain the loss of that fare through their lack of knowledge of the law in this connection.

Wage Statistics for June

According to the Interstate Commerce Commission's monthly summary of wage statistics the number of employees reported by Class 1 railroads for the month of June, 1922, shows an increase of 57,186, or 3.5 percent, as compared with the number reported for the preceding month. This increase was distributed by groups as follows:

Executives, officials, and staff assistants	59
Profesional, clerical, and general	1,720
Maintenance of way and structures	23,893
Maintenance of equipment and stores	15,818
Transportation (other than train, engine, and yard)	4,856
Transportation (yardmasters, switch tenders, and hostlers)	292
Transportation (train and engine service)	10,538
Net increase	57,186

A comparison of the number of employees and their compensation, by months, for the period covered by the new classification follows:

Month.	Number of employees.	Total compensation.
July, 1921	1,634,872	$214,339,385
August, 1921 [1]	1,679,927	227,745,895
September, 1921 [1]	1,718,330	223,972,822
October, 1921 [1]	1,754,136	237,602,959
November, 1921 [1]	1,732,353	225,304,006
December, 1921 [1]	1,637,151	214,921,396
January, 1922 [1]	1,552,014	205,178,639
February, 1922 [1]	1,545,040	194,523,427
March, 1922 [1]	1,570,158	216,704,408
April, 1922	1,578,133	203,413,071
May, 1922	1,628,228	216,672,028
June, 1922	1,685,414	222,932,686

[1] Excludes Detroit, Toledo & Ironton.

Cape Charles Car Ferry Handles Record Traffic

The Pennsylvania Railroad reports that its car ferry between Norfolk, Va., and Cape Charles, 36 miles long, across the lower Chesapeake Bay, carried, in August, a total of 27,943 cars, the heaviest traffic ever handled over the Cape Charles route, and, it is believed, the greatest record for a freight car ferry of equal length anywhere in the world. The average movement was 901 cars a day. The high record northbound was made on August 20 (Sunday) when 620 cars were ferried from Norfolk to Cape Charles; on August 13th, there were 620 cars ferried, north-bound. The previous north-bound high record was on July 13, 1916, when 613 cars were carried across.

The high record south-bound was made on August 4th, when 592 cars were ferried from Cape Charles to Norfolk. The previous high record south-bound was on June 19, 1917, when 527 cars were carried, when 11 barges were in use. They averaged a little over two trips each and carried an average of 27 cars a trip. The average lay-over at Cape Charles for unloading and loading was 50½ minutes. In the first eight months of the present year this ferry has carried an average of 634 cars daily as compared with 519 cars daily for the eight months last year; 534 cars in 1920, and 601 in 1919.

Electric Trains May Be Run Over M. K. & T. Line

A contract is now in process of negotiation between the Missouri, Kansas & Texas and electric power interests which if consummated will furnish electric passenger service between Dallas and Denton, Texas, a distance of 48 miles.

It is proposed that the electrical interests shall lease the trackage rights and that electrification of the line will in no way interfere with the operation of freight trains on the line, nor with the operation of through passenger trains. Z. G. Hopkins, manager, Department of Public Relations, M. K. & T., states that at the present time no change is contemplated in the operation of M. K. & T. trains.

C. E. Calder, president of the Texas Power & Light Company and of the Dallas Power & Light Company, stated that a contract with the railroad for electrification would comply with an agreement made with the city of Dallas for the construction of an interurban line at least 30 miles in length which the Dallas Railway is under bond to build in order to fulfil the terms of an agreement entered into in connection with the granting of the franchises to the Strickland-Hobson interests in 1917. Electrification of the M. K. & T. from Dallas to Denton, according to Mr. Calder, will be an economic proposition from the standpoint of the railroad, as well as the electrical interests.

The railroad now operates six passenger trains on this line, two of which are night trains. It is the intention of the power company to run electric trains hourly. The cost of electrifying has been estimated at between $800,000 and $1,000,000.

British Columbia Advised to Scrap Its Railway

The above is the heading, in Canadian newspapers, of a press despatch from Victoria, B. C., dated September 1, summarizing a report made for the Provincial Government by a special investigator, J. B. Sullivan. We quote, in part:

"Unless the people of British Columbia are prepared to continue paying from two million to two and a half million dollars a year for ten years on the investment already made in the Pacific Great Eastern Railway, the whole system should be abandoned, says Mr. Sullivan. He strongly advises against extension of the line and urges abandonment of the section from Quesnel [the present northern terminus, 360 miles from Vancouver] to Prince George. He recommends abandonment of the line from Squamish to Clinton, 166 miles, and using the salvage money to build a line from Clinton to Ashcroft.

"Mr. Sullivan dismisses the possibility of handing the road over to a private concern as impracticable. None of the large companies would take it. The Government can do as many other railroads are doing—abandon the operation of steam trains for passengers and replace them by gas-driven motor cars. Other recommendations are: Cancellation of mail contracts on that section of the line where snow trouble occurs in the winter; passenger and freight rates must be raised to all the traffic will bear.

"W. P. Hinten and Col. J. S. Dennis, who also made an exhaustive investigation of the railway, made reports for the Government which, in the main, agree with Mr. Sullivan's recommendations."

Locomotive Loadings for Railway Bridges

A paper entitled "Locomotive Loadings for Railway Bridges" was presented by D. B. Steinman, consulting engineer and professor in charge of civil and mechanical engineering, College of the City of New York, at the regular meeting of the American Society of Civil Engineers on September 6. With the aid of lantern slides Mr. Steinman discussed fully the methods in working out a proposed new loading system based on the stress-producing effects of modern heavy locomotives. The discussion of the paper was generally favorable to the plan developed, the main objections cited being that the Cooper loading was, and had been for a long time, in active use, that there was an immense amount of tables, diagrams, calculations, etc., on hand based

on that loading and that all engineers connected with the problem were not of the opinion that a change was entirely necessary or advisable. C. E. Fowler, consulting engineer, New York, stated that the first thing to be done was to convince the A. R. E. A. that it wanted to co-operate in the matter of securing a substitute for the Cooper loading. The next step to be taken up, since the live load factor must be considered as important, was the standardization of locomotives at least along the line of axle spacings and the lightening of parts and farther if possible in order to reduce impact, etc., a plan now being followed by some roads to simplify the problem of the bridge engineer. Locomotive builders and others interested must work along similar lines before a composite loading can be secured that will last. He added that any plan developed should be made to harmonize with the ideas of the A. R. E. A. and the Engineering Institute of Canada. C. F. Loweth, chief engineer, Chicago, Milwaukee & St. Paul, stated that if exactness is to be secured all factors entering into bridge design must be considered thoroughly and among these of prime importance was the speed factor. In the past, designs were made on the basis of the heaviest locomotives but developments continued to upset these ideas. Locomotives have become heavier and heavier and the trend may continue. It also might reverse itself since transportation methods are also showing a tendency to change. There is also to be considered, the possible future use of the electric locomotive which is seldom double-headed and which generally gives a lesser impact.

Respirators and Masks for Tunnels and Industrial Uses

The development of a pocket canister or respirator which will largely alleviate the discomfort to which engine crews are subjected from the presence of sulphurous locomotive smoke when passing through railroad tunnels is announced by the United States Bureau of Mines in technical paper 292 by A. C. Fieldner and S. P. Kinney. The canisters, which fit conveniently into a coat pocket, are filled with an absorbent mixture of activated charcoal and soda lime, and contain filters of Turkish toweling. These small smoke respirators have had the hearty approval of the men who have used them and retain their effectiveness for months. They may be cheaply made and are a great improvement over the sponge respirators and handkerchiefs and towels now used by engineers and firemen when passing through unventilated tunnels.

The Bureau of Mines has also conducted tests to determine the efficacy of the army gas masks for use on locomotives in railroad tunnels. It was found that army gas masks, having canisters filled with charcoal and soda lime mixture and with a cotton pad filter, gave good protection against the smoke and irritant gases. One constituent of smoke, carbon monoxide, which is poisonous but tasteless and odorless, penetrates these canisters, but experience has proven and analyses taken during the tests showed that on moving trains the amount of carbon monoxide present was not enough to be dangerous.

Respirators of the "pig-snout" type containing wet sponges afford some relief by cooling the gases and absorbing some of the irritating constituents of smoke. Protection is not complete and most of the men will not bother with such respirators, preferring to tie handkerchiefs over the nose and mouth.

The bureau has sought to impress on the public the limitations of the Army gas mask and at the same time to develop special types of masks suitable for different industries or occupations, that will serve to protect the wearer from the gas hazards encountered in a particular field of work. The bureau has also done work on a universal mask that would serve to protect the wearer against all of the gases in air commonly met. A light weight form of this universal mask has been developed for the use of city firemen.

The charcoal and soda-lime filled canisters protect against certain acid gases and organic vapors. They should not be used in gasoline vapor; they afford no protection against ammonia, and none whatever against the carbon monoxide which may be found in products of combustion, and in producer gas, coal gas, water gas, and blast-furnace gas. The pocket canisters afford protection against the coarse smoke particles of locomotive smoke; but give very little protection against wood smoke, very fine dusts, and fumes or mists such as those of tin tetrachloride, silicon tetrachloride, or sulphur trioxide.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from September 5 until January 3, 1923, the operation of schedules contained in a supplement to Agent P. A. Leland's tariff which propose to make inapplicable through rates on fresh fruits and vegetables from various producing points in Texas to northern and eastern points when routed from Houston to St. Louis via International & Great Northern, Texas & Pacific and Missouri Pacific.

Court News

Omission of Statutory Signals Bars Recovery From Negligent Truck Owner at Crossing

The Circuit Court of Appeals, Sixth Circuit, holds that the failure to comply with the statutory requirements of sounding whistle and ringing bell, Ohio Code §§ 8853, 8856, is negligence per se, barring recovery for damage to railroad equipment by collision with defendant's motor truck at a crossing.—Norfolk & Western v. Norton Iron Works, 279 Fed. 32.

Warning to Protect Goods Against Flood

The Michigan Supreme Court holds that where the carrier has warning of an oncoming flood, ample time after such warning to protect the shipment, and does not take reasonable precautions to protect it, he is not exonerated from liability on the principles laid down in what it calls the "delay" cases which were decided on the theory that the carrier could not reasonably have foreseen the danger, and that therefore the delay was not the proximate cause. In this case the goods had been placed in the freight-house after arrival at destination. It was held the carrier had ample warning of an oncoming flood to have protected the goods.—Ithaca Roller Mills v. Ann Arbor (Mich.), 186 N. W. 516.

Excessive Verdict Induced by Erroneous Instruction

For an injury causing the amputation, between the wrist and elbow, of the left arm of plaintiff, a brakeman, 30 years old, earning $200 a month, the Mississippi Supreme Court holds a verdict for $25,000 to be grossly excessive, and probably induced by an instruction granted the plaintiff which charged the jury that it might return a verdict in his favor "if it believed certain matters therein set forth to be true 'not to exceed $50,000, the amount sued for.' The jury should not have been so instructed, for $50,000 is more than double the amount for which a verdict should be upheld." The cause was reversed, on the question of damages only, unless the plaintiff entered a remittitur of $7,000.—Alabama & Vicksburg v. Dennis (Miss.), 91 So. 4.

Actions for Injury to Interstate Shipments Removable from State to Federal Courts

The Federal District Court for the Southern District of Texas, following G. H. & S. A. v. Wallace, 223 U. S. 481, 32 Sup. Ct. 205, holds that, while suits arising out of interstate shipments may be cognizable in the state court, they are also removable to the federal district court as matters of federal instance, when the jurisdictional amount ($3,000, exclusive of interest and costs) is involved. The action was under the Carmack Amendment for damage to goods in interstate transportation.—Nelms v. Davis, 277 Fed. 982.

This rule applies though the whole journey was made over the lines of a single carrier.—Nelms v. Davis, 277 Fed. 987.

The Florida East Coast has established an independent city ticket office in Jacksonville, Fla., at 231 West Forsyth street, and has withdrawn from the joint ticket office.

Foreign Railway News

Hope for the Orient in Mexico Seen in Contemplated Purchase by British

The British interests which own the Mexico Northwestern Railroad are negotiating for the purchase of the concession and that part of the Kansas City, Mexico & Orient Railroad which is situated in Mexico. It is stated that the transaction will be more in the nature of a merger of the two interests than an outright purchase. One completed link of the Kansas City, Mexico & Orient connects with the Mexican Northwestern at Chihuahua, and another connects with it at Minaca. If the deal is consummated it is planned to make it the through line across Mexico that was contemplated in the original plans. Along the route west of Minaca are a number of rich mining camps which are now beginning to show activity after several years stagnation. It is reported that the ore traffic alone would justify the building of the road.

South African Railways Ask Bids on Power Plant Equipment

LONDON.

Tenders are invited for the supply and erection in South Africa in connection with the electrification of the South African Railways and for use in the Maritzburg-Glencoe power house, of the undermentioned plant: coal handling plant, ash handling plant and circulating water plant. Specifications, blue prints and forms of tender for each of the above sections may be obtained from the office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W. C. 2 England. The charge for each specification is £5:5:0 for the first copy and £2:2:0 each for any further copies. Sums paid for any number of each specification up to three will be refunded on receipt of bona-fide tenders. Sealed tenders are to be addressed to the Secretary, Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, England, and to be delivered in duplicate not later than noon on Wednesday, October 18, 1922.

French Railways Show Improvement in 1922

Since the enactment of the French transportation law of 1921 there has, according to Economist Consul Westcott, Paris, been a widespread interest in the results of this legislation. For the first six months of 1922, according to data submitted by the Minister of Public Works, there has been a marked improvement in French railway finances, equipment, and safety of operation.

Improvement in the finances of the six trunk-line railways of France is indicated by an uninterrupted decrease in operating deficits since 1919. In 1920 that deficit approximated 3,000,000,000 francs; in 1921 it declined by 33 per cent to about 2,000,000,000 francs; and at the close of 1922 it will be further reduced by a probable 50 per cent to an estimated 1,000,000,000 francs. During the first six months of 1922 operating expenses decreased and receipts increased; the decline in the resulting operating ratio indicated increased operating efficiency in all departments. From January 1 to July 1, 1922, receipts were 200,000,000 francs greater than for the corresponding period of 1921. Receipts on the Nord and Est lines, traversing the devastated regions, were 40,000,000 francs greater than during the preceding half year. It is estimated that on December 31, 1922, total receipts of all roads will be 1,000,000,000 francs in excess of the 1921 operating income.

There has been consistent improvement in the operating equipment of all roads since the war. In July, 1914, rolling stock in poor condition and not used included 1,700 locomotives, 4,500 passenger coaches, and 15,000 freight cars; in December, 1919, this class of locomotives numbered 3,418, passenger coaches 13,800, and freight cars 59,300; by June, 1922, rolling stock out of commission for repairs had been reduced to 2,717 locomotives, 7,764 passenger coaches, and 49,134 freight cars.

Higher efficiency in repair work since the war, with resulting decrease in rolling stock out of commission, has been due mainly to the policy of having repair work done under contract by the machine shops of the country. Before the war such repairs were made in shops of the railway companies. During June, 1922, private corporations thoroughly overhauled 103 locomotives, 783 passenger coaches, and 10,220 freight cars. They did the work in 20 per cent less time and at a lower cost.

Safety of passengers and security of freight carried are the paramount considerations of the entire French railway system. That security is further insured through close supervision of the roads by the Railway Administration under direction of the Minister of Public Works. Two improvements now being introduced on all lines are important controlling factors in operating safety: (1) The "crocodile," an electrical apparatus installed in the locomotive cab, which automatically registers visually and audibly the semaphore signals along the line, thereby reducing to a minimum any possible failure by the engineer to observe the signal; (2) electric lighting of all passenger cars.

Precautionary measures already introduced have resulted in a marked decrease in the number of railway accidents and casualties. In 1913, when the various lines carried 541,342,165 passengers, there were 142 accidents, with 60 persons killed and 413 injured. In 1918, with about the same number of passengers carried, there were 379 killed and 1,435 injured. In 1921, with 665,000,000 passengers carried, there were 72 accidents, 137 killed, and 656 injured. During the first six months of 1922, with 335,000,000 passengers, 20 were killed and 166 injured.

Three Killed and Many Injured in British Railway Accident

On the morning of August 21 three persons were killed and 59 injured in an accident which occurred on the South Eastern & Chatham Railway at Milton Range, a "halt" (i. e. an unimportant station) near Gravesend, England. A workmen's train eastbound from London was discharging passengers who were crossing the westbound tracks when a light engine, westbound,

Photo by International

Scene of the Accident at Milton Range

ran into the crowd killing one man and injuring another severely. The light engine did not stop. This mishap delayed the train and allowed it to be overtaken by a following train which crashed into its rear end resulting in more casualties. A canal runs parallel to the railway at this point and many passengers on the standing train escaped injury by leaping into it when they saw the second train approaching. The second train for some unknown reason had left Gravesend in the face of a signal at stop against its movement.

Reinforced Concrete Ties in Belgium

LONDON

After examining many types of reinforced concrete ties, Monsieur R. Deprets, chief engineer of the Belgian State Railways, has gone on record as in favor of the two following types. The "Calot" tie is of the through type, reinforced with 10 rods of about ¾-in. diameter and having wooden cushions under either the chaired rail or the Vignoles rail. This tie weighs and costs more than a timber tie, and its weak point is reported to be the fastenings. The tie which Monsieur Deprets is inclined to favor is the "Vagneux," which consists of two blocks or "pots"

of reinforced concrete joined together transversely by either a steel joist or reinforced concrete tie. Both metal and wooden soleplates are used under flat footed rails on the Paris, Lyons & Mediterranean and the Nord railways on which lines this pattern has been tried. In this tie the fastening is more satisfactory, the holes for the screw spikes being formed in it, and bitumen then run in. It is hoped that this type of tie will be more economical than timber.

Dutch Market for American Ties

Railway tie exporters in the United States will be able to sell their products in the Netherlands only when they meet the prices of German, Polish, and Finnish exporters, according to Commerce Reports. Red pine, beech, and oak ties are used in the country, the first-named species predominating. The average annual consumption is about 1,000,000 ties of all species, from 600,000 to 700,000 being used for maintenance of way and about 300,000 for new construction.

The estimates of the Dutch railways for the calendar year 1923 have, for reasons of imperative economy, been limited to the requirements for maintenance of way, no allowance whatever being made for new construction. According to this estimate there will be required for the period mentioned 500,000 red-pine ties and 75,000 of beech and oak. The Dutch railways will have a large stock of ties on hand at the end of the current year, and the new purchases will be more than ordinarily limited. The contracts for the ties required in the 1923 estimate will be let privately some time toward the latter part of the year. The Dutch railways have in the past received offers of American ties, but these proposals have been of little interest by reason of the high price. At the present time the Dutch railways are able to secure ties at 3 florins per tie, c. i. f. Holland. This represents, in American currency, about $1.20.

Two standard types of ties are required by the Dutch railways. The dimensions of the first of these is 5 by 10 in. by 8 ft. 6½ in. An upper surface with a minimum of 7 in. in width is necessary. The other standard type differs from the first only in the requirement of a height of 6 in. instead of 5. Both types are required for main lines. A slightly smaller type of tie is used for local lines. This tie is 5 by 9 in. by 8 ft. 6½ in., with a minimum top width of 6 in.

So far as the quality of the tie is concerned, the Dutch railways require that they be of sound wood and appropriate for the purpose. The ties are purchased free from any preservative treatment and are creosoted by the Dutch railways at their creosoting plants at Dordrecht and Hilversum. There exists in the Netherlands no peculiar conditions which tend to affect the life of the tie. The country has a sea climate, but it is devoid of extreme humidity.

American exports desirous of dealing with the Dutch railways may do so directly; in fact, it is preferable that transactions be handled in this way rather than through agents or importers. Purchases of ties for the railways are made by the Chief Engineer of the Dutch Railways, Railway Building, Utrecht, Netherlands. There are no formalities connected with the letting of these contracts. The chief engineer of the railways receives proposals from bidders by letter or in any other suitable form, embracing all the necessary details and references. Bids are furthermore not advertised for, and the letting is usually made toward the latter part of the year, when the railways find that they have received bids at a satisfactory price, and which are deemed to be advantageous. It is incumbent upon tie exporters to be on the lookout for this letting. The ties are approved by the Dutch railways when delivered in the Netherlands and paid for within four to six weeks after approval.

The only ties which the Dutch railways have purchased from the United States in recent years were a quantity which was received from Savannah and Gulfport during the war, which purchase was made necessary by the exigencies of the then existing situation in Europe. A quantity of Douglas fir ties was likewise purchased, but owing to difficulties attendant upon delivery they were later resold in the United States.

The Baldwin Locomotive Works' Exhibit at the Brazilian Exposition, Rio de Janeiro

The wheels turn but the train does not move. The scenery moves, however, carrying out perfectly the illusion of a moving train

China Notes

PEKING.

Proof copies of the sixth annual report on the Chinese Government Railways have been accessible to inquirers for several days. This report covers the calendar year 1920, and is appearing several months later than its counterpart during recent years. The revenues, expenses and income items for the combined lines reported are as follows (in round numbers):

Operating revenues	$91,444,000	Increase $8,400,000
Operating expenses	42,780,000	Increase 4,300,000
Net operating revenues	$48,664,000	Increase $4,100,000
Income debits (interest, etc.)	$11,223,000	Increase 900,000
Income credits (rents, etc.)	3,347,000	Increase 1,100,000
Net income debits	$7,876,000	Decrease $200,000
Credit balance for the year	$40,788,000	Increase $4,300,000

This increase of over 10 per cent in the credit balance for the year is explained to be fully genuine, for the revenue figures contain a considerably smaller amount of military transportation, service stores and material for other railways than did those for 1919, the year previous. The operating ratio is only fractionally higher than in 1919, being under 47. In gaging these figures, it must be remembered that the last four months of the year 1920 were famine months. This is apparent when the increase of agricultural tonnage is observed,—especially on the Peking-Mukden line,—together with a large increase in the average haul per ton for this class of traffic. During those months, the government lines were hauling in grain from their extremities to the central plain, a large movement having been encouraged by a reduction of rates to the extent of 25 per cent.

The effects of the famine are to be read also in the estimated revenues for 1921, which are given as $92,300,000, or barely a million more than the year before. This is the smallest increase during the seven years of uniform statistics. The decrease occurs principally in passenger traffic, famine refugees having been carried free,—and with them no doubt a considerable proportion which ordinarily paid third class fares. Military disturbances, however, must bear a considerable share of this blame, for the months of those troubles show the lowest dip in the graph showing by months the average daily revenue. This is particularly marked upon the Peking-Hankow line, whose southern end was dangerous territory for most of the summer.

The third and last section of the Shantung Railway was evacuated by the Japanese police forces on May 6, whereupon the Chinese police assumed responsibility. However, within the former leased area of Kiaochau, Japanese police remain, and will not be replaced by Chinese until the final handing over of the territory which is expected to take place sometime towards the end of the year.

The Chinese banking group, which was expected to be incorporated with the international consortium, if that institution

were to undertake anything in China, has justified the most pessimistic predictions of the "I told you so" band. About a year ago these columns contained the notice that this banking group had concluded a loan with the Ministry of Communications for the purchase of rolling stock. The amount of the loan was $6,000,000 silver and the banking group superintended the offering and the opening of the tenders under which the equipment was purchased. During the past few months the ministry has been in default on the payments for this equipment, and the banks immediately discontinued payments of installments due to manufacturers. Thus, instead of being a group financing equipment purchases, the Chinese consortium has merely been a device for collecting one more commission on the purchase.

Some speculation is still being indulged in as to the possibilities of activity in connection with the international consortium. Local papers spread the rumor that the consortium was being withdrawn at the time F. W. Stevens, the American representative, left for America. The purpose of this was evidently to secure a denial, which was immediately forthcoming. Now that Wu Pei-fu has undisputed control of Peking, it is thought that some fundamental re-organization may take place. Anything of the sort will require financing, and no one but foreign powers would be so foolish as to advance any money to a government so palpably bankrupt as that of China at present. Yet the followers of Wu Pei-fu are probably the most consistently anti-foreign of any. Wu has been very careless of obligations to foreign countries. A late event is that of seizing the airplanes near Peking, although assurances had been given to the British legation that these planes were to be used for commercial purposes only. The recent re-organization of the Ministry of Communications has seen some eleven special commissions abolished. These were manned largely by students returned from America and this has been construed by some to mean an expression of Wu's resentment of foreign influence. However, if it has any significance more than of the necessity for retrenchment, this action probably is the result of the predominance of Japanese returned students, the present vice-minister being one. The present cabinet is none of Wu's choosing. On the other hand, Wu has decreed the destruction of the old Chiaotung ("communications") clique, even though this deprives him of the best technical assistance. This will remove perhaps the most effective barrier to China's availing herself of the benefits of the consortium. The "communications" clique was the most persistent opponent of the consortium, although somewhat secretly so, for it was well understood that consortium terms would deprive its members of "easy pickings" in some cases, and of the chief executive positions in others. Probably the threatened "loss of face" was the most real obstacle to an approach by China to the consortium representatives. With this clique gone, an opportunity will be afforded for the testing of this theory.

On May 20 the Tenth China-Japan Through Traffic Conference closed. The conference passed nothing of more than routine importance. The principal subjects up for discussion were the questions of a through passenger train between Peking and Fusan and through goods traffic between the South Manchurian and the Peking-Mukden railways. To both of these proposals, which have been put forward by the Japanese at several preceding conferences, the Chinese delegates put up determined opposition on the ground that domestic through traffic, both passenger and goods, had not been carried far enough to warrant its extension to international trains or bills of lading. It is doubtful if this opposition will ever be removed, unless the passing years show the South Manchurian Railway to be an instrumentality of commerce rather than an arm of military penetration. The conference went off very pleasantly up to the farewell dinner tendered by the Japanese delegates, in response to the many functions tendered them by the Chinese. At this dinner a Japanese guest, described as partially intoxicated, made such remarks to the Chinese Minister of Communications, and other Chinese delegates, that the incident has become almost of diplomatic importance.

A modern application of the ancient battering-ram was made by the retreating soldiers of Chang Tso-lin. Intent upon making entrance to Peking either for safety or loot, they boarded a passenger train and with it rammed the city gates where the railway enters. The casualties were not large, because the engine driver applied the brakes and jumped, but the debris thoroughly clogged the opening. The wall guards quickly disarmed and plundered the battering forces.

Equipment and Supplies

Locomotives

THE ST. LOUIS-SAN FRANCISCO is inquiring for 35 Mikado and 15 Mountain type locomotives.

MITSUI & Co., New York City, is inquiring for one side tank locomotive for export to Japan. This locomotive is to have a total weight in working order of 55 tons.

THE PENNSYLVANIA has placed orders for 15 new locomotives for passenger service to be built by the company's forces at Altoona, and for 100 freight locomotives to be built by the Baldwin Locomotive Works.

THE TAVARES & GULF has ordered two Prairie type locomotives from the American Locomotive Company. These locomotives will have 16 in. by 24 in. cylinders and a total weight in working order of 110,000 lb.

THE NORFOLK & WESTERN has ordered through Gibbs & Hill, New York City, from the American Locomotive Company, 4 double-unit electric locomotives. These locomotives will have a total weight in working order of 750,000 lb.

THE VACUUM OIL COMPANY, New York City, has ordered one six-wheel tank locomotive from the American Locomotive Company. This locomotive will have 21 in. by 26 in. cylinders and a total weight in working order of 160,000 lb.

THE WHEELING STEEL CORPORATION, Wheeling, W. Va., has ordered one six-wheel tank locomotive from the American Locomotive Company. This locomotive will have cylinders with dimensions of 21 in. by 26 in. and a total weight in working order of 160,000 lb.

THE SUPERIOR PORTLAND CEMENT COMPANY, Congress, Wash., has ordered one four-wheel tank locomotive from the American Locomotive Company. This locomotive will have cylinders with dimensions of 12 in. by 18 in. and a total weight in working order of 53,000 lb.

THE LOUISVILLE & NASHVILLE, reported in the *Railway Age* of August 26 as having ordered 30 Mikado type locomotives, has ordered 12 additional Mikado locomotives from the American Locomotive Company. These locomotives will have 27 in. by 32 in. cylinders and a total weight in working order of 320,000 lb. This road ordered also 8 Mikado type locomotives from the Baldwin Locomotive Works.

THE CHICAGO & NORTH WESTERN, reported in the *Railway Age* of August 12 as inquiring for 40 Mikado type and 10 Pacific type locomotives, has ordered this equipment from the American Locomotive Company. The Mikados will have 27 in. by 32 in. cylinders and a total weight in working order of 307,000 lb., and the Pacifics will have 25 in. by 28 in. cylinders and a total weight in working order of 273,000 lb.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE, reported in the *Railway Age* of July 29 as inquiring for 5 Mikado and 2 Pacific type locomotives, has ordered 4 Mikado type and 3 Pacific type locomotives from the American Locomotive Company. The Mikado type will have 23 in. by 28 in. cylinders and a total weight in working order of 204,000 lb., and the Pacific type will have 28 in. by 30 in. cylinders and a total weight in working order of 237,000 lb.

THE MISSOURI-PACIFIC, reported in the *Railway Age* of September 2 as having ordered 25 Mikado type locomotives, has increased the order to 46 of the Mikado type and 4 of the Mountain type locomotives, all ordered from the American Locomotive Company. The Mikado type will have 27 in. by 32 in. cylinders and a total weight in working order of 320,000 lb., and the Mountain type will have 27 in. by 30 in. cylinders and a total weight in working order of 335,000 lb.

Freight Cars

THE ELGIN, JOLIET & EASTERN is inquiring for 240 to 500 gondola cars of 50 tons' capacity.

THE NORTHERN PACIFIC has ordered 1,000 [illegible] constructions from the Western Steel Car & Foundry Co.

THE TEXAS & PACIFIC has placed an order with the American Car & Foundry Company for 150, 10,000-gal. tank cars of 50 tons' capacity.

THE CZARNIKOW-RIONDA COMPANY, 112 Wall Street, New York City, has ordered 40 cane cars of 30 tons' capacity from the Magor Car Corporation.

THE ST. LOUIS-SAN FRANCISCO is inquiring for 1,500 steel frame, double hopper cars of 55 tons' capacity, 1,500 single sheathed box cars of 40 tons' capacity and 300 stock cars of 40 tons' capacity.

THE INDIANA GAS & COKE CO., reported in the *Railway Age* of August 19 as having ordered repairs from the General American Car Company to 50 hopper cars, is a mistake as the order went to the American Car & Foundry Co.

THE NEW YORK CENTRAL has let contracts for repairs to a total of 11,100 additional cars as follows:

New York Central

2,000 box, Ryan Car Company.
1,000 box, American Car & Foundry Company.
1,000 gondolas, American Car & Foundry Company.
2,000 box, Illinois Car & Manufacturing Company.
500 box, Buffalo Steel Car Company.
1,500 box, Streator Car Company.
400 gondolas, Steel Car Company.

Michigan Central

200 box, Streator Car Company.
1,000 box, Illinois Car & Manufacturing Company.

Toledo & Ohio Central

500 gondolas, Ralston Steel Car Company.

Cleveland, Cincinnati, Chicago & St. Louis

1,000 box, American Car & Foundry Company.

Passenger Cars

THE CHICAGO ELEVATED RAILWAYS contemplate the purchase of 100 steel passenger coaches.

THE TENNESSEE CENTRAL is inquiring for three combination mail and baggage cars and for six passenger coaches.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE has placed an order with the Pullman Company for 4 passenger coaches.

THE CHICAGO & EASTERN ILLINOIS, reported in the *Railway Age* of July 1 as contemplating the purchase of 17 baggage cars is now inquiring for 17, 70 ft. steel baggage cars.

Iron and Steel

THE LOUISIANA & ARKANSAS has ordered 1,200 tons of structural steel from the Virginia Bridge & Iron Company for its shops at Stamps, Ark.

Miscellaneous

THE SWEDISH STATE RAILWAYS has placed an order with S. K. F. of Sweden for anti-friction bearings on 176 passenger cars for heavy express service.

THE PENNSYLVANIA has placed contracts for a new floating elevator, and three steel grain barges for use at Girard Point elevator, Philadelphia, for the transfer of grain to vessels at other piers in the Delaware and Schuylkill rivers.

The new elevator will be built by the Pusey & Jones Company of Wilmington, Del. It will have a loading capacity of 13,000 bushels an hour, and will replace an old elevator, now in use, having a capacity of only 3,500 bushels an hour. The company has another elevator of 7,500 bushel hourly capacity. The three new barges have been ordered from the Sun Shipbuilding Company, of Chester, Pa. They will be of 40,000 bushels capacity each, and will replace smaller ones. When the new barges are received, the combined carrying capacity of all the Pennsylvania's grain barges will be 184,000 bushels.

Signaling

THE CANADIAN NATIONAL is installing automatic block signals between Cadorna, Que., and Chaudiere, 11 miles. The signals, style T-2, direct current, 25 signals—with other apparatus, have been furnished by the Union Switch & Signal Company.

THE DELAWARE & HUDSON has ordered from the Federal Signal Company a mechanical interlocking, 28 levers, to be installed at Schenevus, N. Y.; also an electric interlocking, 64 levers, for Mechaniesville, N. Y. The last mentioned is to be installed at the crossing of the Boston & Maine and the Delaware & Hudson and adjacent yard tracks.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company will replace the Goddard avenue viaduct at Argentine, Kan., with a steel and wood viaduct.

CHICAGO & NORTH WESTERN.—This company closes bids September 9 for 250 bunk houses 20 ft. by 72 ft. to be constructed along its lines.

CHICAGO UNION STATION.—This company, which was reported in the *Railway Age* of August 12 as calling for bids for the construction of a concrete trucking subway extending north of Harrison street, Chicago, has awarded the contract to the Underground Construction Company, Chicago.

ILLINOIS CENTRAL.—This company has awarded the contract for depressing the tracks from Twenty-fifth to Forty-third streets, and raising tracks from Forty-third to Forty-ninth streets, Chicago, to the States Contracting Company, Chicago. Two tracks will be completed this year. This work is in connection with the new terminal project.

LEHIGH & NEW ENGLAND.—This company has awarded a contract to the Tilghman Moyer Company, for the construction of a concrete and brick freight station at Allentown, Pa., to cost approximately $40,000.

MISSOURI PACIFIC.—This company closes bids September 13 for a passenger station 24 ft. by 100 ft. at Lake Village, Ark.

Trade Publications

WOOD PRESERVING TERMS.—The Protexol Corporation, New York, has recently issued an 86-page booklet by Ernest F. Hartman and E. F. Paddock, containing a large list of wood preserving terms and their definitions. Many terms which are of a technical nature have been included as well as the more strictly industrial ones. In addition, references have been given to facilitate further inquiry and study.

STEREOPHOTOGRAPHIC SURVEYING.—A large size illustrated booklet has been published in the English language by the N. V. Maatschappij voor Landopmeting, The Hague, Netherlands, describing terrestrial and aerial stereophotographic surveying and its applications. The text discusses the advantages of the method which permits of surveying difficult or inaccessible sections without rodmen, etc., and without going over it. It also describes the various classes of work for which it is applicable as well as the way in which the survey and the office work are conducted. The illustrations show results of actual surveys under difficult conditions.

AN AGRICULTURAL INSTRUCTION TRAIN, organized by the Provincial Department of Agriculture and the Canadian Pacific Railway in co-operation with the Federal Department of Agriculture, is making a tour of the province of Quebec, finishing up at Quebec on October 31. There will be numerous exhibits of vegetables, grains, grasses and fruits. Illustrated lectures on agricultural topics will be given at each stopping point.

Supply Trade News

The Illinois Car Manufacturing Company, Hammond, Ind., has purchased the American Nut Company of Columbus, Ohio. It is said that the acquired business will be moved to Hammond.

The National Lock Washer Company, Newark, N. J., is building a new two-story brick structure, 84 ft. by 40 ft., at the corner of Pennington and Hermon streets, the top floor of which will be used for office purposes and the ground floor for shipments. The company is also putting up a steel storage building 100 ft. by 60 ft. for additional storage purposes, and is also rearranging the equipment in its fabricating machine shop and making general improvements throughout the entire plant.

The American Flexible Bolt Company announces a complete reorganization with general offices at Zelienople, Pa. The reorganized company retains the original charter but has added additional working capital. There is also a complete change in the board of directors. **Stephen Robinson, Jr.,** is now president and in charge of sales; **H. T. Frauenheim,** vice-president; **Chas. A. Seley,** consulting engineer and district representative at Chicago; **J. A. Trainor,** Eastern district representative; **L. W. Widmeier,** Cleveland district representative; **W. S. Murrian & Co.,** Southern district representative; **E. F. Boyle,** Western district representative; **H. G. Doran & Co.,** Chicago, representative; **W. F. Heacock,** Chicago, representative. The plant management will be under the supervision of **L. Finegan,** formerly shop superintendent, Mt. Clare shops, Baltimore & Ohio. The purchasing will be handled by **Jas. F. McGann** at Zelienople, Pa.

Federal Trade Commission Opposes Steel Merger

The Federal Trade Commission on August 31 issued a formal complaint charging that the proposed merger of the Midvale, Republic and Inland steel companies would be an unfair method of competition in violation of the federal trade commission act. The companies are given 30 days to file answers, after which hearings will be held. The commission says that after preliminary inquiry it has reason to believe that the merger of these three competing companies will center the control of some 35 corporations in one group and eliminate competition, restrain trade and tend to create monopoly in iron and steel products in interstate commerce. The Department of Justice had previously made a favorable report on the proposed merger. Commissioner Van Fleet voted against the issue of the complaint.

Obituary

Thomas B. Bryson, vice-president and general manager of Holbrook, Cabot & Rollins, construction engineers, died at his home in New York City on September 5, at the age of 50.

Frederick W. Cooke, who was general manager of the Cooke Locomotive Works until 1914, died on August 30 at his summer home, Quogue, Long Island, at the age of 62. He was a graduate of Stevens Institute. His father, John Cooke, founder of the Cooke Locomotive Works, died in 1882, leaving the business to his three sons. They sold it in 1901 to the International Power Company, which later sold it to the American Locomotive Company.

Tourists from "the States" spend in Montreal between $30,000 and $40,000 a day, or approximately $6,000,000 for the six months from May to October, according to the secretary of the Automobile Club of Canada. For the province, he further states, the sum would be about $15,000,000, as Quebec and other points attract large crowds. In the principal hotels of Montreal it is estimated 75 per cent of the guests are from the United States.

Railway Financial News

Chesapeake & Ohio.—*Asks Authority to Issue Preferred Stock.*—This company has applied to the Interstate Commerce Commission for authority to issue $12,558,500 of cumulative convertible 6½ per cent preferred stock plus an amount equal to 20 per cent of the par value of any additional common stock issued prior to September 2, 1922, in conversion of outstanding 5 per cent convertible 30-year gold bonds.

Chicago & Alton.—*Protective Committee for 3 Per Cent Bonds.*—A committee has been formed to look after the interests of the holders of the 3 per cent refunding bonds, due October 1, 1949. The members of the committee are: Charles A. Peabody (chairman), president of the Mutual Life Insurance Company of New York; Darwin P. Kingsley, president of the New York Life Insurance Company; John J. Mitchell, president of the Illinois Trust and Savings Bank, Chicago; W. A. Day, president of the Equitable Life Assurance Society; E. D. Duffield, president of the Prudential Insurance Company of America, and George E. Roosevelt, secretary of the Bank for Savings located in New York City.

There are $45,350,000 of the 3 per cent bonds outstanding. In case it should become advisable the committee will issue a call for the deposit of the bonds.

Mr. Peabody, chairman of the committee, said: "It is very unlikely that the 3 per cent refunding bonds will be at all affected by the position of the Chicago & Alton. The purpose of the committee, which represents more than one-half of the total issue of bonds, is to watch the situation and be ready in case any necessity should arise. In that event, of course, further notice will be given to the bondholders."

Chicago, Indianapolis & Louisville.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority for the issue of $725,000 of equipment trust certificates dated September 15, 1922, to be issued by the National Trust Company.

Leetonia.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of this company's line extending from a connection with the New York Central at Tiadaghton, Pa., in a southwesterly direction, 8.7 miles.

New York, Chicago & St. Louis.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority for the issue of $3,200,000 of equipment trust certificates dated September 1, 1922, and September 1, 1937, which certificates are to bear interest at 5, 5½ or 6 per cent.

Northern Pacific.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $4,500,000 of equipment trust certificates to be issued by the First National Bank of New York and sold at not less than 97½.

Ocala & Southwestern.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of this company's line from Ocala to Ray, Fla., 6 miles.

Sioux City Terminal.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized an issue of $100,000 of common stock for the purpose of partially reimbursing the Sioux City Stock Yard Company for advances made for additions and betterments and other purposes.

Texas & Pacific.—*Guaranty Certified.*—The Interstate Commission has certified the amount of this company's guaranty for the six months' period following federal control as $2,043,041, of which $298,041 was still to be paid.

Wheeling & Lake Erie.—*Annual Report.*—The annual report

issued this last week [illegible] was the following [illegible] for the year ended December 31, 1921

Railway operating revenues	[illegible]
Railway operating expenses	[illegible]
Net revenue from railway operations	[illegible]
Taxes accrued [illegible]	[illegible]
Operating income	[illegible]
Equipment rents, net	[illegible]
Joint facility rents	[illegible]
Interest and discount	[illegible]
Total deductions	$1,[illegible]
Corporate income for the year	$476,129

* Tentative additional accrual of "Compensation" for the guaranty period, (March 1, 1920, to August 31, 1920, inclusive) pending final settlement with Interstate Commerce Commission.

Railroad Administration Settlements

The Railroad Administration reports the following final settlements, and has paid out to or received from the several roads the following amounts:

Indianapolis Union	$76,000
Erie Terminals	[illegible]
Lake Superior Terminal & Transfer	[illegible]
The Mather Humane Stock Transportation Co.	175,000
Savannah River Terminal Co.	6,377
Bath & Hammondsport	19,500
Keokuk Union Depot Co.	6,300
Anderson Union Depot & Railroad Co.	7,700
Western Maryland paid Director General	500,000
Norfolk & Portsmouth Belt Line paid Director General	87,000
Short Lines	
Wisconsin & Northern	4,800
Montana Western	4,000
Owasco River	6,000

The payment of these claims on final settlement is largely made up of balance of compensation due, but includes all other disputed items as between the railroad companies and the Administration during the 26 months of federal control.

Dividends Declared

Beech Creek.—Fifty cents, quarterly, payable October 1 to holders of record September 15.

New York, Lackawanna & Western.—$1.25, quarterly, payable October 2 to holders of record September 14.

St. Joseph, South Bend & Southern.—Common, 1 per cent; preferred, 2½ per cent; both payable September 15 to holders of record September 11.

Trend of Railway Stock and Bond Prices

	Sept. 5	Last Week	Last Year
Average price of 20 representative railway stocks	73.07	73.09	56.08
Average price of 20 representative railway bonds	89.66	89.51	76.13

TIME FOR LABOR TO PURGE ITSELF.—The bold confession of a striker arrested in Chicago that he and several others, acting under instructions from union officials, entered into a conspiracy to wreck trains in Indiana and elsewhere, shows to what lengths such characters will go to accomplish their ends. As if to add insult to injury, the culprit is reported to have said, "What did we care how many we killed? We wanted to kill the fireman and engineer. The others wouldn't run trains if we killed a few engineers and a few firemen." While it would be manifestly unfair to thousands of other strikers to say that many are possessed of such a murderous spirit, it is not straining the point to say that such an attitude is altogether too common among members of labor organizations. Witness the cold-blooded, atrocious murders at Herrin, Ill. And this condition bids fair to continue so long as honest breadwinners permit themselves to be led by cowardly assassins. The men who toil have a perfect right to organize for mutual protection, but they should not permit themselves to be led into acts of violence at the behest of professional agitators who skulk in the background. When labor has purged itself of such leadership a better day will have dawned for unionism.—*Deseret Evening News, Salt Lake.*

Railway Officers

Executive

S. G. Lutz, vice-president of the Chicago & Alton with headquarters at Chicago, has been appointed chief traffic officer with the same headquarters. **A. P. Titus**, vice-president with headquarters at Chicago, has been appointed chief operating officer with the same headquarters.

Financial, Legal and Accounting

Frank Scott, vice-president and treasurer of the Grand Trunk, has resigned and **J. A. Yates**, assistant treasurer, has been elected to succeed him as treasurer. Mr. Scott's retirement is under the railway's superannuation regulations and comes after 44 years of service. He entered the service of the Grand Trunk in 1878 and in 1881 became chief clerk to the treasurer. Ten years later he was appointed secretary to the audit board and purchasing committee. In 1893 he was appointed assistant treasurer. In 1901 he was promoted to the position of treasurer of the company. In 1906 he became treasurer also of the Grand Trunk Pacific and in 1914 was elected a vice-president of the Grand Trunk System, in which capacity he was serving at the time of his retirement.

F. Scott

Traffic

L. R. Jones has been appointed assistant general freight agent of the Philadelphia & Reading with headquarters at Philadelphia, succeeding B. R. Boggs, resigned.

C. F. Moulton has been appointed general agent of the Denver & Rio Grande Western with headquarters at Ogden, Utah, succeeding W. B. Kenney, resigned.

J. T. Fitzgerald has been appointed superintendent of freight transportation of the Hocking Valley with headquarters at Columbus, Ohio, succeeding C. P. Torrey, deceased.

W. F. Lincoln, assistant general freight agent of the Union Pacific with headquarters at Los Angeles, Cal., has been promoted to general freight agent with the same headquarters succeeding T. M. Sloan, resigned.

J. L. Totten has been appointed assistant general freight agent of the Union Pacific with headquarters at Los Angeles, Cal., succeeding W. F. Lincoln, promoted to general freight agent succeeding T. M. Sloan resigned.

T. M. Sloan, general freight agent of the Union Pacific with headquarters at Los Angeles, has resigned. Mr. Sloan was born June 21, 1870, and entered railway service in 1885 as an agent and operator with the Chicago, Burlington & Quincy. Prior to his service in the Spanish American War in 1898, he was consecutively agent and operator on the Atlantic & Pacific and various other lines, and relief agent on the Santa Fe Pacific. From 1898 to 1921 he was agent and operator on the Santa Fe Pacific, and rate clerk, assistant general freight agent and general freight agent of the San

Pedro, Los Angeles & Salt Lake, and its successor the Los Angeles & Salt Lake. He has been general freight agent of the Union Pacific since November 1, 1921.

Mechanical

H. H Stephens, mechanical superintendent of the Southern lines of the Western district of the Atchison, Topeka & Santa Fe, with headquarters at Amarillo, Tex., has been appointed superintendent of shops at Topeka, Kan., to succeed W. B. Deveny, deceased. **E. E. Machovec,** division master mechanic, with headquarters at Argentine, Kan., has been promoted to mechanical superintendent of the Southern lines of the Western district with headquarters at Amarillo, Tex., to succeed Mr. Stephens. **W. R. Harrison,** master mechanic with headquarters at Chanute, Kan., has been transferred to Argentine, Kan., in place of Mr. Machovec. **G. F. Tier,** general foreman at Emporia, Kan., has been promoted to master mechanic with headquarters at Chanute, in place of Mr. Harrison.

Engineering, Maintenance of Way and Signaling

E. M. Hastings, principal assistant engineer of the Richmond, Fredericksburg & Potomac, with headquarters at Richmond, Va., has been promoted to chief engineer. **C. E. Dare** has been promoted to engineer maintenance of way. Mr. Hastings entered railway service with the Baltimore & Ohio as a rodman and chainman in 1900, working during the summer of that year and the following one, and during the entire year of 1902. In 1903 he left the Baltimore & Ohio to enter the employ of the Richmond, Fredericksburg & Potomac as instrumentman, remaining in this position until 1906, when he was promoted to resident engineer. In 1920 he was promoted to principal assistant engineer in which capacity he continued until his recent promotion, effective August 15, to chief engineer.

Special

J. G. Hughes, land assistant in the valuation department of the Atchison, Topeka & Santa Fe with headquarters at Chicago, has been appointed assistant commissioner of taxes with headquarters at Topeka, Kan., succeeding E. T. Cartledge who resigned on account of ill health.

Walter S. Thompson has been appointed publicity agent of the Grand Trunk Railway System, reporting to the vice-president and general manager. Mr. Thompson has hitherto been attached to the general advertising department in the position of editor of the press bureau. Previous to joining the Grand Trunk in 1914, he was engaged in editorial work on newspapers in Canada, Great Britain, Australia and New Zealand.

Obituary

W. H. Richardson, general passenger agent of the Chicago & Eastern Illinois with headquarters at Chicago, died September 4.

W. A. Drake, assistant to the vice-president of the Atchison, Topeka & Santa Fe, with headquarters at Prescott, Ariz., whose death on August 19 was reported in the *Railway Age* of August 26, was born in 1848 at Franklin, N. Y. He took a course in civil engineering in the Delaware Institute and entered railroad service in 1868, with the New York & Oswego Midland railway, now the New York, Ontario & Western railway, with this company until the spring of 1871 he was consecutively, topographer, instrumentman and division and bridge engineer. From 1871 to 1876 he was engineer of the Rome, Watertown & Ogdensburg railroad. He was with the Syracuse, Geneva & Corning Railroad as contractor's engineer from 1876 to 1878. On this date he entered the employment of the Atchison, Topeka & Santa Fe and served as division engineer until 1879. From that date to 1882 he was locating and resident engineer of the Atlantic & Pacific Railroad. On the latter date he was promoted to chief engineer of that road and retained this position until 1885. When he was appointed assistant engineer of the Atchison, Topeka & Santa Fe in Kansas and Indian Territory. During the following year he was in charge of the Denver & Canon City extension of the same road. In 1888 he was appointed superintendent of the Western division and remained in this capacity until 1891, when he entered the private practice of civil engineering for a year. From 1892 to January, 1895, he was assistant chief engineer of the Santa Fe, Prescott & Phœnix railway. From the latter date to July 1, 1920, he served successively as chief engineer, general superintendent and chief engineer, and general manager of the same road now known as the Santa Fe, Prescott & Phœnix lines, Atchison, Topeka & Santa Fe. His next promotion was on July 1, 1920, when he was appointed assistant to the vice-president, the position he held at his death.

Will Nicholson, formerly general colonization agent of the Atchison, Topeka & Santa Fe and later of the Kansas City Southern, died suddenly from ptomaine poisoning on August 30. At the time of his death he was secretary of the Associated Almond Growers of Paso Robles, with headquarters in Chicago.

Henry G. Herbel, general attorney and interstate commerce counsel of the Missouri Pacific with headquarters at St. Louis, Mo., whose death on August 11, after an illness of less than a week, was reported in the *Railway Age* of August 26, was born September 27, 1857, at Affton, St. Louis county, Mo. He was graduated from Washington University, St. Louis, in 1879, after studying law at night. In 1876, while attending Washington University, he entered the service of the St. Louis, Iron Mountain & Southern as a clerk in the law department. He was promoted consecutively to the positions of chief clerk, assistant attorney, assistant to general solicitor and general attorney. More recently he was appointed interstate commerce counsel in addition to his position as general attorney. Mr. Herbel's entire railway service was with the St. Louis, Iron Mountain & Southern railroad and the Missouri Pacific.

H. G. Herbel

Construction has been resumed on the extension of the branch line of the National Railways of Mexico which runs from Monclova to Cuatro Cienegas, about 50 miles. The extension is to run to Sierra Mojada, about 100 miles. It will connect at that point with the Mexico Northern, which in turn connects with the El Paso-Chihuahua division of the National Railways of Mexico at Escalon. The importance of the new line lies in the fact that it will be the means of forming a new through railroad route across a broad scope of northern Mexico. On its route are important coal fields which are as yet undeveloped. The chief purpose of the Mexican government in undertaking the building of this extension at this time is to give employment.

The Paris Orleans Railway (France) has placed an order for 80 electric locomotives with the Société Oerlikon and the Société de Construction des Batignolles both of Paris; these locomotives are each for a one hour rating of 1,720 hp. The Société Oerlikon is to supply and erect the electrical equipment, while the Societé de Construction des Batignolles deals with the mechanical part. Except in the case of the five first locomotives, which will be completed at the Swiss works of the Ateliers de Construction Oerlikon, and will serve as models, the whole electrical equipment will be built in France, to the Oerlikon design, at the works of the Société Oerlikon. The locomotives are specially intended for freight trains and are to be capable of hauling a load up to 1,200 tons; they are, also to be suitable for passenger service, in which case a speed of about 68 miles per hour must be attainable.

Getting Results from Shop Forces

Despite the fact that the railroads are rapidly filling the places of the strikers, it is probable that the heavy traffic of the next few months will have to be handled with a force of mechanics that is below normal both in number and in skill. This is certain to complicate the problem of providing sufficient motive power and will make it necessary to get the most ton-miles per mechanic both in the back shop and in the roundhouse. How can this be done? In the first place classified repairs should be made in a thorough and workmanlike manner and emphasis should be placed on the quality of the work rather than on the number of locomotives turned out of the shop. If a locomotive is properly overhauled, it can make a large mileage after repairs with little attention. If the work is slighted, it will require an excessive amount of minor repairs in the roundhouse and is likely to cause delays or failures on the road. It will be a good policy to try to move the traffic with the minimum number of locomotives by using the power intensively. This will avoid congestion in the roundhouses, which multiplies lost motion. Practically every road has certain classes of power that are troublesome to maintain. Wherever possible, such locomotives should be put in storage. The best results will be secured not by keeping the "weak sisters" in service and allowing them to slow up train movements, but by getting increased mileage out of the locomotives that are most powerful, most efficient and most easily maintained.

Watch Morale of Train Men

The interest and co-operation of train and engine service employees is particularly essential to the efficient operation of the railways during a period of traffic congestion, such as the one which we are now entering. There are a number of conditions existing on the railways at this time, however, which make the securing of this interest and co-operation extremely difficult. Perhaps the most important of these conditions is the tendency among all organized employees to be more or less sympathetic with the striking shopmen. Moreover, the delays resulting from heavy traffic and defective equipment tend to slow up the movement of freight trains and, where this goes very far, the basis of pay of train and engine men is changed from that of mileage to an hourly basis. This change removes the strongest incentive which is offered to train crews for expediting train movement. Even if delays due to equipment conditions and heavy traffic do not slow up service to the extent of putting train crews on hourly pay, the very fact that the delays occur in spite of the sincere efforts on the part of the men to move their trains tends to dishearten them and make them lose interest in "hitting the ball." The means of bolstering up the morale of the train men are well known to trainmasters, superintendents and other operating officers and it is not necessary that we should go into detail about them here. One of the most obvious means, of course, is mingling with the men, explaining to them the importance of their work in handling the heavy traffic and giving them a sympathetic hearing when they tell of conditions which make their work difficult. Another means is the removal, insofar as is possible, of conditions which tend to cause friction. On one road recently, an over-officious special guard shot a fireman on his way to work who objected to the guard's questioning as to the nature of the business which brought him on railroad property. All train men immediately walked out and returned only after all special guards had been removed from the property and soldiers substituted in their places. The company could not be blamed, of course, for attempting to safeguard its property, but where guards are necessary for this, they should be made to understand thoroughly that they are not to molest employees not on strike any more than is absolutely essential in the performance of their duties. With the existence of so many conditions which make it difficult to maintain the co-operation of train men it is important that their supervisory officers should be among them as much as possible. Trainmasters, for instance, are needed more sorely in the performance of their regular duties than they are at making light repairs and coupling up air hoses.

