Railway Age

SEVENTY-THIRD QUARTO VOLUME

From July 1, 1922, to December 31, 1922

Published Every Saturday and Daily Eight Times in June by the
SIMMONS BOARDMAN PUBLISHING COMPANY,
Woolworth Building, New York.

Edward A. Simmons, *President*
L. B. Sherman, *Vice-President.* Henry Lee, *Vice-President & Treas.*
Samuel O. Dunn, *Vice-President.* C. R. Mills, *Vice-President.*
Roy V. Wright, *Secretary.*

Chicago: Transportation Bldg. Cleveland: 4300 Euclid Ave.
Washington: Home Life Bldg. Cincinnati: First National Bank Bldg.
New Orleans: Maison Blanche Annex
London, England: 34, Victoria St., Westminster, S. W. 1

(Established in April, 1856)

Telegraph-Signal Pole Lines

With the installation of automatic block signals in prospect on several roads the question whether a separate pole line should be installed to carry the line circuits deserves serious consideration. For alternating current signaling using approximately 4,400-volt feeding circuits a separate pole line is essential, but with low-voltage direct current circuits another cross-arm has simply been added to the existing telegraph lead in the majority of installations made in the past. Serious accidents are said to have been caused by crosses between telegraph and signal wires carried on the same pole line. Again, in case the pole lines are damaged by wind or sleet storms, considerable confusion and delay often result because of a lack of co-operation between employees maintaining the separate signal and telegraph lines. Also adding another cross-arm for signal wires to an already overloaded telegraph lead is poor economy, as has been found by some roads in the past. A study of these factors on several roads has resulted in the decision to build a separate pole line. The local conditions in each case should be carefully studied before determining the practice to be followed.

Electric Rivet Cutting

Cutting out rivets with the gas flame is a practice quite common in railroad shops. The practice of using the electric arc for this purpose is comparatively new. Numerous objections have been raised from time to time to the use of the electric arc for this purpose, but, one by one they have been disposed of and there are now several railroads using the process. Damage to the plate is offered as an objection but anyone who has watched the work has noticed that the arc sticks to the rivet after it is started and does not wander around on the plate as might be expected even though the rivet is burned completely out of the hole. Mechanical and inductive "kick" have been practically eliminated by improvements of welding equipment. Comparatively large amounts of power are, of course, required which in turn means heavy welding leads and bulky cutting electrodes. On the Chesapeake & Ohio the welding machine is connected to a bus to which are connected in turn a number of welding leads. The cutting electrode only is carried about and the dragging of heavy leads is eliminated. As yet no way has been found to cut down the size of the electrodes so they are difficult to use in confined spaces, but there is apparently a broad field to which this practice can be applied to advantage.

A Word for —and to— Purchasing Agents

Railroad purchasing agents have come in for considerable criticism from time to time on the ground that purchases are based on price rather than quality. During the past two years other industries than the railroads have been obliged to disregard ultimate costs in meeting their immediate necessities with the limited funds available. Not all manufacturers are agreed that railroads make price the sole factor governing the placing of orders. Apparently certain roads are greater offenders than others in this regard. In extreme cases it seems that everything is left to the purchasing agents who, if not technical men, know little about the tools, equipment or material purchased, except the price. Several manufacturers have expressed the opinion that the tendency to buy on price has been decreasing in the past few years and especially since the war. This has probably been brought about by the introduction of well-trained technical men into the purchasing departments, enabling more clear-cut, standard specifications to be drawn. In a specified case one manufacturer writes that "the purchasing methods of railroads have been changed considerably in the last few years, indicating that more modern, businesslike methods are being employed by some roads." However that may be, there is still room for improvement, especially in the purchase of shop machinery and labor-saving equipment. So few orders are placed for this equipment, compared to the enormous number of other orders, and the relative amounts of money involved are so small that there is perhaps a natural tendency for purchasing agents to consider shop equipment and tools relatively unimportant. They should not forget that money spent for shop machinery and equipment is in the nature of an investment rather than a routine expense. Considered in this light, a small saving in the first cost of a tool which may be used anywhere from 10 to 20 years is immaterial compared to its durability, convenience of operation and productive capacity.

French Railroads in 1921

The article by Marcel Peschaud regarding the conditions and results of operation of the French railways in the year 1921 shows that while these railways have not recovered from the effects of the war, they are recovering with remarkable rapidity. The five large lines which are operated by private companies had an aggregate operating deficit in 1921 which, at the present rate of exchange, amounted to about $38,000,000 in American money. Including fixed charges their deficit was about $160,000,000. These figures are, however, a great improvement over those of 1920, when the operating deficit was $130,000,000, and the total deficit $260,000,000. The reduction in the deficit was due both to advances in rates and reductions of operating expenses. In spite of these changes, however, expenses were still 430 per cent more than before the war, while earnings were only 195 per cent more. Each of the large private railways now has more locomotives and freight cars than before the war in 1913, the total increase in number of locomotives being 32 per cent and in freight cars 22 per cent. Freight business on the other hand, was less than in 1913. Nothing is said about the change in number of passenger cars since 1913, but passenger business was 12 per cent larger than in 1913, and those who have traveled recently in France know that passenger equipment is inadequate and trains generally are crowded. The number of employees was reduced nine per cent as compared with 1920, but was still 28 per cent larger than in 1913, "because," as M. Peschaud says, "the lines continued to suffer under the burdensome effects of the eight hour day without having been able to obtain, as they had hoped, a revision of the truly unreasonable conditions of its application." The American reader will, we believe, find M. Peschaud's article

very interesting because of the opportunity it gives both to compare and contrast the railway developments that have occurred in France and in the United States within recent years. Among other things the American reader probably will grasp the significance of M. Peschaud's statement that the deficit of the State Railway in 1921 was, in American money, about $67,500,000, or over one-half as large as the combined deficit of the five large private railways. The State Railway is not comparatively a large system, but like most government-managed railways it shows remarkable ability in producing deficits. There is much talk in France about the desirability of selling or leasing it to a private company for operation. This would work a hardship on the multitude of useless employees who would lose their jobs, but would give quite a substantial relief to the French taxpayer.

A Tribute to the Safety Movement

The results of the safety movement among the railways were emphasized in a striking manner at the recent triennial convention of the Brotherhood of Railroad Trainmen in Toronto, when this organization voted to increase the amount of insurance for members from $2,000 to $2,700 while retaining the same rate as heretofore. The amount of insurance was thus increased 35 per cent without any additional cost. No finer tribute could be paid to the safety movement than this action on the part of the employees themselves, evidencing as it does the decrease in the number of casualties to their members. The reasons for this decrease are evident; modern equipment embodying accident preventive features, better roadbeds, corps of efficient safety supervisors and instructors and a staff of employees, who are co-operating in putting the "safety" principles into effect. The distressing feature of the safety movement at the present time is the increase in the number of grade crossing accidents at the time when the number of casualties to employees is being reduced. Here the railways are facing a different problem, for instead of conducting an educational campaign among groups of employees under direct control, it is necessary to reach large numbers of scattered individuals. Furthermore it is difficult to penalize the public for its carelessness, although it is interesting to note that the Southern Pacific is suing careless drivers who crash into its trains or otherwise damage its property, while the Northern Pacific and other roads have installed train "checkers" at important grade crossings to detect those guilty of "chance taking," who later receive written advice regarding the importance of protecting their own lives.

Electric Heat in Railroad Shops

Electric heat cannot be used economically for general heating purposes, such as the heating of buildings, but in spite of this fact electric heating devices in various forms are finding a place in railroad shops. The term, "electric heating devices," is apt to suggest to the casual reader such things as toasters, flat irons, grills and percolators, but in industry it now applies to such apparatus as paint and varnish drying ovens, glue pots, soldering iron furnaces, sherardizing drums, core baking ovens for foundry work, ovens or furnaces for shrinking pits, ovens for drying and baking armature and field coils; melting pots for lead, tin and babbitt; air heaters for cabs, vats for impregnating woods; furnaces for annealing brass, steel and malleable iron parts; furnaces for heat treating steel forgings, for case hardening, for tempering tools, etc. Rivet heaters and electric welders may also be properly classified as electric heating devices. "Electric heating of houses would be a gross waste rather than a conservation of fuel resources and so prohibitive in cost to users as to be beyond all consideration." This statement was made in a report on electric cooking and heating by consulting engineer Wyer, an electrical expert. It is generally considered to be correct and can be used properly as a guide, but it does not mean that such devices as listed above cannot be used to effect large economies. In many cases fuel burning devices are less efficient than those utilizing electric heat. In other cases much can be saved because the material to be heated will not be oxidized in the electric furnace or because the electric heat can be controlled automatically and held within limits of a few degrees. Many new electric heating devices have been perfected and anyone who happens to be in a position to use such equipment may profit by studying their advantages.

Which Do Railway Employees Prefer?

MOST OF THE coal mines of the country have been shut down and most of their employees have been out of work for three months because the managements and employees have been unable to agree on any method for settling a controversy regarding wages. Recently the importation of non-union workers by the operators and wholesale murder by the strikers have been adopted as means of settlement in one part of southern Illinois.

There is a wage controversy going on between the railways and a large number of their employees. The situation in the railroad industry is different from that in the coal mining industry in one very important respect. The government has established for the railroad industry a board of arbitration—the Railroad Labor Board—for settling controversies which may arise regarding working conditions and wages.

The railway employees, as well as the railways and the public, are represented on this Board. In 1920 it awarded to the employees the largest advance in wages ever made in any industry in history. The railways accepted the award. A strike and prolonged and extensive unemployment were avoided. Since then the same Board has awarded reductions in wages which, if accepted by the employees, would leave most of them with about the same money wages, but with wages having larger purchasing power, as those they had before the large advance was granted in 1920. The existence of the Labor Board and the policy it has followed have resulted in railway employees being paid higher wages than those received by most men doing similar work in other industries. After the reductions awarded, which are to go into effect today (July 1), the employees affected will still, according to the findings of the Board, be paid higher wages than those of men doing similar work in other industries of the country.

If the employees peaceably accept the awards they will have steady employment at good wages, whether compared with those they have received in the past or with those received by other workers. If they strike, many of them will go through a period of unemployment when, like the coal miners, they will have no wages; and they will disregard the decision of the Railroad Labor Board which heretofore, if it has favored either side, has favored them and not the railways.

The Transportation Act relies upon public opinion to enforce the awards of the Labor Board. Public opinion demands that the employees as well as the railways shall accept the awards made by it when made in the exercise of its legal authority. The awards to which the employees object were so made. If the employees strike they will be defying both

the Labor Board and public opinion. They will show that public opinion is not sufficient to secure conformity to the Board's awards by the employees. It is most improbable that after striking they would get higher wages than those awarded by the Board. It is quite possible, however, that they would destroy the whole plan of peaceably settling labor controversies in the railroad industry which the government has established.

Which would railway employees rather have—a situation like that now existing in the coal mining industry or one like that now existing in the railroad industry? Apparently, their leaders, while perfectly willing to accept all decisions made by the Board which are in their favor, would rather destroy it than accept any decisions it may make which are adverse to their claims. Will the employees support their leaders in trying to carry out such an unfair policy? Will they support their leaders by engaging in a strike which almost certainly would not result in their getting higher wages than those awarded by the Board or which economic conditions would force the railways to pay them, but which might result in the destruction of the plan of settling labor controversies which, on the whole, has thus far worked to the advantage of the employees?

We shall soon know whether railway employees prefer such anarchic conditions as now prevail in the coal mining industry, or the orderly and, from their standpoint at least, beneficial procedure in respect to labor controversies which has now prevailed in the railroad industry for more than two years.

Overloading the Division Engineer

ONE OF THE MOST FRUITFUL topics for discussion among maintenance of way officers is the maximum length of sub-division which should be assigned to a roadmaster or track supervisor. This question could be raised with equal appropriateness with reference to the proper length of the division engineer's territory. It is hard to reconcile the discrepancies in the lengths of territories or in the number of miles of line assigned to division engineers on different railways. Roads of more or less similar physical characteristics and traffic vary in their practices in this respect almost as widely as roads totally unlike. This may arise because of the fact that the present division limits are the heritage of organizations developed many years ago when there was a smaller mileage of tracks per mile of line and fewer other complicating factors.

In general the division engineer is in effect an assistant superintendent in charge of maintenance of way and as such his territory coincides with that of the division superintendent. A few months ago there was a distinct tendency, particularly among the western roads, to reduce the number of divisions by giving each superintendent more mileage. This in turn has added to the mileage of tracks under the supervision of the division engineer. In some cases his problem has been complicated still further by the fact that his jurisdiction has been extended to include two or more divisions.

The division engineer has to exercise detailed supervision to secure the best results. His forces are scattered in small units over the entire territory and do not come to a common point at any time in the regular course of their work. To exercise such supervision it is necessary for the supervisory maintenance of way officers to visit the gangs on the line frequently in order to insure that they are performing their work economically. It is impossible for the division engineer to do this over a long division of multiple track line handling heavy traffic. It is practicable, of course, to handle a greater mileage of single track lines with medium to light traffic than of busy multiple tracks and divisions of 500 miles or even more are not impracticable in most such cases. But a dense traffic multiple track division of 300 miles of line may aggregate as much as 800 miles or more of main tracks in addition to terminals. Such tracks must of necessity be maintained in condition to handle comparatively fast and dense traffic, and the forces required are increased accordingly. The magnitude of maintenance of way expenditures today is so great that it would seem desirable that the officers of the maintenance of way and operating departments study their organizations at frequent intervals in the light of the conditions which exist in order to keep them abreast of the developments of the road itself. It is not unlikely that such an investigation would develop the fact that there are divisions which should be lengthened—and others that should be shortened to secure the best results.

Coal, and the Railroad Situation

IT IS HIGH TIME that the effects that may be produced by the coal strike on the transportation situation and general business were given more consideration. There is very great danger that unless something is done soon to increase the production and transportation of coal there will be thrown upon the railways after the strike is ended a burden greater than they can bear. The public should be warned now of conditions which apparently are going to develop on the railroads unless the amount of coal given to them to handle speedily is largely increased.

The *Railway Age* in an editorial in its last issue gave some facts which indicate that a serious congestion of traffic and shortage of cars may come this fall and winter. Some persons and publications have expressed the opinion that we are unduly alarmed. Let us consider the situation in the light of the latest available facts.

In the year 1920 the railways handled the largest traffic in their history. Excepting coal, they recently have been handling more traffic than they did in the corresponding part of the year 1920. In the week ended June 11, 1920, the number of cars loaded with all kinds of freight was 930,976. Of this number 191,494 cars were loaded with coal, leaving 739,472 that were loaded with other freight. In the week ended June 10, 1922, the number of cars loaded with all kinds of freight was 846,002. Of this number only 94,824 cars were loaded with coal, leaving a total of 751,178 cars that were loaded with other kinds of freight. The number of cars loaded with freight other than coal was 11,706 more than in the corresponding week of 1920.

Traffic always increases during the late summer and early fall months. This is especially true of coal traffic. The average number of car loads of coal handled by the railways in the weeks from September 25 to December 18, 1920, was 217,200. This was 112,191 more than the number of cars of coal shipped in the week ended June 10, 1922. If the railways in the week ended June 10, 1922, had handled as much coal as the average amount handled weekly in the fall and winter months of 1920, their total car loadings would have been 958,193. The largest traffic they ever handled in any week was in that ending October 15, 1920, and was 1,018,539 car loads. Of this 226,671 car loads were coal, leaving 791,868 car loads of other traffic. If this figure be compared with that for the amount of traffic other than coal handled in the week ended June 10, 1922, it will be found that in this latter week the amount of traffic other than coal handled was *only five per cent less than the amount of traffic other than coal handled in the week ended October 15, 1920, the largest week's business in history.*

Does anybody doubt that traffic other than coal is going to increase between now and October? In 1920, between the

week ended June 11 and the week ended October 15, traffic other than coal increased 52,396 car loads, or over seven per cent. At that time the country was entering a period of violent business readjustment and depression, and the increase in traffic between June and October was not normally large. This year the country apparently is in a period of increasing business activity. This indicates that the increase in traffic other than coal between now and fall will be more than normal.

The amount of coal produced and transported during the first half of 1921 was about 60 million tons less than the average amount produced and transported in the first half of the last five years. This plainly indicates that after the strike ends the railways will be called upon not only to deal with at least a normal increase of other traffic, but to handle an abnormal coal business. All these facts seem to make it reasonably sure that after the coal strike is settled the demand for railroad transportation will be greater than ever before.

One of the most ominous features of the situation is that up to the date of the latest available report the amount of coal which had been carried by the railways to the Lake Erie ports and thence by water to the head of the lakes to supply the needs of the northwest was only about three million tons. At this time last year the amount of coal that had been dumped at the head of the lakes exceeded eight million tons. If the northwest is to have sufficient fuel to carry it through the winter there must be dumped at the head of the lakes during the season of navigation from 25 to 30 million tons of coal, and already the dumpings at the head of the lakes are five million tons below normal.

The situation developing demands speedy and constructive action. The production of coal must soon be increased. The shipments of all other freight which can be accelerated must be accelerated. The railways must get ready as rapidly as practicable to deal with a record-breaking business. The shipping public must prepare to co-operate with the railways by loading cars heavier and loading and unloading them as rapidly as practicable.

Whatever the cause or causes of traffic congestions and car shortages, it always has been in the past the custom for some newspapers and regulating bodies and many people to denounce and fume at the railways for such conditions. The railways are in no way responsible for the coal strike or its probable disagreeable and costly aftermath, and in this instance co-operation with them of all who can help solve the problem which will be presented should be substituted for the usual outcry against them.

New Books

The Engineering Index, 1921. 584 pages, 7 in. by 9½ in., bound in cloth. *Published by The American Society of Mechanical Engineers, 29 West Thirty-ninth Street, New York.*

The Engineering Index has for years been considered an absolutely essential reference book by those who wish to keep in touch with current engineering literature. The first volume of the Index appeared in 1892 and the book has been issued annually since 1906. The current volume contains over 14,000 items referring to articles which appeared in some 600 engineering and other technical publications. In the preparation of the Index the staff of the Society reviewed more than 1,200 periodicals, reports and other publications regularly received during the year by the Engineering Societies' Library, New York. These publications were printed in ten different languages and, as a result, the book is the most complete reference to scientific and engineering current literature in the world. The railway field is, if anything, even more completely covered than in former editions.

Letters to the Editor

[*The* RAILWAY AGE *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about* 250 *words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.*]

Talk Money to Employees

CHICAGO.

TO THE EDITOR:

At a meeting of the Western Railway Club in Chicago a short time ago a paper pertaining to the education of railway employees was read by C. G. Juneau of the Chicago, Milwaukee & St. Paul. By a series of monthly bulletins, circular letters of instruction, and through meetings of employees this railroad apparently has accomplished wonderful results and the mechanical department officers are to be complimented not only as to their progress, but as to their sincerity in fitting their employees for better jobs, thereby helping the individual and by so doing helping the railroad. The writer has absolutely no criticism to make on Mr. Juneau's paper. The following is merely the result of thinking over the many good points brought out.

After considerable railroad service in the mechanical department, plus three years' service with a manufacturing corporation, I simply draw a comparison of the educational features in both lines and sum it up by saying that the railroads overlook in their endeavors to enlighten their employees the one big word "money."

In the manufacturing game we talk, eat and sleep money, not in a miserly fashion, but as a matter of pure business principle. Our first questions before buying a machine, for example, are: What is the cost? What will we make out of it? Can we afford it? Can we not resort to some other method? What is the other concern doing? Is it the best type of machine for the purpose? Have we enough work to keep it going? Will it take a skilled operator?

Everyone from the set-up man to the general manager is given an opportunity to voice an opinion and if the purchase is made everyone concerned is aware of the amount involved, the output expected, etc. Further, the general manager does not as an individual drop out in the plant, size up a situation, return to the office, order a machine, get it, and say to the superintendent "use it." To the contrary his superintendent reports, "The machine shop foreman wants an automatic machine and I approve his request," the committee is convened and the above questions are raised. The point is this: you can get results out of a machine when the man who expresses a desire for one gets it. If you force a machine on him your results are negligible.

When we run into a lot of scrap or defective parts we put the losses into money; we trace it to the individual responsible and we say to him, "Bill, you made $8.00 yesterday but you only earned $4.00. One half of your work was spoiled." We don't tell him he spoiled so many pieces; we put the figures in dollars and cents. On the other hand, if a day worker has given us an extraordinary amount of good work we place this to his credit and tell him in money how much he has saved.

We talk money to the individual employee in many ways. We say, "Bill, while you are a human being and we will treat you as such, nevertheless from a business standpoint we look on you as an investment. You are earning $2,400 a year. You represent to us an annual expenditure of $2,400 just the same as that milling machine you run. We

expect a ten per cent return from these two investments. When you and the machine earn this return, our company will prosper and so will you. If you or the machine don't function properly, we all lose. And as we most certainly expect to take care of any depreciation or break-downs in our machine investment, we most certainly will take care of you."

We get all of our lead men together in meetings and reflect all of their operations, losses, earnings, etc., by money figures, not pounds or pieces. We draw a circle (representing a dollar) on the blackboard and to reflect operating costs we portion this off in segments and show that for each dollar spent, 50 cents went for labor, 30 cents for material, 8 cents for overhead, etc., until the entire dollar is disposed of. We also show them in the same way the net results of the sale of a dollar's worth of goods. So much for making the article, so much for sales expense, and so on, taking in taxation, insurance, and last, but not least, the stockholders' share. Each employee is posted as to the value of the article he works on so that he will understand the monetary loss in the event it is spoiled.

Now, realizing that dollars and cents are seldom, if ever, mentioned to the railroad employees holding positions below that of supervisors, if I were in charge these are some of the things I would do:

Give the apprentices to understand that on everything they work they are using someone's money and to loaf or spoil through carelessness is nothing short of obtaining money under false pretenses. As the boys of today are our men of tomorrow, I would lay particular stress on this feature.

See that so far as is possible money values are placed on all commodities used. As it is now a foreman orders a piece of material, the requisition is priced by a clerk of the store department, sent to the shop accountant and distributed to the proper account. At the end of the month, the shop superintendent gets one figure showing what his bill for locomotive material was. He may know individual costs but the point is the man who is machining or applying the piece does not. Isn't it true that the average railroader thinks "This company is worth $250,000,000.00; what does a piece of material thrown away mean to them? I'll throw this away and get a new piece instead of repairing it." Now, if this man knew that the piece he was discarding represented one dollar instead of just a piece of material, he naturally would hesitate.

I would start a propaganda throughout my railroad so that every employee would think "How would I do this or what would I do if this was my own money I was spending instead of the company's?" If you can make the man feel that he is reaching right down in his jeans to pay for the work he is doing, you can rest assured he will be careful.

I wouldn't go to a car inspector and say, "Bill, number 53 had a derailment north of here last night. Defective drawbar dropped down; be careful." I would say, "Bill, by your carelessness number 53 was derailed; drawbar dropped down. Damage to equipment was $6,500 which is more money than you could earn in four or five years. You ought to work for this company for five years for nothing." And believe me he would sit up and take notice.

I would have the valuation department see that the man in charge of any equipment or property was cognizant of its value so he could go to the individual and inform him of the responsibility resting on him in handling a machine representing a given amount of the company's money.

I would tell my engine crews that it cost them so many dollars for coal for handling a passenger train over the division whereas the crew that handled the same train yesterday operated ten dollars cheaper. I would not mention the saving or waste in pounds; make it money.

I would see that my train dispatchers were informed of money losses by mishandling trains over their territory.

I would get my auditing department lined up to check joint facilities by first getting a true value of these facilities and working it down through the operation end so that I would not be paying out or investing money for the benefit of some other company.

I would say to my traffic department "The XYZ Railroad got that freight business out of Bloomington. You have lost so many dollars worth of business by failing to land it."

I would see that sufficient analysis was made of the work being performed by my supervisors to know that high salaried men were not being tied up with responsibilities that could be handled by cheaper men, so that the supervisor could devote more time to a study of economies. How many general foremen and foremen in the mechanical department are principally material chasers, so busy they have no opportunity for time study which more than anything else means money?

In every instance where I learned that another railroad was performing a certain operation more economically than I was, I would send my representatives over to find out why. And so on, always talking money.

Your employees should know more about actual costs and you can rest easy that their knowledge will be beneficial to you. I recommend that all railroads follow the lead of the Chicago, Milwaukee & St. Paul and emphasize particularly MONEY.

GRANT GIBSON.

The Transportation Act of 1920

TO THE EDITOR:

We have heard much criticism of the Transportation Act of 1920 from the public, the employee, managements and shippers. Each group condemns it on account of certain provisions, but to criticize this legislation intelligently, the act must be considered as a whole. Furthermore, this legislation must be considered from the standpoint of the transportation needs of the country as a whole, and not any particular state, community or other designated territory.

In order to grasp this viewpoint, we will illustrate with the grain grown in Kansas. As a matter of fairness to the Kansan, it would be asking too much to burden him with a transportation bill necessary to provide a return on sufficient railroad trackage and equipment to move the entire output of grain of that state, even to the border of his own state, for the reason that the amount produced is greatly in excess of his needs. The man in New York is as vitally interested in an adequate transportation system for Kansas as the Kansas man himself; likewise, this same principle is applicable to the products of the east, the north and the south. Therefore, as a matter of economy and self-preservation, the transportation bill of the country as a whole should be paid by the country as a whole and the transportation problem can only be handled fairly and economically as a national one.

There are four groups vitally interested in the transportation problem of our country; namely, the public, the employee, the shipper and the investor. Public opinion ranks them in the importance named, notwithstanding how unfair or unfortunate such classification may seem to an individual class. The interests of these four groups are shown in the order named which in itself shows the wisdom of public opinion's classification.

First—The public's interest is a transportation system adequate to take care of the needs of the country, at a reasonable cost for service, without interruption.

Second—The employee may have selfish interests, but his interests are subordinated to those of the public; therefore, he is entitled to a comparative fair rate of compensation, not hourly or daily, but annually under proper working conditions.

Third—The shipper may have selfish interests, but, his interests being subordinated to that of both public and employee, he is entitled to dependable service without interruption, rates on a parity with his competitors (both individual and community) and as low as will provide the necessary capital to create the transportation system demanded by the first interest and compensate the second interest.

Fourth—The investor, like the employee, may have selfish interests, but such interest is subordinated to that of the public and employee, and shipper, and under the present school of public thought, he will be permitted to make only a nominal return on his investment, the permanency of which will compensate him for the small return.

Will the Transportation Act properly administered provide such conditions essential to public welfare?

The Public.—The first interest of the public, "A transportation system ample to take care of the needs of the country" is provided by empowering the Interstate Commerce Commission to name rates that will permit a fair return on the investment in property used in transportation service (not guarantee as many ill-advised people have been led to believe). This provision, it must be understood, does not mention stocks, bonds or any other securities outstanding, but permits a fair return (the amount of which constitutes a fair return to be determined by the Interstate Commerce Commission from time to time.). The most recent decision of the commission reduces this rate from 6 per cent to 5¾ per cent on the value of the physical property employed in the system of transportation. Furthermore, the value is to be determined by the Interstate Commerce Commission.

Physical units of property constitute right-of-way, ties, rails, ballast, bridges, locomotives, cars, etc. The term does not include good will, which is a valuable asset.

The second interest of the public—reasonable cost of service—is provided for: in part, by the Railroad Labor Board, a creature of the public which names the rate of pay for labor costing 50 per cent of the total; in part, by the Interstate Commerce Commission's power to determine the maximum return on investment; and the general market for supplies which railroads use.

The Employee.—The selfish interests of the employee are guarded by the personnel of the Railroad Labor Board by a two-thirds of its members having no personal interest in the rate of pay; likewise, justice to the employee is guaranteed Board through another two-thirds of its members.

The Shipper.—His first interest, "dependable service without interruption" is guaranteed by the Interstate Commerce Commission's power to provide rates ample to secure capital to provide the transportation system and the power of the Labor Board to name rates of pay that will attract employees. It may be argued that the latter has not power to enforce its decisions and much criticism has been directed at this feature. However, this provision is one of its strongest and under a democratic form of government could not and should not be otherwise. This provision will be more rigidly adhered to by both managements and organizations of labor than any provision of the law and each decision of the Board will be more strictly obeyed than the preceding one.

His second interest, "rates on a parity with competitors," he has always enjoyed except in isolated cases and the Interstate Commerce Commission with its new power of naming minimum as well as maximum rates can prevent unduly low rates being named on specific commodities or in favor of communities and individuals.

His third interest, "as low rates as will provide capital to create a transportation system adequate for his needs." This interest is provided by permitting railroads to earn a fair return on investment in railway property, and the provision that the government is authorized to loan money at six per cent from its revolving fund, which will prevent railroads from being compelled to pay a higher rate in the future; furthermore, lower transportation rates will obtain through the increased traffic of the country and the provision restricting railroad building to projects authorized by the Interstate Commerce Commission restrains speculative enterprises and thus relieves the transportation bill of the country of the burden of supporting non-productive properties.

The Investor.—The interest of the investor, "his return on his investment," is not guaranteed as some would lead us to believe, but he is assured by the law that his government will permit rates for railroad service that should yield a fair return (5¾ per cent at present) on the value of the railroad property investment of the country. If he has been unfortunate and purchased securities representing which there is no physical units, he must take his loss; likewise, if he has purchased securities representing excess physical units, he is entitled to any gain therefrom.

It should not be assumed in the future all railroads will earn a 5¾ per cent rate of return and thereby establish a 5¾ per cent market for securities but on the other hand, railroad credit having been established by law on a sound base, will eventually enable railroads to borrow money at the lowest market rate.

This act also provides that if any railroad earns an income in excess of six per cent such excess amount is prorated equally between the government and the railroad. The government's proportion of excess earnings so accumulated is to be used to loan to railroads at six per cent for additional facilities. The railroad's proportion so accumulated must be set aside in a reserve fund until such time as such reserve fund equals five per cent of its physical property value. After such fund has been accumulated the railroad is permitted to distribute excess earnings.

NOTE.—The arbitrary rate of six per cent named by the act for the use of the fund accumulated from excess earnings should be amended to permit the commission to loan this fund at a fair rate of interest to be determined by the commission. Otherwise, the fund accumulated under this provision will lie dormant in the treasury as undoubtedly in the future only weak roads with poor credit will be compelled to pay six per cent for funds. Thus a fund created from excess charges for transportation will not be available for the enlargement of facilities at a nominal cost.

The two latter provisions of the act will react to the benefit of the public owing to the powers granted the commission to lower the rate of return permissible on railroad property from time to time in keeping with the market price of funds. Thus by the different features of the act dovetailing with each other, we furnish the public with an economical, adequate transportation system, through restricted building and economical financing, with an employee fairly compensated under proper working conditions, with a shipper contented with comparatively the cheapest rate ever enjoyed with uninterrupted service, and an investor contented with a nominal return, the permanency of which is assured by the growth of the country.

The additional benefits to be derived from the operation of the Transportation Act will be the reduction in operating expenses by the increase in capital expenditures. In other words, prior to the Transportation Act of 1920, there was no incentive for the making of capital expenditures, that is, the public was a great deal more watchful over the amount expended for interest and dividends on capital than for any other purpose; therefore, every railroad employee and officer was charging as much of any replacement to expenses as possible—owing to necessity, capital not being available. Now that a plan has been provided that will attract the necessary capital for increased facilities, the incentive has been restored to capitalize such betterments. Thus operating expenses will be relieved of the burden of many capital expenditures heretofore carried through necessity.

Auditor, Missouri & Illinois Bridge & Belt R. R.

One [illegible] River Bridges

Aurora Track Elevation Expedites Traffic

Burlington's Grade Separation Project Is Supplemented by a Plan for Increasing Facilities

THE ELIMINATION of grade crossings between the streets of Aurora, Ill., and the tracks of the Chicago, Burlington & Quincy is only one of a number of improvements to be effected by the completion of track elevation work now in progress in that city. The grade and alinement will be improved, additional trackage will be provided, new local freight and passenger facilities will be constructed and additional space will be afforded for the further development of the extensive locomotive and car repair facilities maintained by the Burlington in that city. These physical changes, coupled with a new operating arrangement, will greatly expedite the movement of traffic through what has been a neck-in-the-bottle on the main trunk line of the Burlington out of Chicago.

Looking North East from Spring Street, Partly Completed Embankment on the Right

Aurora is located 37 miles from Chicago where the three-track main line of the Burlington divides into a double track line to Galesburg and the west and southwest, a single track line to Savanna, Ill., and the north, and a single track line known as the Streator branch. While Aurora is the terminal point only for trains of the Streator branch, a considerable amount of switching is done here in connection with the transfer or interchange with the Elgin, Joliet & Eastern at Eola, three miles to the east and to fill out trains destined for Chicago. Being a manufacturing city of about 40,000 population, it originates a considerable amount of traffic which, together with the "company" freight incidental to the operation of the car and locomotive shops and a storehouse, also calls for an extensive switching movement. About 50 passenger trains are operated through the station each day, a portion of which must be afforded terminal facilities since Aurora is the terminus for a considerable part of the suburban passenger service maintained by the Burlington.

Physical conditions have seriously hampered the handling of the Burlington's business through Aurora. The city is located on the banks of the Fox river so that access to it is obtained only by a descent into the river valley. This has entailed appreciable grades on the railroad, particularly to the east on the line to Chicago and to the west on the Savanna line. It has also resulted in a rather tortuous alinement and this, together with the 0.5 per cent grade eastward, has necessitated pusher service for freight trains. A further complication was a right of way only 36 ft. wide through the busi-

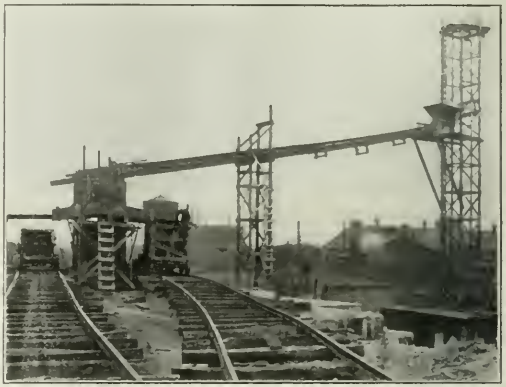
ness part of the city and immediately west of the passenger station and engine terminal. This terminal and the adjacent shop facilities have been seriously cramped for space and because of the lead tracks which enter them from the south it has been necessary to conduct the switching movements across important business streets where the right of way is the narrowest. This also had served to interfere with the efficient handling of the suburban passenger trains.

Coupled with this unsatisfactory condition as regards the handling of railway traffic has been an exceedingly serious situation with respect to grade crossings in the city streets, which was responsible in 1914 for the passing of an ordinance by the city and an order by the State Public Utilities Commission providing for grade separation. After some investigation as to the possibilities of a detour line that would enable through traffic to avoid the city, a decision was made to adopt a plan for track elevation involving a considerable revision of alinement and accompanied with provision for additional tracks and other added facilities that would greatly increase the traffic capacity of the line through the city. An auxiliary project has been the construction of a yard and engine terminal at Eola to facilitate interchange with the Elgin, Joliet & Eastern and provide adequately at that point for all remaking of main line freight trains that is necessary. This not only releases considerable yard trackage in Aurora occupying space which will be utilized for the enlargement of the locomotive and car repair facilities but it will also greatly reduce the amount of switching within the city.

The plan for track elevation provides for the elevating of the tracks a maximum of about 22 ft., so as to provide adequately for under-crossings for the streets and obtain a maximum eastbound grade of 0.3 per cent compensated which will obviate the necessity for pusher service. The total length of the elevation is 4.51 miles on the main line and 0.67 miles on the Savanna line.

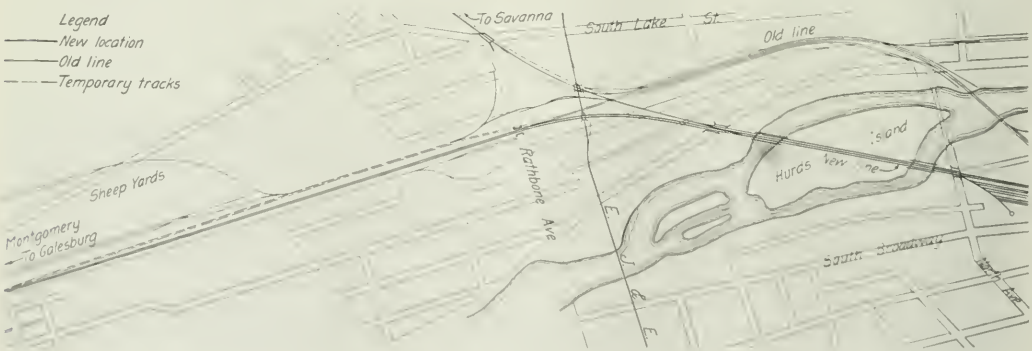
South of the station a marked improvement in the alinement was effected by a new line across Hurds Island. North of the station the new location is thrown against the hillside to the east as a means of obtaining support for the elevated line. This change also adds to the space available for the shop facilities.

The project provides subways for the passage of 14 streets underneath the tracks and also for two under crossings of the Aurora branch of the Elgin, Joliet & Eastern which crosses the Burlington in the southern portion of the city. Physical conditions favor the construction of the runoffs connecting the new and the old grades at the ends of the track elevation territory. At the north end of the city this occurs in a cut where three overhead crossings are readily provided for the only streets crossing the right of way. On the Savanna line the runoff is very readily made because the original grade was on a 0.9 per cent descent into the city, while on the Galesburg main line the change of grade involves a runoff a mile long extending almost to Montgomery, the first station to the south. This involves some changes in the tracks serving the sheep yards maintained by the Burlington at that point, but the problem was not complicated in any way by intersecting streets or highways.



The Concrete Plant as Seen from the Elevated Structure. Hopper Car Loading Station on the Left

One interesting feature of the project was the cutoff across Hurds Island involving a fill 32 ft. high and arch bridges across the two branches of the Fox river, one of three 65-ft. arches and the other two arch spans of the same length.



South End of Track Elevation District

Another unusual complication on this line was the presence of an abandoned stone quarry on the location, which had been excavated to a depth of 70 ft. below the track level. The filling of this quarry required 400,000 yds. of material.

Reinforced Concrete Structures

Following established practice on the Burlington, the street subways are of reinforced concrete of the character shown in the photographs. In general, these consist of four spans of reinforced concrete slabs supported on abutments and three reinforced concrete bents. At one point, the crossing of Benton, Broadway and Clark streets by one continuous structure on a skew entails rather complex construction.

Here it was necessary to introduce structural steel fascia girders to carry the ends of floor slabs not supported by the bents. In other respects, the subway construction conforms closely to that followed by the Burlington on the other track elevation work.

For the three blocks from Fox street to Spring street a marked departure has been made from usual practice in the use of a continuous elevated viaduct of reinforced concrete in place of an embankment supported between retaining walls

The Temporary Passenger Station Looking South West

and pierced by subways at the intersecting streets. Comparative cost estimates of the two forms of construction under the conditions imposed at this point gave favorable results for the elevated concrete viaduct, but an important factor in the decision to adopt this form of construction was the value of the space below the tracks, since it is located in the heart of Aurora's business district. The type of construction adopted, a flat slab construction with columns spaced 19 ft. in one direction and 18 ft. the other lends itself very readily to the use of this space either as passageways or for commercial purposes.

The Construction Plan

Unlike most grade separation projects, the Aurora track elevation was readily prosecuted according to a plan that gave a minimum interference with train operation. Obviously, the two changes of line were of special advantage in this connection, since the work on the new alinement could be carried out without interference with train movement. For the construction of the runoffs at the ends of the work, temporary operating tracks were provided on offset locations.

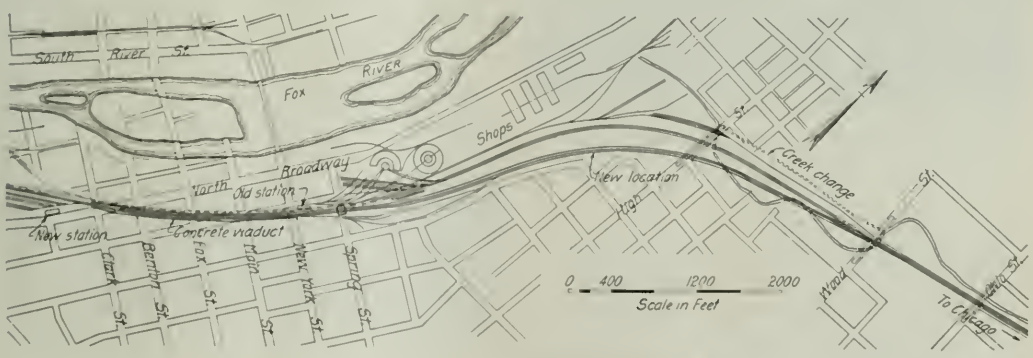
The plan adopted calls for four main tracks on the elevation north of Spring street and five tracks south of that point, but only three tracks are to be constructed at the present time. The neck-of-the-bottle, that is from New York street to Washington street, was broken by the purchase of additional right of way to make room for two operated tracks on the surface while the structure is being built for three tracks on the new grade. The flat slab viaduct is of particular advantage in this connection because it obviates the necessity of a temporary retaining wall between the two surface tracks and those on the elevation. This is clearly brought out in one of the photographs.

Work Started at the South End

The initial work was done on the structures at the south end of the district. This included the river bridges and the subways at North avenue, River street and Rathbone avenue, as all these could be built without interference with the track. Following this, temporary main tracks north of Montgomery were constructed and a contract awarded to Morris & Daugherty for the filling between Montgomery and the north end of the cutoff. This involved a million cubic yards of filling and was taken from a shovel cut west of Montgomery, the average haul being about 3½ miles. This work was carried out intermittently for a number of years, during which the other structures on the southern portion of the project were completed until 1920, when traffic was turned over the cutoff with a runoff at Broadway.

About that time work was undertaken on the north end of the project, the grading on the relocated line being carried as far as possible without involving interference with the existing yards north of Spring street. In conjunction with this work, the viaduct at High street was constructed and the piers for viaducts at Wood and Ohio streets were partly built. They will not be completed until the temporary tracks are abandoned. The viaduct for High street involves four truss spans and several reinforced concrete approach spans.

The final and most complicated step in the work is now in progress and comprises the closing of the gap between the ends of the work previously done. This involves the work in the business part of the city including the provision for structures over eight streets and the filling north of Spring street, where the embankment will cover a considerable portion of the freight yard which cannot be abandoned until additional yard facilities are completed at Eola.



North End of Track Elevation District

The prosecution of this portion of the work also involves the solution of the problem of a new passenger station which was finally concluded by the selection of a new site 3,000 ft. south of the existing station on unoccupied land fronting on South Broadway. Here space was available for six station tracks in addition to the three main tracks and four coach

storage tracks, a turntable and a cinder pit. All the station tracks are to be elevated, with access to and from the passenger station by means of a subway with three communicating stairways. To permit the wrecking of the old station at New York street preparatory to the construction of the elevated structure, the new station site was utilized for a temporary station which consists virtually of the south end of the final station track layout supplemented by a temporary station building. Work on the new station will be undertaken shortly.

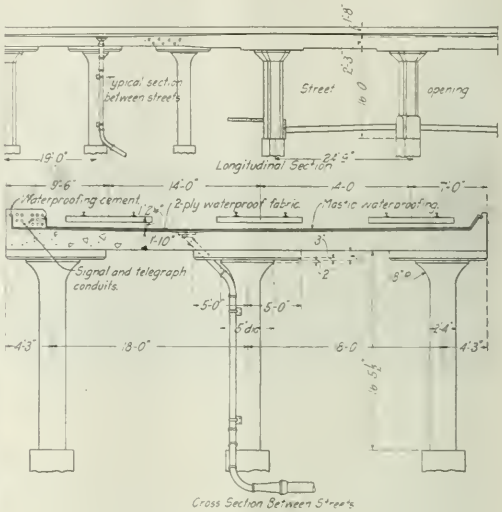
The work between Clark and Spring streets is primarily a structural one since the grading is a relatively minor feature. It involves the placing of 15,500 cu. yd. of concrete, a quantity clearly justifying the application of considerable thought to the development of an efficient concreting plant. This has taken the form of a duplicate mixing plant in the space immediately west of the tracks between Benton and Clark streets where some buildings and a yard were acquired with a right of way purchase. This afforded space for the storage of 9,000 bbl. of cement and some large piles of gravel and for the housing of two concrete mixers with superimposed material hoppers of 60 cu. yd. capacity, four hoisting engines

The "Neck of the Bottle" Looking North East, Temporary Tracks on the Left, New Three-Track Concrete Viaduct on the Right

for the handling of two material derricks and two elevating towers, two locomotive type boilers supplying steam to the concrete mixers, the hoisting engine and two pumps. One of the old buildings is also used as a carpenter shop for the housing of power tools used in connection with the form work.

The concrete is elevated in towers and discharged in chutes by which it is transmitted direct to a considerable part of the form. For the more remote work, that is north of Benton street, the concrete is chuted into auxiliary hoppers which in turn deliver the concrete to hopper cars operated on a standard-gage track erected above the structure. These cars are delivered to the forms by Fairmont section cars, as illustrated in one of the photographs. This double concrete plant operated with the motor car delivery has a capacity of 50 cu yd of concrete per hour continuous operation. It has been effective in placing 486 cu yd in 11 hr, while there is a faster record of 211 cu. yd. in 4 hr and 45 min. The duplication of the mixer was considered essential as insurance against a stoppage of the work in case of a breakdown which would have been a rather serious matter for the flat slab construction adopted between Fox and Spring streets. This concrete plant is being used for all of the work except the footings and columns of the flat slab structure. For these a portable concrete plant set up on a car operated on a track laid between the columns was used. This plant was equipped with a tower high enough to reach the tops of the columns.

The presence of bed rock at a reasonable depth below the



Typical Details of the Concrete Viaduct

surface afforded an easy solution of the foundation problem. Rectangular pits were excavated to the rock level and filled with concrete to the surface. In most cases the rock was found at a depth of from 12 to 19 ft. but for one of the bents a cleft or fissure was encountered which required an excavation to a depth of 40 ft. before the rock was reached. The excavation was made with the aid of two small derricks

A Typical Track Elevation Subway

mounted on cars, one of these being a rail layer derrick with a self-propelling car. These derricks were used to hoist bottom-dump buckets which had been filled by hand and were dumped into wagons, each derrick car serving several pits simultaneously.

The program now laid out contemplates the completion of the work during the coming season. The concrete structure is now virtually completed as far as Main street so that the remaining work consists only in extending this to Spring street. The grading involves the completion of the fill from that point to the vicinity of Liberty street and the completion of the runoff at the north end, a total of about 200,000 cu. yd of fill.

This project is being handled under the general direction of A. W. Newton, chief engineer, and C. L. Persons, assistant chief engineer, of the Chicago, Burlington & Quincy. All bridges and viaducts were designed under the direction of G. A. Haggander, bridge engineer; all building work has been done by the building department under the direction of W. T. Krausch and all signal work under the supervision of J. B. Latimer, signal engineer. C. J. McCarty, engineer of track elevation, is in direct charge of the work on the ground.

The Effect of Traffic Fluctuations on Operating Expenses

To what extent should expenses increase when traffic increases? How large a decrease in expenses should be expected when traffic decreases? These are questions which constantly confront all executive and operating officers as the tide of traffic rises and falls. Everyone familiar with the facts and conditions of railroad operation knows that operating expenses neither increase nor decrease in the same ratio as traffic. It is a matter of judgment, however, as to the extent to which expenses lag behind traffic changes.

This question, like almost all statistical problems, is not subject to definite rule. The cause of the condition is well known. In the grand total of railroad operating expenses, there are certain items which fluctuate with traffic. There are others which are but partly affected, and a few which are practically unaffected by normal fluctuations in business over a considerable period. There is a fourth element, which includes maintenance expenses and which is, to a certain degree, subject to company policy. In the first or directly variable element are included labor expenses at large stations, yard expenses in large terminals and through freight train expense. In the second or semi-variable group are included expenses of medium sized stations and yards and expenses for local freight trains. In the third, or fixed group, are included supervisory expense and expenses for small stations and yards, towers, drawbridges and crossings, the larger proportion of passenger train expenses and general and traffic expenses. This classification is subject to many qualifications. Almost all accounts contain elements of fixed and variable expense, and at times of depression, all expenses are subject to reduction. Nevertheless, it is believed that for normal increases and decreases, the operating charges fall into these general groupings.

It is of no value to know that expenses are divided into three groups of which one is fixed, one variable and one semi-variable. It explains the cause of the condition, but it does not analyze its effect. The following method was developed in an attempt to determine for use of operating officers the extent to which expenses should follow traffic changes. This method was applied to transportation expenses alone, since maintenance charges are to so great an extent dependent upon policy.

The measure of expense used was the man hours. This was due to the fact that labor is the controlling factor in transportation expenses, the changes in the amounts of fuel and material used being reflected in fluctuations in charges for labor. The man hours, rather than payrolls, were used on account of the disturbing element of changes in wage rates.

The measure of freight traffic used was the gross ton miles. This unit reflects better than any other the amount of transportation which the operating department is called upon to handle.

The factor used in measuring passenger business was the passenger train miles. Here again it should be pointed out that the most desirable unit is that which controls the expense. The increase in the number of passengers necessitates little, if any, additional expense, and even the increase in the number of cars per train does not materially affect the passenger expenses as a whole. On the other hand, the addition or elimination of a train directly affects all passenger train expenses and may reflect a change in the amount of business which will justify an increase or decrease in passenger station and yard expenses.

We have then the transportation man hours, gross ton miles and passenger train miles. In the study made, these statistics were obtained by months for a three year period. They were then all translated into index numbers, using the first month of the first year as 100. The results below are fictitious but are indicative of the results obtained:

Index Numbers—January 1st Year = 100

	First year			Second year			Third year		
Month	Man hrs.	Gross ton miles	Pass. train miles	Man hrs.	Gross ton miles	Pass. train miles	Man hrs.	Gross ton miles	Pass. train miles
January	100	100	100	101	105	102	103	104	102
February	96	94	88	96	100	90	98	92	90
March	100	102	92	101	109	103	103	100	101
April	103	106	100	103	116	104	101	98	102
May	105	113	103	104	118	105	102	104	101
June	105	112	108	104	115	109	103	103	102
July	106	106	115	108	118	117	102	103	109
August	107	109	118	109	119	120	101	100	108
September	107	112	117	110	122	119	102	103	108
October	107	118	108	110	128	110	101	102	104
November	103	111	104	106	114	106	100	100	103
December	101	104	102	104	106	105	99	96	100

The next problem which presents itself is that of determining the relative effect of freight and passenger business. The fluctuations of the two differ widely and it is necessary to obtain the combined effect of the two on the man hours. The importance of freight and passenger business on different railroads varies. If transportation expenses are made up, half freight and half passenger, it is possible to obtain the combined index by finding the simple average of the gross ton mile and the passenger train mile indexes. For example, in January of the first year, the combined index would be 100, February 91, March 97, April 103 and so on. On the other hand, if expenses are divided one third passenger and two-thirds freight, a weighted average of the two would be necessary. The combined index for January would be 100, February 92, March 99, April 104, etc. With a combined index of freight and passenger business, it is possible to check the fluctuations of all traffic with the changes in man hours. The simplest method is to show the increase or decrease each month, compared with the previous month.

	First year				Second year				Third year			
Month	Man hrs.	Monthly fluctuations	Traffic index	Monthly fluctuations	Man hrs.	Monthly fluctuations	Traffic index	Monthly fluctuations	Man hrs.	Monthly fluctuations	Traffic index	Monthly fluctuations
January	100	....	100	....	101	....	103	....	103	1	3	— 3
February	96	— 4	91	— 9	96	— 5	95	— 8	98	— 5	1	— 1
March	100	+ 4	97	+ 6	101	+ 5	106	+11	103	+ 5	101	—10
April	103	+ 3	103	+ 6	103	+ 2	110	+ 4	101	— 2	100	— 1
May	105	+ 2	108	+ 5	104	+ 1	112	+ 2	102	+ 1	103	+ 3
June	105	....	110	+ 2	104	....	112	....	101	— 1	103	....
July	106	+ 1	111	+ 1	108	+ 4	118	+ 6	102	+ 1	102	— 1
August	107	+ 1	114	+ 3	109	+ 1	120	+ 2	101	— 1	100	— 1
September	107	....	115	+ 1	110	+ 1	121	+ 1	102	+ 1	100	+ 2
October	107	....	113	— 2	110	....	119	— 2	100	— 2	103	— 3
November	103	— 4	107	— 6	106	— 4	110	— 9	100	....	101	— 1
December	101	— 2	103	— 4	104	— 2	106	— 4	99	— 1	98	— 1
Total increase	...	+11	...	+34	...	+14	...	+26	...	+ 8	...	17
And decreases	...	—10	...	—21	...	—11	...	—23	...	—13	...	5

On the basis of the first example given above of the combined business index, the results would be:

February minus 9
March plus 6
April plus 3

For purpose of simple illustration, it is assumed in this example that freight and passenger traffic are equal in importance. The traffic index numbers given above, are, therefore, combined on that basis and the fluctuations of traffic and man hours are given in the table at the bottom of the preceding page.

In the first year, the decrease of traffic in February, as compared with January, is nine points, the decrease in man hours four points. March shows an increase in traffic over February of six points, while man hours increased but four points. For the first year, the total traffic increases amount to 24 points, while the man hour increases total eleven points. The total traffic decreases amount to twenty-one points, the total man hour decreases equal ten points. Likewise in the other two years, the man hour increases as compared with the traffic decreases, are as 14 to 26 and 8 to 17, while on the decrease side the ratios are 11 to 23 and 13 to 25. From this it is evident that the increases or decreases in man hours over a considerable period, were approximately one-half the increases or decreases in traffic. For this particular railroad, it is to be expected that the *per cent of increase or decrease in man hours and expense will be about one-half the per cent of increase or decrease in traffic.* The actual results on one railroad were 56 per cent for one year, 58 per cent in the second and 57 in the third.

It is not necessary, of course, to use the percentage actually obtained from the results of actual operation. If a better performance is to be sought in the example given, the standard percentage of increase to be expected would be a figure less than one-half the percentage of increase in business. If traffic increased 10 per cent, it would be the task of the operating department to hold the expenses to a figure less than 5 per cent above those for the period with which comparison is being made. On the other hand, when traffic decreases, the attempt will be made to reduce expenses by more than one-half the per cent of decrease in traffic. The value of the compilation similar to that shown above is that it shows what actually has taken place during several years and is a measure of what can be done.

This analysis is extremely valuable in the checking of expenses from month to month over a period of time. It is not practicable for short periods when fluctuations in business are frequent and do not materially affect expenses. Moreover, many exceptions to the rule will be found over longer periods because of particular conditions.

Nevertheless, it provides a measure of the relationship of traffic and expense fluctuations which will enable the chief operating officer to determine whether transportation expenses as a whole have been sufficiently reduced or too greatly increased. It provides a check on the entire situation, without attention to any special group of expenses.

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER OF cars loaded with revenue freight show another considerable increase during the week ended June 17 to a total of 860,772, as compared with 775,328 in the corresponding week of last year and 916,736 in the corresponding week of 1920. As compared with the week of June 10 this was an increase of 14,000. The decrease as compared with 1920 was only 55,964 and is more than accounted for by the decrease in coal loading of 96,702. The coal loading was 63,172 less than for the corresponding week of 1921 and it was also a decrease of 2,688 as compared with the week before. The loading of miscellaneous freight alone showed an increase of 74,000 cars as compared with last year. All classes of commodities except grain and grain products and coal showed increases as compared with last year and all districts showed increases, while there were increases as compared with 1920 in the Pocahontas, Southern and Southwestern districts.

The summary, as compiled by the Car Service Division of the American Railway Association follows:

REVENUE FREIGHT LOADED SUMMARY

ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JUNE 17, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L. C. L.	Miscellaneous	Total revenue freight loaded: This year, 1922	Corresponding year, 1921	Corresponding year, 1920

The freight car surplus for the period June 8 to 15 showed a further reduction of 15,320, as compared with the preceding week, to 268,865.

THE GENERAL OFFICES of the Western Maryland, in Baltimore, have been moved from the Morris Building to the Standard Oil Building.

Shop Workers' Walkout Scheduled for July 1

Unless Roads Agree to Restore Old Working Rules, Abolish Contracting and Keep Wages Up

ACCORDING TO A lengthy telegram from B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, to T. De Witt Cuyler, chairman of the Association of Railway Executives, the unionized shop crafts will go out on a strike on July 1—unless the roads will agree to maintain wages at present levels, restore some working rules abolished by the Labor Board and do away with the contracting of repairs. This telegram was received at Mr. Cuyler's office on June 28. Mr. Jewell's telegram follows:

Mr. Jewell's Telegram

Since passage of the Transportation Act a series of controversies between the carriers and their employees have developed a situation wherein today approximately two-thirds of the men engaged in railway service are voting upon withdrawal from employment.

The responsibility for this situation rests squarely upon the Association of Railway Executives, of which you are chairman.

Slow Down, Dangerous Curve Ahead

This telegram is for the purpose of making clear to you and to all others interested the measure of your responsibility.

1. The Transportation Act provided machinery for negotiations and ready adjustment of disputes regarding grievances, rules and working conditions which the carriers from the outset refused to employ. It provides: "Section 302. Railroad Boards of Labor Adjustment may be established by agreement between any carrier, group of carriers, or the carriers as a whole, and any employees of subordinate officials of carriers or organization or group of organizations thereof." On March 10, 1920, ten days after the Transportation Act went into effect, the 16 standard railroad labor organizations requested the railroad managements to continue the operation of National Boards of Adjustment, but after considerable correspondence this request was refused.

On March 24, and April 5, 1920, the chairman of the Railway Employees' Conference Committee addressed letters respectively to the chairman of the Railway Managements' Conference Committee and to the chairman of the Association of Railway Executives, requesting the continuation of National Adjustment Boards which had successfully functioned previously and were provided for in the Transportation Act. You replied that the association was opposed to the continuation of National Boards.

On July 29, 1920, the chairman of the Railroad Labor Board wrote a letter to the interested parties, directing attention to the above quoted section, which he stated contemplated "as an essential part of the machinery to decide disputes between the carriers and their employees the creation of railroad labor boards of adjustment."

After further discussion and conferences, the Labor Board was notified September 6, 1920, that at a meeting of the Association of Railway Executives, a resolution had been adopted, declaring that the "carriers of the country are unable to agree with the suggestion presented for the formation of National Boards of Adjustment."

Following this, the carriers refused to submit the question of continuing National Boards of Adjustment to the United States Railroad Labor Board, and after submission of the question by the railroad labor organizations, the Labor Board decided on December 7, 1920, that it had no power to "exercise jurisdiction over the question of creation of adjustment boards." Thus, in the beginning of operation under the Transportation Act, the carriers refused to establish what the Labor Board has described as "An essential part of machinery to decide disputes between carriers and their employees." It thus became evident early in the development of the present controversies that the purpose of the carriers in dealing with their employees were, first, to organize managements for national action in support of uniform policies; second, to avoid negotiations with the employees organized likewise for national action; third, to attempt to impose the national policies of management upon local organizations of employees; and fourth, upon the inevitable failure of such unfair methods of negotiation, to throw upon the Railroad Labor Board an unintended and impossible burden of arbitration.

2. Another example of the national program of the carriers was evidenced in their position regarding the national agreements. On April 14, 1921, after a hearing before the Labor Board, a decision was rendered abrogating the national agreements as of July 1, 1921, and referring the negotiation of an agreement relating to rules and working conditions to the carriers and their employees, in accordance with the sixteen basic principles laid down by the Labor Board. In these negotiations on each railroad, the railway executives presented a nationally agreed upon program for the modification of some of the most important rules, upon which agreement with the employees was thus made impossible. The matter was then submitted to the Labor Board, who later issued Decision 222, proposing amendments of Rules 6, 10, 12, 14, 15, 46, and 177, which were not acceptable to the employees.

It will be noted that these proposals of the Labor Board affecting the rules above mentioned were in line with the nationally-agreed-upon program of the railway executives.

3. During proceedings before the Labor Board concerning rules and working conditions, after the carriers had completed their case and before the employees had even had an opportunity to present their case, it will be recalled that Mr. Atterbury in behalf of the railway executives made a peremptory demand for the immediate abrogation of the national agreements, and for an immediate reduction of wages of maintenance of way employees. This demand was shortly followed by a meeting of the Association of Railway Executives, resulting in the presentation by managements of the respective railroads at a uniform reduction in wages to the employees. There was no real attempt made in carrying out this demand to negotiate a wage agreement, but upon the refusal of the representatives of the employees on the different systems to sign on the dotted line, the disputes thus inaugurated by concerted action on a national scale by the railway executives, and which were not submitted for national or even genuine local negotiation, were brought before the Labor Board.

Following the decision in this first wage hearing of 1921, the same procedure was repeated and after further hearings decisions have been rendered within the last sixty days, attempting to impose upon the railroad employees reductions in wages in violation of the principles laid down in the Transportation Act to govern the fixing of reasonable wages. These decisions are not only unjust as amply shown in the minority opinions of the Board, but

are in violation of the requirements of the Transportation Act, and are wholly outside any authority conferred upon the Board. They amount to nothing more than a proposal on the part of six members of the Labor Board, that the employees should accept unjust and unreasonable wages as their acquiescence in the program of the Association of Railway Executives to pay returns on billions of dollars of railway securities, representing no actual investment, and to reimburse the railways for the losses caused by present and past inefficiency in operation and dishonesty in financial management, by denying to the railway employees a fair return upon the investment of their life and labor in the transportation industry.

The railway executives have been able by concerted action to induce six members of the Labor Board to overthrow the precedents of a generation of arbitrations, establishing the principle that the financial obligations of a railroad do not provide a reason for denying to the workers a just and reasonable wage

The findings of six members of the Labor Board upon the question of wages would make the railways a parasitic industry surviving only by the process of denying a reasonable livelihood to the workers.

You well know that rates of pay, involving wages of 23 cents per hour, $1.84 per day, or $563.00 per year, are not rates of pay bearing the relation "between wages and cost of living" required in the Transportation Act.

Senator Cummins, who was more responsible than any other person for the language of the Transportation Act has stated publicly that it was the intention of the government to provide in the act that railroad employees should under all circumstances receive a living wage, and he has stated that "it is no more right to fix the wage below the point of living and comfortable living than it is to fix a return on capital below a reasonable point."

It is clearly in violation of the intention of the Transportation Act, which provides for a minimum return of 5½ per cent to the owners and provides for a salary of $10,000.00 per year for members of the Labor Board, that the wages of any employee in the railroad industry should be fixed upon so low a basis that he cannot support himself and family in a condition of decent living, make provision for the necessary education of his children and provide against the vicissitudes of sickness and old age.

It is simply impossible to show that the wages sought to be imposed upon the railroad employees through the concerted action of the railway executives meet these requirements.

4. During the progress of the controversies above set forth the various railroad systems—obviously acting pursuant to a prearranged program—have undertaken to contract out from under the operation of the transportation systems, both work and shops wherein work necessary to the operation of these systems is carried on. The two-fold purpose of this procedure has been, and even has been frankly admitted to be:

First: To take the men employed out from under the protection of the railroad labor organizations and to destroy their effectiveness, and,

Second. To deny these large groups of employees engaged in the transportation industry from such meager protection as the Transportation Act might afford them.

This program has been in such clear conflict with the purposes of the Transportation Act and such an obvious attempt on the part of the railroads to evade their legal obligations, that the Railroad Labor Board has issued orders specifically holding such contracts so utilized to be void.

Here, the employees have had a vivid demonstration that the management of the railroads will use or violate the Transportation Act as suits their purposes and is to their advantage.

It should be clear that the conduct of the carriers in their relations with their employees as heretofore outlined and as carried on pursuant to the policies determined by the Association of Railway Executives, has operated intentionally to create dissatisfaction among the employees and to hamper their collective efforts simply to maintain reasonable wages and working conditions. A desire has been shown to avoid and discourage the settlement of disputes by negotiation, to create, by carefully planned strategy, sharp differences of opinion and then to carry a program of unconscionable demands before the Labor Board, on the theory that, a compromise decision being the usual product of such a board of arbitration the managements would be able to deprive the employees of some part of their just dues in each proceeding.

You are also aware as we are, that a minority of enlightened and humane executives of the railway systems have been forced by this procedure and by pressure of financial interests, to take part in this national drive against fair treatment of the railway employees. By the refusal at the outset by the executives to permit continuation of boards of adjustment they have been able to force the employees to abandon their natural efforts to negotiate agreements with individual carriers and groups of carriers, and to compel them in protection of their interests to act through national organizations in order to meet on a comparable basis, the national organization of the managements. The system federations, being organizations of the employees of a single railway system, have had complete authority to enter upon and carry through negotiations with the respective railway systems, but the national organization of the carriers has been unwilling to permit in this manner the more humane and enlightened managements to agree upon just and reasonable wages, which would have operated to prevent the establishment of unjust and unreasonable wages elsewhere, which the majority of the executives, under pressure of the financial controllers of the railroads, have desired to impose upon the employees as a part of a nation wide drive against the interests of labor.

The unhappy result of the policies adopted and carried out by the Association of Railway Executives is now made clear in accordance with the laws governing the various organizations of railroad employees involved, it has become necessary to submit to the employees for their own determination, a matter fundamental to their daily life and the well being of themselves and their families,—the question of their willingness to continue to render service.

First: Under the inadequate wages submitted by the action of the Railroad Labor Board, and to become effective July 1, 1922.

Second: Under the injust amendments of Rules 6, 10, 12, 14, 15, 46 and 177, proposed in Decision 222 of the Labor Board, and

Third: Under the illegal practices of the railroads in contracting out work and shops which have been and are a normal and necessary part of the transportation industry.

The votes of the employees upon these questions show in each instance the decision of an overwhelming majority of the employees to withdraw from the service of the railroads, rather than to continue under these intolerable conditions. It, therefore, becomes the obligation of the representatives of these employees to sanction their withdrawal from employment. The national organization of the executives of the railroads and their concerted action in support of a common program, have forced the employees of the railroads as represented in their several organizations, to co-operate nationally for the protection of their common interests, despite their desire and the expressed purposes of their organizations to preserve negotiations and to bring about agreements between the representatives of management and employees on each railway system so far as possible.

There is, however, one benefit which may come to the carriers and their employees, and to the general public, from the fact that there are national spokesmen of the conflicting interests who might be able to halt a nation wide withdrawal of men from employment in the railway service, if the railway executives sincerely desired to avoid this consequence of their previous course of action. For this reason, in behalf of and by the authority of the executive council of the railway employees' department, I am informing you and through you informing the responsible heads of the various railway systems in the United States, and also the Pullman Company, most of which are represented in the Association of Railway Executives, that unless an immediate arrangement can be made: (1) To continue the payment of the wages at present in force; (2) to restore operation under Rules 6, 10, 12, 14, 15, 46 and 177, as they existed prior to the amendments thereof proposed in Decision 222; and (3) to discontinue the contracting out of work and shops, pending negotiations between the Association of Railway Executives and the Railway Employees' Department, looking toward adjustment of the existing disputes upon these questions, a sanction of withdrawal from employment on July 1, 1922, as voted by the employees, will be unavoidable.

Canvassing the Strike Vote

General committees at Chicago, the headquarters of the Railway Employees' Department of the American Federation of Labor and at Detroit, headquarters of the maintenance of way union have been in session canvassing the strike vote polled among these two classes of employees. Statements emanating from both headquarters are to the effect that the men are voting overwhelmingly in favor of a strike. However, unconfirmed reports indicate that the returns have been coming in rather slowly and that a much larger percentage of the workers are not in favor of a strike at this time than would be indicated by the statements issued by the heads of the organizations involved. These reports have brought forth more emphatic statements from various labor leaders to the effect that the ballots so far tabulated show that approximately the same overwhelming ratio in favor of a walkout is shown on all three of the issues put up to the men—use of the contract system by the roads, abolition of time and one-half for overtime and Sunday work, and the recent wage cut ordered by the Labor Board.

The sentiment prevailing among western railroad officers and about the headquarters of the Railroad Labor Board, is that the present threats of a nation-wide strike are merely repetitions of the strategy employed by railroad labor leaders so often in the past and that when the issues are brought to a head, there will be no general concerted movement although there may be sporadic disturbances which will be entirely local in nature

Regarding the possible intervention of the Railroad Labor Board, as was the case in the threatened strike of train service employees last October, B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, is quoted as saying:

"The President, through the Railroad Labor Board, stopped the threatened railroad strike of last October. He told the Board to justify its existence. The Board got busy and the strike was called off. If President Harding again tells the Board to justify its existence it will not be able to do so this time because we are going to strike. We have our backs to the wall and we are going to fight."

Board Renders Six Decisions on Contracting

Several decisions, interesting in the light of the threatened strike, were handed down by the Board on June 24. Its decision regarding contracting, rendered recently in the Indiana Harbor Belt case and described in the *Railway Age* of May 13, page 711, is applied to six similar disputes which have been before the Board for some time.

The disputes so decided by the Board include the following:

That between the Chicago Great Western and its shop employees over the leasing of repair tracks at South St. Paul, Minn., to the A. S. Hecker Co., on July 25;

that between the Chicago Great Western and its clerks, foremen, freight checkers, stowers, stevedores and truckers over the contracting of the operation of a freight transfer platform at Oelwein, Iowa, by the A. S. Hecker Co., on October 5;

that between the Missouri, Kansas & Texas and its shop employees over the contracting of the operation of its railway shops at Sedalia, Mo., Parsons, Kan., and Denison, Tex., to the A. S. Hecker Co., in April;

that between the Chicago Great Western and its maintenance of way employees over the contracting of certain extra gang and regular section labor work at rates of pay lower than those established by the Board;

that between the St. Louis, Brownsville & Mexico and its shop employees over the contracting of passenger car cleaning at Brownsville, Tex., on April 1 and;

that between the Indiana Harbor Belt and its maintenance of way employees over the contracting of certain maintenance of way operations to Colianni & Dire.

The details of several of these disputes have been outlined in previous issues of the *Railway Age*.

The reaction of the employees to these decisions is indicated by the comment of John Scott, secretary of the shop crafts organization, who declared:

"The fact that the Board after months got busy and put out these decisions doesn't give us any assurance that contracting will cease."

He thought the decision would not ameliorate the men's grievances.

At the same time Ben W. Hooper, chairman of the Board, issued a statement expressing the belief that the railroads will abide by the Board's decisions in this regard in the future and announcing his intention of calling their attention more firmly to this violation.

"Some of the carriers," he said, "have proceeded upon the assumption that, because they contracted various kinds of labor before the Transportation Act, this practice is still legal and proper. To my mind, it seems so unjust and unfair to employees and so violative of the spirit of the Transportation Act that public sentiment cannot uphold it.

"Of course the Board has not held that the carriers may not contract their work. It has simply held that such contracts cannot have the effect of removing the railway employees from under the application of the Transportation Act. I still believe that the carriers will all get in line with the Board's decisions on this question and it is my purpose to press this matter upon their attention."

Labor Board Opens Hearings on Contracting

On June 26 the Board commenced the hearing of 28 disputes, all involving alleged violations of the Transportation Act and of the orders of the Board through the contracting of shop and maintenance of way work and other similar activities.

The disputes which are now being heard by the Board, the carrier, the organization and the "bone of contention" are as follows:

The New York Central vs. the Federated Shop Crafts, contracting of car repair shops at East Buffalo.

The New York Central vs. the Brotherhood of Railway Clerks, contracting the work of laborers at the Orange avenue freight house and Union depot, Cleveland, Ohio.

The New York Central vs. the American Federation of Railroad Workers, contracting of the Campbell street shop, Toledo, for the repairing of cars.

The New York Central vs. the American Federation of Railroad Workers, the contracting of the work of coach cleaners and of employees in mail and baggage rooms at Toledo.

The New York Central vs. the Brotherhood of Railway Clerks, the contracting of the work of freight handlers at the Franklin street station, New York, Weehawken, Barclay street and St. Johns Park stations to the New York Marine Company, and the Sixtieth street, Thirty-third street stations and Pier No. 83, North River, to Spencer & Sons.

The Indiana Harbor Belt vs. the Federated Shop Crafts, contracting of shop and enginehouse operation at Gibson, Ind.; Blue Island and Norpaul, Ill.

The Chicago Great Western vs. the Federated Shop Crafts, the contracting of shops at Oelwein, Iowa.

The Chicago Great Western vs. the United Brotherhood of Maintenance of Way Employees, the contracting of the work of foremen, mechanics, helpers and laborers in the maintenance of way and structural departments, to the Hecker Construction Company, on March 31, 1922.

The Erie vs. the American Federation of Railroad Workers, the contracting of the work of crossing watchmen, flagmen and trackmen.

The Erie vs. the Brotherhood of Railway Clerks, the contracting of the work of clerical and station forces.

The Chicago & Alton vs. the United Brotherhood of Maintenance of Way Employees, the contracting of coal chute, pump and cinder work, engine watchmen, etc., in the fuel and mechanical departments at various points.

The Wheeling & Lake Erie vs. the American Federation of Railroad Workers, the contracting of wheel room and air brake work at Toledo.

The Cincinnati, Indianapolis & Western vs. the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, the contracting of locomotive hostler work on December 10, 1921.

The Cincinnati, Indianapolis & Western vs. the Brotherhood of Railway Clerks, the contracting of the work of clerical and station forces at Indianapolis.

The Cincinnati, Indianapolis & Western vs. the Federated Shop Crafts, the contracting of shop work.

The Cleveland, Cincinnati, Chicago & St. Louis vs. the Brotherhood of Railway Clerks, the contracting of the work of freight handlers at Indianapolis and other points to the A. S. Hecker Company.

The Cleveland, Cincinnati, Chicago & St. Louis vs. the Federated Shop Crafts, the contracting of the Beech Grove Shops to the Railway Service Corporation on March 20, 1922.

The Michigan Central vs. the Federated Shop Crafts, the contracting of the car repair shop at Detroit to the Illinois Car & Manufacturing Company.

The Delaware, Lackawanna & Western vs. the Brotherhood of Railway Clerks, the contracting of the work of freight handlers and freight check clerks at the Hoboken and Jersey City piers to the New York Marine Company; at East Buffalo to Hanrahan & Co., and at Scranton to Downey Brothers.

The Chicago, Rock Island & Pacific and the Chicago, Rock Island & Gulf vs. the United Brotherhood of Maintenance of Way Employees, the contracting of coal chutes at Courtland, Kan.; Fairbury, Neb. and Lincoln, and a pumping station at South Bend, Neb.

The Atchison, Topeka & Santa Fe vs. the United Brotherhood of Maintenance of Way Employees, the contracting for the painting of buildings, water tanks and bridges, the driving of piles and other bridge construction work, the construction and repair of turntables, right of way fencing, the re-decking of viaducts and other bridge and building department work.

The Bangor & Aroostook vs. the Federated Shop Crafts, the contracting of car shops at Houlton, Maine.

The Boston & Albany vs. the Federated Shop Crafts, the contracting of car cleaning at the Exeter Street Yard, Boston.

The Pere Marquette and the Fort Street Union Depot Company vs. the Federated Shop Crafts, the contracting of the Baldwin Power Plant, April 25, 1921, car repairing at Ionia, Grand Rapids and the Saginaw Shops, and car cleaning at Detroit in March, 1922, to the Kellogg-Grego Railway Service Corporation.

The Western Maryland vs. the Federated Shop Crafts, the contracting of shop work.

The Missouri, Kansas & Texas vs. the United Brotherhood of Maintenance of Way Employees, the contracting of the positions of crossing watchmen at Clinton, Mo., to the mayor of that town.

The Ann Arbor vs. the Federated Shop Crafts, the contracting of shop work.

The argument in the first of these cases to be heard by the Board followed very closely the previous arguments which have been made by representatives of both the carriers and the employees in previous and similar contract cases, the employees contending that this contracting constituted a violation of the Transportation Act and of the Board's orders and the representatives of the carriers holding that there is nothing in the act to prohibit the contracting of operations of this character, that it has been the practice of the railroads for many years and that it has been done in the interest of efficient and economical operations.

Pennsylvania's Maintenance and Signal Men Agree to Reductions

The Pennsylvania has reached an agreement with some 42,500 of its employees—signal and telegraph men and maintenance employees—agreeing to a modification of wages "to conform with the lower costs of living, the general conditions of employment throughout the country and the demand of the public for cheaper transportation." The railroad's announcement says in part:

> The negotiations were entirely voluntary and were conducted solely between the management's representatives on the one side, and elected representatives of employees on the other, free from outside intervention. The information on which these negotiations were based was gathered jointly by representatives of the management and of the employees, from industries in the territory served by the Pennsylvania System. The management desires to thank not only the employees and their officers concerned, for the spirit in which the negotiations were conducted, but also the industries along the lines of the system, for their co-operation in furnishing.
>
> This successful outcome of the wage negotiations with the maintenance of way and telegraph and signal employees, constitutes one of the most notable achievements, thus far recorded, by the Pennsylvania Railroad's employees' representation plan. This plan, for the amicable settlement of controversial questions, was first put into effect, by mutual consent, on January 1, 1921. Since that time, and prior to the opening of negotiations over the pending wage revision, the plan has been instrumental in bringing to peaceful and satisfactory settlement, more than 9,000 controversial questions between management and employees.

Although no official announcement has been made as to the extent of the reductions agreed to by the Pennsylvania's employees, it is understood that, in general, they are somewhat less than those ordered by the Labor Board.

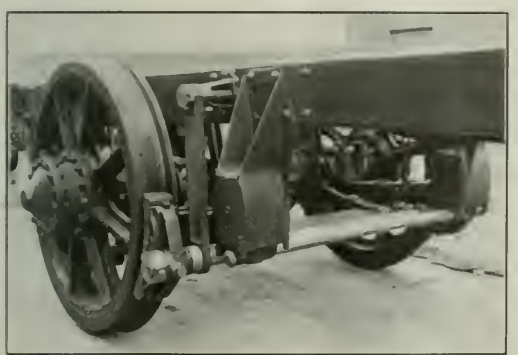
The B. & O. recently established a record for the fast handling of grain through the elevators shown by loading 285,000 bushels of grain into vessels in 13 hours.

Developments in Gasoline Passenger Rail Cars*

New York Railroad Club Discusses Design, Power Requirements and Operating Results of Self-propelled Cars

By W. L. Bean
Mechanical Assistant to the President, New York, New Haven & Hartford

MANY CARRIERS have lines of road which, on account of traffic diversion to trolley lines, or to highway vehicles, or through other causes are unprofitable, while short line railroads are very definitely confronted with a high cost of transportation. Large losses are sustained through operating steam trains, with expenses ranging approximately from 75 cents to $1.50 per train mile and with revenues from 20 cents to $1.00. Expenses mentioned are those for train and enginemen's wages, fuel, lubricants, enginehouse expense and maintenance of equipment. Item, of interest on investment, superintendence (including dispatching), maintenance of way, signals, stations, station employees, and kindred items, are not included. Naturally, there are wide differences in the total costs of furnishing service as between different roads or portions of the same road, but when segregation is made of the items accruing to each separate route or schedule, discrepancies between revenues and expenses show that the patrons of the carrier are usually receiving service at less than cost.



Rear Truck Showing Brake Rigging and Spring Pockets

The excess of costs over revenues is such that usually it would be difficult, if not impossible, to handle the business at a profit. Hence the possibility for many carriers seems to be that of decreasing deficits rather than transforming them into surpluses.

There may well be consideration of the desirability of carriers further developing the costs of rendering service on thin lines of road and acquainting the public with the facts, especially with the inauguration of service through the utility of equipment different from that commonly used. The public does not always receive innovations in the best of spirit, consequently, if a clearer understanding of the relation between revenues and expenses could be had, the logic of the situation might appeal. Railroad managements are rightly expected to devise ways and means to reduce transportation costs but they must receive the co-operation of patrons.

Self-propelled railway cars have been in use for a considerable number of years, but not to wide extent. The subject has received an encourageing impetus recently and if there is progress along right lines, accomplishments should be considerable and of early realization.

The gasoline engine is attracting the widest attention and it appears further development will be chiefly through its use, although light weight Diesel type machines may offer competition and steam is not out of the running.

As in previous developments, two forms of transmission of power from the engine to the wheels and axles are prominent. While gasoline-mechanical drive is at present in the fore-front, there is renewed interest and endeavor to revive the gas-electric system along new lines, embodying lighter construction and less power than formerly used.

Adaptation of Highway Motor Trucks

Adaptation of highway motor trucks to rails has been considerable in extent and with generally satisfactory results. At a reasonable first cost, it is possible to modify a highway vehicle to adapt it to rail use and to produce a reliable piece of equipment which will operate at low cost for fuel, oil, and maintenance. The production of vehicles which stand up under the severe conditions of highway use have favored the operation of similar appliances on rails. Skillfully designed clutches, transmissions, gear shifts, etc.; heat treated alloy steels; efficient systems of lubrication; light weight parts of great strength, durability and flexibility, have worked out well. Furthermore, the extensive use of automotive vehicles for passenger and trucking service has resulted in a wide knowledge of automotive design, construction and operation, thereby making less difficult the adaptation of this equipment to railroad service than would otherwise obtain. Usually the adaptation has been through using the rear pair of wheels to do the driving and substituting a four wheel swivelling truck at front.

Many have been doubtful about the success of a single

*Abstract of a paper read before the New York Railroad Club at New York, May 18, 1922.

pair of wheels operating on rails at speeds necessary for passenger service. It can be stated, however, that the greatest success has resulted and over a sufficient period of time to demonstrate there is nothing to be feared in the trailing of a single pair of wheels under a car of this sort. It is not recommended, of course, that cars be operated at high speed in reverse motion, but it has not come to notice that any difficulty has been experienced in backing six wheel rail cars, the usual backing movement being under speeds of 25 m.p.h.

Advantages in Using Standard Equipment

Equipment of this sort should utilize all possible parts which have been developed and are of minimum weight and maximum strength and durability. The carrier is benefited by the stocks of parts available for quick delivery through the extensive service stations of the manufacturers. Furthermore, the advantage of a stable organization back of the product which is being put into use is important.

In further consideration of the six wheel arrangement, it may be stated that there is no advantage in going to more wheels under a car which can be propelled by existing automotive truck power plants. However, in order to secure acceptable riding qualities in the rear of a six wheel vehicle, it is desirable to have a wheel of a relatively large diameter; namely, 36 in. to 40 in. and arrangements to absorb shocks by rubber or other devices in connection with springs. Special consideration should be given to keeping the unsprung weight to the absolute minimum.

Operating Costs

Cars built on two to three ton chassis have a gas consumption of 8 to 11 miles per gallon and cars built on five ton chassis a consumption of from 4 to 6 miles. The consumption, of course, depends on atmospheric temperature, length of run, loading, grades and especially speed. Maintenance should not exceed five cents per mile on the smaller car or eight cents on the larger one, over a period of time. Other operating and maintenance costs depend on local conditions, particularly as to wages. One man is required for the mechanical operation of the car but whether he can handle the collection of tickets and the performance of such other duties depends altogether on local conditions. First cost of a car of the smaller type is usually around $9,000, and of the larger car around $16,000, depending on the refinements of construction and particularly whether or not the body is built for severe or mild weather conditions.

Depreciation charge rates are not established but a reasonable assumption is that vehicles of this sort can be perpetuated as long as it is desirable to maintain them. The final disposition of these cars probably will be determined from obsolescence rather than physical depreciation, and this will be determined largely by the rate at which manufacturers are able to develop something better than is offered at present.

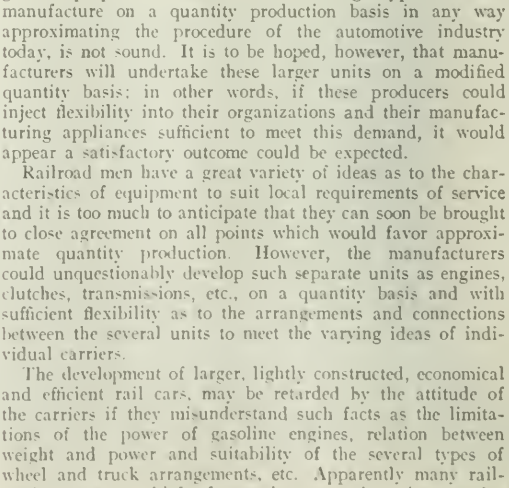
Cars of Larger Capacity Needed

Development of the present six wheel cars was relatively simple but in designing cars to meet from 50 to 75 per cent greater capacity requirements one is confronted by a different problem. This is unfortunate because, although a considerable field for cars of the six wheel type exists, there is a substantial and persistent demand for larger cars. Six wheel cars are built on the basis of two to three ton chassis seating about 24 to 28 people, with a nominal baggage space and cars on the five ton chassis seat about 35 people with a baggage space of approximately 50 sq. ft. There is need for a car which will seat from 50 to 60 people and have a baggage space of about 100 sq. ft. and be able to make speeds of 40 to 45 m.p.h. in either direction. This requirement cannot be met by adaptation of any highway vehicle and requires the design of a new outfit. A double four wheel truck arrangement is necessary because even if a power plant of sufficient capacity were available in a highway chassis, it would not be practicable to operate with a single non-swivelling axle except possibly on exceptional conditions of straight track. Twenty-five feet is about the practicable limit for distance between front truck center pin and rear axle center.

If similar economies are to ensue with the larger car, the same characteristics of construction and weights per horsepower must prevail as in present equipment. A typical rail car weighs 23,750 lb. light; with 35 passengers, two man crew and 2,000 lb. baggage, the weight (at 150 lb. per person) is 31,300 lb. or 489 lb. per brake horsepower. For cars which operate at speeds of 40 m.p.h. on level or nearly level track, the nominal loaded weight per brake horsepower should not exceed 440 lb.

Gasoline propelled vehicles developed a number of years ago were of usual railroad type and experience with them in the consideration of later experience with lighter vehicles, points out the necessity of not following usual railroad equipment types.

Automotive truck manufacturers are the logical agencies for the successful development of the larger cars. These



Chassis of Mack Rail Motor Car

manufacturers, however, appear lacking in confidence that there is a sufficient field of sale of such vehicles to warrant undertaking the expense of engineering development and additional shop equipment necessary to produce on a quantity basis. Anticipation that there will ever be sales of gasoline-propelled rail cars of few enough types to favor manufacture on a quantity production basis in any way approximating the procedure of the automotive industry today, is not sound. It is to be hoped, however, that manufacturers will undertake these larger units on a modified quantity basis; in other words, if these producers could inject flexibility into their organizations and their manufacturing appliances sufficient to meet this demand, it would appear a satisfactory outcome could be expected.

Railroad men have a great variety of ideas as to the characteristics of equipment to suit local requirements of service and it is too much to anticipate that they can soon be brought to close agreement on all points which would favor approximate quantity production. However, the manufacturers could unquestionably develop such separate units as engines, clutches, transmissions, etc., on a quantity basis and with sufficient flexibility as to the arrangements and connections between the several units to meet the varying ideas of individual carriers.

The development of larger, lightly constructed, economical and efficient rail cars, may be retarded by the attitude of the carriers if they misunderstand such facts as the limitations of the power of gasoline engines, relation between weight and power and suitability of the several types of wheel and truck arrangements, etc. Apparently many railroad men cannot think of operation except in trains contain-

ing a multiplicity of units. They have so long been accustomed to couple up a series of cars that when they approach the proposition of transporting a few passengers and a little baggage and mail they endeavor to string the proposition out into two or more cars when there is not revenue enough to support the operation of one car. Those railroad men who attack the problem from this standpoint appear as incorrect in their assumptions as some of the manufacturers who have undertaken the design and construction of single gasoline rail cars having eight wheels where the driving is done on all eight wheels and no contemplation of hauling any trailers is involved. Such excess driving mechanism absorbs power without compensating benefit and is a liability instead of an asset.

Little Need of Trailers at Present

It should not be understood that there are no conditions under which trailer operation may be desirable or that as development progresses, propelling units capable of handling two or more cars may not become available and desirable, but the need at present is a real single unit within the limits of weight carried by two four-wheel trucks.

Rolling friction increases more rapidly as wheels and axles are added rather than through the addition of weight, and for the same total weight on rails the frictional losses are greater than hauling the same weight on fewer wheels.

As the body is lengthened the weight increases at a faster rate than length because of the necessity for sufficient beam strength in the underframing but it is better to have a little more dead weight in a car underframe than to have two units and to add weight through multiplicity of wheels and through the addition of draft gearing for multiple car operation.

The use of trailers furthermore may raise questions in regard to the number of men required in the crew and thereby disrupt estimates with respect of economies versus steam. Under many conditions a train consisting of two or more cars with a seating capacity of perhaps 60 people and with a small baggage compartment, would be unhandy to operate around terminals as compared with the same capacity in a single car, particularly if the single car operated in either direction.

Double end operation is certain to attract increasing interest and there are assurances by some manufacturers that successful double end control mechanism can be applied so that a single car can be operated with equal facility and speed in either direction and therefore be used in the same manner as a trolley car.

Consideration of the expense of self-propelled cars should carry with it the many factors involved, beginning with first cost and the attendant charges for interest on investment, taxes, insurance, depreciation, operation and maintenance. Equipment provided for a given service, therefore, should cost the minimum.

When considering larger capacity cars it should be remembered that weight increases much more rapidly than capacity and that the economies obtained from the use of small cars may not be possible with those of greater size. As the size of vehicles increases, the margin of profit rapidly decreases.

Engines should be so chosen and applied as to reduce vibration to a minimum. Larger cooling surfaces should be provided than are sufficient for the same engines on highway trucks.

Gas-Electric Cars

The gas-electric car is receiving consideration by engineers of two large electrical manufacturing companies in conjunction with car builders, gas engine builders and railway engineers, with the idea of obtaining lighter construction than in former designs. The gas-electric car has a number of advantages over the gas-mechanical drive, one of which is the ease by which double-end operation can be secured and by which power can be transmitted to any or all of the wheels of the car. However, because of the characteristics of gas-electric equipment, it is not possible to use as small an engine as with the mechanical drive.

Final figures from current studies are not available but preliminary values indicate that gas-electric equipment will weigh in the neighborhood of 25 to 50 per cent more per unit of carrying capacity than gas-mechanical. The input-output efficiency of the electric generator multiplied by the input-output efficiency of motors, gives an overall transmission efficiency of about 75 per cent to 80 per cent for the gas-electric, this being the per cent of power delivered from the crank shaft to the rim of the wheels. In mechanical drive of the automotive type, the corresponding efficiency is about 85 per cent.

Furthermore, the combined weight of generator, motors and control apparatus is greater than corresponding parts in a mechanical drive. The combined effect of lower transmission efficiency plus greater weight of machinery reacts on the size of gasoline motor, which reaction increases the weight of body and trucks. It will be surprising if a gas-electric car can be produced which will weigh as little per unit of carrying capacity as a gas-mechanical. Weight, however, is of prime importance in gas-engine design, cost, operation, maintenance, reliability and availability.

Those who have given most study and have had most experience with both the gas-electric and mechanical drive agree, at least on one point, that construction must be light if operation is to be satisfactory. Use of carefully designed parts, heat treated metals, avoidance of all unnecessary parts, reduction of friction in bearings, in truck parts and from atmospheric resistance is imperative. It is impossible in the space available to go into detail on many points but a few of the details may perhaps be considered profitably.

Details of Construction

The six-wheel design has demonstrated its ability to track well. Because of unsymmetrical wheel arrangement and absence of a swing bolster at one end, cars of this design operate well with lack of lateral oscillation even at speeds in excess of 40 miles an hour on track which is not the best.

Four-wheel trucks with too short a wheel base in conjunction with small wheels do not ride well. It is necessary to keep the wheels in excess of 30 in. and preferable to have a wheel base in excess of 48 in. Experience indicates the wisdom of using shock absorbing devices in connection with the spring arrangement. An efficient hand brake should be provided in addition to the air brake. The air compressor should be of sufficient capacity to supply air for blowing a signal whistle in addition to operating the brake.

The body should be designed to give lightness, ability to withstand vibration without setting up noises, to be of pleasing appearance, to have sufficient strength and to provide protection from the elements. Body construction for cars operating in warm climates, of course, can be much lighter than in the north. Hair felt insulation in walls between the belt rail and the floor and beneath the floor with proper sheet metal protection beneath the latter, has been found helpful in dampening body noises and providing warmth.

Seats should be of light design and because of the character of the service, closer spacings, shorter backs, shorter seats and narrower aisles can be used, providing thereby greater capacity for a given floor area than with the usual passenger coach. Since railway cars can be made wider than street cars, seats can hold three persons on one side of the aisle and two on the other side.

In small cars it is relatively easy to heat through the use of exhaust gases from the motor but in large cars, seating 50 or 60 people, especially if designed for double end operation, it is not an easy problem and it may be necessary to

rely on a hot water or a hot air heater but the provision of electric current for the circulating of the air in the latter case is also not easily arranged in cars having mechanical transmissions.

At speeds above 25 m.p.h. wind resistance absorbs a large part of the power produced. The unit pressure due to wind resistance increases as the square of the speed while the horsepower expended in driving the car against this pressure increases as the cube of the speed.

The continued operation of steam trains to handle 30 or 40 passengers and small amounts of baggage, mail and express, is wasteful and should be supplanted by more efficient equipment. Existing gasoline cars can handle the traffic offered on many light lines but occasional spurts requiring the seating of 60-75 people create a need for a larger car. In many cases, the change from expensive steam locomotive to cheap gasoline car operation, hinges on the production of the larger capacity self-propelled vehicle. The small gasoline cars built on modified highway chassis are exceedingly satisfactory to the extent of their capacity. Surely American engineers can increase that capacity 50 per cent to 75 per cent with corresponding efficiency, reliability and economy of operation. If the carriers and manufacturers get together properly, the problem can be solved and without either party hazarding funds of such extent that they are worth considering in view of the benefits possible.

RESULTS OF OPERATION ON NEW YORK, NEW HAVEN & HARTFORD

Discussion

C. B. Young (general mechanical engineer, Chicago, Burlington & Quincy): A gas-electric car was placed in service on the Burlington in 1902. The gasoline engine was heavy, poorly balanced and not thoroughly developed at that time. As a result the use of the car was abandoned within a year or so. In 1904 or 1905 we purchased a steam car designed by Mr. Toltz, formerly mechanical engineer of the Great Northern. The boiler was of the vertical type with superheater. This car was more or less of a failure due to its heavy weight and insufficient capacity of boiler and engine. A gasoline car which will weigh about 16,000 lb. has been ordered recently from the Edwards Railway Motor Car Company.

In developing motor cars it should be remembered that such cars can never take the place of a small engine and should not be used where one or two trailers are necessary or where switching of freight cars is to be done.

H. P. Edwards (president, Edwards Motor Car Company): As general manager of several short line railroads, I have been experimenting with gasoline-propelled passenger cars for the past seven or eight years. Where conditions are favorable large economies can be obtained by using this method of propulsion. Some short lines, however, do not pay the standard wages prevailing on larger systems and are able to provide steam trains at an operating cost of 50 cents per mile. In such cases there is little incentive to change to gasoline cars. The successful self-propelled passenger car has thus far been of small capacity, not over 50 passengers. Cars seating from 75 to 80 people with a large baggage compartment have been tried but the operating costs are reported to be as high as 90 cents per mile.

F. S. Gallagher (engineer rolling stock, New York Central) told of the development of the gasoline car since it was first tried out in 1891. To meet present requirements he considered a car which would seat 60 to 70 people essential.

C. Lewis Diesterweg (president, Bowen Motor Railways Corporation): There is today a considerable mileage of branch and short line roads built at a heavy expense which does not pay the cost of operation. By changing from steam operation to gasoline motor-driven cars many of these roads could be converted into valuable feeders for the trunk lines which own them. The first car we built was for the Westfield Motor Railway at Westfield, Ill., and is operating on the old Sidell & Olney which had been sold as junk but was bought in three years ago by people along the line and since operated by them. This car has covered some 100,000 miles with practically no care and few replacements. Cars of later design are in service on a number of other roads.

Charles Guernsey (general manager, Service Motor Truck Company): The field for gasoline rail cars is limited by the size of the engines available and the economies of the situation. When cars become of such size and initial expense that the operating costs approach that of steam equipment they cease to have an advantage. For the present cars should be built for a passenger seating capacity of not over 50 or 55 and sufficiently light to be handled satisfactorily by a motor of not over 70 hp.

Dwight C. Morgan (vice-president, Pittsburgh & Shawmut): The cars used on the Pittsburgh & Shawmut were purchased from the Bowen Motor Railways Corporation and were designed along railroad lines, not as a makeshift but as a real substitution for steam passenger coaches. They are popular with the public and have been very satisfactory from an operating point of view. The cost of operation, compiled by I.C.C. classification, has averaged 55 cents per motor car mile as compared with 71 cents for previous steam service.

E. S. French (vice-president, White River Railroad): After thorough investigation we placed in service on our road in Vermont a high pressure steam railroad car made by the Unit Railway Car Company. This car weighs about 60,000 lb. and while the schedule does not call for trailer service, an extra car is frequently hauled. The boiler is designed for 1,000 lb. pressure and uses oil fuel. At present, with fuel oil purchased for 3½ cents per gallon, the fuel cost is about 2.45 cents per car mile and lubricating oil about 0.3 cent. The engine is of the two-cylinder, piston valve type and extremely simple. The power available is more than ample while the flexibility and ease of control are noticeable. After five years' experience we are still convinced that high pressure steam offers the best power for unit cars.

AUTOMATIC TRAIN CONTROL DEVICES have been ordered by the Interstate Commerce Commission on leading railroads of high traffic density. It has long been apparent that this must come in time. But the latest accident report shows three collisions occurring on lines unprotected or meagerly protected by automatic block signals. The purpose of train control is to prevent disaster when an engineer fails to observe the signals, but on these unprotected lines there are no signals to observe.—*Springfield Republican.*

Freight Claim Division of A. R. A. Meets in Denver

Means of Reaching Goal of Fifty Per Cent Reduction in Claim Payments Principal Topic

THE THIRTY-FIRST annual session of the Freight Claim Division of the American Railway Association was held in Denver, Colo., on June 20-22, with about 175 freight claim and claim prevention representatives in attendance. The principal work before the convention was the consideration of important changes in the freight claim rules. Numerous changes were adopted which are expected to facilitate the investigation and payment of claims. Several rules were also amended to eliminate delays in apportioning paid claims, thus providing for more economical accounting practices.

Freight Claim Prevention Committee Reports

The report of the Committee on Freight Claim Prevention was adopted in full. This report consisted of a detailed discussion of the results that had been accomplished during the past year and a description of the activities in which the committee had been engaged. It said in part:

"In November, 1920, your committee adopted as a slogan 'Cut loss and damage in half—it can be done.' This slogan has been translated into an accomplished fact. The monthly reports of claim payments are now showing a reduction of 50 per cent or more in the freight claim expense under the corresponding months of last year. While the decreased volume of traffic and price deflation were factors in bringing this result about, to a very large extent the improvement reflects increased activities of the railways and their joint agencies in studying and eradicating the causes of claims. It is particularly gratifying to note a reduction of 23.4 per cent in the number of new claims presented in the first quarter of 1922 compared with the same period in 1921, in the face of an increase of approximately 11 per cent in the number of cars loaded in the first quarter of 1922. Also, at the end of the first quarter of this year there were carried over as unadjusted only 229,880 claims, whereas at the end of the corresponding quarter in 1921 there were on hand 408,629 unsettled claims, a reduction of 43.7 per cent.

"For the year 1921 the main efforts of the committee, through its special representatives, were devoted to the encouragement of freight claim prevention organizations on the individual lines where none existed and the stimulation of activities on the part of lines already organized. To this end, the committee's bulletin service was inaugurated, having in mind the dissemination thereby of valuable thoughts and suggestions among all interested. The bulletin service is conducted in five series. One series is called 'Freight Claim Prevention Suggestions' and is addressed to superintendents, copies being sent as information to chief operating, claim prevention and freight claim officers. These contain suggestions as to methods which have been found useful on certain lines and may be found applicable on others. Another series is entitled 'Freight Claim Prevention Suggestion Letters,' and is addressed to general managers, general superintendents and superintendents of transportation, copies being sent as information to claim prevention and freight claim officers. These are issued less frequently than the 'Suggestions' to superintendents and deal more with matters of recommended practice and policy. The third series is designated 'Freight Claim Prevention Bulletins' and is addressed to freight claim and claim prevention officers only. Carried thereby is material of particular interest to those officers and of a nature different from the other series mentioned. A further series is known as 'Crop Condition Reports,' issued from time to time as conditions warrant and is sent to freight claim and claim prevention officers. A fifth series is known as 'Information' bulletins and are addressed to chambers of commerce throughout the United States."

Perishable Freight

"Plans are now being perfected for a national drive against perishable freight irregularities, which for the year 1921 cost the railways approximately $20,000,000. The months of July and August have been set apart for special education work among all employees in perishable freight service, to the end that there shall be a better understanding of tariff and operating rules and that service defects shall be reported promptly to responsible agencies and corrective action taken. The substantial savings which can be effected through expert inspection of fruits and vegetables and fresh meats to determine the true cause of damage—whether by disease, violation of package or loading regulations, etc., or through fault of the carrier, will be emphasized during the campaign; likewise the importance of each road maintaining a perishable freight service department where the volume of such business justifies."

"Figures for 1921 show that approximately $14,000,000 was charged for loss and damage to fruits and vegetables, an average of $18 per car transported, this amount being nearly seven times the amount per car for loss and damage to live stock. Discussions in the territorial conferences developed great need for inspection service at both initial and destination points."

The committee, after carefully considering the views of the territorial representatives offered the following recommendations:

(1) That perishable freight should be given adequate inspection at destination;

(2) That the inspection services of established inspection bureaus, including that of the U. S. Department of Agriculture, be fully utilized so far as available and that such service be extended to cover as much of this traffic as possible when damage is found or reported by consignee;

(3) That damages due to field diseases and other conditions controllable at the source, to improper packing and bracing, or to other preventable causes, shall be reported to the initial lines;

(4) That damages shown to have resulted from transportation or temperature failures en route shall be reported to the line responsible by the carrier whose investigation determines such failures;

(5) That such reports shall be by letter or form, as may be determined upon to meet the individual conditions of each reporting line; but in either case the facts must be fully covered.

(6) That each carrier shall notify the Secretary the title and address of its official designated to handle such reports;

(7) That carrier receiving such reports will investigate same with the view of determining and applying remedial measures;

(8) That, inasmuch as the arrival of perishable traffic at destination in good condition is of general importance, equally affecting the interests of agriculture transportation agencies and the public at large, efforts should be made to co-ordinate the inspection service of the Bureau of Markets, U. S. Department of Agriculture, with the efforts of the transportation lines, to the end that the department shall investigate at their source the conditions such as field diseases, etc., developed in inspection at destination.

On December 7, 1921, a conference was held in New York by the special representatives of the committee with the representatives of the National Association of Finishers of Cotton Fabrics, the New York Textile Bureau and the Converters' Association to discuss ways of reducing loss and damage to cotton piece goods, estimated at $200,000 per annum. Plans were worked out for joint study of the matter by the organ-

izations represented, together with the eastern claim conference and the Trunk Line Freight Inspection Bureau. The convention's attention was also called to the desirability of extending bureau inspection of concealed loss and damage to all cities where the volume of business warrants. This service, the committee felt, has been satisfactorily performed by the Western Weighing and Inspection Bureau at an average cost of 51 cents per inspection and is preferable to individual road inspection because it secures uniformity, is more efficient, and costs less; also it is a distinct advantage in having inspection made by a disinterested organization.

In addition the following subjects came before the committee for consideration and action thereupon during 1921-1922: Improved methods of loading sacked goods to provide better side door protection; damage caused to automobiles by improper bracing; proper strapping for shipping containers; proposed central bureau for reporting over and short freight of unusual character or value; mailing waybills for astray l.c.l. freight; cotton shortages; reducing claims on household goods; co-operation with the American Railway Express Company; damage to fresh meats and packing house products; reducing loss and damage claims on live stock; damage to newsprint paper; wrongful deliveries made on presentation of stolen or forged papers.

Addressed by Retiring Chairman

H. C. Pribble, who has been chairman of the Freight Claim Division for nearly four years, briefly summarized the activities of the division since the last annual meeting. The undertaking of "cutting losses and damages in half" will be realized, he said, if the claim payments figures available for the current year and the revenues for the same period maintain their ratio for the balance of 1922. If so, the claim payments and the ratio will be less than one-half of that of 1921. While the Freight Claim division did not bring the changes which produced these results, he continued, it was the first to have the vision and then promote the necessary work to be done. He also said: "Claim prevention naturally involves many departments of a railroad, hence several of the divisions of the American Railway Association. We will have to be quite circumspect in dealing with these matters lest we presume upon the prerogatives of some other division. It was found that the efforts of several of the divisions were over-lapping and causing some confusion, hence President Aishton called a meeting of the chairmen and secretaries of the divisions on January 31, 1922, with a view to adopting a policy which would reduce these conflicts to a minimum. An advisory council was formed of representatives of all of the divisions, whose duty it is to canvass the activities of all of the divisions and adopt a program of operation to avoid conflicts. Any matter of importance that may come up hereafter and which may involve more than one division will be referred to this advisory council for decision as to how it shall be handled. Of course this refers only to our claim prevention work.

"I know of no way to advance the desired friendship with patrons of the railways more than by prompt and intelligent investigation of freight claims and their adjustment on fair and reasonable lines with our claimants at the earliest possible time. I do not mean to say that we should pay any claims we have not heretofore paid. If our investigation shows we owe a claim, the claimant is entitled to his money promptly. If the investigation shows he is not entitled to the payment, we should be able to convince him in a way that will not lessen his friendship. Our success, individually or collectively, can rest permanently on no other basis than honest, fair and prompt adjustment of our claims with our patrons."

Colonel Dunn Talks

B. W. Dunn, chief inspector of the Freight Container Bureau of the American Railway Association, discussed the problems of that body in one of the most interesting and constructive talks before the convention. "We are asked," he stated, "to make an engineering study of the construction of a container to give it the strength necessary to meet certain destructive forces. We are asked to pass upon the strength of a freight container to carry 100 lb. of freight but we are not told the maximum destructive force that container will encounter in transit. While that service is being performed that container is liable to meet certain destructive forces. If a car is handled in a certain way during transit, forces are going to be generated which will have a tendency to break that container. We know how to test and prepare specifications for a container where it is expected to carry 100 lb. of freight under normal conditions, but what we do not know, is the maximum shock that that freight car is liable to receive."

Fitch Elected Chairman

William C. Fitch, freight claim agent of the Southern Pacific, was elected chairman of the freight claim division for the ensuing year. J. B. Baskerville, assistant general claim agent of the Norfolk & Western, was elected first vice-chairman to succeed H. C. Howe, recently deceased, while J. F. Horrigan, freight claim agent of the Northern Pacific, was elected second vice-chairman to succeed Mr. Fitch. Lewis Pilcher remains as secretary of the division. H. M. Moors, freight claim agent of the Southern Pacific in Louisiana, C. M. MacDonald, freight claim agent of the Boston & Maine, H. C. Pribble, general claim agent of the Atchison, Topeka & Santa Fe and W. B. Kellett, freight claim agent of the Ft. Worth and Denver City were elected members of the general committee. R. L. Calkins, freight claim agent of the New York Central and H. R. Grachau, freight claim agent of Chicago, St. Paul, Minneapolis & Omaha, remain on that committee, their terms having not yet expired. H. B. Bierman, general freight claim agent of the Missouri, Kansas & Texas of Texas, was elected chairman of the Appeal committee, the other members of which are J. J. Hooper, general claim agent of the Southern and J. F. Horrigan, freight claim agent of the Northern Pacific.

It was decided to hold a second freight claim prevention congress in the early fall, the place and date to be determined later by the general committee. It will, however, probably be held in Chicago in either September or October.

Cushions to Make Sleeping in German Day Coaches More Comfortable

Results of Operation of French Railways in 1921

Deficit Reduced About One Billion Francs—Earnings 190 Per Cent Greater Than Pre-War; Expenses, 429 Per Cent Greater

By Marcel Peschaud

General Secretary of the Committee of Management of the Great French Railways

In 1921 a new railway regime, established by the convention of June 28, 1921, was substituted in France for that instituted by the conventions of 1883. Although the law sanctioning this convention was not promulgated until October 29, 1921, and the convention was not ratified by the shareholders of the railway companies until January and February following, the financial organization provided for came into operation with retroactive effect as from January 1, 1921, this date marking the commencement of the fiscal year for the companies.

From the administrative point of view the new regime brings about co-ordination between the managements of the different lines by the establishment of a Committee of Management dealing with all questions of a general nature of common interest, and between the managements and the general interests of the country, by the establishment of a Superior Council, a consultative body, on which have seats, together with the representatives of the lines and of the employees, representatives of general national interests (commerce, industry, agriculture) and also of the great public administrations interested.

The Common Fund

From the financial point of view this co-ordination takes the form of the establishment of a common fund for all the railways, from which each railway may draw sums required to enable it to meet unearned expenses and charges, and to which the prosperous lines are to pay in their surpluses after all their own charges have been met. In principle the equilibrium of this fund is secured by the working of the tariffs; and eventually, if economic circumstances do not allow of the necessary advances in rates, it will be maintained at the expense of the public treasury, the government having requested the companies to make advances to the fund for its account and the companies borrowing the necessary sums for that purpose.

The reports which have just been presented by the Boards of Management of the great private companies to the meetings of shareholders, show what have been the results of the first year of this new regime. It will not be possible to appreciate fully the effects of the Convention until 1922, because, although it came into force as from January 1, 1921, it was not really applied with all its provisions until January, 1922.

The financial position of the French private railway companies in 1921 appears much better than in 1920, in spite of the economic crisis and the drought, which have hampered traffic. In the case of the five large concessionary (private) lines the deficit on the operation account has been reduced from 1,300 million francs in 1920 to 383 million francs in 1921; and the total deficit, in spite of the heavier fixed charges for the loans, was only 1,600 millions in 1921, a decrease of 1,000 millions on the preceding financial year.

It is to be noted that only the concessionary (private) lines are referred to here. The state lines generally do not publish their reports until a year later than the companies.

Issues of Bonds

The issues of bonds by the companies in 1921 were of greater importance than in the preceding years. In the first place, the expenses connected with the purchase of rolling stock, the constructing of new lines and especially electrification, were greater; and, while awaiting the coming into force of the new regime, and under the legal authority given them in 1914, the Nord and P. L. M. companies continued in 1921 the issue of bonds to cover the deficiency for the financial year (653 million francs for the two lines) as these companies, in contrast to the other three large private lines, have ceased to enjoy the guarantee of the state since 1914.

The amount of capital raised by the companies in 1921 was, consequently, the highest attained since they were established. The bonds and debentures sold reached a total of 3,052,000,000 francs. This new capital was distributed as follows among the individual companies:

	Capital realized
Nord	694,000,000 francs
Est	120,500,000 francs
Paris-Lyons Mediterrean	1,427,500,000 francs
Paris-Orleans	562,800,000 francs
Midi	247,400,000 francs
Total	3,052,200,000 francs

Previous to the war the proceeds of issues did not exceed a total of 400 millions for all the companies taken together. In 1918 the amount increased to nearly 500 millions. In 1919 it reached 1,396 millions and in 1920, 1,062 millions. What an effort was made by the companies in 1921 can be judged from the fact that the figure of their issues exceeded 3,000 millions.

Thus the amount of the bonds issued by the five companies from their establishment to December 31, 1921, reached 21 billions 425 millions. If to this be added the share capital raised (1,318 millions) the figure of 22 billions 800 millions is arrived at, which represents the call upon savings made since their establishment by the only concessionary lines still in existence.

Interest Charges Heavier

Unfortunately, if the issues of the companies were considerably larger in 1921 than in the preceding years, the expenses for interest and redemption were also greater. The minimum rate of interest and redemption for the bonds, which did not exceed 5.5 per cent in 1913, and had risen to 7.5 per cent in 1919 and to 8.5 per cent in 1920, increased to 9.5 per cent in 1921. This progressive increase is the consequence of the general increase in the price of capital.

The desire to take advantage of the coming fall in the rates of interest led the companies to continue in 1921 the issue of short period debentures, repayable in 2, 3, 4 or 10 years. These debentures, on which the companies undertook to pay the taxes, were very favorably received by the public.

On the other hand, the Midi and Orleans companies issued 6 per cent bonds in the United States and the Nord, P. L. M. and Orléans companies have more recently floated loans on the London market, which have had great success, although the rate at which they were issued was lower than that of the last loans floated in France. The subscription lists were open for a few minutes and the amount was subscribed immediately. It can be seen from this that the credit enjoyed by our great companies is as good abroad as in France.

The net capital liabilities (after deduction of the annual

payments due by the state) have increased since 1913 and 1920 as shown by the following table:

NET CAPITAL LIABILITIES (SHARES AND BONDS)

Companies	(In Millions) Net capital liabilities In 1921	In 1920	In 1913	Increase % in comparison With 1920	With 1913
Nord	156.3	226	122	—30%	28%
Est	149	124.6	110	20%	35%
P. L. M.	338.7	327.6	248	3%	36%
P. O.	206.3	162.5	146	23%	37%
Midi	128	78.1	67.7	33%	52%
Total	978.3	918.8	693.7	3%	36%

If, in order to make a comparison with the year 1920, there are added for 1921 the payments due by the state, a total of 1 billion 123 millions is arrived at, an increase of 205 millions, or 22 per cent, on the figure for 1920. The charges connected with the share capital have remained perfectly unchanged. The progressive increase in the charges must be ascribed to the bond capital.

During the past financial year the companies continued regularly to insure the retirement of their capital. The number of bonds repaid in 1921 increased, for the concessionary lines, to 340 million francs. If there be added to this figure the retirement of shares (about 15 millions), a total figure of retirement of 355 millions is arrived at. On December 31, 1921, the amount of retirements effected since the establishment of the companies was 5 billions 934 millions of bonds and 300 millions of shares.

Capital Expenditures

Capital expenditures were made for the construction of new lines, for electrification, for various works and for the purchase of rolling stock.

The work of constructing new lines, which was suspended during the war and resumed from 1919 onwards, was continued. On the P. L. M. the work on the line from Nice to the Italian frontier via Sospel, and on the Est the construction of the line from St. Dié to Saales is in progress. On the Midi the work of constructing the trans-pyrenean lines is being actively carried on. The shareholders' meeting authorized the company to advance to the state in 1922 a sum of 56 millions for the covering of the expenditure connected with this work.

During 1921 the electrification programs of the great railway systems entered upon the period of realization. The Orléans, which is to electrify about one-third of its system, submitted to the Ministry of Public Works projects relating to the electrification of the lines from Paris to Orléans and from Bretigny to Dourdan. As regards the other portions of the system which are to be electrified, it has granted the contract for the construction of hydraulic works in the Haute-Dordogne district and obtained an interest in the construction of another hydraulic works, on the Creuse, the work on which has commenced.

The P. L. M. has completed its preparations for the first stage of its electrification program. It contemplates, first of all, the equipment, within a period of four years, of the line from Culoz to Modane, the prolongation of which in Italy is already electrified; then, simultaneously with the electrification of the line from Nice to Coni, in course of construction, that of the Nice suburban section between Cannes and Mentone. On the Midi, which is to be almost entirely electrified, the work is in full progress.

Reconstruction of Destroyed Railway Systems

The reconstruction of the lines destroyed by the Germans may be regarded as accomplished. On the Nord the destroyed constructive works have been finally restored (5 tunnels, 600 rail-bearing bridges and viaducts, 160 over-bridges); as regards railway stations, 353 station buildings and 339 goods sheds have been rebuilt. In the large centres the reconstruction and transformation have been carried out in accordance with the best technical plans. The shunting (switching) stations in particular have been reconstructed with improvements calculated to insure the best results from the labor employed, while at the same time permitting, in proportion as may be necessary, a considerable increase in output. On the Est the work of restoring the destroyed lines is nearly finished. The reconstruction of the great bridges over the Meuse, which had been delayed by the floods, will be completed this year. The same will be the case with the station buildings, the sheds and the gate-keepers' houses which have to be rebuilt.

More Locomotives and Freight Cars Than Before the War

The rolling stock of the companies increased still further in 1921. On December 31 it comprised 14,464 locomotives (as compared with 10,959 in 1913 and 11,333 in 1920) with an output, in round figures, of 14,000,000 steam h.p. (as compared with 11,000,000 in 1913 and 13,000,000 in 1920).

The number of goods wagons increased from about 300,000 in 1913 to 345,000 in 1920 and 367,000 in 1921.

The number of passenger coaches has slightly decreased since 1920 owing to certain lines having discarded coaches the type of which was no longer suited to present requirements, or the renovation of which would have been too expensive.

Because of the decrease in the traffic there is a plethora of rolling stock on the French railways.

Results of Operation in 1921

The gross receipts of the concessionary (private) lines amounted to 4 billions 910 million francs in 1921, an increase of 193 per cent over 1913 and of 10 per cent over 1920. Operating expenses were lower than for 1920 by 8 per cent, amounting to 5 billions 292 million francs; but they are still higher than in 1913 by 430 per cent.

The Est Company alone shows small net earnings; the other companies show deficits. The deficit on operation for all the concessionary lines taken together amounted to 383 millions, distributed as follows:

Companies	Gross receipts (in millions)	Working expenses (in millions)	Net earnings (in millions)	Ratio of working expenses to gross receipts
Nord	984.6	1,059.5	— 74.9	107%
Est	910.1	908.2(2)	+ 1.9	99%
P. L. M.	1,670.8	1,732.4	— 61.6	104%
P. O.	923.8	1,094.3	— 170.5	120%
Midi	420.2(1)	498.4	— 78.2	118%
Total	4,909.5	5,292.8	—383.3	108%

(1) Net receipts (after deduction of taxes and rebates).
(2) Including the repayment of one-fifth of the proceeds of the increase in the rates (Convention of November 10, 1916).

The deficit from operation amounted in 1920 to 1,927 millions. The decrease in the deficit amounted in 1921 to 913 millions—that is to say, 70 per cent. This decrease is even more important than appears at first sight, because the operating account of the companies is burdened in 1921 with expenses which were payable by the state in 1920, these being the family allowances and the bonuses for the increased cost of living granted to pensioned employees. In 1920 these expenses, taken together, represented a total of about 115,000,000. Taking these into consideration for 1920 the total deficit for that year would be 1,312 millions. The actual decrease in the deficit in 1921 was therefore 1 billion 29 millions. This improvement in the operating results was due both to an increase in the earnings and a reduction of expenses.

The increase in earnings is in part due to the fact that the last advance in rates authorized by the law of February 14, 1920, which brought the total of the increases up to 140 per cent for goods rates and up to 70.75 and 80 per cent (according to the class) for passenger rates, benefited

the whole of the financial year 1921, whereas it affected only the last ten months of 1920. It is further to be ascribed to the general increase in traffic in 1921, especially in passenger traffic, due to the improvements in their service made by the companies. The increase is of importance on the Nord and Est systems above all. In fact, it is upon those systems that the increase in traffic has been greatest.

The receipts for the conveyance of passengers reached 1 billion 233 millions, representing 25 per cent of the total gross receipts. The advance in the rates having been 70.75 to 80 per cent, according to the class, it will be seen that that advance did not lead to a reduction of the traffic, seeing that the receipts from the latter increased by 151 per cent as compared with 1913.

The number of passengers carried exceeded on all the lines the figures for 1913 and 1920. It amounted to about 436,000,000 for the large private companies, as compared with 379,000,000 in 1920 and 388,000,000 in 1913; the increase is 15 per cent as compared with 1920 and 12 per cent as compared with 1913.

Improvements in Passenger Service

The increase in traveling is to a great extent due to the improvements effected by the companies in the train service. The companies have again put into force the sale of collective return tickets to the members of certain associations and have granted fresh facilities for collective family traveling. Furthermore, they have continued to make improvements in long-distance connections. New express trains have been introduced, direct services have been established, for instance, between Strasbourg and Bordeaux, and between Bordeaux, Toulouse and Marseilles. The south express, which had not been running since the war, has been reinstated. To encourage tourist traffic they established joint offices at Brussels, Berne, New York and Rome. With the same object they continued to extend the motor car services in the districts favored by tourists and joined in the establishment of hotels or encouraged the hotel industry in those districts.

At the same time the service became more regular. The number of delays to trains, which had reached 48 per cent after the war, was almost insignificant in 1921, being 2.8 per cent on the Nord system, 1.72 per cent on the Est, 3.17 per cent on the P. L. M., 1.79 per cent on the P. O. and 4.3 per cent on the Midi.

The tonnage conveyed by fast freight trains has decreased somewhat in comparison with 1920. This decrease is partly explained by the reversion to slow-train conveyance for certain classes of traffic, especially as regards the conveyance of animals, which was previously effected by fast train. The receipts of the companies for slow-train traffic amounted to 3 billions 62 millions, an increase of 10 per cent as compared with 1920 and of 224 per cent as compared with 1913. They represent 62 per cent of the total gross receipts.

The increase in the receipts in 1921 as compared with 1920 is, as has already been said, partly due to the fact that the advances in the rates authorized by the law of February 14, 1920, were in force throughout the financial year 1921, while they benefited the financial year 1920 only during 10 months, it is due also to the unification of the goods tariffs which was carried out during the financial year 1921 and brought about certain increases in the rates. It is estimated that the total advance in rates amounts to from 220 to 230 per cent—something very near the increase recorded in the receipts. The latter would have been much greater had it not been for the economic crisis and the drought in 1921.

As regards the lines as a whole, the tonnage carried by slow train was slightly larger than in 1920 (139,900,000 tons as compared with 139,800,000) but it has not yet reached the figure of 1913.

The Nord and Est systems are those which show the greatest increase in tonnage. This is chiefly due to the growing activity in connection with the reparation work in the devastated districts. But these lines are far from having recovered their pre-war traffic in coal and metallurgical products, which came from the mines or works at present undergoing reconstruction.

On the P. O. system the tonnage decreased by 15 per cent as compared with that of 1920, but was still greater than in 1913. On the P. L. M. the tonnage carried by slow train was less than in 1920 or 1913, but the ton mileage was greater by 5 per cent than in 1913.

On the Midi the tonnage carried by slow train was 3.7 per cent less than in 1920 and also less than in 1913.

On these three systems the diminution in the tonnage has been chiefly in minerals and metallurgical products. This shows that the decrease in traffic is caused by the industrial crisis and that when the latter is over the traffic will regain its vigor.

The great lines have taken certain measures to encourage the development of traffic. On the Est the allowances granted on the conveyance of complete train-loads of minerals have been increased. They amount at present to a total of 29.25 per cent for a train of 600 net tons in private 40-ton wagons. The improvement in the working conditions of the great lines has enabled relaxations to be made in the regulations relating to the storage of goods at stations. Since November 1, 1921, the charges for warehousing and standing have been considerably reduced, the reductions for the warehousing of goods varying from 20 to 90 per cent and for standing places from 10 to 50 per cent. The lines are studying the readjustment of tariffs in order to meet the reduction in the value of the goods, and in doing so are endeavoring to give preference to raw materials and long-distance traffic.

Operating Expenses 429 Per Cent Higher Than in 1913

The working expenses in 1921 were 5 billions 292 millions, as compared with 5 billions 758 millions in 1920. In 1913 the expenses amounted to only 999 millions, and in 1921 were still greater than in that year by 429 per cent, whilst the earnings have increased only 193 per cent from 1913 to 1921.

Companies	Working expenses (in million francs) in 1921	in 1920	in 1913	Increase or decrease in comparison with 1920	1913
Nord	1,059.5	1,216	207	—12%	+411%
Est	908.2	896	188	+ 1%	+383%
P. L. M.	1,732.4	1,858	340	— 6%	+409%
P. O.	1,094.3	1,240	184	+11%	+494%
Midi	498.4	546	80	— 8%	+525%
Total	5,292.8	5,758	999	— 8%	+429%

The reduction in expenses in 1921 is to a great extent attributable to the reduction in expenditures for fuel, to improvements effected in the service and, in a lesser degree, to the decrease in the cost of the staff.

The decrease in the expenditure for fuel, which amounted to 53,000,000 on the Est system, 155,000,000 on the P. O., 56 per cent of the expenditure for 1920 on the P. L. M. and 30,000,000 on the Midi, is chiefly due to the fall in the price of coal. The average price per ton on the P. L. M., for instance, which was 266 francs in 1920, comes out at 187 francs for 1921; that is to say, 30 per cent lower.* The prices at the end of the financial year were around 150 francs, but that figure is far removed from the pre-war price (30 francs in 1913).

The decrease in the expenditure for fuel is also due to the decrease in the consumption per kilometre of the engines. On the Est system, for instance, the consumption per kilometre of the locomotives was reduced from 24 kilograms in 1920 to 20.6 kilograms in 1921. Likewise, on the P. L. M., the consumption of coal per kilometre, which had fluctuated between 24.5 kg. and 22.5 kg. in 1920, diminished to about

*Figured at the present rate of exchange, these prices for coal were about $26 per ton in 1920, and about $18 per ton in 1921. A franc at present exchanges for about 10 cents in American money.—*Editor.*

20 kg. during the last three quarters of 1921. During 1921 that line continued its experiments for improving the consumption of the locomotives by the utilization of superheating and the pre-heating of the feed water.

The Paris-Orléans completed the fitting-up of the apparatuses for firing with fuel oil (mazout) on three of its locomotives. The runs hitherto made on fuel oil (mazout) have not justified the more extensive use of that method of firing.

Employees Reduced 9 Per Cent

Generally speaking, the cost of the personnel declined in 1921. This decrease is in part attributable to the diminution in the number of employees. The decrease in the traffic on certain lines and the greater experience gained by the employees engaged since the war (thanks, more especially, to the establishment of traffic and transport schools) enabled the lines to discharge a certain number of minor officials and day laborers and to make less appeal to the services of auxiliary labor. The reduction of personnel amounted to nine per cent.

NUMBER OF EMPLOYEES

(Including Auxiliary and Temporary Employees)

Companies	Number in 1921	Number in 1920	Decrease %
Nord	72,444	76,909	5%
Est	65,464	75,326	13%
P. L. M.	103,771	118,577	14%
P. O.	65,490	72,179	10%
Midi	34,705	35,331	2%
Total	341,874	378,322	9%

The number of employees is still greater by 28 per cent than in 1913, because during 1921 the lines continued to suffer under the burdensome effects of the 8-hour day, without having been able to obtain, as they had hoped, a revision of the truly unreasonable conditions of its application to the railways. The additional expenses for materials and staff entailed upon the six great lines by the 8-hour law amount to about 1,100 million francs. That figure represents rather more than half of the total deficit of the lines.

Maintenance Expenses Increased

The expenses for repairs to rolling stock increased slightly in 1921. This increase was due to the measures taken to accelerate the reconditioning of the rolling stock, which had been postponed during the war. It was also due to the important nature of the repairs effected in 1921 to rolling stock which was in a very bad condition, for in 1920 the lines began by repairing the locomotives and wagons which were least damaged so as to be able to recondition a large number of units more rapidly. This work is nearly completed. The expenses for the maintenance of tracks and buildings also increased, for in 1920 they had to be reduced owing to the scarcity of materials. This increase was also due to the energy with which the work of rehabilitating the tracks of certain lines was pushed forward with the object of permitting the running of heavy engines.

To sum up, the earnings increased in 1921 in spite of the crisis which bore hard upon industry and contributed to the decrease in traffic, and there has been a decrease in expenses in spite of the paying off of a considerable amount of arrears left by the war and the taking upon themselves by the lines of the payment of grants to the employees which were formerly paid by the state. The point cannot be too strongly emphasized that these results, which are shown by a decrease in the deficit from operation, were attainable only by means of a continual effort on the part of the managements. If traffic has increased, this is due in the first place to the fact that the companies whose lines had been damaged in the war pushed forward, with the greatest energy, the work of reconstruction which was to enable the districts served by them to carry on a more normal life. It is also due to their having progressively increased the number of passenger trains and encouraged tourist traffic. It is further due to the fact that, thanks to the continuous improvements in their methods of working and the care they have devoted to the organization of a personnel hastily recruited on the morrow of the armistice, they have obtained greater regularity in their passenger and goods services. Finally, they endeavored to effect every possible economy—in the cost of personnel—by reducing the number of employees; in the cost of fuel, by improving its consumption.

The Balance of the Financial Year

If the deficit on the subsidiary services and the capital liabilities be taken into account, the operation of the concessionary (private) lines shows a total deficit of 1,351 million francs in 1921. This deficit no longer falls upon the state, as was the case when interest was guaranteed, but upon the fund established by the Convention of June 28.

Although the accounts of the state railway for the financial year 1921 have not yet been definitely made up (the accounts for the year 1920 have only just been published) it is possible, judging by the credits voted by Parliament on the budget, to estimate the results of operation for the year. They show a deficit on operation of 675 millions in round figures—that is to say, nearly half as great as the deficit of all the five concessionary (private) lines taken together. Thus the operating results for the whole of the French railway systems taken together show a deficit of, in round figures, 2,026 millions in 1921. [At the present rate of exchange this is about $203,000,000.—*Editor.*]

This figure does not include the special war-time compensations (720 francs per official), which were still paid by the state in 1921. The amount of these for 1921 is about 320 millions—namely, 250 millions for the concessionary (private) lines and 70 millions for the state railway system. If these be taken into account the total deficit of the concessionary lines comes to 1,600 millions, as compared with 2,610 millions in 1920; thus the deficit has decreased by 1,000 millions, or 38 per cent. For the whole of the French lines, including the state railway system, the deficit comes to 2,345 millions in 1921, as against 3,530 millions in 1920, there being thus a decrease of 33 per cent.

The "convention" of June 28, 1921, authorizes the institution of a management premium intended to give the companies, and also their personnel, an interest in the development of traffic and in economy in expenses. The premium for the company consists of two elements, both based upon the comparison of the year under consideration with the year 1920. The first is equivalent to three per cent of the increase in the receipts (not including advances in rates). The second is equivalent to one per cent of the decrease in the deficit or, if the receipts exceed the expenses, to one per cent of the total of the surplus and the deficit for 1920. In the case of the Nord and Est systems this ratio has been raised from one per cent to two per cent. If the deficit is greater than for the financial year 1920 the company is subject to a penalty proportional to the amount of this increase in the deficit, to be charged against the premiums for the following years. Generally speaking, the premium granted to the personnel is double that for the company.

For the concessionary lines the premiums thus earned for the financial year 1921 amount to 32,576,000 francs, of which sum 11,326,000 francs goes to the companies and 21,250,000 francs to the personnel. In the case of the state railway system the premium in connection with the first element amounts to 130,800 francs, being 43,600 for the railway and 87,200 for the personnel. As regards the second element, the state railway system not only does not benefit by any premium at all, but is penalized 351,000 francs, which will have to be made up out of the premiums for subsequent years.

The premiums have to be paid out of the joint fund. The latter showing a deficit, the amount of the premiums must be added to the lines' deficit mentioned above. Thus the

total deficit chargeable to the joint fund comes to 2,059 millions, 1,384 millions for the concessionary (private) lines and 675 millions for the state railway system.

Thus, although there is still a deficit, the financial position of the companies shows an improvement as compared with 1920. What are the prospects for the financial year 1922? In the first place, the increase in earnings is bound up with the resumption of economic activity and that resumption, of which symptoms were thought to be perceptible at the end of last year, is not yet clearly discernible. Furthermore, it is under present circumstances not possible to contemplate increases in the tariffs capable of establishing the financial equilibrium of the lines. On the contrary, the industrial crisis, while contributing to the decrease in traffic, leads to numerous demands for rate reductions being made in the hope that a decrease in the rates for the conveyance of certain commodities or industrial materials would lead to a revival of business. The companies, being desirous of facilitating this revival, have undertaken, in agreement with the public authorities, a revision of the unified tariffs, which had in some cases placed an excessive burden upon certain kinds of traffic and had caused difficulties in certain transactions. Numerous tariffs have already been revised and proposals submitted to the Minister of Public Works; others are being considered. The result of all this revisionary work will be a considerable reduction of the rates which are burdening industry and commerce. It is to be hoped that this will increase traffic and that this increase of traffic will compensate for any losses the railways may suffer.

As regards expenses, the lines will find themselves charged in 1922 with the expenses connected with the allowance to employees for the increased cost of living, amounting to 720 francs, hitherto borne by the public treasury. They will also have to meet the considerable additional expenses resulting from the increases in pensions. On the other hand, there will be a further decrease in the expenses for fuel in 1922; moreover the hope seems justified that there will be a decrease in the cost of personnel owing to a more reasonable application of the 8-hour law.

In spite of all it does not seem that the lines will be able to establish their financial equilibrium, and in 1922 they will again have to resort to borrowing to cover their deficit. It may nevertheless be hoped that this deficit will decrease progressively from year to year, thanks, on the one hand, to the efforts made to develop traffic, and, on the other hand, to the re-establishment of normal economic conditions.

Annual Meeting of Freight Station Section—A. R. A.

Large Attendance—Illuminating Discussions of Many Topics—Inspiring Address by Gen. Atterbury

THE ANNUAL meeting of the freight station section of the American Railway Association was held in Philadelphia, Pa. on June 20, 21 and 22, J. C. Gilmore, chairman of the Section presiding. The members were welcomed to Philadelphia by Robert L. Russell, vice-president of the Philadelphia & Reading and by E. J. Cattell, city statistician. More than 400 members and guests attended the meeting.

Detailed and instructive discussions were held concerning all kinds of freight station activities, but most of the formal action taken was in the shape of resolutions instructing committees how to handle various reports in connection with the parent association. One interesting discussion was that on checking of inbound l.c.l. freight. Descriptions were given of the practice of the Erie Railroad at Cleveland, the Atchison, Topeka & Santa Fe at Kansas City and the Louisville & Nashville at Cincinnati.

Weighing freight loaded into cars from freight houses was discussed at a considerable length. The report on this subject says that probably 90 per cent of the outbound freight houses of the country have no adequate equipment of platform scales, and that at such stations not more than 5 per cent of the freight is weighed. At one station where a count was made for four days it appeared that the consignors had shown the weight on their bills in only 87 per cent of the shipments.

The Committee on Uniform Way Bill has induced the accounting officers' association to make some—but not all—of the improvements which are desired by the local agents. The question of making useful records of the cost of operating a freight house was discussed briefly, but the consensus of opinion was that usually the desired data is not obtainable at reasonable cost; and the subject was dropped. The use of tractors in freight houses was discussed in the same connection. The subject had been studied at length by the committee in charge but here also no cost comparisons could be made with satisfaction, because of the inability to get the records giving all the desired information.

A proposition that a quarterly circular should be issued informing members of the activities of the different committees was warmly approved by the meeting.

Officers. The election of officers of the Section for the ensuing year resulted in the choice of C. M. Teschemaeker (C.&A.), Chicago, for chairman; H. W. Maynard, Jr., (C.N.J.), New York, first vice chairman; and J. R. Hitchcock (A.T.&S.F.), Kansas City, Mo., second vice chairman.

Local Freight Agents as Promoters of Good Relations with the Public

The feature of the meeting on Thursday morning, June 22, was an address by Gen. W. W. Atterbury, vice-president of the Pennsylvania Railroad. Gen. Atterbury said in part:

The work of no other group of railroad men is of greater importance to the welfare of the transportation industry than the work of men in the freight departments. A comparatively new field of public service has in recent years opened up to you—a form of public service of the highest importance. Railroads are regulated by: (1) Congress; (2) Interstate Commerce Commission; (3) State Legislatures; (4) State Public Service Commissions; (5) County Governments; (6) City Governments. Railroad regulation depends upon a well-informed public opinion existing behind all of those regulatory bodies. The railroad problem will never be settled in the courts, for public opinion has its say even after the court of final resort has passed its decision. Our legislators, public utility commissioners and other public officers mean to act wisely. The public in turn means to act wisely and justly. They can act wisely and justly only if they know the true situation.

No other transportation officials, either as individuals or as a group, come into such close contact with the public as do the local agents. None have a better opportunity to cultivate in personal ways a fuller understanding of the railroads and a spirit of co-operation with them in the interest of the common welfare. Here, then, is a new and wonderful field of real service which has opened up to you. To take an efficient part calls for an earnest self-education and a sincere interest—not only a selfish interest in your own welfare but a statesmanlike interest in the welfare of our entire country.

Freight agents are the railroads' "antennae." They are most happily situated to serve as interpreters of the railroad to the

public, and to interpret public sentiment to the railroad men themselves. What shippers think about you is, in most cases, what they think about the railroads. To them, you are the railroads.

The railroads more than any other industry are forced to combat continuously campaigns of misrepresentation, conducted by individuals or organizations whose interests are not those of the public, nor of the employees whom oft-times they profess to lead * * *. I have no quarrel with the man who conscientiously believes in the policy of governmental ownership and operation of the railroads. That is not a moral proposition. But believing, as we do, that the public welfare will be served most efficiently and most economically through private ownership and private operation, under a wise governmental regulation, confined to regulation, we should be remiss in our public duty if we did not inform those with whom we come in daily contact of the reasons for our faith.

This resolves itself, to a large degree, to a question of ways and means. The railroads usually are not well prepared to talk to the men on the street in the simple terms which he understands, and it is this man and members of his family who vote who in the last analysis are back of the governmental policy toward our railroads, and in time their ideas will find their reflection in the laws upon our statute books, and in the decisions of the courts.

The railroad problem to most people means something extremely complex; but the principles underlying the railroad problem may be stated in language simple enough for all to understand. The truth must be learned primarily through statements of the fundamental facts. The public wants to know the facts. There are intcrests which purposcly misinterpret the facts. Not a day passes but that important facts about the railroads are distorted or misrepresented in their presentation to the public.

Every freight agent in the country should feel that it is a part of his duty, first, to educate himself in a proper way about the business in which he is engaged; second, to pass that information on in the countless ways which come to him. The proper handling of this duty is fully as important to his usefulness as the handling of freight. Furthermore, you will find that there is a genuine desire on every hand for information of the kind that you can convey.

There is no other business about which so much can be known. There are no railroad secrets. Every detail can be had for the asking.

Ever since Federal Control, and to some extent before that, a number of so-called economists presuming to speak for the railroad employees of the country have been filling thousands of pages of official records with distorted or misinterpreted facts. As an example—the return which the railroads are allowed to earn is set by governmental authority at a percentage (at present 5¾ per cent) of the property value of the roads as determined by the Interstate Commerce Commission. This is quite different from allowing railroad investors the same percentage return upon their securities * * *. The valuation of the railroads has been under constant attack. The valuation upon which the railroads are allowed to earn a return is determined not by the railroads themselves, but by the government. On this work the government and the railroads have spent more than fifty millions of dollars already.

Again, it is alleged that railroad policies are determined by a small group of banking interests. The fact is that there are more than one and one-half million owners of railroad securities. About thirty million insurance policy holders and about eleven million savings bank depositors have a direct financial interest in the railroads.

There are numerous misapprehensions in relation to wage rates and freight rates. But that is not enough—a great mass of prejudice and ignorance remains. A false picture still abides in the minds of thousands upon thousands. The only way to remove that picture is to substitute a new picture, based upon facts the authority of which can not be questioned and, more important, it must be based upon performance which will tell its own story and paint its own picture.

The railroads must suffer the results of business depression, but the railroads are not in the same catagory as ordinary private business. Their profits are limited by law. Their rates are set by government authority. Their expenses are, to a large extent, determined by government authority. The management has little latitude as compared with ordinary private business in the matter of making money. A private business in times of prosperity may make ten, twenty, fifty or more per cent. It may prepare for the lean years and the years of adversity. The railroads are allowed to do no such thing.

The railroads in the last five years have earned less than four per cent per annum. If railroad facilities are to be increased so that they may meet the demands of the commerce of this country now soon to increase, investments in railroads must be made attractive. This is a very simple situation concerning which there is a great misunderstanding, but which every man in the freight departments of railroads can put before his neighbor or his customer in a way that can not fail to be understood. It is not a matter of railroad selfishness. It is a matter of the public weal.

Outside Contract Repairs to Locomotives Found Justified

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION has issued two additional reports on its investigation of the cost f locomotive repairs in outside contract shops, in which it finds justified the resort by the Chicago & North Western to outside shops to obtain classified repairs for its locomotives during 1920, including 35 repaired by the American Locomotive Company, "although apparently for the most part at costs materially in excess of those for similar work in its own shops."

The commission also says that contracts negotiated by the Seaboard Air Line in 1920 with various concerns under which 51 of its locomotives were given classified repairs, although at average costs materially in excess of those for similar work in its own shops, were not found to have been unwarranted.

Commissioner Hall dissented from the finding in both cases for the reasons stated in connection with previous reports, that the proceeding goes beyond the province of the commission and should be discontinued. In the report on the North Western case, the commission says in part:

"In 1919, with the approval of the Railroad Administration, 20 locomotives were sent to the shops of the American Locomotive Company for class repairs, under an estimate made upon inspection, at an average cost of $16,859.30 per locomotive. In December, 1919, an additional ten were similarly forwarded to that company on substantially similar terms. In February, 1920, the regional director approved, subject to the concurrence of the corporate officers, the sending of ten more, and 15 were in fact forwarded. This was done upon a suggestion by wire from the American company that the locomotives be sent without awaiting estimates, which would be promptly prepared and submitted and which it had no reason to believe would not be in line with the estimates covering those sent during federal control; but the bills finally rendered averaged $23,944 per locomotive. Between March and October, 1920, respondent sent 35 more locomotives to the American shops, eight to the Manitowoc Shipbuilding Corporation, and two to the Elgin, Joliet & Eastern Railroad shops, all without bids or contracts. Of the 35 to the American shops, final bills for ten sent in July averaged $27,534 per locomotive, and final bills for the remaining 25 averaged $29,534. The repair cost of the two sent to the Elgin, Joliet & Eastern averaged $12,690, while those of the only two sent to Manitowoc comparable in type with the others averaged $20,857.

"Respondent has refused to pay the bills of the American covering the last 35 locomotives repaired, deeming them excessive, and, in view of the American's refusal to revise the bills, thinks it likely that the matter can be adjusted only by litigation. The dispute appears to involve a total of approximately $500,000.

"The cost of similar work in respondent's shops is computed by the investigators to range approximately from $8,000 to $13,000, depending upon the type of locomotive. However, the record abundantly establishes the critical condition of the respondent's motive power and respondent's inability to cope with the situation in its own shops, and, subject to the possibility that preliminary estimates might have resulted in better terms, fully justifies the resort to outside shops for assistance."

Beginning soon after the end of federal control, the Seaboard entered into various contracts with industrial concerns under which 51 of its locomotives were given class repairs,

at an aggregate cost of $815,424.41. The work performed and the cost thereof were divided as follows: Baldwin Locomotive Works, Philadelphia, Pa., 25 locomotives, $545,974.72; Charleston Dry Dock & Machine Company, Charleston, S. C., nine locomotives, $80,552.28; Merrill-Stevens Shipbuilding Corporation, Jacksonville, Fla., four locomotives, $49,760.15; Southland Steamship Company, Savannah, Ga., six locomotives, $55,681.98; Broadfoot Iron Works, Wilmington, N. C., four locomotives, $48,462.66; and Woodward Iron Works, Birmingham, Ala., three locomotives, $34,992.64. With the exception of the Baldwin plant, the several contract shops were located on respondent's lines, and for the movements thereto and therefrom no freight charges were incurred. The freight charges to and from the Baldwin plant were still in dispute at the time of the hearing, but were estimated to be between $400 and $500 per locomotive, in addition to the foregoing figures. Per locomotive, the Baldwin charges were much the highest. The commission says:

"The shop records indicate that, with the exception of those made at the Baldwin plant, the contract repairs were generally lighter than the same class of repairs made on the same classes of locomotives in respondent's shops, while those at the Baldwin plant were average class 3 repairs.

"During the 20 months of federal control the Railroad Administration expended an aggregate of $438,663 on shop buildings, shop machinery and tools, and engine houses and appurtenances, chargeable to capital account; but the extent to which these expenditures increased the capacity for classified repairs is not shown. Based upon reports to the Railroad Administration and taking 43 locomotives repaired in respondent's shops as contrasted with the figures covering 44 of the 51 locomotives repaired in the contract shops, the average cost per locomotive is shown as $7,156.97 in respondent's shops and as $14,913.79 per locomotive in the contract shops.

"The total cost of the repairs in the contract shops, inclusive of estimated freight charges, material furnished by respondent, and inspection by respondent, is shown as $836,030.27, an average of $16,392.75 per locomotive. The cost of substantially similar repairs on the same classes of locomotives in respondent's shops in the same period is computed to average $7,722.59 per locomotive, on which basis the total excess cost of the contract repairs was $442,178.16, or an average of $8,670.16 per locomotive. The items of cost in respondent's shop are labor and materials, inclusive of shop and store expense, but including no other overhead account, on the ground that respondent's overhead expense remained practically constant notwithstanding the repair of the 51 locomotives outside.

"It was suggested at the hearing that by putting respondent's shops on a nine-hour basis the necessity for sending locomotives to the contract shops might at least have been reduced. The suggestion was answered by testimony on behalf of respondent that certain of the shopmen agreed to work overtime on condition that the same schedule should be followed in all the system shops, and it appears that at the Savannah shop the men declined to work overtime. There is also testimony to the effect that extensive shipyard strikes along the Atlantic coast in the summer of 1920 released large numbers of skilled mechanics who could have been secured by respondent, but this was after all the contracts had been made.

"While there is much detailed evidence of record, the determinative facts are few. There were more locomotives on the line at the end than at the beginning of federal control, which increased respondent's capacity to move traffic, but all were actively engaged and likewise increased the demands upon the shops by so much. This is shown by the larger number in and awaiting shop for class repairs at the later date; and the condition of the motive power necessarily was aggravated by the materially greater gross-ton and locomotive mileage in 1920 than in 1919, due to the increased traffic. The figures submitted tend to confirm respondent's estimate of the maximum capacity of its shops, and the accrued bad-order power was considerably in excess of that capacity at all times in 1918, 1919 and 1920. The figures also indicate that the shops were so fully utilized from the time private control was resumed and the striking increase in traffic on the line began that no substantial increase in the output would have been reasonably possible. While some of the figures are rather close, it does not appear that the awards of the contracts were unjustified."

National Transportation Institute Strongly Endorsed

WASHINGTON, D. C.

THE MOVEMENT FOR the organization of a National Transportation Institute, as an institution under private disinterested auspices to make fundamental studies into transportation and its relationships and to promote education in the processes, methods and relationships of transportation among those responsible for transportation performance, as well as to the general public, is strongly endorsed in letters from leading members of Congress and members of the Interstate Commerce Commission which are being published in pamphlet form by President Bird M. Robinson of the American Short Line Railroad Association. The place for the establishment of such an institution was proposed by Mr. Robinson several months ago and was outlined in his address at the annual meeting of the Short Line Association at Washington on April 25 (*Railway Age*, April 29, 1922, page 1030). The plan has since been recommended by the Joint Commission on Agricultural Inquiry in its report on transportation, which is about to be submitted to Congress, and Edgar E. Clark, formerly chairman of the Interstate Commerce Commission, has consented to be chairman of the board of governors. Those active in the work of organization, in addition to Mr. Robinson, include Sydney Anderson, chairman of the Joint Commission on Agricultural Inquiry, and D. D. Conn, who, as chief of the division of transportation of the Joint Commission, had charge of the transportation part of the commission's investigation. The letters from members of Congress are largely from those who as members of the committees on interstate commerce have been especially interested in transportation affairs.

Would Fill An Imperative Need

In a letter to Mr. Clark, Representative Anderson says:

"I am glad to know that this recommendation is in the process of realization through the proposed creation of a National Transportation Institute. We have just completed a year of investigation of transportation in all its phases, with special reference to its economic aspects and relationships. The outstanding thing which a year of investigation has developed, is that there is no organized body of information touching the economic relations of different transportation agencies to each other, or to agriculture, industry, trade, commerce or finance; nor is there any organized basis of knowledge upon which sound transportation policies can be predicated.

"There is, it is true, a mass of data touching operation, physical valuation, car movement, etc., but almost nothing upon the effect of rates or transportation service upon the movement of commodities, the volume of traffic, or the state of business of the country. There are many problems vitally affecting transportation agencies, shippers and the public, which should be studied from an impartial standpoint on the basis of definitely ascertained fact. No agency today is engaged in research with respect to transportation problems in an economic sense or in organizing the facts of transportation on a basis equivalent to that which has preceded the discovery and application of most of the methods, machinery and organization of modern industry, engineering and science.

"There is very great need for the establishment of an institute

to obtain and organize the facts of transportation in all its relationships and to make fundamental studies from which the process and practice of transportation can be determined and reduced to a definite formula of action. Such an agency would also be a splendid instrument of education, not only of those responsible for transportation performance and regulation, but also of the general public.

"The creation of a National Transportation Institute under thoroughly disinterested, private auspices, would fill an imperative need in a field which so far has scarcely been touched."

Must Be Wholly Disinterested

Chairman Cummins, of the Senate Committee on Interstate Commerce says:

"I assume that the institute is to be wholly disinterested, for it would be of little or no value unless established on this basis. With this understanding I feel free to say that nothing is more needed at this time than an organization having for its purpose the ascertainment and dissemination of the truth respecting transportation. I do not mean the ascertainment of the isolated facts alone but the intelligent and impartial marshalling of the facts in their relation to each other.

"There is no subject upon which the people are so easily misled, no subject upon which misrepresentation or half-truths are so fatal to sound judgment, as that of transportation. I congratulate the people of the country upon your selection as leader of this most worthy undertaking and earnestly hope that the institute will achieve the highest success."

Four Distinct Considerations

Chairman Winslow, of the House Committee on Interstate and Foreign Commerce, in a letter to Mr. Anderson, says:

"From your brief yet most interesting elaboration of the fundamental thought underlying this recommendation I gleaned that your commission had in mind primarily four distinct considerations: First, the desirability of keeping current the statistical data and compilations which the commission has made as one of the results of its study and investigations; second, the need for accurate and reliable data relating to transportation in its broad and comprehensive sense to the end that there may be found a sound basis of fact upon which the various agencies and instrumentalities of transportation may be properly correlated under a broad transportation policy; third, the desirability of more intensive study of the fundamental principles of transportation including those scientific and academic problems which for obvious practical reasons are not within the legitimate scope of the prescribed powers and duties of the Interstate Commerce Commission and other kindred governmental agencies; and fourth, the dominant importance of supplying the means and facilities for educating those who desire to enter the transportation business in some capacity and of informing the public on all aspects of transportation—a thing so vital to their happiness and prosperity.

"I was delighted to learn that this splendid conception already has taken on definite form and that there is now on foot a movement for bringing your purpose to realization through the establishment of a national transportation institute. As I understand it and speaking broadly, this plan contemplates the financing of the institute by private contributions from carriers, shippers and the general public and that the definition of the policies and the direction of the activities of the institute is to be under the authority of a disinterested board of competent, public-spirited governors whose eminence in their respective fields and whose character are beyond cavil.

"During my brief service in the House of Representatives I have been a member of the committee on interstate and foreign commerce. I was a member of that committee during the 66th Congress when we were confronted with the task of providing an adequate transportation system following the termination of federal control. I doubt if the magnitude of that undertaking is yet appreciated even in substantial degree by the American people. The great and ever present difficulty involved was our inability to obtain accurate and indisputable facts. The carriers would submit their contentions, the shippers theirs, and perhaps other special interests would regale us with their views. The net result invariably was that we were forced to resort to compromise concerning the real facts of the problem. Palpably no question can ever be solved properly upon a compromise fact basis. Facts in their essence are truth and truth cannot be compromised. If some means can be provided for the intensive and scientific study of the fundamental principles of transportation and this instruction can be directed by impartial and competent minds, the prime difficulty of meeting the transportation requirements of the nation, so far as legislation is concerned, will largely be met. To be sure, the institute must be kept free of any suspicion of domination by special interests and its instructors must be men of acknowledged authority on the subjects entrusted to them. In the light of your broad experience, it will not be necessary for me to add that it must be kept absolutely free from partisan politics and be cast upon a broad American basis. The great subject of transportation is in no sense political—it is economic—and its proper solution is imperative if the interest of the people is to be the guide. Every man, woman and child in America is a constant consumer of transportation. It enters as an important element into everything we eat, wear, consume or employ. Notwithstanding its basic and fundamental character and its paramount importance to agriculture, industry and commerce, up to this time little or nothing has been done in a definite way to get at the fundamental principles and policies upon which transportation may be developed, fostered, correlated and controlled. Vast sums are appropriated from the federal Treasury for the study of insects, birds, bees and shrubs, which is as it should be and I am not protesting, but we must not overlook this much more important thing called transportation and leave to chance and accident the development of adequate transportation services. With the complexities of modern life ever increasing, with the requirements of the people constantly taking on larger and larger proportions, it is indefensible not to take timely action to meet the radically changed and rapidly changing order of things.

"An institute of the character your commission has in mind will, in my judgment, be the largest single factor in bringing this important work into definite shape and in building for a transportation system which will be adequate not alone to your requirements and mine but which will serve posterity as well."

A Need for Such an Institute

Commissioner Esch, in a letter to Mr. Clark, says:

"In my opinion there is need for such an institute. Its most beneficial purpose would be in the collection of reliable data as to all forms of transportation, the co-ordination of such data and application to the solution of the problems now existing and which may hereafter arise. During my service as a member of the House committee on interstate and foreign commerce there have been occasions when the need of reliable and unbiased information was felt. A transportation institute composed of men of large experience and of highest type and actuated by a zeal to serve the public interest would be of great value, not only to both houses of Congress, but to regulatory bodies state and federal and to the general public. Your large experience in transportation matters and knowledge of the problems which both carrier and shipper have to meet fit you in high degree to perform the duties and meet the expectations of the Transportation Institute. I can assure you that your connection with the institute will be an assurance of its success."

At Eight o'Clock every morning, the Canadian Pacific has 36 trans-continental trains on their way across the continent, while at the same time 36 dining cars are serving breakfast. These trains include the "Trans-Canada" which makes the journey from Montreal to Vancouver, 2,885 miles, in 92 hours.

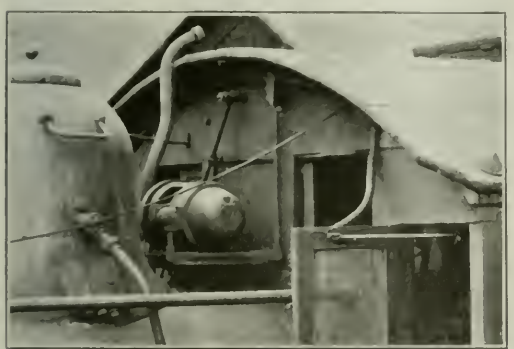
Effect of Design on Headlight Maintenance

Cost of Turbine-Generator Operation Calls for Careful Consideration in Selection of Equipment

By R. Wayne Cargo
Westinghouse Electric & Manufacturing Company

HEADLIGHT TURBINE UNITS seem to be a small item of equipment. The cost is about one fourth of one per cent of the total cost of a locomotive, yet this small part when considered for all the railroads of this country, will aggregate a large amount which is deserving of careful attention.

The following figures will give an approximate idea of the investment and cost of operating these units. It should be borne in mind that these figures are not based on any



The Union Railroad Mounts the Headlight Unit as Shown

actual operating data, but rather are taken as approximate, and are used merely as an example to show what is invested in these installations.

A railroad having one hundred equipments at $125 each, has an initial investment of $12,500. Repair parts should be maintained in stock at all times, to the amount of $15 a unit. This adds to the initial investment $1,500, making the total investment, therefore, $14,000.

The maintenance, including labor on these units, will run from $50 to $100 a year, with say, an average of $75 a year. This will result in an annual maintenance cost of $7,500.

Turbine units will take about 200 pounds of steam an hour, and then to be in use an average of eight hours a day for three hundred days a year, the cost of steam at 50 cents per hundred pounds, will give a total of $24,000 a year for steam on these 100 machines. Including the maintenance cost, the operating cost is, therefore, $31,500 a year on 100 machines. This does not include oil or other minor items.

The performance of most of the units of today does not warrant a life of more than five years. Therefore, depreciation will be at the rate of 20 per cent a year, to which should be added interest on the investment at 6 per cent. Based on the $14,000 initial investment, this makes an addition of $3,640 a year to be added to the operating cost of $31,500. This, therefore, gives a total cost of $35,140 a year for operating one hundred turbine-generator headlight units.

If these figures are extended to take in the thousands of equipments in service, it will result in a very large figure which merits the closest consideration.

One of the first considerations should be Are these figures justifiable? In view of the performance of large turbine generator units for stationary work, they are not justifiable, even with the allowance made for the wide difference in the class of service. Other equipment on the locomotive includes nothing which would in any way nearly approximate these costs.

The main points to be considered in the selection of the headlight unit should be

1—Reliability
2—Ruggedness
3—Simplicity
4—Efficiency
5—Accessibility for inspection
6—Finish and workmanship.

Greater reliability is necessary in order to cut down the high maintenance charges and repair cost. The unit should not be selected on account of the ease of repair and the extreme accessibility, but rather the frequency of repairs, and cost of repair parts should be the prime consideration. A machine having a great number of wearing and adjustable parts is always subject to frequent adjustment and renewal.

Typical Installation of Headlight Unit on the Buffalo, Rochester & Pittsburgh Railroad Locomotive

These are the items which make up the bulk of maintenance charges.

The class of service to which the headlight turbine-generator is subject is very severe, and calls for the most rugged construction possible. All of the parts should be heavy and well proportioned.

Special attention should be given to the bearings, to see that these are as large as possible, and in fact these should be larger than would ordinarily be called for in other classes of service. The best grade of self-alining ball bearings should be used.

The castings should be heavy to withstand the severe shocks and rough handling in operation. The design should be so arranged that there is no chance of difficulty from temperature or mechanical distortion of the unit. The preferable way would be to have only one bearing fixed in bolting the unit down; the steam and electrical ends of the

unit should be unsupported, and, therefore, the unit would be free to expand, due to temperature differences. The bolting down should be so arranged that the unit would not be distorted when it is secured.

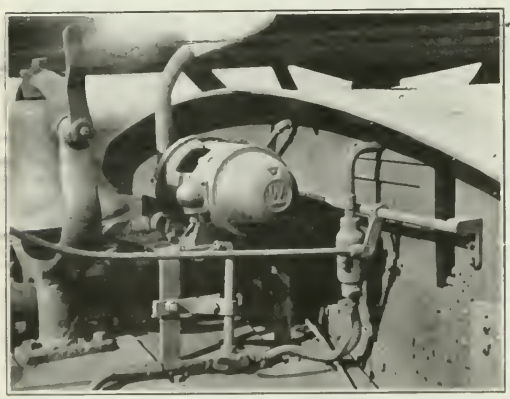
Due to the high rotative speed of the unit, there are heavy centrifugal forces set up. This, therefore, requires extremely heavy armature and turbine rotor. Also these should be of as small diameter as possible. The quill type of construction on the armature is not preferable in this class of apparatus, as the small diameter necessary for ruggedness cannot be obtained.

The turbine rotor should be especially designed to eliminate any distortion from heating or rough handling, as this would quickly put the unit out of balance. There should be enough metal in the rotor to readily obtain perfect balance. Stamped or forged, inserted blades will not lend anything to ruggedness, but rather, take from it. The rotor should be made of steel throughout, as cast iron or sheet iron will not give the desired strength.

Simplicity of design is very desirable. There should be as few parts as possible in the whole unit, and especially the moving parts, which are subject to wear, should be at an absolute minimum. There should be as few adjustments as possible, which is only brought about through simplicity of design.

The governor should be arranged for the minimum number of parts, with the minimum number of adjustments. These parts should be rugged and accurately finished. The governor should be connected to the valve as directly as possible, eliminating all lever mechanism, which tends to stick and wear, and consequently, necessitates adjustment and replacement.

The inlet valve should be simple in design and operation. This part is subject to cutting from the steam, wear from the action of the governor and clogging up from accumulation of scale and boiler compound. There should be no long



One Method of Mounting the Headlight Unit as Used by the Long Island Railroad

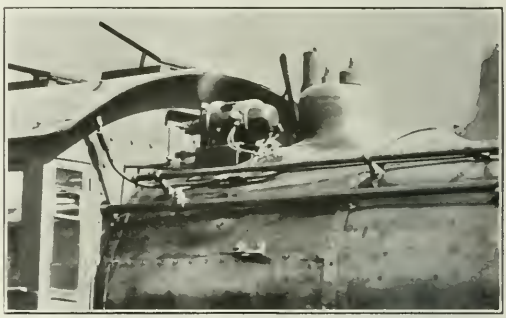
valve sleeves or stems which can become clogged with scale or subject to wear, with the consequent steam leakage and poor regulation.

Stuffing boxes on turbine shaft should be as simple as possible and not subject to adjustment. All manner of renewable or adjustable packing should be avoided.

On the generator end the wiring should be all inside of the frame so that connections should not have to be broken when dismantling. Connections from the outside should be made in such a way that the conduits or permanent wiring on the locomotive will not have to be disturbed.

Efficiency is an item which has not usually been given the consideration it deserves. This has been on account of the fact that the first thought has been for reliability. If the unit were operated, which had a steam consumption of 125 pounds an hour instead of 200 pounds an hour, there would be a saving of $90 a year on each unit. This is based on the previous assumption of steam cost and length of operation. When extended to the great number of units in service, $90 a machine is no inconsiderable item. Efficiency, therefore, deserves the fullest consideration, along with the other items.

The units should be accessible only for inspection and not for repair or adjustment. A unit which is totally enclosed is the most preferable, as it eliminates the collection of dust, corroding gases, moisture and oil. While the unit should be enclosed, arrangements should be made for ease of inspection of interior, for trouble. Adjustments, however, should not be especially accessible and should not be many in number. They should be made only by authorized persons who are familiar with the unit, otherwise unauthorized persons are likely to make incorrect adjustments and spoil the operation of the unit. Ease of repair is not of greatest importance but frequency of repairs should be given prime consideration.



The Headlight Unit As Mounted on the Pittsburg & Lake Erie Railroad Locomotive

Workmanship and finish are items which should receive careful attention. The finish of the individual parts and the way they are fitted together reflect the ability of the manufacturer to turn out a reliable and rugged unit, as well as an efficient one. The finish will usually be the best index to the character of the machine. If the rotor is well made and well finished, there will be higher efficiency obtained. If the governor parts are made of the best grade of material, accurately machined, with the elimination of pins, using in place carefully made knife edges and knife edge blocks, the regulation and operation of this governor will be far superior to one using rough cast parts and pivot pins.

By observing these various points of the machine, giving particular attention to the material and the finish, the purchaser or operator will be furnished with a very good idea of the reliability and efficiency of the machine which is in question.

"Trains Will Run in Kansas," says Governor Henry J. Allen. Asked if he believed the government should interfere in the event of a walkout, he replied: "Surely the men can always strike, but the government should see that the roads are kept running. There will be no tie-up in Kansas. If the men go on strike the roads will be run anyway, and the strikers will not be allowed to interfere. Section 9 of our industrial court law takes care of that."

Annual Meeting of the A. S. T. M. at Atlantic City

THE TWENTY-FIFTH annual meeting of the American Society for Testing Materials was held this year at the Hotel Chalfonte-Haddon Hall, Atlantic City, N. J., on June 26-30 instead of at Asbury Park, N. J., as has been the custom for the past several years. The election of officers for 1922 was as follows: George K. Burgess, chief, division of metallurgy, bureau of standards, Washington, D. C., was elected president; W. H. Walker, vice-president; and D. M. Buck, W. M. Corse, W. K. Hatt and J. R. Onderdonk, members of the executive committee. The meeting was well attended, the registration for the first two days being in excess of 500, considerably more than the previous year.

In the annual address of the retiring president, C. D. Young, general supervisor of stores, Pennsylvania Railroad, Philadelphia, Pa., attention was called to the growth of the society and emphasis was placed upon the fact that this growth was not evidenced until the society had freed itself from the limitations previously existing from the old International Association. He stated that the most characteristic feature of the society was the independence of its members from preconceived notions and arbitrary standards. He brought out that American standards of quality have forced recognition throughout the world, have stabilized production and employment through the broadening effect of increased markets and have made it safer for manufacturers to accumulate stocks during dull periods.

Report on Cast Iron

While revised specifications for cast-iron car wheels were submitted as tentative at the annual meeting of the society last year, the committee has nevertheless continued work on the subject and this year presented a further revision of the car-wheel specifications as the result of this study and the very wide discussion of the cast-iron wheel throughout the country. The standard specifications for foundry pig iron adopted in 1904 and revised in 1909, have been brought up to date by making a few changes found desirable as experience was acquired. New specifications were presented to cover what the committee classified as "high-test" cast iron to include those irons which show higher strengths than the usual run of material. In the production of these cast irons, considerable steel scrap is added to the mixtures, and with a high degree of metallurgical skill the foundryman is able to turn out exceptionally good metal. In order to differentiate this high-grade material from the lower ranges of castings, none the less good in their class, these new specifications have been prepared to enable the consumer of castings to call for a superior article and to give him some assurance that he will get quality of article which he calls for.

Reports on Iron and Steel

The Committee on Steel, among other work, presented the report of the joint committee of the society and the American Railroad Association. This report was given on page 1588 of the June 20 issue of the *Railway Age* June Dailies. A paper by Lawford H. Fry on the Tensile Properties of Steel Castings presented a study of the tensile properties of steel castings of the grades currently used for railroad service. About 600 tests from seven manufacturers were examined, grouped into two series. In the first series the tensile properties as usually determined are compared to show the relation between strength and ductility, and the relation between the yield point and the elastic limit determined by the method for forgings adopted by Committee A-1 on Steel. In the second series methods of greater precision than are applied in commercial testing are used to compare the so-called true elastic limit with the yield point. These tests show that with even a moderate degree of precision in the method of measurement, annealed cast steel is found to behave as a plastic rather than an elastic material and the term "elastic limit" has, as a consequence, little meaning.

Detailed data were presented by Committee A-5 on Corrosion of Iron and Steel bringing the results of the tests on copper bearing and non-copper bearing plates up to date. The data are in the form of numerous tables which give the composition, the percentage of copper, the condition of the plate at various stated periods, etc. The results of the tests conducted at Pittsburgh, expressed in a general form, are indicative of the effect which copper is having on the rate of corrosion. Practically all of the light gage non-copper-bearing sheets in the Pittsburgh test failed after 28 months' exposure, whereas only 6 of the 146 copper-bearing sheets had failed at that time. At the end of 64 months' exposure there still remains two full groups of copper-bearing sheets, as well as 18 other scattered copper-bearing sheets with no failures. The heavy gage non-copper-bearing sheets now show 87 of the total 120 sheets failed, five groups showing entire failures, whereas none of the 132 copper-bearing sheets have failed at this time. This information continues to bear out the conclusions of the 1921 report that copper-bearing metal in the Pittsburgh location shows marked superiority in rust resisting properties as compared to non-copper-bearing metal of the same general composition.

Electrical and Magnetic Weld Testing

This paper by T. Spooner and I. F. Kinnard, research engineers, Westinghouse Electric and Manufacturing Co., Pittsburgh, Pa., desbribes a series, too long to be given here, of laboratory tests applied to arc butt-welded steel plates to determine the possibility of developing electrical and magnetic tests that would be capable of revealing the quality of such welds, the summary of which is as follows: The methods of application consisted in measuring the electrical or magnetic potential drop across the weld with a definite e.m.f. or magnetic potential applied on opposite sides of the weld. This drop was compared with the drop over an equal length of unwelded plate. After completing the electrical and magnetic tests the plates were cut into strips one inch wide at right angles to the welds and these strips tested for tensile strength.

The electrical, magnetic and tension tests showed a very fair general agreement among themselves and with the known quality of the welds as reported by the welder. The electrical and magnetic tests tended to smooth out small local defects, thus giving an approximation of the average quality of the weld over a distance of several inches. In other words, the variations by these tests were not as great as shown by the tension tests but are perhaps just as good an indication of the quality of the weld as a whole.

The electrical and magnetic methods of test show considerable promise, at least as applied to butt-welded plates. A really poor weld will be demonstrated without a shadow of doubt.

By some suitable alterations in the details of the apparatus so as to provide a more rugged portable device there seems little doubt that the methods could be applied commercially, thus greatly increasing the possible applications of electrical and gas welding, since it should be feasible to eliminate poorly welded sections before any harm could result to the completed structure.

Other Reports and Papers

Among the other reports and papers which were presented and are of interest to railway men desiring detailed data are those on concrete and concrete aggregates, timber, fatigue of metals and a symposium on impact testing of materials, etc.

General News Department

Representative Burke, of Pennsylvania, has introduced in the House a resolution authorizing the Railroad Labor Board to rescind its decisions reducing the wages of certain classes of railroad employees, effective on July 1.

Senator Guglielmo Marconi, inventor of wireless telegraphy, is to be the recipient of the John Fritz Medal for 1922. The presentation is to take place at the Engineering Societies' Building, 29 West Thirty-ninth street, New York, on the evening of July 6.

The United States Spruce Production Corporation has sold Spruce Production Corporation Railroad No. 1, extending from Disque Junction to Lake Pleasant, Wash., 36 miles, to Hill, Scritsmeier & Lyon, who propose to use it for logging operations and to operate it as a common carrier.

Samuel Gompers, president of the American Federation of Labor, was re-elected without opposition last week at the convention in Cincinnati, Ohio. It was his 41st election to that office. Portland, Oregon, was chosen as the place for the next convention, which will be held in October, 1923.

Reduction of losses of perishable commodities will be conducted by the Freight Claim Division of the American Railway Association during the months of July and August. During the year 1921 approximately $20,000,000 was charged to the loss and damage account as the outcome of losses and damages to perishable commodities, excluding live stock.

Francis A. Dever, assistant engineer for the Duluth, Missabe & Northern at Duluth, Minn., has been awarded the Strathcona Memorial Fellowship in Transportation at Yale University for the next academic year. Mr. Dever graduated from the College of Engineering and Architecture, University of Minnesota, with the degree of B. S. in C. E. in 1920, and has been connected with the above railroad since his graduation.

B. & O. Wars on Social Diseases

The Baltimore & Ohio Association of Railroad Surgeons at its annual meeting held in Chicago on June 16, decided to inaugurate a campaign of education among its employees to teach them the dangers of contagious and social diseases. Dr. Page Edmunds, of Baltimore, Md., consulting and general surgeon for the system, said: "The Baltimore & Ohio is taking out of its service all persons who may be contaminated and is attempting through propaganda to educate them."

Supplement No. 2 to the 1921 Rules of Interchange

A supplement to the 1921 Rules of Freight Car Interchange has been prepared by the Arbitration Committee and the Committee on Prices for Labor and Materials. This supplement, in addition to interpretations of existing rules by the Arbitration Committee, announces the extensions of the effective dates of certain rules which are to become effective during the year 1922; also labor allowances for R. & R. or R. of Transom Draft Gear and Parts, recommended by the Committee on Prices for Labor and Materials.

A. S. C. E. Elects Dunlap Secretary at Portsmouth Meeting

The American Society of Civil Engineers through its Board of Direction at the annual convention held at Portsmouth, N. H., on January 21 and 22, has elected J. H. Dunlap, professor of hydraulics and sanitary engineering, University of Iowa, Iowa City, Ia., as secretary of the society. Professor Dunlap was born at Harrisville, N. H., on September 9, 1882, and is a graduate of Dartsmouth College. Before entering university work, he spent some time in government reclamation and in railway service. Professor Dunlap succeeds to the office held temporarily by Herbert S. Crocker and E. M. Chandler, respectively acting secretaries since the retirement of Charles Warren Hunt in 1920.

Adjustment of Brake Power on Tank Cars

Request has been received from a majority of the owners and operators of tank cars for an extension of the effective date for complying with the provisions of Circular S. III-11 of the Mechanical Division of the A. R. A., issued May 15, 1919, and the Tank Car Specifications for the Adjustment of Brake Power on Existing Cars. It is stated that this request is due to the general business conditions prevailing for some time and also to the fact that so many of the cars were scattered throughout the country, many of them having been stored on railroad sidings, making it difficult, if not impracticable, for the owners to complete the work in the time limit set.

This request has been granted by the General Committee and the effective date for complying with the requirement of the Tank Car Specifications in the matter of Adjustment of Brake Power on existing tank cars is extended to July 1, 1923.

Looking for Good Men

In connection with their regular work of visiting freight stations for the purpose of supervising the billing and instructing agents, representatives of the claim department of the Southern Railway are under instructions to be on the lookout for local office employees whose work shows that they are worthy of promotion; and to make report of such cases. Already, several local office men have received promotions as the result of recommendations made. This plan is in pursuance of the policy announced some time ago to the effect that wherever possible preference would be given to worthy local office men for promotions in the freight traffic department. Rate classes have been organized at the larger stations all over the system, offering station employees a means of acquiring the training which will fit them to hold more responsible positions.—*Southern Railway Bulletin.*

A Memorial To a Great Explorer

As a tribute to David Thompson, who explored and surveyed a good part of western Canada from 1784 to 1826, the Canadian Pacific Railway, in conjunction with the Hudson's Bay Company, is preparing to erect a memorial building on the shores of Lake Windermere, B. C., where Thompson established the first white man's trading post west of the Rocky Mountains, and made the first accurate records and surveys. The memorial structure will be built in the form of a Hudson's Bay fort with stockades and bastions. It will be used partly as a museum for local Indian relics and antiquities, and partly as a recreation hall for Lake Windermere summer camp. The formal opening of this memorial building is being arranged for September 1, and will be accompanied by an Indian pageant.

Valuation of Telegraph Property

The Interstate Commerce Commission has assigned for argument, in briefs to be filed on or before October 1, questions of law regarding the making of inventories of property used by telegraph companies and by other carriers in connection with its railroad valuations. In the Texas Midland case the commission held that a telegraph line is necessary in the conduct of the business of the carrier and the cost of reproducing the telegraph property was inventoried with that of the railroad. The notice

of the hearing says that the commission is continually confronted with the necessity of determining whether any part of the telegraph property used by any telegraph company shall be inventoried to any common carrier other than that telegraph company in cases where it clearly appears that the property is owned by the telegraph company and also in cases where the matter of ownership has not been agreed upon by and between the carriers who use the property; and the commission desires further light on the questions of law that have been presented from time to time.

Durability of Treated Ties

The annual inspection of more than 25,000 ties in test tracks on 20 divisions of the Chicago, Burlington & Quincy, located in eight states, last fall showed that 88 per cent of the untreated ties in these sections had been removed on account of decay, after 12 years' service in contrast with 1.6 per cent of those treated with creosote, 4.4 per cent of those treated by the Card process (creosote and zinc chloride) and 12 per cent of those treated with zinc chloride. These results were obtained with 20 different species of wood. The results of these tests to date are summarized as follows:

SUMMARY
(Regardless of Species)

	Total ties placed in track	Total removed to date	Percentage removed account decay	Percentage removed account other causes
Straight creosote	3,261	198	1.6	4.5
Card	15,846	2,518	4.4	11.5
Burnett	2,492	629	12.0	13.2
Untreated	3,263	3,106	88.0	7.1

Fuel Savings on the Pere Marquette

A letter by Frank H. Alfred, president and general manager of the Pere Marquette, addressed to all employees who have to do with the handling and consumption of fuel, calls attention to the excellent fuel performance obtained on that road during the month of April. Passenger, freight and switching records for that month show an improvement over March, 1922, and also a better showing than in the same month of 1921. The fuel performance in these periods was as follows:

	April, 1922	March, 1922	April, 1921
Passenger service			
Average car miles per ton of coal	117.30	109.00	111.10
Freight service			
Pounds of coal per 1,000 gross ton miles	144.00	148.87	187.64
Switching service			
Average miles per ton	14.19	13.47	14.21

The increase in the average car miles per ton for April, 1922, over March, 1922, is 7.61 per cent, and over April of last year, 5.58 per cent. In freight service the record shows a 3.29 per cent better performance in April than in March of this year and a 23.26 per cent better showing than for April of last year, this being in part due to the better quality of coal used.

Transportation of Natural Gas Gasoline

The results of a study of the hazards involved in the transportation of natural gas gasoline, made by the Bureau of Mines, in co-operation with the Association of Natural Gasoline Manufacturers and the Bureau of Explosives, are given in a report by D. B. Dow, chemical engineer of the Bureau of Mines, which is now being distributed by the Association of Natural Gasoline Manufacturers, 821 Mayo building, Tulsa, Okla. The investigation was undertaken at the request of the Interstate Commerce Commission.

Several very disastrous explosions and fires have occurred in the shipment of natural gas gasoline. The Ardmore, Okla., explosion of September 27, 1915, in which 47 were killed and 500 injured, was the most disastrous. Shipping regulations designed to prevent such accidents have failed in many cases to accomplish their purpose, and new regulations have been proposed in the hope that accidents may be prevented in the future.

It was found that pressures developed in standard cars were much higher than pressures developed in insulated cars, particularly in summer months. Due to this difference in pressure, insulated cars are desirable for the shipment of natural gas gasoline, not only from the standpoint of safety, but also from the standpoint of economy.

Every effort should be expended in prevention of carelessness in unloading tank cars of natural gas gasoline. The men who have charge of unloading should be thoroughly instructed as to proper methods of procedure and be required to pass examinations as to their fitness for this work.

Railway Consolidation Plan

The Interstate Commerce Commission on June 23 issued a statement saying that during the preceding 10 days the commission had received many telegrams, letters and copies of resolutions from individuals, chambers of commerce, labor organizations, and others, with reference to the recent decision of the Supreme Court affecting the Southern Pacific and Central Pacific railroads. Some ask that the commission seek to have the decree of the Supreme Court withheld; others that it invoke legislation to counteract the effect of the decision. "Manifestly," the statement says, "the commission cannot consider such requests. It is also requested to exercise promptly its powers under the Interstate Commerce Act, particularly the provisions of section 5.

On August 3, 1921, the commission adopted a tentative plan for the consolidation of the railway properties of the United States into a limited number of systems. It said at that time that the tentative plan was put forward in order to elicit a full record upon which the plan to be ultimately adopted can rest. The commission has recently conducted a hearing concerning the carriers in the southeastern region, and its work has been planned in such a way and its engagements are such that hearings with reference to carriers in the west are not likely to be held before October. In the meantime, telegrams, letters and resolutions can be of no assistance to the commission as they cannot be made a part of the record.

"Where the Railroad Has Failed"

This is the title of an editorial of nineteen paragraphs in "The Mutual Magazine" of the Pennsylvania Railroad for June. It reads, in part:

"We are sometimes forced to believe that our railroad organizations are incomplete; that they need experts to expound the virtues of the railroad. The public needs to be told that it costs eight dollars to ship a ton of freight from Harrisburg to Philadelphia by railroad, and *thirty dollars* by automobile.

"The public must be reminded that the railroad goes 300 miles from the city and brings in a supply of milk at a price which every one can afford. . . . This service advertising man needs, also, to tell the employes the great advantages they are enjoying; of the millions their company has voluntarily spent to provide a pension system; of the spirit of helpfulness that is shown at all times by our Relief Department. Our railroad must not be too modest to point to the expense and effort involved in providing easier work when we become incapacitated for our regular jobs; to the great advantages and education we get from a free transportation that enables us to see the country in a way that the men and women of no other industry can enjoy.

"The railroads have done more for the development of our country, generally, and for their employes, especially, than any other industry or institution, and they have suffered most from being misunderstood and misjudged. No matter how good the service or how great its advantages, it will not be appreciated or popular unless constantly referred to."

General Foremen's Convention

The International Railway General Foremen's Association has issued the following announcement of its 1922 meeting:

"The General Foremen's convention, scheduled at Chicago for September 5, 6, 7 and 8, 1922, affords an opportunity for a period of intensive instruction that no general foreman or his superior officer can consistently disregard.

"Held annually at a nearly central point in the United States and at a time of the year that is the most favorable for the average railway shop supervisor to absent himself from his duties, the attendance will comprise a class of energetic, earnest workers who will put vim into their meetings and return to their tasks broadened and advanced in their ideas.

"Insofar as the foreman has been the subject for a great many printed articles showing his acts to be commendable or otherwise, as the spirit of the writer impelled his ideas, it brings out this

Operating Statistics of Large Steam Roads — Selected Items for the Month of April, 1922,

[1]Includes Chicago, Terre Haute & Southeastern from July 1, 1921, only.

[3]Includes Galveston, Harrisburg & San Antonio, Houston & Shreveport, Houston & Texas Central, Houston East & West Texas, Iberia & Vermillion, Lake Charles & Northern, Louisiana Western, Morgan's La. & Tex. R. R. & S. S. Co., and Texas & New Orleans.

thought: Is the foreman to blame for his lack of knowledge or his apparent inability to keep step with the rapid progress of the railway mechanical department? If due consideration is given to the fact that four years of constant training is necessary to produce a passable mechanic, we would say that the foreman who rarely sees any shop except the one in which he is employed and meets no mechanical men other than his daily associates, is not to be censured but rather to be praised for what he does accomplish, and that the time spent at an annual convention or meeting yields large returns.

"Numerous men holding responsible positions today attribute their success and value to their employer largely to the broadening influence gained by attendance at business sessions. Each railway general foreman as a matter of benefit to the stockholders by whom he is employed, his superior officers, and himself should not only be permitted but required to attend the convention of the International Railway General Foremen's Association."

Railroads Appeal to Employees on the Strike Issue

A number of railroad presidents have issued circulars or letters to employees calling attention to some of the fundamental principles involved in the consideration of the strike problems now coming up for decision. C. H. Markham, president of the Illinois Central, appealed to employees to declare themselves against the strike and stand by their employer. He said, in part:

"There is no pending issue on our railroads in regard to piecework and the contracting of shop plants to outsiders. Under these circumstances, you cannot be expected to do otherwise than cast your ballot against a strike on the Illinois Central system. On the ballot relating to rules, there are seven rules mentioned. On four of these rules your representative and our management reached agreements. The remaining three were referred to the United States Railroad Labor Board and by that board decided. * * * "You have received successive general increases in wages and two general decreases, the most recent one to become effective July 1, 1922. * * * Since you have accepted all decisions of governmental agencies that have been favorable to you, my confidence in your spirit of fair play is such that I do not believe you will decline to accept a decision when it is unfavorable to you.

"I am in full sympathy with your ambitions for better working conditions. I earnestly desire that you shall be happy in your employment with the Illinois Central system. I want to do all that I can to advance your interests. I have frequently said in public speeches and newspaper interviews and in conversations with our patrons that there is no more loyal and efficient group of men than the employees of the Illinois Central system. I ask you not to cast your ballot until you have given consideration to both sides of this question, and if you do that I am sure you will reach the right conclusion."

W. H. Finley, president of the Chicago & Northwestern, issued a statement to his employees under the caption "The North Western—Your Railway," in which he declared that if a strike should be called against the decisions of the Railroad Labor Board, it would not only destroy at once the spirit of co-operation which it has taken years to develop but it would also be a strike "against this country's progress toward prosperity." He called upon all employees to stand by the road, stating that the Chicago & North Western had accepted without question the orders for the Labor Board to increase the pay of its men.

W. G. Besler, president of the Central of New Jersey, referring to former circulars issued by him said:

"In each of those letters I emphasized the fact that our relations have always been based upon the principle of *a square deal.* The Transportation Act of 1920 is the law of the land, and this company and its employees, as law-abiding citizens, are bound to respect and obey it.

"In all of the increases and adjustments in pay and working conditions which have been ordered by the Labor Board, some of which were retroactive, the Jersey Central has lived absolutely up to the requirements of the law. * * * I understand that strike ballots have been passed among some of our employees, and that you are requested to vote upon a strike. As your president, and the head of the Jersey Central family, I call upon each and every member thereof to abide by the lawful decision of the United States Railroad Labor Board. I advise and urge this as your best friend. * * * It is only by a continuance of your steadfast loyalty to the employer with whom you have been associated so many years, that we may continue to enjoy that certainty of position and wage which has become a part of our everyday life. * * * Loyalty insures continued permanent position. Loyalty avoids unhappiness, distress and all that goes with dishonorable conduct."

E. J. Pearson, president of the New York, New Haven & Hartford, reminded his employees that a vote for a strike now can only be construed as a vote against organized society. There are 30,000 employees on the New Haven system. If a strike is called, "it follows that the 17,000 employees of the maintenance of way and maintenance of equipment departments will have arrayed against them a public, which is exclusively served, of about four million people. Can a strike be won against such odds? * * * The revision of rules and reduction in rates so far awarded by the labor board, together with all prospective reductions for other classes, assuming they are made on the same percentage basis, will only offset about one-half of the loss in revenue from the reductions in rates which have been ordered in the hope and belief that business is waiting for them in order that it may drive ahead upon some basis of cost which can be regarded as reasonably permanent for some time to come.

"If this theory of the reductions is correct, the readjustments to be made on July 1st will result in a material benefit to workers generally, as industry will revive and start those activities so essential to the comfort, well being and economic existence of all. No individual class can reasonably hope to receive preferential economic treatment as compared to other classes, beyond that which may be definitely established by common consent of society as a whole.

"The public shows no disposition to be unreasonable. * * * There is every confidence in the integrity and ability of the labor board, either individually, or as a group. It has been called upon to decide some of the most momentous questions of peace times. It has searched diligently for the truth. * * * This company seeks, in every way, to avoid disputes with its employees. It believes that in the interest of itself and of society in general, its employees should be well paid; but neither employer nor employee can hope to escape the inexorable effect of economic law. * * *"

The Transportation Act of 1920 contemplates prosperous railways; fair and liberal treatment of employees, proper service for the patrons and reasonable returns to the owners. On the success of the latter, depends the ability of the management to provide the two items first mentioned, also its ability to improve facilities and to more largely stabilize regularity of employment. A railroad is made by the combined endeavors of its officers and employees, by the endeavor of every individual.

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings:

AIR BRAKE ASSOCIATION.—F. M. Nellis, 165 Broadway, New York City. Next convention, May, 1923, Denver, Colo. Exhibit by Air Brake Appliance Association.

AIR BRAKE APPLIANCE ASSOCIATION.—J. F. Gettrust, The Ashton Valve Company, 318 W. Washington St., Chicago. Meeting with Air Brake Association.

AMERICAN ASSOCIATION OF DEMURRAGE OFFICERS.—F. A. Pontious, Supervisor of Demurrage and Storage, C. & N. W. Ry., Chicago.

AMERICAN ASSOCIATION OF DINING CAR SUPERINTENDENTS.—L. A. Stone, C. & E. I. Ry., Chicago. Annual meeting, Oct. 17-23, San Francisco, Cal.

AMERICAN ASSOCIATION OF ENGINEERS.—C. E. Drayer, 63 E. Adams St., Chicago.

AMERICAN ASSOCIATION OF GENERAL BAGGAGE AGENTS.—F. L. Duncan, 332 So. Michigan Ave., Chicago.

AMERICAN ASSOCIATION OF PASSENGER TRAFFIC OFFICERS.—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York. Annual meeting, October 10 and 11, Seelbach Hotel, Louisville, Ky.

AMERICAN ASSOCIATION OF RAILROAD SUPERINTENDENTS.—J. Rothschild, Room 400, Union Station, St. Louis, Mo. Next Convention, August 23-25, 1922, Kansas City, Mo.

AMERICAN ELECTRIC RAILWAY ASSOCIATION.—I. W. Welsh, 8 W. 40th St., New York.

AMERICAN RAILROAD MASTER TINNERS', COPPERSMITHS AND PIPE FITTERS' ASSOCIATION.—C. Borcherdt, 202 North Hamlin Ave., Chicago, Ill.

AMERICAN RAILWAY ASSOCIATION.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.

Division I. Operating

Freight Station Section (including former activities of American Association of Freight Agents) R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.

Medical and Surgical Section. J. C. Caviston, 75 Church St., New York.

Protective Section (including former activities of the American Railway Chief Special Agents and Chiefs of Police Association). J. C. Caviston, 75 Church St., New York, N. Y.

Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents) W. A. Fairbanks, 75 Church St., New York, N. Y. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.

Safety Section. J. C. Caviston, 75 Church St., New York.
Division II—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.
Division III—Traffic. J. Gottschalk, 143 Liberty St., New York.
Division IV—Engineering. E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Exhibit by National Railway Appliances Association.
Construction and Maintenance Section. E. H. Fritch.
Electrical Section. E. H. Fritch.
Signal Section (including former activities of the Railway Signal Association). H. S. Balliet, 75 Church St., New York, N. Y.
Division V—Mechanical (including former activities of the Master car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Exhibit by Railway Supply Manufacturers' Association.
Equipment Painting Section (including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.
Division VI—Purchases and Stores (including former activities of the Railway Storekeepers' Association).
Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.

AMERICAN RAILWAY BRIDGE AND BUILDING ASSOCIATION.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next convention, October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.

AMERICAN RAILWAY DEVELOPMENT ASSOCIATION.—A. Leckie, Industrial Agt., Kansas City Southern Ry., Kansas City, Mo.

AMERICAN RAILWAY ENGINEERING ASSOCIATION.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Exhibit by National Railway Appliance Association.

AMERICAN RAILWAY MASTER MECHANICS' ASSOCIATION.—(See American Railway Association, Division V.)

AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

AMERICAN SHORT LINE RAILROAD ASSOCIATION.—T. F. Whittelsey, Union Trust Bldg., Washington, D. C.

AMERICAN SOCIETY FOR STEEL TREATING.—W. H. Eiseman, 1600 Prospect Ave., Cleveland, Ohio. Annual convention, Oct. 2-7, 1922, General Motors Building, Detroit, Mich.

AMERICAN SOCIETY FOR TESTING MATERIALS.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

AMERICAN SOCIETY OF CIVIL ENGINEERS.—E. M. Chandler (acting secretary), 33 W. 39th St., New York. Regular meetings 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York.

AMERICAN SOCIETY OF MECHANICAL ENGINEERS.—Calvin W. Rice, 29 W. 39th St., New York.
Railroad Division—A. F. Stuebing, Manager Editor, Railway Mechanical Engineer, Woolworth Bldg., New York.

AMERICAN TRAIN DISPATCHERS' ASSOCIATION.—C. L. Darling, 1310-1311 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

AMERICAN WOOD PRESERVERS' ASSOCIATION.—S. D. Cooper, A. T. & S. Fe R. R., Topeka, Kan. Next meeting, January 23, 1923, New Orleans, La.

ASSOCIATION OF RAILWAY CLAIM AGENTS.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn.

ASSOCIATION OF RAILWAY ELECTRICAL ENGINEERS.—Jos. A. Andreucetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.

ASSOCIATION OF RAILWAY EXECUTIVES.—Thomas De Witt Cuyler (chairman), 61 Broadway, New York, N. Y.

ASSOCIATION OF RAILWAY SUPPLY MEN.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.

ASSOCIATION OF RAILWAY TELEGRAPH SUPERINTENDENTS.—(See American Railway Association, Division I.)

ASSOCIATION OF TRANSPORTATION AND CAR ACCOUNTING OFFICERS.—(See American Railway Association, Division II.)

BRIDGE AND BUILDING SUPPLY MEN'S ASSOCIATION.—D. J. Higgins, American Valve & Meter Company, 332 S. Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Ass'n.

CANADIAN RAILWAY CLUB.—W. A. Booth, 53 Rushbrook St., Montreal, Que.

CAR FOREMEN'S ASSOCIATION OF CHICAGO.—Aaron Kline, 626 North Pine Ave., Chicago. Regular meetings, 2d Monday in month, except June, July and August, New Morrison Hotel, Chicago.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Kneneke, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.

CENTRAL RAILWAY CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Iroquois, Buffalo, N. Y.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill. Annual convention, August 22-24, Chicago.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesian Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors' and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, 614 F St., N. W., Washington, D. C.

FREIGHT CLAIM ASSOCIATION.—(See American Railway Association, Division VII.)

GENERAL SUPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Annual convention, August 15-17, Hotel Sherman, Chicago. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George P. White, 747 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Wabash Ave., Winona, Minn. Next convention, September 5-8, Chicago.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MASTER BOILER MAKERS ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTER CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James F. Walker, 41 Lafayette St., New York. Next convention, September 26, 1922, Detroit, Mich.

NATIONAL PLATING TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York.

NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition at convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Nexon, 600 Liberty Bldg., Broad and Chestnut Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.

RAILWAY CLUB OF PITTSBURGH.—J. D. Conway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh, Pa.

RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electrical Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va. Next meeting October 10-13, 1922, Pittsburgh, Pa.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A., Division IV., Signal Section.)

RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division VI.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Church St., New York.

RAILWAY TREASURY OFFICERS' ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa.

ROADMASTERS' AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, C. & N. W. Ry., Sterling, Ill. Annual convention, September, 19-21, 1922, Hotel Statler, Cleveland, Ohio. Exhibit by Track Supply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Frauenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill P. O. Box 1205, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—J. L. Carrier, Car Serv. Agt., Tenn. Cent. Ry., 319 Seventh Ave., North Nashville, Tenn. Next meeting, October 19, St. Augustine, Fla.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, 9 N. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hilburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, 1177 East 98th St., Cleveland, Ohio. Annual convention, September 12-15, Hotel Sherman, Chicago. Exhibit by Railway Equipment Manufacturers' Association.

WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago. Regular meetings, 3d Monday each month except June, July and August.

Loading Meat at Chicago for 48-Hour Train to New York to Connect With Liner to Europe

Traffic News

R. S. Kreitler has been appointed traffic commissioner of the Canton Chamber of Commerce, Canton, Ohio.

Reductions of about ten per cent have been made by the Pennsylvania Railroad in the ferry boat rates, at New York and Philadelphia, for the transportation of automobiles, trucks and other vehicles, this traffic being classed as freight and as coming under the order of the Interstate Commerce Commission calling for a general reduction of ten per cent on July 1.

The Southern Railway, for the summer tourist season, announces the "Land of the Sky Special," a train giving over-night service between Asheville, N. C., and the Southeast with through sleeping cars from Wilmington, Charleston, Savannah, Atlanta, and Macon. Through sleeping car lines have been established to Asheville from Chicago and St. Louis in addition to which the lines from New Orleans, Mobile, Montgomery, Birmingham, and Chattanooga have been re-established for the summer. Sleeping car lines have also been established between Memphis, Tenn., and Richmond, Va., via Asheville, and between Cincinnati, O., and Goldsboro, N. C., via Asheville.

Coal Production

Production of soft coal has taken a sharp upward turn in the twelfth week of the strike, according to the Geological Survey bulletin, and may approach 5,500,000 tons. Production of anthracite remains practically zero.

Complete returns on the eleventh week (June 12-17) show a production of 4,986,000 tons of soft coal and 22,000 tons of anthracite. The record of the twelfth week (June 19-24) shows a prompt recovery from the traffic congestion which had interfered with the placement of cars at mines in Eastern Kentucky and parts of West Virginia. The increased production comes not from any of the strongly organized fields, but results from a gradual return to work in non-union fields affected by the strike, and from increased activity in districts of the Far West where demand has hitherto been insufficient to call out full production. The accumulation of unbilled loads is still declining and the draft upon consumers' stockpiles continues. In the eleventh week of the strike the daily average number of unconsigned loads of bituminous coal was 4,672. The total is now less than a sixth of that in the week of April 8. Counting 50 tons to a car, the quantity of unbilled coal is now about 250,000 tons. In comparison with the country's daily requirements of over a million tons, this appears small

Freight Commodity Statistics—Three Months

The Bureau of Statistics of the Interstate Commerce Commission has compiled a statement showing by districts the freight tonnage transported by Class I steam railways for the quarter ended March 31, 1922. Below will be found a comparison, by general classes of commodities, of the tonnage transported in 1921 with that transported in 1922:

Class of commodities	Number of tons originated		
	Quarter ended Mar. 31, 1921	Quarter ended Mar. 31, 1922	Percent of increase 1922 over 1921
Products of agriculture	26,038,239	25,754,849	*1.09
Animals and products	5,911,716	5,881,188	* .52
Products of mines	115,791,162	120,906,905	4.42
Products of forests	20,646,604	19,265,592	*6.69
Manufactures and miscellaneous	[illegible]	[illegible]	2.94
Merchandise—All L. C. L. freight	[illegible]	[illegible]	* [illegible]
Total	218,083,067	222,581,084	2.06
	Total tons carried		
Products of agriculture	[illegible]	[illegible]	1.41
Animals and products	[illegible]	10,077,556	[illegible]
Products of mines	[illegible]	[illegible]	6.68
Products of forests	[illegible]	36,464,473	[illegible]
Manufactures and miscellaneous	[illegible]	[illegible]	[illegible]
Merchandise	15,906,966	16,013,192	.67
Total	402,114,193	416,298,809	3.53

* Decrease.

Commission and Court News

Interstate Commerce Commission

The commission has suspended until October 28 the operation of schedules published by the Missouri Pacific which propose to establish from Sioux City, Ia., to various points in Arkansas and Missouri south of St. Louis, Mo., rates on grain and grain products 5 cents per 100 lb. higher than the rates from Omaha.

The commission has suspended until October 13 the operation of schedules published by the St. Louis-San Francisco which propose to limit the territory to which sugar stored in transit at Wichita, Kansas, could be reshipped, thereby resulting in increased charges on such traffic to the extent of the local rates from Wichita to ultimate destinations of the reshipped product.

The commission has suspended from June 22 until October 20 the operation of schedules published by the Mobile & Ohio which propose the cancellation of joint through rates on crushed, ground and rough-quarried limestone, carloads, from Columbia Quarry No. 2, Ill., and Krause, Ill., to St. Louis, Mo., when routed via Vulcan, Ill., and the Missouri Pacific Railroad, and the application in lieu thereof of switching charges ranging from 10 to 60 cents per net ton in addition to the present rate of 70 cents.

State Commissions

The Railroad Commission of California, in conjunction with the State Corporation Commissions of Arizona and New Mexico, after a two days' conference on the United States Supreme Court decision in the Southern Pacific-Central Pacific dissolution case, sent a telegram to the Interstate Commerce Commission urging that body to hasten the proposed grouping of railroad lines in the western region. Under the tentative plan proposed by the Interstate Commerce Commission the Southern Pacific and the Central Pacific are left as one system.

Ticket Frauds on the New York Central

The Public Service Commission of New York decided, last December, in favor of the railroad company, on a complaint made by Lanman Crosby of the alleged injustice of requiring him to provide himself with a copy of his photograph to show to conductors with his monthly commutation ticket. In the full report of the commission, which has recently been issued, interesting details are given of the practices which led to the establishment of the requirement that photographs must be provided.

The report deals with the suburban traffic to and from New York City on two divisions, the Hudson and the Harlem. Typical stations are Ossining, 30 miles from New York, where the one-way fare is $1.10, and the cost of a ride on the monthly ticket 17 cents; White Plains, 22 miles, one-way fare 82 cents, commutation 14 cents.

The company sells as many as 20,000 commutation tickets a month. These tickets for at least four years past have been misused. They were to be bought at various stores, fruit stands, bootblack stands, poolrooms, barber shops, cigar stores and groceries in most of the small towns.

Continuing, the report says:

Detectives rented commutation tickets in a great many of the small places, and conductors took up tickets on the trains from parties to whom they were not issued. Bundles of tickets so taken up were presented at the hearing. It was obvious as shown by the signatures of the purchasers thereon and of the persons from whom they were taken that they were presented by others than the purchasers. At Ossining one man rented space in a store, and dealt in these tickets, and on Sunday night could be found on the station platform collecting the tickets from persons to whom he had rented them, on their return. One woman at White Plains had eighteen or twenty tickets a month. The practice was, at the start of each month, for her to give a customer wishing to go to New York and return the price of a commutation ticket to be taken out in his or her own name.

The next man or woman did the same, and the process continued until the dealer had accumulated enough tickets to last during the month. One could go to her, secure a ticket, ride to New York and return on it, pay her the charge, and return the ticket to her. Her charge was considerably less than the regular rate which the passenger would have needed to pay.

The company procured injunctions against persons renting out these tickets, in the State and Federal courts, and restrained, for instance, in Ossining 13 persons, in Poughkeepsie 37 persons, in Newburgh 44 persons. The injunctions, however, did not stop the sales by other people.

After the requirement of the photograph on the commutation tickets was put in effect, the sale of commutation tickets fell off in one month at—

Ossining	165
Peekskill	94
Poughkeepsie	62
White Plains	300
Mount Kisco	78
Yonkers	148
Harrsdale	50

Commutation tickets with a like photographic requirement have been used on the Baltimore & Ohio between Philadelphia and Wilmington, on the Pennsylvania between Philadelphia and New York and between Trenton and North Philadelphia, and 100-ride tickets for the season of 1921 with such a requirement were in use on the Central of New Jersey between New York and Bradley Beach.

Personnel of Commissions

H. D. Loveland, a member of the California Railroad Commission since its organization in 1907, died at his home in San Francisco on June 11.

Court News

Charge for Parking Showman's Cars Valid, Though Not in Tariff

The Alabama Supreme Court holds that a railroad is entitled to make a charge to a showman for parking his cars on its tracks for 45 days, although such charge is not contained in its tariffs.—A. G. S. v. Wood (Ala.), 90 So. 502.

Coal Spur—Right of Eminent Domain

The Pennsylvania Supreme Court holds that an extension of a railroad to be employed largely to take coal from certain coal mines is a public use sufficient to justify the exercise of the right of eminent domain.—Pioneer Coal Co. v. Cherrytree & Dixonville (Pa.) 116 Atl. 45.

Spur Track Held Unnecessary

Although a spur track would be a great convenience to certain shippers and decrease their operating expenses, the Arkansas Supreme Court holds that this is not a service the railroad is required to furnish, where adequate facilities for all shipping purposes are furnished these and all other shippers at the regular passing track, in the absence of a contractual right to have the spur maintained.—Thomas-Bowman Cooperage Co. v Missouri & North Arkansas (Ark.) 237 S. W. 101.

Assumption of Risk—Question for Jury

The Circuit Court of Appeals, Third Circuit, holds that where an employee calls the attention of his foreman to a defect in the tool he is using (in this case a wrench) and objects to using it, but returns to his work with it, without an assurance of reparation from the employer, the question whether he voluntarily assumed the risks incident to the use of the defective tool was for the jury in an action under the Federal Employers' Liability Act; and that the test is whether the conduct of the foreman was such as to justify the employee in relying on the foreman's judgment rather than on his own in the continued use of the tool, or, on the other hand, whether the danger from the defect in such continued use was so imminent that no man of ordinary prudence would hazard it.—L. V. v. Skoczyla, 278 Fed. 378.

Foreign Railway News

Japanese Railway Buys American Electrical Equipment

The Westinghouse Electric & Manufacturing Company announces that it has received an order for motor car and substation equipment from the Chichibu Railway which operate in the vicinity of Tokio, Japan. A large part of this new equipment will be a duplicate of the large order shipped from the Westinghouse Company's plant at East Pittsburgh to the Chichibu Railway during the past year.

L. & N. W. Withdraws Bill Permitting Highway Transport

The London & North Western has withdrawn its support of the bill before Parliament which was drawn to allow it to engage in the transportation of freight by motor upon the highways. The company's loss of interest in the bill is due, apparently, to the insistence of the Ministry of Transport that the rates to be charged be regular railway rates and not those established by competing highway trucking concerns. The railway rates are, as a general rule, higher than the highway rates; consequently the railway could hope for little business if restricted as the Ministry of Transport proposed.

Death of Noted British Mechanical Officer

LONDON.

Norman J. Lockyer, locomotive works manager of the North Eastern Railway at Darlington, England, and one of Britain's best known railway mechanical men, died recently. Mr. Lockyer commenced his apprenticeship with Sir J. Whitworth & Co., Ltd., of Manchester, England, in 1877. Subsequently he served in the works of the Manchester, Sheffield & Lincolnshire Railway at Gorton until 1882, when he was employed by the running department. In 1885 he joined the staff of Sir A. M. Rendel, being employed in superintending the manufacture of locomotives for the Indian State and other railways. In 1896 he was appointed manager of the works of Sharp, Stewart & Co., Ltd., of Glasgow, the locomotive builders, and in 1899 he became works manager of the Gateshead Locomotive works of the North Eastern Railway. He was transferred to the Darlington works in 1909. He was the inventor of a number of devices for use on locomotives and in railway shops, one of the best known of his locomotive invention being called the "Lockyer" double-beat regulator valve.

Rhodesia Wants Railways

It has been reported, says Trade Commissioner P. J. Stevenson, Johannesburg, in a report to the Department of Commerce, that Rhodesia demands railroads before entering the Union of South Africa. A railroad between Walvis Bay, Southwest Africa, and the Wankie coal fields in southern Rhodesia is considered most important, since it will afford an outlet through Walvis Bay for Wankie coal to the east coast of South Africa and will open up Southwest Africa and the Bechuanaland Protectorate for development. A road extends from Walvis Bay to Grootfontein and if extended, as desired, it would form the first transcontinental railroad in Africa.

Next is the linking up of West Nicholson and Messina, which would give southern Rhodesia access to the sea through the port of Lourenco Marques. At present a roundabout route through the Union or through the less important port of Beira is used. A road is desired also between Sinoia in southern Rhodesia and Broken Hill in northern Rhodesia, to form the connecting link that would afford an outlet through Beira for the large volume of copper from the Katanga District of the Belgian Congo. The people of Rhodesia are said to consider the road to Walvis Bay as an economic necessity and to expect its early construction.

Equipment and Supplies

Locomotives

Mitsui & Company, New York City, has ordered from the H. K. Porter Company two locomotives for export to Siam.

The Delaware, Lackawanna & Western contemplates asking for bids in the near future on about 30 locomotives.

The Southern Railway has ordered 15 Mikado type locomotives from the American Locomotive Company. The Southern is also inquiring for 15 Pacific type locomotives.

The Lehigh Valley, reported in the *Railway Age* of June 24 as inquiring for 5 locomotives, has ordered 5 Mikado type locomotives from the Baldwin Locomotive Works.

The New York, Chicago & St. Louis, reported in the *Railway Age* of June 10 as contemplating buying about 10 locomotives, has ordered 14 locomotives from the Lima Locomotive Works.

The Magna Arizona Railroad has ordered 1 Consolidation type locomotive from the American Locomotive Company. This locomotive will have 22 by 28 in. cylinders and a total weight in working order of 199,000 lb.

The Chosen Railway (Korea) has ordered 6 Pacific type locomotives from the American Locomotive Company. These locomotives will have 24 by 26 in. cylinders and a total weight in working order of 203,000 lb.

The Standard Slag Company, Youngstown, Ohio, has ordered two 4-wheel switching locomotives from the American Locomotive Company. These locomotives will have 16 by 24 in. cylinders and a total weight in working order of 99,000 lb.

The Tennessee Copper Company, Copperhill, Tenn., has ordered 1, 6-wheel switching locomotive from the American Locomotive Company. This locomotive will have 20 by 26 in. cylinders and a total weight in working order of 133,000 lb.

The W. F. Carey Company, 90 Wall street, New York City, has ordered 2, 4-wheel switching locomotives from the American Locomotive Company. These locomotives will have 14 by 22 in. cylinders and a total weight in working order of 79,000 lb.

The Lehigh Portland Cement Company, Allentown, Pa., has ordered one 4-wheel switching locomotive from the American Locomotive Company. This locomotive will have 11 by 16 in. cylinders and a total weight in working order of 43,000 lb.

The Chicago & Eastern Illinois, reported in the *Railway Age* of June 17 as inquiring for ten Mikado type locomotives, has ordered this equipment from the American Locomotive Company, and expects to place orders for six Pacific type locomotives this week.

The Abitibi Power & Paper Company, Montreal, Quebec, has ordered one Mogul type locomotive from the American Locomotive Company. This locomotive will have 19 by 26 in. cylinders and a total weight in working order of 141,000 lb. This company has also ordered 1 Shay locomotive from the Lima Locomotive Works.

Freight Cars

The Norfolk Southern is inquiring for 286 steel underframes.

The Philadelphia & Reading is inquiring for 100 refrigerator cars.

The Brooks Scanlon Company, Kentwood, La., is inquiring for 25 steel logging cars.

The Delaware, Lackwanna & Western is inquiring for 380 gondola car bodies of 40 tons' capacity.

The Lehigh & New England is inquiring for 50 low side composite gondola cars of 50 tons' capacity.

The Chicago, Milwaukee & St. Paul is reported to be preparing to make repairs to about 800 gondola cars in its own shops.

The Temiskaming & Northern Ontario is inquiring for from 50 to 75 steel underframe, double-sheathed box cars of 40 tons' capacity.

The Buffalo & Susquehanna, reported in the *Railway Age* of June 17 as inquiring for 200 hopper car bodies of 55 tons' capacity, has ordered this equipment from the Standard Steel Car Company.

The Norfolk & Western, reported in the *Railway Age* of June 17 as inquiring for 1,000 single-sheathed box cars of 50 tons' capacity, is inquiring in addition to that number for 1,000 hopper cars of 70 tons' capacity.

The War Department is offering for sale 7,554 new railroad cars including box, flat and gondola cars—all built by American manufacturers for military service in France. Bids for this equipment will be received until 3 p. m., July 6, at Washington, D. C.

The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., has ordered from the General American Tank Car Corporation 5 tank cars for transporting liquid chlorine. This is in addition to the 10 cars ordered from the same company as reported in the *Railway Age* of June 10.

The Northern Pacific, reported in the *Railway Age* of June 24 as having ordered part of its large freight car inquiry, has just placed an order for 1,000 automobile box cars and 250 stock cars with the General American Car Company. This company is expected to place orders for 250 gondola cars this week.

The New York Central has ordered 1,106 self clearing hopper cars of 55 tons' capacity from the American Car & Foundry Company, 18 low side gondola cars of 70 tons' capacity from the Standard Steel Car Company and 49 high side gondola cars of 50 tons' capacity from the Buffalo Steel Car Company.

Passenger Cars

The Boston Elevated is inquiring for 40 tunnel cars.

The Brown-McFarland Company is inquiring for 30 electric car trucks.

The Virginia Coal & Iron Company is inquiring for one private car.

The Carnegie Steel Company, Pittsburgh, Pa., is inquiring for one pay car.

The Texas & Pacific is inquiring for one combination baggage and express car.

The Atchison, Topeka & Santa Fe is inquiring for eight buffet library cars.

The New York Central is building three steel baggage cars at its West Albany shops.

The Chesapeake & Ohio has ordered one steel private car from the Pullman Company.

The Metropolitan Railway of Barcelona, Spain, is inquiring through the car builders for 20 subway cars.

The Philadelphia & Reading is inquiring for 5 all-steel baggage cars 63 ft. long and for 5 all-steel combination baggage and mail cars 63 ft. long with 30 ft. mail compartments.

The Chicago & Eastern Illinois, reported in the *Railway Age* of June 17 as contemplating the purchase of a number of baggage cars, will send out inquiries for 17 cars as soon as specifications are completed.

Iron and Steel

The South Manchurian Railway will receive bids until July through New York export houses for 7,000 tons of 100-lb. rail.

THE NORTHERN PACIFIC has ordered 270 tons of steel from the American Bridge Company for overhead bridges between Minneapolis, Minn., and St. Paul.

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS will receive bids until July 7, for a large number of bolts, screws, nuts, iron bars, billets, plates, sheets, shapes, nails, wire, axles and tubes, the equipment to be supplied for period between July 1 and October 1 of this year.

Track Specialties

THE PENNSYLVANIA is inquiring for 100,000 tie plates for 100-lb. rails.

Machinery and Tools

THE CHICAGO, BURLINGTON & QUINCY is inquiring for 11 traveling cranes, the largest of which are two 225-ton cranes for its new shops at Denver, Colo. This company is expected to issue another machine tool list at an early date to equip the new shop.

THE GREAT NORTHERN is inquiring for 350 spout hoist machines, 350 cam shaft levers, 36 steel motor pinions, 36 steel spur gears, 36 nine-inch bearings for 2 7/16 in. diameter line shafting, 18 five-inch bearings for the same shaft dimensions and 4,030 ft. of cold rolled steel line for shafting of 2 7/16 in. diameter.

Miscellaneous

THE NORFOLK & WESTERN will receive bids until 12 o'clock noon, July 12, at Roanoke, Va., for its requirements of couplers and repair parts; 10,000 steel switch plates and 2,200 signal rail bonds.

THE PITTSBURGH & LAKE ERIE will receive bids until 12 o'clock noon, July 6, at Pittsburgh, Pa., for three months' requirements of car and locomotive axles, slag ballast, Portland cement, stovepipe iron, pickled steel sheet, galvanized sheet steel, wire nails, wire rope, steel billets, bars, shapes and plates.

THE NORFOLK & WESTERN will receive bids until 12 o'clock noon, July 5, at Roanoke, Va., for its requirements from July 1 to September 30, of miscellaneous steel castings, cast steel truck bolsters and cast steel side frames; 3,000 tons of steel shapes, plates and bars; and its requirements of brake shoes. Bids are also requested for 200 cast steel side frames, 100 cast steel truck bolsters and 50 cast steel body bolster center castings.

Signaling

THE CHICAGO, BURLINGTON & QUINCY has placed an order with the Federal Signal Company for 50 Federal type "4" top post signals to be installed in the vicinity of Aurora, Illinois.

THE CHICAGO, BURLINGTON & QUINCY will install signals on 89 miles of single track and 20 miles of double track at various points this season in addition to the 56 miles reported in *Railway Age* of May 20.

THE ST. LOUIS-SAN FRANCISCO has placed an order with the Federal Signal Company for a 48-lever Saxby & Farmer interlocking machine and other necessary materials for the rebuilding of an interlocking plant at Aurora, Mo.

THE GRAND TRUNK has placed an order with the Federal Signal Company for 24 Federal type "4-A," 3-position, U. Q. bottom post signals, for an installation of automatic permissive block signaling on its line in the vicinity of Yarmouth, Maine.

CHICAGO BURLINGTON & QUINCY.—This company will soon request bids for the installation of light signals between Hannibal, Mo., and Louisiana and between Ewhanks, Ill., and Quincy, the distances totaling 32 miles, and has under consideration the installation of signals between Lytle, Wis., and Bluff Siding and between Arapahoe, Neb., and Indianola, this distance totaling 45 miles.

Supply Trade News

Charles M. Schwab, chairman of the board of directors of the Bethlehem Steel Corporation, has been elected chairman of the board, also of the **Chicago Pneumatic Tool Company**, New York, to succeed John R. McGinley, who resigned as chairman but who remains as a director of the company.

The business of the Pittsburgh High Voltage Insulator Company, Pittsburgh, Pa., will be carried on in the future under the name of the **Westinghouse High Voltage Insulator Company**. The change in name does not affect the management or method of conducting the business of the company which will continue to be carried on as it has been in the past.

The U. S. Light & Heat Corporation, Niagara Falls, N. Y., has received orders for about 500 USL car lighting devices in the last sixty days from the following railroads; Atchison, Topeka & Santa Fe; Boston & Maine; Chesapeake & Ohio; Chicago, Rock Island & Pacific; Norfolk Southern; Norfolk & Western; Pennsylvania; and Wabash.

Colonel Walter J. Riley, president of the O. J. Jordan Company, East Chicago, Ind., has been appointed chairman of the Interstate Harbor Commission, a joint commission of the states of Illinois and Indiana and the United States Government, to consider the development of a harbor in the vicinity of Hammond, Ind., which project when carried out will include extensive rail as well as water terminals.

The Products Distributing Corporation, 360 Madison avenue, New York has been organized as a selling company for a direct drive axle generator and system for the electric lighting of railway cars. The equipment will be built by the Wagner Electric Company of St. Louis, Mo., under the E. M. Fitz patents. The generator used with this equipment is of the self-regulating, constant-voltage type and is mounted directly on one of the car axles.

The engineering staff of the **Strauss Bascule Bridge Company**, Chicago, has been reorganized and is now as follows: **J. B. Strauss**, president and chief engineer; **C. A. Ellis**, vice-president and engineer in charge of design; **P. L. Kaufman**, assistant secretary and contracting engineer; **C. E. Paine**, designing engineer. The New York office has been discontinued and new eastern offices opened at room 603 Albee building, Washington, D. C., in charge of **J. C. Eversman**. **L. O. Hopkins**, who was transferred about a year ago from the Strauss Bascule Bridge Company to the Strauss Yielding Barrier Company, is no longer connected with the latter company and his relations with both companies have been entirely severed.

William H. Eager, since 1918 first vice-president of the **Whitman & Barnes Manufacturing Company**, Akron, Ohio, has been elected president to succeed A. D. Armitage, who resigned on June 7, in order to give more of his time to his duties as vice-president and general manager of the J. H. Williams Company, Brooklyn, N. Y., with executive offices in Buffalo. Mr. Armitage still remains a member of the Whitman & Barnes board of directors. Mr. Eager is a graduate of the Massachusetts Institute of Technology, and for the past 16 years has been with the Whitman & Barnes Manufacturing Company, having joined the organization as assistant superintendent of its Chicago factory, later becoming works manager and in 1908 he was elected treasurer. In the early part of 1909 he was transferred to Akron, two years later he was appointed sales manager, and in 1918 was elected first vice-president. **Frank W. Oliver** has been appointed eastern sales manager of the Whitman & Barnes Manufacturing Company, with headquarters at 64 Reade street, New York City. Mr. Oliver has been connected with the drill and reamer industry continuously for 23 years.

Financial Plan for Improvements of Lima Locomotive Works

The Lima Locomotive Works, Incorporated, plans to complete the extension to its manufacturing plant at Lima, Ohio, at an estimated cost of $1,500,000. The program of enlargements and additions has been in progress during the past three years and approximately the same sum has already been spent. The completion of these additions will increase its capacity about 50 per cent.

The Board proposes to redeem $1,393,000 of first mortgage bonds which are now outstanding, as the interest and sinking fund payments amount to $170,000 per annum, equivalent to 12.2 per cent. on the amount of bonds now outstanding.

To provide money for these purposes new financing is required, which can be done to best advantage by an issue of common shares without par value. The board proposes that the certificate of incorporation be amended so as to change the existing common stock into shares without par value, giving each present common stockholder two such shares for each of his present shares, and so as to make the total authorized issue of such new common stock 300,000 shares, and to provide that the preferred stock, which is now convertible into the existing common stock on the basis of share for share, shall be convertible into such new common stock on the basis of two common shares without par value for each preferred share, and further to provide that while any of the preferred stock remains outstanding, the holders of the new common stock shall be entitled to one vote for each two shares held by them. While the preferred stock will thus retain in full its preferential position as to assets and dividends, and its conversion privilege and proportionate voting position will be protected, the common stockholders will receive two shares for each one they now hold, and there will be available for subscription such additional number of shares as will provide the desired new capital.

A special meeting of the stockholders has been called to be held at the principal office of the company in Richmond, Virginia, on July 14, 1922, to vote on the necessary amendment of the certificate of incorporation and incidental matters mentioned in such notice.

Subject to such amendment being authorized by the stockholders the board has resolved to offer to the common stockholders of record at the close of business on July 20, 1922, the right to subscribe for and purchase at the price of $50 per share, one and one-third shares of such new common stock for each share of the existing common stock.

Preferred stockholders as such will not be entitled to subscribe for the new common stock. They can, however, obtain the right to do so by converting their stock into common stock on or before the close of business on the 20th day of July, 1922.

There are now outstanding 23,560 shares of preferred stock and 48,550 shares of the present common stock. If no more of the preferred stock should be converted, the number of preferred shares outstanding after the completion of the financing would remain at 23,560, and the number of common shares would be 161,967.

The stock transfer books will be closed, for the purposes of the stockholders' meeting from three o'clock p. m. on June 28, until ten o'clock a. m. on July 15, 1922, during which period no conversion of preferred stock into common stock is permitted, but the books will be reopened on the last mentioned date, in order to afford an opportunity for transfers and for conversion of preferred stock, until three o'clock p. m. on the said 20th day of July, 1922, at which time all subscription rights will belong to common stockholders then of record. Subscriptions will be received up to the close of business on August 16, and payment of one-half of the subscription price or $25 per share will be required at the time subscription is made. The payment of the balance of the subscription price or $25 per share will be required on or before the close of business on September 15. Suitable subscription warrants will be mailed as promptly as possible after the close of business on July 20, 1922, to the common stockholders of record at that time.

The quarterly dividend of 1¼ per cent. on the existing common stock of the company will be paid on September 1, 1922, to holders of existing common stock of record on August 15, 1922. The new common shares which will be offered for subscription as above stated, will not participate in this dividend, but will be entitled to participate in all dividends which may be declared on the common stock of the company from and after September 2, 1922. The next following quarterly dividend date will be December 1, 1922.

Trade Publications

The Federal Signal Company, Albany, N. Y., has issued a bulletin, numbered 12-A, describing in detail its new neutral direct-current relay, style "M." This relay is said to embody a new design of contact finger, giving a wide range of adjustment without bending any of the parts, and a new type of trunnion and adjustable armature support claimed to insure perfect alinement of the bearing holes.

Flood and Searchlights.—The Pyle National Company, Chicago has recently issued supplement 2, of catalog 101, illustrating and describing a series of flood lights and searchlights adapted to the lighting of yards, loading platforms, locomotive coaling operations and construction work and general roundhouse illumination. The bulletin includes a list of parts for this equipment and presents illustrations to show the application of the lights to various kinds of night work.

Insulating and Soldering.—A catalogue supplement describing insulating and soldering compounds and announcing the extension of that line of products has been issued by the Westinghouse Electric & Manufacturing Company. The publication is known as 5-A, Supplement No. 2. The materials discussed in the supplement are baking and air-drying varnishes, insulating compounds, finishing materials, including paints, enamels, lacquers, etc., insulating glue, soldering flux, and lubricating oil.

Welding Rods and Electrodes.—A 40-page handbook known as Catalog No. 500 has recently been issued by the Page Steel & Wire Company, Bridgeport, Conn., which gives a variety of information concerning Page-Armco welding rods and electrodes for oxy-acetylene and electric welding. The catalog is well illustrated and, in addition to the welding rod data, it contains a fund of miscellaneous information useful to the welder concerning the metallurgy of iron and steel, amount of welding material required per lineal foot of weld, definitions of electrical units, mensuration factors, wire gage table, etc.

Shipment of Creosoted Fir Ties from Victoria, British Columbia to India is now claimed to be a permanent business. Last year two full shiploads were sent. They were experimental, the Indian Government also testing at the same time Burmese, Javanese and Australian woods. Of all the imported woods the British Columbia material was most satisfactory and another lot of 7,000,000 is now going forward.

In the West Virginia Coal Fields

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, which was reported in the *Railway Age* of June 3 as receiving bids for station extensions and alterations at Lubbock, Texas, and Waynoka, Okla., to cost approximately $15,000 each, has awarded contracts for this work to E. F. Ware, El Paso, Texas.

BUFFALO, ROCHESTER & PITTSBURGH.—This company has awarded a contract to the Ogle Construction Company, Chicago, for the construction of a 1,200-ton frame coaling station at Rickers, Pa., to include Duplex hoisting equipment with two-way buckets and complete sanding facilities.

CHESAPEAKE & OHIO.—This company has awarded a contract to Fairbanks, Morse & Company, Chicago, for the construction of an 800-ton reinforced concrete coaling station, sand drier and cinder handling plant at Clifton Forge, Va. The coaling station will have pockets for three kinds of coal, viz., run-of mine, passenger engine stoker and freight engine stoker. The station will be electrically operated and will have a hoisting capacity of 100 tons per hour. The station is equipped with a coal crusher and screen so that run-of-mine coal can be prepared for stoker use if necessary. The ash handling facilities will consist of two 200-ft. pits equipped with clam-shell buckets on overhead traveling cranes. The estimated cost of this work is $92,000. The same contractors will also build a 500-ton, reinforced concrete coaling station, sand drier and cinder handling plant for this company at Thurmond, W. Va., to cost approximately $52,600. This station will handle both run-of-mine and stoker coal and will also be provided with a crusher and screen. The station is to be electrically operated with a hoisting capacity of 75 tons per hour. The cinder disposal plant provides for underground haulage. The company has awarded a contract to the Fairfield Engineering Company, Lancaster, Ohio, for the construction of a 300-ton frame coaling station at Charlottesville, Va., to cost approximately $15,500. A 250-ton frame coaling station will be built by company forces at Raleigh, W. Va. A Robertson cinder conveyor will also be installed at this point. The cost of this work is estimated at $18,000. The company has awarded a contract to J. T. Nuckols, Richmond, Va., for the construction of a reinforced concrete freight house, 52 ft. by 523 ft., at Norfolk, Va., to replace a structure destroyed by fire. This will be a one-story structure except for 101 ft. at one end, where two stories will be provided for office use. In this structure panels of "Gunite" siding will alternate with rolling steel doors. Four fire walls of hollow tile construction and automatic fire doors will be provided. The roof will be of reinforced concrete slabs covered with 4-ply built-up asbestos roofing. This work will cost approximately $161,000. This company in conjunction with the state highway department of Virginia is eliminating a grade crossing at Longdale, Va., by the construction of a subway. Major Bros. & Company, Clifton Forge, Va., have the contract for this work which will cost approximately $20,000. The awarding of contracts to Joseph E. Nelson & Sons, Chicago, for extensive engine terminal improvements at Peru, Ind., and Peach Creek, W. Va., were noted in the *Railway Age* of June 24.

CHICAGO, BURLINGTON & QUINCY.—This company is calling for bids for the construction of a new 6-stall engine house at Rock Island, Illinois, bids to close July 6.

CHICAGO & NORTH WESTERN.—This company, which was reported in the *Railway Age* of May 13 as contemplating the rebuilding in the near future of its 12-stall engine house at Ashland, Wis., and in the *Railway Age* of June 24 as calling for bids for the construction of this work, has awarded the contract to C. W. Gindle, Chicago.

CHICAGO, ROCK ISLAND & PACIFIC.—This company is contemplating the construction of a freight station at Omaha, Nebraska, to cost in the neighborhood of $200,000.

ERIE.—This company, which was reported in the *Railway Age* of June 3 as expecting to call for bids in the near future for an extension to its shops at Hornell, N. Y., has awarded the contract for this work to the Bates & Rogers Construction Company.

HOUSTON & BRAZOS VALLEY.—This company has applied to the Interstate Commerce Commission for a certificate authorizing construction of an extension from a point 1.9 miles south of Clute Station, Texas, in a northeasterly direction 13 miles, to Hoskins Mound, to reach a sulphur deposit.

ILLINOIS CENTRAL.—This company has awarded a contract to G. A. Johnson, Chicago, for and is now undertaking the construction of an addition to the hospital at Chicago, to cost approximately $250,000.

ILLINOIS CENTRAL.—This company, which was reported in the *Railway Age* of June 17, as calling for bids for the construction of a water supply line at Kankakee, Ill., to cost approximately $20,000 has awarded a contract to the Railway Water & Coal Company, Chicago.

KANSAS & OKLAHOMA.—This company has located and is preparing to build an extension to its present line northwesterly through Hugoton, Kan., and on to Trinidad, Col. A preliminary route has been established as far as Colorado.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—This company will rebuild its 16-stall roundhouse recently destroyed by fire at Gladstone, Mich., although plans concerning the date of rebuilding and the type of structure are as yet indefinite.

PENNSYLVANIA.—This company is receiving bids for the following projects: The elevation of tracks and the elimination of grade crossings on the Conemaugh division from the Ft. Wayne connection at Anderson street to Thirtieth street bridge (Northside) Pittsburgh, Pa., and the construction of a reinforced concrete arch bridge to carry a state highway over the tracks of the Indiana branch, Conemaugh division, at a point south of Reed station, Pa. The work on the two above projects will be in charge of George Nauman, assistant to chief engineer, Pittsburgh, Pa. This company is also receiving bids for the construction of an undergrade bridge on line of Station avenue at Cornwells, Pa. The structure will have a 27 ft. roadway and a 6 ft. sidewalk. The work will be in charge of J. P. Temple, assistant engineer, Philadelphia, Pa.

UNION PACIFIC.—This company has authorized and will undertake at the earliest possible date the construction of 20.47 miles of second track on the Oregon Short Line through Glenns Ferry, Idaho. The timber treating plant which this company was reported in the *Railway Age* of April 29 as planning to construct at The Dalles, Oregon, at an expenditure of approximately $500,000, has been authorized and a contract for the grading awarded to Grant Smith & Company, Portland, Ore., pursuant to the company's plan to push the work to an early completion and store ties in the near future. The company's plans relative to extensive improvements to its store department facilities at Pocatello, Idaho, Rawlins, Wyo., and Grand Island, and Omaha, Nebr., as reported in the *Railway Age* of April 29, have advanced to the point that it has installed gantry crane on a 1,000-ft. runway at Pocatello and expects to start in the near future the construction of a 175-ft. addition to the store house at that point as well as a small paint storage cellar. The 7½-mile extension of the Homedale branch of the Oregon Short Line, reported in the *Railway Age* of May 13, as having been authorized by the Interstate Commerce Commission, is now under construction and will be completed this season. The company expects to start in the near future and complete this season the construction of the Delta-Fillmore branch of the Los Angeles & Salt Lake, but does not contemplate undertaking this year the construction of the proposed terminal facilities at Los Angeles for which property has been acquired, as reported in the *Railway Age* of April 29.

VIRGINIAN & WESTERN.—The Interstate Commerce Commission has issued a certificate authorizing this company which is a subsidiary of the Virginian to construct an extension from the end of the Virginian Connecting Branch, a distance of 3.6 miles. The commission, however, denied the request for permission to retain the excess earnings because the new line will be operated as a part of the Virginian.

WABASH.—This company, which was reported in the *Railway Age* of June 24 as calling for bids for the construction of a reclamation plant at Decatur, Illinois, has awarded the contract for this work to C. W. Gindle, Chicago.

Railway Financial News

ATCHISON, TOPEKA & SANTA FE.—*Asks Authority to Acquire Control.*—This company has applied to the Interstate Commerce Commission for authority to acquire control of the Santa Fe & Los Angeles Harbor by lease and purchase of its stock.

ATLANTA & ST. ANDREWS BAY.—*Abandonment of Line Authorized.*—Upon further hearing and consideration of the results of a suspension of operation for an experimental period, the Interstate Commerce Commission has issued a certificate authorizing the abandonment of operation of this company's branch line between Panama City and St. Andrews, Fla.

ALABAMA & MISSISSIPPI.—*To Be Sold.*—This railroad will be sold at public auction on July 31 at Pascagoula, Miss., by Hernando Money, special commissioner. The road operates between Vinegar Bend, Ala., and Pascagoula, 78 miles. It has been in the hands of a receiver since March 17, 1921.

BOSTON & MAINE.—*Asks Authority for Equipment Trust Certificates.*—This company has applied to the Interstate Commerce Commission for authority to enter into an agreement for the issuance of $1,815,000 of equipment trust certificates, the proceeds of which, together with a government loan of $1,212,500, are proposed to be used to acquire equipment to the amount of $3,049,700. It is proposed to offer the certificates to several banks in Boston who have expressed a desire to bid on them and to sell them on the basis of not less than 6½ per cent.

BUFFALO, ROCHESTER & PITTSBURGH.—*Merger Report Denied.*—President William T. Noonan has issued a statement denying the report that his road would be included in a merger of the Western Maryland, the Wheeling & Lake Erie, and the Toledo, St. Louis & Western.

CANADIAN NATIONAL RAILWAYS.—*Annual Report.*—The annual report issued this week contains a combined income account for the year ended December 31, 1921, as follows:

	1921	1920
Gross Operating Revenue		
Canadian Northern	$69,088,474	$66,695,399
Canadian Government Railways	40,964,304	44,537,804
Grand Trunk Pacific	16,638,678	14,408,550
Canadian National Railways	$126,691,456	$125,641,753
Operating Expenses		
Canadian Northern	$75,564,385	$82,953,979
Canadian Government Railways	46,551,603	54,987,680
Grand Trunk Pacific	20,668,370	24,543,064
Canadian National Railways	$142,784,357	$162,484,722
Net Deficit from Railway Operations		
Canadian Northern	$6,475,911	$16,258,580
Canadian Government Railways	5,587,299	10,449,876
Grand Trunk Pacific	4,029,692	10,134,514
Canadian National Railways	$16,092,902	$36,842,970
Tax Accruals		
Canadian Northern	$1,191,891	$1,185,652
Canadian Government Railways	35,744	61
Grand Trunk Pacific	357,395	45,409
Canadian National Railways	$1,585,029	$1,231,122
Total Operating Deficit		
Canadian Northern	$7,667,802	$17,444,232
Canadian Government Railways	5,623,043	10,449,937
Grand Trunk Pacific	4,387,086	10,179,923
Canadian National Railways	$17,677,931	$38,074,092
Non-Operating Income		
Canadian Northern	$1,119,350	$1,845,995
Canadian Government Railways	457,352	1,737,979
Grand Trunk Pacific	863,186	1,837,442
Canadian National Railways	$4,139,888	$5,421,415
Deductions from Gross Income		
Canadian Northern	$1,011,242	$125,637
Canadian Government Railways	845,066	720,096
Grand Trunk Pacific	801,668	812,405
Canadian National Railways	$2,657,976	$1,658,138
Total Deficit Before Fixed Charges		
Canadian Northern	$5,559,694	$15,733,875
Canadian Government Railways	6,010,756	9,432,055
Grand Trunk Pacific	4,425,568	9,154,886
Canadian National Railways	$15,896,019	$34,310,816
Fixed Charges		
Canadian Northern Railway System—		
Interest due public	$17,595,708	$13,993,695
Interest due government	13,224,208	10,326,261
	$30,819,916	$24,319,956
Grand Trunk Pacific Railway—		
Interest due public	$3,977,447	$4,270,244
Interest due government	1,535,474	1,539,224
Interest on receiver's certificates	1,702,887	808,352
Interest due Grand Trunk Railway	2,742,192	2,256,468
	$9,958,000	$8,874,288
Canadian National Railways	$40,777,916	$33,194,244
Total Deficit		
Canadian Northern Railway System	$36,379,610	$40,043,831
Canadian Government Railways	6,010,756	9,432,055
Grand Trunk Pacific Railway	14,283,568	18,029,174
Canadian National Railways	$56,673,934	$67,505,060
St. John and Quebec Railway (leased)	316,045	346,015
	$56,989,979	$67,851,075
Operating Ratios		
Canadian Northern	109.37	124.38
Canadian Government Railways	113.64	123.46
Grand Trunk Pacific	124.21	170.34
Total	112.70	129.32

CENTRAL VERMONT.—*Authorized to Issue Equipment Notes.*—The Interstate Commerce Commission has authorized an issue of $754,000 of equipment notes.

CHICAGO, MILWAUKEE & ST. PAUL.—*Asks Authority for Equipment Trust Certificates.*—This company has applied to the Interstate Commerce Commission for authority to assume liability in connection with $8,085,000 of 5 per cent equipment trust certificates for the purchase of 6,500 freight cars and 25 locomotives. The certificates have already been offered for sale by White, Weld & Co.

CHICAGO UNION STATION COMPANY.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $6,150,000 of first mortgage 5 per cent bonds to be sold at not less than 97 and the proceeds used for construction purposes. The proprietary companies were also authorized to guarantee the bonds.

CINCINNATI, INDIANAPOLIS & WESTERN.—*Asks Authority to Sell Bonds.*—This company has applied to the Interstate Commerce Commission for authority to sell $1,000,000 of first mortgage 5 per cent, 50-year, gold bonds at not less than 70. The company has also applied to the Interstate Commerce Commission for a certificate authorizing the acquisition and operation of that part of the Chicago & Indiana Coal Railroad extending from Brazil, Ind., 25.76 miles, to a connection with the Cincinnati, Indianapolis & Western in Parke County, Ind.

GREAT NORTHERN.—*Certificate for Abandonment Denied.*—The Interstate Commerce Commission has denied this company's application for authority to abandon 3.69 miles of its Portland branch in Traill county, N. D., on the ground that the saving to be effected would be relatively small and that the towns served would be placed at a disadvantage.

KANSAS CITY, MEXICO & ORIENT.—*Guaranty Certified.*—The Interstate Commerce Commission has issued a final certificate stating the amount of this company's guaranty for the six months' period of federal control as $478,904, of which $38,904 was still to be paid. For the Kansas City, Mexico & Orient of Texas the commission certified the amount of the guaranty as $554,715, of which $84,715 was to be paid.

LAKE ERIE & WESTERN.—*Authorized to Issue Notes.*—This company has been authorized by the Interstate Commerce Commission to issue $1,300,000 of 6 per cent promissory notes for the purpose of refunding indebtedness.

MAGMA ARIZONA.—*Asks Authority to Issue Stock.*—This company has applied to the Interstate Commerce Commission for authority to issue at par $800,000 of capital stock to provide funds for changing the road from narrow to broad gage, improving the grade and providing equipment.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—*Dividend Case.*—Federal Judge W. F. Booth, at Minneapolis, Minn., has decided that the common stockholders are entitled to the 2 per cent. semi-annual dividend declared March 13, to be paid out of an undivided surplus accumulated between 1909 and 1919.

Equal dividends of 2 per cent on the common and preferred stocks were declared March 13, though the preferred stock had a 7 per cent preference as to dividends declared out of any one year's earnings. The Continental Insurance and Fidelity Phoenix Insurance companies, large holders of preferred stock, brought suit enjoining payment of the 2 per cent on the common stock, claiming that the preferred stockholders must be paid at the full annual rate of 7 per cent before the common stock participated in the earnings.

Missouri, Kansas & Texas.—*Asks Dissolution of Receivership.*—A decree was filed in the federal court at St. Louis, Mo., on June 28 by the bondholders and other interested parties for the dissolution of the road's receivership.

Objection was entered by the Kansas City Terminal Railroad Association and nine constituent railroads to one provision in the decree—the plan for the withdrawal of the Missouri, Kansas & Texas from the use of the Kansas City Union Station and establishment of its own station.