Turn-Around Service

Locomotive utilization is a matter which merits attention at any time, but it is of special importance under present conditions of peak traffic. Greater locomotive utilization in its simplest terms means more miles per locomotive-day and more tons per locomotive-mile. These are aims which are to be secured by many methods of efficient railroad operation. There are, however, two ideas which at present stand out above some of the others. One is that of running locomotives over more than one division, which plan of operation has already received considerable attention in these columns. The other is what is generally termed turn-around service, in which there is embodied the idea of having a freight train crew "double" the division and return to its starting point inside the 16-hour limit. The district, let us say, extends from *A* to *B*. The crew starting from *A* must move over the road and arrive at *B* in time so that it can take another train back to *A* inside of 16 hours. The district in question may be 75 miles long. The payment in that case would be on the basis of two one-way trips; namely, two days at the 100-mile minimum. Usually the crew lays over at its home terminal on alternate days. The advantage of this method of operation is primarily the incentive given the crew to move its train over the road and the adoption of turn-around service usually results in marked savings on this score. The crews further are returned to their home terminal, which is always an advantage. Locomotive utilization is considerably increased. As the idea is usually worked, the crew returns with the same locomotive, which means increased locomotive mileage. The fact that the locomotive is returned to a home terminal is no unimportant factor from the standpoint of locomotive maintenance. Of course, all roads do not have conditions which will permit a turn-around service, but there are nevertheless many districts, particularly those less than 100 miles, where it will prove advantageous. The testimony of those roads which have adopted the turn-around service is that it is difficult to understand why it is not followed more generally.

The *Railway Age* has emphasized the need of better shop machinery and equipment. Presumably in criticism of the policy, a master mechanic writes: "I think sometimes too much stress is laid on the necessity for purchasing new machinery, when the fact of the matter is that a great deal of the repairs to locomotives could be made as successfully with the machinery already on the ground. For example, a lathe or planer may be 30 or 40 years old and yet, if it is in good shape, do good work. . . . . In fact, all the ordinary light repair work in the usual run of railway machine shops can be done just as successfully with old machines as by purchasing new ones." We believe these statements are wrong as applied to nine cases out of ten and yet many shop officers agree, by inference at least, with the master mechanic that the old tools are good enough. This mistaken attitude, transmitted to the managements, is doubtless the real reason for small annual machine tool budgets and the fact that railroad shops as a rule are equipped with such a large proportion of obsolete, inefficient and costly-to-operate machine tools. There is just one case for which the master mechanic's first statement holds true. If the old lathe, for example, produces reasonably accurate work and is installed in a small roundhouse requiring only two or three turning operations a day, there would certainly be no excuse for installing a modern lathe. How many lathes 30 years old, however, are capable of even reasonably accurate work? How many shops or roundhouses are so small as not to have turning operations enough to keep one lathe busy eight hours a day? The master mechanic's error is in seeing the old lathe turn out passable work regularly and forgetting the excessive labor cost. Owing to the greater power and convenience of operation, a modern lathe can produce two or three times as much work in the same time and show a handsome saving over the increased carrying charges and power cost. In a specific case a modern boring mill worth $7,500 replaced an old machine worth $3,800, increasing the production three to one. The annual saving in labor offset all other charges and showed a profit, not of 15 per cent, but of *70 per cent* on the investment. (Railway Mechanical Engineer, September, 1921, Page 552.) Admitting the scarcity of funds for needed betterments, no railroad management is going to pass up such an opportunity if it has to borrow the money. The trouble is that many mechanical department officers themselves fail to appreciate the savings possible by improved shop machinery, and many of those who do see the possibilities fail to present them to the managements in a comprehensive, puncture-proof and convincing way.

Use of Antiquated Machinery Justified—Sometimes

The "Main Tracker"

IN THE DEVELOPMENT of its plan for the systematic movement of traffic through its terminals, the Baltimore & Ohio has created a term which should come into more general use.

We refer to the term "main tracker." As stated in an article which appeared in the issue of August 19, describing the system which has been perfected for the operation of terminals on this road, the term "main tracker" is applied to those trains which are made up and dispatched from a terminal for continuous movement to destination, or to a breaking-up yard, and which in their movement pass through intermediate yards and terminals intact. In the development of this plan many trains have been operated as "main trackers" for distances up to more than 600 miles without pulling a pin.

The classification of cars into trains for movement through adjacent terminals is not new; some roads have employed it for the handling of certain classes of fast freight traffic for years. It is, however, capable of much wider application. Its supervision cannot be left to local division officers for their conflicting interests may jeopardize the entire plan. Rather it must be administered from the standpoint of the system as a whole with a well laid plan for system supervision.

A yard is a necessary railway facility. It is, however, *auxiliary to* the line and is required only to prepare cars *for movement* economically. Cars earn money only when moving. This means line movement, while time spent in yards is lost revenue. The net earnings are therefore promoted by reducing yard operations to the minimum consistent with the necessity for the economical handling of the traffic.

What are the advantages of the "main tracker"? In the first place, it reduces the amount of switching to be done in intermediate terminals with little or no increase at the originating point. This permits a direct saving to be made in terminal operating costs. Less switching also reduces the amount of damage to equipment which again creates a saving. It requires less investment in yards and postpones additions to these facilities. It also expedites the movement of traffic, speeds up the delivery at destination and thereby increases the use of equipment.

At the present time, when the roads are facing the necessity for the adoption of every measure to reduce congestion (which is confined almost entirely to terminals) and to increase car mileage, the "main tracker" deserves special consideration.

Rates for the American Legion

ONE OF THE most difficult problems the passenger officials of the railways have had for some time has been that of making satisfactory rates for patriotic meetings such as those of the Grand Army of the Republic, the Spanish War Veterans and the American Legion. In past years when the prevailing passenger rate was two cents a mile it became the custom to make for gatherings of this kind a rate of one cent a mile. The prevailing passenger rate since 1920 has been 3.6 cents a mile. In 1921, owing to independent action taken by some railways, the old rate of one cent a mile was made for the meeting of the American Legion at Kansas City and for some other gatherings. The same rate was asked this year by the American Legion and the railways were strongly urged to grant it to this organization and also some others. It was argued that when large numbers of passengers were carried to and from a certain point at the same time a rate of one cent a mile would not necessarily be unremunerative, and that even if this would be the case the railways should be willing to stand some loss for the benefit of the men who made great sacrifices for the country during the late war.

The spokesmen of the railways pointed out, however, that the one-way rate of 1.8 cents for the round trip was relatively the exact equivalent of the one-cent rate which they formerly made. They also showed that it would not be possible for them to handle even such a large crowd as will attend the American Legion meeting at New Orleans next month at a rate of less than 1.8 cents a mile without incurring a substantial loss on the business, and that in making a rate of one fare for the round trip the railways are doing more for the ex-service men than any other class of business concerns in the country, since no other class of concerns makes them a half price for what they buy. It was also pointed out that if the railways should make a one-cent rate for the American Legion thousands of other organizations would contend that the railways would not have made this rate voluntarily if they had not thought it profitable and

would, therefore, have demanded that they also make it for these other organizations.

The result is it has been settled that the rate which will be given to the American Legion is one fare for the round trip; that is, 1.8 cents a mile. This rate is the lowest now made by the railways and is given only to a very few patriotic organizations, especially the Grand Army of the Republic and the American Legion. The rate now being made for large meetings of other kinds is one and one-half fare for the round trip, which figures out 2.7 cents a mile or 50 per cent higher than that made for the American Legion.

Developing Machinery and Neglecting Men

THE RADICALS who desire by direct action to overthrow existing political and industrial institutions and replace them with guild socialism or Sovietism have regarded developments in connection with the coal strike and the railway shop employees' strike with great complacency. They believe and preach that the existing civilization of western Europe and the United States contains the seeds of its own destruction. They believe "capitalistic" governments are so weak, and the working class inherently so strong, that the working class by united action through strikes, and the use of violence when necessary to win strikes, can overthrow existing governments, wrest all kinds of property from its owners and establish the dictatorship of the proletariat in both political and industrial affairs.

Developments in connection with these strikes will be construed by the radicals, and not unreasonably, as supporting these views. Never in the history of the United States did any strikes illustrate so forcibly at one and the same time the power of labor unionism and the weakness of government. The United Mine Workers of America has got such a grip on the coal mining industry that it was able to stop for almost five months virtually all production of anthracite and all production of bituminous coal outside of a few comparatively small areas. The railways are winning the shop employees' strike, but in this strike, as in that in the coal mines, the weakness of government has been strikingly exemplified. In respect to both strikes government officials have been vacillating and timid. They would not take strong measures to prevent or stop the strikes when such measures might have done good. They would not later keep their hands off and let the immediate parties fight the strikes out to a definite conclusion. They would not even so enforce the laws as to cause performance of the first duty of every civilized state—the prevention of personal violence and destruction of property. Men who have committed no crime except that of showing willingness to do the productive work without which the entire population would starve and freeze have had their homes and families threatened, have been assaulted, shot and massacred. Those who have done these things have gone unpunished.

Labor leaders of a certain kind and communists and bolshevists, may well regard these developments with satisfaction. Serious-minded men who do not desire to see our political and industrial civilization overthrown and America converted into a desert and a shambles like Russia, will not only regard them with misgivings, but will seek for and try to bring about alleviation or removal of their causes.

Ours is a civilization of machinery; and the greatest dangers that threaten it are largely due to the fact that most of its financial and industrial leaders think and act so much more intelligently about machinery than they do about men. The development of machinery has produced within the last one hundred years an industrial revolution so great that it has caused changes in the relations between men working together in industry exceeding all the changes of like kind of which there is any record since the record of man's economic activities began to be kept. Modern machinery, among all the effects it has had, has had two of vital importance. First, it has enormously increased man's capacity for producing comforts and luxuries, but increased still more his appetite for comforts and luxuries. Many workingmen now have comforts and luxuries which no king had up to a century ago. But the gap between what people have and what they want has been widened instead of narrowed. The spectacle of comfort and luxury did not make many people dissatisfied before the age of machinery because few people then had comforts, and exceedingly few had luxuries. Now so many have comforts and even luxuries that those who do not have them are greatly dissatisfied.

Second, the development of modern machinery has resulted in the creation of enormous industrial concerns employing not only thousands but hundreds of thousands of men, and the machinery has come between the owners and managers of these concerns on the one side and their employees on the other. This is strikingly true of most railroads. Most railway managers have come to think of operation and its results mainly or almost entirely in terms of machinery. How could it be otherwise? Operations are so vast that managers have to get information regarding operating results in statistical form, and practically all railway statistics, except those prepared for very special purposes, relate to *car, train* miles, tons per *car, train, locomotive* miles and other results of the performance of machines. The men who run these and other machines, and upon the efficiency of whose work the efficiency of the machine largely depends, are not kept in mind by the employer as he kept his men in mind when there were but few of them and he knew them personally and even worked beside them at the bench. It is literally true that the higher officers of most large concerns think hardly at all in terms of men except when the human element becomes refractory and hinders the smooth and efficient running of the machines.

If machinery has obscured the owners' and the managers' view of the employees, it has almost entirely cut off the employees' view of the owners and managers. What does the average railway employee know about the economics of the railroad business; about the efforts and sacrifices the stockholders and bondholders have made to get the money they have invested in railway securities; or about what the chairman, president and vice-presidents do to earn their so-called "fancy" salaries? He knows that he and other employees actually run all the machines. He is taught in his radical literature that he and other employees do all the really productive work; that the security owners and higher officers are merely parasites and vampires who live in affluence off the fruits of his labors; and he very seldom sees any evidence to the contrary. Is it any wonder, then, that, desiring like other people to get more comforts and luxuries, the average railway employee supports every movement which the leaders of his labor union tell him will enable him to increase his income at the cost of the security owners and higher officers?

The best brains of the railroads and other large industrial enterprises have been absorbed for years in improving the mechanical technique of plant construction, maintenance and operation. Has a railway officer shown that he knows just where a grade should be reduced, or heavier locomotives used, to secure maximum increases in train load with the minimum increase of capital investment? Has he shown he is master of the technique of so rearranging terminals and marshalling and directing the movement of locomotives and cars as to secure the maximum practicable increases in

locomotive miles and car miles per day? If so, he has stood a very good chance of advancement to the highest offices in railroad service, even though he has shown none of those qualities which enable a man to win the confidence, loyalty and co-operation of large numbers of other men.

Now, it would be very foolish to minimize the importance of the managers of large concerns being masters of the technique of their business, but it has long been becoming plain, and it never was so plain as it is today, that the exaggerated stress which has been and still is being placed upon the improvement of machinery and the operation of machinery is hindering increases in the efficiency of industry and actually threatening the destruction of our machine industrial civilization. The many great strikes which have occurred in recent years in countries with highly developed industrial systems, and the many more which have been barely averted both before and since the war, are signs too ominous to be disregarded.

Many business men irritably attribute them to the growth of labor unionism and to bad leadership of the unions. That is only part of the explanation. It does not explain why the employees of so many large concerns are following the leadership of the heads of labor unions instead of the leadership of the heads of these business concerns. The rest of the explanation is that many managers of large concerns who are masters of the machine technique of their businesses either have not tried to win the loyalty and co-operation of employees or have conspicuously failed in their efforts to do so.

If all managers of large concerns had failed equally in their efforts to win and hold the leadership of their employees the situation would appear hopeless. Fortunately that is not the case, and if there were not so many men who are unwilling to be taught by anybody's experience but their own we might hope that the methods of those who have been conspicuously successful in dealing with labor would be widely copied with most wholesome results.

The experience of those who have been most successful in dealing with labor in large concerns clearly indicates certain things. First, some of the very best brains in the business must be devoted almost solely to devising and carrying out plans for improving the relations between management and men, and the brains devoted to this task must be those of men who are sincerely anxious to promote the welfare of employees in every practicable way. Secondly, no effort should be spared to give to the employees the best working conditions and wages that the concern can reasonably afford to. Third, no effort should be spared to disseminate among the employees all the facts regarding the business required to nullify propaganda against it and its management carried on by labor union leaders or radicals. Fourth, the work of employees should be so firmly and thoroughly supervised that they will be required to do efficient work and at the same time it should be made clear to them why efficient work is in their own interest. Fifth, not the slightest timidity, but the greatest firmness and courage, should be shown in promptly resisting and even fighting to a finish every effort of the employees or their unions to get working conditions that unreasonably interfere with efficiency or wages that are excessive. Sixth, every reasonable inducement and opportunity should be offered to employees to become partners in the enterprise by buying its securities.

There are lamentably few large concerns in which all, or even most, of these things are done. There are lamentably few in which the man is patiently studied in the higher offices as much as the machine.

While many specific suggestions based upon experience can be made as to what should be done, one thing that is of vital importance is that financial and industrial leaders should awaken to the fact that our civilization of machinery, with all its potential power of securing increased production and greater material comfort and happiness for all classes of people, is threatening to destroy itself by exalting to excess the kind of ability that has matchless skill in the engineering of materials and machinery and largely ignoring the supreme need for developing and advancing to the highest positions the kind of ability that understands the *engineering of men.* There are many men in important positions in industry whose idea of dealing with labor is to placate it and many others whose idea is to fight it. There are some who see that merely placating or merely fighting labor will simply make bad conditions worse—that there are times when it should be placated and other times when it should be fought, but that most of the thought and energy devoted to dealing with it should be used in trying to bring about a better mutual understanding and closer co-operation.

All classes of people may well pray for speeding of the day when large enterprises will be dominated by more men who not only know the technique of their businesses, but who can compete successfully with the heads of labor unions for the leadership of their own men.

Two Kinds of Union Leadership

THOSE interested, which includes almost everybody, can as a result of recent developments draw conclusions as to what kind of leadership is best for railway employees. Several classes of railway employees had their wages reduced on July 1 under awards made by the Labor Board. Some of them were ordered by their leaders to strike. Some of them were kept at work by their leaders.

The men who were ordered to strike were, of course, those employed in the shops. Those who struck in obedience to the order of their leaders and are still out have lost ten weeks' wages. Those who struck and later returned to work lost their wages while they were out and also their seniority rights. The strike has been won by most of the railways. The facts show this, and the heads of the shop crafts unions tacitly admit it. Weeks ago they agreed to put the men back to work at the wages awarded by the Labor Board, subject to rehearings, provided the railways would take them back with their seniority rights unimpaired. The railways refused to do this.

The number of men employed in the shops has constantly increased. Recently the leaders of the national unions have evinced a willingness to make settlements with only part of the railways on the basis of all strikers on these railways being taken back and questions with respect to seniority rights being settled later by negotiations. Everybody knows what this means. It is an admission that the strike is irretrievably lost on most railways, and a virtual admission that in time it will be lost on all the others unless some settlement with these others is soon made. Thousands of the strikers have lost their former positions forever. They have lost many millions of dollars in wages while they have been out. The shop crafts unions on many railways have ceased to exist and no longer represent the shop employees on these roads.

These are the results of one kind of leadership—the kind that led the men out on strike against the decisions of a government body created by the public for the purpose of peacefully settling railway labor controversies.

Among the unions besides those of the shop crafts whose members had their wages reduced were the United Brotherhood of Maintenance of Way Employees, the Brotherhood of Railway and Steamship Clerks, and the Brotherhood of Railway Signalmen. Their leaders were as strongly opposed to the reductions of wages as the leaders of the shop crafts unions. They could have caused strikes also. The heads of

these unions, Messrs. Fitzgerald, Grable and Helt resisted all demands that they issue strike orders. They kept most of their men at work and the men have received their wages while the shop employees have been on strike. Their unions are still intact and their men retain all the rights and privileges they possessed before. The United Brotherhood of Maintenance of Way Employees already has been given a rehearing in its wage case, and the other unions mentioned soon will be. The unions whose members have stayed at work have not incurred public disapproval by striking against a decision of the Railroad Labor Board, or got themselves into trouble with the law by committing acts of violence.

There has been much criticism of the kind of leadership that some of the railway labor unions have had within recent years. It has been claimed that their members would fare better under leaders who were willing to submit their claims to arbitration and abide by the results than under leadership which opposed all arbitration and refused to accept arbitration decisions seemingly adverse to the employees, even when these were rendered by a body created by the public to render such decisions. Some of the railway employees whose wages were reduced on July 1 have had leaders who preferred to strike as a means of getting what they wanted, and some of them have had leaders who preferred peaceful methods of getting what they wanted. Can there be any doubt as to which kind of leadership has been best for the employees during recent troubled months?

It is to be hoped that railway employees of all classes will reflect carefully upon the developments which have occurred on the railways since July 1. If they do, there can be little doubt as to what kind of leadership they will decide will be best for them in future.

The Problem of Railway Power

THE RAILWAYS are in the midst of a transportation crisis similar in some respects to that of 1920, but different from it in other important respects. That of 1920 marked the end of a period of great business activity. The present one, unless all appearances are deceptive, marks the beginning of a period of great business activity. All the indications are that the available freight traffic will exceed the capacity of the railways for months and even years to come. With both the bituminous and anthracite mines opened and with the great shortage of coal it would seem that throughout the fall, winter and spring, and perhaps even later, they will be called upon to move more coal than they are capable of moving. The crops promise to be enormous. Traffic of other kinds already is moving in unprecedented volume, and indications are that it will continue to do so.

How well the problem presented will be solved will depend largely on the efficiency with which the railways are able to use their cars, and this in turn will depend largely upon the co-operation they can get from shippers and consignees. We discussed the problem of car service in an editorial in our issue of September 2 entitled "Some Things That Must Be Done."

In every crisis of this kind, however, there is presented a problem more important than that of car efficiency. This is the problem of locomotive efficiency. Experience over a long period beginning with the great congestion and car shortage which culminated in 1906 and 1907 has shown that the ability of each individual railway and of the railways as a whole to cope with the traffic depends more upon the amount, quality and condition of the locomotive power available than upon anything else. The great so-called "car shortages" in the past usually would have been better named if they had been called "locomotive shortages." In many cases there were enough and more than enough cars available, but empty and loaded cars accumulated and caused congestion because there were not enough locomotives to keep them moving, or because the locomotives available were not used with the greatest possible efficiency.

The statistics of the American Railway Association show clearly that a car shortage is coming rapidly. The number of surplus cars in condition for service decreased from 239,-160 on July 8 to 120,961 on August 25. Attention already has been called to this decline in the number of serviceable cars. It is ominous enough. But the decline in the number of surplus serviceable locomotives which is occurring is equally significant and little attention has been called to it. On July 1 the railways had stored 6,332 serviceable locomotives. On August 15 they had stored only 4,077 serviceable locomotives.

The effect of this decline in the locomotive surplus on the policy of some railways is shown by the recent increase in orders for new locomotives. In the early part of this year the railways placed relatively large orders for freight cars and only relatively small orders for locomotives. In the months of July and August, however, they ordered 573 locomotives as compared with only 432 in the entire first six months of the year. The increased attention which this indicates is being given to the problem of power is both significant and encouraging. Not enough attention is being given to it yet, however.

If the railways are to handle the very maximum traffic of which they are capable, not merely during the next few months but during the next year and the immediately succeeding years, it appears evident that they must do at least certain things with respect to their power.

First, they must spare no study or effort to secure the maximum utilization of the power available. This means not only putting forth every effort to put and keep it in repair, but also putting forth every effort to keep locomotives out of roundhouses and shops and out on the road where they can actually pull freight. Several railways already have made successful experiments with running locomotives over more than one division and operating through freight trains for long distances without breaking them up. The running of locomotives over more than one division has passed the experimental stage and the results which have been obtained show that it can be tried with highly beneficial results on many lines where it has not already been tried.

Secondly, the railroads should improve as many of their old locomotives by installing capacity increasing equipment as the conditions in their shops will permit. There are, of course, many railways whose shops are still crippled by the strike, but many others have sufficient forces to proceed not only with current locomotive repairs, but with the work of improving old locomotives.

Third, the orders for new locomotives should be increased. Many railways will find it much easier under present conditions to buy new locomotives than to repair or improve old ones. The builders are still able to turn out locomotives within a few months after they are ordered, and there is little or no room for doubt that not only for many months, but for years the railways will have plenty of use for any reasonable number of locomotives that may be ordered in the present year. The sooner they are ordered the sooner they will be available to relieve congestions and move the business. It should hardly be necessary to emphasize the importance of ordering locomotives that are fully equipped with the various modern devices that save fuel and increase capacity, in view of the present and prospective cost of fuel and the need for effecting the greatest possible economies in operation.

The transportation problem confronting the railways is and will continue to be largely a problem of power, and it cannot be recognized and dealt with as such too soon.

Canadian National Installs Grain Car Unloaders*

Essential Features of Equipment, Each Unit of Which Empties Six Cars Per Hour at Port Arthur

By F. Newell
Mechanical Engineer, Dominion Bridge Company, Ltd., Montreal, Que.

A successful box car unloader for grain must meet the following requirements:

(1) It must not damage the railway rolling stock, no matter how defective the condition of such rolling stock on arrival at the elevator.

(2) It must be designed to handle all types of box cars that may be received at the elevator.

(3) It must remove all grain from the car to the elevator pit without loss of grain and without hand labor.

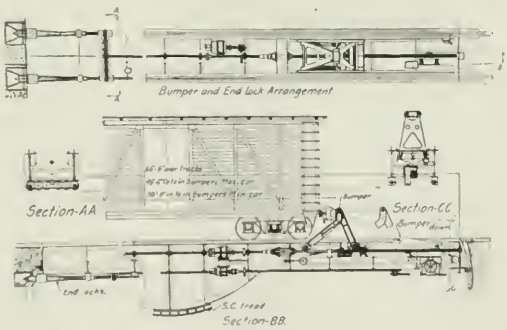
(4) It should have means of removing the grain door quickly and without damaging it.

(5) It must be made practically foolproof in operation, and safe and reliable under all conditions of operation.

(6) It must be sufficiently rapid and economical in operation to more than justify its first cost.

(7) It must be served by trackage that will permit rapid handling of cars to and from the unloader without interruption to the unloading process over long periods.

In order to get the grain out of the typical box car, the grain door has to be forced open, and if gravity is to be used, the car must be tilted either endways or sideways, or both. Therefore, as tilting operations must be performed to empty the car, the most ready way is to run the car on some form of rocking table or cradle provided with end bumpers to keep the car from rolling off, and also with some form of mechanical door opener which will open and carry the door clear of the flow of grain. If we consider the shape of a box car with its long length in comparison with its width, and with the door in the middle of its length, it will be seen that either

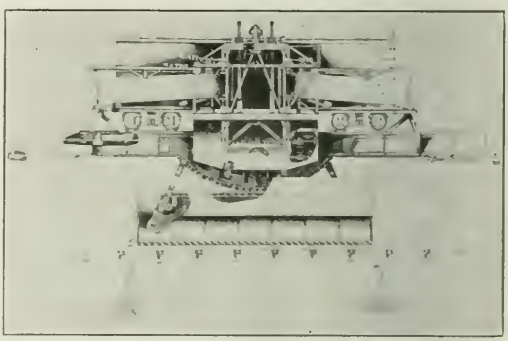


Details of the Car Tilting Device in Cradle

or both side and end tilt would have to be made many times to empty the car of all grain; consequently the cradle should be supplied with deflecting baffles which can be inserted in the car and avoid the side tilting operation, and an unnecessary number of end tilts.

Before designing the unloaders at Port Arthur the trunnion live roller, knife edge suspension, rope suspension and rolling types were considered. The relative advantages and disadvantages of side tilting, superelevation of the outer rail and the use of deflecting baffles without side tilt to the car were also considered.

The trunnion and knife edge suspension types are comparatively cheap in construction as far as first costs are concerned, but are liable to break down from wear and are difficult to repair in case of such failure. The lubrication of heavily loaded trunnions presents some difficulty, and the maintenance of lubrication during periods of rest also entails a large degree of uncertainty. Further, if the point of suspension is kept below the base of rail, in order to keep the supporting bracket clear of the flow of grain, the out-of-balance moment when tipping to an angle of 45 deg. causes a heavy peak torque on the operating mechanism, and a correspondingly large motor is required. On the other hand, if the point of suspension is placed above the base



A Sectional Elevation of the Car Unloader

of rail in order to reduce the out-of-balance moment, the supporting bracket will interfere with the flow of grain, unless special rotating hoppers are introduced, which in turn provide additional complication.

A high virtual axis of rotation can be obtained by using a live roller support and a curved track; this, however, introduces a complicated track support, together with all the disadvantages attendant on live rollers, and a complex number of parts. Also, the axis of rotation will remain fixed and a good distribution of grain in the receiving hopper will not be obtained.

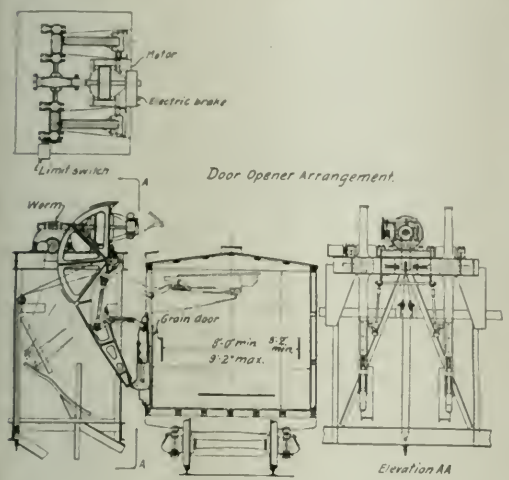
By side tilting the cradles or with a superelevation of the outer rail, it might be possible to do away with the deflecting baffles. This, however, causes serious side stresses in the cars, for which they are not designed, and it is doubtful if sufficient side tilt could be given to the car to obviate the necessity of hand sweeping to clean the car thoroughly after operations were completed on the unloader. By inserting deflecting baffles, an angle of slope of 30 deg. is made by the trough formed between the baffle and the floor of the car, when the car is tipped to 45 deg. and the baffle inserted at 45 deg. to the longitudinal axis of the car, whereas in the case of a 15 deg. side tilt the maximum angle of slope is only increased about 5 deg. and along a plane of about 33 deg. to the longitudinal axis of the car.

*Abstracted from a paper presented at the general professional meeting of the Engineering Institute of Canada at Winnipeg, Man., on September 7.

Under these conditions the grain is more likely to run down to the other end of the car than to flow out of the side door, as is required, with a minimum number of end tipping operations. The clearance required for side tilts also makes a wider spacing of trackage and housing necessary, and a consequent increased cost in construction.

Type Adopted for Port Arthur

The unloader adopted is of the rolling type, operated without side tilt but with deflecting baffles and an automatic door opener, which opens the grain door without damage and carries it clear of the outward flow of grain from the car. The rolling type was used because it is possible to obtain a higher virtual axis of rotation than with the trunnion type, and has not the possibility of breakdown and



The Door Opener

consequent delay which might occur with the use of live rollers or knife edge suspension. The higher virtual axis of rotation allows the unloader, whether empty or loaded with a full car of grain, to be in stable equilibrium. The point of support, moving in a horizontal plane in the direction of rotation, causes a less out-of-balance moment with a loaded car and a better distribution of grain in the receiving hopper than would obtain with the trunnion type.

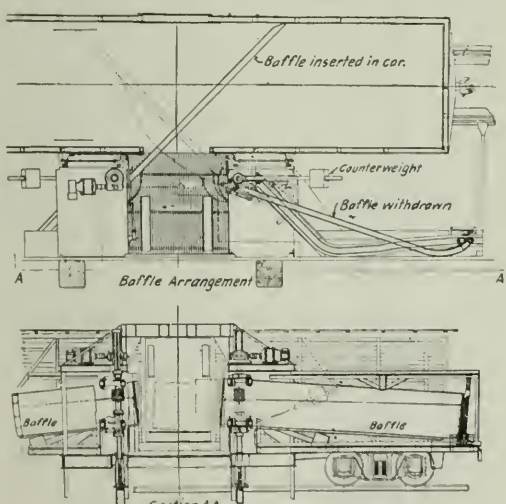
The prime function of an unloader is its ability to handle efficiently all sizes of box cars now in use, or contemplated in the near future, for the transportation of grain. In the design of the unloaders at Port Arthur, due consideration was given to (a) weight of all box cars and contents; (b) variation of length, width, and height of all box cars; (c) variation in elevation of floor of box cars, both when loaded and unloaded; (d) variation in width and height of grain doors. The result of a thorough consideration of all these points is that the unloaders have been built to cover all possible variations in the above mentioned features of box cars, with the possible exception of a few freak cars.

The unloaders consist of a heavy structural rocking cradle, capable of being tipped with its longitudinal axis at a maximum elevation of 45 deg. to the horizontal in either direction. This cradle carries the car of grain, and is provided with end locks to support the ends of the cradle definitely while cars are being taken on and off, and with collapsible end bumpers to bring the car to a central position on the cradle, clamp the car in this position, and take the total end thrust on the couplings of the car during the time the car is tilted at any angle to the horizontal in either direction. One side of the cradle is provided with heavy structural steel brackets which carry the door opening mechanism, two deflecting baffles, and baffle operating mechanism. Between these brackets and opposite the grain door is a deflecting hopper or chute to insure the grain being carried well into the centre of the receiving hopper. Steel gratings are provided to protect the chute and to cover all the open spaces around the unloader. Flexible deflectors are also provided to prevent any spillage of grain along the side of the walls of the car, or in any manner except into the receiving hopper. A closed operating cab from which all movements of the unloader are controlled is placed in a fixed position opposite the grain door, and at an elevation from which all movements of the grain can be observed.

The cradle consists of two heavily built web plate girders, the lower portions of which are formed at the centre into a circular tread which rests on steel cast tracks supported on a heavy concrete foundation. These girders are braced rigidly in a horizontal plane, and also at right angles to the axis to prevent side flexure, and to make them act together as a whole rigid tilting platform. They are designed to take a maximum loaded box car estimated to weigh 180,000 lb.; the girders being able to take this load with the horizontal axis tipped to 45 deg. from the horizontal in either direction. The girders are also designed to take a 380,000 lb. locomotive when in the horizontal position and with the end pins in place.

The Operating Machinery

The tipping machinery consists of a 75-hp. wound rotor motor, equipped with a full torque solenoid brake, driving



Baffles Deflect the Grain Toward the Doors

the main operating pinions through a worm and worm wheel, equalizing gear and bevel gears. Two pin-connected struts are fastened to the cradle, each having, respectively, a rotating axis at a point beyond each end of the circular tread. These struts are equipped with cast steel racks engaging the main operating pinions. The racks and struts are provided at the outer end with guides when in the lowered position, as at this time the yoke or carriage maintaining alinement between the pinion and the rack are at the upper end of the strut close to the connecting pins. The ends of the cradle are also guided by rollers at each end to assure an

alinement of the track rails after tipping operations are completed.

Four end locks are provided, each consisting of heavy steel pins, one at each corner of the cradle. The pins are pointed at the ends for easy entrance into the castings bedded in the concrete abutments, and are operated by a 5-hp. motor through a screw and spur gear. They are designed to take the weight of a loaded car or engine coming on or off the cradle and give a final alinement to the rail in both the horizontal and vertical direction. They are interlocked with the bumpers or car clamps so that they cannot be withdrawn until the car is centralized on the cradle, and in the reverse, the bumpers cannot be lowered until the end locks are driven home; thus preventing any accident due to the possibility of running a car or engine on or off the unloaders, excepting when the cradle is supported at the ends by the four interlocking pins.

The bumpers or car clamps are arranged so that the car does not have to be spotted in an exactly central position on the unloader, but can be pulled on the unloader into any position within two or three feet, and will be pushed into a central position by the bumpers. They are also designed so that practically any length of box car can be clamped in a central position on the cradle.

The clamps or bumpers at each end consist of two steel cast slides connected to a pair of tension and compression links capable of rising to the level of the car coupler and then traveling forward, forcing the car to a central position when the bumper at the other end will strike the coupler and clamp the car. The front slide, that is, the one nearest the transverse centre line of the unloader, is fastened to a wire rope coiled upon a drum, which is in turn clamped with a retarding torque sufficient to hold the slide in a fixed position. The rear slide, which is definitely operated by a screw, is, at the same time, lifting the tension and compression links to the required height. When this has occurred, the two slides come together and travel forward until the car is clamped at both ends. The slides are operated simultaneously at both ends by a single 10-hp. motor operating the screws and traveling nuts through a pair of spur gears.

In applying the clamping device to the couplers of the car, the component of the weight of the car and grain along the rails is taken on the coupler, which is designed for such loads. The bumpers were designed for a maximum load of 127,500 lb. and work very efficiently, allowing practically no end play when rocking the car.

When the car has been clamped in a central position and the ends locks are removed, an interlocking switch comes into operation, allowing the door opener to be operated, the cradle to be rotated, and the baffles to be inserted. The door-opening mechanism consists of two steel cast pressure arms, cast integrally with spur gear quadrants, pivotally mounted on trunnions and rotated by spur pinions from a common shaft driven through worm gearing by a 22-hp. motor. Means are provided for adjusting the width of the pressure arms to suit the varying width of door openings and are arranged so as to strike the door as close to the door posts as possible. When the pressure arms first touch the door, their lower ends are kept above the elevation of the highest car floor and are so arranged that a slight pressure on the door releases a telescopic arrangement at the bottom of the arms, allowing an extension to come down until it strikes the door sill. By this means the pressure is exerted over the total height of the door regardless of the elevation of the car floor and as close to the door posts as possible, thus avoiding any undue damage to the grain door. This, in itself, is quite an economy, as doors were invariably broken by the old hand method.

The opener enters the grain with an upward and inward movement, carrying the door above the grain toward the roof of the car and clear of the flow. The pressure of the grain against the door is released by the leakage of grain into the hopper, which occurs as soon as the smallest opening is effected, and the outward flow of grain allows an easy clearance space through which the door can be pushed. During this operation about ten per cent of the grain in the car is discharged into the hopper.

While the door is being held up inside the car by the opener, the cradle is tilted through an angle of about 20 deg. and about another 25 per cent of the grain is discharged into the hopper, the remainder running down toward the other end of the car. The baffles are arranged so that they are tilted with the car and cradle, and while the car is in this position the upper baffle is inserted into the car as far as possible without crowding on the grain. The car is now tilted to an angle of about 40 deg. in the other direction, when about another 50 per cent of the grain strikes the baffle and is discharged into the hopper. The baffle which is in the car, and which was in the upper position, is now in the lower and can be withdrawn easily. At the same time the other baffle, which is now in the upper position, can be inserted, and as only 15 per cent of the grain remains in the car, the baffle can be pushed forward over the floor of the car until the nose reaches the far side. The car is now tilted through the maximum angle in the other direction when the last remaining portion of the grain is emptied into the hopper and the cradle can be brought into the horizontal position and the baffle withdrawn.

The baffles consist of a pair of plated rectangular structural frames of right and left hand, having their faces at right angles to the floor of the car, and capable of being slid into the car so that the rectangular face, or the trace of the plane of the baffle, is at 45 deg. with the longitudinal axis of the car. As stated before, this gives a trough having an angle of slope of 30 deg., when the floor of the car is tilted to 45 deg. The grain will flow readily down this trough out of the car. A wire rope attached to the front end of each baffle, passes round a grooved operating drum and thence to the rear end of the baffle, so that the baffle can be pulled in or out of the car by rotating the drum. The rear end of the baffle is guided at its upper and lower ends in tracks having a setting and curvature specially designed to keep the overall width of the unloader down to a minimum; while the front end passes through a pivoted yoke so that the baffle is held in its correct location for any position in or out of the car.

At the time of entry, the baffle is at least three inches above the highest car floor, but as it is driven forward is lowered by a screw and nut until contact is made with the floor and the weight is relieved from the sliding nut, after which any further driving forward of the baffle only causes the sliding nut to travel up the shaft without altering the elevation of the yokes. The back end is flexibly retained in its tracks in such a manner that the lower edge of the baffle makes contact with the car floor along its entire length. To further prevent the escape of grain to the lower end of the car, a flexible canvas sealing strip is attached to the bottom edge.

To prevent the flow of grain from traveling too far down the baffles, along the baffle track, and out of the hopper, spring doors are provided to seal the entrance of the baffle and to close the opening when the baffle is fully withdrawn. Flexible, hand operated, deflecting baffles are arranged to prevent leakage of the grain along the sides of the car, and deflecting plates are provided under the car door to carry the grain well into the centre of the receiving hopper. Steel gratings are also provided to protect the fixed hopper and to cover all spaces around the unloader, as well as to catch any large foreign substances which might come out of the car with the grain.

Throughout the design of the unloader, the choice of type and the choice of method of operation were, to a large extent,

governed by the desire to obtain a maximum safety of operation, and particular attention was paid to features governing this requirement. The cradle is in stable equilibrium under all conditions of loading, so that if a breakage should occur in the tipping mechanism, the car and cradle will come to a horizontal position without damage. All power transmission is made through self locking worm or screw gearing, so that motion cannot take place unless it is so intended by the operator. The operations are electrically interlocked, so that they have to be carried out in proper sequence, and so ordered that damage cannot occur to either the car or the unloader. Limit switches are also provided, where necessary, for limiting the travel of each mechanism.

A completely closed operator's house is placed at a good elevation opposite to the car door, and is provided with glass windows so that the operator can, at all times, observe the process of unloading. The house contains the complete electrical control board, controllers, and resistances, so that the operations are under the direct control of the operator.

Time of Operation

The average time taken by the various operations in unloading a car of wheat is the time taken to remove the empty car and spot a loaded car on the unloader platform depends, in a large degree, on the trackage layout. At the Canadian National Railway's elevator this occupies about three minutes, and the results obtained by observation show that where wheat is being unloaded, and no delays in distribution occur, it is easily possible to unload at the rate of eight cars per hour. When unloading oats, the time of operation is about one minute longer, as the car requires at least one extra tipping of the cradle. Further, the time of operation over long periods of unloading is certain to be increased by delays incidental to distribution and other causes. Results, however, show that about 250 cars can be unloaded in a ten-hour day on four unloaders at the Canadian National Railway's elevator, or an average of six and one-quarter cars per unloader per hour.

The average rate of unloading in an elevator equipped with multiple pits and having a pair of power shovels at each pit is about one car per hour for a ten-hour day, while the unloader has an unloading capacity of at least six cars per hour over the same period. The average unloading staff in a house equipped with a number of pits is approximately two men per pit, while on one unloader, an operator, one attendant and two laborers, a total of four men, are required.

As one unloader will do the work of six hand pits, the saving of labor is represented by 12 men on the hand pits against four on the unloader, or eight men, and the monetary saving is in the same ratio, as the shovelers can be put on the unloaders as operators with very little training. Assuming a period of work during the year equivalent to the employment of the maximum staff for 200 days, the saving in labor will amount to 1,600 men-days. Assuming a rate of $5 per day, this would amount to a saving of $8,000 per year per unloader. There is also a further saving due to the grain doors being removed undamaged. Maintenance costs are smaller than for an equivalent number of power shovels. The labor turnover and the danger of tying up operation by strikes is naturally lessened on account of the very great improvement in working conditions. Power costs are rather less for one unloader than for six shovels. The initial cost of installation will, of course, depend upon conditions at different elevator sites, but will in many cases permit of a saving due to a less expensive trackage layout.

The question of the economy of installation in existing elevators is one which would have to be studied for each separate case by expert elevator engineers. The writer believes, however, that where a large volume of grain is handled a study of the question would be well worth while and that unloaders can be installed to advantage.

The unloaders were designed by the Dominion Bridge Company, Limited, in collaboration with C. D. Howe and Company, consulting engineers of Port Arthur, and were built and erected by the Dominion Bridge Company, Ltd.

Group Insurance for New Haven's Subordinate Officers

The New York, New Haven & Hartford has contracted with the Travelers Insurance Company of Hartford, Conn., for life and accident insurance for its officers below superintendent, to be paid for in about equal shares, half by the company and half by the insured individual; and has given all eligible persons until October 1 to accept the plan, which provides for group insurance at very low rates. At least three-fourths of the eligibles must join in the movement in order to make it effective, this being a requirement of the statute under which group insurance is authorized.

This offer of the company was announced by C. L. Bardo, general manager, at Niantic, Conn., a seashore resort, last Sunday, where a dinner was given by the company to the officers and their wives, followed by baseball and dancing. The scheme is confined to "supervisory and subordinate officials" in the transportation, mechanical and maintenance of way departments. In brief, it provides for life and accident insurance, without medical examination, to remain in force so long as the person insured remains in the employ of the company and pays his share of the premiums. If he leaves the employment, he may continue his insurance without medical examination by an arrangement with the insurance company. The insurance covers death, permanent and total disability, and dismemberment. The railroad will contribute approximately one-half of the cost "in appreciation of the loyalty of the company's supervisory forces and to show a helpful interest in matters involving the welfare of its employees and dependents."

The company has already paid the premium for the insurance, covering over 2,000 employees, up to October 1. About 1,000 of these men were present at Niantic, and next Sunday the plan will be similarly explained to another group of 1,000, at a second outing to be held there. It was necessary to have the outing in two sections in order that all might have an opportunity to attend, without leaving the railroad unprotected at any point.

In a circular explaining the plan, it is stated that the life insurance of employees whose pay is $150 a month or less (Class A) is $1,000; more than $150 and up to $200 (Class B) insurance $1,500; Class C, from $200 to $250, insurance $2,000; Class D, $250 to $300, insurance $2,500; Class E, more than $300, insurance $3,000. The principal sum of accident insurance in each case is the same as the amount of life insurance; thus the totals of the classes, with the monthly cost to the employee in each class are as follows: Class A $2,000, $0.75; Class B $3,000, $1.15; Class C $4,000, $1.50; Class D $5,000, $1.90; Class E $6,000, $2.25.

If an insured employee becomes wholly disabled by bodily injuries or by disease before he is 60 years old, no further premium will be collected and the amount of his life insurance will be paid to him, either in a lump sum or in yearly instalments extending over a series of years, up to 20 years, as chosen by him. Indemnity for loss of hands or feet or sight of eyes is adjusted as is customary in accident insurance policies. Premiums will be deducted from an employee's pay by the paymaster, saving the individual all care in connection with that detail. After October 1 employees can join only by submitting to the insurance company's regular medical examination.

The offer applies on the Central New England as well as on the New Haven road; insurance ceases when an individual leaves the employ of the company or when he ceases to pay his monthly premium.

Coal Bills Passed by Senate

WASHINGTON, D. C.

THE CUMMINS BILL, to restrain profiteering in coal by authorizing the Interstate Commerce Commission to issue priority orders in favor of or embargoes against interstate shipments of coal for which the owner has charged or the purchaser has offered what the commission considers to be an unreasonable price, was passed by the Senate on September 7 by a vote of 40 to 7, after it had been amended to limit the period during which it is to be effective to six months instead of a year and to provide that nothing in the bill "shall be construed as changing or amending the present law as to assigning cars for handling or transporting coal on contracts entered into prior to July 25, 1922, at not more than $2 per ton f.o.b. cars at mine."

The bill proposes to regulate coal prices indirectly through exercise of the powers to regulate the railroads and as described by Senator Cummins: "Broadly speaking, the immediate purpose is to prohibit a carrier from carrying coal which is sold at an exorbitant price," in the same way that the power to regulate commerce has been exercised in other laws to prohibit the interstate transportation of certain things held by Congress to be undesirable.

As the Winslow bill, intended to accomplish the same general purpose, as passed by the House a week before, contained numerous different provisions, the two bills were sent to conference.

The Borah bill to provide for the creation of a fact-finding commission, to be appointed by the President to make an investigation of the production, transportation and distribution of coal, was also passed by the Senate on September 8 after it had been amended to provide for a separate report on the anthracite industry. A similar bill had also been passed by the House. A strong effort was made to omit from the bill the direction to the commission to report on the advisability or wisdom of nationalizing the coal industry, or of government regulation, but the amendment for this purpose was defeated.

There was a protracted debate on the priority bill in the Senate, during which the bill was attacked by several, on the ground of opposition to price-fixing, on the ground that the price-fixing is indirect, and on constitutional grounds. Various senators who were obviously speaking from the standpoint of the coal operators or of interests that have contracts for coal at a low price, objected on the ground that it would divert coal from those contracts to other purposes and several attempts were made to amend the bill so as not to affect such contracts. Senator Kellogg obtained an amendment to include within the commission's jurisdiction for the purposes of the bill vessels suitable for the transportation of coal on the inland waters of the United States. Senator Sutherland of West Virginia and Senator Dial of South Carolina objected to the bill on the ground that it was intended to protect those who had not had the forethought to make contracts last spring. Senator Dial talked a good deal about some contracts which he and various cotton-mill owners had made at $1.90 a ton. When asked if a cotton mill should have preference over domestic consumers, he said that if the cotton mill employees are turned out of work they will perish by starvation and he "reckoned" it would be about as painful to perish in that way as to freeze to death.

In reply to the contention that certain mines claim they cannot get cars to deliver contract coal while others are able to get cars for coal which they sell at high prices, Senator Cummins pointed out that under the present law the priority given to certain classes of consumers may take cars away from certain mines but that that is done regardless of the price factor, while to undertake to protect contracts would also protect contracts made by speculators at unreasonable prices. He said, however, that he had no objection to the amendment as finally proposed by Senator Dial, after he had inserted the $2 limit, because it does not mean anything. "The commission now," he said, "has the authority to say that if coal is intended for a certain purpose, cars cannot be furnished for the transportation of that coal until the coal that is required for a more important purpose has been furnished."

Senator Sutherland, after a defense of the coal operators, said he supposed there may be operators who had contracted to sell their coal at $2 a ton who would welcome the interference of the Interstate Commerce Commission and the diversion of their product to some one who was willing to pay $4 or $5 a ton, if such prices should be fixed, rather than to ship their coal to the customers to whom they had contracted it at $2. Senator Cummins replied that if that were possible it would not be brought about by this bill, but by the existing law, and that it would not comport very accurately with the description which the senator from West Virginia had just been giving of the coal operators. He admitted, however, that if the coal were diverted by a priority order the operator would not be obliged to sell it at the contract price; he would only be required to sell it at a fair and reasonable price.

In arguing the constitutionality of the bill, Senator Cummins discussed at length the various Supreme Court decisions in cases in which it had sustained a prohibition against interstate transportation where "the use of interstate transportation was necessary to the accomplishment of harmful results." He said that the fact that the distortion of commerce resulting from unreasonable prices for coal is effected necessarily through the interstate transportation of the coal differentiates this bill from the child labor law cases, where the law was held unconstitutional by the Supreme Court on the ground that the mere fact that goods produced by child labor were intended for interstate transportation, does not make their production subject to federal control under the commerce power. The bill, he said, is directed entirely against the use of transportation. Senator Kellogg also made the point that interstate commerce is directly affected by the price of coal because the railroads are such large purchasers of coal.

Senator Reed of Pennsylvania said that the laws which the court had sustained dealt with the transportation of articles held to be evil in themselves, whereas the transportation of coal is not an evil and the charging of a high price is not interstate commerce.

The Senate bill differs from the House bill in that in it Congress declares the existence of the emergency, and the President is authorized to terminate it, while in the House bill the President is authorized to declare an emergency and so revive its provisions at any time prior to January 1, 1924. The Senate bill acts entirely upon common carriers, while the House bill is not so restricted. The House bill provides a penalty for soliciting, accepting or receiving any concession or discrimination in respect of car service, or for the procuring of priority orders by misrepresentation or misuse of priority orders.

The conferees representing the Senate and the House reached an agreement on Wednesday which represents a combination of the Senate and House bills. The period during which the act shall be in effect was changed to 12 months and the principle of the Senate bill that the act should apply only to interstate shipments was adopted. The conferees were expected to make their report on Thursday.

Separate Peace to End Strike on Some Roads

Strikers Give in on National Settlement and Seniority— Roads Operating 50,000 Miles to Accept

TERMS OF AGREEMENT for the settling of the shop employees' strike were agreed upon in Chicago this week by the heads of the policy committee of the shop crafts' unions and railways having about 55,000 miles of line. The exact list of railways which have signed the agreement has not been made public, but it is known to be with some important exceptions the 52 railways which made to the shop employees the proposition for settlement at the meeting in New York.

Following the meeting of the Association of Railway Executives on August 25, the list of railways which made the proposition at that time was given in the *Railway Age* for September 2, page 418. Among the railways which joined in the proposition at that time but which are known not to have signed the agreement made this week are the Chicago Bur-

Copyright, 1922, New York Tribune, Inc. Used by permission

There May Be Some Good Arguments Against the Strike Injunction, But This Is Not One of Them

lington & Quincy, the Northern Pacific, the Erie, the Norfolk & Western, the Chesapeake & Ohio and the Chicago, Rock Island & Pacific. It is understood that at least one or two important lines which did not join in the proposition made in New York will sign the new agreement.

The list of roads that already have signed the statement has not been given out because the labor unions have authorized the heads of the labor organizations on the individual railways to present the plan to all of the individual railways for the purpose of getting as many railways as possible to accept it.

The Shopmen's Terms

The terms of settlement finally agreed upon are based upon the original plan offered by the 52 railways two weeks ago, although some important modifications have been made, for example the commission proposed in the plan adopted by the railways in New York to which was to be referred questions arising regarding relations of the men who returned to work to the strikers was to have been composed of representatives of the train service brotherhoods and the railways signing the agreement. Under the plan adopted at Chicago this commission will be composed of six representatives of the shop crafts' unions and six railway officers representing the roads signing the agreement. The text of the terms of settlement agreed upon in Chicago is in full as follows:

"First—In order to bring to an end the existing strike of employees upon the undersigned railroads and relieve the country from the adverse effects thereof and to expedite the movement of essential traffic the following memorandum of agreement is made upon the understanding which the parties hereto accept that the terms hereof shall be carried out by the officers of the companies and the representatives of the employees in a spirit of conciliation and sincere purpose to effect a genuine settlement of the matters in controversy referred to below. This paragraph does not apply to or include strikes in effect prior to July 1, 1922.

"Second—All men to return to work in positions of the class they originally held on June 30, 1922, and at that same point. As many of such men as possible are to be immediately put to work at present rates of pay, and all such employees who have been on strike to be put to work or under pay not later than thirty days after the signing of this agreement, except such men as have been proven guilty of acts of violence which in the opinion of the commission, hereinafter provided for, shall be sufficient cause for dismissal from service.

"Third—The relative standing as between themselves of men returning to work and men laid off, furloughed or on leave of absence, including general chairmen and others who were as of June 30, 1922, properly on leave of absence, will be restored as of June 30, 1922, and they will be called back to work in that order.

"Fourth—If a dispute arises as to relative standing of an employee or if any other controversy arises growing out of the strike that cannot be otherwise adjusted by the carrier and said employee or the duly authorized representatives thereof, the matter shall be referred by the organizations parties to this agreement, the employees or the carrier in the interest of any employees who may be aggrieved, to a commission to be established and constituted as hereinafter provided for final decision by a majority vote.

"Fifth—The commission referred to in Paragraph 4 hereof shall be composed of six representatives to be named by the chief officers of the organizations parties hereto and six railroad officers or representatives selected from and by the railroads agreeing hereto. This commission shall be constituted within fifteen days from the signing of this agreement and shall have jurisdiction to decide all cases that may properly be referred to into or before May 31, 1923, but not thereafter.

"Sixth—Inasmuch as this agreement is reached for the purpose of composing in a spirit of compromise this con-

troversy, all parties hereto agree that neither this settlement nor any decision of the commission above provided for, shall be used or cited in any controversy between these parties or between the railroad signing the same or any other class or classes of their employees in any other controversy that may hereafter arise.

"Seventh—Both parties pledge themselves that no intimidation nor oppression shall be practised or permitted against any of the employees who have remained at work or have taken service or as against those who resumed work under this understanding.

"Eighth—All suits at law now pending as the result of the strike to be withdrawn and cancelled by both parties."

National Settlement Plan Abandoned

It will be noted at once that the decision of the labor leaders to offer this plan of settlement to all the railways and to make settlements with the individual railways which will accept it involves final abandonment of their stand in favor of nothing but a national settlement. It will also be noted that the men will be put back to work without the restoration of their seniority rights and that all questions arising concerning the relations between the present employees in the shops and returning strikers are to be referred to the commission which the agreement creates.

This latest "peace" movement was hinted at, announced and denounced in the press for several weeks, alternately affirmed and denied by almost everyone concerned and only reached a tangible stage when the convening of the "policy" committee of the Federated Shop Crafts at Chicago and the presence of certain railway executives in Chicago immediately prior to this meeting left little doubt as to the existence of some sort of a plan for the partial settlement of the strike. However, even after it became generally known, all of those who might know something of the details refused to talk for publication with the result that many and varied rumors were circulated. There were so many "guesses" in the press as to the terms of the new plan, the whereabouts of the leaders of the negotiating factions and the railroads involved, that it was not until September 13 that reliable information was available.

Warfield Started Conference Which Brought Settlement

The conferences between a few railway executives and B. M. Jewell which resulted in the shop crafts' "separate peace" agreement were begun by S. Davies Warfield, president of the Seaboard Air Line, on September 2. In an interview given out on September 13, Mr. Warfield reviewed the negotiations as follows:

"At the meeting of the Association of Railway Executives, at which the resolution was passed breaking off negotiations for the settlement of the strike, I cast the four votes of the Seaboard Air Line against the resolution to leave a way open for direct contact with the shopcrafts leaders. It seemed to me unwise to close the door for the settlement of this strike at a time of great business and world-wide unrest. I was not convinced that the whole country must be made to suffer because of exaggerated views of the difficulties respecting new men who had accepted employment during a strike.

"After this meeting, negotiations continued between the brotherhood mediators and a small committee, headed by Daniel Willard, representing fifty-two railroads, the Seaboard being one. This failing in result, I was in position to meet and did meet Mr. Jewell the same day, and reopened negotiations directly with him and his associates. I urged dealing with individual roads, pointing out to Mr. Jewell that he could not defend a position based on declination to negotiate with railroads in position to settle on an acceptable basis simply because other railroads declined. Mr. Jewell stated he would consult his associates and decide whether they could proceed on the basis we discussed.

"Mr. Jewell, with two associates, met me in Baltimore on Sept. 2; we reached a tentative understanding. I then asked A. H. Smith, president of the New York Central Lines, if he would meet these gentlemen, and later communicated with Daniel Willard, president of the Baltimore & Ohio Railroad, who was out on his road. The presence of Mr. Smith, who came to Baltimore on two occasions, contributed largely to the result. After the conference with Mr. Jewell, and later with members of his Executive Council of Eight, an agreement was reached acceptable to the three railroads represented and to the shop crafts leaders. Other railroads, called over the telephones, tentatively agreed to go along on the same lines. The negotiations were closed on Sept. 5. Mr. Jewell called a meeting of the Policy Committee of the railway employees department to take action, Mr. Willard undertaking to present the conditions of settlement to a number of railroads. We found Mr. Jewell and his associates desirous of a fair and reasonable settlement of the existing differences.

Strained Relations Unfortunate

"Continued strained relations between the railroads and their employees is very unfortunate. If not permanently relieved, Government operation is likely to ultimately result. The newspapers announce that a cabinet officer, Mr. Hoover, and Interstate Commerce Commissioner Aitchison, in charge of car service, are to confer with the anthracite coal operators to determine with respect to priority orders to govern the transportation of coal. With labor troubles on the one hand, and on the other the government now largely directing railroad operation, the outcome is not encouraging. If the railroads cannot themselves settle disputes with their own employees and determine among themselves what is to be done in respect to the hauling of coal to care for the nation's needs without the necessity for the issuance of orders by a government agency, where will we finally land?

"Regional railroad labor boards should be properly and promptly established. A board should be named by each group of railroads that operate in each of the four rate-making districts into which the commission has divided the country; the men of each group of railroads also to organize boards to confer with the regional railroad boards. Negotiations could be successfully carried on and disputed questions settled if approached in good faith.

"The ill effects of this strike have not been confined to the railroads. Judge Gary made a 20 per cent increase in the wages of steel employees to prevent them from accepting employment with the railroads which were advertising for them. Having occasion to confer with officials of a number of car manufacturing companies now building cars for the railroads, I found that a number of shops were nearly closed down; in others, labor difficulties caused increases in wages from 20 per cent to 33 per cent to hold their men, many leaving to take employment in railroad shops. Column upon column of newspaper advertisements by railroads for men told the story. This could not continue without serious disruption for the industrial labor structure. A shortage of equipment through a continuance of the shop crafts strike has thus been augmented by the failure of car manufacturers to deliver cars because the railroads have been taking their men, an apt illustration of the 'vicious circle'"

Lull in Violence One of Week's Developments

Probably as a result of the insistent "peace" talk of the past week and the militant entry of the government into the controversy, there has been a lull in the violence which has heretofore characterized the strike. However, reports still continue to be made of the bombing of railroad property and workers' homes, the burning of bridges, the attempted wrecking of trains and numerous riots and similar disturbances directed at the intimidation of loyal or new employees.

Bombs or dynamite were used during the past week in attempts to destroy the track of the Chicago, Milwaukee & St. Paul near Perry, Ia., an Atchison, Topeka & Santa Fe bridge near Verdemont, Cal., a Southern Pacific train at Los Angeles and homes of two Missouri, Kansas & Texas shopmen at Parsons, Kan., two New York Central shopmen at Ashtabula, Ohio, and a Rock Island shop foreman at Valley Junction, Iowa.

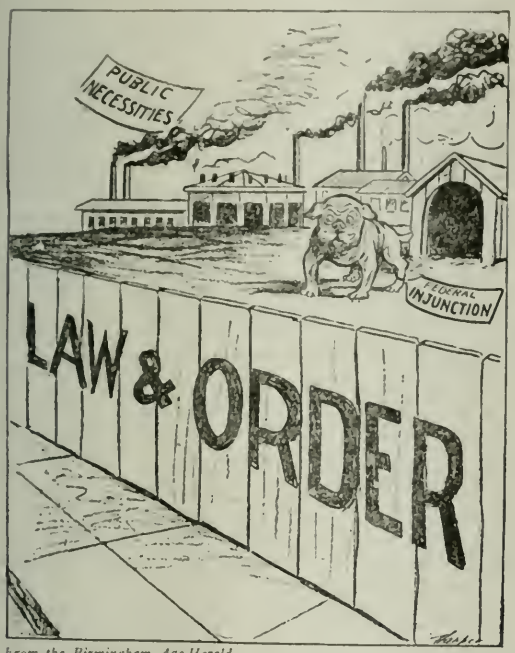
An attempt to wreck a train was likewise reported from St. Charles, Mo., on the Wabash.

The burning of bridges, a form of violence in particular favor with strikers and their sympathizers in the southwest, continued with reports of two instances of this character,

one on the Midland Valley at Bixby, Okla., and the other on the St. Louis-San Francisco at Altus, Okla.

Rioting in which loyal or new employees, railroad guards, strikers and strike sympathizers were involved were reported during the past week from Parsons, Kan., Chicago, Galesburg, Ill., Terre Haute, Ind., and Ft. Worth, Texas. At Parsons, Kan., it became necessary to call upon state troops to patrol railroad property following the disorders at that point and after an investigation disclosed that strikers had been hired as deputies.

With the granting of injunctions throughout the country restraining the strikers from interfering with the operation of trains, court actions have been numerous and in the



From the Birmingham Age-Herald

He'll Not Bite You, If You Stay on Your Side of the Fence

majority of cases unfavorable to the strikers involved. At Memphis, Tenn., four men were indicted by the grand jury for killing a Frisco employee and according to reports from that point have confessed to many other acts of violence in that territory. At Roodhouse, Ill., the scene of considerable trouble during the past three weeks, eight strikers were indicted by the grand jury for an alleged assault upon a Chicago & Alton roundhouse foreman at that point. At Oklahoma City federal operatives have announced an investigation of acts of violence in Oklahoma, particularly the destruction of bridges and other attempts to interfere with the operation of trains. In many cases former employees have been convicted of violations of federal injunctions and sentenced to prison terms.

Maliciously Derailed Says I. C. C. Report

The Interstate Commerce Commission has issued the report of its Bureau of Safety on the derailment at Gary, Ind. on the Michigan Central, August 20, when an American Express (merchandise) train was maliciously derailed, resulting in the death of the engineman and fireman. As heretofore reported, the cause was malicious removal of spikes, of which 30 had been withdrawn from the ties on the outside of the left rail. The spike holes were in no way distorted nor were the spikes bent. No evidence was found of any dragging equipment nor of any fault in the track nor the locomotive. No tools had been taken out of the trackmen's tool house although it is plain that the spikes had been drawn with a claw bar.

Dynamite Lehigh Valley Reservoir

A large reservoir of the Lehigh Valley Railroad near Packerton, Pa., was damaged by an explosion of dynamite on the night of September 6, and its contents, many millions of gallons of water, run off. The reservoir was one of ten acres extent, averaging 22 ft. in depth. The railroad police at once began searching for men suspected of having stored dynamite near the scene of the outrage.

Saving the Strikers "Spotless Record"

At Asheville, N. C., on September 9, three striking shopmen of the Southern Railway were each sentenced to seven years' imprisonment, having been found guilty of abducting one of the new employees, age 19, and beating him with whips. On September 8, in the Federal Court at Richmond, Va., two strikers, charged with violating the injunction against improper interference with new employees, were let off by Judge Groner, the judge saying that he "did not wish to mar the spotless record" which had thus far been maintained by the strikers in his district. But, he told the accused men to leave the state.

Sermon Alleged to Violate Injunction

A clergyman, pastor of a church at Quincy, Ind., is among the persons complained of in an application made before the court by the Chicago, Indianapolis & Louisville last week, naming alleged violators of the injunction against illegal encouragement of strikers. It is charged that the clergyman, in a sermon in his church, said that he was a union man and that no man had a right to take a job that a union man had vacated; also, that he told one of his congregation, who worked for the railroad company, that he ought not to do so.

Recruiting Continues

Railroad shop forces continue to increase, by the return of strikers to the service and by the employment of new men. Net gains by days are reported by the Association of Railway Executives as follows:

September 1	2,419	September 7	4,124
September 2	1,114	September 8	4,601
September 4	3,317	September 9	2,922
September 5	2,927	September 11	4,170
September 6	4,400		

The Strike Situation in Chicago and the West

Despite the widespread talk of peace in the shopmen's strike, conditions in the shops of the Western lines have continued to improve during the past week, both in the number of men at work and in the quantity and quality of the work turned out by the existing forces. A general picture of conditions on the western roads was painted by the Western Presidents' Committee on Public Relations of the Association of Railway Executives when it said on September 10:

The best evidence regarding the strike situation on the railways is afforded by the steady increase in the number of men employed in the shops and the large volume of business being moved.

The number of men employed in the shops of the western railways had increased on September 8 to 103,870, or 65 per cent of the number before the strike began. How steadily and rapidly the number of men at work has increased is shown by the following figures:

On August 1 the number of employees was 58,073, or 36.5 per cent of normal. On August 15 it was 76,886, or 49 per cent of normal; on September 1 it was 96,593, or 61 per cent of normal,

and since then the increase has been 7,283 men, making the present force 65 per cent of normal.

The volume of freight now being moved by the railways of the United States is approximately as large as in the same part of the year 1920, when it was the largest in the history of the country. The total carloads moved in the week ended August 26 was 890,838, which was 62,000 carloads larger than in the same week of 1921, and 38,487 more than in the first week of August. Since the week ended August 26 there has been such a large increase in the amount of coal moved that, as already stated, the total traffic now being handled is about equal to the record business of 1920.

On September 14 the Western Presidents' Committee on Public Relations called attention to the fact that "the number of carloads of freight moved for the week ended September 2 was only 9 per cent less than the largest number ever moved in any week in history which was in October, 1920," adding,

"The number of men employed in the shops of the western railroads on September 13 was 109,513 or 69.3 per cent of the number employed before the strike began. This was an increase of almost 5,643 men since September 8."

Embargoes Declared in East as Anthracite Mines Open

Congestion already developed, together with the prospect of much heavier traffic when anthracite mining, resumed this week, reaches normal, has resulted in embargoes on a number of Eastern roads. Of these the Lackawanna, the Lehigh Valley and the New York Central have placed restrictions only against traffic not ordinarily moving over their rails. Their embargoes are designed only to prevent diversion of traffic from other roads. The Baltimore & Ohio has embargoed all traffic received from connections and originating at points in the mining regions, excepting food, fuel and kindred commodities. Certain exceptions to the embargoes of the Baltimore & Ohio and the New York Central will be allowed under the "permit" system. The embargoes of the New York Central, the Lackawanna and the Lehigh Valley do not cover food or fuel except Pacific Coast perishables which do not under normal conditions move over their lines.

The Erie, however, has gone a step farther. It, too, has closed its lines to traffic diverted from other roads and, in addition, has embargoed Pacific Coast fruit and vegetables shipped after September 10 for points east of Hornell, N. Y. The Erie has practically a monopoly in the handling of this business to the New York market and, furthermore, receipts of fruit and vegetables from the Pacific Coast in this market are running in excess of 25 per cent of the total. Consequently, the prospective loss of these commodities has caused considerable concern in New York. The embargoes of the New York Central, the Lehigh Valley and the Lackawanna, as noted above, prevent the turning over of any of this business to them.

Endeavor to Get Pennsylvania to Take Over Traffic

The marketing of Pacific Coast perishables in New York is built up around the Erie's piers 20 and 21, North river. There the goods are unloaded and there they are auctioned off to buyers. The diversion of this traffic to the terminals of other roads would disrupt this market and, accordingly, the Erie has offered the use of these piers free of charge except for labor to any road which will take over this traffic. At a meeting on Wednesday afternoon between representatives of the Fruit and Produce Trade Association and officers of the Pennsylvania, this company expressed its desire to do everything in its power to handle the business. Definite details of just what the road could offer, however, were not decided upon and a committee from the railroad and the produce association was chosen to consider the matter again on Friday. Corporation Counsel O'Brien representing the City of New York, attended the Wednesday meeting.

There has been some adverse comment concerning the declaring of these embargoes, particularly that of the Erie against Pacific Coast perishables. City officials of New York have interested themselves in the matter and unless some other road will agree to take over this business it seems likely that shippers and produce dealers, aided perhaps by New York City officials, will lay their case before the Interstate Commerce Commission. Roads which handle this business from the Pacific Coast to Chicago, also, will doubtless be interested in whatever solution is arrived at.

The New York Central's Statement

The statement of the New York Central relative to its embargo follows:

The embargo is made necessary as a precaution against the overcrowding of our lines, yards and terminals by accumulations of freight due to abnormal diversion from connections unable to handle it, which roads already have embargoes in force. The "permit system," whereby shippers may apply to the freight traffic manager at Chicago or the general freight agent at New York and secure authorization for the movement of shipments, will give control calculated to afford the utmost protection to regular business and exclude temporary diversions which might cause congestion and, consequently, reduction of the very heavy tonnage handled promptly during the past 60 days.

The embargo covers all freight, carload and less than carload, originating beyond the rails of the New York Central System's roads, from connections at Clearfield, Pa.; Buffalo, N. Y.; East Buffalo, N. Y.; Gardenville, N. Y.; Black Rock, N. Y.; Suspension Bridge, N. Y.; from Niagara frontier stations or junction points west thereof, destined to points east via the New York Central Railroad. The various roads of the New York Central System, including the Boston & Albany Railroad, the Michigan Central Railroad, the Cleveland, Cincinnati, Chicago & St. Louis Railway, the Pittsburgh & Lake Erie, The Toledo & Ohio Central, the Indiana Harbor Belt Railroad, the Chicago Junction Railroad, and their constituent lines, are not affected in the loading of their regular business.

The exceptions to the embargo comprise: Food for human consumption, live stock, food for live stock, perishable products, coal, coke, fuel oil, petroleum products, railroad material, freight consigned to offices of the United States government, newsprint paper, fertilizer, food containers and shipments restricted by the embargo when they are covered by permits issued by W. A. Terry, freight traffic manager, Chicago, Ill., and G. C. Woodruff, general freight agent, New York City.

Shippers in territory served by the New York Central Lines, including New England, will appreciate that this embargo is for the protection of regular traffic which has been moved with promptness in increasing quantities during recent weeks and that the embargo is calculated to safeguard operation against disturbances or temporary heavy diversions from other roads.

Whatever may be the general opinion about these embargoes, there can be no doubt but that traffic conditions justify some such steps. The way perishable and live stock traffic is being handled may be taken as an index to general conditions and, according to information received from official sources, this business is not moving according to schedule—at least into New York City.

Anthracite Mining Resumed

The first trainload of anthracite coal to reach New York since the resumption of mining in the anthracite fields came into the Lehigh Valley's terminal at Perth Amboy, N. J., early Tuesday morning. The mine operators seem to be having some difficulty in reassembling their forces in spite of the termination of the strike. Many strikers, it is reported, have since the cessation of mining drifted into other lines of work and not a few have returned to their homes in Europe. Then, too, the mines and breakers have not been kept ready for instant use during the period of the strike and some days will be required before this condition ceases to be a retarding factor. It is not thought that maximum production of anthracite coal can be reached for a week or two.

Legal Battle Over "Daugherty Injunction" Opens

Shopmen Lose Fight to Have Restraining Order Dismissed—Government Attitude Unchanged

THE LEGAL BATTLE over the now-famous "Daugherty injunction" opened on September 11 in the courtroom of Federal Judge James H. Wilkerson at Chicago. The temporary injunction, granted to Attorney-General H. M. Daugherty on September 1, was continued by Judge Wilkerson for 10 days and the motion of Donald R. Richberg, counsel for B. M. Jewell, president of the Railroad Employees Department of the American Federation of Labor, that the temporary injunction be dismissed was denied. Attorney Richberg had attacked the legality of the government's action in seeking the restraining order and had directed many of his remarks at Attorney-General Daugherty, whom he charged with betraying the court.

While Judge Wilkerson did not pass finally upon the Richberg motion to dismiss the injunction, he did intimate that he did not intend to comply with this request. The language the judge used was that he was "not satisfied that the bill (the government petition) fails to state a ground for any relief." The judge indicated however that he would hear additional argument on the motion later.

In extending the temporary injunction for 10 days, Judge Wilkerson did not attempt to pass upon the merits of the contentions of either the government or the defendant. The injunction would have expired at midnight if he had not acted.

Following the denial of the union attorney's plea for dismissal, Blackburn Esterline, assistant solicitor-general, continued with the government's fight to make the temporary injunction permanent. He presented three documents to the court. One was Decision 1036 of the Railroad Labor Board. The second was a general history of the strike, and the third an affidavit from Chester J. McGuire, secretary to one of Attorney-General Daugherty's aids. The affidavit contained a series of depositions taken from secret agents employed by the government, each of which depicted the alleged connection between the strike of the shopmen and various acts of violence, including murder, arson and sabotage of railroad property.

In the depositions offered by the government attorneys in support of their request that the injunction order be made permanent, 18 cases of murder, 44 assaults, 17 derailments, dynamitings, and burning of bridges, together with a list of various acts of sabotage and depredation covering 26 pages were recited.

After Attorney Esterline's recital of the acts of violence, a motion to strike the affidavit from the records was made by Frank L. Mulholland, another attorney for the labor leaders named in the injunction. He characterized the affidavits as "mere rumors." Judge Wilkerson reserved his decision on the point until all the testimony had been given in support of the affidavit, adding that mere heresay was not regarded as evidence.

A letter signed by the Postmaster General was also introduced by Attorney Esterline in which it was stated that 953 mail trains had been withdrawn since the start of the strike and that mail service on 82,912 miles of railroad had been adversely affected.

Labor Attorney Argues for Dismissal of Injunction

Mr. Richberg submitted four points in support of his contention that the restraining order should be vacated. These were:

1. The government erroneously assumed the strikers violated law when they declined to abide by decisions of the Labor Board.
2. The open shop issue, cited as an important reason for seeking an injunction, is not one to be dealt with by the Department of Justice.
3. Federal courts have held that strikers have a right to attempt to recruit their ranks from among non-union workers.
4. The government failed to establish an unlawful conspiracy on the part of the strikers, as alleged in the injunction.

At the opening of the court's session Attorney Richberg was given permission to argue his motion for dismissal of the temporary injunction ahead of the government's petition for making the injunction permanent. He attacked the order as unconstitutional and unjustified, then made his speech denouncing the attorney-general.

After the court had ordered him to confine his remarks to the law in the case, Mr. Richberg proceeded to sketch his argument. Essentially, he said, the temporary injunction is based on the allegation that the officers of the shop crafts conspired to obstruct railroad transportation, and this allegation is based in turn on the presumption that the crafts are bound by law to obey the decisions of the Labor Board. Such a presumption, he said, is unjustified.

"Not only is there nothing to that effect in the Transportation Act, but if there were such a clause it would be unconstitutional," he continued. "Even if the Board's decisions were legally binding they could not be used to prevent the workers from withdrawing from service."

In support of this argument he quoted Senator Cummins, Representative Esch, and President Harding to the effect that "there is nothing of an anti-strike nature in this law."

Attorney Richberg called the court's attention to the public statement made by the attorney-general at the time of the temporary injunction, in which Mr. Daugherty asserted his purpose to fight "for the open shop."

"The attorney-general has no right to use the power of the government to fight 'for the open shop'," Mr. Richberg said. "Whether the open shop or the closed shop prevails is entirely outside the province of the attorney-general. It is a question which only the legislative branch of the government can pass on if it comes under the jurisdiction of the government at all."

The injunction fails to show, Mr. Richberg argued, that the shop crafts leaders conspired against the law. It simply calls their association "an unlawful combination," he said, without adducing proof. In fact, the combination is lawful, he continued, and not ground for court action.

Denying the existence of such a conspiracy by the railway unions and demanding that Judge Wilkerson vacate the injunction, Attorney Richberg built up his defense on the grounds that the government had failed to make a case against the unions, that the injunction is in violation of the Clayton Act and that it was obtained through misrepresentation for "ulterior and unlawful" motives.

Concerning the sabotage charges Attorney Richberg said, "The position of the shop crafts regarding vandalism or any acts of violence in connection with the strike has been repeatedly stated from time to time since the inception of the walkout. The railway unions have not only agreed that perpetrators of any violence in connection with the strike should be harshly punished but they also have sought to

co-operate with the proper authorities to prevent any illegal acts. The union leaders have time and again warned the membership against any lawlessness."

The usual number of legal citations were given by Attorney Richberg to sustain his contentions, the Clayton Act in particular being used frequently.

The first shot in the union's fight against the injunction came on September 9 when a motion to vacate the government's temporary restraining order against the shop crafts' union, so far as it applies to Mr. Jewell, and John Scott, secretary of the Federated Shop Crafts, was filed in United States District court. The action was begun by Attorney Richberg and was based on three general allegations, namely:

(1) That the complaint has not in and by its said bill made or stated such a case as entitled it in a court of equity to any relief against the defendants as to the matters contained in said bill, or any of said matters.

(2) That the relief prayed for in said bill, and granted in said restraining order, is that relief which, under the provisions of the act of Congress commonly known as the Clayton Act, no court of the United States, or judge, or the judges thereof, is permitted or empowered to grant.

(3) That relief was sought in said bill and was obtained in said restraining order for ulterior and unlawful purposes upon misrepresentation and suppressions of matters of fact and law, the disclosure of which was required by good faith.

Government Discloses Sabotage and Conspiracy Data to Be Used in Trial

Details of the government's sabotage and conspiracy charges against the striking shop crafts were made public in a statement given out on September 11, disclosing the line of the government's testimony in the affidavits which will be presented to Judge Wilkerson during the injunction hearing. The statement said in part:

Since the commencement of the present railroad strike acts of depredation have been committed in practically every state and judicial district in the United States. The efforts of the perpetrators are concentrated upon the two ends—destruction and intimidation. The means to attain these ends are almost indescribable. In fact, one must believe that anything suggested to the imagination of the vandals of their conspirators was immediately put into effect.

The venom of the participants in this strike has not ceased with ordinary assaults, bombing, dynamiting, wrecking of trains, or minor depredations, but has been in many instances satisfied only with the taking of human life.

At least 25 murders have been reported. Many have indirectly met their death or been fatally injured through strike causes, and these results were not confined solely to those opposing the views of the shopmen now on strike. Many were men, women, and children whose only purpose was to travel from one point to another, sometimes because of necessity and sometimes for pleasure, but always with no thought of entering into the controversy.

In or about Needles, Cal., on the Sante Fe system, twelve trains were abandoned in the desert. Hundreds of passengers, men, women, and children, some 90 years of age and some as young as one day, and many sick, were required to live in almost unbearable heat for periods varying from one to four days.

It has become necessary to appoint approximately 5,500 United States deputy marshals to assist in the protection of interstate commerce and the United States mails. Approximately 950 mail trains have had to be discontinued; several roads have been compelled to discontinue trains in order that coal orders might receive priority, and many roads have placed embargoes upon perishable products. During the trouble in northern and southern California, it is estimated $75,000,000 damage was caused by inability of the carriers to transport fruit ready for market.

Dynamiting, bombing, setting fire to railroad property and bridges are a few of the most dangerous means adopted against the railroad companies.

Many derailments have occurred. The general scheme adopted has been to remove spikes from the tracks, often on curves, causing them to spread when subject to the pressure of a train.

The throwing of sticks of dynamite and bombs have come to be more than daily occurrences. At least 100 sticks of dynamite have been used and over 30 bombs thrown. Many of these were not destined for railroad property, some being thrown at workers, and others have exploded on and about their homes and sleeping quarters.

Switches have been tampered with. Several times, with a clear track showing, trains have run into cars on sidings, blocking tracks and causing considerable damage.

It would be almost impossible to enumerate the various assaults which have been perpetrated. Whippings were resorted to in practically every instance where strikers were able to lay their hands upon those whom the railroads have secured to take their places. When they could not be apprehended, stones were thrown at them. Pepper was sometimes thrown in the faces of women accompanying them. Shots were fired, and other acts, equally as detestable, were indulged in. Tarrings and featherings are included in the list, and in many cases.

The statement specifically named a large number of instances of the character mentioned. Practically all of these outbreaks have been described in previous issues of the *Railway Age*.

When hearings were resumed the following day, Attorney Richberg said, "I request that the attorney-general be required to explain who gave out this statement. It is nothing short of criminal libel. If any ordinary citizens were to make public such a statement, they would be liable to prosecution for defamation of character. I think the attorney-general should explain."

There was no reply and finally Mr. Esterline proceeded with his case, offering evidence supporting the contention that the shopmen's strike is in effect a gigantic conspiracy against interstate commerce.

The Government's View of the Effect of the Shopmen's Strike

He read from reports by the secretary of agriculture purporting to show how the shopmen's strike had handicapped the transportation of the country's winter coal supplies and the bumper crops. In an affidavit which was read to the court, Secretary Wallace said that a questionnaire sent by the Department of Agriculture to 16,000 farmers and small-town retailers showed a coal famine in prospect as a consequence of the railroad strike. Farming sections generally have only one-fourth of the required supply of coal, the affidavit said, and crop movements have been hampered as well.

Shop statistics prepared by the Interstate Commerce Commission were then offered in evidence. These statistics showed that of 6,170 locomotives inspected by agents of the Commission in August 4,355 were defective and 465 were being operated in violation of safety regulations. Eighty-six accidents, through which four persons were killed and 94 injured, occurred in August because of bad-order equipment, according to the report. In July the Commission inspected 3,029 locomotives and found 2,383 of them defective, 165 to such an extent that their operation was in violation of law. Locomotive withdrawals in July were 3,608, the report showed and 7,506 locomotives were inactive throughout the month.

Supplementing these figures were more complete statistics from the American Railway Association. Bad-order freight cars increased in number through July and August as follows:

	No. cars	Per cent of total
July 1	325,583	14.3
July 15	342,079	15.1
August 1	345,013	15.2
August 15	335,575	14.8

Bad-order locomotives, the American Railway Association report showed, increased in number as follows:

	No. locos.	Per cent of total
July 1	13,896	22.5
July 15	15,347	24.7
August 1	17,569	28.5
August 15	18,698	30.3

After getting these figures before the court the government attorney began reading numerous affidavits from victims of strike violence.

Several days were consumed by Mr. Esterline in the reading of affidavits made by witnesses to various instances of

violence and sabotage. The indications at the time this is written are that the government will require at least a week and perhaps longer to present its case against the shop crafts leaders and that the legal controversy will continue for some time.

Administration Officially Taking No Part in Strike Settlement

WASHINGTON, D. C.

REPORTS THAT negotiations with individual roads were in progress were confirmed at the White House on Friday, when it was stated that while the administration was doing nothing officially, the President was aware of what was going on and would be glad to see results ensue. It was stated that the matter was in the hands of a good many people, including railroad people and the shop crafts leaders and that it would not be proper for the President to discuss the subject until after settlements were reached.

Attorney General Daugherty also issued the following statement:

The government is not a party to any negotiations between the railroads and the employees, if any are in progress. The suggestion that such negotiations would be interfered with by the temporary restraining order granted by Judge Wilkerson is in my judgment wholly unjustified.

The only concern of the government is industrial peace and the restoration of transportation. Any conference between the railroad executives and their former employees to adjust their grievances is in the interests of industrial peace and would not find any obstacle on the part of the government. The government would not contend that either party to the controversy was denied by the temporary restraining order, any right or opportunity to confer between themselves and to the possible terms of such settlement.

The government is not a partisan in this labor controversy. It champions neither the employers nor the employees; their differences are for them to adjust. The government is, however, vitally concerned in the restoration of industrial peace and any movement that seeks to adjust the unhappy differences between employers and employees will not only find no obstruction from the government but will have its sympathy.

Union Tries to Enjoin Daugherty Injunction

An unsuccessful effort to enjoin the enforcement of the temporary restraining order obtained at Chicago on September 1 by the attorney general was made in Washington on September 7 by the International Brotherhood of Electrical Workers, one of the striking shop crafts, James P. Noonan, its president, and Charles P. Ford, its secretary, who filed in the Supreme Court of the District of Columbia a petition for the issuance of an order restraining the United States attorney and the marshal for the district from serving the injunction issued by Judge Wilkerson at Chicago or from enforcing its provisions in any way to interfere with the holding of union meetings or the conduct of the strike. The petition asserted that the injunction had no effect outside the jurisdiction of the Chicago court and that Judge Wilkerson had no authority to issue it. Following a brief proceeding on Saturday morning Justice Bailey issued an order temporarily restraining the marshal from interfering with meetings of the union, which he had not attempted to do, or from doing anything outside the scope of the Chicago injunction, pending a hearing on Friday of this week on a motion filed by the government to dismiss the bill of complaint, but denied the order requested without prejudice to a renewal of the application after the Chicago hearing on Monday.

Messrs. Noonan and Ford were served with notice of the Chicago injunction shortly after they had filed their petition; and the district attorney in his motion denied the jurisdiction of the District Supreme Court to interfere with the service of an order from a federal court of competent jurisdiction. He also prevented the hearing, sought by the attorney for the union on Saturday morning, by asking for time to present his motion to dismiss, arguing that a full remedy was available to the plaintiffs in Chicago on Monday.

James S. Easby-Smith, who represented the union, made a lengthy argument in support of the application, saying that threats to interfere with the orderly meetings of the strikers had been alleged against Marshal Snyder as well as other acts claimed to be in excess of the scope of the injunction order, even if it were valid. The government's attorney argued that the bill of complaint alleged no fact showing that the district court for the northern district of Illinois was without jurisdiction to enter the order and that the District of Columbia Court was without jurisdiction to modify or review an order duly entered by that court.

The petition for a restraining order recited instructions issued by the union to its members to prevent disorderly acts and asserted that neither the union nor its members have, to the knowledge of the plaintiffs, committed any unlawful acts incident to the strike and if any such acts were committed they were contrary to the instructions. It asserted that the Chicago injunction was issued "without warrant or authority of law or equity" and that under it the marshal for the District of Columbia had threatened to prevent the holding of peaceable and lawful meetings of men on strike.

Impeachment Charges Referred to Committee

Representative Keller of Minnesota presented impeachment charges against Attorney General Daugherty in the House on September 11, demanding his removal from office for alleged infractions of the Constitution, apparently in connection with the injunction proceedings, by abridging freedom of speech, freedom of the press and the right of people peaceably to assemble, and by "using the funds of his office in the prosecution of individuals and organizations for certain lawful acts which, under the law, he was specifically forbidden to prosecute." A resolution which the Representative introduced was referred to the Judiciary Committee, which is expected not to take any immediate action.

A bill to abolish the Railroad Labor Board and create in its place a board of five members to be appointed by the President and also to penalize strikes and lockouts was introduced in the House on September 11 by Representative Hoch of Kansas. The bill would encourage voluntary settlement of disputes without resort to the board, but would give full power of determination to the board where disagreement threatens to disturb transportation.

On receipt of private advices from Chicago indicating the adoption of the so-called Willard-Jewell plan for individual settlements of the strike on certain roads, but before news has been received indicating the extent or the definiteness of the settlements, Secretary of Labor Davis gave out a statement on Wednesday afternoon, apparently based on the assumption that this meant the complete settlement of the strike. He said in part:

"American industry has overcome the last obstacle in the way of the greatest economic revival the nation has ever known. With the settlement of the strike of 400,000 railroad shop craftsmen assured, the whole industrial machinery of the country is ready for a forward movement unprecedented in our economic history. The disturbances in the bituminous and anthracite coal mining industries are in the past and the 600,000 miners are at work." The secretary did not state whether he meant that a partial settlement of the strike was sufficiently satisfactory or whether he meant that the strike was already over on a majority of the roads without any settlement.

THIRTY STEAM LOCOMOTIVES, valued at $278,167, were exported from the United States in May, 1922. Of these 21, valued at $206,107, went to Brazil.

The Public and the Coal Industry*

By Herbert Hoover
Secretary of Commerce

THE FAVORABLE progress of legislation for the creation of a National Coal Commission fully empowered to get to the bottom of the troubles in this industry is the first step in one of the most vital problems we have. I have been earnestly recommending such a commission for the last three years. There are two distinct lines of problems: the employer-employee relationship, and the economic reorganization of the industry.

The present relationship of employer and employee in the industry comprises a periodical national danger, because with national organization and national disagreement, it means national stoppage. Surely fair play can be obtained for employer and employee in our civilization without war on the public. We must discover the machinery by which fair play can be delivered to all sides. We must have continuity of production in this essential commodity under righteous conditions of employment if we are to maintain the welfare of the nation at all. Under freedom from the restraint of trade laws the workers' organizations have grown in strength, solidarity, and devotion; they have shown able leadership, whereas the organization of employers for the purpose of collective bargaining has been to a large degree destroyed by the action of these very laws. The recent agreement in the bituminous industry was determined by only 15 per cent of the employers.

The federal laws on conciliation have failed to obtain any results for peace. The organization of employers on a national basis is no remedy, for in such case, while collective bargaining might proceed more smoothly, the public could well take alarm that the costs of any bargain can be passed on to the consumer.

The public has rights as well as the employer and employee. It has a right to a continuous supply of its vital necessities and services upon terms fair to the employer and employee.

Aside from employee relationships, most of the economic demoralization lies in the bituminous, as distinguished from the anthracite, industry, and my discussion hereafter refers to bituminous alone. This industry, indeed, functions very badly. Some state glibly that it will work itself out if left alone. But it must be borne in mind that it has not been left alone in the past and the present situation is in large degree due to legislative interference. The control of combinations among operators without such restraint among employees, the rules of artificial car distribution, the state legislation of various sorts, and other acts have a great responsibility for the present condition. I am not here questioning the necessity of these measures, but their influence in the situation must not be overlooked and they must be either supplemented or amended by wise provisions, if we are to have coal peace.

There are 8,000 bituminous mines with an annual capacity of 850,000,000 tons, 300,000,000 capacity beyond our national needs. The over-capacity in the industry results not in the permanent closing of some mines but in the operation of all of them more or less intermittently. Thus the working personnel is held attached to each mine in daily hopes of employment. In the best year of their history the bituminous mines operated an average of only 249 days in the year, out of a possible 308, whereas in most years the average is about 210, as against about 295 days in England and over 300 days in Germany. Many bituminous mines are probably operating an average of less than 180 days in the year.

There are 2,500 too many bituminous mines and 200,000 too many people in the business. Investment in the industry is extremely speculative. Distribution costs are excessive. The operators vibrate between bankruptcy and high profits. And the public in ordinary times is paying far more for its coal than would be necessary from a stabilized industry. Labor is honeycombed with the worst of stimulants to unrest, insecurity of employment. At the same time, men who have the opportunity to work full time in regularly operating mines earn returns far above the average income of our most prosperous farmers and other workers.

The largest contributor to over-expansion of the industry is the almost regular biennial quarrel. Beyond this the non-union mines in the South, with a capacity of over 300,000,000 tons yearly, being able to secure a lower wage level than the union mines in the North, at times of sharp competition are enabled to under-sell northern coal, and are gradually causing the industry to migrate from the North to the South, with consequent over-equipment in the North.

Intermittent operation also arises in the chronic annual shortage of railway cars. A bad system of distribution of cars to mines by the railways contributes also. The fly-by-night operator has a right to demand his quota of cars in times of good demand and paralyzes the ability of the systematic mines to maintain regular operation. There is inadequate storage at points of consumption to take up slack from intermittent production. The marketing machinery itself creates intermittency because of the incessant shifting of contracts from one mine to another. Furthermore the high unit wage basis encourages absenteeism and thus at times an irregular supply of labor; there is a perpetual rain of small and local strikes, all directly and indirectly contributing to intermittent operation—for all of which the public pays.

Aside from relief from strikes and lockouts, there are proposals of practical remedies which should be investigated. For instance, an extra annual storage of 20 per cent of railway consumption would equalize the seasonal fluctuation. A system of car distribution that would not itself break into regular operation would help. Larger storage by public utilities would give greater security to the public.

A contributing remedy that will need the most earnest consideration is the possibility of permitting the cooperative system of marketing developed by the farmers to be applied by such mines as wish to adopt it. More accurate statistics of capacity, production, consumption stocks, and prices would greatly promote stability and would be in the true interest of the operators who are now blamed for much that is not their fault.

It has also been proposed, although I have doubt as to practicability, that there should be a penalty in higher wages for short-time employment. Proposals are also made for a basic wage with a participation in the realized price of coal.

Of dominant importance, however, is the fact that the whole employee and employer relationship requires reform. The instability of these employment relations themselves form a vicious circle of quarrels. The constant local violation of agreements, and the multitude of small strikes are themselves proofs that the industry needs better organization, and public participation with guarantees.

I recognize that, or anything that lends stability to the industry is opposed by a small minority of speculative operators who use the periodically disturbed production to reap a recurrent harvest. It would be opposed on the other side by some of the more narrow-minded labor leaders who seek to reduce the number of hours of actual labor to some minor fraction of the whole year. However, I believe that the constructive men on both sides are in full agreement that we must have a broader and better solution than results from the truces of the past few years. These periodic wars are symptoms of a disease. But before we treat this disease we must have a more accurate diagnosis.

*From an address before the Salesmen's Association of the American Chemical Industry, New York City, on September 12.

Dynamometer Tests of the Locomotive Booster

Severe Trials Demonstrate Reliability at Heavy Loads and High Speeds; Maximum Drawbar Pull 11,000 lb.

SINCE THE ADVENT of the locomotive booster, which was first applied early in 1919, numerous tests have been made in road service but up to this time little information has been available regarding the mechanical efficiency of the device or the power which it develops. While the results of actual operation can be studied best on the locomotive, it is necessary to test the booster independently if its performance as a machine is to be determined. With this in mind, the Franklin Railway Supply Company, New York, recently conducted a thorough dynamometer test of the latest type of booster. The purpose of the test, which was made under the direction of Dr. Harvey N. Davis, of

Fig. 1—The Test Plant, Showing Boiler (at left), Booster and Condenser

the Engineering School of Harvard University, was to determine accurately the ability of the booster to stand up satisfactorily under continuous heavy loading and operation at high speed, the power which the booster will deliver under varying conditions of speed and boiler pressure on a locomotive, the steam consumption per brake horsepower hour or drawbar pull under such conditions and the mechanical efficiency.

Description of the Booster Engine

The Type C-1 booster which was tested is a 10 in. by 12 in. double-acting two-cylinder engine with cranks set at 90 deg. Some of the important mechanical features of the design are as follows: The gear ratio between the booster engine shaft and the trailer axle is 14 to 36. The engine frame is designed to withstand the stresses imposed upon it with the minimum strain and the gear cover has been made an integral part of the casting. The bearings in the trailer axle boxes have been made larger and an oil tight case has been provided for the trailing axle gears, affording splash lubrication of these parts. The rocker design has been changed to relieve the bottom journals of all stress and stops have been so placed that the pitch circles of the gears are held in the proper relative position at all times. The engine case has been fitted with an oil tight cover which is easily removed and replaced. A new design of manifold for the live and exhaust steam has been applied at the rear of the cylinder with large cross section in the passages to reduce the steam velocity. A manifold has also been attached to the crank case to receive all air connections. The appearance of the booster is well illustrated in Fig. 1 which shows the machine connected to the dynamometer shaft with the cover of the crank case removed and the rear end elevated.

The Test Plant

The test equipment was designed especially for this test and for the routine test under load to which all boosters are subjected after assembling at the factory of the Poole Engineering & Machine Company, Baltimore, Md. The steam plant consists of a 250 hp. Heine boiler with a low temperature superheater and a feed water heater connected in parallel with and draining into the main condenser. The test bed carries a shaft and 18 in. gear, similar to a standard trailer axle gear, direct connected at one end to a prony brake. The steam pipe from the boiler to the test bed is fitted with a gage to show the inlet pressure and a thermometer to indicate the superheat, which ranged between 30 and 35 deg. F. in most of the tests. A second pressure gage is located about 30 ft. back from the inlet gage, the piping between duplicating that on a locomotive. Pressures read on this gage are called throttle pressures in the report and correspond to the boiler pressure on a locomotive.

The booster was operating on the test plant during four

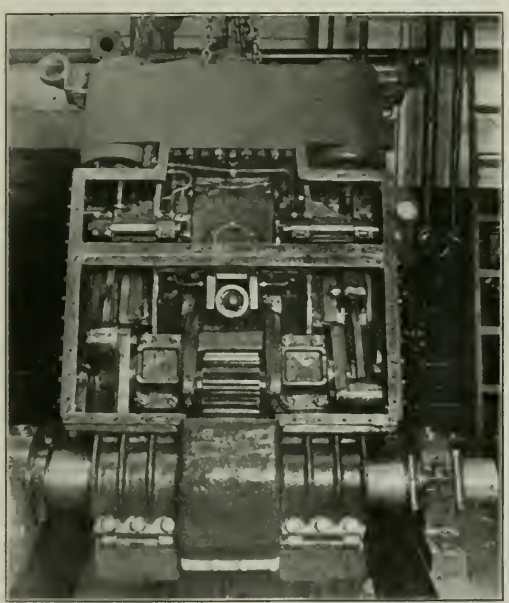


Fig. 2—Top View of the Booster, with Cover Removed

days under a wide variety of conditions ranging from stalling tests to high speed runs at 22 m.p.h. Some of the trials were made with the exhaust piped to the condenser to measure the steam consumption and others with the steam discharging to the atmosphere through 40 ft. of 4 in. pipe to duplicate roughly conditions on the locomotive. The tests represented an equivalent run of about 92 miles as of a 45 in. trailer wheel, most of which was made under heavy load.

During each of the tests the speed and boiler pressure were held as nearly constant as possible. Indicator cards were taken and records made of the speed, the brake load, steam pressure and temperature and steam consumption.

From the data thus obtained the details of the performance of the booster were determined as set forth in the following paragraphs.

Mechanical Efficiency

The mechanical efficiency of the booster, or the ratio of the power delivered at the rim of the trailer wheel to the power developed in the cylinders, is plotted in one of the curves on Fig. 3. It will be noted that it varies from 90 per cent at 6 m.p.h. to a maximum of 95 per cent at 14.5 m.p.h. dropping slightly at higher speeds. The mechanical efficiency of the booster does not change with the steam pressure over the limited range met with in practice.

These mechanical efficiencies seem very high but the explanation of the excellent results is to be found in the high efficiency of the gear arrangement, the effective lubrication and the unusually high mean effective pressure. A typical curve of the brake horsepower, which corresponds with the

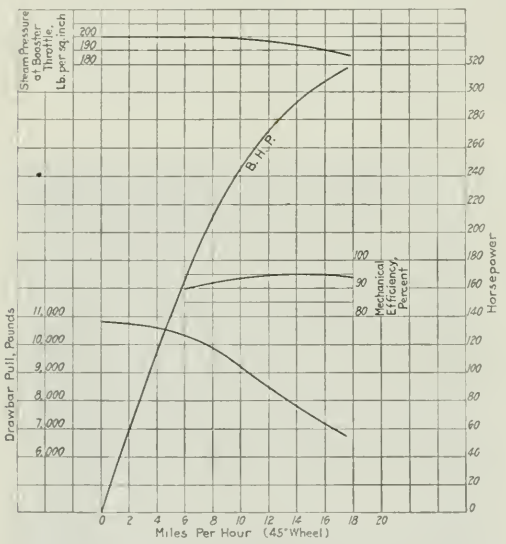

Fig. 3—Drawbar Pull, Horsepower and Efficiency of Locomotive Booster

power delivered at the trailer wheels, is also plotted in Fig. 3. The steam pressure dropped somewhat during this test and with a pressure of 186 lb. at the booster throttle at 17.8 m.p.h., 316 hp. was developed.

Tests showed that at any given speed with a given exhaust connection the brake horsepower is proportional to the gage pressure at the booster throttle but does not vary with superheat.

Drawbar Pull

A typical curve of the drawbar pull as obtained during the tests is shown in Fig. 3. For convenience in predicting the drawbar pull curve of the booster on any particular locomotive the chart of Fig. 4 has been plotted for speeds from 0 to 25 m.p.h. and boiler pressures from 140 lb. to 200 lb. gage.

In using this chart the pressure that can be maintained at various speeds by the boiler supplying the booster is estimated and the corresponding points are plotted on the chart, using the pressure lines as guides. A constant pressure equal to the boiler pressure of the locomotive can be realized over the entire speed range if the cut-off in the main locomotive cylinders is shortened enough at each speed to keep the steam consumption of the main cylinders and the booster cylinders within the limit of the capacity of the locomotive boiler. It will be noted that with 200 lb. pressure the type C-1 booster delivers a pull of 11,000 lb. at starting and at 20 miles an hour is still giving nearly 7,000 lb. at the drawbar.

Steam Consumption and Water Rate

To show the steam consumption of the booster under conditions identical with those plotted in Fig. 4, Fig. 5 has been

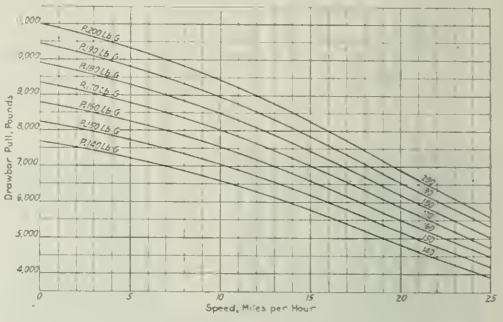

Fig. 4—Drawbar Pull Curves at Various Steam Pressures

drawn. The values given by this chart are based on superheat of 30 deg. F., the average value during the tests. The steam consumption is assumed to decrease about one per cent for each 6 deg. F. increase in throttle superheat. If saturated steam were used the consumption would be approximately five per cent greater than shown and if highly superheated steam were used, the values would be materially less.

The water rates as determined from the tests varied from 40.8 lb. to 43.4 lb. per brake horsepower hour. These rates

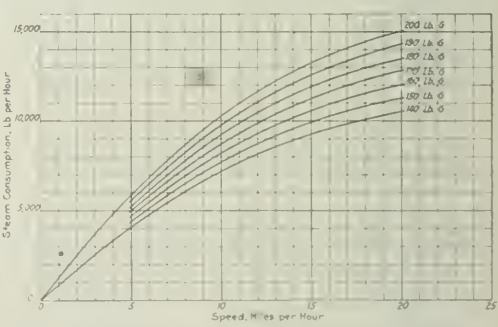

Fig. 5—Steam Consumption at Various Boiler Pressures

are, of course, subject to the same variation due to superheat as the steam consumption shown in Fig. 5.

Application to Operating Conditions

The manner in which the data obtained in the test can be used to determine the performance of the booster in actual service is illustrated in Fig. 6. This shows the increased hauling power and increased acceleration that can be obtained when the booster is applied to a Pacific type freight locomotive. In the chart the drawbar pull exerted by the locomotive or required to pull the train is plotted ver-

tically and the speed in miles per hour is plotted horizontally. The drawbar pull required for a 2 [illegible] ton freight train, averaging 40 tons per car, on level and on grades up to 0.8 per cent is shown in the series of dotted lines. The lower solid line shows the drawbar pull of the locomotive without the booster and the upper line the drawbar pull with the

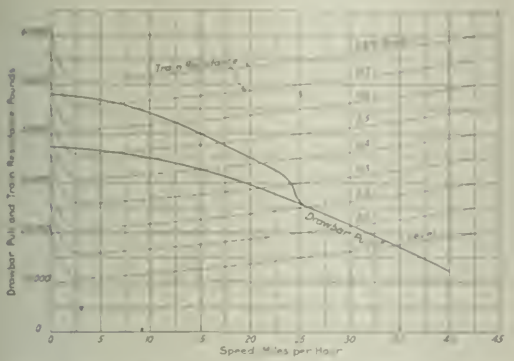

Fig. 6—Performance of Pacific Type Locomotive Hauling 2,500 Tons With and Without Booster

booster in operation, on the assumption that the booster is cut out at about 23 m.p.h.

Assuming the train is starting on level track it is evident that the locomotive without the booster can exert drawbar pull considerably greater than the train resistance. The difference between the drawbar pull of the locomotive and

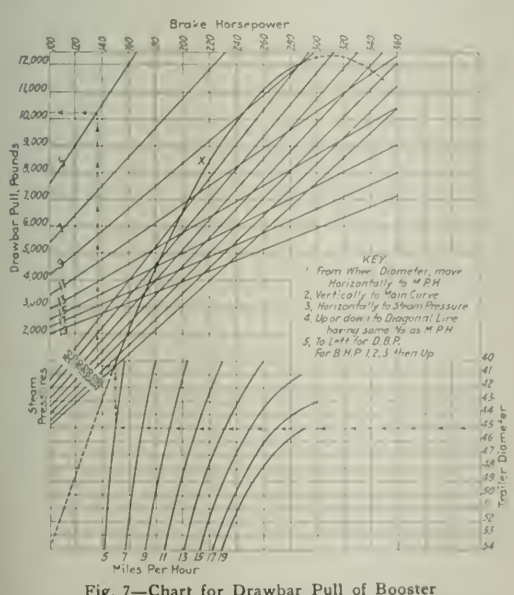

Fig. 7—Chart for Drawbar Pull of Booster

the resistance of the train is available for acceleration. With the booster still more power can be obtained for acceleration and the speed of the train will be increased more rapidly. As the speed increases the train resistance increases and the drawbar pull drops off until finally the drawbar pull just equals the train resistance. Under this condition no more acceleration will take place and the train will run at a constant speed of about 34 miles per hour on level track, as shown by the intersection of the drawbar pull and train resistance curves.

The pull required to start this tonnage on various grades is also plotted on this chart which shows the locomotive can only just start a train of this weight on a 0.3 per cent grade. With the booster the locomotive is able to start it on a 0.5 per cent grade and attain a speed of 17 m.p.h. If the booster is thrown out the speed of the train on this grade will drop back to 6 m.p.h. and if it stops the locomotive would be unable to start again without the aid of the booster.

The great advantage of the booster as shown by this chart is to enable the locomotive to make a grade of 0.7 per cent, while without the booster a train of this weight would stall the locomotive on a grade slightly more than 0.5 per cent. Even with a grade of 0.5 per cent, however, the booster offers the advantage of enabling the train to make a speed of 17

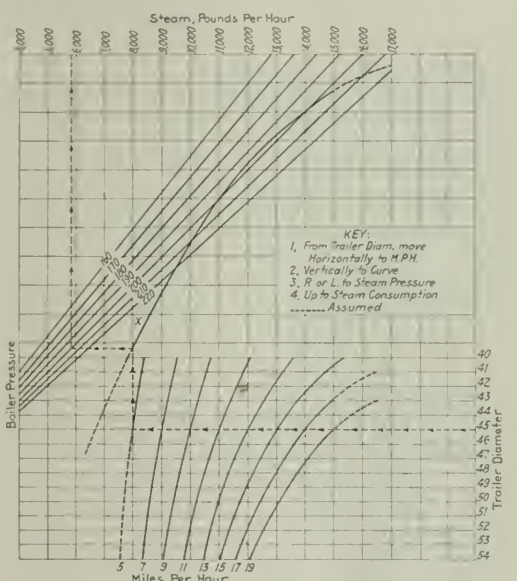

Fig. 8—Chart for Determining Steam Consumption of Booster

m.p.h. instead of only 6 m.p.h., thus saving over 64 per cent of the running time on the grade. With a grade of any appreciable length this saving in running time would be an important item, particularly near congested stations.

In order to enable engineers to predict the results that will be obtained under any given conditions, the curves shown on Fig. 7 have been developed. From these curves the tractive effort for any size wheel and any steam pressures can be determined, as it will be readily understood that these are the only two variables in the formula.

As an example of the use of the chart, assume that the tractive effort for a 45-in. wheel at 200 lb. boiler pressure is desired at speeds at from 5 to 13 miles an hour. The trailer wheel diameter is located at the right of the curves and the 45-in. point is used as the origin. The horizontal line is followed to the left until it crosses the speed curve that is desired, in this case five miles an hour. From the intersection of the horizontal line with this curve a vertical line is followed to the main brake horsepower curve, marked *X*. From this point a horizontal line is followed again

either to the left or right until it crosses the steam pressure curve desired, in this case 200 lb. Then a vertical line is followed, up or down, as the case may be, to the diagonal line in the upper set for the same speed, in this instance to the line marked 5, and moving horizontally from this point to the left, the drawbar pull at the given speed and boiler pressure can be read from the scale at the side. Similarly any desired figure can be obtained and the drawbar pull curve set up for any conditions.

Another factor of interest to engineers is the steam consumption for the booster. To enable this to be readily determined at various speeds, the chart shown in Fig. 8 has been developed. Having determined the wheel diameter and knowing the boiler pressure, the chart is used as follows:

From the point on the lower right hand margin corresponding to the trailer wheel diameter, a horizontal line is followed to the miles-per-hour curve, and thence moving vertically to the curve marked *X*. From this curve a horizontal line is followed to the steam pressure curves, and then moving vertically to the top of the chart the steam consumption in pounds per hour can be read from the scale. It will be seen from the examples given that a complete prediction of the performance of the booster can be made from these curves.

Terminal Relief by Direct Freight Delivery

Successful System Necessitates Complete Cooperation of Railroad, Shipper and Responsible Trucking Medium

THE SUBJECT of direct freight delivery or "store door" delivery was presented at the Society of Terminal Engineers, New York, on September 12, in the form of a series of independent talks on the various phases of the question. In one of these talks, the various methods of interchange and off-track freight handling now in use at St. Louis, Cincinnati and, by the Erie, at New York were discussed and analyzed. Considerable evidence was offered that the motor truck and demountable body forms an important and economic medium for the movement of freight in congested terminal districts. This subject was presented by W. W. Drinker, terminal engineer, Port of New York Authority, and is given here in abstract, followed by an abstract of the remarks of others taking part in the discussion.

The Port Authorities' Plan

The Port of New York Authority, after a year of study and conference with transportation, business and municipal interests as to the comprehensive plan of the Bi-State Commission, adopted the automatic electric system of that commission for the relief of Manhattan. Realizing, however, that a considerable period of time must elapse before that system could be installed and that in the meantime the situation would grow worse, they recommended the establishment of a motor truck service between the railroads of the port district and the island of Manhattan as a present relief.

This service is to utilize the principle of the container in order to avoid rehandlings of freight, leaving the motor truck free to perform the functions for which it was designed, *i. e.*, the rapid carrying of freight. It is to handle the carload and less than carload freight which is now handled at pier stations, and will utilize to the fullest extent possible the existing ferries to New Jersey and water routes for the railroads having long overland hauls in case the water routes prove, upon analysis, cheaper.

But where does the Port Authority come in? Why cannot each railroad establish such a service for itself? And rumors are abroad that several of them are contemplating such service very seriously. The answers are that a responsible medium between the railroads and the shippers is needed; that with a series of separate stations for each railroad the economies of full loads and short hauls are denied to the shipper; that street congestion will not be relieved and that there will be duplication of effort and destructive competition as to station facilities and service, which will deny full economies to the railroads. The Port Authority is an impartial public body which can assist and participate in the creation and operation of an impartial organization, without which the full economies of the motor container system can never be realized.