The decree held that the interests of the road and its creditors could be served best by dissolving the receivership and selling the assets. It pointed out, however, that operation under the receiver had been successful. The decree asks that the sale be held in the M., K. & T. station at Colbert, Okla.

Belief was expressed that the financial interests now controlling the road would bid it in at an auction sale.

An outline of the reorganization plan was published in the *Railway Age* of November 26, 1921, page 1043.

Norfolk & Portsmouth Belt.—*Asks Authority to Sell Bonds.*—This company has applied to the Interstate Commerce Commission for authority to have certified and delivered by the Fidelity Trust Company of Philadelphia $150,000 of 5 per cent gold bonds and to sell them at not less than 85, the proceeds to be used to pay off some notes.

Texas & Pacific.—*Annual Report.*—The annual report issued this week shows the following income account for the year ended December 31, 1921:

	1921	1920
Operating revenues	$35,600,474	$41,844,190
Operating expenses	28,424,905	37,459,040
Net revenue from railway operations	7,175,569	4,385,150
Tax accruals	1,437,974	1,337,259
Railway operating income	5,727,387	3,039,567
Equipment and joint facility rents—net Dr.	1,181,698	1,565,440
Net railway operating income	4,545,689	1,474,127
Non-operating income	341,322	3,316,283
Gross income	4,887,011	4,790,410
Interest on funded debt	1,792,166	1,729,870
Total deductions from gross income	2,146,287	2,399,578
Net income	2,740,724	2,390,832
Income appropriated for investment in physical property—road	1,925,502	2,241,815
Total appropriations of income	2,422,097	2,989,564
Income balance	318,627	Def. 598,732

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to the several roads the following amounts:

Lehigh Valley	$4,600,000
Northern Alabama	125,000
Cincinnati, Findlay & Ft. Wayne	18,900

Dividends Declared

Baltimore & Ohio.—Preferred, 2 per cent, semi-annually, payable September 1 to holders of record July 15.

Central Railroad of New Jersey.—2 per cent, quarterly, payable July 15 to holders of record July 5; 2 per cent, quarterly, payable August 15 to holders of record August 3.

Norfolk & Western.—Common, $1.75, quarterly, payable September 19 to holders of record August 31; adjustment preferred, $1.00, payable August 19 to holders of record July 31.

Northern Central.—4 per cent, semi-annually, payable July 15 to holders of record June 30.

Philadelphia & Western.—Preferred, 1¼ per cent, quarterly, payable July 15 to holders of record June 30.

Trend of Railway Stock and Bonds Prices

	June 27	Last Week	Last Year
Average price of 20 representative railway stocks	64.91	64.42	53.14
Average price of 20 representative railway bonds	86.38	85.47	73.08

Railway Officers

Executive

Walter L. Stanley, whose election as vice-president of the Seaboard Air Line was announced in the *Railway Age* of June 17 (page 1513), was born at Wytheville, Va., on May 24, 1871. He was graduated from Emory and Henry College, Emory, Va., and studied law at the University of Virginia. He then practiced law for five years and then entered the service of the legal department of the Norfolk & Western. He went with the Seaboard Air Line on September 1, 1901, and served consecutively as claim agent, claims attorney, assistant to the president, assistant to the federal manager (under the Railroad Administration) and general attorney, in which latter position he was serving at the time of his promotion to the vice-presidency. Mr. Stanley was also a staff officer under the regional director of the Southeastern region. Mr. Stanley's headquarters have been at Atlanta, Ga., since 1916.

Walter L. Stanley

Michael H. Cahill, whose election as vice-president and general manager of the Seaboard Air Line was announced in the *Railway Age* of June 17 (page 1513), was born at Lexington, Ohio, in 1874. He received a high school education and entered railway service in 1891 as a messenger boy for the Baltimore & Ohio. He subsequently served that company as operator and train dispatcher and was then promoted to trainmaster and, later, to assistant superintendent. He was promoted then to division superintendent and served in that capacity on four different divisions. Thereafter he was general superintendent of the Pennsylvania and Maryland districts. With the exception of a short period when he was in the service of the Delaware, Lackawanna & Western, Mr. Cahill served continuously with the Baltimore & Ohio until 1920, when he went to the Seaboard Air Line at Norfolk, Va., as general manager, the position he held at the time of his election to the vice-presidency.

M. H. Cahill

Financial, Legal and Accounting

A. G. Gutheim, manager of public relations of the Car Service Division of the American Railway Association, has resigned to engage in the general practice of law at Washington, D. C., effective on July 1.

Operating

C. A. Braillier has been appointed supervisor of work equipment of the Atchison, Topeka & Sante Fe lines east, with headquarters at Topeka, Kans., effective June 12, to succeed Wm. Barnes, deceased.

Nicholas D. Connelly, whose promotion to superintendent of the Indiana Harbor Belt, with headquarters at Gibson, Ind., was reported in the *Railway Age* of June 17, was born on November 27, 1884 at Jackson, Mich., and entered railway service on August 18, 1899 as messenger boy in the telegraph department and the office of the trainmaster of the Michigan Central at Jackson Junction, Mich. He continued as messenger boy at this point and later in the offices of the chief train dispatcher and the division superintendent at Jackson, Mich., and thereafter as a telegraph operator at various points of the Michigan Central until December 14, 1905, when he was transferred to the Indiana Harbor Belt as a train dispatcher. Consecutively thereafter, he served as train dispatcher, switchman, conductor and yardmaster on the Indiana Harbor Belt, until 1912 when he was promoted to general yardmaster, from which position he was advanced in 1916 to trainmaster, with headquarters at Gibson, Indiana, the position he held at the time of his recent promotion to superintendent.

N. D. Connelly

Traffic

C. J. Faulconer has been appointed district freight agent of the Lake Erie & Western, with headquarters at Pittsburgh, Pa.; A. C. McKinley, district freight agent, with headquarters at Chicago; J. K. Leigh, district freight agent, with headquarters at Minneapolis, Minn.; W. B. Robbins, district freight agent, with headquarters at Detroit, Mich.; D. L. Holtz, district freight agent, with headquarters at St. Louis, Mo., and W. B. McGowan, district freight agent, with headquarters at Kansas City, Mo., all effective June 16. Effective the same date, J. H. McHugh has been appointed division freight and passenger agent at Peoria, Ill., H. C. Fisher, division freight and passenger agent at Sandusky, Ohio, and E. J. Hayler has been appointed commercial agent, with headquarters at Muncie, Ind., and W. A. Angrick, commercial agent, with headquarters at Kokomo, Ind.

Bernard W. Herrman, whose appointment as assistant freight traffic manager of the Norfolk & Western, with headquarters at Roanoke, Va., was announced in the *Railway Age* of June 10, page 1369, was born on October 10, 1866, at Dayton, Ohio. He was educated in the public schools and in 1882 entered the service of the Cleveland, Columbus, Cincinnati & Indianapolis (now C. C. C. & St. L.) and the Scioto Valley (now N. & W.). In 1890 he was promoted to contracting freight agent of the Big Four and the following year entered the service of the Norfolk & Western as traveling freight agent with headquarters at Columbus, Ohio. In 1893 he became local freight agent for the same company at Columbus and the following year entered the employ of the Cleveland, Akron & Columbus (now the Pennsylvania) in a similar capacity. In 1910 he became general agent of the Norfolk & Western at Cincinnati, Ohio, and in 1912 was promoted to assistant general freight agent, with headquarters at Columbus. In 1917 he was promoted to general freight agent with the same headquarters and in 1918 was transferred to Roanoke, Va., in a similar capacity. In this latter position he was serving at the time of his recent promotion.

Engineering, Maintenance of Way and Signaling

Major L. D. Blauvelt, former chief engineer of the Denver & Salt Lake, has resigned as state highway engineer of Colorado to become chief construction engineer for the commission established to construct the six-mile tunnel through the continental divide on the line of the Denver & Salt Lake, west of Denver, Colo.

Purchasing and Stores

R. J. Aul, storekeeper of the Indiana Harbor Belt, with headquarters at Gibson, Indiana, has been appointed to serve also as storekeeper of the Chicago River & Indiana and the Chicago Junction.

Obituary

William C. Arp, retired superintendent of motive power of the Vandalia, died at his home in Terre Haute, Ind., on June 16 at the age of 74 years after having been engaged in railway service for 48 years.

Archibald Stuart Baldwin, vice-president of the Illinois Central in charge of the Chicago terminal improvements and this company's extensive program of electrification in that city, died suddenly on the evening of June 26 on a Michigan Central train approaching Detroit on his return to Chicago after an extended visit in Europe where he attended the International Railway Congress at Rome, Italy, and spent considerable time thereafter studying European electrification systems. Mr. Baldwin was born at Winchester, Va., on September 28, 1861, and entered railway service in 1879 as a rodman on the Richmond & Allegheny, now a part of the Chesapeake & Ohio, a position which he left in 1880 to become assistant engineer of the Iron and Steel Works Association of Virginia. He was employed as assistant engineer and engineer of this company until 1882 when he re-entered railway service as a draftsman on the Philadelphia extension of the Baltimore & Ohio. Advanced a short time later to assistant engineer on this work, he continued in this capacity until 1885 when he became principal assistant engineer on the construction of the Missouri river bridge of the Chicago, Milwaukee & St. Paul at Kansas City, Mo., a position he occupied until 1886. Consecutively thereafter he was resident engineer of the Louisville, St. Louis & Texas from 1886 to 1887, assistant engineer on the Louisville & Nashville from 1887 to 1889 and roadmaster until December, 1901, when he entered the service of the Illinois Central as principal assistant engineer. He was advanced to engineer of construction on May 1, 1903, was promoted to chief engineer on March 20, 1905, and on August 1, 1918, was elected vice-president of the corporation, a position he held until March 1, 1920, when he was appointed vice-president in charge of the Chicago terminal improvements. Mr. Baldwin has been active in engineering associations for many years, having been president of the American Railway Engineering Association during 1916-1917 and president of the Western Society of Engineers during 1919-1920. At the time of his death he was the selection of the Illinois Section of the American Society of Civil Engineers for director.

A. S. Baldwin

One Hundred Carloads of Potatoes all destined for New England, left Cape Charles, Va., by the Pennsylvania Railroad, on June 16.

INDEXES TO VOLUME 72

The indexes to the last volume of the Railway Age are now ready for distribution. Those desiring indexes to this volume should kindly advise the New York office, 2201 Woolworth Building.

Shop Crafts' Strike a Violation of Law

The omission of a small word frequently changes the meaning of an entire statement. The *Railway Age* in an editorial in its issue for June 24 said: "For the employees whose wages are to be reduced to strike would not be a technical violation of the Transportation Act, but," etc. The statement should have been: "For the employees whose wages are to be reduced to strike would not *only* be a technical violation of the Transportation Act, but," etc. There can be no question that the strike is a violation of law. Section 301 of the Transportation Act says: "It shall be the duty of all carriers and their officers, *employees* and agents to exert every reasonable effort and adopt every available means to avoid any interruption to the operation of any carrier growing out of any dispute between the carrier and the employees or subordinate officials thereof." The section then says that all disputes shall be, if possible, settled in conference between representatives of the railways and the employees, and concludes as follows: "If any dispute is not decided in such conference, it shall be referred by the parties thereto to the Board which, under the provisions of this title, is authorized to hear and decide such dispute." In this instance, after the Labor Board has given the shop crafts a full hearing and decided the matters in dispute, they have struck in an effort to accomplish the very purpose the law sought to prevent—that is, an interruption of transportation. The Transportation Act does not specifically provide any penalties for any violation of its labor provision except that requiring witnesses to appear and testify when subpœnæd. The violation of law involved in this strike is just as plain, however, as if all the strikers could be arrested and put in jail.

Back Up the Tool Committees

Personnel is conceded to be the most important factor in railroad shop production, but even an efficient, highly-organized personnel cannot accomplish satisfactory results when handicapped by inadequate shop machinery and equipment. There is no denying that literally thousands of old machines now used in railroad shops can readily qualify for the scrap pile and the recommendations of shop officials and tool committees regarding replacement of these machines should receive favorable attention. Recommendations of the tool committees represent the final and best mechanical department opinion which should be respected both as to the amount and kind of machinery purchased. Why discourage shop officials from developing improved methods by continually disapproving their requests for machinery needed in applying those methods? And why expect a shop once equipped to run for years without further additions and improvements? Machine tool design is in a state of continual change, the tendency being always toward more powerful, accurate, easily-controlled and productive machines. Any business or industry failing to take advantage of modern machinery, fails to a proportionate extent in earning a maximum return for its stockholders. Railway purchasing agents are as a rule more capable and broadly experienced than those serving industrial plants but most of the former know little about machinery which they are inclined to think of in terms of price per pound. Price is of far less importance in the long run than a machine's productive capacity, adaptability to the work and the amount of work available for it. These factors are all given consideration by the tool committee. It is a mistake to ignore the recommendations of these experts and furnish another machine simply because of a few dollars difference in price.

The Element of Speed

As a result of the unfortunate accident at Winslow Junction, N. J., on July 3, it seems not unlikely that the high scheduled speeds of passenger trains between Camden and Atlantic City may be the subject of some unthoughtful criticism. At the present writing, only meager press reports of the accident are at hand and it is impossible to determine whether or not the element of speed played any considerable part in the disaster. Attention should be called, however, to the fact that the Philadelphia & Reading and the Pennsylvania express train service between Camden and Atlantic City has few equals in this country when speed, comfort and safety, taken as a whole, are considered. The tracks of both railroads are excellent, of high standards of construction and maintenance. There are few curves and the lines are practically level. The equipment used in this service by both roads is of the best. The distance is short—less than 60 miles—and traffic is heavy. If there is any situation in the United States where high speeds may be safely scheduled it is here. Indeed, speaking generally, it would seem that these two railroads are to be congratulated upon the splendid services which they offer between the Jersey coast and Camden, whence ferryboats operate to Philadelphia. Passenger service in America, as a rule, is comfortable and safe and relatively fast. It is not as fast on the average, however, as the service in England. There are good reasons for this, of course. Travel in England is of much greater density than that in this country and the distances between cities are shorter. But between Philadelphia and Atlantic City the conditions are favorable to high scheduled speeds. With conditions as favorable as they are, the railroads would be remiss in their duty to the public if their scheduled speeds for express passenger service on these lines were less. Indeed, 40 miles an hour is doubtless a more dangerous speed in many places where it is prescribed than are the higher speeds on the Atlantic City lines of the Reading and the Pennsylvania. Speed as high as conditions of traffic, equipment and track justify is a factor in the service which railroads offer to passengers just as are comfort and safety.

"If due consideration is given to the fact that four years of constant training is necessary to produce a passable mechanic, we would say that the foreman who rarely sees any shop except the one in which he is employed and meets no mechanical men other than his daily associates, is not to be censured but rather to be praised for what he does accomplish." This quotation from an announcement of the convention of the General Foremen's Association, is commended to the higher officers for careful consideration. Nothing has demonstrated the importance of foremen more forcefully than the present strike. Loyalty of the rank and file to the road seems now to count for little, if it has not been entirely displaced by loyalty to the labor organizations. Under such conditions, the foremen are the pillars of the organization. This is true at all times; the strike merely serves to emphasize it. The emergency through which the roads are passing will accomplish some good if it brings home to the managements the necessity for standing back of the foremen with encouragement and support.

The Pillars of the Organization

The Matter of Statistics

THE RAILWAYS and the Interstate Commerce Commission are again discussing the matter of the Interstate Commerce Commission's statistical requirements. This question as it relates to both the Interstate Commerce Commission and the state commissions is an old one and has been recurring in one form or another for many years. The general impression is that the commissions require too much statistical data and that the reports are so extensive that their compilation represents a heavy financial burden upon the carriers. There is, no doubt, a great deal of truth in this opinion, but there are so many extenuating factors that the question is not a simple one. The chief of these factors is, of course, that the railways require accounts and statistics for purposes of management and many carriers find it advisable to compile for their own purposes data of one kind or another in addition to that required by statute or by commission regulation.

Attention has been directed from time to time to the large increase in the number of railway clerks and in their compensation, which increases are somewhat out of proportion with the increase in the number of other employees, the compensation of other employees, the amount of traffic handled, or the revenue therefrom. Of course, there are many reasons contributing to the increase in the number of clerks. Among them is the fact that today many employees are designated as clerks who in former times were reported under some other designation. Federal control, the valuation act, the guaranty period, rate cases, discussions before the Labor Board, etc., have further necessitated the compilation of all kinds of material and thereby increased the number of clerks engaged in that kind of work. Another and not an unimportant factor is the increasing proportion of l.c.l. freight, the accounting costs on which per dollar of revenue are much higher than on carload freight.

The question is in the hands of the railways through the Association of Railway Executives and through the submission of the question to the Railway Accounting Officers' Association. The accounting officers have appointed a special committee, headed by E. M. Thomas, comptroller of the Chesapeake & Ohio, which is discussing the matter for the association and for the railways with the Bureau of Statistics of the Interstate Commerce Commission. The reference of this important question to the Railway Accounting Officers' Association is a compliment to that body. The able analysis of the situation as presented by President J. J. Ekin of the association in his address before the opening session of the accounting officers meeting in Cleveland on June 7 (*Railway Age* of June 17, page 1485) is assurance that the matter is in able hands. The accounting officers at their annual meeting put themselves plainly on record as advocating simplicity in accounting and direct, practical and usable statistics.

There is unquestionably a great deal of work that can be done in this matter of statistical requirements. It is something in which railroad officers in all departments of railway work are interested, the operating department, of course, being primarily interested. It will be borne in mind, however, that the operating statistics which are at present being required by the Interstate Commerce Commission on the O. S. forms are in the case of most roads but a small proportion of all statistics which are compiled concerning operation. Many roads have come to the conclusion that they need rather elaborate statistical reports to check up their own affairs and there are many columns in these reports which do not appear in the figures required for submission to the Interstate Commerce Commission. On a great many roads statistics have grown up much like "Topsy." There are too many instances in which the compilation of statistics has been begun for a definite purpose but which purpose after a time has disappeared, notwithstanding which the figures have been continued. These are factors which must always be borne in mind in discussing this matter of commission requirements.

There is presumably much ground for the argument that the Interstate Commerce Commission does require much statistical material which is not urgently necessary. One is told from time to time of masses of statistics which are requested but are apparently not used. The commission must apparently also plead guilty to a charge that there is not a complete co-ordination of the statistics that are furnished the various bureaus. On various occasions one or another bureau of the commission has required the carriers to compile information already in the files of some other bureau. The commission, for one purpose or another, frequently has to call on the carriers for special reports or special studies. These are sometimes quite costly. The commission presumably gives the question of cost serious thought before issuing such requirements. Whether it gives the element of expense sufficient consideration on all occasions is, however, a question. The matter of co-ordination is an important one not only as between the bureaus of the Interstate Commerce Commission but as between the I. C. C. and the state commissions. There is much room for improvement in the present situation whereby different reports covering the same ground are required for submission to the different regulatory bodies.

In addition to considering the matter of statistical requirements the Interstate Commerce Commission, with the co-operation of the Railway Accounting Officers' Association, has undertaken a revision of the various accounting classifications, the first one to be revised being that of operating expenses.

The work of revising the statistical requirements of the commission logically begins with the revision of its classifications, and we strongly suspect that both the feature of revising the classification and revising the statistical requirements will be merged and worked out in accordance with a definite plan embracing both accounts and statistics. The operating expense account should state clearly the cost of performing the transportation service separated into the elements of payroll, material, fuel and miscellaneous. These accounts together with physical statistics, both operating and traffic, should form a basis reflecting the actual operation of the property and affording a comparison with other periods and with other roads, from which proper deductions and conclusions may be reached. The object of statistics is to establish facts and the first and primary object of these facts is their use. The first test for statistics should be their utility. It is axiomatic that no statistics should be compiled unless they serve a useful purpose.

As we see it, railway accounts and statistics should be compiled for use by four classes of users. The management, the regulatory bodies, the investor and the public. Insofar as concerns the management, they will be used as an aid in operating the property in an efficient and economical manner. The Interstate Commerce Commission should be furnished with them monthly and annually in summary form so that they may afford a guide or yardstick to the commission in determining whether the properties have been efficiently and economically operated. The investor needs them to the end that he may be enabled to invest his capital with a proper degree of judgment. The public's interest lies in the necessity that it be given the facts in order to be able to form an intelligent opinion upon the broader aspects of railway welfare.

It is to be sincerely hoped that the Interstate Commerce Commission and the Railway Accounting Officers' Association, when revising the classification and statistical requirements, will have in mind that what is desired by all concerned is a clear, direct and honest statement from month to month and year to year of railroad operations as reflected in the accounts and statistics prepared and published from time to time.

Permissive Feature Omitted from Automatic Stop Specifications

The Interstate Commerce Commission has seen fit, in its final order requiring installations of automatic train control, to omit the "permissive" feature in the specifications for automatic stops as originally adopted jointly by the A.R.A. Committee and the Commission's Bureau of Safety. This was in paragraph *b* which would allow an automatic stop to be installed so that it would be "under control of engineman, who may, if alert, forestall automatic brake applications and proceed." This was to be expected after certain questions were framed by the commissioners during the hearing, apparently for the purpose of placing in the records answers which would indicate that such a provision was dangerous and that enginemen as a class could not be trusted to perform their work faithfully and conscientiously. It is well known that all of the companies having devices of merit can meet the conditions imposed by the specifications in the Commission's order, but we still believe that for the good of the art this paragraph should have been inserted in the final specifications; or, in lieu of that, that railroads desiring to use devices operated on the permissive principle should have been allowed to do so.

As the specifications now stand it appears that a premium is placed by the Commission on the use of speed control. This may be compared to a contractor trying to erect a building by attempting to construct the top floors first. In the development of any device it is desirable to start with the simple fundamentals first, as then, under service conditions, other features which prove necessary or desirable can be added, eventually approaching the ideally constructed device for the use intended. Speed control has not been used in steam railway service on an extensive enough scale or under all operating conditions for a sufficient period to warrant putting on it the premium that the Commission does in its desire to obtain absolute safety. The Commission apparently takes no account of the fact that a device may be made so "safe" that it will prevent trains from getting over the road. Safety with dispatch should be the goal sought.

As a matter of fact, it would appear the Commission has "strained at a gnat and swallowed a camel." While it has omitted paragraph *b* for considerations of safety, in paragraph *c* under "Automatic Train Control or Speed Control" it allows of a medium speed restriction which requires the train speed "to be below a prescribed rate when passing a caution signal or when approaching a stop signal or a danger zone *in order to forestall an automatic brake application.*" Is the absolute safety sought obtained if a train running under a medium speed restriction can be automatically allowed to pass a stop signal? If enginemen as a class cannot be trusted to operate a permissive automatic stop feature what is to make them take action to handle their trains properly at a stop signal under such a provision? The engineman may be dead; or even if he is alert, he may, owing to fog or storm, slip by such a signal with disastrous results. How can elimination of the one feature and provision for the other in the same specification be justified?

The railroads are no doubt at fault and must bear part of the responsibility for the provisions in the specifications because, before train control was studied intensively by them, they adopted what were considered theoretically ideal requisites which appeared to be framed to discourage the development of the art. After more thorough study and investigation they are now inclined to change their views as to what is desirable. We believe that, like other safety devices, automatic stops and train control, if developed along right lines, will not only increase safety but will prove to be of material benefit in train operation; but they must be developed along proper lines if they are to be a success. Therefore, railroads that desire to use a simple automatic stop with the permissive feature should not hesitate to seek authority from the Commission to do so; and the Commission should be willing to allow wide latitude in the development of the art in order that greater safety may not be secured at the cost of serious interference with train operation.

The Real Issue in the Strike

The strike recently begun by certain railway labor unions puts the labor provisions of the Transportation Act to the first real test to which they have been subjected. Temporarily the labor provisions have "broken down." Their main purpose was to prevent strikes. In this instance they have failed to accomplish that purpose.

The situation created is quite different from that brought about by the switchmen's strikes in 1920. Those strikes occurred before the Railroad Labor Board really had begun to function, and were not ordered or authorized by recognized and well established labor unions. The present strike has been ordered by the heads of recognized and well established labor unions after full hearing and decision by the Labor Board regarding the matters in controversy. It is a revolt by the labor unions against working conditions and wages which the Board has held to be reasonable.

One of the grounds assigned for the strike is the system of contracting work adopted by some railways; but only a small number of the railways have contracted work, and following the Board's decisions condemning this policy practically all of them have agreed to abandon it. The contracting of work is, therefore, merely a pretext and not a real reason for the ordering of a strike on all the railways.

The strike might conceivably have either of two outcomes. It might result in the unions being beaten and the employees being required to return to work on the terms the unions have rejected; or it might result in the unions triumphing and the railways being forced to grant working conditions and wages different from those the Board has awarded.

The former outcome would be a victory not only for the railways, but also for the method of settling labor controversies which has been established by the government. It would result not only in the strikers losing their wages while they were out, but also probably in many of them losing seniority and pension rights and other rights and privileges which have been of value to them. The effect of such an outcome would be to vindicate the provisions of the Transportation Act and the decisions of the Railroad Labor Board,

to strengthen the Labor Board's position and increase its prestige, and to make unlikely important strikes in defiance of the law and of the Labor Board's decisions in future.

It is equally plain what would be the effects of even a partial victory by the labor unions. If by their strike they should gain any working conditions or wages which from their standpoint were more favorable than those awarded by the Labor Board, this would convince them and other railway labor unions not involved in the strike that they had more to gain by striking than by submitting their claims to the Labor Board and accepting its decisions. This would speedily result in the destruction of the method and machinery for peacefully settling railway labor controversies which have been established by the Transportation Act. Organized labor naturally is going to adopt that policy by which it thinks it can gain the most. Even partial success for the labor unions as the outcome of the present strike would mean the substitution of open warfare between the railways and their employees for hearings and decisions by the Labor Board as the usual method of settling railway labor controversies.

B. M. Jewell, head of the shop crafts' unions, says it is the railways' "next move." This is not correct. The "next move" is the public's, through its government. The public either does not want railway labor controversies settled by the methods and machinery it has established, or it does want them so settled. If it does not want them so settled it should at once repeal the labor provisions of the Transportation Act. This would be an announcement by the public that it desires the railways and the labor unions to settle their controversies by conferences or strikes and lockouts as such differences are settled in other industries. The managements of the railways would be no more fearful of the outcome of negotiations or struggles with the labor unions under these conditions than are the managements of other kinds of business concerns. Furthermore, they would be relieved of certain serious handicaps with which they are now burdened. They would not be required, for example, to operate under working rules much more restrictive and wages much higher than those in other industries as they have been recently. Each railway would then be able to make the best terms it could with its own employees instead of all of them being obliged to accept practically uniform terms established by a government body.

On the other hand, if the public prefers the method of settling railway labor controversies now established by law, and the results of which, except in few and isolated cases, public sentiment has compelled the railways to accept, then it plainly is for the public through its various government officials and bodies, particularly the Railroad Labor Board, to take the leadership in fighting this strike to a finish. It may be assumed with practical certainty that the railways will neither make any overtures to the labor unions that have caused this strike, nor pay attention to any overtures from them. For their own reasons, and regardless of the future of the present system of government regulation of labor controversies, they cannot afford to concede a jot to the strikers that has not been conceded to them by the Labor Board's awards.

The real issue presented is whether the labor unions involved will be allowed to flout a law passed by Congress and defy and destroy a governmental agency established by the public through Congress to carry out that law. The public and the government must determine that issue. The strike is not one against what the railways have done, but against what the government has done. The American people must either stand fast and their government must adopt measures which will completely defeat this strike, or witness the certain destruction of the means for peacefully settling railway labor controversies which the public by its government has established.

Letters to the Editor

A Few Terminal Suggestions

St. Louis, Mo.

To the Editor:

It is my opinion that, with few exceptions, no locomotive weighing more than 70 tons should be employed in a terminal. I hold this view because of the fact that there is more danger of damage to equipment and lading where the heavier locomotive is used, and at the same time greater delays occur to freight because of the practice of waiting for the accumulation of large trains before attempting to move them. Where small locomotives are employed frequent deliveries are necessary, and these frequent deliveries reduce the delay in moving traffic through the terminals.

I also think that many cars are too large. Too much power is employed in pulling empty car space around the country. With smaller cars less damage would result to them and to their contents because the shock in switching would be less severe.

One reason for the great increase in the payment for damages to cars and contents in recent years has been the intensive loading in over-large box cars, for the larger the cars and the more intensive the loading, the higher are the damage claims. There is some question regarding the economy of intensive loading. Since this campaign was started the number of claims for damages has increased greatly, while this campaign has also led to a great deal of indiscriminate loading which also contributes to damages.

Some of the railways are now experimenting with containers on flat cars for the handling of merchandise. While I believe that this will be a success, there is a still further step which could be taken, namely, the adoption of a different type of car altogether; a smaller car which could be made rain-proof and theft-proof, which could be transferred from railway car trucks to automobile trucks; could be run in on a depressed track and unloaded from that point with a derrick which would lift the lid off the car and unload in much the same manner as the hold of a vessel is unloaded. Such a car could be loaded more compactly and thus be able to stand the ordinary shocks of transportation better.

I also believe that too many loads are being transferred in the terminals. If it is possible to get a shipment through in the original car it should be done. Some roads are now transferring cars in large terminals to save per diem. More or less damage and loss is incurred invariably when these transfers are made.

Another thing which is needed in large terminals is that all freight shall be inspected and loaded as carefully as explosives, inflammables and acids are now handled. There is no apparent reason for all loading not receiving the same supervision, for the loss in claim payments would more than pay for it. The day will come when a shipper will have to furnish a certificate to the railroad for every package he ships. He now has to do this for explosives, inflammables and acids and there is no reason why he should not do it with flour, food stuffs and other shipments susceptible to damage.

There are also too many repair tracks in large cities. This work could be done cheaper and better on fully equipped zone repair tracks where the roads could employ a better class of men, install better methods of bookkeeping, and maintain supplies of the various parts of different cars. The existence of so many repair tracks creates a tremendous waste on account of the crude methods which are required at these outlying repair tracks.

A Superintendent.

The Labor Board in Session on Strike Issue—P. & A. Photo

Shopmen Begin First General Strike on July 1

A. F. of L. Leader Defies Labor Board Which Replies by Issuing Call for New Organizations

JULY 1, 1922, will go down in railroad history as a momentous day for then began the first nationwide strike of railroad employees, accompanied by a $400,000,000 rate reduction, a $135,000,000 wage cut and a traffic revival which, were it not for curtailed coal loading, would be practically equal to the volume of traffic in the record-breaking months of 1920. Of these First of July developments, the strike of shopmen and the threatened strike of maintenance of way, clerical and signal employees and stationary firemen and oilers, are holding the center of the stage.

The last two issues of the *Railway Age* contained details of the threat of a nationwide strike of those classes of employees affected by the Railroad Labor Board's recent decisions fixing new rules and working conditions and cutting wages. The story ended in the last issue with the "ultimatum" sent by B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, to T. DeWitt Cuyler, chairman of the Association of Railway Executives, and promising a strike of the shop crafts unless the railroads agreed to refrain from applying the Labor Board's rulings on wages and certain working rules and to do away with the contracting of repairs.

J. W. Kline Issues Call for Strike on July 1

The order for a strike of shopmen on July 1 in protest against the wage reduction recently authorized by the Labor Board, against the changes in overtime rules which were made some time ago by the same body and against the practice of certain railroads in contracting for the operation of repair shops, was sent out on June 28 by J. W. Kline, who is president of the International Brotherhood of Blacksmiths.

"In compliance with the strike vote," the telegraphic order read, "all shop craft employees below the rank of general foremen are hereby granted sanction to suspend work 10 a. m. July 1 on all railroads and Pullman shops in the United States."

The direction of the strike was delegated to W. P. Johnston of the International Association of Machinists.

Carriers Reply to Jewell's "Ultimatum"

By coincidence, a meeting of the member roads of the Association of Railway Executives had been called some time previously for June 29 at Chicago to consider express contracts. Naturally, Mr. Jewell's ultimatum to Mr. Cuyler came up for consideration with the result that the following reply was drawn up, unanimously approved by the executives present and forwarded to Mr. Jewell over Mr. Cuyler's signature:

Your telegram conveys, on behalf of the shop crafts an ultimatum that, unless the carriers turn their backs on the Railroad Labor Board and its recent decision, and accept your terms, the employees on behalf of whom you speak will on July 1, resort to force in the shape of a strike and will attempt to interrupt the orderly processes of transportation on which the business, comfort and welfare of the American public depend. Meanwhile, before consideration could be had and this reply sent, the public press carries today the announcement that you have actually issued your strike order effective 10:00 a. m. July 1.

It is impossible within any reasonable limit of space to single out and reply to all the erroneous and misleading statements contained in your telegram. Suffice it to say there has been and is nothing in the conduct of the carriers to justify the act which you notify us you are about to commit. There can be no question about the facts.

The facts are that the terms on which in your telegram you insist, have been duly and fully presented to the Board. That Board has patiently heard the evidence on which you rely to support your demands, as well as that offered in opposition, and have listened to and duly considered your arguments in support of your position. You fully participated in this lawful arbitration and had your day in court.

The Board in this hearing decided against you and rejected the demands which you now insist that under penalty of a strike

we shall accept, and rendered a decision fixing the wages which in their opinion are just and fair under the circumstances.

In the spring of 1920 the Board heard the demands of labor for an increased wage, and in July of that year granted an annual increase which in its ultimate application amounted to approximately $700,000,000, making its decision retroactive for four months. The carriers loyally accepted the decision and paid the increased wage.

You demand now that we accept your decision and reject that of the Board. You are clothed with none of the power or authority of organized government. The Board is a creature of the United States statutes, is a part of the government to whom all good citizens hold loyalty and allegiance, and in what it has done in the matter of which you now complain has been performing a function expressly delegated to it by Congress. To submit now to your demands and to reject the decision of the Board would be to recognize your power and authority as greater than that of the government.

The consequences of the rejection of this constituted governmental authority and obedience to your invisible and irresponsible power would be to continue a charge on the producing and consuming public for transportation in excess of that which the government, through its Board, has now declared to be just and fair. This unjust burden shall not be put upon the public by a surrender on our part to your threat of force.

If the just authority of the government is to be successfully defied and the government is to be rendered helpless to protect its citizens in their peaceful and lawful pursuit, if patriotic and loyal obedience to government authority is to be denied, the act and the responsibility is to be yours. It shall not be ours. If you strike it will be against an order of a governmental tribunal—it will be a strike against the government of the United States.

Labor Board Calls Inquiry

Simultaneously with the dispatch of this telegram to Mr. Jewell, federal intervention was announced in a citation ordering the heads of the organizations threatening to strike and the executives of all of the Class I railroads to appear before the Board on June 29 for an inquiry into the "threatened interruption of traffic." This action was taken under Section 313 of the Transportation Act which gives the Board the right to initiate hearings to determine whether or not there has been a violation of any of its decisions. The citation named a number of carriers on which it is alleged certain work has been contracted in violation of the Board's decision and specifically requested the executives of these roads to be present. It was expected at this meeting that the procedure followed by the Board last October when the train service organizations were threatening to strike would be followed again to bring about the recall of the strike orders which were already out and the end of the threats being made by the other organizations. However, indications of the partial failure of this move became apparent the following morning with the receipt of a letter at the Board's office from Mr. Jewell intimating that he had changed his mind about answering the Board's call and instead of attending "under protest" that he might not be present at all.

Jewell Objects to Board's Investigation

His communication, addressed to the chairman of the Board, read in part:

I assume that a similar telegram (the Board's citation) has been sent to the executives of the shop craft organization. They are engaged in doing all in their power in behalf of an orderly and peaceable suspension of work on the part of those employees who expect to act upon the sanction to suspend work granted by these executives in compliance with the almost unanimous vote of the crafts. It appears to me that the result, even if not the purpose of the telegram and the proposed hearing, would be a confused and disorderly strike movement lacking authoritative control and almost inevitably resulting in a mob-like action which would be pregnant with grave possibilities which it is the chief desire of the executives of the organizations of employees to prevent and which it has been far too often the obvious desire of employers to incite.

In protection of the public interests in law and order and in conservation of the railroad industry and in aid of the disciplined conduct of half a million men under trying conditions, permit me to urge that no action be taken at the present time which would deprive the railroad employees of the immediate counsel and guidance of their chosen representatives.

A discussion of the right of the Board to institute such an investigation under Section 313 followed, Mr. Jewell contending that while this section applied to the carriers it did not apply to the employees because their conviction that "they cannot afford to continue to render service under the wages and working conditions fixed in a decision of the Board" does not constitute a violation of the Board's rulings. Mr. Jewell then continued:

A compulsory limitation upon the right to control one's own property, "may well be within the power of our government because all rights of property are creations of law. But a compulsory limitation upon the right to control one's own labor is not within the power of the government, because this right is a natural right and is protected by the Thirteenth Amendment of the Constitution of the United States which provides that involuntary servitude shall not exist within the United States. Therefore, Congress

Photo by Underwood & Underwood

Strikers Walking Out of the I. C.'s Burnside Shops, Chicago, on July 1.

did not and cannot grant authority to anyone to impose terms and conditions of labor upon the employees of the various transportation systems which these employees individually or collectively refuse to accept.

After quoting numerous passages from the Congressional Record purporting to show the views of the framers of the act at the time of its passage, Mr. Jewell continued:

It is also respectfully submitted that the Board being an administrative arm of the government should not take upon itself the authority to extend its own power or to issue any orders attempting to coerce men into non-acceptable employment, thus forcing them into involuntary servitude.

If the Board, by its direction in its telegram of June 29 to the effect that the status quo be maintained on all roads until the conclusion of its hearing means that the Board has entered an order suspending operation of its decision, such suspension of operation of decisions should be clearly and unmistakably expressed. If, however, it is the intention of the Board to direct the employees of the railroads to remain at work under non-acceptable wages and working conditions, such order is void both because it is not within the powers of the Board and because it is a violation of the Constitution of the United States.

A similar letter expressing practically the same views was received by the Board from Timothy Healy, president of the International Brotherhood of Firemen and Oilers.

Chairman Hooper Outlines Board's Views on Threatened Strike

The attitude of the majority on the Board at this time was reflected in a statement made by Chairman Hooper in which he declared that the Board made no mistake in its decision and intimated there would be no change in its opinion at the inquiry to follow. Chairman Hooper said:

The people of the United States are sick and tired of having railway transportation and traffic periodically interrupted by con-

traverses between railway management and employees. It was this feeling which moved congress to enact the Transportation Act.

The right to strike and tie up a private business is quite a different thing from any supposed right to shake and obstruct the flow of interstate commerce in this vast commercial nation. Railway transportation is not a private business. It is essential to the very existence of our republic and to the individual well being of every citizen.

It is evident to every student of the situation that the railway labor organizations have no just cause for serious complaint at the treatment they have received at the hands of federal wage tribunals during the war period and since.

The wages fixed by the recent decisions of this Board will purchase more than the wages received by them prior to the war. In other words, their wages have increased by a greater percentage than has the cost of living. In some instances the increase is strikingly notable.

With but slight exceptions the great carriers of the country have paid the wages fixed by the various succeeding government tribunals. Now that decreases have come the employees should be good sports and accept the reductions.

If a change in conditions should at any time justify increased wages this Board will most cheerfully respond to the situation. Moreover, if it should at any time be made to appear to the Board that any injustice has been done to any class of employees by any rule or wage decision, under a continuation of present conditions, it would be the duty of the Board to correct such mistake.

Let it be understood, however, that the Board is convinced at this time that it has made no mistake and committed no injustice of any noteworthy magnitude in its recent decisions on rules and wages. The Board has endeavored to conform to the requirements of the law and has established a schedule of wages higher than those prevailing, as a rule, in other industries. It is useless to repeat statistics on this subject.

The employees do have one substantial grievance against certain of the carriers, and that is the contracting of railway employment to so-called independent contractors. This is not simply a labor grievance, it is a public grievance. This policy carried to its legitimate end destroys the labor article of the Transportation Act, treats the United States congress with contempt, deprives the public of lawful protection from railway labor troubles, and grievously imposes upon the employees.

Photo by Underwood & Underwood

Striking Employees of the C. & N. W's Fortieth Street Shops, Chicago, Going to a Strike Meeting in a Ball Park

Neither need have any fear that the public will permit injustice to be done to them by the Railroad Labor Board. If the Board does not effectuate a substantial degree of justice both to the carriers and the employees, it will be wiped out by congress.

Inquiry Opens Without Shop Crafts' Leader

When the time for the opening of the Board's inquiry arrived, it became apparent that Mr. Jewell would follow out his intimated defiance of that body for neither he nor his assistants were present. After a wait of almost an hour the Board filed into the room, the chairman bearing subpoenas for Mr. Jewell and Mr. Healy. Both were issued.

The inquiry began, nevertheless, with the partial elimination of one of the grievances which the labor leaders contend was a big factor in producing the "overwhelming vote" to strike. Chairman Hooper launched an inquiry as to the attitude of the railroads on the subject of contracting, meeting with an immediate reply from A. B. Ramsdell, assistant to the vice-president and general manager of the Chicago, Rock Island & Pacific, who said:

"The Rock Island made the announcement this morning that it did not at this time or at any future period expect to contract out their labor for car repair work, has not been in the habit of doing so and we felt we were wrongly charged and wrongly classified on the docket. It is not the carrier's purpose to farm out or contract its labor."

Marvin Hughitt, Jr., vice-president of the Chicago & North Western, likewise replied, "We have been obeying all the decisions of the Board and do not understand why we have been cited here."

The chairman announced in turn that the Southern Pacific, the Atchison, Topeka & Santa Fe and the Boston & Albany, had already announced their intention of refraining from contracting out their labor and that the Cincinnati, Indianapolis & Western had telegraphed, "in the interest of harmony we will acquiesce in any decision you may make in our case relating to the shop contract matter." Similarly W. R. Seaton, general attorney of the Pere Marquette, announced that that carrier had withdrawn from the contracts for the operation of shops and for coach cleaning.

E. F. Grable Questioned on Threatened Strike of M. of W. Employees

E. F. Grable, president of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, under examination described the strike ballot issued by that organization, its contents, the manner of its distribution, and the laws of his organization relating to the calling of a strike.

"The calling of a strike or the calling for a ballot to be put out comes from the system division in our organization," Mr. Grable testified. "The president is empowered to sanction the strike after a representative vote has been received and a majority vote in favor of it."

Mr. Grable testified that the organization sent out approximately 650,000 strike ballots, that his total membership was approximately 200,000, that the latest check of the returns show that approximately 228,000 strike ballots have been returned and that approximately 55 per cent of these ballots had already been tabulated, the big majority being in favor of striking on the wage reduction issue, the only one included in the ballot. In reply to a question of R. M. Barton, a member of the public group on the Board, Mr. Grable stated that he had refrained from sending out any instructions or literature to influence the vote one way or another.

In explaining the vote, Mr. Grable said:

The reason for such a heavy vote in favor of striking is not entirely indicated by the ballot. Prior decisions of this Board are not being carried out properly by the carriers, decisions of the Board being ignored on some properties in their entirety, rehearings had and decisions not yet carried out or applied. The contract labor proposition which arbitrarily reduced maintenance of way employees, rates of pay, the matter of the eight-hour day which some properties are trying to make the ten-hour day as a regular proposition—all those things influenced the vote in favor of a strike. These things have caused the unrest, dissatisfaction and all the other terms you may care to apply to it, among the employees in our department on all properties. The executives of our organization have been severely criticised for months because we used our influence with the membership to go along with these things with a view that in the near future the proper result would be obtained from this Board.

If we understood this call from the Board to mean that these matters would be held in status quo for the time until this matter was gone into, our organization assured that further hearings would be entertained on increases in answer to our request and some sort of assurance given that they see as we do at this

moment, that the factors determining wages have changed materially since this case was filed and the evidence was presented—in favor of increases in wages rather than the decreases that were given us—our attitude might be different.

After mentioning in addition the upward trend in the cost of living and the alleged injustice in the failure to apply the wage reduction to supervisory forces, Mr. Grable continued:

These are the things that made the ballot come in as it has and these are the things that if we had definite and concrete assurance on, as president of the organization I would use my influence with the other officers and the membership accordingly.

Chairman Hooper Reassures M. of W. Leader

In reply to Mr. Grable's remarks about the increase in the cost of living, Chairman Hooper said:

Do you think it would be worth anything to your organization and to the members of it to know that if the evident present trend of cost of living continues upward in such a degree as to render an increase in wages just and reasonable, that this Board would just cordially take that matter up and consider that trend of conditions as it considered the contrary at the time of its decision?

Mr. Grable replied that it would be very helpful and Chairman Hooper proceeded to state the assurance more specifically in the following language:

The Board would like for your organization to understand that at any future time whenever conditions of that sort (an increase in the cost of living) become of sufficient importance and of such an appreciable character, you can predicate a request for an increase in wages on them and come with a reasonable plea of that sort to this Board, you should know and your organization should know, that this Board will as cordially give you an increase as it gave you the decrease and do it because it would be its sworn duty to do it under the Transportation Act.

Twenty-three Cent Wage Fiction Answered by Board Chairman

Chairman Hooper spoke at length on the misunderstanding and misstatements which are so prevalent in the discussion of the Board's decisions and their effect, citing as an illustration the 23 cent minimum wage fiction widely heralded as the rate of pay for all common labor in the maintenance of way department. He said:

The labor organizations complain a great deal about the unfairness of the press. I noticed one week in your paper "Labor" a statement accompanied by a cartoon to the effect that there were more than 100,000 men of the common labor class put on the 23 cent minimum wage by Decision 1028. That same statement was repeated in the issue of the following week and yesterday a congressman of the United States repeated it on the floor of Congress and put it in the Congressional Record.

Now, of course, such a very absurd and prejudicial statement as that does an injustice to everybody concerned, misleads men, inflames the minds of men who are concerned directly and men who are only indirectly affected. The truth about that matter is that there were about 6,000 men who were put on a minimum wage of 23 cents an hour and that was all in a certain section of the country where labor was cheap in all industries. Perhaps these statements are made through ignorance and sometimes through design, but they are hurtful in a case of this sort.

In reply to the direct question as to his intentions in regard to the further conduct of the threatened strike, Mr. Grable replied that the executive council of his organization met on July 3 at Detroit and that the presentation of the developments of the meeting and the assurances given, together with other assurances on points he raised, would be very helpful at that meeting. However, he made no definite promises although his attitude throughout the questioning indicated a desire to co-operate in preventing a walkout.

Carriers Promise to End Contracting of Repair Work

At the suggestion of Chairman Hooper the hearing then resolved itself into "a Methodist meeting for a minute or two," practically every executive present standing up at the suggestion of Chairman Hooper as "having come up through the ranks as railway employees." Chairman Hooper then said:

I want your men present here, who are authorized to represent your roads to get out of this contract business which is in violation of the decisions of this Board, and as we believe the Transportation Act. We want you to announce that fact now in the interests of not only industrial peace on your roads but in interests of fair play to your men. I am not asking you to say your action has been illegal because we differ about that. We are not asking you to concede you have violated the law, not even asking you to say you never will do any more contracting. But we are asking you to make this simple, frank announcement that the American people will approve. What I want you to do is simply to say that you will withdraw from the contract policy on your road, will cut out the contracts that are now outstanding and that you have no present intention of going back into it. That you don't do in the face of a threat to strike. You are not showing any lack of manhood or moral courage but you are simply expressing a desire to put yourself in line and in conformity with the decisions of this Board which is a government tribunal.

Jacob Aronson, representing the New York Central, the Michigan Central and the Cleveland, Cincinnati, Chicago & St. Louis, was first to comply with Chairman Hooper's request, stating frankly that it was the belief of these carriers that their contracts were not in violation of the Board's decisions or of the provisions of the Transportation Act, but adding:

In the interest of harmony and with a definite view of removing every vestige even of colorable cause of complaint, these carriers are prepared now to say to the Board without prejudice to their legal rights that if such action will avoid a strike, they will undertake as soon as they legally may do so under the provisions of the several agreements to terminate the agreements of these carriers which have been evolved in the hearings this week that cover repair of equipment.

Similar statements were made by Ralph M. Shaw, general counsel of the Chicago Great Western; H. E. Byram, president of the Chicago, Milwaukee & St. Paul; Ralph Budd, president of the Great Northern; W. E. Williams, representing the Missouri, Kansas & Texas; Frank H. Alfred, president of the Pere Marquette; J. M. Kurn, president of the St. Louis-San Francisco; John G. Walber, representing the Ann Arbor; W. G. Bierd, president of the Chicago & Alton; Hale Holden, president of the Colorado & Southern, and C. W. Coe, assistant general manager of the Wheeling & Lake Erie.

These concessions on the part of the railroads named, made in the interests of uninterrupted transportation service and in an effort to co-operate with the Board in settling the controversy, were futile, however, insofar as the shop crafts were concerned. Mr. Jewell was not present nor could he be found by the officer delegated to serve the subpœna.

The examination of E. H. Fitzgerald, president of the Brotherhood of Railway and Steamship Clerks, Express and Station Employees; D. W. Helt, president of the Brotherhood of Railroad Signalmen of America, and Timothy Healy was comparatively short, each witness outlining the manner in which the strike ballots were prepared, distributed and tabulated and the authority of the chief executive to order a walkout. In each case it was developed that no strike orders would be issued in time to call out the men represented in these organizations before July 1. Both Mr. Fitzgerald and Mr. Healy predicted that some of their men would join the shopmen on July 1 despite their orders.

Shop Crafts' Leader Denounced by Chairman Hooper

The absence of Mr. Jewell from the hearings and the inability of the officers of the Board to serve a subpœna on him led to the following remarks by Chairman Hooper which are self-explanatory and which closed the hearing:

The Board has ample power to compel Mr. Jewell's presence here as a witness, not as a party to the controversy, but as a witness to material facts involved in this hearing.

Tomorrow, according to the letter of Mr. Jewell, and a previous notification received from him, is the day set for the strike of the organizations, the shop crafts, which he represents. That being the case, it is not worth while for this Board to adjourn this case over till tomorrow, to undertake to compel Mr. Jewell's presence here. No practical purpose could be subserved by it. The chair did want Mr. Jewell to understand that it has the

power to compel his attendance here, and had he been found, proper steps would have been taken to compel it. But, this Board feels that it has fully carried out the responsibility resting upon it under the Transportation Act, to use every available means to prevent labor disturbance which might result in interruptions of traffic. The Board having gone that far, and tomorrow being the day for the strike, no practical purpose can be subserved by an adjournment of this hearing in order to get his testimony.

The Board right here might express its appreciation of the different force of conduct adopted by the gentlemen representing the other organizations of employees, and also its appreciation of the very fine spirit shown by nearly all of the railroads. In my own mind I can think of but two exceptions, which I will not name.

So far as Mr. Jewell is concerned, let his blood be on his own head. Mr. Jewell has flouted a government tribunal, charged with the duty and responsibility to investigate this matter, not only in the interests of the public, but in the interests of his own organizations, and the interests of the carriers the railway transportation system of this country. He has shouldered the responsibility of his own volition, and the Board desires to pursue the matter no further.

The Strike Situation to Date

So ended the first effort of the government to intervene. The strike began promptly at 10 a. m. July 1, with varying success at different points. So far, it has been very difficult to determine the number of men actually out on strike or to estimate the effects of the walkout upon the ability of the railroads to meet the ever-increasing demand for transportation service. This is due largely to the fact that the strike was called on Saturday, two of the following three days being holidays. It is known, however, that in many places employees have gone out with the strikers confident that their seniority and other rights will not be taken away from them, with the intention of returning to work after the Fourth of July.

Labor Board Calls for New Unions

The first official expression of the opinion of the Board on the strike was announced on July 3 in the form of a resolution calling for the formation of new labor organizations and the protection of workers remaining on duty or hired to take the places of the strikers. This resolution said:

> Be it resolved that it be communicated to the carriers and the employees remaining in the service and the new employees succeeding those who have left the service to take steps as soon as practicable to perfect on each carrier such organizations as may be deemed necessary for the purposes above mentioned to function in the representation of said employees before the Railroad Labor Board, in order that the effectiveness of the Transportation Act may be maintained, and
>
> Be it further resolved, that, on any carrier, where either of the above named organizations, by reason of its membership severing their connection with the carriers, ceases to represent its class of employees, procedure similar to that above suggested in the case of the shop crafts is recommended, and
>
> Be it further resolved, that the employees remaining in the service and the new ones entering same, be accorded the application and benefit of the outstanding wage and rule decisions of the Labor Board, until they are amended or modified by agreements with said employees, arrived at in conformity with the Transportation Act, or by decision of this Board, and
>
> Be it further resolved, that, if it be assumed that the employees who leave the service of the carrier because of their dissatisfaction with any decisions of the Labor Board are within their rights in so doing, it must likewise be conceded that the men who remain in the service and those who enter it anew are within their rights in accepting such employment, that they are not strike-breakers seeking to impose the arbitrary will of an employer on employees; that they have the moral as well as the legal right to engage in such service of the American public to avoid interruption of indispensable railway transportation, and that they are entitled to the protection of every department and branch of the government, state and national.

By Wednesday it became possible to begin the reorganization of the shop forces on practically all of the carriers affected by the strike. Throughout the country thousands of new men are being hired daily and many shop men are returning to work before the expiration of the time limits variously set by different railroads at from July 5 to July 10. Mr. Jewell's claim of a "100 per cent" walkout have not as yet been specifically answered by railway officers, but the real conditions will be disclosed during the next week when detailed reports can be compiled.

Comparatively little violence has been reported from any point in the country, present reports indicating minor disturbances here and there but little or no action requiring extensive protective measures.

Maintenance Strike Called Off

After a long conference on the Fourth of July between the executive officers of the maintenance of way union and members of the Labor Board the threatened strike of these employees was called off, the official announcement to that effect being issued by E. F. Grable, president of the union. Mr. Grable's communication stated that it was the belief of the officers that "it is not wise for our membership to leave the services of the carriers until every resource has been exhausted that affords hope of a peaceful adjustment." The plan determined upon by the leaders of the maintenance of way organization includes the taking up with the railway managements of "all the grievances and controversies outstanding between the members of the organization and the carriers" including "revision of the recent wage decision of the Board, certain changes in rules and the question of contracting out labor." Another phase of the plan provides for continuing work under the present wages under protest with the understanding that any revision of wages obtained be made retroactive to July 1.

"With the best interests of the members of our organization at heart," Mr. Grable said, "It is our judgment that more will be gained for them by the program here outlined than could be derived from any other source. We believe that a just and generous public sentiment will sustain us in this policy and every move necessary to its accomplishment will be most vigorously stressed."

Mr. Jewell's Reply

Mr. Jewell's reply to the Board's resolution quoted in part above stated that that body has "outlawed itself" as the friend of the unions and has adopted a tragic attitude in attempting to force American workers to accept a wage scale below "decent" levels.

"The Board is now attempting to direct the organization of employees," Mr. Jewell said, "And to select those whom it will recognize as organizations of railway employees. In this partisan effort of the Board to destroy the effectiveness of the organization which the railway employees have formed by their own desire and in the exercise of their right of mutual aid and co-operation the Board has 'outlawed' not the organization of employees but itself.

"It is a tragedy that the Board has, first, allowed itself to be used as an instrument to lower the American standard of living at the behest of organized greed and, second, allowed itself to be used as an instrument of attack against the national organizations of labor that have been for a generation the means of peaceful, reasonable betterment of the conditions of the wage earners.

"The Labor Board has placed itself in the position of being not an arm of the government of the people of the United States—the Board has placed itself in the position of being an arm of an organized financial and employing interest which is engaged in a nationwide campaign to reduce wages below the level of a decent living, to check the rising standard of living for the American worker and to disintegrate the protective organization of the worker."

The Board's rejoinder to this letter was made public on July 5, Chairman Hooper pointing out that Mr. Jewell had previously announced that the striking shopmen were no longer "under the jurisdiction of the Labor Board" and that

furthermore the Board had not outlawed the shop crafts in its resolution.

"When certain of the employees went out of the employ of the carriers," Chairman Hooper's letter said, "A majority of those who remained in and those who may subsequently enter will be entitled to represent all of any given class of employees in any dispute before the Board. The Board will not cease to function merely because certain employees leave the service nor will the Transportation Act be annulled. It therefore follows that you are greviously in error when you state that the Board has 'outlawed' your organization.

"It has only accepted your own statement as one of facts and law that the striking men are not now employees of the carriers.

"You must know that you do this Board a grave injustice and yourself no credit when you characterize the Board as unfriendly to your organization, as being implicated in a 'drive' of the financial interests against the employees. You are too well aware of the numerous instances in which the Board has upheld all the railway labor organizations, recognized their right to function, declaring their right of collective bargaining and sustaining them in their resistance to efforts made here and there to deprive them of their rights and privileges. But because we have thus recognized the rights of the employers it does not follow that we can or should agree with them in every contention or that we should ignore the rights and interest of the public."

No Interference from Washington

WASHINGTON, D. C.

AFTER HAVING made it clear that the Railroad Labor Board has the full support of the administration and that it does not expect a stoppage of transportation, Washington officials appear to have adopted a "hands-off" policy with reference to the railroad strike. President Harding left the city for a holiday trip shortly after the strike began, Attorney General Daugherty also went on a trip and Secretaries Hoover and Davis were engrossed in their efforts to induce the coal operators and the miners' union officials to agree on a basis for negotiating a settlement of the coal strike.

No signs of the slightest intention on the part of the administration to interfere in any way were discernible in Washington and newspaper men were reminded by high officers of the government that a shop or maintenance of way strike could not stop traffic or even interfere seriously with railroad operation for some time. The attitude was in marked contrast to that displayed when a trainmen's strike was threatened last fall, when the attorney general and his assistants had complete plans prepared for enjoining the labor leaders and probably also tying up their strike benefit funds, on the ground that a strike against the orders of the Labor Board would require the exercise of governmental power to protect the vital right of the public to uninterrupted transportation service. Not the slightest sympathy was manifested in administration circles with the claim of the union leaders that they had not received a fair deal at the hands of the Labor Board. On the contrary, the view was expressed at the White House, on the strength of reports from Chairman Hooper of the board, that its action was fully justified and that when it spoke it enunciated the policy of the government. Therefore there was no suggestion of any compromise affecting the board's decision.

At the White House it was stated officially on Friday, after the strike order had been issued, that it was the function and duty of the Labor Board, delegated to it by Congress, to deal with wage controversies, that the board was the agency to express the government's policy and to be backed up by the government and that for the purpose of the present case it is the government. It was also added that the government expects to be supreme. A question by a newspaper man also brought out the fact that the President understands clearly that the 23 cents an hour rate, which the labor statements have used as the basis for their claim that the wages fixed are too low, applies to only a small percentage of the men and recognizes local conditions in some parts of the south and southwest.

The legal theory on which the administration was prepared to act in case of a trainmen's strike last fall was that it would be directly against orders or findings of the government, represented by the Labor Board, and not against the railroad corporations, and that, under the Debs and Adamson law case decisions of the Supreme Court, where a labor organization seeks, by an organized cessation of labor, to paralyze the public service of the railroads, the United States government, on the motion of the attorney general or other proper governmental representative, has the right to apply to a court for an injunction enjoining the employees from combining and conspiring to interfere with interstate commerce. Also that upon violation of such injunction, the court may inflict punishment by fine and imprisonment, as was done in the Debs case.

It was undoubtedly the fear of such action on the part of the government as well as the knowledge that a strike would have no popular support, that induced the brotherhood leaders to grasp the opportunity offered them by the statement of the Labor Board that it could not expect to clear its dockets for a wage reduction case for some time, and to call off their strike. Since that time Secretary Hoover has emphasized to the railroad executives the importance of preserving as good relations as possible with the train service employees, on the ground that they are the only class of employees indispensable to railroad operation, and that the mechanics and track forces in the main can be recruited from the general labor pool of the country.

Before the coal strike the government made some efforts toward mediation because there was no established tribunal to decide the controversy and after the strike had progressed for three months efforts were renewed to settle it by negotiation even on a compromise basis. However, when the shop and maintenance of way unions threatened a strike no efforts toward mediation were made because a governmental tribunal had adjudicated the dispute. The theory of the transportation act is not to prohibit strikes and that if a class of railroad employees is sufficiently dissatisfied with the wages fixed to be willing to take the chance of having its jobs taken by others the government has no right to interfere unless the public welfare is seriously affected. As it would probably be considered rather futile to try to stop a strike by injunction after it had been in progress for some time, and after the strikers have been outlawed, the failure to take any action at this time would seem to indicate a confidence that the wages established by the board are high enough to attract men to perform the necessary work, and that if the men who have been doing it are unwilling to continue, the railroads will have comparatively little difficulty in replacing many of them, besides having much of their maintenance work done by contract

F. C. GALLOWAY, station master of the Pennsylvania Railroad at Cincinnati, Ohio, writing to the Pennsylvania Railroad magazine, The Pennsylvania Standard, says that the public is better mannered than it was when he first came in contact with it in the railroad service, about 36 years ago. "The grumpy bluffer used to be always with us; but now he is an exception. The campaign for better manners among railroad men has had its effect on the traveling public, and passengers are more careful in their manners, lest they be excelled by a poor railroad man. The benefit derived has been mutual . . ."

Train Service Not Affected by Shopmen's Strike

Walkout Occurs in Midst of Holiday Rush—Many Employees Return and New Men Being Hired

THAT PASSENGER service was being handled on schedule and freight service practically without interruption and that a record-breaking holiday traffic was cared for without untoward difficulty were the outstanding features of the first few days of the shopmen's strike which began according to schedule at 10 a. m. on July 1

The response to the strike call was fairly general. Some roads reported that 100 per cent of their shop employees had left their work and others lost employees in their maintenance and clerical forces even though no strike had been called for the latter.

The Pennsylvania, which was not a party to the Labor Board's decision, has been affected by the strike to some extent, but its big shops at Altoona have lost few, if any men. The Reading stands out as an exception, its shop forces, being members of the Federation of Railroad Workers, were not called out.

The starting of the strike on Saturday morning offered a serious situation to the railroads because it timed the strike with the holiday passenger traffic. The railroads had to contend with a record-breaking holiday rush. The New York Central, to take one example, handled on Saturday 27 extra sections of passenger trains out of New York. The Pennsylvania between 6 o'clock Saturday morning and 6 o'clock Sunday evening moved 100,000 passengers to Atlantic City, Cape May, Wildwood and other South Jersey points, constituting one of the heaviest movements of holiday travel ever recorded in a similar period. Similar experiences were reported by the New Haven, the Boston & Maine and many other roads. The returning traffic Tuesday presented another problem but except for minor difficulties no trouble was presented other than that normally to be met with under such circumstances.

Determination of the full effect of the strike was difficult at the start because it was felt that many of the men who failed to report were merely laying off for the holiday. At any rate the railroads took prompt steps to meet the situation. Advertisements for men promptly appeared in the daily papers at all important industrial centers. Applications for employment were received in large numbers and between the new men secured in this manner and the fact that many of the regular employees have since returned to service the railroads have been able to report a rapidly improving situation. Some of the railroads, notably those in the New York metropolitan district have announced a further step in the form of action to remove from their payroll strikers who fail to return to work. The men have been told that they will lose their rights and will be hired only as new employees. New men now being employed to take the places made vacant by strikers are assured permanent positions if they prove themselves competent. This policy, it is explained, is in entire conformity with the resolution of the Labor Board which places the strikers without its jurisdiction. The new men are being paid at the new Labor Board scale.

E. M. Rine, vice-president and general manager of the Delaware, Lackawanna & Western and chairman of the conference Committee of Managers of roads entering New York, is quoted as saying after a meeting of the committee on July 3:

"A man who has left the service is gone. If his place is taken by a new man he loses his seniority. The new men will have permanent positions and protection, if they fill the bill.

"The railroad companies have hired more than 1,000 new men in this city since Saturday. We are not hiring strike-breakers. We are hiring men to take the place of men who have left their jobs. We don't raise any question as to whether they are union men or not."

The Long Island has announced to the public its plans for paying off the strikers on Friday.

Roads Appeal to Employees to Remain at Work

Just prior to the strike most of the roads issued statements to their shop employees and the public calling attention to the fundamentals involved in the strike, *i. e.*, that the strike is directed primarily against a lawfully-arrived-at decision of the Labor Board, a government tribunal.

A typical statement is that issued by P. R. Albright, general manager of the Atlantic Coast Line which follows in part:

Briefly stated the strike vote was taken on five points of alleged dissatisfaction as follows:

1. Installation of piece work without agreement by committees.
2. Right of railroads to contract their car and locomotive shops to contractors.
3. Failure of railroads to observe orders of the Labor Board.
4. Opposition to rules ordered by the Labor Board.
5. Reductions of wages ordered by Labor Board effective July 1, 1922.

The Atlantic Coast Line is in no way involved in any of these matters except that its employees have expressed opposition to several of the rules ordered put into effect by the Labor Board some months ago, to which only one member of the Board dissented in rendering the decision. The employees are also opposed to acceptance of the reduction in wages ordered by the Labor Board effective July 1, 1922.

In both instances conferences were held between representatives of the employees and the management of the Atlantic Coast Line Railroad, and upon failure to agree the questions at issue were submitted for a decision to the United States Railroad Labor Board in the regular orderly way provided for in the Transportation Act; the submissions being jointly signed by the management and the employees of the Atlantic Coast Line Railroad. In the case pertaining to wages the Labor Board has recently issued an official decision ordering a reduction in wages, concurred in by six of the nine members of the Board which includes all of the public representatives thereon. The strike, if called, therefore, is between the shop employees, headed by Mr. Jewell, and the American public acting through its representatives on a federal board delegated by the Transportation Act to decide such matters.

The Atlantic Coast Line Railroad has complied with all of the requirements of the law and has also complied with all of the decisions of the United States Railroad Labor Board. There has been almost complete absence of friction in the relations of this company with its employees and at the present time, through the best of individual effort on the part of employees and the supervisory officers, the operation of the railroad has more nearly approached normal peace time conditions than at any time since the war. It is much to be regretted that in spite of the facts as they actually exist, and without regard to the spirit of the law enacted by congress for the purpose of maintaining uninterrupted transportation, the employees of these classes should leave the service of this company in a body as proposed, which is without justification under the conditions which now prevail.

I make an appeal to the employees to remain at work, observe the spirit of the law by accepting the decisions of the Labor Board created by congress, and maintain uninterrupted service for the future welfare and benefit of themselves, the public and the company, all of whom are vitally and directly interested in that being done.

The Situation in the East and South

The following is a brief analysis of the situation on the various railroads in the East and South as of Wednesday:

Baltimore & Ohio

The situation on this company's lines at the beginning of the strike was shown in a statement issued on July 3, by C. W. Galloway, vice-president in charge of operation to be as follows:

"Complete reports from all principal points indicate 73 per cent members Federated Shop Crafts went out on strike Saturday and reports thus far received for first trick today indicate practically no change compared Saturday. Our movement Saturday was good and as much as we had been moving for several weeks past. Yesterday about usual Sunday average. Reports from several points indicate number of the men who went out Saturday will return by Wednesday. At Mt. Clare shop today some fifty men who had gone out returned to duty. There are no present indications of difficulty in moving passenger and freight traffic. Everything quiet."

Vice-president Galloway on July 5 described the strike situation as follows: "Complete reports from principal stations for all tricks July 4 indicate no change strike situation compared with Saturday. Reports from some points today for first trick show increased force by old men returning and new men hired. Movement yesterday somewhat less than Sunday and Monday account holiday as well as reduced operation at some points due to strike. No difficulty in moving passenger and freight traffic. Everything quiet."

Bangor & Aroostook

Out of approximately 410 shop employees, 80 per cent went on strike, causing no interference with traffic. The road is gradually filling vacancies with new men and a few of the strikers who are returning. Most of its outlying points are fully covered. The road advises that its power is in good shape with serviceable engines stored and that it anticipates no interruption to traffic.

Bessemer & Lake Erie

Shops working 100 per cent on Monday. A small number in the car forces at Conneaut Harbor, Ohio and Albion, Pa., ceased work. No cessation of train movement.

Boston & Albany

On Saturday morning about one-third of this company's employees in shops, engine houses, coal pockets, ash pits and at inspection points went on strike. A good many section men left the service. On July 3 the Allston shops were operating with a full complement. On the same day 85 men reported for work at West Springfield shops. There has as yet been no interference with freight or passenger service, which latter has been exceptionally heavy. There have been no disorders of any sort at any point on the line.

Boston & Maine

Despite heavy holiday passenger traffic beginning Saturday, passenger trains run with but little delay. Freight is being handled without embargo or restriction. There has been a heavy response to the company's advertisements for recruits. The new men are being assured of permanent positions if competent. Press reports told of 200 men who went on strike Saturday returning to work Monday.

Central of Georgia

Mechanical crafts walked out on July 1 but most of the colored helpers and shop laborers remained at work as did all mechanical foremen. These foremen with the assistance of laborers are getting trains out on time. A heavy holiday traffic was handled without material delay. No disturbances have been reported.

Delaware & Hudson

Practically all employees at the smaller terminals remained at their posts. At the larger terminals about 50 per cent of the engine house and stores department employees left the service, together with practically all car shop employees. About 400 new men have been employed to take the places of striking engine house employees, engine dispatchers and car inspectors. Trains are moving according to schedule.

Erie

This company's shops are operated by contractors and it is the contractors who are filling the places of striking employees. About 2,500 of the contractors' old force of 7,500 men are at work. Between 600 and 800 new men have been employed and about 200 former employees have returned to the service. All trains are being operated practically on schedule.

Lehigh & New England

None of this company's regular shop force of 270 employees were on duty July 5. A few transfermen, signalmen and linemen also were out.

Lehigh Valley

About 1,420 regular employees out of a force of 5,573 are at work. The road is successfully replacing the employees who have left the service. All trains are being operated on schedule including fast freights.

Long Island

C. D. Baker, general superintendent, made public the following statement Saturday afternoon:

"At ten o'clock this morning about 1,000 men stopped work in our Morris Park shops, including machinists, boilermakers, electricians and the usual shop craft men, in addition to a number of employees, classed as laborers, who do not come under the shop agreement.

"At the Long Island City engine house 300 of the 310 shopmen employed there went on strike. None of the shopmen in the Marine shops at Whitestone have stopped work. Practically all of the high tension men of the electrical department left the service. A number of car inspectors stopped work.

"It is difficult to determine exactly how many men have left the service for the reason that a great many of the men involved in the shopmen's strike order would not have been at work Saturday, Monday and Tuesday, which are holidays. In so far as the men actually employed in the shops are concerned, it is our belief that their leaving the service will not seriously affect the train service, as our equipment is in excellent condition and can be utilized for a long period without being shopped for repairs."

A special effort has been made by the striking employees, but without success, to stop the operation of the power houses at Long Island City.

The Long Island is advertising for shop employees. On July 3 announcement was made that the company would pay off on July 7 those shopmen who had "not seen fit to return to duty." Sufficient men, the announcement said, having been obtained to take care of the work necessary to be done at this time.

Maine Central

About 90 per cent of the shop forces left the service. No interruption to passenger service. Freight service being performed satisfactorily. Road is well fixed from the standpoint of power and equipment condition.

New York Central

The executive offices of the New York Central Lines in New York reported on Wednesday afternoon that the strikers were drifting back at practically all points over the system and applying for their former positions. At the outset of the strike on Saturday, the statement continued, the number of men in all the shop crafts who had left their work were distinctly in the minority. In some districts, the men remained at work 100 per cent, in defiance of the strike call, while the condition was variable in different localities and ranged from a complete walkout to the departure of merely handfuls of men, from some of the engine terminals and from the locomotive repair shops.

The combination of the record breaking holiday passenger traffic and the quitting of 50 car inspectors, air-brake men and others having to do with the make-up and inspection of passenger trains at Grand Central and Mott Haven yards presented the New York Central with an acute situation at New York during the first few hours of the strike. The amount of traffic necessitated the running of 27 extra trains or sections. The result was delayed service for a period in the afternoon but the situation was soon taken in hand.

Other men held in readiness were put in the places of the strikers and no train was cancelled. These car inspectors having directly to do with train operation quit generally at most terminal points but the railroad management succeeded in having their places promptly filled and avoiding interruption of passenger service.

From the beginning of the strike Saturday morning until Wednesday evening, each succeeding hour saw, the company reported, large forces employed at each point, the New York Central employing considerable numbers of men on Saturday, Sunday, Monday and Tuesday while Wednesday saw the beginning of the return in considerable numbers of old employees. No strike breakers were employed by the New York Central, it being stated that every man would be given a permanent position if he proved competent, that he would be protected at his work and that any strikers re-employed would have to 'come back as new employees with the loss of their seniority and pension rights.

It was stated on Wednesday that the complete loyalty and splendid service of the supervisory forces had enabled the railroad to continue full passenger and freight service, and that with the addition of competent men available to fill out the forces within a short time, the situation would improve from day to day. The strikers on this railroad generally had left their work peaceably and there was no disorder at any point, of consequence.

At some points, the strikers met on Wednesday and voted on the question of returning, these meetings generally resulting in the return of considerable numbers to work and at one point the vote was unanimous and the entire striking force returned to their work en masse.

The points on the New York Central chiefly affected are Albany, Utica, Syracuse, Rochester, Buffalo, Cleveland, Toledo, Elkhart and Chicago. Reports on Saturday were to the effect that only 17 men obeyed the first call and left work at the locomotive shop at West Albany.

New York, New Haven & Hartford

C. L. Bardo, general manager, issued the following statement on July 1:

"The New York, New Haven & Hartford reports no delays to trains on its lines due to the withdrawal of mechanical department forces at 10:00 A. M. today. There has been some slight delay to New Haven trains in starting from the Grand Central Terminal. Out of a total authorized force of 6,139 men, which covers the full complement for the entire 24-hour period (these forces working on an 8-hour day basis) all of the men on the first shift, which consists of about 2,500 men, withdrew from the service at 10 o'clock today, except 276 mechanics of various crafts at the several locations. All points are now being covered by competent men. While no strike has been ordered in the maintenance of way department, the reports so far received would indicate that from 100 to 200 laborers, widely scattered, failed to report for duty at the accustomed hour this morning, presumably as a result of the reduction in rates ordered by the Labor Board effective today."

On July 3 the road reported an improved situation with respect to mechanical department forces and similar reports followed on succeeding days. On Monday on the first shift there was an increase of 472 men as compared with the first shift on Saturday after the strike was called. On Tuesday there was a further increase of 4 men and on Wednesday another increase of 653. The New Haven has advertised extensively and is hiring skilled mechanics at the new Labor Board scale, applications for employment being received in large numbers. From the start of the strike passenger and freight service has been maintained on a normal basis.

Norfolk & Western

The strike of the shop employees has had the effect of slowing up freight movement on this company's lines to some extent, the interruption being greatest between Roanoke, Va., and Hagerstown, Md. More employees were on duty on July 5 than on July 1, the first day of the strike, and some improvement in the movement of freight traffic has been noted. Maintenance of way forces have been very slightly affected by the strike. On July 5, at 10 A. M., 99 clerks out of a total of more than 800 left the service at Roanoke.

Pennsylvania

The most important feature in connection with the strike insofar as it concerns the Pennsylvania System is that the Altoona shops are not affected. The situation on the system as a whole on the first day was described in a statement issued late in the evening to be as follows:

"As far as Philadelphia is concerned the Pennsylvania Railroad is practically unaffected thus far by the strike. Up to 4 p. m. out of a total force of 3,724 maintenance of equipment employees on the Philadelphia Terminal Division, including the West Philadelphia Shops, only 122 men failed to report. On the evening shift only 46 men were out. These numbers of absentees are in no way abnormal, especially before a holiday, and might occur under ordinary circumstances without attracting notice.

"Outside of Philadelphia, the Eastern Region showed about 2,500 men failing to report out of total forces of over 27,000. At certain points, notably in the neighborhood of New York City, where there had been considerable losses on the first shift, late afternoon and evening conditions showed improvement, and there is no point in the region at which any engine house or shop is unable to function.

"The Altoona Works were unaffected by the strike and worked with normal forces all day. These are the largest and most important shops on the Pennsylvania System, employing 12,000 men."

The report issued Sunday gave some interesting details concerning the holiday traffic.

"Throughout the Eastern Region more than 85 per cent of the normal Sunday forces reported. On the Philadelphia Terminal Division 100 per cent worked.

"Advertisements for men to take the places of those leaving the service have been inserted in the newspapers of a number of cities, including New York, Philadelphia, Camden and Atlantic City, and a number of new men have been hired for work at various points. Despite the day being Sunday, applications for permanent jobs have been freely made.

"Train service has not been affected in the slightest degree at any point by the strike. The volume of traffic, both passenger and freight, handled since the strike began, has been unusually large. Between 6 o'clock Saturday morning and 6 o'clock Sunday evening the Pennsylvania carried to Atlantic City, Cape May, Wildwood and other South Jersey points approximately 100,000 passengers, constituting one of the heaviest movements of holiday travel ever recorded in a 24 hour period.

"In addition to the regular trains, 48 extra trains and sections were operated to the shore in this interval. Throughout the entire Eastern Region, 640 extra passenger coaches were in service and these were operated from two to four round trips each. The total passenger travel in the Eastern Region has been about 25 per cent ahead of the corresponding portion of the holiday period of last year.

"Complete reports received today by C. S. Krick, general manager of the Eastern Region, regarding the traffic handled on Saturday at Pennsylvania Station, New York City, established definitely the fact that it was the heaviest ever recorded in a single day since the station was opened twelve years ago. Altogether 688 trains were operated in and out of the station during the day. They made up a total of 5,066 cars, carrying an estimated number of 303,000 passengers."

The reports on the following days indicated that the general tendency on the system was in the direction of improvement. Emphasis was placed on the fact that normal service both freight and passenger was fully maintained without difficulty. Wednesday night the situation was described as follows:

"Normal performance of all service both passenger and freight continued today on all four regions. Car and engine repair shops were generally closed for the holiday. Enginehouses at all points performed all functions necessary in connection with train movement. At a number of points men who had left their work reported back and asked to return to duty whenever they were needed. Everywhere conditions on the Pennsylvania System were not materially changed."

Philadelphia & Reading

This road is not affected, none of its shop employees having left the service. The shopmen on the Reading are not affiliated with the A. F. of L. but with the Federation of Railroad Workers.

Southern Railway and Other Southeastern Lines

In the south the strike had no very marked effect on the handling of traffic during the first few days of the strike and officials said it would be difficult to gage the situation before next Monday, as many undoubtedly remained away from work over the holiday who would return later.

Reports from the southeastern roads indicate that approximately 90 per cent of the shop employees obeyed the strike order and left their work on July 1, but a considerable number have returned to work in the days since. Some of the roads have posted notices fixing dates by which the men must return to their jobs or lose their rights but other roads had not yet taken this step. On some roads some of the men whose organizations had not yet authorized a strike went out in sympathy with the shopmen. On one large road the maintenance of way employees withdrew from the organization and formed a new one of their own.

There was some delay in the handling of traffic at certain points but no outstanding development had taken place during the first part of the week. The Southern Railway reported that most of its mechanics had gone out but that a few had returned at various points and that the strike had had practically no effect so far.

Virginian

Approximately 95 per cent of the shop crafts are out, but with no interference with operation.

Western Maryland

The *Railway Age* is advised as follows:

"Western Maryland Railway has contracted all repair work. Contractors have not lost a man as result of strike which began July 1. Pittsburgh & Lake Erie Railroad together with Western Maryland is, I am advised, the only line between Pittsburgh and Baltimore which is giving normal service under present conditions. I believe this is good evidence that the public obtains at least some benefit from the contract plan which Western Maryland Railway has had in effect since March, 1922."

Canadian Roads Not Affected

The Canadian National and the Canadian Pacific have not been affected by the strike. The application of the Labor Board's adjustment of shopmen's wages to similar occupations on the lines of the Canadian National is a matter of negotiation between the management and the unions interested. No decision has been reached as yet. On the Canadian National's American subsidiary, the Duluth, Winnipeg & Pacific, the shop employees went out on strike on July 1.

Economic Status of Rail Workers Still 18.75 Per Cent Above 1914

ANALYSIS of the wages of railroad employees by the National Industrial Conference Board shows that the wage cut recently ordered by the Labor Board leaves the four main classes of men affected with an economic status which is nearly 19 per cent higher than their position in 1914. Of the four classes affected, the car men stand at the top of the list with an increase of purchasing power of 33 per cent over the 1914 level, followed by unskilled labor, whose increase amounts to 19 per cent; that of the clerks 13 per cent, and of skilled shop mechanics. The study also demonstrates that even after the new wage cuts go into effect railroad employees will still constitute a preferred class of industrial labor, as their increase in real earnings and their actual money wages are still materially above the real wages and actual wages paid to employees of other industries performing a similar class of service.

The Conference Board's statement, made public on July 2, reads in part as follows:

The majority of railroad employees whose wages will be reduced after July 1 by order of the Labor Board are included in the shop forces, the track laborers, the clerks and the signalmen. Various other classes, such as the stationary firemen and oilers, have also had their wages reduced by the Labor Board's decision, but these form only a small percentage of the total number of railroad employees.

The shop forces include two main classes of employees, the skilled mechanics or the so-called locomotive crafts, comprising the machinists, blacksmiths, boilermakers, sheet metal workers and electrical workers, and the car men, whose duty it is to repair freight and passenger cars. The bulk of the car men are engaged in the repair of freight cars. The maintenance of way employees include, besides track laborers, a number of skilled mechanics, but as these mechanics are paid at the same rates as the mechanics in the shop crafts, unskilled labor only was taken account of by the Board in making the present estimates. The same applies to signalmen, who are chiefly electrical workers or unskilled laborers.

The skilled mechanics of the shop crafts have had an average working week of 48.06 hours since the signing in 1919 of the National Agreements defining the working conditions of this group of employees. Their rate of pay up to the present time has been 77 cents an hour for journeymen mechanics not engaged in autogenous welding, the autogenous welders receiving a differential of 5 cents per hour in addition to the regular mechanic's rate.

The recent decision of the Labor Board cut the rate of skilled mechanics 7 cents per hour, making a new hourly rate of 70 cents. It is fair to assume that the average number of hours of employment per week will not be less after July 1 than it has been during the past two and one-half years, and for the purpose of estimating the earnings of skilled shop mechanics under the wage cut, 48.06 hours have been taken as a basis. At this rate, skilled mechanics will receive pay for 48 hours at 70 cents plus .06 of one hour overtime at time and one-half, making their average weekly earnings $33.67 per week. This makes their average hourly earnings after July 1 70.1 cents. The average weekly earnings of this class of employees in 1914 was $19.73, which indicates a net increase over 1914 of 71 per cent in estimated average weekly earnings after July 1. The average hourly earnings of this class were 38.5 cents in 1914, making the increase over 1914 of the estimated new earnings 82 per cent. The index of actual hourly earnings divided by the index of the cost of living, which was 154.9 on June 1, and which will probably change but slightly in the next few months, gives an index of real earnings or purchasing power of actual earnings, based on the average hourly earnings, of 118, and based on the average weekly earnings, the real index is 110. In other words, the economic status of the skilled mechanics of the shop forces when expressed in purchasing power is 10 per cent higher than in 1914.

For the car men, computing the figures in the same manner, it is found that since the signing of the National Agreements reducing the working hours the average number of hours of employment per week is 48.59. Thus, car men whose rate has been reduced 9 cents from the present rate of 72 cents, will have average weekly earnings of $31.15, which is a 106 per cent increase over the average weekly earnings of $15.09 in 1914. Their average hourly earnings of 64.1 cents under the new rate show an increase of 150 per cent over the 1914 average hourly earnings of 25.6 cents. Their real earnings after July 1 based on their average hourly earnings will, therefore, be 61 per cent higher than in 1914, and based on their average weekly earnings, 33 per cent higher than in 1914.

The average number of hours of employment per week of *unskilled labor* since the signing of the National Agreements has been 49.86. The rate of pay of unskilled labor varies somewhat from one part of the country to another, and in the case of negro labor in some of the southern states, was as low as 28 cents per hour before the decision rendered by the Labor Board. However, the rate paid to unskilled white laborers in the northern and western states, including the great majority of the railroads of the country, has been 40 cents per hour. This rate, reduced 5 cents per hour by the Labor Board's order, will therefore be 35 cents per hour after July 1. Working 49.86 hours per week, the average weekly earnings of unskilled labor will therefore be $17.45 per week, which is an increase of 85 per cent over the 1914 earnings. The decision rendered by the Labor Board on December 16, 1921, while recognizing the principle of the eight-hour day, provided that track laborers should be paid overtime only after the expiration of the tenth hour of continuous service. The 1.86 hours over the regulation 48-hour week cannot therefore be computed at time and one-half in figuring the weekly earnings of this class of employees. The average hourly earnings will therefore be 35 cents or the same as the hourly rate of pay. This shows an increase in actual hourly earnings of 117 per cent over the average hourly earnings of 16.1 cents in 1914. The real earnings based on the average hourly earnings show an increase of 40 per cent; while real earnings based on average weekly earnings show an increase of 19 per cent.

The clerical forces of the railroads since the Clerks' National Agreement was signed early in 1920 have worked an average of 48.18 hours per week, and, as is the case with unskilled labor, the .18 extra hours over the regulation 48-hour week cannot be computed at time and one-half because of the decision of the Labor Board of January 22, 1922, which ordered that clerical forces should not be paid overtime until the expiration of the ninth hour of continuous service. No definite rate can be established for all classes of clerical employees, but their average hourly earnings in October, 1921, were 61.8 cents. The reduction of the Labor Board, which has just been ordered, equals 3 cents for some classes of clerks, and 4 cents per hour for other classes, or an average reduction of 3.8 cents, which will make the average rate per hour of all classes of clerks 58 cents after July 1. This is an increase in actual hourly earnings of 97 per cent over the 1914 rate and the real earnings of clerks based on their average hourly earnings will therefore be 28 per cent over the 1914 level. Working 48.18 hours per week, the average weekly earnings of clerks will be $27.94, an increase of 74 per cent over 1914. Computed on the basis of average weekly earnings, their purchasing power will have increased 13 per cent.

Thus, the average increase in purchasing power based on weekly earnings of the four classes is 18.75 per cent over the 1914 standard. The car men stand at the top of the list with an increase of 33 per cent, followed by unskilled labor, whose increase is 19 per cent, the clerks and unskilled shop men coming next with increases of 13 per cent and 10 per cent respectively.

Although comparisons of wages of railroad employees with employees in other industries cannot be made for all classes, and the latest reports of the National Industrial Conference Board on wages of employees in manufacturing industries do not give data for later than January 1, 1922, it is interesting to compare the wages of railroad skilled shop labor with those of the skilled employees of foundries and machine shops, who perform practically identical services. Thus we find that while the average hourly earnings of railroad skilled shop employees under the new wage cut will be 70.1 cents, those of employees in the foundry and machine shop industry stood at 56.1 cents on January 1, and the comparative average weekly wages stood at $33.67 and $25.08 for railroad and foundry and machine shop mechanics, respectively. The increase in real weekly earnings of foundry and machine shop employees over the 1914 level was only 5 per cent as compared with a 10 per cent increase for the railroad employees.

The same is true with regard to unskilled labor outside the railroad industry. The National Industrial Conference Board's studies show that the average hourly earnings of unskilled laborers in other than the railroad industry were 41.4 cents as compared with 35 cents for railroad labor on January 1, and the average weekly earnings of unskilled manufacturing labor were $19.04 as compared with $17.45 for railroad common labor. While real earnings for unskilled railroad labor increased 19 per cent in the eight-year period, those of unskilled labor outside of the railroad industry increased only 9 per cent. These increases are figured both for the railroad industry and for outside industries on the basis of the Conference Board's cost of living index for June 1 1922, which shows that the cost of living at that time was 6.6 points lower than on January 1.

Comprehensive Report on St. Louis Terminals

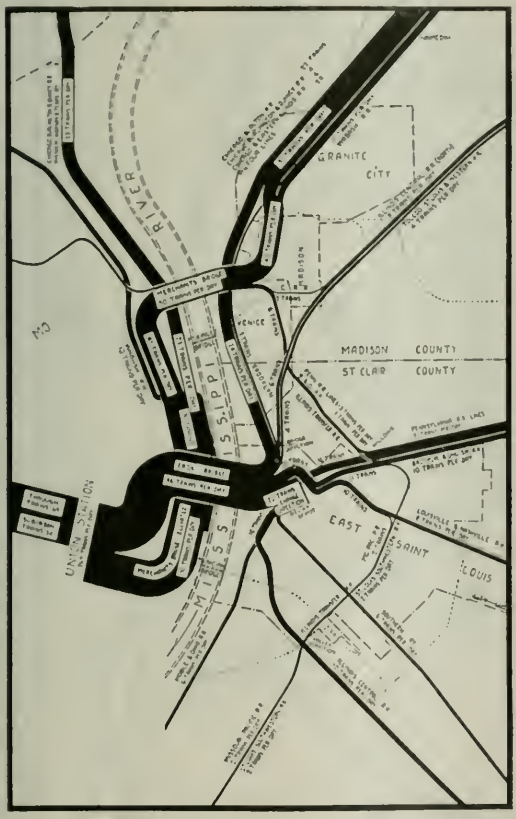
Engineers' Committee Recommends Improved Facilities and Partial Unification of Operation

WHAT IS PROBABLY one of the most complete reports ever made on railway terminals in this country was recently transmitted to the Terminal committee of the St. Louis Chamber of Commerce by the Engineers' committee appointed in 1920 to make a complete study of railway transportation in the St. Louis terminals. This report not only covers an exhaustive study of the entire problem with detailed recommendations for improving rail facilities in and about the terminals, but also includes a large fund of supporting data concerning railway facilities and operations in the St. Louis terminals as well as abstracts from recent reports on the railway problems of other urban areas. The report evidences a minute study of details and the recommendations made, while including the enunciation of general principles, are exceedingly specific in their reference to particular features of the intricate network which comprises the St. Louis railway terminal area. This study has borne fruit in recommendations for the improved routing of passenger trains, increased facilities at the Union Passenger Station of St. Louis, the unified classification and interchange of freight cars, a revised plan for the utilization of the Mississippi river bridges and an improved handling of the l.c.l. business. Electrification is found to be unnecessary and financially impracticable.

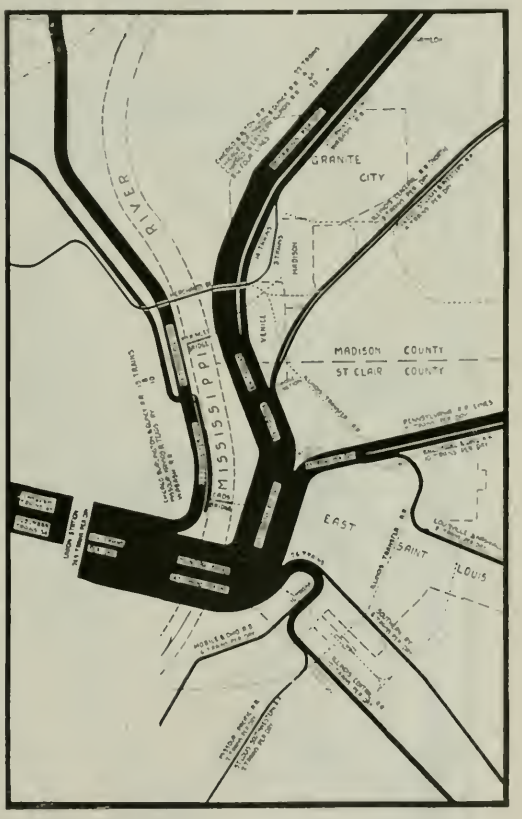
The St. Louis-East St. Louis Industrial District

The St. Louis-East St. Louis industrial district comprises an area in Missouri and Illinois about 25 miles square, of which the cities of St. Louis, Mo., and East St. Louis, Ill., occupy most nearly the central position. The Illinois side consists of what is known as the Great American Bottoms, a low level, fertile area, bounded on the east by bluffs. The Missouri side is an undulating surface of gently rolling hills, sloping gradually to the Mississippi. The St. Louis industrial district has a population in excess of 1,000,000.

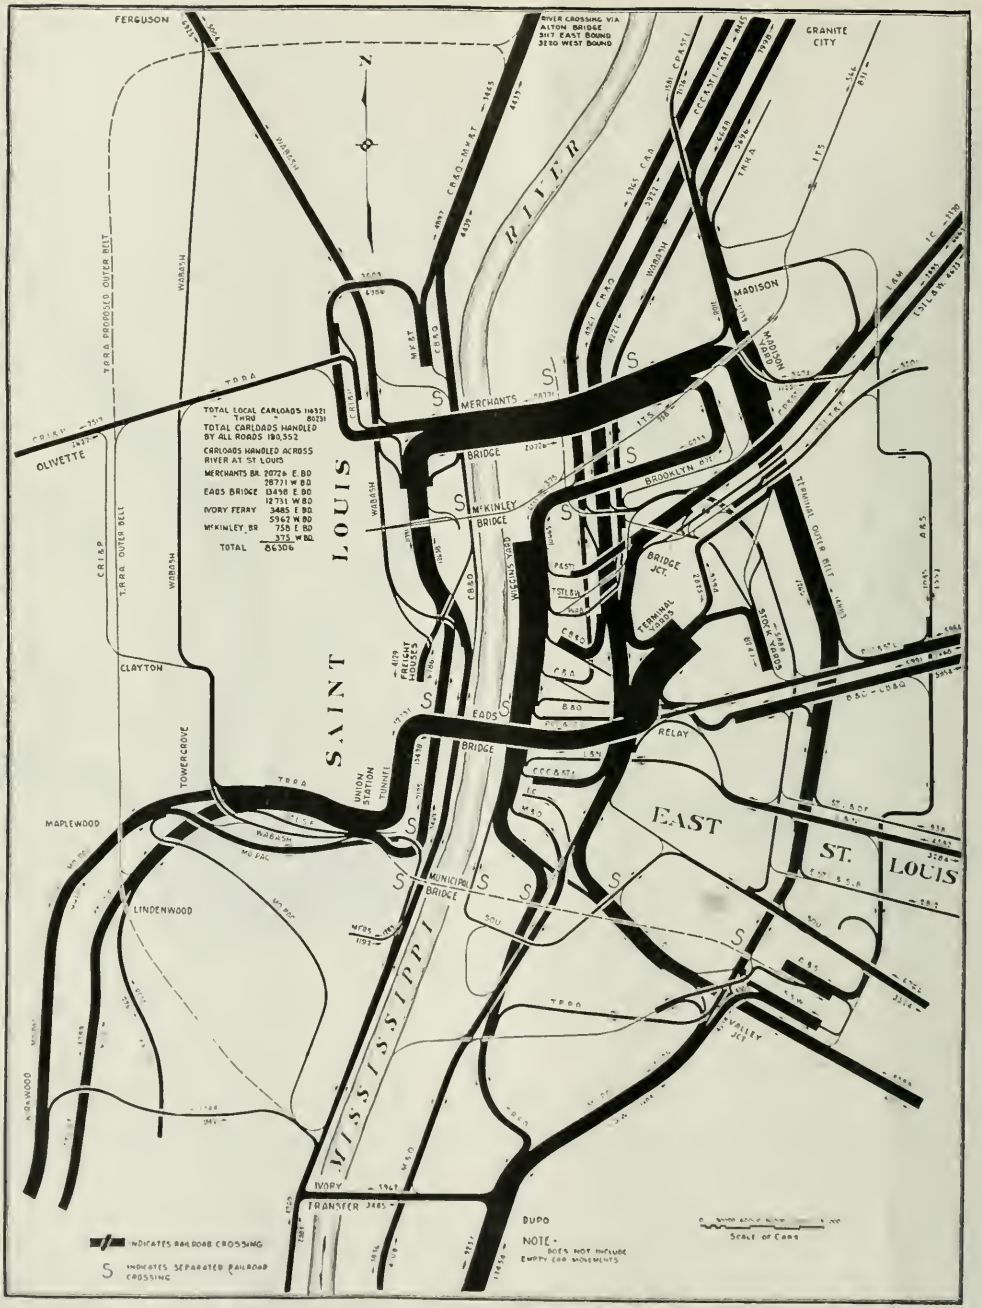
Local conditions at St. Louis and East St. Louis, such as the great expense of Mississipi river bridges have already resulted in considerable unification of terminal facilities in the Terminal Railroad Association of St. Louis, a belt line owned by 15 trunk lines. It was manifestly impossible for



Present Routes of Passenger Trains



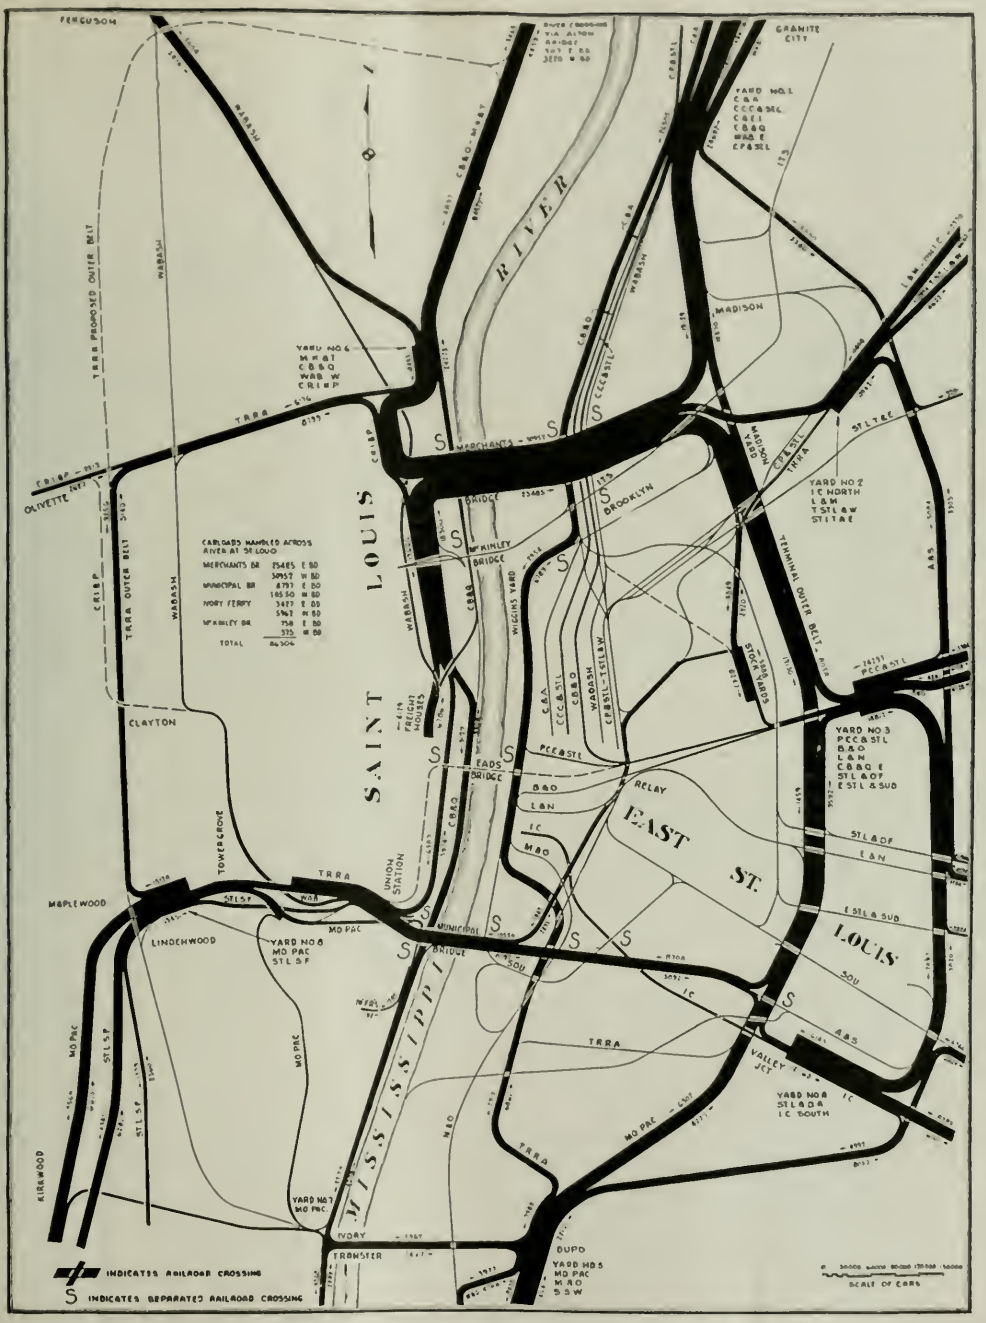
Proposed Routes for Passenger Trains



Composite Carload Freight Diagram—Present Routing

each railroad to provide terminals on both sides of the river and to provide its own river crossing facilities. Consequently, it was natural that one company should develop such facilities for the use of all.

The Terminal Railroad Association has become the most notable example in the United States of progress in unification of railroad terminals. Its facilities have been developed on the "co-operative" theory as distinguished from the "com-



Composite Carload Freight Diagram—Proposed Rerouting

petitive" theory under which the facilities of individual railroads are usually developed. At the same time each railroad has developed its own terminal facilities to a greater or less extent on one or both sides of the river on the competitive theory, while also relying on the facilities of the Terminal Railroad Association for additional advantages.

The river bridges play an important part in the solution of the terminal problem. Two of the bridges, the Eads

bridge and the Merchants bridge are controlled by the Terminal Association. The McKinley bridge is controlled by the Illinois Traction System, while the newest crossing, the Municipal bridge is owned by the City of St. Louis but has not been thoroughly co-ordinated into the general railroad situation by connections adequate to permit its extensive use by railroad trains. To permit this bridge to be adequately used the two present connections must be made permanent and at least four additional connections must be built.

Further recommendations of the committee with respect to the bridges are that the Eads bridge, which is of inadequate loading capacity and encumbered by a tunnel approach, should be abandoned for railroad traffic and that passenger trains should be transferred from the Merchants and the Eads bridges to the new Municipal bridge which should also be used for such freight traffic as can be handled over it more expeditiously than over the other crossings. The McKinley bridge also should be provided with additional approaches and connections which will enable it to be used to better advantage for freight traffic.

Improvements in Passenger Facilities

Eighteen railroad companies operate passenger trains in and out of the Union Station. The number of trains varies somewhat throughout the year, seasonal trains being added and taken off as necessity demands. A detailed study of the time tables of December, 1920, showed a total of 269 passenger trains each day. In addition, the Wabash Railway operates 10 suburban passenger trains per day in and out of St. Louis that do not use the Union Station, their terminus being an uncovered track on the river front at the foot of Olive street. The 269 passenger trains that use the Union Station may be subdivided as follows:

	Trains per Day
Western entrance	103
Eads bridge and tunnel	96
Merchants elevated	70

Little change is recommended for the routing of trains through the western entrance to the station except for the possible addition of two more passenger main tracks. However, attention is called to the objectionable features of the other two routings, that over the Merchants bridge and Merchants bridge elevated having a three mile stretch along the river front through a congested freight terminal and industrial area while the Eads bridge routing embraces a tunnel on the west approach, 1.5-per cent approach grades and an exceedingly congested condition in the vicinity of the Relay Depot in East St. Louis.

The solution offered for these conditions is to abandon both the Merchants and the Eads bridges for passenger service and substitute a route over the Municipal bridge, while for the 23 trains of the Chicago, Burlington & Quincy and the Missouri, Kansas & Texas which use the Merchants bridge elevated along the river front it is proposed to reduce interferences with other operations by an extension of the elevated structure for a considerable distance to the north. The present routing of passenger trains and the suggested rearrangement of routes are shown clearly in the two routing diagrams. The proposed plan for an east side rerouting involves the construction of some long approaches to the Municipal bridge, together with the elevation of the passenger tracks in the vicinity of the Relay Depot to eliminate grade crossings with freight tracks.

The Union Station

The St. Louis Union Station is one of the most conveniently arranged union stations in the country. Numerous features of this station have been copied in the design of other stations, notably the Union Station at Washington, D. C. and the C. & N. W. Station in Chicago. The statement is frequently heard that the Union Station is outgrown and overburdened with traffic and for that reason a new station will soon be required. On the contrary the station is not used to anywhere near capacity as evidenced by comparison with the South Station in Boston; other comparisons might be made, but it is thought this comparison, with the city most nearly equal in size to St. Louis, will suffice.

	No. of Tracks	Trains per Day	Max. Trains One Hour
St. Louis Union Station	32	269	50
South Station, Boston	28	660	87

The North Station in Boston handles over 420 trains per day on 23 tracks and is also subject to the interference of a drawbridge. The number of passengers handled annually in the three stations are as follows:

South Station, Boston	45,000,000
North Station, Boston	30,000,000
St. Louis Union Station	25,000,000

Although the Union Station as a whole is entirely satisfactory it is deficient in certain operating features both from the standpoint of the railroads and the public, the following being the more important of the criticisms offered:

(a) The surroundings are unsightly and the street and street railway approaches are inadequate.
(b) The balloon type train shed is hot in Summer, cold and damp in Winter, smoky, dark and dirty.
(c) The midway is too narrow.
(d) The platforms between tracks are too narrow.
(e) The station tracks are too short and the curves connecting the station tracks to the approach tracks are too sharp.

The first of these objections will be largely overcome by a plan proposed by the city for the widening of streets and the creation of a plaza adjacent to the station. The second can be corrected by the replacement of the present balloon shed by sheds of a Bush or umbrella type. The midway can be widened by taking away some of the space from the ends of the tracks. It is proposed to widen the track platforms by the acquisition of additional property to the west of the station.

The most formidable feature of the recommendation involves the lengthening of the track by moving the entire body of tracks in the Mill Creek Valley further south of the station. This plan also has the advantage that it would provide space that is urgently required for a passenger train yard immediately adjoining the station and the correction of the inadequacies in baggage, mail and express facilities, engine house facilities, etc.

The report goes into considerable discussion of the developments of suburban service which is now subject to a serious handicap because of the fact that the Union Station is a mile from the business district of the city. It is proposed to correct this by the construction of a suburban station fronting on Market street in the vicinity of Eighth street.

Elaborate Study of Freight Traffic

Probably the most important feature of the investigation made by the Engineers' committee was the exhaustive study made of a movement of carload freight through the St. Louis-East St. Louis terminals. In connection with this, more than 500,000 car records were consulted from which tables and graphic diagrams were prepared to show the

Summary of Average Number of Days Consumed in Handling Through Carload Freight via Terminal Lines from Arrival in to Departure from St. Louis District and Local Freight until Set at Industry.

Through Movement	Via Eads	Via Merchants	Via Wiggins
From east side lines to west side lines	3.1	2.6	2.8
From west side lines to east side lines	3.0	3.1	2.9
From east side lines to east side lines	.	3.1	3.3
From west side lines to west side lines	.	2.5	3.1
Average Through Movement About Three Days			
Local Delivery			
From east side lines to west side lines	3.6	3.1	3.5
From west side lines to east side lines	4.0	5.5	3.8
From west side lines to west side lines	3.8	3.8	3.9

Average local deliveries about four days.

freight routing for all the railroads. In addition, a time study was made of the car movement, a total of 3,548 cars being selected at random for the purpose of determining the time that was required for the cars to pass through the terminals. The results of these studies are given in the table at the bottom of the preceding page.

The freight traffic studies were made for the month of October, 1920, this being the last normal month prior to the commencement of the study. The volume of business handled that month is given in the table below:

NUMBER OF CARLOADS OF FREIGHT HANDLED IN OCTOBER, 1920

	East Side	West Side	Total
Through carload brought in by all lines for through movement	60,201	20,030	80,231
Cars loaded at freight houses	6,060	10,724	16,784
Cars loaded at industries and team tracks	15,356	13,827	29,183
Cars unloaded at freight houses	5,723	5,823	11,546
Cars unloaded at industries and team tracks	2,838	30,970	53,808
	110,178	80,374	190,552

NUMBER OF LOADED AND EMPTY FREIGHT CARS CROSSING MISSISSIPPI RIVER AT ST. LOUIS BASED ON OCTOBER, 1920, BUSINESS

	Carloads	Empty cars
Eastbound	41,584	31,832
Westbound	51,032	0,828
Total	92,616	52,660

Careful studies were made of the manner of handling cars which indicated that there was a large amount of lost motion and duplication of effort. Thus, except for freight handled over direct connections between railroads and live and perishable freight, all interchange freight handled by the intermediate switching agencies is classified at least three times. This work is done in over 40 freight yards which are so located that there is a great deal of excess engine and car mileage in back hauls and much delay on account of railroad grade crossings and interference with and by through movements, local switching and passenger trains.

In order to eliminate unnecessary classifications, and unnecessary mileage, and to minimize delays, the committee recommends that the present system, under which railroads classify cars in their own yards for direct connections and for clearing cars for other connections through the Madison yard, the Wiggins yard, and the East St. Louis yard of the Terminal Railroad Association, be changed and that there be substituted therefor direct transfer movement between outer classification yards and the individual railroads. As there is not a sufficient number of cars interchanged each day between each railroad and every other railroad to warrant a direct movement in every case, the committee recommends the assembling of interchange business in several outer group yards. All cars brought in by any road for delivery to any other road would be placed on the receiving tracks of the appropriate group yard.

The management of the group yard, which might be controlled by those roads using the group yard, would classify cars brought in by all roads on to classification tracks for direct delivery to every other railroad. By grouping roads conveniently located in group yards, interchange freight could be handled in solid transfer movements without going through intermediate clearing yards as at present, thus saving one interchange and one classification of a large portion of the cars now handled by the Terminal Railroad Association. It is thought that the present average time of three days for through cars and four days for local cars can be reduced to one-half this time by such grouping and direct delivery.

The committee does not propose that entirely new group yards be constructed. Locations have been suggested where railroads now have at least the nucleus of such yards, and in some cases nearly ample facilities. It is intended that present facilities shall be modified and developed to suit the proposed grouping, with such additions as may be necessary.

In the St. Louis-East St. Louis District less than carload freight is handled by 20 railroads in 25 l.c.l. railroad freight stations, some of which are located in St. Louis and others in East St. Louis. Nine east side lines have no freight stations in St. Louis, but handle l.c.l. freight in stations at the ends of their lines on the East St. Louis river front and in off-track stations in St. Louis. This latter is true of the four east side lines having freight houses on both sides of the river.

The amount of l.c.l. freight handled by the railroad freight houses during the week of October, 18 to 23, 1920, is given in the following table:

	Tons
St. Louis freight houses—inbound	4,[illegible]
St. Louis freight houses—outbound	1,932
East St. Louis freight houses—inbound	3,446
East St. Louis freight houses—outbound	7,792
Total l.c.l. freight	27,169

The chief problem with respect to l.c.l. freight in the St. Louis-East St. Louis District relates to the improvement of facilities for the business of the so-called East Side lines, having origin or destination on the west side of the river. This may be developed by various methods which together with others that have been considered are outlined as follows:

(1) Through the individual freight stations in East St. Louis or St. Louis as the case may be.
(2) Through universal on-track freight stations.
(3) Through individual on-track freight stations of each railroad to be provided on each side of the river at various locations, and immediately adjacent to the central business district.
(4) Through the present freight stations and individual on-track freight stations located in St. Louis as close to the business district as practicable, and so close together as to form practically a joint universal station, receiving and delivering freight at certain designated doors for each railroad.
(5) Through universal off-track freight stations of the various transfer companies.

It is apparent from a study of the present conditions that the first plan will not suffice and must be supplemented by other arrangements. The second plan is not recommended because of the experience with the Terminal Association freight house at Tenth street, St. Louis, which handles only a negligible percentage of the freight to and from the city.

The third plan, that of individual on-track freight stations of each railroad is dismissed because it would add an enormous overhead charge to the business handled. The same decision was reached with respect to the fourth plan after a detailed study for the development of an area between Broadway and the river providing for individual houses of each railroad in a sort of group terminal. The conclusion is that, under present conditions, there would not be sufficient economy nor advantage to the St. Louis shippers or to the east side railroads to justify the construction at this time of St. Louis freight houses for the east side lines. However, if it should be found in future that the development of air rights above freight stations in St. Louis by the construction of multiple story commercial buildings would carry all or a considerable portion of the fixed charges of the freight stations, less saving would be required to justify such a step than if the saving had to carry the entire fixed charges.

Off-Track Stations Recommended

The report draws particular attention to the popularity of the off-track freight station in St. Louis, Mo., to serve the railroads maintaining freight stations on the east side of the river. The east side railroads have arranged with the transfer companies to dray the freight across the river, absorbing their charges and recognizing their off-track stations as the St. Louis freight stations of the east side lines. There are about 20 public transfer companies whose charges between the east side freight houses and the west approach to Eads Bridge are absorbed by the railroads, but only three operate off-track freight stations and are recognized by the railroads in the application of rates to and from such stations.

In the committee's opinion the principle of off-track uni-

versal freight stations is correct, and the facilities should be developed in St. Louis. The system presents the necessary element of flexibility which lends itself to a city whose street traffic is congested and whose commercial industrial districts are widely distributed.

The system promotes the short haul of less than carload freight and the accumulation of such tonnage into lots which can be moved with greatest economy and dispatch to and from the rail haul.

The Engineers' committee responsible for this report consisted of the following: Harland Bartholomew, engineer, City Plan Commission of St. Louis; P. W. Coyle, traffic commissioner, St. Louis Chamber of Commerce; E. A. Hadley, chief engineer, Missouri Pacific; J. B. Hunley, engineer, bridges and structures, Cleveland, Cincinnati, Chicago & St. Louis; R. D. Sangster, industrial commissioner, St. Louis Chamber of Commerce; C. E. Smith, consulting engineer for City of St. Louis; F. J. Stimson, chief engineer maintenance of way, Southwestern region, Pennsylvania Lines; D. O. Freight Car Loading

WASHINGTON, D. C.

THE NUMBER OF CARS loaded with revenue freight showed another large gain during the week ended June 24 to a total of 877,856, as compared with 775,447 during the corresponding week of 1921 and 911,503 in the corresponding week of 1920. The gain over the preceding week was 17,084 cars and the fact that unusually large increases had been shown in earlier weeks indicates that instead of holding back freight to await the 10 per cent reductions in freight rates on July 1, as had been considered probable, some shippers may have hastened their shipments because of the threatened railroad strike. The loading of coal during the week of June 24 was 96,960 cars, which was the largest since the coal strike began on April 1, but the total car loading was 102,000 cars greater than during the corresponding week of last year and only 33,000 cars less than in 1920 in spite of the fact that coal loading was 59,061 cars less than in 1921 and 98,539 less than in 1920. Increases as compared with last year were shown in all districts and in all classes of commodities except grain and grain products.

The Car Service Division has published the accompanying chart comparing the cumulative car loading from January 1

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS. COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JUNE 24, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L.C.L.	Miscellaneous	Total revenue freight loaded: This year 1922	Corresponding year 1921	Corresponding year 1920

Revenue Freight Car Loadings Up to June 24, 1922

to June 17 this year with that for the preceding four years. This shows that the loading this year, nearly 18½ million cars, considerably exceeds that for last year or 1919, but, mainly owing to the light coal loading during the strike, is below that for 1918 or 1920. The year 1920 exceeded the

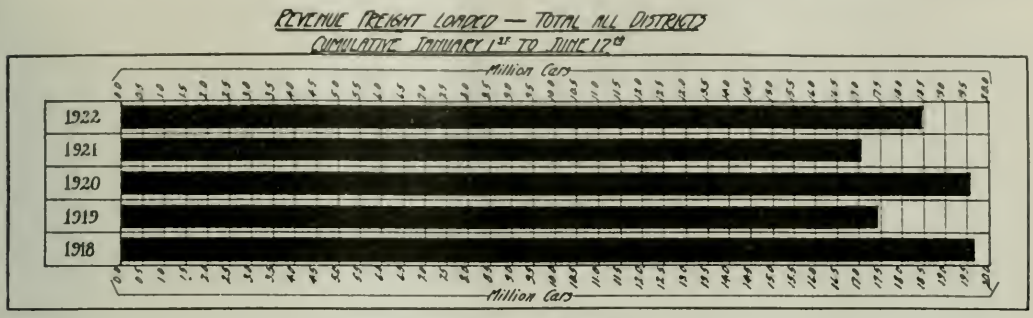

Chart Showing Increased Traffic in 1922

year 1918 but the loading for the first part of the year was somewhat less than that of 1918 because of the switchmen's strike. The Car Service Division is planning to issue a bulletin presenting such conclusions as may be safely approximated by way of estimates from the experience of previous years as to what the trend of car loading is likely to be for the balance of this year and what conditions may be expected in the way of car supply to meet the requirements.

The number of bad-order freight cars was reduced from 15 to 14.6 per cent of the total from June 1 to June 15, according to the semi-monthly report of the Car Service Division. The number was 332,681, of which 268,305 required heavy repairs.

Coal Loadings Elimination Fails to Hurt Big Four

Traffic Received from Connections Increases Sufficiently to Balance Effect of Strike

THERE ARE at present two factors of leading interest in Big Four operations. One is the gradually improving position of the property from a traffic and earnings standpoint. The other is the peculiar effect the coal strike is having on Big Four operations; in spite of the fact that not a single coal mine on its own lines is in operation, the road is benefiting from the shutdown of the union mines because of the volume of non-union coal which is being received from connections.

The improvement in the Big Four's position is one of the interesting developments in the New York Central System. The Big Four in recent years has been showing somewhat the same favorable results of the parent company; and its progress, except for the difference in degree, has not been unlike that of its sister company, the Michigan Central. The Big Four had a standard return for operations during federal control of approximately $10,000,000. In 1918 it earned for the government nearly $15,000,000; in 1919, about $13,000,000. In 1920 it did not do so well, but its net after rentals for the year of about $8,500,000, after charges made to maintenance equalization reserves, was not at all bad considering 1920 conditions. In 1920, also, the Big Four fared rather well during the last four months of the year, its net railway operating income for that period being over $5,000,000.

In 1921 the road's net after rentals was $10,000,000, thus putting the Big Four practically on a pre-war or standard return basis in spite of the falling off in traffic by which 1921 was unfortunately characterized. The Big Four's corporate net in 1921, according to the recently issued annual report, was $2,326,617; this compared with $5,323,339 in 1920.

The road pays five per cent on its preferred stock, the dividends amounting annually to $499,925. The figure of corporate net is after the deductions of these dividends. Under the conditions as a whole and even with the fact that the 1921 corporate results were not as good as the 1920, it is not to be wondered that the directors should have decided in May to declare a dividend on the common stock of two per cent. This is the first dividend disbursement on the common stock since September, 1910.

Only 4 Cars of Coal Reported Loaded Since April 1

Since the beginning of the coal strike the road has loaded only four cars of coal, one car being reported for the week ending April 8 and the other three for the week ended June 17. At this time last year the road was loading from 2,000 to 2,300 cars weekly. In spite of this fact, the Big Four has been showing improved results since the strike. In April, for instance, it handled 435,682,000 net ton-miles of freight (including revenue and non-revenue) as compared with 412,843,000 in April last year. For the first four months of 1922 its total net ton-miles were 2,065,554,000 as compared with 1,788,008,000 last year. Further, in April the road had a net after rentals of $1,016,441 as compared with $204,517 in April last year. For the first four months its total was $4,526,507 as compared with $1,290,215. It had an operating ratio in April of 73.90; for the four months of 74.60.