St. Louis System Reduces Congestion

There is nothing novel about the plan. It is, in itself, an evolution arising from conditions at St. Louis where the majority of the railroads are on one side of the Mississippi river and the bulk of the business on the other. Twenty railroads in the St. Louis-East St. Louis district handle less than carload freight. All the west side lines and four east side lines have freight stations only in St. Louis. Four east side lines have stations in both cities and nine east side lines have no freight stations in St. Louis; these nine together with the four east side lines having stations in both cities, handle their less carload freight in the off-track stations of the transfer companies which arose out of this situation shortly after 1916.

There are about 20 transfer companies whose charges between the east side freight houses and the west approach to Eads bridge are absorbed by the railroads but only three operate off-track freight stations and are recognized by the railroads in the application of rates. These transfer companies have become so popular that the Terminal Railroad Association, which formerly handled this business by rail to their Tenth St. station in St. Louis, no longer finds that station over-burdened but operates it at less than capacity. The Engineers Committee, St. Louis-East St. Louis railroad terminals, seem to regard this service as cheaper than switching for less carload freight in St. Louis.

The business of the three transfer companies is virtually a voluntary store-door delivery plus less than carload interchange between railroad stations. For freight handled at their off-track stations the railroads make them a certain allowance and the shipper must call for or deliver his wares. For freight which the shipper desires to receive or forward at his door, the railroads make the transfer companies a lesser allowance to a constructive delivery point on the west side of the river and the shipper pays to the transfer company an additional charge from the constructive point to the store-door although the same dray carries it between store and car door. In addition to the freight handling floor, the off-track stations have overhead warehousing facilities owned or controlled by the transfer companies. In the off-track stations freight is received from shippers and consolidated into dray loads for the individual railroads and inbound freight brought from the railroads by drays is delivered to trucks or wagons of consignees. These practices have all been confirmed by the Interstate Commerce Commission.

Additional off-track stations have been recommended by the Engineers Committee of the St. Louis East St. Louis railroad terminals in their 1922 report as a solution of part of the district's troubles.

Cincinnati Motor Terminals Method

Prior to 1917, eight railroads entering Cincinnati were suffering all the evils of trapcar interchange of less carload freight. This interchange business grew to a point where the station capacities were inadequate and relief was had from horse-drawn drays, 115 heavy drays and 225 trap cars being in daily service. To correct this evil it was necessary to establish an intensive trucking system. Research was had in several cities, among them St. Louis, where at the time of the study (1915) horse-drawn drays were still in service. From the dead wagon system, then in use, there developed the Motor Terminal Companies system of motor truck and demountable bodies with crane hoists for the transfer of the bodies to the chassis. This is essentially an interchange service whereas the St. Louis systems have an off-track station service in addition to less carload interchange.

The trapcars and horse-drawn drays, 225 and 115 respectively in number, have been replaced by 15 motor truck chasses, 225 demountable unit containers, 60 electric hoists and 13 hand hoists. It is said that the number of hoists could be materially diminished and the same service performed. Material savings resulted and the time of service was improved.

Motor Hauls in Miles Compared

The Erie in January, 1922, established a direct delivery and inland station business for handling part of its Manhattan business. Horse-drawn drays were used at first but they are gradually being replaced by tractors with "stake wagon" trailers. The system apparently has been modeled after the St. Louis system but it is expanding and proving successful from a traffic angle, and the Erie deserves credit for its initiative. Some of its lighterage freight is also handled in this way. The United States Trucking Corporation is the medium between shipper and railroad.

The St. Louis transfer companies handle 4,138 tons per day and the average haul is 1.5 miles. The Motor Terminals Company in Cincinnati handles 700 tons per day and the average haul is 3 miles. The U. S. Trucking Corporation's Erie off-track service handled at inland stations in May, 1922, approximately 450 tons per day with an average haul of 1.6 miles, one mile of which is ferried. The Port Authority's system is expected to handle ultimately 10,000 tons per day with an average haul of 3.8 miles, but it will have to start small and expand as did the others.

What System Will Minimize Costs?

From this point on the statements made are not meant to be conclusive but represent preliminary analysis on methods yet to be adopted or rejected by the Port Authority. They are in fact even in advance of proper checking by the staff.

For instance, the Baltimore & Ohio, the New York, New Haven & Hartford and possibly the New York Central have long hauls to Manhattan. What is the system of motor truck transportation which will minimize their costs? What is the relative cost of a motor truck and demountable body per mile overland and what, if chassis and container body are hauled by ferryboat or self-propelled float?

Taking the Motor Terminals Company's rental basis as representative of motor costs; the chassis and body cost $22 per 8-hr. day, or $0.0458 per minute; assume the speed to be as ascertained in Bi-State Commission's studies 6¾ miles per hour, this amounts to $0.4071 per mile which with the running rental of 50 cents per mile gives a total cost overland under power of $0.9071.

In comparison take the cost of a certain railroad ferryboat as recorded for 1911, $3.0912 per mile; expand it 60 per cent for increases in cost of labor and material and you have a total cost of $4.8279 per mile and adding $0.9481 for interest on first cost and depreciation of boat gives a total of $5.7760 per mile.

At the derived boat speed 9.4157 miles per hour the chassis and body rental standing idle on boat amount to $0.2918 per mile for one truck and container, or with 24 trucks, the ferryboat capacity, the idle rental cost is $7.0032 per mile, which plus $5.7760 per mile for boat expenses gives $12.7792 total; dividing this by 24 gives $0.5324 per mile for truck and container on ferryboat as compared with $0.9058 on land or 37.47 cents per mile saved in running time.

Using a derived time of 7 minutes per trip for despatching and receiving ferryboats and any delay you may assume for truck at ferry gates, one way, will give you the economic haul limits of trucks and containers on ferryboats.

Costs of Equipment Analyzed

There is another moot question pending, motor trucks and containers (either demountable or loose) or tractors and trailers. There is bitter fighting as to which is better. The Cincinnati system uses one, the Columbia Terminals Company in St. Louis the other. Let us take the Cincinnati equipment first cost for 16 five-ton motor trucks, 225 container bodies, 13 hand hoists and 60 electric cranes and an estimated first cost of a similar equipment of tractors (16) and trailers (225). The figures show an excess of 30 per cent for tractors and trailers in favor of motor trucks and demountable bodies. As to operating costs; assuming depreciation at 20 per cent on investment, interest on first cost at 8 per cent, operating expenses including gas, oil, tires, drivers, executives, chassis repairs and chassis tire renewals is nearly the same in each case; insurance on chassis the same; insurance on demountable bodies and hoists in the Cincinnati case at actual cost; insurance on semi-trailers at 5 per cent on investment; body maintenance in Cincinnati case the same as semi-trailer bodies; repairs on trailers running gear 5 cents per mile and yearly renewal of trailer tires gives a result showing tractor and trailer operation 100 per cent greater,—for the costs not common in both cases,—than motor truck and demountable body.

Other assumptions and other conditions may change these figures but as to that, the contract rates charged for service in Cincinnati, compared with St. Louis tariff rates, are of interest. The difference may be caused in part by traffic influence. The service rate between the railroads and Columbia Terminals depots varies from 4 to 12 cents per cwt. dependent on performance; whether all in St. Louis, all in East St. Louis or between St. Louis and East St. Louis. The Cincinnati contract rate for interchange is 5 cents per cwt. or $1.00 per ton.

All the rates at St. Louis whether for interchange or off-track stations are peppered with exceptions and the actual total tonnage of one railroad handled to off-track stations averaged $2.73 per ton or 13.65 cents per cwt. actually paid to the transfer company, and interchange averaged $1.80 per ton according to the St. Louis committee report. Of course the services are not comparable in off-track station work, as the Cincinnati system only handles interchange, but the railroad interchange rates are comparable, and there is room in a $2.73 rate per ton at off-track stations for considerable handling.

The question of tailboard space while not militating so strongly in St. Louis against the trailer as it would in Cincinnati, is very serious in any application to inland terminals in Manhattan, especially if existing warehouses are used temporarily. For instance, take a typical warehouse capable of handling as far as floor space is concerned, 600 tons per

day with demountable bodies (360 tons in and 240 tons out). Assuming 12½ minutes per ton for unloading or loading and 4.5 tons per trailer or container, with 21 doorways, 10 for inbound and 11 for outbound, trailers would occupy the inbound doorways 75 hours, merchants' wagons 75 hours, a total of 150 hours or 15 hours per doorway would be required. Trailers would occupy outbound doorways 50 hours, merchants' wagons 50 hours, a total of 100 hours of 9.1 hours per doorway. How would the warehouseman receive or forward his own goods? With demountable body containers not blocking a doorway for more than 1½ minutes, the inbound doors would only be occupied 7.7 hours each and the outbound doors 4⅔ hours each.

Erie's Proposed Container Plan Discussed

One suggested system has been roughly analyzed with much interest as applied to Manhattan freight. This consists of motor trucks and containers between terminals in Manhattan and a river front pier; transfer of containers only to carloads holding 60 containers single tier or 120 containers double tier, by means of a straight-line, traveling gantry crane; carfloat and containers self-propelled to a New Jersey pier; transfer by crane of containers to flat cars; flat cars and containers to transfer platform and freight from containers on platforms to standad cars for line haul or further consolidation.

This may be efficiency, but analyze it.

Take the crane transfer in Manhattan. If motor trucks unloaded containers to one float and went to another to receive containers approximately three hours would be required for the transfer. With three hours for transfer from float to flat cars in New Jersey, half an hour for floatage across the river, 10 minutes for truck travel and depot transfer of containers to chassis in Manhattan, 10 minutes for flat cars between New Jersey pier and transfer platforms and 10 minutes platform to standard cars, your average time per container on 60 containers forwarded west bound would be 5 hr. 30 min. between Manhattan terminal door and car floor.

But here are three speed rates and a perfect cycle does not seem possible unless you unload and reload one float simultaneously. Of course, if you get enough car floats you can work the other way, but try it and see at what cost for equipment and service. If this seems unreasonable, try a time study on unloading and loading a float simultaneously. Here the Manhattan gantry crane transfer would take approximately 5 hr. and (following through) the time for one container between terminal door in Manhattan and car floor in New Jersey would be (on a 60-container float) 8 hr. 30 min. Three to four hours is present practice and motor truck and container body service between Manhattan door and sealing of car door in New Jersey via ferry would take 35 min.

Other Discussion on the Subject

H. C. Snyder, general freight and passenger agent, New York terminal district, Erie Railroad, described the methods which that road has been using in the delivery of freight to consignees via motor trucks and ferries, stating that it was not strictly store door delivery as the term is customarily used but rather a method of direct delivery. This system was described on page 233 of the January 21, 1922, issue and page 826 of the April 1, 1922, issue of the *Railway Age*. He added that the present terminal allowances are far below the actual costs in the New York terminal districts and this has caused the eastern roads to carry a heavy burden. The result is that tonnage is being diverted gradually to other ports, such as Boston and Baltimore, where the terminal expense is considerably less. The method which has been adopted by the Erie is a step forward in a plan to handle the freight in a more economical manner, to relieve congestion and allow an expansion in the volume of business which may be handled. To date it had proved satisfactory and successful in operation.

W. S. Sims, special accountant, Pennsylvania Railroad, said that store door delivery as such, was a problem purely of the consignee or shipper, *i. e.*, they can have it any time that they want it by arranging with a responsible trucking company to make or take delivery with proper authority to sign receipts, etc. Direct delivery was an entirely different proposition, since it involves the cooperation of the railroad and the consignee. The latter must be willing to accept freight at any time that it is delivered to him. This brings up a difficult point since the average shipper or consignee is jealous of all the privileges accorded by the railroad under the present laws and regulations. To a large extent, the majority insist upon the full 48 hour free storage which actually amounts to nearly three days under the present system. Thus before direct delivery could be successfully effected the consignee must be compelled by law to accept delivery when made.

He stated that the net return on the railroad dollar had shrunk so low that if any additional terminal service was to be added to that now given, it would have to be paid for by the consignee. In other words, the railroads must be compensated for the expense of new facilities, which would amount to a considerable figure in and around New York. If there is any saving to be made, such savings cannot in justice be passed on entirely to the shipper or consignee; they must be cut or divided in some manner equitable to both parties. The propositions of store door or direct delivery will stand or fall on their economic positions. A factor to be considered is that the railroads are gradually being forced off the waterfront by the increasing rentals for piers. The problem was complicated by the necessity of evolving and simplifying methods of collecting charges, making out bills of lading, receipts and other papers in connection with the large number of freight classifications and rates which are now in common use. He added that the Pennsylvania was studying the question in detail, one of the plans under scrutiny being that of a secondary express service, *i. e.*, express service at terminal points with freight service on the line.

L. R. Gwyn, executive assistant to the president, American Express Company, expressed some surprise that store door delivery had not been adopted already in many places in this country if it was such a "cure-all" as many claimed. He recognized that the New York condition was an accentuated one which would, of its own necessity, better itself as time went along. He referred to the experience of the American Express Company which, in a way, was a modified and simplified form of store door delivery. Long years of use and training had accustomed consignees in this service to accept shipments promptly and pay the charges on delivery. Much difficulty and trouble was obviated by the fact that the drivers were trained to make out all papers and were responsible agents to the company. Even though there were fewer classifications in this service, he saw no reason why drivers could not be trained to handle the more complicated classification of railroad freight—an item which must be given serious consideration in store door or direct delivery systems. He brought up the question of what can be done with the shipper who does not want this service.

Col. C. Hine, Tabulating Machine Company, gave a short talk on the inconsistency of expecting the railways to carry the burden in this question of direct delivery by furnishing an extra service requiring additional investments and then passing the benefits on to the shipper. He called attention to the fact that the return of the railroads per man in service was less than one-half of that of the merchants in New York and while the railroads "turned over" their capital in a period of from three to four years, merchants in general "turned over" their capital in about one year, and in many cases several times in a year.

Indian Creek, Pa. (Alleghen Mountains) on the Baltimore & Ohio

Will Baltimore & Ohio Pay a Common Dividend?

Company Has Strengthened Its Position Through the Conservation of Income. Surplus Now Totals $39,116,290

The Baltimore & Ohio succeeded in 1921 in effecting a marked improvement in its earning power as compared with 1920 or with the period of federal control. This improvement is evidenced in a net railway operating income or, as the recently issued annual report expresses it, "net income from property used in transportation service," of $21,853,546. This compared with a deficit after rentals in 1920 of $4,427,019; with a net earned for the government in 1918 of only about $7,000,000 and in 1919 of only about $5,000,000. The actual increase over 1920 was $26,280,565. This improvement, as great as it was, did not succeed in restoring the Baltimore & Ohio to a pre-war earnings basis. It could hardly have been expected to have done so under the conditions of industrial depression which governed during 1921. The 1921 net fell about $6,000,000 short of equalling the standard return for operations during federal control—and the standard return figure of $28,031,146 furnishes about as good a measure of pre-war earnings as any. It is likely, however, that a pre-war basis of earnings will be reached during 1922. The Baltimore & Ohio, even with a large part of its coal tonnage lacking, has been reporting some very favorable monthly earnings.

The increase in net railway operating income for 1921 over 1920—as noted, $26,280,565—was secured in spite of a decrease in revenue tons of 29.81 per cent; and in revenue ton-miles of 32.17 per cent. The decrease in freight revenues was 14.39 per cent and in total revenues, 14.37 per cent. Actually the 1921 operating revenues were $198,622,373, a decrease from 1920 amounting to $33,322,071. The cut in operating expenses, however, was $59,942,283. The 1921 operating expenses, totaling $166,457,024, were 26.48 per cent less than those for 1920. To secure this result expenses were cut very severely—possibly too severely. The cut in expenses for maintenance of way was 25.53 per cent; in maintenance of equipment, 34.47 per cent, and in transportation, 24.89 per cent. By means of these cuts the 1921 operating ratio was brought down to 83.81 per cent as compared with 97.61 per cent in 1920. Transportation expenses in 1921 were 43.04 per cent of total operating revenues.

The reduction in expenses for maintenance of way and equipment was sufficiently severe as to indicate deferred maintenance. That this was the case is admitted by the Baltimore & Ohio management and it was so admitted by the management a year ago. It was explained that the cut was rather in the refinements than in anything else and that

Baltimore & Ohio Coal Train

Sixty-three steel hopper cars (55 tons capacity) loaded with 3,351 tons of coal. Gross weight of cars and contents 4,586 tons. Mikado engine, weight 284,500 lb. Tractive effort 55,000 lb.

nothing was omitted which might in any way prove detrimental to safety or efficient operation. The Baltimore & Ohio was, however, no exception in 1921 in the matter of cutting maintenance expenses; it was merely a bit more willing than some of the other roads to admit that this was its policy.

The Baltimore & Ohio suffered rather severely from federal control, for reasons which have already been given in these columns. Its sharp recovery in 1921, however, showed that the conditions were but temporary and that they could be remedied without undue difficulty under more normal B. & O. conditions. That this is appreciated by the management is indicated in the following paragraph in the annual report:

"The reduction in cost of operation and the improved standard of service accomplished during the year covered by this report were both due in large measure to the loyal and efficient efforts of the officers and employees. The board wishes to record its appreciation of their efforts. Their continued helpful co-operation in improving the service and efficiency of the company is earnestly desired."

1921 Improvement Not Reflected in Corporate Net

Because of the complications embodied in reporting standard return and guaranty the improvement which the Baltimore & Ohio made in 1921 is not reflected in its corporate income account. The 1921 corporate net after fixed charges was $6,388,891, or $856,589 less than the figure of $7,245,481 reported for 1920. The 1920 income account shows a "net income from property used in transportation service" of $26,434,295, this being $4,580,749 above the 1921 figure of $21,853,546 previously mentioned. The 1920 figure includes, of course, standard return for two months and guaranty for six which accrued to the road and compensated in part for the deficit after rentals which showed in the 1920 results. On the other hand, 1921 "other corporate income" of $10,120,824 ($4,720,966 greater than in 1920) includes amounts relating to the guaranty period chargeable to the government. The Baltimore & Ohio's four per cent preferred dividends of $2,354,529 were paid from surplus account, which on December 31, 1921, had a credit balance of $39,116,290.

Perhaps the most encouraging feature in the report, although not particularly commented upon or referred to by the company, is the strengthening of its surplus account through the conservation of income. Under the company's ten-year secured bonds, it obligated itself to reserve and apply to additions and betterments, or retirement of debt, $3,500,000 per annum, but with the suspension of dividend payments upon its common stock for the past several years, much more than this has been added annually to the surplus account, which shows a credit balance at December 31, 1921, of $39,116,290. The extent to which the company's income has been applied towards improvement of the property is indicated by the fact that notwithstanding there was expended on the property by the government during federal control for additions and betterments, $23,000,000, only $9,000,000 of these improvements have been funded through a ten-year secured note with the United States Railroad Administration.

The Possibility of 1922 Dividends on the Common

A factor of much interest in connection with the Baltimore & Ohio at present, is, of course, the question of whether or not the company may in this year resume dividend payments upon its common stock. Baltimore & Ohio common stock dividends ceased in the second half of 1919. Disbursements in that year totaled only two per cent. This cessation of dividends followed uninterrupted payments for more than 18 years, beginning in 1900. From 1900 to 1906 the rate was 4 per cent; from 1907 to 1914, it was 6 per cent and from 1915 to 1918, 5 per cent. In 1918 it was made 4 per cent. A reason why the resumption of dividends may commend itself to the directors of the company is that this step will apparently be necessary in order that Baltimore & Ohio bonds may continue to be legal investments for savings banks and trust funds in the state of New York and in some other states having laws similar to those of New York. This factor is of importance because of its possible effect on the refinancing which the company will be called upon to do in 1925 in connection with its four issues of bonds maturing in that year, totaling a principal amount of approximately $130,000,000. The question of the legality of investment in railroad securities was complicated by federal control but an opinion has been expressed by the attorney-general of New York State that any Baltimore & Ohio bond now rated as a legal investment will continue to be such during 1922. This has been generally accepted as implying that if no dividends are paid in 1922, the bonds will be removed from the legal class and similarly that if a rate of 4 per cent is resumed on the common this year, they will not be so removed. There is also a proviso that if a lapse should occur the bonds would fail to have a legal status until the dividend has been restored and maintained for a period of five years. However, while important, the investments by savings banks are not a controlling factor and it may be that the appeal to general investors would be greater if the company continued for a time to conserve its income and so continue to improve its reserves and credit position.

The two most important issues included in the total of $130,000,000 are the $74,910,025, 3½ per cent prior lien bonds issued in 1898 and maturing July 1, 1925, and the $44,991,390 Southwestern Division bonds, paying also 3½ per cent, issued on January 1, 1899, and maturing also on July 1, 1925. It is not necessary at this time to examine the possible means of refunding or extending these and the other issues involved. The important matter at present is the steps that may be taken to maintain them as legal investments.

Another interesting factor is that the present issues have a rate of 3½ per cent. No one would care to make a guess as to whether they can be refunded in 1925 at that rate. Under present conditions it does not look as if they could be. The possibility is offered, at any rate, that B. & O. interest charges may be further increased. This is a problem which has confronted Baltimore & Ohio for some time and especially in the past two years. In 1920 this was because of refunding government indebtedness arising out of federal control and in 1921 because of equipment trusts. The B. & O.'s interest charges in 1921 were $22,534,069; in 1919, they were $19,640,622 or $2,893,447 less. A favorable feature exists, however, in the fact that there is but a small amount of refunding of bonds to be done this year, in 1923 or in 1924.

Favorable Earnings in 1922

Under the circumstances relating to the possibility of a dividend on the common stock this year, it is not unnatural that Baltimore & Ohio earnings statements should be given no small amount of attention. Interest in these statements is also, of course, intensified by the remarkable recovery which took place in net railway operating income in 1921. Fortunately this improvement has been continued into the present year. Even though the road was deprived from April 1 on of the better part of its coal traffic—bituminous coal makes up about 48 per cent of the total revenue tonnage—the net railway operating income so far this year has been considerably ahead of last year's.

The July statement showed the effect of the railway shopmen's strike. The Baltimore & Ohio did not start to fill the places of its strikers as soon as some of the other roads did. It held off while it was trying to make some sort of a separate agreement with its shopmen. The effect of this policy—which unfortunately did not secure at once the de-

sired results—was evidenced in the July net, but it remains to be seen whether in the course of several months it was better for the company to be patient and to ultimately resume operations with its old, trained forces rather than undertake to replace them and train new forces. The end of the coal strike and a heavy fall movement of commodities in general should readily make up, however, for what was lost in July. The net railway operating income for the month was $1,225,067 as compared with $2,026,782 in July last year. In each of the three previous months—those of the coal strike—the net railway operating income exceeded $2,500,000. In March, when coal was moving in anticipation of the strike, the figure was $3,081,212. For the seven months the report shows a net railway operating income of $15,805,362, as compared with a figure of $9,657,246 for the first seven months of 1921, an increase of $6,148,116.

It is interesting to observe that even with reduced coal loadings for April, May, June and July and also with reduced rates on many commodities, the freight revenues for the first seven months of this year were in excess of those for the same period of last year. The freight revenues of $89,676,196 for these months this year exceeded those of last year by $1,268,830. Expenses similarly continue less, those for the first seven months of this year totaling $89,244,692, or $7,792,546 less than those for the same period of last year. Under the present trying conditions, it is difficult to predict very far ahead, but it would appear on the whole as if in 1922 the Baltimore & Ohio should come through a great deal better than it did in 1921—even with the improvement which took place in 1921.

The Baltimore & Ohio's expenditures for additions and betterments to equipment in 1921 showed a net charge of $7,067,405. There were added 50 locomotives and 2,059 freight cars, and retirements included 5 locomotives, 2,400 freight train cars and 24 passenger cars. It will be remembered that during the latter part of the year large purchases were made of freight car bodies for the purpose of car rehabilitation. Additions and betterments to road, totaled $3,518,124. This included enlargement of yards, etc., at Locust Point, Baltimore; a new bridge across the Miami at Lawrenceburg, Ind., was placed in service October 1, 1921, and there was considerable work done in the way of renewing and strengthening of a number of other bridges. Automatic block signals were installed on 12 miles of double track between Callery Junction, Pa., and Wildwood

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER of cars loaded with revenue freight during the week ended on September 2 was 931,598, the largest reported for any previous week in eleven months and an increase of 40,760 cars over the previous week. Moreover, the increase was not all attributable to the increased coal movement following the more general resumption of bituminous mining, as the increase in coal loading over the previous week was only 38,457 cars.

The loading for the week of September 2 represents an increase of 100,310 cars as compared with the corresponding week of 1921, and a decrease of only 30,035 cars under the corresponding week of 1920, when 961,633 cars were loaded. It was also 91½ per cent of the total for the record week of October 15, 1920, when 1,018,539 cars were loaded. Coal loading had not yet reached normal proportions, although the coal loading for the week was 149,487 cars as compared with 111,030 during the week before. The coal loading was 5,099 cars less than for the corresponding week of last year and 49,513 cars below the corresponding week of 1920.

As compared with the previous week there were decreases in grain and grain products, livestock, coke, forest products and ore, but there was an increase of 3,350 cars in merchandise, l. c. l., and of 3,943 cars in miscellaneous freight.

Only the Southwestern district showed a reduction as compared with the corresponding week of last year.

The percentage of open top car requirements filled during the week of August 26 was 86, the same as the week before. In the corresponding week of 1920 only 49 per cent of the open top cars required were furnished. The total requirements for the week were 392,030, of which 338,785 were furnished and 284,703 were loaded.

The freight car surplus is rapidly dwindling. For the period from August 15 to 23 it averaged 120,961, a reduction of 12,292 cars as compared with August 8-15. This included 96,405 coal cars and 8,237 box cars. On the other hand, there were shortages amounting to 43,519 cars, of which 27,195 were box cars and 8,175 were coal cars. For the period from August 23 to 31 there was a further decrease in the surplus to 70,455, including 3,850 box cars and 54,566 coal cars. The shortage amounted to 58,670, including 35,819 box cars and 13,835 coal cars.

The Car Service Division has compiled charts showing the weekly variation in the loading of merchandise and mis-

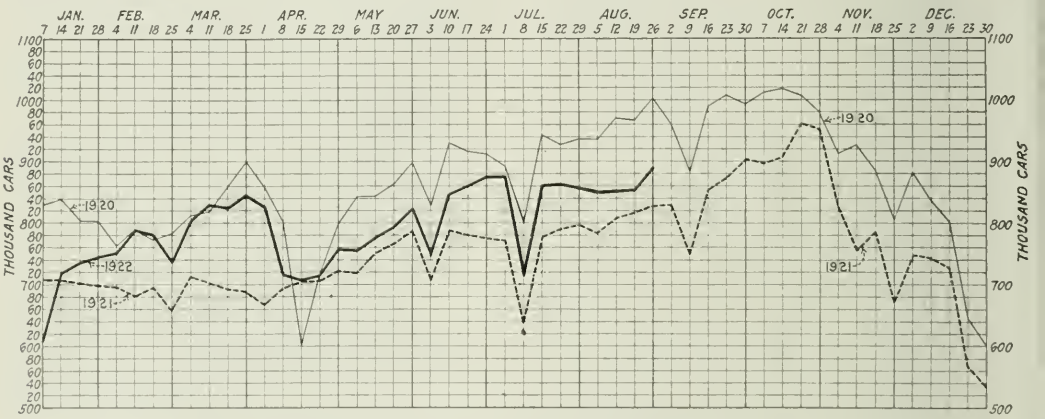
Compiled by Car Service Division, American Railway Association.

cellaneous freight for the years 1920 and 1921 and for 1922 to date. While most other commodities show heavier total loading in 1920 than in 1922, merchandise and miscellaneous freight has been running well over 1920 since the first week of April, and has been in excess of 1921 during the entire year.

The circular charts show a distribution of this class of loading between the different railroad districts for the period January 1 to August 19 in each of the last three years. The total number of cars loaded to date this year exceeds any of the two previous years. The Eastern and Allegheny districts amounting to 50.1 per cent of the total traffic in 1922, show an increase over 1920, while all other districts indicate a decrease.

Dumpings of coal at the lower lake ports for last week amounted to approximately 600,000 tons, with 9,380 cars reported at lake ports on Saturday morning, according to a statement by the fuel committee. As coal was not moving to the lakes under the normal No. 2 classification in sufficient quantities to make up the Fuel Distributor's program, priority No. 1 orders were issued on Saturday directing lake-



Revenue Freight Car Loadings Up to August 26, 1922

ward a sufficient tonnage of coal to insure the attainment of the full lake program for this week. These priority authorizations are being placed with a view to causing the least possible disturbance to the normal movement of coal. Difficulties experienced in the unloading of iron ore from boats at lower lake ports have been solved, and there is now no shortage of vessels for the transportation of coal to Lake Superior docks.

The fuel distributor has found it necessary to issue Priority No. 2 orders for the movement of a limited tonnage of coal necessary to keep some non-essential industries in the Southeast from closing. Authorization for the movement of 10,000 tons of coal from Norton, Virginia, to the State Fuel Administration of South Carolina has been given. Representations are being made from time to time that industries will be compelled to close unless given certificates of priority which will aid them in obtaining fuel supplies. These cases are being considered on their individual merits, under a general policy of issuing priority authorizations only where real emergency needs cannot be provided for by other means.

The Interstate Commerce Commission has announced a hearing to be held on September 21 on a petition filed by the National Association of Sand and Gravel Producers for a modification of Service Orders 23 and 24 to provide that after the most essential requirements for coal cars are taken care of, under the higher classes of the priority list, the available open top cars should then be distributed on an equal basis to all shippers requiring such cars, on the ground that shippers of sand and gravel are just as much entitled to cars for their products as manufacturers are to cars for fuel.

A total of 158,010 cars were loaded with coal last week, the week which ended on September 9, according to reports received by the Association of Railway Executives. This was a decrease of 9,418 cars compared with the preceding week, but had it not been for the observance of Labor Day, loadings last week would have exceeded the week before and been the largest since April 1 last when the miners' strike began. On Labor Day, only 10,021 cars were loaded, compared with 30,054 cars on the preceding Monday. Except for Labor Day the average daily loading last week was approximately 29,600 cars, while the average for the week before was only 27,900 cars.

On the basis of the number of cars loaded with coal, production last week was approximately 8,700,000 tons, compared with approximately 9,250,000 tons the week before.

Coal loadings on Friday, September 8, totaled 28,487 cars and on Saturday 27,527 cars, 960 cars less than the preceding day, but 2,370 cars above the previous Saturday. Loadings on Saturday, however, are generally lower than other week days owing to a short day being observed at most mines.

Functions of Department of Purchases and Stores*

Great Possibilities in Securing a Better Control Over the Expenditures for Materials

By H. C. Pearce
Director of Purchases and Stores, Chesapeake & Ohio

THE PURPOSE OF THE division of purchases and stores is to provide needed materials for the construction, operation and maintenance of the property; to have accurate knowledge of what is available, the quality best suited for the purpose for which it is to be used, the time when the material will be needed, the proper storage and distribution, and proper accounting for same. These six general divisions include all the details of prices, freights, inspection, storage, handling, etc., down to and including the disposition of the salvage. The magnitude of the work can best be visualized by the fact that our Class 1 American railroads expend more than 1,250,000,000 for materials and supplies per annum, not including new equipment, made up of over 60,000 individual items, scattered over approximately 232,000 miles of railroad.

Value of the Budget System

The budget system must be installed before any thorough or comprehensive expenditures can be carried on in an economical manner. An organization responsible for the expenditure of millions of dollars annually must first be capable of viewing the problem with knowledge that the money necessary will be available when the liabilities become due. Compare the amount of detail and practical knowledge necessary for the handling and accounting of this sum of money by our treasury and accounting departments and realize, if you can, how much more organization is required properly to safeguard this amount of money in the form of materials scattered over thousands of miles of railroad and you have at least a fair general idea of the inadequacy of the organizations now handling this work.

Railroad executives have viewed this problem in the past through the eyes of the using departments, and when the question of expense, as reflected by the payroll, came to their notice, their first thought was to turn the work over to the using department, with the idea that they could show a reduction in the payroll, when, as a matter of truth, the work must be done by others with less experience and knowledge, at higher rates of pay, or not done at all. The latter was usually the result.

Supply officers as a rule were not men of large vision or broad experience and did not have the knowledge or strength necessary to do the things they know should be done. To carry on work of such magnitude, it must be apparent to any one that has studied the facts that it must be controlled by an officer of strength of character and great energy and force, and the organization must be sufficient to care for each detail and record it properly so that exact knowledge may be had at all times. Supply officers, with few exceptions, have in the past accepted the situation as they found it, recognizing that it was better to keep their positions and satisfy or obtain favor with their superiors than it was to stand for principles. The results of such understanding, or lack of understanding, develops the fact that there are with rare exceptions no standard forms of comparison or standard methods, the purpose having been to muddle everything up as much as possible to prevent comparisons. Accounting officers were more interested in the appearance of the records than in the condition and control of the stock; their conception of the value of the stores department was their ability to obtain reports required on certain dates and an inventory of the assets, as reflected in neatly typed pages and summaries of figures, without thought of responsibility as to correctness of these figures other than the calculations. This work alone has been a terrific drain on the resources of supply officers. The using departments are only interested in the actual amount of material charged to specific work; the amount of material on hand has no interest to them, as under our system of accounting, nothing is charged until it is actually reported as used by the department that uses it.

These fundamental facts have prevented owners of railroad securities and executives realizing the tremendous investment they have, knowledge of what these investments are worth, and little or no knowledge of what the real cost of doing the work was. The principle underlying the accounting for materials is that nothing shall be charged to an account or piece of work until it is actually used. This is entirely wrong, regardless of the reasons for the plan. The fact remains that every account and every piece of work should bear not only the actual cost of labor and material, but all the costs incidental thereto, which should include losses due to faulty design, wrong estimates, errors in ordering, changes, delays in doing the work and all other causes incidental thereto. The plan that should be adopted under the budget system is that all material delivered to the work shall be charged to the account or work for which it was ordered. Whatever remains after completion shall be surveyed and credit allowed for its actual value. If this were done and the monthly budget system carried out as it is being rapidly developed, the using departments would be—as they should—responsible for every dollar which they order, and it would be shown at the end of the month just what they have expended. This one thing would do more to overcome the enormous quantities of materials which have been acquired on our railroads, which have either been held in suspense or become obsolete, than any other one thing, and without any added expense.

A Financial Problem

The purchases on our railroads generally have been in the hands of honest, intelligent men, but they have lacked breadth of view and knowledge of details, which has seriously impaired their work. Lack of proper records which should be such as to enable them to know accurately daily the liabilities they were incurring, records of comparison with previous months and previous years, specifications which will enable them to develop the market and procure competition, have always tremendously handicapped the railroad purchasing agent. Probably no other department of a railroad is so dependent upon the accumulation of details as the service of supply. It is made up of details, and they must be accurately recorded each day, in simple and accurate form, in order to bring about proper control.

If I were asked what were the outstanding faults of the service of supply as a whole, I would say *price* and *payroll* comparison. They have been the curse of the supply de-

*Abstract of paper read before the New York Railroad Club, Friday, September 15, 1922.

partment. They have stunted the development of supply officers. They have stultified the ambitious and capable man. They have appealed to the selfish and self-seeking man, and in every way have been most harmful. The same thing has handicapped the railway executive. What encouragement is there for a railway executive, no matter how convinced he is of what is necessary in order to establish a strong, practical and capable organization, when the first questions his brother executives ask him are, "What are you paying your chief supply officer"; "What is the cost of operating your supply department"; "What are your average monthly issues"; or having his officers constantly dinging into his ears, "This is all very nice, but we have to pay for it out of our appropriation—it all goes into our operating expenses." Until this work can be raised to the point where there will be constantly staring the executives of our railroads in the face the fact that they have hundreds of thousands of dollars tied up in unused materials, costing not less than 25 per cent. per annum to maintain, representing monies which should be in the property or in the treasury, this organization will never be placed on the proper basis or perform the real service for which it is intended, and for this reason I repeat that the problem is a financial rather than an operating one.

Many splendid businesses have been wrecked by injudicious buying. I am a strong believer in the plan known as the "Thorne" system, introduced by the late W. V. S. Thorne, and carried out most successfully on the Harriman lines. The plan is simple, the first requirement being to definitely determine what is the most desirable material to purchase, based on service, source of supply and price. This having been definitely determined, a running agreement is made for the requirements, subject to cancellation by either party giving a stated period of notice. This insures a fixed source of supply, the quality of materials best suited for the requirements, and enables the manufacturer to produce it at the lowest cost. It eliminates the expense and delay of sending out inquiries, receiving proposals, tabulating bids, etc. Each day's delay between the time the need develops and the delivery is made represents a loss, either in interest or a loss through lack of delivery.

More Specifications Needed

Broadly speaking, all materials should be bought to specifications. I know it will be contended that this is not always practicable. Manufacturers' agents who wish to sell some special brand, or mechanics and others who prefer to criticise the quality of something rather than write a specification, will not approve the plan. Our technical officers should be able and should be required to put their knowledge of what is required into a specification. Three factors should be taken into consideration in preparing a specification: (a) the service required, (b) the source of supply, (c) the cost. If representatives of each of these factors—i. e., the user, the manufacturer and the buyer, were consulted in their preparation, 90 per cent. of the materials used on our railroads could be covered by practical and economical specifications. Specifications without test are worthless and how is any buyer to know what he is getting unless the material is inspected and tested, and how can it be tested unless it is built to a specification? It is the only practical plan either for the manufacturer or buyer. I had hoped that the American Railway Association would adopt minimum specifications. With minimum specifications the manufacturers have a base to work to; any railroads or service requiring something better than the minimum specification can procure it at the lowest cost because there is a base. It is the only way to obtain necessary and honest competition. Because railroads have not followed generally the plan of buying material to specifications in competition is one of the reasons why we have the Clayton Act. I further believe that it is mandatory for public carriers to offer every responsible manufacturer an opportunity to bid on its requirements, and this cannot be carried out in a practical manner without practical specifications and tests.

The engineer of tests should report to the chief supply officer for the reason that it is desirable that materials should be arranged for in advance of the need. The engineer of tests on our railroads should be investigating and reporting on the requirements, source of supply, conditions and facilities of manufacturers at all times. If this were done as it should be there would be very little inspection required at destination, and none of the long, tedious and expensive delays in receiving materials that fail to conform to the specifications being held up by long and many times useless correspondence.

It will be said that the engineer of tests should be independent or report to the using department, on the ground that they are responsible for the kind of material to be used. My answer to this question is that the using departments are responsible for the specifications and the supply department is responsible for furnishing material to the specifications.

Distribution of Material

Material has no value either to the railways as capital or to the using department as service until it reaches the points where it is needed to be used. It is essential, therefore, to determine upon methods which will best enable the railway company to conserve its assets and make them available when wanted in the least possible time. Material must be first assembled and maintained at as few points as possible for distribution, for the reason that it represents money, which must be as closely guarded and conserved as if it were in the bank. Desirability of this is based principally upon the following facts:

(1) Generally there is only one place where there is sufficient organization for thorough check, test and care of materials;

(2) Materials can be inventoried more readily when centralized;

(3) By restricting the number of places where stocks are carried a smaller fixed investment will be found sufficient to adequately protect the needs of all departments.

The shops, representing the largest users of classes, if not values, must first be considered, and a practical plan is for the stores department to deliver the materials to the users in the shops. This keeps high priced mechanics at their work and their machines in operation during a period which otherwise would cause them to be absent procuring needed materials, and it enables the supervisory forces to keep in touch with the progress of the work and the actual needs of the mechanics. The shop delivery system assures accuracy in accounting by requiring that all material orders be revised and the proper description entered thereon. It provides the means for obtaining an order for all material issued; enables store department employees to observe the use of materials by coming in personal contact with the men who are actually using it; it provides a method by which they can intelligently anticipate and provide for the needs and satisfy themselves that the material will be utilized as intended. It results in delivering materials to points required in less time than other systems now in effect and at less expense; insures an opportunity for locating and returning to stock materials drawn for use and not applied; it insures proper supervision over the manufacture of materials and the return of the finished or repaired product to the stores when completed; it encourages the use of serviceable second-hand and repaired material in lieu of new and by co-operation provides for the disposition of shop worn material in proper sequence, thus avoiding the inadvertent disarrangement of stock.

The supply train serves the same purpose for the line that

the store delivery does for the shops and in precisely the same way. It places the representative of the supply department in personal contact with the users on the line; it places the storehouse at the disposal of the men; it establishes the closest relations between the two, which, when coupled with a thorough inspection by the supervisory officers, as it should, furnishes the ideal method of distributing material on the line

This system is in use by many large railway systems of the country. The reason why the supply train has not been generally adopted is due to the fact that there has not been a sufficiently broad conception of what the service of supply should embrace. The supply, or what is commonly called the stores department, is looked upon as merely a depot where supplies should be procured when ordered, and the storekeeper in charge merely as the man who hands them over the counter. It has occurred to few that the service of supply must be based on broad enough lines so that its agents should know what is actually needed, what gives the best service for the purpose, and have means at their disposal whereby they can come in personal contact with the users on the ground. The supply department is responsible not merely for having materials, but also the quantity and quality, and must also dispose and market the salvage.

Reclamation

Reclamation in its broadest sense has been generally misrepresented and largely misunderstood. Reclamation means making useful that which has been discarded. The fundamental principle underlying reclamation is that nothing must be reclaimed that will not be needed for future use or that cannot be reclaimed at a saving, and in order to guard against losses or incorrect conclusions an accurate record must be kept covering each operation, from which a monthly statement should be compiled showing the net results (savings or loss) on each item of material reclaimed.

There is one feature of this work which operating and maintenance officers seem to lose sight of, and that is, that the supply department has not taken over any of the functions of the maintenance department in salvaging materials; they have taken over this work after the using departments have finished with it. The using departments are expected and should be required to get the utmost service out of their materials and tools and not permit them to be turned over as scrap to be salvaged until they have performed their full service. The following outstanding features of this work must appeal to all practical men:

(1) That the supply department is organized for the purpose of supplying materials, and the reclaiming of materials is one of its sources of supply;

(2) That the work of dismantling, disposing and sale of all materials, including released equipment, is one of the duties of the supply department;

(3) That this work can be done more economically in conjunction with the handling and marketing of scrap, of which it is a part.

Railway Storehouse Not a Reservoir

All primary accounting should be done at points where the materials are issued. In no other place can basic accounting be done as economically and accurately. All materials must be received and checked by the storekeeper. The same material must be priced and either invoiced to the using department or charged direct to the primary accounts. In no other way can the storekeeper keep control of the stock and control his business. The supply officer is the fiscal agent of the company. The money invested in material is enormous. Every dollar invested unnecessarily in materials is unliquid and unworking capital. The railway storehouse is not a reservoir, but a bank. Material is not junk, but cash, and must be as safely guarded and controlled as cash.

There is an unlimited field for practical reform in our accounting system, which can only meet the full possibilities when our railroad executives realize that decentralization must take place and the records made complete on the ground.

What Has Been Done on the C. & O.

Probably the property with which I am connected is a fair example of many large-earning, reasonably well-managed properties, and its material conditions were probably not out of line with the majority of railways. The stock on hand April 30, 1921, was $15,830,416. On June 30, 1922, the stock on hand was $8,591,088. No unusual work was performed. On the contrary maintenance was greatly curtailed during the first half of the year 1921. No additional facilities were provided, and only applied common sense was required to accomplish this, but it was necessary to have men who knew what to do at the time. It was not sufficient to have well-meaning, honest men that were willing to learn.

The first step was to find out what we had and where it was. This was accomplished by starting men out over the line taking lists of everything that was on hand, on rough pencil sheets, being careful to give accurate description and location. These sheets were forwarded daily to a central location where they were transcribed on to cards. The cards were arranged alphabetically. All requisitions were sent to a central location, checked against these cards and the material transferred.

This was merely a bridge until a permanent organization could be built. Where storehouses or platforms were not available, ground was leveled off and rough timbers laid down, the material sorted and every piece marked or stencilled. After it was all segregated and marked, it was listed in books by classes. From these books a master book was built up which contained every item on the road, properly described. We were then in position to discontinue the monthly inventories and card indexes and start in with basic records. The next move was to consolidate the material at as few places as possible. Everything that was not used at a particular point was consolidated at the principal shops and a general store established, leaving only a 30 or 40 days' supply at local points. We continued the monthly inventory and transfer cards for the maintenance of way material until arrangements could be made to handle it in the same manner. We procured an appropriation covering the expense of work trains sufficient to pick up and assemble the maintenance of way material in the same manner, but the shop crafts' strike on July 1 prevented us from carrying out the plan, which will be taken up as soon as the strike is over.

I merely mention these simple things to illustrate what anyone can do, no matter what the condition of the material is, or lack of organization. We had absolutely nothing; neither organization, storehouse facilities nor records; only the confidence and support of our president.

Owners of railroad securities and executives have quite recently passed through a period which has opened their eyes to the need of better control of their expenditures for materials. If this experience has not shown them that something was radically wrong with their supply department, nothing can be said or written that will be likely to have any effect.

Unless the chief executive of a railroad is in entire sympathy with such an organization and has the courage to select and support the man whom he places in control, nothing lasting or substantial can be obtained. Reforms must begin at the top. The real responsibility rests with the chief executive, who must first satisfy himself that the need exists, select the man whom he believes capable of organizing the department (because it is almost entirely a matter of organization), give him support, and he will be satisfied with the results.

Coal Production

WASHINGTON, D. C.

INSTEAD OF THE 9,400,000 tons suggested by the first reports, final returns on soft coal production show only 9,142,000 tons in the week ended September 2, according to the weekly bulletin of the Geological Survey. The record of the week was awaited with interest as an indication of the supply to be expected after general resumption of mining under the Cleveland agreement. In the week of September 4-9, because of the Labor Day holiday, the output can hardly exceed 8,700,000 tons.

Production of anthracite, though expected shortly, has not yet been resumed.

The trend of output, day by day, is shown by the statement of cars of bituminous coal loaded. The early promise, as indicated by loadings of 30,662 cars on Monday, August 28, was not fully borne out by the reports of Friday and Saturday, when loadings dropped to 27,040 and 25,517 cars, respectively. On Labor Day 10,021 cars were loaded by the non-union mines, confirming the experience of other years that the day counts for a third of an ordinary working day. The double holiday on Sunday and Monday increased the number of empty cars available for placement on Tuesday and on that day 33,085 cars were loaded, the largest number on any day since last March. On Wednesday, however, loadings dropped to 30,652 cars and on Thursday to 28,238 cars. These returns suggest a total output for the week of between 8,300,000 and 8,700,000 tons.

	1st Week	18th Week	19th Week	20th Week	21st Week	22d Week	23d Week
Monday	11,445	15,102	16,229	15,703	18,601	30,662	10,021
Tuesday	11,019	11,446	13,729	13,032	17,801	28,197	33,085
Wednesday	11,437	12,447	13,368	12,531	18,524	28,641	30,652
Thursday	11,090	12,380	13,277	13,521	19,388	28,637	28,238
Friday	11,296	12,669	13,539	13,718	22,882	27,040	.....
Saturday	8,888	12,405	11,009	13,524	23,070	25,517	.....

"The limiting factor in the supply of soft coal has now become transportation," the bulletin says. "It is true that some thousands of miners are still on strike, notably in the Connellsville and Kanawha districts, but the tonnage offered for shipment by the other mines at work will absorb the available transportation facilities. The demand for coal is active and prices are high. Under such conditions coal is offered for shipment up to the limit of the ability of the railroads to transport it.

"The present rate of production is 9,600,000 tons a week. In the corresponding period of 1920 the average was 11,750,000 tons; in 1919, 11,340,000 tons; and in 1918, about 12,800,000 tons. The present rate of soft coal movement, even with priority in use of open-top cars, is therefore 25 per cent below 1918, 15 per cent below 1919, and 18 per cent below 1920.

"The Cleveland agreement itself was concluded on August 15 and 16. By Saturday of that week it had been accepted by the majority of operators in Ohio, Fairmont and Michigan, and in part of Central Pennsylvania, and by that time coal was beginning to move from these mines.

"The following week (August 21-26) was marked by a series of local wage conferences, and by the acceptance of the Cleveland settlement in district after district. In rapid succession agreements were signed in the Kanawha and Michigan section of West Virginia, in Montana, Illinois, Indiana, Wyoming, the Southwest Interstate Field, and Central Pennsylvania. Before the week ended only Washington and Pittsburgh of the strongly organized districts had failed to reach an agreement.

"In the meantime output in the non-union fields of the Middle and Southern Appalachians continued to be limited by transportation. The mines in the Logan district alleged a loss of 73.4 per cent of full time capacity on account of transportation. In the Winding Gulf field the loss was 63.7 per cent, and in Northeastern Kentucky 56.0 per cent. Transportation difficulties were most acute in the Hazard and Harlan districts, where losses of 71.5 and 89.6 per cent were reported. There was, however, a slight improvement in car service as compared with the week preceding."

The all-rail movement of coal to New England during the week ended September 2 comprised shipments of 1,232 cars of bituminous coal and 151 of anthracite over the six principal Hudson river crossings and 19 cars of bituminous coal through Rouses Point. The aggregate, 1,402 cars; was an increase of 259 cars, or nearly 23 per cent, over the preceding week. The total all-rail forwardings this year to September 2 amounted to 112,025 cars divided as follows: 50,710 cars of anthracite and 59,777 cars of bituminous coal through the principal gateways and 223 cars of anthracite and 1,315 of bituminous coal through Rouses Point.

Under the Federal Fuel Distributor's orders directing coal to Lake Erie ports total shipments during the week ended September 2 increased 79 per cent, and according to reports from the Ore and Coal Exchange a total of 463,242 tons was dumped as against 258,598 tons in the week preceding. Of the total, 432,281 tons were cargo coal and 30,961 tons were vessel fuel. The present rate of dumpings was 79 per cent of that in the corresponding week a year ago. The total quantity of cargo coal forwarded during the present lake season now stands at 5,337,275 tons as gone to destinations not ordinarily taking lake coal. The quantity sent to the regular lake markets is only 4,441,043 tons as against 16,216,834 in 1921, and 11,346,697 in 1920.

Shipments of bituminous coal through Hampton Roads increased in volume during the week ended September 2. Dumpings for the week of September 2 totaled 369,685 net tons, as against 310,593 tons the week before. Cargo coal for export decreased, whereas coal for New England and other coastwise destinations and bunker coal increased.

After the Sunday and Monday holiday total shipments on Tuesday were the largest recorded for the period since April 1. On the next day they were less, but were higher than on any preceding Wednesday. Aggregate shipments during the first half of last week, considering Labor Day equivalent, as usual, to about three-tenths of a full day, were at the rate of 1,600,000 tons a day. This rate exceeded by 15 per cent and 65 per cent, respectively, the daily averages for the preceding week and for the week before that.

Pennsylvania districts showed continued increase on Wednesday. In northern West Virginia, Ohio, Indiana, and Illinois, the rapidly rising rate of shipments was checked by transportation difficulties.

In the non-union districts of southern West Virginia, Virginia, Kentucky, and Alabama shipments have declined generally, but the Logan, Pocahontas-Tug River, and parts of Eastern Kentucky shipments increased this week although still far behind the high rate attained late in June.

In the region immediately west of the Mississippi river shipments have increased regularly from day to day and on Wednesday, September 6, were higher than previously reported this season.

The Colorado coal fields early last week shipped at about the rate of the week before, which was less than previous weeks. Marked increases were shown last week in Utah and New Mexico, whereas in Washington there was a decrease as compared with the week before.

Lake coal now being loaded is moving almost entirely under its natural Class 2 movement and with only a very limited application of the No. 1 priorities. A problem in the transportation of lake coal has arisen because of delays in the unloading at lower lake ports of cargoes of iron ore from the northern ranges from boats which carry coal on their return trips to Lake Superior ports. This delay in unloading ore boats which has been occasioned by deficiencies in the railroad car supply, will be obviated, it is hoped, by the issuance of special permits for the use of cars to transport iron ore.

It is probable that arrangements will have to be devised to insure at least a partial supply of anthracite for the upper

lake region. In normal seasons between 3,000,000 and 4,000,000 tons of anthracite are shipped to upper lake territory, the great bulk of which goes by the water route through Buffalo, N. Y., and Erie, Pa. It is hardly possible at this juncture to supply the lake region with its normal anthracite requirements, but it is hoped that a considerable percentage, perhaps 50 per cent of the normal supply may be provided. In the consideration of the lake anthracite problem, the demands of the Eastern and Northeastern regions for hard coal have to be taken into account.

Fuel Distributor Spencer is still receiving a large number of urgent requests for coal. These requests come to a considerable extent from the southeastern states, notably Mississippi, eastern Tennessee and North and South Carolina. Artificial gas manufacturing companies in the northern states continue to ask assistance in obtaining coal for gas making purposes. The State Fuel Administration of Massachusetts has informed the Fuel Distributor that it will require no

Secretary Hoover, of the Department of Commerce, and

further supplies of emergency coal.

Fuel Distributor Spencer conferred with members of the Pennsylvania Fuel Commission and representatives of the anthracite producers in Philadelphia on September 7 with a view to assuring an equitable and expeditious distribution of hard coal supplies, when available.

The railway fuel situation last week was reported as apparently much easier, and railroads generally, with the exception of certain lines in the southeastern part of the country, are obtaining coal supplies. The Fuel Committee is endeavoring to take care of the needs of certain short-line railways in the Southeast.

The Federal Fuel Distributor is at present issuing very few priority orders for the movement of coal. The policy at present being pursued is to limit the use of No. 1 priority orders to cases of keen emergency and then to apply the priority only against coal under contract.

A conference has been called by the President's Fuel Committee, in co-operation with the United States Chamber of Commerce, to be held in Washington on Friday, September 15, to be comprised of business, industrial railway and public utility representatives, to consider various measures in amelioration of the coal situation. The conference will consider specifically the organization of a voluntary campaign of—

(a) Measures for expedition of coal movement.

(b) Measures for restraint on accumulation of unnecessary coal stocks by business and industrial consumers.

(c) Measures for placing upon the public market some part of the production of the mines normally producing for certain industries.

(d) Other methods for expediting return of the coal situation to normal.

The co-operation of the responsible coal operators will also be requested, the general purpose of the movement being that prices may be quickly readjusted downward, the householder and small consumer immediately supplied, and the coal situation returned to normal.

Julius Barnes, of Washington, and Alexander Legge, of Chicago, are acting for the United States Chamber of Commerce. The invitations to the conference have been issued by Secretary Hoover of the Department of Commerce on behalf of Fuel Distributor Spencer, Commissioner Aitchison of the Interstate Commerce Commission and Dr. Foster Bain, director of the Bureau of Mines, representing the Department of the Interior.

Except for seven different days in March, more cars were loaded with coal on Monday, September 11, than on any one day this year, either before or after the coal miners' strike began on April 1. Loading on Monday totaled 35,808 cars. This exceeded the previous record loading since the miners' strike began by 2,723 cars, that record having been made on September 5, when the total was 33,085 cars.

Coal loadings on Monday were equivalent to a weekly production of approximately 11,800,000 tons and exceeded the average daily loading in September last year by 11,251 cars, and the daily average for August this year by 18,745 cars.

FORTY-SIX LOCOMOTIVES, valued at $783,000, were exported from the United States during June. Of these 25 went to Argentina.

EXPORTS of freight cars in May totaled 490, valued at $998,076. Passenger cars exported numbered 8, valued at $11,237. Of the freight cars, 400, valued at $880,000, went to Argentina.

General News Department

The Western Railway Club has postponed its September meeting and will hold its next regular meeting in October.

The Telegraph & Telephone Section of the American Railway Association, W. A. Fairbanks, secretary, announces that the annual meeting of the Section, scheduled for September 19, 20 and 21, has been indefinitely postponed.

Graysonia, Nashville & Ashdown is the name of the successor to that part of the Memphis, Dallas & Gulf which extends from Ashdown, Ark., on the Kansas City Southern and the Frisco Northeast to Shawmut, on the Missouri Pacific, about 60 miles. The new company is preparing to rebuild the line. It is planned to use motor cars for passenger, express and baggage service. C. M. Conway, of Texarkana, Ark., heretofore general agent, has been elected president and general manager of the new company.

Henry Ford professes to believe that the members of the Interstate Commerce Commission are only pawns in the hands of New York financial interests. In a statement given out at Detroit last Wednesday he declared that by its control of empty coal cars the Commission aids the coal profiteers. He said, as quoted in the dispatches:

"The same interests who own the public utilities, railroads and mines are using the commission as part of their scheme to fleece the public. If this commission ever was useful, it now has outlived its usefulness. If the Government had desired, it easily could have stepped in and given the public all the coal it needed. Why should it let the Labor Board set the wages for the railroad crafts so far below a living wage that they would strike? Why should the I. C. C. permit the Louisville & Nashville to carry a $70,000,000 surplus and keep an insufficient one-track road serving the most productive coal fields. The commission should have insisted that the L. & N. build adequate facilities into the heart of this great coal region. With a wonderful opportunity for public service, the I. C. C. widely misses the mark."

Northern Pacific Sued by Strikers

Former Northern Pacific shopmen at Pasco, Wash., 28 in number, have filed suits against that railroad for $1,000 each, as damages for alleged refusal of the company to employ them. After the strike was declared the railroad management decided to build a fence around the shops at Pasco, and a contract for building the fence was let to a construction concern. The 28 idle shopmen applied for work on this job but were rejected.

Freight Loss and Damage Payments in May

Figures compiled by the freight claim division of the American Railway Association show that the total charged to loss and damage by the railroads of the country in May, 1922, was $4,258,941 as compared to $8,333,320 for the same month in 1921, a decrease of 48.9 per cent. For the five months ended May 31 the total charged to loss and damage was $23,414,363, as compared with $47,388,357 for the same period last year, or a decrease of 50.6 per cent.

Burlington 72 Years Old This Month

On September 2 the Chicago, Burlington & Quincy completed its seventy-second year of service. Under the name of the Aurora Branch railroad, with tracks extending from Aurora, Ill., to Turner Junction (West Chicago), a distance of 12 miles, it began serving the public on September 2, 1850. At that time its equipment consisted of one locomotive, one passenger coach and two combination baggage and freight cars. The road was built to meet local requirements and the promoters of the Aurora road harbored no idea of extending their line beyond the boundaries of Illinois. However, during the years following the management took advantage of the opportunities presented to build a large transportation system until today the Burlington has 9,389 miles of line, 1,955 locomotives, 1,389 passenger cars and 72,131 freight cars and employs more than 50,000 officers and employees.

Automatic Train Control on C. & N. W.

The Chicago & North Western has contracted with the General Railway Signal Company, Rochester, N. Y., for an installation of automatic train control between West Chicago, Ill., and Elgin. [West Chicago is 30 miles west of Chicago and Elgin is 12 miles north of West Chicago.] The line to be equipped has some double track and some single, with both mechanical and electric interlocking plants. The intermittent induction type will be used, with speed control.

T. and T. Convention Postponed

The annual convention of the Telegraph and Telephone section of the American Railway Association, which was scheduled to be held at Colorado Springs, Colo., on September 19-21, has been indefinitely postponed according to a notice issued on September 6 by Chairman W. H. Hall and Secretary W. A. Fairbanks. The notice reads as follows:

"Owing to the present conditions the Committee of Direction has decided that it is advisable to postpone the fall session (annual meeting) of the Telegraph and Telephone section."

New Union on M. & St. L.

The shop employees of the Minneapolis & St. Louis have organized a new union under the leadership of W. A. Liehl, who has been elected president. "We have formed this association at the suggestion of the wage board," Mr. Liehl said. "We have a set of officers who can be dealt with and, in a diplomatic way can settle disputes, thus avoiding friction and strikes. Our organization will extend to all the shops of the road. I believe that 75 per cent of the striking shopmen who are out did not go out of their own free will; and they fear the torrent of abuse they would get if they went back to work."

New Cars in 1922

The railroads of the United States, in the seven months from January 1 to August 1 this year, had 25,763 more new freight cars, either ordered and under construction or installed in actual service, than during the entire year of 1921, according to a statement issued by the Association of Railway Executives; seven months this year, 95,199 cars; 12 months of 1921 a total of 69,436.

Of the total ordered or installed this year, 41,405 were coal cars and 39,612 were box cars. The railroads are also augmenting their supply of refrigerator cars. On August 1, 3,870 had actually been installed and placed in service, while 6,428 more had been ordered.

Labor Board Again Rules Against Contracting

Several decisions directed against the practice of contracting on various railroads were handed down by the Labor Board on September 11 and subsequent days. These decisions, involving the Erie; the New York Central; the San Antonio, Uvalde & Gulf; the Great Northern; the Chicago and North Western; the Cincinnati, Indianapolis & Western; the Chicago, Milwaukee & St. Paul and the Chicago Great Western, follow, practically word for word, the Board's ruling in the Indian Harbor Belt case described in full in the *Railway Age* of May 13, page 1111.

In every case the practice complained of by the employees had been discontinued before or soon after the strike of shopmen began on July 1. At the Board's inquiry on June 31 into the strike

situation all of the roads involved in the decision except the Erie, announced the discontinuance of the practice of contracting or made a promise to do so as soon as possible.

Safety on the Southern

The Southern Railway announces that since March 1, 1920, the end of federal control, it has had the comfort of being able to record, month by month, that no passenger has lost his life by accident while on one of its trains. During these thirty months the company's trains carried passengers equivalent in number to nearly half the population of the United States. On the other hand, during the same period, there has been a steadily growing toll of fatal accidents at highway crossings on this company's lines. For three periods of two years each the records show:

	Railroad Passengers Killed on Trains	Automobile Passengers Killed in Road Crossings
1912-1913	7	7
1913-1914	8	10
1921-1922	0	58

Attention is called to the fact that from a social standpoint the driver of an automobile has the same duty of taking all needed precautions as has the railroad company.

Canadian Engineers Meet at Winnipeg

The Engineering Institute of Canada held its thirty-sixth annual professional meeting at Winnipeg, Man., on September 5-7, with approximately 200 members in attendance. J. G. Sullivan, consulting engineer, Winnipeg, and formerly chief engineer of the Canadian Pacific, Western lines, presided. The first day was devoted to the presentation and discussion of papers describing the hydro-electric plants in the vicinity of Winnipeg which were visited on the following day. On Thursday separate meetings were held for the civil, geological and mechanical sections of the society. Among the papers of interest to railway men which were presented before the society on Thursday was one by S. B. Wass, terminal engineer, Canadian National, on the Construction of the Moncton Yard and Engine Facilities, which was abstracted in the *Railway Age* of September 9, page 463. Following this a paper was presented on Automatic Grain Car Unloaders for the Canadian National Railways at Port Arthur by Fred Newell, mechanical engineer, Dominion Bridge Company, Ltd., Montreal, which is reprinted on another page in this issue. Professor T. Thorvaldson of Saskatchewan University, presented a paper on the Disintegration of Concrete of Alkaline Ground Waters in which he described the extensive investigations which are now under way to determine means of arresting and overcoming the attacks on railway and other structures.

Railway Earnings for July

The railroads of the United States had a net operating income in July amounting to $69,239,000, equal to a return on an annual basis, of 4.04 per cent on their tentative valuation. In June the net operating income was $76,594,000, or 4.79 per cent.

The railroads fell short by $29,332,800 of a return of 5¾ per cent, the figure fixed by the Interstate Commerce Commission in its recent rate decision.

Operating revenues in July totaled $443,183,000, a decrease of 4.3 per cent below July last year; operating expenses $340,725,800, or 6.1 per cent under 1921.

For the first seven months this year the railroads had a net operating income of $418,271,000, compared with $214,713,400 during the same period last year; an annual rate of 4.3o per cent, compared with 2.24 per cent in the first seven months last year. Operating revenues for the first seven months in 1922 amounted to $3,054,531,000, a decrease of 2.6 per cent under the same period last year, while operating expenses totaled $2,419,602,000, or 11.2 per cent decrease.

The carriers in the Eastern district had a net operating income in July of $24,165,400, compared with $31,054,370 in July last year; in the Southern district $6,479,000, compared with $4,703,000, and in the Western district $38,594,500, compared with $33,560,800.

Despite the strikes of coal miners and shopmen, loading of revenue freight in July increased 10 per cent over the same month last year. Coal loading during the same month, however, was approximately 48 per cent under July, 1921 but loading of all commodities other than coal increased nearly 24 per cent. Measured in net ton miles, there was a decrease in freight traffic of approximately 4½ per cent under July last year.

The tabulations as to earnings are based on the reports of 197 Class 1 railroads representing a total mileage of 235,221 miles. There were formerly 201 Class 1 roads but because of the consolidation of reports by a number of railroads with subsidiary lines which heretofore had been classified separately, the number of Class 1 roads named in the reports is now 197.

National Association of Railway Commissioners

The thirty-fourth annual convention of the National Association of Railway and Utilities Commissioners will be held at Hotel Tuller, Detroit, Mich., beginning on Tuesday, November 14, the date having been changed from September 26 by action of the executive committee. The call for the convention, signed by Carl D. Jackson of Wisconsin, president of the association; James B. Walker of New York, secretary, and H. G. Taylor, of Nebraska, chairman of the executive committee, says that the tendency of the federal government to encroach on the powers of the states must be checked, and every state is earnestly urged to send as many delegates as possible.

Chairman C. C. McChord of the Interstate Commerce Commission will address the convention on Tuesday afternoon and will tell what has been done and what is proposed in the direction of co-operation between the federal commission and state commissions. Possible changes in the Transportation Act will be discussed by W. H. Newton of Minnesota and H. G. Taylor of Nebraska.

On Wednesday morning, the regulation of telephones will be discussed and on Thursday morning other public utilities will be the subject with addresses by executives of the different interests, who have been invited by the association. These addresses will deal with gas, electric light and power.

Hon. E. V. Kuykendall, of Washington, will present the report of the new standing committee on Motor Vehicle Transportation. Washington is one of the states which has taken the lead in regulating motor vehicles. Reports are expected from all of the standing committees.

The address of Secretary James B. Walker is 49 Lafayette street, New York City.

A Committee on Public Relations

The Long Island Railroad announces the appointment of a Committee on Public Relations, which, in the words of President Ralph Peters, has been established for the purpose of opening up as many channels as possible between the management of the road and the people patronizing it, with the end in view that patrons may have a closer idea of the company's problems and the officers have a closer idea of the problems of the people. In addressing the members of the committee at their first meeting, Mr. Peters said:

"The road must expand its activities and keep its patrons better informed about railroad problems. Public opinion may be depended upon to be actuated by justice and good sense if the people are well informed. Employees need a liberal education; they need information that will give them courage to speak for the company. The committee is expected to supply officers and employees with the facts which will enable them to speak authoritatively and clearly, not only on matters pertaining to the Long Island road but as well on railroad problems generally."

In the "creed" which has been prepared for the committee we read: "Any employee can do *as* told; *all* employees will do *when* told; but the most valuable employee is the one who gives off-duty thought to the problems with which he has to deal." Announcement has been made that a member of the committee or a representative will attend meetings held in any town on Long Island to discuss all matters affecting train service, civic improvements and general railroad subjects. Chambers of Commerce, Boards of Trade and other organizations can make special arrangements by addressing the Chairman, P. H. Woodward (general passenger agent), Pennsylvania Station, New York City. Other members of the committee are C. D. Baker, general superintendent; J. F. Keany, general solicitor; C. L. Addison, assistant to the president; Donald Wilson, general freight agent and George Flatow, Publicity Agent.

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF JULY AND SEVEN MONTHS OF CALENDAR YEAR 1922

Name of road.		Average mileage operated during period.	Operating revenues: Freight.	Passenger.	Total (inc. misc.)	Maintenance of: Way and structures.	Equipment.	Operating expenses: Traffic.	Transportation.	General.	Total.	Operating ratio.	Net from railway operations.	Operating income (or loss).	Net after rentals.	Net after rentals 1921.

Employees as Solicitors

Solicitation of business, both freight and passenger, by employees in all departments, has now become such a regular thing on the lines of the Southern Pacific (Pacific System) that a permanent record is to be kept, with a "score board" showing the standing of the different divisions. If an employee gives a tip resulting in a freight shipment (less than a car-load) he is given ten points; for a car-load, 50 points; and one who gets the promise of all future business of a certain firm receives an award of 100 points. A local one-way ticket means one point; round trip, two points; through tickets to the East, five points; round trip, ten.

The first score board reads as follows:

Divisions	Points August	Total to date
Los Angeles	1435	1977
General offices	1075	1516
Tucson	760	837
Coast	408	503
Western	119	197
San Joaquin	71	176
Stockton	9	139
Salt Lake	24	85
Sacramento	....	10
Shasta	10	10
Portland	3	3

The bulletin issued by the company gives a long list of names of men in all departments who have secured business; also names of several women, one of whom got six car loads of freight from Phoenix, Ariz., to San Francisco.

Reading at Work on Camden Terminal

Details of the plans for the new Camden terminal of the Philadelphia & Reading Railway, which, it is expected, will be ready for the 1923 summer season, have just been announced by the company. Work on the new terminal was begun several months ago and has now reached the stage of driving the piles and dredging the river for ferry slips. In the new terminal extensive additions to the company's ferry and track facilities will be provided to handle the growing seashore traffic.

The plans call for a two-story structure of steel frame and brick with stone trimmings on a concrete foundation built on piles. It will house the ferry slips, a train shed, a concourse, waiting rooms for men and women, a restaurant, and the offices of the Delaware River Ferry Company and of the seashore lines of the Philadelphia & Reading.

The river front end of the building, which will be built of copper, will house four modern electrically operated ferry slips. The spaces between the ferry slips will be used for the men and women's waiting rooms, for offices, and for the restaurant, all of which will be built of brick with stone trimming.

The concourse will be 328 feet long and 105 feet wide. It will lead directly to the train shed which will contain ten tracks for use in the company's regular service and four additional tracks for use at times when travel is especially heavy. All these tracks will be gated and practically all of them will be long enough to accommodate trains of fourteen cars. The train platforms will be built of concrete with butterfly shelters.

On the land side of the building the main entrance will be from Mechanic street. The plans for this part of the structure call for a two-story office building 115 feet long by 42 feet wide. On the first floor of this building will be the lobby, the ticket office, and facilities for handling express. The second floor will be occupied by the offices of the Reading's seashore lines. At the opposite end of the concourse from that occupied by the office building will be a brick power house used to generate the power necessary in the operation of the terminal.

Driveways leading into the terminal will be laid out, each of them wide enough to accommodate four lines of vehicles. There will be separate driveways for baggage and express. Adjoining the terminal proper will be a large storage yard for cars and a railroad Y. M. C. A. building for the use of trainmen.

The construction of the new terminal and the laying of the necessary tracks between it and the present Reading's seashore lines will require considerable filling in and the construction of several bridges. The relaying of the tracks also will eliminate the number of grade crossings existing on the present lines.

Provisions have been made in the plans, also, for the adaptation of the new terminal to the use of double-deck ferryboats should this become necessary.

Traffic News

The Northern Pacific has restored the 20 branch line trains in Montana and Minnesota which were cancelled on July 20, to conserve coal. It is expected that other branch line trains, west of Paradise, Mont., will also soon be restored. The St. Louis Southwestern has announced its intention to reinstate 12 of its passenger trains in Texas which were discontinued on August 6, because of the coal shortage.

The Interstate Commerce Commission has issued Foreign Commerce Order No. 5, cancelling Foreign Commerce Order No. 2 issued on January 12, designating points on the railroad lines at which information relative to the handling of export shipments by common carriers by water in foreign commerce are required to be maintained and from which through bills of lading to foreign destinations in connection with ocean carriers whose vessels are registered under the laws of the United States to points in non-adjacent foreign countries are to be issued. This order is issued in accordance with Section 25 of the interstate commerce act.

The Public Service Commission of Indiana, acting in behalf of shippers of that state, opposes the approval by the Interstate Commerce Commission of reductions in freight rates from New York to the Pacific coast proposed by the Southern Pacific. The change will place New York shippers on an equal basis with competitors as far west as the Mississippi river on shipments to the Pacific coast. The proposed reductions are on 175 articles, including board, various kinds of paper, plumbers' goods, earthenware and stoneware, pumps and sprayers, certain agricultural implements, clay and clay products, tile roofing, bottles, jars, glass, bars and bent iron, wire fencing, nails and stoves.

Traffic Statistics for First Half of 1922

The number of ton miles of revenue freight handled by the railroads of the country during the first six months of 1922 was 152,435,057,000, as compared with 146,832,606,000 in the corresponding period of 1921, according to the monthly bulletin of traffic statistics issued by the Interstate Commerce Commission. Although the volume of freight increased, the freight revenue decreased from $1,863,986,628 to $1,859,121,583, and the average revenue per ton miles decreased from 1.269 cents to 1.22 cents. The revenue passenger miles totaled 16,487,117,000, as compared with 18,382,451,000 last year. The passenger revenues decreased from $574,734,980 to $502,763,758 and the average revenue per passenger mile decreased from 3.127 cents to 3.049 cents.

New Grain Rate Case

The Public Utilities Commission of Kansas has filed with the Interstate Commerce Commission a complaint against all carriers in the Western rate group, asking for a reduction of rates on grain, grain products and hay between points in the Western group. The complaint recites the increase in rates on the commodities mentioned in Ex Parte 74, the reduction required in the Western grain rate case effective December 27, 1921, and the general reduction in rates required in the reduced rate case, 1922, which was effective July 1. It is then alleged that the reductions ordered in the Western grain rate case "were for the purpose of removing injustices and to establish a proper level and relationship as between commodities, and the level and relationship which was established has been seriously disturbed by the decision of the commission in 'Reduced Rates' by the exception from this decision of grain, grain products and hay, carload rates between points in the Western group resulting in unreasonable and unjustly discriminatory interstate rates." It is also alleged that considering prevailing production costs and farm and market values of the commodities involved the existing interstate rates are prohibitory and operate to the serious disadvantage of the shippers of these commodities and are unjust and unreasonable, unjustly discriminatory and unduly prejudicial. The Kansas commission will press for an early hearing, and has invited the cooperation of other commissions in the Western group.

Commission and Court News

Interstate Commerce Commission

The Commission has vacated its order in the Nevada intrastate rate case in which it ordered the rates increased to correspond with the increase made in interstate rates, the Public Service Commission of Nevada having vacated its order which prescribed lower rates.

United States Supreme Court

Southern Pacific Control of Central Pacific Severed

The case of the United States vs. Southern Pacific was reported in the *Railway Age* of June 3, page 1256. The government was sustained in its plea for severance of the control of the Central Pacific by the Southern Pacific, as in violation of the Sherman Act, the Supreme Court's decision reverses the decree of the federal district court for the District of Utah (239 Fed. 958). In the course of its opinion, the Supreme Court said that considered collectively, the cases of Northern Securities Co. vs. United States, 193 U. S. 197, 327; United States vs. Union Pacific, 226 U. S. 61, and United States vs. Reading Co., 253 U. S. 26, 57, 58, 59, had established that "one system of railroad transportation cannot acquire another, nor a substantial and vital part thereof, when the effect of such acquisition is to suppress, or materially reduce the free and normal flow of competition in the channels of interstate trade." The defendants contended that the suit was barred by laches on the part of the government in failing to institute it earlier; but the court was unable to discover that laches existed. The stock acquisition complained of was in 1899. In 1901 the Union Pacific acquired control of the Southern Pacific by purchase of sufficient stock to accomplish that purpose. The Union Pacific case was begun in 1908, and a final decree reached in 1913, and in 1914 this suit was begun. United States vs. Southern Pacific. Opinion by Mr. Justice Day. Mr. Justice McKenna dissented in separate opinion. Justices McReynolds and Brandeis took no part in the decision. Decided May 29, 1922.

What Is Employment in Interstate Commerce?

In proceedings by a railroad employee under the California Workmen's Compensation Act, in which the State Commission awarded relief which award was reversed by the District Court of Appeal, the Supreme Court of the United States had before it, on certiorari, the question whether redress for injuries received while working in the general repair shops of the company upon a locomotive which had been employed in interstate commerce and which was destined to be so employed again must be sought through the Workmen's Compensation Act or the Federal Employers' Liability Act.

The state and federal decisions applying the jurisdictional test are diverse, and the court below pointed out that the Supreme Court had fixed no rule by which the conflict could be resolved, but had remitted the decision of each case to its particular facts. The Supreme Court says, of its decisions on the point, that "a precise ruling, one that enables an instant and undisputed application, has not been attempted to be laid down. . . . We refrain from a review of our cases. They pronounce a test and illustrate it. We are called upon to apply it to the present controversy. . . . We are brought to a consideration of degrees. There may be only a placement upon a sidetrack or there may be a definite withdrawal from service and placement in new relations. The locomotive in the present case was placed in the shop for general repairs on December 19, 1918. On February 25, 1919, after work upon it, it was given a trial and it was placed in service on March 4, 1919. The accident occurred on February 1 of that year, the engine at the time being nearly stripped and dismantled. It was not interrupted in an interstate haul to be repaired and go on. Judgment reversed and cause remanded. Industrial Accident Commission of California vs. Payne. Opinion by Mr. Justice McKenna. Decided May 29, 1922.

Foreign Railway News

Complete Details of Large Construction Program of South African Railways Obtainable in New York

As has previously been announced in the *Railway Age*, the South African Railways are planning to undertake at an early date the construction of some 850 miles of new line. This work will involve, of course, extensive purchases of track and construction material. The National Bank of South Africa, 44 Beaver Street, New York City, has the detailed prospectus which the government has prepared to cover this work, and all of the projects contemplated are therein described in detail. This company, which is the fiscal agent of the government of the Union of South Africa, will be glad to allow any American manufacturer who is interested in furnishing any of the material needed to inspect this prospectus at its New York office.

French Railway Orders Control Equipment for 120 Electric Locomotives

An order covering the complete control equipment for 120 electric locomotives, now under construction, has been received by the Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., from the Paris-Orleans Railway of France as part of an electrification contract amounting to approximately $8,000,000.

The Paris-Orleans Railway, which is one of the largest systems in France operating over 5,000 route miles of track, is electrifying 125 miles of its main line between Paris and Vierzon. This is the first of an extensive program laid out by the Paris-Orleans for the electrification of its lines.

The complete order of control equipment will be manufactured in the United States and shipment of this order will commence in January, 1923, and extend to December, 1924.

China Notes

PEKING.

The political situation continues to dominate everything in China. None of the military movements which it was supposed two months ago were to be determining factors in the march of events have proved to be decisive. In the South, Sun Yat Sen is staging a "come back" by means of the navy after it was supposed that he had been eliminated by Chen Chung Ming, the friend of Wu Pei Fu. In the North, Wu Pei Fu has been influenced to withdraw his forces from the Manchuria border leaving Chang Tso Lin in possession of the Peking-Mukden rolling stock and much of the Salt Gabelle revenue. Wu's nominal chief, Tsao Kun, is connected by marriage with Chang Tso Lin and is negotiating for the complete recognition of Chang with restoration of honors, and for a mandate of censure to apply to Wu equally with Chang for precipitating the late hostilities. Midway between North and South, Wu's forces are harassed in Honan by heavily armed banditry under the direction of the late Tuchun of the province, and in Kiangsi by adherents of Sun Yat Sen. Parliament is expected to convene in three days, whereat the log-rolling for the election of a regular president to succeed acting-president Li Yuan Hung is expected to occupy much of the autumn period. It is said that the present minister of communications has now secured the support of Tsao Kun and is likely to remain in office indefinitely, although still actively opposed by the old "Chiaotung" (communications) clique.

Passenger service has been restored almost to normal. Express trains are running as usual to Shanghai and to Hankow. The week-end special to Peitaiho beach, which during the past four years has been a regular feature of the summer season has not been resumed.

Tsao Kun's forces continue to collect the revenue of the Peking-Hankow line. His representatives have offered to permit this to go to the ministry of communications providing the ministry can advance a million dollars and continue to contribute $800,000 monthly. The line earns only about $1,800,000

a month under normal conditions of which about $800,000 is required for operating expenses. After paying the military's $800,000 only $200,000 would be left, which is about one-third of the amount necessary to repay instalments due on mortgage bonds and interest charges.

Just what diplomatic moves are going to be made as a result of Chang Tso Lin's seizing of the Peking-Mukden rolling stock is a matter of considerable importance. The British and Chinese corporation, which is trustee for the bondholders who hold the mortgage on the property and the revenue of the Peking-Mukden, have gone through the preliminary formalities of demanding of the ministry of communications the restoration of the line, of invoking the aid of the British legation, which in turn has repeated the demand to the Chinese foreign office, all of which are helpless. The British see clearly that if a Chinese military freebooter once "gets away" with a seizure of British pledged property, in this way, it will be only a short time before their whole vast interests in China are lost, as all of them are valuable and highly revenue producing. At the same time, to land forces and recover the possession of this property is more apt to stir up all China against them than it is to secure the friendship of the Peking government, whose battle they fight and whose position they save. Incidentally, the Japanese have a second mortgage upon a portion of this line, and as an invasion of Manchuria would be required, and in spite of the Washington conference, when it comes to Manchuria there is still a "sphere of influence" in China—it is quite likely that the Japanese government would be displeased with any such movement unless the British should yield to the Japanese a voice in the management of the Peking-Mukden line. Hence the British have every reason for giving the Chinese plenty of time for working out a solution in their own way.

Announcement has just been made of a traffic agreement between the Chinese Eastern Railway and the South Manchurian Railway by which rates are reduced on the Chinese Eastern from Harbin to Changchun on the route to Dairen and raised on the section from Harbin toward Vladivostock. Also, a rebate of $3.55 per ton is to be paid the Chinese Eastern by the South Manchurian for beans delivered at Dairen if originated west of Harbin. The effect of this will be to divert the entire bean trade of Manchuria from Vladivostock to Dairen and a considerable portion of all other kinds of traffic originating west of Harbin. This all goes toward confirming the impression that now Japan really means to withdraw her troops from Siberia. It is stated, and as frequently denied, that the gage from Harbin to Changchun will be narrowed from the Russian 5 ft. to the Japanese 4 ft. 8½ in., so that through trains will be run from Harbin to Dairen. If at the same time the Japanese could work out an arrangement with the British by which that portion of the Peking-Mukden north of the Great Wall were also handed over to Japanese management, the economic conquest of Manchuria would be practically complete.

The Ministry of Communications has made public a summary of its financial obligations as follows:

Domestic—	
Short term loans and advances	$11,864,654.23
Redeemable bonds	11,320,000.00
Overdrawn bank accounts	706,938.03
Pledged for the redemption of private railways	38,326,880.68
	$62,218,472.94
Foreign—	
Loans contracted by the ministry	$63,235,547.72
Loans contracted by subordinate departments	72,776,913.58
Obligations upon the railways and telegraphs	298,367,008.00
Loans made by the ministry of finance secured on the property and revenues of the railways and telegraphs, but for which the ministry of finance is responsible	106,200,000.00
	$540,579,469.30
Grand total	$602,797,942.24

This tabulation omits several millions due on current accounts for which creditors are pressing for settlement. Much of the above total bears interest rates of nine to twelve per cent, but the long term loans at present rates of exchange work out to a little over four per cent. But the upshot is that some $36,000,000 a year is required for interest payments, omitting entirely the large repayments which are now falling due. The railways last year had a total net revenue of some $41,000,000 of which perhaps $33,000,000 was cash applicable to purposes of this kind. Telegraphs barely pay their way, but the postal department makes a small surplus, which under its foreign co-director general it devotes to betterments of the service. Hence the ministry of communications no longer has credit.

Equipment and Supplies

Locomotives

THE DULUTH & IRON RANGE is inquiring for 8 Mikado type locomotives.

THE VIRGINIAN RAILWAY contemplates buying some heavy type Mallet locomotives.

THE CHICAGO, BURLINGTON & QUINCY contemplates buying about 50 locomotives.

THE ATCHISON, TOPEKA & SANTA FE is contemplating the purchase of 100 locomotives.

THE NEW YORK CENTRAL has ordered 100 locomotives from the American Locomotive Company.

THE CHESAPEAKE & OHIO is negotiating for the purchase of 50 compound Mallet type locomotives.

THE WESTERN MARYLAND has ordered 10 Consolidation type locomotives from the Baldwin Locomotive Works.

THE NORFOLK & WESTERN is inquiring for from 20 to 40 Mallet type locomotives and 12 Mountain type locomotives.

THE TEXAS & PACIFIC is inquiring for 8 Pacific type locomotives and is considering the purchase of 8 switch engines.

THE NORTHERN PACIFIC is contemplating the purchase of a large number of locomotives, the number of which is still undetermined.

THE CHICAGO, ROCK ISLAND & PACIFIC is inquiring for 10, 2-10-2 type locomotives, and contemplate buying 30 Mikado type and 10 Mountain type locomotives.

THE ST. LOUIS-SAN FRANCISCO, reported in the *Railway Age* of September 9 as inquiring for 35 Mikado and 15 Mountain type locomotives, has ordered this equipment from the Baldwin Locomotive Works.

Freight Cars

THE UNION PACIFIC is inquiring for 50 caboose cars.

THE WESTERN PACIFIC is inquiring for 100 gondola cars.

THE ATLANTIC COAST LINE is inquiring for 2,000 box cars of 40 tons' capacity.

THE WABASH is inquiring for repairs to 300 stock cars, 250 automobile cars and 500 box cars.

THE BETHLEHEM-CHILE IRON MINES COMPANY is now inquiring for 20, 50-ton special hopper ore cars.

THE PITTSBURGH, SHAWMUT & NORTHERN is inquiring for 200 stock cars of 30 tons' capacity and 50 box cars of 40 tons' capacity.

THE SCHENECTADY VARNISH COMPANY, Schenectady, N. Y., has ordered one tank car of 8,000 gallons capacity from the Standard Tank Car Company.

THE CENTRAL OF GEORGIA, reported in the *Railway Age* of August 19 as inquiring for 100 cars of 40 tons' capacity, has ordered this equipment from the Virginia Bridge & Iron Company.

THE GREAT NORTHERN is inquiring for 100 tank cars, new or second hand, of 12,000 gal. or less capacity for carrying fuel oil. The company is also considering the question of leasing 100 tank cars.

THE NEW YORK, NEW HAVEN & HARTFORD, reported in the *Railway Age* of September 2 as inquiring for 6 caboose cars, has ordered this equipment from the Keith Car & Manufacturing Company.

THE CINCINNATI, INDIANAPOLIS & WESTERN, reported in the *Railway Age* of September 2 as inquiring for 300 high side gondola cars of 50 tons' capacity, has ordered this equipment from the Pullman Company.

THE ST. LOUIS-SAN FRANCISCO, reported in the *Railway Age* of September 2 as inquiring for 500 hopper car bodies of 50 tons' capacity, has ordered 1,000 of 55 tons' capacity from the American Car & Foundry Company.

THE ILLINOIS CENTRAL, reported in the *Railway Age* of August 19 as inquiring for 75 caboose cars, has ordered this equipment from the American Car & Foundry Company. The cars are to have steel underframes and are to have a capacity of 30,000 lb.

THE WEST VIRGINIAN PULP & PAPER COMPANY, New York City, reported in the *Railway Age* of August 12 as inquiring for 10 steel underframe box cars, has ordered these cars from the Western Steel Car & Foundry Company. The cars are to have a capacity of 80,000 lb.

Passenger Cars

THE ALASKAN ENGINEERING COMMISSION, Seattle, Wash., is inquiring for two baggage cars.

THE UNITED STATES BUREAU OF MINES has ordered 2 rescue cars from the American Car & Foundry Company.

THE LONG ISLAND contemplates inquiring soon for 90 steel passenger coaches, 80 of the cars are for electric service and 10 for steam service.

THE GRAYSONIA, NASHVILLE & ASHDOWN, successor in part to the Memphis, Dallas & Gulf, contemplates the purchase of passenger, express and baggage motor car equipment.

THE ATLANTIC COAST LINE, reported in the *Railway Age* of June 10 as having ordered 20 express cars and 10 coaches from the Bethlehem Shipbuilding Corporation, Harlan plant, has increased its order to 25 steel express cars and to 25 steel coaches.

THE TENNESSEE CENTRAL, reported in the *Railway Age* of September 9 as inquiring for 3 combination mail and baggage cars and 6 passenger coaches, has ordered 3 combination mail and baggage cars, 3 combination coaches and 3 steel coaches from the Bethlehem Shipbuilding Corporation, Harlan plant.

Iron and Steel

THE WABASH is inquiring for 20,000 tons of 90-lb. rails.

THE CHICAGO, ROCK ISLAND & PACIFIC has ordered 8,000 tons of rail from the Illinois Steel Company.

THE LOUISIANA RAILWAY & NAVIGATION COMPANY has ordered 3,000 tons of rail from the Tennessee Coal, Iron & Railroad Company.

THE UNITED STATES STEEL CORPORATION announces an increase in the price of standard steel rail from $40 to $43 a ton, to become effective on October 1.

THE SOUTH MANCHURIAN RAILWAY ordered recently through a New York City export house 700 tons of tie plates from the U. S. Steel Products Corporation.

THE IMPERIAL JAPANESE GOVERNMENT RAILWAYS received bids recently through export houses in New York City for 4,800 tons of 60 lb. rail and 218 tons of splice bars.

Machinery and Tools

THE GRAND TRUNK is inquiring for one flanging machine and one Nazel hammer.

THE ATCHISON, TOPEKA & SANTA FE has ordered a 10-ton hand power crane from the Whiting Corporation.

THE GENERAL ELECTRIC COMPANY, Schenectady, N. Y., is inquiring for four, 5-ft. radial drills, also for one, 6-ft. radial drill.

THE ILLINOIS CENTRAL, reported in the *Railway Age* of June 10 as inquiring for a large list of machine tools, has completed negotiations for $250,000 worth, exclusive of motors.

THE CHICAGO, BURLINGTON & QUINCY has placed an order with the Whiting Corporation for two 125-ton electric overhead traveling cranes, one 125-ton hoist and one auxiliary 15-ton hoist.

THE CHICAGO, BURLINGTON & QUINCY is about to place orders for overhead electric traveling cranes for its shops at Denver, Colo., and for two gantry cranes for use in its scrap yard at Aurora, Ill.

THE PENNSYLVANIA is inquiring for 4 double trolley overhead traveling cranes and for 8 single trolley overhead traveling cranes, to include 2 of 250 tons' capacity, 2 of 60 tons', 2 of 25 tons' and 6 of 15 tons'.

THE UNION PACIFIC, reported in the *Railway Age* of July 8 as having issued a machine inquiry comprising 73 items, has now placed orders with various companies for approximately $200,000 worth of machine tools.

THE CHICAGO, BURLINGTON & QUINCY, reported in the *Railway Age* of July 8 as having issued a machine inquiry comprising 117 items, is expected to place orders this week for a large number of the machine tools. This company has two lists before the trade, one comprising 117 items mentioned above, and another including 78 items for shops at various points on the system.

Miscellaneous

THE IMPERIAL JAPANESE GOVERNMENT RAILWAYS requested bids through expert houses in New York City, on 32,900 couplers for freight cars. The bids were wanted on September 15, at Tokio, Japan.

THE UNION PACIFIC received bids until September 15 for its requirements for one year beginning on the above date for incandescent lamp bulbs aggregating approximately $150,000 in net value.

THE NEW YORK CENTRAL is asking for bids until 12 o'clock noon September 26, for cast iron car wheels for car and locomotive service and track material, including switch points, frogs, switches, guard rails, etc.

THE PITTSBURGH & LAKE ERIE will receive bids until 12 o'clock noon September 26, at Pittsburgh, Pa., for its three months' requirements of car, engine truck, and driving wheel axles, Portland cement, stove pipe iron, pickled sheet steel, galvanized sheet iron, wire nails, wire rope, steel billets, bars, shapes and plates, boiler tubes, annealed copper wire, insulated wire, annealed iron wire, tinned iron wire, and soft steel wire.

THE NORFOLK & WESTERN will receive bids until 12 o'clock noon September 27, at Roanoke, Va., for its requirements from October 1 to December 31, 1922, of couplers and repair parts, also for locomotive tires and for brake shoes. Bids are also wanted on 2,000 tons of steel plates, shapes and bars. Separate bids are wanted for its requirements of brake shoes from October 1, 1922, for a period of six months and from the same date for a period of twelve months.

Signaling

THE MISSOURI, KANSAS & TEXAS in connection with the construction of its new freight yard at Dennison, Texas, is installing 12 signals; 8 Style S three-position semaphores and 4 color-light signals. The material is furnished by the Union Switch & Signal Company.

THE TYRONE DIVISION of the Pennsylvania Railroad reports having passed through the shopmen's strike without the loss of a single man. This division connects with the Main Line at Tyrone, Pa. Its lines aggregate 279 miles in length, and it employs 1,720 men. General Manager C. S. Krick has sent congratulations to the superintendent on "the wonderful loyalty displayed by the men in remaining at work during the trying days of the strike, particularly when men on the adjacent divisions left their work in considerable numbers and exerted every effort to induce the employees of the Tyrone division to join them. You and your subordinates evidently have created and maintained among your employees that old-time feeling of loyalty and affection for the company and its interests that has done so much to make the Pennsylvania Railroad what it is today."

Supply Trade News

The Economy Fuse & Manufacturing Company, Chicago, Ill., has moved its Detroit sales offices from the Majestic building in that city to the First National Bank building.

The American Brake Shoe & Foundry Company, New York, has bought 17 acres of land at Portsmouth, Va., where it is proposed to erect a new plant in the near future for the manufacture of brake shoes.

The Norwalk Iron Works Company, South Norwalk, Conn., has been consolidated with the Automatic Carbonic Machine Company of Peoria, Ill. The plant and equipment of the latter company has been moved to South Norwalk.

H. M. Aubrey, manager of the packing department of the Union Asbestos & Rubber Company, Chicago, has been appointed sales representative of that company in charge of the recently opened New York Office, 30 Church street, New York City.

The Ramapo Iron Works with plants at Hillburn and Niagara Falls, N. Y., and Niagara Falls, Ontario, and the Ajax Forge Company of Chicago with plants at Chicago and Superior, Wis., have been consolidated under the name of the Ramapo-Ajax Corporation, with J. B. Strong as president and headquarters at Hillburn. The control of the new company will be held by the American Brake Shoe & Foundry Company, New York.

Obituary

John H. Flagler, who organized the National Tube Company and served as its president until it was merged with the United States Steel Corporation, died on September 8 at his country home in Greenwich, Conn.

From the Indianapolis News

Out Again

Railway Construction

Atchison, Topeka & Santa Fe.—This company will construct an underground crossing with 80 ft. girders on concrete abutments at Britton, Okla. This company will also construct a subway with steel superstructure under two tracks at Twenty-third street, Oklahoma City, Okla.

Chicago, Burlington & Quincy.—This company has awarded contracts to the following companies: Home Builders' Association, Wichita, Kan., for a power house at Alliance, Neb.; Jones Engineering Company, Omaha, Neb., for an addition to the power house at Lincoln, Neb.; G. A. Johnson & Sons, Chicago, for a passenger station at Elsberry, Mo., which inquiry was reported in the *Railway Age* of August 5; W. G. Zitterell, Webster City, Iowa, for a freight house at Ziegler Junction, Ill., which inquiry was reported in the *Railway Age* of August 26; G. A. Johnson & Sons, Chicago, for a freight house at Aurora, Ill.

Chicago Union Station.—This company will close bids on September 18 for the construction of concrete track slabs and track drainage system for the north approach tracks, the installation of fibre conduit for high and low tension leads between Washington and Lake streets and the excavation for permanent station tracks between Van Buren and Harrison streets.

Illinois Central.—This company has awarded a contract to Ellington Miller Company, Chicago, for remodeling the freight house with new concrete paved transfer platform at Indianapolis, Ind., to cost $45,000.

Illinois Central.—This company, which was reported in the *Railway Age* of August 5 as calling for bids for the rebuilding of 12 water treating plants, has awarded the contract for the four at Dunlap, Iowa and Manchester, and at La Salle, Ill., and Scales Mound to the International Filter Company, Chicago.

Jefferson Southwestern.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a line from a connection with the Chicago & Eastern Illinois near Mt. Vernon, Ill., to a connection with the Chicago, Burlington & Quincy, 3 miles south of Waltonville, Ill., 14.5 miles.

Kansas, Oklahoma & Gulf.—This company is preparing plans for the extension of approximately 6½ miles of its lines from Baxter Springs, Kan., to a connection with the Joplin branch of the Missouri, Kansas & Texas.

Michigan Central.—This company has awarded a contract to Ellington Miller Company, Chicago, for a three-story office building 60 ft. by 75 ft. at Detroit, Mich., to cost approximately $80,000.

Pennsylvania.—This company is receiving bids for the construction of the substructure of an overhead bridge at Josephine, Pa., Cresson division, Black Lick branch, State Highway Route No. 68. The approximate quantities are as follows: 1,050 cu. yd. foundation excavation; 430 cu. yd. foundation masonry; and 975 cu. yd. neat masonry. The work is in charge of George Nauman, assistant to chief engineer, Pittsburgh, Pa.

Southern Pacific.—This company will construct extensions to its sidings at Crystal Lake, Cal., Cisco and Troy at a cost of approximately $250,000 and involving considerable rock excavation. This company will also double track its line across the Techachapi mountains at a cost of approximately $1,000,000. It will also enlarge the tunnels along this line and reline them with concrete at a cost of $2,800,000. The work on two of these, Tunnel 25 at San Ferando, Cal., and Tunnel 26 at Hasson will cost $1,800,000. Electrically operated turntables 100 ft. long will be installed at Ashland, Ore., Siskiyou, and Dunsmuir, Cal., and San Luis Obispo, at a total cost of about $200,000. This company will also relay 300 miles of track with new 90-lb. rail at a cost of $4,500,000, renew 2,400,000 ties at a cost of $4,500,000 and apply 1,000,000 cu. yd. of crushed rock and slag ballast at a cost of $2,500,000. This company also contemplates grade reductions and double tracking on the Central Pacific portions of the system.

Annual Report

The Baltimore and Ohio Railroad Company

Baltimore, Md., June 1922.

To the Stockholders of The Baltimore and Ohio Railroad Company:

The President and Directors of the Company submit herewith report of the affairs of the Company for the year ended December 31st, 1921. While this is the ninety-sixth report published by the Company, it in fact covers the operations of the Company for its ninety-[illegible] year, [illegible] the previous reports having been for an overlapping [illegible] to the fiscal year.

OPERATIONS OF THE YEAR.

During the entire year of 1921 the transportation property of the Company was operated solely by the Company on its own account and upon its own responsibility, the first whole year so operated since 1917. The property was operated by the Director General of Railroads under Federal control from January 1st, 1918, to February 29th, 1920, and by the Company under the guaranty provisions of the Transportation Act of 1920, from March 1st to August 31st, 1920.

The business depression which began in the fall of 1920, continued throughout the year, resulting in a very marked decline in the traffic handled. While the loss of revenue due to the decline in the volume of traffic was partly offset by the increase in rates and charges made effective August 26th, 1920, the total revenues were less than anticipated because of the numerous rate reductions made throughout the year 1921 on certain commodities, particularly those relating to agriculture, building operations, road construction, etc., such as grain and grain products, lumber, iron ore, sand, gravel, coal, etc., which commodities constitute a large portion of the Company's traffic. In these circumstances it became necessary to curtail the expenses to the lowest point consistent with safe and efficient operation. The reduction in revenues was in part offset by reduction in wages authorized by the United States Railroad Labor Board and made effective July 1st, 1921, and also by some decrease in the prices of material and fuel.

PROPERTY OPERATED.

The mileage of the properties operated by The Baltimore and Ohio Railroad Company, excluding separately operated subsidiaries, is shown in Table 14, and may be summarized as follows, viz.

	First Main Track.	Total all Tracks.
Miles owned and operated	4,956.06	9,786.97
Miles leased and operated	150.11	344.53
Total miles owned, leased and operated	5,106.17	10,131.50
Miles of trackage rights over which the Company operates	81.01	162.17
Total miles over which the Company operates	5,187.18	10,293.67

There was an increase of 31.99 miles of first main track during the year 1921, due principally to the inclusion in the Company's operations of the mileage of the Little Kanawha Railroad Company and the Belington and Northern Railroad Company, which companies had been separately operated prior to January 1st, 1921.

The equipment of the properties embraced in the above mileage is shown in detail in Table 18, page 30, and consists of:

2,683 Locomotives.
94,932 Freight Train Cars.
1,300 Passenger Train Cars.
2,633 Work Train Cars and other Work Equipment.
167 Tug Boats, Car Floats and other Floating Equipment.
Miscellaneous Equipment of various kinds.

The total investment of the Company in property used in and held for transportation service, excluding investments in separately operated properties, is $707,032,851.36, and is shown in Table 2, page 14. The operations of the property embraced in this investment produce the Net Railway Operating Income as defined by the Transportation Act of 1920.

The income accounts of six subsidiary companies, with mileage of 218.34 miles, are shown separately. The net profit or loss of these subsidiaries and other separately operated properties is absorbed and transferred to the income account of the parent company through the medium of the accounts "Separately Operated Properties"—Profit or Loss—as the case may be, so that the Corporate Income Account as shown in Table 1, comprises the net income of the entire Baltimore and Ohio System.

The total first main track mileage operated by the Company and its separately operated subsidiaries is 5,405.52 miles.

RAILWAY OPERATING INCOME.

Railway Operating Income as defined by the Transportation Act of 1920 is shown in Table 5.

As before stated, the results shown for the year 1921 are from operations conducted wholly by the Company for its own account. During the year 1920, Net Income from Property used in Transportation Service included compensation accrued under the contract with the Director General of Railroads for January and February, 1920; guaranty accrued under the terms of the Transportation Act of 1920 for the period March 1st to August 31st, 1920; and railway operating income for the period September 1st to December 31st, 1920. For this reason the items comprising Net Income from Property used in Transportation Service for 1921, as shown in Table 1, are not comparable with those for 1920. However, for comparative purposes there is shown in Table 5, railway operating results for the years 1920 and 1921.

Referring to Table 5, it will be seen that freight revenues for 1921, in comparison with 1920, decreased $26,289,416.31, or 14.39 per cent., reflecting in part the decline in industrial activity which began in the fall of 1920, and continued throughout the year 1921. The extent of the decline in freight traffic may also be measured by the revenue tons carried, which for the year 1921 amounted to 71,536,702 tons, compared with 101,924,520 tons in 1920, a decrease of 29.81 per cent. As a further indication of the extent of the decline in business, it may be mentioned that the revenue tons carried one mile, decreased from 20,932,667,112 tons in 1920, to 14,198,727,702 tons in 1921, or 32.17 per cent., due to a shorter average haul as well as a lesser volume of tonnage. Table 15, shows the decline in tonnage by commodities, and in comparison with the year 1920 indicates a decrease of 12.40 per cent in products of agriculture, 30.44 per cent in products of mines, 31.05 per cent. in products of forest, and 34.58 per cent. in manufactures and miscellaneous. Freight traffic statistics may be found in Tables 11 and 12.

Passenger earnings for 1921 decreased $1,852,336.30, or 5.94 per cent. below 1920. There were 4,325,427, or 17.06 per cent fewer passengers carried, and 167,795,712, or 15.83 per cent. fewer passengers carried one mile per mile of road in 1921, when compared with 1920. Passenger traffic statistics may be found in Tables 13 and 14.

Mail revenue for the year shows a decrease under 1920 of $1,579,954.08, which is due wholly to the inclusion in the figures for 1920 of $2,104,680.97 above the revenues of that year representing additional allowances by the Government for services rendered in the years 1916 to 1919, so that if this additional allowance is eliminated in the comparison of 1921 with 1920, there is an actual increase in favor of 1921 of $524,726.89, or 23.50 per cent.

Express revenue decreased $2,571,758.43, or 55.17 per cent., part of which is due to the downward trend of business and part to the revision of the divisions established by the Director General of Railroads, and which remained in effect throughout the first eight months of 1920. Other revenues, including switching, storage, demurrage, etc., decreased $1,028,605.41, or 11.36 per cent., also due to the falling off in business activities.

Total operating revenues for the year were $198,622,372.81, of which 78.75 per cent was from freight, 14.77 per cent from passenger, 1.39 per cent. from mail, 1.05 per cent. from express, and 4.04 per cent from all other revenues. The decrease in gross revenue for the year compared with 1920, was $33,322,070.53, or 14.37 per cent.

Maintenance of way and structures expenses during 1921, were $24,617,808.24, a decrease as compared with 1920 of $8,441,474.61, or 25.53 per cent, and Maintenance of Equipment expenses for the year were $45,129,-

Interest on Funded Debt	22,534,069.45	21,960,591.49	573,477.96
Interest on Unfunded debt	583,148.26	200,667.31	382,480.95
Miscellaneous Income Charges	124,544.03	575,870.34	*451,326.31
Total Deductions from Gross Corporate Income	$25,585,478.94	$24,588,673.08	$996,805.86
Net Corporate Income	$6,388,891.27	$7,245,480.70	*$856,589.43

During the year 1920, Net Income from Property used in Transportation Service included compensation accrued under the contract with the Director General of Railroads for January and February, 1920; Guaranty accrued under the terms of the Transportation Act of 1920 for the period March 1st to August 31st, 1920; and railway operating income for the period September 1st to December 31st, 1920. For this reason the items comprising Net Income from Property used in Transportation Service for 1921 are not comparable with those for 1920. However, for comparative purposes there is shown in Table 5, railway operating results for the years 1920 and 1921.

*Indicates decrease.

857.14, a decrease when compared with the previous year of $23,742,958.52, or 34.47 per cent. Total maintenance charges for the year were $69,747,665.38, and constituted 41.90 per cent. of all operating expenses and 35.12 per cent. of all operating revenues.

Transportation expenses for the year were $85,481,386.51, a decrease as compared with 1920 of $28,322,722.65, or 24.89 per cent. and comprised 51.35 per cent. of total operating expenses and 43.04 per cent. of total operating revenues.

All other expenses for the year were $11,227,972.58, an increase over 1920 of $564,872.43, or 5.30 per cent. and were 6.75 per cent. of total expenses and 5.65 per cent. of total revenues. This increase is largely due to increase in traffic expenses, occasioned principally by the re-establishment and expansion of agencies at various important points off the line of road.

Total operating expenses for 1921 were $166,457,024.47, a decrease under 1920 of $59,942,283.38, or 26.48 per cent., compared with a decrease in operating revenues of $33,322,070.53, or 14.37 per cent. The ratio of operating expenses to operating revenues was 83.81 per cent. in 1921, and 97.61 per cent. in 1920, a decrease of 13.80 per cent.

CORPORATE INCOME AND SURPLUS.

The income and surplus accounts of the Company will be found in Table 1, and it will be seen that the net income for 1921 from property used in transportation service, or "Net Railway Operating Income" as it is defined in the Transportation Act, was $21,853,546.08, equivalent to 3.09 per cent. on the investment in property devoted to transportation service, or about one-half of the return contemplated by the Act which permitted a return of six per cent. as reasonable. There was a decrease in net railway operating income as compared with 1920 of $4,580,749.16, but of this amount $2,648,358.01 is due to setting up in 1921 reserves in the operating accounts to provide for lapover items pertaining to the guaranty period and chargeable to the United States under the Transportation Act of 1920, resulting in a corresponding increase in Other Corporate Income.

Other Corporate Income for the year is shown as $10,120,824.13, an increase over 1920 of $4,720,965.59. This large increase is due principally to the inclusion as income, under instructions of the Interstate Commerce Commission, of amounts found to relate to the guaranty period and chargeable to the United States under the Transporation Act of 1920.

Deductions from Gross Corporate Income aggregated $25,585,478.94, an increase over 1920 of $996,805.86, made up of increases in interest on funded and unfunded debt, and losses incurred by separately operated properties, which were also affected by the general decline in business.

From the Net Corporate Income for the year of $6,388,891.27, shown in the Corporate Surplus Account, there was appropriated $3,500,000.00 in accordance with the provisions of the $35,000,000.00 loan agreement of July, 1919, and applied in the retirement at maturity of outstanding long term debt.

Dividends on the Preferred Stock of the Company at the customary rate of four per cent. per annum were declared during the year.

SETTLEMENTS WITH THE UNITED STATES.

Settlement with the Director General of Railroads for use of the property during Federal control has not been completed. The Company's claims have been presented and final action is expected within a short time..

Final settlement has not as yet been effected with the Government for the operations of the property during the guaranty period, March 1st, to

---

I Indicates increase. D Indicates decrease.

August 31st, 1920, under the Transportation Act of 1920. Claims for the amount due have been filed with the Interstate Commerce Commission and action by that body is awaited.

ADDITIONS AND BETTERMENTS TO ROAD

Expenditures for additions and betterments during the year 1921 amounted to $3,518,123.91, and are shown in Table 4 grouped substantially according to the Interstate Commerce Commission classification for expenditures for road. A summarization of the more important work undertaken or completed during the year 1921 follows:

The work of rearranging and enlarging the freight yards and tracks at Locust Point, Baltimore, Md., to accommodate increasing movement of development, was completed during the year.

An extension of the Aster Branch was placed in operation during the year, and further extensions of this branch are in progress.

The Norton Branch was relocated and extended.

The new bridge crossing the Miami River at Lawrenceville, Indiana, was completed and placed in service October 1st, 1921, thus eliminating the necessity of detouring traffic over foreign lines for about ten miles, made necessary by the destruction of the old bridge by an ice gorge in February, 1918.

After the acquisition of the Bridge Company of Foxburg, referred to in the report of last year, the work of renewing the three main spans of the bridge over the Allegheny River at Foxburg, Penna., was immediately undertaken. This work was completed in 1921.

The renewal and strengthening of bridges is being carried forward according to a carefully arranged schedule, designed to preserve safe conditions and gradually to extend the operating limits of the heavier class of motive power. During the year 1921, work was completed on spans 14 and 15 of the Benwood Bridge over the Ohio River at Wheeling, W. Va. Work was also completed on the bridge at Conemaugh, Pa., on four bridges on the Wheeling, Pittsburgh and Baltimore Branches, and on the bridge structures at Lookout Avenue, Butler, Pa., and Miami Street, Toledo, Ohio. Reconstruction of several bridges on the Parkersburg Branch is now under way, and work is also in progress on bridges at West Junction, O., Painesville, O., Elyria, O., Washington, Pa., West Alexandria, Pa., Lumbrook, Del., and Mitchell, Indiana.

Automatic signal protection was installed on 11.50 miles of double track between Callery Junction and Wildwood, Pa., and controlled manual block was installed between Camden and Mt. Royal Stations Baltimore, Md. Additional train and crossing signals were installed at various points.

I indicates increase. D indicates decrease.