In March, when it was moving coal in anticipation of the strike, it got its ratio down to 66. The reason for these favorable figures in spite of the elimination of its coal loadings is to be attributed to the increase in the volume of other traffic due to reviving industrial conditions, but primarily to the large volume of coal traffic received from connections,

notably the Louisville & Nashville. For the purpose of putting this in more graphic form, the following figures of coal loadings, total loadings and cars received from connections are given. The figures selected are those of the third week in each of the last four months.

Week ending	Coal loadings		Total loadings		Received from connections	
	1922	1921	1922	1921	1922	1921
March 18.....	4,115	2,182	12,267	9,476	17,822	14,142
April 15.....	0	1,667	8,592	9,299	14,684	13,100
May 20.....	0	2,307	9,033	10,090	20,737	14,795
June 17.....	3	2,089	9,543	10,049	22,255	14,161

Coal from L. & N. Big Factor

The Louisville & Nashville is one of those roads which has benefited greatly from the coal strike, this being because it serves an extensive and as yet but partly developed non-union area in eastern Kentucky. Its loadings for the past several weeks have been running over 12,000 cars weekly. There have been one or two recent weeks that the loadings have run over 15,000 cars, whereas at this time last year Louisville & Nashville coal loadings were running less than 10,000 weekly. A large share of this traffic is turned over to the Big Four for movement northward from Cincinnati and from Louisville. The Big Four, therefore, in spite of the elimination of the coal mining on its own lines, is not being hurt by the strike, and in spite of the fact that it serves union fields, is being helped quite considerably by the movement from the non-union fields.

The Big Four has a rather diversified tonnage. There has been a tendency towards an increasing movement of coal and in recent years the proportion of coal has run about 50 per cent of the total tonnage. The road participates in the movement of perishable products eastbound from St. Louis and holds its own in this traffic. One of the characteristics of the road is its large amount of interchanged traffic which is a natural result of its location. The coal which the Big Four lines originate is received in Indiana and Illinois. The road serves 50 mines in Illinois and 25 in Indiana including 20 on the Evansville, Indianapolis & Terre Haute, a controlled property (since November 1, 1920) but separately operated. The coal which is received from the Louisville & Nashville reaches the Big Four at Cincinnati and Louisville. From Cincinnati the larger part of the movement is to the west and northwest to Chicago, or to Detroit, Toledo, Cleveland, etc. That received at Louisville is mainly destined to Chicago. The Big Four normally does not move a very large amount of coal to Lake Erie ports for lake movement.

The 1921 Results

In 1921, as was noted, the Big Four had a corporate net after the preferred dividends of $2,326,617. On December 31, 1921, it had a profit and loss credit balance of $18,885,959. The distinguishing features of operations during the year were not quite typical of those of most of the country's railroads. There was a reduction in revenue tons and a reduction in revenues, but the reduction in operating expenses was less than the reduction in revenues which is unusual as compared with the results shown in 1921 by most other lines.

The revenue tonnage in 1921 was 30,043,632 as compared with 38,513,685 in 1920, a reduction of 8,470,053. About one-half of the decrease was in the tonnage of bituminous coal. The freight revenue in 1921 was $56,289,898, a reduction of $4,535,557. The 1921 total operating revenues were $79,793,593. These compared with $88,862,078 in 1920, the reduction being $9,068,485. The Big Four in 1920 charged off certain sums for equalization of maintenance, the larger part of which is credited in 1921. It is not necessary to emphasize this factor particularly, because reference to similar procedure has already been made in the reviews which have appeared in these columns of the New York Central and Michigan Central annual reports. However, it should be noted that the charges made to equalization of maintenance of way in 1920 were $2,057,145, and to maintenance of equipment $658,740. Excluding these maintenance reserves and their credits in 1921, the operating expenses for the latter year were $66,597,189. This amount was $5,322,196 less than in 1920.

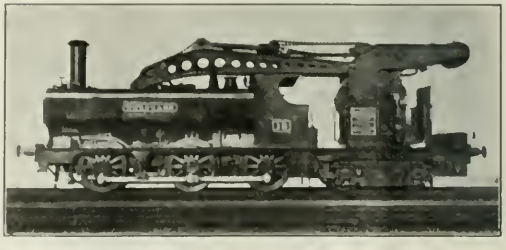
There was an actual increase of $1,398,578 in maintenance of way expenses. The reduction in maintenance of equipment was only $783,981, the 1921 figure being $18,513,988. The transportation expenses in 1921 were $33,005,071, a decrease of $6,025,788. The reason for the comparatively smaller decrease in expenses as compared with the decrease in revenues is not in evidence from the annual report. In-so-far as concerns maintenance of equipment, it to be noted that on June 15 the Big Four had a percentage of bad-order cars of 18.1, which appears to be rather high.

Big Four operating statistics naturally show the effect of the falling off in traffic. In 1921 the road's revenue train load was 707 tons as compared with 799 in 1920. Its average car load was 27.1 as compared with 28.8. The road in 1921 had an average haul of 177 miles, 1.5 miles less than in 1920. Its revenue traffic density in 1921 was 2,232,219 as compared with 2,871,527 in 1920.

Improvements

The Big Four, in common with the other parts of the New York Central, has in recent years made large expenditures for the physical improvement of the property. In 1921 it completed double tracking work as follows: Columbus, Ohio, to Avenue, 4.3 miles; Briar, Ind., to Beech Grove, 9 miles; Augusta, Ind., to Whitestown, 11 miles; Templeton, Ind., to Swanington, 6 miles; Winchester, Ind., to Farmland, 9 miles. Some of these projects are to assist in handling increased traffic, others include relocations and grade revisions to permit heavier tonnage. In one case the project permits adding 500 tons to the train load behind the heavy Mikados.

Work under way or contemplated includes a second track from Farmland to Muncie, 10 miles. At Delaware, Ohio, a 3½-mile single track cut-off is planned for the purpose of grade reduction and to save 2½ miles for through trains on the Cleveland division between Columbus and Galion. In connection with this grade revision work it is worth noting that the Big Four in the last 12 years has spent something like $60,000,000 to $70,000,000 for grade revision. Other Big Four projects include the grade separation and station work at Indianapolis, engine terminal facilities at Ansonia, Ohio, and Sheff, Ind. The road has recently installed automatic signals on the new double track line between Galion, Ohio, and Berea. It is hardly necessary to say much concerning the large increases made in recent years in the way of equipment. The New York Central Lines, as a whole, have accomplished a great deal in this respect and the Big Four has played its part in the whole situation.



A Combined Locomotive and Crane

Designed by C. b. Collett, chief mechanical engineer of the Great Western of England. Tractive effort 17,410 lb., lifting capacity 6 tons at 18-ft. radius, or 9 tons at 12-ft. radius.

Effect of Tonnage and Speed on Fuel Consumption*

Ton Miles Per Hour Affects Fuel Rate; Economical Tonnage For Various Speeds, Effect of Grade and Car Weight

By J. E. Davenport
Engineer, Dynamometer Tests, New York Central

THIS DISCUSSION touches the subject of the economic train load or train speed purely from the standpoint of fuel. Admitting that many times other operating conditions, or costs, or returns, finally settle the question of train load, it is altogether fitting that this association approach the discussion with entire attention directed toward the fuel consumption. The tonnages referred to herein are gross tons of 2,000 lb., not adjusted tons.

A train hauled by a locomotive is a unit made up of two components. The first component, the locomotive, is a machine capable of exerting a maximum drawbar pull at low speeds, and capable of producing a maximum dynamometer horsepower output at some higher speed dependent upon its dimensions (in the case of the modern Mikado this speed is around 30 miles an hour), but in terms of useful work per unit of fuel consumed the maximum efficiency is neither at the maximum dynamometer pull nor the maximum dynamometer horsepower. A modern Mikado type locomotive capable of exerting a dynamometer pull of some 60,000 lb. at speeds below eight or ten miles an hour, and a dynamometer horsepower of some 2,500 at speeds in the neighborhood of 30 miles per hour, shows its maximum efficiency from the fuel standpoint while producing a dynamometer horsepower output in the neighborhood of 1,400, and this output may be produced at any operating speed above approximately 10 miles per hour. The second component, the train, is a machine capable of being hauled most efficiently, as expressed in terms of resistance to hauling, at the lowest possible speeds and in car units of the highest possible weights which can be placed on four-wheel trucks. This statement may need modification when more knowledge is at hand concerning resistance of cars equipped with other than four-wheel trucks. The great number of variables entering into the makeup of the train unit indicates the reason that the question of economic train load is one so difficult of ready solution in all its phases, including the fuel rate. The most efficient fuel performance occurs somewhere between the most efficient locomotive performance and the most efficient train haulage performance.

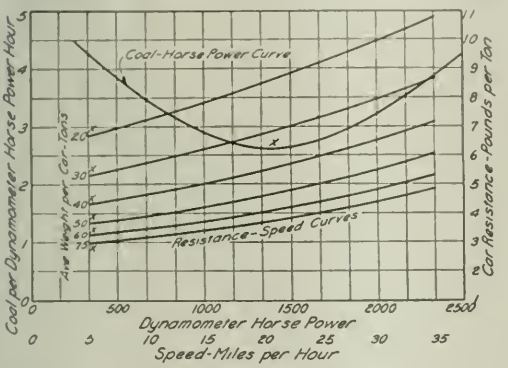


Fig. 1—Relation of Locomotive Fuel Consumption and Train Resistance to Train Speeds

The foregoing roughly expressed generalities are shown graphically in Fig. 1. That portion of each curve marked with an X indicates the most efficient point of operation as related to that component of the train unit.

There are, possibly, many methods of arriving at the relation of load and speed to fuel consumption of which the following is suggested for your consideration. Two commonly accepted principles form the foundation of this method: First, the locomotive component of the train unit develops useful power related definitely to the fuel consumed. Second, the train resists haulage in terms related definitely to the grade, including curvature, speed and weight of the individual cars.

The production of useful power and its relation to fuel consumption is shown in Fig. 2, wherein the dynamometer horsepower developed is plotted against the coal consumed per hour. The curves are plotted from figures developed at the Pennsylvania and University of Illinois locomotive testing plants and represent the most reliable information obtainable on locomotive performance. It will be noted that at the point of maximum horsepower output the coal consumption increases most rapidly with each unit of power produced. The resistance to haulage is shown in Fig. 1. These curves are reproduced from the University of Illinois studies on Freight Train Resistance. The values shown therein were substantially checked by the writer several years ago, and it is felt under average conditions these curves are entirely acceptable as a measure of car resistance.

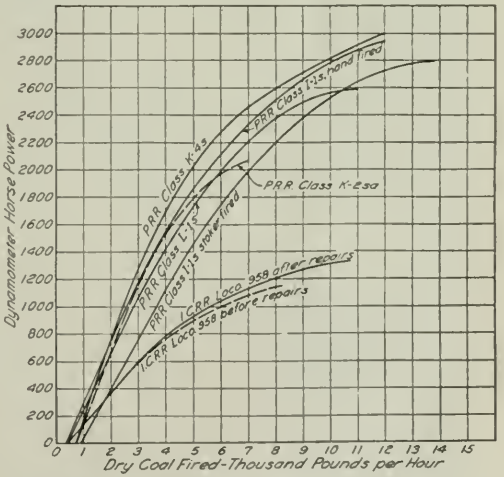

Fig. 2—Showing the Increasing Rate of Fuel Consumption in the High Ranges of Horsepower Output

Using the Pennsylvania Class L1s Mikado tests reported

*Abstract of a paper presented before the International Railway Fuel Association, Chicago, May 22, 1922.

in Bulletin No. 28. Figs. 4, 5, 6, 7 and 8 are submitted, showing in each case the consumption rates while the locomotive is working steam. Fig. 3 shows the relation between speed and coal as fired per thousand ton miles behind the tender with cars of 50 tons gross weight on tangent level track under the development of 40, 50, 60, 70 and 80 thousand ton miles per train hour, indicating a reduced fuel consumption at a set speed with increased ton mile production and a rapidly increasing consumption at a set ton mile production with an increase of speed.

Fig. 4 shows the relation between speed and coal as fired per thousand ton miles behind the tender with cars of 50 ton gross weight for trains of varying weight on tangent level track. These curves indicate that for each weight of train there is a speed of minimum fuel consumption; the lighter the train the higher this speed. Also they indicate the rapid increase of consumption with increase of speed beyond the point of minimum consumption; the heavier the train the more rapid the increase in consumption. It is interesting to note that the 2,000-ton train and the 8,000-ton train consume the same amount of fuel at 22 miles per hour, but by operating the 8,000-ton train at 11 miles per hour its coal consumption may be reduced to 75 per cent of the minimum possible with the 2,000-ton train.

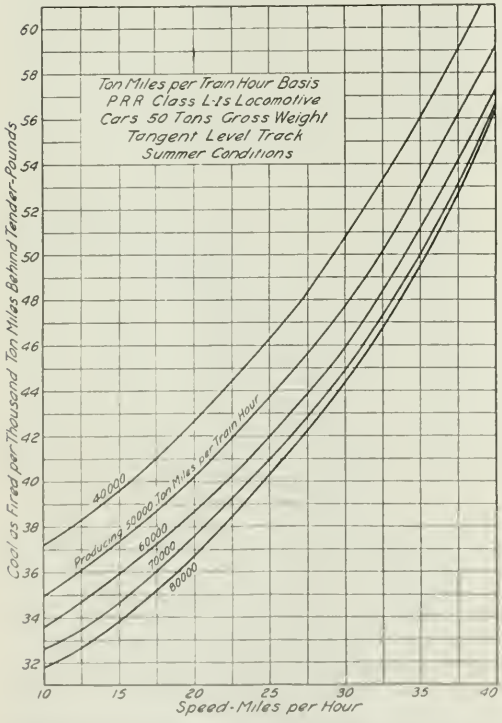

Fig. 3—Relation of Speed to the Ton-Mile Fuel Rate for Various Rates of Ton-Mile Output

Fig. 5 shows the relation between train load and coal as fired per thousand ton miles behind the tender with cars of 50 ton gross weight, operating at various speeds on tangent level track. These curves locate 20 miles per hour as the most economical speed for a train of from 2,000 tons to 2,500 tons, 15 miles per hour for trains from 2,500 to 6,000 tons and 10 miles per hour for trains from 6,000 to 8,000 tons, these economic speeds of course would be altered slightly had other individual speed lines been shown. These curves indicate that for 10 miles per hour operation the train tonnage should be over 8,000 tons for minimum consumption; for 15 miles per hour operation, between 7,000 and 8,000 tons; for 20 miles per hour operation, 4,500 to 5,500 tons; for 25 miles per hour operation, around 4,000 tons; for 30 miles per hour operation, slightly under 3,000 tons; for 35 miles per hour operation, slightly under 2,500 tons; and for 40 miles per hour operation, something less than 2,000 tons.

Fig. 6 shows the relation between speed and coal as fired per thousand ton miles behind the tender with 40 cars of 50 tons gross weight (2,000 ton train) on tangent level track and tangent grades of .1 per cent, .2 per cent, .3 per cent, .5 per cent, .8 per cent and 1 per cent. These curves emphasize the effect of speed and grade on fuel consumption and indicate that the heavier the grade, the less the speed at which minimum fuel consumption may be expected. For example, the minimum rate on a 1 per cent grade is 199 lb. per thousand ton miles at 8 miles per hour, and on level track 42 lb. at 18 miles per hour. Also it requires 10 per cent more fuel at 14 miles per hour on a 1 per cent grade than at 8 miles per hour.

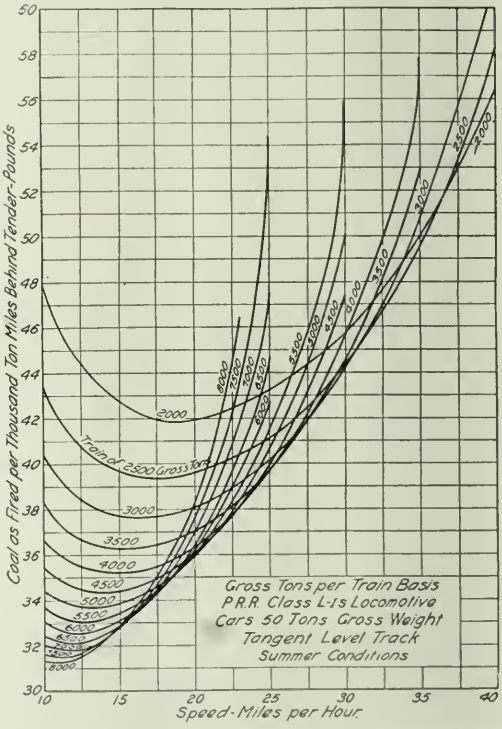

Fig 4—Speed-Fuel Rate Characteristics of Trains of Various Weights

The foregoing charts having dealt with cars of 50 tons gross weight, a figure close to the average for eastbound loads on trunk line roads, Fig. 7 is produced to indicate the relation between speed and coal as fired per thousand ton miles behind the tender for the empty car return movement, cars of 20 tons gross weight, on tangent level track. These curves indicate the same relation as with the loaded cars: a minimum consumption for each train weight at some definite

speed, the lighter the train the higher the speed. They also indicate that for operating speeds between 10 and 20 miles per hour a train of 150 cars shows the most economical performance, between 20 and 24 miles per hour, trains of 125 cars; between 24 and 30 miles, trains of 100 cars, between 30 and 36 miles, trains of 75 cars, and between 36 and 40 miles per hour, trains of 50 cars. Comparing the minimum consumption of 2,000 ton trains in Figs. 5 and 8, it is noted that the empty car train requires 60 per cent more fuel than the loaded train. This indicates the importance of the empty car movement in any fuel economy program.

Practical Application

Using recent dynamometer car tests with a 4-8-2 type locomotive, computing the train resistance established for level

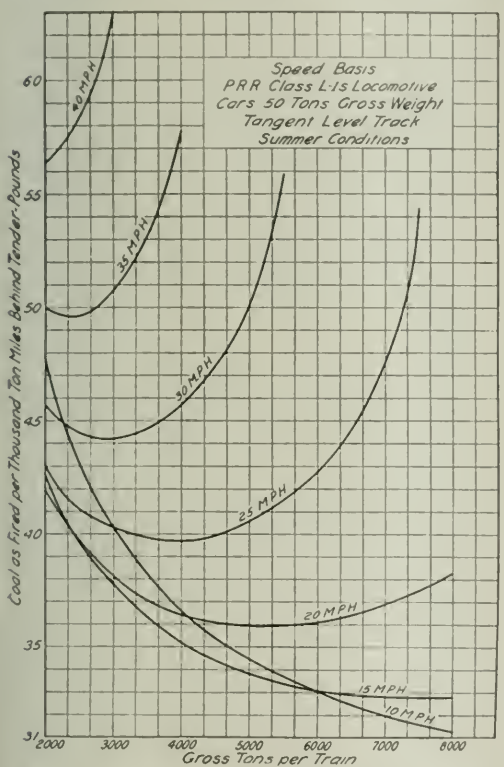

Fig. 5—Curves Showing the Economical Tonnages for Various Operating Speeds

tangent track and relating this figure to the actual average dynamometer pull recorded, there is located what might be termed the equivalent grade for this territory. In Fig. 8 there is plotted the relation between the coal as fired per thousand ton miles behind the tender and speed for trains of cars of 35 tons weight, and trains of cars of 55 tons weight, both sets of curves making use of the equivalent grade figure of .06 per cent. The trains shown in the upper group, i. e., of 35 ton car weight, represent trains falling in the fast freight service and trains in the lower group, i. e., of 55 ton car weight, represent trains falling in the slow freight service.

Analyzing the operation from the curves shown in Fig. 8 for the period of 1921, covering the five summer months, in the fast freight service an average load of 2,675 tons was handled at an average operating speed of 19½ miles per hour, and in the slow freight service an average load of 5,750 tons was handled at an operating speed of 15 miles per hour. This fast freight service from the foregoing analysis shows the coal consumption of 76.6 lb. per thousand ton miles and the slow freight service a coal consumption of 54 lb. per thousand ton miles, showing an increase of 41 per cent in fuel for the fast freight service over the slow freight. A

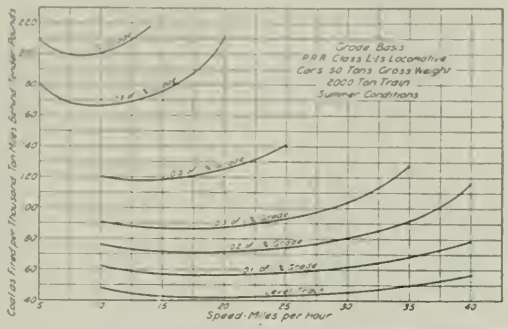

Fig. 6—How Grade Affects the Relation Between Speed and Unit Fuel Consumption

similar check of a different class of power in another territory, indicating an equivalent grade of .085 per cent, shows a coal consumption of 84 lb. per thousand ton miles in fast freight service and 63 lb. in slow freight, or an increase of 33 per cent in fuel in the handling of fast freights, which increase results from the combination of a higher speed, lighter train load and lighter individual car weight.

Many errors are made by the yard forces in computing the size of the individual train in both fast and slow freight trains. These errors in numerous cases on the slow freight side amount to as high as 20 per cent in the tonnage ordered and on the fast freight side running at times to 15 per cent.

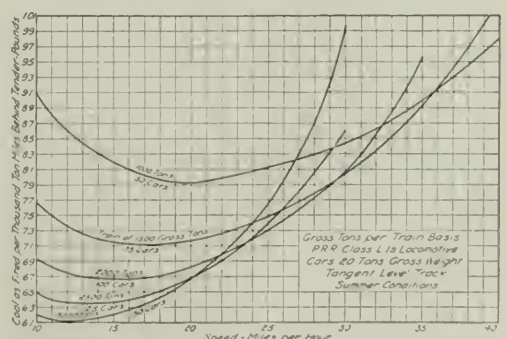

Fig. 7—Speed-Fuel Rate Characteristics of Trains of Light Weight Cars

When errors of this nature produce a train heavier than is ordered the resultant will produce a more economical coal consumption since the operating speed in this service is from 14 to 20 miles per hour. However, when the error results in an underload of from 10 to 15 per cent the increase in the operating speed of this particular unit will result in an increased coal consumption as high as 10 per cent or 12 per cent.

Conclusion

The method outlined herein for ascertaining the relation between train load, speed and fuel consumption is suggested as possible for practical application for use during that portion of freight train movement while the locomotive is using steam. The fuel consumption during that portion of the run while the locomotive is drifting and during the delay periods must be computed in a different manner, and from the locomotive test plant results will amount to from 300 to 900 lb. per hour, depending upon the class of locomotive and method of firing. It is evident that local operating conditions will in each case govern the ratio of the portions of the run during which the locomotive is using steam and hauling the train and during which the locomotive will be consuming coal at this lesser figure, or in other words the relation between train load, speed and fuel consumption varies in each territory and each direction and can best be solved by local studies. Assuming the foregoing proposed method as containing a fair amount of merit, the conclusion is reached that for each weight train in each direction there will be a definite speed at which the minimum coal consumption will result, and with speeds either higher or lower than this definite speed there will be an increase in coal consumption. Generally speaking the handling of heavier cars and heavier trains and operation at moderate speeds will greatly assist in reducing the fuel bills.

Fig. 8—Application to a Typical Operation on .06 Per Cent Equivalent Grade

The following is an abstract of a written discussion presented by E. E. Ramey (B. & O.):

As the subject indicates, the effect of train load and running speed on unit fuel consumption alone has been considered in the paper, and the conclusions are given in pounds of coal per 1,000 gross ton-miles. It is also fairly general practice to measure the wage performance in freight service on the basis of some such unit as gross ton-miles per hour of crew time or wage cost of train and engine crews per 1,000 gross ton-miles, and it is not inappropriate to attempt a combination of the fuel and wage costs, which are the controlling factors in the cost of producing ton mileage, and to use the combined fuel and wage cost as an indicator of the trend of the actual unit cost of the movement of traffic.

In practice this may be done currently by the compilation of a running daily and cumulative record of the performance of similar trains and groups of trains arranged as the particular operating conditions may render desirable. Comparison of the performance day by day of specific engine runs or operating divisions with good previous performances and with properly established standard performances will indicate the trend of the unit expense of moving the traffic.

To illustrate the position here taken, Table I has been prepared on the basis of Fig. 4 of Mr. Davenport's paper. In addition to these specified conditions, the following assumptions have been made in order to incorporate the wage factor:

(a) Locomotive run of 100 miles for mikado locomotives.
(b) Terminal and road delays amounting to a total of three hours per trip.
(c) Train and engine crew wages of $27.32 for eight hours or 100 miles with overtime at the rates generally in effect.
(d) Cost of coal on tenders, $5.00 per ton of 2,000 lb.
(e) Consumption of coal during the three hours of delay at the rate of 750 lb. per hour.
(f) Crew time used in estimating the wage and fuel expense.

The general indication of the table for the conditions assumed, is that the wage factor predominates to the extent that the running speed for the lowest unit cost of wages and fuel combined is practically identical with the running speed for the lowest unit cost of wages alone. This running speed is 20 miles per hour under these conditions.

The running speeds for the lowest unit cost of fuel under the specified conditions vary from 19 to 20 miles an hour for a train of 2,000 tons to 12 miles an hour for a train of 6,000 tons. This would indicate a material variation for the heavier trains between the running speed of lowest unit fuel cost and that of lowest unit cost of wages and fuel combined.

In a general way it would appear that for the trains of

TABLE I—COMBINED COST OF FUEL AND WAGES PER 1,000 Gross Ton-Miles for Trains of 2,000 tons to 6,000 Tons

3,000 gross tons or more, reduction of delays will cause the running speed of lowest unit wage cost to approach the running speed of lowest unit fuel cost, resulting in a cumulative lowering of the combined unit cost. It appears that for the trains of less than 3,000 the running speed for the lowest possible combined unit cost is around 20 miles per hour. It should be kept in mind that the table and these conclusions are based upon the condition of tangent level track.

It appears to be entirely practicable for the interested local operating officer to advantageously apply the principle here outlined to the particular conditions surrounding his operation or at least to the portion covered by regular runs which vary only slightly in character. Such an application for use as a standard of performance for specific locomotive runs would only require the establishment of the so-called equivalent grade of the run and the stating of the other controlling conditions from observation of the possibilities of the particular operation.

Central of Georgia Perishable Traffic Big Factor

Corporate Deficit in 1921 of $979,814, Net Railway Operating Income $1,220,655

The Central of Georgia, all the common and preferred stock of which is owned by the Illinois Central, represents an extension of the latter's lines into Alabama and Georgia. As an Illinois Central property it reflects the same efficiency of operation which is characteristic of the parent company. One of the features of Illinois Central activity of late has been its work in the matter of public relations. The Central of Georgia has adopted similar plans in connection with this work. It has given it proportionately as great importance and it has been having marked success.

The Illinois Central and the Central of Georgia connect at Birmingham, Ala., but there is a large volume of traffic which moves through Atlanta, thence over the Nashville, Chattanooga & St. Louis, reaching the Illinois Central at Martin, Tenn. The Central of Georgia's traffic is rather diversified. About one-fourth its tonnage is bituminous coal, about 14 per cent lumber, and about 25 to 30 per cent, manufactures. The traffic of greatest interest, however, is perishables, notably peaches and watermelons. The company's lines serve the Georgia peach area and the company is said to be the largest originator of peach traffic of any road in the United States. The peaches originate in a restricted area, about 75 per cent being secured in a district of about 50 miles radius centering on Fort Valley or Marshallville. This area is gradually increasing in size. In June, 1921, there were on the Central of Georgia lines 7,443,000 peach trees of which 6,261,000 were bearing. The most important feature in connection with the peach traffic is the limited time in which it moves. It is confined to a 60-day period and the larger part of it to 30 days. During 1921 the Central of Georgia handled 8,170 cars of peaches moving under refrigeration. Of this it originated 7,619 cars and an indication of the restricted area from which the traffic is derived is given by the fact that of the total 7,192 cars moved from one division. The largest day's movement of peaches has been 544 cars.

The larger part of the peach traffic moves to Macon and thence to Atlanta. At the latter point it is delivered to the Nashville, Chattanooga & St. Louis for movement over that line to Martin, Tenn., where, as has been previously noted, it reaches Illinois Central rails. Some idea of the problem presented is conveyed by the fact that in the height of the season the company averages 41 trains daily, inclusive of passenger service, between Fort Valley and Macon. From Fort Valley to Atlanta is mostly single track protected by automatic block signals. The peach traffic is growing in volume and the estimates are that before many years it will exceed 10,000 cars a season.

The watermelon traffic is likewise heavy and much of it as well as other perishable traffic is received during the peach season. During the 1921 season the road originated 3,802 cars of watermelons and handled a total of 8,864 cars. The Central of Georgia also participates in the perishable traffic from Florida. It receives a large movement of pineapples from Cuba. Much of this traffic is received from the Atlantic Coast Line at Albany, Ga., and moves thence to Birmingham or Atlanta, where it is delivered to connections.

1921 Results

For the year ended December 31, 1921, the Central of Georgia reported a corporate deficit after fixed charges of $979,814. The five per cent dividends on its common stock and the six per cent on its preferred, all accruing to the Illinois Central, were paid, but from surplus. The 1921 deficit compared with a net income in 1920 of $1,516,707. The decrease was due to the fact that the road, operating on its own account, did not secure a net from operations as great as the corporation received in 1920 with the assistance of standard return for two months and guaranty for six. In 1920, also, it included in its income account an extra dividend of $40 per share amounting to $799,640 on the stock of its subsidiary company, the Ocean Steamship Company, whereas in 1921 it received from this source only the regular dividends.

The net railway operating income or net after rentals in 1921 was $1,220,655. This compared with a deficit after rentals in 1920 of $1,553,191. The standard return for the property was $3,408,809, so it will be seen that the road was unable to report its return to normalcy in spite of the marked improvement made in operating results.

The road at present, incidentally, is doing very much better than it did in the early part of 1921. Up to the end of April in 1921 it had reported a net after rentals of only $2,471. In the first four months of 1922 it had a net after rentals of $287,794. Its operating ratio for this period was 80.80. The improvement in net has not been due to increased traffic, as is indicated by the fact that in the first four months of this year it reported 401,121,000 net ton-miles (revenue and non-revenue freight) as compared with 452,990,000 net ton-miles in the first four months of last year. The road has been hurt to some extent by the coal strike, its coal loadings having fallen off from one-third to one-half. Coal, however, is not a very important factor on the Central of Georgia.

Referring again to the improvement in operating results in 1921 as compared with 1920, the facts are that the road suffered as between the two years a decrease of 13.3 per cent in revenue ton-miles. There was a decrease of 5.94 per cent in its freight revenues and a decrease of 12.06 per cent in its total operating revenues. The 1921 freight revenues were $13,565,644 as compared with $15,485,718 in 1920. The total revenues were $22,057,499 as against $25,082,288 in 1920, the decrease being $3,024,790. The decrease in operating expenses was $5,712,525 or 22.2 per cent, the

1921 figure being $20,020,845, and that for 1920, $25,733,367. In 1920 the road operated at a ratio of 102.6; in 1921 this was reduced to 90.77. In 1917, to take a pre-war example, the operating ratio was 68.93, all of which indicates that the Central of Georgia is not yet on a pre-war basis of earnings.

Analysis of the reductions in operating expenses shows that in 1921 as compared with 1920 maintenance of way expenses were reduced 30.22 per cent; maintenance of equipment, 23.56 per cent; and transportation, 22.3 per cent. The reasons for these decreases were the smaller amount of traffic, decreases in wages and material costs generally and in the case of maintenance, "to decreased expenditures for repairs," meaning presumably that there was less work done. A distinguishing feature was the saving in fuel due to an intensive campaign for fuel economy. The company estimates that by better performance it saved 91,265 tons or $350,999. Freight loss and damage was reduced $351,054 or 70.8 per cent.

Improvement in Physical Condition

Some interesting figures have been compiled relative to improvements in the Central of Georgia's physical characteristics in recent years. The road began the use of treated ties in 1912, having its own treating plant at Macon, Ga. By using creosoted ties it has reduced its annual tie renewals by 330,000. At present in main line and side tracks 55 per cent of the ties are treated. The road uses 90-lb. rail. In 1916 it had 121 miles of 90-lb. rail and in 1921, 354 miles. The improvement in rail condition is given in these figures: On December 31, 1916, there was in track 212,977 tons of rail with 1913.66 miles of line. On December 31, 1921, there were 227,556 tons of rail with 1914.4 miles of track, an increase of 14,579 tons in the five-year period. The improvement program has also included the replacement, insofar as possible, of timber trestles and there has been a large amount of ballasting. Another improvement is the new engine terminal at Columbus, Ga., costing about $750,000 which project has already been described in the *Railway Age*.

The Central of Georgia has made much out of the possibilities of public relations work. Its plan is patterned on that of the Illinois Central. The activities include contact with the employees through the magazine and through bulletin board announcements under the name of "talking points"; with the public through advertising; with the press by friendly contact. A great deal is done by means of personal contact with the shippers. The advertising deals with leading railway matters of interest to the public and the method followed is to have the advertising appear on the first day of the month in the case of all daily papers in the road's territory and in the first issue of the month for the weekly publications. The Central of Georgia has thus been able to tell the public its story forcefully and well and we understand that the resuts have been most favorable.

Iowa Withdraws High Tax Rail Valuation.—The state executive council of Iowa has announced that the $100,000,000 railroad tax case, involving all of the railroads operating in that state will be compromised out of court. Early last fall the railroads, believing that they were being taxed at from 79 to 84 per cent in excess of their actual value, brought injunction suits against the state executive council and 99 county auditors. Under the terms of the present agreement the state will rescind the valuation it placed upon the railroad properties and return to the taxation valuations used for the collection of the 1920 taxes. This agreement is $27,643,470 above that which was allowed by Federal Judge M. J. Wade who sustained the carriers injunctions restraining the state from taxing under its valuation.

Interchangeable Mileage Book Bill Passed by House

Washington, D. C.

The House of Representatives on June 29 passed the railroad mileage book bill which had previously passed the Senate, but with numerous amendments proposed by the committee on interstate and foreign commerce, and on July 1 the Senate concurred in the House amendments. The bill as passed by the House amends the interstate commerce act to direct the Interstate Commerce Commission to require, after notice and hearing, each carrier by rail subject to the act, to issue at such offices as may be prescribed by the commission, interchangeable mileage or scrip coupon tickets at just and reasonable rates, good for passenger carriage upon the passenger trains of all carriers by rail subject to the act.

However, the commission may, in its discretion, exempt from the provisions of this act, either in whole or in part, any carrier where the particular circumstances shown to the commission shall justify such exemption to be made. Such tickets may be required to be issued in such denominations as the commission may prescribe and before making any order the commission is directed to make and publish such reasonable rules and regulations for the issuance and use of the tickets as in its judgment the public interest demands; and especially it shall prescribe whether such tickets are transferable or non-transferable and, if the latter, what identification may be required, and especially also to what baggage privileges the lawful holders of such tickets are entitled. Any carrier which through the act of any agent or employee wilfully refuses to issue or accept any such ticket demanded or presented under the lawful requirements of the act or wilfully refuses to conform to the rules and regulations lawfully made and published by the commission thereunder or any person who shall wilfully offer for carriage any such ticket contrary to the rules and regulations shall be deemed guilty of a misdemeanor and upon conviction shall be fined not to exceed $1,000.

The Senate bill, passed some time ago, left the fixing of the rate to the commission, but provided for a ticket of not exceeding 5,000 miles nor less than 1,000 miles. The House bill inserted a provision for scrip coupon tickets which will represent amounts of money rather than miles, and also left the denomination to the commission. The House also inserted the provision for exempting particular carriers. This was to take care of such roads as now charge rates higher than the normal rate by reason of their sparsely settled territory or mountain grades. The House bill also omits the word "interstate" which was used in the Senate bill, so that any carrier subject to the interstate commerce act may be required to issue mileage books good for both state and interstate travel. This point raised some debate on the question of the constitutionality of the law. Some representatives also argued that the bill discriminated in favor of commercial travelers, but it was pointed out that though the bill had been passed largely at their request, mileage books would be available to all who may be willing to purchase a given amount of transportation at one time. In the Senate an effort had been made to provide in the law for a reduced rate, but it was decided to leave the matter of the rates to the judgment of the commission and in the House this question was not raised.

Senator Poindexter on June 30 made an unsuccessful effort to have the Senate accept the House amendments before the House adjourned to August 15, so that the bill might become law at an early date, but the bill was taken up again on the following day and, after some discussion of the constitutionality of omitting the restriction to interstate traffic, the Senate concurred in the House amendments.

Clearing Away the Wreckage (P. & A. Photo)

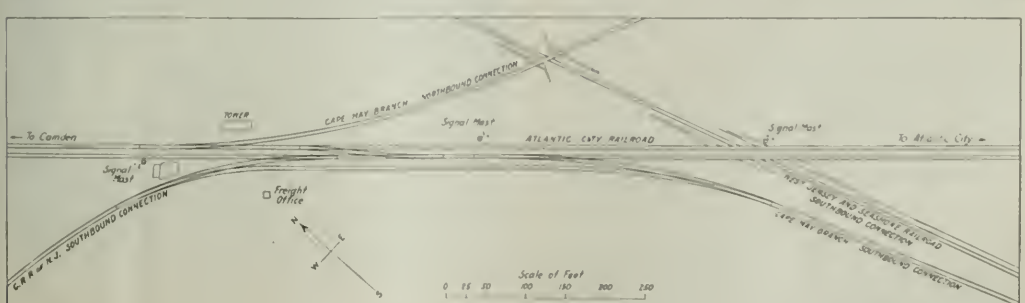
Disastrous Derailment at Winslow Junction, N. J.

Reading's Atlantic City Express Wrecked at Seventy Miles an Hour by Entering Turnout Too Fast

A DERAILMENT OF a fast passenger train of the Atlantic City Railroad of the Philadelphia & Reading carrying 90 passengers at Winslow Junction, N. J., at about 11:20 p. m. (Eastern Time) on July 2, resulted in the death of seven persons and the serious injury of 32 more. Train No. 33 running from Camden, N. J., to Atlantic City, a distance of 55.5 miles in a scheduled time of 1 hr. 5 min. with three stops, was about five minutes late and when running at about 70 to 75 miles an hour entered a diverging track, the switch being set for a branch in error, and was derailed with disastrous results. In the belief that a train of empty passenger coaches which passed a short time before was No. 33, the towerman had set the switch for the Cape May branch, expecting a freight train which follows No. 33 and which was at that time occupying a siding above the junction. Rain was falling at the time and the engineer of No. 33 evidently missed the distant signal. Train No. 33 consisted of one Pullman car, a combination baggage and day coach and four passenger coaches, all of which were, according to the statement of the railroad, of steel. The locomotive was a "camel-back" of the Atlantic type.

Winslow Junction is located 24.5 miles from Camden and is the point of divergence of the Cape May branch to the more southern Jersey seashore resorts. The Pennsylvania Railroad (West Jersey & Seashore) also operates over this branch reaching it through a connection mentioned later. From Camden to Atlantic City, the Reading's line is double track, rock ballasted, laid with 100-lb. rail, has but slight grades and maximum curvature of one degree. It has a complete installation of automatic block signals—enclosed disks.

The turnout for the Cape May branch is the Reading's



Track Layout at Winslow Junction

standard No. 15 turnout, the curve being extended for about 200 ft. beyond the frog after which the track is tangent for about 1,000 ft. to a point where the Pennsylvania connection joins it. The West Jersey & Seashore parallels the Reading in this section on the east or left side, the connection mentioned leaving the main line a little north of the tower at Winslow Junction. It is carried under the Reading and for the distance necessary to reach the grade of the Cape May branch, follows along the toe of the enbankment of that branch. At the undercrossing there is a difference in elevation of about 25 ft. This provides for southbound movements of the two roads over the Cape May branch without interference from grade crossings. A like arrangement farther to the south provides similarly for the northbound movements. All railroad crossings in the vicinity of Winslow Junction are at separate grades.

Practically all movements through Winslow Junction are through movements of passenger trains and fast freight, the passenger trains being chiefly fast expresses with a total number of approximately 50 trains daily each way. This includes traffic to and from Atlantic City and to and from the Cape May branch. Little or no switching as the term is commonly used, is done at the junction. The movements are controlled by a mechanically operated interlocking plant located about 300 ft. north of the Cape May turnout. The home signal is about 420 ft. and the distant signal about 3,200 ft. back of the turnout. The main track is tangent through this section for about five miles.

The tower was in charge of John F. De Walt, an experienced operator, said to be 60 years old, who entered the service of the Reading in November, 1898, and has been employed continuously since then at Winslow Junction.

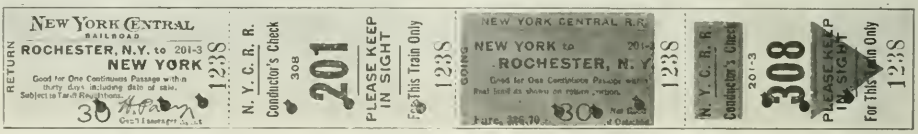
According to the information at hand at this writing, De Walt mistook the train of empty coaches for No. 33. Expecting No. 491, the fast freight, to follow immediately, he set the switch for a movement to the branch, having, of course, first set the distant signal against main line movements. The engineman, Walter Westcott, was among those killed in the wreck. The towerman discovered his error only when No. 33 passed him. The locomotive was derailed at or slightly beyond the point of the frog, plunged down the embankment and was piled up on the West Jersey & Seashore track. It turned over on its side, the cab was stripped off and the engine as a whole was badly smashed up. The Pullman which was next to the engine turned completely over and came to rest, bottom side up and seriously wrecked, on top of the locomotive. The remaining cars with the exception of the last, the combination car, were piled one after another upon the forward part of the wreck. The derailment was so close to the undercrossing that some of the cars rested against the outer end of one of the abutments. The engineman, the fireman, a porter and three passengers were killed, and the conductor died later from the injuries received. Thirty two passengers were injured seriously and sent to hospitals while numerous others were injured to varying degrees but were able to return to their homes. A steady rain was falling and to add to the unfortunate situation, the derailed cars broke down a pole supporting the lighting circuits of the town of Winslow and the vicinity. Rescue work was carried on under extreme difficulty owing to the lack of sufficient artificial light. No trouble, on the other hand, was experienced from fire.

The official investigation was begun on July 5, at Camden. Representatives of the Interstate Commerce Commission, of the New Jersey State Board of Public Utilities Commission and of the Camden county authorities were present, but no report of the findings has been made public as yet.

Tickets With Hat Checks Attached

The New York Central has adopted a new style of local card ticket, to be used on all divisions of the railroad, one of which, a round trip ticket from New York to Rochester, is shown in the illustration. The distinctive features are the provision of a conductor's check attached to the ticket, and the use of colors to distinguish one division of the road from another. The engraving is reduced nearly one-third, the actual length of the ticket shown being 9⅛ in. and the width about 1⅛ in.

The color of the going ticket, brown, indicates that the destination is on the Syracuse division. The return portion is uncolored, that being the standard for the Hudson-Electric division, on which New York is situated. The number, "308," represents the destination, Rochester; and "201" represents the destination of the return portion. On a ticket sold at the Grand Central terminal, New York, there would be a fifth coupon, or stub, which is detached by the ticket seller for use in making up his record of sales.



On through trains the conductor is able to distinguish the division to which a passenger is destined by the color of the hat check, the colors adopted being as follows: Hudson-Electric division, white; River division, pink; Mohawk division, blue; Syracuse division, brown; Erie division, purple; Cleveland division, red; Toledo division, green; Western division, gray. On minor divisions the tickets are white with a large colored letter to indicate the division; for example, the Harlem division ticket bears a red letter "H"; Adirondack division, "A D" in red. West of Buffalo minor divisions have blue letters.

When a Train of Perishable Freight Was Derailed Near Absecon, N. J., on the Pennsylvania

General News Department

To Insure Prompt Delivery of watermelons and other perishable freights at New York city the Pennsylvania Railroad, last week, was obliged to build about 1½ miles of wagon road, to enable consignees to reach the delivery tracks on Newark Meadows, five miles from New York, the destruction of a draw bridge by a steamer on June 22 having made the regular highway impassable. Heavy rains continued throughout the week, and the cost of the road building was about $15,000.

Passengers killed in collisions between railroad trains and street cars at crossings in the State of Pennsylvania, in a period of eight years and nine months, numbered only five. This fact is published as showing the value of the rule, prescribed by the Public Service Commission of the State, requiring that conductors of street cars shall go ahead of the car at crossings and give a hand signal to the motorman when it is safe to pass over the tracks. The number of crossings used by street cars in the State is 611, of which number 310 are on main lines.

"The Pennsylvania News"

On July 1 the Northwestern Region of the Pennsylvania issued the first number of its "Pennsylvania News." It is an eight-page tabloid size newspaper, four columns to the page. It will be published every two weeks and distributed to each of the 18,500 employees of that Region.

Ketchum Chosen Engineering Head of Illinois University

Prof. M. S. Ketchum, author of numerous works on engineering and member of the American Railway Engineering Association, has resigned his position as head of the department of civil engineering at the University of Pennsylvania to become dean of the college of engineering at the University of Illinois.

Floods on the Rio Grande

The recent floods on the Rio Grande washed out approximately 1,000 ft. of the Southern Pacific trestle between Del Rio and Sanderson, Tex., and three 230-ft. spans and one 120-ft. span of the International Bridge at Eagle Pass. Work of constructing a temporary trestle to restore traffic and to serve as falsework for the erection of a new steel bridge is under way. A new steel structure, designed for Cooper's E-50 loading will be erected for permanent use, and the grade line will be raised 5 ft. All of the work will be done by the Southern Pacific, the Mexican Lines sharing in the cost to the extent of 50 per cent.

To Investigate Automobile Accidents

The National Bureau of Casualty and Surety Underwriters is going to conduct an automobile accident prevention campaign. This bureau is the rate-making organization for automobile insurance against accidents, its members being 23 of the leading stock casualty insurance companies. During 1921 there were 12,500 deaths—one every 42 minutes night and day—and over 300,000 other injuries from automobiles in the United States; and the number of automobile accidents is increasing. The insurance companies are alarmed at the tendencies. This is the first organized effort on the part of insurance companies to deal with the automobile accident prevention problem.

The Bureau will make studies looking toward better control of traffic conditions, development of safety education in public schools and among drivers and stimulation of an intelligent treatment of the matter by local communities. Part of the money that has been appropriated will be expended through the National Safety Council. The secretary of the National Bureau is G. F. Michelbacher, 120 West 42d street, New York.

Black Tom Suits Settled

The suits of the governments of France and of Great Britain and the Aetna Explosive Company against the Lehigh Valley Railroad for losses caused by the great explosion at Black Tom, New York harbor, in July, 1916,—which suits were combined and tried together and which were appealed to the Supreme Court of the State of New Jersey and finally to the Court of Errors and Appeals, have finally been decided by the highest court

This litigation was begun in June, 1920. The verdict was for the defendant railroad company as to the claims of the British Government and that of Aetna Explosive Company, amounting in the aggregate to about $1,430,000; and the French Government won as regards an amount of $510,000, but the French claims to the amount of about $122,000 were allowed. The railroad company made its appeal as against this last item, but without success.

Accident Record to April 1, 1922

The Interstate Commerce Commission has issued an abstract of its quarterly record of railroad accidents for the months of January, February and March, 1922. Most of the totals vary but slightly from those of the same quarter in the preceding year. There is, however, a large decrease in the number of passengers killed—from 75 to 23—which is no doubt explainable largely by the fact that the disastrous collision at Porter, Ind., occurred in February, 1921. In the quarter now reported the total number of persons reported killed in train accidents and train service accidents was 1,154 and of injured 9,870. In train accidents 7 passengers, 42 employes and 11 other persons were killed and 311 passengers, 342 employes and 66 other persons were injured. In non-train accidents 83 persons were killed and 17,526 injured.

The Strike Situation on Western Roads

As indicating the effect of the walkout in Western territory the following reports of the situation on representative Western carriers are of interest:

The Chicago & North Western reported between 7,000 and 8,000 men out.

The Illinois Central reported approximately 60 per cent of its shop forces still at work.

Of a normal 15,000 shop employees the Santa Fe reported 3,500 still at work.

The Burlington reports that 1,400 men of a normal force of 15,000 are still at work.

On the Rock Island 8,000 men left their places.

The Southern Pacific has reported that less than 50 per cent of their shop forces have answered the strike call. Seventy-five per cent of the shop men on the Union Pacific are out, according to officers of that road.

Reports of the intimidation of shopmen remaining at work or new men hired to take the places of the strikers are beginning to be frequent. For instance at Slater, Mo., 18 new men were driven from the Chicago & Alton shops and at Bloomington, Ill., 300 strikers surrounded a truck laden with lumber with which it was intended to build a shelter for workmen. Similar occurances have been reported at many points but only in one or two cases has it been necessary to call upon the state for protection. At Bloomington it is reported that the sheriff has called upon the governor for troops.

M. & N. A. Bridges Damaged

The Missouri & North Arkansas bridge near Freeman, Ark., was damaged by fire on June 22, this being the third to be destroyed or seriously damaged by fire in five days. On June 18, a bridge near Fairview, Mo., was burned and on the following day one near North Lexa, Ark. Two men are awaiting preliminary hearings on arson charges for burning the bridge in

Missouri, but, although incendiarism is suspected in the case of the North Lexa and Freeman bridges, no arrests have been made at the time of this writing. Residents of Harrison, Ark., propose to offer a reward for the arrest and conviction of anyone guilty of setting fire to a bridge on this road. It is believed that the "bridge-burning campaign" is in reprisal of a meeting held at Wheaton, Mo., the week previous at which resolutions were adopted denouncing the strikers. Residents of Wheaton expressed their gratitude for the opening of the road 15 days sooner than had been anticipated and declared that they would tolerate no interference with the operation of the road. More than 100 cars of strawberries were shipped from Wheaton in May, and thousands of dollars was thereby saved to the growers. Regular passenger service was resumed on June 18, large crowds greeting the trains at each station and cheering the non-union crews in charge of them.

Shippers Urged to Support Railroads on Strike Issue

The National Industrial Traffic League has issued a circular to its members urging that they support the railroads in the recent wage reductions. This circular reads in part: "Even if the strike is a peaceable one, and without disturbance of any kind, it still will be highly expensive and costly to the companies. The resultant increases in expenses necessitating government loans, will be cast upon the shipping, traveling and tax-paying public." The carriers may be somewhat protected by the recent supreme court decision regarding property damage by members of labor unions; but, says the circular, "If property of shippers is destroyed in transit the carriers may resist claims on the ground that the losses were due to causes beyond their control. If they are unsuccessful and must pay judgments, they would undoubtedly have a further cause of action against the labor organizations. If the carriers successfully defend themselves, the shippers might well have causes of action against the unions, their officers and agents, who promoted the strikes." The circular concludes with an appeal to members of the League to suffer any and all inconvenience necessary to insure the award of the Labor Board being properly enforced. Any other stand by the shippers will weaken the carriers and give comfort to those who are about to defy the Board.

Disastrous Fire at Baltimore

A fire at the Locust Point terminal of the Baltimore & Ohio, Baltimore, Md., on the afternoon of July 2, caused by a stroke of lightning, damaged grain elevators and contents, and loaded freight cars, to an estimated total amount of more than $4,000,000. The fire was not got under control for about five hours; and besides large quantities of grain there were destroyed 60 loaded cars containing tobacco. The damage was mainly to Elevators B and C, Pier 2 and a warehouse on Pier 5. Large numbers of tugs were employed to remove shipping from points of danger, and about 1,000 freight cars had to be hauled away from the yard. From a military hospital, nearby, 500 patients, soldiers, were removed to a schoolhouse as a precaution against panic.

The estimated original cost of buildings and plant is about $2,500,000 covered to extent of insurable value. The grain destroyed was valued at about $1,000,000 fully covered by insurance. Grain shipments will continue to be moved over the B. & O. to Baltimore and taken care of temporarily at neighboring terminals. All other traffic will be handled without serious inconvenience, at the piers not touched by the fire.

A photograph of this terminal appeared in the *Railway Age* of July 1, on page 16.

British Committee Recommends Automatic Train Control

The committee of government and railway officers which was appointed by the British Government in 1920 to report on the subject of automatic train control, the chairman of which was Colonel J. W. Pringle, chief inspecting officer, has presented its report and it was published on June 20. It recommends the gradual adoption of automatic train control on British railways. The committee studied in detail the apparatus now in use on three roads, the Great Western, the North Eastern and the Great Central, and also examined devices which have been tried on the London & North Western, the Great Eastern and the London, Brighton & South Coast. The committee does not approve of continuous control, and it believes non-contact devices are too costly and too delicate; and it recommends the contact type.

The conclusions of the committee are summarized as follows:

1. The Committee are of opinion, after careful examination and analysis of statistics during the past ten years, that automatic train control presents the only reliable method of preventing a large proportion of train accidents directly occasioned by failures of enginemen to obey signals, which amount to about one-third of the total.

2. They consider, therefore, that a case for the installation of control upon British railways has been made out, and recommend its gradual adoption, in accordance with the list of requisites given.

3. They consider that the system likely to prove most suitable to prevailing conditions will be of the contact type, designed to operate in conjunction with existing methods of signalling.

4. They regard it as essential that the system of control should be uniform in character, and that all working parts should be of standard design in order to facilitate replacements and to ensure interchangeability.

5. They are of opinion that a complete system of automatic train control should include a train-stop device at selected stop signals, and train control generally at distant signals. They are satisfied from their investigations, however, that control at stop signals is of first importance, as a means for providing additional security.

6. If, therefore, owing to financial considerations the complete scheme cannot at present be entertained, the committee consider that the preliminary step should be the introduction of control at selected stop signals.

7. They recommend the immediate formation by the railway companies of a committee of experts to determine and standardize track and locomotive apparatus, having regard to differences in structural and loading gauges, and the position of conductor rails on electrified railways.

Holiday Travel

The exodus from the cities of New York and Philadelphia for the Fourth of July was this year the heaviest known, some business houses allowing a four-day vacation.

At the Grand Central Terminal, New York, on Saturday, July 1, the addition of extra sections to many trains failed to take away passengers as fast as they applied for passage and thousands of people were waiting in the station almost constantly throughout the day. The great concourse was, much of the time, densely packed, and at one time there was an estimated crowd of 10,000 people in the station. Some of the congestion was caused by the delays to outgoing trains, which delays were partly due to the strike of mechanics and inspectors in the yard where trains were made up. The management did not bring on its "strike breakers" until the inspectors actually left their jobs and this resulted in delays of an hour or two in a number of places, and these caused other delays. Departing trains had, however, mostly recovered their regularity by the middle of the afternoon.

It was estimated roughly that 150,000 passengers passed through the station in the course of the day.

The New York Central sent out that day a total of 25 extra sections of 22 passenger trains, and 20 extra cars on other trains. The total of extra sleepers sent out on Saturday was 54, of which 20 went to Montreal.

Trains on the River division of the New York Central were delayed in leaving Weehawken by a landslide near New Durham which blocked the road for two hours.

The total number of passengers passing through the Pennsylvania station, New York, on Saturday was estimated at 303,000. The two roads, the Pennsylvania and the Long Island, together, moved in and out of the station 5,006 passenger cars in 688 trains. On Tuesday, the 4th, the total number of trains was 900, made up of 6,500 cars.

From Philadelphia to New Jersey shore resorts both the Pennsylvania and the Philadelphia & Reading reported the heaviest holiday records in their history. Officers of the Reading estimated that in three days, Friday, Saturday and Sunday, they sent out 75,000 passengers.

The Pennsylvania, for the 30 hours ending at 6 o'clock on Sunday evening, estimated its movement to Atlantic City and other South Jersey resorts at 100,000 passengers.

Traffic News

"Rocky Mountains—Unlimited" is the title of an illustrated booklet just issued by the passenger department of the Chicago, Rock Island & Pacific. It contains a "human interest story" of a trip through the Colorado Rockies, written by a Chicago man who saw the Rockies for the first time on this trip.

The Northern Pacific will operate a new passenger train during July and August to be known as "The Yellowstone Special." Through sleeping cars will leave Chicago daily over the Burlington route. The train will leave St. Paul, Minn., at 10:50 p. m., and will arrive at Gardner, Mont., at 11:15 on the second morning. Also, through pullmans from Chicago have been added to the Pacific Express, this train now leaving St. Paul at 8:55 a. m. instead of 11:05 as formerly.

The Traffic Club of Cleveland, Ohio, held its annual meeting at Woodland Park, Ashtabula, Ohio, on June 26, and elected the following officers: President, H. N. Siblald, the National Lamp Works; vice-president, F. P. Barr, Wheeling & Lake Erie; second vice-president, A. Z. Baker, Cleveland Provision Company; secretary, F. A. Gideon, the American Steel & Wire Company; treasurer, M. J. Naughton, D. L. & W. Five new members for the board of governors were also elected.

Freight Rates to Be Reduced In Canada

The board of railway commissioners for Canada on June 30 announced its decision to order a general reduction, on August 1, in freight rates on forest products, building material, brick, cement, lime and plaster, potatoes, fertilizers other than chemicals, pig iron, billets, ores, wire rods and scrap iron. The reduction in general is 7½ per cent; so that the increase which was ordered in September, 1920, will now become 12½ per cent in Western Canada and 17½ per cent in Eastern Canada. The Commissioners have no jurisdiction over the government-owned railways and the present order has nothing to do with rates on grain and flour, which were reduced by Parliament. The principle of arbitraries from the Maritime Provinces to all points west of Port Arthur has been approved, the St. John arbitraries being on the basis of 24 cents per 100 lb., first class.

It has been estimated that the 7½ cent reduction, in addition to restoration of the rates of 1918 on grain and flour, may cost the Canadian roads $18,000,000 to $20,000,000. Government roads will be heaviest losers so far as grain is concerned as they are more dependent on the movement of grain than is the Canadian Pacific.

Coal Production

The thirteenth week of the coal strike has been marked by a recurrence of traffic congestion in certain of the non-union fields, and as there has been no compensating increase in the fields affected by the strike, production of bituminous coal will be slightly less than in the week preceding, according to the Geological Survey. Production of anthracite is still practically zero.

Complete returns for the twelfth week (June 19-24) show a production of 5,337,000 net tons of bituminous coal and 24,000 net tons of anthracite.

The thirteenth week opened with production at a high rate, but on Tuesday, and again on Wednesday, congestion on the railroads serving Southeastern Kentucky and parts of Southern West Virginia began to curtail production and loadings fell off 1,000 cars. By Thursday, however, the congestion was lessening and 16,411 cars were loaded. The decrease in loadings is not owing to scarcity of cars but to inability to move them faster than a certain limit set by the existing yard and track facilities. The railroads concerned are making new records in volume of traffic handled. Production in the non-union fields of the Middle Appalachians has reached a maximum and further gains in output are not to be expected at this time.

Commission and Court News

Interstate Commerce Commission

The commission has suspended until October 28 the operation of schedules which propose to increase the rates on iron and steel from Ohio and Mississippi river crossings to points in the southeast.

The commission has suspended until October 28 the operation of schedules which propose to readjust the rates on lumber from the lower peninsula of Michigan to Central Freight Association territory, resulting except in a few instances, in reductions.

The commission has suspended until October 29 the operation of schedules which propose to cancel proportional commodity rates on petroleum from Mississippi river points to various points in Canada, on traffic from points in Kansas, Louisiana, Oklahoma, Texas and Wyoming, class rates to apply in lieu thereof.

The commission on June 27 gave special permission to the railroads to make the 10 per cent reduction in freight rates effective on July 1 by filing tariffs on one day's notice. The carriers had stated to the commission that it would be impossible to file all the reductions prescribed in the time which had been allowed.

The commission has suspended from July 1 and July 12 to October 29, the operation of schedules which propose to cancel the present specific commodity rates on new iron and steel rails and new iron and steel cross ties from various points in Maryland, Pennsylvania and West Virginia, to points in Canada, and apply the sixth class rates in lieu thereof.

The commission has suspended until October 29 the operation of schedules which propose reductions in the rates on various commodities, carloads, from New York, piers of the Southern Pacific Steamship Lines (Morgan Line), to points in Arizona, Mexico and New Mexico when routed by water to Galveston, and the Southern Pacific beyond, to the same basis as in effect from Chicago, all-rail.

Freight Rates on the Denver & Salt Lake

The commission has reopened the general rate case for a hearing before Commissioner Hall at Denver on July 31 on the question as to whether the Denver & Salt Lake shall be excluded from the general 10 per cent reduction in rates. This road and the receivers in charge of it have represented to the commission that they are financially unable to make the rate reduction and that because of a fire and cave-in of a tunnel on the line on March 31 the road has not since transported any freight; and it does not contemplate the resumption of freight service before August 1.

Overcharge Claims by the Thousand

The recent amendment to the Transportation Act, 1920, which provides that complaints covering overcharges above the legal tariff charge may be filed with the commission within two years and six months after the termination of federal control, is now in effect and the commission has received approximately 100,000 claims. It is continuing to receive them at the rate of about 500 a day. These claims are being examined by the commission, recorded and returned to claimants for handling with the appropriate carrier as rapidly as the work of the commission permits. In view of the large number of claims received, the commission reminds claimants that it is not possible to dispose of these claims with the commission's usual promptness.

The commission has suspended until November 2 the operation of schedules contained in a supplement to a Chicago Great Western tariff changing the transit rules applicable on grain at Missouri river cities by changing the destination territory to read "Stations in Illinois, Iowa, Minnesota, Missouri, Michigan

and Wisconsin." While this change widens the destination territory within the states named it eliminates the provision for transit at the Missouri river cities on traffic destined beyond those states.

K. C. M. & O. in Straits

Chairman McChord of the Interstate Commerce Commission has sent telegrams to the governors of Oklahoma, Texas and Kansas, inviting them to a conference with the commission at Washington on July 12 to consider what steps may be taken to keep in operation the Kansas City, Mexico & Orient, which has stated that unless financial assistance is given it, it will be obliged to suspend service. In the telegram Chairman McChord said that the situation is so serious that vigorous steps must immediately be taken if the road is to be continued in operation. He said that if the governors desire to bring representatives of their state commissions or other representatives to the conference, the commission would be glad to have them do so.

Financial Decisions to Be Printed

The commission has in the past issued in mimeograph form a limited number of copies of its decisions in so-called "Finance Cases"—applications under paragraphs 18 to 20 of Section 1, Section 20a, etc., of the Interstate Commerce Act, and Sections 204 and 209 of the Transportation Act, 1920. This method of distribution has not proved satisfactory and, in future, decisions of this character will be printed in pamphlet form as issued, and made available at the Government Printing Office, on a subscription basis at the same cost as other pamphlet decisions, i. e., at the rate of one dollar a volume. These decisions will also be issued in bound volumes at the usual price.

Volume 65 of the Interstate Commerce Commission reports, which has recently been issued, is the first volume of finance decisions, and volumes 67, 70 and 71 have also been allotted for this purpose.

The plan of issuing copies in pamphlet form will begin with volume 72. Applications for pamphlet copies of these decisions together with remittances, should be made directly to the Superintendent of Documents, Government Printing Office, Washington, D. C.

Court News

Valuation of Capital Stock for Taxation

The Illinois Supreme Court holds that the mode of finding the share of a railroad's "capital stock" to be taxed is to take the value of all property, tangible or intangible, including the franchise granted by the state, and deduct from it the value of the tangible property to avoid double taxation; and this can only be done by the State Tax Commission if the property is assessable under the General Revenue Act and not a part of the charter lines.—Illinois Central v. Carr (Ill.), 134 N. E. 138.

Trainman Held Not to Assume Risk of Others' Violation of Rules

The Circuit Court of Appeals, Second Circuit, holds that a freight train conductor, properly on the adjoining track to see whether a defect in the engine of his train, which was just starting, had been removed, did not assume the risk of the violation by a train on the adjoining track of a rule that the engine bell should be rung while the engine was passing a train.—L. V. v. Mangan, 278 Fed. 85.

Live Stock Caretaker's Authority to Change Stopping Points

An attendant furnished by a shipper of livestock, under his contract, to care for lambs on the way, had no ostensible authority to change the contract by eliminating the provision as to unloading at an intermediate point, his own statement that he was the person in charge, or his possession of the bill of lading was not sufficient identification as a person authorized by the bill of lading to change stopping points.—Cook v. Northern Pacific (Mont.), 203 Pac. 512.

Foreign Railway News

French Road Seeks Loan in Switzerland

LONDON.

The French Paris-Orleans Railway Co., is negotiating with a group of Swiss banks with a view to the issue of a loan of 50,000,000 francs (about $4,100,000 at the present rate of exchange), paying interest at 6 per cent.

Brazil Gets $25,000,000 for Electrification

The Brazilian government has recently negotiated a loan of $25,000,000 in the New York market the proceeds of which will be devoted to electrification work on the Central of Brazil, a government-owned carrier.

Poland's Freight Car Requirements

Colonel A. B. Barber, American technical adviser to Poland, writing in "Poland," the journal of the American Polish Chamber of Commerce, estimates that the Polish railways will need to acquire between 110,000 and 120,000 freight cars during 1922.

New Lines in South Africa

LONDON.

The Minister of Railways and Harbors of the Union of South Africa has introduced a bill providing for the construction of 21 new railway lines, mostly in agricultural districts, with a total length of 851 miles and costing £4,087,620 (or $19,864,833 at the normal rate of exchange).

South American Railway Conference

The Second South American Railway Conference will be held in Rio de Janeiro, Brazil, during September. Chile has already appointed its delegation of six, headed by the assistant secretary of the Department of Railways, according to word received from the American embassy at Santiago.

A Central Purchasing Bureau for Polish Railways

LONDON.

A department called the "Centraine Biuro Zakupow" has been established at the Polish Ministry of Railways, which will be entrusted with the purchase for the railways in Poland of all material necessary for their operation. At the present moment orders for rolling stock and bridges, etc., will not be dealt with by this department, the activities of which will be limited to the purchase of rails, metals, lubricants, india rubber goods, asbestos, glass, and so forth. It is understood that the proposal is to extend this department gradually, and for it to undertake subsequently the purchase of all the requirements of the Ministry.

Information About Electrification in South Africa

The May issue of the South African Railways and Harbors Magazine is devoted to a full exposition of the subject of railway electrification, especially as it applies to South Africa. In addition, some valuable information is given about the railway situation in general in South Africa together with a map of the railways. This magazine is published by the publicity manager of the South African Railways at Doornfontein, Johannesburg.

Reductions in Freight Rates in Great Britain

The British railways which have been repeatedly requested by shippers to make general rate reductions have decided that this course of action is impossible at this time; but they have made important reductions in the case of certain basic commodities in England and Wales, according to the Railway Gazette (London). These reductions were effective on May 22. In the case of coal the basic percentage increase re-

mains at 75 per cent over the pre-war level but the flat rate per ton is reduced from 4d. per ton to 3d. and the maximum addition to this rate is reduced from 4s. to 3s. 6d. Iron ore, limestone and other raw materials for blast furnaces are decreased from 75 per cent over pre-war to 50 per cent. Other rather complicated reductions are made in iron and steel products and the cost of collection and delivery is reduced from 1s. 6d. per ton to 9d.

Electrification of the S. E. & C

LONDON

In connection with the electrification of certain suburban sections of the South Eastern & Chatham Railway, England, a meeting of the shareholders was held recently to approve the proposal. Altogether 220 miles of track extending to a distance of 16 miles out of London are to be converted for electric traction. The scheme having been approved, work is to commence immediately. At the end of May, a company known as the South Eastern & Chatham Construction & Power Company, with a nominal capital of £10,000 in shares of £10 each, was registered for the purpose of undertaking the electrification work and of erecting a generating station. The directors of this company are chosen from the directorates of the South Eastern and the London, Chatham & Dover companies, together with the managing committee's secretary and the general manager of the South Eastern & Chatham Railway.

China Notes

PEKING.

Prospects appear good, today, for a resumption of railway traffic in all directions during the coming week. Traffic has been suspended, actually or practically for three weeks, and seriously curtailed for a much longer period. During the fighting, the Tientsin-Pukow, the Peking-Hankow, and the Peking-Suiyuan lines have been cut, while for a few hours a rail was taken out of the main line between Peking and Tientsin,—this in violation of the Protocol of 1900. It is possible that traffic between Tientsin and Mukden will be impossible for a long time still. It is reported that a bridge north of the Great Wall has been destroyed, and that the Chang Tso-lin forces are, therefore, unable to retreat further than Shanhaikuan. At the same time it is known that Wu Pei-fu is urging the president to deprive Chang Tso-lin of his command,—which would have the result of giving legality to the desertion of Chang by some of his strongest commanders. This indicates that Wu Pei-fu is intent upon absolutely destroying the Manchurian war-lord's power, and leads to the belief in further hostilities on the Peking-Mukden line to the North.

The present disturbances evidence a growing appreciation on the part of the Chinese commanders of the part that railways play in warfare. Hitherto, when armed forces came on the line, their treatment of station and train forces was such that the railway employees deserted at the first opportunity, leaving the line to be operated at intermediate points by ignorant soldiery. This year stringent orders were given by commanders concerning the treatment to be accorded railway men, and as a result, the railway organization has continued to function,—under general orders from the military. Perhaps it would be fairer to say that this situation evidences growing discipline over military forces by the commanders than a change of attitude on the part of the latter.

The three war-lords of the North for two years, at least, have evidenced a keen appreciation of railway control, for Chang Tso-lin, immediately after the victory over the Anfuites, two years ago, insisted upon and secured the appointment of a personal confidant as managing director of the Peking-Mukden. Tsao Kun of Chihli already had a managing director satisfactory to him directing the Tientsin-Pukow line, and a few months ago soon after Wu Pei-fu began to collect the Peking-Hankow revenues at the stations, he appointed a managing director of that line, with jurisdiction over the section which Wu's troops occupied. The Peking appointee controlled only the 16 miles just to the south of Peking.

Indeed, many began to fear that the fading out of the authority of the Central Government had gone so far that the railways would become the property of the militarist who happened to be in control of the territory traversed, and the revenues would be collected at the stations everywhere, the same as on the Peking-Hankow by Wu Pei-fu's representatives. The result upon debts owed to foreign creditors appeared to be very serious. Certain interest and principal payments were already in default to British interests. The British, however, were in a fortunate position. The customs and the salt revenues are paid in to British banks as collected. Railway accounts as they became due were being paid, so it is asserted, on the authority of the British managers of these two services. This put the British creditor in a many more favorable position than those of any other nationality, and if the situation continued, would give British supply firms the entire market. Naturally, other nationalities have been protesting. But the victory of Wu Pei-fu, consolidating as it does all of the territory served by the railways, once more serves to unify the railway administration.

The first fruits of Wu's victory is a mandate depriving Yeh Kung Cho of all his offices, decorations and perquisites. Yeh Kung Cho is probably the ablest minister of communications that China has had. But he has been guilty of "picking the wrong horse" and assisting with all of the means at his command in Chang Tso-lin's effort to become the dictator of North China. It is said that the vice-minister of communications is to be arrested also, but that individual has returned to Peking in the face of this threat and assumed the work of the ministry, pending a re-organization of the cabinet. It is too early to predict the probable shifts in personnel which will follow this re-organization, but the shifting will affect practically all of the important lines, so far as managing directors are concerned, as well as the important bureau chiefs in the ministry. An effort will be made to oust the Chiaotung "clique," but the more professional members can not be discharged without seriously crippling the effectiveness of the ministry, as there are no others with the same professional training and experience.

The new appointees will have anything but a bed of roses, for the financial straits of the railways and the ministry are very shallow as well as narrow. Two years ago the Anfu club "swept the bin." Their successors authorized the building of an extension to the Peking-Suiyuan line, a branch to the Peking-Mukden line and double track between Tongshan and Chinwangtao. In addition heavy orders for rolling stock and other supplies were given. Much of the rolling stock is now laying at ports being held for payment of lighterage and wharfage dues. Salaries are in arrears and the best estimates by creditors place the current obligations of the railways as $55,000,000, whereas the yearly income of the railways,—if it could be collected—after operating expenses, fixed charges, etc., is only about $25,000,000 cash,—supposing that no improvements are made during the current year. Ordinarily, this sum would make very easy a simple funding scheme over a short period. But the Chinese bankers, who know their Government best, do not seem inclined to trust it with more funds at the present time. The Peking-Suiyuan, which is the only unpledged piece of rail, is held sacred from mortgages of any kind. And Chinese public opinion seems to be unalterably opposed not only to any dealings with, but even to the bare recognition of the consortium.

In its opposition to the consortium, the Chinese public is caught on the horns of dilemma. It does not trust the present militaristic forces with any loan funds unless there is a very strict foreign supervision. Strict foreign supervision is interpreted to mean foreign control, and foreign control is construed to constitute an infringement on China's sovereignty. "China's sovereignty" is now a cherished infant, a delicate subject. It must not be chastised even for its own moral upbringing. In order to clarify the ideas of what is probably the greatest force for public enlightenment in China at present, F. W. Stevens, the American representative of the consortium, has been making a series of speeches to the student bodies of North China, explaining the circumstances under which America's railways were financed principally by foreign money and denying that the consortium would constitute a monopoly. Whether or no there is any significance in the circumstance, the fact is than only the American representative of the consortium is taking any steps to create an impression favorable to the consortium.

All the Japanese forces are said to have been withdrawn from the Shantung Railway. The third and last contingent was delayed in its leaving by the fact that arms for the Chinese guard could not be transported by rail on account of the internal disturbances. But, with the assistance of the Japanese authorities, arrangements were made to bring them in by sea. Apparently nothing has been done by way of organizing the valuation forces, although the transfer date is less than six months distant and the line is 260 miles long.

Equipment and Supplies

Locomotives

THE INTERNATIONAL HARVESTER COMPANY is said to have ordered two six-wheel switching locomotives from the Baldwin Locomotive Works.

THE NASHVILLE, CHATTANOOGA & ST. LOUIS, reported in the *Railway Age* of June 1 as inquiring for 5 Mountain type locomotives, has ordered 3 Mountain type locomotives from the Baldwin Locomotive Works.

THE CHICAGO & EASTERN ILLINOIS, reported in the *Railway Age* of July 1, as having placed an order for 10 Mikado type locomotives and about to place orders for the remainder of its inquiry consisting of six Pacific type locomotives, has ordered this latter equipment from the Lima Locomotive Works.

Freight Cars

THE ILLINOIS CENTRAL is receiving bids for from 500 to 1,000 gondola cars.

THE GREAT NORTHERN has ordered 300 underframes from the Minneapolis Steel & Machinery Company.

THE DETROIT EDISON COMPANY has ordered 6 gondola cars of 50 tons' capacity from the Pressed Steel Car Company.

THE VERDE COPPER COMPANY, Clarksdale, Arizona, has placed an order for 24 ore cars with the Western Steel Car & Foundry Company.

THE ALABAMA & VICKSBURG has ordered from the Kilbourne & Jacobs Manufacturing Company 25 all-steel automatic air dump cars of 40 tons' capacity.

THE WESTERN PACIFIC, reported in the *Railway Age* of June 24 as inquiring for 2,000 refrigerator cars, has ordered this equipment from the American Car & Foundry Company.

THE WESTERN PACIFIC, reported in the *Railway Age* of June 17 as inquiring for 2,000 refrigerator cars, has ordered this equipment from the American Car & Foundry Company.

THE UNITED VERDE COPPER COMPANY, reported in the *Railway Age* of May 6 as inquiring for 24 ore cars, has ordered this equipment from the Pressed Steel Car Company.

THE NORTHERN PACIFIC, reported in the *Railway Age* of July 1 as inquiring for 250 gondola cars, has ordered 250 general service gondola cars from the General American Car Company.

THE SOUTHERN PACIFIC has ordered from the Kilbourne & Jacobs Manufacturing Company 40 all-steel automatic air dump cars with improved apron attachment of 40 tons' capacity.

THE NORFOLK & WESTERN, reported in the *Railway Age* of July 1 as inquiring for 1,000 hopper cars, has divided an order for 2,000 hopper cars of 70 tons' capacity as follows: American Car & Foundry Company, 500 cars; Standard Steel Car Company, 500, and Pressed Steel Car Company, 1,000.

THE CHICAGO GREAT WESTERN, reported in the *Railway Age* of June 10 as inquiring for repairs to 527 miscellaneous type box cars, has placed orders for the repairing of 200 cars with the Pullman Company, 154 cars with the Sheffield Car & Equipment Company, Kansas City, Mo., and 173 cars with the Siems Stembel Company, St. Paul, Minn.

THE NORTHERN PACIFIC, reported in the *Railway Age* of July 1 as having placed orders for a large number of miscellaneous freight cars, has ordered in addition 250 gondola cars from the Standard Steel Car Company. This completes its large outstanding inquiry with the exception of 70 passenger refrigerator cars which the company has not decided whether it will purchase or not.

Passenger Cars

THE AURORA, ELGIN & CHICAGO is reported to be contemplating the purchase of new electric passenger cars.

THE WESTERN PACIFIC is reported to be considering the purchase of some passenger motor cars for short haul and branch line traffic.

Iron and Steel

THE WABASH is inquiring for 100 tons of tank plates.

THE MISSOURI PACIFIC is inquiring for 100 freight car axles.

THE ANN ARBOR has placed an order with the Midvale Steel & Ordnance Co. for 1,800 tons of steel rail.

THE MISSOURI PACIFIC has ordered three steel girder spans weighing 127 tons from the American Bridge Co.

THE ILLINOIS CENTRAL has placed an order with the United States Steel Corporation for 20,000 tons of rails.

THE LONG ISLAND will receive bids until 12 o'clock noon July 14 for 300 gross tons open hearth steel 100 lb. rails.

THE CANADIAN PACIFIC has placed an order for 48,000 tons of steel rail with the Algoma Steel Corporation, Sault Ste. Marie, Ont.

THE PITTSBURGH & LAKE ERIE will receive bids until 12 o'clock noon July 17 at Pittsburgh, Pa., for approximately 1,625 net tons of fabricated steel work.

Machinery and Tools

THE LONG ISLAND is inquiring for 2 axle lathes, a wheel press and some other machines.

THE BOSTON & ALBANY is inquiring for a 90-inch wheel lathe, also for a box facing and boring machine.

THE WAR DEPARTMENT is offering for sale a large list of commodities, including machine tools, shop equipment and supplies.

THE UNION PACIFIC has prepared a machine inquiry list consisting of 73 items which are as follows: 22 lathes of various types, 15 grinders of various types, 4 boring bars, 4 drills, 3 boring mills, 2 drill presses, 2 shapers, 2 forcing presses, 2 pneumatic flanging machines, 1 boring and turning machine, 1 disk sander, 1 flange clamp, 1 punch and shear, 1 riveting machine, 1 hammer, 1 boring machine, 1 centering machine, 1 slip roll forming machine, 1 pipe folder, 1 pneumatic flanging clamp, 1 pipe cutting and threading machine and 1 cutting off machine.

THE CHICAGO, BURLINGTON & QUINCY has issued a new machinery inquiry for its Denver shops covering 117 items which include 31 lathes of various types, 19 grinders of various types, 12 drills, 6 hammers, 5 presses, 5 crank shapers, 5 boring mills, 4 grindstones, 3 planers, 2 slotters, 2 turret screw machines, 2 bar iron shears, 2 combination punch and shears, 2 milling machines, 2 head bolt cutters, 2 pipe threading machines, 1 single end punch, 1 bolt centering machine, 1 bending roll, 1 pneumatic flanging machine, 1 pneumatic flanging clamp, 1 sheet metal cutter, 1 drill press, 1 forging machine, 1 staybolt and crownstay machine, 1 pipe bending machine and 1 horizontal boring machine.

Signaling

THE CITY OF PHILADELPHIA has ordered from the Union Switch & Signal Company apparatus for the complete installation of an automatic block signaling and interlocking system on the Frankford Elevated Railway, six miles in length, double track, from Philadelphia Rapid Transit line at Arch street, north to Bridge street. Electro-pneumatic interlockings, utilizing alternating current throughout, will be installed at Arch street, Girard avenue, Dauphin street, Torresdale avenue and Bridge street. There will be 50 automatic block sections with electro-pneumatic automatic train stops with three-indication color-light signals. The contractor will do the whole of the work and will use alternating current for control and operation of all the signals and interlocking.

Supply Trade News

J. D. Rogers, who has been representing the **Baldwin Locomotive Works** in South Africa, has been appointed manager of the company's office at Calcutta, India.

N. E. Gage, formerly connected with the Standard Tool Company, Cleveland, Ohio, has recently been appointed sales manager of the **National Tool Company** of that city.

Fay, Spofford & Thorndike, consulting engineers, recently removed their offices from 15 Beacon street to the Massachusetts Trust building, 200 Devonshire street, Boston, Mass.

The Kennedy Car Liner & Bag Company, Shelbyville, Ind., has received orders during the past month for Kennedy freight car liners aggregating about 50,000. These orders were placed by various grain carrying roads throughout the country.

The Wilson Welder & Metals Company, Inc., 132 King street, New York City, recently appointed the **King-Knight Company**, Underwood Building, San Francisco, Cal., exclusive representatives in central and northern California for Wilson plastic-arc welding machines and Wilson Color-Tipt metals.

C. C. Clark has been appointed assistant general sales manager of the **Pressed Steel Car Company** and the **Western Steel Car & Foundry Company**, in charge of sales matters in the central district, with headquarters in the Farmers Bank building, Pittsburgh, Pa., taking the place of K. C. Gardner, resigned.

A. R. Kipp, mechanical superintendent of the Minneapolis, St. Paul & Sault Ste. Marie with headquarters at Minneapolis, resigned effective June 30 to form a partnership with **F. L. Battey**, consulting engineer specializing in railroad shop and industrial plant design and construction shop operating problems, with offices in the Union Fuel Building 123 West Madison street, Chicago.

Anson W. Burchard, vice-chairman of the board of directors of the General Electric Company, Schenectady, N. Y., has been elected president and chairman of the board of the **International General Electric Company**, succeeding Gerard Swope, its former president, who was recently chosen president of the General Electric Company. He also succeeds Charles Neave, former chairman of the International Company, who has resigned.

W. H. White will in the future be in charge of the New York City business of the **Mahr Manufacturing Company**, Minneapolis, Minn., makers of Mahrvel oil burning equipment. Mr. White's headquarters will be at 56 Murray street, New York City. He has devoted all his time to mechanical work both in the shops and on the road, having served in the steel and iron business for the past 10 years. Until recently he was with B. M. Jones & Company, Inc., New York City.

Charles H. Bluske has been appointed district sales manager of the **Economy Fuse & Manufacturing Company**, Chicago, at its Los Angeles, Cal., office, 1304 Maltman avenue, succeeding George L. Davis. Mr. Bluske was formerly connected with the Pacific States Electric Company, Los Angeles. The Pittsburgh, Pa., sales office of the Economy Fuse & Manufacturing Company has been moved from 2223 Farmers Bank building to 1006 Peoples Bank building at Fourth avenue and Wood street.

Dwight P. Robinson & Company, engineers and constructors, New York City, have contracted with the Metropolitan Life Insurance Company for life insurance policies, to be given, without expense, to all members of the organization reporting to the central office, under a group insurance plan. All employees included in the plan are insured regardless of their age and condition of health and no medical or physical examination is required. The amount of insurance is increased $100 for each additional year of continuous employment, and provision for total and permanent disability before the age of sixty is also included.

O. R. Hildebrant will in future represent the railway sales department of the **U. S. Light & Heat Corporation**, Niagara Falls, N. Y., in the southeastern territory with headquarters at Norfolk, Va. Mr. Hildebrant began work in 1905 with the Pennsylvania at Jersey City, N. J. In 1909 he went to the Safety Car Heating & Lighting Company and later was with the Edison Storage Battery Company as chief inspector and sales engineer until February, 1918. He then entered the employ of the U. S. Light & Heat Corporation, as representative in the southeastern district, which position he held until November, 1920, when he again entered railroad work on the Florida East Coast. He now returns to the service of the U. S. Light & Heat Corporation as above noted.

American Car and Foundry Company

The annual report of the American Car & Foundry Company for the year ended April 30, 1922, showed the operation of drastic economies during the period of reduced railroad earnings which resulted in final net profits equivalent to $14.94 a share on the $30,000,000 of common stock, as compared with $21.50 in the preceding year. The company reduced its notes and accounts receivable from $20,002,355 to $8,399,478. Part of the proceeds of the liquidation was invested in United States war bonds and Treasury certificates, this account rising $13,518,974 to $18,527,824. Net earnings of the company after taxes declined $4,161,095, as compared with 1921; net profits $1,967,530, and the surplus after dividends $1,967,530. Cash decreased $4,663,080, accounts payable $13,239,510 and inventory $4,929,235.

President William H. Woodin, in his remarks to the shareholders, commented on the present unfortunate situation of the carriers, in which he stated that they are under-equipped to handle normal traffic and are in great need of rehabilitation. The present situation, he added, is the result of a lack of adustment of rates and wages as a result of incomplete co-ordination between two different government agencies. "The development of a fairer public attitude towards the problems of the railroads, however, will bring about a realization of the necessity of providing and maintaining equipment sufficient for all needs," he concluded. Details of the annual report for the year ended April 30 are as follows:

INCOME ACCOUNT

	1922
Net earnings after Federal taxes	$9,051,721
Renewals, replacements, etc	2,468,401
Net profits	6,583,320
Preferred dividend	2,100,000
Common dividend	3,600,000
Surplus for year	883,320
Previous surplus	35,276,568
Total surplus, April 30	36,159,888

ASSETS

Property and plant account	72,301,696
Materials	9,080,826
Accounts and notes receivable	8,399,478
U. S. securities	18,527,824
Stock and bonds	5,764,050
Cash	6,811,358
Total assets	$120,885,232

LIABILITIES

Preferred stock	$30,000,000
Common stock	30,000,000
Accounts payable	8,455,083
Federal taxes	1,119,785
Dividends declared	1,425,000
Reserve accounts—	
For insurance	1,500,000
For improvements, etc	1,196,778
For dividends on common stock	10,800,000
For employees	228,698
Surplus account	36,159,888
Total liabilities	$120,885,232

THE NEBRASKA STATE BOARD OF EQUALIZATION has fixed the taxable valuations of all railroads in Nebraska, except the Chicago & North Western, at $277,254,122, an increase of $9,788,540 over last year. The valuation of the North Western is withheld pending developments in a federal court injunction suit.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, in conjunction with the city of Kansas City, Kan., is preparing plans for the south approach and main section of the Goddard avenue viaduct. The construction program for the north approach has not been completed, pending negotiations with other railroads.

CHICAGO, BURLINGTON & QUINCY.—This company is calling for bids for the construction of a two-story brick addition to a freight house at Burlington, Iowa.

CHICAGO, ROCK ISLAND & PACIFIC.—This company, which was reported in the *Railway Age* of February 25 as contemplating the construction of a one-story brick passenger station at Graham, Texas, estimated to cost $25,000, is now calling for bids on this work. This company has awarded a contract to the Gould Construction Company, Davenport, Iowa, for the construction of an 8-ft. by 9-ft. by 190-ft. reinforced concrete box at Pershing, Iowa, to replace a high trestle at that point; a 6-ft. by 6-ft. by 30-ft. reinforced concrete box near Eldon, Iowa, to replace a stone box at that point; two concrete and steel subways near Fairfield, Iowa, to replace existing structures, and a 12-ft. by 12-ft. by 25-ft. reinforced concrete box near Jamesport, Iowa, to replace a stone and steel structure at that point; this work to involve the expenditure of approximately $60,000.

ILLINOIS CENTRAL.—This company is calling for bids for the construction of interlocking plants at Peotone, Ill., and Manteno to involve a total expenditure in excess of $20,000.

MISSOURI PACIFIC.—This company is calling for bids for the construction of a considerable extension to its car repair shed at Sedalia, Mo.

NASHVILLE, CHATTANOOGA & ST. LOUIS.—This company has begun and will complete by company forces improvements at Dickson, Tennessee, involving the construction of a $16,000 passenger station, the conversion of the present station into a freight house at a new location and the installation of a new turntable. The total estimated cost of this work is $40,000.

NATIONAL RAILWAYS OF MEXICO.—This company is undertaking extensive improvements on its Chihuahua division between Juarez and Jimenez, involving altering the existing line to cost in excess of $200,000.

NEW YORK CENTRAL.—On July 6 G. A. Harwood, assistant to the president; R. E. Dougherty, designing engineer; F. B. Hank, assistant engineer, and Alfred Fellheimer, consulting engineer, submitted a plan to the mayor and terminal commission of Buffalo, N. Y., for the construction by this company of a main passenger station at Clinton street, that city, and for a smaller station on the site of the present main station at Washington street and Exchange place. The plan also calls for necessary track changes.

PENNSYLVANIA.—This company is receiving bids for the construction of a double-track half-through girder bridge with reinforced concrete floor to carry two tracks of the Delaware divison over the state highway north of State Road Station, Del. Approximate quantities are about 960 cu. yd. of foundation and channel excavation, 1,200 cu. yd. concrete masonry, etc., 2,250 sq. ft. asphalt paint for waterproofing and 5,000 cu. yd. embankment removed. Work will be in charge of J. F. Cullen, assistant engineer, Philadelphia, Pa.

PORTLAND, ASTORIA & PACIFIC.—This company has awarded a contract to A. Guthrie & Co., Portland, Ore., for laying rails and ballasting of approximately 30 miles of new line, extending from Vernonia, Ore., on the Spokane, Portland & Seattle, to the timber properties of the Central Coal & Coke Co., in the Nehalem district. The work is now in progress.

WABASH.—This company is calling for bids for the converting of its combination freight and passenger station at Kirksville, Mo., into a passenger station, and for the construction of a one-story 27 ft. by 136-ft. frame freight house at that point.

Railway Financial News

CENTRAL OF GEORGIA.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Central of Georgia Perishable Traffic Big Factor." See also excerpts from annual report on adjacent pages.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Elimination of Coal Loadings Fails to Hurt Big Four." Se also excerpts from annual report on adjacent pages.

DAYTON-GOOSE CREEK.—*To be Purchased.*—See New Orleans, Texas & Mexico.

ERIE.—*Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $4,500,000 of equipment trust certificates to be sold at not less than 96.94.

INTERNATIONAL & GREAT NORTHERN.—*To be Sold.*—This road, now in receivership, will be sold at public auction at noon July 28. L. McDaniel, special master appointed by Judge Hutchinson, will sell the road. An auction will be held to satisfy the claims of the bondholders, which amount to between $18,000,000 and $19,000,000, and will be made under the foreclosure decree signed by Judge Hutchinson on May 17, 1915. It is understood the bondholders have made plans to purchase the road unless a bidder appears who will offer enough to clear the indebtedness. They will then reorganize and terminate the present receivership.

Reorganization Plan Operative.—J. & W. Seligman & Co. and Speyer & Co., reorganization managers, announce that they have declared operative the plan and agreement of reorganization of the International & Great Northern. See article in *Railway Age* of June 10, 1922, page 1347.

INTERNATIONAL & GREAT NORTHERN.—*Annual Report.*—The annual report issued this week shows the following corporate income account for the year ended December 31, 1921:

	1921	1920
Net revenue from operations	$2,012,706	$2,129,697
Federal rental and guaranty	.....	1,416,854
Hire of equipment—credit	1,061,430	349,916
Other corporate income	145,932	200,801
Gross corporate income	3,220,068	4,097,268
Tax accruals	444,043	119,831
Hire of equipment—debit	2,217,348	779,155
Total deductions, inc. other	2,894,402	989,890
Net corporate income	325,666	3,107,379
Interest on funded debt	892,005	902,043
Interest on unfunded debt	916,704	874,149
Deficit or surplus, carried to profit and loss	Def. 1,483,043	1,331,187

MARSHALL & EAST TEXAS.—*Sale of Property Ordered.*—The United States District Court for the Eastern District of Texas on July 1 instructed Bryan Snyder, receiver of this road, to sell that part of the main line extending from Marshall, Tex., to Elysian Fields, about 18 miles. The property to be sold includes buildings and appurtenances located on the right-of-way. The sale will be held at the County Court House in Marshall on August 1, 1922.

The Marshall & East Texas was placed in the hands of receivers January 25, 1917, and operation was discontinued July 31 of the same year. Under court orders certain sections of the original 92-mile line were sold separately.

MISSOURI, KANSAS & TEXAS.—*Receivership Ended.*—Judge Sanborn in St. Louis on June 30 signed a decree authorizing the sale of this road for not less than $28,000,000. Byron F. Babbitt of St. Louis and Joseph F. Dobbyns of Oklahoma City have been appointed special masters to conduct the sale at public auction. The sale will be held at Colbert, Okla., in about six weeks.

NEW ORLEANS, TEXAS & MEXICO.—*Asks Authority to Purchase Dayton-Goose Creek Railroad.*—This company has applied to the Interstate Commerce Commission for approval of a contract entered into with the Dayton-Goose Creek Railroad Company for the purchase of the latter's property for $1,000,000, of which $750,000 will be paid in cash and the remainder in New

Orleans, Texas & Mexico five per cent adjustment bonds. The Dayton-Goose Creek was built three years ago by R. S. Sterling, of Houston, Texas. It extends 25 miles between Dayton, Texas, and Baytown, a connection being made with the Southern Pacific at the former place.

NEW YORK CENTRAL.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $25,000,000 of 5 per cent refunding and improvement mortgage bonds, series C to be sold at not less than 90. The proceeds are to be applied to the payment of a like amount of 10-year 7 per cent collateral trust bonds as the latter are called for redemption on September 1.

READING COMPANY.—*To Offer Modified Plan.*—The United States District Court at Philadelphia has ordered that the Reading Company, the Philadelphia & Reading Coal & Iron Company, and the general mortgage bondholders' committee, after a conference, formulate and submit to the court on or before October 30, a plan for a modification of the Reading dissolution decree to conform to the recent ruling of the United States Supreme Court in Justice Taft's opinion.

TOLEDO, ST. LOUIS & WESTERN.—*Stock Ruling.*—The United States District Court at Toledo has entered an order providing that all of the expenses and compensation of the stockholders' protective committee of the Toledo, St. Louis & Western be paid by the company and that the stock of the railroad company on deposit with the Empire Trust Company, New York City, be delivered upon the return of the outstanding certificates of deposit, as follows:

"B" certificates, upon the basis of share for share, and original certificates, upon the basis of ninety shares of railroad company stock for 100 shares of original certificates, free of all charges of the committee.

UTAH TERMINAL.—*Certificate Denied.*—The Interstate Commerce Commission has denied this company's application for a certificate authorizing the construction and operation of a line of 3.64 miles in Carbon County, Utah, as a spur into a mining district.

WABASH.—*Asks Authority to Issue Equipment Trusts.*—This company has applied to the Interstate Commerce Commission for authority to issue $4,245,000 of 5 per cent equipment trust certificates which had been conditionally sold to Kuhn, Loeb & Co. at 95¾.

Treasury Payments to Railroads

Since last announcement, dated June 1, 1922, payments under Sections 204, 209, 210 and 212 of the Transportation Act, 1920, as amended, have been made by the Treasury as follows:

Section 204:	
Apalachicola Northern Railroad Co.	$3,763.97
Arizona & Swansea Railroad Co.	15,296.34
Blytheville, Leachville & Arkansas Southern R. R. Co.	29,892.09
Bullfrog Goldfield Railroad Co.	15,144.79
Jefferson & Northwestern Railway Co.	4,983.55
Lawndale Railway & Industrial Co.	2,730.98
Leetonia Railway Co.	44,831.32
Millers Creek R. R. Co.	50,237.97
Ocean Shore Railroad Co.	63,322.30
Paris & Mt. Pleasant Railroad Co.	1,748.47
Raquette Lake Railway Co.	9,717.82
Silverton Northern Railroad Co.	20,845.16
South Buffalo Railway Co.	196,175.57
South San Francisco Belt Railway	29,590.87
United Verde & Pacific Railway Co.	34,533.15
Ventura County Railway Co.	17,456.32
Section 209:	
Apalachicola Northern Railroad Co.	14,802.29
Chicago & Eastern Illinois Railroad Co.	723,982.56
Chicago & North Western Railway Co.	3,733,520.55
Colorado Springs & Cripple Creek Ry. Co., Receiver	170,920.69
Duluth, South Shore & Atlantic Ry. Co.	178,459.94
El Paso & Southwestern Co.	691,408.32
Flint River & Northeastern Railroad Co.	1,238.91
Jefferson & Northwestern Railway	18,362.49
Mineral Range Railroad Co.	123,167.95
Minneapolis, St. Paul & Sault Ste. Marie Railway	592,467.82
Mississippi Eastern Railway Co.	4,494.77
New Orleans, Great Northern Railroad	131,055.93
Paris & Mt. Pleasant Railroad Co.	6,105.81
Peoria & Pekin Union Railway Co.	83,829.87
Rock Island Southern Railway Co.	58,711.84
The San Antonio & Arkansas Pass Railway Co.	81,354.39
Waterville Railway Co.	938.59
Section 210:	
Boston & Maine Railroad	5,000,000.00
Hocking Valley Railway Co.	612,000.00
New York, New Haven & Hartford R. R. Co.	300,000.00
Seaboard Air Line Company	1,100,000.00
Section 212	
Louisiana Railway & Navigation Co.	626.94
Paris & Mt. Pleasant Railroad Co.	[illegible]
Texas & Pacific Railway Co., Receiver	[illegible]
Total	$4,774,[illegible]

Total payments to June 30, 1922

(a) Under Section 204, as amended by Section 212, for reimbursement of deficits during Federal control:

(1) Final payments including partial payments previously made	$2,397,8[illegible]	
(2) Partial payments to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	1,456,226 51	
Total payments account reimbursement of deficits		3,854,047 50
(b) Under Section 209, as amended by Section 212 for guaranty in respect to railway operating income for first six months after Federal Control:		
(1) Final payments, including advances and partial payments previously made	70,243,57[illegible] 50	
(2) Advances to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission	234,053,672 00	
(c) Partial payments to carriers as to which a certificate for final payment has not been received, as stated above	138,746,422 09	
Total payments account of said guaranty		443,043,666 59
(c) Under Section 210, for loans from the revolving fund of $300,000,000 therein provided		314,103,050.00
Total		$761,000,794.09

Repayments of loans have been made to the amount of $80,095,550.

Tentative Valuations

The Interstate Commerce Commission has issued a number of additional tentative valuations in which, as authorized by the recent amendment to the valuation law, it has omitted the report on the cost of acquisition of land in addition to its original cost or present value. The final values of the property owned and used are given as follows:

		Owned	Used
Sandersville	1916	$46,673	$57,392
Ashland Coal & Iron Railway	1916	1,447,448	1,445,436
New York & Fawn Grove	1916	106,026	....
Duluth, South Shore & Atlantic	1916	17,961,229	17,967,191
Cement, Tolenas & Tidewater	1916	112,002	.....
Craig Mountain Lumber Company's Railway	1917	116,017	.....
Oregeen, Pacific & Eastern	1917	321,117	328,217
Manistee & Repton	1917	75,000	117,500
Munising, Marquette & Southeastern	1916	2,999,784	3,009,889
Carlton & Coast	1917	348,603	373,603
Cincinnati, Flemingsburg & Southeastern	1917	151,397	155,497

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out or received from the several roads the following amounts:

Boston & Maine Railroad	$2,470,000.00
Philadelphia & Reading Railway Company, *paid Director General*	8,000,000.00
Sioux City Terminal Railway Company, *paid Director General*	60,000.00
Rock Island-Frisco Terminal Railway Company, *paid Director General*	21,800.00
Dayton & Union Railroad Company, *paid Director General*	1,000.00
SHORT LINES	
Raquette Lake Railway Company	4,000.00
Paris & Mt. Pleasant Railroad Company, *paid Director General*	100,747.17

Dividends Declared

Buffalo & Susquehanna.—Common, 1¼ per cent, quarterly, payable September 30 to holders of record September 15.

Delaware, Lackawanna & Western.—3 per cent, quarterly, payable July 20 to holders of record July 8.

Pere Marquette.—Preferred, 1¼ per cent, quarterly; preferred, on account of accumulated dividends, 1 per cent; prior preference, 1¼ per cent, quarterly, all payable August 1 to holders of record July 15.

Pittsburgh & West Virginia.—Preferred, 1½ per cent, quarterly, payable August 31 to holders of record August 1; preferred, 1½ per cent, quarterly, payable November 29 to holders of record November 1.

Trend of Railway Stock and Bonds Prices

	July 3	Last Week	Last Year
Average price of 20 representative railway stocks	65.91	64.91	54.43
Average price of 20 representative railway bonds	86.41	86.38	73.83

Annual Reports

Central of Georgia Railway Company — Twenty-seventh Annual Report.

Savannah, Ga., March 8, 1922.

To the Stockholders:

The Board of Directors herewith submits the following report of the operations and affairs of your company for the year ended December 31, 1921.

ACCOUNTS WITH DIRECTOR GENERAL

Final settlement with the United States Railroad Administration of accounts growing out of Federal Control (which are shown on the Balance Sheet of December 31, 1921, as due to and from your Company) was effected January 3, 1922.

GOVERNMENT GUARANTY

The amount accrued to your company by the Government under the six months' guaranty given by the Transportation Act, 1920, has not been ascertained and certified by the Interstate Commerce Commission, but final claim has been filed with the Commission under its Order, dated December 15, 1921.

INCOME

A summary of the income for the year ended December 31, 1921, as compared with the previous year is stated below.

	1921.	1920.	+Increase —Decrease
Average Miles Operated during year	1,913.63	1,913.63	.....
Operating Revenues	$22,057,498.58	$20,676,551.05	+$1,380,947.53
United States Government—Guaranty Period Claim	.....	3,111,965.51	— 3,111,965.51
Rental from United States Railroad Administration	.....	732,892.77	— 732,892.77
Total Operating Revenues	$22,057,498.58	$24,521,409.33	—$2,463,910.75
Operating Expenses	20,020,842.57	†21,102,368.50	— 1,081,525.93
Excess of Revenues over Expenses	$2,036,656.01	$3,419,040.83	—$1,382,384.82
Taxes	899,875.21	795,151.18	+ 104,724.03
Uncollectible Railway Revenues	46,588.39	5,584.69	+ 41,003.70
Operating Income	$1,090,192.41	$2,618,304.96	—$1,528,112.55
Equipment Rents—Net credit	235,176.69	167,337.00	+ 67,839.69
Joint Facility Rents — Net debit	104,713.76	83,581.37	+ 21,132.39
Net Operating Income	$1,220,655.34	$2,702,060.59	—$1,481,495.25
Non-operating Income	918,424.05	1,777,309.27	— 858,885.22
Gross Income	$2,139,079.39	$4,479,369.86	—$2,340,290.47
Deduction from Gross Income	3,118,893.01	2,962,662.41	+ 156,230.60
Net Income	*$979,813.62	$1,516,707.45	—$2,496,521.07

*Asterisk denotes deficit.

†Includes corporate operating expenses for the months of January and February, 1920, amounting to $12,592.52, not assumed by United States Railroad Administration.

During the current year your railroad was operated under corporate management. In the preceding year the property was under Federal control the first two months; under corporate management with a Federal guaranty the following six months; and under corporate management without guaranty the remaining four months. As a consequence, the only items which are comparable are "Non-operating Income" and "Deduction from Gross Income" as during the first two months of 1920, when the properties were under Federal control all "Net Railway Operating Income" items were borne by the Government and your company received a rental which, in the Income Accounts, is shown opposite "Rental from United States Railroad Administration," and, therefore, the operating accounts comprising "Net Railway Operating Income" include the results for ten months only, while the figures for 1921 are the totals for the year.

To afford a proper comparison of operating results for the two years there has been prepared and will be found below a table headed "Transportation Operations," which for 1920 combines the Federal operations for the first two months of the year and corporate operations for the balance of the year.

NON-OPERATING INCOME

"Non-operating Income" this year amounted to $918,424.05 as against $1,777,309.27 last year, a decrease of $858,885.22. The decrease was due to a reduction of $799,640.00 in dividends received from Ocean Steamship Company of Savannah; a reduction of $231,800.00 in dividends received from Atlantic Compress Company, and a net increase of $172,554.78 in other items comprising "Non-operating Income" of which $75,000.00 was due to an adjustment in December, 1920, of interest on open accounts with the United States Railroad Administration.

DEDUCTIONS FROM GROSS INCOME

"Deductions from Gross Income" amounted to $3,118,893.01, an increase of $156,230.60 over the previous year. This increase was due principally to interest of $18,377.00 on Equipment Trust "M" certificates issued in February, 1921, and to interest of $127,205.47 on advances from affiliated companies.

TRANSPORTATION OPERATIONS

The results of transportation operations this year, compared with last year, referred to above are as follows:

Railway Operating Revenues	1921.	1920.	+Increase —Decrease
Freight	$14,565,643.79	$15,485,717.56	—$920,073.77
Passenger	5,483,676.31	6,794,338.45	—1,310,662.14
Mail	154,847.87	917,380.09	—762,532.22
Express	459,989.01	591,324.55	—131,335.54
Other passenger train	228,379.16	291,956.17	—63,577.01
Other transportation	60,780.00	106,170.25	—45,390.25
Incidental and joint facility	604,182.41	695,201.82	—91,019.58
Total railway operating revenues	$22,057,498.58	$25,082,188.09	—$3,024,789.51
Railway Operating Expenses			
Maintenance of way and structures	$ 449,358.35	$ 1,942,898.11	—$1,493,539.98
Maintenance of equipment	1,711,701.60	6,164,735.93	—1,453,034.33
Traffic	778,475.70	673,246.65	+ 105,229.05
Transportation	10,052,517.47	12,908,739.14	— 2,856,221.67
Miscellaneous operations	87,677.55	64,426.70	+ 23,250.85
General	950,019.02	990,233.74	— 40,214.72
Transportation for investment—Cr.	8,907.12	9,913.02	— 1,005.90
Total railway operating expenses	$20,020,842.57	$25,733,367.47	—$5,712,524.90
Net revenue from railway operations	$2,036,656.01	*$651,079.38	+$2,687,735.39
Railway tax accruals	$899,875.21	$925,198.85	— $25,323.64
Uncollectible railway revenues	46,588.39	10,735.53	+ 35,852.86
Railway operating income	$1,090,192.41	*$1,587,013.76	+$2,677,206.17
Equipment rents—Net credit	235,176.69	148,611.13	+ 86,565.56
Joint facility rents—Net debit	104,713.76	114,788.83	— 10,075.07
Net railway operating income	$1,220,655.34	*$1,553,191.46	+$2,773,846.80

* Asterisk indicates deficit.

RAILWAY OPERATING REVENUES

"Railway Operating Revenues," amounted to $22,057,498.58 this year as compared with $25,082,288.09 last year, a decrease of $3,024,789.51, or 12.06%.

The decrease of $920,073.77 or 5.94% in "Freight Revenue" is due to a decline in the volume of traffic handled as a result of prevailing business depression. The tons of revenue freight carried one mile this year were 1,112,683,441, a decrease of 170,615,035 ton miles, or 13.30%, as compared with previous year.

The decrease of $1,310,662.14, or 19.29% in "Passenger Revenue" is due to the substantial falling off in passenger travel which was affected by the general depression in business existent throughout the year. The revenue passengers carried one mile decreased 65,982,673, or 27.37%. The decline in the volume of traffic was offset in part by increased rates which were in effect during the year as against only four months of the previous year. The average revenue per passenger per mile being 3.13%, an increase compared with last year of 0.31c., or 10.99%.

The decrease of $462,532.22, or 50.42% in "Mail Revenue" is due principally to the inclusion in "Mail Revenue" for 1920, of $329,638.00 for back mail pay applicable to the years 1918-1919, and to an adjustment this year of $40,176.27 covering back mail pay for the years 1916-1917.

The decrease of $131,335.54, or 22.21% in "Express Revenue" is due in part to a smaller volume of express traffic handled, but more largely to the inadequate proportion of the total express revenue received from the Express Company for the transportation of express.

The decrease in "Other Passenger Train Revenue," "Other Transportation Revenue" and "Incidental and Joint Facility Revenue" aggregating $200,-185.84, or 15.48% is due to the same causes as the decreases in "Freight Revenue" and "Passenger Revenue."

RAILWAY OPERATING EXPENSES

"Railway Operating Expenses" amounted to $20,020,842.57 this year as compared with $25,733,367.47 last year, a decrease of $5,712,524.90, or 22.20%.

The decrease of $1,493,539.98, or 30.22% in "Maintenance of Way and Structures Expenses" is due to the decreased expenditures for repairs; decrease in force and wages; decrease in number of locomotive hours worked; and a decrease in the cost of material and supplies used.

The decrease of $1,452,034.33, or 23.50+% in "Maintenance of Equipment Expenses" is due to decreased expenditures for repairs to equipment; decrease in force and wages; changes in working conditions; and a decrease in cost of materials and supplies. Charges to "Maintenance of Equipment Expenses" for depreciation were $617,951.55, an increase of $11,383.13, or 1.96%. The increase is due to an increase of depreciable equipment. The average miles per locomotive were 31,167, a decrease of 4,562 miles, or 12.77%. The average age of locomotives was 18.2 years as compared with 17.3 years for the preceding year.

The increase of $105,229.05, or 15.63% in "Traffic Expenses" is due in part to the reorganization of the Traffic Department and re-establishment of outside agencies after the termination of Federal control and partly to increased printing expenses on account of the numerous changes in rates and the necessary issue of voluminous tariffs in connection therewith.

The decrease of $2,856,221.67, or 22.13% in "Transportation Expenses" is due to a reduction in train service on account of the decline in the volume of business transported this year as compared with the previous year; reduction of wages; and greater efficiency in the operation of trains. Train loading increased 2.4% over the previous year. Fuel costs decreased $648,486.00. This saving was partly due to a decrease in the price of fuel, but principally to the fuel campaign carried on throughout the year which effected a saving of 91,265 tons of coal by better performance. There were also substantial decreases in the payments for casualty items this year, the result of special campaigns for the prevention of causes originating such claims.

The decrease of $40,214.72, or 4.06% in "General Expenses" is due principally to reduction in general office forces and wages.

The increase of $23,250.85, or 36.09% in "Miscellaneous Operations" is due to the decrease in passenger business.

RAILWAY TAX ACCRUALS

"Railway Tax Accruals" amounted to $899,875.21 this year as compared with $925,198.85 (the latter figure including taxes assumed by the United States Railroad Administration for the first two months of 1920) last year; a decrease of $25,323.64, or 2.74%, due to substantial decrease in Federal income tax on account of a reduction in taxable income.

FINANCIAL

Capital Stock.

There has been no change.

Funded Debt—Equipment Trust.

To aid in paying for the seven Mountain Type locomotives and seventeen passenger train steel cars acquired during the year, your Company on January 24, 1921, borrowed from United States Government $237,900.00 payable in fifteen annual installments, 1922 to 1936, inclusive, with interest at 6% per annum; and on February 1, 1921, issued its Equipment Trust M and sold $650,000.00 of Equipment Trust Certificates maturing in eleven

annual installments, 1926-1936, inclusive, with interest at 6½% per annum, payable semi-annually.

Other Indebtedness

Non-negotiable debt to affiliated companies increased $3,399,923.50, all due to Ocean Steamship Company of Savannah.

Loans and bills payable decreased $543,280.00.

Current Liabilities decreased $2,148,374.93.

Your Company has no floating debt.

Dividends

During the year preferred dividends Nos. 16 and 17 (total $900,000), at the stipulated rate of six per cent per annum, and common dividends Nos. 11 and 12 (total $250,000) at the rate of five per cent per annum, were declared and paid.

Valuation

Under the Valuation Act, the Interstate Commerce Commission has reported a tentative final value for the railway property operated by your company of $79,083,523.00. While this exceeds not only the capitalization but the book values, your directors, being of opinion that it is less than the actual value of the property, filed protests. Testimony and briefs have been submitted, and the question is now before the Commission for final action.

PHYSICAL CHANGES

Roadway and Structures

37.0572 miles of track were relaid with 90 pound new steel rail, of which 5.6186 miles were relaid with new steel rail of the same weight, 2.2588 miles of track relaid with second hand steel rail replacing rail of lighter patterns; and 3.6089 miles of track relaid with second hand steel rail replacing rail of same pattern; total mileage of track relaid with new and second hand steel rail was 42.9249.

Work was begun in the early part of the year on the construction in Jefferson County, Alabama of a line to be known as the Cahaba District, approximately seven miles in length, extending from McCombs, Alabama, in a southwesterly direction along the eastern slope of Shades Mountain. This line will serve the Bragg and Class Seams, situated in what is commonly known as the Waterworks Basin of the Lower Cahaba Coal Fields. Tipple layouts to serve both of these coal seams will be located near the Cahaba River. Work was started on April 7, 1921, and the line has been fully completed for a distance of four miles from McCombs.

Seven new Mountain Type locomotives were added during the year. One locomotive of an obsolete type was sold. Ten Mikado type locomotives were leased from the Illinois Central, making an increase of six locomotives owned and ten locomotives leased, with an increase of 845,770 pounds in tractive power.

Seventeen modern all steel passenger train cars were purchased from The Pullman Company consisting of four sleeping cars, five open coaches, four partition coaches and four baggage and express cars.

Superheaters, valve gears, piston valves and other improvements were applied to five locomotives.

There were no freight train cars acquired; 414 freight and work cars were sold, destroyed or retired, and four freight train cars were converted to work equipment. The average capacity of freight train cars at the close of the year was 38.8 tons, and the total capacity was 323,700 tons.

One consolidated locomotive was converted to Mikado type.

The Board takes pleasure in acknowledging the fidelity, efficiency and united efforts displayed by your officers and employees in the discharge of their duties.

By order of the Board of Directors.

CHARLES H. MARKHAM,
Chairman of Board.

Cleveland, Cincinnati, Chicago and St. Louis—Thirty-third Annual Report

To the Stockholders of

THE CLEVELAND, CINCINNATI, CHICAGO AND ST. LOUIS RAILWAY COMPANY:

The Board of Directors herewith submits its report for the year ended December 31, 1921, with statements showing the income account and the financial condition of the company.

Road operated

The mileage covered by this report is as follows:

	1921 Miles	1920 Miles	Decrease Miles
Main line and branches owned	1,691.78	1,693.03	1.25
Proprietary line	.....	.78	.78
Leased lines	205.10	205.10	.....
Lines operated under contract	326.68	326.68	.....
Lines operated under trackage rights	187.31	195.86	8.55
Total road operated	2,410.87	2,421.45	10.58

Traffic conditions

The year 1921 was one of business depression, reflected in the decreased freight and passenger traffic of the company. The tonnage fell off in volume 22 per cent and the passenger traffic 20.4 per cent, as compared with 1920. This situation was met by economies in operation.

In co-operation with the federal government in its effort to lower costs of foodstuffs, voluntary decreases in rates on certain agricultural products were put in effect during the year. There was no general reduction in other freight rates, but adjustments were made from time to time to remove inequalities. The company has co-operated with State authorities in a readjustment of rates on roadmaking material for the purpose of stimulating the building of good roads and to meet the unemployment situation.

There was no general readjustment of passenger rates, but the practice which obtained prior to federal control of putting into effect reduced excursion rates during the summer months was re-established to some extent.

Account with Railroad Administration

The company's account with the Railroad Administration covering the period of federal control will be completed in the early part of 1922.

Claim against United States upon the guaranty

The company's claim against the United States based upon its guaranty for the period March-August, 1920, is approaching completion. It has been necessary to restate this claim several times in accordance with tentative formulas. It will be ready for presentation in the early part of 1922.

Loans and bills payable

The following demand notes appear on the balance sheet:

The New York Central Railroad Company	$4,000,000
Director General of Railroads	3,500,000
Total	$7,500,000

The $4,000,000 demand note was given to The New York Central Railroad Company in 1920 in renewal of the unpaid balance of notes theretofore given to that company from time to time for money borrowed to provide additions and betterments. This note is secured by $4,189,000 of this company's refunding and improvement mortgage bonds, series A, issued (nominally) in 1920 for that purpose, the note, with such collateral, being pledged as part of the collateral security for the loan made to The New York Central Railroad Company by the United States under section 210 of the Transportation Act.

The indebtedness of $3,425,000 to banks and trust companies, included in the list of loans and bills payable in the annual report for 1920, was paid during 1921. During the year the company gave to the Director General of Railroads, in reduction of its indebtedness to him for additions and betterments during federal control, its demand note, above referred to, for $3,500,000, thereby correspondingly decreasing the amount due him for additions and betterments.

Issue and retirement of securities

Additional notes amounting to $65,800 were issued under the equipment trust known as Equipment Trust No. 44 and given to the Director General of Railroads in connection with final settlement for the equipment allocated to the company during the period of federal control and described in the annual report for 1920. The total cost of the equipment was $6,937,706.50, of which $5,195,800 was financed by equipment notes.

In June, 1921, the company issued $1,052,600 of its 20-year 6 per cent refunding and improvement mortgage bonds, series C, in the refunding of prior lien bonds, paid or acquired by the company, as follows:

$567,000, principal amount, of first consolidated mortgage bonds of the Cincinnati, Indianapolis, St. Louis and Chicago Railway Company due May 1, 1920;

$158,000, principal amount, of general first mortgage bonds of the Cincinnati, Indianapolis, St. Louis and Chicago Railway Company due August 1, 1936;

$327,600, principal amount, of 5 per cent general mortgage bonds of this company due June 1, 1993.

The disposition made of these bonds is stated on another page.

During the year the company's notes of a maturity of more than two years, equipment trust obligations and mortgage bonds were increased as follows:

Equipment Trust No. 44 of January 15, 1920, additional notes	$65,800.00	
Twenty year refunding and improvement mortgage bonds of the C. C. C. & St. L. Ry. Co., series C, 6 per cent	1,052,600.00	$1,118,400.00

The following bonds were retired during the year:

C. I., St. L. & C. Ry. Co., general first mortgage bonds retired	$77,000.00	
C. C. C. & St. L. Ry. Co. (St. Louis Division) first collateral trust mortgage bonds purchased for sinking fund	52,000.00	
Central Grain Elevator Co. bonds retired	25,000.00	154,000.00

Payments falling due during the year and on January 1, 1922, on the company's liability for principal installments under equipment trust agreements were made as follows:

N. Y. C. Lines Trust of 1907, installment due November, 1921	$245,689.81
N. Y. C. Lines Trust of 1911, installment due January, 1922	149,[illegible].82
N. Y. C. Lines Trust of 1912, installment due January, 1922	159,8[illegible].00
N. Y. C. Lines Trust of 1913, installment due January, 1922	116,7[illegible].71
Big Four Railway Trust of 1914, installment due June, 1921	373,000.00
Big Four Railway Trust of 1915, installment due June, 1921	115,000.00
Big Four Railway Trust of 1917, installment due June, 1921	237,000.00
Equipment Trust No. 44 of January 15, 1920, notes due January, 1921	342,000.00
C. C. C. & St. L. Ry. Co. proportion of N. Y. C. R. R. Co., Equipment Trust of April 15, 1920, certificates, due April, 1921	761,111.40
	2,551,050.94
Serial note of the C. C. C. & St. L. Ry. Co., given to the N. Y. C. R. R. Co., due December 23, 1921, paid at maturity	262,933.34

There were nominally issued during the year and pledged as collateral for a demand note for $3,500,000 given to the Director General of Railroads $3,500,000 of this company's refunding and improvement 6 per cent mortgage bonds, series A, $811,000; series B, $2,689,000.