The following securities bear the endorsement of The Baltimore and Ohio Railroad Company, jointly with other Companies, viz.: Kentucky and Indiana Terminal Railroad Company, 1st Mortgage Sterling Bonds, $6,282,780.60; Richmond-Washington Company, 1st Mortgage Bonds $10,000,000.00; Washington Terminal Company, 1st Mortgage Bonds, $12,000,000.00. The Company, through its subsidiary, The Toledo and Cincinnati Railroad Company, guarantees $2,728,000.00 Consolidated First Mortgage Bonds of The Dayton and Michigan Railroad Company. The Company guarantees $2,427,600.00 notes of the Morgantown and Kingwood Railroad Company, given in payment of equipment allocated by the Director General of Railroads.

The above General Balance Sheet presents an accurate statement of the accounts of the Company as of December 31, 1921.

J. J. EKIN, *Comptroller.*

ADDITIONS AND BETTERMENTS TO EQUIPMENT.

The total equipment owned by the Company and in service at December 31st, 1921, together with equipment of constituent companies operated as Baltimore and Ohio Railroad Company, is shown in Table 18.

The total ledger value of equipment held in the name of the Company on December 31st, 1920, was			$150,715,718.98
During the year 1921 there were added 59 locomotives, 2,059 freight train cars and 23 pieces of other equipment, costing	$9,003,833.31		
During the same period there were retired from service and written out of the investment account, 5 locomotives, 2,400 freight train cars, 24 passenger cars, and 420 pieces of other equipment, having a ledger value of	$1,854,818.09		
There were reductions in value, incident to change of class of equipment, of	81,610.56		
		1,936,428.65	
			7,067,404.66
Total ledger value of equipment held in the name of the Company on December 31st, 1921			$157,783,123.64

SUBSIDIARY COMPANIES AND OPERATIONS.

Beginning January 1st, 1921, the operations of the Little Kanawha and Belington and Northern Railroad Companies, which had therefore been separately operated, were included in the operations of the parent company.

Income accounts for the year 1921 for the several separately operated railroad properties will be found in Table 20. The result of the operations of these properties was a net deficit of $687,564.96, which was met by a charge against the income of the parent Company, so that the net income as stated in Table 1, reflects the final results of operations of all companies owned and operated.

RELIEF DEPARTMENT—PENSIONS.

Statements showing the operations of the Relief and Savings Features of the Relief Department will be found in Table 17.

The payments to retired employes constitute a special roll and are contributed by the Company from month to month. The total number of retired employes carried on the pension rolls in 1921 was 1,181, and the pensions paid during the year amounted to $380,013.60. There was an increase of 79 pensioners and $27,623.10 in pensions paid during the year as compared with 1920. The total payments in pensions to employes retired from service since the inception of the Pension Feature October 1st, 1884, aggregate $4,630,316.55.

Of the more than 60,000 employes of the Company, 40,069 are members of the Relief Department.

The number of shareholders in the Company as of December 31st, 1921, was 35,640.

For the purpose of brevity as well as at the suggestion of various shareholders, and with the view to economy, the annual report has been somewhat curtailed by the elimination of certain detailed data and statistical tables. Complete data with respect to the operations of the property are, of course, on file with the Interstate Commerce Commission, and information relating to previous years is available in preceding annual reports.

The reduction in cost of operation and the improved standard of service accomplished during the year covered by this report were both due in large measure to the loyal and efficient efforts of the officers and employes. The board wishes to record its appreciation of their efforts. Their continued helpful co-operation in improving the service and efficiency of the Company is earnestly desired.

By order of the Board.

DANIEL WILLARD, President.

[ADVERTISEMENT]

FOUR HUNDRED AND NINETY-SEVEN freight cars, valued at almost $1,000,000, were exported from the United States in June. Of these 200 went to Argentina and 100 to Chile.

TWO HUNDRED MILLION DOLLARS is the value of merchandise handled by the American Railway Express, in San Francisco, in the course of 12 months, according to the estimate of H. R. Hislop, superintendent, in an article published in a San Francisco business paper. This freight is in four million shipments. In the busy season following the war, the San Francisco office dealt with four train loads of silver each month; 12 cars to a train and 500 bars of silver in a car. Millinery and other dry goods from eastern cities constitute a considerable portion of the regular business. Bread to the amount of 500 cases is shipped daily to surrounding cities and towns; milk brought in averages 30,000 gallons daily and the daily receipts of veals average 500. Motion picture films, handled largely between sundown and midnight, constitute a traffic which requires a special room with a man in attendance every hour of the 24. During the rush hours following the close of evening entertainments, a pick-up service has to be furnished to every exchange in the city and over 200 of these shipments have to be sent out within an hour and a half after they are received. Films have to be receipted for the same as money. Express service is maintained on 70 outward trains and 70 inward each day, requiring the services of 182 messengers. In the city altogether, the company employs 1,000 persons, 100 wagons, 40 gasoline trucks, 5 electric trucks and 14 electric towing tractors.

Railway Financial News

ALABAMA GREAT SOUTHERN.—*Annual Report.*—The annual report issued last week shows the following income account for the year ended December 31, 1921:

	1921	†1920
Operating revenues	$9,542,225	
Operating expenses	8,196,320	
Net revenue from operations	$1,345,905	
Taxes	325,691	
Operating income	1,020,786	$2,177,783
Total non-operating income	427,697	236,193
Gross income	$1,448,483	$2,413,976
Interest on funded debt	475,945	465,239
Total deductions	913,394	754,808
Balance of income over charges	535,090	1,659,168
Dividends on preferred stock*		236,625
Dividends on ordinary stock*		548,100
Additions and betterments charged to income		1,093
Balance carried to profit and loss	$535,090	$873,350

* Dividends of 6½ per cent on preferred and ordinary stock charged to profit and loss.

† Operating revenues and expenses are not comparable, the property having been operated by the U. S. R. A. during January and February, 1920.

BALTIMORE & OHIO.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue, entitled "Will Baltimore & Ohio Pay a Common Dividend?" See also excerpts from annual report on adjacent pages.

CHICAGO GREAT WESTERN.—*Receivership Rumor Denied.*—President S. M. Felton says: "There is absolutely no truth whatever in the rumors of receivership. We have just got through paying the September 1 interest and no more is due until March 1. We are handling more business than ever before."

CHICAGO, ROCK ISLAND & PACIFIC.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $1,000,000 of first and refunding mortgage gold bonds, to be sold at not less than 83½.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Dividends Declared.*—This company has declared a dividend of 2 per cent on the common stock, payable November 1 to stock of record September 29. In June, last, a similar dividend was paid, so that the payment of 2 per cent on November 1 will put the stock on a 4 per cent dividend basis for the year.

The company has also declared the regular quarterly dividend of 1¼ per cent on the preferred stock, payable October 20 to stock of record September 29.

DULUTH & NORTHERN MINNESOTA.—*Sold.*—This railroad, extending from Knife River, Minn., to Mile Post, 99.25 miles, has been sold to R. Waldron. On July 15, 1921, the Interstate Commerce Commission authorized the abandonment of the entire railroad. It is planned to use the D. & N. M. as a nucleus for the construction of the Duluth & Ontario, which will extend from Duluth, Minn., to Fort William, Ont. (Canada), a distance of 216 miles. Mr. Waldron will be president of the new company and will be associated with a number of Duluth and Minneapolis men, among them being H. Baxter, of Minneapolis, attorney of the Duluth, Winnipeg & Pacific; M. J. Dooley, of Minneapolis, general manager of the Minneapolis, Northfield & Southern, and R. M. Hunter of Duluth and James S. Sebree of Pierre, S. D.

ILLINOIS CENTRAL.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to issue $6,645,000 of equipment trust certificates to be sold to Kuhn, Loeb & Co. at 95 on a basis to cost 5.32 per cent.

LOUISIANA & NORTH WEST.—*Bond Redemptions.*—Under the provisions of a voluntary sinking fund instituted by the directors, by which 20 per cent of net earnings applicable to dividends is set aside for bond redemptions, the company will receive at its office, 347 Madison avenue, New York, up to noon October 2, written orders for redemption of $12,000 of its first mortgage bonds. A quarterly dividend of 1½ per cent will be paid to stock-

holders of the road on October 1 to holders of record September 15.

MARSHALL, ELYSIAN FIELDS & SOUTHEASTERN.—*Charter Granted.*—A charter has been granted by the State of Texas to this company to operate with a steam locomotive that part of the old Marshall & East Texas, extending between Marshall, Tex., and Elysian Fields, a distance of 17½ miles. The capital stock is $30,000. A request for a charter to operate a motor car was refused. The officers of the road are M. Turney, president, Marshall, Tex.; J. B. Furrh, vice-president, Elysian Fields, Tex., and W. L. Berry, secretary-treasurer. The headquarters of the company will be at Marshall.

MOBILE & OHIO.—*Annual Report.*—The annual report issued last week shows the following income account for the year ended December 31, 1921:

	1921	*1920
Operating revenues	$18,130,180	
Operating expenses	16,124,530	
Net revenues from operations	$2,065,650	
Taxes	737,627	
Operating income	1,174,974	†$730,449
Total non-operating income	786,670	1,414,749
Gross income	$1,961,644	$684,300
Interest on funded debt	1,354,215	1,359,099
Total deductions	1,759,938	1,811,426
Balance carried to profit and loss	$201,705	†$1,127,127

* Operating revenues and expenses are not comparable, the property having been operated by the U. S. R. A. during January and February, 1920.
† Deficit.

NASHVILLE, CHATTANOOGA & ST. LOUIS.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to assume liability in connection with an equipment trust agreement which provides for the payment of $497,037 in cash and $1,800 in 15 annual instalments at 4½ per cent. The certificates are proposed to be sold to J. P. Morgan & Co. at 94.89.

NEW ORLEANS & NORTHEASTERN.—*Annual Report.*—The annual report issued last week shows the following income account for the year ended December 31, 1921:

	1921	†1920
Operating revenues	$6,329,586	
Operating expenses	5,854,466	
Net revenues from operations	$475,120	
Taxes	573,862	
Operating income	‡259,591	$624,993
Non-operating income	661,484	702,607
Gross income	$401,893	$1,327,600
Interest on funded debt	392,325	392,325
Total deductions	508,771	496,675
Balance of income	‡$106,878	$830,925
Dividends of 6 per cent on common stock		360,000
Additions and betterments charged to income		821
Balance carried to profit and loss	‡$106,878	$470,104

* Dividends of $360,000 charged to Profit and Loss.
† Operating revenues and expenses are not comparable, the property having been operated by the U. S. R. A. during January and February, 1920.
‡ Deficit.

SOUTHERN RAILWAY.—*Equipment Trusts Offered.*—Hambleton & Co. and E. Lowber Stokes & Co. are offering $2,974,400 Southern Railway Company stamped equipment trust 6 per cent gold notes, maturing $228,800 each January 15, from 1923 to 1935 inclusive, at prices to yield from 4.50 per cent to 5.75 per cent, according to maturities.

ST. LOUIS-SAN FRANCISCO.—*Equipment Trusts Sold.*—A syndicate composed of Speyer & Co., J. & W. Seligman & Co., the Guaranty Trust Company and Lee, Higginson & Co., have sold, subject to the approval of the Interstate Commerce Commission, $6,000,000 of 5 per cent equipment trust certificates maturing in equal annual instalments from September 1, 1923, to September 1, 1937, inclusive, and secured on standard equipment costing about $8,000,000. The bonds were sold at prices to yield from 5 to 5.30 per cent.

TERMINAL RAILROAD ASSOCIATION OF ST. LOUIS.—*To Increase Capital.*—The stockholders will vote October 9 on increasing the capital stock from $50,000,000 to $100,000,000, on increasing the bonded indebtedness from $50,000,000 to $100,000,000 and on amendments to the charter or articles of association.

President Henry Miller when asked if the capitalization increase would be the forerunner of a program of expansion and improvement, declared that the reason behind the move was to take care of future financing for provisions necessary to keep pace with growing business. Mr. Miller said that no announcement will be made regarding any future plans until the increase has been authorized.

Treasury Payments to Railroads

Since last announcement, dated August 1, 1922, payments under Sections 204, 209, 210 and 212 of the Transportation Act, 1920, as amended, have been made by the Treasury as follows:

Section 204:	
Chesapeake Western	$11,040
Colorado Springs & Cripple Creek District, Receiver	284,121
Emmitsburg Railroad	2,998
Manchester & Oneida	6,327
Okmulgee Northern	15,684
Owasco River	21,740
Spokane & British Columbia	14,290
Section 209:	
Aransas Harbor Terminal Railway	18,094
Chicago, Peoria & St. Louis, Receivers	78,373
Denison & Pacific Suburban	341
Emmitsburg Railroad	2,498
Galveston Wharf Company	31,743
Liberty-White Railroad Company, Receiver	8,104
Manchester & Oneida	5,487
Montana Western	4,019
Sandy River & Rangeley Lakes	26,534
Sioux City Terminal Railway	21,623
Wabash	618,288
Section 210:	
Cisco & Northeastern	27,862
Section 212:	
Salina Northern, Receiver	8,000
Total	$1,207,366

Total payments to August 31, 1922:

(a) Under Section 204, as amended by Section 212 for reimbursement of deficits during Federal control:		
(1) Final payments, including partial payments previously made	$3,166,676	
(2) Partial payments to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	1,178,102	
Total payments account reimbursement of deficits		$4,344,778
(b) Under Section 209, as amended by Section 212 for guaranty in respect to railway operating income for first six months after Federal Control:		
(1) Final payments, including advances and partial payments previously made	$99,261,777	
(2) Advances to carriers as to which a certificate for final payments has not been received by the Treasury from the Interstate Commerce Commissinn	216,775,672	
(3) Partial payments to carriers as to which a certificate for final payment has not been received, as stated above	130,367,722	
Total payments account of said guaranty		446,405,171
(c) Under Section 210 for loans from the revolving fund of $300,000,000 therein provided		314,721,805
Total		$765,471,754

Repayments of loans have been made to the amount of $81,396,500.

Dividends Declared

Atchison, Topeka & Santa Fe—Common, $1.50, quarterly, payable December 1 to holders of record October 27.

Lackawanna Railroad of New Jersey—1 per cent, quarterly, payable October 1.

Lehigh Valley—Common, 1¾ per cent, quarterly; preferred, 2½ per cent, quarterly; both payable October 3 to holders of record September 16.

New York, Chicago & St. Louis—Common, 1¼ per cent, quarterly, payable September 30 to holders of record September 19; common, 1¼ per cent, quarterly, payable December 30 to holders of record December 19.

Pittsburgh, Bessemer & Lake Erie—Common, 1½ per cent, semi-annually, payable October 1.

St. Louis, Rocky Mountain & Pacific—Common, 1 per cent, quarterly; preferred, 1¼ per cent, quarterly; both payable September 30 to holders of record September 16.

Southern Railway (Mobile & Ohio Certificates)—$2.00, semi-annually, payable October 1 to holders of record September 15.

Western Pacific—Preferred, $1.50, quarterly, payable October 20 to holders of record October 10.

Trend of Railway Stock and Bond Prices

	Sept. 12	Last Week	Last Year
Average price of 20 representative railway stocks	74.16	73.07	58.36
Average price of 20 representative railway bonds	90.37	89.66	76.44

Railway Officers

Executive

C. M. Conway has been elected president and general manager of the newly formed Graysonia, Nashville & Ashdown, (successor to a part of the Memphis, Dallas & Gulf) with headquarters at Texarkana, Ark. The vice-presidents elected are: **Martin Walsh**, vice-president and traffic manager; **Louis Heilbron**, vice-president and land commissioner, and **J. K. Riffel**.

Financial, Legal and Accounting

G. C. Shindel has been appointed paymaster of the Chicago, Burlington & Quincy, with headquarters at Omaha, Neb.

George F. Ancrum has been appointed assistant treasurer of the Grand Trunk with headquarters at Montreal, effective September 1.

H. R. Martin has been appointed general attorney of the Grand Trunk, Western Lines; **Harrison Geer**, consulting attorney; **W. A. Geer**, attorney; and **Leo J. Carrigan**, attorney—all with headquarters at Detroit, Mich.

Henry H. Larimore, assistant general attorney of the Missouri Pacific, with headquarters at St. Louis, Mo., whose promotion to general attorney and interstate commerce counsel was reported in the *Railway Age* of August 26, was born September 14, 1874, at Mexico, Mo. His early education was received at Missouri Military Academy, Mexico, Mo., from which he graduated in 1894. In 1896 he graduated from Washington and Lee University, Lexington, Va., where he studied law. Mr. Larimore entered railway service on February 1, 1909, with the Missouri Pacific in the legal department. On March 1, 1915, he was appointed assistant attorney, with headquarters at St. Louis. On October 1, 1919, he was again promoted to assistant general attorney for Missouri, retaining this position until he was appointed general attorney and interstate commerce counsel on September 1, 1922.

Henry H. Larimore

Operating

N. A. Williams, superintendent of the Wyoming division of the Union Pacific with headquarters at Cheyenne, Wyo., has been appointed general superintendent of the Los Angeles & Salt Lake with headquarters at Los Angeles, Cal. Mr. Williams will be succeeded by **J. E. Mulick**.

W. R. Smith, general superintendent of the Central district of the Great Northern, with headquarters at Great Falls, Mont., has been transferred to the Western district, with headquarters at Spokane, Wash., to succeed **F. S. Elliot** who has been granted a leave of absence. **F. Wear**, division superintendent of the Butte division, with headquarters at Great Falls, Mont., has been promoted to general superintendent of the Central district, with the same headquarters, to succeed Mr. Smith. He will be succeeded by **T. F. Dixon**.

Traffic

W. F. Van Norte has been appointed general agent of the Midland Valley with headquarters at Pawhuska, Okla.

W. A. Wilson, city passenger agent of the Great Northern at Duluth, Minn., has been promoted to district passenger agent, with the same headquarters.

H. R. Todd, general agent of the Colorado & Southern, with headquarters at Birmingham, Ala., has been transferred to Atlanta, Ga., succeeding W. T. Vardaman.

O. B. McClellan has been appointed commercial agent of the Erie, with headquarters at Akron, O., and **W. K. Vandiver** has been appointed commercial agent, with headquarters at Birmingham, Ala., succeeding H. L. Scott. **C. W. Dow** has been appointed commercial agent, with headquarters at Boston, Mass.

Obituary

Robert Quayle, who retired as general superintendent of motive power and machinery of the Chicago & North Western on May 1, 1922, died at his home in Oak Park, Ill., on September 13 at the age of 69.

James Truman Clark, president of the Chicago, St. Paul, Minneapolis & Omaha, with headquarters at St. Paul, Minn., died on September 8, from heart trouble. Mr. Clark is one of the long list of railroad presidents who have risen from the traffic department. From the time that he entered railway service as a messenger boy 52 years ago, Mr. Clark's life is typical of the success that rewards whole-souled devotion to a single end. He was prominent in the St. Paul union depot project and as the representative of the North Western interests in the negotiations preceding the acceptance of the first station site, later rejected by the government, he did much to harmonize the many conflicting interests of the roads involved and to bring about a general agreement for a single plan. Mr. Clark was born on November 20, 1852, at Auburn, N. Y. He entered railway service in 1870 as a messenger boy in the general agent's office of the Illinois Central at St. Louis and up to July, 1873, held various clerical positions. From July, 1873, to April, 1880, he was employed in the general passenger department, general superintendent's office and general manager's office of the Chicago & North Western. From April, 1880, to January 15, 1883, he was general agent at Omaha and Council Bluffs. On the latter date he was appointed assistant traffic manager of the Chicago, St. Paul, Minneapolis & Omaha. He was appointed assistant general freight agent of that road in November of the same year, which position he held until December, 1884. For the next 12 years he held the position of general freight agent, being promoted to general traffic manager on October 1, 1896. On June 5, 1899, he was promoted to vice-president in charge of traffic. On March 9, 1903, his jurisdiction was extended over the operating and construction departments. He was elected president on May 23, 1916, which position he held up to the time of his death.

J. T. Clark

The Union Pacific has announced reductions in transcontinental freight rates on shoes, confectionery, machinery, cereals, dry goods, hardware, fish, cotton, tin, portable houses, shovels, canned goods, stoves, chinaware, plumber's goods and clothing.

EDITORIAL

Railway Age

The Table of Contents Will Be Found on Page 5 of the Advertising Section

Increasing Car Mileage

With the prospect that a car shortage will develop within the next few weeks, the railroads will naturally give special attention to getting the maximum mileage from their freight cars. It is interesting, in this connection, to analyze freight car movement and find where the equipment spends the most time. The operating statistics for the first six months of 1922 show that on the average, each freight car made a round trip in 17 days, exclusive of the time spent on the repair track. During the round trip, the car was in motion about 26 hours under load and about 14 hours empty. The average time for loading and unloading each car was probably very close to the free time allowed—two days in each case. This leaves about 11½ days per trip as the time which the car spent in yards awaiting movement. The railroads must cut down this idle time in yards.

Another Road Adopts Water Treatment

As a general rule, railroads proceed with deliberation in authorizing new projects of one kind or another involving large expenditures; this emphasizes the importance of any project which is once accepted, and makes it of special interest to those roads which perhaps had considered doing the same thing but have desired first to determine the results obtained by others. The recent action of the Chicago, Milwaukee & St. Paul in equipping an entire region of 400 miles of lines with water-treating facilities is therefore noteworthy. As described elsewhere, 14 treating plants in all were installed in the belief that the treatment of water in the locality selected would effect benefits in the way of lessening boiler repairs, reducing fuel bills and improving the transportation service generally that would far overbalance the expenditure for it. That the company was justified in this belief appears already to have been brought out by the results obtained in the short period which has elapsed since the installation of the last treating plant.

Increasing Ton-Miles Per Locomotive

Most of the railroads at present are facing a prospective shortage of motive power. Under this condition, they should naturally do everything possible to get the most ton-miles per month from each locomotive, not only by expediting repairs, but also by careful attention to operating methods. Just how this can be done on each division is a matter for the individual road to work out. In general, better results will be obtained in slow freight service by decreasing the tonnage and increasing train speed. In the first six months of 1922, freight trains made an average of 11.8 miles an hour, which shows the speed of drag freight is still very low. Actual operating results on divisions with fairly heavy grades have shown that when the average speed is 15 miles an hour, the locomotives and the crews can make far more ton-mileage per month than when the trains are loaded to the limit with the speed reduced to about 8 miles an hour. The cost of handling the traffic may be slightly greater at the higher speed, but during the next few months the real problem will be to haul all the traffic that is offered. If the roads can move more freight and increase the gross revenues by running trains faster, the higher transportation cost will be unimportant.

Discarding Written Train Orders

The use of written orders to direct train operation on single or multiple track lines can be largely, if not entirely, eliminated by making slight changes in existing automatic block signal installations or by the installation of a proper signal system where none is now in service. The Erie has demonstrated what can be accomplished in this respect on double track and the same method, with such few changes as are necessary, can be applied as successfully to single-track operation. Such a system does not take the control of the trains out of the hands of the dispatcher, but it eliminates the written order and the inherent defects which go with it. Safety of train operation is increased, as trains are handled by signal indication with all the safeguards which such a method provides. An article elsewhere in this issue on conveying train orders by signal indication is worthy of careful study and consideration.

Who Left the Door Open?

Labor leaders have had a good deal to say during the past year or two about the campaign of Wall Street and business interests generally to destroy the unions and to bring about the "open shop." As a matter of fact many employers have been far less concerned about destroying the unions than they have about keeping the unions from destroying them, and a good part of the "open shop movement" has been nothing more than an effort to cure some of the unions of their habit of bluffing and occasionally calling strikes on the slightest provocation. However, the outcome of the railroad shopmen's strike, which, by reason of individual settlements on the roads that still have room for many of their former employees, is now rapidly becoming a thing of the past, begins to make it appear that Mr. Jewell and some of his associates have become our leading open shop promoters. The shops of most of our leading railroads have become open shops because the union men who wanted to keep them closed have walked out and allowed others to take their places.

Bring Your Specifications Up to Date

The Service Bureau of the American Wood Preservers' Association calls attention to a common fault of engineers in specifying timbers to be given preservative treatment, which is a heritage from the days when timber preservation was unknown. Owing to the fact that the sap wood of most species of timber when used in the natural state is much more susceptible to decay than the heartwood, it has long been the practice to specify that structural timber shall be "all heart," "85 per cent heart," etc. However, in adopting the use of treated timber many engineers still retain the restrictions on the use of sap wood. Owing to the fact that material

which contains considerable sap wood, particularly in the case of Southern pine, can be obtained at less cost than that which is almost entirely of heartwood, the restriction on sap wood in specifications for lumber results in an unnecessary waste of timber and in an increased cost to the user. After a piece of timber has been subjected to preservative treatment, the sap wood is as immune to decay as the heartwood; moreover, investigations by the United States Forest Products Laboratory involving over 300,000 tests show that the sap wood is equally as strong as the heartwood. There is, however, still another reason why the restriction on the amount of sap wood should be removed. The sap wood takes the preservative much more readily than the heartwood and, therefore, a much more thorough treatment is insured in a stick that contains appreciable proportions of the former.

Large Locomotive Purchases

In last weeks issue of the *Railway Age* there were reported orders for 160 locomotives, this being the largest number reported for any one week so far this year with a single exception. That exception was the preceding week in which orders for 226 locomotives were reported. The orders reported in last week's issue included 100 locomotives for the New York Central, 10 for the Western Maryland and 50 for the St. Louis-San Francisco. Since last week's report, orders have been reported for 50 locomotives for the Baltimore & Ohio and 50 for the C. & O., and these will be found in the report for the present week. This, however, does not tell the whole of the story. In last week's issue there were also reported inquiries for a total of over 300 locomotives, orders for a good proportion of which may presumably be expected in the near future. This shows that the railway supply field now has a buying movement for locomotives such as it has not been fortunate enough to have had in a long, long time. The existence at last of some railway net income, the real need for power and the accentuated realization of this need resulting from the shopmen's strike, presumably lead as the reasons for the present heavy purchases. Whatever the reasons, we can at any rate feel optimistic and happy—so long, at least, as the critics hold off from declaring that it would have been better if the orders for locomotives had been placed earlier, before the rush instead of during the rush, and with deliveries before or during the heavy coal movement instead of after it.

A Lost Opportunity

Some lost opportunities may return, but it will probably be a long time before railroads can again purchase machine tools at the low prices prevailing in the early months of this year. Manufacturers were then willing to make price concessions which can by no means be obtained now. Roads purchasing machines in March, therefore, are doubly fortunate because they bought at the bottom of the market and secured machines of great subsequent assistance and value during the strike. Since March there has been a distinct upward trend in machine tools prices due to the increasing cost of raw materials, such as pig iron and brass, coupled with increasing labor costs. At some points it is now difficult to get at any price the skilled labor required in the manufacture of machine tools. To accentuate the rising price tendency, there are clear indications that both the railroads and industrial manufacturers will soon be in the market for machines an adequate number of which are not now available. Stocks of new machines built at the high cost prevailing during the war have been largely liquidated and second-hand machine tools of the better quality have also, to a great extent, been absorbed. In consideration of these facts, it is safe to predict an increase in machine tool prices, especially when the railroads and other industries begin to compete with each other in securing early deliveries. Certain railroads refused to place machine tool orders early in the year because they thought that prices were going still lower, whereas the opposite has been true. The sooner these orders are now placed, the more machines can be purchased with fixed appropriations.

Railroad Power Plant Economies

The average railroad power plant, as a general rule, receives comparatively slight attention from railroad mechanical officers. If it functions to the extent of furnishing the required amount of steam, power, lights, heat, compressed air and water it is liable to be forgotten and is rarely visited. An investigation is made in connection with a new development to determine the power that will be required and consideration is given to the selection of boilers, engines, generators, air compressors and some of the other accessories. The judgment used in the selection will affect both the capital investment and later the operating costs. Other factors, such as the provisions for handling coal and ashes, are not always carefully planned. Even in quite moderate sized plants, an installation of machinery for handling coal and ashes mechanically will usually materially reduce the operating labor costs and such apparatus should always be considered. An initial selection of the equipment and a good layout of the building is not sufficient, however, as conditions and practices which tend to reduce the efficiency of the plant easily creep in and frequently pass unnoticed for a long time. The only way in which results can be checked is by the keeping of suitable power plant records. These records, however, are of but little value unless they are placed in such shape that they can be and then are periodically analyzed. The prevention or reduction of wastes is and always will be a continuous fight.

Keep the Cars Out of Yards

At a time such as this, when the roads have a traffic which is taxing their facilities to the limit and when car shortages and embargoes are appearing, every effort should be made to keep all available cars moving and thereby rendering the maximum service. When confronted with a similar situation in 1920 the roads increased the average movement per car per day from 23.1 miles in 1919 to 28.5 miles in October, 1920. This was equivalent to the addition of three-quarters of a million cars without any capital expenditure and without the added congestion which this large amount of equipment would have created. This increased speed may have been due in some slight measure to the faster movement of trains between terminals, although this is to be doubted. It was due in large part, if not entirely, to the reduction in delays in the terminals. The responsibility may perhaps be largely on shippers for delays in loading and unloading cars, but elsewhere in terminals the delays rest with the roads themselves, for the cars are exclusively under their control. In going through some yards one gains the impression that they are used for the storage rather than the classifying and forwarding of cars. Cases are not infrequent where the replacement of an obsolete, out-grown yard with one of ample proportions and modern design has been followed by a greater detention of cars simply because there was room for them, whereas the very inadequacy of the old facilities required the prompt forwarding of the traffic to get it out of the way of incoming

trains. The terminal is a necessary railway facility, but it should aid in the *movement* of traffic. By making up trains at the original terminal so that it will not be necessary to break them up in intermediate yards, time which would otherwise be required for this additional switching is saved and the movement of the cars is expedited by this amount. No single measure will contribute more to the more rapid movement of cars to destination than their classification for forwarding in trains in a manner which will reduce the amount of switching en route to the minimum. The "main tracker" plan has much to commend it from the standpoint of increasing car movement, particularly at a time such as this, when this objective is so much to be desired.

Improving Train Service Morale

An observer whose business it is to know as much as possible about the produce markets in New York has told us that morale in the train service is low. He makes this deduction from an increase in the number of breakages of eggs in transit which he has noticed lately and which he says always accompanies conditions which would tend to make train and yard men less interested in their work. Whether increased egg breakages can be taken to indicate low morale or not, however, it can readily be admitted that conditions are not so favorable that there is no room for improvement. Furthermore, any improvement which train service men may show in the interest they have in their jobs will have a decidedly favorable effect on the performance of the railroads in handling the heavy traffic of the next few months. It is gratifying, therefore, to notice that certain things are happening which should go far toward offsetting conditions provocative of discontent. One of these is the progress which is being made in the signing of contracts between railroads and the transportation brotherhoods extending present wages and working conditions for another year. The New York Central has gone a step farther and announced its intention to work out a plan under which premiums will be paid to train crews for expediting the movement of their trains. No railroad which is in a position to negotiate a wage contract with its train service employees at this time should delay action any longer than necessary. This, and any other similar step which can be taken now, will work to assist the railroads in handling the heavy traffic of the next few months.

The Engineman of the Lightning Express

Until automatic train control apparatus, now in the minds of everybody as a needed addition to the safety devices in use on our high-speed railroads, can be installed, the duty of maintaining present safeguards continues as pressing as ever. This point, noticed in these columns on September 9, comes again to mind in connection with Chief W. P. Borland's report on the derailment at Winslow Junction, N. J., on July 2, which is noticed in this issue. This report discloses that Engineman Westcott very likely was asleep or dozing; as he omitted two or three whistle signals which customarily would be sounded in the circumstances under which he approached Winslow Junction, and did not apply brakes even when he entered the curve. With such a state of facts, an inquiry is needed as to how this engineman had spent the 13 hours that he was off duty just before starting on this run. The government report gives no light on this point. Without a stronger organization, the Bureau of Safety, very likely is unable to go very thoroughly into such a far-reaching investigation; but the need of it is plain. It will be recalled that this need was brought out on the occasions of the Ivanhoe and South Byron collisions. At Ivanhoe (June, 1918) the engineman, 55 years old, had been without rest for 23 hours. At South Byron (January, 1919) the engineman appears to have been older than 55, and he had been without rest for 18 hours. Wescott, as well as Towerman DeWalt, had a clear record; but clear records do not clear up all doubts. For enginemen of midnight trains running at high speeds, the only satisfactory standard, now as in the past, is that they shall keep their bodies and brains fit, and their habits correct, throughout the 24 hours of every day. And the same is true of the fireman, if we are going to depend on him to corroborate the engineman's reading of signals at the entrance of every block. Instructing, regulating and checking the fireman is a duty often done very poorly, yet he is depended on, ostensibly, for important functions as a lookout man. And the reports of the recent collisions at Leeds, Alsuma and Lester (*Railway Age*, September 9) remind us that the fireman's monitorship is of extreme importance.

Earnings in July

Railroad earnings in July with a net railway operating income of $69,239,000, equal to a return on an annual basis of 4.04 per cent on property investment, fell short by a considerable margin—to be exact, $29,332,800—of the 5¾ per cent return fixed by the Interstate Commerce Commission. Considering, however, the rate reduction effective July 1, the absence of the better part of the coal traffic, and expenses incident to the shopmen's strike, the net for the month is rather better than was to have been expected. Looking ahead a week or two, it is safe to predict that the August earnings will not prove comparatively as favorable as were those for July. The expenses resulting from the strike, combined with the larger mechanical department payrolls due to an increasing proportion of normal shop forces at work, will unquestionably be reflected in the revenues and expenses figures. On the other hand, it will be very much a matter for surprise if the September earnings do not compensate for whatever poor results may be reported in August. The reason is, of course, the coal movement. Many of the coal carrying lines have increased their coal loadings from practically zero for the weeks during coal strike to figures for the weeks since the end of the strike much in excess for those reported for the corresponding weeks of last year. These carriers will show a sudden change in their figure of net income as will also, in only less degree, the carriers which receive coal from them at connections. This makes it extremely worth while to watch the results reported by the coal carriers in particular and it is to be expected that the September earnings reports will be awaited with considerably more interest than has been the case for those of any other month for some period. In view of this situation, on the other hand, the August results—while not being without a large amount of value from other points of view—will nevertheless tell a story that is already out of date a week or more before they begin to be published.

An Advance in the Price of Rails

For over 20 years the marketing of steel rails in the United States has been governed by selling prices that have been established by fiat rather than the untrammeled operation of the law of supply and demand. For this reason, when any change is made in the established base price, such as the $3 advance which goes into effect on October 1, the question arises as to the factors which govern such modifications. For the first eight years after the fixing of $30 as the base price for open-hearth rails, the current

quotations of steel beams and plates averaged about 18 per cent higher than those for rails. During the next seven years, when plates and shapes were on a generally lower level, no adjustment was made in the price of rails, but during the period of fixed prices in 1918, 1919 and 1920, recognition was given to a differential between the prices for rails and those for shapes and plates in establishing prices for the latter that were definitely higher than those for rails. With the depression which followed the boom of 1920, quotations for structural materials fell from approximately $70 a ton to about $30 a ton early in the present year. In the meantime, two cuts in the base price for rails, reduced the latter from $57 to $40. The fact that rails have been quoted at considerably more than the structural material during the last 12 months has been taken as indicating the effect of price stabilization; that $40 represented a base price which would not fluctuate while the quotations on other materials ranged above and below this. It now appears, that this assumption was not correct, for no sooner has the current price of structural material advanced so as to equal that for rails than the price for the latter is also advanced. This increase, however, will be purely nominal as regards those railroads which place orders within the next week for their requirements for the early part of 1923.

Partial Settlement of the Shop Employees' Strike

To those who really know what is the railway situation as affected by the shop employees' strike there can be no doubt regarding the significance of the strike settlement which has been made by the labor leaders and by railways having between one-fourth and one-fifth of the mileage of the country. Whatever they may say, it is a confession by the labor leaders that the strike has been lost by the unions on most of the railways and that in the absence of some kind of settlement it would be lost in time on all the others. It is at the same time an admission by the railways signing the agreement that their situation is such that they can better afford to settle now and take all their striking employees back than refuse to make any settlement and fight the strike out to a finish.

The question of who has lost a strike can always easily be determined when it is ended by the concessions made by the combatants. What have the labor unions conceded in the settlement made in Chicago? First, they have agreed to put the strikers back at work under the very working conditions and wages fixed by the Railroad Labor Board against which they struck. Secondly, they have retreated from their position that they would not make any settlement with any railway or group of railways unless it was made nationally with all the railways. Third, they have given up the position that the strikers must be taken back with their seniority rights unimpaired. The men return to work with their relations to employees who stayed at work and to new employees left to future determination by a commission on which the railways and the labor unions signing the agreement will have equal representation.

The railways signing the agreement do not make a single concession which any individual railway in the country, excepting possibly the Pennsylvania, would not have been willing to have made at any time within several weeks after the strike began. The only concessions they make which any considerable number of railways have been unwilling to make at any time are, first, that they will take all the strikers back and give them the same kind of work at the same places as before the strike, and, secondly, that they will leave the question of seniority to future negotiations instead of explicitly requiring the strikers to return as new employees.

The leaders of the striking labor unions will ask all the other railways individually to sign the same agreement. If some, including a number of the largest systems of the country, consider it fair and expedient to sign it, why should not all? Because owing to differences in local conditions, in the past labor policies of different railway managements and in the way individual railways have been treated by their employees before and since the strike began, the situation on some railways is widely different from what it is on others. Some railways have virtually full forces of competent men and therefore have good reason for not settling with the strikers and no reason for doing so. Other railways which are not in an equally strong position have had chronic trouble in their shops for years because among the employees who struck there were radicals and agitators who took advantage of every opportunity to embroil the men with the managements and to render efficient operation of the shops difficult or impossible. The seniority rules have heretofore prevented these railways from getting rid of these men, but the strike has afforded an opportunity to do so which they do not intend to lose.

We have heard much criticism from business men who stand for the open shop and from some railway officers against the railway executives who negotiated and signed the terms of settlement adopted at Chicago. Such criticism is not inconsistent when made by men who are in favor of the pursuit by employers of an absolute anti-labor union policy. But the railway executives of the country through their various organizations repeatedly have repudiated the charge that they were trying to break up the labor unions and said that all they were opposing were the policies of the unions which tended to foster inefficiency and to interrupt transportation. Those railways which have actually won the strike, and those which are in a fair way to win it and which are confident that they can render the public as good or even better service now and in future by never settling with the strikers as by settling with them, are amply justified in refusing to settle with them. The strikers took their chances on the outcome of the strike and those who have lost by it cannot reasonably blame anybody for it but their leaders and themselves. On the other hand, railways whose situation is such that their managements believe that they can now and in future render the country as good or better service by settling with the strikers as by refusing to do so are amply justified in settling, provided of course, they faithfully live up to all the obligations they owe to men who have stayed at work or have gone to work during the strike. The terms of agreement adopted at Chicago recognize the obligation of the railways fully to protect employees who stayed at work and new employees who have entered the service since the strike began.

There certainly is room for difference of opinion as to which is the more expedient from the railway standpoint of two widely differing labor policies which always have had advocates among railway officers and which have been advocated with unprecedented energy since the shop employees' strike began. On the railways, as elsewhere, men who deal with labor may be roughly divided into two classes—those who are naturally antagonistic to labor unions and everything they stand for, who would prefer to have nothing to do with them and are willing to fight out every difference with them to a finish, and those on the other hand, who naturally favor labor organizations, who are always willing to negotiate with them and who would rather effect fairly satisfactorily settlements with them at any stage of a controversy than engage in finish fights with them. Practically all the railway executives who have made the recent settlement belong to the latter class. Among the railway executives who have refused to participate in the recent settlement are not only those who are naturally hostile to labor organizations and their methods, but also many who on principle are friendly to the labor organizations but who for reasons

growing out of the strike do not feel they can afford to deal any longer with the shop crafts unions.

It will be well worth while to study the comparative results obtained on the railways which settle and on those that refuse to settle. Certainly past experience is that railways which have fought great strikes to a finish won them and refused to make any settlements, have subsequently got better results from the work of their employees and been more favorably treated by them than railways which have shown a tendency to try to placate the labor unions. The railways which have most completely won the shopmen's strike are almost all of them railways such as the Pennsylvania, Illinois Central, Burlington, Union Pacific and Southern Pacific, which at one time or another have fought truculent labor unions to a finish and completely whipped them.

The principal argument that the railways have made in favor of negotiations and settlements of labor controversies between individual railways and their own men rather than on a national scale is that this would make it possible to adopt different policies and by carrying them out determine which were best for all concerned. That some railways have signed the Chicago agreement and that many will not sign it will have the beneficial effect of making it possible for different railways and their employees to adopt different methods of co-operating with each other and to test what methods actually secure the best results.

"Our Road"

A RAILWAY EXECUTIVE has made this request: "You have had considerable to say in your editorial comments* recently about the necessity for improving the relations between the employees and the managements of the railways. You have referred to the so-called personnel work in other industries. Won't you be a bit more specific and tell us definitely just what you think the railways should do to eliminate internal friction and misunderstandings and bring about as nearly as possible ideal conditions?"

The answer is not an easy one! Nor is it as simple as some would have us believe. In the first place, not one, but a great many things, must be done to bring about the desired result. These, however, will be useless if they are not done in the right spirit and actuated by the best motives. One reason why labor is so suspicious of capital and management is that some managements in the past, either through ignorance or design, have taken advantage of the employees under the guise of welfare work. Then, too, the term "welfare work" has become objectionable to employees and progressive managements alike because of the stigma attached to it in its earlier stages, due to the paternalistic spirit in which it was too frequently promoted. This was, and is, particularly objectionable to American workingmen.

Possibly it will be easier to get the proper perspective if we attempt to visualize the objective of welfare or personnel work in a concrete way—"improving the relations with the employees" is a rather general and hazy statement. Is not the goal for which we should strive, the cultivation of such a spirit of respect and cordiality on the part of the employees that they will speak of the railroad as "our road"? What would not the accomplishment of this ideal mean to the peace of mind and development of the individual employees? What would it not mean in a greater interest in their work, in greater efficiency and production, in giving better and more efficient service to the public, in making a larger contribution to the prosperity of the communities served, and in stabilizing the prosperity of the nation as a whole?

We have seen recently, on a large scale, one effect of the lack of this spirit. Can such conditions be allowed to continue? How far railway employees, in many cases, are from this ideal may be learned from listening to them talk matters over among themselves, or by studying the expressions of their brotherhood or union leaders, or through reading their union magazines.

One reason for the great gulf between employers and employees in these days is the tremendous size to which many companies have grown. It is not difficult for the small employer to keep close to his men and to arrive at satisfactory terms with them as to wages and working conditions. The larger a concern grows, however, the more difficult it is to preserve a sufficiently close contact to avoid serious misunderstandings. The tendency in the railroad field since the beginning of the period of federal control has been to intensify this difficulty by taking matters relating to wages and working rules out of the hands of the individual roads and putting them on a national basis. Obviously, and particularly when we take into consideration the widely varying conditions throughout the country, it is important that the individual roads should deal direct with their employees in all matters of this sort, if the right sort of contacts are to be made and preserved. How have other large industries handled this and other questions relating to the personnel? Possibly the railroad officer's question may be best answered by referring to what some of these industries have done.

So far as wages, hours of work and working conditions are concerned, some of the larger industries have placed the responsibility for this entire matter in the hands of a special officer or department reporting direct to the chief executive and having the full support of that executive and the board of directors. Such departments have been variously named, but fundamentally their duty is to study conditions and develop a constructive policy looking to the payment to the men of the best wages reasonably possible. The aim is to establish a length of working day which will not be detrimental to the health of the worker, and will give him a reasonable amount of leisure and yet maintain a low cost of production. Such a department, to function properly, must develop means whereby misunderstandings or grievances on the part of the employees will be brought to the attention of those in authority without delay and will be handled quickly. In many cases the best way of heading off the development of misunderstandings and grievances has been found to be through devising ways and means of keeping the employees informed as to problems confronting the industry and by removing "the mystery" from the business and taking the workers into confidence as to the actual facts. It is difficult enough to accomplish these things in a single plant. The problem of doing it on the railroads, with many departments and with the employees scattered over a vast territory, is far more difficult, but it is not impossible of accomplishment, and, as we have indicated in previous editorial comments, *it must be done*.

Closely allied with this problem of relieving friction by arranging for a channel whereby the management may keep intimately in touch with the needs and feelings of the workmen and promptly adjust difficulties, is the necessity for giving greater attention to the selection and training of men for supervisory positions. It has been found that many of the real grievances, and the most unnecessary ones, were caused by foremen or subordinate officers who were selected because of their skill as workmen, rather than for their ability to understand and control men. Almost invariably, therefore, after inaugurating a department such as suggested above, it has been found necessary to give the foremen special coaching or training in the art of handling men. In not a few instances some of the foremen have had to be replaced because of their inability to fit themselves for this larger task. Provision for promptly locating and following up the grievances, automatically discovers the men who are weak in this respect. The cause, rather than the effect,

* See "The Next Step," August 19, p. 319; "Looking Ahead," August 26, p. 363; "One Way to Raise Wages," September 2, p. 407; "What Causes Inefficiency on the Railroads," September 9, p. 455; "Developing Machinery and Neglecting Men," September 16, p. 495.

should be treated, however, by taking immediate steps to provide special instructions and training for all of the foremen.

The problem of stability of employment has been tackled in a number of different ways by different industries. Much has been accomplished by careful study and planning of the work and the transfer of forces from one department to another as the demands fluctuate, due to seasonal or other causes. Special funds have been created in some cases to be used as unemployment insurance. Closely allied to the fear of losing his job, is the workman's fear of disability and helplessness in old age. This is being met by providing pension funds, relief funds and sick benefits. It is interesting to note that in many cases the men contribute a certain percentage to the pension fund, and if they leave the service are entitled to a cash consideration equaling the amount of money they have paid in. Group insurance is now being installed in many industries and on several railroads.

Special efforts have been made in some industries looking toward health conservation. The loss through inefficiency, due to poor health, which can be corrected in most cases, is very considerable in some industries and this has resulted in the development of medical and dental departments which have been a great boon to the employees, and have paid for themselves in the increased efficiency of the employees, and in the reduction of absences from work, which interfere seriously with the work schedules and hamper production. Industries which have conducted safety first campaigns as actively as have some of the railroads, have also given an equal amount of attention to this matter of health conservation, with splendid results.

The question of working conditions has been overlooked to a large extent on the railroads and in many industries. Poor light and ventilation and unsatisfactory environment put the brakes on efficiency. The question of properly equipped lavatories and locker rooms and other conveniences which make for efficiency is also important.

Some companies have assisted the employees by encouraging them to save and by advising them in making sound investments. In not a few instances employees have been encouraged to buy the stock or bonds of the companies by which they are employed. The employees have in many cases greatly appreciated company aid in financing the purchase of property and the building of homes. Some industries have been most helpful to their employees in promoting certain kinds of co-operative buying.

The mechanical departments of American railroads have given more or less attention to the education of shop apprentices. Unfortunately, however, only a few of the roads have adopted the best practices and the most modern methods. The whole question of providing adequate training for those entering other classes of work in all departments and of training the men for promotion has been largely neglected. Other industries have done much more in this respect, even to the extent of arranging for the education and training of men already employed and who may even have been rated as skilled workers. Certain conditions which may have been inherited from federal control and which need not be reviewed here, make it imperative that the railroads should give this whole question of education and training of employees more intelligent attention.

The promotion of schemes for recreation has met with a good reaction in many places. This includes athletic programs, social clubs, reading and literary clubs, etc.

Most industries have given far more attention to the employment problem than have the railroads, which are among the largest employers. Properly organized employment departments not only examine the men carefully as to their experience and skill, but have them passed upon by the medical department. If accepted, special pains are taken to see that they are introduced to their new work in such a way as to make a good impression at the very start. Their work is carefully followed up, in many instances to such an extent as to insure that men who are unfitted for the class of service to which they have been assigned may be transferred until they find their proper place in the organization.

No reference has been made to profit sharing plans because these are largely in an experimental stage and there is also a question as to whether they are applicable to a public utility. There are, however, better ways of paying men in proportion to their skill and output than are now used by the railroads. Seniority, of course, makes it more difficult to recognize individual initiative. Piecework, banished from the railroads for a while, when properly installed and maintained, has many advantages for both the men and the managements on some classes of work. It will be interesting to follow the result of the graduated wage scales now being introduced in the mechanical department by some roads. Bonuses for practical ideas and suggestions have been found to be productive of good results in many industries.

The above touch in a rough way upon some of the noteworthy things that have been done by the industries to improve the relations with the employees. The inference is not that the railroads have not done any of these things or that some of them may not have done many of them. It is a fact, nevertheless, that the railroads have not been nearly as active in these respects as they should have been.

One thing is vital in solving the human relations problem in a big way, and that is, that a policy must be adopted which is not subject to the whims or peculiarities of any one individual officer and that the employees understand this. A permanent policy must be adopted and supported by the board of directors. And why not? Is there any greater problem confronting American railroads today?

The Shopmen's Strike— A Series of Blunders

EXPERIENCE IS the best teacher. Some people welcome its lessons when it shows they have been right but reject its lessons when it shows they have been wrong. Progress is due to those who are willing to learn from experience, as well as other teachers, even when the teachers show they have been wrong.

The shopmen's strike, which has now been settled on some railways, has afforded an experience which should teach some most important and valuable lessons to railway managers, railway labor leaders and railway employees. The future experience of the railways which have settled and are taking the strikers back and those which have not settled will afford some additional lessons.

The strike has been terribly costly to the railways, the strikers and the public. The issuance of the original order for it and its continuance so long have been due to a series of big blunders. But all the blunders have not been committed by the labor leaders and the members of the unions. Every party concerned has blundered. Some things which when done seemed obviously wise and beneficial to those who did them now appear in an entirely different light.

One of the worst blunders of the series that has caused and protracted the strike was that made by the railways which adopted the policy of contracting out work which it had been customary to do themselves. They saved money by it for a time, and it seemed to their managers wise and proper. It was done by only a small part of the railways but it has had important consequences for all of them. It exasperated and alarmed labor leaders and employees to an extent that few people realized until recently. The labor leaders and the employees feared that the system of contracting would be extended to all the railways of the country,

with the result of breaking down all the working conditions and wages favorable to labor that had been approved by the Labor Board. There is no doubt now that the policy of contracting out work contributed largely toward causing the strike. In addition it gave the labor leaders a pretext for charging that the railways had violated, or at least evaded, the law and the decisions of the board on a wholesale scale, and for using this charge in defense of the employees' action in striking against the decisions of the Labor Board. It is wholly inconsistent for spokesmen of the railways to denounce employees for striking against decisions of the Labor Board when railways themselves are doing virtually the same thing.

The next blunder was committed by the labor leaders when they issued the strike order. They knew they could get rehearings by the Labor Board in the wage cases at any time. They should have known that public sentiment and the sentiment of many members of their own organizations would be against a strike which was in defiance of decisions of the Labor Board that had been reached after full hearing of all the matters in controversy.

The next blunder was made by the Labor Board in immediately issuing statements that the strikers had sacrificed their seniority rights, and by many railways in issuing notices that unless the strikers returned to work within a very few days their seniority rights would be forfeited. These announcements and ultimatums immediately became a bar to an early settlement of the strike. It was unreasonable to expect that men who had struck would return to work within a few days. Some roads which gave the strikers two weeks, or even more, within which to return to work got back many of their men before the time limit expired. If the seniority issue had not arisen as a result of so many railways prematurely depriving the strikers of opportunity to return to work with their rights unimpaired the strike would have been ended within three weeks.

The next blunder was made by President Harding when, after the strike had been going on for some time, he proposed that it should be terminated by the railways taking the strikers back with their seniority rights unimpaired. This encouraged the strikers to stay out in the hope that a settlement finally would be made which would restore their seniority rights after the railways had committed themselves so far to the men at work that they could not honorably or with any regard for future consequences take the strikers back with their seniority rights.

The result of these and other blunders has been a strike which lasted ten weeks on the railways which have settled, which is still continuing on most of the railways, which has cost employees, railways and the public hundreds of millions of dollars and the effects of which will cost hundreds of millions in future. It has had and will have some good effects. It has broken down the plan of national negotiations and settlements by which the labor unions had imposed uniform working conditions and wages on all the railways, and by which they were determined to maintain them. It has disillusioned many thousands of railway employees who had been led to believe that the railways could not or would not long resist a nation wide strike and that they had more to gain by striking than by accepting the decisions of the Railroad Labor Board. But the net result is to demonstrate what every sane man should have conceded before it occurred—namely, that the railways and their employees have more to gain by dealing with each other fairly and reasonably and by accepting and carrying out decisions of the Railroad Labor Board regarding controversies that they cannot settle themselves than they have to gain by fighting their differences out in strikes.

A strike, like a war, is a game in which usually everybody concerned loses. What the shop employees and the public have lost is fairly obvious. Even railways which have won the strike have suffered losses which they will feel for years. The strike should cause the leaders in the railway field, in the labor field and in public life to join in good faith in an effort to devise and carry out measures which will prevent similar struggles in future. This is what would be done if the wishes and counsel of the moderate men of all interests should prevail. Unfortunately the extremists connected with the various interests are as influential as the moderate men, and labor leaders whose real goal is the destruction of private ownership, railway leaders whose real desire is the destruction of labor unions and politicians whose sole object is the promotion of their own selfish ambitions will exert as much influence on the final outcome as the moderate men.

Would the Public Pay the Bill?

In recent public discussions of the coal mining industry the over-development of bituminous mine capacity has frequently been referred to as one of the most difficult conditions with which the industry is confronted, both as it affects labor conditions within the industry and its relations with the public. It has an equally important bearing on the development of railroad capacity. This is brought out clearly in an article on another page, describing the effect of the coal strike on the coal movement from the eastern Kentucky fields over the Louisville and Nashville. In enlarging its capacity to serve these fields this railroad has spent within the last 20 years an amount equal to approximately 15 per cent of its total investment in physical property. Almost one-quarter of this amount has been spent since the termination of Federal control and it has all been applied to a part of the system aggregating not more than 18 per cent of the total system mileage. But notwithstanding this intensive development the mines served by the railroad in this territory, working full time, can probably produce more than twice as much coal as the railroads can move away from the mines. This situation may be considered fairly typical of the relation between railroad and mine capacity throughout the bituminous coal fields.

The fact that the country's fuel supply has always been moved, indicates that the capacity of the railroads cannot be very far behind the actual requirements of the market. But, with the coal-mining industry organized on a basis of low average production with high peak loads, caused by disturbances such as the recent coal strike, the capacity of the railroads becomes the limiting factor and the roads are subjected to much loose criticism for their inability to supply cars up to the full loading capacity of the mines. The apparent car shortage, however, is not primarily a lack of sufficient cars. It is a lack of main tracks, of passing tracks, of block signals, of yards and of engine terminal facilities, without which additional cars and motive power are useless.

From 25 to 30 per cent of the tonnage moved on the railroads of the United States is bituminous coal and if the railroads are to meet the peak load demands caused by the unstable and erratic operating conditions within the bituminous mining industry, they must provide facilities great enough to move the nation's annual coal supply in a few months of the year. But to provide facilities on such a scale would involve a tremendous investment which would be fully utilized for short periods only. It is obvious that under a policy of public regulation which limits the return on investment in railway property to the lowest point short of confiscation no such increase of railway facilities is possible. But even if it were possible, would the public be willing to pay the price of such a tremendous increase of railroad facilities in the form of increased rates? Unless this question can be answered in the affirmative, adverse criticism of the railroads because of car shortages when the surplus mine capacity of the country is suddenly brought into production is not only unjust, but futile.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

A Well Deserved Tribute

New York.