Acquisition of European Loan Bonds

With additional purchases in 1921, the company's holdings of European Loan bonds at the end of the year amounted to 35,415,500 francs, equivalent at the normal rate of exchange (5.1813 francs to the dollar) to $6,835,253.70. The total cost of these bonds was $3,318,839.58.

Purchase of capital stock of the Evansville, Indianapolis and Terre Haute Railway Company

During the year this company exercised its option, referred to in the annual report for 1920, to acquire the entire capital stock of the Evansville, Indianapolis and Terre Haute Railway Company by paying therefor on June 14, 1921, $1,052,600 principal amount of its 6 per cent refunding and improvement mortgage bonds, series C, due 1941, carrying interest from January 1, 1921, these bonds being taken at 95, and $30 in cash. The settlement with the interests formerly controlling the Evansville, Indianapolis and Terre Haute Railway Company was made as of November 1, 1920, and since that date the road has been operated by that company in the interest of this company as sole stockowner.

Stock of the Cincinnati Northern Railroad Company

During the year the company acquired 700 shares, par value $70,000, of the capital stock of the Cincinnati Northern Railroad Company, making the total shares in that company now owned by this company 17,774, or 59.25 per cent of the total shares outstanding.

Proposed purchase of income bonds and capital stock of The Peoria and Eastern Railway Company

There are outstanding $4,000,000 of income mortgage 4 per cent non cumulative bonds of The Peoria and Eastern Railway Company, due April 1, 1990, and $9,994,200 of the capital stock of that company, not including $800 of such stock nominally issued, but held in that company's treasury, and $5,000 not issued, but reserved for exchange for the stock of The Ohio, Indiana and Western Railway Company, predecessor of the Peoria and Eastern Railway Company. By resolutions adopted by this company's Board of Directors on December 14, 1921, the company authorized an offer, subject to the approval of the Interstate Commerce Commission, to purchase income bonds and stock of The Peoria and Eastern Railway Company, paying therefor in 4½ per cent first mortgage bonds of The Evansville, Mt. Carmel and Northern Railway Company (of which $2,118,000 are now in the treasury of this company), to be guaranteed by this company, on the basis of one $1,000 Mt. Carmel bond for three $1,000 Peoria and Eastern income mortgage bonds, and one $1,000 Mt. Carmel bond for sixty shares (par value $100 each) of the capital stock of The Peoria and Eastern Railway Company. Applications for authority to acquire these Peoria and Eastern securities, or such part thereof as may be offered on the above terms, and to guarantee Mt. Carmel bonds to be used for that purpose are pending before the Interstate Commerce Commission.

SUMMARY OF FINANCIAL OPERATIONS AFFECTING INCOME

	Year ended Dec. 31, 1921 2,410.87 miles operated	Year ended Dec. 31, 1920 2,421.45 miles operated	Increase Decrease 10.58 miles

		225,418.69
Balance to credit of Profit and Loss, December 31, 1921		$18,885,959.08

Operating expenses

In arriving at the railway operating income for the guaranty period, the Transportation Act required that the maintenance allowance should be fixed with reference to the standards and price levels of the test period. The company worked out a tentative factor which resulted in charges to maintenance in excess of actual expenditures and the carrying forward of a reserve at the end of 1920. This factor, however, has proved to be larger than the government is likely to accept. Therefore, entries were made in December, 1921, closing out balances in the maintenance reserves which had been accumulated in 1920; and as operating expenses for that year had been over-accrued by the amount of the reserves, it was necessary to adjust operating expenses in 1921 to offset the overcharge and preserve the continuity of the accounts. In making this adjustment the amount tentatively charged against the government for guaranty period operations was reduced, and a corresponding charge was made against non-operating income, as a result of which the net corporate income for 1921 was not affected.

The operating expenses for 1921, by groups, as compared with those for 1920, eliminating these adjustments, were as follows:

	Amount	Decrease
Maintenance of way and structures	$11,163,218.04	$1,198,577.74*
Maintenance of equipment	18,513,987.91	783,980.67
Traffic	1,276,151.28	4,029.34
Transportation	33,005,070.53	6,025,787.61
Miscellaneous operations	686,087.51	71,315.13
General	1,994,018.16	103,097.50*
Transportation for investment—Cr.	41,344.44	61,241.89*
	$66,597,188.99	$ 322,195.52

*Increase.

The decrease in operating expenses reflects the falling off in traffic, the economies effected by the company during the year, and the reduction in wages and in costs of material and fuel.

Changes in organization

On June 15, 1921, Mr. Albert H. Harris was elected a Director to fill the vacancy caused by the resignation on April 13, of Mr. William C. Brown.

On October 26, 1921, Mr. Frank J. Jerome was elected a Director to fill the vacancy caused by the resignation on February 9, of Mr. Samuel Mather.

Appreciative acknowledgment is made to all officers and employees of their loyal and efficient co-operation and service.

For the Board of Directors,

ALFRED H. SMITH, President.

Railway Officers

Executive

Stanton Ennes, vice-president and general manager of the Wheeling & Lake Erie, has been elected president and general manager, succeeding **W. M. Duncan** who has been elected chairman of the board of directors.

Financial, Legal and Accounting

W. E. Rodwell has been appointed car accountant of the Seaboard Air Line with headquarters at Portsmouth, Va.

James C. Rogers, general paymaster of the Pennsylvania and president of the Veteran Employees' Association of the general offices at Philadelphia, retired from service on June 30 after having served the company continuously for 52 years and 8 months.

H. A. Toland, a former assistant auditor of the Oregon Short Line at Salt Lake City, Utah, and engaged for the past two years in the New York office of the Union Pacific, has been appointed auditor of that road, with headquarters at Omaha, to succeed H. J. Sterling, resigned.

Operating

C. B. Packer, car accountant of the Seaboard Air Line with headquarters at Portsmouth, Va., has been appointed assistant superintendent of transportation.

O. F. Brookmeyer has been appointed superintendent of passenger transportation of the Cleveland, Cincinnati, Chicago & St. Louis and the Peoria & Eastern with headquarters at Indianapolis, Ind.

A. S. Payne has been appointed superintendent of the Shenandoah division of the Norfolk & Western with headquarters at Roanoke, Va., and **W. B. Houchins** has been appointed superintendent of terminals at Roanoke.

J. F. Lord, who was reported in the *Railway Age* of June 17, page 1514, as superintendent of safety and fire prevention of the Chicago Great Western pursuant to the abolishment of this title and his appointment to the newly created position of assistant to general manager, holds this position in the service of the Chicago & Eastern Illinois instead of the Chicago Great Western.

John J. Scully, general superintendent of the Algoma district of the Canadian Pacific with headquarters at North Bay, Ont., has been appointed general manager, Eastern lines, with headquarters at Montreal, succeeding **Alfred Price** who, after a service of more than 40 years has, at the advice of his physicians, been granted an indefinite leave of absence. **George Hodge**, assistant to the vice-president, Eastern lines, has been appointed assistant general manager. **W. M. Neal**, assistant general superintendent of the Ontario district with headquarters at Toronto, has been appointed general superintendent at North Bay.

W. M. Wardrop has been appointed general superintendent of the Southern division of the Pennsylvania with headquarters at Wilmington, Del., succeeding the late Gamble Latrobe. Mr. Wardrop has heretofore been general superintendent of the Michigan division (G. R. & I.) at Grand Rapids, Mich. **J. B. Hutchinson, Jr.**, has been appointed general superintendent of the Michigan division at Grand Rapids. Mr. Hutchinson has heretofore been general superintendent of the Toledo division, at Toledo, Ohio. **T. A. Roberts**, acting superintendent of the Ft. Wayne division, with headquarters at Ft. Wayne, Ind., has been appointed general agent at Detroit, Mich., and superintendent of the Toledo division, at Toledo, Ohio. **R. H. Pinkham** has been appointed superintendent of the Ft. Wayne division, at Ft.

Wayne, Ind. Mr. Pinkham has heretofore been superintendent of the Norfolk division, at Cape Charles, Va. **F. D. Davis,** division engineer of the New York division, has been appointed superintendent of the Norfolk division, with headquarters at Cape Charles, Va.

Traffic

George W. Koonce has been appointed division freight agent of the Pennsylvania, with headquarters at Canton, Ohio, and **Stephen T. Stackpole,** division freight agent at Buffalo, N. Y., has been transferred in the same capacity to Detroit, Mich.

J. A. Sullivan, division freight agent of the Wabash, with headquarters at Detroit, Mich., has been promoted to the newly created position of assistant general freight agent, with the same headquarters, pursuant to the establishment of general freight and passenger offices in that city.

Engineering, Maintenance of Way and Signaling

W. G. Morgan, assistant engineer of the Kansas City Southern with headquarters at Pittsburg, Kan., has been promoted to the re-established position of division engineer of the Kansas City Terminal division with headquarters at Kansas City, Mo., effective July 1.

J. G. Bloom, whose promotion to the newly created position of engineer, maintenance of way, system, of the Chicago, Rock Island & Pacific with headquarters at Chicago, was reported in the *Railway Age* of May 20, page 1204, was born in Ohio on November 25, 1869, and studied engineering at Ohio State University. Immediately following his graduation in 1889, he entered railway service as a chainman on the Pennsylvania at Cincinnati, Ohio. After a few months, he left railway service and in the spring of 1890 became associated with the Kenova Land Association as an assistant engineer at Kenova, W. Va., but re-entered railway service that fall as an assistant supervisor on the Norfolk & Western at Crewe, Va., where he remained until April, 1892. Becoming an assistant engineer on the Baltimore & Ohio Southwestern on the latter date with headquarters at Cincinnati, Ohio, he served consecutively in this capacity until November, 1895; as a division engineer at Flora, Ill., until June, 1896, as principal assistant engineer at Cincinnati, Ohio, until February, 1900, and thereafter as division engineer first at Chillicothe, Ohio, and later at New Castle, Pa., until June, 1903, when he entered the service of the Chicago, Rock Island & Pacific as district engineer, with headquarters at Topeka, Kan. Thereafter he served as district engineer until July, 1905, as engineer maintenance of way of the Southwestern & Choctaw district at Topeka until February, 1907, and again as district engineer until December, 1909, when he left railway service to become president of the Southern Ballast Company at Denison, Texas. He was engaged in this work until July, 1912, and then as superintendent of construction of the John F. Stevens Construction Company, New York, until October, 1914, when he re-entered the service of the Chicago, Rock Island & Pacific. Thereafter he was engaged in valuation work with headquarters at Chicago until July, 1916; as superintendent of the Amarillo division with headquarters at Amarillo, Texas, until August, 1918; as superintendent of the Louisiana division with headquarters at Eldorado, Ark., until May, 1921; and as division engineer of the Nebraska-Colorado division with headquarters at Fairbury, Neb., until May 15, 1922, when he was promoted to engineer maintenance of way, system.

J. G. Bloom

Obituary

S. B. Rice, engineer maintenance of way of the Richmond, Fredericksburg & Potomac, died on June 26.

Martin S. Decker, former public service commissioner of the State of New York, died in New York City on July 1 at the age of 60. Mr. Decker's home was in Albany, N. Y., and he was in New York City on a visit. He was born at Rosendale, N. Y., and in early life was a railroad telegraph operator. He was for many years assistant secretary of the Interstate Commerce Commission, at Washington. He was appointed a member of the Public Service Commission by Governor Charles E. Hughes when the commission was organized under the new law, in 1907, and continued a member of that board for six years. He served two terms as president of the National Association of Railway Commissioners.

William C. Arp, retired superintendent of motive power of the Vandalia (now a part of the Pennsylvania), whose death on June 16 was reported in the *Railway Age* of July 1, page 48, was born on June 30, 1848, near Williamsport, Pa., and entered railway service as a machinist's apprentice on the Northern Central (now a part of the Pennsylvania) at Williamsport. Following his apprenticeship he engaged in stationary engine and mill work at Williamsport until 1875, when he was advanced to roundhouse foreman. He continued thereafter as roundhouse foreman and as foreman of engines of the Middle division until 1883, when he was promoted to general foreman of shops of the Pennsylvania lines west of Pittsburgh, at Indianapolis, Ind. In 1886 he became roundhouse foreman of the Pennsylvania, at Columbus, Ohio, and a year later was promoted to master mechanic at Logansport, Ind. He served later in the same capacity at Dennison, Ohio, until January 15, 1896, when he was promoted to superintendent of motive power of the Terre Haute & Indianapolis, a position he continued to hold following the acquisition of this property by the Vandalia until the date of his retirement in 1918.

Cornelius P. Torrey, superintendent of freight transportation of the Hocking Valley, with headquarters at Columbus, Ohio, whose death on June 9 was reported in the *Railway Age* of June 24, was born on October 25, 1852, at Coshocton, Ohio. He completed his course of study in the high school of that city, following which he devoted some time to various occupations until December 1, 1885, when he entered railway service as a yard clerk for the Hocking Valley. From his initial position as yard clerk, Mr. Torrey worked his way consecutively through various other clerical and administrative positions in the operating and transportation departments of the Hocking Valley and on February 10, 1914, after 29 years of service was appointed acting superintendent of freight transportation to relieve T. R. Limer, granted a leave of absence on account of illness. Thereafter Mr. Torrey continued as acting superintendent of freight transportation until July 10, 1914, following Mr. Limer's death, when he was promoted to superintendent of freight transportation, the position in which he continued in an active capacity until the time of his death as noted above.

C. P. Torrey

Railway Age

The Table of Contents Will Be Found on Page 5 of the Advertising Section

Manufacturers frequently complain, and with much justification, that it costs more to sell shop machinery and equipment to railroads than to other industries. In fairness, therefore, the railroads ought to be willing to pay more. One manufacturer writes as follows: "On many lines of machinery of a new or improved type, railways should properly pay a higher price than industries because, over a long period, it is necessary to spend far more time and money to introduce such machines than it requires with the general trade. Railways figure that they are competing with no one in shop work and, therefore, do not keep on their toes in trying to cut down shop costs." Even when manufacturers can prove an operating economy for a machine, the report is that they always secure a much larger percentage of orders from the general trade than it is possible to secure from the railways. This is a severe indictment of present railroad methods and to the extent to which it is true, present methods should be corrected. It has been suggested that valuable results would follow if the responsibility of the shop managements in the way of reducing costs could be increased, at the same time granting them more power in installing efficient equipment and methods. At present, railroad supply manufacturers are compelled to interest shop foremen, higher mechanical department officers and purchasing officers in all new equipment, convincing these officers that the advantages claimed for the equipment are actual. The cost of this educational and demonstration work is high and must come out of profits on the machines manufactured. In the long run increased selling costs are added to production costs and form a tax paid by all purchasers of machine tools.

Cost of Selling Machines to Railroads

Something of a precedent in safety campaigns was set recently by two trainmen at a road crossing in Ohio, according to one of our Columbus friends. Two youths, accompanied in an automobile by two girls, were racing a fast freight train for precedence at the highway crossing. The motor car won, but only by an instant, and one of the girls, frightened by the approaching train, jumped from the motor car and fell between the tracks. She, too, narrowly escaped death—indeed the engineman on the freight train thought that she had been run over and stopped the train.. Two members of the train crew came up to ascertain the cause of the sudden stop. The two young men, instead of showing a chastened spirit as a result of their narrow escape from death, demanded that the trainmen cut the crossing to allow the girl, who had rolled to safety on the opposite side of the train, to join them in their automobile. Instead of complying with their demands, the trainmen paired with the young men and proceeded to thrash them soundly, only desisting upon their promise never again to take such a chance with their own lives or with those of others. We cannot, of course, expect the railroads to instruct their trainmen to undertake any such extra-legal activities as the corporal punishment of those who take chances at highway crossings. The public would, however, we think, condone such actions occasionally when they are so eminently appropriate as in this case. A better plan would be for the public authorities, assisted in detection by vigilant railway employees, to undertake the punishment of these prisoners by fine and imprisonment. Racing with trains for highway crossings is a sport, with the exultation of winning and death as the two possible results. If the winning motorists were invariably punished, the race for grade crossings would cease to be such a sport. It would be a sure thing—a fine, prison or death for the reckless driver. Thus the grade crossing race would lose its glamor and such accidents would seldom occur.

Militant Safety Campaigners

One of the most marked developments in the design of railway buildings in the last decade is to be found in enginehouses. The average building of this character erected 15 or 20 years ago is a dark, gloomy structure with practically solid walls, small windows so begrimed with smoke as to afford little light and with little or no provision for ventilation other than for the removal of locomotive exhaust through the smoke jacks. As a result, smoke hangs so heavily in these buildings at all times that it is the common practice for the workmen to carry torches with them at all times to light their paths and to provide them with sufficient illumination to perform their work. In marked contrast with such construction is the Southern Pacific's enginehouses at Mojave, Calif., and Indio, which are described elsewhere in this issue. While some features of these houses are designed to meet the local conditions prevailing at these desert locations, the extensive provisions for ventilation and for light are in accordance with modern practice. It is coming to be recognized in industry that ample light and air are conducive to efficiency. Good light will not only increase the amount of work a mechanic will turn out, but it will reduce the number of mistakes and accidents. As a step in the modernization of old buildings to conform to this newer idea, a few roads have undertaken to whitewash the interiors of their enginehouses at frequent intervals with excellent results. Of more permanent benefit is the increased attention to the problems of light and air in the construction of new houses, a subject to which too much attention cannot be paid.

The Tendency in Engine-House Design

The spectacular and distressing disaster at Winslow Junction, New Jersey, reported last week, will tend powerfully to promote interest in "train control" as distinguished from the simple automatic stop with which we are familiar in the New York subways and the Pennsylvania Terminal. At Winslow Junction the main line is straight, and safe for 100 miles an hour, while movements to the branch must be limited

Where Speed Control Is Needed

to about 40 miles an hour. "Speed control" apparatus will provide for this condition; while, if only a simple stop were to be used, every branch train would have to be brought to a stop before passing over the switch. The practical operating officer—that is to say, the consensus of operating officers' opinion as expressed recently to the Interstate Commerce Commission, and noticed in the *Railway Age* last week, page 51—hesitates to use speed control apparatus extensively until it has been more thoroughly developed; and he would bridge this gap between ideal conditions and cold actuality by making his automatic stop as simple as possible and allowing the engineman to suspend its operation at a place like Winslow Junction. This privilege of suspension is held up by the extreme idealists as a large sized bugbear; but if the engineman is compelled to get the co-operation of the fireman in every operation—as may very simply be provided for—the argument against the permissive arrangement becomes pretty weak. The Automatic Train Control Committee of the Ministry of Transport of Great Britain in its recent report, while not recommending speed control for such conditions as at Winslow Junction, says that "such cases of accidents can be safeguarded if not entirely prevented by installing a train control device either of a permanent or temporary character, which would provide an audible indication as well as a brake application, to remind enginemen of the existence of a speed restriction over any curve, crossing, etc., in advance." The arguments, pro and con, on this important point, ought to be thoroughly thrashed out.

The Opening of Construction Work

Much has been said recently about the activity of the railways in the buying of equipment, while relatively little comment has been heard regarding the appropriations which have been made for improvements to roadway facilities. Yet the same tendency towards increased expansion of facilities is evident here. One index is the construction news columns of the *Railway Age*, which required more than twice the space during the first six months of this year than during the corresponding period of a year ago. Even more instructive is a comparison of the projects undertaken in the two years. Over 30 individual projects, each involving an expenditure of more than $1,000,000, have been undertaken in the first six months and more are being announced weekly. These include such work as the Atchison, Topeka & Santa Fe second track from Yampai, Ariz., to Griffith ($6,500,000) and the Ellinor, Kan., cutoff ($1,500,000); the Canadian Pacific pier at Vancouver, B. C. ($2,000,000); the Chicago, Burlington & Quincy shops at Denver ($2,000,000); the Great Northern terminal at Tenatche, Wash. ($1,500,000); the Illinois Central third track from Matteson, Ill., to Kankakee ($2,000,000); the Michigan Central bridge across Niagara river ($2,000,000); the Missouri, Kansas & Texas classification yard at Denison, Tex. ($3,000,000); the New York Central Castleton cutoff ($20,000,000); the Pennsylvania improvements at Pittsburgh ($8,000,000); the St. Paul Union Station 1922 program ($5,000,000); the St. Louis-San Francisco second track ($1,500,000); and the Union Pacific freight station and other improvements at Denver ($2,000,000). An even larger amount of work has been undertaken on projects of smaller magnitude. In the aggregate the improvement and betterment work already authorized and undertaken this year involves an expenditure of more than $150,000,000, exclusive of the passenger terminal at Cleveland and the Illinois Central terminal at Chicago which have been authorized and for which plans are being prepared, and the Union Station at Chicago, on which several million dollars will be spent this year.

Significance of the Shop Crafts Strike

The strike of railway shop employees is, we believe, unprecedented in one respect. It directly involves more employees than ever were previously involved in any railway strike in this country. There were about 475,000 employees in the shops when the strike order went into effect. Estimates of the number who quit work differ; but a large majority quit.

In other respects the strike is similar to those which have preceded it. Like most other strikes, it was the result of a difference of opinion between managements and employees concerning the rules under which the employees should work and the wages they should be paid. Unlike other strikes in this country, it disregards decisions made by a government arbitration body regarding the matters in controversy, but strikes in disregard of decisions of government arbitration bodies have not been unknown. Australia and New Zealand have tried compulsory arbitration. It has resulted in peaceful settlements when the decisions have been against the employers, but repeatedly has resulted in strikes when the decisions have been against the employees.

Differences of opinion between employers and employees regarding how much the latter should be paid have arisen throughout the history of the wage system. Innumerable plans for so settling them as to prevent resort to lockouts and strikes have been advocated and tried; but no such means has ever been successful long. The employer is prone to underestimate the amount he ought to pay; but public opinion and law can compel him either to pay what a government tribunal holds just or go out of business. Employees, individually and collectively, are equally disposed to overestimate what the employer can afford to pay; but up to the present time public opinion and law seldom have succeeded in forcing them peacefully to accept wages that they have really regarded as too low. They often have been forced to accept lower wages than they demanded, but the only really effective compulsion has been that of economic conditions.

Regardless of the employee's opinion of what he ought to have, he cannot by the strike or any other means long exact more than the employer can afford to pay. In the controversy preceding the present strike the labor leaders contended that the railways should be required to pay an average wage of $2,637 a year because the employees need this much to support their families according to a certain standard. But, hard as it may seem to say so, the wages any industry can afford to pay never have been and never will be determined by what its employees need. What any industry can afford to pay out is determined solely by what it can earn. A business concern can stop operating just as its employees can stop working. A business concern not only can but must stop operating if for any considerable time it is forced to incur expenses which exceed what it can earn. It is more difficult for a railway than any other kind of business concern to stop operating, because to do so is to forfeit its right ever to do business again. Already, however, many small railways in the United States have been forced to stop operating by inability to earn enough to pay their expenses.

If the demands made by the leaders of the railway labor unions should be complied with, either an enormous advance in rates would have to be made, or every railway company in the United States would have to stop operating. The public would not pay any such advance in rates. It has successfully insisted upon a reduction of rates. A reduction of wages was inevitable. The shop employees refused to accept it. There was presented such a situation as has developed in industry over and over again. It had the same result that it has so often had—a strike. The decisions and mediation of the Railroad Labor Board made no difference.

Will this always be the course of events in future? The

labor leaders doubtless will answer that it will be as long as the wage system exists. The more radical among them would avoid the development of similar irreconcilable differences, and the resulting lockouts and strikes, by abolishing "capitalism"—which is another name for private property—and the wage system with it. They would have all the means of production and distribution owned by the public and managed by the workers under some guild or soviet plan. But would that prevent the workers from demanding more than industry could produce? The soviet system has been adopted in Russia; but the workers in Russia still have to live on what industry can produce. It does not produce as much as it did before the hated capitalist and wage systems were abolished, and therefore the workers have to live on less. The proletariat are supreme in Russia, but the incomes of the workers are not based there any more than anywhere else on what the workers need or demand. They need and demand more than is required to keep them from starving; and yet thousands and even millions of them are starving. Economic laws cannot be repealed by strikes or revolutions, although many labor leaders convince their followers they can be. What men need and what they can get can be made equal only by increasing production enough to make what they can get equal to what they need.

There is being fought out in this strike not only the age long issue between employer and employee, but also the equally venerable issue of law and order versus violence. The law says that every man has the right to work without interference from other men. It is just as much a crime to threaten or assault or murder a man for the purpose of keeping him from working as it is to threaten or assault or murder him for the purpose of robbing him. Strikes such as this are accompanied by what is euphoniously called "peaceful picketing." The picketing is peaceful until some men try to work under the conditions or for the wages against which others have struck. Then the pickets usually begin to "persuade" them not to work by beating, stabbing, or killing them. The present strike has reached this stage. In every part of the country attacks by strikers upon men who have tried to work have been reported. The strike leaders constantly express pious hopes and wishes that there shall be no violence. Most of them are undoubtedly sincere; but the outrages continue. This raises squarely the question whether the public officials who have sworn to enforce the laws have the disposition and power to do so. It raises squarely the question whether the forces of law and order are stronger than the forces of lawlessness and disorder. Usually the forces of law and order have triumphed in this country. When violence begins in a strike it almost invariably indicates that the strikers are losing ground and know it. It began early in this strike.

The situation in many respects is tragic. It is depressing to realize that after all the progress which has been made in increasing the efficiency of industry it is still impossible to pay a large part of the workers wages sufficient to enable them to live in reasonable comfort. It is hardly less depressing to realize that most working men are so ignorant and badly led they are unaware that this condition is at least as much the fault of themselves and their leaders, as it is of the system of industry against which they inveigh and which many of them would like to overthrow. It is easily conceivable that with modern methods and machinery labor and capital could so co-operate as in a short time to secure an increase of production which would enable the average worker to receive the equivalent in necessaries, comforts and luxuries of the $2,637 a year of which the labor leaders talk. Shortcomings of human nature, which vitiate both labor and management, prevent it. If labor and capital would both use as much skill and energy in increasing production as they do in fighting over the division of what is produced, the problems of both would be largely solved.

It is also depressing to recall all the efforts that have been made to devise means of peacefully settling the differences that arise over the division of what is produced and then contemplate the situation now existing in the United States. Business conditions of other kinds have improved so much that, except for the coal strike and the railway strike, the total production of necessities, comforts and luxuries in the United States undoubtedly would be greater today than it ever was before. These two strikes, however, which are the results of efforts to settle by force what ought to have been settled by reason, already have prevented a normal and even more than normal increase of production.

Congress, in adopting the labor provisions of the Transportation Act, tried to establish a means of peacefully settling railway labor controversies and of substituting in this field, at least, the rule of reason for the rule of force. But human nature cannot be changed by legislative enactments; and the country has upon its hands this shop men's strike. But the laws of economics are still in operation and cannot be repealed either by statutes or by force. Increased efficiency in production can enable industry to pay wages of much greater purchasing power. Nothing else can. Strikes interfere with increased production, and, therefore, in the long run hinder increases in real wages. As long as there are labor unions that are led by and composed of men who would rather carry on propaganda and strikes than help increase the efficiency of production, we shall continue to have strikes and most labor unions will continue to be agencies not for enabling higher wages to be paid, but for making their payment more difficult.

Standardize Traffic Signals

THE "CAREFUL CROSSING CAMPAIGN" inaugurated by the American Railway Association should assist in reducing the heavy toll of life taken in highway crossing accidents, which are increasing so rapidly. The principal benefit from this campaign will be derived from educating the public through the intensive publicity campaign. However, the greatest benefits from such movements will not be derived until traffic signals are standardized nationally and a safety first movement is started by the various automotive societies along lines similar to those of the railroads. Such a movement means public education. The American Railway Association, through its Signal section, has yet to standardize the automatic highway crossing signal and this work is now well under way.

It will devolve upon automotive societies, the International Traffic Officers Association and other bodies to standardize or harmonize other traffic signals with long standing recognized practices. For example, red is universally recognized to represent "danger" in navigation and on the railroads, but it is also used to indicate "safety" in marking exits in public buildings and other places. The use of red in automobile tail lights has resulted in accidents (as pointed out editorially in the *Railway Age* for January 4, page 166) which otherwise would have been prevented if indiscriminate use had not been made of it. Therefore it is to be hoped that the meeting which was held in New York on May 23, under the auspices of the American Engineering Standards Committee, at the request of the Illuminating Engineering Society and International Traffic Officers Association, and looking to greater public safety through the standardization of colors for traffic signals, will produce results.

At this meeting A. H. Rudd, chief signal engineer of the Pennsylvania, representing the Signal section of the American Railway Association, recommended that (1) red be used for stop everywhere, such as at highway crossings with railroads, in fixed signals and in the hands of traffic officers at street intersections, at the ends of streets and possibly to

indicate excavations in the streets, unless qualified by a more favorable indication; (2) yellow for tail lights of automobiles, possibly for excavations in streets and for calling policemen or for any other purpose where caution is required, possibly at busy street intersections to indicate that the traffic lights will be changed from red to green or from green to red, and (3) green lights for fire escapes, for proceed at street intersections and other purposes to indicate the way is clear. These recommendations should form a good basis for the standardization of traffic signals. The sooner these signals are standardized and safety first campaigns for the public inaugurated the more quickly will regrettable highway crossing accidents be reduced to a minimum.

Freight Rates 6.9 Per Cent of Wholesale Value

ALTHOUGH THE arguments often used by shippers and politicians in demanding reductions in freight rates would seem to indicate an impression that rates are the most important factor affecting prices and the general state of prosperity or depression, the findings of the Joint Commission on Agricultural Inquiry just reported to Congress show the exact contrary as to rates in general.

For 1920 this report shows that the total freight revenue of all the railroads in the United States, $4,435,911,000, was only 6.9 per cent of the estimated wholesale or factory value of products of manufacture for that year, which was $62,500,000,000, and that "the freight revenue shown includes not only the transportation of raw materials of every kind handled but also the cost of transportation for final distribution to ultimate point of consumption." In other words, while the figure for the total retail value of the products of manufacture was not available, the total amount of the freight rates paid to the railroads was known and it constituted only 6.9 per cent of the wholesale or factory value. Therefore, it is plain that the freight rates must have been a still lower percentage of the prices paid by the public.

The freight revenues of the railroads in 1900, the report shows, amounted to $1,049,256,323, which was 9.2 per cent of the value of products of manufacture; in 1910 the freight revenues were $1,926,940,028, or 9.3 per cent. Therefore, the wholesale value of products in 1920 had experienced a much greater increase by 1920 than had the freight rates. The freight revenues for 1920, however, were the result of eight months under the rates as established by the Railroad Administration and four months under the advanced rates authorized by the Interstate Commerce Commission on August 26, 1920.

At another point in the report the proportion of freight to the value of goods transported is estimated at about 6.05 per cent, based on the census figures for 1914. In this calculation the total production of agricultural, manufactured and mineral products is added to the imports from which is made an estimated deduction of these same articles which do not move by railroad transportation. The estimated total value of $55,298,000,000 for that year, divided by the total railroad tonnage, 1,094,000,000, gives an average value of $30.40 per ton, while the average freight revenue per ton was $1.84.

The Congressional commission has compiled a large amount of data to show the economic relationship of freight rates to the prices of agricultural products and it urges reductions in these rates on the ground that they "bear a disproportionate relation to the prices of such commodities." Its comparisons of rates and prices for agricultural products, however, are based on the prices actually paid by the wholesaler and are more important in indicating the relation of the freight rate to the amount received by the farmer than the relation of the freight rate to the price paid by the public. The commission finds, however, that "reductions in rates upon the articles of higher value, or upon tonnage moving upon so-called class rates are not warranted, while the rates upon agricultural products and other basic commodities remain at their existing levels." It also finds that "freight rates on highly fabricated articles of wearing apparel, such as boots, shoes, dry goods, men's and women's suits, etc., are not a material factor in increasing or reducing prices of these commodities."

"Higher freight rates are not infrequently urged as an excuse for increases in prices without justification," the commission says. "While freight rates are often a considerable factor in the cost of distribution of low-priced, heavy tonnage commodities and may restrict the radius of distribution thereof and sometimes even prevent shipment altogether, as a rule freight rates have not kept pace with increases in the prices of such articles as dry goods, boots, shoes and other highly fabricated articles usually purchased in less than carload quantities and do not restrict or diminish the movement of such commodities. The amount of freight in the average purchase of dry goods is so small it is difficult to show it."

The report emphasizes the statement that because the prices of farm products had fallen after freight rates had been advanced, "the farmer is suffering from a 72-cent dollar," measured by its purchasing power in terms of transportation. But the same table in the report that is used to illustrate this shows that for seven years before the decline in prices of farm products the purchasing power of the farmer's dollar, measured by the amount of transportation it would buy, ranged from $1.01 to $1.89, so that for that period the railroad dollar would buy less of farm products.

Farmers and Railway Public Relations Work

EVERY RAILWAY EXECUTIVE in the country should read and reflect upon the letter from C. B. Hutchings, traffic manager of the American Farm Bureau Federation, which is published in the "Letters to the Editor" department of this issue of the *Railway Age*. This paper has often expressed the opinions, first, that the future of the railways will be determined by public sentiment, and, secondly, that the class of our people whose sentiment will play the greatest part in determining it are the farmers. While most business men will join in every agitation for reductions of rates, most of them are strongly opposed to every form of state socialism and will always be found arrayed against government ownership of railroads and measures which plainly tend to bring it about. On the other hand, there is a great deal of radical sentiment among the working men in cities largely because most of them are not property owners and do not clearly see how the overthrow of the institution of private property would be directly injurious to them. It is to be feared the resolutions adopted by the American Federation of Labor in favor of government ownership of railroads over the opposition of Samuel Gompers himself express the real attitude of most of the wage earning population.

The farmers are not only the largest single class of our people, but also much the largest class of property owners; they hold the balance of power. They have principally determined the policy of railway regulation followed in the past. The importance of securing a sentiment among them in favor of fair and reasonable regulation and against government ownership is, therefore, apparent.

How is this to be done? The answer may be inferred from Mr. Hutchings's letter. The managements of the rail-

ways must be made to understand better the farmers' problems and needs, and the farmers must be made to understand better the railways' problems and needs. Beyond any question there is great misunderstanding on both sides now. The welfare of the railways demands that their managements take the initiative in removing the causes of these misunderstandings. It is a most significant fact, as Mr. Hutchings points out, that when representatives of agriculture, industry and transportation, under the auspices of the Joint Commission of Agricultural Inquiry, sat down around a table and discussed matters of mutual interest they were able to reach agreements upon almost every question under consideration. This was the case because the facts about the situation of each interest were clearly and fully presented by its representatives to the representatives of each of the other interests. As Mr. Hutchings says, "reasonable-minded men will always conform to the facts."

If all the farmers, business men and railway men of the country could be made to know and understand the facts about one another's businesses a fairly harmonious sentiment among them could be secured. But the problem of placing needed information in the possession of all of them is vastly more difficult than that of placing it in the possession of a few men sitting around a table. And yet that is a problem which must be solved if the relations between the different industries and between each of them and the government are to be made satisfactory and healthy. The railways will never do the part of this work that they ought to do until they collectively and individually adopt and carry out plans as large in their scope as the importance of the object to be attained.

With respect especially to the relations of the farmers and the railways nothing could be more certain than that there is among the farmers a vast amount of hostile sentiment toward the railways. This is partly due to the fact that the railways never have done as much as they should have to help the farmers solve the farmers' problems. It is also due to the fact that for years interested persons have disseminated misleading and downright false propaganda against the railways among the farmers, and that railway officers have not done enough to nullify its effects by taking directly to the farmers the facts about the development and management of the railways. Every man who has thoroughly studied the history of and the current data regarding our railways knows it is not true that as a whole they are overcapitalized or inefficiently or dishonestly managed, that they are earning excessive returns, or are charging higher rates than their operating expenses make necessary. Nevertheless, there are literally millions of farmers who believe that not only some but most railways are grossly overcapitalized and inefficiently or dishonestly managed, that they are earning or are "guaranteed" excessive returns, and that their rates as a whole are higher than conditions warrant.

The *Railway Age* has no doubt that this sentiment among the farmers could be remedied by constant, simple, direct and adequate presentation of the facts about the railroad business to them. The railways should spare no effort to get the point of view of the farmers and their organizations and should be influenced by it. At the same time, they should spare no effort to give the farmers their point of view, and without any doubt the farmers will be influenced by it. Nothing would contribute more than this toward the solution of both the farmers' problem and the railroads' problem.

LAST YEAR the total value of supplies bought for Pullman cars was $1,310,283.34, or 4.11 cents for each passenger carried, according to recent figures compiled by that company. During the year 113,640 gal. of liquid soap and 2,531,808 cakes of soap, 1,035,925 towels, 2,587,536 boxes of matches and 64,755,000 drinking cups were used on the cars. Laundries washed 214,870,412 pieces of Pullman bed clothes, towels, etc., during 1921.

Letters to the Editor

[The RAILWAY AGE *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]*

Farmers and Railway Public Relations Departments

CHICAGO, ILL.

TO THE EDITOR:

I have read with a great deal of pleasure Samuel O. Dunn's address on the Railway Situation, delivered at the annual meeting of the Railway Accounting Officers Association at Cleveland on June 7. The part of the address in which I am particularly interested is that in which he speaks of the necessity for public relations work on the part of the railroads.

The longer I have to do with the relations of railroads and their customers the more I am convinced that a large part of our difficulties consist in the fact that one side does not realize the conditions surrounding the other. The farmers today are grievously at sea in regard to the true facts of the railroad situation, and the railroads, in a very large measure have not realized how serious was the disease which had attacked agriculture and business. The plain truth of the matter seems to be that each party to the argument has failed to see the necessity for telling the other the real facts about his problem.

As you know, the Joint Commission of Agricultural Inquiry has approved the establishment of public relations divisions on the part of the railroads. Without considering where the fault lay in the past our present railroad difficulties can largely be solved if adequate work along this line is done. As one of the staff of the Joint Commission, I sat for weeks around a table where representatives of agriculture, industry and transportation met to discuss the report, and while some of our discussions were lengthy it is nevertheless a fact that upon only one subject did we fail to reach complete agreement. This agreement was possible because the facts had been fully told and reasonable minded men will always conform to the facts.

When this report was submitted to a second and wholly different body of representatives of agriculture, industry and transportation, an agreement was reached upon this problem although the second body was unable to agree upon two other questions, but when such an agreement can be reached upon 40 or 50 recommendations it is not too much to say that the solution of the whole problem lies in an adequate understanding of the facts.

I am vitally interested in this subject and hope that the *Railway Age* will continue to promote the establishment of such departments.

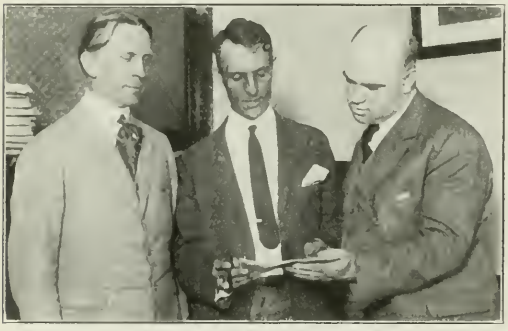
C. B. HUTCHINGS,
Traffic Manager, American Farm Bureau Federation.

THE STATE OF MICHIGAN has filed 31 suits against 11 railroads to recover $200,000 claimed to be due in fees and penalties for failure to pay the statutory fee for the right to issue securities. There is a law providing that utilities obtaining permission of the Michigan Utilities Commission to issue securities shall pay the State a fee of one-tenth of one per cent of the value of the securities to be issued. Certain railroads have gone to the Interstate Commerce Commission for the approval of their issues and have ignored the Public Utilities Commission.

Violence on Western Roads, Quiet in the East

Carriers Securing New Recruits to Take Place of Strikers— Serious Interruptions on But Few Roads

Reports of rioting, slugging, bombing, and arson have featured the past week in the shopmen's strike in the West. In six states it has been necessary to mobilize troops for the protection of property and employees who are remaining on duty or who have been recruited for service by the railroads. In many instances it has been necessary to dispatch these troops to points where civil authorities have confessed their inability to maintain peace. Injunctions restraining the strikers from interfering with the operation of railway shops or with the men obtained by the railroads to operate these properties have been issued by federal courts



P. & A. Photo

Signalmen Not to Strike—Their Chief, D. W. Helt (Center), Talking with Messrs. Hooper (Left) and McMenimen of the Labor Board

throughout the country. Innumerable instances of attempted intimidation have been reported, these attempts being directed not only at workmen but at the troops which have been called to protect various shops. Despite all of these developments, however, there has been a slow but steady resumption of repair work on many roads with the aid of loyal employees and new workers who have been brought into the shops, in several instances under the guard of troops, to take the places of the strikers.

Disturbances on the C. & A.

The walkout of the shop craft employees was, as a rule, conducted in an orderly manner and in the days immediately following there was little disorder. Sporadic outbursts occurred now and then but they were so isolated as to be negligible. Picketing was resorted to by the strikers at practically all points, but this too was, as a rule, orderly. The first serious disturbance was reported when the Chicago & Alton shops at Slater, Mo., were seized on July 5 by strikers who drove 25 non-union men from that town on July 4 and 18 on July 5. Union officials stated that the non-union men were placed on trains and sent from the town. Other reports declare that the non-union men were merely driven from the shops and that they left Slater voluntarily. Chicago & Alton officials stated that three guards employed by the railroads at the shops had been arrested by local authorities and placed in jail, and that the railway property was without protection of any sort. On July 6 the Chicago & Alton appealed to Governor Hyde for protection, and on July 7, state troops were mobilized and held ready for call.

Immediately following the Slater outbreak, strikers on the Chicago & Alton at Bloomington staged a demonstration. Little damage was done but the civil authorities found themselves unable to cope with the situation, and troops were requested by both city and state officers. Five units of state troops were later dispatched to Bloomington and had the situation in hand until the importation of strike breakers on July 11 occasioned another outbreak in which shooting and slugging played a large part.

The uprising spread rapidly through Illinois, and on July 7 a group of strikers in Aurora escorted a number of workers sent from Chicago to work in the Burlington shops at that point to the city limits. On July 6 a cordon of several hundred men surrounded the Wabash shops at Decatur, Ill., in violation of a restraining injunction, in an attempt to intimidate those still at work. Two guards at the shops were beaten when they attempted to prevent strikers from interfering with workers in the shops. Troops are still held in readiness to move there if further trouble breaks out.

On July 8, the importation of workmen led to a demonstration at Clinton, Ill., in which stones were thrown at the workmen by the striking Illinois Central shop men. Armed guards opened fire on the strikers. One striker was shot

P. & A. Photo

Troops Patrol Yards at Clinton, Ill.

and his son killed by a stray bullet. State troops were immediately requested.

Arson followed mob violence on July 7, in Chicago, when after a night of rioting at the Burnside yards of the Illinois Central, a box car was burned in the yards. Police report that the car had been soaked with oil and fired by strikers. Two attempts were made on the night before to set fire to the homes of workmen.

The hiring of men by the various roads to replace the strikers resulted in further outbreaks. On July 8 four men were reported killed in the disorders. By this time, the situation had become so serious in Illinois that the Chicago, Burlington & Quincy applied for injunctions to restrain picket-

ing by strikers at the various towns along its lines. This example was followed by the Chicago & North Western, the Chicago & Alton, the Illinois Central and numerous other roads. These injunctions were granted by the courts.

Curtailment of Service

Neither traffic disturbances nor curtailment of trains have been general. The Missouri, Kansas & Texas is reported as having discontinued the operation of 47 local trains in Missouri, Kansas, Oklahoma, and Texas. Lack of proper protection for workers, and the possibility of damage to equipment, was given as the cause. The Chicago & North Western has withdrawn 14 trains, it is reported.

A majority of the roads had issued ultimatums to their

P. & A. Phot.

Kitchen Cars to Feed New Employees

striking employees, setting a limit after which, if they did not return to work, they would lose their seniority and pension privileges. These were followed by a rather slow filtering back of strikers, but not to any appreciable extent.

The Situation on Individual Roads

The following reports of conditions on various western carriers are indicative of the strike situation in that territory:

Approximately 4,900 employees in the locomotive department and 3,138 employees in the car department of the Missouri Pacific are on strike, according to B. F. Bush, president of that road. A total of 522 men in the locomotive department and 450 in the car department—loyal employees and new men—are now in service. "So far traffic has not been affected," Mr. Bush reports. "Some disorders have been reported at smaller points but nothing serious has happened. Recent injunctions and other activities on the part of state officers should make the situation more favorable." Mr. Bush also reported that 15 foremen returned to work at the Little Rock shops of that road on July 11 and that more were expected later.

J. M. Kurn, president of the St. Louis-San Francisco, reports that the general shop labor situation on that carrier is very much improved. "We are hiring new men daily and a few old men are returning to service," Mr. Kurn said, "There has been no curtailment of passenger trains and none in contemplation. Our passenger trains are running practically on time and we are handling a heavy freight business without very serious delay. Our coal supply is adequate. We have secured an injunction in Missouri yesterday restraining strikers or their sympathizers from picketing or interfering in any way which might tend to hamper the operation of our trains."

On July 11, the situation is Bloomington, Ill., became more serious. In that city the enginemen, firemen and other train service employees became restive because of the patrolling of railway property by state troops and appealed to their organizations' leaders who in turn, it is reported, requested permission of their international president to refuse to operate all trains, with the exception of those carrying mail, in troop-patrolled territory.

Violence during the day was sporadic and in few cases of serious character. At Newcastle, Cal., several sticks of dynamite were used in an attempt to blow up a large water tank on the Southern Pacific and at scattered points throughout the country violence was used in driving replacement men from their work.

Of the roads centering in Chicago the Erie has filled its ranks and is hiring no more men. The Chicago, Milwaukee & St. Paul which lost approximately 16,000 men and has recruited 1200 men is operating full train service without disturbances.

The Chicago & Alton has recruited 300 men to take the place of the 2,500 who went out. It is operating trains with little difficulty although it has had much trouble with interference of strikers at various points in Illinois and Missouri. The Chicago, Burlington & Quincy has 1800 out of a normal complement of 14,000 shopmen at work.

The Illinois Central, has approximately 8,000 at work out of a pre-strike force of 12,000 men. Traffic is unaffected and no serious disorders have been reported up to the present.

The Chicago Great Western has 550 men out of a normal

P. & A. Photo

Military Supplies Ready for Shipment to Scenes of Violence

force of 2,100 at work and is having no difficulty in operating its trains.

The Santa Fe reports 1600 men at work at its Topeka shops on July 10, while 200 men returned to work on the following day.

Mobilization of Troops

Conditions became so serious throughout the country late last week that repeated calls for state troops led to mobilization in six states. The only troops on active duty, however, are those in Illinois and Missouri. State aid in Illinois has also been extended through the utilization of United States marshals and their forces. United States Marshal Levy of Chicago was given unlimited authority by Federal Judge Carpenter of the United States District Court at

Chicago to deal with the situation in Illinois. Marshal Levy has blanket authority to swear in as many deputies and to spend as much money as he considers necessary to maintain law and order.

Judge Carpenter pictured the federal court as the "last bulwark between the people and Communism, Bolshevism, and anarchy," in granting this authority for the swearing in of deputies by the marshal.

The Strike Situation in the East

While the shopmen's strike situation in the west has been somewhat complicated by acts of violence which in some cases have necessitated the calling out of state troops, in the east this has been a minor factor and only sporadic outbreaks of an unimportant nature have occurred. In general the situation in the east shows a progressive and material improvement. The railroads primarily by hiring new men have replaced the strikers to a considerable extent, some, of course, having had much better success than others. Few roads have been able to bring their forces entirely back to normal although some have had a large degree of success particularly insofar as concerns the men directly associated with the operation of trains. There has been in the east practically no interruption to either freight or passenger service. The Erie is the only large eastern road which has curtailed its service; it has annulled 20 suburban trains running out of Jersey City but even in this case the reason ascribed by the management was the fear of a possible fuel shortage.

Practically all the roads report that they have had good success in securing new men to take the places of the men who had answered the strike call. They have advertised for men and have continued to receive applications for employment in large number. The men are said to be competent and experienced to a far greater percentage than might have been expected under such circumstances. Many of them have been recruited from ship yards and similar employment. The New Haven has received the co-operation of manufacturing industries in its territory. New men, if competent, are guaranteed permanent jobs. A number of roads have sought to enlist college men who are now on their summer vacations.

Most of the roads have announced that the strikers have been taken off the payrolls and that they can return to work only as new men. Some put this announcement in the form of an ultimatum or invitation setting a certain date beyond which the men would lose their rights. Some of the roads have had a number of the strikers return and have taken them on as new men, this being the case particularly on the Pennsylvania and Long Island which two roads were not parties to the Labor Board's decision which resulted in the strike call

The strike, insofar as the eastern roads are concerned, has been comparatively free from violence of a serious nature. Guards are a familiar sight at all railroad centers. There have been instances of intimidation. Cases have been reported here and there of guards or strike-breakers being beaten up and occasionally rocks have been thrown at men and even at trains.

Another feature of the second week of the strike has been the contracting of locomotive and car repairs with outside shops. One instance is that of the Erie which has made a contract with the American Locomotive Company to have 25 locomotives repaired per month at the latter's Cooke Works at Paterson N. J. for a period of six months. The labor forces are at present trying to prevent the carrying out of the work

An order sent out by A. J. Berres, secretary-treasurer of the metal trades department of the American Federation of Labor, on July 12 instructed members of all unions affiliated with that department that no further repair work will be authorized on locomotives coming from railroads on which strikes are in progress to outside shops employing union labor

The following items give a résumé of the situation as it exists on a number of the eastern roads. Most of the roads, it will be noted, report an improving situation and practically all advise that passenger service continues to be operated on schedule and freight service without interruption:

Baltimore & Ohio

C. W. Galloway, vice-president in charge of operation advised under date of July 11 as follows:

"The strike situation on the Baltimore & Ohio today shows substantial improvement compared with July 1, when 73 per cent of the shop employees went on strike. Since the holidays many old employees have returned and including 2,000 new men employees 7,350 men are working, equal to 35 per cent of the force employed on June 30. It has not been necessary to close down the shops at any point except the big rebuilding shops at Cumberland and Pittsburgh which we have not tried to open.

"Only a few minor cases of strikers attacking workmen have occurred.

"There has been no curtailment to passenger train service, the performance gradually improving. There are no restrictions against the acceptance of freight of any class and perishable, live stock and food stuffs are moving according to schedule. There has been some slowing up in the movement of slow freight."

In his report Wednesday of the situation on the Baltimore & Ohio Mr. Galloway said:

"The only situation that is causing any trouble is in northern Ohio and northern Indiana, where the strikers have interfered with the operations at Willard and Garrett on account of the lack of protection on the part of the local authorities at these points, and in this particular section certain of the passenger service will be discontinued until the authorities can guarantee protection to our employees, who are willing and anxious to work.

"In some other sections passenger train service will be curtailed as a result of the acute coal shortage, but this will be minimized so as to create the least public inconvenience."

The Staten Island Rapid Transit, the Baltimore & Ohio's New York terminal and suburban line on Staten Island, reports that from 60 to 70 per cent of its shop employees are at work. The number is 260 men including 30 strikers who have returned and about 20 men who did not go out. The normal force is 340 men. It also reports that there has been no interruption to traffic.

Bangor & Aroostook

The chairman of the Federated Shop Crafts on this road was in Chicago all of the week before the strike at the same time that the road's general manager was there at the hearing before the Labor Board, and made several appeals to Mr. Jewell and Mr. Franklin not to call the strike on the Bangor & Aroostook because the men did not want to go out and were satisfied with conditions, but these appeals were made in vain and he was told that the men would either have to go out or lose their union cards.

About 80 per cent of the men affected answered the strike call. The road reports a steady improvement since the strike began. On Tuesday of this week 148 men were working or 38 per cent of the normal force; 11 strikers had returned. Passenger and freight service is normal.

Boston & Albany

Conditions are reported as improving each day. The road has had no interruption to freight or passenger service.

Boston & Maine

On July 10, 45 per cent of the men were working including new employees. Three of the shops were practically closed at the outset and the road concentrated its efforts on locomotive terminals and inspection points. Three important shops are now working with substantial forces. There have been some isolated cases of violence. Service is normal and the situation as a whole is reported by the company to be showing steady improvement.

Buffalo, Rochester & Pittsburgh

The number of men at work is 68 or 6 per cent at normal, and none of the strikers have returned. Service, however, has been handled without interruption and the situation is reported as improving.

Central of Georgia

The Central of Georgia has 652 men working or 30 per cent of its normal force. No strikers have returned to work nor have any more employees left service. The situation is reported as unchanged.

Central of New Jersey

This road on July 5 had 821 men at work which force it increased to 1,400 men on July 6. The latter figure is 30 per cent of the normal force of 4,746 men. On July 11 the percentage had risen to 35 per cent. Since the beginning of the strike the road has had 25 per cent of its strikers return. Service is reported as being handled without interruption.

Delaware, Lackawanna & Western

This road is operating its through and suburban passenger service as well as its manifest freight service on schedule and has suffered no interruptions to its other freight service. Its

Copyright, 1922, New York Tribune, Inc. Used by Permission

A Question Bound to Arise Sooner or Later

situation is reported as improving rapidly, large numbers of competent new employees being hired to fill the places of the strikers. The round-house forces at Hoboken, Secaucus and Port Morris are now filled out to normal. The walk-out at the Scranton locomotive shops, and the Kayser Valley car shops was complete and these shops are practically idle. The situation at the Kingsland, N. J., shop is in somewhat better shape.

Erie

The Erie is one of the few roads in the East which has had to curtail its train service. Effective July 10, 20 suburban trains operating out of Jersey City were annulled although the reason assigned was that the step was taken for fear of a possible fuel shortage. The Erie's contractors now have 41 per cent of their normal forces at work and 225 strikers have returned to duty. Among the several interesting features in the Erie situation is that it has made a contract with the American Locomotive Company for the repair at the latter's Cooke Works, Paterson, N. J., of 20 locomotives per month for a period of six months. The labor forces are now trying to effect a cessation of work at the locomotive plant insofar as repairs to these locomotives are concerned.

Lehigh & New England

On July 11, the Lehigh & New England had 44 shopmen and laborers or 13 per cent. There has been a gradual improvement in the situation due to the employment of new men.

Lehigh Valley

This company was operating on July 12 with shop crafts' forces about 28 per cent of normal, i. e., with 1,532 out of a pre-strike force of 5,573. The road has not suffered from violence and is moving its trains, passenger and freight, according to schedule and without interruption. None of its shops have been closed and 123 strikers have returned to their posts during the week ended July 12.

Maine Central

This company on July 12 had 462 shopmen at work, which represents 30 per cent of those at work on June 30. Of this total 252 were old employees and the remainder recent acquisitions. Since the beginning of the strike a few new employees and a few old employees who did not heed the strike call on July 1 have left the service. The road has closed none of its shops but work at Waterville is practically at a standstill. No violence has been reported and there has been no interruption to either passenger or freight traffic. The situation in general shows improvement over the preceding week.

New York, New Haven & Hartford

On the New Haven the number of men who went on strike totaled 6,139. The road has been able to report a progressive and steady improvement day by day since the beginning of the strike. A statement issued under date of July 7 said "Conditions have improved each day and skilled mechanics and others have been placed in the positions formerly occupied by men now on strike. Recruiting of desirable mechanical experts continues as rapidly as applicants can be examined and arrangements made for placing, and large numbers of applicants continue to appear. Manufacturers and other industries have patriotically proffered assistance in supplying men in the skilled trades. The company reiterates that qualified men of good habits and character who accept service at this time will be regarded and treated as permanent employees."

On June 11 the company reported that it had a force of 3,200 men or 50 per cent of its normal force. A statement issued by the management on the same day said in part:

"Conditions on the New York, New Haven & Hartford this morning have improved materially over any previous day.

"A large number of skilled mechanics and also a large number of laborers have been employed at the rates awarded by the Labor Board to permanently fill positions formerly occupied by mechanics and laborers on strike. The personnel of the mechanical department is, with the assistance of loyal and patriotic manufacturers and industries, being built up on a firm and lasting basis. There have also been a number of the men out on strike who have returned to duty as new men upon coming to a realization that the strike is not against the railroad individually but against the constituted government of the United States.

"This morning there is an increase of approximately 250 skilled mechanics over the force working on the first shift yesterday.

"There has been no interruption to freight or passenger service, which continue to be operated on a normal basis."

The New Haven reported on July 6 that it had closed a contract with the Keith Car & Manufacturing Company, Sagamore, Mass., for the rebuilding of 6,000 bad order freight cars. In explanation it further said: "At various times in past years when bad order cars have increased beyond normal, the excess have been sent to the Sagamore plant. There are a large number of additional cars awaiting repairs so that this arrangement will not affect the running of this company's shops on a normal basis and the giving of continuous employment to those now in or who may be taken into the employ of the company. It is the program of the company to give preference to its own shops in currently performing the normal amount of this work."

The New Haven also reported on Wednesday that "three trains of the larger locomotives have been forwarded to the shops of locomotive builders for general repairs and more are lined up

to follow so that there will be an adequate supply of power at all times to meet the requirements of the service."

New York, Ontario & Western

This road reports that it has had no interruption to train service either passenger or freight.

Norfolk & Western

The Norfolk & Western on Tuesday had 1,243 men at work, 12 per cent of its normal force. Since last week it has lost 76 additional men. The road has had no interruptions to passenger service. Freight service has been interrupted, but not to a substantial extent. The siuation as a whole is designated as "slightly improved."

Pennsylvania

On July 11 the Pennsylvania had 41,000 shopmen working out of an average week day force reporting in normal times of approximately 55,000. The road reported that it had gained 4,100 men actually working this week. It has no shops or enginehouses closed down anywhere on the system and has not had since the strike began. Nor has it had any interruption to its train service either passenger or freight. The general situation on the Pennsylvania has been showing material improvement every day.

On the New Jersey grand division the condition has improved to the extent whereas 2,000 men went out originally, 1,500 or 1,600 new men have been hired to take their places. The most essential classes are rapidly reaching normal. On the New York division, including Meadows shops, more than 1,000 new men have been taken on. One agency in New York hired 145 new men Tuesday morning.

The Pennsylvania's power house at Long Island City which supplies power to the Pennsylvania's New York electric zone and to the Long Island has been one of the central points of attack on the part of the labor forces, but thus far without success on their part. The first trick at the power house has a normal force of 90. On Tuesday morning the number of men at work was 122. The Long Island, like the Pennsylvania has had no interruptions to service.

Philadelphia & Reading

The Reading has not been affected by the strike.

Richmond, Fredericksburg & Potomac

Practically all of the shopmen who were members of the federated crafts ceased work on July 1. Up to the early part of this week the road had employed almost 150 new men or 20 per cent of its normal force. Traffic is being handled without interruption. As compared with last week the situation is reported as "stationary."

Seaboard Air Line

This road has only about two per cent of its men working. All its shops are closed. There has, however, been no interruption to passenger service. The situation continues about the same as in the early part of the strike.

Southern Railway and Other Southeastern Roads

In the Southeast some of the strikers have returned to work, but on most roads the percentage has not been very large and there was no general movement to return on Monday as had been expected in some quarters. As a result, there has been some slowing up of freight movement, but comparatively little interference with traffic. Some local trains have been withdrawn. The Southern Railway has not withdrawn any passenger trains and perishable freight trains are moving currently, while the movement through some of the principal terminals has been very large. The Southern has issued no ultimatum to the men setting a date by which they must return to work and it is understood has made no effort to replace those who went out for the present. On the Norfolk & Western about 700 clerks out of 3,000 went out on strike after the shop men went out. The Alabama & Vicksburg secured a restraining order against interference with its men at New Orleans. Some of the lodges of the trainmen's brotherhoods in the Southeast have notified men who have been promoted to official positions but who still retain their membership in the organizations that if they perform any of the work of the men out on strike they will lose their insurance, seniority and other rights in the organizations.

Washington Terminal

Officers of the Washington Terminal Company last week, when the semi-monthly pay day came around, indicated their attitude toward the strikers when they refused to accept payments to the employees' relief fund tendered by the men who had gone out on strike on July 1. They took the ground that since the men had left their jobs they were no longer to be considered employees of the terminal. Officers of the machinists' union said they had instructed their attorneys to make efforts to force the railroad authorities to accept the payments.

Photo by Keystone

Helping to Keep the Trains Running—a New Employee of the Pennsylvania

Western Maryland

The situation during the second week of the strike remains unchanged. The road advises that it has all the employees necessary. The Western Maryland has contracted all repair work and the contractors did not lose any men following the announcement of the strike call.

Developments at Chicago and Washington

D. W. Helt Agrees to Withhold Strike Order

Insofar as the Railroad Labor Board is concerned, two of its members, Ben. W. Hooper, chairman and one of the three public representatives, and W. L. McMenimen, one of the three representatives of labor on the Board, have devoted a good deal of their time during the past week to inducing the leaders of the other organizations which have threatened to strike to withhold their strike orders.

After conferences between these two members and D. W. Helt, president of the Brotherhood of Railroad Signalmen of America, the latter announced that he would withhold strike orders for the members of that organization pending the carrying out of a program being drafted by a committee of its officers. For the time being at least this action ends the possibility of the addition of signalmen to the ranks of the strikers.

The program determined upon by this committee was announced on July 11 by Mr. Helt and included the following provisions:

First: To instruct our general system committee on each carrier to take up promptly with the management all the grievances and controversies outstanding between the members of our organization and the carriers for the purpose of negotiating speedy adjustment, the matters to be taken up, among others, to embrace a revision of the recent-wage decision of the Labor Board, certain

changes in our rules, the elimination of the four cent inequality, and the method of determining rates of pay as applicable to signalmen and signal maintainers with less than four years' experience.

That the carriers could not well hesitate to consider a revision of the wage decision is indicated by the fact that some of them have already granted more favorable rates than those authorized by the Board in Decision 1074.

Second In case of a failure to secure from any carrier fair and reasonable concessions in regard to the various matters involved, to bring these matters before the Labor Board with the assurance that they shall be given the right of way for prompt consideration and decision.

Third: To continue work under the present wage decision of the Labor Board under protest pending the efforts to obtain a satisfactory adjustment.

Fourth To insist that any revision of wages obtained be made retroactive to July 1.

Fifth: To withhold strike order pending the carrying out of the foregoing program.

"With the best interests of the members of our organization at heart, we believe that this program should be followed prior to resorting to more drastic action," the announcement added.

The conferences which resulted in this action and in the similar action of E. F. Grable, president of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, reported in last week's *Railway Age*, have not been made public and the arguments by means of which these two labor leaders were induced to withhold their strike orders are not known.

Plans were made by these two members of the Board to hold similar conferences with E. H. Fitzgerald, president of the Brotherhood of Railway and Steamship Clerks, Express and Station Employees, but the latter declined to meet them and efforts to reach Mr. Fitzgerald were futile. This move on the part of the clerks' leader, together with the tenor of his remarks at the Board's inquiry on June 30, indicate according to observers of the strike, that on certain roads at least the clerical forces will soon join the striking shopmen in an effort to tie up transportation.

Board Upholds Right of Employees to Refuse to Do Strikers' Work

Two resolutions holding that the carriers have "no right to require an employee to perform work outside the scope of the existing agreement or decision of the Board covering the rules and working conditions of the class to which such employee belongs unless the employee performs such work voluntarily," were adopted by the Board during the past week. The first resolution refers to employees who are members of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers and was handed down as the result of a protest by Mr. Grable, the president of that organization, who contended that members of his organization were being asked to perform the work of striking employees of other classes.

The second resolution referred to the employees who are members of the American Train Dispatchers' Association and the Railroad Yardmasters of America and was handed down as the result of protests registered by J. G. Luhrsen and J. L. Eldridge, presidents of these organizations.

"The observance of the policy here recommended will be conducive to the peaceful and uninterrupted operation of the carriers at this time and will enhance harmonious cooperation among all classes of employees after the strike is terminated," the last resolution of the Board added.

The Labor Board's Call for Conferences

On July 12 it became known that Mr. Hooper and Mr. Jewell and other leaders of the Six Shop Craft organizations now on strike had participated in a series of conferences, the first of which was held on July 8. Referring to these conferences Chairman Hooper said: "Too much significance need not be attached to the fact that I have held conferences with Mr. Jewell and the head of the several organizations. In the meantime I have also conferred with several railway executives. As a result of these conferences there are no optimistic predictions to make. My participation in the previous conferences has been personal rather than official and arose from a desire on our part to be as helpful as possible in the present situation."

Mr. Jewell also stated that: "A conference between certain members of the Labor Board and officers of the organizations of employees now on strike was held in which the issues involved were discussed. There are no optimistic or definitely hopeful results to announce at this time."

Reports being circulated as a result of these conferences indicate that the provisions under which it may be possible to end the present walkout include, first, an agreement to end the practice of contracting; second, an arrangement for modifying certain working rules which reduce the overtime pay of shopmen; third, the granting of assurances to Mr. Jewell that his organization will not be denied a re-hearing by the Labor Board on the wage issue, and, fourth, an agreement to establish the boards of adjustment provided for in the Transportation Act.

The report also indicates that Chairman Hooper has not receded from the Board's contention that the shopmen must return to work before they can expect further consideration before that body. It is questionable, according to observers, whether any "assurances" which might be given unofficially by Chairman Hooper would give Mr. Jewell material with which he could justify to his members a return to work. It is also pointed out that the contract "grievance" has already been practically eliminated through the statements of the carriers involved at the Board's hearing on June 30 and that the subject of wages and working rules can be brought before the Board by the employees involved at any time. Furthermore this situation has remained the same from the time the strike was called to the present.

The heads of the Train Service Brotherhoods asked for conference with the chairmen of the Regional committees created by the railways some months ago to deal with the Train Service organizations regarding working conditions. The chairmen of the Railway Regional committees are L. F. Loree, president, Delaware & Hudson, for the Eastern Region; S. M. Felton, president, Chicago Great Western, for the Western Region; W. R. Cole, president, Nashville, Chattanooga & St. Louis, for the Southeastern Region, and B. F. Bush, president, Missouri Pacific, for the Southwestern Region. This conference was held in Chicago on Wednesday and was understood to relate to charges made by men in train service that they had been asked by some railways to do work ordinarily performed by the striking shopmen.

The attempt of Chairman Hooper to bring about a conference between leaders of the striking employees came to nothing on July 12 when the Committee on Public Relations of the Association of Railway Executives virtually refused to meet the labor leaders at the present time.

President Calls for Law and Order

Washington, D. C.—Following the Cabinet meeting on Tuesday, at which the strike situation and its possible effects were thoroughly canvassed, President Harding took official action to strengthen the efforts of the railroads and of the Railroad Labor Board to preserve uninterrupted transportation service by issuing a formal proclamation, signed also by the Secretary of State, directing all persons to refrain from interference with the lawful efforts to maintain interstate transportation and the carrying of the United States mails and inviting the co-operation of all public authorities and the aid of all good citizens to uphold the laws and preserve the public peace. It is understood that the administration also stands ready to back up the words of the President by the use of troops if necessary.

While not gainsaying the right of any man to leave his work or denying the right to strike, the President emphasized the idea he has expressed in several recent speeches by saying that those who choose to accept employment under the terms of the decision of the Labor Board "have the same undisputable right to work that others have to decline to work."

The proclamation was not issued until a late hour on Tuesday evening and until after it had apparently been given careful consideration. It had been announced earlier in the day that the President would have an official statement on the strike situation but the proclamation came as somewhat of a surprise as it represents the first action of its kind by a President for many years and is in marked contrast with the practice so frequently followed in the case of railroad labor disputes in recent years of calling the parties to the White House for a conference leading to a compromise. In the case of the coal mining controversy President Harding had called such a conference because there was no public tribunal charged with the function of adjudicating it but in the case of the strike against a decision of the Labor Board he has made it clear from the outset that the board speaks with the authority of the government and there has been no suggestion of a thought of any one in Washington doing anything to weaken the position of the board.

Daily reports of the strike situation on the different roads are being received by administration officials and, with the coal strike on the way to a settlement, the railroad strike is regarded as constituting the most important barrier to a resumption of prosperity unless the men who are willing to go to work can be protected from the fear of violence. Secretaries Hoover, Davis and Weeks, Attorney General Daugherty and Postmaster General Work remained at the White House for further conference after the cabinet meeting. The Postmaster General had reports regarding interference with the mail and it is understood that the participation of the Secretary of War had to do with the use of federal troops. The text of the proclamation follows:

A Proclamation

WHEREAS, The United States Railroad Labor Board is an agency of the government, created by law, and charged with the duty of adjusting disputes between railroad operators and employees engaged in interstate commerce; and

WHEREAS, The United States Railroad Labor Board has recently handed down decisions, on affecting the wage of the Shop Craft employees, the other declaring the contract system of shop craft work with outside agencies to be contrary to the intent of the transportation act and, therefore, that such practice must be discontinued; and

WHEREAS, The Shop Craft employees have elected to discontinue their work, rather than abide by the decision rendered, and certain operators have ignored the decision ordering the abandonment of the contract shop practice; and

WHEREAS, The maintained operation of the railways in interstate commerce and the transportation of the United States mails have necessitated the employment of men who choose to accept employment under the terms of the decision, and who have the same indisputable right to work that others have to decline to work; and

WHEREAS, The peaceful settlement of controversies in accordance with law and due respect for the established agencies of such settlement are essential to the security and well-being of our people;

NOW, THEREFORE, I, WARREN G. HARDING, PRESIDENT OF THE UNITED STATES, Do hereby make proclamation, directing all persons to refrain from all interference with the lawful efforts to maintain interstate transportation and the carrying of the United States mails.

These activities and the maintained supremacy of the law are the first obligation of the government and all the citizenship of our country. Therefore, I invite the co-operation of all public authorities, state and municipal, and the aid of all good citizens to uphold the laws and to preserve the public peace, and to facilitate those operations in safety which are essential to life and liberty, and the security of property and our common public welfare.

IN WITNESS WHEREOF I have hereunto set my hand and caused the seal of the United States to be affixed. WARREN G. HARDING.

Reports of violence and interference with the mails at various points in connection with the shop men's strike caused the administration to take a more active interest in the strike situation following the return of the President and the Attorney General to Washington on Saturday and Monday. While the President had determined not to interfere with the strike itself, but to leave it to the Labor Board and the railroads, the reports of rioting and interference with mails created a situation requiring action from Washington and a formal statement indicating that the government intends to use its resources to preserve law and order was given out by Attorney General Daugherty on his return to Washington on Monday, with the approval of the President. After a conference with Alfred P. Thom, general counsel of the Association of Railway Executives, Mr. Daugherty went to the White House for a conference with the President.

Disorders and interference with mail trains by striking railroad men have resulted in several appeals to the government to afford protection. Serious charges of interference and assault and, in one case, of forcible seizure of railway employees, have caused the Post Office Department to lay the complaints before President Harding and Attorney General Daugherty. Passenger trains carrying mails have been discontinued in some instances.

According to telegrams to the superintendent of the railway mail service at Fort Worth, Tex., 26 trains have been withdrawn on different branches of the M. K. & T. All of them are railway post office trains with the exception of two, which carry closed pouches.

Z. V. Rawis, attorney for Pamlico County, North Carolina, telegraphed the Post Office Department from Bayboro that the Norfolk & Western had discontinued two passenger trains from Newbern to Oriental and that the mail service was completely paralyzed. A large portion of the mail, Mr. Rawis said, must be held over in Newbern from 16 to 40 hours, and mail on the Oriental section must lie over from 24 to 48 hours.

Mr. Rawis requested a prompt investigation and post office officials at Newbern and Oriental have been directed by the Post Office Department to report on the feasibility of installing temporary mail service between the two places, 30 miles apart.

The Post Office Department had announced on July 7 that only two cases of actual interference with the mails had been reported thus far, one at Marshall, Texas, and one at De Quincey, La. These cases were placed with the Department of Justice for prosecution. It was stated that the trouble at Chaffee and Slater, Mo., had been cleared up, according to advices received after President Kurn of the St. Louis-San Francisco appealed to the governor of Missouri and the sheriff of the county. The Brotherhood of Railroad Trainmen lodge at Chaffee wired the Post Office Department denying delay of mails at that town. Reports of delays of mails in Mississippi towns due to general strike conditions had also been sent in.

Later, on July 10, Postmaster General Work was notified by President Taussig of the Wabash of serious interference with the movement of mails, at Moberly, Mo., on Saturday night by strikers who stopped a mail train, cut the air hose and threw stones through the car windows. Eighteen railway mail clerks were taken from a train and marched to a strikers' hall and several engines at Hannibal, Mo., were put out of service by the strikers. Mr. Taussig said he had received no reply to his telegrams to the governor of the state of Missouri.

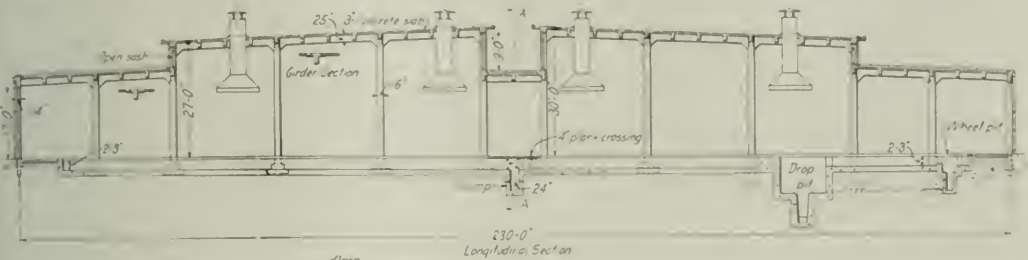
The Postmaster General issued a notice to all postmasters directing them to report to the divisional superintendent of railway mail service any acts of interference with mail movements. He also instructed the superintendent of railway mail service at Washington to have divisional inspectors sent to all points where railroads had reported disorders by strikers.

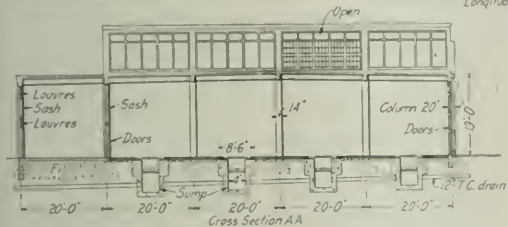
Southern Pacific Builds Unique Engine Houses

Rectangular Concrete Structures Are Provided With Lead Tracks at Each End to Expedite Use

THE SOUTHERN PACIFIC Coast Line recently completed two concrete engine houses at Mojave, Cal., and at Indio, which embody some interesting departures from the usual types of locomotive terminal facilities. Both the houses are rectangular in plan and similar in construction but differ in length, being planned to accommodate the types of engines in use on the divisions served. In both cases four tracks are provided, spaced 20 ft. center to center with adequate length for two engines on each track so that the house will accommodate eight engines in all. By providing lead tracks at each end of the house with connections to the main line, the movement of a locomotive into or out of the house interferes in no way with the other locomotives. The layout of the engine house site is such that space is provided for future enlargements by adding additional tracks.

The house at Indio is 206 ft. long by 80 ft. wide and has an annex of 110 ft. by 20 ft. to house a machine shop, foreman's office and engine crew's room. The house at Mojave is of the same dimensions except that the engine house proper is 230 ft. long instead of 206 ft.





Longitudinal and Cross Sections of the House

The engine pits are 210 ft. in length, and slope from the outer ends toward sumps in the center of building. From these sumps the drainage is conveyed through 12-in. pipes by gravity to a concrete oil trap where, by a system of weirs, the oil is separated and stored in a compartment until a sufficient quantity has accumulated, when it is pumped into the fuel oil tanks. This oil separator also acts as a sludge trap. Transversely of the building at the center is a 14-ft. wide gangway opposite the entrance to the machine shop. Where this gangway crosses the engine pits, heavy plank crossings are laid.

In addition to the engine pits, a truck-wheel pit and a drop-table pit are provided. The drop-table pit is arranged on No. 1 track and extends outside of the building to a

The Arrangement of the Engine House Is Simple Yet Convenient

wheel storage track. This arrangement prevents the blocking of two tracks when wheels are being removed from an engine and brings the wheels to a point immediately adjacent to the machine shop.

Smoke jacks are provided as shown in the drawings. The two outer jacks shown are for the accommodation of the Mallet locomotives operated with the tender at the front end, a practice peculiar to certain portions of the Southern Pacific. The building has been completely piped for air, steam, hot and cold water. Blow-off steam from engines is conveyed to a large tank outside of the building where it is used to heat water for washing and filling of boilers.

The building is of reinforced concrete construction throughout, including the roof slab which is carried on a series of beams, girders and columns. The columns are spaced 20 ft. center to center across the building and 24 ft. on centers lengthwise of the building, except at the ends and in the center where the spacing has been reduced to 18 ft. and 14 ft., respectively, to suit the planning.

The lighting of the building is unusually good, sash being used in practically the whole wall area between columns with the exception of ventilation openings near the roof and necessary low spandrel walls below the sill line. In addition to the sash in the side walls, sash area has been obtained by breaking the plane of the roof to form clerestories. An unusual arrangement has been adopted in the center of the building above the transverse gangway, where the clerestory has been formed by depressing the roof line in place of raising it. This arrangement gives a large sash area and still preserves sufficient head clearance for engines to pass under and is one which has no disadvantage since the house is located in a region where snowfall is a rarity.

The floors are of paving brick set on edge on a concrete base and between engine pits are laid with a crown to drain to the pits. The engine doors at ends of building are made to slide on parallel tracks, the tracks being arranged so that the last door turns back against the side walls of the building.

These buildings were designed and erected under the supervision of W. H. Kirkbride, engineer maintenance of way and structures, Southern Pacific, and W. M. Jaekle, assistant engineer maintenance of way and structures, Southern Pacific System, at San Francisco, Cal.

Ambiguity of Recapture Provisions Caused Speculation

Washington, D. C

An apparent ambiguity in the language of different paragraphs of Section 15-a of the Transportation Act has aroused a discussion in some quarters as to whether the so-called "recapture" of one-half of the excess net railway operating income of a carrier begins at 6 per cent, as commonly understood, or at 5¾ per cent, the rate which the Interstate Commerce Commission in its recent general rate reduction order, fixed as the rate of fair return for the period beginning March 1, 1922.

While paragraph 6 of Section 15-a specifically provides for the payment to the government of one-half of the excess above 6 per cent, the preceding paragraph 5 declares that "any carrier which receives such an income so in excess of a *fair return*, shall hold such part of the excess, as hereinafter prescribed, as trustee for and shall pay it to, the United States." The word "so", under the ordinary construction given to the English language, refers back to the sentence in the same paragraph, which states the impossibility (without regulation and control) of establishing uniform rates upon competitive traffic which will adequately sustain all the carriers without enabling some of such carriers to receive a net railway operating income "substantially and unreasonably in excess of a fair return" upon their value. Although the commission, under the provisions of paragraph 3 of the section has prescribed 5¾ per cent as constituting a fair return, there would seem to be no conflict between these two paragraphs 5 and 6, unless the difference between 5¾ per cent and 6 per cent be considered enough to represent a substantial and unreasonable excess.

However, paragraph 9 of Section 15-a, which directs the commission to prescribe rules and regulations for the determination and recovery of the excess income, says that "the commission shall make proper adjustments to provide for a computation of excess income for a portion of a year, *and for a year in which a change in the percentage constituting a fair return* or in the value of a carrier's railway property *becomes effective.*"

The commission was required to make adjustments for that portion of the year 1920 after this part of the Transportation Act became effective, but, it is argued that there would be no occasion to make adjustments to provide for the computation of excess income for a year in which a change in the percentage constituting a fair return unless the point at which recapture begins is to fluctuate with changes in the percentage declared to represent a fair return.

On the other hand, the general impression that Congress intended to allow an individual carrier or system 6 per cent before recapturing any excess is strengthened by paragraph 7 of Section 15-a, which provides that a carrier may draw from the reserve fund, to be established with its half of its excess, "to the extent that its net railway operating income for any year is less than a sum equal to 6 per centum" of the value, for the purpose of paying dividends, interest or rents. It would be a rather strange procedure to require a carrier which earned, for example, 6¼ per cent in one year, to pay ¼ per cent to the government and put another ¼ per cent in a reserve fund, and at the same time to permit it to draw from the reserve fund in the next year enough to make up a sum equal to 6 per cent, which it might then pay out in interest and dividends. This would restrict a road from paying out more than 5¾ per cent in a so-called "good" year but would let it pay out as much as 6 per cent in the "lean" year following.

Some confusion between 6 per cent and a fair return has been caused because paragraph 2 of Section 15-a directs the commission to make rates in an effort to produce a net railway operating income equal as nearly as may be to a fair return, and for the two years beginning March 1, 1920, directed the commission to take as such fair return 5½ per cent plus, in its discretion, not to exceed ½ per cent, and the commission in Ex Parte 74 did add the ½ per cent. At the present time, however, 5¾ per cent is officially presumed to be a fair return.

The commission has as yet made no ruling and placed no interpretation upon the recapture provisions because the question will not become a practical one for it until at least the end of this year.

The commission is still struggling with the returns of the carriers to show which of them earned an excess over 6 per cent for that part of 1920 during which they were not under guaranty and also for the year 1921. The returns are naturally based on the railroads' own claims as to their value and while the commission has received a few small checks representing half of the admitted excess, it is understood it is somewhat at a loss as to what to do with them until it has ascertained the value of the roads that have sent the checks and thus put itself in a position to be able to say whether the checks are sufficient.

Purchase by the Federal Government of the Cape Cod and Dismal Swamp canals would be authorized by an amendment to the rivers and harbors bill which has been adopted by the Senate committee on commerce.

Relations of Transportation to Agriculture

Congressional Commission Makes Report Containing Valuable Data on Relations of Rates and Prices

WASHINGTON, D. C.

THE JOINT Commission of Agricultural Inquiry has made public recently a voluminous report to Congress of the results of an exhaustive investigation of the relations between transportation and agriculture which contains much valuable data in the form of charts and tables regarding comparisons of freight rates and the other factors entering into the wholesale prices of agricultural products and of articles purchased by the farmer. The commission has not, however, found it possible to carry its data so far as to show the relations between rates and retail prices, on account of the difficulty of tracing commodities through because of mixing of grades and for other reasons. Some of the findings and recommendations of the commission have already been published in the form of advance statements by the chairman of the commission, Representative Sydney Anderson of Minnesota. This investigation is somewhat unique among congressional committee inquiries for the reason that it was conducted entirely without public hearings, but by the process of direct investigation and study in which a number of prominent railroad officials, as well as representatives of agriculture and industry, participated and assisted. The present report dealing with transportation is Part III of the complete report of the commission.

A large part of the report is devoted to a study of the history and development of the nation's transportation system, including its finances, organization, plant, methods of operation, etc.

An interesting feature is an estimate that freight charges in 1920 represented 6.9 per cent of the wholesale or factory value of products of manufacture, including raw materials of every kind and also the transportation for final distribution to ultimate point of consumption.

How the Inquiry was Conducted

The commission, in order to secure the material for this report, established a transportation division on August 1, 1921. This division organized throughout the United States committees representative of agriculture, industry, and transportation, which, through specific questionnaires, obtained the statistical data upon which the conclusions of the commission primarily rest.

One hundred and fifteen general committees, representing agriculture and industry, were established, and these in turn appointed subcommittees in the different sections, numbering approximately 200. The appointees to these committees were those whose knowledge and experience qualified them particularly to analyze the conditions of the phase which was assigned to them. In like manner executive committees of transportation were formed, and in turn, appointed subcommittees throughout the country.

In co-operation with the transportation division, the executive committees in charge of railroad, electric, motor, and other branches of transportation worked out the questionnaires forwarded them by the commission and analyzed in minute detail the pertinent facts in their relation to agriculture and industry and transportation. The committees representing agriculture, industry and transportation, correlated their efforts where possible and at all times co-operated in the endeavor to arrive at the basic data called for by the commission.

The transportation division opened offices in Washington for the assembling and analysis of the data procured by this comprehensive field organization. It also called to Washington accredited representatives of agriculture, industry, and transportation to confer upon the details of the inquiry, to effect a better understanding of the relation of transportation to agriculture and industry, and to obtain an initial agreement as to the basic facts developed by the field organization

The body of the report having been tentatively set up, a further analysis of the data and the findings was undertaken by an advisory board to the transportation division, which was called to Washington and requested to study a summary of the work accomplished thus far as presented in an agenda and working outline. This method was pursued in order that the commission might have the benefit of the views of accredited representatives of these three great branches of our economic life. The collection and assembling of the data in this report represent the combined efforts of over 1,600 people and the circulation of more than 250,000 questionnaires.

The commission did not undertake an investigation of the labor problem as effecting transportation, in so far as that problem involves the question of proper wages, for it felt that was outside of the scope of its inquiry. It does present the facts, however, as to labor costs in transportation, gathered from official reports, and it makes certain recommendations concerning the adjustment of labor disputes.

Summary of Recommendations

The commission makes the following recommendations:

1. That the transportation rates on many commodities, more especially the products of agriculture, bear a disproportionate relation to the prices of such commodities; that there should be immediate reductions in transportation rates applied to farm products and other basic commodities; and that reductions in rates upon the articles of higher value, or upon tonnage moving upon so-called "class rates," are not warranted, while the rates upon agricultural products and other basic commodities remain at their existing levels; that greater consideration should be given in the future by public rate-making authorities and by the railroads in the making of transportation rates to the relative value of commodities and existing and prospective economic conditions.

2. That the pyramided per cent advances in rates which have been authorized by the Interstate Commerce Commission or made by the United States Railroad Administration caused the dislocation of long-standing rate relationships between rates upon agricultural and industrial products between competitive enterprises and competitive sections of the country; that the railroads and the public rate-making bodies should seek to readjust rates of the country so as to preserve so far as practicable the general relationship of rates existing prior to 1918, with due regard to present and future changes in economic conditions.

3. That in establishing the general level of rates and commodity and class rates the federal and state regulatory bodies give greater consideration to existing and prospective economic conditions and to the relationships existing between the price level of commodities and the level of transportation rates as well as the relationship existing between the price of different commodities, the weight of such commodities, and the space required for their transportation.

4 That regional agencies of the Interstate Commerce Commission be established whose duty it shall be to consider and adjudicate questions of regional application and to co-operate with the state commissions with a view to minimizing conflicts between state and federal regulations as to rates, facilities, and practices; that the state commissions have representation in such regional agencies in all cases in which intrastate rates, facilities, and practices over which the state commission has jurisdiction may be affected.

5. In view of the conclusion of the International Joint Commission, this commission recommends that the government enter into immediate negotiations with the Dominion of Canada for the conclusion of a treaty for the improvement of the St.

Lawrence River, through a commission directed to make the further study suggested by the International Joint Commission, and authorized to proceed with the work if its plans, including a plan of financing, shall be approved by Congress and the Dominion of Canada.

6. Complete standardization as rapidly as possible of all freight equipment, except with respect to cubical and weight-carrying capacity.

7. The unification and joint operation of facilities at terminals wherever such unification and joint operation will result in economy and better service.

8. Prompt consideration and adoption of a comprehensive plan for central control and distribution of freight cars.

9. That railroads and shippers co-operate to secure the full utilization of the carrying capacity of cars wherever possible.

10. That the supply of box cars, coal cars, stock cars, and refrigerator cars is inadequate to meet the demand during normal periods of activity and should be rapidly augmented.

11. That special consideration should be given to increasing the available number and efficiency of refrigerator cars. Older and inefficient types of refrigerator and heater cars should be progressively retired.

12. That the number of cars in bad order exceeds all previous records, and unless bad-order cars are promptly repaired, the supply of serviceable cars will be materially impaired.

13. That a large proportion of the cars being used in interline movement are box cars and should be made fit for bulk grain loading; and all other classes of freight equipment should be promptly made suitable for all requirements, including general interchange throughout the country.

14. That the number of locomotives operating and owned by some railroads is inadequate to meet the need during business activity and it should be augmented.

15. That there is need for increase in terminal facilities generally, and that special consideration should be given to an increase in facilities at ports, including facilities for handling coal at tidewater.

16. That there should be complete correlation of ore and coal facilities at Lake Erie ports.

17. That permanent joint railroad and shippers' committees be organized to co-operate in carrying on a nation-wide campaign to reduce loss and damage of goods in transit.

18. That freight-revenue divisions should be promptly revised to the basis of two-figure percentages.

19. That regional clearing houses be established for the current settlement of debits and credits growing out of rate divisions.

20. That the railroads should adopt universal through way-billing of interline freight.

21. That the railroads be required to maintain complete cost data covering each item of expense with particular reference to the maintenance of equipment.

22. That the railroads be required to adopt better systems for checking the extent and value of repairs to equipment when made by lines other than the line owning the car.

23. That the railroads of the country establish regional traffic executives.

Better Relations With Public Needed

24. That the relations between the public and the railroads be improved, and a closer contact and better understanding established through the organization by the railroads of public relations departments, so that wherever possible conflicts between persons, industries, or localities and the railroads with respect to rates, facilities, and practices be settled by informal negotiation, with a view of reducing the necessity of resort to formal complaint and adjudication before the Interstate Commerce Commission.

25. That the Interstate Commerce Commission be directed by Congress as a part of its continuing duties to investigate the development and correlation of the various systems of transportation and their relation to agriculture, industry, trade, and commerce, and report to Congress from time to time as to the correlation of such transportation facilities and their better relation to agriculture, industry, trade, and commerce.

26. That the bill "To provide for classification of civilian positions within the District of Columbia and field service" (H. R. 8928) shall not apply to the employees of the Interstate Commerce Commission, but if the Interstate Commerce Commission employees are included under the classification bill, due regard shall be given to the peculiar character of the organization of the commission and the classification and duties of its employees.

27. That Congress continue to promote an adequate program of highway construction and maintenance, directed to the more effective correlation of highway transportation with rail and water transportation.

28. That the program of highway construction and the maintenance by states and counties be continued under the direction of skilled experts with particular reference to the construction and maintenance of farm-to-market roads. That the program of appropriations for research into methods of road construction and maintenance, density, character, and the effect of traffic be continued and regulation of traffic based upon the facts ascertained by such research.

29. That the several states co-operate in effecting a uniform basis for taxing motor trucks and other motor vehicles which shall fairly represent the reasonable proportion of the cost of highway construction and maintenance chargeable to such vehicles.

30. That a study be made of postal rates with a view of a readjustment of charges and the removal of present rate inconsistencies.

31. The commission makes no recommendation with respect to government aid to American shipping, but if government aid is given to American shipping it ought to be given in such a way that the amount of such aid may be definitely known, and should be limited to such aid as will fairly represent the difference in capital and operating cost required by higher American standards and more burdensome navigation regulations, compared with foreign capital and operating costs and foreign navigation regulations.

Rates and Prices

The commission makes the following findings:

1. That freight rates upon perishables normally take about one-third of the selling price, frequently running as high as two-thirds; that these rates in periods of low-price levels and slight demand constitute a very heavy burden upon this traffic. This is especially true, owing to the average length of haul of these commodities, which was shown to be more than 1,400 miles in a study of 9,476 shipments.

2. Prices of canned goods are practically back to pre-war levels.

The existing freight cost per case is substantially lower in relationship to value of the product than the freight cost of the so-called basic commodities, including grains.

3. That rates and sales margins on hay have been abnormally high in recent months and have greatly restricted its distribution.

4. That freight rates on highly fabricated articles of wearing apparel, such as boots, shoes, dry goods, men's and women's suits, etc., are not a material factor in increasing or reducing prices of these commodities.

5. That imperative need exists for the organization of the statistics and knowledge of transportation and its relation to agriculture, industry, trade, and commerce through the establishment of private research and educational institutions under disinterested auspices for the purpose of promoting education in the principles, operations, and practices incident to transportation.

6. That greater uniformity is desirable in the requirements of state legislation and state regulatory bodies in regard to the length of trains and crews required to man trains of different lengths and similar requirements affecting operation of railway systems.

7. The aggregate compensation paid to railway employees increased 151 per cent in 1920 over 1916 and 90.7 per cent in 1921 over 1916; the number of employees increased 384,830 in 1920 over 1916, or 23.3 per cent; and 14,204 in 1921 over 1916, or eight-tenths of 1 per cent. In most cases the aggregate number of hours worked increased in lower ratio than the aggregate compensation and the number of employees.

8. That the increase in efficiency of operation of transportation is shown by the fact that in 1890, the first year for which statistics were available, for every $100 investment in property 983 tons of freight were carried 1 mile and 163 passengers carried 1 mile; whereas in 1920 for every $100 investment in property 2,063 tons of freight were carried 1 mile and 231 passengers were carried 1 mile, an increase of 110 per cent in freight and 50 per cent in passenger traffic for each $100 of property investment. Property investment as reported to the Interstate Commerce Commission has increased 155.82 per cent, the tons carried 1 mile 438 per cent, and the passengers carried 1 mile 295 per cent in the same period.

9. That in 1921, for each 100 ton-miles yielding revenue the railroads produced 147.6 nonrevenue and tare ton miles. The revenue producing ton-miles, constituting 40.3 per cent of the total, is therefore supporting nonproductive ton-miles equaling 59.7 per cent of the total. That the expense incident to the transportation of the nonproductive tonnage must be met either by higher freight rates or a reduced return to the railroad companies.

That the significance of this is not generally understood by railroad officials and the public. That economical transportation of the products of agriculture and industry require a reduction in the tare or waste ton-miles.

10. That the revenue return to the railroads should be sufficient to enable them to sustain the value of their properties put to public use and to attract the capital required for the expansion and improvement of property, facilities, and service.

11. That sound railroad finance requires that a larger part of the capital necessary for railway development and equipment be secured by stock issues instead of by bond issues.

12. That the issuance of tax free securities by federal, state and municipal government should be reduced to the lowest possible limits, so that taxation can be reduced and capital be allowed to accumulate for use at fair interest rates by agriculture, industry, and the railroads.

13. That a comparison of the operation of the railroads during the period of federal control and under competitive management in the post-war period affords no conclusive basis as to the relative efficiency of government and private operation. The conditions existing in both periods have been too abnormal to permit of sound comparison or accurate measurement of the relative efficiency in either. An examination of the operation of government-owned railroads in foreign countries both before and after the war, however, does afford some basis for an estimate as to the relative efficiency with which private management in this country and government management in foreign countries have withstood and surmounted the difficulties attendant upon the dislocations and the abnormal conditions which followed the war period. It may be said that, measured by the relative performance and cost of service, private management in this country is more efficient at less cost than foreign governmental management.

14. That the daily, weekly, monthly, and yearly fluctuations in shipments of live stock are very marked. Railroads, shippers, and stockyards should co-operate to bring about a more even distribution of shipments at the live-stock markets.

15. That mine prices, freight rates, and sales margins on both bituminous and anthracite coal have very greatly increased since 1913. There has been practically no deflation in this industry, although prices were somewhat lower in 1921 than in 1920. Coal is an element in the cost of production of a very wide range of manufactured products, and increases in coal prices are promptly reflected and often multiplied in the final price of highly fabricated articles. A reduction in mine prices, freight rates, and sales margins on coal, especially bituminous coal, would probably be promptly reflected in improved business conditions.

16. That fertilizer and phosphate prices are now close to the pre-war basis, except for the higher freight costs now prevailing.

17. That the weighted average of farm implement factory prices shows these prices, exclusive of power, equipment, and twine, to be 41 per cent above 1913; inclusive of power, equipment, and twine, these prices are now approximately 20 per cent above 1913.

Relation of Freight to Farm Prices

The course of the relationship of freight charges to farm prices from 1909 to 1921, inclusive, is shown in tables given in the report. The five-year average from August 1, 1909, to July 31, 1914, is used as 100 per cent of the average price of farm products, and the railroad revenue per net ton-mile from July 1, 1909, to June 30, 1914; the nearest comparable figure in the statistics of the Interstate Commerce Commission, is used as 100 per cent of the railroad charges. From 1910 to 1916 the two lines moved side by side in very close relationship to each other. Then began a tremendous increase in the price of farm products, until in June, 1920, it reached the maximum of 246. Railroad freight rates from 1916 to 1917 show practically no increase. From 1917 to 1920 they increased more slowly than did the price of farm products.

In July, 1920, the slump began, which brought the index figure for farm products down from 246 in June, 1920, to 106 in June 1921. In the same period railroad charges went up from 127 in July, 1920, to 171 in June, 1921. On the basis of the last monthly figures available, in October, 1921, farm products show an index figure of 102 and railroad rates of 169. "In this period of falling prices for farm products the increased freight charges made the farmer feel more keenly the relationship of freight charges to the prices obtained for his products." The report says: "On the basis of this a table has been constructed to show the purchasing power of farm products in terms of transportation. This figure is obtained by dividing the index figures for farm products by the corresponding index figure for freight changes. While the purchasing power was about 100 in the previous years, it was in November, 1921, only 72. So far as transportation is concerned the farmer is suffering from a 72-cent dollar.

Purchasing Power of Farm Products in Terms of Transportation

Year and month	Per-centage	Year and month	Per-centage	Year and month	Per-centage
1909	[illegible]	1920—Continued		1921—Continued	
1910	[illegible]	March	[illegible]	February	[illegible]
1911	[illegible]	April	[illegible]	March	[illegible]
1912	[illegible]	May	[illegible]	April	[illegible]

One table in the report indicates the estimated value of commodities transported in the United States in accordance with the United States census of 1914. The total production of agriculture, manufactured, and mineral products is added to the imports, from which is made an estimated deduction of these same articles which do not move by railroad transportation. The estimated total value of $33,298,000,000 divided by the total tonnage of railroads, 1,094,000,000, gives an average value of $30.40 per ton. The average revenue per ton for the same period was $1.84; the proportion of freight to the value of goods transported as estimated is about 6.05 per cent.

Value of Commodities Transported in United States, 1914

[000,000 Omitted]

Production:		
Products of agriculture		$9,849
Manufactures		24,246
Minerals		2,394
Total		$36,489
Imports		1,894
Total		$38,383
Deductions for local use		
Products of agriculture	$2,202	
Manufactures	2,023	
Minerals	[illegible]	
Imports	[illegible]	
Total		[illegible]
Total amount transported		$33,298
Total tonnage carried by railroad		1,094
Value per ton		$30.40
Freight revenue (Class I and II roads)		[illegible]
Revenue per ton		$1.84
Per cent freight to value of goods transported		6.05
Per cent freight to total production plus imports		5.26

This commission has compiled a large amount of data to show the economic relationship of freight rates to the prices of agricultural products. In compilation of such information data was secured from the various market points showing the prices actually paid by the wholesaler for these farm products as near as possible to the third Tuesday of each month during the seasons of 1913, 1916, and 1921. Similar information was then secured from the country shipping points showing the prices a few days earlier, in order to allow for the time in transit. An addition of the freight rate to this country price would show the margin or spread upon which the city dealer operated.

This method of making comparisons is, of course, subject to various objections, the report says. The commission met a great deal of difficulty in matching grades, particularly in the case of wool and fruits and vegetables. In other cases it was impossible to secure data throughout the years. Furthermore, it was impossible in every case to secure a weighted average of prices either at the market or on the farm, and it has been necessary to use a mean between the high and low point in the construction of the economic relationship charts.

Some extracts from the report follow:

It is obvious that freight costs distributed over the unit of sale will always be greater upon the bulky, heavy-loading commodities, whose original value is comparatively low, than on the higher class of articles, such as finished food products, clothing, high-

grade furniture, etc. It must be expected that the percentage of freight costs to the prices of these low-grade commodities can not be as low as those for the higher-valued articles, as these commodities, with the other so-called low-grade commodities of heavy tonnage, represent the great factors in the earning capacity of our railroads.

Rates on Basic and High Grade Commodities

Higher freight rates are not infrequently urged as an excuse for increases in prices without justification. While freight rates are often a considerable factor in the cost of distribution of low price heavy-tonnage commodities, and may restrict the radius of distribution thereof and sometimes even prevent shipment altogether, as a rule freight rates have not kept pace with increases in prices of such articles as dry goods, boots, shoes, and other highly fabricated articles usually purchased in less than carload quantities and do not restrict or diminish the movement of such commodities. The influence of freight rates upon basic commodities is increased by the fact that such increases usually become a part of the dealer's cost and the basis of profit additions, and are thus multiplied in the final price paid by the consumer. Upon the higher cost and more highly fabricated articles the freight charges are sometimes absorbed by dealers, and even where they are a part of the basis cost upon which profits are figured, are not multiplied to the same extent as freight rates upon high tonnage, lower-priced commodities.

Adequacy of Equipment

The adequacy of the present railroad freight-car equipment is dependent to a large extent upon the efficiency with which cars are handled with respect to their proper maintenance, distribution, and movement. The question of car distribution will be discussed later. It is the desire at this point to consider the increase in the number and capacity of cars available during the past several years in its relation to the amount of tonnage transported.

The number of cars owned and operated by the railroads has increased 6.7 per cent over 1911. The aggregate capacity has increased 18.2 per cent. The net ton-mileage for 1920 shows an increase of 62.4 per cent over 1911. The traffic handled during 1920 was greater than in any previous year. It appears fair to assume that the increase in car supply must be based upon the increase in the volume of traffic offered, with due consideration for efficiency of handling. The necessity for a greater number of freight cars during periods of maximum movement is in part the result of light loading, bad-order cars and slow movement on congested railroads or in terminals. The purchase of the necessary new freight-car equipment by the railroads depends upon their financial condition. There appears to be in this question a much more important principle; and while it is desirable to prevent any unnecessary outlay of money, we have here a situation of vital interest, not only to the investor in railroad securities but in a much larger degree to the shipping public, and, in fact, to our entire economic structure. Carriers feel that the supply of cars should be adjusted fairly and equitably as between supply and demand. In other words, it is felt by the railroads that they can not be expected to meet a short peak demand. They take the position that they must guard against the acquirement of cars to serve only during short peak periods and which must necessarily lie idle at all other times, thus creating an economic waste.

The commission feels that transportation should be made an incident to trade and should not restrict commerce. If the carriers do not supply sufficient equipment to reasonably meet the demands, an artificial situation economically unsound is created. Failure to supply cars in adequate numbers during any considerable period usually results in an inflation of prices. During times of general business activity as well as at other times there are a large number of individuals throughout the country striving to make a living through the purchase and sale of goods, each transaction dependent upon transportation by railroad. It does not seem right or proper to deny them the opportunity which should be extended to every shipper. The commission is of the opinion that a sufficient number of cars should be added to the supply to meet the demand for cars wherever ordered and in whatever quantity they may be required.

The major trend of freight traffic is from west to east, and it is largely moved in box-car equipment. The return movement of empty box cars from the East to the West must be made in heavy volume to meet the needs of originating territory. The supply of box cars is insufficient to meet the peak demands, and it should be augmented by additional cars.

The supply of stock cars does not fully meet the requirements of the peak demand, which in the case of stock is especially urgent. The number available should be augmented by new construction.

The present number of coal cars is insufficient to meet the peak demands of the basic industry requiring such equipment, and should be augmented by new construction.

The present supply of refrigerator cars is insufficient to meet the peak demands for perishable loading and should be rapidly augmented by new construction.

Although an advance has been made in the standardization of freight car equipment, there is room for still further improvement. Types of freight cars have been developed ostensibly to serve the shipper along a particular railroad to better advantage, but which in reality represent the personal views of some executive, and in most cases cost more money. The eastern lines generally have adopted the 36-foot box car as standard while the standard of the western lines is a 40-foot car. When it is understood that a very great proportion of the loading must be moved in cars foreign to the originating line, the folly of such a course will be appreciated.

Car Service

This commission is of the opinion that the public welfare requires the adoption of a comprehensive system for the control of freight-car equipment which will make possible the reduction and the elimination of the waste at present incurred by the unnecessary haul of empty cars and which will prevent the development of emergency conditions. The country needs uninterrupted transportation service. It is all very well to prepare for emergency conditions. It is, however, clearly apparent that with respect to freight-car control and distribution, and the co-ordination and unification of terminal facilities, the carriers have not progressed. In fact, there is a strong tendency toward reaction in this important matter, and unless prompt and adequate action is taken, emergency conditions with all of the attendant harassments to business will certainly result.

It would seem impossible to intelligently handle the car distribution of the country without current information as to the flow of traffic throughout the country. One plan has been suggested which contemplates the subdivision of the railroad mileage into districts of comparatively small extent, each division thus formed to include, so far as possible, distinct producing territories but not necessarily to include all lines of any particular railroad. The points of contact with other districts would be fixed at railroad division terminals or at junction points, each district placed in charge of a supervisory officer who would secure daily passing reports from each point of contact with the adjoining districts. These reports would indicate the volume of loaded and empty cars moving in each direction, classified as to type of car. This plan would make possible a daily balanced movement and the fuller utilization of power. Heavy loaded movements in one direction could, where desirable, be instantly met with a movement of empty cars in the opposite direction. Whatever plan is adopted must be based upon the premise that each individual shipper, each group of shippers, and each of the several producing or originating districts throughout the country must be fully supplied with freight equipment at all times. Shippers in one section of the country should be wholly dependent upon the voluntary action of railroad officers in another section of the country who are only concerned with the requirements of shippers in the district served by them and who may hold and use cars belonging to other railroads serving other districts.

Increased Terminal Facilities and Equipment Needed

Although operating efficiency shows a steady improvement, the lack of terminal tracks and facilities and of a sufficient number of freight cars has, during periods of business prosperity, proved to be a severe handicap to the business of the country, influencing as it does the processes of inflation at the outset and later the reaction by the stagnation it has induced.

The necessity for the increase and improvement of railroad facilities must be measured not by the volume of traffic moving presently nor in previous years on the average, but by the amount moved during the years of greatest business activity plus the annual increase produced by the steady growth of the country and the expectancy of the continuance of such normal growth. Increases in efficiency made possible by improved devices will in some degree modify these requirements. It is essential, however, and the country demands that there shall be a margin in the transportation facilities in excess of what are termed "normal requirements," so that any expansion of business activity may proceed unhampered.

The car supply must at all times meet every reasonable demand. The terminal facilities must be improved to handle adequately all traffic seeking an outlet through the ports or inland termini, either by the unification and joint operation of existing terminal facilities or by the addition of new trackage and other facilities, or by both.

The transportation facilities of the country must be placed upon a solid foundation. It will not do to make up deficits by appropriations of public funds. The railroad companies must be operated with the expectation that the gross revenues will be sufficient to cover operating expenses and leave a reasonable return

upon the investment. It is of paramount importance to the public welfare that the transportation companies be made going concerns; that they be placed upon a substantial foundation in every respect; and that the operating expenses be reduced by careful and efficient management.

During the period of federal control terminal facilities in many of the larger cities of the United States were consolidated. These consolidations have been largely abandoned under private control. This commission believes that the unification and joint operation of terminals affords an opportunity for very large savings in operating costs, and will also contribute to the efficiency of the operation of the railroads as a whole, and that such unification and joint operation of railroad terminals should be accomplished wherever better service and more efficient operation can be secured at less cost.

There is an excessive duplication of tracks to parallel construction which should be eliminated by appropriate traffic arrangements between the railroads concerned. This commission believes such arrangements should be consummated wherever they can be in keeping with the maintenance of reasonable competition between the railroads, in order to avoid the unnecessary expense of operation which this parallel construction involves.

Relation of Railroad Credit to Industry

The railroads are one of the largest consumers, taxpayers, and employers of labor, but these low returns prevent them from promoting prosperity and providing adequate facilities, improvements, and equipment until that situation is improved.

Considering the present obligations resting upon the government and upon the country at large, and as a matter of economic policy, new money for railroad improvement should not be raised through constant government aid. In the public interest the railroad industry must rest upon its own foundations, and its revenues must be so constructively regulated that their operations will produce enough to pay fair wages, cost of materials, taxes, meet the fixed charges, pay a fair dividend, and leave a small margin to attract investors of new capital. In other words, to obtain new railroad capital, the opportunities to earn and pay regular returns must exist, and railroad managements must be encouraged to exercise the greatest initiative in improving and extending transportation facilities. Furthermore, conditions should be created whereby the sale of capital stock by the principal roads will become possible and the continued increase in funded debt will be minimized.

Railroads can not go on constantly increasing their indebtedness and not building up an equity in their properties underlying their debt. When the investor thinks that too large a percentage of the value of the property of a given company is represented by debt and not enough by stock, he will decline to buy further bonds of that company, or if he takes them it will be only at an unduly high interest rate. It is important, therefore, that railroad credit should be so strengthened as to enable a properly capitalized, well-managed company with adequate traffic to do its financing through issues of stock. Stock, being junior to debt, and having no lien on the property or equipment, naturally must bring a larger return in order to be attractive.

In considering the financial aspects of the transportation industry, it is recognized that the cost of capital is a part of the cost of transportation and enters into the rate charged for transportation. An investment which commands public confidence and brings an assured return is more freely made and on a lower basis of cost than one which is subject to uncertainty and possible attack. It is therefore of great importance that the earnings of well-managed and properly capitalized railroads should be such as will protect their securities outstanding and attract, on reasonable terms, the new money needed for additional facilities. While there has been more general public discussion of, and inquiry into, the cost of sustaining railroad investment, yet the return paid thereon requires a much smaller outlay than for most of the other important railroad costs.

Railway Expansion Necessary

The transportation systems must be continually improved to keep pace with industrial progress. It is possible to cheapen transportation through intensive development such as electrification, improvement of rolling stock and other equipment, and the use of the most modern methods in the loading of trains. This country has enjoyed railroad transportation on a cheaper basis than practically any other civilized country in the world, but can not continue to do so by restricting initiative or by undue limitation of railroad profits earned under uniform and reasonable rates.

The production of the principal products of the country increases on an average from 3.6 to 4 per cent per annum, and the traffic units consisting of the combined ton mileage and passenger mileage of the railroads increased on the average between 6 and 7 per cent per annum since 1908. In periods of prosperity these increases are substantially exceeded, but the transportation service of the country needs an increased yearly investment to finance additional tracks, stations, equipment, and facilities to take care of this growth. While it is generally stated that a billion dollars a year ought to be provided to finance railroad extensions, new equipment and improvements, the actual experience since 1908 is that the property investment of the railroads has increased on an average of only $540,000,000 per annum. However, in view of the fact that prices of material and labor have increased and that increased railroad property investment has been restricted for several years, at least $750,000,000 per annum should be spent for several years for the foregoing purposes.

An important consideration in this connection is that the capital funds of the country loaned by the investors and the banks is the surplus derived from the enterprise, thrift, and sacrifices of all hard working, prudent citizens and conservatively managed corporations, and is a species of general reservoir from which all forms of industry must draw. It is important to the agricultural industry, which depends on that reservoir in the same way as the railroad industry, that the rate of interest should not be unduly raised to the railways because of reduced net earnings, nor because of large issues of tax-free securities. If the interest rate to the railways rises, the interest rate to the farmer will also increase, for the capital market is on a competitive basis, and what effects the interest rate for one industry affects the rate for all industries. In this emphatic way does the independence of all industry, in our highly complex economic system disclose itself.

National Character of Commerce

The national character of commerce is becoming more and more apparent, and nothing has been made more evident through the investigations of this commission than this fact. It is witnessed by an increase in the average haul of commodities, by the wide distribution of many commodities, the production of which is centralized in a few localities, and by the competition of far-distant communities centralizing at points of concentrated use and consumption. All of this emphasizes the wisdom of the recognition and assertion of the paramount authority of the federal government in the control of interstate transportation. On the other hand, the widely differing conditions found in different states and communities emphasizes the importance of state control of such matters as are of local concern, including the rates and regulations local and only statewide in application. No centralized authority, however efficient or democratic, can with reasonable dispatch and with due regard for local requirements consider and finally determine the vast number of questions of rates, regulations, practices, and facilities which properly and inevitably arise in connection with concerns wholly within a state; and the held of regulation of state legislatures and of state commissions ought and will continue to be a very wide one. It is probable that no court will ever be able to lay down a rule eliminating the respective federal and state powers with respect to transportation with sufficient definiteness to avoid conflicts in the future in the exercise of their representative powers.

All of these considerations, it seems to us, lead logically to the conclusion that there is need for the establishment of regional agencies of the Interstate Commerce Commission to consider and adjudicate questions of regional application and to co-operate with the state commissions with a view of minimizing conflicts between state and federal regulations as to rates, facilities, and practices, and in order that these conflicts may be disposed of in larger measure by consultation and co-operation between state and national authorities, thus limiting the range and number of cases to be judicially determined by the federal authorities. In such regional agencies the state commission should have authoritative representation in all cases involving intrastate rates, facilities, and practices in which the state commission is interested.

Chairman Anderson has received the following letter from President Harding with respect to the proposed National Transportation Institute:

"I want to thank you for your communications, both personal and otherwise, concerning the program for organizing a National Transportation Institute. I was much impressed with your statement of the purpose of such an organization and am convinced that it would be of great practical usefulness. The broad and outstanding study of the entire transportation problem is unquestionably a serious national matter—indeed I think I may well say a serious world necessity, at this time. Such an organization as you are proposing ought to become a power in connection with the nation-wide consideration of these problems and a useful directing force in connection with the determination of public policy."

In the *Railway Age* of July 1 a letter to Mr. Anderson

regarding the proposed Transportation Institute which was written by Representative Webster of Washington was erroneously attributed to Chairman Winslow, chairman of the House committee on interstate and foreign commerce.

Contract for Exchange of Materials Held Not to Constitute Control

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION has dismissed the joint application of the New York, Chicago & St. Louis and the Lake Erie & Western for approval of a contract for the exchange of materials and supplies between the two companies, which was filed on the theory that such a contract might come within the provisions of paragraph 2 of Section 5 of the interstate commerce act, which provides for the acquisition of control of one carrier by another to the extent authorized by the commission. The application was filed for the two roads by W. A. Colston, vice-president, who was recently director of the Bureau of Finance of the Interstate Commerce Commission, but the commission holds that the proposed contract does not constitute a means of acquiring control within the meaning of the paragraph of the law referred to.

The contract provides, in effect, that whenever either company shall have, or may conveniently obtain, any materials or supplies not needed for its own immediate purposes, it shall, when desired by the other company, furnish such materials or supplies to the other at not more than cost, plus 10 per cent of cost, freight charges, and the cost of labor employed in handling, applying or fabricating any such materials and supplies; that the officers of said companies may purchase or obtain any necessary materials and supplies on joint account and when so obtained they may be furnished when desired to either of the companies, and when so furnished shall be accounted for in all respects in conformity with the assumption that the lines of said companies form one operating system under common control and management, irrespective of separate ownership and accounting; and that, so far as transactions between said companies are involved, the agreement shall apply to all dealings in supplies or other articles of commerce and all contracts for construction or maintenance, or other matters contemplated by section 10 of the so-called Clayton Anti-trust act.

The applicants stated that the object of the agreement is to relieve the companies of the necessity of complying with this provision of the Clayton act to the extent that it may be involved in transactions between them, thereby avoiding inconvenience and delay and permitting more efficient and economical operation. The applicants have certain common directors and officers, the holding of such positions having been authorized by the commission, and the same interests own a majority of the out-standing capital stock of both companies.

The commission says in its report:

"The proposed contract may be said to give each company a certain measure of control over specific transactions and contracts of the other and to facilitate the establishment of a relation that will make possible a closer union for operation and management. The applicants contend that common control of two or more corporations by means of common directors and officers is one of the means of control which is recognized by the act, and that the additional measure of control afforded by this contract is supplementary thereto, and simply carries the common control one step farther towards an ultimate complete unification of operation and management without resulting in any corresponding unity of ownership.

"The control provided for by this paragraph, however, is control over one or more carriers by another carrier and not mutual control by the two carriers over the same subject-matter. Moreover, we think the 'control' that the framers of the act had in mind is the full and complete control which may be exercised by the owner of the majority of the capital stock of a carrier, or by the lessee of the property, and not the control which might be exercised by one carrier in the purchase of materials and supplies for another carrier. It is obvious that, unless the paragraph gives us authority to make an order approving this contract, no expression of approval on our part would have the effect of relieving the applicants from the possible application of restrictive laws. Inasmuch as we are of the opinion that paragraph (2) has no application to the transaction involved herein, it follows that the application must be dismissed."

Novel Form of Highway Crossing Protection

AN INTERESTING type of highway crossing protection, designed to retard the speed of automobiles when approaching railway tracks, has been installed recently on the Eastern division of the Chicago & North Western about two miles west of Meadow Grove, Neb. This consists of the construction of a mound of stone in a conspicuous position in the center of the highway 100 ft. on each side, or 50 ft. beyond the limits of the right-of-way. Being located in the center of the highway these mounds are in the most conspicuous position possible. Automobile drivers are made aware of the fact that they are approaching a railroad crossing and must put forth physical effort to retard fast moving cars

A View of the Crossing

and steer them around the mound. If they then find a train approaching they still have nearly 100 ft. in which to stop, which distance is sufficient for speeds up to 30 to 35 miles per hour. This type of "retard" avoids the objection to the "humps" on account of the danger of damaging automobiles, whose drivers might not know of their presence and who might overlook or disregard the advance warning signs. In this instance the county did the grading and the railway furnished the signs and the riprap.

We are indebted for the above information to C. F. Womeldorf, division engineer, Chicago & North Western, under whose direction the crossing was built.

THE CONSTRUCTION ACTIVITY in the United States is having its effect in Quebec. The mills are kept busy on lumber for shipment to the New England and middle states. During the second week of May one company shipped 70 carloads of lumber to New York.

Operating Characteristics of Missouri Pacific

Good Progress Made in Rehabilitation and Financial Reconstruction of This Property

THE MISSOURI PACIFIC'S corporate net after fixed charges for the year 1921 was $3,537,010 as compared with $5,033,075 in 1920 and with $4,240,859 in 1919. However, the relative magnitude of these figures affords no adequate index of the results secured during the past year since the above figures for the years 1919 and 1920 take into account the compensation received from the government under the regime of the Railroad Administration and also of the six months' guarantee period immediately following. The road did not earn its rental during federal control.

A somewhat better measure of the operating results for 1920 is obtained by comparing the net after rental for the last four years. This was $11,821,976 in 1918 and $4,563,698 in 1919. It represented a deficit of $4,617,009 in 1920, which was changed to a net of $10,230,848 in 1921. In other words, the result in 1921 was an improvement as compared with the previous year of $14,853,857.

In making this improvement in 1921 over the results for 1920, the Missouri Pacific had the advantage of a rather minor decrease in operating revenues as compared with that experienced by many other railroads, namely, 7½ per cent. Therefore, by effecting a reduction of 18.78 per cent in operating expenses as compared with 1920, it was possible to obtain a net revenue from railway operations of $18,092,094 as compared with $3,284,672 in 1920.

The 1921 Results

In 1921 the Missouri Pacific carried 27,045,102 tons of freight. This compared with 33,960,017 tons in 1920 and was a reduction of 20.36 per cent. Of this total traffic, 24.37 per cent was in products of agriculture; 2.93 per cent, products of animals; 35.38 per cent, products of mines; 14.89 per cent, products of forests, and 18.92, manufactures and miscellaneous. In 1921, as against 1920, there were increases of 7.74 per cent in agricultural and 5.25 per cent in animal products. There were decreases of 25.46 per cent in products of mines; of 30.24 per cent in lumber and of 27.91 per cent in manufactures.

The freight revenues totaled $81,660,401 or 5.64 per cent less than in 1920. The total operating revenues were $109,745,075 as compared with $118,721,428 in 1920, a reduction of $8,976,350 or 7.56 per cent. The Missouri Pacific's characteristics are reflected in an average haul for the year 1921 of 238 miles. The average receipts per ton-mile in 1921 were 1.27 cents as compared with 1.07 in 1920, an increase of 18.03 per cent.

As already indicated, the system in 1921 made a reduction of 18.78 per cent in operating expenses. It operated at a ratio of 83.87 in 1921, which is considerably better than the figure of 95.45 for 1920. The operating expenses for 1921 were actually $92,042,456 as compared with $113,319,940 in 1920. In maintenance of equipment, the reduction was $6,827,400 or 22.94 per cent, despite the fact that the Missouri Pacific reported only 8.2 per cent bad order cars on May 1. In maintenance of way, the reduction in expenses was $6,617,802 or 26.74 per cent. A reduction of this proportion in the maintenance of way expenditures of any railroad always raises the question as to the possibility of some deferred maintenance.

The Missouri Pacific has a rather different position among railroads today from that which it had when it was the central link and most important part of a nearly completed transcontinental system. The intervening period, to put it in its briefest terms, has been devoted to rehabilitation and to financial reconstruction. The Missouri Pacific has made good progress in overcoming the difficulties arising from the failure of the transcontinental project.

The Missouri Pacific System's operated mileage totals 7,500. Of this it owns 6,783 and operates 517 miles under lease or trackage rights. Its lines reach 10 states and serve a very productive territory. The main lines of the system are in two groups—the group of the original Missouri Pacific and those of the former St. Louis, Iron Mountain & Southern. The former includes the lines from St. Louis to Kansas City, from Kansas City to Omaha and from Kansas City to Pueblo, Colo. The main stem of the Iron Mountain extends from St. Louis to Texarkana, Ark., and is supplemented by the lines to Alexandria, La., from which trackage rights over the Texas & Pacific bring the Missouri Pacific into New Orleans. The line from St. Louis to Kansas City receives its importance because it is the main stem of that part of the Missouri Pacific System. From Omaha to Kansas City is a good territory because of the large livestock and dressed meat business. The line from Kansas City to Pueblo gives the system a large grain business, and a connection with the Denver & Rio Grande Western.

The Iron Mountain section is the most productive part of the system. Its Illinois division serves the coal districts of Southern Illinois, the Missouri Pacific being well situated in this field and one of the leading carriers. The Missouri Pacific also serves coal fields in Arkansas and Kansas but these are of less importance than the Illinois fields. Bituminous coal constitutes about 20 per cent of its total tonnage. The Iron Mountain line also serves a lumber territory in Arkansas and Louisiana. About 15 per cent of the total tonnage on the whole system is products of forests. A third factor in the traffic of the southern lines is agriculture—important on this line now and rapidly expanding.

The line from St. Louis to Texarkana, Ark., as already noted, is the main stem of the Iron Mountain. It is over this line that the Missouri Pacific operates its best passenger train—the Sunshine Special. This train runs from St. Louis to San Antonio, Tex., over the Missouri Pacific to Texarkana, Texas & Pacific to Longview, thence via the International & Great Northern. The line as thus mapped out is likewise an important freight route. Because of the International & Great Northern's position at Laredo, as the road which has the largest interchange business with the Mexican lines of any of the United States carriers, the route has great potential value, which should be realized when conditions in Mexico again become normal. The Missouri Pacific also operates another through freight line to the south. This uses the Illinois division to Thebes, thence by means of trackage rights over the St. Louis Southwestern tracks to Paragould and from there on it uses the Missouri Pacific rails to Alexandria, La., reaching New Orleans over the Texas & Pacific.

Not the least among the physical advantages of the Missouri Pacific is its strategic position in the St. Louis terminals, whereby it is in large measure independent of the St. Louis Terminal Railroad Association so necessary to practically all of the other trunk lines that serve the St. Louis-East St. Louis Terminal area. The Missouri Pacific, through the possession of a car ferry with convenient connections, is the only road that has its own independent river crossing at that point. It has independent trackage to a large proportion of the industries. As a result of these advantages the Missouri Pacific with a main line mileage of only about nine per cent of the aggregate main line mileage

of all the railroads entering the "Mound City," according to comparisons made late in 1920, handled nearly 20 per cent of all the carload freight and 15 per cent of l.c.l. freight in the St. Louis terminals.

The Missouri Pacific's main lines are probably as good as those of any line occupying the same territory. They are laid with 85-lb. rail, or heavier. The company's standard is 90-lb., although there is some 100-lb. rail—242 miles between Poplar Bluff, Mo., and Little Rock, Ark., on the main line to Texarkana. The remainder of this line is laid with 90-lb. rail. Rail of this weight is also laid on the larger part of the line between St. Louis and Kansas City and for a distance out of Kansas City on the lines to Omaha and Pueblo. The mileage of 90-lb. rail totals 838 and that of 85-lb. rail, 2,717. Of the system's total mileage of running tracks, 3.39 per cent is laid with 100-lb. rail; 11.74 per cent with 90-lb. and 38.08 per cent with 85-lb. Of the total mileage, 80.39 per cent is ballasted: 2,185 miles, or 30.62 per cent, with gravel; 1,350 miles, or 18.92 per cent, with cinders and slag; 1,913 miles, or 26.81 per cent, with zinc, chatts, etc. White oak and red oak ties are used. More recently a larger percentage of treated ties is being applied The system has 358 miles of automatic block signals from St. Louis to Jefferson City and from St. Louis to Poplar Bluff. Manual block signals are used on most of the other main lines, the mileage of these signals totaling 2,210. Telephone dispatching is the rule on the main lines and the system has 2,909 miles of it.

Some Operating Details

The Missouri Pacific compiles some extremely complete statistics and it is from some of these figures covering the months from September, 1920, to December, 1921, that the following details were obtained:

The highest "out-of-pocket" cost per 1,000 gross ton-miles for the period in question was in December, 1920, when it amounted to 119.6 cents. In October, 1920, it was 99.9 cents. In October, 1921, however, it had been reduced to 81.5 cents and in December, 1921, it was 87.7 cents. The December, 1920, figure included wages amounting to 47.6. In October, 1921, this item had been reduced to 34.6 and in December, 1921, it was 35.1. There was a wage reduction effective July 1, 1921, which must be taken into consideration. In the period, however, there was a steady decrease in train service overtime. The cost per train mile for September, 1920, was 14.20 cents and for October, 1920, it was 13.89 cents. There was a gradual improvement throughout the entire year 1921, when in October of that year it had reached the low average of 9.04 cents, the marked improvement being made particularly in through freight service. Average overtime expenditure per freight train mile for the calendar year 1920 was 11.66 cents, compared with an average of 8.17 cents for the calendar year 1921. The 1920 figure for overtime per 1,000 gross ton-miles was 9.02 cents; in 1921, but 6.34 cents.

In the case of fuel, the cost per 1,000 gross ton-miles in December, 1920, was 47.8; in October, 1921, 31.3 cents and in December, 1921, 34.7 cents. This reflected a decrease in cost of coal from $4.12 per ton in October, 1920, to $3.50 in October, 1921. There was also a reduction in consumption by reason of greater economy for the year 1921, compared with the year 1920, based upon the unit of measure—per ton-mile—the saving in reduced consumption measured by the work performed was 128,234 tons, or $446,000.

The unit of efficiency in yard operations is the average number of cars handled per switch engine hour. This increased from 12.5 cars in September, 1920, to 15.9 cars in October, 1921. The average for November, 1921, was 15 cars and the average for December, 1921, was 14.8 cars. The labor cost per car handled decreased from 47.4 cents in September, 1920, to 33 cents in October, 1921. The average for December, 1921, was only 35.9 cents. While a portion of this decrease was due to the reduction in wages, the substantial increase in the number of cars handled per engine hour indicates that the larger portion of the reduced cost was obtained through greater efficiency.

The unit of measure in handling merchandise in the warehouses is the average number of tons handled per man hour. In September, 1920, tons handled per man hour (truck-loaders, stowers and truckers) amounted to 0.79, while for December, 1921, the average had increased to 1.22 tons per man hour, or 54.4 per cent. The average labor cost per ton in September, 1921, was 103.2 cents. This average had decreased to 68.6 cents in December, 1921, and measuring the results for each month since September, 1920, making proper allowance for the decreased wages effective July 1, 1921, the saving for the 15 months' period amounted to $314,000.

Transportation enginehouse expense likewise showed a marked improvement. The unit of measure in this case is man hours per engine handled. Prior to April, 1921, the Missouri Pacific statistics included both mechanical and transportation. Subsequent to April, 1921, the mechanical time was excluded, consequently the first month of exclusive transportation handling susceptible of comparison is April. The average for that month was 12.72 man hours per engine. This had decreased to 11.32 in October, 1921, the average for November and December being 11.95 and 12.00 man hours, respectively. The average labor cost decreased from $7.47 per engine to $5.62 per engine.

1922 Improvement Program

The Missouri Pacific for 1922 has an improvement program which calls for about $8,000,000. In this total the most important item is a $2,000,000 double track project on the eastern division (St. Louis to Kansas City). This includes 30 miles of double track extending westward from Kirkwood, a short distance out of St. Louis. This work is required to overcome traffic congestion between St. Louis and Jefferson City, Mo. Other items in the program include a new bridge, built in connection with a levee project, at Corning, $220,000; river protection, $100,000; 14th Street viaduct in St. Louis, Missouri Pacific share, $115,000; new bridge over the Osage river, $220,000; water projects at Hoisington, Kan., $250,000 (total cost to be $500,000); filling in bridges on the White River division (in southwest Missouri), $215,000; work equipment, $325,000, etc. About 20,000 tons of new rail are to be laid.

Railroads Play Important Part in Recent Fighting Between Wu-Pei-fu and Chang Tso-lin in China

Factors Underlying Primacy of American Railways

Importance of Developing and Maintaining the Right Relationships Between Managements and Men

THE FIFTIETH anniversary of the Railroad Y.M.C.A. was celebrated widely throughout the United States during the week beginning June 11. At the celebration in St. Louis, which included a luncheon at the Statler Hotel on June 12 and a program during the evening of the same day at the Association building, the following message was read from President Harding.

President Harding Commends Railroad Y. M. C. A.

"The half century of progress which has characterized the work of the Railroad Department of the Young Men's Christian Association is of distinct national significance. The 125,000 members, or the approximately $9,000,000 in buildings and equipment, or the $6,500,000 annual expenditure, indicative as they are, do not adequately measure either the service which has been rendered in the lives, character, and efficiency of the men or the safety of life and property upon the railroads. It is a privilege to express the deep interest I have in the welfare of the great work which is done in St. Louis as well as in all parts of the United States."

On the same day a luncheon was held at the Hotel Commodore, New York, presided over by President Truesdale of the Delaware, Lackawanna & Western, and including a large gathering of railway executives and representative railway men. Addresses were made by President J. H. Hustis of the Boston & Maine; Samuel Rea, president of the Pennsylvania Lines; Dr. John R. Mott, general secretary of the International Committee of the Y.M.C.A.; L. J. Tate, conductor on the Long Island Railroad; Fred Ferguson, a trainman on the New York Central, and Ward W. Adair, secretary of the New York City Railroad Y.M.C.A.

At the close of his address Mr. Hustis said: "We recognize, too, that the old order of things has passed away and we believe that while conditions and the viewpoint of all has changed, human nature is very much as it has always been. The solution is in the restoration of confidence between men and management. The duty of finding the methods by which this can be accomplished is quite, if not more, incumbent on those managing the railroad properties than on any other agency. But whatever the method or the organization used, it must, if it is to be successful, be based on the principle for which the Railroad Association stands—that of service."

Doctor Mott's Address

Doctor Mott spoke on the factors underlying the leadership of the railways of America, as follows:

It has been my lot to devote much of my life abroad as well as here in America to travelling work. I find myself, therefore, always at home in the midst of railway men, having spent nearly 35 years in almost incessant travel among the nations. I am prepared to appreciate sympathetically as well as with my whole mind's assent the finer aspects of this work in honor of which we meet to-day, and also lying back of that, the work of the railways themselves. Every time I come back from a foreign journey, whether from the Orient, or from the western nations, or from those that lie south of us, I have a deepened sense of appreciation of the unique and stupendous service rendered by the railways of America to the upbuilding of the life of our nation.

It is due to the railways that we have had the almost unbelievable development of the vast material resources of the American continent. It is due to the railway service, and this is often overlooked, that there has been facilitated so largely the nation-wide dissemination of intelligence as well as the physical and social well-being of the American people. Likewise, the railways have done more than any other one factor to promote the unity of the nation. Just as the Civil War fused together forever the American states politically, so the ceaseless shuttling of the railways has made possible and done much to realize the social unification and the real spiritual solidarity of our strongly sectional and markedly cosmopolitan population. How much that means only those of us fully appreciate who travel widely over the land. Moreover, the American people do not realize the great contribution of our railways in preventing some of the great ills and perils that have well nigh undone other nations and have actually brought on some of the greatest calamities of mankind.

Importance of Adequate Transportation

When on my recent visit to China I heard of the terrible havoc and suffering caused by the famine, I said, "How much of this might have been prevented by an adequate railway service." When in India I have found, even under the matchless administration of Britain, how great famines at times still obtain among the three hundred millions of Hindustan, and have said, "What would not be the situation were it not for the railways they have, and what is not a widely extending country saved by having an adequate railway system?" When I was in Russia in the summer of 1917 with my good friend, General Scott, sent by the President as members of the Root Mission, and we saw the crumbling of the Russian Army and the rise of Bolshevism, we recognized that the principal thing which made this great catastrophe possible was the breakdown of the means of communication. The reason why we have had to pour tens of millions of dollars worth of provisions into Russia this year to save them from starvation, and the reason why the great political distemper of Bolshevism, like a malignant disease, still eats its way into the heart of Russia, is because of insufficient transportation.

Think also of the great contribution of American railways in opening in the railway service boundless opportunity to successive millions of men for useful work and for advancement. Our railways constitute one of the greatest, if not the greatest, school of democracy we have.

Why is it that the American railways hold the primacy among the railroad systems of the nations? It is a fact familiar to those present that America has practically one-half of the railway mileage of the entire world. That, however, is not what impresses us so much as the causes which have given the railways of America their unique distinction and great achieving power.

What are some of the factors which have made the American railways great and given them leadership among the railway systems of the world? I may be far afield but I think one of the factors has been the spaciousness of the opportunity. They had a vast continent thrust upon them to be opened, settled, subdued and developed. There was something about this which appealed powerfully to the imagination and also to the adventurous and heroic in strong men. It served to call out the best that was in them. Someone might say: "Is there not a great continent in Africa? What about Siberia which is nearly three times the size of Canada or the United States?" Yes, their day will come, and I predict that the very spaciousness of those vast areas, which grew upon me as I made my long journeys over them, will

yet challenge some of the greatest minds and release the latent energies not only of the Russian people but also of other nations whose co-operation they must have.

Why America's Railways Excel

The admitted leadership of American railways may also be explained by the freedom which they have had to evolve plans and project them through the decades, notwithstanding embarrassing and harassing restrictive legislation—legislation which in its practical effects or outworking has often proved to have been unpatriotic. When we contrast the developments on this side of the Atlantic with those in the European nations, and even more with those in Latin America, we recognize that we have had a measure of liberty that has made possible our showing what railways can do and how they can serve the interests of a great people.

Another factor that explains the greatness of our railways has been the eminent leadership which these enterprises have had. I make bold to say that there is no work in America or in any other country, which has called out among men more power of vision, more capacity for initiative, more organizing ability, that is, the ability to wield and combine men, than has the leadership of the railway systems of this country. Undoubtedly another cause has been not only the power of mentality and personality to which I have called attention, but likewise the money power. What undertaking in America or in any other nation has had so largely poured out upon it the great energies of capital, not only of the rich but also of what we might call associated poverty. What project have we today that is more truly American?

Then I like to add another factor that has made us forge to the front. That has been our power to co-operate. I remember the discerning remark of Senator Root, "You may judge the degree of advancement of a nation's civilization by its ability to co-operate with other nations." This is just as true of companies as it is of nations. Judging by this test, the railway companies of this country have evolved into a high stage of advancement and present an example of which we may be proud. We all remember the days of keen and remorseless competition, even unto warfare. It sometimes had its advantages in calling out the latent capacities of men and companies; but we have evolved, I repeat, into that state where railways, notwithstanding centrifugal energies, have shown their ability to co-operate with one another, and, what I sometimes think is even more striking, have developed unusual capacities of co-operation internally. When we think of troubles between companies and men we may at times feel depressed, and wonder whether or not this point is true, but if we contrast what we have here with what they have in certain other nations, we shall find abundant ground for encouragement and hope.

Establishing Right Relationships

Were I to mention another factor, it would be to emphasize the general character and spirit of the men in the service from top to bottom. I do not wonder that you are proud of this service. Nor do I wonder that the thing that causes us most solicitude is the fact that at times we are conscious that there is not the desired solidarity, or the sense of the solidarity that does exist. This leads us right into the heart of what has brought us here to-day.

Among the influences that have made possible the remarkable personnel of the American railway systems is the work of the Railroad Y.M.C.A. It deserves to be ranked very high indeed if we may judge by the testimony of the railway officials. What agency has begun to do as much to promote right character, right relationships and right spirit among the men in the varied services as has the Y.M.C.A.?

The word that I suppose we heard most frequently in the war was the word "morale." You will remember the dictum of Napoleon that morale is to other factors in war as three to one. The World War was a war of morales. You will recall that Hindenburg in the early days of the war said that the victory would ultimately be achieved by the nation that had the strongest nerves. I do not like that word as well as I like the word "morale," which represents, as I see it, the spirit of men.

It will be interesting to remind ourselves of what it was that at times tended to destroy the morale of men in the armies. War-tiredness in some cases was the cause; again it was idleness; at other times it was uncertainty or doubt; and not infrequently it was what we called enemy propaganda. These were among the principal influences. On the other hand, what were the causes that contributed most powerfully to the building up and maintaining of high morale? As I answer this question my answer will constitute in some respects the best outline I could give of the work of the Railroad Y.M.C.A., because of what this organization is striving to do along railway lines of the country is to promote the right morale, that is right the character, attitude and spirit of the men. I would, therefore, ask the question again: What were the factors in the war that did most to maintain and strengthen morale? One of them undoubtedly was the promotion of the physical comfort of the men. That is one of the great objects of the Railroad Y.M.C.A. When you think what it does with its dormitories, restaurants, rest rooms, athletic features, its homelike lounges, you understand what we mean by the physical comfort of the men. A second factor that contributed to morale was the mental and heart contentment of the men. Again you will recall vividly the entertainments, the lectures, the reading rooms of the Army Y. huts and of the Railroad Y. buildings at terminal and division points, and you recognize the full force of this point.

The right use of the leisure hours had very much to do with preserving and strengthening morale. I trace nineteen-twentieths of the troubles among young men to unaccounted-for hours—sometimes an evening off, sometimes a day, sometimes a week-end. It is to these vacant hours that I trace the lapses and falls of men. We cannot well overstate the importance of a program such as that of the Association to occupy usefully the vacant spaces in the time of men.

Another thing that contributed much to feeding the morale of men in the war was the opportunity the Association afforded them to change their minds. After spending long days and nights in the trenches, or after being on the battlefield where they witnessed scenes and had experiences which they would fain forget, or after the irksome routine of camp life, to be able to go into a bright and cheerful room and mingle with their fellows and converse with the men and women workers in charge and enjoy the diverting games and uplifting ministries to mind and spirit, was the means of transforming their whole mental outlook.

Another influence that made for morale was the consciousness the men had that they were not forgotten, that the people back at home—the citizens of their native land—believed in them, were indeed interested in them, and followed them, not simply through government taxes but through such welfare organizations as the Y.M.C.A. Tens of millions were contributed for Y huts, equipment and facilities. The same influence is exerted by the Railroad Y. with its generous backing from the companies and their stockholders and friends.

The secretarial leadership of this work has also had a profound influence. I can speak freely on this point because I am not known technically as a Railroad Y.M.C.A. secretary. But I know these secretaries and how they have spent themselves and how they count it a high honor to be of service to the railway men. They have helped immeasurably, in my judgment, to keep alive the ideals that have done so much to feed the spirit and maintain the morale of the men.

Let me emphasize as a chief factor the ministry of pure religion, the religion that St. James spoke of as pure and undefiled, which is being exemplified, lived and communicated in the religious program of these Associations. What did this not mean to men going into battle; what has it not meant to men since in the more difficult period following the armistice; what has it not meant to millions of men in the railroad service, who through these Associations have come under the wonderful, superhuman influence of Jesus Christ.

The Railroad Y. M. C. A.

Well, therefore, may we today, on the turning of the fiftieth milestone of the work of the Railroad Y.M.C.A., pay our tribute to this nation-wide, beneficent, efficient and fruitful organization. It has accomplished a great work. With its hundreds of Associations, with its scores of thousands of members, with its large property interests of many millions, with the backing of nearly every railway company of importance in the land, with the wise outreach of its influence to other lands, it is on the threshold of vastly greater achievements.

If I were to mention another great result that has been achieved and is being increasingly achieved, next to its influence on the character and spirit of the men, I would speak of the unifying power of the Railroad Y.M.C.A. In these recent fateful and tragic years we have witnessed an alarming development and manifestation of the divisive forces of mankind. I sometimes think the greatest problem before us for the next 15 years is the racial problem. Not only the divisive tendencies among the races but among the nations. Nor would I overlook another great divisive tendency—that in the social and industrial order. The conflict is on. What does it not mean that we have an organization which for 50 years has shown its ability, as no other society with which I am familiar, to unite in one membership, one program and one objective, the employers and employees, and this in a voluntary and not an obligatory way, with the largest possible freedom of expression and action, and, therefore, ensuring the finest and most effective cooperation? What has it not meant?

I am not surprised that the other great industries of the world have finally been convinced after watching for years this practice game of the Railway Y., and now we cannot keep up with their demand for the extension of the Y.M.C.A. work on the railway Association model to their industries. Nor should we wonder that industrial leaders in Europe and in Asia have requested that we send experts to study their fields at first hand, and to plan agencies and facilities for their service. Discerning observers recognize afresh the stabilizing and steady guiding power of this great work.

In a time of strain like the present, it assumes added meaning and importance. To my mind, we are summoned at a moment like this to expand greatly our plans. There are some things on which we have to call time, but this is not one of them. This is one of the projects from the nature of the case that should be expanded until the [illegible]ful network of the organization is spread much more intimately over all classes of men throughout all the railways of America. We want to keep in mind what the French call "grand strategy." By grand strategy they mean that which takes in the whole map—all the fronts.

As I look over our great American Republic and notice the spaces that are without these facilities and without the helpful working of these vital and steadying processes, I say let us have grand strategy that takes in every railway system in its entirety. To this end we must expand greatly the resources for this work. So far as I can see there is no more higher multiplying use of money right now than that of relating it to these plans, to influence aright the ideals, the character, the spirit, the efficiency, the relationships, the output of the men to whom we commit such unparalleled interests of property and of human life.

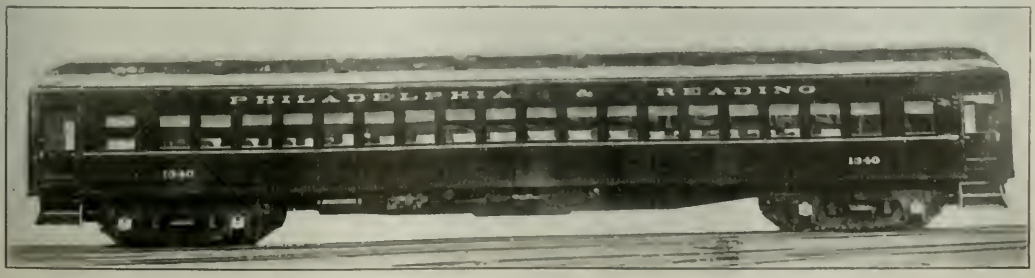
New Steel Passenger Cars for the Philadelphia & Reading

THE FIRST deliveries of cars for the Philadelphia & Reading on an order for 55 main line all-steel passenger equipment cars have been made recently by the Harlan plant, Wilmington, Del., of the Bethlehem Shipbuilding Corporation, Ltd. Thirty of the main line cars ordered from the

Interior of the Coach

Bethlehem Company are all-steel passenger coaches and five are all-steel combination passenger and baggage cars.

These cars are all 63 ft. in length, the coaches being of the wide vestibule type with a seating capacity of 78; the



New 63-ft. Steel Coaches for the Philadelphia & Reading

combination passenger and baggage cars have a seating capacity of 51. Hale & Kilburn Walkover design seats upholstered in Philadelphia & Reading standard blue plush are used in the coaches, and black fabricoid is used in the combination cars. Safety Car Heating and Lighting Company body hung electric light equipment of the latest type is installed in each car, and the same company's Thermo-Jet heating system is used. Current for lighting is furnished by the Electric Storage Battery Company's 300 ampere hour, type No. 13 batteries. Gould buffers and draft gear, Pitt couplers and Westinghouse universal control air brakes are part of each car's equipment.

The interiors of both coaches and passenger compartments of the combination cars are plain steel finished in imitation mahogany, and the baggage compartments are painted and enameled buff color on the side walls with the upper and lower decks painted and enameled white. The interiors of all cars are insulated with three-ply Salamander, and the headlining is of fire-proof agasote painted to harmonize with the interiors. The exteriors are painted Philadelphia & Reading standard body color with gold lettering. Each car is equipped with four-wheel Commonwealth cast steel trucks with 36 in. forged steel wheels and clasp brakes designed by the builder.

In addition to the above order the Harlan plant also has under construction for the Philadelphia & Reading 50 all-steel cars for suburban traffic, 45 of these being passenger cars and five combination passenger and baggage. These cars are designed to have strength equal to the main line cars and are in every respect high grade cars for suburban traffic.

President Asks Arbitration of Coal Strike

WASHINGTON, D. C.

A PLAN FOR a settlement of the coal strike by arbitration and an immediate resumption of mining was proposed by President Harding on Monday, July 10, to the conference of coal operators and union leaders which he had summoned to Washington and which had been in a state of deadlock for the week during which they had been holding meetings among themselves and in the presence of Secretaries Hoover, Davis and Fall. The plan was not immediately accepted, however. The mine union leaders said it would be necessary to first hold a meeting of their policy committee, which was called for Saturday, and the representatives of the operators also asked for further time for consideration.

The President proposed that the mine workers return to work on the scale of wages which expired last March 31 and which would be continued in effect until August 10. A coal commission would be created at once, consisting of three members selected by the mine workers, three selected by the mine operators and five to be named by the President, all decisions of the commission to be accepted as final. This commission would determine, if possible, within 30 days a temporary basic wage scale for the miners on strike, which would be effective until March 1, 1923. In event that the commission is unable to report this scale by August 10, it would have power to direct continued work on the 1922 scale until the superseding scale is ready. The commission would also investigate exhaustively every phase of the coal industry, and the President promised to ask Congress to confer authority for the most thorough investigation and make appropriations necessary for the work. The commission would be asked to make recommendations looking to the establishment and maintenance of industrial peace in the coal industry, the elimination of waste due to intermittency and instability, and suggest plans for a dependable fuel supply.

The President in addressing the conference said that the government required the parties to the dispute to settle it among themselves. The government could not settle it for them and it will force no man to work against his free will, nor force men to employ men against the free exercise of an employer's rights.

The operators in a statement to the press pointed out that they had already proposed that a committee of operators and miners be charged with the grouping of the districts where possible and mutually agreeable, and that a board of arbitration be set up by the President in each group or district to report on or before August 1. They also suggested that a board be appointed by the President to state the fundamental problem of the bituminous coal industry and to make recommendations. The proposals of the operators, however, were promptly rejected by the union.

Pere Marquette Valuation

WASHINGTON, D. C.

THE INTERSTATE Commerce Commission in its tentative valuation report on the Pere Marquette, as of June 30, 1915, finds a final value of $63,309,242 for the property used, including the leased lines, the Grand Rapids, Kalkaska & Southeastern, Huron & Western and Chicago & West Michigan, and $60,522,576 for the property owned. The used property covers 1,829.99 miles of first main track and 2,613.97 miles of all tracks. Lines operated in Canada are excluded.

The outstanding capitalization on the valuation date was $108,837,176 of which the report says $7,125,790 is only a nominal liability due to securities held by or for the carrier and $101,711,386 constituted the actual liability to the public. The investment in road and equipment, including land, was stated by the carrier to be $87,100,296 but the report says that if certain readjustments were made the balance in this account would be decreased to $80,179,569.

The original cost to date cannot be fully ascertained, the report says, and no data supported by accounting records are obtainable as to the cost to predecessors of the carrier in creating and improving 838 miles of road now owned by the carrier. For creating the remaining 951 miles of road owned by the carrier on the date of valuation and for improving all the property owned, the report gives the recorded money outlay as $38,272,894 and the outlay in securities as $14,542,499, but says that from these items should be deducted certain amounts not definitely ascertainable representing expenditures on lines not now owned. The cost of reproduction new of the common carrier property other than land used is given as $66,730,170 and the cost of reproduction less depreciation as $50,103,559. The present value of the carrier lands is given as $7,511,047 and the value of materials and supplies on hand as $1,196,533.

ECONOMIC ASPECT OF POOR VISION.—In the examination of more than 10,000 employees in factories and commercial houses, 53 per cent were found with uncorrected faulty vision and 13 per cent had defects which were corrected, making a total of 66 per cent with defective eyes. This is the summary of a report of studies made by the Eye Sight Conservation Council of America, headquarters Times Building, New York city. In one manufacturing establishment over 70 per cent were found with eye defects. As an example of inefficiency and resulting waste, 20 per cent of the inspectors in a large factory were found to be unable to see sufficiently well to detect defects in the product they were inspecting. More attention has been given to the perfecting of machinery than to the correcting of physical defects in the workman. Every manager should see to it that the eyes of all associated with him are corrected to compensate for defects. It will pay from a purely business standpoint.

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER of cars loaded with revenue freight for the week ended July 1, which was the last week before the 10 per cent reduction in freight rates took effect, as well as the last week before the shopmen's strike, was 876,896, or 960 less than the total for the preceding week. This was, however, an increase of over 100,000 as compared with the corresponding week of 1921, when the loading was 776,079 and only 14,725 less than the loading for the corresponding week of 1920, which was 891,621, although the coal loading was 62,365 cars less than in 1921 and 98,286 less than in 1920. Coal loading showed a decrease of over 2,000 cars as compared with the week before. There were increases as compared with the last year in all classes of commodities except coal, but there were decreases as compared with the week before in grain and grain products, live stock, coal, forest products and merchandise l.c.l. Increases as compared with 1920 were shown in the Pocahontas, Southern and North Western districts. The summary as compiled by the Car Service Division of the American Railway Association is given in the table below.

The freight car surplus for the period June 15 to 23 showed a further reduction to 255,685, which included 160,733 surplus coal cars and 62,577 box cars and for the period June 23 to 30 there was a further reduction to 239,225, which included 60,101 box cars and 147,558 coal cars. There were also scattering shortages amounting to some 4,803 cars.

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS COMPARISON—TOTAL—THIS YEAR, LAST YEAR, TWO YEARS AGO—WEEK ENDED SATURDAY, JULY 1, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Misc. L.C.L.	Miscellaneous	Total revenue freight loaded: This year 1922	Corresponding year 1921	Corresponding year 1920

Batignolles Tunnel, Paris, the Scene of Disastrous Accidents, Being Converted into an Open Cut

General News Department

The Missouri Pacific "Scenic Limited," westbound from St. Louis to California, collided head-on with a local freight train near Kansas City, Mo., resulting in the death of five persons and the injury of forty.

The Delaware & Hudson and the New York, Ontario & Western railroads were on July 2 blocked by a flood between Carbondale, Pa., and Jermyn, 4 miles, for the fourth time within four weeks. The total damage done by this latest flood is estimated at more than $1,000,000.

The feasibility of motion pictures on a moving train was demonstrated on June 17 on train No. 3 of the Illinois Central, operating between Chicago and New Orleans. A curtain was hung at one end of the dining car with the chairs rearranged to face it. The passengers were then invited to the diner and a three-reel film was shown. The current for the projector was taken from the regular lighting circuit.

Members of Congress have received complaints from commercial organizations on the Pacific Coast and from other parts of the country against the alleged activity of the officials of the Southern Pacific regarding the Supreme Court decision ordering the merger of the Southern Pacific and the Central Pacific dissolved. The Peninsula Bureau of Chambers of Commerce and Associations, which met at Redwood City, California, petitioned members of Congress outlining the attitude of those commercial bodies against any reversal of the Supreme Court ruling in the dissolution case. Another petition was received from the Omaha Chamber of Commerce in which it is charged that "the Southern Pacific Company is making a determined effort, by appeals to senators and members of Congress, to nullify the effect of the decision of the Supreme Court in the Central Pacific case, requiring a separation of the Central Pacific Railroad from the Southern Pacific Company."

General Foremen's Convention

The International Railway General Foremen's Association has announced a tentative program for its convention to be held in Chicago, September 5-8 as follows: Repairs to Steel Cars and Appliances for Doing the Work; Labor Saving Devices in the Locomotive and Car Departments; Methods of Increasing Shop Output, and Engine Failures and Their Remedies.

A Correction

In an article entitled, "Large Size Boiler Plates," published on page 1620 of the *Railway Age* of June 20, 1922, the size of the boiler plates for the Southern Pacific 2-10-2 type locomotives was incorrectly stated as 223 in. by 150 in. by $\frac{3}{8}$ in. The actual sizes of the plates for the crown and side sheets were 247½ in. by 195½ in. by $\frac{3}{8}$ in. and for the wrapper sheets, 291 in. by 149 in. by $\frac{5}{8}$ in.

Quarterly Circular on Loss and Damage

The freight claim division of the American Railway Association has recently issued its quarterly circular on freight loss and damage expenditures as divided among the principal causes and commodities for the three months ending March 31. This statement shows a decrease of 49.2 per cent in the amount charged to loss and damage as compared to the same period in 1921. Members are urged to study their own cause and commodity ratios as they fluctuate from month to month, for the reason that an increase in the ratio, as compared to previous months, is indicative that decreases in that cause or commodity are not keeping pace with the list as a whole. The total loss and damage expenditure recorded for this three-month period is $14,852,103.

Interesting Colored Firemen in Fuel Economy

In connection with the fuel economy campaign on the Central of Georgia a meeting of colored firemen was recently held at Columbus, Ga., at which an address was delivered by Dr. M. L. Taylor. Dr. Taylor is a physician, one of the prominent colored citizens of Columbus and one who exerts a great deal of influence with the members of his race. It is sometimes difficult to secure the interest of colored firemen and Dr. Taylor's talk, which was widely commented on and was published in the Right Way Magazine, has served as a further encouragement to these employees in the efforts to save fuel.

Electric Power for the Pennsylvania

Electric energy, purchased from the Philadelphia Electric Company, will be used for the operation of the West Jersey and Seashore Electric line which runs between Camden and Atlantic City. An agreement has been reached between the Pennsylvania, which controls the West Jersey, with the electric company for the necessary work of building a connecting line. The power now used is generated by the railroad at its Westville plant. It has not been decided whether this plant will be abandoned or maintained for auxiliary and emergency purposes.

To obtain power from the new source, the Pennsylvania will run a line across its Delaware river bridge and connect with the West Jersey at Westville. The power line after reaching Delair, N. J., across the river from Bridesburg, will follow the old Haddonfield-Westville cut-off to Westville.

Annual Safety Congress Next Month

The Eleventh Annual Safety Congress will be held in Detroit, Mich., from August 28 to September 1. In the past this conference, which is promoted by the National Safety Council, a co-operative non-commercial organization of men, industries and communities interested in the prevention of accidents, has annually brought together 3,000 or more persons who are actively engaged in safety work in both the United States and Canada. This year invitations will be sent to 15,000 executives and safety workers and a large attendance is expected. Complete discussions of the various phases of industrial and public safety will be conducted at the meetings of the 20 different sections into which the council's activities are divided. These meetings will cover safety problems in a wide variety of fields. The steam railroad section will hold sessions on Tuesday and Wednesday, August 28 and 29. The subjects covered will include "Safety and Publicity," "Accident Prevention from the Standpoint of the Operating Department," "Report of Progress—Careful Crossing Campaign" and "Safety as Seen from the Pulpit."

Train Control on the Pennsylvania

The Pennsylvania Railroad has arranged with the Union Switch & Signal Company for the installation of continuous induction, full-speed train control system on 45 miles of single track and five miles of double track between Lewistown, Pa., and Sunbury. Alternating current track circuits and position light signals will be installed at the same time. This will require that a 4,400-volt, single-phase, 60-cycle transmission line be built. Speed control apparatus is being applied to eight freight and four passenger locomotives. It is expected that the installation will be completed and in full operation before fall.

This will be the first extensive installation working on the continuous induction principle. This system requires that a signal be transmitted to a train to permit it to proceed, while non-receipt of a signal results in stopping of the train. As continuous track circuit protection is installed, this provides that the train will be under control at all times, occupying or entering the main track

equipped with the installation. No apparatus is required along the roadway, as rails are used to conduct the [illegible] current which operates the engine apparatus, and the switch ahead of the train or another train backing into the block will cause the apparatus to be applied immediately. This system will provide against excessive and dangerous speed being attained and is designed with the intention of at no time relieving the engineman of responsibility for proper handling of his train.

Thirty-One Cars of Chocolate

The Pennsylvania Railroad calls attention to a second "Prosperity Special" which passed over its lines this week, a train-load of chocolate. It is said to be the largest single shipment of chocolate ever made by rail in the history of the candy-making industry, 1,250,000 lb. chiefly of what is known as confectioners' "covering" chocolate, in 10-pound cakes. It completely fills 31 box cars. The train left the works of the Stollwerck Chocolate Company at Stamford, Conn., on July 1, and moved by way of the Hellgate bridge to Greenville, N. J., Philadelphia and Pittsburgh. The western candy trade feels the revival of business. Five of the cars go to Denver, Col., three each to Cincinnati, O., and Portland, Oregon; two each to St. Paul, Minn., and Sioux City, Iowa; and one each to Newark, O., Dayton, O., Muskegon, Mich., Galesburg, Ill., Freeport, Ill., St. Louis, Mo., St. Joseph, Mo., La Crosse, Wis., Fond du Lac, Wis., Minneapolis, Minn., Burlington, Iowa, Sioux Falls, S. D., Ottumwa, Iowa, Pueblo, Col., Pennsylvania Railroad estimates that the candy of which this a pound box to each one of five million American girls. Cleveland, O., and Milwaukee, Wis. The statistician of the chocolate will become a constituent will be sufficient to furnish

Wage Statistics, April, 1922

For April, 1922, the number of employees reported by Class I railroads was 1,578,133, an increase of 7,975, or 0.5 per cent over the number reported for the preceding month, according to the monthly bulletin of the Interstate Commerce Commission. Owing to a decrease in the number of the higher paid employees, the total compensation decreased $13,291,337, or 6.1 per cent.

Compared with those for March, 1922, the returns for April, 1922, indicate the following increases or decreases (D) by groups of employees:

Executive officials, and staff assistants	21
Professional, clerical, and general	101,170
Maintenance of way and structures	31,045
Maintenance of equipment and stores	D8,394
Transportation (other than train, engine, and yard)	11789
Transportation (yardmasters, switch tenders, and hostlers)	11688
Transportation (train and engine service)	D12,070
Net increase	7,975

A comparison of the number of employees and their compensation, by months, for the period covered by the new classification follows:

Month	Number of employees	Total compensation
July, 1921	1,634,872	$214,339,385
August, 1921[1]	1,679,927	227,745,895
September, 1921[1]	1,718,330	223,972,822
October, 1921[1]	1,754,136	237,602,959
November, 1921[1]	1,732,353	225,304,006
December, 1921[1]	1,637,151	214,921,396
January, 1922[1]	1,552,014	205,178,639
February, 1922[1]	1,545,040	194,523,427
March, 1922[1]	1,570,158	216,704,408
April, 1922	1,578,133	203,413,071

[1] Excludes Detroit, Toledo & Ironton Railroad.

The N. Y. C.'s "Canned" Safety Speech

The New York Central is circulating a "canned speech" which is being read before all kinds of public gatherings, in furtherance of the "Cross Crossings Cautiously," campaign.

This speech, which takes four minutes to deliver, already has been read at sessions of commercial organizations, Rotary clubs, automobile clubs, in motion picture theaters and even to church congregations assembled at their worship. The speech was written by Marcus A. Dow, general safety agent of the New York Central. The address follows in part:

"Approximately 1,800 persons are killed on railroad grade crossings throughout the country each year and about 5,000 sustain painful and crippling injuries. In the last 30 years the country's population has increased only 68 per cent, while fatal crossing accidents have increased 345 per cent and injury cases have increased 62 per cent. Most 75 per cent of the persons killed and injured in these deplorable railway crossing accidents are occupants of automobiles.

"There are at present over 251,000 railroad grade crossings in the United States. To eliminate all of these crossings by grade separation would require a sum of money in excess of $12,500,000,000. Constant work is being done in this direction, and 300 grade crossings were eliminated in 1919, but even at this rate it would take 629 years to abolish all the crossings of the country.

"The only solution of the problem is in safety education. A railroad crossing, no matter whether or not it is protected, is a place of danger where no chances must be taken. If you are driving a car, slow down approaching every railroad crossing, look carefully both ways before entering upon the tracks, and do not proceed until you have made sure that no train is approaching from either direction. If a train is coming—*WAIT*. Do not attempt to cross ahead of it. Many lives have been snuffed out because the driver of a car thought he could beat the train to the crossing and the race was a tie.

"To 'stop, look and listen' is about the best piece of advice that was ever written. This remedy for crossing accidents is sure and is within the reach of everyone. It takes only a little thought, a little care, and perhaps a moment's time to use it."

Railway Returns for May

The Class I railroads of the United States in May had a net operating income of $61,980,600, which on an annual basis represented a return of 4.36 per cent on their tentative valuation. In May last year their net operating income amounted to $36,943,248, or at the annual rate of return of 2.60 per cent, while in April this year it was $50,271,865, or 3.93 per cent. The net operating income fell $19,680,500 below a return of 5¾ per cent, the figure fixed by the Interstate Commerce Commission in its recent rate decision as representing a fair return.

Operating revenues in May totaled $448,947,900, an increase of nine-tenths of 1 per cent over the same month last year, while operating expenses totaled $355,588,800, a decrease of 0.4 per cent.

Fifty-six railroads—27 in the Eastern, 2 in the Southern and 27 in the Western district—had operating deficits in May, compared with 59 in April.

For the first five months this year the net operating income of the railroads totaled $273,259,000, compared with $94,417,907 during the same period last year. This is at the annual rate of return of 4.36 per cent (the same as for the month of May) compared with 1.51 per cent during the first five months in 1921. The operating revenues for the five months period totaled $2,137,339,700, a decrease of 3½ per cent compared with the corresponding period last year, while operating expenses totaled $1,714,688,900, a decrease of 13½ per cent.

The railroads in the Eastern district had operating revenues in May of $218,955,300, a reduction of 1 per cent, while the operating expenses totaled $173,147,700, which was a reduction of 7.4 per cent. Their net operating income was $31,752,380, compared with $20,801,715 in May the year before. The net operating income for the month was at the annual rate of return of 4.57 per cent.

The railroads in the Southern district had operating revenues of $61,778,800, an increase of 12.6 per cent compared with May, 1921. Operating expenses totaled $46,257,700, a reduction of 6.7 per cent, while their net operating income was $11,304,700, compared with $2,064,841 during the same month last year. This was at the annual rate of return of 6.63 per cent.

The operating revenues for the carriers in the Western district totaled $168,213,700, a decrease of three-tenths of 1 per cent compared with the same month last year, while their operating expenses totaled $136,183,360, a decrease of 5 per cent. Their net operating income totaled $18,923,500, compared with $14,076,692 in May, 1921. This is at the annual rate of 3.41 per cent.

There was an increase of approximately 3½ per cent in the number of freight cars loaded with all commodities in May, compared with the same month in 1921. Because of the coal strike coal loading fell off 47.4 per cent, but there was an increase in the loading of all commodities other than coal of 16.8 per cent. Measured by net ton miles there was a decrease in freight traffic in May of eight-tenths of 1 per cent compared with the same month last year.

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF MAY AND FIVE MONTHS OF CALENDAR YEAR 1922

Name of road.		Average mileage operated during period.	Operating revenues: Freight.	Passenger.	Total (inc. misc.)	Operating expenses: Maintenance of Way and structures.	Maintenance of Equipment. Conference on Help for K. C. M. & O.

An effort to find ways for extending help to the Kansas City, Mexico & Orient, whose receiver has stated that the road cannot continue operation much longer without assistance, was made at a conference between Chairman McChord and Commissioners Meyer and Potter, of the Interstate Commerce Commission, Receiver Kemper, traffic officers of connecting roads and representatives of the state commissions of Kansas, Texas and Oklahoma at Washington on July 12, but without definite result. Another conference will be held in Chicago on July 18. Various possible ways of tiding over the road until it can recover from the effect of three drought years, high prices, etc., were discussed, ranging from the remission of taxes and the hope of discovering oil along its line to an increase in its divisions and the diversion of traffic from other lines. A formal complaint asking an order extending the latter forms of relief is now before the commission and a hearing has been held but it was represented that the condition of the road was such that it could not await the outcome of these cases. One of the traffic officers brought out that shippers have something to say about the routing and that one shipper of live-stock would not allow the Orient to be used for his shipments for fear that he could not collect in case of loss or damage. The question of increased divisions was considered at length and a committee was appointed to examine the figures of revenues and divisions. The conference was called by Chairman McChord, who had invited the governors of the states through which the road operates, but they sent representatives.

Commissioner Meyer, in a letter to two Texas Congressmen who had asked for an investigation, discussed the situation of the Orient as follows:

"You suggest 'an immediate investigation.' The Orient Railroad has been and still is under investigation in the sense that many months ago, prior to the making of a loan, we investigated its financial, traffic, and operating conditions. We now have pending before us two proceedings relating to routing of traffic and divisions, respectively, which have recently been heard and which will be disposed of at the earliest possible date.

"We are fully conscious of the dependence of thousands of people upon this railroad. The situation in which many may find themselves is tragical. We have been and are doing everything within our power under the law to be of assistance in working out this extremely difficult situation. However, Congress has not authorized us to make donations to a railroad company which may be in severe financial distress. We have made the Orient a loan under section 210 of the transportation act. We are not authorized by law to reach into the public treasury to relieve suffering, no matter how acute it may be. We will soon have exhausted all our resources under the law. Furthermore, we have conferred with other departments of the government in the hope of finding a way of rendering still further financial assistance. Thus far we have been unable to find it.

"This leads me to inquire whether the communities served by the Orient and the thousands of people dependent upon it have exhausted all their resources in rendering assistance to this railroad with a view of keeping it permanently in operation. The states, the counties, and the municipalities in which it operates have an immediate and direct interest in this property and it may be that it is possible for those authorities to render assistance in ways that have not thus far been considered and resorted to.

"We are advised that the Director General has made final settlement with the Orient Under the provisions of the transportation act we made partial payments to the Orient on April 7, June 12, August 4, August 25, and October 21, 1920, respectively. These payments aggregated $916,000. They were made as large as we could lawfully make them. Since these partial payments were made, representatives of the carrier and of this commission have at various times conferred with respect to the determination of the amount due in final settlement of the guaranty provisions of the transportation act under which the above-mentioned partial payments were made. The carrier is now in default of interest on the government loan of $2,500,000 by $75,000. The maximum amount which we may be able to certify to the Treasury as payable to the carrier in final settlement will probably not exceed the amount of the interest in default by more than about $40,000. A certificate for whatever amount may be determined as due will be issued in the immediate future.

"What, if anything, can be accomplished in the two other proceedings pending remains to be seen, although it is safe to assume that no substantial financial assistance may emanate from that source in the immediate future or before July 1.

"Whether Congress can devise ways and means of keeping this railroad in operation in the event that the receiver should be unable to do so, is for you gentlemen who constitute Congress to decide.

"My official contact with the Orient has created in me the impression that its original construction was spectacularly speculative and an invitation to disaster. I am losing no sympathy over the speculators who prematurely created this railroad and those who personally and officially encouraged them to do so. However, I have the most profound sympathy for the people who have built their homes, schools, churches, and places of business along the line and who are dependent upon it. If there is a way to save and protect them, that way should be found.

"In this connection I can not refrain from remarking that in spite of tragedies like those of the Orient, which may be found in every part of this country, we are constantly being appealed to and importuned to authorize the construction of certain new railroads which in all probability, if constructed, would end in disaster. If such disaster should strike only those who are clamoring to be permitted to take the risk, authority might conceivably be granted; but the real sufferers will be the people, largely innocently persuaded, who may make their home in localities dependent upon the success of the enterprise.

"Please regard this letter as my individual expression. I sincerely hope the Orient will continue to operate."

"The Railroad and the Auto Truck"

An evolution is taking place in the transportation of the country that does not seem to be attracting the attention which it deserves. The automobile is elbowing the railroad out of service in many respects. Railroad officials and investors do not seem to realize and legislators do not seem to understand that it is useless to make appropriations for hard roads and have them smashed to pieces by heavy trucks that are transporting freight between industrial points. Millions and millions of tons of freight which formerly went by rail are now transported by automobiles. The highways are sustained at public expense. The railroad is compelled to build its own thoroughfare, buy its own right of way and, in cases where it occupies a public street, pay compensation. Is the competition between the two modes fair?

A great deal of dissatisfaction is manifested toward the railroad and many people are wondering why it is that its returns are so small as compared with what they were years ago when there was less freight to transport and millions of dollars were paid in rebates. Now no money is returned to the shipper by the railroad and all shippers are supposedly treated alike. Why should the state build a hard road costing as much per mile as a great steel thoroughfare and not compel the motor truck transportation company to pay a proper remuneration for the use of it? Why should thousands of citizens be compelled to pay special assessments to have the street in the front of their residences pounded to pieces by those who aimlessly chase about in automobiles, hardly knowing where they are going and knowing less about how to operate the cars, to say nothing of the business vehicle? One reason why there are so many automobile accidents is because so many people are operating cars who have not the experience necessary for the protection of their own lives and their own property or the lives and property of others who are using the streets.

Something ought to be done. Many railroads are slipping financially. Vast sums are being expended in hard roads without proper provision being made for keeping these roads in repair. The glamour of the railroad has disappeared and the enthusiasm now centers around the automobile. The average citizen has his mind on a new form of transportation and the public through its officials and legislative bodies should recognize this sentiment and prepare to meet new conditions.

The railroad cannot be obliterated on account of its ability to compete for the long-haul business and something should be done to dovetail the two forms of transportation, one dealing with long hauls and the other with short hauls. One is as important as the other and it seems that the transportation company which will bring these two methods of transportation into juxtaposition will have solved the question. Either the automobile companies should own the railroads or the railroads should control transportation. *Manufacturers' News.*

Traffic News

The Cleveland, Cincinnati, Chicago & St. Louis on June 25 put on a new passenger train each way between Chicago and Indianapolis, Ind. The new trains will leave each city at 5 p. m. and arrive at the opposite terminal at 10 p. m.

On July 1 the Texas & Pacific inaugurated double dining car service on its "Sunshine Special" operating between El Paso, Tex., and Memphis, Tenn. It is said that two diners were necessary during the heavy summer travel in order that the passengers would not be delayed in getting their meals.

On July 10, the Wabash and the Delaware, Lackawanna & Western inaugurated additional sleeping car service between Chicago and Scranton, Pa., operating eastbound on Wabash train No. 6 and Lackawanna train No. 2, and westbound on Lackwanna No. 5 and Wabash train No. 1. This arrangement also gives the Wabash through sleeping-car service on train No. 3, leaving Buffalo at 7:45 a. m. and arriving at Detroit at 1:45 p. m., and Chicago at 9:50 p. m.

Coal Production

Production during the fourteenth week of the strike was interrupted by the Independence Day Holiday. The total output of bituminous coal will probably fall between 3,500,000 and 4,000,000 tons, and even the average production per working day will show a decrease, according to the Geological Survey bulletin. Production of anthracite remains practically zero.

Complete returns for the thirteenth week (June 26-July 1) indicate an output of 5,207,000 tons of bituminous coal and 25,000 tons of anthracite, a total of 5,232,000 tons, of all coal. In the corresponding week of 1921 bituminous mines produced 7,660,000 tons and the anthracite mines 1,870,000 tons, a total of 9,530,000 tons. In 1920, a year of active business, the total coal raised was 12,064,000 tons. Considering anthracite and bituminous coal as a common source of supply, it will be seen that present production is running from 5,000,000 to 6,000,000 tons behind normal.

The record of daily loadings of cars of bituminous coal clearly discloses the effect of the Fourth of July holiday. On Saturday, July 1, 12,614 cars were loaded as against 13,593 cars on the preceding Saturday. On Monday only 11,165 cars were loaded. On Independence Day itself production ceased almost entirely, and the recovery thereafter was slow. By Thursday, July 6, loadings had reached 14,000 cars but were still running 2,000 cars below the level of the week preceding. Even allowing for full recovery on Friday and Saturday, it does not appear likely that the week's production can pass 3,900,000 tons. Contributing to the decrease in output was a recurrence of traffic congestion on the railroads of Southeastern Kentucky and parts of West Virginia.

The quantity of unbilled coal at the mines has now fallen to small proportions and continues to decline. In the week ended July 1 the average daily number of unconsigned carloads of bituminous coal was 2,898, equivalent to 145,000 tons. This includes all the unbilled coal held by all carriers.

The mine reports for the week ended June 24—the twelfth of the strike—show conditions during the period of highest production since the strike began.

The traffic congestion in Southeastern Kentucky which had been the immediate cause of the decrease in output in the eleventh week, was materially relieved. Losses ascribed to transportation disability in the Harlan field declined from 49.4 per cent of full time to 21.3 per cent, and in the Southern Appalachian field also the placement of cars at the mines was better. This improvement more than offset an increase in transportation disability in the Hazard district and in Northeastern Kentucky. The only other field to report significant loss through transportation was Winding Gulf. The report of transportation disability for Colorado was confined to the Routt County field, the peculiar situation of which has been referred to in these reports. No great change in the number of men on strike is indicated by the mine reports. Production in non-union Pennsylvania continued to increase slowly, but the mines operating had less than their normal working force and shipments were still below those just before the strike.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from July 10 until November 7, the operation of schedules published by the Buffalo, Rochester & Pittsburgh, which propose to cancel the specific commodity rates on brick from New York and Pennsylvania points to Norfolk & Western stations and apply class rates in lieu thereof.

A hearing before the Interstate Commerce Commission on its Docket No. 13896, in re rules governing ratings of coal mines, other than anthracite, and the distribution of cars to such mines, consolidated with the commission's Docket No. 12530, in re distribution among coal mines of privately owned cars and cars for railroad fuel, will be held at 9 a. m. on July 17, at Washington, D. C. The committee which will handle this matter on behalf of the American Railway Association is prepared to offer testimony on behalf of all the railroads with respect to both general subjects. Individual railroads are not, however, precluded from offering any testimony through their own witnesses and counsel with respect to the matters under consideration on behalf of their individual lines.

Express Rates to Be Investigated

The Interstate Commerce Commission has ordered an investigation, upon its own motion, into the interstate rates and charges of express carriers subject to the Interstate Commerce Act for the transportation of express traffic in and between the several zones as defined in *In Re Express Rates, Practices, Accounts, and Revenues*, for the purpose of determining whether such rates and charges, or any of them, are unreasonable or otherwise in contravention of the provisions of the Interstate Commerce Act, and of making such findings and entering such orders as may be necessary to remove any unlawfulness which may be found to exist.

All express companies and common carriers by rail subject to the provisions of the Interstate Commerce Act engaged in the transportation of express traffic between points in the United States and between such points and points in adjacent foreign countries be, and they are made respondents to this proceeding.

Joint Rates Must Not Be Increased or Cancelled Because of Disagreement

The Interstate Commerce Commission in a notice to carriers says it frequently occurs that carriers, unable to agree among themselves upon the division of joint through rates, propose cancellation or increase of such joint rates as a means of adjusting their differences. Almost invariably when no substantial justification for the proposed increase other than dissatisfaction with division is offered, the commission suspends such cancellation or increase and after hearing, requires that the schedules under suspension be cancelled, continuing the joint rates in effect.

"Section 15 of the Interstate Commerce Act places upon the carrier the burden of proof to show that a rate, fare or charge increased after January 1, 1910, is just and reasonable. Disagreement over divisions is not considered by the commission as justification for increases in or cancellation of joint rates or charges, and therefore, as it construes the law, it has no option other than to condemn such changes unless substantial justification other than dissatisfaction with divisions is submitted. The commission is authorized by the same section of the act to prescribe just, reasonable and equitable divisions to be received by the several carriers parties to joint rates and therefore, if unable to obtain equitable divisions from its connections, a carrier should bring the situation to the attention of the commission in an appropriate proceeding rather than without justification attempt to increase or cancel joint rates. Ordinarily the commission will not undertake in investigation and suspension proceedings to pass upon the reasonableness of divisions of joint rates involved therein.

"The attention of carriers is called to the fact that the only

result of attempting to cancel or increase joint rates, which in themselves are reasonable, because of disagreement over divisions, has been waste of time and added expense to shippers, the commission and themselves. Therefore such practice should be discontinued."

Switching Charges at Boston Reduced

The Interstate Commerce Commission has issued a decision finding unjust and unreasonable the switching charges, rates and practices at Boston, Mass., and vicinity and prescribing enlarged switching limits and a uniform basis of switching charges and absorptions, effective on October 2. The case is that of the Boston Wool Trade Association vs. the director general and the various railroads and has been under consideration by the commission since the period of federal control. Various other shippers and receivers of freight intervened and the case was submitted to the commission finally on May 11, 1921. The decision reviews at length the evidence submitted in the case, including a study of the cost of switching service. The order provides for a rate of $10 per car for interchange switching, $15 per car for intra-terminal switching and $20 per car for inter-terminal switching, as defined in the report. The railroads were also ordered to establish between points outside and points inside the switching limits of Boston a rate that does not exceed the rate or charge contemporaneously maintained and applied on like traffic between the same outside point and any other point within the future switching limits. They are also required to maintain through routes between local points outside the switching limits and points within the limits and to apply to transportation over such through routes rates which shall not exceed the rates applied on like shipments from and to the same points to or from Boston by more than $5 a car, provided that these provisions shall not apply to the extent that the defendants accomplish similar results by the partial absorption of switching charges. In view of the intricacy of the situation and the somewhat fragmentary character of the evidence, the report says it is not an easy matter to determine just where the limits of the Boston switching district should be placed nor what the switching charges or absorptions should be. For this reason its conclusions with respect to these matters must be regarded as in a measure tentative or experimental. Applications of the shippers for reparation and of the carriers for fourth section relief were denied.

Court News

Nonmineral Character of Railroad Grant Lands

The Circuit Court of Appeals, Ninth Circuit, holds that, while the act of 1886 making a grant of lands to the Southern Pacific excluded mineral lands, it was intended that the character of the lands should be determined by the Interior Department before the issue of patents, and after a patent issued under the grant, it must be accepted, in a suit where the attack is collateral, as conclusively showing the nonmineral character of the land and the regularity of the proceedings.—People's Development Co. v. Southern Pacific, 277 Fed. 794.

Decisions Under Federal Employers' Liability Act

The Illinois Supreme Court holds that an employee engaged in interstate commerce work, killed in a collision while going from the yard to his home on a hand-car provided by the railroad and under the direction of a foreman, was within the act.—Ramsay v. B. & O. (Ill.), 133 N. E. 703.

A blacksmith, injured while carrying a drawbar belonging to an engine used in interstate traffic, was held within the act.—Gladewell v. Quincey, O. & K. C. (Mo. App.), 236 S. W. 677.

The Wisconsin Supreme Court holds that an employee sent from one town to another to make repairs on cars being used in interstate commerce, was engaged in interstate commerce when killed, on his way back, by a train engaged purely in interstate commerce.—Richter v. Chicago, M. & St. P. (Wis.), 186 N. W. 616.

The Iowa Supreme Court holds that a switchman of a terminal company moving an empty tank car having its origin out of the state to the track of the owner, was engaged in interstate commerce precluding recovery under the Workmen's Compensation Act.—O'Neill v. Sioux City Terminal (Iowa), 186 N. W. 633.

Foreign Railway News

Reserved Seats in British Coaches

LONDON.

Owing to the increasing popularity of the system of reserving seats on express trains, the Great Western Railway (England) is extending and improving this facility on the principal trains during the summer months, commencing in July. The registration of seats will be based on the system adopted by theatres, plans of the trains being provided at the railway stations concerned, showing intended travellers the exact position of every seat, and its number in the train, smoking compartments being indicated. The registration fee will be one shilling (about 25 cents at the normal rate of exchange). The tickets for first and third class seats will be distinguished by different colors and will show the date on which the passenger will travel and the time of the train. Arrangements are also being made for reserving seats by mail.

Forty Die in German Railway Accident

LONDON.

A serious railway accident occurred on June 27 on the Berlin Metropolitan Circle Line. The number of dead is 40 and injured 30. The accident is explained by the extraordinary traffic conditions which were created by the stoppage of work as a tribute to Dr. Rathenau, who was murdered, supposedly by monarchist sympathizers. At noon work in all factories and most shops ceased, but at the same time, tramcars and motor omnibuses were withdrawn from the streets and for thousands of people the metropolitan trains were the only means left of getting anywhere near their homes.

The accident occurred between the two stations of Gesundbrunnen and Schonhauser Alle. A coach door on the near side of one of the trains was left open, swinging outward. It seems that this door caught the projecting ends of a number of planks which a workman standing on the footboard of a car on a passing train was carrying in a bag on his back. Practically all the people who were on the footboards of the rear portions of both trains were brushed off.

Electrification at Bombay, India

Approximately 40,000,000 rupees (about $13,000,000) will be spent in the next five years in the electrification of railways around Bombay, according to Commerce Reports. The first of this work will be on the Harbor Branch of the Great Indian Peninsula Railway and bids on this will soon be asked. This line is about seven miles long, half of which is double-tracked. The Tata Hydroelectric Power Company will furnish the power from existing power houses and sub-stations. It is estimated that the electrification of the Harbor Branch will represent about one-thirteenth of the total program.

The second step on the program will be the electrification of the Great Indian Peninsula's double-tracked main line from Victoria terminus to Kurla. Bids for this will be called for in about six months. Other projects are for the electrification of the G. I. P. line from Kurla to Thana, 14 miles, and from Thanan to Kalyan. Kalyan is 34 miles from Bombay. Meantime the Bombay, Baroda & Central India proposes electrifying its double-tracked line from Colaba station to Virar, a distance of approximately 39 miles. It is understood that the government of India will advance the funds necessary for this work.

The English Engineering Trades Lock-out Settled

LONDON

The great engineering lock-out in Great Britain which has lasted for three months has at last been settled. The result of the ballot which was taken shows that 75,478 members were in favor of a settlement and 39,423 against, leaving a majority of 36,055 in favor of settlement.

From the outset the employers were unanimous in their decision not to give way on any matter of principle. They felt that the time had come when it must be decided once for all whether management of the works was to be in the hands of the owners or in those of

representatives of the employees. That was the real point at issue and a great many employers declared that sooner than give way they would close their businesses. However, although the men have obtained certain concessions, the principle that the management shall be vested in the employer has been maintained, and it only remains for the whole community, which has suffered severely from the effects of the struggle, to deplore the necessity for a fight of this character before a decision that was inevitable could be reached.

The end of this lock-out, however, does not mean that the unemployment in the metal trades will immediately cease. On the contrary there is reason to believe that the proportion of unemployed in the engineering unions will be large for some time to come.

K. C. M. & O. in Trouble in Mexico Too

It is authoritatively stated in advices from Monterey, Mexico, that unless immediate steps are taken by the Kansas City, Mexico & Orient to rehabilitate and connect up its broken stretches of track in that country the Government may take over the property under forfeiture of the company's concession. No public announcement has been made as to what status the Mexican lines of the Kansas City, Mexico & Orient occupies with regard to the possible abandonment of that part of the system which lies in the United States. It is explained, however, that from a financial standpoint, the Mexican divisions are in as bad shape as those across the Rio Grande. It was recently reported that the Southern Pacific of Mexico was negotiating for the purchase of the Kansas City, Mexico & Orient of Mexico, with the view of connecting up the different links in the system and thus forming a new route from the port of Topolobampo to Alpine, Texas, where connection would be made with the transcontinental line of the Southern Pacific. If this pending deal is not made, the government will probably take over the property and merge it with the National Railways of Mexico.

The route across Mexico as laid out for the Kansas City, Mexico & Orient is 633 miles from the Rio Grande crossing, three miles below Presidio, Texas, to Topolobampo. Of this mileage there is completed three stretches of track, operated as separate divisions, aggregating 227 miles, leaving gaps aggregating 406 miles yet to be built. The first division runs from Marquez, State of Chihuahua, to the city of Chihuahua, 91 miles. The second division runs from Minaca to Sanchez, 74 miles, and the third division from Fuerte to Topolobampo, 62 miles. The latter crosses the main line of the Southern Pacific of Mexico at San Blas.

The distance from Alpine to the proposed Rio Grande crossing is 83 miles, and from there to Marquez, 165 miles. For several years preceding the revolutionary period the Kansas City, Mexico & Orient operated its trains west from Chihuahua over the track of the Mexico & Northwestern to Minaca, thence over its own track to Sanchez. From Chihuahua to Minaca is 122 miles. The unfinished gap between Sanchez and Fuerte is 209 miles, and this part of the route is said to be through a mountainous region that offers great engineering and construction difficulties to the building of the proposed railroad.

It is pointed out that the rounding out of the Kansas City, Mexico & Orient in Mexico as originally planned would give an enormous scope of rich territory of this country a transportation outlet to the United States. The Conchos river valley in the State of Chihuahua, which the line already penetrates, is capable of being irrigated and made very productive, while the western part of that state has mineral resources almost unequalled anywhere in the world, it is asserted. The Pacific Coast region is being rapidly developed agriculturally and much of its products are finding a market in the Western part of the United States.

In the event of the National Railways of Mexico taking over the Kansas City, Mexico & Orient's division in that country, it is considered doubtful if the connecting up of the different stretches of track would be made for many years to come. It is the expressed opinion of men who are familiar with the situation that in their present positions of isolation these component parts of the Kansas City, Mexico & Orient cannot be made to pay profitable returns, but that by finishing the line all the way through from Alpine, Texas, to Topolobampo, it would obtain a heavy freight traffic.

Equipment and Supplies

Locomotives

The Sewell Valley has ordered one Mikado type locomotive from the Baldwin Locomotive Works.

The New York Central is having 50 locomotives overhauled at the shops of the Baldwin Locomotive Works.

The Illinois Central is inquiring for 15, 0-8-0 type switching locomotives, 25 Santa Fe type locomotives and 25 Mikado.

The International Harvester Company has ordered two 6-wheel switching locomotives from the Baldwin Locomotive Works.

The Western Meat Company, San Francisco, Cal., has ordered one 6-wheel switching locomotive from the American Locomotive Company.

The Erie has entered into a contract for the repair of 20 locomotives a month for a period of six months at the American Locomotive Company's Cooke Works.

The Baltimore & Ohio has ordered 35 Mikado type locomotives from the Baldwin Locomotive Works. This road is also having repairs made to 25 locomotives at the Baldwin shops.

The Delaware, Lackawanna & Western, reported in the *Railway Age* of July 1 as contemplating asking for bids on about 30 locomotives, is now asking for 5 Pacific type and 25 Mikado type locomotives.

The Pittsburg Plate Glass Company, Zanesville, Ohio, has ordered one, 0-4-0 type switching locomotive from the American Locomotive Company. This locomotive will have 13 by 20 in. cylinders and a total weight in working order of 65,000 lb.

The Central America of Cuba has ordered one Mogul type locomotive from the American Locomotive Company. This locomotive will have 17 by 24 in. cylinders and a total weight in working order of 111,000 lb.

The Delaware & Hudson has ordered one Consolidation type locomotive from the American Locomotive Company. This locomotive will have 23½ and 41 by 30 in. cylinders and a total weight in working order of 312,000 lb. and will be equipped with superheater.

Freight Cars

The Southern Pacific is inquiring for 250 general service cars.

The Pere Marquette is considering having repairs made to 1,000 box cars.

The Buffalo Creek & Gauley is inquiring for from 200 to 300 hopper cars

The Burdett Manufacturing Company, Chicago, is inquiring for one U. S. R. A. box car.

The Humble Oil & Refining Company is inquiring for three 12-yd. capacity air dump cars.

The Argentina State Railways have placed an order with the Standard Steel Car Company for 100 ballast cars.

The Pittsburgh & West Virginia and the West Side Belt are inquiring for 1,000 hopper cars.

The Northern Refrigerator Car Company has ordered 500 refrigerator cars from the Pullman Company.

The Chicago & North Western is preparing to issue inquiries for repairs to a large number of cars, the number and type yet to be determined.

The Chicago, Milwaukee & St. Paul is inquiring for repairs on from 1,000 to 1,500 box cars and 250 gondola cars.

The Chicago, Burlington & Quincy is preparing to issue inquiries for repairs to a large number of cars the number and type yet to be determined.

The San Antonio Uvalde & Gulf is inquiring for 25, 30-ton steel underframe ventilated box cars and 25, 30-ton steel underframe composite gondola cars.

The Chicago, Rock Island & Pacific is inquiring for repairs to 1,500 box cars, from 500 to 1,500 gondola cars, 500 refrigerator cars and 500 furniture and automobile cars.

The Central Vermont will have repairs made to 200 steel gondola cars, 100 wooden underframe box cars and 400 steel underframe box cars at the shops of the American Car & Foundry Company.

The Illinois Central, reported in the *Railway Age* of July 8 as inquiring for from 500 to 1,000 gondola cars, is now inquiring for 2,000 gondola cars and is asking prices on the repair of 600 gondola cars.

The Nashville, Chattanooga & St. Louis has increased its recent freight car inquiry from 750 to 1,000, the revised inquiry calling for 750 box cars, 150 stock cars of 40 tons' capacity and 100 flat cars of 50 tons' capacity.

The Delaware, Lackawanna & Western reported in the *Railway Age* of July 1 as inquiring for 380 gondola car bodies of 40 tons' capacity, has given an order for 370 car bodies to the American Car & Foundry Company.

The New York, New Haven & Hartford has given a contract to the Keith Car & Manufacturing Company, Sagamore, Mass., for rebuilding 6,000 bad-order freight cars. The company also has a large number of additional cars awaiting repairs.

The Nashville, Chattanooga & St. Louis, reported in the *Railway Age* of June 10 as inquiring for 500 box cars, 150 stock cars and 100 flat cars, has ordered 500, 40-ton single sheathed box cars, 250, 40-ton double sheathed box, 150, 40-ton stock and 100, 50-ton flat cars from the American Car & Foundry Co.

The Texas & Pacific will build 532 freight cars in its shops at Marshall, Tex., as soon as the shopmen's strike is settled. This is the first authorization of a total 1,100 cars which are to be built in these shops, the company already having the necessary material on hand for the construction of the initial lot.

Passenger Cars

The Tennessee Central is inquiring for from 2 to 5 coaches.

The New York Central is having seven dining cars built at its West Albany shops.

The Nashville, Chattanooga & St. Louis is reported to be considering the purchase of 17 passenger cars.

Machinery and Tools

The Long Island has ordered a 150-ton overhead traveling crane from the Whiting Corporation for its Morris Park shops. The company is inquiring also for the following tools: Vertical boring mill, car wheel borer, car axle lathe, vertical double slotter, upright bushing press and a wheel press.

Signaling

Pennsylvania.—See item in General News Department.

The Grand Trunk has placed an order with the General Railway Signal Company for 12 color light signals complete, 36 type K ½ transformers, 26 Model Five switch boxes and 10 light type switch indicators for installation between St. Henry, Que., and Lachine.

The Victorian Railways, Australia, have placed an order with the General Railway Signal Company for two Model 2 B unit lever electro-mechanical interlocking machines for installation at Camberwell, Victoria, and Hawthorn. Both machines will have 32 levers.

Supply Trade News

The offices of the **Air Reduction Sales Company**, formerly maintained at 120 Broadway and 160 Fifth avenue, New York, have been consolidated with the executive office at 342 Madison avenue.

The Clarence Cottman Company, which operates one of the large piers at Canton Terminal, Baltimore, Md., has given a contract to Heyl & Patterson, Inc., Pittsburgh, Pa., for an 11-ton man trolley ore bridge.

W. J. Gruss, who has been head of the pig iron sales department of Pickands, Mather & Company, Cleveland, Ohio, has resigned to become manager of sales of the **Gartland-Haswell-Rentschler** interests, with headquarters at Dayton, Ohio.

The **Greenville Steel Car Company**, Greenville, Pa., is erecting a new building 75 ft. by 390 ft. in which the company plans to install its present fabricating equipment. The company has heretofore only repaired and rebuilt steel equipment but will in the future also build new freight cars.

Jay L. Hench, who resigned recently as Chicago district sales manager of the Lackawanna Steel Company, has formed **Jay L. Hench & Company**, 208 South La Salle street, Chicago, to engage in the purchase and sale of various iron and steel products including steel sheet piling, light and heavy tee rails, sheets, plates, shapes and bars with an additional line of open-hearth electric castings. Mr. Hench was born on April 11, 1885, at Hinsdale, Ill. He attended Cornell University from 1903 to 1905, specializing in iron and steel analysis. From 1905 to 1906 he was employed in the open-hearth and Bessemer departments of the Illinois Steel Company, and from 1906 until 1911 he was connected with the sales department of Joseph T. Ryerson & Son. He left in 1911 to become a sales agent of the Lackawanna Steel Company, having jurisdiction over the Indiana and Michigan territory. In May, 1919, he was promoted to district sales manager in charge of the Chicago office, which position he held up to the time of his resignation.

J. L. Hench

The **Pilliod Company**, Swanton, Ohio, manufacturers of the Baker locomotive valve gear, with New York office at 30 Church street, has secured control of the Southern Valve Gear Company. The former offices of the Southern Valve Gear Company located at Knoxville, Tenn., have been discontinued.

H. D. Shute, vice-president and general sales manager of the Westinghouse Electric & Manufacturing Company, Pittsburgh, Pa., has been elected a member of the board of directors of the **Standard Underground Cable Company**, Pittsburgh. **A. B. Saurman**, general sales manager of the **Standard Underground Cable Company**, Pittsburgh, has been elected vice-president in addition to his other duties.

C. E. Knickerbocker, regional engineer, Eastern Region, United States Railroad Administration and formerly chief engineer of the New York, Ontario & Western, resigned effective July 1 and has formed a partnership with L. D. Rockwell, under the name of **Knickerbocker & Rockwell**,

with office at 2 Rector street, New York City. The new firm will handle railway supplies and specialties.

The Younglove Construction Company, United Bank building, Sioux City, Iowa, have been appointed representatives of the **Conveyors Corporation of America**, 326 West Madison street, Chicago, for the sale of American trolley carriers in northwestern Iowa and in South Dakota. The trolley carrier is equipment used for handling coal from cars to storage pile or overhead silos by means of monorail and self dumping buckets.

Sidney G. Johnson on July 1 resigned as assistant to the president of the Chicago Railway Signal & Supply Company. In the *Railway Age* of June 24, on page 1754, Mr. Johnson was by error mentioned as being connected with the Okonite Company instead of the Hazard Manufacturing Company, Wilkes-Barre, Pa., with which he has been connected since April, 1921. Mr. Johnson's headquarters are at 30 Church street, New York City.

Joseph H. Towle, who joined the selling forces of the **National Railway Appliance Company** of New York, some time ago, is now in charge of the company's new Pennsylvania headquarters at Harrisburg, Pa., where an office was recently opened at 85 Union Trust Building. Mr. Towle was formerly with the Railway Improvement Company, New York, as sales engineer. The National Railway Appliance Company is now selling a new product known as Tnemec paint. The principal use of this material is the protection and rust-proofing of metals and other materials.

Obituary

Harvey E. Miller, vice-president of the Fairbanks Company, New York City, died on July 9 of injuries he received in the Atchison, Topeka & Sante Fe collision at Burrton, Kan.

Trade Publications

CERTIFIED MALLEABLE IRON.—The daily service that is being rendered by one of the most important branches of the iron and steel business is outlined in a book, entitled "Certified Malleable in Transportation and Industry," just issued by the American Malleable Castings Association, Cleveland, Ohio. It tells in an interesting way the story of certified malleable castings and their contribution to safety, strength and economy.

The book points out the great responsibility that malleable castings assume when used for vital parts of railway and general industrial equipment and also describes the methods employed by the American Malleable Castings Association in bringing the product of its members to a uniformly high standard and maintaining it at that point. By standardizing the manufacturing process of an industry, scientists and practical foundrymen, operating through the American Malleable Castings Association, have produced certified malleable, a superior metal assuring high strength and ductility.

In the strict supervision of the product of its members, the work of the Association parallels the activities of the trade guilds of the middle ages whose chief reason for existence was the guardianship of the consumers' interests. They saw to it that their members conformed to adopted standards of material and craftsmanship, and their supervision was accepted by the careful buyer as a certain guaranty of quality. The book is a complete treatise on the subject of malleable iron and gives information regarding the properties of the metal that are of interest and value to all users.

"TAKE A CHANCE ON READING THIS, but never on a railroad crossing." This is the introduction to a circular addressed to "Our Friends the Automobilists," which has been issued by W. H. Gemmell, president of the Minnesota & International, for distribution in garages, hotels, commercial clubs and other places where it will be seen by the people addressed. "One hundred per cent of the terrible and distressing crossing accidents that happen," says the circular, "are caused by the drivers of cars and teams failing to exercise the ordinary care that is expected of prudent men and women in the interests of themselves and their families. Does this seem like a strong statement? Think it over. How can it be otherwise? * * *"

Railway Construction

ATLANTIC COAST LINE.—This company's shops at Montgomery, Ala., were recently destroyed by fire, but as yet no definite plans for rebuilding them have been made.

BALTIMORE & OHIO.—This company has placed contract with the Pittsburgh Construction Company, Pittsburgh, Penna., for the erection, concreting and waterproofing of a new railroad bridge crossing Spring Grove avenue, Cumminsville, Cincinnati, O. The new structure at this point is to be a solid floor bridge, consisting of four through plate girder spans, two 43 ft. in length and two 30 ft in length. The work has been undertaken for the purpose of replacing an old and light bridge, and constitutes a step in the modernization of the company's facilities in the Cincinnati district.

BALTIMORE & OHIO.—Contracts for bridgework recently placed by this company include the following: Bridge over Grand Calumet river, Gary, Ind.—Two plate girder spans, 78 ft. and 25 ft. in length, respectively, required for extension of opening provided by 14-ft, masonry arch. Contract for the fabrication of the steelwork has been placed with the American Bridge Co.; delivery is to be made September 1, and erection will be performed before the conclusion of the present working season. The installation of these spans has been found necessary, due to the increased volume of water in the Grand Calumet river, occasioned by drainage from the adjacent plant of the Illinois Steel Co. Similar work on the adjacent bridges of the New York Central and the Elgin, Joliet & Eastern is also involved, and is being prosecuted simultaneously: bridge crossing public road, south of Painsville, O.—The new structure at this point, consisting of two plate girder spans, with respective lengths of 63 ft. 6 in. and 33 ft., was fabricated by the American Bridge Co. Contracts for the erection has been let to the Kelly-Atkinson Construction Co., Chicago, Ill. The new bridge replaces an old masonry arch viaduct, constructed almost 70 years ago, which had been found inadequate for the company's needs and which provides a restricted opening for the passage of highway traffic: bridge crossing, Black river, Elyria, O.—This structure consists of two deck plate girder spans, each 47 ft. long, and two "I" beam spans, each about 20 ft. in length. The superstructure was fabricated by the American Bridge Co. Contract for the erection has been placed with the Kelly-Atkinson Construction Co.; overhead bridge west of Metchell, Ind.—This structure, which crosses the company's tracks on the line of the Lincoln highway, is to consist of three spans of plate girders, encased in concrete, center span 63 ft. long, two approach spans each 32 ft. long. The new bridge replaces a wooden structure, and the work is occasioned by the absorption of a county road into the Lincoln highway, increased volume of highway traffic and weight of vehicles. Contract for the construction of the new bridge complete has been placed with the American Bridge Co., and the work will be pushed to a prompt conclusion.

CANADIAN NATIONAL.—This company has awarded a contract for grading and culverts on a revision of the Grand Trunk Pacific main line, at the crossing of Sundance creek between Mile 60.71 and Mile 64.46, to David Fitzgerald, Carstairs, Alta.; also for grading and culverts on a proposed five-mile connection between the Canadian Northern Alberta and the Grand Trunk Pacific near Magnolia, Alta., to James Fitzgerald, Edmonton, Alta.; also for grading and culverts on a proposed connection at Camrose between the Bashaw division of the Grand Trunk Pacific and the Battle River subdivision of the Canadian National, to Fred Mannix, Calgary, Alta.; also for the construction of a pipe line approximately 16,200 ft. long at Kindersley, Sask., to C. U. McManus, Moose Jaw, Sask.

CANADIAN PACIFIC.—This company is calling for bids, up to 3 p. m. Monday, July 17, for the construction of a new pier between piers A and D at its Pacific terminals in Vancouver harbor. The pier will be 850 ft. long and 330 ft. wide, and is estimated to cost $2,000,000. It is to be completed by September 30, 1923. H. Rindal, district engineer, Vancouver, B. C., is in charge.

CHICAGO, BURLINGTON & QUINCY.—This company has completed surveys for and may undertake next year the construction

of a 17-mile cut-off authorized between Frederick, Ill., and Vermont, the work to involve heavy grade revision and probably to include four tunnels. This company is making surveys in contemplation of building a 45-mile extension northerly from Casper, Wyo., to the Salt Creek and Teapot oil fields.

CHICAGO, BURLINGTON & QUINCY.—This company has awarded a contract to the Great Lakes Construction Company, Chicago, for the construction of a power plant at Aurora, Ill. This company, reported in the *Railway Age* of July 1, page 45, as requesting bids for the construction of a new round house at Rock Island, Ill., has awarded the contract for this work to G. A. Johnson & Sons, Chicago. The company will also accept bids for the construction of one-story brick passenger stations at Fort Morgan, Colo., and Hardin, Mont., respectively.

CHICAGO & NORTH WESTERN.—This company will accept bids until July 16 for the construction of a one-story frame passenger station at Bassett, Neb.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—This company has been ordered by the Illinois Commerce Commission to construct a viaduct over its tracks and the track of the Lake Erie & Western at Bloomington, Ill.

EVANSVILLE, INDIANAPOLIS & TERRE HAUTE.—This company reported in the *Railway Age* of May 20, page 1197, as preparing to replace four steel bridges at various points on its line, has awarded the contract to the Walsh Construction Company, Davenport, Iowa, for the sub-structure work on three bridges, the fourth not requiring such work.

GREAT NORTHERN.—This company has been ordered by the Board of Railway Commissioners of Montana to extend its line from a point in or near Gilman to Augusta before September 15.

ILLINOIS CENTRAL.—This company is contemplating the improvement of its freight facilities at Indianapolis, Ind., the work to include the construction of a freight handling platform, the paving of the drive way and the laying of two tracks.

LOS ANGELES & SALT LAKE.—The Interstate Commerce Commission has issued a certificate authorizing the construction of a branch line from Delta to Fillmore, Utah, 31.4 miles, together with 3.6 miles of secondary track. The cost of the proposed line is estimated at $701,188.

MISSOURI, KANSAS & TEXAS.—This company has awarded a contract to Bowie, Lydon & Co., Inc., Chicago, for the construction of a freight terminal at Denison, Texas, to cost approximately $450,000.

MISSOURI, KANSAS & TEXAS.—This company is reported to have awarded a contract to the A. McKenzie Company for the construction of a two story brick and concrete freight house, 58 ft. by 400 ft. at Waco, Texas. It is also accepting bids for the construction of freight houses at Wichita Falls, Texas, and Fort Worth, respectively

NEW YORK CENTRAL.—This company is receiving bids until July 25 for covering a new metal superstructure for its bridge over Sherman street, Fort Wayne, Ind.

PENNSYLVANIA.—This company is receiving bids for the elevation of tracks from Everett street to south of White Horse Pike, Camden, N. J. Approximate quantities are as follows:—45,000 cu. yd. embankment; 590 cu. yd. concrete abutment masonry and concrete bridge floor, including reinforcement; 6,500 sq. ft. waterproofing; 2.4 miles track material unloaded, piled, distributed and laid; 4 turnouts and 1 crossover, etc. This company is also receiving bids for paving and track work along Front street, Chester, Pa., from Ridley river to Pennell street. Approximate quantities are as follows: 3,000 cu. yd. excavation; 0.76 mile track material unloaded, piled, distributed and laid; 2,000 cu. yd. unloading and surfacing stone ballast; 5 turnouts and 2 cross overs laid; 2,900 cu. yd. street grading; 3,750 lin. ft. concrete curb; 5,400 sq. yd. Belgian block paving on concrete base. The work will be in charge of C. W. Thorn, assistant engineer, Philadelphia, Pa.

UNION PACIFIC.—This company will accept bids until July 21 for the construction of a brick freight house at Denver, Colo. Its superstructure will be of steel, 610 ft. by 70 ft., including two platforms 16 ft. by 865 ft. and an automobile unloading shed, 50 ft. by 400 ft.

Railway Financial News

ATLANTIC COAST LINE.—*Authorized to Acquire Control.*—The Interstate Commerce Commission has authorized the acquisition by this company of control of the Rockingham Railroad by purchase of additional shares of its stock. The Rockingham Railroad operates 21 miles between Gibson, N. C., and Rockingham.

BIRMINGHAM & NORTHWESTERN.—*Purchased.*—This road has been purchased by the Gulf, Mobile & Northern, subject to the approval of the Interstate Commerce Commission. The Birmingham & Northwestern operates between Jackson, Tenn., and Dyersburg, 49 miles.

CHESAPEAKE & OHIO.—*Asks Authority to Acquire Trackage Rights.*—This company and the Norfolk & Western have applied to the Interstate Commerce Commission for approval of the acquisition by the Chesapeake & Ohio of trackage rights to operate over the line of the Norfolk & Western between Waverley and Valley Crossing, Ohio.

CHICAGO & NORTH WESTERN.—*Equipment Trust Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $5,250,000 of 5½ per cent certificates to be issued by the Farmers Loan & Trust Company at not less than 97½.

CHICAGO, MILWAUKEE & ST. PAUL.—*Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has authorized this company to assume liability in respect of $8,085,000 of equipment trust certificates to be sold at not less than 96¾.

CINCINNATI NORTHERN.—*Annual Report.*—The income account for the year ended December 31, 1921, follows:

	1921	1920
Miles operated	245	246
Operating revenues	$3,757,713	.....
Operating expenses	2,642,291	.....
Net from railway operations	1,115,422	.....
Railway tax accruals	274,948	.....
Railway operating income	840,448	.....
Net railway operating income	702,255	$475,243†
Total other income	8,224*	1,638
Gross income	694,031	476,882
Total deductions from gross income	131,543	121,665
Net income	562,488	355,217
Dividends declared (5 per cent in 1921; 3 per cent in 1920 charged to profit and loss)	150,000	.....
Surplus for year	412,488	355,217

†Includes compensation accrued for January and February, guaranty, March to August, and net railway operating income—corporate—September to December.
*Debit balance.

CUBA RAILROAD.—*Dividends.*—This company has declared two semi-annual dividends of $3 a share on the preferred stock, payable August 15, 1922, and February 15, 1923. Both disbursements are payable to stock of record July 20, 1922. The last previous payment was a $3 semi-annual disbursement on August 1, 1920.

DENVER & RIO GRANDE WESTERN.—*Receivership Is Asked.*—Receivership for this road has been requested by the New York Trust Company in an application filed July 7 in the Federal District Court of Denver, Colo. The petitioner alleges that there have been several defaults on the mortgage bonds which were first issued by the Denver & Rio Grande and later purchased by the succeeding company, the Denver & Rio Grande Western. Judge Foster Symes has set the hearing on the application for July 21.

ELGIN JOLIET & EASTERN.—*Annual Report.*—The income account for the year ended December 31, 1921, follows:

	1921	1920
Miles operated	457	457
Operating revenues	$19,334,942	$22,051,470
Operating expenses	13,613,040	16,249,936
Net from railway operations	5,721,902	5,801,534
Railway tax accruals	933,167	644,294
Railway operating income	4,788,736	5,157,241
Net railway operating income	3,370,340	3,106,832
Other income	1,470,297	220,033
Gross income	4,840,646	3,326,864
Rent of leased roads	3,008,088	1,358,981
Interest on funded debt (E. J. & E. Ry. Co.)	500,000	500,000
Total deductions from gross income	3,579,869	2,238,548
Net income	1,260,777	1,088,316

HOCKING VALLEY.—*To Exchange Bonds.*—The Guaranty Trust Company of New York announces that on and after July 10 the Hocking Valley Railway Company 6 per cent equipment gold notes, series 32 and 32A, in definitive form, with coupons due July 15, 1922, and subsequent attached, will be delivered in exchange for trust receipts now outstanding upon presentation of the latter at its trust department, 140 Broadway, New York City.

ILLINOIS CENTRAL.—*Authorized to Operate Line.*—The Interstate Commerce Commission has issued a certificate authorizing this company to operate in interstate commerce a line heretofore built and operated as an industrial spur track, from a point near Zeigler, Ill., for a distance of 4.83 miles and also to operate under trackage rights in connection with it 3,600 feet of track owned by a coal company.

LAKE ERIE & WESTERN.—*Annual Report.*—The income account for the year ended December 31, 1921, follows:

	1921	1920
Miles operated	719	738
Operating revenues	$9,061,494	.....
Operating expenses 66	8,137,734	.....
Net from railway operations	923,761	.....
Railway tax accruals	596,235	.....
Railway operating income	327,674	.....
Net railway operating income	197,252	$1,075,123*
Total other income	112,902	208,787
Gross income	310,154	1,283,910
Interest on funded debt	702,741	672,041
Total deductions from gross income	898,458	894,181
Balance for year	Def. 588,304	389,729

*Includes compensation accrued for January and February, guaranty, March to August and net railway operating income—corporate—September to December.

Applications Before I. C. C.—See New York, Chicago & St. Louis.

MEMPHIS, DALLAS & GULF.—*Sale Again Postponed.*—The sale of this road was again postponed on June 21, this being the third postponement.

MINARETS & WESTERN.—*Asks Authority to Issue Securities.*—This company has applied to the Railroad Commission of California for authority to issue $50,000 common stock and to sell $2,200,000 six per cent bonds at not less than 97. The road is being built primarily for the lumbering operations of Sugar Pine Lumber Company which recently established its mills in Fresno. The proceeds of the securities now asked to be issued are to reimburse the lumber company for advances and to provide funds for the completion of the road.

MISSOURI, KANSAS & TEXAS.—*Charter.*—The reorganized company filed incorporation papers in Missouri on July 6 with Secretary of State Charles U. Becker and was given a charter upon payment of an incorporation fee of $175,025.

MISSOURI PACIFIC.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Operating Characteristics of Missouri Pacific." See also excerpts from annual report on adjacent pages.

NEW YORK CENTRAL.—*Bonds Sold.*—J. P. Morgan & Co. and associates have sold $25,000,000 refunding and improvement mortgage 5 per cent bonds, series C, at 94½ to yield approximately 5.30 per cent.

The bonds, which have been authorized by the Interstate Commerce Commission, are dated October 1, 1921, and are due October 1, 2013. They are redeemable as a whole, but not in part, at 105 and accrued interest on, but not before, October 1, 1951, or any interest date thereafter, on three months' notice. The proceeds of the issue will be applied to the retirement of the $25,000,000 of 7 per cent collateral trust bonds of the company, which will be called for redemption on September 1, 1922, and these bonds, due September 1, 1930, will be accepted in payment at 105.

In a letter to the bankers, A. H. Smith, president of the New York Central, said that the company's net railway operating income for the first five months of 1922 was $20,190,353, compared with $11,775,742 for the corresponding period of last year, an increase of 60 per cent. He said also that the average interest rate on the entire corporate indebtedness of the New York Central, including the present issue and $480,161,000 of underlying bonds, is approximately 4 per cent.

Equipment Trust Authorized.—The Interstate Commerce Commission has authorized the New York Central Lines to assume obligation and liability in respect to $27,645,000 of equipment trust certificates to be issued by the Guaranty Trust Company and to be sold at not less than 95.495.

NEW YORK CENTRAL.—*Acquisition of Further Control Authorized.*—The Interstate Commerce Commission has authorized the acquisition of further control of the Cleveland, Cincinnati, Chicago & St. Louis by the New York Central by the purchase of additional stock. The New York Central now controls the Big Four through the ownership of $30,207,700 of its common stock out of a total of $47,028,700. This does not, however, constitute complete control since the consent of a majority of the preferred stock is required for the issuance by the Big Four of any evidence of funded debt or the making by it of any lease of railway property which may entail increased fixed charges. The New York Central, therefore, desires to acquire at least a majority of the preferred stock. A group of the owners of preferred stock objected to the plan, contending that the proposed price is inadequate.

NEW YORK, CHICAGO & ST. LOUIS.—*Asks Authority to Acquire Control.*—This company and the Lake Erie & Western have filed a joint application with the Interstate Commerce Commission for an order approving an agreement made between the two roads effective July 1 providing for the operation, management and control of the Lake Erie & Western by the New York, Chicago & St. Louis as a single system. The application is filed under Paragraphs 1 and 2 of Section 5 of the Interstate Commerce Act, but it asks that the commission consider that it is also filed under other parts of the act if the commission considers necessary, and if the commission cannot give its complete approval of the agreement it is asked to state the extent to which it will give approval.

Contract for Exchange of Materials.—See article on another page entitled "Contract for Exchange of Materials Held Not to Constitute Control."

NEW YORK, NEW HAVEN & HARTFORD.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $5,900,000 of first and refunding mortgage bonds to be pledged with the Secretary of the Treasury as part security for a loan from the United States.

ROCKINGHAM RAILROAD.—*Acquisition of Control.*—See Atlantic Coast Line.

SILVERTON.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has authorized the abandonment as to interstate and foreign commerce of this company's narrow gage railroad from Silverton to Joker Tunnel, Colo., 15.5 miles.

SOUTHERN PACIFIC.—*Asks Authority to Acquire Line.*—This company has applied to the Interstate Commerce Commission for authority to acquire the Chowchilla Pacific, 10 miles, in Madera County, Calif.

WESTERN MARYLAND.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Western Maryland Increases Net with Less Traffic."

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to or received from the several roads the following amounts:

San Antonio & Aransas Pass	$1,000,000.00
Gulf & Ship Island	575,000.00
Vicksburg, Shreveport & Pacific	250,000.00
Chicago, Peoria & St. Louis	1.00
Calumet Western paid Director-General	7,377.87

Dividends Declared

Central of Georgia.—Common, 2½ per cent; preferred, 3 per cent; both payable June 30.

Nashville, Chattanooga & St. Louis.—3½ per cent, semi-annually, payable August 1 to holders of record July 22.

Trend of Railway Stock and Bonds Prices

	July 11	Last Week	Last Year
Average price of 20 representative railway stocks	67.25	65.41	55.31
Average price of 20 representative railway bonds	87.02	86.41	73.96

Annual Report

Fifth Annual Report of Missouri Pacific Railroad Company

TO THE STOCKHOLDERS: St. Louis, Mo., April 15, 1922.

The Board of Directors herewith submits report of the operations and affairs of the Company as of December 31, 1921.

CORPORATE INCOME STATEMENT

FOR THE YEAR ENDED DECEMBER 31, 1921, COMPARED WITH THE PREVIOUS YEAR

	1921	1920	INCREASE OR DECREASE
Railway operating revenues	$109,785,949.76	$98,194,270.81	$11,591,678.95

Balance—Net income transferred to profit and loss,	$ 3,537,016.09	$ 3,033,075.17	$ 503,940.92

FEDERAL CONTROL

The Board of Directors at a meeting held on July 15, 1921, approved the settlement negotiated with the Director General of Railroads, covering the use of the properties of the Company during the Federal Control Period, January 1, 1918 to February 29, 1920.

Under the terms of settlement the Company received $13,927,787.35 consisting of a cash payment of $9,000,000.00 and the cancellation of all open accounts, the balance $4,927,787.35 was in favor of the Director General.

The settlement was an arbitrary one and no detailed information is available as to the allowances made by the Director General for Additional Compensation, Depreciation, Under-Maintenance and other items included in the claims presented by the Company.

The total amount credited by the Government was $43,959,387.35, of which $30,031,600.00 constituted Compensation for use of the property and the balance $13,927,787.35, the cash payment and cancellation of open accounts and all claims. The latter amount has been credited to Profit and Loss in compliance with Order of the Interstate Commerce Commission dated January 25, 1922.

GENERAL BALANCE SHEET

ASSETS.	December 31, 1921	December 31, 1920	Increase or Decrease

Funded Debt Unpledged .	$5,501,000.00	$3,501,500.00	$2,000,000.00
Funded Debt Pledged . . .	$7,031,500.00	$9,031,500.00	—$2,000,000.00
TOTAL	$12,533,000.00	$12,533,000.00	

The Capital Liabilities shown above include the securities issued under the Reorganization Plan for bonds of various issues dealt with by the Plan, including $1,687,500.00 principal amount, not acquired on December 31, 1921, which are accordingly not shown as Liabilities.

The company is guarantor jointly with other companies of the securities of certain terminal companies none of which are in default.

GUARANTY PERIOD

Under the terms of Section 209 of the Transportation Act of 1920, guaranteeing one-half of the annual compensation of the Test Period for the six months, March 1 to August 31, 1920, $12,583,[illegible]00 has been advanced by the Government. Final settlement is expected during the present year of claim prepared under the formula prescribed in the Order of the Interstate Commerce Commission dated December 15, 1921.

OPERATIONS

(Compared with previous year)

The Total Railway Operating Revenues for the year were $109,745,072 51, a decrease of $8,976,355.92 or 7.56%.

This decrease is attributable to the general depression in business.

The Total Operating Expenses were $92,042,456 [illegible], a decrease of $21,277,483.75 or 18.78%, largely due to reduction in force, reduction in cost of materials and economies effected in both Maintenance and Operation. The average number of employes in service was 33,462, a reduction of 7,722 or 18.75%.

Net Revenue from Railway Operations was $17,702,616.39, an increase of $12,301,127.83.

The total number of tons of revenue freight handled decreased 6,914,855 tons or 20.36%, while the revenue ton miles decreased 20.05%.

The average revenue per ton mile was $0.01270, as compared with $0.01076.

The number of revenue passengers shows a decrease of 27.98%, while the number of passenger miles decreased 25.29%, with an increase of 1.81 miles in the average haul per passenger.

The average revenue per passenger mile was $0.0344, as compared with $0.0294.

FEDERAL VALUATION

The federal valuation of the properties of your Company is to be made as of June 30, 1918. The Bureau of Valuation of the Interstate Commerce Commission has completed the inventory of the physical property of the Company and is now engaged in compiling and pricing same; it is expected that the tentative report will be completed and referred to us for review, before the close of the present year. The valuation department of your Company has worked in close co-operation with the Interstate Commerce Commission forces in completing the inventory and has done a large amount of work in anticipation of the receipt of the completed report in order that a prompt review may be made, as but thirty days are allowed for filing exceptions.

PENSION SYSTEM

The Employes' Pension System has been in effect since July 1, 1917. During the operation of this system, 242 employes have been carried on the pension rolls; the number on the rolls at the present being 189, with an average monthly allowance of $56.15 involving a monthly contribution of $10,617.50.

CAPITAL STOCK

No changes have been made in the Capital Stock during the year.

FUNDED DEBT

Funded Debt outstanding in the hands of the public decreased $304,900.

During the year the Long Term Debt was increased by notes to the United States Government payable proportionately, January 15, 1922 to 1936, inclusive, amounting to $1,200,000 and Equipment Trust Certificates, Series A, to the amount of $1,836,000, a total of $3,036,000 to cover the cost of fifty (50) locomotives. Equipment Gold Notes, Series 41, in an additional amount of $181,500 were issued to complete the balance due on the equipment allocated in 1920 to the Company by the Director General of Railroads.

Note in favor of the United States Government maturing March 1, 1930 for $3,000,000 was issued to cover a loan made by the Director General of Railroads on account of Additions and Betterments completed during the period of Federal Control, the Company having paid the Government in full for all such Additions and Betterments in the final settlement heretofore referred to.

Equipment Trust Certificates aggregating $2,135,400 were paid and General Consolidated Railway and Land Grant Mortgage bonds to the principal amount of $25,000 were purchased and retired during the year. Note representing a loan from the United States Government of $4,362,000 matured November 1, 1921 and was paid.

First and Refunding Mortgage Bonds, Series D, to the principal amount of $5,600,000 were pledged with the Government as security for the Notes above mentioned issued during the year and $9,416,000 of the amount of the same issue of bonds were returned to the Company's Treasury by the retirement of notes heretofore issued to the Government. This resulted in increasing the amount of unpledged bonds of this Series in the Company's Treasury $3,816,000 of which $1,816,000 principal amount are carried as "Investment in Securities Issued, Assumed or Otherwise Carried as a Liability by the Accounting Company," and $2,000,000 principal amount nominally issued.

LOANS AND BILLS PAYABLE

Notes of the company in favor of the Government aggregating $3,901,225 were returned and cancelled reducing this account to $70,000, which is represented by a demand note covering surplus funds of the Missouri Pacific Hospital Association.

NEW LINES

There were no new lines constructed during the year, and only changes of minor importance occurred in the operated mileage.

ROAD AND EQUIPMENT

The following new equipment has been received and taken into the accounts during the year:

25 Mikado Type Locomotives,
5 Mountain Type Locomotives,
5 Pacific Type Locomotives,
15 Switch Locomotives,
10 Steel Passenger Coaches.

The details of charges to Road and Equipment are summarized as follows:

Road,		$4,366,243.84
Equipment,	$5,378,679.35	
Less Equipment Retired,	913,391.95	4,465,287.40
General Expenditures,		1,279.91
Assets and Liabilities not appraised June 1, 1917		52,348.58
Total Charges to Road and Equipment,		$8,885,159.73

In the following pages the Corporate and Federal Accounts have been consolidated to afford ready comparison of results of the year covered by the report and with the previous year.

By Order of the Board of Directors,
B. F. BUSH,
President.

Railway Officers

Executive

Ross S. Marshall, whose appointment as assistant to the president on the Chesapeake & Ohio and Hocking Valley with headquarters at Richmond, Va., was announced in the *Railway Age* of June 24, page 1761, was born at Rock Island, Ill., on March 15, 1880. He attended high school at Anaconda, Mont., and, in 1897, entered railway service as a clerk. From 1902 until 1915 he served as division accountant and chief clerk to division engineer of the Chicago, Rock Island & Pacific. He then went to Panama where he served as chief clerk to the general superintendent and as local auditor of the Panama Railroad. Returning to the United States two years later he became a statistician to the general superintendent, the general manager and vice-president in charge of operation of the New York, New Haven & Hartford. From 1911 to 1914 he served consecutively as assistant to the vice-president in charge of operation and as division superintendent of the Minneapolis & St. Louis. In 1914 he went with the Seaboard Air Line as superintendent with headquarters at Richmond, Va. He subsequently served this company as assistant general manager and as general superintendent. In 1918 he went with the United States Railroad Administration as statistician in the division of law, where he served until his appointment as assistant to the president of the Chesapeake & Ohio.

W. M. Duncan, president of the Wheeling & Lake Erie, whose election as chairman of the board of directors was announced in the *Railway Age* of July 8, page 91, was born at Pittsburgh, Pa., on May 19, 1873. He was admitted to the bar soon after his graduation from the school of law of Cornell University in 1894, and entered railway service in the same year as an attorney for the Cleveland, Akron & Canton. He served in this capacity until 1897 when he joined the law department of the Wheeling & Lake Erie where he remained until 1905, following which he served as general attorney of the Wabash-Pittsburgh Terminal Railway, the West Side Belt and the Wheeling & Lake Erie. He became general attorney for the receiver of the Wheeling & Lake Erie in 1908, which position he held until June 20, 1912, when he was appointed receiver of this road. At the close of the receivership on Jan. 1, 1917, Mr. Duncan was elected president of the reorganized company and has continued in this capacity until his recent election as chairman of the board.

W. M. Duncan

Financial, Legal and Accounting

L. B. Williams, treasurer of the New York, Chicago & St. Louis, with headquarters at Cleveland, O., has been appointed general treasurer of that road and of the Lake Erie & Western with the same headquarters.

Operating

H. J. Humphrey has been appointed assistant general superintendent of the Ontario district of the Canadian Pacific with headquarters at Toronto. **H. J. Main** has been ap-

pointed superintendent of the Trenton division with headquarters at Toronto.

F. N. Reynolds, superintendent of the Indianapolis terminal of the Cleveland, Cincinnati, Chicago & St. Louis, has had his jurisdiction extended to include the Springfield division from Springfield, Ohio, to Indianapolis, Ind., with title of superintendent Springfield division and Indianapolis terminal.

D. Coughlin, general superintendent of the first district of the Chicago, Rock Island & Pacific with headquarters at Des Moines, Iowa, has been appointed acting manager of the district with the same headquarters, to succeed C. W. Jones granted leave of absence due to ill health. **A. T. Abbott**, division superintendent with headquarters at Des Moines, has been appointed acting general superintendent, to succeed Mr. Coughlin and he will be succeeded by **C. T. Ames**, train master at Des Moines who has been appointed acting superintendent. Mr. Ames will be succeeded by **F. A. Bogue**, trainmaster of the Chicago Terminal division, who has been appointed acting trainmaster, with headquarters at Des Moines.

R. E. Brooks, assistant superintendent of the Oregon Short Line, who has been promoted to superintendent of the Montana division effective June 25, was born at Bismark, Mo., February 5, 1885, and entered railway service in 1900 as a messenger with the Louisville & Nashville. He was employed by this road as messenger, telegraph operator, train dispatcher and chief dispatcher until April, 1910, when he entered the service of the Atchison, Topeka & Santa Fe as train dispatcher. He was employed as a dispatcher by the Denver & Rio Grande from September to December, 1911, and by the Union Pacific from December 15, 1911, to April 1, 1917. On June 15, 1917, he entered the service of the Oregon Short Line as dispatcher, later serving as chief dispatcher and assistant superintendent until the date of his recent promotion.

W. M. Neal, whose appointment as general superintendent of the Algoma district of the Canadian Pacific with headquarters at North Bay, Ont., was announced in the *Railway Age* of July 8, page 91, was born in June, 1886. On January 25, 1902, he entered the employ of the Canadian Pacific as a clerk for the Canadian Pacific in Toronto. In May, 1903, he became a stenographer and clerk in the general superintendent's office at Toronto. The following year he was transferred in a similar capacity to the office of the superintendent of transportation at Winnipeg. In January, 1908, he became chief clerk to the superintendent at Souris, Man. Two months later he became clerk to the general superintendent at Winnipeg. In June, 1910, he was promoted chief clerk of car service at Winnipeg and in May, 1915, was transferred in a similar capacity to Montreal. In January of the following year he was appointed car service agent of the Eastern division at Montreal. In April, 1916, he became acting superintendent of car service and, two months later, assistant superintendent of District No. 2, with headquarters at Montreal. The following month he again became acting superintendent of car service, and, a few days later, assistant superintendent of car service. In November of the same year he again became acting superintendent of car service and remained in that capacity until October, 1917, when he entered the service of the Canadian Railway Association for National Defense. In February, 1920, he was promoted to assistant general superintendent, which position he held on the Ontario district until his recent promotion.

Traffic

L. D. Knowles has been appointed traffic manager of the Union Refrigerator Company, Milwaukee, Wis.

C. B. Stovall, has been appointed district freight agent of the Lake Erie & Western, with headquarters at Memphis, Tenn.

G. W. Humphrey has been appointed assistant general freight agent of the Bangor & Aroostook with headquarters at Bangor, Maine.

A. E. Dove has been appointed general agent of the passenger department of the Chicago, Rock Island & Pacific with headquarters at Minneapolis, to succeed W. L. Hathaway, deceased.

H. E. Shepard has been appointed commercial agent of the Atlantic Coast Line with headquarters at Jacksonville, Fla., effective July 10.

R. G. Hyatt, formerly traffic manager of the Waco (Texas) Chamber of Commerce, has been appointed manager of the Texas Freight Traffic Association.

H. L. Pigott, traveling passenger agent of the Wabash with headquarters at Kansas City, Mo., has been promoted to division passenger agent, with headquarters at Ft. Wayne, Ind., succeeding G. D. Maxfield, deceased.

J. L. Bennett, travelling freight agent of the Chicago, Rock Island & Pacific with headquarters at Minneapolis, Minn., has been appointed commercial agent with the same headquarters, succeeding C. H. Bacon, retired.

Stuart C. Leake has been appointed general agent of the Richmond, Fredericksburg & Potomac, **William E. Phaup**, commercial agent, and **Edward W. Weeks**, commercial agent, all with headquarters at Richmond, Va.

Mechanical

J. E. Osmer has been appointed superintendent of motive power of the Denver & Salt Lake with headquarters at Denver, Colo.

Engineering, Maintenance of Way and Signaling

W. P. Wiltsee has been appointed principal assistant engineer of the Norfolk & Western with headquarters at Roanoke, Va., effective July 1.

Obituary

W. H. Biggar, vice-president and general counsel of the Grand Trunk, died suddenly at Toronto on July 7.

David Meriwether, Jr., regional engineer of the United States Railroad Administration at Washington, D. C., and formerly assistant chief engineer of the Southern Railway, died at Washington on June 21. He had been connected with the Southern since 1901 and became regional engineer for the Railroad Administration in March 1, 1920.

J. H. Manter, assistant freight traffic manager of the Atchison, Topeka & Santa Fe, died at Chicago on July 5 after a long illness. Mr. Manter was born at Murphysboro, Ill., on May 14, 1865, and entered railway service as a telegraph operator on the St. Louis, Iron Mountain & Southern in 1883, which position he held until 1885 when he left to become a telegraph operator on the Minneapolis & St. Louis. He later became a clerk in the general freight office of the same road and in 1886 he entered the service of the Minnesota & North Western as a chief clerk to the general agent at Minneapolis. From April, 1887, until August of that year he was a train dispatcher of the same road at St. Paul, Minn., and in August, 1887, he was transferred to Chicago as chief clerk to the general agent. From April, 1889, to September, 1890, he was chief clerk for the general agent of the Atchison, Topeka & Santa Fe at Chicago and from September, 1890, to February, 1891, he was contracting freight agent with the same headquarters. In February, 1891, he was promoted to commercial agent with headquarters at Peoria, Ill., which position he held until October, 1895, when he was transferred to Kansas City, Mo. On January 1, 1897, he was promoted to general agent with headquarters at Chicago, and he held this position until March 1, 1903, when he was promoted to assistant general freight agent with the same headquarters. On March 1, 1920, he was promoted to assistant freight traffic manager, which position he was holding at the time of his death.

FORCE OF HABIT—(From a recent train bulletin). "Nos. 10 and 1 on time; cause unknown."

A Logical Step In Locomotive Development

The plain saturated locomotives with narrow fireboxes built before 1900 all had one outstanding limitation, the lack of boiler capacity at speeds above about 20 miles an hour. The first step taken to remedy this condition was the application of a wide firebox and a trailing wheel on passenger locomotives. As the size of motive power increased it became necessary to place the firebox behind the drivers on freight engines as well, adhesive weight being sacrificed to get greater steaming capacity. Most of the important developments since that time have tended to improve locomotive performance at the higher speeds. Typical modern designs for both passenger and freight service have considerable excess boiler capacity at low speeds and a relatively large proportion of weight on leading and trailing trucks. Where the locomotive of twenty years ago had relatively high starting tractive effort and was deficient in steaming capacity the modern locomotive often has inadequate adhesion for starting and considerable excess boiler capacity at low speeds. The desirability of a better balance between the starting tractive force and the power at running speeds is shown by the numerous efforts now being made to utilize the locomotive and tender trucks to secure additional power. Three different designs have been brought out of which two have already received thorough tests. There is no longer any room for doubt as to the practicability of locomotive boosters mechanically or their advantages from the operating standpoint. They represent the logical increase of machine power to utilize the increased boiler power already secured and will no doubt assume an important place in future locomotive design.

Pennsylvania's Lease of Panhandle

The Interstate Commerce Commission in a decision dated July 10 has approved the lease by the Pennsylvania Railroad of the Pittsburgh, Cincinnati, Chicago & St. Louis. It has made its approval conditional by adding a proviso that the Pennsylvania Company and the Pennsylvania Railroad Company shall not dispose of their stock in the Panhandle without the commission's consent. All of the stock of the Pennsylvania Company is owned by the Pennsylvania Railroad Company. The Pennsylvania Company and the Pennsylvania Railroad together own 98.3 per cent of the total shares outstanding. The proviso resulted in a number of dissenting opinions, these being expressed by Commissioners Hall, Daniels and Campbell. Commissioners Eastman and Aitchison dissented for other reasons. Commissioner Potter in a concurring opinion giving the views also of Commissioners Lewis and Cox expressed his disapproval of the proviso. It has not yet been announced whether the Pennsylvania management will go forward with its plans or not. The proviso is an apparent handicap to future financing on the part of the Pennsylvania insofar as concerns the Panhandle stock. Commisioner Potter says that "The condition is inherently unwise and unreasonable." A most important feature of the decision, however, reverts back to one of the main reasons for the desire to lease the Panhandle property. This was to save accounting costs and to get around the necessity of figuring out divisions of rates and classifying charges and costs of operation as between the Panhandle and the parent company. The savings in costs would be great and very much in line with the country's desire for decreased railway costs. It is disappointing that the Commission should feel it desirable to put obstacles in the way of such progress and particularly disappointing because of the unusual nature of the obstacle itself. We shall probably hear more of this decision.

Strikes and Fast Freights

Press dispatches from Fresno, Calif., are to the effect that $200,000,000 worth of fruit may be endangered by lack of freight transportation. This figure may be exaggerated. It may, indeed, be strike propaganda. Whatever it is, it emphasizes the importance that fast freight service bears to the welfare of the nation from the standpoint of keeping consumers distant from the producing centers supplied with foodstuffs of one sort and another. Fast freight service in this country is also one of the best indexes of efficient railroad service, the degree of efficiency being indicated by the fast freight schedules and the manner in which trains are kept on schedule. It is, therefore, at the present time an index, in addition, to the manner in which the various railroads are being affected by the shopmen's strike. If anything, it is a better index than the passenger service for the simple reason that special efforts are usually directed towards keeping passenger trains running normally and other things in comparison are secondary. With these ideas in mind it is interesting to learn from shippers that a number of roads, among them notably the Lackawanna, the Lehigh Valley, the Illinois Central, the Nickel Plate, the New Haven, and to a lesser extent, the New York Central and Pennsylvania are keeping their schedule freights on time, thereby showing that they apparently have the strike situation well in hand. The idea might be carried further. It is axiomatic that strikes are won or lost through the force of public opinion. It is an interesting psychology whereby the striking shopmen try to prove their case to the public by desiring first to tie up or delay passenger service which inconveniences the public itself and second to tie up the freight service—notably the fast freight service—which endangers the public's food supply. Various able students have recently been making a careful study of public opinion—its cause and effect. They will be very likely to find much material in the present railway strike.

The Trend in Building Design

One of the most attractive fields for the display of engineering ability in railway service and one which has only recently come to be recognized to any extent lies in the design of buildings for their most effective occupancy. The time has not long passed since the average engineer confined his attention to the design of the foundations, walls, roof and floor to carry the loads imposed on them safely and to the selection

of the materials of construction on consideration of maximum economy in first cost and maintenance. The more modern idea of building design contemplates all of this and more. It is coming to be considered that a building is well designed only when it complies with the principles of engineering as applied to both the construction and the operating needs of the department which will use it. This implies a thorough study of the methods of the using department and the visualization of these methods as they will be applied in the new structure. Only by such an investigation prior to the design of the structure can arrangements be made for the installation of the facilities required by the using department. The engine terminal which the New York Central is now completing near Syracuse, N. Y., and which is described on a following page, is an illustration of the care with which such buildings are being designed. It is evident that the spending of a relatively small amount for additional engineering services in the design of such a structure will yield large returns in decreased costs of operation by the department which will occupy it. It is from refinements such as are, for instance, noted here in the design of the enginehouse, the coaling station and the somewhat unusual type of ash pit, that many of the economies of railway operation must come in the future. Engineering department officers can contribute in no more effective way to the success of their companies than by utilizing every opportunity to familiarize themselves with the needs of the other departments which they serve and then so designing their structures that they may meet these needs to the largest possible extent.

Effects of Wheel Arrangement

"Electric Locomotives" is the title of a paper presented recently to the Institution of Mechanical Engineers by Sir Vincent L. Raven, chief mechanical engineer, Northeastern Railway, England. The paper describes the characteristics of many existing electric locomotives and outlines the requirements of electric locomotives for various classes of service. The comments made by Sir Vincent on the effect of wheel arrangement are of particular interest. There is a well-founded opinion in America that a symmetrical wheel arrangement is undesirable for high speed service as it may be the cause of excessive lateral oscillations or "nosing." Sir Vincent mentions this and then points out the fact that there are a number of locomotives with symmetrical wheel arrangements used successfully up to speeds of 75 miles an hour both on British and Continental railways. As an explanation for this difference he suggests that a possible cause of the trouble experienced in the United States and from which European railroads seem to be free is that on practically all railroads in the United States the rail joints are staggered, whereas on the British and also on French railroads the rail joints are opposite each other. Quite possibly staggered joints do contribute to the necessity for using unsymmetrical wheel arrangements and it is a point which may profitably be determined. In any event the paper by Sir Vincent provides an example of how the knowledge of a subject may be broadened by interchange of ideas and information. There is a more or less prevalent opinion in this country that the United States has nothing to learn about electric railroads in Europe because conditions in the two countries are so different. Fuel costs in Europe are generally high, train weights are comparatively light and the length of haul short. The point brought out by Sir Vincent, however, indicates what can be accomplished and how much has been done by the International Railway Congress, by exchanges of European engineers here and American engineers abroad and the exchange of information by letter and periodical.