To the Editor:

The railroad shopmen's national strike of July 1, 1922, will go down in history as unique in three particular respects, i.e., first, the large percentage of shopmen who left their work; second, the relatively small interference caused thereby in the movement of the railroad traffic of the country during the ensuing two months; and third, the loyal support and co-operation of the supervising officers and employees who performed the work of the strikers in order to provide the public, including the strikers, with food, milk, fuel and other necessities.

The railroad mechanical department heads and supervising forces deserve particular commendation and recognition. No jobs have been too difficult or arduous for them to undertake and perform in order to keep locomotives and cars moving. The sterling and seasoned qualities of these men, and the maintenance in safe operating condition of the motive power and equipment under their care, have been put to a most severe test and they have made good. Too much consideration cannot now be given, by the railroad executives, to those of these officers who are deserving of increased remuneration, authority and advancement, for the purpose of retaining in the railroad service true and tried men who otherwise will continue, as during the past ten years, to enter industrial and commercial fields where opportunities for promotion and increased earning capacity have been much more attractive.

John E. Muhlfeld.

Instructing and Pleasing the Public

Cleveland, Ohio.

To the Editor:

People do not realize the bigness of a railroad. It is important to explain the magnitude of our railroad system frequently and in varied ways, so that the facts will penetrate the resisting mind. For example, the New York Central's advertisement telling how it has the power to move a long freight train around the world in one day—who had ever thought of that? A person who goes to Europe on the *Mauretania* gets some idea of what the steamship company has to do to give him such gorgeous comfort and marvelous speed; but the traveler on the New York Central has only a dim idea of how many cars—how many tons of steel—have to be hauled over the road to give him the regularity of facilities and the comfort which are furnished to him so cheaply.

I have just read the Illinois Central's manifesto, in the St. Louis Globe Democrat. The president of that road says: "We are constantly seeking to promote good-will among our patrons. We are attempting to render a dependable, efficient transportation service, by having officers and employees who are at all times courteous and obliging. It is our hope that the Illinois Central System will always stand in the front rank of the railroads of this country in having the good-will of its patrons."

How many readers of that statement can begin to understand the task thus implied? The average reader, if he should hear that President Markham received 50 letters in one day complaining of incivility on the part of station agents, clerks, conductors, brakemen and others would declare the advertisement a fraud—a lie. And yet that number, 50, probably would not equal one in 500 or one in 1,000 of cases wherein an employee *might* forget his manners. The Illinois Central, according to the Official Guide, has about 1,000 stations where passengers can ask foolish questions every day, and many times a day.

Another thing that passengers at ticket offices and patrons of freight stations should remember is that a railroad must seek efficiency first. A store clerk is uniformly polite—"courtesy first"—but he frequently gives you poor service. The railroad man must do his work safely and honestly, even if he should occasionally lose his temper.

President Markham invites constructive criticism. I venture to suggest (assuming that his road is not far above the average of the big roads) that he invite his trainmen and the agents and clerks at the smaller stations to constructively criticise themselves by constructing a few sentences (in good English) every day. One of the most common faults of these people is silence. If a question is the least bit difficult, they evade the issue; they remain dumb. I do not mean vital questions; they will tell you enough so you won't get left, and they don't mean to let you run in front of a moving locomotive; but there are many other things on which such servants of the public ought to do a little thinking now and then. For example, I rode, the other day, in a very old coach; and in a semi-jocular manner I asked the young and rather green conductor where he found that car. Apparently no such irregular question ever confronted him before; and instead of grasping the opportunity to explain the company's expenditures and efforts to provide steel cars, and how a rush had compelled the use of the ancient buggy on this occasion, he only grinned. He was an intelligent fellow, however, and probably within a half hour recovered sufficiently to see that he ought to have said something. Another conductor comes to my mind; one not old nor specially smart looking, who patiently took three minutes to explain to a passenger, as clearly as President Harding could have done it, some of the whys and wherefores of government regulation of railroads. That conductor reads something besides the sporting pages and the local news. And he did not explain every unpleasant feature of the service as being required by "the orders of the Interstate Commerce Commission."

Having "knocked" the store clerks, I want to give them a good word. I advise all railroad men to watch them closely. The competent retail salesman, at the end of his first year, can give the average railroad man a hundred points on pleasing the public, which the said railroad man seems to try in every way to avoid.

No superintendent, I suppose, will send groups of his men to the department stores to take the courses of instruction which I am here suggesting, and so I will propose an easier measure: require every passenger brakeman to write down, and report, each week, what questions are asked of him by passengers. Do not require him to report what answers he has made. This will afford a chance to compare brakemen in a new way. After the first week, the most frequent questions, those which can be answered easily, can be omitted.

Anything to get trainmen to think! Do we stop to reflect how much idle time the brakeman has every day? Idleness tends to promote sloth; yet we call upon these men to be mentally alert.

Oberlin.

Train Orders by Signal Indications

Trains on Single or Double Track Can Be Operated by Signals Without the Use of Written Orders

By A. R. Fugina
Signal Engineer, Louisville & Nashville, Louisville, Ky.

Erie Train Order Signals

Is it possible and profitable to operate trains by signal indications instead of by written orders? It undoubtedly is. Then why are the railroads so slow to adopt this more efficient method of operation? Wm. Nichols said in his treatise on train operation which was published in 1916, that "with a proper block signal system, the signals to govern train movements into and out of sidings, trains may be moved safely on single track without train orders and with but few train rules." It is our purpose in this paper to show that it is feasible and advisable to operate trains in this manner.

The problem is relatively simple for double track movements and many railroads are now operating such divisions more or less completely under signal indications. The best example of this method of operation is that in use between Port Jervis, N. Y., and Chicago on the Erie, a distance of approximately 900 miles. The system has been employed on this road for many years and has been found to be a great improvement over the old method of using written train orders to convey information. Several years ago the writer and one of our division superintendents made a careful investigation of the operation on the Susquehanna division of the Erie, spending a number of days on it interviewing local officers, visiting dispatchers' offices and riding various classes of freight and passenger trains. The operation was found to be smooth and every one concerned was favorable to it with the possible exception of the train dispatchers who did not like to assume the additional responsibility of directing all of the train movements in spite of the fact that their work was made more easy.

To make effective the Erie method of train operation by signal indication the line of road is equipped with one-arm automatic signals of the three-position upper quadrant type. Where train order signals are required, they are placed on the automatic signal mast below the automatic signal. The train order signals are one-arm, three-position electric signals. They are located at passing sidings or crossovers and are controlled from the nearest day and night train order office. The dispatcher directs their operation by telephone instructions to the office controlling them. One operator usually controls the train order signals at the point where he is located, as well as at either one or both adjacent sidings, this being possible because they are electrically controlled.

Train Order Signal Indications

The upper arm of the signal is the automatic signal and it controls the movement through the block in the usual way. The lower arm or train order signal indicates as follows:

Horizontal (red light)

Stop on main track and consult dispatcher on telephone.

Diagonal (yellow light)

Take siding and consult dispatcher on telephone when clear of main track.

Passenger trains will report before pulling into siding.

Vertical (green light)

(1) Proceed regardless of following preferred trains until otherwise directed by dispatcher.

(2) Trains are forbidden to accept this indication if there is any known cause that will prevent their making their usual running time. In such event they will consult immediately with dispatcher by telephone. When a train accepts the "proceed" indication and for any cause is unable to make its usual running time, it must protect itself against the following preferred train according to Rule 99, operating department.

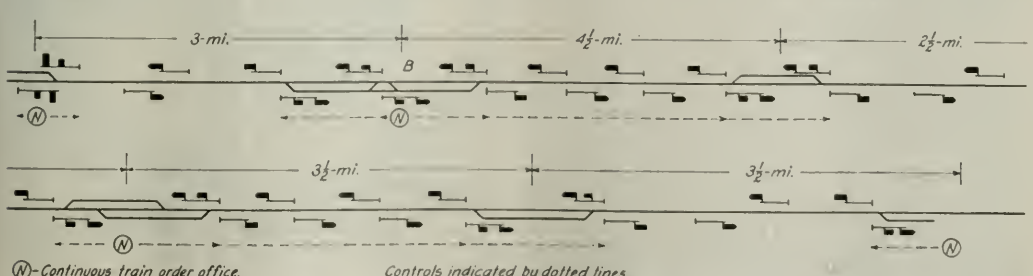
When the train order signal displays "stop" or "take siding" the automatic signal displays "stop."

Under this system a freight train, whether local or through, holds the main track on the time of any passenger train until directed by the dispatcher to take siding through means of the train order signal.

Single Track Operation

Our thorough investigation of the Erie system convinced us of the desirability of this method of operation for double track movements and also that a similar scheme can be developed for use on single track. We submit the following method for operating on single track.

The diagram represents a typical single track railroad equipped with automatic signals of the absolute permissive type and electric train order signals arranged to be controlled

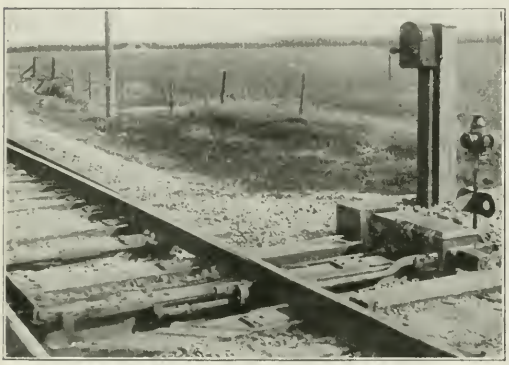


How Trains May be Operated on Single Track Without Written Orders

by the operator to convey orders to trains at the direction of dispatcher.

All entering signals at passing tracks are to be equipped with a second arm, this arm to be a three-position electrically-controlled train order signal. The train order signals and the leaving automatic signals will be under the control of the operator. The leaving signal is a positive signal and by placing it under the control of the operator a train may be stopped by it if desired. The indications of the train order signals will be the same as used by the Erie as previously explained. Thus the operator is enabled to inform the train to proceed, take siding; stop at the entrance of the siding and get into telephone communication with the dispatcher, or to proceed on the main track to the clearance point at the leaving end of the siding.

When there is a double siding such as at B, in the sketch,



Outlying Switch Operated by Low-Voltage Machine

additional train order signals may be located between the switches of the sidings. The addition of these signals will enable the operator to instruct the train to enter either of the two sidings. A similar arrangement may be used at lap sidings if thought desirable. However, this should not generally be necessary if each siding is used only by trains in a certain defined direction.

The proposed plan of operation includes a train-announcing scheme which may consist of a separate small light, similar to lights used on telephone exchange boards, to represent a direction of traffic for each positive block, the light to indicate when the block is occupied. For example, on a northbound movement, the northbound light would indicate as soon as a train passed the leaving signal at the next station to the south, and the southbound light for this block would indicate from the time that the southbound train left the leaving end of the siding until it had cleared at the next station. The lights would continue to indicate until the train cleared the block.

The Use of Electric Switch Machines

Train operation may be further expedited by equipping siding switches with electrically-operated switch mechanisms and placing their control in the hands of the operator. This will enable the operator to move a train into or out of a siding without stopping it or requiring the train crew to throw the switch. The low-voltage electric switch movement enables switches to be so equipped at reasonable cost and switches may be fitted up at certain locations or over the entire territory as may be felt desirable. Some roads are making large savings by the installation of these machines to enable the operator to handle bad pull-in or pull-out switches for trains, and yet the roads generally have been very slow in adopting this time and money-saving device, the efficiency of which has been proved many times.

Each train should be provided with a portable telephone train set in order to enable it to get into communication with the dispatcher if it should be unduly delayed between stations or at other points not near a telephone location.

Operation under this system will, of course, call for quite a departure from the Standard Code operating rules, making a revision or separate set of operating rules or instructions necessary.

The cost of providing the additional facilities necessary for train operation by signal indication where automatic signals are already installed, is not very great and the operating advantages that will be obtained will far outweigh the cost of installation as the economies made in operation would pay for the expenditures within a very short time. I am satisfied that when systems of this kind are installed they will prove as safe, economical and desirable as automatic signal systems.

Railroads have been slow to avail themselves of the full benefits offered by signal systems. As an example, the "19" order for restricting the rights of trains represents one of the greatest advantages of an automatic signal system, and yet it required years of missionary work to induce any road to adopt this economical method of operation, and many roads still refuse to do so.

Since the railroads are so slow in availing themselves of the use of the "19" order for restricting rights of trains in automatic signal territory, or in using electrically-operated passing siding switches, it is not strange that they are failing to eliminate written train orders and substitute therefor the signal indication method of conveying orders. And yet this will be brought about sooner or later.

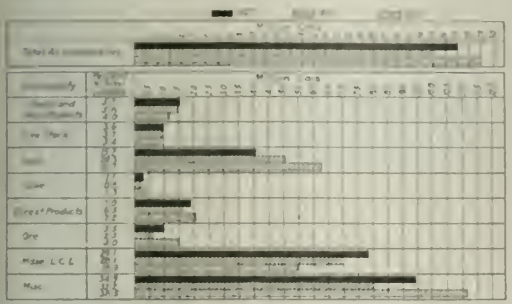
From the St. Louis Globe-Democrat

Wouldn't This Be a Good Time to Try and Invent a Different Kind of Clock?

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER of cars loaded with revenue freight during the week ending September 9 was 882,744, an increase of 85,192 as compared with the corresponding week of 1921, but a decrease of 50,071 as compared with the corresponding week of the record year 1920. The decrease of nearly 100,000 as compared with the preceding week is



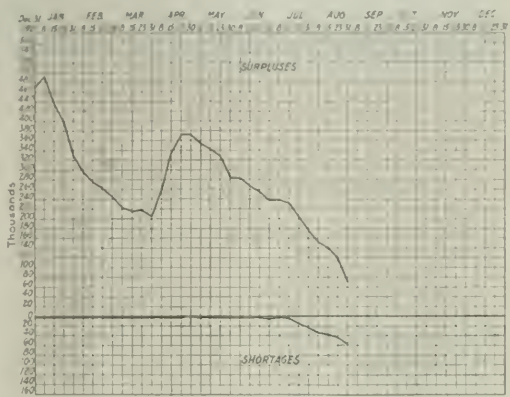
Cars of Revenue Freight Loaded—Cumulative January 1 to August 26

attributable to the Labor Day holiday. Increases as compared with the corresponding week of last year were shown in all districts except the Pocahontas and in all classes of commodities except grain and grain products and coal. Revenue coal loaded amounted to 139,570 cars, a decrease of 2,578 as compared with the year before and a decrease of approximately 10,000 as compared with the previous week, which contained no holiday. The summary as compiled by the Car Service Division of the A. R. A. is given in the table at the bottom of the page.

A total of 195,142 cars were loaded with coal during the week which ended on September 16, according to reports received from the railroads by the Association of Railway Executives. Of this total, 175,326 cars were loaded with bituminous coal, an increase of 17,316 cars over the week before, when, however, there was a falling off in coal loadings due to the observance of Labor Day. The remaining 19,816 cars were loaded with anthracite coal during the past week, which was the first week of production since the recent agreement was reached.

On the basis of these loadings, coal production last week approximated 10,033,000 tons, of which 9,050,000 tons consisted of bituminous coal and 983,000 tons were anthracite coal. A total of 5,088 cars were loaded with anthracite coal on Saturday, September 16, the largest number for any one day since operations were resumed in the anthracite fields, and 384 cars in excess of the preceding day. This was within 363 cars of the average daily loading in September last year.

Loadings of bituminous coal on Saturday amounted to 25,073 cars, 2,798 cars below the preceding day. Coal loadings in the bituminous fields, however, always show a decrease on Saturday compared with other days in the week. These figures include both revenue and non-revenue loading.



Car Surpluses and Shortages Up to August 31, 1922

An accompanying chart presents an analysis of revenue freight loaded for the period January 1 to August 26 inclusive for the past three years. It will be noted that the total of all commodities shows about two million cars less loaded to date this year than in 1920 and about the same number of cars increase over 1921; furthermore, that the loss in loading this year compared with 1920 is due entirely to

REVENUE FREIGHT LOADED

the decrease in total coal loading, so that as an aggregate all other commodities show an increase over both 1920 and 1921.

It is particularly interesting to note that in spite of the fact that the year 1921 as a whole witnessed the heaviest grain and grain products loading on record, the current year to date shows slightly greater total loading of this commodity. Live stock, coke and forest products show an increase over last year to date and correspond favorably with 1920. Coal naturally shows a considerable decrease compared with the two previous years, and ore shows a decrease over 1920 but an increase over 1921. Merchandise (LCL) shows a marked increase over both of the two previous years; miscellaneous freight shows an increase over 1921 and a decrease in the aggregate compared with 1920. The total of these two items, however, would show an aggregate increase over both of the two previous years.

Except for two days in last March and one other day in 1921, more cars were loaded with bituminous coal on Monday, September 18, than on any day during the past 2½ years. The total was 37,330 cars.

Coal Priority Bill Passed

WASHINGTON, D. C.

THE CONFERENCE report on the Cummins-Winslow bills to restrain profiteering in coal by authorizing the Interstate Commerce Commission to order priority in favor of coal sold at a fair price or embargoes against coal for which an unreasonable price has been charged or paid at the mines, was adopted by the House on September 15 by a vote of 228 to 70 and by the Senate on September 16 by a vote of 37 to 12. The report represents a combination of the principles and phraseology of the two bills, the principal change being the adoption of the Senate provision making it apply solely to interstate commerce, and a change in the period to one year. The main provisions of the bill as rewritten by the conferees are as follows:

"That by reason of the prolonged interruption in the operation of a substantial part of the coal-mining industry in the United States and of the impairment in the service of certain carriers engaged in commerce between the States and by reason of the disturbance in economic and industrial conditions caused by the World War a national emergency exists which endangers the public health and general welfare of the people of the United States, injures industry and business generally throughout the United States, furnishes an opportunity for the disposition of coal and other fuel at unreasonably high prices, limits the supply of heat, light, and power, threatens to obstruct and hamper the operation of the Government of the United States and of its several departments, the transportation of the mails, the operation and efficiency of the Army and the Navy, and the operation of carriers engaged in commerce among the several States and with foreign countries.

"SEC. 2. That the powers of the Interstate Commerce Commission * * * are during the aforesaid emergency, enlarged to include the authority to issue in transportation of coal or other fuel orders for priorities in car service, embargoes, and other suitable measures in favor of or against any carrier, including vessels suitable for transportation of coal on the inland waters of the United States which for such purpose shall be subject to the interstate commerce act, or region, municipality, community, person, copartnership, or corporation, and to take any other necessary and appropriate steps for the priority in transportation and for the equitable distribution of coal or other fuel so as best to meet the emergency and to promote the general welfare, and to prevent upon the part of any person, partnership, association, or corporation the purchase or sale of coal or other fuel at prices unjustly or unreasonably high. This act shall not be construed as repealing any of the powers heretofore granted by law to the Interstate Commerce Commission, but shall be construed as conferring supplementary and additional powers to said commission and as an amendment to section 1 of the interstate commerce act, and subject to the limitations and definitions of commerce controlled by said act, and all powers given said Interstate Commerce Commission shall be applicable in the execution of this act.

"SEC. 3. Because of such emergency and to assure an adequate supply and an equitable distribution of coal and other fuel, and to facilitate the movement thereof between the several States and with foreign countries, to supply the Army and Navy, the Government of the United States and its several departments, and carriers engaged in interstate commerce with the same during such emergency, and for other purposes, and for the further purpose of assisting in carrying into effect the orders of the Interstate Commerce Commission made under existing law or under section 2 hereof there is hereby created and established an agency of the United States to be known as Federal fuel distributor, whose appointment shall be made and compensation fixed by the President of the United States. Said distributor shall perform his duties under the direction of the President.

"SEC. 4. It shall be the duty of the Federal fuel distributor to ascertain:

"(a) Whether there exists within the United States or any part thereof a shortage of coal or other fuel and the extent of such shortage;

"(b) The fields of production of coal and other fuel and the principal markets to which such production is or may be transported and distributed and the means and methods of distribution;

"(c) The prices normally and usually charged for such coal and other fuel and whether current prices considering the costs of production and distribution, are just and reasonable; and

"(d) The nature and location of the consumers, and what persons, copartnerships, corporations, regions, municipalities, or communities should under the acts to regulate commerce administered by the Interstate Commerce Commission, including the transportation act, 1920, in time of shortage of coal and other fuel, or the transportation thereof, receive priority in transportation and distribution, and the degree thereof, and any other facts relating to the production, transportation, and distribution of coal and other fuel; and when so ascertained the Federal fuel distributor shall make appropriate recommendations pertaining thereto to the Interstate Commerce Commission from time to time, either on his own motion or upon request of the commission, to the end that an equitable distribution of coal and other fuel may be secured, so as best to meet the emergency and promote the general welfare. All facts and data within the possession of the Federal fuel distributor shall be at all times accessible and furnished to the Interstate Commerce Commission upon its request. The Interstate Commerce Commission is hereby authorized and directed to receive and consider the recommendation of the Federal fuel distributor, based upon his reports upon the foregoing subjects, and any other information which it may secure in any manner authorized by law.

"SEC. 5. The Federal fuel distributor may make such rules, regulations, and orders as he may deem necessary to carry out the duties imposed upon him by this act, and may co-operate with any department or agency of the Government, any State, Territory, district, or possession, or department, agency, or political subdivision thereof, or any person or persons, and may avail himself of the advice and assistance of any department, commission, or board of the Government, and may appoint or create any agent or agency to facilitate the power and authority herein conferred upon him; and he shall have the power to appoint, remove, and fix the compensation of such assistants and employees, not in conflict with existing laws, and make such expenditures for rent, printing, telegrams, telephones, furniture, stationery, office equipment, travel, and other operating expenses as shall be necessary for the due and effective administration of this act. All facts, data, and records relating to the production, supply, distribution, and transportation of coal and other fuel in the possession of any commission, board, agency, or department of the Government shall at all times be available to the Federal fuel distributor and the Interstate Commerce Commission, and the person having custody of such facts, data, and records shall furnish the same promptly to the Federal fuel distributor or his duly authorized agent or to the commission on request therefor.

"SEC. 6. That whenever the President shall be of the opinion that the national emergency hereby declared has passed he shall by proclamation declare the same, and thereupon, except as to prosecutions for offenses, this act shall no longer be in force or effect, and in no event shall it continue in force and effect for longer than 12 months from the passage thereof.

"SEC. 7. Every person or corporation who shall knowingly make any false representation to the Interstate Commerce Commission or the Federal Fuel Distributor or to any person acting in their behalf or the behalf of either of them respecting the price at which coal or other fuel has been, is being, or is to be, sold or bought, the inquiry being made for the purposes of this act, or whoever having obtained coal or other fuel through a priority order or direction shall dispose of the same for purposes other than those for which said priority order or direction was issued without the consent of the Interstate Commerce Commission, shall be deemed guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than $1,000 nor more than $20,000: *Provided*, That any person or any officer or director of any corporation subject to the provisions of this act, or the interstate commerce act and the acts amendatory thereof, or any receiver, trustee, lessee, agent, or person acting for or employed by any such corporation, who shall be convicted as aforesaid, shall, in addition to the fine herein provided for, be liable to imprisonment in the penitentiary for a term not exceeding two years, in the discretion of the court. Every violation of this section may be prosecuted in any court of the United States having jurisdiction of crimes within the district in which such violation is committed, or through which the transportation is conducted, or in which the car service is performed, or in which such concession or discrimination is granted or given or solicited or accepted or received; and whenever the offense is begun in one jurisdiction and completed in another it may be dealt with, inquired of, tried, determined, and punished in either jurisdiction in the same manner as if the offense had been actually and wholly committed therein.

"SEC. 8. There is hereby authorized to be appropriated the sum of $250,000, available until expended, for the purposes of this act, including payment of personal services in the District of Columbia and elsewhere, and all expenses incident to organizing the work of the President's fuel distribution committee, and not exceeding $50,000 thereof shall be available for reimbursement and payment upon specific approval of the President of expenses incurred since May 15, 1922, in connection with the work of the President's fuel distribution committee organized for the purpose of helping to meet the emergency existing in the matter of fuel."

The title has been amended to conform to the text as agreed upon in conference, as follows:

"To declare a national emergency to exist in the production, transportation, and distribution of coal and other fuel, granting additional powers to the Interstate Commerce Commission, providing for the appointment of a Federal Fuel Distributor, providing for the declaration of car-service priorities during the present emergency, and to prevent the sale of fuel at unjust and unreasonably high prices."

One of the Three Tent Villages for Employees at the Corbin, Ky., Shops of the L. & N.

L. & N. Moves Coal in Spite of Obstacles

Heavy Traffic Increase Caused by Coal Strike Subjected to Intensive Sabotage Since July 1

THE COAL STRIKE which began April 1 effected a tremendous increase in coal traffic on the railroads serving the great non-union producing territories of West Virginia and Kentucky. With the advent of the shopmen's strike extraordinary efforts were put forth to hinder or block the movement of coal from these territories; other traffic has been left to move practically unhindered by the intensive sabotage to which coal traffic has been subjected.

The Louisville & Nashville, serving the Eastern Kentucky fields, is one of the three roads which have been most directly affected by this situation and because of its strategic, and vulnerable, position in the Cumberland field, has perhaps been subjected to greater pressure than any of the others. But notwithstanding the shopmen's strike and the intensive efforts to cripple the service on its largest coal producing division, the railroad moved practically as great a volume of coal from the coal fields actually in production, during July, 1922, as was moved during the same month of the previous year.

The Louisville & Nashville serves coal fields on four widely separated parts of the system. Normally, 63 to 68 per cent of its total coal traffic comes from the Eastern Kentucky and Cumberland fields; 15 to 20 per cent from Western Kentucky, and 11 to 14 per cent from the Alabama field. These are all non-union fields. About four per cent of the road's normal coal traffic comes from union mines in Illinois.

Although conditions created by the shopmen's strike have somewhat disturbed the movement from the Western Kentucky, as well as from the Eastern Kentucky and Cumberland fields, the greatest difficulties have been encountered in the Cumberland fields and the present article will be confined to a description of the conditions in that territory, particularly as they affected the Cumberland Valley division, which serves the Cumberland field.

Eastern Kentucky Fields Rapidly Developing

The Louisville & Nashville serves two coal fields both of which are largely in the eastern part of Kentucky. The more southerly of the two, known as the Cumberland field, lies in Tennessee, Kentucky and Virginia. It extends from southwest to northeast for a distance of about 90 miles, parallel with the Kentucky-Virginia state line, and is approximately 25 miles wide. The principal developments in this field lie along the Cumberland river valley in Southeastern Kentucky and are served by the Harlan branch of the Cumberland Valley division. Including the main line, which also produces some coal, both in Kentucky and Virginia, this division has a track capacity for handling about 800 carloads of coal a day. This field is a comparatively old development, but during the past 22 years the railroad has spent over $9,000,000 in new mine branches, grade revisions, double track and increased yard facilities to enlarge the coal handling capacity of these lines.

The northerly, or Eastern Kentucky field proper, covers an area of 12,000 sq. mi. and is comparatively undeveloped. This field is served on the east by the Chesapeake & Ohio and the Baltimore & Ohio along the Big Sandy river and its tributaries. The Eastern Kentucky division of the L. & N., extending in a southeasterly direction from the main line of the Kentucky division at Winchester, Ky., enters this field along the North Fork of the Kentucky river which it follows to its extreme head-waters, a distance of about 185 miles. In the past 12 years the L. & N. has spent about $17,000,000 in adding to the line and enlarging yard and track facilities on the Eastern Kentucky division. This division now has a daily capacity of about 650 carloads of coal.

A large percentage of the coal produced in the territories served by both the Cumberland Valley and the Eastern Kentucky divisions is moved from Corbin, Ky., and Ravenna, Ky., respectively, over the lines of the Kentucky division which extends north from Corbin, Ky., to Cincinnati, Ohio. During the past 12 years approximately $13,000,000 has been spent in enlarging track facilities on this division, including extensive double tracking and a hump yard at De Coursey, Ky., for classifying Cincinnati bridge deliveries. This constitutes a total of over $39,000,000 which has been spent on the fixed plant, largely to meet the requirements of coal traffic from the two Eastern Kentucky fields, most of which has been spent since 1910. Adding to this total $7,000,000 worth of equipment which may properly be apportioned to the coal traffic in this territory, a total of over $46,000,000 has been spent on road equipment to meet the

requirements of this territory, approximately $11,000,000 of which has been authorized and spent since the termination of Federal control on March 1, 1920.

Notwithstanding the magnitude of these increases in railroad facilities there has been a constant development of mine capacity in excess of the normal requirements of the market so that, working full time, the mines in the Eastern Kentucky fields have a maximum loading capacity greater than the track capacity of the railroad. Although, under average conditions the mines on the Cumberland Valley division, working three or four days a week, load some 3,000 cars which the railroad moves at the rate of about 500 loads a day, these mines have a maximum loading capacity of 1,700 cars a day.

Typical of the tendency toward over development of mine capacity is the fact that, under the present favorable market conditions, this road is being subjected to more or less pressure to provide branches aggregating about 117 miles in the Eastern Kentucky fields, which would open up 195,000 acres of new coal land and add approximately 20,000,000 to 30,000,000 tons annually to the capacity of the mines on this part of the system.

Big Increase in Traffic Caused by Coal Strike

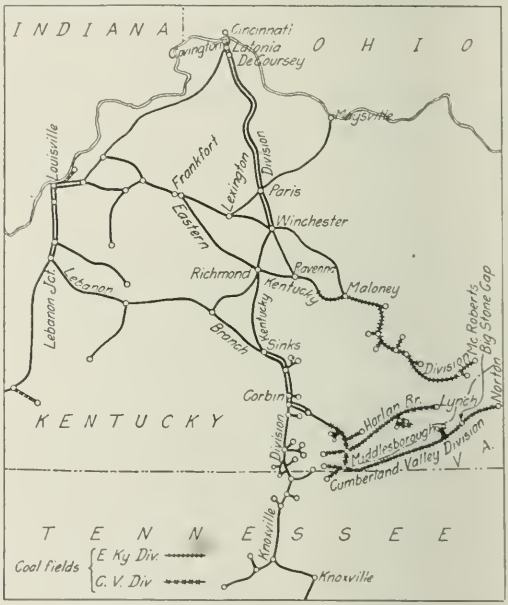
The record carload coal traffic on the Louisville & Nashville was handled in 1920, aggregating from all fields approximately 512,500 carloads. The largest single month's business during that year was handled in December and totaled 51,175 carloads. The volume of coal traffic in 1921 was slightly greater than that during the preceding year although the number of cars handled was less. A new record was established in October, 1921, however, when a total of 52,717 loads were moved, at the rate of 2,081 cars per working day.

At no time since April 1, until the coal strike was finally settled, was any coal loaded in the Illinois field. From the other fields, however, the L. & N. handled an aggregate business of 66,415 cars in May and 64,558 cars in June, at the rate of 2,460 loads per working day in May and 2,483 loads per working day in June, rates exceeding that of the largest previous record by 18 and 19 per cent, respectively. On several days during these two months the Cumberland Valley division loaded over 1,000 cars of coal; a record was established on June 12, when 1,241 cars were loaded. In May the average loading per working day on this division was 818 cars and in June, 814 cars, marking the full utilization of available track capacity, while on the Eastern Kentucky division, with a record of 900 cars as the largest day's business, the loading averaged 669 cars a day in both May and June. Furthermore, a number of mines on the east end of the Cumberland Valley division between Big Stone Gap and Norton, Va., from which business normally moves over other lines, threw a heavy movement westward over the Cumberland Valley division. During March the movement from this territory had averaged about four loads a day. By April 15 it had increased to 250 loads a day. This business had to be moved over 75 miles of line the character of which requires the use of light power, with grades which limit the rating to less than 800 tons per train.

Normally about 40 per cent of the coal produced on the Cumberland Valley division moves north over the Kentucky division, 40 per cent moves west from Sinks, Ky., over the Lebanon branch to Louisville, Ky., and 20 per cent moves south over the Knoxville division. During the coal strike, however, about 75 per cent of the Cumberland Valley coal has been moving north over the Kentucky division, adding materially to the volume of traffic movement over the 58-mile single track line from Sinks to Winchester, Ky., a line with 1.2 per cent ruling grades, requiring helper service throughout the entire distance. With the increase in loading on the Cumberland Valley and the Eastern Kentucky divisions and the changes in the routing caused by the coal strike the Kentucky division handled a total of from 1,000 to 1,600 cars a day into the De Coursey yards at the north end of the division, averaging during the months of April, May and June 46 per cent more traffic than was handled during the same months in 1921, which, because of a rapidly growing traffic, had not themselves been exceeded by the same months of any previous year.

Corbin the Key to the Cumberland Field

Corbin, Ky., is one of the most important freight terminals on the L. & N. It forms the terminal of the Kentucky division on the north, the Knoxville division on the south and the Cumberland Valley division on the east. Traffic between Louisville, Ky., via the Lebanon branch and points south and east of Corbin also passes through the Corbin yards. During the month of May, 25,799 loads from the



Lines of the Louisville & Nashville Serving the Eastern Kentucky and Cumberland Coal Fields

Cumberland Valley divisions, 3,084 loads from the south over the Knoxville division, and 3,463 loads from the north over the Kentucky division and the Lebanon branch, were handled through the Corbin yards, a total of over 32,000 carloads. In addition to the loads, over 20,000 empty coal cars were moved into Corbin from the north for distribution to the mines on the Cumberland Valley division, making a total of more than 50,000 cars which were handled through this terminal during the month.

Mechanical facilities at this point consist of a 25-stall roundhouse with a small machine shop to take care of running repairs and a limited amount of light classified repairs, and a wood mill for finishing car repair materials. The terminal normally despatches from 50 to 60 locomotives a day and at the time of the strike employed 686 men in the roundhouse and on the car repair tracks. On the morning of July 1 the master mechanic and three foremen constituted the entire force at this point and all that could be accomplished was the movement of passenger trains until a new

force could be built up. This alone repaired the despatching of 11 engines in 24 hours.

Corbin is exclusively a railroad town and local sympathy was lined up solidly behind the striking shopmen. Therefore, before a new force could be built up it was necessary to establish a self-contained camp at the terminal with a complete commissary organization. Beginning July 7, a camp of 150 sleeping tents, floored and electric lighted, was established in three villages with seven complete kitchen and dining tent units. Everything possible, under the circumstances, has been done to make agreeable the life of employees compelled to live in complete isolation from direct contact with the outside world. The camp includes shower baths, an emergency hospital, a moving picture show and a radio outfit. Open entertainments for the benefit of the employees are provided by the two latter facilities every evening. A check car has also been provided, where personal effects may be stored in safety.

Since the establishment of this camp, notwithstanding a lack of trained sub-foremen, the force has been gradually built up and developed into a working organization the effectiveness of which is constantly increasing. At the end of August it consisted of approximately 650 mechanics and helpers and about 150 laborers, in addition to about 200 guards required properly to patrol the railroad property throughout the 24 hours.

Two Thousand Cars Maliciously Damaged

But delays incident to the building up of a new organization in the Corbin terminal were by no means the only obstacles placed in the way of the movement of traffic. At the beginning of the strike there were about 3,500 loads on hand on the Cumberland Valley division outside of Corbin and 1,200 loads in the yards at Corbin. At the outset all of this equipment was unguarded and when power began to be available whole strings of these loads at the tipples or on sidings were found with the air hose cut and with coupler

Typical Examples of Cut Air Hose Removed from Cars at Corbin, Ky.

knuckles, brake shoes and brake shoe keys removed. On one string of 39 cars, 76 hose were found to have been maliciously destroyed. As many as 30 and 40 cars have been rendered unserviceable in a single night in the yard at Corbin.

Up to August 28 there were clear records of 1,122 cars in Corbin and on the lines adjacent to Corbin on which the air hose was cut, 75 cars on which the passage through the hose was stopped and 150 on which the journals, couplers and brake shoes had been tampered with. Including cars subjected to similar sabotage on other parts of the system, there is a clear record of approximately 2,000 cars known to have been damaged by deliberate intent. That sand and other destructive materials have also been applied to the journals of many other cars which were not discovered in the yards, is evident from the many complaints from train service employees. In one train more than 14 cars had to be brassed and relubricated within a distance of 20 miles.

To keep traffic moving since the strike it has, therefore, been necessary to do an unusual amount of car repair work at outlying points on the Cumberland Valley division. But it was impossible to send men out to do the work without armed guards for their protection. Accordingly, a traveling repair force of 18 men with the necessary armed guards was organized and provided with five cars, including commissary, materials, tools and supplies. Under this method of handling the work the division had been practically cleared of shop cars by the end of August.

Under these conditions the dropping off of coal movement from the Cumberland Valley division in July is not surprising. On several days during the first ten days of the month the loading was less than 10 cars a day. By the end of the month, however, it had increased to over 400 a day and had averaged 259 cars a day for the month. Taking the system as a whole, and excluding from the comparison the St. Louis division in Southern Illinois, on which coal was loaded only during the first three months of this year, the total loadings in July amounted to 37,235 cars, or nearly 96 per cent of the loading in July, 1921.

A Five-Day Brotherhood Strike

During the first two weeks in August the daily loadings on the Cumberland Valley division were gradually increasing, for the first five days averaging 390 cars a day and for the next week 489 cars a day. Then, on the morning of August 14, a strike of train service employees, confined to the Cumberland Valley division, tied up the division and the Corbin yard, which is operated by the Cumberland Valley division employees. The grievances out of which this strike grew involved the alleged unsafe condition of motive power and cars and the employment of armed guards. It was settled, however, without adding any serious handicaps to operation and the men returned to work on the afternoon of August 18. With operations on the other two divisions running into Corbin continuing during the five days of the strike on the Cumberland Valley division, several days elapsed before the accumulation of loads in the yard and on the line of the division itself could be cleared, and the first empties were not placed at the mines until August 24.

Operations Improving

By the end of August bad-order cars were practically cleared up on this division, the terminal at Corbin was despatching from 40 to 44 engines a day,—all of which were leaving the terminal in condition to meet the most exacting demands of the train service employees,—and operations are rapidly returning to normal.

With the general resumption of coal production in the union bituminous mines throughout the country, however, and the entire industry ready to load to full mine capacity, the limiting factor in the production in the Eastern Kentucky coal fields in the future is much less likely to be track or motive power capacity than the ability to secure an adequate supply of empty coal cars.

THREE EMPLOYEES and two passengers killed is the reported result of a collision on the Northern Pacific on Thursday evening, September 7, at Parkwater, Wash., four miles east of Spokane. Westbound passenger train No. 41 ran into a four-car train of shopmen occupying the main track and headed west. Reports indicate that both of the passengers killed would be classed as employees. It is said that the shop train entered the main track after reading a switch indicator which indicated that no train was approaching. The automatic block signal which should have stopped Train 41 is 6,000 feet in the rear.

Hearing on Daugherty Injunction Completed

After four days of incessant allegation of violence and lawlessness, the United States rested its case against the Railway Employees Department of the American Federation of Labor for conspiracy to disrupt interstate commerce and in support of a plea for the now famous "Daugherty injunction." The opening phases of this legal battle were described in the *Railway Age* of September 16, page 507. As indicated at that time, the government continued throughout the week to read thousands of affidavits from witnesses of acts of violence and instances where strikers have taken the law into their own hands in the name of unionism, and, by every known artifice of intimidation and actual crime, sought to terrorize men into allegiance to the strikers' cause.

The affidavits showed that the strikers dynamited and burnt; they fired shots through workmen's homes and through camp cars in which workers were interned on railroad property; they blew up water tanks and put railroad buildings to the torch; they stuffed sand, gravel and emery in the journals of locomotives and cars; they pulled bolts and nuts from rolling stock and withdrew spikes from rails; they painted signs of "scab" on workmen's homes and on the sidewalks in front of them; they coerced mayors and police authorities into looking the other way when violence was committed against loyal workers; they kidnaped workmen and threatened to make way with their families; they frightened storekeepers into refusing to sell to "scabs" and boarding houses from giving them food or lodging. Hundreds of men had sworn to cases of brutal assault in the main streets of towns and cities.

With the presentation of this evidence, the government has rested its case. On September 18 the defendants retaliated with a scathing denunciation of the government's evidence as "an avalanche of hearsay, mixed with perjury." Donald R. Richberg, chief of counsel for the striking shopmen, asked that Attorney-General Daugherty's petition for permanency of the injunction now temporarily in effect be dismissed. He questioned the government's right to seek such an injunction, doubted the jurisdiction of the court and insisted that the attorney-general and his staff have failed to make out a case.

The 25,000 affidavits filed by the government "do not charge the defendants named in the case with any crime," he said. "They recite acts of violence, but not one of them directly connects the defendants with the crimes charged."

The first ruling by Judge J. H. Wilkerson construed as favoring the shop crafts in the injunction proceedings, came on September 19 when he ordered the first class of affidavits submitted to the government, 283 in number, thrown out on the petition of Attorney Richberg. It was charged the makers of the affidavits were unaware that they were to be used in court, and that they were therefore not liable for perjury. Judge Wilkerson had previously ruled against throwing out the remaining classes of affidavits.

Attorney-General Daugherty Defends His Injunction Activities

Attorney-General Daugherty defended his course in the injunction proceedings and incidentally paid his respects to Samuel Gompers, president of the American Federation of Labor, in a statement reading in part as follows:

"I would say that, if this case is fortunate in its preparation and presentation and decision, I would guess there is nobody now living old enough to take observation of these proceedings who would ever see another strike involving the transportation facilities of interstate commerce.

"It has been a long time since the decision in the Debs case. That was the outstanding case that involved these questions and aside from the changes and extensions that naturally come in the law and the construction of the law in the development of the times, there is very little new in this case.

"Anything that would have been held, or can be held, to be a violation of the law construed in connection with the restraining order in the Debs case, these same facts being shown, would be construed to be a violation of the order in this case, and there is nothing in this case that would be held a violation of the restraining order that would not likewise be held to be a violation of the restraining order in the Debs case. Our order is a little more elaborate and accommodatingly exquisite.

"Mr. Gompers has criticized the government. You see, some people call him Uncle Sam, but he is not the Uncle Sam we are taking our orders from. There is another Uncle Sam here. And he talks about 'our constitution.' That is the one that he and some of his friends made. We are talking about the constitution that the American people made, and it is big enough and broad enough and fair enough to cover everything. This late demand and complaint on the part of the so-called minority for trampling upon their rights is all unjustified, but sometimes I feel like asking the question whether the majority have any rights at all. Whether the majority is expected to obey the will of the minority.

"I have nothing hard to say about labor—nothing hard to say about unions. If I were a workman in a factory I would belong to a union, but I would not belong to any union that had any rule of action or conduct which set aside the laws of the government. If I were running a shop or a factory, I would run an open shop—that means a man who works if he wants to work without being compelled to present a certified paper that he belongs to any organization. That is what a free country means. And as the days go by it will be found that this proceeding will be beneficial to legitimate unions, and they will commend it as things settle down."

It is probable that by the time this issue of the *Railway Age* is off the press, Judge Wilkerson will have rendered his decision in the case.

The shop-worn allegations of "interlocking directorates" and an iniquitous control of the railroad industry by the "inner banking circle centering around the House of Morgan" were again resurrected by legal representatives of Mr. Jewell and his associates in an advertised counter attack before Judge Wilkerson on September 19. Eight men representing the "railroad committees of the New York bank combine" considered to bring about the rail shop crafts' strike and have opposed peace in that strike in order to forward their "deliberate anti-labor union policy," according to an affidavit filed by Mr. Jewell and backed up by a fat exhibit giving figures, names and charts of interlocking railroad directorates which, it is alleged by the defense attorneys, are illegal. Mr. Jewell made a sweeping denial of all the government's charges of a conspiracy and counter charged that the Association of Railway Executives deliberately precipitated the strike as a part of a plot to crush the railway unions. The strike, Mr. Jewell asserted, was caused primarily by the refusal of the railroads to cease "farming out" repair work as ordered by the Labor Board. All this, it was pointed out by government attorneys, has little to do with the immediate issue at stake. It was suggested that the defense was filibustering since there has been no argument for modification of the terms of the Daugherty order.

The Jewell defense, however, does admit that the strike once lawfully called had the purpose of obstructing interstate commerce. The court wanted to know if it was permissible for either side in an industrial controversy to stop a service which was absolutely indispensable to the carrying on of commerce. Mr. Richberg replied that the rights of the human beings involved were more important to preserve than the "sacred rights of interstate commerce"; that constitutional rights must be preserved, commerce or no commerce. The precedent to be set in this case, it appears, is whether the government entering a controversy of this character on behalf of the whole people can set aside the rights and the freedom permitted in other industrial disputes. Judge Wilkerson has indicated several times that the Clayton Act provisions which the defense relies upon do not hold in a case of this character where the dominant purpose was to obstruct interstate commerce. Strike bulletins presented by the defense show that this was the purpose and that instructions were issued by the defendant officials.

The Ljungstrom Turbine-Driven Locomotive

Remarkable Efficiency Shown in Swedish State Railway Tests by Locomotive with Many Striking Features

WHEN IT IS RECALLED that the superheated steam locomotive converts only about six to eight per cent of the heat value of the coal consumed into useful work, whereas from 15 per cent to 19 per cent is converted in modern power plants, it is apparent that there is room for large improvements in locomotive efficiency. The importance of the matter stands out prominently at the present time on account of the world-wide increasing cost of fuel. While this increase has not been as pronounced in this country as in Europe, fuel is still one of the largest items of railroad operating expenses.

At the present time the steam turbine is the most generally used prime mover in important stationary plants and is being extensively applied in the marine field, despite the efficiency of the compound or triple expansion engines formerly used. In any consideration of radical changes in locomotive design, one thus naturally turns to the steam turbine. As an evidence of this trend of design, three turbine-driven locomotives are now in operation in Europe. These include a 10-wheel locomotive with a geared Zoelly turbine built by Escher, Wyss & Co. of Zurich, Switzerland; the Ramsay turbo-electric locomotive of the 2-6-6-2 type and 22,000 lb. tractive force on the London & North Western, England, built by Armstrong, Whitworth & Co.; and the Ljungstrom geared-turbine locomotive of 30,000 lb. tractive force on the Swedish State Railways. A very complete description of the Swedish design has been given in recent issues of Engineering (London) to which the *Railway Age* is indebted for most of the information and illustrations used for this article.

Object and General Description of Design

The design is largely the work of Fredrik Ljungstrom, assisted by his older brother, Birger Ljungstrom, general manager of Aktiebolaget Ljungstroms Angturbin, at whose factory near Stockholm the work of construction was carried out. In regard to running gear, boiler design, locomotive practice and requirements, the engineers of the Swedish State Railways collaborated with the builders. By combining the knowledge of an old established manufacturer of turbines and power plant equipment with that of practical railroad engineers, an epoch marking locomotive has been brought out after a vast amount of investigation and preliminary experimental work. In working out the details the object aimed at was to adapt the most advanced power station practices to the space and weight limitations of an ordinary locomotive and still retain the relatively high efficiency, reliability and possibility of long continued operation without inspection or withdrawal from service for repairs to boiler or machinery. Bearings and running parts have been enclosed as far as possible. The feed water is used over and over, thus reducing the amount of scale and necessary boiler work to a minimum. Tests in regular service have shown a fuel consumption of less than half that of standard type locomotives of a similar capacity when hauling the same trains. The small size of the boiler and the little coal required are striking proofs of increased efficiency.

It will be noted from the drawings that the locomotive consists of two parts, a boiler unit and a condenser unit. The forward half, containing the boiler and coal bunker, weighs 138,800 lb. and is carried on a four-wheel leading truck and three pairs of wheels with boxes and pedestals of ordinary European design. All ten wheels are of 38¼ in. diameter and are used simply for carrying the weight. The rear unit, in addition to the condenser, carries the turbine, reduction gear and part of the auxiliary machinery. It weighs 143,360 lb. and is carried on three pairs of coupled driving wheels, 56¼ in. diameter, and a two-wheel trailing truck with 43¼ in. wheels. The weight on the driving wheels is 107,520 lb. and on the trailing truck, 35,840 lb.

Boiler and Air Heater

The boiler carries 285 lb. steam pressure and is of the straight top type, 66 in. outside diameter, with a firebox 63 in. long by 63 in. wide which gives a grate area of 28 sq. ft. There are 160 tubes, 3 in. outside diameter and 9 ft. 10⅛ in. long between the tube sheets. The evaporative heating surface includes 108 sq. ft. in the firebox and 1,130 sq. ft. in the tubes.

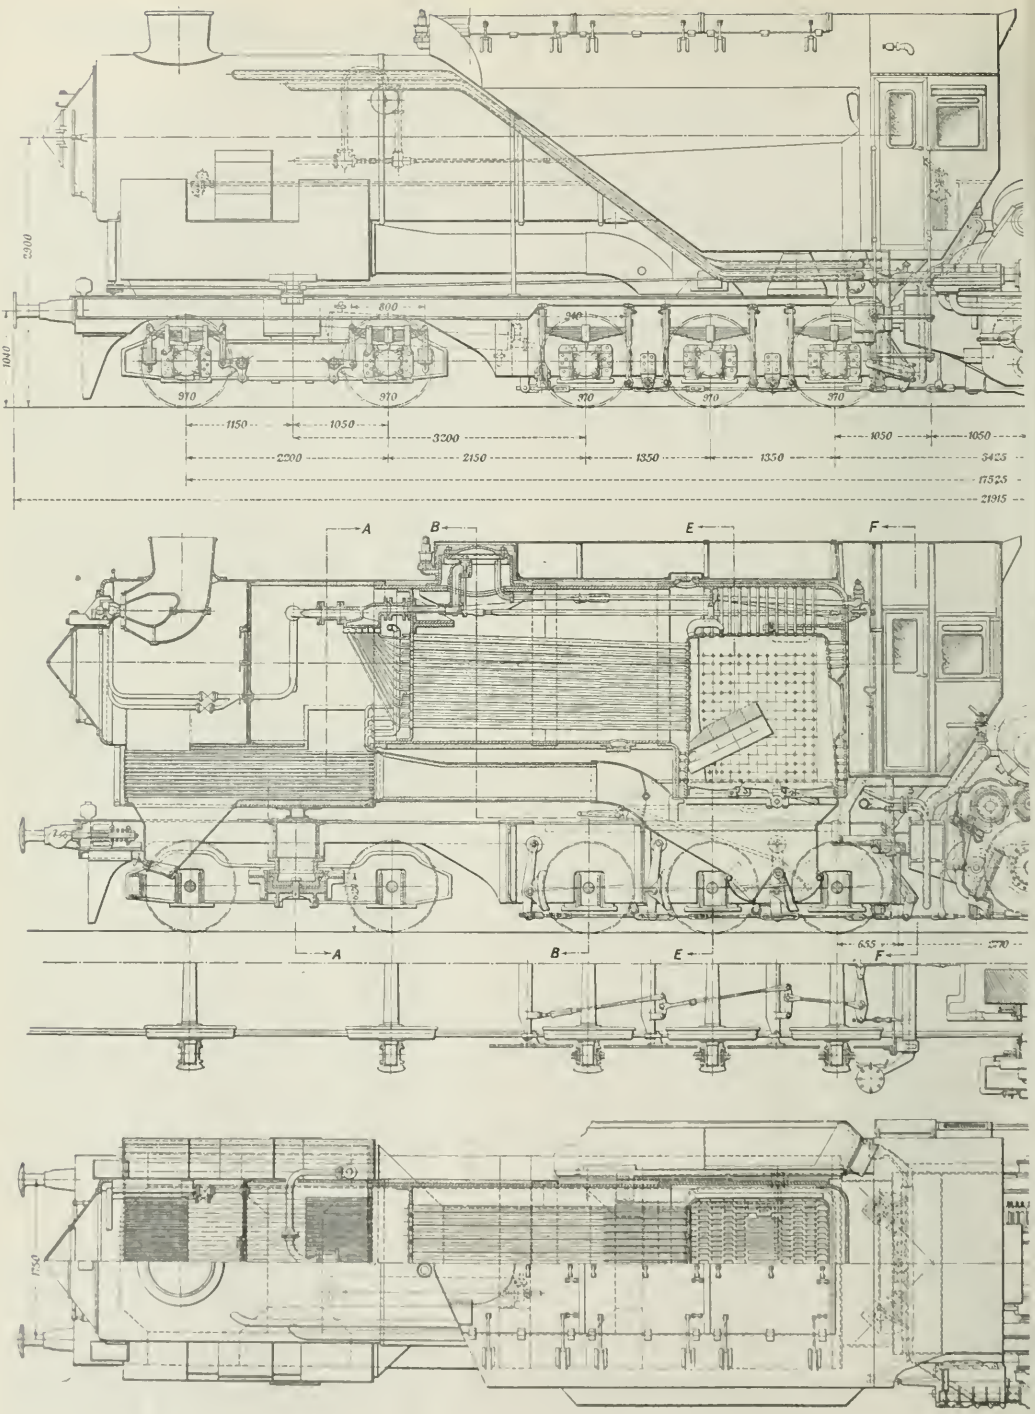
The length of the tubes is only about two-thirds that of ordinary locomotive boilers. This was decided upon because it was thought that greater economy could be secured by utilizing the surplus heat contained in the gases for preheating the air required for combustion. This is believed to be the first instance in which an air preheater has been used on a locomotive.

The smokebox is divided into two portions by a transverse diaphragm which causes the gases to pass down and through the air heater before going to the stack. This heater which is located beneath the smokebox contains 650 longitudinal brass tubes, 1.3 in. outside diameter, 8 ft. 11¼ in. long and with a heating surface of 1,787 sq. ft. The gases leave the boiler tubes at about 610 deg. F. and are cooled to about 300 deg. F. in passing through the air heater while the air for combustion is raised to about 300 deg. F.