Equipment Orders in June

THE LOCOMOTIVE orders reported in the issues of the *Railway Age* in June totaled 27: for freight cars, 11,097, and for passenger cars, 37. These totals include only the orders for equipment for domestic service. They are the orders reported in the issues of the *Railway Age* of June 3, 10, 17 and 24, but they do not include the cars or locomotives reported in the *Railway Age* of July 1. The June totals would be somewhat disappointing were it not for the fact that whereas normally there is seasonal decline at this time of the year, this year the buying movement has been continued into July in rather favorable manner. Totals for the first three weeks of July show 111 locomotives, 9,475 freight cars and 11 passenger cars. The totals for the month, for the half year and for July to date are shown in the following table:

DOMESTIC ORDERS

Month	Locomotives	Freight cars	Passenger cars
January	5	7,960	235
February	8	14,721	160
March	76	5,550	25
April	272	30,507	540
May	99	18,337	235
June	22	11,097	37
Total six months	482	88,172	1,232

July—first three weeks: Locomotives, 111; freight cars, 9,475; passenger cars, 11.

Presumably the most interesting feature of this table is that while the car and locomotive buying this year has not been exactly spectacular or record-breaking, it has gone on during a period when there was a car surplus and when there were large numbers of bad order cars and unserviceable locomotives. The buying movement has continued during a severe coal strike and seems to have suffered little, if any, retardation from the effect of the shopmen's strike. In fact, if anything, the latter strike has helped the builders because it has resulted in additional orders for contract repair work. The coal strike has hurt railway revenues but its continuance for a period of 3½ months is rather an argument in favor of equipment purchases because when the coal finally does begin to move the demands upon equipment supply will unquestionably prove severe particularly in view of the increase in the tonnage of other commodities which has characterized recent months.

The car and locomotive market has been greatly assisted by lower prices. Steel underframe box cars have been secured in recent months at prices approximating $1,500 or $1,600, steel hopper and gondola cars at from $1,000 to $1,800, the price varying, of course, with the size and design. Refrigerator cars cost at present about $2,700. Typical locomotive prices are $40,000 for a Pacific and from $37,000 to $42,000 for a Mikado. Six-wheel switchers have been bought at about $30,000 to $33,000. Passenger coaches have been secured at about $20,000. These prices represent marked decreases from the high prices which ruled in 1920 and are apparently proving a real attraction in so far as concerns bringing out orders. Considering the situation as a whole, other than the fact that we should normally expect a decline in business in the summer months, there is nothing at present in sight to lead one to believe that the equipment business will do else than continue in good volume.

The important orders in June included orders placed by the Baltimore & Ohio for 1,000 gondola cars and 1,000 box car bodies; Seaboard Air Line, 1,000 cars; New York, Chicago & St Louis, 1,000 automobiles; Wabash, 2,050 gondola car bodies; Atlantic Coast Line, 700 box, 30 passenger train cars, etc. Orders thus far in July have included among the important orders: Baltimore & Ohio, 35 Mikado locomotives; Chicago & Eastern Illinois, 10 Mikado and 6 Pacific type locomotives; Southern, 15 Mikado, and New York, Chicago & St Louis, 14 locomotives. Freight car orders have included 1,000 automobiles, 250 stock and 250 gondola cars ordered

by the Northern Pacific, 2,000 refrigerator cars placed by the Western Pacific, 2,000 hopper cars ordered by the Norfolk & Western, etc.

English at the International Railway Congress

COMMENTS published in the *Railway Age* for May 20 on the difficulties met by English-speaking delegates to the Congress of the International Railway Association at Rome last April in following and participating in the discussions have called forth a letter from V. Tondelier, president, and J. Verdeyen, general secretary of the Association, which is published elsewhere in this issue. Messrs. Tondelier and Verdeyen evidently think that what was said in the *Railway Age* may cause misunderstanding. The article in the *Railway Age* specifically stated that "French is the official language of the Association; and courtesy required that the language of the country in which the Congress was held should also be used." It added, however, "but certainly all the English-speaking delegates felt that English should have been used more, in view of the fact that more of the world's railway mileage is operated and more of its traffic is handled in countries using English than in countries using any other language."

Messrs. Tondelier and Verdeyen point out that all the reports were published in English translations and that resumés of all reports also were published in English. This is, of course, correct, and it might be added that the summaries of the reports published in English in Volume 4, Number 4, of the bulletin of the Association constituted discussions of a large number of technical railway problems which could be studied with profit by every man who desires to acquire a broad knowledge of the present practice, and the progress in practice, of the world's railways.

The comments made in the *Railway Age* pertained solely to the difficulties met by the English-speaking delegates in following and participating in the proceedings and discussions at the sessions of the Congress in Rome. Messrs. Tondelier and Verdeyen refer to the fact that all the speeches and communications made in each section were immediately rendered briefly in English and published in the English edition of the Daily Journal. Frankness requires us to say, however, that the summaries of the discussions published in English in the Daily Journal were so brief and fragmentary that they were not as helpful as they might have been made, and that in many cases interpreters who were employed to state in English what delegates had said in French, Italian and other languages, spoke English which it was difficult for the English-speaking delegates to follow.

The *Railway Age* does not desire to injure the International Railway Association, but to help make it a stronger and more useful organization. We realize that the language problem presented is a very difficult one. If, however, the problem is to be solved, it must be clearly stated and boldly attacked. The fact is, the United States is so far from France and the rest of Europe that extremely few Americans, including railway officers, speak or understand French or any other European language except English; and it had just as well be recognized that this will always be the case. The same thing is true of all other English-speaking countries, although not to the same extent of England because England is separated from the continent of Europe only by a very narrow body of water. It is further true that at the recent sessions of the Congress in Rome most of the English speaking persons attending could not understand a word of what was said in discussions often lasting for hours at a time, in addition to which, as we have said, the reports of the discussions published in English were very fragmentary and inadequate. To say that French is the official language of the Association largely explains the situation, but it does not in the least tend to remedy it. The only remedy is for English to be used more.

Why should not the Permanent Commission of the Association consider the question of making both French and English official languages and arrange for English to be used as much as French? It may be replied that the attendance of English-speaking delegates has not been sufficient to justify this. But how can the Association reasonably expect to get a larger attendance and participation by English-speaking railway men if it does not arrange for more use of the only language that most of them can understand? It would be no more tedious and unprofitable for delegates speaking other languages to listen to long discussions in English than it is for those who speak English to listen to long discussions in other languages. We urge upon the Permanent Commission serious and early consideration of this problem, as we feel sure that whether there will be an increase or decrease in American participation in the work of the Association will depend mainly on what is done about it.

Why the Strike Is Not Settled

THE INFORMAL conferences held by Chairman Hooper of the Railroad Labor Board recently with several railway executives and representatives of the striking shop crafts unions has made clear there are five matters upon which these railway executives and the labor leaders differ widely, and which must be settled before the strike can be terminated.

The public mind lately has apparently become somewhat confused regarding the attitude of the two parties relative to these matters. It is necessary that this confusion should be cleared up, since public sentiment must be relied upon to determine the outcome. The five major points involved and the positions taken by the railway executives and the labor leaders in these conferences are as follows:

First: Wage decisions of the Labor Board. The labor leaders insist that before the men will return to work the railroads must agree to pay wages different from those awarded by the Labor Board. The railway executives have positively refused to consider paying any wages except those awarded by the Board, but have indicated that the railways will be represented at any further hearings that the Board may hold, and will accept such modifications, if any, in the wage awards as the Board may hold reasonable after rehearing.

Second: Rules and working conditions. The labor leaders demand that the railways agree to modifications of the working rules made by the Labor Board as a condition of calling off the strike. The railway executives have positively refused to consider this, although indicating that if any modifications of the rules should be made by the Board after further hearings they would be accepted. The position of the railway executives who have conferred with Chairman Hooper has been that for the railways to grant to the strikers any rules or wages not authorized or fixed by the board would be to concede, in response to the use of force, more than the employees were able to secure by peaceful means. For the railways to let the labor unions get by force what they could not get by arbitration as prescribed by law would be directly to encourage the use of force in future labor controversies.

Third: Contracting of work. The labor leaders still claim that this is one of the principal matters in controversy. Samuel Gompers, president of the American Federation of Labor, in an interview published in the newspapers July 14 made the statement: "The railroads, in ignoring the Board's

decision on repair work contracts, are violating the Transportation Act because that Act specifically provides that such repair work shall not be let to outside contractors." Mr. Gompers' statement is entirely false. Neither the Transportation Act nor any other law does or ever did specifically provide that the railways should not let repair work to outside contractors. Furthermore, all the railways except two which have done contracting of the kind against which the Labor Board has ruled have agreed to discontinue doing so in compliance with the Board's request.

Fourth: Boards of adjustment. The labor leaders have succeeded in making many people believe that the railways have refused to establish boards of adjustment as provided by the Transportation Act. The facts are as follows: The Transportation Act provides (Section 302) that "Railroad boards of labor adjustment may be established by agreement between *any carrier, group of carriers, or the carriers as a whole,* and any employees or subordinate officials of the carriers, or organization, or group of organizations thereof." The leaders of the shop crafts have demanded the establishment of *national* boards of adjustment by the "carriers as a whole." The railways have insisted on the establishment of boards of adjustment representing only *each carrier* and its own employees, but the railway executives who have conferred with Chairman Hooper have indicated willingness to establish regional boards of adjustment on which would be represented each "group of carriers" and their shop employees, such as have been established for the train service employees. Either local, regional or national boards of adjustment would be in complete accordance with the Transportation Act.

Fifth: Seniority and pension rights, etc. The labor leaders insist that all men who have struck shall be taken back with the same seniority, pension and other rights and privileges which they had before they struck. Most of the railways individually have published advertisements and posted notices to the effect that strikers who did not return to work within designated periods would lose all these rights and privileges and have to return, if they returned at all, as new men. On every railway there are many men who have stayed at work or gone back to work with the understanding that at the termination of the strike they would be protected in seniority rights superior to those of the men who struck or did not return to work within the limits set. The men who struck voluntarily dissolved all relationships with the railways for which they had been working, and gave up every claim, based on continuity of service, that they had to special consideration. The men who have stayed at work or gone to work during the strike have prior claims upon the companies, the establishment and recognition of which are based upon working rules which the striking unions themselves have got adopted. The seniority rule is a rule which has been established because the unions demanded it, not because the railroads wanted it. For the railways to let the strikers come back with all their old rights and privileges would be to encourage still more men to strike when there is another controversy.

The public cannot, in its own interest, sanction any settlement based on any wages or working conditions except those established by the Labor Board. It cannot rationally sanction continuance of a strike against all the railways of the United States because two persist in contracting work. It cannot sanction continuance of the strike because the railways will not establish national boards of adjustment, when the Transportation Act also provides for local and regional boards of adjustment. Nor, it would seem, can it afford to support the labor leaders in demanding that men who have struck against the decisions of the Railroad Labor Board shall be taken back into service with rights and privileges superior to those of men who have accepted these decisions and stayed at work.

For men to gain anything by striking against the decisions of a government arbitration body would be to destroy the government arbitration body, and with it, the means of peaceful settlement of railway labor controversies in the future.

The British Report on Train Control

AMONG THE HIGH LIGHTS in the report of the Automatic Train Control Committee to the Ministry of Transport of Great Britain are its recommendations that the contact type of train control be adopted; that continuous control and speed control are not necessary to meet British operating conditions, and that a system of train control should supplement, but not replace, the existing signal system. On reading the report (which appears elsewhere in abstract in this issue), one cannot help but be impressed by its thoroughness. It appears to have been handled strictly from an engineering standpoint and its conclusions are based on intensive investigation.

The committee selected the contact type of control in preference to others because the ramp and shoe type has been more highly developed, is better known and has proved reliable after many years of satisfactory operation under all conditions. While the committee felt that the continuous type of control had advantages, it concluded that its disadvantages outweighed the advantages. Speed control was not deemed necessary because the accidents investigated which might have been prevented by it comprised only 1.6 per cent of the total and these, the committee felt, could have been prevented by other means. The committee felt that the intermittent induction type required more or less complex electrical apparatus on the locomotive which would add to the expense of installation and increase the likelihood of failures, which, even though on the safe side, would cause unnecessary delays.

In Great Britain, it is interesting to note that the Great Western has had an electro-mechanical system of control in service at distant signals for the past 16 years with about 200 track miles and 100 engines equipped. The North Eastern has had a mechanical appliance in operation at distant signals for about 15 years with 89 route miles and 1,528 locomotives equipped. The Great Central has had apparatus known as "Reliostop" in service for seven years, on 42 route miles and on 20 locomotives. The London & North Western has experimented with the Leigh device and the Biddle device, while the Great Eastern has experimented with the Syx, Daniels and Regan systems. The London, Brighton & South Coast has been experimenting with the Angus system of continuous train control.

While conditions in Great Britain are different from those in this country, the fundamental principles affecting the application of train control are largely similar and the report of this committee confirms the views already expressed editorially in these columns that it is advisable for American roads to start with simple apparatus and develop it along lines which experience shows to be necessary to meet traffic conditions rather than to attempt to force installations which later may prove unsuccessful. In striking contrast to the British report that such devices should be an adjunct to the block system, we find the Interstate Commerce Commission, in its order, saying that it has "no desire to discourage efforts to automatically control trains without the aid of fixed wayside signals," which position we believe to be a mistake on the part of the commission, considering the present development of the art.

Considering the importance of the train control question in this country we suggest that the report of the British committee be studied by railroad officers and members of the Interstate Commerce Commission, as it is a valuable contribution to the literature on this subject.

Letters to the Editor

[*The* RAILWAY AGE *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about* 250 *words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.*]

The Operating Officers' Interest in Statistical Requirements

NEW HAVEN CONN.

TO THE EDITOR:

Your editorial entitled, "A Proposed Revision of the Operating Expenses Classifications" in your issue of June 17 and that headed, "The Matter of Statistics" in the issue of July 8 have in them much that should be of interest to railway operating men. The only adverse criticism which I would make of them is that you do not sufficiently show your position in the matter of the proposed changes in accounting requirements. This is doubtless due to the fact that you do not wish to take a definite stand at this time when the situation is still more or less indefinite.

It is my understanding that the source of the present inquiry came, first, from the difficulty experienced in compiling quickly information for the I. C. C. and the Senate Committee in the hearings in the past two or three years, and second, from the complaints made concerning the increasing cost of clerical work.

With reference to the latter, I have checked up the facts as to the increase in the number of clerks. I know that on our own road there was a large increase in clerks, but during the last year or so, there has been a considerable decrease. It is reasonably certain that if we exclude the men who are working on the various special jobs required by federal and guaranty period settlements, rate hearings, wage investigations, etc, the number, in comparison with the amount of business, will not be much different from the number in the period prior to federal control.

I assume that the first item is that which is of the most serious importance. As expressed by J. J. Ekin in his president's address at the Accounting Officers' meeting, the general impression seems to be that we should proceed along the lines of simplification in our accounts. Does simplification mean primarily, reduction in the number of accounts? I do not think that any one would be rash enough to state that it is not an advantage to reduce the number of accounts *if this can be done without reducing the amount of necessary information.* Simplification, however, does not necessarily mean elimination.

I think everyone would be glad to see a reduction in the enormous amount of detailed statistical and accounting work which is now necessary. This applies to both the revenue and expense sides. We have, however, this situation confronting us. The total net railway operating income which the railroad can earn is now limited to a percentage so low that in many cases it will do no more than provide a small return on the total amount of capitalization. Furthermore, there appears little prospect that the freight and passenger rates will be so fixed that this return can be made without difficulty. In the third place, the Transportation Act requires the Interstate Commerce Commission to give attention to the efficiency and economy with which railroads are operated. Since these three things are so, it is particularly necessary that the roads should know:

1. What classes of traffic are remunerative and those which are not.

2. Where further economies can be effected through increased efficiency and how much can be expected from these economies.

To obtain this sort of information requires a large amount of data, both accounting and statistical. It may be possible that the reduction in accounts will effect some reduction in the number of clerks in the accounting offices, although I believe there is room for considerable argument on this point. Regardless of this feature, however, the amount of work necessary to provide detail required by the operating officers would be very largely increased if we are to continue to provide the same amount of information to our operating officers that is given them today. This is particularly true in the grouping of the transportation expense accounts. The group "Other Yard Expenses" contains many elements which have no bearing on each other and which will vary from month to month by differing percentages. It will never be sufficient for an operating officer to know that other yard expenses have increased or decreased by a certain per cent when that group includes everything from the wages of a general yardmaster to the price of a fire hook on a yard locomotive. It would not be logical to combine the labor accounts into one item since the fluctuations of cost of yardmasters and clerks or of switch and signal tenders do not correspond with the fluctuations in yard enginemen and trainmen. The same general criticisms apply to grouping all the train accounts, other than fuel, into one item.

From the point of view of the operating officers, it is illogical to reduce the amount of information available for their purposes just at the time when the slight margin between revenues and expenses makes it absolutely necessary that they be provided with all the data which can be provided at a reasonable expense.

This objection to a decrease in the amount of information provided is even more serious when an attempt is made to determine the cost of some particular class of traffic. If we wish to ascertain the cost of suburban passenger service near a large city, or the cost of milk traffic, or the cost of less carload freight within a certain territory, it is necessary to sub-divide the accounts in even greater detail than the present classification provides. For example, the maintenance of station and office buildings must be divided as between office buildings and station buildings; the maintenance of shops and engine houses between shops and engine houses. Furthermore, accounts such as the various yard and train accounts must be sub-divided by individual yards or individual groups of trains. The proposed yard groups, containing not only wages but other elements which fluctuate in varying degrees, would render any such further sub-division extremely difficult. For example, if an attempt were made to divide freight train expense as between fast, slow and local trains, the sub-division of the expenses for water, lubricants and other locomotive supplies might well be made on the basis of locomotive fuel. On the other hand, the sub-division of the wages of train and engine crews into these three elements would require an entirely different basis of apportionment. When any such studies were made, therefore, the entire account would have to be broken down and set up on some basis as is provided at the present time. There appears little doubt that the additional work of breaking these accounts would entirely offset the economies which would be affected in compiling the accounts currently.

There is one other feature from the point of view of the operating department which requires attention. If accounts and statistics are to be changed, it would appear that operating department representatives should be consulted as well as the accounting department. The operating department officers are interested in the results although they may not be interested in the methods by which those results are obtained. In this work, I believe that a committee of operating officers, who have knowledge and understanding of statistics and make practical use of them, could well co-operate with

the accounting committee and the commission, at least when they are near the end of their labors. If such a committee were provided, the results obtained would furnish the proper balance in results obtained. The accounting department is responsible for the compilation of the statistics and for their accuracy and would be in a position to keep down the requirements in the way of accounts and statistics to a point where they can be effectively handled. In addition, the operating department would be represented and its voice heard to the extent that the data provided would be of practical use to the operating officers.

J. E. SLATER,
Special Assistant to General Manager, New York, New Haven & Hartford.

Dispatchers and Engineers

HAILEYVILLE, Okla.

TO THE EDITOR:

I have been reading the recent articles in the *Railway Age* concerning the controversy between the dispatchers and engineers. When the thing is all boiled down to the proper degree there is not very much to it. When one man commences to criticize another, who is in an altogether different department, there are ten chances to one his criticism is unjust. We cannot all be first class workmen in our several lines of work but I will venture to say that the man who has the interest of the company and his family at heart is doing the very best he can under the conditions which are open to him. In my experience in the railroad game which dates back over 30 years, in various departments, I have found some poor men in each department and the percentage of poor dispatchers, compared with engineers, is in favor of the engineers. It is true the dispatcher is always working against an unknown quantity; in other words he is banking his judgment on moves which he anticipates will be made providing every thing goes all right. If some engineer falls down his plans are all shattered; so with any one else concerned in the movement, or some part of the machinery. If the dispatcher falls down there will be some body else fall down and vice versa from one day's end to the other.

As long as the world stands individuals will make mistakes and have shortcomings but why not bury the hatchet and let the principles of the golden rule prevail? The railroad company pays us for every minute we work and it should make but little difference what we are doing, whether laying in the side track a while or sitting in the office smoking cigars.

It is the opinion of the writer that so much strife between the men employed by the railroads is caused by the fact that they are not better personally acquainted with each other; they should do more visiting with one another and study the characters of the individuals; in other words tune up for each other. I worked with a conductor once for nine years and had never met him personally; I came to the conclusion that he was about the worst man I had ever run across; we frequently had little tilts in connection with the work; no doubt he had formed the same opinion of me. However, I had the opportunity one time to meet him personally and we had a long visit. From that day to this I do not know of a finer man to work with. We know each other now and know just about how to set our pegs to avoid any friction whatever. Let's all get together closer, line up for each other, cut out the criticism and this old world will be a better place in which to work and live. My argument is borne out here on the Rock Island where the employees' clubs have been functioning for over a year; we know each other better; we get together frequently. The atmosphere is altogether different to what it was before the clubs were formed. Let's keep the clubs going. The railroad will be better off in every way; the employees will be better; the public will be benefited.

J. L. COSS,
Train dispatcher, Rock Island Lines.

Language Problem of the International Railway Association

BRUSSELS, Belgium.

TO THE EDITOR:

We have read in the *Railway Age* for May 20, 1922 (pages 1156 and 1163), the articles published on the International Railway Congress held in Rome in April last.

Our attention has been specially called to the paragraph entitled "In French and Italian," in which you point out the difficulties met by the English-speaking delegates, and especially by Americans, in taking part in the discussions.

We think we ought to remind you that article 16 of the statutes of our Association stipulates that "The discussions shall be conducted in French or in the language of the country in which the Congress is held. Speeches in any other language shall be translated into French." However, at the Berne session in 1910, at the request of delegates from English-speaking countries, a résumé of the discussion was given in English in each section in order that the said delegates might effectively follow the proceedings.

Special arrangements were made by the Organizing Committee for the Congress at Rome for the translation into English of all documents, discussions in sections and proceedings of the general meetings. All the reports of the reporters were published in English and distributed to the delegates before the opening of the session.

For every subject or question a brief résumé of these reports was published in English so that delegates, whose appointment had been delayed (as was the case with several American administrations), were able to obtain sufficient information before the sectional meetings.

All the speeches and communications made in each section were immediately rendered briefly into English and published, *for the first time in a non-English speaking country,* in the English edition of the Daily Journal. Sir Henry Fowler, chief mechanical engineer of the Midland Railway (England), was appointed a general secretary of the session, and although it was impossible for him to correct all the proofs of the Daily Journal, he paid attention to the conclusions arrived at.

In addition of the five sections of which the Congress was composed, the presidency of two of them was confided to English-speaking officials: George Gibbs, chief engineer of electric traction, Long Island Railroad (U. S. A.), for the second section, and Gustav Behrens, a director of the Midland Railway (England), for the third section. The first section was presided over by a Belgian, the fourth by a Frenchman, and the fifth by an Italian.

It is possible that the organization was not quite as satisfactory as we had hoped, but this was chiefly due to the small number of delegates from English-speaking administrations having sufficient knowledge of either of the official languages of the Congress (French and Italian). We are already trying to discover what improvements can be made in this organization for future sessions which do not take place in an English-speaking country.

We trust, however, you will be good enough to recognize that we have done the best we could to give every satisfaction to the English-speaking delegates.

We may also add that the English and American delegates generally expressed their appreciation of the arrangements made to assist them in understanding the discussions.

As the articles which your estimable journal has published might be wrongly interpreted by readers having no knowledge of the organization of the congresses of our Association, we should be very glad if you would kindly publish this letter in an early number of the *Railway Age*.

V. TONDELIER,
President.

J. VERDEYEN,
General Secretary, International Railway Association.

Superheated Consolidation Locomotive to Which the Tender Booster Has Been Applied

Booster for Tender Trucks Developed on D. & H.

Utilizing Tender to Increase Tractive Power Enables Locomotives to Haul Heavier Trains

DURING THE past two years there has been developed on the Delaware & Hudson a booster designed for application on the tender trucks. The basic principles underlying this development were: First, to utilize as a source of revenue tractive power at moderate speed the

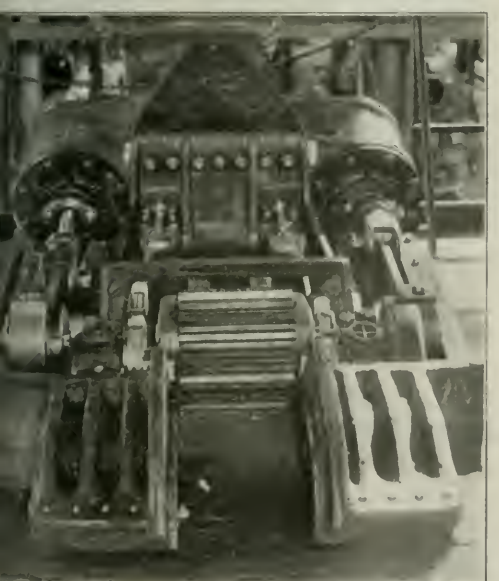

Fig. 1—Booster Engine Assembled in Shop

excess boiler capacity, the volume of which is increased materially by the use of superheated steam. Second, to convert the tender weight, unused as a motive agent, into a means of obtaining additional tractive power, the amount of increase depending on the speed and whether the application is made on one or both tender trucks. Third, to obtain more nearly constant tractive force at the tender draw bar during successive revolutions of the locomotive. The development of the tender truck booster has now progressed sufficiently to prove that these objectives have been attained.

The tender booster, which has been patented jointly by J. A. McGrew, general superintendent of equipment and way and J. T. Loree, general manager, comprises a four-wheel truck fitted with side rods and a reciprocating steam engine, arranged to drive one of the axles. The engine which supplies the motive force for the booster is shown in Fig. 1.

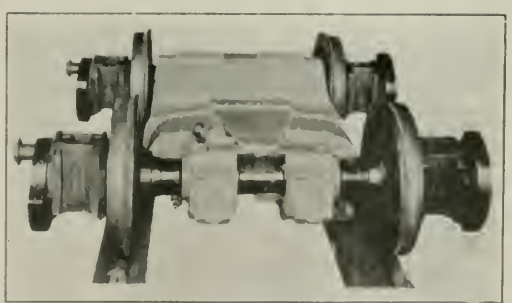

Fig. 2—Booster Truck Before Frame Has Been Applied

It is a simple two cylinder engine with 10-in. by 10-in. cylinders. On the main shaft of the booster engine is a pinion and on one of the tender truck axles is a large gear. Intermediate between them is a gear arranged to be thrown into mesh between the pinion and the large gear by a bell crank operated by a piston impelled by the superheated steam forming the motive agent for operating the booster cylinders. In Fig. 2 the engine is shown mounted on the axles before the frame has been put in place. The two bearings shown in the foreground of Fig. 1 span the geared axle and the opposite end of the frame casting rests on springs supported by journal boxes on the other axle, giving a three point

support. A view of the completed truck as applied under the tender is shown in Fig. 3.

The steam supply for the booster is taken directly from the steam pipes of the locomotive. Admission of steam to the booster is controlled by an air-operated valve in the main steam line, as shown in Fig. 4. Operation of the booster is governed by an independent air valve in the cab, thus in no manner interfering with the engineman in his method of running the locomotive, enabling him to use or cut out the booster at will as road conditions may indicate to be desirable. The booster cannot be started except when the main throttle is open and if the locomotive is shut off the booster

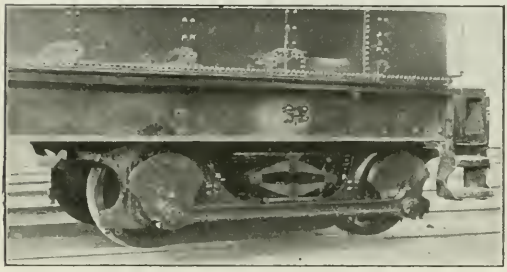

Fig. 3—Completed Truck as Applied Under Tender

is automatically thrown out of gear. Barco joints are fitted in the steam pipe between the locomotive and the tender to give the necessary flexibility at this point.

The steam on its way to the engine entrains the booster engine transmission gears. The fact that superheated steam in the locomotive steam pipe is simultaneously the motive agent of the booster and the controlling power effecting the meshing of the gears, produces practically perfect synchronization of effort of the locomotive and booster engines and also provides an elastic cushion for disengagement should excessive stresses be set up within the gears. The steam from the booster is exhausted direct, without pipe couplings, into a simple feed water heater located in the tender tank. The gear ratio between the booster engine shaft and the tender axle is 1 to 4.25, and the wheels are 33 in. in diameter. The rated tractive effort with 210 lb. steam pressure, based on the formula commonly used for locomotives, is 12,200 lb.

The locomotive to which the booster has been applied is

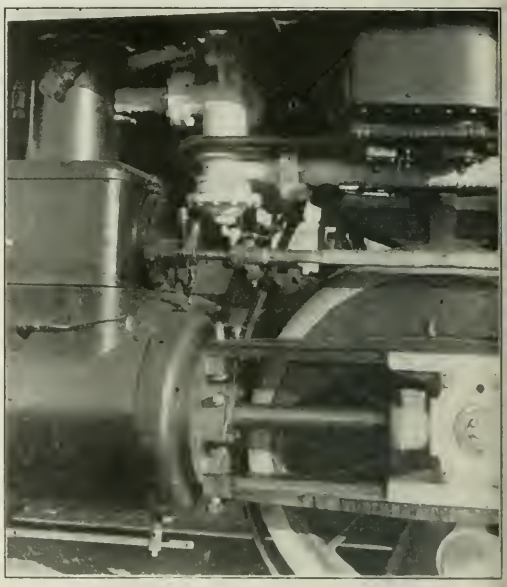

Fig. 4—Steam Pipe to Booster and Air Operated Valve

shown in the photograph at the beginning of this article. It is of the Consolidation type, the weight of the locomotive being 207,150 lb. and the rated tractive power 42,100 lb., developing a maximum draw bar pull of 36,000 lb. on level

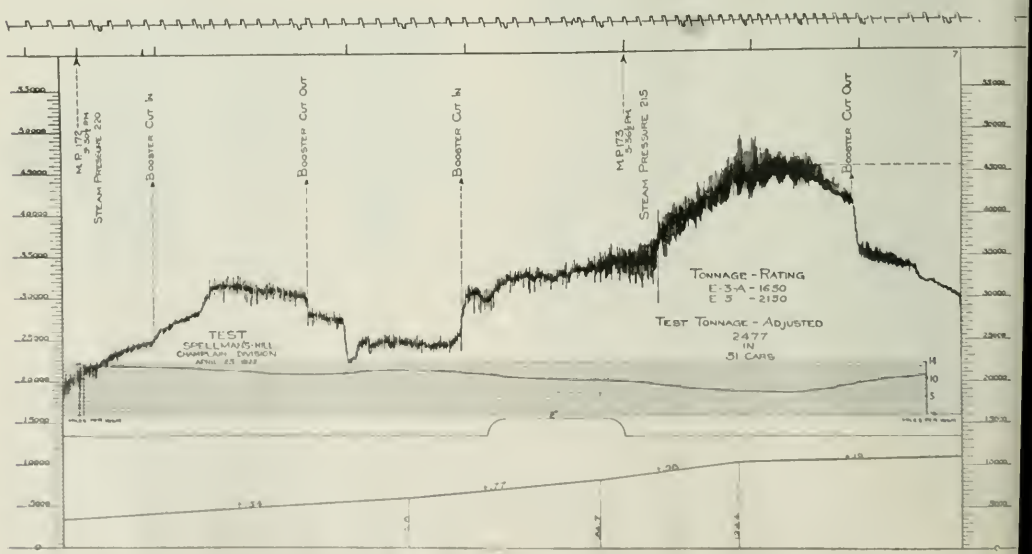

Fig. 5—Dynamometer Chart Showing Operation of Booster on a Ruling Grade

rack. The weight of the tender when empty is 58,800 and when loaded 120,800 lb.

To determine the results that can be obtained in actual service from locomotives equipped with the booster, tests were made over the Pennsylvania, Susquehanna and Champlain divisions. A photograph taken from the dynamometer chart on the controlling grade on the Champlain division is shown in Fig. 5. The increase in tractive power due to the booster is clearly shown in the draw bar pull curve. The standard rating for this class of locomotive, without the booster, on this division is 1,650 adjusted tons, while the tonnage of the test train was 2,477 adjusted tons in 51 cars, an increase of 48 per cent.

An analysis of the various tests conducted with the booster developed the following principles:

When superheated steam is used as the motive agent in the

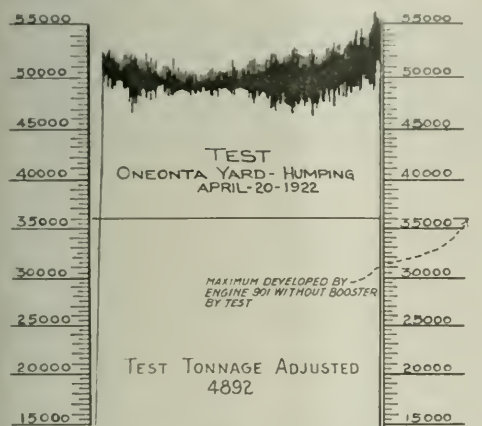

Fig. 6—Chart of Tractive Effort of Locomotive with Booster Pushing Over a Hump

booster, and advantage is taken of the opportunity thus afforded for using steam expansively in the locomotive cylinders, no difficulty is experienced in maintaining practically constant steam pressure.

The use of steam for the gear operating cylinders as well as for supplying power to the locomotive and booster cylinders, gives a complete synchronization of effort between the primary and secondary engines.

The results of the tests also clearly demonstrate the following operating advantages resulting from the booster application:

The tonnage which the locomotive can haul is increased; abnormal stresses on draft gears and equipment are decreased, and more prompt and constant acceleration is effected. Tire wear and rail wear, due to slipping of the locomotive driving wheels, are decreased. The average speed over grades is increased and grades may be equalized without a very heavy capital expenditure. The booster makes it possible to haul increased tonnage over divisions where the trainload is now limited by the weight of locomotives which the bridges can safely carry. The location of the booster is such that no delay in turning of power need be occasioned by repairs. The addition of the geared power unit on the tender permits of using a lower factor of adhesion in locomotive design. The booster also effects a saving in fuel by reducing the time required for movement over the division, and by making it possible for a smaller locomotive to do the work of a larger type.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR loading during the week ended July 8 showed the effect of the Fourth of July holiday by a reduction to 718,319 cars, as compared with 876,896 the week before but this still represented an increase of 77,784 as compared with the corresponding week of 1921, which also included a holiday, when the loading amounted to 640,535 cars. In the corresponding week of 1920 the total was 796,191. On the basis of a five-day week the average daily loading during the week of July 8 was 143,664, as compared with 146,149 cars for a six-day week the week before. As a holiday usually represents a loss of more than a single day this leaves only a slight decrease to be possibly accounted for by the first week of the shop strike. As compared with the corresponding week of 1921 increases were shown in all districts and in all classes of commodities except grain and grain products and coal. Coal loading, 68,996 cars, was about 26,000 cars less than during the week before and 54,974 cars less than during the corresponding week of 1921. The summary as compiled by the Car Service Division of the American Railway Association follows:

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JULY 8, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Misc. L.C.L.	Miscellaneous	Total revenue freight loaded: This year 1922	Corresponding year 1921	Corresponding year 1920

Hearing on Coal Car Distribution Rules

WASHINGTON, D. C.

HEARING WAS begun before Commissioner Aitchison of the Interstate Commerce Commission on July 17 on a proposed revision submitted by the Car Service Division of the American Railway Association of the coal car distribution rules now incorporated in Circular C. S. 31 (revised) together with rules for the rating of and car distribution to other than tipple mines loading bituminous coal. The proposed rules have been generally assented to by the National Coal Association, except as they apply to assigned cars, and the commission has ordered a general proceeding of investigation, consolidating with it its investigation of the distribution among coal mines of privately owned cars and cars for railroad fuel. Representatives of the Indiana and West Virginia state commissions also sat with Commissioner Aitchison and other members of the commission sat in for part of the time.

At the outset the attorney for the National Coal Association and other representatives of the coal operators asked for a continuance of the hearing on the ground that the operators have been so busy in labor negotiations and trying to open their mines that they are not prepared. R. V. Fletcher, general solicitor of the Illinois Central, on behalf of the railroads, declined to join in the request, saying that a car shortage may occur very soon if the coal strike is settled and the railroads desire to have the rules ready for use. He said that because of the strike it may be impossible for some of the operating officers desired as witnesses to appear but that the first witness was ready, A. G. Gutheim, who has recently resigned as manager of the public relations section of the Car Service Division, and who was chairman of the railroad committee that conferred with the National Coal Association on the proposed rules. Commissioner Aitchison then said the hearing could proceed at least that far.

Mr. Gutheim outlined the history of the car distribution rules, the present rules representing a modification of the uniform rules put into effect by the Railroad Administration. He said that they are recommendatory but that so far as the Car Service Division is informed they have been generally observed. Commissioner Aitchison was interested in knowing to what extent they have been in effect and whether they would automatically go into effect in case of a car shortage. Mr. Fletcher said many roads have had very little use for such rules during the past year and a half and some probably now have none in effect but that the old rules would go into effect unless new ones were available and unless restrained in some way most of the roads would probably put in effect the new revised rules which are the subject of the investigation.

Mr. Gutheim explained the desirability of having uniform rules and proper mine ratings, saying that the proposed rules base the ratings on the demonstrated producing and shipping capacity of a mine for the previous calendar month. He also spoke of the desirability of deflating the present ratings, which many operators admit are too high, saying that if they are uniformly too high the effect is not especially serious but that it is not pleasant to have it generally advertised in the newspapers that the railroads are furnishing only a 50 per cent car supply when they know that they are providing a 75 per cent supply.

He also said that the proposed rules require the operators to report the actual mine working time, which gives a more accurate index of the capacity than the tipple time, because some mines by increasing their tipple investment out of proportion to their other facilities, may secure more than a fair share of the cars if their rating is based on tipple time. The rules also propose a reinstatement of the principle that a mine served by more than one railroad shall have a higher rating, which was abolished by the Fuel Administration on the ground that under government control the railroads constituted but one system. However, this matter is now pending before the Interstate Commerce Commission and the roads are willing to put into the rules what the commission decides on this point. Mr. Gutheim also discussed the assigned car rule, saying the only alternative, except confiscation, for railroads that have not been able to make contracts or to obtain coal under their contracts, is to go into the spot market, which is expensive for the roads and has a serious effect on the market. Confiscation, he said, is the worst possible way for a railroad to get the necessary coal, both because of the effect on the owner of the coal confiscated and also because it is uneconomical for the railroad and often gives it the wrong kind of fuel. Also some roads do not handle enough commercial coal to supply their needs if they confiscated it all. Many roads have made a large investment in private coal cars to supply their own needs.

Mr. Gutheim occupied the stand for two days and was followed by Eugene McAuliffe, president of the Union Collieries Company, who advocated ratings based on tipple time. The hearing was then adjourned to August 14.

Business Organizations Urged to Support President's Stand on Strike

BUSINESS ORGANIZATIONS of the country are called upon by the board of directors of the Chamber of Commerce of the United States to take such leadership as will crystalize public sentiment in upholding President Harding in the exercise of his authority for the maintenance of uninterrupted railway transportation. At the same time the board commended President Harding's statement making clear the issues involved in the strike, and urged the administration to use all the power of the government to the end that the supremacy of the law be maintained.

President Harding was informed of the action of the board in a letter written by Julius H. Barnes, of Duluth, President of the Chamber. The declaration of the board, as set forth in the letter to the President, follows in part:

"The Board of Directors of the Chamber of Commerce of the United States commends the statement of President Harding making clear the issues involved in the railroad shop crafts strike. We believe in the peaceful settlement of controversies and due respect for agencies established by law or mutual agreement for securing just and impartial decisions. We believe in the compliance with such decisions by both parties and that the public will trust decisions so arrived at as generally fair and accord them the support of public opinion.

"This strike of a section of railroad employees is against a decision of the government's own agency.

"The attempt of the striking railroad employees to enforce their own views through methods of industrial war should meet the condemnation of all who believe in orderly processes of settlement.

"This country is slowly emerging from a period of unemployment and severe business depression, and cannot patiently view any unlawful interference with its transportation facilities, retarding its industrial recovery.

"We commend the President for his determination to maintain the supremacy of the law and we urge the administration to use all the power of the agencies of the government to that end.

"We call upon the business organizations of the country to take such leadership as shall crystallize public sentiment in upholding the President in the exercise of his authority for the maintenance of uninterrupted railroad transportation and for such local protection and community public order as will secure every man his right to work without intimidation."

British Approve Automatic Train Control

Ministry of Transport Committee Recommends Intermittent Contact Type—Disapproves of Speed Control

THE PRACTICABILITY of train control devices "has been proved beyond dispute by extended trial and actual operation covering long periods" and these devices can no longer be regarded as in the experimental stage, according to the Automatic Train Control Committee appointed by the Ministry of Transport of Great Britain. In its report which was submitted on April 20, 1922, the committee recommended the gradual adoption of the intermittent contact type of train control as best adapted to prevent a large proportion of train accidents directly occasioned by the failure of enginemen to obey signals, which it found amounts to about one-third of the total number. While the committee considered continuous control to possess merit, it was thought to have too many disadvantages to warrant its recommendation. Speed control also was not considered essential because an analysis of the accident records for the past 10 years indicated that only 3 out of 193, or 1.6 per cent, of the accidents could have been prevented by speed control. The intermittent induction type likewise was not considered suitable for British railways because it would require complex electrical arrangements and a considerable addition to the skilled maintenance forces. Any system of train stop or train control must be used to supplement the present highly developed and efficient signal systems and be reasonable in first cost and annual charges for maintenance and renewals. The committee recommended that multiple track lines only (except in exceptional cases, single track) be equipped. This mileage was estimated to be 24,00 track miles. Approximately 23,00 locomotives should be equipped, while track devices would be required for 24,000 distant signals and 38,000 stop signals. The total estimated first cost was £4,660,000 ($20,550,600), with a total annual charge for maintenance and renewals of £407,000 ($1,894,870, based on a rate of exchange of $4.41).

Of 193 accidents analyzed for a 10-year period ending September 30, 1921, the committee said that 71, or 36.8 per cent, could have been prevented by train control and that on the basis of the number of accidents reported by the railways but not investigated by the government, train control "would have a preventive effect, not obtainable by any other means, upon a yearly total of more than 100 cases." The committee did not recommend the use of speed control, saying that "the difficulties arising—* * * * and the need for insuring that the capacity of roads is not injuriously affected by imposing unnecessarily low speed restriction upon express traffic, would, in the opinion of the committee, render such devices unsuitable to British conditions." In discussing the continuous type of control, while the committee felt that such a system would cover practically every risk which such devices are designed to safeguard, other conditions would not make the expenditure justifiable upon surface lines in Great Britain. Therefore, the committee recommended the use of the intermittent contact type, which supplements rather than replaces existing signaling and block telegraph systems.

The use of train control was considered only for multiple track lines handling passenger and mixed traffic because of the security afforded on single track lines "by single line token working, with interlocking of signals and relative tokens, and to the small number of accidents upon single lines. The committee is of the opinion that a case for the adoption of automatic train control upon single lines so worked and protected has not been established although there may be a few special cases where control may eventually be found desirable. It considers also that lines used purely for freight or mineral traffic do not as a general rule call for the adoption of automatic train control."

The committee was instructed to enumerate the possible functions of train control as it relates to railway conditions in the United Kingdom; prescribe requisites which the devices should meet; examine those under trial; recommend others which are or may become available during the period of investigation and form conclusions on its adoption with regard to its advantages and the cost involved.

Three Early Conclusions

Three of the earliest general conclusions unanimously arrived at by the committee were: (1) That existing traffic facilities and line capacity must not be injuriously affected by the general introduction of automatic train control; (2) that any acceptable method of control must be such as can be fully developed in conjunction with the highly developed block working and signaling systems on the British railways and (3) that the introduction or extension of any system of control could not be recommended unless a standard, in respect to track and locomotive apparatus, be first decided upon, which would enable the desired effects to be produced upon all locomotives, whether on home or foreign lines.

Calling attention to the high degree of security attained on British railways in the past, the committee points out that in recent years the growth of traffic has made it necessary to shorten block sections in order to increase track capacity without incurring the cost of constructing new interlockings or additional lines. This has resulted in the adoption of track circuits, electric interlocking and other safety devices "to supplement the powers of observation and memory of signalmen." Continuing, the committee says that "no general action, however, has been taken to provide appliances for obtaining additional security against mistakes by enginemen, although they must have been affected, possibly to an equal extent with signalmen, by growth of traffic and altered conditions of working. The functions of automatic train control * * * are broadly to assist enginemen in the proper observance of signals and regulations and to safeguard liability to train accidents which may arise from failure in this respect." In the opinion of the committee, train control can no longer be regarded as being in the experimental stage. "The question is rather whether its adoption is ex-

pedient in the interests of safety, and financially possible."

Applicability to British Railways

In discussing the applicability of train control and its adoption on British railways, the committee considered it from the standpoint of (1) the conditions, whether technical, climatic or physical, which govern the conduct of railway traffic and which may render special treatment necessary; (2) the degree of safety existing, and the extent to which additional security is desirable and can be obtained; (3) the methods of control which appear most suitable for the purpose and (4) the cost of installation. In this connection the committee obtained the views of responsible officers and a number of locomotive inspectors and enginemen of standing and experience; it analyzed accident statistics furnished in government returns and by certain railway companies; systems of train control in operation on the Great Western, the North Eastern, and the Great Central were inspected and studied in detail and the experimental installations on the London & North Western, the Great Eastern and the London, Brighton & South Coast were also inspected. Estimates were obtained from railroad companies and inventors, which were based on present day prices, but without allowance for quantity production.

Relation of Block Signaling to Train Control

The committee, commenting on certain outstanding features in the working conditions, equipment, and methods of block signaling upon British railways, called attention to those peculiar to Great Britain and which needed special consideration. All are factors which have to be allowed for satisfactorily in considering the expediency of automatic train control. They are as follows:

"(a) The dissimilarity in brake power of trains. Three classes of trains have to be provided for, viz., passenger and express goods, which are fitted throughout with continuous power brakes; freight trains, which have only the locomotive fitted with the power brake; and mixed trains in which a certain proportion of unfitted freight cars may be attached to fitted passenger cars, and partially fitted freight trains with which the proportion of fitted cars is variable.

"(b) The speed maxima likely to be attained on level road by various classes of trains may differ as widely as 20 and 80 miles an hour.

"(c) The standard block interval or overlap (440 yd) has been fixed without any regard to speed or gradient. On level or falling gradient, therefore, if the brake, owing to inattention, etc., on the part of the engineman, is not applied until a stop signal at danger is actually reached, the speed of the train may be such that it will not be brought to a standstill, even though full brake is exercised, until a train has passed beyond the clearing point and entered the danger zone.

"(d) The liability to bad atmospheric conditions, such as fog, falling snow, etc., and the consequent difficulties that enginemen have in observing signals, have necessitated the use of a manual fog signal, supplementary to wayside signaling, without which congestion, amounting even to complete stopping of traffic would inevitably result.

"(e) The high frequency and complex character of traffic in many railway areas.

"(f) The number of lines either jointly owned or used by different railway companies.

"(g) Existing variations in structural and load gages will present difficulties in adopting a uniform system of automatic train control unless these are foreseen and provided against. This point also calls for special consideration in connection with the electrification of railways."

Devices to Prevent Mistakes by Enginemen

Continuing an abstract of the report, the committee says that all devices designed to prevent accidents primarily due to mistakes of enginemen obtain their effect either indirectly or directly as follows:

"(a) Indirectly: By automatically providing either on the train or on the track, distinctive visual and audible indications, supplementary to those given by the wayside signal. Reliance for necessary action to avoid danger is, with these inventions, still placed upon enginemen, and appliances of the kind are often described as cab or fog signaling devices.

"(b) Directly: 1. By the automatic application of the power brake. In this case it can be arranged that enginemen either have the power to release the brake at any time after it has been applied, or do not have the power of doing so until the train has come to rest. Appliances of this nature are indifferably termed 'train stops' or 'train control' devices.

"2. By automatic speed control. In this case the brake is applied at any desired point if the speed exceeds a prescribed rate, and cannot be released until either the train has come to rest or the speed has been reduced to a predetermined limit. All these effects can be produced either singly or in combination."

Continuous Train Control

The committee next divided the devices into two general types: "continuous" and "localized" or "intermittent." With respect to the continuous type of control the committee says:

"(a) A continuous type of control aims at entire and constant protection of the train at all stages of its journey against every risk of collision, either with other trains, or in some cases, with earth slides; and, as a general rule, against risk of derailment due to rail breakage, lack of continuity of track, washouts, etc. Devices of this kind are essentially electrical, and usually, though not invariably, of the non-contact type so far as the control mechanism is concerned. They are dependent on complete track circuiting or its equivalent. The outstanding advantage of a control of this type is that it can be made to cover practically every risk which automatic train control can be expected to safeguard.

"There are, however, the following arguments against the adoption of this form of control upon British railways:

"1. The first cost of engine and track equipment is higher than that required for localized control.

"2. The cost and difficulty of supplying electrical energy to all railways in the country in such a form as to be suitable for a standard system of control, is likely to be prohibitive, and would delay installation almost indefinitely.

"3. Although it can be arranged to exercise control at signal locations, its function, broadly speaking, is to provide a substitute for, rather than addition to, existing systems of signaling and block workings, which have already been installed at considerable cost, and have reached a high state of development.

"4. Maintenance would be costly and necessitate the use of a large number of skilled workmen.

"5. The principle of action in apparatus of this class is that electrical energy must be constantly supplied to the train during the whole of its journey. If this energy is cut off, the train is then unable to proceed. Its energy may be cut off for two reasons: (a) Because it is unsafe for the train to proceed owing to some obstruction, etc., on the line ahead; or (b) in consequence of failure in the source of supply, or break-down of the control apparatus.

"No form of automatic train control can be considered wholly immune from risk of failure such as described in (b). The continuous control systems which have been examined require the use of comparatively delicate locomotive apparatus. Such apparatus is more likely to be affected by the vibration and shock of ordinary working conditions than the more robust apparatus used in localized systems. Although failures from this cause would doubtless be on the side of safety, they would cause traffic delay. With regard to the breakdown of the main electrical supply, such a contingency would be serious in a continuous control system handling a frequent service of trains, as all traffic would come to a standstill in the area concerned. Failures from either of the above causes would necessitate arrangement to enable release from the control to be effective. The difficulty and risk of accident attached to such a provision will be apparent, particularly when the main electrical supply fails."

Localized or Intermittent Control

"In the light of the foregoing disadvantages, the committee is of the opinion that expenditure to the extent necessary for continuous control would not be justifiable upon surface lines in Great Britain. On the other hand, in the case of an entirely new railway system, or on railways upon which appliances are less complete, or where accidents of the class preventable only by continuous control are comparatively common, this type of control might be worthy of consideration. The attention of the committee has therefore been directed to localized control, which supplements rather than replaces existing signaling and block telegraph systems. Localized control can be either of the non-contact or contact type.

"The non-contact type is essentially electrical, and although it has the advantages consequent upon the avoidance of any physical contact between track and locomotive apparatus, it necessitates the use of somewhat complex electrical arrangements, entails a

considerable addition to the skilled maintenance staff, and is likely to be more expensive, both in first cost and upkeep, than the contact type. There is also a difficulty in arranging for the production of more than two distinctive effects.

"The contact type is the best known and most developed. Despite the inherent disadvantage, in regard to shock effects, which is common to all forms of contact control, apparatus of this nature has proved reliable after many years of operation under working conditions, and capable of withstanding satisfactorily the effects of high speed traffic. Three indications can readily be provided, viz., 'clear,' 'warning,' and 'danger,' and alternative methods for obtaining brake release can be arranged. Devices of this type do not necessarily require either primary or secondary batteries on the locomotive. In connection with local track circuiting, this type of control can be used with automatic and three position signaling. Moreover, as track circuiting is extended, the control exercised by any localized device, although not strictly continuous in character, will confer nearly all the benefits obtainable from the continuous system.

"To safeguard shock effects in the case of contact devices at wayside signal locations, locomotive and track elements used to obtain control of tracks at distant signals should be more robust than those at stop signals. Trains are authorized to pass, and do pass, distant signals at high speed, whether they indicate 'clear' or 'warning.' It follows, especially if separate indications for warning and clear are required, that contact between locomotive and track elements will be of high frequency. On the other hand, the occasions upon which trains pass stop signals at danger are comparatively rare, and it is not considered necessary for the stop signal apparatus to provide more than one effect, i.e., 'danger.' In special cases a 'clear' indication can, if required, be provided at stop signals by other means, e.g., hand signaling. While, therefore, means for detecting integrity and correct position of the track mechanism for affording control at stop signals will be required, to insure that contact is made when enginemen pass them at danger, it is not a matter of primary importance if damage to the apparatus should result from contact between locomotive and track elements at such signals."

Speed Control

"The employment of speed control and time element relay devices, in conjunction with other indirect or direct methods already mentioned, has been very fully considered by the committee, especially in relation to the outstanding features which characterize British railways. It is argued with some cogency that an appliance either of one character or the other is necessary, because the clearing point, which defines the length of overlap in advance of home signals, etc., is often too close to insure, in all conditions of gradient, speed, and brake equipment, that a train will be stopped by a full application of the power brake when the danger point is reached.

"With some well-known speed control devices, the conditional character of release would, in certain conditions, impose restrictions in the rate of speed unacceptable to British practices and unnecessary for safety. There is not only the dissimilar extent of power brake equipment upon trains to be remembered, but also the variation in speed maxima, in combination with gradient effect. It is common practice for the same engine to be used for hauling fully fitted passenger and unfitted freight trains. Consequently, an engine working a passenger train on one trip might require a speed control set to act at 40 miles an hour, and on another trip hauling a freight train, the device would have to be adjusted for a different speed, of, say, 20 miles an hour.

"Again, a time element relay arranged to apply the continuous brake to a passenger train which approaches a home signal at danger at a higher speed than, say, 55 miles an hour, would not furnish a safeguard to an unfitted freight train approaching the same signal at a very much lower, and yet, dangerous speed. Moreover, with time element relay appliances there is always in existence an element of danger. A train may be traveling at a comparatively slow rate of speed when the first point of contact on the track is made and afterwards accelerate, so that, although the time occupied in traversing the measured length of track is not less than that for which the apparatus is set, its speed at the moment it passes the second point of contact is considerably higher than that calculated to be safe in the event of the signal in advance being at danger.

"The difficulties arising from such conditions, and the need for insuring that the capacity of roads is not injuriously affected by imposing unnecessarily low speed restrictions upon express traffic, would, in the opinion of the committee, render such devices unsuitable to British conditions. Moreover, it will be seen that out of 193 accidents which have been fully analyzed, in only three (or 1.6 per cent) of the whole number could it be said that a speed control device would alone have proved remedial. Such cases of accidents can, in the opinion of the committee, be adequately safeguarded, if not entirely prevented, by installing a train control device, either of a permanent or temporary character, which would provide an audible indication, as well as a brake application, to remind enginemen of the existence of a speed restriction over any curve, crossing, etc., in advance.

"The question of the utility of any form of automatic train control as a means for preventing buffer stop collisions has been carefully examined. It has generally been recognized, and the analysis of accidents reported upon during the past 10 years confirms the view, that the majority of buffer stop collisions take place at low speeds, seldom exceeding 5 or 6 miles an hour. Collisions at higher speeds are of rare occurrence, and are almost entirely due to brake or pump failures, or to lack of continuity of the power brake upon a train. For accidents of this description no remedy could be found in any form of automatic train control. . . ."

Analysis of Accidents

"An analysis of accidents reported upon during the 10 years ending September 30, 1921, furnishes information with regard to the preventable character of typical accidents upon British railways. It will be seen that the 193 cases analyzed have been divided as follows:

"A.—Accidents of various types (including buffer stop collisions) for which automatic train stop or train control is not likely to afford any remedy—73. Percentage, 37.8.

"B.—Train accidents due mainly to signalmen's errors, which are preventable by such well-known appliances as track circuit, electrical control of signals, etc.—49. Percentage, 25.4.

"C.—Train accidents mainly caused by failure of enginemen, which some form of train stop or train control with automatic application can alone prevent or beneficially affect—71. Percentage, 36.8.

"The 71 cases of accidents under C have been allocated under three heads:

"1. Derailments due to speed upon sharp curves, etc., for which speed control would be the best remedy, 3. Percentage of these cases, 4.22; percentage of all cases, 1.6.

"2. Miscellaneous cases, such as collisions with platelayers' trollies or other vehicles standing in the section between block posts, and derailments due to switches being out of position, or to rail breakages. For these classes of accident either a form of continuous control is necessary or localized control combined with continuous track circuiting and signal interlocking. Number, 12. Percentage of these cases, 17.0; percentage of all cases, 6.2.

"3. Train accidents directly due to failure of enginemen to observe or obey signal indications. This type of accident is preventable either by localized or continuous control. Number, 56. Percentage of these cases, 78.87; percentage of all cases, 29.0."

The committee considers that on a very conservative estimate, automatic train control would have a preventive or beneficial effect, to the same percentage as is shown in the foregoing tabular statement, upon a total number of accidents at least 10 times as great as those actually inquired into.

Relative Value of Train Control at Distant and Stop Signals

"The evidence of both railway officers and men was generally in favor of some form of automatic train control, as a preventive measure against accidents of the class under consideration. But with regard to the relative value of train control at distant and stop signals, there are two distinct schools of thought. One, perhaps the older, school considers that the provision of control at distant signals is indispensable for safety; and that control at stop signals is of quite minor importance. This view is held very strongly by some of its advocates, so much so that it is thought that, if observation by enginemen of distant signals can be secured, security will result in many cases of accidents. The other school regards control at stop signals as of first importance, and control at distant signals as of secondary value. The main points in the evidence may be briefly summarized as follows:

"(a) In respect of stop signals—the weight of evidence was in favor of control by means of a full brake application when danger was indicated, but against any audible indication.

"(b) In respect of distant signals—a partial brake application combined with an audible indication was favored by the majority for the warning position.

"(c) There was unanimity against the utility of visual cab signals, with which the general opinion of the committee concurs.

"The committee is in no doubt respecting the relatively higher value of control at stop than at distant signals. Further information obtained from the critical analysis of accidents confirms this view. In the 56 cases in which it is considered that beneficial results might have been expected from a system of automatic localized train control, it is shown:

"1. That control at distant signals would in the circumstances have been necessary as a preventive measure in 7 instances.

"2. That control at either a distant or stop signal would have proved effective in 18 instances.

"3. That control at a stop signal, either home, starting or advance, would have been necessary in 31 instances.

"The above figures prove conclusively that control at the selected stop signals is an essential feature of automatic train control. * * * The committee finally agreed that in general, and especially in areas liable to bad atmospheric conditions, sufficient provision for safety against preventable train accident due to failures of enginemen cannot, in the existing conditions, be made without recourse to train control at distant signals also.

"There are three alternative methods of train control at distant signals:

"1. The first and simplest, which provides 'location' effect, is to provide a track appliance fixed in character which shall give one and the same effect on locomotives whenever the distant signal is approached, irrespective of its position. Advocates of this method were particularly unanimous that a brake application and audible signal should be combined for the desired effect.

"2. The second method is to provide an appliance which shall give these warning effects, whenever distant signals are passed in the 'warning' position; no effect being produced when the signal is in the 'clear' position. This method necessitates, if the track appliance is fixed in character, the employment of electrical energy for the purpose of differentiating between the warning and clear positions of the distant signal. It is consequently more costly, both as regards track and locomotive apparatus than the 'location' system. * * *

"3. The third method, advocated by a large majority of the witnesses examined, provides train control in the direction of two separate effects for the warning and clear positions, respectively. The clear effect to be an audible signal distinctive from that given for the warning effect, but with no brake application. The increase in cost of this over the second method (presuming the track apparatus is fixed in character) is small, and affects the locomotive apparatus only. * * *"

Fog Signaling and Train Control

"Train control at distant signals should be considered in relation to manual fog signaling. The questions that arise are: Will control prove an acceptable substitute for fog signaling; and if so, what effects must train control produce to prove acceptable? On the first point, though some of the witnesses expressed doubt, the answer was in the affirmative by a large majority of both officers and men. On the second point, it is clear, at all events, in areas subject to fog, that train control must produce effect on all occasions when the train passes distant signals, otherwise, one of their functions, i.e., to give geographical information to engineman of their whereabouts, will only be performed when these signals are passed in the warning position. With this minimum requirement, both the first and last methods comply, but the second does not.

"There was considerable diversity of opinion whether it is essential, in order adequately to meet all fog signaling requirements, that separate effects must be produced by train control to differentiate between the clear and warning positions of distant signals. It appears to the committee to be more a traffic than a safety question. In some areas, no doubt, existing traffic facilities would be reduced unless a dual indication were provided.

"As a general rule, the committee considers that train control at distant signals, in order adequately to meet fog signaling requirements, should provide distinctive effects for both clear and warning positions. Over large and well defined districts, however, where there is no liability to fog, the 'location' method, whereby the warning indication only is given on approaching, all equipped distant signals, whatever their position, may prove sufficient. * * *"

Outside of the financial effect which the committee states would not be so great as might be expected, it continues, saying, "there are certain beneficial effects which it may be anticipated will result from the use of control wherever possible, in place of manual fog signaling. These are:

"(1) Manual fog signaling is not free from special danger to the personnel employed. A number of fatalities occur yearly to men employed in visiting fog posts, and injuries result to fogmen from the explosion of detonators. The elimination of this class of accident proportionately to the degree of substitution of control may be anticipated.

"(2) Owing to the sudden appearance of fog, it is not always possible for fogmen to be at their posts when their services are essential. Enginemen in such conditions have an anxious time. Sometimes they receive no geographical indication of their whereabouts and are in complete uncertainty whether they have passed a signal, and have missed seeing the fogman's green light, or whether the absence of an explosion or green light is to be explained by the fact that the fogman has not arrived at his post. Control producing both an unmistakable clear and warning effect would do away with this sense of insecurity, and undoubtedly improve safety conditions.

"(3) Failures of detonators to explode, and of enginemen, especially in the case of double-headed trains, to hear the sound of detonations, as well as mistakes made by fog-signalmen themselves, are not unknown under the manual system of fog signaling. A betterment in all these respects may undoubtedly be expected from the introduction of control.

"(4) Some additional facilities to traffic working may be counted upon."

Train Control Considered Essential

"As the result of this general investigation of the subject matter, the committee has found that there is a *prima facie* case for automatic train control upon British railways, as the only means for obtaining greater security against the class of train accident, which in general results from failure on the part of enginemen.

"They consider that the method of automatic train control most likely to suit existing conditions upon British railways should supplement rather than replace existing block telegraph and signaling systems, and comprise:

"(a) Automatic train stop, located at or near selected stop signals, which shall, in the event of a train passing such signals, when they indicate, or should indicate, danger, bring the train to a standstill.

"(b) Automatic warning control at unworked distant signals, also at worked distant signals, whenever these are passed in the warning position, and at such other places where danger from too high a speed may be anticipated. In addition to the above, which the committee regards as the minimum necessary to obtain adequate security against train accident, it is held that the selected system of control should be capable of producing a distinctive audible effect for the clear position of worked distant signals, in order to meet conditions of fog signaling."

Requisites for Installation

"In compiling these requisites, due weight has been given to safety requirements, as well as to the following considerations:

"(a) Standardization of equipment to obtain uniformity of effect upon all railways.

"(b) Future development in the direction, for example, of three-position and automatic signaling, and extended electrification.

"(c) Lowest cost compatible, with due regard to safety conditions.

"1. The control apparatus should be constructed to work in conjunction with any system of fixed signaling, mechanical, power worked, or automatic.

"2. To be so constructed in respect of both track and train elements as to insure the undermentioned effects being produced upon locomotives* when running either upon home or foreign lines in Great Britain.

"3. The control to be capable of producing three alternative effects, namely, (a) danger, (b) warning, (c) clear, as follows.

"(a) The danger effect to be produced at a two- or three-position stop signal, when this indicates or should indicate danger, and to consist of a full application of the power brake. In the case, however, of purely automatic signals, the danger effect is required to be produced only when the signal correctly indicates danger. The brake application to be capable of release by the engineman, only by an action entirely distinctive in character from that required for the release of the warning brake application.

"(b) The warning effect to be produced at a two-position distant signal or at a three-position signal, whenever these indicate or should indicate caution, and to consist of an unmistakable brake application and audible warning. The brake application in this case to be capable of immediate release by the engineman. The action for brake release in respect of both 'danger' and 'warning' effects must necessarily reset the locomotive apparatus in the normal receptive position.

"(c) The 'clear' effect to be produced at a two-position distant signal or at a three-position signal, when these correctly give the clear indication, and to consist of an audible signal distinct from that required for the warning effect. The control of this locomotive apparatus to be in the hands of the engineman, so that he can render it operative or inoperative at will.

"The clear effect shall be produced only when this condition is indicated both by the signal concerned and by the position in the frame of the corresponding signal lever; and in the case of automatic or semi-automatic signaling also by the condition of the corresponding track controls. In all other circumstances, either the danger or the warning effect, as the case may be, shall be produced.

"4. To be so constructed that the correct position of all track and train elements of the device shall be assured under all conditions of speed, atmosphere, weather, wear, oscillation and loading; and that the device shall operate under all conditions which permit of traffic movements.

*The word "locomotive" wherever used in these requisites includes the leading control vehicle of multiple unit trains, whether steam or electric.

"5. The track apparatus in the event of failure of any of the actuating mechanism, electrical energy, or connections, and in the event of other electrical faults, to assume the danger or warning condition, as the case may be, and give the corresponding indication. The integrity and correct position of all moving parts of the track apparatus, which are designed to come in contact with the locomotive apparatus, must be continuously indicated to the signalman, or detected in the case of automatic signaling. Failure of any portion of the locomotive control apparatus, which prejudicially affects the brake control in connection with the danger and warning effects, to give an unmistakable application of the power brake.

"6. To be capable of operation upon locomotives fitted with air, vacuum, steam or other power brakes, or any combination thereof.

"7. The locomotive apparatus to be such as not to interfere with or impair the efficiency of the normal working of the power brake.

"8. The apparatus to be such that it will be operative when the locomotive is running in forward or backward gear, without involving any action additional to that normally necessary for reversing the direction of travel of the locomotive.

"9. The apparatus to be inoperative automatically in respect of the danger effect when a train passes a signal not applicable to the direction of its movement.

"10. To be of simple standardized construction with easily interchangeable parts so that maintenance, inspection and tests to insure efficiency of all the parts shall be easily carried out. Any part of the apparatus which is liable or designed to be destroyed by shock of impact must be capable of rapid replacement.

"11. To be so constructed and installed as not to constitute a source of danger to railwaymen or passengers.

"12. Where there are a number of signals at any point applicable in the same direction to one road, the track apparatus for that road must be capable of operation in conjunction with any one of the signals in question."

Recommendations Regarding Requisites

The committee has the following recommendations and remarks to make in connection with the requisites:

"(a) Localized (intermittent) control is recommended as more suitable for prevailing conditions on British railways than continuous control. The contact type is selected in preference to the non-contact type. The necessity in this country for a speed control or time element device has not been established.

"Locomotive and track apparatus for train control at distant signal locations must be of a robust and durable character; the track apparatus of the fixed element type. The use of electrical energy for obtaining a distinctive clear effect is acceptable. Locomotive apparatus should preferably not require the carriage of batteries, particularly those of a secondary character.

"For stop signals the train stop apparatus, both track and locomotive, should be of a simpler and less expensive character, the track element preferably of the mechanical movable trip type. In the case of the locomotive apparatus a mechanism of the frangible character would not be objectionable. Overhead train stop or train control devices are not regarded as suitable. The possible development of power working of signals should not be lost sight of in the selection of train stop and train control devices.

"(b) In the opinion of the committee the most suitable position for the track element of train control at distant signals is the center of the four-foot way. The possible effect of the selection of this position upon any scheme for electrification has to be borne in mind.

"(c) Requisite No. 3.—Change of effect: In connection with the release of this effect of control the committee records its preference that the arrangement should be such as will permit of the engineman actuating the release without having to leave the foot plate of the engine for the purpose, unless the additional expense thereby incurred is considerable.

"(d) To meet the possibility of failure of locomotive apparatus for train control or train stop appliances, the cut-out or other device for the purpose should differ essentially from that in use for obtaining the normal stop signal control release, and will require to be protected from unauthorized use.

"(e) For emergency, e.g., pilot, working upon track equipped with control apparatus for one direction of travel only, it will be necessary for railway companies to issue instructions regarding the precautions to be taken for cutting out the locomotive control or stop apparatus as required.

"(f) The requisites do not deal specifically with difficulties which may arise from the adoption of automatic train control in connection with helper engines, double-headed trains, or two trains coupled together. As regards helper engines, it is held that track control apparatus will not be required at signal locations on short and continuous lengths of service rising gradient where helper engines are normally employed at the rear of all trains. This may perhaps render the retention of manual or fog signaling at distant signals located on such grades necessary.

"In localities where, over longer sections of track, with variations in direction and inclination of gradient, automatic train control will no doubt require to be installed, there is a possibility of signalmen returning a track control device from clear to normal before a banking engine in rear of a train, or the second engine of two trains coupled together, has passed it. The committee suggests a last-vehicle or track circuit device would meet the case. In the case of double-headed trains, the committee sees no reason why both enginemen should not be called upon to release their brakes in the event of a train control distant signal warning effect. In the case of stop signals, the likelihood of the signal being returned to danger before the second engine has passed is inconsiderable.

"(g) The effect of the extended adoption of electric traction upon the use of the electrified ramp for distant signal control will require consideration, and special precautions may be necessary to safeguard a false clear effect being given as the result of the ramp becoming energized from an extraneous source. The possibility of alternating current proving necessary eventually for the purpose of energizing the ramp, will be for consideration in the design of the engine apparatus.

Cost of Installation

In estimating the cost of installation the committee has taken the figure of 24,000 track miles as representing the maximum mileage for passenger lines to which automatic train control would in any circumstances require to be applied. Regarding the number of signals and locomotives it estimates as follows:

Distant signals—Equipped with dual application, 18,000; Equipped with warning indication only, 6,000.

Stop signals—Equipped with trip device for "danger" effect, 38,000.

Locomotives—23,000.

The estimated first cost is, 18,000 distant signals at $308.70 each, $5,556,600; 6,000 distant signals at $110.25 each; $661,500; total for distant signals, $6,218,000.

The annual charge for maintenance and renewals at 7½ per cent of first cost, $466,357.50. First cost of fitting 38,000 stop signals at $4,189,500. Annual charge for maintenance and renewals, 7½ per cent, $314,212.50.

First cost of fitting 23,000 locomotives at $441, $10,143,000. Annual charge for maintenance and renewals (10 per cent first cost) $1,014,300.

The total cost of the full scheme would appear to be:

Distant signals, $6,218,100.

Stop signals, $4,189,500.

Locomotives, $10,143,000.

Total first cost $20,550,600. Total annual charge for maintenance and renewals, $1,894,870.

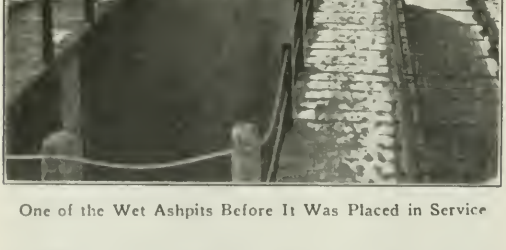
Unusual Ash Pits Feature New Engine Terminal

New York Central Incorporates Interesting and Economical Designs in Solvay Enginehouse Project

THE NEW YORK CENTRAL has recently completed and placed in operation an interesting 30-stall enginehouse and terminal layout at Solvay, outside the city limits of Syracuse, N. Y., for the care of passenger locomotives turned at this division point. The new terminal, which replaces one that had become congested and crowded because of its circumscribed limits within the city, contains many features of economical design, construction and operation which are a departure from ordinary practice. This is notable in the design of the ash pits, which are circular in section, of mass and reinforced concrete and economical both in cost and operation.

Location and General Features of the Terminal

The new terminal had been under consideration for a number of years preceding the war and in 1918 construction was started but on account of financial and other conditions



One of the Wet Ashpits Before It Was Placed in Service

little was done. Work was resumed in 1921 and the project was carried through rapidly to completion. The layout is primarily for the care of passenger train locomotives received from and sent out over the several divisions of the New York Central centering at Syracuse. Some freight power is handled, however, as well as switching locomotives. The terminal is located about 3.5 miles west of the Syracuse passenger station. It adjoins the four-track main line to Buffalo and the two-track line of the West Shore Railroad, also a part of the New York Central.

The terminal includes a 30-stall enginehouse of brick walls and timber roof on concrete foundations which is served by a 100-ft. turntable. All stalls are completely equipped with modern facilities, including electric welding and are exceptionally well lighted, aside from the natural light, by a comprehensive overhead direct lighting system. Portable inspection lights are also provided. Flood lights are used in considerable number in and around the turntable, the ash pits and the coaling station. A modern power plant furnishes hot air for heating, steam and compressed air. A well equipped machine shop adjoins and is a part of the enginehouse, as are the offices, etc. The coaling plant has a rated capacity of 1,000 tons with duplicate hoisting machinery. Four ash pits of the circular type have been installed, giving a capacity for about four days, normal operation between cleanings.

Passenger and Freight Power Are Turned at Different Points

Both the New York Central's four-track main line and the West Shore's two-track main line pass through Syracuse and there is a heavy through passenger and freight traffic over both of these lines. There is also considerable traffic which originates at or is destined for industries in Syracuse and the immediate vicinity. In addition the Rochester division, better known as the Auburn Road, leads to the west, the Ontario division to the north and the Chenango branch to the south. The traffic handled through Syracuse is naturally large and the problem of turning power quickly and efficiently becomes important. Under the method of operation now in use in connection with the new terminal, freight and passenger engines are, with a few exceptions, turned at separate points. Freight power from and to the west, i.e., locomotives used on the Syracuse and Rochester divisions are handled at DeWitt, a combined engine terminal and freight yard, while those on the Mohawk division (Syracuse to Albany) are handled at Minoa. Both of these terminals are east of Syracuse proper. Other freight power is ordinarily handled at Belle Isle to the west but at the present is being turned along with all of the passenger engines at Solvay.

In more detail, the power now turned at Solvay consists of both passenger and freight locomotives for the following approximate number of trains and divisions over which they pass: The passenger train movement over the Syracuse division is about 30 trains daily each way and the number ove

Coaling Station in the Distance at the Right

the Mohawk, its complementary division, is about the same. There are about six passenger trains each way over the Ontario division, about five each way on the Rochester division and about three each way on the Chenango branch. Added to this number of passenger train movements, there are five double header freight trains each way on the Ontario division while from one to three coal trains are received daily from the Pennsylvania or handled by the Pennsylvania from Elmira, N. Y., over the Central's line. Thus 85 or more locomotives are handled daily without taking into account the switching power housed and handled at Solvay. It should be noted in connection with this, that the turning of freight power at Solvay is only temporary and that it is intended solely for passenger locomotives.

The Ash Pits Are of Unusual Design

The ashing facilities at Solvay are easily the outstanding features of the Solvay terminal because of their departure

The Arrangement of the Three Ashpits on the Inbound Tracks

from ordinary practice, their low cost and their ease of construction. The arrangement consists of four wet ash pits of mass and reinforced concrete, built in the form of circular wells. Three of these pits are located under the inbound engine tracks and one under one of the outbound tracks, thus providing ashing facilities for outbound power, an arrangement of which the advantage is obvious.

Certain advantages are accorded to this type of pit which are of importance. They can be built for about $11,000 each, exclusive of water connections and drainage. Three pits, giving the same number of engine positions as would be permitted by a 200 ft. pit, can be built for less than half the first cost of the long pit. Maintenance of traffic not being a necessity, these particular pits were constructed and others can be constructed likewise by forming the circular rim and then excavating inside the shell by means of a crane and clam shell bucket, the weight of the shell carrying it down into position. After the circular shell has reached the proper elevation the bottom and piers can be placed and likewise the section of concrete forming the slope.

As compared with the long 200-ft. pit, there is very much less structure to maintain. In the case of the long pit, 400 lin. ft. of steel girder construction must be maintained, as contrasted with 150 ft. for the three small pits. The storage is concentrated directly opposite the engine positions for the full capacity of the pit, and until any one pit is completely filled, the number of engine positions is not reduced. While the long pit will allow greater storage capacity for the same number of engine positions, nevertheless to utilize the maximum storage capacity of the long pit, the number of engine positions must be reduced for a portion of the time in order to completely fill it, thereby reducing the efficiency of the terminal from an ash pit standpoint. In the circular types, additional storage capacity can be obtained by deepening the pit.

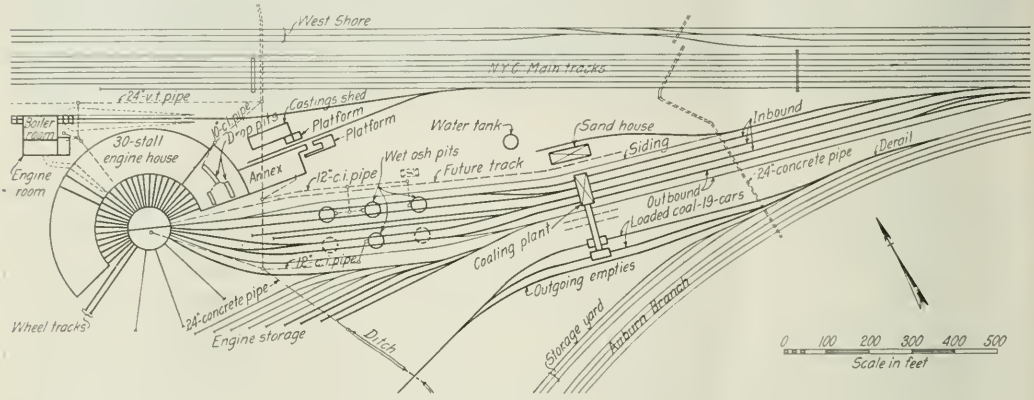
If an extension of plant is required, one or more pits may be added without disturbing the others. In view of the lesser lengths of track supported over or adjacent to the water, a much better opportunity is afforded for protection and a man may cross between the engines without as great an element of risk. On account of the smaller first cost, it is reasonably economical to install pits with walkways on the water side rather than to leave them open or to install gratings. When the circular type cannot be built by the methods described here, an alternate type, somewhat hexagonal in section, has been developed which can be built in place at about the same cost.

Basically the pits are concrete wells with an inside diameter of 32 ft. and with 15-in. walls. The total depth from base of rail to the under surface of the bottom slab is 20 ft. and to the upper surface, 17 ft. 8 in. The outer ring was poured as a unit on the surface of the ground and when the concrete had set sufficiently it was brought to final position. This was done by digging out in the center of the ash pit by means of a clam shell bucket, the pit wall sinking of its own weight as the dirt was removed. Once in position, the reinforcing could be placed for pouring the slab base or floor, which was poured integral with the track supports. The circular wall was not reinforced except at the base which was strongly reinforced by a series of 5/8-in. rods and stirrups, the base being not unlike the bottom edge of some caissons; and at four points around the circumference where the wall was built out to form supporting posts. This is shown clearly in the drawings.

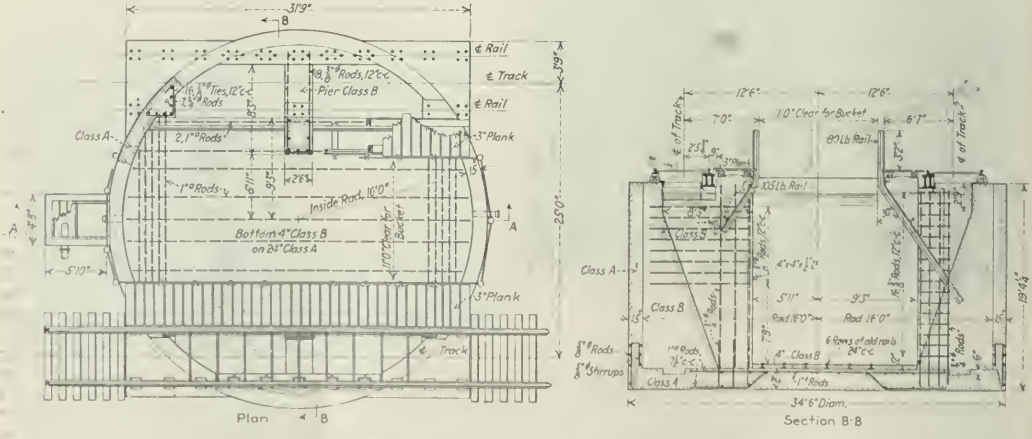
The two lines of rails nearest the circumference of the

pits are each supported upon a concrete sector with a maximum thickness at the top of 1 ft. 10 in., measured along the diameter at right angles to the track center. The inner surfaces of these supporting sectors are perpendicular for a distance of 2 ft. 9 in., after which they slope inward to a maximum thickness of 6 ft. 9 in. Each sector is poured integrally with a small pier extending at a 90 deg. angle from the sector and forming a center support for the inner rail of the track. This pier is finished flat under the supports but is brought elsewhere to a "V," thus diverting the ashes to either side. In order to continue the support under the outer rail to the same distance that the inner rail is supported, concrete blocks 4 ft. deep were poured on the outside of the pit wall. There are four of these blocks, two to each track over the pit.

The tracks over the pit are supported above the concrete by special castings for the lines of rail nearest the circumference and by I-beams on the inner lines. Two 12-in., 55-lb. beams are used for each line of rail, the space between the beams being filled with concrete and the side exposed to the hot ashes being protected by a ¼-in. steel plate specially fitted. The pits are cleaned by a locomotive crane with clam shell bucket, operating on a stub track adjacent to the pit tracks. In order to protect against damage from the bucket six rows of old rails 30 ft. long and on 24-in. centers have been imbedded in the concrete at the bottom of the pit with the ball of the rails slightly above the surface of the concrete. Each side of the opening between the 4 ft. walks on the inner side of the pit tracks has been protected by a series of 80-lb. rails bent at about a 30-deg. angle. These rails are vertical above the edge of the pit but slope toward the walls, thus forming guides for the bucket when it is withdrawn. Each alternate rail is extended and imbedded in the concrete sectors mentioned. The ends of the shorter lengths of the bent 80-lb. rails and the centers of the longer ones are tied together on each half of the pit by a length of 105-lb. rail paralleling the center line of the track while a second line higher up adds to the rigidity of the arrangement. A clear opening, 11 ft. wide, is secured.



General Layout of the New Terminal



A Plan View and Cross Section of One of the Circular Pits

The extended vertical sections of the 80-lb. rails form the posts for the protective "railing" on the inside of the walks. The railing consists of ¾-in. steel cables run through holes drilled in the web of the rail and is carried around the ends of the pits by wooden posts, making a continuous protection.

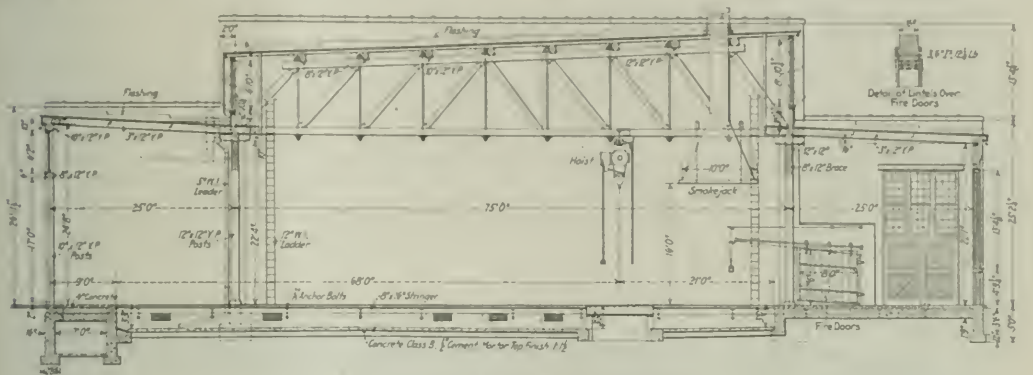
The two walkways are placed independently in the pit and are built of timber, easily removed and replaced when necessary.

A Well Arranged 30-Stall Enginehouse

The type of enginehouse which has been built at Solvay is one which has become, in a way, a standard on the New York Central. This particular house is a 30-stall structure with mass concrete foundations, brick walls and fire walls, timber posts and a timber monitor roof structure. It is felt on this road that in view of the question of obsolescence and the considerable amount of reconstruction work which is nearly always being carried out around engine terminals in which the location of the enginehouse is often changed, the more permanent forms of completely fireproof structures have serious disadvantages. The road also favors the idea of a minimum number of supporting posts between engine stalls and the elimination of all metal possible in the superstructure.

The enginehouse is a semi-circular structure with an inner radius of 126 ft. 5 9/16 in. With the exception of five stalls at one end which are 125 ft. deep, all stalls are 110 ft. from center line of the door posts to the interior faces of the pilasters in the rear wall. One stall has been constructed as an outbound track through the building; this divides it into sections of 10, 14 and 5 stalls, respectively, each separated by fire walls. The angle between center lines of stalls is 6 deg. 48 min. for all except the outbound track mentioned where the angles to either side have been increased to 7 deg. 15 min. This gives an opening of 15 ft. center to center of door posts on 29 stalls and 16 ft. 11 1/4 in. for the outbound track, although this section has no doors at front or rear. Each stall is divided into three bays which, in the 110 ft. sections of the house, are 25 ft., 64 ft. and 21 ft., respectively, from the door end. In the 125 ft. 5-stall section they are 25 ft., 75 ft. and 25 ft. The roof is a timber structure carried on 12-in. by 12-in. yellow pine posts. The center bay forms the monitor and this section is supported by timber trusses between stalls. The trusses are reinforced with steel rods in the 125-ft. section, which is chiefly the repair section of the house and little affected by hot gases. The roof over each bay is of the shed type, the slope of the inner bay and the monitor being toward the first line of interior posts and of the outer bay toward the rear of the house. In the 125-ft. 5-stall section the entire roof structure has been raised slightly over five feet, thus increasing the clearance under the monitor section for the use of a monorail hoist of 7½ tons capacity. The effectiveness of the lighting was also improved—a distinct advantage since this section is also the main repair section of the enginehouse.

Windows of large size have been installed in the rear and end walls, in both sides of the monitor and over the doors of the 125-ft. section. Smaller sash has been installed over the doors of the 110-ft. section. Daylighting is thus well taken care of, there being about 19,000 sq. ft. of windows in the enginehouse and in the 52-ft. by 92-ft. annex which



A Section Through a Standard 125-ft. Stall

A Compact Well-Arranged Layout

includes the machine shop, offices, oil storage and quarters for engine crews. The interior electric lighting is also well taken care of. Besides three large drop lights between stalls, six drop lights have been provided in clusters of two with large reflectors, so arranged as to throw the light on each side of the locomotives. These lights are controlled by a switch arrangement on the rear wall. There are also numerous outlets for the use of portable lights. Another installation of interest electrically is the provision at each stall for the use of a portable electric welder.

Engine Pits Form Sides of Hot Air Ducts

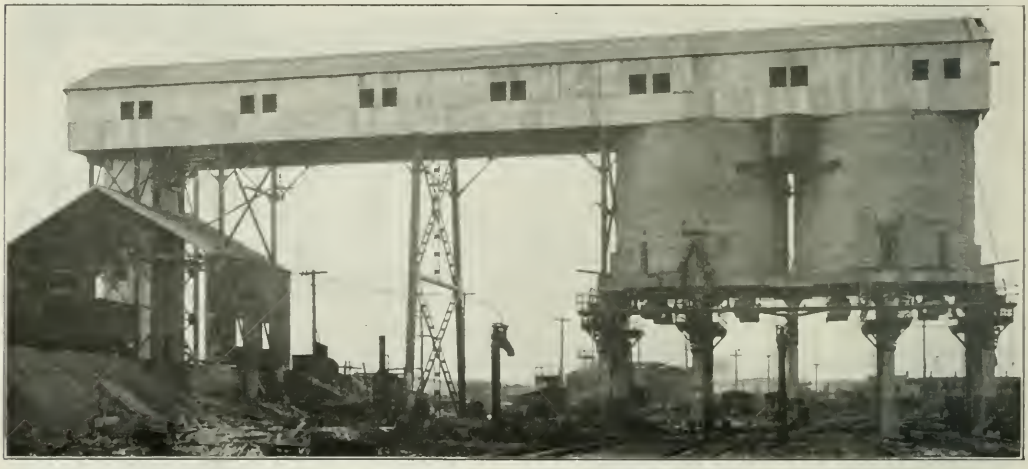
The engine pits are of concrete, crowned slightly at the bottom and drain toward the inner and outer circles. The wheel pits have all been installed in the 125-ft. section, three tracks having driver wheel pits and two tracks having pony truck and tender pits. One wall of the pits forms one side of the hot air ducts through which the pits and the house are heated. These air ducts have five screened openings into each pit and connect at the inner circle with a large hot air duct which follows the line of the inner circle just below the floor system and inside the doors. It is of concrete of variable inner dimensions to secure the most efficient flow of the heated air. The two arms of this duct tap into the main heating duct from the power house adjacent to the enginehouse between stalls Nos. 18 and 19, the sides of the pits at this point forming the sides of the duct. The clear height at this point is about 7 ft. 6 in. The junction of the two arms is constructed to divert the air in the proper quantities. This is accomplished chiefly through a "V" or baffle wall located so as to give different dimensioned passageways to either end of the house. The entire enginehouse is floored with six inches of concrete, this flooring forming the top of all air conduits except the feeder extending around the inner circle, over which the enginehouse tracks pass. At these points a reinforced concrete slab 11½ in. thick forms the top and on this is placed 7½ in. of cinders and then the regular floor construction. As a precaution against engines going through the rear walls, an opening has been left in the floor back of the bumpers. This opening is covered with plank flooring which the pony trucks can easily break through, thus effectually stopping the engine.

In addition to the equipment mentioned for the enginehouse proper, each stall is provided with a link in the rear wall by means of which, in conjunction with a special motor and drum on the turntable, dead engines can be hauled into position. Another unit of interest is a portable oil and repair truck used by the enginehouse forces. This truck contains a generous equipment of tools, oils, grease, etc., necessary for the pit work and inspection on the engines. It also contains a special high candle-power inspection light which can be placed in the pit or at any other desired location, greatly facilitating the work. By concentrating all of the various needs of the locomotive, electrical, air brake and other inspectors, and the men and their helpers, it is estimated that a substantial saving has been made in time saved. A test indicated that the amount of walking eliminated by the foreman and his 11 men in one 8-hour period was the equivalent of 43 miles by one man.

The enginehouse, power house and machine shop are completely equipped with all necessary facilities where needed, arranged for easy access. The equipment includes three 400 hp. water tube boilers with space for a fourth unit, pumps, feed water heaters, boiler washing plant, hot air heating coils and large size blower, oil filters and an ash hoist and storage bin, etc. The power house has an inside trestle for coal cars.

A Large, Modern Railroad Designed Coaling Plant

The coaling plant is of reinforced concrete and steel throughout, making a fireproof structure with a rated capacity of 1,000 tons. The actual capacity appears to be somewhat greater than this. The entire design aside from the machinery was prepared by the engineering department of the road with the purpose, among other things, of facilitating the rapid construction of the plant. Coal is delivered in hopper-bottom cars operated by gravity over two tracks and is discharged into hoppers under the tracks from which it is elevated to a conveyor gallery. Duplicate hoisting and conveying machinery has been installed. The storage facilities are in the form of two circular concrete bins resting on a "flat" slab which in turn is supported by 15 concrete posts, all concrete being reinforced. The bin structure spans four tracks and serves six tracks with two coaling spouts per track. The shed over the hopper tracks, the enclosure of the hoisting equipment and the conveyor gallery are of steel construction. The concrete bins are 33 ft. 8 in. inside diameter, 30 ft. 8 in. in height and have a wall thickness of 8 in. The slab measures 74 ft. long by 37 ft. wide by 1 ft. 7 in. thick and the supporting posts vary in size from 2 ft. by 2 ft. 6 in. to 2 ft. 6 in. by 3 ft. 6 in.



A Modern, Workmanlike Coaling Plant

An interesting feature of this coaling station, aside from its design, was the short period of time required for its creation. The excavation for the footings was started on August 30, 1921. By October 8 the columns supporting the bins had been poured and by October 31, the concrete work in the storage bins had been completed. Thus in about 50 working days after excavation had been started all footings, piers, columns, floor slab and bins involving a total of 850 cu. yd. of concrete had been reinforced and poured with due time given for aging of all parts. While the speed of the work in this instance was the most outstanding feature, excellent time was made in the construction of the terminal as a whole. No delays were encountered at any time, the contractors having their materials and their forces well in hand at all times.

The Solvay terminal was designed by and erected under the supervision of the engineering department of the New York Central, Geo. W. Kittredge, chief engineer; J. W. Pfau, engineer of construction, and R. E. Dougherty, designing engineer; and J. H. Van Buskirk, mechanical engineer. R. H. Colson, assistant engineer, was in active charge of the field work. W. M. Ballard, Syracuse, N. Y., was the general contractor for the grading, framing and masonry; the Edward Joy Company, Syracuse, for the piping, plumbing and electrical work; and the Link-Belt Company, Chicago, for the coaling plant machinery.

Lease of Panhandle by Pennsylvania Authorized Conditionally

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION has rendered a decision authorizing the acquisition by the Pennsylvania Railroad Company of control of the railroad and leased lines of the Pittsburgh, Cincinnati, Chicago & St. Louis by lease for 999 years from January 1, 1921, subject to the condition that the Pennsylvania and the Pennsylvania Company shall not dispose of their stock in the Panhandle without the consent of the commission. Commissioners Potter, Lewis and Cox signed a concurring opinion vigorously opposing the imposition of this condition as not workable; Commissioners Hall, Daniels and Campbell dissented because of it, and Commissioners Eastman and Aitchison dissented on the ground that the lease is not in the public interest.

The Pennsylvania on June 2, 1921, filed an application, pursuant to paragraph (2) of section 5 of the interstate commerce act, for an order authorizing the lease. Hearings were held on September 27 and December 13, 1921. No representations were made by any state authority either in favor of or against the granting of the application.

At the first hearing the Continental Insurance Company filed an intervening petition asking that the application be denied on the ground that the proposed lease is unfair to the independent stockholders of the Panhandle. At the second hearing it was contended in behalf of L. Kemp Duval, an intervening minority stockholder owning 1,225 shares of the Panhandle, that not only should the past earnings for a period of not less than 10 years be considered, but that in determining what those earnings were, the commission should make an investigation and ascertain what the true earnings were.

4 Per Cent to December 31, 1925, 5 Per Cent Thereafter

By the terms of the proposed lease, the Panhandle demises to the Pennsylvania all the railroads owned and operated by it, and assigns to the Pennsylvania the leases which it holds of the Little Miami, the Terre Haute & Peoria, and that portion of the Evansville & Terre Haute extending from Terre Haute, Ind., to Rockville, Ind. The Pennsylvania proposes to pay to the Panhandle, as rental: (a) a sum equivalent to four per cent on the Panhandle's outstanding capital stock until December 31, 1925, and five per cent thereafter, without deduction for any taxes other than an income tax on the stockholder levied by the government of the United States; also a sum equivalent to such percentage on any additional capital stock that may be issued in the future. (b) A further sum sufficient to enable the Panhandle to maintain its corporate organization and to pay all taxes and assessments and all installments of interest and sinking funds on its bonded and other indebtedness, when due and payable, and all taxes in respect of such bonded or other indebtedness.

The Pennsylvania further agrees to pay all rentals accruing under the leases of the Little Miami and the Terre Haute & Peoria, and all sums to become due under any contracts for trackage or other rights conferred upon or possessed by the Panhandle. The lease further provides that the Pennsylvania may and will make all such improvements, betterments and additions to the demised premises as shall in its judgment be necessary, and that the cost thereof shall be repaid to it by the Panhandle, either in money, or by the issue and delivery to it of bonds of the Panhandle, or of its capital stock, as the Pennsylvania shall elect. Upon the maturity of any of its bonds, during the term of the lease, the Panhandle, if unable to pay them, agrees to provide for their extension, or to issue and deliver to the Pennsylvania other bonds to provide for such payment.

Owns 98.3 Per Cent of Panhandle Stock

On March 15, 1920, the Pennsylvania Company, whose entire capital stock is held by the Pennsylvania, owned 651,245 shares of the capital stock of the Panhandle and the Pennsylvania owned 4,500 shares. These holdings aggregated 77.54 per cent of the entire capital stock. The remainder of the stock, amounting to 189,908 shares, was held by outside stockholders.

For many years the Pennsylvania Company and the Pennsylvania have been the financial backers of the Panhandle and its predecessor companies. Either one or the other of these two companies has guaranteed all the outstanding bonds of the Panhandle and has advanced funds from time to time to enable it to enlarge and improve its property, to provide equipment and to sustain its credit. On March 15, 1920, the Panhandle was indebted to the Pennsylvania Company for advances to an amount approximating $22,000,000, and thereafter issued and delivered to the Pennsylvania Company $20,000,000 of its five per cent, 50-year bonds, to discharge this indebtedness. Thereupon the Pennsylvania Company offered to purchase the outstanding minority stock of the Panhandle by paying to the holders thereof, par for par, 50-year five per cent bonds of the Panhandle, guaranteed, principal and interest, by the Pennsylvania. This offer was accepted by the holders of 174,791 shares. There remain outstanding 15,117 shares of minority stock, comprising 1.7 per cent of the total issue, of which the Continental Insurance Company owns 2,000 shares. The shares held by the Continental company were the only shares that voted against the approval of the proposed lease.

The Commission's Report

The commission says in its report:

"For many years the Panhandle and the Pennsylvania have worked in close co-operation and have interchanged and moved traffic as one transportation system. It is stated by the applicant that the proposed lease will enable it to operate the railroad of the Panhandle as a part of its system, which will eliminate much of the separate accounting now necessary. It is expected that economies in operation will be effected through a better alignment of operating divisions and the reduction of overhead expenses.

It should also simplify the work of preparing reports required by federal and state regulatory bodies.

"The interveners do not contend that the proposed lease would not be advantageous to the railroad companies involved nor that it would not effect economies beneficial to the public. They do contend, however, that the net income of the Panhandle for the years 1908 to 1917, inclusive, before deducting payments required to be made to sinking funds, averaged 6.75 per cent on its outstanding capital stock. They contend further that the principal factor in determining the value of the capital stock of a railroad company is the prospect of future earnings of the company, and that the circumstance that the stock of the Panhandle is virtually guaranteed by the Pennsylvania should not be given any appreciable weight in determining its value. For obvious reasons, the earnings for the period 1908 to 1917 cannot be taken as an index of future earnings. A vice-president of the Pennsylvania testified that in his opinion there was no hope that the Panhandle would earn a return equal to 4 per cent on its capital stock during the next five years, even with all economies that might be effected. As to the value of the guaranty, it is common knowledge that in many cases a guaranteed stock may sell on an interest basis comparable to that of bonds. Furthermore, in comparing the value of a rental with a return through dividends, it must be taken into consideration that dividends are not ordinarily measured by net income but are usually and properly much less.

"We do not consider it necessary to discuss our responsibility in protecting the interests of minority stockholders who may object to proposed action on the part of a carrier corporation, inasmuch as it is our view that the granting of the authority herein requested will not be inimical to the interests of any of the interested stockholders.

"As heretofore stated, approximately 98 per cent of the Panhandle stock is owned by the Pennsylvania or by the Pennsylvania Company. It is obvious that so long as that situation continues, the payment of the rentals reserved in the lease will be merely a matter of bookkeeping as regards the 98 per cent of the stock which is so owned. If the Pennsylvania were to dispose of the stock which it and the Pennsylvania Company now hold, an entirely different situation would be presented and one which might very well be said to be against the public interest. Such a sale of stock would separate the responsibility in operating the property under the lease from the proprietorship in the property which is now vested in the lessee. The Pennsylvania contends that we have no power to guard against such an occurrence by means of a condition attached to our authorization which would prevent the Pennsylvania from disposing of the stock without our consent, its position being that the conditions referred to in paragraph (2) of section 5 of the act are the conditions of the lease itself, and that the language does not cover a condition subsequent which is unrelated to the subject matter of the transaction.

The Condition

"We are unable to accept this construction of the law. In considering the propriety of proposed action for which our authority is sought, it is plainly our duty to take into consideration all surrounding circumstances that have a bearing upon the interest of the public in the thing sought to be done. It follows, in our opinion, that where the authorization depends for its justification upon certain existing circumstances, the authority given may be conditioned upon a continuance of the controlling circumstances, and proper provisions may be made to insure such continuance, or the substitution of circumstances as satisfactory from the standpoint of the public interest. In this case, we regard the relationship between lessor and lessee as essential to our approval of the proposed arrangement, and such approval will be given upon condition that the Pennsylvania Company and the Pennsylvania Railroad Company shall not dispose of their stock in the Panhandle without our consent. Subject to the aforesaid condition, we find that the acquisition by the Pennsylvania of control of the railroad and leased lines of the Panhandle under the terms of the lease described in the application will be in the public interest."

Commissioner Potter Dissents

Commissioner Potter in his concurring opinion, said:

"Our proper function is limited to an approval or disapproval, in whole or in part, of the proposed acquisition. We possess no power to require the establishment of a relation between the acquiring carrier and this commission, by virtue of which we may say what the carrier may or may not do in the future. We may not exact tribute from a carrier as an inducement to us to grant approval. We may not, as a condition, require that a carrier part with any of its property or surrender any of its existing rights. We could not properly demand that the applicant surrender to us its Panhandle stock. Nor should we demand control of that stock by tying it up so that it cannot be used without our consent. And yet this is exactly what the report attempts to do when it says the Pennsylvania may acquire the Panhandle by lease only upon the condition that it surrender control of an important asset which it now owns, and give to us the power of saying how it shall be used during 999 years.

"There is much that can happen within 999 years. This commission may not be in existence that long. Notwithstanding our order, the Pennsylvania might in the future go ahead and sell the stock without coming to us. It may be sold under a decree of court at the instance of a creditor. The condition would not prevent these and many other events. Certainly it could not be said that we are empowered to destroy the value of the Panhandle stock as property, although such is really the logic of the condition imposed. The stock in question is property, and will continue to be property, and the title and power of sale remains with the Pennsylvania. Would its sale constitute a breach of a contract made with us, and, if so, would the remedy be to recover damages and how and to what extent would we have been damaged? We have no authority to build up such a right for the government. Would the lease automatically terminate and the property revert to the Panhandle? Clearly not. Would a breach of the condition which we have exacted give the Panhandle the right to re-enter and take its property? If we thought we secured that right to the Panhandle and it did not want to exercise the right, there apparently would be nothing that we could do. But the Panhandle could not have any such right. It would have agreed otherwise. The condition simply is not workable.

"The condition is inherently unwise and unreasonable. If effective, it is a destruction and waste of which we ought not to be guilty. Our job is to develop financial strength—not dissipate it. We should conserve assets for credit and other purposes and not render them unavailable. A lease without condition would vastly improve and strengthen the position of both carrier properties and serve the public interest. The condition, if valid, will injure the carrier and the public. In imposing such a condition we transgress our duty rather than perform it. We prejudice where we should benefit. The Pennsylvania now has a practical control through stock ownership of the Panhandle. The continuance of that control we find to be desirable and obviously it is. The Pennsylvania could part with the Panhandle stock and could hypothecate and otherwise use it. It is available to serve the public interest for credit purposes, but with the present relations between the companies such use might disrupt the system. Allow the lease to be made without condition and the stock could be used no more freely than now, but if through any adversity the stock should get out of Pennsylvania control the system would not be disrupted as would result from a sale of the stock without a lease. The public interest clearly requires that the lease should be made and that the stock should remain available for use as now. It cannot be in the public interest to render unavailable an available $50,000,000 asset.

"We say it is a good thing to put the properties together. We don't even say that the stock ought not to be sold. We recognize that perhaps it should be sold—but only with our consent. We say the Pennsylvania may acquire the Panhandle by lease *if* it will turn over to us the right to say whether an asset consisting of shares of stock shall be continued in its present form for 999 years or be converted into something else. To my mind this is an invasion in management in the field of company policy which has not been authorized and which properly was withheld from a government agency.

"Section 2 of paragraph (5) authorizes us to ascertain whether the terms and conditions of the lease or other instrument of acquisition are just and reasonable. Such an instrument necessarily must have terms and conditions. The terms and conditions contained in such an instrument presented by the application, and only those so contained, are the ones we are authorized to consider. The purpose is to give us power to determine whether the terms and conditions are unduly burdensome. There is no warrant in the statute for imposing any outside or new conditions establishing a right in us or a relation between the applicant and us as an inducement to us to act.

"The explanation of my vote in favor of the report containing the offensive condition is this. Perhaps the applicant will desire to proceed under the report. The application has been before us for a long time. Bad as I think is the report, it seems to be the only way by which the applicant can obtain what I conceive to be even partial justice. Perhaps the applicant will conclude that the condition is illegal, as I am strongly inclined to think it is, and that it may be disregarded, as seems to me it may. Whatever we may think of our power, we are not above the law. The courts may intervene in a helpful way. And then, too, it may be that some time within 999 years this commission will be composed of men whose views do not accord with ours. Perhaps other men at another time will correct our error. I even indulge the hope that with further consideration we may change our mind. The report is no worse than a denial and it may be helpful to have our views understood. So I vote for the report in its present form rather than for a denial. Commissioners Lewis and Cox concur in these views."

Strike Situation Shows General Improvement

Roads Refuse to Restore Strikers "Rights"—Interruption to Traffic on Few Roads

NEGOTIATIONS BY the Labor Board for ending the strike came to an end this week when it was learned that representatives of the managements were steadfast in their resolve not to restore seniority and other "rights" to the men out on strike in precedence over men now employed, should the strikers decide to return to their jobs. Announcement to this effect was made by Chairman Hooper on July 20. A. O. Wharton, a labor member of the Board, at the same time characterized the attitude of the carriers in this regard as "unusual" and said that this action "will place full responsibility" for the "continuation of the strike with the inevitable consequences" upon the carriers. The position of the executives was outlined in a statement issued by the western presidents' committee on public relations on July 20.

Acts of violence and intimidation continued throughout the week, although such instances were, on the whole, less serious than those which occurred last week. A number of railroads secured injunctions restraining strikers from interfering with new employees or the operation of trains. The walkout of clerks and stationary firemen and oilers on some roads caused some trouble, but on the whole the situation of the railroads all over the country shows steady improvement. On some roads, especially in the Southwest, a number of passenger trains have been cancelled and in a few instances the movement of freight has been slowed up somewhat.

The roads with a few exceptions are continuing to employ new men and in most cases applicants are so numerous that little difficulty is being experienced in selecting skilled men. In the East present forces are reported as being from 50 to 60 per cent of normal and with overtime work seems to insure a continued improvement in operation in the few cases where it has been impaired.

Strike Developments at Chicago

VIEWED FROM CHICAGO, headquarters of the Railroad Labor Board, the strike developments during the past week have included continuance of violence at many points, the clarifying of the real issues involved, and indications of a possible spread of the movement.

The "secret" meetings between Ben W. Hooper, chairman of the Labor Board, and B. M. Jewell, head of the federated shop crafts, were briefly outlined in last week's *Railway Age*. These meetings developed the shopmen's attitude toward a settlement, namely, that the present walkout may be ended (1) if an agreement to stop the practice of contracting is made by the carriers; (2) if an arrangement for modifying certain working rules which reduce the overtime pay of the shopmen is made; (3) if assurances are granted to Mr. Jewell that his organization will be given a hearing by the Labor Board on the wage issue; (4) if the establishment of *national* boards of adjustment is agreed to by the carriers; and (5) if the strikers are taken back without loss of their seniority and other "rights."

E. F. Grable (Right), Leaving White House After Conference With President

This program was presented to a committee of railway executives composed of B. F. Bush, president of the Missouri Pacific, representing the southwestern roads; W. R. Cole, president of the Nashville, Chattanooga & St. Louis, representing the southeastern roads; L. F. Loree, president of the Delaware & Hudson, representing the eastern roads, and Samuel M. Felton, president of the Chicago Great Western, representing the western carriers. The results of this conference are indicated in the following parts of a letter which was subsequently sent to Chairman Hooper by the executives present at the meeting:

> This strike is a refusal to accept the results of the arbitration of the Labor Board pursuant to law, after exhaustive hearings in which all parties concerned were fully heard. After careful consideration of your inquiry the conclusion seems necessarily to follow because of the strike called in defiance of the decision and order of the Labor Board and the controlling provisions of the Transportation Act, the issue thus raised is not one for consideration between the carriers and the representatives of the organized crafts on strike except through the further orderly processes before the Labor Board as contemplated by the Transportation Act. This statement is confirmed by statements which have appeared in the public press to the effect that these representatives are only willing to abandon this strike and return to service on the condition that they be relieved from acceptance of the mature decision of the Labor Board in the case referred to.
>
> No conference for that purpose is in our judgment permissible or tolerable because it would place the carriers participating therein in apparent cooperation with those on strike in seeking to find means to subvert the decision of the Labor Board. On the other hand, a prompt recall of the strike order would permit the resumption of former methods of conference and permit the consideration of any matters which representatives of the employees might desire to submit.

The letter also assured the board that the carriers will respond to the Board's call for further hearings on the issues involved should that course be taken.

The meeting on the same day between the heads of the five train service brotherhoods and the committee of railway executives named above, announced in last week's *Railway*

Age, resulted in the agreement by those present that the carriers would refrain from requesting the members of these organizations to perform work which would otherwise be done by the men on strike.

On July 13 the heads of the striking shop crafts unions carried their controversy to President Harding in a telegram in answer to the President's strike proclamation. In this telegram they charged the railroads with many violations of the Transportation Act, charged the Labor Board with having fixed lower than "living wages," and added:

We respectfully insist that no interruption of commerce or interference of mails was caused by direct or unlawful acts of the organized employees. Such interruption and interference result inevitably from attempts of railroads to operate with insufficient, incompetent and unskilled workmen.

Such interruptions and interference will continue and increase until agreement is obtained upon just and reasonable wages between the representatives of the skilled employees and railroad executives, who up to date have refused even to meet with employees' representatives.

Unrest Prevails Among Other Employees

Reports from Cincinnati told of a serious split in the ranks of the maintenance of way men, many of the general chairmen of that organization being in favor of joining the walkout and disregarding the refusal of E. F. Grable, president of the organization, to call a strike. In a statement T. C. Carroll, president of the general chairmen's association of the brotherhood, said that he had received from a majority of the general chairmen requests that he call them together in a meeting at which plans might be made for calling out the maintenance men.

Mr. Grable, who immediately announced his intention of going to Washington to enlist the aid of the President in holding his men in line, attributed a great deal of the unrest among them to requests made upon them to perform work formerly done by members of the striking organizations. He said, however, that only 24 out of the 197 general chairmen of the union were in favor of a strike.

It became known on July 14 that other workers, particularly the stationary firemen and oilers and clerks, had either been authorized to join the shopmen or were seriously contemplating such action. Timothy Healey, president of the International Brotherhood of Stationary Firemen and Oilers, authorized a strike of the members of that organization effective on July 17 in response to an "88.6 per cent strike vote of the membership." Defections in the ranks of the clerks' organization similar to those being reported among the maintenance of way men were indicated on July 14 in the reports of sporadic strikes of clerks on various railroads and threatened walkouts at many other points. E. H. Fitzgerald, president of the clerks' organization, predicted that some of his men would quit work despite his orders to the contrary. The prediction has been partly fulfilled.

Chairman Hooper continued his "personal" efforts to bring about a settlement of the shop crafts strike but on July 15, after a series of conferences, issued a statement outlining the "fundamental differences." He said:

Mr. Jewell and his associates suggested four things for consideration. Set out in the order of their importance, namely, the contract question, the protested rules embraced in board decisions, the recent wage decision and the establishment of a national adjustment board. Incidentally they demanded that after a satisfactory adjustment of the four matters named, all men out on strike would be reinstated in their former positions without impairment of their rights of seniority.

The carriers suggested that they would undertake to meet the first request of the employees by wiping out the contract system on the two or three roads where it still exists. They expressed the belief that this could be done and the board's decision against this practice made effective on all roads.

The railway executives further agreed to establish regional boards of adjustment similar to those already in operation for the train and engine service men.

The executives would not agree that the strikers, when they returned to the service, should take the positions and the seniority of the new men and the men who had remained in service.

As to the rule decision and the wage decision of the Labor Board, the carriers took the position that the shop crafts were at liberty to petition the board for a rehearing of these decisions, in which hearing the carriers would participate and by the result of which they would abide.

Mr. Jewell and his associates insisted that the carriers must agree to satisfactory modification of both the wage and the rule decisions of the board before the strike is called off. The executives declined to consider these two decisions, except in connection with a rehearing by the board.

Roads State Their Position

The position of the railroads was further clarified the following day when the western presidents issued a statement outlining the strike situation and answering several of the contentions being widely circulated by Mr. Jewell through the medium of statements to the press. The statement of the executives said in part:

The situation is somewhat better in eastern territory than elsewhere, but western railways report increasing numbers of men returning to work, and most of them report the movement of trains normal. Developments show that the main thing needed to insure the return of normal conditions is protection of men who want to work from violence by strict enforcement of the laws.

Strikers at Slater, Mo., Looking Over Incoming Passengers for New Employees

Several railway executives have, at his request, met and conferred informally with Chairman Hooper of the Railroad Labor Board regarding possible means of terminating the strike. The railway executives have unanimously indicated that they will not agree to any plan which is inconsistent with the decisions which have been rendered by the Labor Board, and that they will not confer with representatives of the strikers while the strike continues, but that they are perfectly willing to attend any meeting, or participate in any hearing called by the Labor Board with a view to effecting a settlement that would not nullify but uphold and carry out the board's decisions.

The railway executives also have indicated a willingness to accept any modification of its decisions which the Labor Board, after hearings, might make. They cannot agree to any conference with the representatives of the strikers because the very purpose for which such conference is sought by representatives of the strikers, as avowed by B. M. Jewell, is to secure a settlement contrary to the decisions of the board, and for the railways to agree to this would be to undermine the dignity and influence of the board, just as the unions are trying to do by this strike.

The facts show clearly that the executives of the railways have shown willingness to do everything that is reasonable to end the strike, while Mr. Jewell has indicated that only by the railways surrendering to his demands and disregarding the decisions of the Labor Board can it be ended. This leaves responsibility for continuance of the strike solely upon the leaders of the strikers.

Hooper Abandons Peace Plans

The proposed plans for the settlement of the strike were outlined and the futility of reconciling the men and the

railroads on certain points were stressed by Chairman Hooper in a statement issued on July 20 intended apparently to end the many rumors of new "peace" plans sponsored by members of the Board.

"As there does not seem to be any probability of reconciling the antipodal views of the carriers and the men on the question at issue (seniority) the Labor Board or none of its members are now engaged in further efforts along that line," Chairman Hooper said. After outlining again the peace proposals of Mr. Jewell which have been described in previous issues of the *Railway Age* but to which has been

Copyright, 1922, New York Tribune, Inc. Used by Permission

Meanwhile the Public Should Keep Cool

added the provision that all strikers must be restored to service with their seniority and other rights unimpaired, the statement says: "My investigation of the attitude of the carriers has convinced me that no serious obstable is to be found in any of the items enumerated except the fifth (seniority). As to the contracting of railroad shops only 16 out of the 201 Class I roads had entered into or proposed to enter into such contracts. Nearly all of them have desisted from this objectionable practice and a majority of the carriers would be pleased to see the few remaining roads withdraw from it. As to the reopening of the wage decision and the disputes in regard to the seven protested rules, the carriers have no objection to this course. The foregoing disposition of wages, contracting and rules would remove from conflict all three of the questions on which strike votes were taken. The proposal to establish an adjustment board was not embraced in any strike ballot but has been a mooted question a long time. Many of the carriers are willing to have regional adjustment boards, some are willing to have a national board and some would favor such a board on individual roads. An agreement of some sort could doubtless be reached on this matter. But at present there is no possibility of an agreement on the question of the reinstatement of the striking employees with all rights restored."

Chairman Hooper then outlined the carriers' position on this question as stated in the announcement by the Western presidents and the employees' position as described by A. O. Wharton, labor member of the Board. Mr. Wharton's analysis of the employees' views is as follows: "Any settlement of the present controversy which has for its object the restoration of harmonious relations and efficient operation of the shops must take into consideration, first, the restoration of the men involved to their status as employees as of date prior to the stoppage of work; second, that the great majority of these men are permanently located and are more desirable employees than those who have been employed since the stoppage of work began; third, that it will be an unusual position and one which it is not believed to be justifiable if the carriers in this case adopt an attitude denying the requests of the organizations in this respect when by so doing they prevent the possibility of a settlement; fourth, no organization has heretofore been called upon or expected to sacrifice all the accumulated rights of years of service in situations of a similar character; fifth, that this action on the part of the carriers will place full responsibility of a continuation of the strike with the inevitable consequences therefrom on the carriers."

The Carriers' Position on Seniority

On July 20, the western presidents' committee on public relations issued a statement outlining the carriers' position on the seniority of the strikers in the event of a settlement of the present controversy. This statement said in part: "Not only justice but the public interest demands that in any settlement of the strike the seniority rights of men who are now working shall be recognized. If those who have struck against the decisions of the Labor Board and tried to interrupt transportation are favored in any settlement that may be made, the incentive of men to stay at work in

Copyright by Underwood & Underwood

C. & A. Shops at Bloomington Under Guard

case of future strikes will be destroyed and difficulty of maintaining transportation service increased."

After calling attention to the ruling of the Labor Board on the right of the men who remained in the service and those who are employed to take the place of the strikers and President Harding's statement on the same subject, the western executives said "that it will be seen that the men who are now working have claims upon the railways and the public superior to those of the strikers is a fact that has been repeatedly recognized by Government bodies and officials and that they have remained at work or gone to work with the distinct understanding that their rights will be protected."

Developments at Washington

WASHINGTON, D. C.

THE PRESIDENT and his advisors have been devoting more of their attention to efforts to settle the coal strike than they have to the railroad situation, although both of them have been under constant consideration by the cabinet at its meetings and the administration has kept in close touch with the situation through its reports. Apparently it has been considered that if a basis for settlement of the coal strike could be reached it would be less difficult to settle the railroad strike because in that case a government tribunal is in existence to deal with the situation, and optimistic expressions have been made as to the probability of an early adjustment of the railroad controversy. For several days it has been stated to newspaper men that the question of restoring seniority rights to the strikers if the strike should be called off on a promise of a new hearing by the Labor Board has been the principal stumbling block to a settlement.