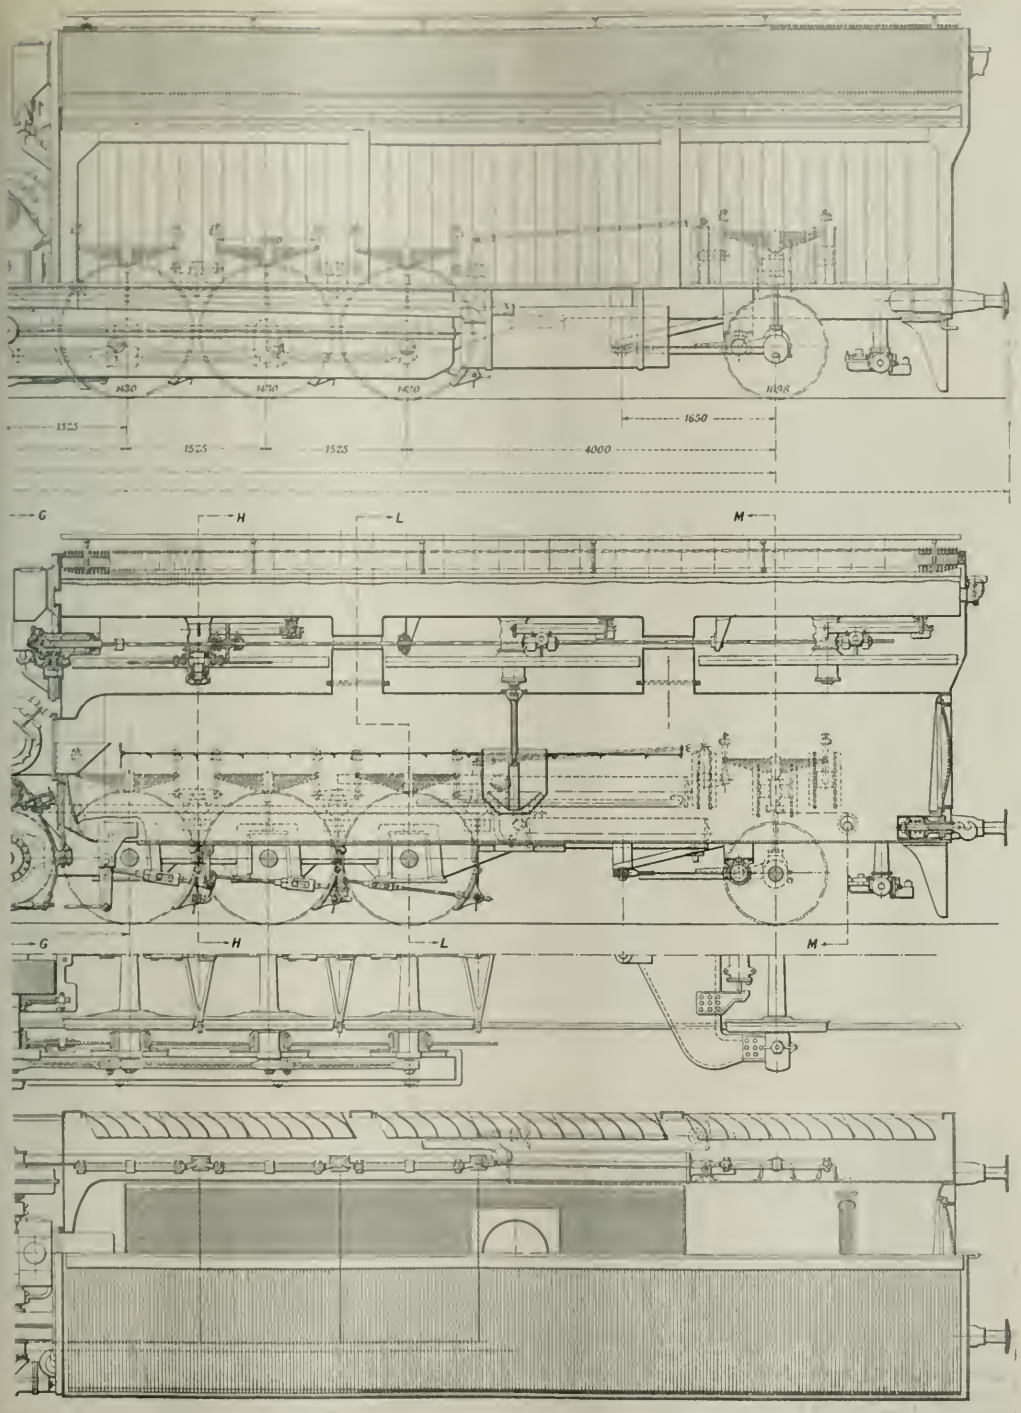
The front portion of the air heater casing is extended downward to form a hopper in which soot and dust can collect and from which they can be discharged at will. A large duct connects the rear end of the air heater to the closed ash pan. The supply of air to the ash pan is controlled by a series of vertical shutters or dampers which cover the front end of the heater and can be opened and closed from the cab. The handle by which they are operated is interlocked with the firedoor in such a way that they are closed automatically when the firedoor is opened, thus avoiding the danger of flame or gases being blown back into the cab when the door is opened, while the locomotive is running. There is also an additional damper in the duct to the ash pan for further regulation. The coal is carried in a saddle bunker of seven tons capacity, mounted on top of the boiler and extending from the front of the dome to the cab. Its tapered form serves to bring the coal to doors opening to the foot plate on each side of the firebox where it is most convenient for the fireman.

Induced Draft Fan

As the exhaust steam is all condensed, it becomes necessary to use a fan to create the required draft. As will be noted from the drawings, the stack has an extension reaching down into the front compartment of the smokebox, and carried forward where it terminates in an annular opening with a horizontal axis. A turbine-driven fan is mounted on the front of the locomotive with the fan blades close to the annular opening to the stack and serves to draw the gases from the smokebox and force them through the stack. The cooling of the gases to 300 deg. F. while passing through



Elevation, Sections and Plan of



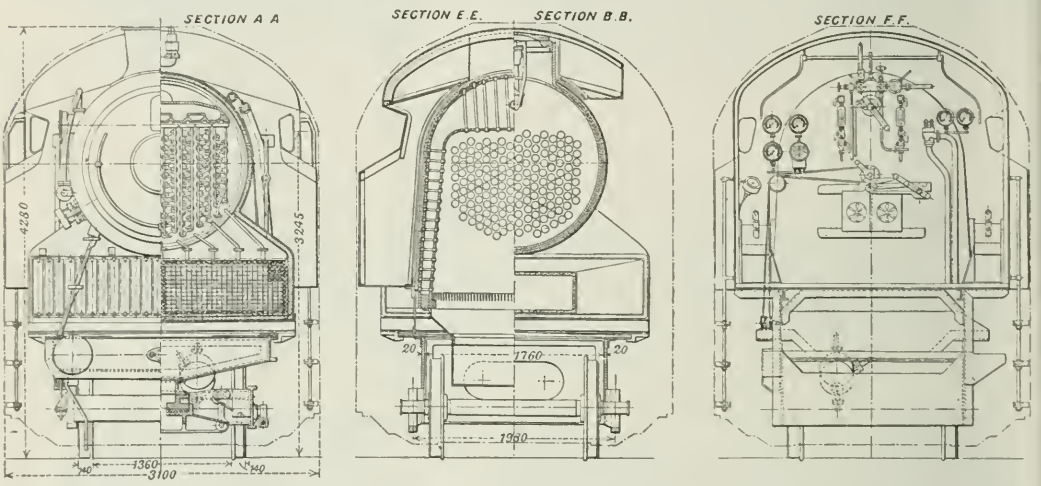
Ljungstrom Turbine-Driven Locomotive

the air heater also reduces their volume, both of which simplify the fan problem. The maximum speed of the fan is 10,000 r.p.m., at which speed the turbine develops 40 hp.

Superheater and Tube Blower

All tubes contain superheater elements. Each element is heated by the gases passing through two tubes, the superheater pipes making four passes through the first tube and then four through the second tube before returning to the header. The length of each pass is shorter as the steam becomes superheated. The total superheating surface is 861 sq. ft.

Provision has been made for blowing the soot out of the tubes, the mechanism being operated from the cab. A horizontal steam pipe extends across the front tube sheet above the top row of tubes, and to this pipe is connected a series of smaller vertical pipes between each alternate row of tubes. These small pipes have drilled holes opposite each tube opening. When the engineman desires to remove the soot from the tubes he can admit steam to each one of the vertical pipes in succession. As extensions of the pipes pass down into the air heater, boiler tubes, superheater elements and air heater tubes are all cleaned at the same time. The tubes being blown in small sections, there is no appreciable interference with the draft, such as would result if all tubes were blown at the same time.



End Views and Sections of Boiler Unit

The Main Turbine

The main turbine is of the impulse-reaction type with axial steam flow and develops 1,800 b.h.p. at the maximum speed of 9,200 r.p.m., which corresponds to a locomotive running speed of 68.3 m.p.h. Superheated steam is carried from the boiler unit to the turbine by a steel pipe with a U-shaped bend to obtain the required flexibility between the two units of the locomotive. The cast-steel steam chest contains five nozzles, each of which is independently controlled by a valve operated by oil pressure through a rotary control valve conveniently located in the cab. The steam as it leaves the nozzles acts on a velocity compounded impulse wheel with two rows of rotary blades with one row of stationary blades between. After leaving the impulse blading the steam passes through 15 rows of reaction blades mounted on a built-up conically shaped rotor. A novel and ingenious method has been adopted to shorten the length of the turbine and bring the large exhaust opening in line with the center of the turbine. The last row of reaction blades carries another row of blades mounted on their tips. The steam after leaving the last inner row of blades goes through a reversing passage in the turbine casing and then backward axially through the outer row of blades to the exhaust passage which surrounds the turbine cylinder.

As a safeguard, the turbine is fitted with an overspeed governor which acts to shut off the steam should the speed exceed a certain predetermined amount above the normal maximum.

The Main Reduction Gear

A double reduction gear with a ratio of approximately 22 to 1 is used to bring down the rotative speed from 9,200 r.p.m. of the turbine to 420 r.p.m. of the low speed gear. On either end beyond the turbine spindle and in line therewith, is a double helical high speed pinion in rigid bearings. Flexibility is obtained by mounting flexible couplings on the ends of the turbine spindle and on the outer ends of the pinions, each pair of couplings being connected by a shaft which passes through the hollow shaft of the pinion.

The high speed pinions mesh with the teeth of two gears mounted on a shaft, the center portion of which is the low speed pinion. A spring connection is interposed between the rims of the high speed gears and the shaft which forms the low speed pinion to cushion such shocks as may arise between the driving wheels and the turbine. The low speed pinion normally meshes with the low speed gears mounted on the jack shaft, at the ends of which are cranks at 90 deg. angles. Connecting rods couple the crank pins to the three pairs of driving wheels. As an illustration of the precautions taken in designing this locomotive to exclude dust and dirt from all bearings, the cranks and connecting rods to the driving wheels are entirely enclosed. The lower part of the cover can be removed with little effort when inspection is necessary and in addition, small covers are provided for the inspection of the crank pins.

As the turbine is non-reversing, it is necessary to provide means in the gearing for the reversing of the locomotive. The arrangement used is a novel and bold one, but apparently effective and reliable. When the engine is to be run in a backward direction, the crank shaft is first dropped

slightly so that the low speed gear is thrown out of mesh with the pinion which drives it. After the gears have come to rest, an idler gear is brought into mesh with both the low speed gear on the crank shaft and the low speed pinion. As this idler gear has to connect with both the gear and the pinion in the train and as all gearing is of the double helical type, it has to be cut with helical teeth running in one direction and then recut with teeth running in the opposite direction. This doubling of the spirals reduces the tooth bearing to one-half of that used for driving in the forward motion, but as the idler pinion is only in use when the locomotive is backing, the strength is ample. The process of disengaging the pinion and bringing the idler into mesh is done automatically by oil pressure controlled by a simple movement of the handle of a control valve. The means employed for locking the gear in the two positions and for securing meshing without injury to the gears are interesting but not necessary to describe in detail. It is sufficient to state that the whole process of reversal is as quickly and as easily accomplished as with an ordinary locomotive equipped with a power reverse gear.

The Condenser

The efficiency of a steam turbine depends upon the employment of a condenser which will ensure the maintenance of a high vacuum. The ordinary type of condenser used in stationary and marine installations with a large number of water tubes was considered to be impractical on account of the size, weight and large quantities of cooling water that would be required. An air-cooled condenser was consequently decided upon as the most suitable for locomotive use. In the condenser as in other parts, the design adopted shows good engineering, ingenuity and a willingness to depart from the conventional provided there is a clear advantage to be gained by so doing.

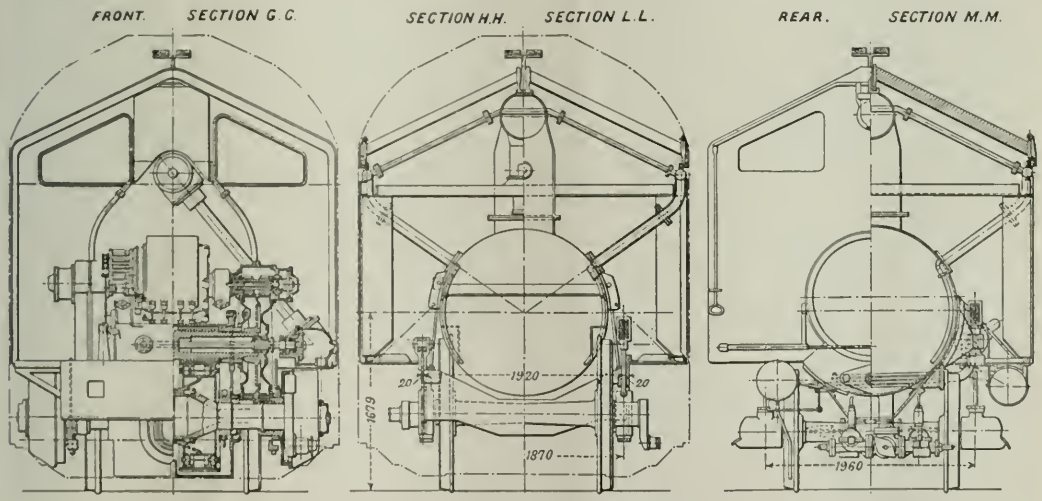
As has been stated, the condenser occupies most of the space of the second unit of the locomotive, the actual room occupied by the turbine and reduction gear being small. Running the full length of the unit and at the bottom is a cylindrical vessel about 66 in. in diameter which is normally half full of water of condensation. The turbine is bolted direct to a flange on the front of this vessel without interposed piping or expansion joints. The exhaust steam passes in on top of the water and then rises through two short connecting pipes to another cylindrical vessel about 22 in. in diameter which is located near the top of the unit.

Between the two drums are three fans which are driven from the main turbine by an inclined shaft and bevel gears. The fans themselves are driven by friction wheels which can be shifted to give the desired speed. Each fan has a capacity of 141 cu. ft. of air per second. The object of the fans is to induce a strong current of air over the cylindrical drums and past the copper tubes referred to later. The sides of the vehicle consist of vertical sheet steel guide plates which facilitate the entrance of air while the locomotive is running. The shape was determined by results obtained from experiments with a specially constructed wind tunnel.

The roof of the vehicle consists of a large number of specially formed flattened copper tubes in which most of the condensation takes place. These tubes are closely packed together and contain about 3,530 sq. ft. of cooling surface over which the air from the fans passes.

Feedwater Heater

After the steam has been condensed, it is fed back to the boiler and on the way passes through three feedwater heaters arranged in series. Each heater is supplied with exhaust steam at a different temperature so that the feed water is heated progressively from about 120 deg. F. to 300 deg. F. The heaters are circular and contain a series of brass tubes, surrounded by exhaust steam. The first heater is supplied with steam at approximately atmospheric pressure and 195 deg. F. from the condensate pump turbine, the air ejector for the condenser, the vacuum brake ejector, leakage from the dummy piston of the main turbine and steam from the other heaters. The intermediate heater is supplied with steam at approximately 9 lb. pressure and 230 deg. F. from the turbine boiler feed pump. The high pressure heater is supplied with steam at approximately 60 lb. pressure and 295 deg. F., being the exhaust from the induced draft fan turbine.



End Views and Sections of Condenser Unit

Pumps and Air Ejector

The condensed water is taken by a condensate pump and delivered to a boiler feed pump which forces it through the feedwater heaters into the boiler. The condensate pump

which operates under a low head is of the single-impeller rotary type and driven by a small turbine, the speed being brought down by a single helical reduction gear. Saturated steam is used for this turbine although in practically all other places superheated steam is employed.

The boiler feed pump also is of the rotary type. It has three impellers in series and is driven by a direct-connected turbine. The boiler feed pump is mounted on a cast-iron oil reservoir. In this reservoir there is a rotary lubricating oil pump with a vertical spindle which is driven by a worm mounted on an extension of the boiler feed pump shaft. This pump supplies oil to the main turbine, the reduction gear, the various auxiliaries and also the important bearings on the locomotive. The use of force-feed lubrication in conjunction with the enclosure of running parts is expected to greatly increase the durability and make it possible to run the locomotive for long periods without requiring any attention.

An air ejector is used to free the condenser of air. This has two steam jets which work in series and is much simpler than an air pump. The discharge from the ejector is piped to the low-pressure feedwater heater so that there is little loss of heat.

Tests and Performance

Fuel economy is one of the strong claims for the Ljungstrom locomotive although low maintenance costs, large starting torque and evenness of turning effort also are advanced. The ordinary Swedish locomotive with about 145 lb. boiler pressure, steam superheated to 650 deg. F. and expanded down to an exhaust pressure of six pounds above atmosphere, will convert about 200 B.t.u. into useful work for every pound of steam used. The Ljungstrom locomotive with its higher pressure and steam expanded down to 2.1 lb. absolute converts about 400 B.t.u. into useful work. The fuel consumption is thus only 50 per cent as much as with an ordinary locomotive. In addition there are further economies resulting from preheating the air for combustion and from feedwater heating.

Before the locomotive was placed in service it was submitted to tests on a specially constructed dynamometer, which tests extended over several months and were carried on under the supervision of engineers from the Swedish State Railways.

Following these successful tests, it was turned over to the railroad and has since been used on numerous runs, hauling heavy trains and conforming to the operating conditions of other locomotives, the firing and running being performed by ordinary railway employees. In repeated instances a dynamometer car has been attached to the train and full records of performance thus obtained. The drawbar pull repeatedly has reached 30,000 lb. and the work performed has been in excess of 1,500 hp. These test records bear out the claims for fuel economy. For example, on one of the runs between Stockholm and Upsala the train consisted of 11 coaches and a dynamometer and weighed 596 short tons including the locomotive. The maximum speed was 51 m.p.h. and there were only a few stops. The coal consumption for the run averaged 37.4 lb. per 1,000 ton-miles. Under other conditions and where the stops have been frequent, the coal rate has been as high as 67 lb. A vacuum of 26 in. to 27 in. was easily maintained with an air temperature near the freezing point.

In operation, the locomotive has shown a better starting torque and quicker acceleration than standard locomotives. It is easily controlled and runs with unusual smoothness at all speeds. Coal consumption has been reduced 50 per cent and as there is very little loss of water, the supply lasts for a considerable time before replenishing is necessary. The continued performance of this remarkable locomotive will be watched with the greatest interest.

Appropriation for Additional Service and Safety Inspection

Washington, D. C.

A DEFICIENCY appropriation of $100,000 for the Interstate Commerce Commission for the employment of additional service agents and other personnel to carry out the car service work of the commission, and another appropriation of $66,150 for 15 additional safety appliance inspectors was recommended in a report of the committee on appropriations and was passed by the House on September 19. The commission had also asked for an additional appropriation of $201,917 for locomotive inspection to provide for 35 additional inspectors, but the committee took the position that this appropriation could not be made because the number of inspectors is provided in the permanent law.

J. C. Roth, director of service, who with other representatives of the commission testified in support of the appropriations before the sub-committee on September 14, said that the deterioriated condition of railroad equipment has resulted in accumulations of loaded freight cars upward of 100,000 cars. He said that the slowing down in transportation has dislocated the car supply to such an extent that it will take months to clear up the congestion and to repair the bad-order cars and locomotives. He expressed the opinion that not less than 25 per cent of the cars were in bad-order as compared with 15 per cent when the shopmen's strike began. In order to meet the emergency and to assist in the movement of freight, he said the commission had increased its force of service inspectors in the field from 4 to 20 by drawing them from various other bureaus of the commission and it has also been necessary to increase the clerical force because of the vast flood of correspondence coming from shippers in all sections of the country. Secretary McGinty said that since the first emergency service order was issued in July the commission has assigned to the service bureau 39 employees at an expense of $76,020 and that thus far most of them have been drawn from other work in the commission, whose places it is necessary to fill, as the President has said that the regular work of the safety and locomotive inspection bureaus must go on. He said the force would be reduced as quickly as possible when the emergency is over. When members of the committee made the point that the number of locomotive inspectors was governed by law, he said that the President and the director of the budget bureau thought that this objection could be overcome in an emergency.

Mr. Roth said that the commission is pressing down upon the carriers through the men in the field, through personal conferences and correspondence to get the cars to the places where they are needed and that it is helping both the carriers and the shippers in various ways. A. G. Pack, chief inspector of locomotives, expressed the opinion that even with the settlement of the strike it will take several weeks to deal with the situation and improve conditions and it will take at least a year for the railroads to gain what they have lost in condition of motive power and equipment. Secretary McGinty said that the commission is receiving not "only thousands, but hundreds of thousands of complaints from all over the country."

W. J. Patterson, assistant chief inspector of safety, explaining the need of additional safety inspectors, said that in addition to the cars reported as in bad-order by the railroads themselves, the percentage of cars found by the commission's inspectors to be defective has increased from 3.41 per cent of the number inspected in January to 11.32 per cent in August. During the month of June 15 cases of violations of the safety appliance law were transmitted to the United States attorneys for prosecution, involving 39 counts. During July no cases were transmitted, but during

August 24 cases were transmitted, resulting in courts. He said the inspectors inspect approximately [illegible] cars a month.

Mr Pack said that during the past [illegible] year the locomotive inspection bureau has been seriously hampered in the performance of its duties by the lack of funds and that the number of inspectors was not increased when the law was extended to cover all parts of the locomotive. He said that the presence of the commission's men even on a division has a most beneficial effect on the improvement of motive power. In June of this year, he said, 45 per cent of the locomotives inspected by the commission were found to be defective; during July 60 per cent, and during August 71 per cent. Legislative representatives of the train service brotherhoods also testified before the sub-committee regarding the necessity for additional inspectors.

The appropriations committee also proposed an appropriation of $150,000 to carry out the provisions of the new coal priority act passed by the Senate and the House last week. While the act authorized an appropriation of $250,000, Secretary Hoover testified before the committee that the amount required would depend upon the length of time federal supervision was to continue and that a smaller sum than that authorized would suffice if transportation conditions become normal at an early date. Secretary Hoover said that if a hopeful view of the situation is taken, the necessity for having a federal fuel distributor will be over by the first of January, "but if, on the other hand, it develops that transportation is more deeply injured than now expected, that is, if the strike continues and we go on with degenerating motive power, we will be in the throes of coal famine all winter long."

Strike Settled by Negotiation and Defeat

Some Roads Take Back Strikers Under Willard-Jewel Plan—Wage Contracts for Train Service

THE ATTEMPT to place in effect the so called "Willard-Jewell peace plan," fully described in the *Railway Age* of September 16, page 503, has resulted in some misunderstanding between representatives of the shop employees and those roads which signified their willingness to cooperate in ending the shopmen's strike under the terms of this agreement. At one point the result was further rioting. Later reports indicate, however, that these misunderstandings are gradually being ironed out and that, insofar as those roads that have agreed to the plan are concerned, the shopmen's strike will soon be definitely ended. On many other roads which were not parties to this agreement it is likewise claimed that the shopmen's strike is ended but in an entirely different way. Practically all of these roads are claiming normal forces and normal production in their shops, and, while their officers state that they will take back any of the strikers who have not been guilty of violence and who are willing to come back minus their seniority rights but with their pension and other similar rights and privileges intact, they consistently maintain that they are not negotiating with Mr. Jewell's organization.

When representatives of the employees and of the roads came together to complete the terms under which the shopmen were to return to work under the "Willard-Jewell" plan, there immediately arose misunderstandings as to the intent of certain terms of this plan, particularly the status of the men now at work in the shops. On the Chicago & North Western for instance, the shopmen's committee demanded that all of the men who remained on the job when the strike was called or who were subsequently hired to take the place of strikers, be discharged. Officers of the road in turn pointed out the terms of the "Willard-Jewell" plan and eventually the difficulty was straightened out. The men were returning to work all along this line according to the latest reports.

A similar misunderstanding on the Chicago, Milwaukee & St. Paul led to minor disorders at the Galewood, Grand Avenue and Bensonville shops but this trouble was quickly ended with the arrival of police. Later announcements by officers of this road indicated that the men were returning to work as fast as arrangements could be completed for them.

From other points where representatives of the railroads and employees were negotiating under the new peace plan came reports of similar misunderstandings, but present indications are that the shopmen on the roads which have agreed to this plan will be on the job again during the present or the coming week.

As yet there has been no definite announcement of the roads which are included in the list agreeing with Mr. Jewell on the solution of the strike problem, a fact which has led to a great deal of speculation as to the inclusion of certain carriers in this plan. Within several days after the announcement of the new plan officers of the following carriers definitely announced that their properties were not included in the negotiations with Mr. Jewell or would not agree to the peace plan:

The Atchison, Topeka & Santa Fe; the Atlantic Coast Line; the Boston & Albany; the Central of Georgia; the Central Railroad of New Jersey; the Chicago & Alton; the Chicago, Burlington & Quincy; the Chicago Great Western; the Delaware & Hudson; the Delaware, Lackawanna & Western; the Elgin, Joliet & Eastern; the Erie; the Fort Worth & Denver City; the Gulf Coast Lines; the Illinois Central; the Louisville & Nashville; the Lehigh Valley; the Minneapolis & St. Louis; the Missouri, Kansas & Texas; the Missouri Pacific; the New York, New Haven & Hartford; the Norfolk & Western; the Northern Pacific; the Pennsylvania; the St. Louis-San Francisco; the St. Louis Southwestern; the San Antonio & Aransas Pass; the Southern Pacific; the Texas Pacific; the Virginian; the Wabash; the Western of Alabama; the Nashville, Chattanooga & St. Louis; the Tennessee Central; the Chicago, Rock Island & Pacific and the Union Pacific.

Labor Board Chairman Comments on Peace Plan

The strike having been partly settled through direct negotiation between the railroads and the employees concerned, Chairman B. W. Hooper of the Railroad Labor Board was asked for a comment on the new peace plan. The following was the result:

"As a positive disbeliever in the moral right and practical efficacy of railway strikes, I am glad to know the strike has ended on a part of the roads. It is to be hoped that some plan of settlement can be agreed upon for all the others.

"No extended comment either in a postprandial or postmortem vein, is necessary.

"The settlement sustains the Transportation Act and the theory of orderly procedure for the adjustment of labor troubles in the railway industry. The decisions of the Labor Board stand un-

modified by the appeal to economic and physical force. All the questions upon which the strike was predicated will come back to the Board, if the parties desire to bring them there. If they should be, at any time, re-opened, the Board will accord them the fullest and fairest consideration, without any spirit of vindictiveness or reprisal.

"The question of seniority that arose out of the strike, is not disposed of by the settlement, as neither party yielded its position, but the matter is referred to a commission, composed of representatives of both sides. This is nothing more or less than an adjustment board, with jurisdiction limited to questions arising out of the strike, and is in strict conformity with the Transportation Act.

"It may also be noted that this settlement is in substance and effect, identical with the last recommendation made by President Harding."

Washington Regards Strike as Virtually Over

Official Washington appears to have treated the partial settlement of the shop strike as indicating virtually the end of the strike and representatives of the administration expressed varying degrees of optimism as to the effect of the strikes and their termination upon prospects for an era of great business expansion.

"While the losses to the country due to the two great strikes are considerable, they are easily over-estimated," said Secretary Hoover in a statement to the press. "The estimate of current coal miners' wages lost in the five months is not a correct basis of estimation of the loss because over a period of 18 months we will probably consume approximately the same amount of coal. In other words, the miners will work more days in the week and produce more coal in the next six or eight months than they would have produced if there had been no strike, and thus the wage roll of the next six or eight months will be larger and will in a considerable degree compensate the loss during this suspension.

"The real loss would lie more in the loss of productivity in industries that have, or might have, to close down as a result of the coal strike. If all of our industries can be kept in motion the loss will be much less from the coal strike than is currently estimated.

"The greatest loss today is the one being met by the farmer as a result of the railway strike. The export of farm produce has been seriously interfered with by inability of the railways to transport produce. Prices are, therefore, unduly depressed in the agricultural regions and the farmer is suffering grievously.

"The inability to transport manufactured products will create some degree of loss, but not so serious as that to agriculture.

"There are other losses that must be counted into the national balance sheet, such as the damage to the railways, the extra charges which they have been put to, the cost of keeping the mines open and maintaining them during the period of suspension, and a hundred other items that are of importance.

"In the broad view, however, if we can get back to business, if we can secure a resumption of transportation and rapid distribution of coal and agricultural produce, we will not have received such an economic wound as cannot be very quickly recovered from. We will probably not be on such a high plane of business prosperity during the next six months as we would have been had the strikes not taken place, but we will undoubtedly be on a much higher and much more comfortable plane than that of last year."

Davis and Mellon Optimistic

Secretary Davis of the Department of Labor had issued a statement saying the settlement of the strikes had removed the last obstacle to "unprecedented" prosperity, while Secretary Mellon of the Treasury Department, although considering the business outlook "very good" recognized limitations imposed on the productive capacity of the country by the fact that the railroads have not been expanding their facilities in recent years as well as by the present condition of equipment. Mr. Mellon was represented as seeing no difficulty ahead of the carriers in supplying the requirements of the country over the winter, but reports to the Treasury Department indicate that some commercial projects have been deferred until next year as a result of the uncertain conditions created by the coal and railroad strikes.

Hearings on motion of the United States attorney and United States marshal for the District of Columbia to dismiss the injunction proceedings brought by the National Brotherhood of Electrical Workers were postponed by Justice Stafford of the Supreme Court of the District of Columbia from September 15 to September 25. The temporary injunction restraining interference with meetings of the railroad strikers will remain in force until that hearing.

Harrison Wants More Boiler Inspectors

Senator Harrison of Mississippi, who has a habit of interrupting the consideration of bills in the Senate by making partisan political speeches, interjected a discussion of the railroad situation into the debate on the resolution for a government loan to Liberia by offering an amendment to appropriate $100,000 to enable the Interstate Commerce Commission to appoint such additional number of inspectors of locomotive boilers as may be necessary to meet the present emergency at salaries of $1,800 a year. The adoption of such a plan might tend to find jobs for a number of men who have lost their seniority rights during the strike. Senator Harrison supported this proposed amendment by citing figures showing an increase in the number of bad order cars and locomotives in such a way as to give the impression that all the bad order equipment was in service and therefore unsafe for use. Senator Cummins said he intended to vote for the amendment, although he would prefer to have it constituted a permanent addition to the interstate commerce law. He said he had been attempting for a year and a half to have the number of inspectors increased from 50 to 100 and to increase their compensation. He said the commission's appropriation for this purpose has been formerly $300,000 a year, but that the Budget Bureau had reduced it to $290,000.

Two Bills to Abolish Labor Board

Two bills to abolish the Railroad Labor Board were introduced in the House on September 14 in addition to one previously introduced by Representative Hoch. The bill introduced by Representative Cooper of Ohio would repeal the section of the Transportation Act under which the board was created and would turn the files of the board over to the United States Board of Mediation and Conciliation, which has not yet been legally abolished, but which has gone out of existence because no appropriation was made for it. Mr. Cooper said he sought to reestablish the plan of mediation, conciliation and arbitration provided for by the Newlands act. The other bill, to abolish the board, was introduced by Representative Goodykoontz of West Virginia.

There were 8,890 less cars requiring heavy repairs on September 1 last than there were at the beginning of the shopmen's strike on July 1, according to reports filed with the Car Service Division of the American Railway Association.

There were, however, 5,981 more cars requiring light and minor repairs on September 1 than at the beginning of the strike. This made a net decrease of 2,909 cars in the number requiring both light and heavy repairs since July 1.

The total number in need of repairs on September 1 was

321,674 cars, or 14.1 per cent of the cars on line. On July 1 there were 324,583 cars, or 14.3 per cent.

There were also 52,413 less cars requiring both heavy and light repairs on September 1 last than on the same date one year ago. Of cars requiring heavy repairs, there was on September 1 last a decrease of 33,237 cars below the total on that date last year, while there was a decrease, compared with one year ago of 19,176 in the number requiring light repairs. One year ago, 16.2 per cent of the cars on line needed repairs.

Reports also showed a decrease of 23,339 in the number of cars needing repair on September 1, compared with August 1 last, with 15,292 less cars requiring heavy repairs, and 8,047 less cars requiring light repairs. On September 1 there were 345,013 cars in need of repair, or 15.3 per cent of the cars on line.

Strike Situation Rapidly Clears in Chicago and Western Territory

Conditions in the shops of carriers in western territory are rapidly approaching normal with the consummation of the so-called "Willard-Jewell peace plan" on several of the roads and the continued recruiting of new forces on others. As it has become more and more apparent that the shopmen's strike has collapsed completely, a fact indicated by the success of the carriers in recruiting new forces and by the attitude and action of Mr. Jewell in finally agreeing to a separate peace with each carrier, the reports of violence, bombing and similar activities on the part of strikers or their sympathizers have become fewer and of only minor importance.

As indicative of the general conditions prevailing on western lines, the Western Presidents' Committee of the Association of Railway Executives issued a statement on September 19 outlining the situation on the previous day. This statement said:

"Reports for September 18, show that 122,415 men are now employed in the shop and repair forces of the western roads. This was 77.5 per cent of the force employed on June 30, the day before the strike began. Excepting the three western roads which have joined in the 'Willard-Jewell' peace movement, namely the Chicago, Milwaukee & St. Paul, the Monon and the Chicago & North Western, the shop forces of the remaining western carriers were 76 per cent of normal yesterday."

Reports made to the Western Presidents' Committee on September 20 indicated that 83 per cent of the normal shop forces of the western roads were at work on that day. It was also reported that the western lines were handling an exceptionally heavy traffic.

The use of dynamite and bombs continued to a small extent during the last week, reports being made of the bombing of homes of three Louisville & Nashville employees at Birmingham, Ala., and a Wabash employee at St. Louis and the bombing of a Chicago & Alton tank car at Bloomington, Ill., and a Louisville & Nashville freight car at Albany, Ala. Riots, slugging and similar outbreaks were comparatively few, the press reporting trouble of this character at Chicago and Burlington, Ia., where the homes of loyal employees were attacked. Local police officers at Needles, Cal., where there has been more or less disorder since the strike began, requested the proclamation of martial law and the sending of troops to that point as the result of the sheriff's statement that he could not supply sufficient men to give protection to railroad employees who are now working.

There have been numerous instances during the past week where strikers or their sympathizers have been fined and sentenced to prison terms on the charge of violating injunctions issued to the carriers prohibiting interference with railroad operation. At Peoria, for instance, fines totalling $3,700 and various prison sentences were given to strikers who were convicted of violating injunctions issued to the railroads and similarly three former Chicago & Alton employees at Slater, Mo., were convicted on similar charges.

Strike Settled on Four Roads in East and South

The strike of the shopmen has been settled on the Seaboard Air Line, the Baltimore & Ohio, the Southern and the New York Central under the terms of the "Willard-Jewell" agreement. Settlement on the New York Central did not come until Tuesday, after preliminary negotiations had failed and until B. M. Jewell had been called from Chicago to reopen negotiations. Earlier conferences failed to reach an agreement, it was said, because of the attempted interjection by the unions' representatives of terms not outlined in the announced plan of settlement.

Settlement on the Southern

A conference between Vice-President Miller of the Southern Railway and the general chairmen of the six striking shop crafts held on September 16 adjourned without reaching an agreement for immediate termination of the strike but at another meeting on Monday agreements were signed both for the Southern and the Mobile & Ohio, on the basis of the Chicago agreement. The Southern was willing to settle on the basis of the Chicago agreement and presented this to the shop craft chairmen for their signature, but they at first declined to sign and were insisting on the dismissal of the new men employed during the strike.

Lehigh Valley Will Not Meet Representatives of Strikers

The Lehigh Valley has announced that it will not enter into negotiations with representatives of strikers and that present employees are now forming an association with which the company will co-operate in every way. The statement of President E. E. Loomis follows in part:

"Lehigh Valley is not a party to any agreement which may have been made in Chicago. The pledges we have made to our employees who continued working after the strike was called, as well as to the new men who have entered our service since that time, to say nothing of our policies to our supervisory offices, make it out of the question for us to accept any such plan as is proposed.

"The Lehigh Valley employees are now forming an association of their own, started of their own initiative, and we have promised to co-operate with them in every way. I do not see how a railroad can be expected to retain or build up a loyal organization on any other basis."

According to Mr. Loomis, the new organization will be known as the Association of Maintenance of Equipment Employees of the Lehigh Valley Railroad.

L. F. Loree, president of the Delaware & Hudson, reiterated on Wednesday his previously announced intention to refuse to confer with Mr. Jewell or his associates.

Violence in East and South

Dynamite outrages figured in the news dispatches during the past week from Albany, Ga., Jacksonville, Fla., and Cumberland, Md. At Cumberland, the Welton Tunnel bridge of the Western Maryland, over the Potomac river, was damaged about $500 at 4 o'clock in the morning of September 16. At Jacksonville on the 17th, a man was arrested charged with having attempted to destroy a trestle of

the Atlantic Coast Line at Baldwin, Fla. On the same day another man was arrested for having aided in the escape of men who had been engaged in another bridge outrage. In this connection, eight men are now in custody at Jacksonville. At Albany a car in a freight train was blown up at 10 o'clock in the evening of September 13. Frank Parkhouse, a police officer of the Delaware, Lackawanna & Western, died at Elmira, N. Y., on September 15 from pistol wounds; and a colored man, James Whitfield, a machinist, employed by the road, is held on a charge of murder. The report says that Whitfield stole whisky from a car.

Roads Sign Wage Contracts With Train and Engine Employees

Contracts covering wages and working conditions of train and engine service employees have been entered into by a number of Eastern roads. These contracts, in general, extend present wages and working conditions until September, 1923. Among the roads which have entered into these agreements with all or some of the classes mentioned above are the New York Central, the Pennsylvania and the Lehigh Valley. Conferences with representatives of the transportation brotherhoods and managements of a number of other roads are expected shortly. Settlements and negotiations looking toward settlements have been reported also from the West and South.

New York Central Contemplates Premiums for Freight Train Employees

In addition to entering into a wage contract with its trainmen and conductors, the New York Central has announced that it is studying a plan whereby premiums will be paid to these employees in freight service for prompt movement of freight trains. The statement given out by the company follows:

A. H. Smith, president of the New York Central Lines, in direct conference with representatives of conductors and trainmen of the entire system, has concluded an amicable agreement whereby all matters of controversy now pending before the United States Railroad Labor Board will be immediately withdrawn. The settlement arrived at will remain in effect until Sept. 30, 1923.

Under the terms of the agreement a joint committee representing the employees and the management will be appointed to consider the question of compensating employees in the freight train service on a basis of paying premiums for prompt movement over the roads, as against slow movement, which results in the imposition of costs in the form of penalty overtime.

This proposal is an innovation in railroad operation and it looks toward economy and increased efficiency in freight movement from which notably good results are expected mutually for the managements and employees.

This direct settlement between the New York Central management and the employees marks the return to the former successful practice of adjusting difference in personal negotiations across the conference table.

It is anticipated that further direct negotiations will result in a similar agreement with the engineers, firemen and switchmen.

It has been in a spirit of keen realization of the existing extraordinary conditions in this country that the New York Central Lines management has directed its efforts in this settlement and is now approaching also a settlement of the shopmen's controversy. The country is entering a period of business revival and the stoppage of coal mining for five months requires that this vast tonnage be moved in an unprecedented short time. The farmer has large crops to sell and it is of prime importance that they be prompt in reaching the markets.

W. G. Lee, president of the Brotherhood of Railroad Trainmen, in commenting upon the wage agreement with the New York Central, said:

In July, 1920, a wage increase was granted the conductors, engineers, firemen and trainmen of $1.04 a day. On July 1, 1921, the Railroad Labor Board reduced this increase 80 cents. At that time the carriers applied to the board for a further reduction, which would take away from the men the remaining 24 cents. This matter has never been heard by the board.

The action taken by the New York Central and the Pennsylvania today under the terms of the agreement means that they will at once withdraw this application from consideration by the Labor Board. As we are about to conclude similar agreements with all the roads of the country, the matter of a further wage cut will be entirely removed from action by this board. On the other hand we had a number of applications and requests before the board relative to working conditions and rules that were counter proposals to the wage cut request. These will be withdrawn. The letter withdrawing them is being written now.

Mr. Lee made another statement also to the effect that the railroads and unions were going back to the method of settling their differences by direct negotiation, rather than by interference from outside agencies. This statement was widely interpreted to signify that by direct negotiations for wage contracts the employees and the railroads were "ignoring" the Labor Board. The fact is that the Transportation Act provides for appeal to the Labor Board only when disagreements arise which cannot be settled by the parties thereto. The successful outcome of the negotiations between the train service unions and the railroads is in entire accord with the letter and obvious intent of the Transportation Act.

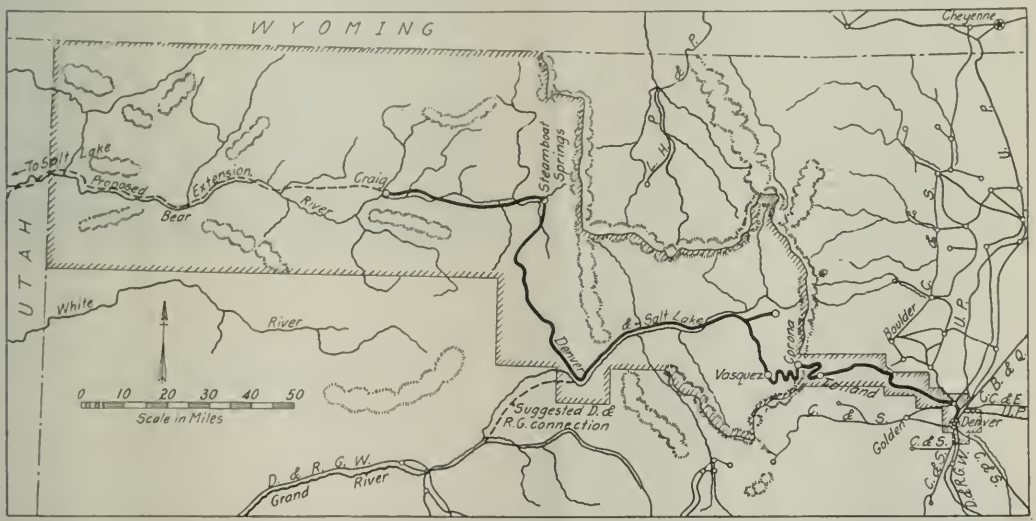
Colorado Prepares New Plans for Moffat Tunnel

Creation of an "Improvement District" to Underwrite Bond Issue Now Being Tested in Courts

ANOTHER CHAPTER is now being written in the story of the long projected Moffat tunnel in Colorado, this time through the novel procedure of enacting legislation for the creation of an "Improvement District" embracing that part of the state assumed to be benefited by the improved means of communication to be afforded by the construction of this tunnel. A commission has been appointed, as provided in the statute, and a test case is now being carried through the Colorado courts for the purpose of determining the constitutionality of the law as a preliminary to the marketing of bonds.

The project to build this tunnel had its inception in the construction of the Denver, Northwestern & Pacific under the leadership of D. G. Moffat with a view to affording rail transportation to the northwestern portion of Colorado and the eventual extension of the line to Salt Lake City. The line was chartered in 1902 and completed as far as Craig, Colo., in 1909. The chief obstacle in the construction of this line and what subsequently militated against its successful operation is the crossing of the continental divide about 65 miles west of Denver. A study of the physical conditions at the time of original location pointed to the need of a long tunnel at an elevation of about 9,100 ft. above sea level, but lack of funds led to the postponement of this feature of the project and the substitution of what was then considered a temporary line across the divide, having the summit at Corona at an elevation of about 11,500 ft., a length 23 miles greater than that of the tunnel line, four per cent grades and extremely heavy curvature. The physical characteristics of this summit location, coupled with adverse weather conditions, characterized by heavy snow storms at almost any season of the year, have made the operation of the line extremely difficult and as a consequence the property has never enjoyed earnings that enabled it to command sufficient credit for the construction of the tunnel. Moreover, it has been conceded that without an improvement of the line which can only be made in this way, its extension to Salt Lake City is commercially impractical.

Extensive surveys have been made from time to time to determine the best location for the tunnel to relieve the adverse operating conditions of the railroad via the temporary line over the Corona summit, and have resulted in the location of a bore 6.4 miles long, with its eastern portal on the South Boulder watershed near Newcomb, Colo., and with its west portal on the Fraser river watershed two miles from the station of Vasquez, Colo. These surveys have determined the selected tunnel site to be the only one that exists at as low an elevation as 9,100 ft. directly west of Denver and for many miles north or south of the Moffat road.



Outline of the Colorado "Improvement District" in Relation to the Location of the Denver & Salt Lake and Its Proposed Extension

The construction of this tunnel would eliminate all of the four per cent grades and the 16 deg. curves. It would save 2,500 ft. of rise and fall, some 8,000 deg. of curvature, and no portion of the road would be subject to the severe snow conditions.

Because the completion of an effective rail connection between Denver and Salt Lake City would place Denver on a direct transcontinental route and also afford convenient access to a large undeveloped portion of the state of Colorado, the people of the Colorado capital have long taken a special interest in the tunnel project. As a result of this, in 1913 the city voted to issue $3,000,000 in bonds to pay two-thirds of the cost of the tunnel to be constructed by the railroad which had been reorganized at that time as the Denver & Salt Lake. However, the following year this bond issue was declared unconstitutional, making it necessary to search for other means of financing this project. In 1920

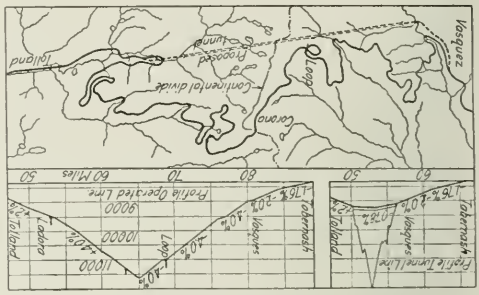
another plan was undertaken whereby the state as a whole was to underwrite the construction of this tunnel; to make the plan attractive to the people of other parts of the state, it included projects for the construction of two other tunnels through the continental divide, but this scheme also proved abortive.

The present plan, which was the result of a law passed in May, 1922, provides for an improvement district modeled after the common form of taxing bodies organized for public improvements, such as irrigation, drainage, sanitation, etc. The justification in this case is stated in Section I of the statute as follows:

"It is hereby declared that to provide for an avenue of communication by means of a transportation tunnel through the continental divide at or near James Peak will reduce the barrier which now separates the western portions of this state from commercial intercourse with the eastern portion thereof, will facilitate communication all seasons of the year, will promote the health, comfort, safety, convenience and welfare of the people of the state of Colorado, and will be of especial benefit to the property within the boundaries of the improvement district hereinafter created."

The boundaries of the district are indicated on the map and include a large portion of the northwestern part of the state, tapering down into a narrow zone on either side of the Denver & Salt Lake, but including all of the city of Denver. Under the law, this district is to be managed by a board of five members to be elected at intervals of two years by "all persons holding real estate within the district who are citizens of the state of Colorado."

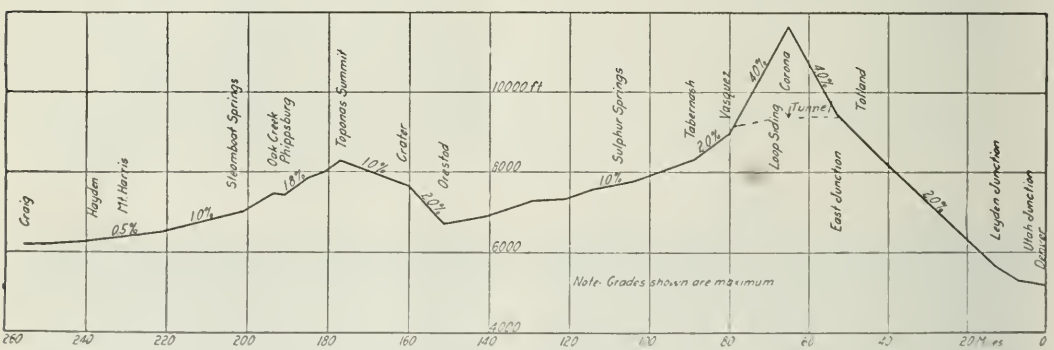
The law also provides specifically that the object of this organization is for the construction of a tunnel substantially in the location determined upon for the Moffat tunnel, but provides for no legal relationship to the Denver & Salt Lake other than to state that the approaches of the tunnel shall for levying assessments against the property in the Improvement District for any deficiencies in the funds available from the tunnel revenues. According to Section 19, the "tunnel, its approaches, equipment and appurtenances shall be owned perpetually by the Moffat Tunnel Improvement District, and shall remain forever a public improvement for public transportation and communication, and after the



Map and Profiles of the Present and Proposed Routes at the Location of the Proposed Tunnel

bonds which may be issued under the provisions of this act are fully paid, it shall then be maintained and operated as provided by law.

The board is also given the necessary power to provide for the employment of engineers, attorneys and other employees required in connection with the construction and operation of the tunnel, including the adoption of electric power, the construction of power plants, etc. W. G. Robinson is president of the Moffat Tunnel Commission and L. D. Blauvelt, former chief engineer of the Denver & Salt Lake, is chief engineer of the commission. Construction plans now under consideration imply no change in the location, grades or alinement of the tunnel from those determined upon when plans were prepared in 1914. It is expected that questions as to the constitutionality of the law will be definitely settled through a Colorado Supreme Court decision some time this fall and that with a favorable conclusion it will be possible to start active construction work in the early part of next spring.



Profile of the Operated Line

be constructed so that they may be used by standard-gage railroads. It also provides for the use of the tunnel for telephone and telegraph lines, for the transmission of water and the transportation of automobiles and other vehicles. The board is authorized to make leases or contracts with persons or corporations desiring to use the tunnel for periods not to exceed 99 years, with the specific proviso that no monopoly for the use of the tunnel or its approaches shall be granted to any one in connection with the granting of any such leases.

The estimated cost of the tunnel is indicated by the fact that the board is authorized to issue bonds to the limit of $6,720,000, bearing interest at the rate of six per cent. Revenues from the use of the tunnel are to be applied against the interest and amortization of the bonds with provision

THE ERIE has cancelled its contract with the Hornell Machinery Company which has been operating its shops at Hornell, N. Y., and at one or two other terminals.

St. Paul Adopts Water Treatment on Large Scale

An Installation of Fourteen Plants Results in an Economical Solution of Serious Operating Problem

By C. Herschel Koyl
Engineer Water Service, Chicago, Milwaukee & St. Paul

IN THE COUNTRY between Lake Michigan and the Rocky mountains, the Chicago, Milwaukee & St. Paul has more than 8,000 miles of steam-operated mileage; and because most of this is a country of less than average rainfall, with few streams and fewer lakes, the railroad is confronted with many water problems. The most difficult of these are east of the Missouri river in South Dakota, where the few streams run slowly through lands so rich in the soluble salts of

The Installation at Lennox, S. D., Typical of the Branch Line Plants

calcium and magnesium that the river waters are always hard, and the more the rainfall on adjoining lands and the higher the rivers, the harder the water.

Quality of Water Bad

In that part of the country, because of the scarcity of water at or near the surface, most railroad supplies are derived from drilled wells, which vary in depth from 50 ft. to 1,500 ft. and in which the character of the water varies as widely. In the ground are two layers of sandstone whose horizontal cracks furnish the supply, the water from the lower sandstone being very hard (80 to 90 grains per gallon) and carrying also 20 to 60 grains of sodium sulphate or chloride, while the water from the upper sandstone so closely resembles the lower water after softening that it is presumed to be the same water softened in the ground, that is, by zeolitic action. At distances from 100 to 200 miles east of the Missouri river, the soft water rises to ground level and is used by the railroad, but near the river the water must be pumped from a depth of 300 ft. Since this soft water is both scarce and difficult to pump, we drill to the lower sandstone and get hard water which usually rises to ground level.

The problem confronting the road in this locality was one of getting more of this water (as bad as it is) and of accomplishing something in the way of improving it. To enlarge the supply, sand-proof wells were drilled at Sanborn, Iowa, and at Lennox, Plankinton, Yankton, Scotland, Tyndall and Platte in South Dakota. These wells range from 50 ft. to 900 ft. in depth and were completed last year.

Our experience with these waters for locomotive boilers having been very expensive, in spite of all the boiler compound that could be used, this program of getting more water was supplemented by the establishing of water treating facilities at various points. Fourteen treating plants were installed in all, one each (on the main lines) at Sanborn and Rock Valley, Iowa, and at Canton, Lennox, Marion Junction, Bridgewater, Vermilion, Yankton, Scotland and Ethan, S. D.; and (on branch lines) at Tyndall, Avon and Platte, S. D. Treating plants having been installed previously at Sioux City, Iowa, and at Mitchell and Elk Point, S. D., this gave a total of 17 treating plants on the district, with a plant at every water station on the treated water district including about 400 miles of lines.

The Plants Are of Two Kinds

The new plants are continuous in operation and are of two types of construction. All of the main line plants with the exception of those at Lennox and Bridgewater are designed to treat 15,000 gal. of water per hour continuously and consist each of a hard water pump; a 40-minute reaction tank within which the mixture of hard water and the necessary chemicals (all fed in continuous streams) is slowly

An Exterior View of the Plant at Scotland, S. D.

stirred by mechanical means; a three-hour settling tank; a treated water pump which delivers to the track tank; and a chemical storage room; all strongly housed and heated.

The plant at Scotland, S. D., illustrated in the drawings, is typical of the main line plants. Everything is of wood except the machinery and pipe. The drilled well, 12-in. by 168-ft., under the pump room furnishes water to a double-stroke deep-well pump which delivers it through a six-inch pipe to the water wheel which does the stirring. The water, after passing the wheel, flows to the bottom of the mixing tank where, as it rises, it meets in succession the continuous streams of milk-of-lime, sodium carbonate and ferrous sulphate solutions.

Hydrated lime is used in water treating to extract the carbonic acid, which brings about the precipitation of the scale-making limestone carbonates down to three grains per gallon or less. Sodium carbonate (soda ash) is used to re-

place completely the scale-making limestone sulphates by non-scaling sodium sulphate. Ferrous sulphate (green sulphate of iron) is used for the treatment of the last three grains of calcium carbonate so that it will not clog the injector or branch-pipe; this, by converting half of the calcium carbonate into calcium sulphate.

In these plants, these reagents are all fed by regulated streams of water from the pipe which supplies the water wheel. The milk-of-lime box, holding 480 gal. of water, carries in suspension in each case enough hydrated lime for a five-hour's supply (at Scotland 400 lb.) and this is fed continuously by a small stream of water entering at the bottom of the lime box and overflowing near the top through a two-inch pipe to near the bottom of the mixing tank. The drawing shows a lime pump at the top of the lime box, but it is there only for emergencies.

Once every hour, an hour's supply of dry hydrated lime is added to the supply in the box. This method produces an hourly variation in the rate of lime feeding, but the stirring in the mixing tank is so thorough and so prolonged (45 min.) that only a slight variation is found in the water as it overflows from the top of the mixing tank to the bottom of the settling tank.

The dry soda ash rests on a shelf in the soda box and is fed to the mixing tank by a spray. The supply on the shelf is replenished hourly. The sulphate of iron is fed in solution from its box by a small stream which enters at the bottom and overflows near the top.

The best method of feeding any reagent to a treating plant is determined principally by its solubility in water and in all cases the thinner the solution or mixture the better. The arrangement of feeding devices described above is not theoretically perfect, but has been adopted as the result of experience in handling railroad plants which are frequently miles from a repair shop and are seldom operated by skilled mechanics. The uniformity of results is the best proof of the wisdom of the design and method.

The water, with its chemical reactions practically complete and its precipitate ready to settle, arrives at the bottom of the settling tank and there commences to leave its precipitate as the water slowly rises to overflow through the perforated collecting pipe to the treated water pump in the pump room, whence it is sent to the track tank. The two pumps in the pump room are operated by a 10-hp. oil engine, each pump having a clutch on the engine shaft.