Following the failure of negotiations with the mine operators and the union the next step of the President was the sending of the message to the governors of the coal-producing states, the purpose being to give the coal operators an opportunity to demonstrate whether they can open their mines, as many of them have said they could, if the government would refrain from interfering and would furnish protection for those willing to work. Calling upon the state authorities was also regarded as a necessary preliminary before making use of the federal troops.

Action of State Authorities Awaited

Secretary of War Weeks on July 13 made public a telegram he had sent in reply to a request for federal troops from C. E. Schaff, receiver of the Missouri, Kansas & Texas, advising him to make demand on the governor of Texas for the protection of lives and property, including requisite protection from lawlessness and violence to permit the operation of trains. The state is charged with responsibility in such matters, he said, "but in case the state authorities are unable or unwilling to maintain law and order the federal government is ready to afford protection and will take action, if necessary," as soon as Mr. Schaff had a reply from the governor.

Secretary Weeks also sent a message to Major General John L. Hines, commanding the Eighth Corps Area at San Antonio, stating that if protection is not furnished by state authorities the federal government will take action and directing him to prepare a sufficient force for that purpose. He added that the receiver is acting under appointment by a United States court. The telegram from Mr. Schaff was as follows:

"Referring to President's proclamation assuring movement interstate commerce and protection of men employed therein the Missouri, Kansas & Texas Lines are being operated by me as receiver under appointment by United States Court. The largest and most important terminals on these lines are at Parsons, Kansas, and Denison, Texas. At Parsons we now have for protection state troops and are having no difficulty in operations. At Denison we have not been able to get protection and a serious situation has arisen. K. O. & G. roundhouse foreman was shot and killed last night while at work; thirty guards brought into Denison on our passenger train number four about midnight last night were taken in charge by mob of strikers while being escorted to shops by deputy United States marshal and sent out of town; a number of our guards have been taken off and beaten up. Sixty-four cars of livestock and meat in interstate commerce are being detained on account of interference by strikers. United States marshals so far have been unable to cope with situation. We have just now reported situation by telephone to Commanding General of Eighth Corps Area at San Antonio. We have also reported it to governor of Texas. I respectfully request aid and urge that you send to Denison today a detachment of United States troops to prevent riot and bloodshed or loss of lives and property and to assure movement of interstate commerce on Missouri, Kansas & Texas lines which have heretofore been designated by War Department as Class A military lines to be maintained and operated in event of major emergency. Please telegraph your decision and greatly oblige."

Messages received since then from Col. Lincoln, the inspector general, indicate an absence of disorder at Denison because little effort is being made to operate trains from that point. He also reported that the governor of Texas wanted more time before deciding whether to send state troops to that point and also that he had taken the position that local authorities should act first. The Secretary of War said on Monday that he had received no additional requests for troops but the Attorney General has received many requests for additional deputy marshals and many of these have been complied with.

Secretary Weeks said on Friday that he had not as yet acted to send federal troops to Denison, Tex., because the governor of Texas, by sending the state adjutant general to make an investigation, was apparently acting in good faith and so he had also ordered an inspector general to that point so as to be prepared to act if necessary in case the state authorities failed to do so. He said most of the representations made to him in telegrams from railroad officers involved cases of individual sabotage rather than mob action and that they were therefore rather difficult to deal with by the use of troops.

Following the cabinet meeting on Friday the administration apparently held a most optimistic view of the situation and it was stated that a settlement might be reached before morning.

The cabinet meetings on Friday and Tuesday were devoted entirely to the railroad and coal strike situations. The Secretary of War and the Attorney General reported on the numerous telegrams that they had received from various railroad officers asking for or suggesting the possible need of protection from federal marshals or troops and Secretary Hoover had complete reports as to the situation on each road. There was also a report from Chairman Hooper of the Labor Board on his negotiations looking toward a settlement of the strike.

President's Power

President Harding believes that the executive has full power to take over and operate the coal mines or the railroads and to draft men into the service to keep them in operation in the event of any well established emergency, it was stated officially at the White House, in reply to questions from correspondents, but it was also stated that the railroad situation was not likely to take that tack. The President believes that in case of a sufficient emergency involving the welfare of the public the executive has almost limitless power, because the only way of proceeding against him would be impeachment and he would be willing to run the risk of impeachment if he considered it necessary to serve the people. He also believes that it would hardly be held to constitute an abrogation of any one's liberties to draft a citizen into the public service in an emergency.

Grable Calls on President

E. F. Grable, president, and Fred L. Feick, legislative representative, of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, spent two hours on Saturday in conference with the President and urged him to call a conference between Mr. Jewell and the railroad executives in order to prevent a continuance and spread of the strike. According to a statement from the White House "they brought to the President the first personal and official protest that the railway managers were ignoring the decisions of the Railroad Labor Board, and presented their objections to the decision of the board relating to the appeals of that brotherhood." It was also stated that "the President

gave the fullest possible hearing and assured Messrs. Grable and Feick that they had taken the one defensible course in presenting their case. He assured them that inasmuch as Congress has constituted the Railroad Labor Board for the express purpose of settling disputes and preventing interruptions to transportation, all decisions must be accepted by employers and employees alike, and assured them also that non-compliance on the part of railways had not been brought to his attention until the strike was called. He explained that any inadequacy in the law must be corrected by Congress and cannot be affected by interrupting railway operations. Messrs. Grable and Feick expressed a hope for an early settlement and declared that the proper conferences would end in such a settlement. The President assured them that every possible conference was being sought."

After his visit to the White House Mr. Grable announced that he had issued a call for a meeting at Detroit on Wednesday of the grand officers of the brotherhood to decide on its policy.

Amendment of Transportation Act Proposed

Hearings for the purpose of considering amendments to strengthen the labor provisions of the Transportation Act will be held soon before the Senate committee on interstate com-

merce, Senator Cummins announced on July 15 after a conference with the President on the strike situation. While he said there was no expectation of legislation in time to affect the present strike he was convinced that the law ought to be changed to make the decisions of the Labor Board mandatory and enforceable by the provision of penalties for their violation and also to guarantee a "living wage" to the railroad employees as a minimum, including a definition of a living wage. Senator Cummins, at the time the transportation act was being written was in favor of imposing penalties for failure to comply with decisions of the Labor Board and for conspiracies to interfere with interstate commerce by strikes.

Senator Cummins has also announced his intention of introducing a bill providing for a tribunal similar to the Railroad Labor Board to deal with coal labor controversies.

Gompers Advises the Press

Washington newspaper correspondents on Friday were given their choice between two very different sources of news and guidance on the railroad situation. The information and publicity service of the American Federation of Labor sent out a notice that President Gompers "has thought that reporters and correspondents might care to come together with him for a discussion of the present railroad situation in which views might be exchanged and questions asked freely" and that he would be glad to see them at his office at three o'clock, hoping "that such a conference may be of value both for its general interest and for its news value." The time corresponded exactly with one of the regular twice a week conferences of the newspaper men with President Harding, who was also expected to have something of interest to say on the railroad situation. The press associations and the larger papers that have large staffs in Washington were able to cover both conferences but more papers have only one man here and it was observed that the number at the White House was about the same as usual. However, the President had very little to say on this occasion, being in expectation of more definite news from Chicago, and many of the correspondents were able to arrive at Mr. Gompers' office a little late but still in time to hear some of his fulminations. The extent to which they exchanged views with him was not reported but he apparently succeeded in convincing some of them that the government was trying to "enforce" the decisions of the Labor Board by "coercing" the employees but not its decisions against railroads that have failed to comply with orders of the board, rather than trying to protect those who are willing to work under the board's decision from interference by those who do not wish to. Mr. Gompers also took the position that the Labor Board is a "fifth wheel," that attempts to regulate wages are all wrong, and that the three public representatives on the board are simply representatives of the railroad interests, although two of them were those who two years ago voted for the wage increase of over $600,000,000. He said that the best medium for a settlement would be direct negotiations between labor and the railroad managements without interference from the board, and he has issued numerous statements to the press along these lines.

Motor Trucks and Airplanes for Mail Transport

Plans for mobilizing motor trucks and airplanes for the transportation of mails if the strike conditions make it necessary have been worked out by the postoffice authorities and motor trucks were put into service on July 15 to carry the mails between Bedford and Switz City, Ind., after the mail trains had been annulled. The Secretary of War has furnished the postoffice department with an estimate that 131 planes and 172 air pilots are available at 13 widely distributed fields while the Navy Department said it could furnish 163 planes and 240 pilots. Postmasters were also directed to make a canvass of all government agencies in the immediate vicinity of their offices for the purpose of ascertaining what government-owned trucks other than those belonging to the postal service will be available for mail transportation. Should a contingency arise necessitating the use of motor trucks in lieu of mail transportation service they were to advise the department promptly by wire or letter, depending upon the nature of the emergency, stating the motor trucks available and the branch of the government having jurisdiction over them.

However, it was stated at the White House on Tuesday that there had been very little real disturbance of the mails and the report that marines would be placed on mail trains as guards was characterized as "bunk."

Mail Train Schedules Affected

Reports received by Paul Henderson, second assistant postmaster general, from Lovilla, Iowa, on Tuesday, state that the interference of strikers who sought to prevent strikebreakers from clearing the wreckage of a Burlington passenger train which jumped the track has ceased, and the wrecking crew has been permitted to build a temporary track around the wreck, which allows the passage of trains.

Inspector-in-Charge S. H. Cisler, St. Louis, wired that

20 deputy United States marshals are on duty at Hannibal, Mo., but officials of the Missouri, Kansas & Texas and Wabash railroads state that 50 will be necessary before they can take action to open shops or restore trains. No more trains have been taken off, but the Wabash railroad reported that its stock of coal is being depleted rapidly. The St. Louis-Omaha line, which has been interrupted by washouts, was expected to resume during the day. Branches of the Burlington in northwest Missouri are getting in better shape and regular service will be resumed shortly. The M. K. & T. advised the inspector that it expects to resume service on the Hannibal-New Franklin line by Wednesday.

Superintendent of Railway Mail Service Gaines, Fort Worth, Texas, wired that passenger train service between Colmesnell and Trinity has been superseded by motor car service, with no delay to the mails. Trains 5 and 6 between Dallas and San Antonio have been annulled, but mail cars will operate on trains 7 and 8 between those cities. Trains 25 and 26 between Fort Worth and Waco have been discontinued but mail service will be transferred to trains 17 and 18. All train service between Stamford and Rotan was omitted Saturday and Sunday, but was resumed Monday. The superintendent stated that all of the services referred to are on the Missouri, Kansas & Texas and the discontinuance of trains has been due to strike troubles.

Superintendent of Railway Mail Service Harris, Atlanta, stated that the following trains were discontinued Monday to conserve power, mail cars being assigned to other trains: Trains 5 and 6 between Harriman and Nashville; 17 and 18 between Hamlet and Atlanta; trains 20, 21, 23 and 24 between Hamlet and Jacksonville; 402 between Nalaca and Burtow; 13 and 14 between Savannah and Montgomery.

Mr. Henderson on Wednesday heard from Superintendent Gaines, Fort Worth, Texas, that striking employees prevented the operation of train service on Tuesday on the Deleon-Cross Plains, Texas, line. Gaines stated that the railroad people expected to get a train out some time during the night, but the superintendent regarded that as a doubtful possibility. The superintendent further stated that if train service is not resumed by this morning, he will arrange to supply Cross Plains, Pioneer and Rising Star by truck from Cisco.

A. A. Fisher, superintendent in charge of the Washington division, stated that Norfolk & Southern trains 30 and 31 between Raleigh and Charlotte, N. C., and trains 32 and 33 between Raleigh and Fayetteville, N. C., had been withdrawn, and announced that the mail carried on those trains had been transferred to other trains.

S. H. Cisler, superintendent at St. Louis, wired that the St. Louis-San Francisco would discontinue trains No. 3 and No. 4 between St. Louis and Paris, Mo., and also annul trains 18 and 19 between Springfield and Clinton, Mo., trains 22 and 23 between Kansas City and Clinton, trains 827 and 828 between Cape Girardeau and Hayti, Mo., and trains 873 and 874 between Cape Girardeau and Poplar Bluff. Mail cars scheduled to run on these trains have been transferred to other trains.

Superintendent Formanek at Cleveland, stated that trains 2 and 7 between Grand Rapids and Chicago have been withdrawn because of coal shortage and strike conditions. Trains 101 and 108 between Pentwater and Holland, Mich., trains 1 and 4 between Saginaw and Manistee, train eight from Petoskey to Grand Rapids, trains 102, 105 and 120 between Bay City and Detroit, trains 22 and 27 between Port Huron and Saginaw, and trains 21, 22, 23 and 26 between Big Rapids and Grand Ledge, Mich., have been annulled, the mail cars being transferred to other trains.

Instructions to U. S. Marshals

The Attorney General telegraphed the following instructions on Tuesday to United States marshals:

"In making requests for the appointment of special deputies, you should base them on specific facts, the result of investigations made by you and the United States attorney. You should make your investigations independent of the railroad companies and reach your conclusions uninfluenced by their requests, except as they are competent and relevant to the situation as you find it to exist. You will readily appreciate that the Department of Justice is anxious and willing to do all within its power to preserve federal law and order in your district. You will just as readily understand that the department cannot police the railroads and prevent the infraction of state laws at different points where disturbances occur and are likely to occur.

"In making your investigations you should particularly inquire as to what steps, if any, the state and county officials have taken to uphold the law of the state in which your district is located. You should co-operate with the local authorities and request that they co-operate with you in enforcing the law. When you do reach a conclusion, based on the investigation and evidence above outlined, you should submit it to your federal judge for approval if possible, and then only make your specific request of the department for authority to appoint deputies or additional deputies to prevent either a direct or immediate indirect violation of the federal laws in your district. You should reduce this special force as the situation improves and will permit keeping the best and most experienced men until the last." Commenting upon his telegram, Mr. Daugherty said:

"Deputy United States marshals cannot run trains, but they can see to it that the mails are not interfered with and that interstate commerce is maintained. The Department of Justice cannot furnish a regiment of deputy marshals to run the railroads, but it can and will prosecute violations of the law. Deputies will do what is necessary to be done until other agencies are required. If any one doubts the power of the government, he is very much mistaken, and if any one doubts the intention of the government to preserve order, he, too, is very much mistaken."

A. F. of L. Asks Support of Strike

The executive council of the American Federation of Labor has addressed an appeal "to all workers everywhere to support the railroad workers in their efforts to secure a just settlement of the railroad shop trades dispute." The appeal has been forwarded to every labor organization in the United States, to every labor publication and to all organizers of the American Federation of Labor, as follows:

"We call upon working people everywhere and upon all Americans who love justice to sustain the cause of the railroad workers who have ceased work as their only remaining method of protest against an injustice which must rank as one of the most reprehensible which any American industrial or political institution has ever sought to impose.

"No workman, whether a member of a union or not, will, if he is possessed of true American manhood, engage in any work formerly done by men now on strike.

"No man now on strike, will, if he is true to the cause, conduct himself in any but a law-abiding manner.

"The cause for which the workers are contending is worthy of every just and proper effort that can be put forth in its behalf.

"Let there be a determination and a solidarity which shall at the same time bring victory in the present struggle and serve notice upon reactionary employers and financial interests everywhere that there is to be no return to autocratic, despotic methods in American industrial life."

President Asks Governors to Protect Mines

President Harding on Tuesday addressed to the governors of the 28 coal producing states a telegram urging them to second his invitation to the mine operators to return to

their mines and resume activities, in which he expressed in a general way the policy of the federal government toward both the coal and the railroad strikes. He stated that the invitation should be accompanied "by such assurance of maintained order and the protection of lawful endeavor as will give assurance to everybody concerned," by way of pointing out that the preservation of law and order is primarily the function of the state and local authorities. He said he wanted to convey the assurance of the prompt and full support of the federal government "whenever and wherever you find your own agencies of law and order inadequate to meet the situation," and that "your state government and the federal government are jointly responsible for maintained conditions under which free men, willing to work, may work in safety" and that "we are responsible for the production and transportation of a fuel supply ample for the necessities of the American people and the public utilities which serve them, particularly the railways engaged in interstate commerce."

"Thus far," he said, "there has been no challenge of the right of the workers to decline employment or the right of the employers to hire as they elect," and "there has been no government assumption of a part in the dispute between the organized workers and organized employers."

The Situation on Western Roads

The third week of the strike brought few developments of a serious nature. The sharp encounters of the preceding weeks gave way to "trench warfare" with both sides on the defensive. The center of violence shifted from Illinois to the southwest. The presence of state troops in Bloomington and Clinton, Ill., seemed to have a salutary effect and a certain degree of quiet was restored. In Bloomington the members of the train service brotherhoods, who had voted on July 11 to not handle trains out of the Chicago & Alton yards as long as troops were on duty there, rescinded their action the following day.

One more state, Ohio, found it necessary to mobilize troops during the past week. Disorders at Cleveland, Toledo and other points forced Governor Davis, on July 14, to order a battalion of infantry and auxiliary troops to be mobilized and held in readiness for the suppression of further disorders. It was also found necessary on July 14 to mobilize another detachment of the Missouri national guard to reinforce the troops on duty at Poplar Bluff, but by July 17 the situation at this point had so quieted that one company of guardsmen was believed sufficient to cope with the situation, and three companies were transferred to Chaffee, Missouri, where state troops had been requested by the sheriff following the announcement that the St. Louis-San Francisco will reopen its shops at that place on that date.

Governor Boyle of Nevada was asked by the Union Pacific for protection at Las Vegas, while Governor Russell of Mississippi received an appeal for troops to protect the shops of the Mississippi Central, and the St. Louis-San Francisco renewed its appeal to Governor Taylor of Tennessee to send national guardsmen to protect its shops at Memphis. The situation at Grand Rapids and Saginaw, Mich., where officials have threatened to appeal for federal troops in the event of strike violence, is said still to be critical, although no open outbreaks have occurred.

The center of violence during the past week has been in Texas where orders for the mobilization of regular army forces at San Antonio were expected as a result of the statement by Governor Neff that state troops would not be ordered out to protect Missouri, Kansas & Texas property. The governor's statement followed a telegram from Secretary of War Weeks to Maj. Gen. John L. Hines, commander of the eighth corps area, to the effect that "if protection is not furnished by state authorities, the federal government will take action and you will prepare a sufficient force for that purpose." Secretary Weeks announced on July 14 that he had ordered the inspector general of the eighth corps area to proceed to Denison, Tex., and report on conditions there, further appeals for assistance having been received from the receiver operating the line from the Dallas, Tex., Chamber of Commerce.

Strikers are believed to be responsible for the increasing number of train wrecks reported since July 16. At Nevada, Mo., it was reported that a switch on the main line of the Missouri, Kansas & Texas had been thrown three times, but that it was discovered each time by employees before an accident resulted. Postmaster General Work received notice at Washington that coal and rail strikers and sympathizers had blocked all attempts by wrecking crews to clear the Chicago, Burlington & Quincy tracks at Lovilia, Iowa, where a train had been derailed. Local authorities were said to be "lukewarm."

On July 16 an attempt was made to wreck Texas & Pacific train No. 16, running between New Orleans and El Paso. The engine was derailed but the remainder of the train did not leave the track.

On July 14, temporary injunctions restraining strikers from violence or intimidation were obtained from federal courts by the Wabash at Little Rock, Ark.; the Chicago & North Western at Winona, Minn.; the Kansas, Oklahoma & Gulf, at Guthrie, Okla.; the Union Pacific, at Reno, Nev.; the Chicago, Rock Island & Pacific, at Fort Smith, Ark., and the Baltimore & Ohio at Indianapolis, Ind.

Picketing of railroad shops by strikers was definitely forbidden in preliminary injunctions granted four railroad companies by Federal Judge FitzHenry at Springfield, Ill., on July 17. The injunctions continue in effect the temporary restraining orders granted several days previously. They are directed against strikers of the Wabash, the Illinois Central, the Chicago, Burlington & Quincy and the Chicago & Alton.

Reports from western roads indicate that operating conditions are improving. Recruiting of workers has resulted in shop craft forces ranging from 25 per cent to 60 per cent of normal. Full traffic schedules are being maintained with comparatively little difficulty. Injunctions have proven effective and have contributed to the maintenance of service.

The Cleveland, Cincinnati, Chicago & St. Louis reports a 60 per cent locomotive and a 30 per cent car department force working, and recruiting progressing favorably in spite of much intimidation. Little trouble has been experienced with men in other departments. This company has operated every passenger train on schedule and about 85 per cent of the time has accepted all freight offered, with no accumulations at any time.

The Pere Marquette has experienced much trouble through the interference of strikers, but secured an injunction on July 18, which is expected to eliminate the majority of the difficulty.

The Great Northern has a force of approximately 2,000 men at work out of a normal force of 9,000. The strike of firemen and oilers crippled this road somewhat, but normal traffic has been maintained.

The Michigan Central is operating normally with a 60 per cent force. Traffic has not suffered and recruiting of workers has been carried on rapidly. This company is contracting with outside shops for repairs wherever possible.

The Denver & Rio Grande Western has 211 shopmen working and 2,400 still on strike, more men being hired daily. No serious disturbances or interferences with traffic

have been encountered and other classes of employees have remained neutral.

The Southern Pacific System reports that of the 9,778 shopmen who walked out 764 returned by July 6, on which date the ultimatum regarding the loss of seniority rights expired. The working force has since been recruited to 6,768. The company reports that it is encountering serious interference by intimidation and that violence is being continually used to prevent recruiting. Sufficient protection has been obtained at the present time and with an injunction in force traffic is being maintained at a normal status, other employees remaining neutral.

The Missouri Pacific has increased its shop forces to within approximately 25 per cent of normal. It has suffered some congestion but with the assistance of the United States marshals, militia and local authorities the situation is well under control. The injunctions are proving effective and the attitude of other employees is satisfactory.

The St. Louis-San Francisco reports improved conditions. With a number of its former employees returning in addition to the new workers, it has a sufficient force to handle all traffic; all passenger trains are now being operated although the removal of several trains from branch lines is contemplated due to the difficulty in turning engines at small terminals and the decrease of travel due to the strike.

The Missouri, Kansas & Texas has 25 per cent of its normal force at work and is having no serious labor disturbances or interference with traffic nor has any difficulty been experienced with its other employees.

The Atchison, Topeka & Santa Fe reports that 8,358 men are working. Approximately 11,000 are on strike. No difficulty has been encountered in operation and traffic is moving satisfactorily, the attitude of other employees remaining neutral.

The Pennsylvania, Northwestern region reports that conditions are practically unchanged and that from 50 to 60 per cent of its shop positions are filled. Little or no interference or operating difficulty is noticed and all train schedules are being maintained.

The Chicago & Alton reports that it has approximately 500 men at work in place of its pre-strike force of 2,450. This company has been seriously hampered by labor influences at points on its line although traffic is moving satisfactorily and conditions are improving.

Conditions in the East

Developments in the strike situation in the East have been largely in the nature of steady and gradual improvement. Passenger and freight business is moving in normal volume with few delays chargeable directly to strike conditions. Most of the roads are building up their shop forces by the employment of new men and from observation at some of the railway recruiting offices in New York City, it seems that there is no shortage of applicants. As to the numerical strength of present forces as compared with those of pre-strike days, John P. Walber, executive secretary of the Bureau of Information of Eastern Railways, said on July 19 that in the eastern district, present forces represent from 50 per cent to 60 per cent of normal and that this figure shows an increase of about 50 per cent over July 5.

The strike of the stationary engineers, firemen and oilers which was scheduled for July 17 has apparently had little effect, inasmuch as most of these employees who were likely to respond to the strike call had already gone out, without authority from their leaders, with the rest of the shopmen.

Several of the roads have secured from federal courts injunctions against strikers forbidding them to interfere in any way with the work of new employees or the operation of trains.

The refusal of mechanical employees in outside shops to have anything to do with repairing equipment sent to these shops by the railroads on account of the strike, which was rumored, has apparently fallen through in at least one important plant. Press dispatches from Albany carry the news that the employees of the Schenectady plant of the American Locomotive Company have voted by an overwhelming majority to continue repairing locomotives belonging to railroads affected by the strike.

Pennsylvania and Shopmen Come to Agreement

The Pennsylvania, on July 18, announced that it had reached an agreement as to wages with its shop crafts employees who had not left the service. This completes a series of wage negotiations which the company has carried on with employees in a number of its departments, viz., maintenance of way, signal department, clerks, miscellaneous forces and shop crafts. The company's announcement reads in part as follows:

> The matter of adjusting rates of pay of these classes has been under negotiation for several months. It was handled entirely with committees of employees representing the various classes.
>
> The new schedules of wages differ in some respects from the rates established by the Labor Board for other railroads, but the difference is in favor of the Pennsylvania employees. For the most part the Pennsylvania System rates are graded in accordance with the skill and experience required and the prevailing rates are generally higher than those established for other railroads.
>
> The completion of these wage adjustments marks the third important achievement in industrial relations under the Pennsylvania System's plan of employee representation which was established last year in order to give the employee an opportunity to have a voice in the Pennsylvania management. The first was the negotiation of mutually satisfactory rules covering working conditions to take the place of the so-called "National Agreements," and the second was the establishment of permanent methods of settling controversial questions.
>
> All three of these matters have been determined in joint conferences between the management and employees elected by secret ballot to represent the various classes.

Conditions on Baltimore & Ohio Improve

The Baltimore & Ohio, which was affected in a comparatively serious manner at a few of its points, reports continued improvement. The situation on this road is reported in an unusually complete fashion in a statement given out by C. W. Galloway, senior vice-president, last Saturday, which follows in part:

> A number of the old men who have been working at Mt. Clare, who failed to show up for work Monday, reported for work this morning. Their fears have been allayed by the issuance of the federal injunction of Maryland, and the realization of this means protection against the intimidation, threats and fear of bodily harm on the part of strikers and their sympathizers, who have been stopping the men on the streets and threatening them. This feeling on the part of the men who are working is justified from the results in other territories where federal injunctions have been granted.
>
> Information coming to me this morning from a number of men is that they want to return to work and I believe they will do so at many points as soon as they fully realize the value of the protection obtained under the injunctions which have been granted at various points on the Baltimore & Ohio and which have tended to restore almost perfect order.
>
> The Baltimore & Ohio continues to lose its business to non-union roads, one non-union road offering to handle the Baltimore & Ohio's lake business, the movement of which has been delayed by curtailed operations resulting from the strike.
>
> We hired 829 new men yesterday on the system as a whole, 550 of whom were employed on Eastern lines and 279 on Western lines.
>
> Everything is quiet this morning. The only disturbance in the last 24 hours was at Glenwood, Pa., where at 4 o'clock yesterday afternoon an attempt was made on the part of strikers and sympathizers, among them women, to assault a motor truck driver making deliveries to shops, which resulted in a large crowd gath-

ering off the property of the Baltimore & Ohio, some stones being thrown. The crowd was dispersed by city police by the use of clubs and the party who threw the stones was also arrested. There were also three pickets arrested for attempted assault on employees, the arrests being made personally by the commissioner of police, who was on the ground. There was no property damage and no one hurt.

The effect of the firemen and oilers being called on strike so far as the Baltimore & Ohio is concerned, is negligible, as a good many of them had illegally struck in sympathy and have been replaced.

Overtime Work a Factor

L. F. Loree, president of the Delaware & Hudson, on July 19 called attention to the fact that shop employees of his road are now working twice as many hours a day as normally, a factor which must be taken into consideration in estimating the effect the strike is having on the railroads. The percentage of present forces as compared with pre-strike forces is not enough—this figure in many cases should be practically doubled to determine with any degree of accuracy the railroads' present labor strength.

The *Railway Age* this week has not attempted to publish reports of the strike situation on the various Eastern roads as has been done in previous issues. The reason for this is that there have been few changes of a sufficiently pronounced character to warrant a complete summary of present conditions. In most cases the summaries published last week need only be amended by the simple statement, "Conditions improved."

Some Violence Reported

Some instances of violence and intimidation have been reported. One of the most outstanding of these occurred at Concord, N. H., where, it is said, 15 or 20 heavily armed masked men evaded the guards at the Boston & Maine shops on the night of July 18 and routed new employees of the railroad from the dormitory where they were sleeping. Approximately 40 new men were driven out into the rain by the invaders and some of them were injured.

Strike Situation in the Southeast

The strike situation in the southeast varied considerably with the different roads. On some roads a considerable number of the men had returned to work or had been replaced by others but on some of the larger roads there was very little change. Freight service was somewhat delayed and some local passenger trains were withdrawn. On a number of roads some of the clerks have gone out while others are talking about going out and whereas the situation had been rather quiet during the preceding two weeks, disorders have broken out at several points and in many cases the local authorities instead of trying to maintain order have been acting in support of the strikers.

Western Maryland Increases Net with Less Traffic

Tonnage Falls Off 36.9 Per Cent. Transportation Ratio Reduced to 36.64. Maintenance Savings

The Western Maryland in 1921 moved 36.9 per cent less tonnage than it moved in 1920. In spite of this fact it improved its net income markedly. The corporate income account for 1921 showed a credit income balance of $421,296, which compared with $57,735 in 1920. This meant that the road had a wide margin over fixed charges; it pays no dividends. The net was not up to pre-war standards. In 1917, for instance, there was a net after fixed charges of $1,614,285; in 1916, of $1,319,060. The 1921 income account included an item of $400,400 partial payment on the guaranty. In 1920 there was credited on the guaranty $1,001,788.

Because of the fact that the corporate income account takes into consideration the matters of standard return and guaranty, it does not give an adequate idea of the road's real operating results and does not reflect the real improvement that was made during the year. The improvement is better shown by the fact that in spite of the decline in traffic the road operated during the year at a ratio of 78.59. This compared with ratios of 101 in each of the years 1920, 1919 and 1918. In 1917 the ratio was 70.10. Transportation expenses in 1921 were brought down to 36.64 per cent, a figure which but few of the country's railroads were able to better. The transportation ratio in 1920 was 44.88; in 1919, 39.77; in 1918, 46.44 and in 1917, 34.62.

Bituminous Coal About 60 Per Cent

Bituminous coal makes up about 60 per cent of the Western Maryland's tonnage. In 1920 the road moved 11,527,675 tons of this commodity which made up 62.9 per cent of its total tonnage. In 1921 the bituminous tonnage totaled only 6,524,286 tons, or 56.4 per cent of the total. The drop in the coal tonnage was sharp and decisive as should be sufficiently clear from the figures given. This detail is further emphasized if it is noted that the tonnage of the best month of 1921—January, 626,731 tons—was less than the tonnage of the poorest month of 1920, June, in which month 674,474 tons were moved. The best month in 1920 was January, in which month the bituminous totaled 1,317,270 tons. The Western Maryland is being rather severely hit by the present coal strike. Its loadings of coal in the week ending April 15 this year were only 313 cars. In March and April, 1921, its weekly loadings approximated 1,300 cars. This reduction in coal tonnage will very likely be clearly reflected in the April, 1922, net.

The total tonnage of the Western Maryland in 1921 was 11,578,111 as compared with 18,335,345 in 1920, a reduction, as noted in the first paragraph, of 36.9 per cent. The transportation revenues totaled $17,643,054 as compared with $20,205,687, or there was a decrease of $2,562,633. The reduction in coal and coke revenues as between the two years was $2,200,647.

A Program of Drastic Economy

With this reduction in revenues confronting it, the road carried out a program of drastic economy. Whereas the revenues were reduced about $2,500,000, operating expenses were reduced $6,508,263. Maintenance of way was reduced $1,237,042; maintenance of equipment, $2,543,304; transportation, $2,605,185; the latter reductions, as above noted, resulting in a transportation ratio in 1921 of 36.64.

The reduction in maintenance of way expenses was partly due to lower material and wage costs. There were also actual savings in the amount of work done. There were laid 26.05 miles of new rail as compared with 20.65 miles in 1920; rail renewals were up to the average of preceding years. At the end of the year the road had in its total of 774 miles, 568 miles laid with 90-lb. rail, as compared with 561 at the end of 1920. On the other hand, the number of ties put in in 1921 totaled 269,351, as compared with 322,056

in 1920. The ties put in track in 1921 were the smallest in number for a period of 10 years with a single exception, 1916.

The Western Maryland is mostly ballasted with cinders and slag. Of the total mileage of 774 on December 31, there were 88 miles ballasted with stone, 561 with cinders and slag, and 125 were partly ballasted. In 1921 ballast on 57 miles was renewed as compared with 103 miles in 1920. The 1921 ballast renewals were the lowest for a ten-year period with the exception of 1917 and 1916. It is interesting to observe that in 1920 the road had 206 miles ballasted with stone; in 1917, 539 miles, but in 1921, only 88 miles. The road's practice since 1917 has been to prefer cinder and slag in renewals instead of stone.

Some Detailed Figures of Equipment Maintenance

With reference to equipment maintenance, the story is told in a percentage of bad-order cars on April 15 of 13.5 not as low as it should be but about the average for the country as a whole. The Western Maryland annual report gives some detailed figures relative to the maintenance of both way and equipment. Some of the maintenance of way figures have already been quoted. The maintenance of equipment figures include such details for cars as cars repaired and new wheels applied, and such details concerning locomotives as: locomotives receiving general, heavy and light repairs shown separately; boilers receiving general repairs; new driving and truck axles; new cylinders; new engine frames; new main and side rods; new tires, etc. The figures for 1921, in nearly every case, show reductions from those of 1920 and previous years, with the single exception of one item—cars receiving light repairs. Locomotives receiving general repairs in 1921 totaled 138, or 97 less than in 1920; those receiving heavy repairs, 95, or a reduction of 23. Freight cars receiving general repairs totaled 6,208 as compared with 8,023 in 1920; cars receiving heavy repairs, 2,557 as against 3,113; light repairs, 210,589 as compared with 157,958.

These details would seem to indicate that much of the economies carried out in 1921 will, of necessity, have to be made up in more opportune times than a year in which the road suffered a reduction of 36.9 per cent in its tonnage. Of course, it will be borne in mind that the figures which have been quoted must be used with discretion. With smaller traffic the amount of repair work to equipment would necessarily be less. To take one instance, the average mileage per locomotive in 1921 was 18,250 as compared with 25,745 in 1920 or approximately similar figures in other previous years. The road has also recently received a considerable number of new locomotives which makes a difference. These factors, however, do not get around a percentage of unserviceable locomotives on April 15 of 27.8 per cent, or the percentage of bad-order cars above noted of 13.5 per cent on the same date.

The savings in transportation expenses were due first to the smaller amount of traffic handled and to lower costs generally. To take one example, coal consumed by locomotives. The number of tons consumed in 1921 was 499,296 as against 640,543 in 1920. The average cost on the tender including handling was $3.68 per ton in 1921; $5.94 in 1920, a reduction of 26 cents. The pounds of coal per thousand gross ton-miles in 1921 were 245 as against 252 in 1920.

New Grain Elevator

One of the outstanding developments on the Western Maryland in 1921 was the work on the new grain elevator at Port Covington, Baltimore, Md. This will increase the present grain storage capacity at this terminal 1,500,000 bushels. The new elevator is expected to be completed in about four months. The capacity of the terminal with the new facilities will aggregate 3,500,000 bushels.

The Western Maryland has built up an important traffic in grain. It receives this commodity largely from the Pittsburgh & Lake Erie at Connellsville and, on the whole, has been securing a larger proportion of the traffic than one might expect. The reason is presumably that the road is making a special effort to get this business and is handling it well. It should be noted, however, that in 1921 the road did not get the same increase in wheat traffic that the roads serving the Gulf ports secured. The wheat tonnage in 1921 was 236,911 as compared with 328,195 tons in 1920. Corn, however, increased from 44,782 tons in 1920 to 276,235 tons in 1921.

Gasoline Motor Car and Trailer for the Baltimore & Ohio

The Baltimore & Ohio has recently received from the Edwards Motor Car Company, Sanford, N. C., a gasoline motor car and trailer for use in passenger service on branch lines out of Green Springs, W. Va.

The motor car has a baggage compartment 9 ft. 3 in. long by 7 ft. 8 in. wide just behind the operator's compartment, the rear of the car being fitted with seats for 22 persons. In addition, the trailer has capacity for seating 34 passengers. The cars are equipped with water coolers and toilets. The total weight of the motor car empty is 17,200 lb., and the weight of the trailer empty is 9,350 lb., or a total of 26,550 lb. It is stated that this equipment is lighter per seated passenger than any other of similar type

Looking Forward from the Rear of the Trailer

due to the use of heat treated chrome nickel steel and aluminum castings in the construction. On a recent test trip from Baltimore to Philadelphia over the Baltimore & Ohio, these cars made an average speed of 30 miles an hour, the maximum speed being 40 miles an hour.

Both the motor car and the trailer are carried on two four-wheel trucks. The rear truck of the motor car has fixed axles and drives through three chains, two of the chains transmitting the power from the differential shaft, the third chain carrying the drive from the front to the rear axle. It is stated that driving on all four wheels gives unusually good traction and enables the car to run when snow or frost is on the rails. The power to propel the car is furnished by a Kelly-Springfield motor with four cylinders, 4½ in. x 6½ in., which develops 60 hp. at 1,600 r.p.m.

The equipment of the cars includes Westinghouse air brakes, an air alarm whistle, a hot air heating system and 12 volt lighting system. The hot air heaters are of special design with aluminum castings made by the Peter Smith Heater Company, Detroit, Mich. An electric fan is mounted by the Edwards Railway Motor Car Company. There are two compressors, one driven from the line shaft and one from the axle of the rear truck. The compressor driven from the line shaft is used before the car is in motion. It is then cut out and the compressor driven from the axle

Edwards Motor Car Unit with Seating Capacity for 56 Passengers

on each heater which drives the hot air through the cars and distributes the heat uniformly.

The air brake system is a standard Westinghouse traction brake except that the compressors are of special design made is used thereafter. Both compressors weigh only 140 lb. and furnish 10 cubic feet of air per minute. An automatic cut-out device stops the compressors when the required pressure is obtained and a reduction starts them again.

A Remarkable Mikado on the Michigan Central

Maximum Power Per Unit of Weight and Utmost Efficiency in Use of Fuel Keynotes of Design

For the past month the Michigan Central has been operating a Mikado type locomotive built by the Lima Locomotive Works, which incorporates many new features of design. On account of the unusual character of this new motive power the railroad has not heretofore made public any of the details of its construction. The following general description has now been given out by the New York Central Lines:

An extraordinary locomotive "No. 8000," which is expected to prove a most important contribution to motive power progress, has just been put in service on the Michigan Central. In numerous details of its design and construction it is radically different from any locomotive previously built and in general appearance it presents striking departures from the familiar features of the ordinary locomotive.

The locomotive was planned and constructed under the personal direction of President A. H. Smith of the New York Central Lines, who specified the several most important main accomplishments to be sought by the new design and made provision for the use of every up-to-date improvement of proved worth, brought to the last degree of refinement for economy and efficiency. The engine is of Mikado type, but contains features never before incorporated in any locomotive.

Locomotive 8000 in its preliminary tests and subsequent daily service hauling heavy trains between Detroit and Toledo, has performed in a way highly satisfactory to the New York Central officials and the builders. In its initial road test, it hauled 100 heavily laden coal cars and later easily pulled a train of 140 cars containing more than 9,000 tons of coal, indicating a capacity of more than 150 cars and load in excess of 12,000 tons.

Locomotive 8000 is considered the last word in efficiency and economy in freight motive power. The principal advantages which it is expected to demonstrate in service are the following:

(1) For its weight, it will deliver more power than any other locomotive in the world.

(2) It will develop more power per ton of coal consumed than any locomotive ever built.

(3) It will prove a locomotive easier to operate and repair than its predecessors, this making for quick turnarounds and safety.

Locomotive 8000 was designed and built to expedite the movement of heavy fast freight trains. With an increase in weight of less than two per cent as compared with the heaviest Mikados in service on the Michigan Central, No. 8000 has an increase of nearly eight per cent in tractive power derived from the forward cylinders and an increase of over 26 per cent when the booster is cut in.

The designers of this locomotive in addition to securing the greatest possible tractive effort with a minimum weight at which strength would not be sacrificed, incorporated the best known practices and devices for securing economy in the use of fuel and water. A type E superheater has been applied which produces a higher temperature of steam than the superheaters in general use.

On Locomotive 8000 a maximum tractive effort of 74,500 lbs. is obtainable. Of this figure 11,000 lbs. are delivered by the booster, the remaining 63,500 lbs. being obtained from the main cylinders.

Refinements in design and the use of alloy of steel and hollow axles and crank-pins have made it possible to eliminate a great amount of weight ordinarily necessary. The weight of the locomotive, exclusive of tender, is 334,000 lbs. The tender, which has a capacity of 10,000 gallons of water and 16 tons of coal, weighs 199,700 lbs. The boiler carries 200 lbs. per square inch steam pressure. The main cylinders are 28 in. in diameter, with 30 in. stroke. The diameter of the driving wheels is 63 in.

On this locomotive for the first time superheated steam is used to operate the air pump, feed-water pump, booster engine and headlight turbo-generator.

The locomotive is equipped with the superheater company's feed-water heater. The heater is located at the front of the engine, above the headlight and near the top of the boiler, on a level above the top of the tank so as to give the condensate pipe line plenty of fall to return the condensed water to the filter on the rear of the tender. The feed-water pump is mounted on the left side of the boiler just back of the smoke-box.

Another important departure from standard railway practice is the feature of superheating the steam before it reaches the main throttle. In locomotive 8000 the steam from the boiler passes through the steam dome into the dry pipe and thence to the superheater units, the dry pipe, which is outside of the boiler, being connected at the forward end direct to the superheater.

Before the steam leaves the dome it is passed through a separator which collects any water that may be carried in the steam, the water being automatically returned to the boiler, which, together with the taking of steam from the highest possible point of boiler, insures absolutely dry steam. From the superheated steam passages in the header, the superheated steam is conveyed to the throttle, located in a throttle box, at the top of the smoke-box and just forward of the stack, another unusual departure from existing designs and practice which was necessary in order to permit the use of superheated steam for the auxiliaries.

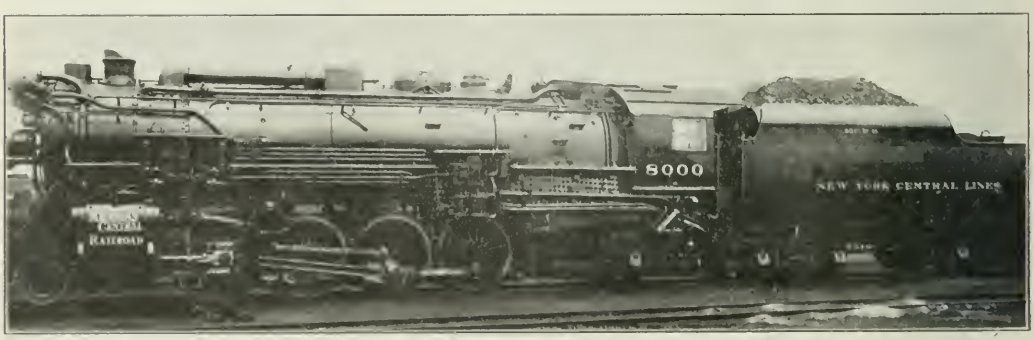
Careful attention has been given to the application of devices to facilitate handling the locomotive by the enginemen, the special equipment consisting of the precision power reverse gear, an Elvin stoker and a power grate shaker. The interior arrangement of the cab is such that the engineer and fireman perform the necessary duties in connection with the operation of the engine with minimum of movement from their positions on either side of the cab, the physical effort of each being practically nil. Even the blowing of the whistle is pneumatically controlled, an air valve being located near the side of the cab and immediately in front of the engineer.

The Front of the Locomotive Presents a Striking Appearance

As is customary on the Michigan Central, the engine is equipped with a water scoop, which eliminates stops and consequent delays for taking water.

Before being put into service the engine was inspected by President Smith, Vice-President E. D. Bronner and General Manager Henry Shearer of the Michigan Central.

Locomotive 8000 has more than lived up to expectations in the short time it has been in service. When it has been in service a sufficient length of time dynamometer tests will be taken and results very definitely determined.



Many Radical Changes Have Been Made in the Construction of This Locomotive

---

The Central Railway Club, Buffalo, owing to the current labor troubles, has postponed until further notice its outing scheduled to take place on the last Thursday in August. The next regular meeting will be held on September 14, at 8 p. m. (standard time) at the Hotel Iroquois.

General News Department

The Ashley, Drew & Northern has announced that it will install oil burners on all its locomotives in the near future.

A Broken Rail caused the derailment of Seaboard Air Line train No. 3 one mile south of Cox, Ga., on the morning of July 17. Five cars left the tracks. A dining car employee was killed and several passengers were injured.

Brotherhood Bank Gets Charter

The Transportation National Bank of Minneapolis, organized by the four transportation brotherhoods, has been granted a charter by the government and is preparing to open for business on September 1. This bank will be patterned after the enginemen's bank at Cleveland, Ohio. It will accept deposits and carry on a regular banking business. The stock will be sold exclusively to the members of the four brotherhoods and will be limited to 10 per cent dividends The capital of the new bank, as given in the charter application, is $200,000.

Connecting Lines Discuss K. C. M. & O. Problems

Kansas City, Mexico & Orient problems were discussed at a conference held in Chicago on June 18 between the executives of the company and representatives of connecting carriers. The chairman, S. H. Johnson, vice-president and freight traffic manager, stated that no definite conclusions were reached regarding the situation. The plans discussed, however, will not be divulged until reviewed by the Interstate Commerce Commission. It is believed that car routing and readjustment of freight rate divisions were the immediate subjects under discussion.

Baldwin Locomotive Works Issues Quarterly Magazine

Under the title "Baldwin Locomotives," the Baldwin Locomotive Works has published the first issue of a periodical devoted to the interest of transportation and motive power problems. It is intended to illustrate from time to time the newest types of locomotives constructed at the Baldwin Works and to present articles on technical or commercial subjects allied to transportation. The first issue, dated July, 1922, contains articles on the first uniform gage transcontinental railway in South America, on the lubrication of railway car journals, and on South American business. The locomotives described include the Consolidation type built for the Western Maryland, Santa Fe and Pacific types built for the Argentine state railways and also logging and tank locomotives. The interests of foreign readers have not been overlooked as some of the articles are published in both English and Spanish and the locomotive specifications are given also in French and Portuguese.

Railway Club Secretaries Meet

At a special meeting of the Society of Railway Club Secretaries held on Tuesday at the Railway Club of New York, further consideration was given to the matter of enlarging the organization and broadening the scope of its work which was agreed upon at the annual meeting held at Atlantic City in June at the time of the convention of the A. R. A. Mechanical Division. Considerable time was given to a study of a tentative plan which is to be submitted to all secretaries of other organizations representing either directly or indirectly various railroad interests and is to be made a subject of more definite action at a general meeting of those concerned. It is expected that this movement will ultimately result in the formation of an association of mutual advantage to those engaged in secretarial work for the organizations in question. The men identified in this capacity for the railroad clubs have taken the initiative and express their earnest wish to make the suggested organization a medium for increased usefulness and efficiency.

Illinois Central Large Purchaser of Shovels

During the last four years the Illinois Central and the Yazoo & Mississippi Valley have used 129,110 shovels of all kinds at a cost of more than $143,000. Of that number 68 per cent or 88,266, were track shovels, representing an expense of $81,102, or an annual expenditure of $20,275. An average of 74 track shovels were furnished each working day at a daily expense of $70 and, assuming that 50 per cent of the time the track forces used no tools other than shovels, the average life of each shovel was only a little more than two months. The company states that if the employees give the proper care and use to track shovels a reduction of 50 per cent in the purchasing of these implements would be effected. Many shovels are broken by nipping ties, being thrown under pressure bearing materials, pulling the ties, or by driving stakes, etc.

Maine Holds Hearing on Consolidation Proposals

Opposition to an all-New England railroad system and approval of the plan of A. H. Lane, chairman of the transportation directorate of the State Chamber of Commerce and Agricultural League, for linking up the Maine railroads with the New York Central and other trunk lines were voiced at a hearing on July 13, by the committee appointed by Governor Baxter to get the views of Maine people on the proposed consolidation, according to the Boston Transcript.

Judge Benjamin F. Cleaves, executive secretary of the Associated Industries of Maine, declared his belief that if the railroads of Maine were left alone within the next 15 years they would be back in as good condition as several years ago. Others who participated in the discussion asserted that the roads must have help. Among those present was Professor William Z. Ripley of Harvard University, who prepared the tentative consolidation proposals for the Interstate Commerce Commission.

James Q. Gulnac of Bangor, president of the State Chamber of Commerce, said he thought there was an absolute need for the consolidation of the Maine Central and Bangor & Aroostook railroads.

Standards for Overhead Wire Crossings

The American Engineering Standards Committee, by letter ballot, has approved the National Electrical Safety Code of the Bureau of Standards which covers the generation, distribution and utilization of electricity for power, light and communication.

In making public this decision, the Standards Committee announces that there is now in process of formation a thoroughly representative sectional committee to consider any revisions of Part 2 of this Code, "Rules for the Installation and Maintenance of Overhead and Underground Electrical Supply and Signal Lines," which may be deemed necessary by any of the interested parties. There are also being organized three sub-committees to take up the unification of crossing specifications under the three following heads:

Signal lines crossing railways.
Power lines crossing railways.
Power lines crossing signal lines.

These committees are being organized in conformity with the action of the recent conference (March 2) on the standardization of crossing specifications at which there were present representatives of 14 national, engineering, utility and industrial associations, four departments of the federal gov-

ernment, various state commissions of Connecticut, Iowa, Minnesota, New York, and of the telephone, telegraph and cable companies.

Plan for Settlement of Coal Strike Fails

The President's plan for a settlement of the coal strike by a submission of all points in controversy to a commission of arbitration having failed because of a flat rejection of the plan by the United Mine Workers, President Harding on Monday invited the operators, who had accepted the plan, to return to their mine properties and resume operation. The President had received the replies of the operators to his proposal during the day, and while some groups of them had accepted only conditionally, he had construed them as an acceptance by the majority of the principle of arbitration. He expressed his disappointment at the lack of unanimity among the operators but his gratitude to the large majority who had pledged readiness to resume activity under the government's proposal and said that "we have now reached a point, owing to the refusal of mine workers and the minority of your operators, to accept the proposed arbitration, where the good offices of the government in seeking a voluntary adjustment of the dispute between mine operators and mine workers are without avail."

It was explained by administration officials that the administration had now exhausted its resources and that efforts would now be made to test the ability of the operators to resume operation, as many of them had taken the position that if assured protection they could induce a large percentage of their employees to return to work. Legislation to protect the public interest will be sought, however, as soon as the House returns after adjournment to August 15.

Long Island Establishes "Committee on Public Relations"

The Long Island on July 19 announced the appointment and organization of a "Committee on Public Relations." The committee consists of C. D. Baker, general superintendent; J. F. Keany, general solicitor; C. L. Addison, assistant to the president; Donald Wilson, general freight agent; P. H. Woodward, general passenger agent, and George Flatow, publicity agent.

In addressing the committee at its first official meeting, Ralph Peters, president of the road, referred to the work that the company had already done to bring about closer co-operation between management, employees and public, and said that the time had come for an expansion of such activity. Continuing, he said:

"I believe that the public is beginning to realize that it has been duped, in many instances, by political regulation, rather than economic regulation of many of our industries. The public is beginning to realize that capital, the public and the government must all co-operate through a mutual understanding. The loose way in which language and figures are used by so-called experts in economics, must be counteracted by plain and simple facts which all can understand. The propaganda of many employees' organizations must be met with clear, patient and painstaking statements of facts.

"The railroad employees need more liberal education. They need information that will give them courage to speak for the company. It may be that officers of this railroad and its principal employees have been reticent in speaking out on railway questions for fear of incurring the displeasure of their higher officers. This we want to overcome, and I hope the committee on public relations will plan to supply officers and employees with such facts as will enable them to speak authoritatively and clearly on matters pertaining to our own situation, as well as railroad problems generally."

The committee elected Mr. Woodward, chairman; Mr. Wilson, vice-chairman, Mr. Flatow, secretary, and T. P. Brennan, special representative.

New York Railroad Club Officers Attend Shore Dinner

Celebration of the Golden Anniversary of the organization of the New York Railroad Club will be observed in a more pretentious way next December than the usual annual dinner at the Hotel Commodore, New York. Plans to this effect were initiated last Tuesday evening with a shore dinner at the Atlantic Yacht Club in honor of the officers and members of the executive committee. The host of the occasion was Daniel M. Brady, the club's oldest member and active in its affairs from its inception. The number of guests participating was nearly 100 and would have been greater had it not been for the absence of railroad officers who at the last minute were forced by labor disturbances to cancel their acceptances and remain in direct touch with the properties they have in charge.

At the dinner formal addresses were made by L. F. Loree, president of the Delaware & Hudson, and Elisha Lee, vice-president of the Pennsylvania. Both speakers stressed their conclusion that the present labor troubles are largely attributable to politics and to politicians who use the railroads to create political issues for their personal advantage, and to labor leaders who seek chiefly to gain their personal ends, while the public suffers from their interference with the legitimate functioning of public utilities and industrial interests. In these comments they were joined by Frank Hedley, president of the Interborough Rapid Transit, and they appeared to be agreed that unless a strictly impartial tribunal is created with sufficient power to safeguard the public and vested interests on a parity in this regard with the United States Supreme Court, the situation will become worse instead of better. Such a tribunal should be free from every possibility of bias in behalf of either side of pending controversies.

Mr. Lee dwelt upon the method of handling disputes on the Pennsylvania as a result of which so far as known at present no grievances are pending on that system and none is at this time anticipated that cannot be amicably adjusted. He also indicated that men and women should meet their own responsibilities at the polls. Others spoke concerning the value of the railroad clubs, notably in that they assist in training and educational work for young men in railroad service. It was urged that railroad companies give to the clubs substantial practical encouragement.

Railway Returns for May

The Interstate Commerce Commission's summary of railway revenues and expenses of Class I roads for May is as follows:

Item	May 1922	May 1921	Four months 1922	Four months 1921
Average number of miles oper.	235,228.50	234,721.28	235,183.99	234,715.34
Revenues:				
Freight	$319,361,730	$313,132,827	$1,533,531,215	$1,548,206,619

Traffic News

C. A. Bland has been appointed general traffic manager of the El Paso (Tex.) Chamber of Commerce.

As a further step in its efforts to eliminate the abuse and misuse of commutation tickets the Long Island has just established a new rule which requires commuters to buy their own tickets and sign them with pen and ink at the time of purchase.

It is reported that the cities of Norfolk, Portsmouth and Newport, Va., will raise $10,000 to fight Boston's appeal to the Interstate Commerce Commission for an equalization of all import and export freight rates with other Atlantic ports. A hearing will be held in Boston on September 12.

The Traffic Club of Augusta, Ga., has been organized with E. W. Matthews, traffic manager of the Riverside Mills, as president, and R. B. Arthur, commercial agent of the Southern, as secretary; the election of other officers being postponed pending the report from committee on organization.

Traffic Statistics for April

The revenue ton miles of freight handled by the Class 1 railroads in April totalled 22,284,788,000 as compared with 23,083,759,000 for April, 1921, according to the monthly report of revenue traffic statistics compiled by the Interstate Commerce Commission. The decrease is accounted for by the falling off of coal production due to the strike. For the first four months of the year the ton miles totalled 100,846,975,000, as compared with 96,141,529,000 in 1921. Freight revenues, however, showed a decrease from $1,230,964,365 in 1921 to $1,209,894,593 in 1922 and the average revenue per ton mile was 1.2 cents as compared with 1.28 in 1921. The revenue passenger miles showed a decrease both for April and for four months as compared with 1921. For April the total was 2,701,720,000 as compared with 2,846,848,000 and for four months it was 10,395,936,000 as compared with 12,170,328,000. Passenger revenue for the four months were $321,272,002 as compared with $381,559,164 in 1921 and the number of revenue passengers per car was 14.66 as compared with 16.4. The figures are for 183 roads, excluding switching and terminal companies.

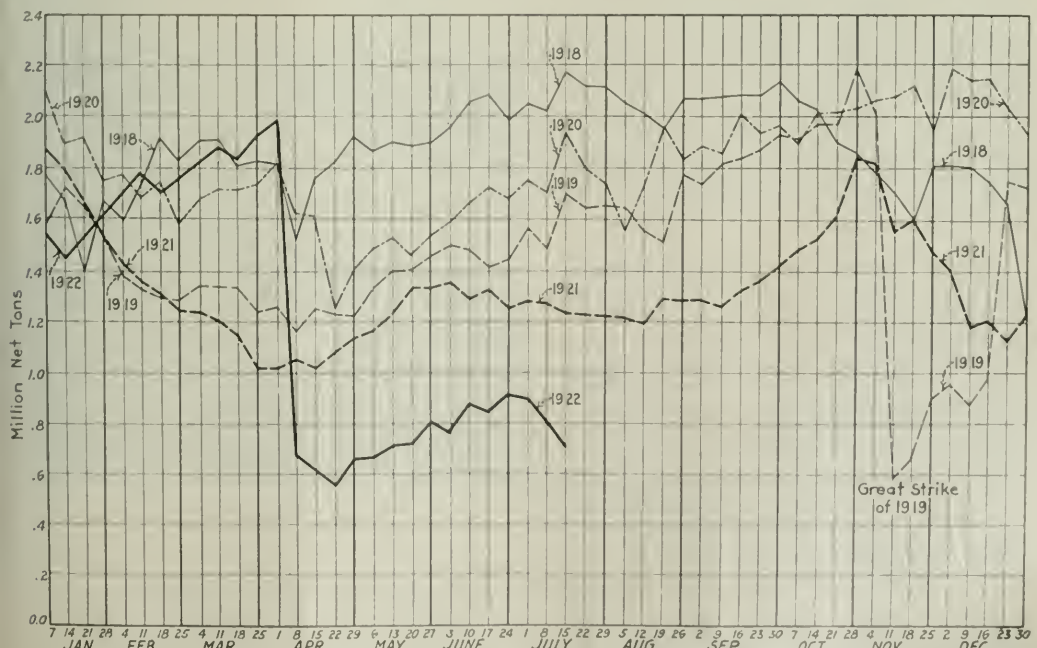
Coal Production

A new cause has arisen to limit the production of coal, namely, local congestion of traffic associated with the strike of the railway shopmen, according to the weekly bulletin of the Geological Survey. Because of the uncertainties of the situation it is difficult to forecast production for the week of July 10-15, but the record of the first four days suggest that the output of bituminous coal can hardly exceed 4,300,000 tons. Production of anthracite continues practically zero.

Final returns on the week of Independence Day, the fourteenth of the strike, show that 3,936,000 net tons of soft coal and 23,000 tons of anthracite were produced, a total of all coal of 3,959,000 tons.

The trend of production in the fifteenth week of the strike (July 10-15) is indicated by the cars of coal loaded daily. Monday's loadings (14,952 cars) were lower than those of Monday in other recent weeks, yet on Tuesday loadings dropped to 12,829 cars, and on Thursday they fell to 11,584, the lowest on any Thursday since mid-April.

The cause of the decrease is said to have been congestion of traffic resulting indirectly from the shopmen's strike. The first districts to be affected were Logan and Eastern Kentucky, but in Western Kentucky and Southwestern Virginia also loadings soon began to decrease, and by Wednesday even the Pocahontas, Tug River, and Kenova-Thacker districts were producing far below normal. In the non-union fields of Pennsylvania and in Alabama and the Far West no decrease in output had been reported up to Wednesday. No reports have been received to indicate any significant change in the number of men on strike.



Fluctuations in Coal Production During Last Five Years

Foreign Railway News

German Car Plant Burns

According to press dispatches from Berlin, the Orenstein & Koppel Works, builders of cars, was completely destroyed by fire on July 16.

Reduction in British Railway Wages

LONDON.

Owing to the fall in the cost of living in Great Britain, the railway workers' war bonus has been reduced by 4 shillings (about 97 cents at the normal rate of exchange) per week. However, a number of classes have not been affected by this reduction, as they have already reached their standard of wages.

French Railway Earnings

The gross earnings of the leading railways of France from January 1 to June 3 are as follows, according to the Economic Review (London):

	Francs (mill.) (a) 1922	(b) 1921	Increase (actual)	% per kilometer
State	394.0	385.7	38.3	10.78
Paris-Lyon Méditerranée French section	702.2	663.4	38.7	5.8
Nord	412.1	368.4	43.7	11.6
Orleans	359.2	352.3	6.8	1.94
Est	393.5	355.6	37.8	10.64
Midi	182.0	166.5	15.5	9.31
Alsace-Lorraine and Guillaume-Luxembourg	187.3	170.7	16.5	9.72

(a) Estimated. (b) Ascertained.

Switzerland Finances Electrification

LONDON.

The Swiss Federal Council has decided to fix the amount of the second railway electrification loan at 150,000,000 francs (about $28,713,000 at the present rate of exchange) only, although the first intention was to take up 200,000,000 francs (about $38,540,840 at the present rate of exchange). The amount subscribed was 280,000,000 francs (about $53,957,173 at the present rate of exchange). The cause of the reduction of the amount of the loan, which was issued at 4½ per cent, is to be looked for in the expectation that the rate of interest in Switzerland will be further reduced. Electrical locomotives now cost in Switzerland only 500,000 francs (about $96,349 at the present rate of exchange) each as compared with the former price of 900,000 francs (about $173,429).

Further Cheap Railway Fares in Great Britain

LONDON.

The railway companies of Great Britain have announced further cheap railway fare facilities, as follows:

Special day excursion tickets for individuals are to be reduced to a single ordinary fare for the round trip. At present the charge is a single fare and a third. These tickets, available for the day of issue only, will be issued to passengers in the following circumstances: (1) Local journeys from holiday resorts, (2) local journeys from towns to holiday resorts within a radius of 60 miles, (3) passengers attending local events, such as agricultural and flower shows, regattas, bazaars, etc., (4) on early closing days to towns within a radius of 60 miles, (5) to important cricket and football matches from stations within a radius of 60 miles, (6) to metropolitan sports clubs, (7) pleasure party tickets, with a minimum number of 12 adult fares. The reductions are to come into force on July 1, 1922.

First, second and third class walking tour tickets, available on the day of issue, enabling individual passengers to travel out to one station and return from another are also to be introduced. These tickets are to be issued at two-thirds of the ordinary single fare from point to point to stations within a radius of 30 miles.

Improved Condition of Palestine Railway System

Local communications have been greatly improved within the past year, and today Palestine enjoys probably the best railway, telephone and telegraph and mail service in the Near East, according to advices from the U. S. Shipping Board representative at Constantinople.

An efficient railway system in Palestine is a heritage of the war. In their military operations the British built the line from Kantara on the Suez canal to a point near Gaza, connecting there with the old pre-war narrow gage system. The gage was broadened and an extension built into Haifa. The system, now 500 kilometers in length, connects with the Egyptian State Railways at Kantara and with the Syrian railways in the north.

The motive power and rolling stock is in first-class condition. American locomotives built in 1918 for the British war department are used, having evidently been turned over to the Palestine railways. A few mountain saddle-tank type locomotives built in Leeds, England, have been added recently. A number of new passenger coaches from England, together with international sleeping cars afford good accommodations to travelers. Daily passenger and mail service are proving beneficial to business.

L. & N. W. Asks Employees for Suggestions

LONDON.

In a circular Arthur Watson, general manager of the London & North Western, asks employees for suggestions as to improved service and efficiency. The circular reads in part:

"It is further recognized that almost every railway employee has ideas concerning the management or working of his railway, but that there has existed a certain amount of diffidence, and in some cases, difficulty, in making known those ideas to some one in authority. Suggestions from the staff on all matters likely to promote the economical working of the concern or to increase the receipts are, therefore, welcomed. Such matters are:

(a) Any new method—mechanical or electrical—which it is believed will result in economy.
(b) The elimination of the waste of engine power, stores and materials.
(c) Improved methods of working trains or road vehicles and accelerating movement.
(d) Improvement in rolling stock and equipment.
(e) Improvements in passenger and goods station working.
(f) Improvements in stationery forms, office methods and equipment.
(g) The prevention of accidents.
(h) The improvement of relations with our customers and the securing of additional business to the company."

Decrease in Railway Accidents in Great Britain

LONDON.

As compared with the year 1920, there was a decrease in the number of passengers killed from 121 to 89 in the year 1921, on the railways of Great Britain and Ireland, while the number injured fell from 2,675 to 2,095. There was a still more satisfactory decline in the number of railway employees killed and injured, the figures being 231 killed and 2,892 injured as compared with 376 killed and 4,414 injured in the year 1920. The figures for individuals not included in the two foregoing categories were: killed 406 for the year 1921 as compared with 409 killed in the year 1920, and injured 168 in the year 1921, as compared with 286 in 1920. The grand total of passengers, employees and other persons was 726 killed and 5,155 injured in 1921, as against 906 killed and 7,375 injured in 1920. It is noteworthy that the number of accidents due to failure of rolling stock or permanent way fell from 13,675 to 9,408, an indication of the increasing care exercised by the companies with a view to the safety of passengers and employees. The number of accidents to trains was also considerably less. There were only 14 collisions between passenger trains in 1921, as compared with 39 in 1920, 49 collisions between passenger trains and freight trains or light engines in 1921, as compared with 62 in 1920, and 85 collisions between goods trains, light engines or other moving vehicles in 1921, as compared with 187 in 1920. There was also a decrease of 153 or nearly 33 per cent in the number of derailments.

Officials of Chilean State Railways Inspect Their New Equipment at Westinghouse Plant

Manuel Trucco, director general, and other representatives of the Chilean State Railways recently made a tour of inspection of the Westinghouse Electric & Manufacturing Company's plant at East Pittsburgh where the $7,000,000 order for electrification equipment, received last October, is now being furnished. Accompanying Senor Trucco and the other officers of the railway were

One of the Locomotives for Chile

Guy E. Tripp, chairman of the board of directors, E. M. Herr, president, and other representatives of the Westinghouse Company.

Only a few days prior to the visit of the Chilean representatives, a train, almost a quarter of a mile long, left the Westinghouse works loaded with sub-station equipment for the Chilean State Railways. This was the first shipment of material on this order.

A Train Load of Equipment for Chile with a Chilean Locomotive at the Head

At the head of the train was one of the 39 Baldwin Westinghouse locomotives to be furnished for the electrification.

An accompanying photograph shows the group of Chilean Railway officials with representatives of the Westinghouse Electric Company and Baldwin Locomotive Company in the yards of the Westinghouse East Pittsburgh plant following the inspection tour.

Equipment and Supplies

Locomotives

THE BALTIMORE & OHIO is inquiring for 15 Pacific type locomotives.

THE CANADIAN PACIFIC is inquiring for 15 Mikado type and 15 Pacific type locomotives.

THE SOUTHERN RAILWAY has ordered six 0-8-0 type switching locomotives from the Baldwin Locomotive Works.

THE CHICAGO & NORTH WESTERN is considering repairs to a number of its locomotives, although no definite decision reached regarding number or time when.

THE DELAWARE, LACKAWANNA & WESTERN, reported in the *Railway Age* of July 15 as inquiring for 5 Pacific type and 25 Mikado type locomotives, has ordered this equipment from the American Locomotive Company.

THE LEHIGH VALLEY is having 5 Consolidation type and 10 switching locomotives repaired at the shops of the American Locomotive Company and 6 Consolidation type and 9 switching locomotives at the shops of the Baldwin Locomotive Works.

THE NATIONAL ENAMELING COMPANY, Granite City, Ill., has ordered one, 0-6-0 type switching locomotive from the American Locomotive Company. This locomotive will have 21 by 26 in. cylinders and a total weight in working order of 141,000 lb.

THE ILLINOIS CENTRAL, reported in the *Railway Age* of July 15 as inquiring for locomotives, has ordered 15 switching locomotives from the Baldwin Locomotive Works, 25 Santa Fe type locomotives from the Lima Locomotive Works and 25 Mikado locomotives from the American Locomotive Company.

Freight Cars

THE NORTHERN PACIFIC is inquiring for 1,000 sets of steel center sills.

THE CANADIAN PACIFIC is asking for prices on from 250 to 500 refrigerator cars.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE is inquiring for 300 gondola cars of 50 tons' capacity.

THE UNION REFRIGERATOR TRANSIT COMPANY, Milwaukee, Wis., is inquiring for 350 refrigerator cars.

THE CHESAPEAKE & OHIO is inquiring for 50 steel underframe refrigerator cars of 40 tons' capacity.

THE NORFOLK & WESTERN has ordered 1,000 single sheathed box cars of 50 tons' capacity from the Ralston Steel Car Company.

THE MANILA RAILROAD COMPANY has ordered 50 cane cars of 30 tons' capacity from the Koppel Industrial Car & Equipment Company.

THE ILLINOIS CENTRAL, reported in the *Railway Age* of June 15 as inquiring for repairs to 600 gondola cars, has contracted for this work with the Ryan Car Company.

THE NEW YORK CENTRAL will have repairs made to 500 freight cars at the shops of the Ryan Car Company and to 500 cars at the shops of the Buffalo Steel Car Company.

THE PITTSBURGH & WEST VIRGINIA, reported in the *Railway Age* of July 15 as inquiring for 1,000 hopper cars of 55 tons' capacity, has ordered this equipment from the Cambria Steel Company.

THE PHILADELPHIA & READING, reported in the *Railway Age* of June 17 as inquiring for 1,000 gondola cars of 70 tons' capacity, has ordered 500 cars of this type from the Pressed Steel Car Company and 500 from the Standard Steel Car Company.

The Missouri Pacific will have repairs made to 2,500 freight cars at the shops of the following companies: American Car & Foundry Company, 1,250 cars; Mount Vernon Car Manufacturing Company, 250 cars and Sheffield Car & Equipment Company, 1,000 cars.

The Chicago, Burlington & Quincy, reported in the *Railway Age* of July 15 as preparing inquiries for repairs to a large number of cars, is now inquiring for repairs to 500 box cars and 500 steel gondolas. This company may call for inquiries for further repair work later.

The Humble Oil & Refining Company, Houston, Texas, reported in the *Railway Age* of July 15 as inquiring for three 12-yd. capacity air dump cars, has revised the inquiry to three 16-yd. capacity air dump cars with alternate on one 20-yd. capacity air dump car.

The Buffalo Creek & Gauley, reported in the *Railway Age* of July 15 as inquiring for from 200 to 300 hopper cars, has ordered 300 steel hopper coal cars of 55 tons' capacity from the American Car & Foundry Company. This road is owned by the Elk River Coal & Lumber Company.

The Chicago, Milwaukee & St. Paul, reported in the *Railway Age* of July 15 as inquiring for repairs on 1,000 to 1,500 box cars and 250 gondola cars, is now asking for prices on repairs also on 750 wooden gondola cars of 30 tons' capacity and 450 wooden gondola cars of 40 tons' capacity.

The Baltimore & Ohio has let contracts for freight car repairs as follows: To Baltimore Car & Foundry Company, 1,000 steel coke cars; American Car & Foundry Company, 1,000 box cars; Pullman Company, 1,000 composite gondola cars; Pressed Steel Car Company, 1,000 box cars; Hamilton Car Company, 500 box cars; Youngstown Steel Car Company, 500 hopper cars; Illinois Car & Manufacturing Company, 500 box cars, and General American Car Company, 500 gondola cars.

Passenger Cars

The Winston-Salem Southbound is inquiring for 6 coaches and three baggage and mail cars.

The Chicago, Aurora & Elgin, reported in the *Railway Age* of July 8, as contemplating the purchase of a number of new electric passenger cars, is said to be preparing inquiries for 20 all-steel coaches.

The Philadelphia & Reading, reported in the *Railway Age* of July 1 as inquiring for 5 baggage cars and 5 combination baggage and mail cars, has ordered this equipment from the American Car & Foundry Company.

The Nashville, Chattanooga & St. Louis, reported in the *Railway Age* of July 15 as considering the purchase of 17 passenger cars, has ordered five baggage cars, four mail cars, two compartment cars and four coaches from the American Car & Foundry Company.

The Chicago, North Shore & Milwaukee, in addition to its recent order for 15 merchandise dispatch cars and one utility line car from the Cincinnati Car Company, has purchased seven motor limited coaches, two parlor observation cars and one motor dining car from the same company.

Brooklyn Rapid Transit.—The New York Transit Commission has issued an order for increased service on the rapid transit lines; the order includes the purchase of 50 new steel passenger cars for subway use and the order has been accepted by the New York Consolidated Railroad Company. The company will retire 65 of the present wooden car equipment.

Iron and Steel

The Pennsylvania is expected to issue inquiries soon for 5,000 to 10,000 tons of car repair plates.

The Southern Pacific has placed an order with the Tennessee Coal, Iron & Railroad Company, Birmingham, Ala., for 30,000 tons of steel rails.

The Union Pacific is reported to have placed an order with the Illinois Steel Company for 10,000 tons of steel rails.

The Cleveland, Cincinnati, Chicago & St. Louis has issued inquiries for its third quarter requirements, including 500 tons of plates and 700,000 small bolts.

The Missouri, Kansas & Texas has placed an order with the Mount Vernon Bridge Co. for 1,400 tons of steel for repairs to its locomotive shop at Waco, Texas.

The Illinois Central has placed orders with the American Bridge Company for 369 tons of structural steel and field rivets and for 142 tons of steel deck plate girder spans.

The Michigan Central will receive bids until October 1 for its requirements of steel sheets, bars, shapes, plates, billets, springs, axles, tubes, crank pins, piston rods, steel rope, wire, bolts, nuts, washers, cotters and keys, rivets and bar iron.

The Java State Railways have ordered through the Netherlands Government, Colonial Department, New York City, from the Blaw-Knox Company, 60 galvanized steel transmission towers making a total of about 160 tons of steel. These towers form a part of a transmission line to be used to transmit power to the Batavia-Buitenzorg Line, about 40 miles long, which is now being electrified. The same company is inquiring for 4,000 unfinished car wheel tires to weigh about 400 lb. each.

Track Specialties

The Missouri, Kansas & Texas is inquiring for 400 tons of tie plates.

Machinery and Tools

The New York Central has ordered a 6 ft. American radial drill from the American Tool Works.

The Chesapeake & Ohio has bought a 5 ft. Western radial drill from the Dale Machinery Company.

The Illinois Central, reported in the *Railway Age* of June 10 as inquiring for a large list of machine tools, is expected to begin placing orders for these supplies this week.

The Atchison, Topeka & Santa Fe has placed an order with the Whiting Corporation for a 240-ton screw jack locomotive hoist to be used on the Gulf, Colorado & Santa Fe.

The Louisiana & Arkansas in connection with the construction of a new shop at Stamps, Ark., will receive bids until 11:00 a. m., July 31, for the following: Three overhead electric traveling cranes, one of 90 tons' capacity, 1 of 10 tons' and 1 of 7½ tons'; steam heaters with motors and diffusing outlets; 150 hp. boilers of either return tubular, water tube or Scotch marine type; 2,100 kw., d. c. electric generators connected directly to four valves, unaflow condensing or non-condensing, turbines condensing, full Diesel or semi-Diesel engines; one 69-in. wheel lathe; one 24-in. slotter; one 48-in. boring mill; one 24-in. shaper; one 2¼-in. flat turret lathe; one 48-in. car wheel borer; one 4-ft. radial drill; one 18-in. tool room lathe; one double car wheel press; one 2,500-lb. steam hammer; one 1½-in. forging upsetting machine; one 1¼-in. bolt heading upsetting forging machine; one condenser, boiler feed pump and feed water heater.

Signaling

The Raritan River has placed an order with the Hall Switch & Signal Company for 19 unit type color light signals, 52 relays and 36 switch boxes.

The New York Central has placed an order with the Hall Switch & Signal Company for 59 Style L top post motor signals with accessory material and 156 neutral relays and 52 motor type relays.

The Missouri Pacific has placed an order with the General Railway Signal Company for one 30-lever Saxby & Farmer interlocking machine and four Model-2, form "B" locks, all of which are to be installed by company forces at Kenneth, Kansas.

Supply Trade News

K. C. Gardner, formerly general sales manager, central district, of the Pressed Steel Car Company, is now associated with the **Greenville Steel Car Company**, Greenville, Pa., as vice-president in charge of sales. Mr. Gardner's headquarters are at Greenville.

S. H. Lanyon has been appointed manager of the recently opened San Francisco branch office of the **Okonite Company**, Passaic, N. J., manufacturers of insulated wires and cables, splicing tapes, etc. His office is located at 509 New Call building.

J. H. Rodger, western manager of the **Safety Car Heating & Lighting Company**, with headquarters at Chicago, has been promoted to vice-president with the same headquarters, in charge of that company's western business. Mr. Rodger entered the railway supply business in 1899, in the service of the Standard Coupler Company, which company he left in 1905 to become assistant to the president of the Monarch Machine Company, New York. In 1911, he became a sales agent of the Safety Car Heating & Lighting Company in its Chicago offices. He was promoted to western manager of that company in 1919, which position he was holding at the time of his recent promotion.

J. H. Rodger

G. A. Woodman has been appointed sales manager of the **Northwestern Malleable Iron Company**, Milwaukee, Wis., with offices at 237 Railway Exchange building, Chicago. He will have charge of the sales of the Joliet journal box which was formerly handled by the Joliet Railway Supply Company, Chicago, now the Republic Railway Equipment Company, of the same city. Mr. Woodman was born at Dunkirk, N. Y., on August 21, 1866. On August 21, 1883, he entered the service of the Brooks Locomotive Company as a machinist's apprentice and was successively thereafter, in the drafting department, same company, mechanical engineer, Lima Locomotive & Machine Company, assistant master car builder, Swift & Company, Chicago, assistant superintendent, American Car & Foundry Company, Chicago; mechanical engineer, Kirby Equipment Company, Chicago, when that company sold the Woodman journal box, the name of which was later changed to the Franklin journal box; and the National Car Equipment Company, Chicago. He retired two years ago and has been inactive in the railway supply business up to the time of his recent appointment.

G. A. Woodman

G. M. Jacobsen has joined the service staff of the **Franklin Railway Supply Company**, New York, and is now in charge of Southern territory with headquarters at Atlanta, Ga., relieving **B. C. Wilkerson**, who has been appointed a special service representative of the company on locomotive booster applications.

The **U. S. Light & Heat Corporation**, of California, has been incorporated as a subsidiary of the U. S. Light & Heat Corporation, Niagara Falls, N. Y. A site has been leased and construction started on a new plant at Oakland, Cal. The new plant is to handle the company's business on the Pacific Coast, and it is expected that production will start in the new factory about October 1.

Republic Railway Equipment Company

The Republic Railway Equipment Company, Inc., Chicago, has been organized to take over the Joliet Railway Supply Company, which owns and operates a modern brake beam and bolster plant at 93rd street and Drexel avenue, Chicago. At a meeting of the board of directors of the new company in Chicago on July 7, Fred A. Poor, president of the P. & M. Company, was elected chairman of the board; Burton Mudge, president of Mudge & Company, was elected president; J. H. Slawson, vice-president of the Joliet Railway Supply Company, was made first vice-president; C. A. Carsecadin, vice-president of the Joliet Railway Supply Company, was elected vice-president, sales; A. M. Pearson, secretary of Mudge & Company, was made secretary, and W. F. Hoffman, treasurer. J. E. Simons, manager of sales of the Joliet Railway Supply Company, has been appointed to the same position in the new organization. **Fred A. Poor** was born in Maine in 1870. He was superintendent of electric signals of the Illinois Central with headquarters at Chicago from 1892 to 1900. In the latter year he entered the service of the Weber Railway Joint Manufacturing Company as western sales manager with office in Chicago, which position he held until 1906, when that organization was merged with the Rail Joint Company, at which time he was sent to London, England, as foreign manager. In 1908 he returned to this country as western sales agent with headquarters at Chicago, which position he held until 1914, when he became president of the P. & M. Company which he had organized in 1905. In 1914 he became president also of the Vermilion Malleable Iron Company; in 1916, president of the P. & M. Company, Ltd., of Canada, in 1921, chairman of the board of the Canton (Ohio) Forge & Axle Company, and most recently chairman of the board of the Republic Railway Equipment Company, all of

F. A. Poor

Burton Mudge

which positions he is now holding. **Burton Mudge** was formerly connected with the operating departments of the Atchison, Topeka & Santa Fe, the Chicago & North Western, the Fort Worth & Denver City, and the Chicago, Rock Island & Pacific. He resigned as assistant general manager of the last named road in 1908 to enter the railway supply business and in September that year he organized the firm of Burton W. Mudge & Bro., representing the Commonwealth Steel Company, which later became Mudge & Co. In January of this year Mr. Mudge was elected vice-president and director of the Pilliod Company, New York, which duties he assumed in addition to those with Mudge & Co. His work as president of the Republic Railway Equipment Company will also be in addition to that mentioned above.

J. H. Slawson

J. H. Slawson was born at Cleveland, Ohio. He entered railroad service in 1890 as a clerk in the office of the assistant general freight agent of the Lake Shore and Michigan Southern (now a part of the New York Central) and was thereafter employed successively in the revision department, the tariff bureau, the auditing department and the office of the chief engineer. In 1902 he entered the service of the Malleable Castings Company at the Sharon, Pa., plant with special duties pertaining to railroad matters. He later became chief clerk, following which he was promoted to local treasurer in charge of the finances of the Sharon plant. He was transferred to Chicago in 1912, as sales agent, which position he held until 1917, when he was elected vice-president of the Joliet Railway Supply Company, a subsidiary of the Northwestern Malleable Iron Company, Milwaukee, Wis. He was holding this position up to the time he became first vice-president of the new organization.

C. A. Carscadin

C. A. Carscadin, vice-president, sales, was born in Buffalo, N. Y. He entered railway service in 1881 as a stenographer in the employ of the New York Central & Hudson River (New York Central), at New York, which position he held until 1882 when he left to become stenographer and secretary to the president of the Michigan Central at Detroit, Michigan, and from 1887 to 1902 he was a traffic representative of the same road. From the latter date until the present he has been engaged in the railway supply business, having been connected with the Detroit Seamless Tube Company the Globe Seamless Tube Company and the National Car Equipment Company. He was elected a vice-president of the Joliet Railway Supply Company in October, 1917, which position he has held until the recent change in the organization

---

The O'Malley Beare Valve Company has removed its downtown, Chicago, sales and service office from 841 Railway Exchange building to its new general office and manufacturing plant 231 to 259 East Ninety-fifth street.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, reported in the *Railway Age* of June 17, page 1507, as authorizing the construction of the first unit of enlarged freight terminal facilities at Dallas, Tex., to cost approximately $200,000, has completed plans for this work. The work includes a new concrete warehouse and office building, 60 ft. by 240 ft. with an 8 ft. by 200 ft. platform; a 60 ft. by 60 ft. concrete warehouse addition with an 8 ft. by 60 ft. platform, and a 30 ft. by 150 ft. open concrete platform.

BALTIMORE & OHIO.—This company will rebuild its elevators and grain piers at Locust Point, Baltimore, recently destroyed by fire. The new facilities will be built of steel and concrete and provided with modern conveying machinery. The elevators will be equipped with conveying galleries leading from storage bins to merchandise piers and running the full length of these. These galleries will be provided with chutes enabling vessels to load grain simultaneously with general cargo, thus effecting a saving in time in loading vessels and enabling shifting at the piers to be reduced to a minimum.

CANADIAN PACIFIC.—This company has completed plans for branch lines, construction to include the closing of the existing gap in the Weyburn, Sask.-Lethbridge, Alta., line; the grading of the first 60 miles east from Consul, Sask.; the equipping for traffic of the first 50 miles of the line from Lanigan, Sask., to Naicam and the completion of the line extending north from Russel, Man., 12.5 miles.

CANADIAN NATIONAL.—This company has awarded contracts for water supply improvements on the Grand Trunk Pacific as follows: The construction of dams at Pope, Man., Raymore, Sask., Maryfield, Sask., Mecheche, Alta., and Conquest, Sask., to W. A. Dutton, Winnipeg, Man.; the construction of a dam at Wiseton, Sask., to the Northern Construction Company, Winnipeg, Man.; the construction of a dam at Rama, Sask., to C. G. Anderson, Norwood, Man.; the construction of pipe lines at Wiseton, Sask., Rama, Sask., Raymore, Sask., and Maryfield, Sask., to Green & Elsasser, Winnipeg, Man.; the construction of a pipeline at Pope, Man., to G. M. Irwin, Stonewall, Man.; a pipe line at Mecheche, Alta., to the Jamieson Construction Company, Edmonton, Alta.; a pipeline at Tilney, Sask., to Riley & Reed, Patience, Alta.; and 10,000 ft. of pipeline at Lloydminster, Alta., to Simpson & Shillington, Winnipeg, Man. This company has also awarded contracts to Gibbs Bros., Lumsden, Sask.; and to Rossa & Wikstrand, Saskatoon, Sask., respectively, for a line revision of the Boundary subdivision near Lampman, Sask., and for a connection between the Craik and Riverhurst subdivisions at Regina, Sask.; also a contract to the Ideal Fence & Spring Co., of Canada, Winnipeg, Man., for approximately 50 miles of fencing on the Oakland, Man., subdivision.

CHICAGO, BURLINGTON & QUINCY.—This company reported in the *Railway Age* of June 24, page 1755, as accepting bids for the construction of a power house at Plattsmouth, Neb., and a five-stall roundhouse at Council Bluffs, Iowa, has awarded the contract for the former to the Jones Engineering Company, Chicago, and contract for the latter to the Home Builders, Omaha, Neb.

ILLINOIS CENTRAL.—A contract has been awarded to Joseph F. Nelson & Sons, Chicago, for the construction of brick standard interlocking towers at Peotone, Ill., Manteno and Monee streets.

LOUISIANA & ARKANSAS.—This company will receive bids until 11:00 a. m., July 31, for the construction and equipment of a locomotive repair shop at Stamps, Ark. The work includes a main building 280 ft. by 120 ft., a blacksmith shop 60 ft. by 80 ft., a power house 68 ft. by 72 ft., a lavatory building 17 ft. by 32 ft., and an office building 36 ft. by 60 ft. With the exception of the office building, which will be a two-story frame structure, all the buildings will be of brick construction with large glass wall areas. The main building and the blacksmith shop will have structural steel frames. The equipment to be provided will be found in our equipment and supplies column.

Railway Financial News

ALABAMA & VICKSBURG.—*New Directors.*—R. E. Kennington, of Jackson, Miss., and A. S. Bozeman, of Meridian, Miss., have been elected directors.

BALTIMORE & OHIO.—*Equipment Trusts Sold.*—Kuhn, Loeb & Co., Speyer & Co., and the National City Company have sold privately at prices to yield an average of 5.25 per cent and subject to approval by the Interstate Commerce Commission, $6,750,000 5 per cent equipment trust certificates, maturing in equal annual instalments from August 1, 1923, to August 1, 1937, inclusive.

BOSTON & MAINE.—*Meeting Postponed Again.*—The annual meeting, several times adjourned, was again held up on July 14 by new court action of E. D. Codman. A bill in equity was filed in the Supreme Court of Massachusetts against the New York Central and 42 other defendants, including officers and directors of the Boston & Maine, to prevent what the plaintiff says is an attempt on the part of the New York Central to secure a control of the Boston & Maine. Judge Crosby issued an order of notice returnable July 18 and the Boston & Maine meeting was adjourned until July 27.

Mr. Codman filed his suit after Supreme Court Justice Crosby had denied his previous petition for an injunction to prevent a declaration of the vote cast at the Boston & Maine meeting in May on 222,000 shares of stock held by the New York, New Haven & Hartford. These shares are in the custody of trustees appointed by the United States Circuit Court for the Southern District of New York. Under the order of that court the trustees were directed to vote for six directors nominated by the New Haven Road.

BOSTON & MAINE.—*Equipment Trust Authorized.*—This company has been authorized by the Interstate Commerce Commission to assume obligation and liability in respect of $1,815,000 of equipment trust certificates to be issued by the First National Bank of Boston and sold at not less than 98.42.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Payment for Stock.*—See New York Central.

CLINTON & OKLAHOMA WESTERN.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue $500,000 of first mortgage 6 per cent gold bonds and $400,000 of second mortgage 5 per cent gold bonds to be exchanged at a par for $900,000 of first mortgage 5 per cent gold bonds now outstanding.

DAYTON, TOLEDO & CHICAGO.—*To Be Sold.*—W. H. Ogborn, receiver, pursuant to a court order, will offer this road for sale at public auction on August 24, 1922, at the court house in Troy, Ohio. The sale will include the 90 miles of main track between Stillwater Junction, Ohio, and Delphos, 12 miles of side track, one locomotive, two coaches, one baggage car, right-of-way, real estate and all other properties incident to and connected with the operation of the line.

DULUTH & IRON RANGE.—*Annual Report.*—The income account for the year ended December 31, 1921, compares as follows:

	1921	*1920
Operating revenue	$4,972,513	$10,781,71
Gross income	5,348,710	11,471,821
Operating expenses	4,369,544	5,695,087
Railway tax accruals	298,852	1,159,239
Interest on funded debt	407,550	407,550
Total deductions	5,204,034	8,721,492
Net income	144,676	2,750,329
Income applied to sinking and other reserve funds	.....	1,254,447
Balance to profit and loss	144,676	1,495,882

*Does not include federal income for months of January and February.

EASTLAND, WICHITA FALLS & GULF.—*Authorized to Issue Securities.*—The Interstate Commerce Commission has authorized the issuance of $556,000 of common stock and $350,000 of first mortgage bonds to be delivered to John Ringling in payment for advances.

IONIA, JI[illegible] & CLOVERVILLE.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue and sell $550,000 of 4½ per cent 50-year first and [illegible]dated general refunding mortgage bonds.

GULF, MOBILE & NORTHERN.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of 3.4 miles of this company's McLain branch north of Pryor, Miss.

KNOXVILLE & CAROLINA.—*Authorized to Issue Securities.*—This company has been authorized by the Interstate Commerce Commission to issue at par $200,200 of common stock and $132,000 of first mortgage bonds to be used to pay for the railroad property acquired from L. C. Gunter, formerly the Knoxville, Sevierville & Eastern.

LOUISIANA & NORTHWEST.—*Initial Dividend.*—The directors have placed the stock on a 6 per cent annual basis by declaring an initial dividend of $1.50 a share, payable October 1, for the quarter ending September 30, 1922.

MEMPHIS, DALLAS & GULF.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the receiver to abandon as to interstate and foreign commerce its lines from Glenwood to Hot Springs, Ark., 35.3 miles; Graysonia to Leard, Ark., 5.49 miles; and from Daleville to Clark's Mill, Ark., 10.64 miles.

MISSOURI, KANSAS & TEXAS.—*Cash Installment on Deposited Stock.*—J. & W. Seligman & Co. and Hallgarten & Co., reorganization managers, announce that a cash instalment of $5 a share on the common stock and $4 a share on the preferred was payable July 18 on stock deposited with the Equitable Trust Company of New York.

Bond Readjustment.—See Sherman, Shreveport & Southern.

MUSCATINE, BURLINGTON & SOUTHERN.—*To Foreclose.*—Foreclosure proceedings to collect $517,800, brought by the Continental & Commercial Trust & Savings bank, Chicago, against the Muscatine, Burlington & Southern, were heard in the Federal District Court at Muscatine on July 13. It is expected that this road, which operates between Muscatine, Iowa, and Burlington, 54 miles, and is now in the hands of a receiver, will be ordered sold by the court eventually. There are rumors that the Minneapolis & St. Louis, the Chicago, Milwaukee & St. Paul or the Chicago, Burlington & Quincy might seek to annex the property.

NEW YORK CENTRAL.—*Authorized to Issue Stock.*—The Interstate Commerce Commission has authorized an issue of $23,478,880 of stock to be used in payment for common and preferred stock of the Cleveland, Cincinnati, Chicago & St. Louis. The order calls attention to the fact that the Big Four is included in the New York Central System in the grouping of roads under the tentative plan for consolidation promulgated by the commission and that it is represented that the proposed acquisition of stock of the Big Four will be in aid of such consolidation.

NORTHERN PACIFIC.—*Bond Offering.*—J. P. Morgan & Co., the First National Bank and the National City Company are offering this morning an issue of $8,702,300 refunding and improvement mortgage 5 per cent bonds, series "C," dated January 1, 1922, and due July 1, 2047, at 96 and interest to yield 5.20 per cent. The bonds are callable at 105 after 1952. The proceeds will be used to pay off the outstanding Northern Pacific-Great Northern joint 6½s, which were not exchanged.

OCALA & SOUTHWESTERN.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for a certificate authorizing the abandonment of its line from Ocala to Ray, Fla., 6 miles.

PENNSYLVANIA.—*Lease of Panhandle.*—See article on another page entitled "Lease of Panhandle by Pennsylvania Authorized Conditionally."

PITTSBURGH, CINCINNATI, CHICAGO & ST. LOUIS.—*Pennsylvania's Lease.*—See article on another page entitled "Lease of Panhandle by Pennsylvania Authorized Conditionally."

SEABOARD AIR LINE.—*Asks Authority for Equipment Trust.*—This company has applied to the Interstate Commerce Commission for authority to enter into an equipment trust agreement with the

Chase National Bank for the issuance of $2,450,000 of 6 per cent equipment trust certificates under the Philadelphia plan for the acquisition of 1,000 new freight cars and 4 dining cars and 1,000 rebuilt box cars. The certificates have been sold to Freeman & Co. at 97.02

SHERMAN, SHREVEPORT & SOUTHERN.—*Readjustment of Bonds.*—A plan and agreement of readjustment of the 50-year first mortgage 5 per cent gold bonds, guaranteed by the Missouri, Kansas & Texas, has been prepared by the protective committee of these bonds, according to an announcement by R. Walter Leigh, Chairman. Mr. Leigh has sent a notice to all holders of certificates of deposit of the Columbia Trust Company, issued under the deposit agreement of February 15, 1916, stating that they shall be assumed to have assented to and ratified the plan unless within twenty days after July 19 1922, the date of first publication of the announcement, they shall dissent and withdraw the bonds represented from the deposit agreement. Holders of undeposited bonds who do not deposit shall have no right, the notice states, to participate in the plan of readjustment.

ST. LOUIS-SAN FRANCISCO.—*Six Months Guaranty Certified.*—The Interstate Commerce Commission has issued a final certificate placing the amount of this company's guaranty for the six months period of 1920 at $5,385,449, of which $835,449 was still to be paid and that of the St. Louis, San Francisco & Texas at $314,967 of which $114,967 was to be paid.

RUTLAND.—*Asks Authority to Discontinue Operation of Line.*—This company has applied to the Interstate Commerce Commission for authority to discontinue operation between the Vermont shore of Lake Champlain and Fort Ticonderoga, N. Y.

TOLEDO TERMINAL.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $321,000 of first mortgage bonds at 91.78 for the purpose of liquidating $294,613.80 of demand notes payable to proprietary companies.

YAZOO & MISSISSIPPI VALLEY.—*Asks Authority to Issue Bonds.*—This company has applied to the Interstate Commerce Commission for authority to issue $5,034,000 of 5 per cent gold improvement mortgage bonds to be delivered to the Illinois Central at par in payment of advances for additions and betterments.

Dividends Declared

Cuba Railroad.—Preferred, $3, semi-annually, payable August 15 to holders of record July 20; $3, semi-annually, payable February 15, 1923, to holders of record July 20.

Louisiana & Northwest.—$1.50, quarterly, payable October 1, to the quarter ending September 30.

Trend of Railway Stock and Bonds Prices

	July 18	Last Week	Last Year
Average price of 20 representative railway stocks	67.65	67.25	55.37
Average price of 20 representative railway bonds	87.78	87.02	74.42

The Erie Triplex on the Susquehanna Grade

Railway Officers

Executive

Morris K. Trumbull, formerly assistant chief engineer of the Chicago & Western Indiana and more recently consulting engineer with the American Sugar Refining Co., has been appointed executive assistant to the president of the Canton Railroad Company with headquarters at Baltimore, Md.

Stanton Ennes, whose election to the presidency of the Wheeling & Lake Erie was announced in the *Railway Age* of July 8, page 91, was born on March 19, 1862, at St. Louis, Mo. He began his railroad career on July 10, 1881, on the Texas Pacific. Leaving this road on December 31, 1881, he entered the service of the Southern Pacific as a telegraph operator and was employed in this capacity and later as a brakeman in the service of this company until December 20, 1883. On August 9, of the following year he entered the service of the Missouri Pacific as a telegraph operator and consecutively from that time he was engaged as a telegraph operator, until May 15, 1886, as a train dispatcher until June 1, 1893, and as chief dispatcher until July 1, 1902, on which last date he was promoted to division superintendent with headquarters at Nevada, Mo. He left the Missouri Pacific in April, 1904, and consecutively thereafter was superintendent on the Western Maryland until September, 1905; assistant superintendent on the Grand Trunk at Ottawa, Ont., from January 15, 1906, to April 1, 1907; and superintendent on the Great Northern from the latter date until 1915, when he re-entered the service of the Western Maryland as general manager. During federal control he was transferred to the Baltimore & Ohio and served as general manager of the lines of this road from Cumberland, W. Va., to the Atlantic coast after March 1, 1920. He continued as general manager of the Eastern Lines of the Baltimore & Ohio until January 1, 1921, when he was elected vice-president and general manager of the Wheeling and Lake Erie, which position he held at the time of his recent promotion.

S. Ennes

Financial, Legal and Accounting

G. E. B. Welles has been appointed to the newly created position of supervisor of land valuation of the Southern Pacific, Pacific system, with headquarters at San Francisco.

F. J. Goebel, assistant counsel of the Cincinnati, Indianapolis & Western, with headquarters at Indianapolis, Ind., has been appointed general attorney which position he will hold in addition to serving as secretary of that road.

J. Welch, assistant comptroller of the Chicago, Milwaukee & St. Paul with headquarters at Chicago, has been promoted to assistant secretary and treasurer with headquarters at New York. He will be succeeded by **T. I. Walsh**, assistant auditor of expenditure with headquarters at Chicago.

George D. Hill, statistician in the operating department of the Seaboard Air Line, has been appointed traveling auditor of joint facility accounts, with headquarters at Portsmouth,

Va. The office of statistician has been abolished, the work being transferred to the accounting department.

Operating

E. E. Peterson has been elected secretary and general manager of the Lakeside & Marblehead with headquarters at Cleveland, Ohio, succeeding A. B. Mack, resigned.

A. W. Flanagan has been appointed assistant superintendent of telegraph of the Southern Pacific, Pacific System, and of the Western Union Telegraph Company, with headquarters at San Francisco, Cal.

George Hodge, whose appointment to assistant general manager, Eastern lines, of the Canadian Pacific was announced in the *Railway Age* of July 8, page 91, was born in October, 1874. In March, 1890, he entered the service of the Canadian Pacific as a clerk in the general passenger department at Montreal. In August, 1890, he became a clerk in the office of the assistant to the president. Two years later he was promoted to secretary to the vice-president and, in 1897, became chief clerk to the vice-president. In March, 1907, he was promoted to superintendent of terminals at Montreal and, in March, 1911, was transferred in a similar capacity to London, Ont. A year later he was appointed general superintendent with headquarters at Montreal and in June, 1915, was appointed assistant to the general manager, Eastern lines, with headquarters at Montreal. In October, 1918, he became assistant to the vice-president which position he was holding at the time of his recent appointment.

G. Hodge

Alfred Price, whose retirement from the general managership of the Canadian Pacific, Eastern lines, for an indefinite period at the advise of physicians was announced in the *Railway Age* of July 8, page 91, was born in Toronto, Ont., on December 6, 1861, and was educated in the public schools and the School of Practical Science, Toronto. He entered business as a messenger for the Montreal Telegraph Company, at the Toronto office in 1875. On September 3, 1879, he joined the service of the Ontario Credit Valley Railway as a telegraph operator and clerk. In 1881 he took charge of the car accounting and records department of the company and in July, 1882, was promoted to dispatcher. In July, 1888, he became car distributor and in May, 1896, assumed the duties of chief dispatcher. Mr. Price was in August, 1898, appointed superintendent of the Toronto terminals of the Canadian Pacific. In May, 1903, he became superintendent of the Fort William terminals and in August, 1904, was promoted to superintendent of transportation with headquarters at Winnipeg. Three years later he was promoted to general superintendent with the same headquarters and in December, 1907, was transferred in a similar capacity to Calgary, Alta. In 1913 he became assistant general manager, Eastern lines, with headquarters at Montreal and in October 1918, was promoted to general manager, Eastern lines.

A. D. Price

John J. Scully, whose appointment as general manager, Eastern lines, of the Canadian Pacific was announced in the *Railway Age* of July 8, page 91, was born on February 3, 1872. On January 4, 1887, he joined the service of the Canadian Pacific as office boy in the offices of the car accountant at Montreal. He successively filled the following positions: February, 1888, clerk in the car account's office, Montreal; June, 1888, clerk to the assistant superintendent at Farnham, Quebec; August, 1890, clerk in the office of the superintendent at Montreal; April, 1891, clerk to the assistant superintendent at Farnham; March, 1893, clerk in the mechanical department at Montreal; September, 1894, clerk in the mechanical department at Toronto Junction. In March, 1898, he was appointed assistant to the master mechanic at Toronto Junction and in August, 1901, he was transferred in a similar capacity to Winnipeg. In August, 1902, he became chief clerk in the general superintendent's office at Winnipeg. He was appointed assistant superintendent of the Western division in June, 1903, and in July, 1903, chief clerk to the assistant manager at Winnipeg. In April, 1904, he became assistant superintendent at Brandon, Man., and three months later was appointed superintendent at Brandon, Man. In November, 1906, he was transferred to Kenora, Ont., and in May, 1910, became superintendent of the Western division. He was promoted to general superintendent of the Saskatchewan district in July, 1910, and in April, 1912, was transferred to the Algoma district, North Bay, Ont., where he was serving at the time of his recent promotion.

J. J. Scully

H. C. Koch has been appointed general superintendent of the New Orleans, Natalbany & Western with headquarters at Natalbany, La., to succeed O. C. Pantall and the office of superintendent has been abolished.

C. J. Brown, trainmaster of the Chester district of the Missouri Pacific, has been appointed acting superintendent of the Illinois division, to succeed **O. E. Coyne**, granted leave of absence due to ill health. **E. E. Buckminister** has been appointed acting trainmaster of the Chester district.

Mechanical

M. Meehan has been appointed master car repairer of the Western division of the Southern Pacific, Pacific system, with headquarters at West Oakland, California, to succeed **H. Englebright**, retired.

Engineering, Maintenance of Way and Signaling

C. F. Hinchman, engineer maintenance of way of the Indianapolis terminals of the Cleveland, Cincinnati, Chicago & St. Louis, with headquarters at Indianapolis, Ind., has had his jurisdiction extended over the Springfield division, from Springfield, Ohio, to Indianapolis, with the title of engineer maintenance of way, Springfield division and Indianapolis terminal, with the same headquarters.

Traffic

N. C. Osborn has been appointed commercial agent of the Seaboard Air Line with headquarters at Memphis, Tenn.,

succeeding D. W. Anderson, effective August 1. **B. F. Black** has been appointed general eastern freight agent with headquarters at New York, N. Y., succeeding N. C. Osborn and **D. W. Anderson** has been appointed commercial agent with headquarters at New York, N. Y., succeeding Mr. Black.

R. G. Nicholson, chief clerk in the general freight office of the Atchison, Topeka & Santa Fe at Chicago, has been promoted to assistant general freight agent, with headquarters at Chicago, to succeed J. H. McCabe, promoted. Mr. Nicholson was born on October 10, 1882, at Milwaukee, Wis. He entered the service of the Wisconsin Central (now a part of the Minneapolis, St. Paul & Sault Ste. Marie) in October, 1898, as a clerk, which position he held until 1900 when he left to become a stenographer and clerk for the Atchison, Topeka & Santa Fe. He left in 1902 to engage in other business and in 1905 he re-entered the employ of the Atchison, Topeka & Santa Fe as a clerk in the traffic office at Milwaukee, Wis., and was soon transferred to the Chicago office. He was promoted to claim clerk in the freight department at Chicago in 1907 and served successively as rate clerk, chief rate clerk, assistant chief clerk and chief clerk in the same department, which latter position he was holding at the time of his recent promotion.

R. G. Nicholson

C. C. Dana, general freight agent of the Atchison, Topeka & Santa Fe, with headquarters at Chicago, has been promoted to assistant freight traffic manager with the same headquarters, to succeed F. A. Manter, deceased. Mr. Dana was born on August 17, 1868, at Morrisville, N. Y., and after graduating from Princeton University in 1891, entered railway service as a clerk in the general manager's office of the Atchison, Topeka & Santa Fe at Topeka, Kan. He was later employed as a clerk in the local office at Topeka, which position he held until 1895, when he left to become material agent of the Cerrillos Coal Railroad Company at Los Cerrillos, N. M. He returned to the Atchison, Topeka & Santa Fe in March, 1895, as assistant chief clerk in the assistant superintendent's office at Fort Madison, Iowa, and on December 31, 1897, he was promoted to agent at Pekin, Ill. From January, 1898, to June, 1913, he was successively traveling freight agent with headquarters at Streator, Ill., and division freight agent with headquarters at Fort Madison, Iowa. On the latter date he was promoted to industrial agent with headquarters at Chicago, which position he held until July 1, 1916, when he was promoted to general freight and passenger agent of the Panhandle & Santa Fe and assistant general freight agent of the Atchison, Topeka & Santa Fe, with headquarters at Amarillo, Tex. He held these positions until July 14, 1920, with the exception of the period from October 1, 1918, to April 15, 1919, when he was assigned to the U. S. R. A. at Washington, D. C. to act as personal assistant to Edward Chambers, director of the division of traffic. On July 15, 1920, he was appointed general freight agent of the Atchison, Topeka & Santa Fe, with headquarters at Chicago, which position he was holding at the time of his recent promotion.

C. C. Dana

J. H. McCabe, assistant general freight agent of the Atchison, Topeka & Santa Fe with headquarters at Chicago, has been promoted to general freight agent with the same headquarters, succeeding C. C. Dana, promoted. Mr. McCabe was born on November 20, 1873, at Washington, D. C., and entered railway service in February, 1887, as an office boy in the auditing department of the Atchison, Topeka & Santa Fe at Chicago. He has been in service of that company continuously since the latter date, as a clerk in the local office from 1891 to 1898, a clerk in the refrigerator department from 1898 to 1900, and a clerk in the general freight department from 1900 to 1913. In the latter year he was promoted to chief clerk in the general freight department, and on March 1, 1920, he was appointed assistant general freight agent, which position he was holding at the time of his recent promotion.

J. H. McCabe

Purchasing and Stores

A. H. Laret, whose appointment as assistant to the vice-president and chief purchasing officer of the St. Louis-San Francisco was noted in the *Railway Age* of June 17, page 1514, was born on October 11, 1890, at Pittsburg, Kan. He entered railway service in 1906 as a stenographer in the local freight agent's office of the St. Louis-San Francisco at Pittsburg, Kan. He was employed as a stenographer in the general storekeeper's office of the Kansas City Southern from January, 1907, to August, 1909, and as a stenographer in the stores department of the Atchison, Topeka & Santa Fe from August, 1909, to December, 1910. He was then promoted to secretary to general storekeeper of the latter road. He re-entered the service of the St. Louis-San Francisco on November 15, 1913, as secretary to the chief purchasing officer. In April, 1914, he was promoted to assistant chief clerk, and in August, 1915, to chief clerk, which latter position he held until the period of federal control when he acted as assistant chief clerk to purchasing agent of the St. Louis-San Francisco and the Missouri, Kansas & Texas. At the close of federal control on March 1, 1920, he was appointed chief clerk to the vice-president and chief purchasing officer of the St. Louis-San Francisco, remaining in that capacity until June 1, 1922, when he was promoted to his present position.

A. H. Laret

EDITORIAL

Railway Age

The Table of Contents Will Be Found on Page 5 of the Advertising Section

A New Way to Advertise

The Northern Pacific has found a new way to advertise the scenic attractions along its route and hereafter the slogan of its publicity department will be "Say It with Pictures." Beginning last week, actual photographs, each showing some point of beauty on that road, were substituted for the ordinary printed menus on its dining cars. Patrons will be permitted to retain these photographs as souvenirs, and to increase their value as such, no advertising has been added to mar the face of the picture, the meal items being printed on the reverse side. This seems to be a step forward in the art of railway advertising, for no words can describe the garden spots of this country as well as a clear photograph. It is reasonable to expect, as the Northern Pacific does, that this advertising will prove to be an excellent means of developing travel, for the photographs will find a wide distribution in homes and offices throughout the country.

A Duty and an Opportunity

While foremen and the rank and file of railway forces are in many instances excluded from participation in any work of the departments now affected by the strike, it is commonly expected that the subordinate officers shall willingly assume any duties that the requirements of the hour demand of them. This is as it should be. These men and their superiors, taken collectively, constitute the management of the railroad, and as a part of it each man should do his share to insure the continuity of transportation service. While such duties have their disagreeable aspects and may take men away from their regular work to its obvious detriment, the emergency employment which the present condition imposes on them affords an opportunity for acquiring a knowledge beyond the scope of their regular employment which is bound to accrue to their benefit. As the railroad man is advanced in his department to positions of increasing responsibility, he soon finds that his progress is governed in considerable measure by the extent of his knowledge concerning railway matters outside his own regular work. Therefore, any opportunities afforded him for obtaining a broader grasp of railway transportation should be seized with enthusiasm.

Hauling Unnecessary Dead Weight

A choice from a number of designs of rail motor cars is now offered to railroad officers. A study of these cars brings out one point with the greatest clearness; namely, that those responsible for their design strongly realize the importance of holding the dead weight to the lowest possible amount consistent with strength. One of the latest designs of such equipment consists of a motor car with a baggage compartment which weighs 782 lb. per passenger seat, together with a trailer which weighs 275 lb. per passenger seat. The two cars combined have a seating capacity for 56 passengers in addition to baggage and weigh only 478 lb. per passenger. Other designs of motor cars weigh from 600 lb. to 700 lb. per passenger seat. The operating economies claimed for gasoline driven rail motor cars depend to a considerable extent on keeping the dead weight down to a minimum. The contrast between the weight of such cars and the usual passenger coach is striking. Modern steel day coaches rarely weigh less than 1,500 lb. and frequently 2,000 lb. per passenger while sleeping cars run as high as 7,000 lb. per berth. There would appear to be possibilities of some real reductions in railway operating costs by a somewhat greater attention to passenger car design and an elimination of all unnecessary dead weight.

The Unions' Interest in Efficiency

Various methods have been adopted by the railroads from time to time in the effort to get suggestions from employees as to improving efficiency and safety of operation. Many attempts also have been made to educate employees for advancement, but this only to a limited extent in the operating department. None of these trials has been successful in great enough degree to attract general attention. One method by which the desired results might be obtained seems to have been given but scant chance to prove its merits. That is an out-and-out bid to the unions for their co-operation. Cars, locomotives, yards, signal plants—these are the tools with which operating department employees work. That the men have some degree of interest in these tools and the regulations under which they are used is self evident. Notwithstanding this, it has been difficult to get them to express their opinions when appealed to as individuals. Why not call in the local officers of the unions affected and ask them to find the sentiment of their men regarding proposed changes in facilities or methods? Is it not reasonable to suppose that a greater degree of co-operation might be secured than under present methods of appealing directly to the employees as individuals? Almost every magazine published by the operating department unions contains a certain amount of technical material, indicative of some interest in these matters and this in spite of the fact that the railroads have done little if anything to encourage the interest of the unions as such in technical problems. Great economies could doubtless be effected if the interest of operating department employees could be aroused. A general movement of this nature might go far toward bringing about the increased efficiency of labor which alone makes general wage increases possible. More than that, the interest of the worker in securing the greatest efficiency of production is the only solution of the labor problem.

The Economy of Purchasing Electric Power

In view of the increasing use of electricity for power and lighting by the railways and the rapid extension of local utilities companies, it is worth while to investigate whether this power cannot be purchased more economically than it can be generated with railway owned and operated equipment. While the decision in each case must be based on the local conditions existing at that point, it is capable of demonstration that roads can buy electric power for driving shop machinery or lighting large office buildings cheaper than they are now producing the same energy at many points. The

electrical engineer of a southern road said recently that while "the demand for electrical power in our shop has far exceeded the capacity of our boilers and generators, as long as we can buy power from the public utilities company at the present rate we cannot justify an expenditure for further additions to our generating plant, for investments in other improvements will pay a much higher return." This condition is not due to any lack of skill on the part of the railway engineering forces but rather to the fact that the public utilities companies operate large and efficient generating units and their load factor is more nearly constant during the 24 hours of the day. Where they have large evening lighting demands, they can offer attractive power rates during the day in order to keep the machines on a constant load. While it is true that up to a certain capacity exhaust steam can be used economically for heating buildings, this capacity is exceeded in many cases. Furthermore the heating of buildings is necessary during less than half of the year, although in some cases it is possible that money can be saved by buying power only during certain months of the year. Of course, there are many well engineered and efficiently operated power plants in the large railroad shops of this country but there are as many or more that are losing money, if all operating and overhead charges are considered. After extensive engineering studies the 5,000 kilo-watt connected load to be used in and about the new union station in Chicago is to be furnished under contract by a public utility company at such a low rate that a power plant for even this large load was not considered a profitable investment. If such a condition prevails here it would seem advisable for railroads to make a similar study of many of their smaller projects.

Graduated Wage Rates for Foremen

The principle of regulating wages through the agency of a national authority, which was first exercised by the Railway Wage Commission of the United States Railroad Administration and subsequently perpetuated by the Railroad Labor Board, has had a general leveling effect on the wages of all classes of railway employees. Whatever the effect of this so-called standardization may have been on laborers or craftsmen, it is undeniably unfortunate as applied to foremen. Whereas the railroads formerly maintained differentials in the rates for these men to compensate for variations in degree of responsibility, capacity or service record, the tendency now is to pay all men the established minimum rate without regard to the effect of these influences. The section foremen may properly be taken as an illustration. It is not feasible or desirable to subdivide sections so that each man is accorded exactly the same degree of responsibility. Some of these men have more ability than others and any tendency to reduce these men to a common level by an arrangement that would insure each of them the same degree of responsibility would represent a shameful waste of ability. However, any attempts to recognize difference in capacity without acknowledgment in the form of graded compensation cannot be entirely successful. Men are selected for foremen because they have demonstrated the "will to do" and this characteristic cannot be fostered to the fullest extent unless the men are afforded encouragement through the promise of reward. That the wages of foremen in railway service are now well within reason is evidenced by the findings of the Labor Board in the recent wage reduction for maintenance of way and mechanical department employees. By recognizing these rates as true minimum rates and applying proportionate increases to them for the foremen deserving of special recognition, it should be possible for the railroads to effect a marked improvement in the morale of their subordinate supervisory forces.

When Treating Plants Pay Dividends

In the last few years a very considerable number of water treating plants have been installed on various railroads. These installations were undoubtedly made only after the management was convinced that certain good would come from an investment ranging from a few hundred dollars, perhaps, to a figure in excess of $20,000. Once installed and set in operation, however, it has happened in many cases that little interest has been shown in these installations, other than perhaps to ascertain occasionally if they are operating or to inquire into the seemingly large expense for their maintenance or longer justification for their use. At a time like this when the paramount concern is the getting of trains over the road with a crippled organization, the treating plant is apt to receive little attention either from the roads operating them or such roads as have had the matter of their installation under consideration. As a matter of fact, however, on roads where bad water is encountered, in even small amounts, this is the very time when the treating plant should receive special attention, for by removing scale-forming matter and improving water in other respects, the properly designed and properly operated treating plant at once emerges from a position of relative obscurity to one of much significance as an important factor in getting trains over the road when, regardless of the cost, it is next to impossible to give more than a minimum amount of attention to keeping the rolling stock in repair and operation. On some roads a survey will undoubtedly disclose the fact that a system of treating plants is enabling locomotives to operate without boiler trouble for several days more than they possibly could under raw water conditions and may even disclose the fact that by reason of treating the water, the power can be operated over much longer divisions than it now is. To the same degree that railroads having good water, therefore, can congratulate themselves on their good fortune, railroads having bad water can look with satisfaction upon their earlier foresight in having established treating plants. This is a time when treating plants pay big dividends, by reason of which railroads having them should by all means give close attention to their proper operation.

The Train Control Question

Advocates of train control may be classified under three heads: (1), those favoring a simple automatic stop; (2), those who advocate speed control as the only logical solution of this problem, and (3), those who feel that there is a field for both types, depending upon the service conditions to be met. Regarding the automatic stop, we have on the one hand the railroads, who requested, through A. M. Burt at the hearing before the Commission in March, that prohibitive restrictions should not be placed on the use of the automatic stop by roads wishing to avail themselves of such a device and on the other hand the Commission's decision that the granting of this request would not provide the necessary safeguards. Advocates of speed control contend that the only logical way that train control should be installed is with the speed control feature and good arguments are advanced in support of this contention. Others (and we are among them) feel that there is a field for both types and that the railroads should be allowed some latitude in their selection of devices in line with the Commission's statement that "the degree of control desired by a railroad will depend upon the particular operating and traffic conditions upon its road."

Speed control has proved its case insofar as the control of trains is concerned in dense traffic territory on electrically operated lines with equipment having practically the same

constant in its braking power. We contend, however, that undue weight has been given to the application of speed control to steam line service in open territory with much lighter traffic in the majority of cases, and with varying percentages of braking power depending on the type of train because we believe that the effects of speed control on freight trains have not been demonstrated on a large enough scale and over an extensive enough territory to determine definitely its effects in this service. We agree that speed control applied to passenger equipment should operate satisfactorily, but freight service must also be considered.

The control of long freight trains, particularly on long descending grades, is a matter which requires the exercise of sound judgment. In the exercise of this judgment many times there is little latitude between what constitutes success and what constitutes failure, which generally means disaster. Under the cycling system of brake operation with alternate high and low speeds on long descending grades it is as yet an open question whether the operation of an automatic speed control is not likely to create a hazard greater than that which it is intended to remove? Can it be applied to drag freight trains under all conditions without increasing the chances of wrecks and damage due to break-in-twos? If it is impracticable in one class of freight service can it be made applicable in any other without completely equipping all locomotives? Are any of these questions as yet answerable on the basis of experience under service conditions?

Train control, we believe, if properly applied, will materially assist in train operation as well as promote safety. However, as only one type of automatic train stop or train control has proved itself, viz., the intermittent contact type, train control as respects the induction, the continuous and the wireless types is still in the experimental stage. Consequently we have contended that the order of the Commission was drastic and that much greater good would have been accomplished if arrangements had been made for eight or ten roads to make installations of various types on a sufficiently extensive scale to furnish comparative data as to the operating results of speed control in comparison with the intermittent contact type. The roads then would be in a better position to determine which types of control meet their operating conditions most satisfactorily.

Union Leaders' Concessions Show Strike Was Without Cause

B. M. Jewell and other leaders of the shop crafts unions now admit that they had no good reason for ordering the shop employees' strike. They do not do this in specific language but by stating the terms on which they are now willing to call the strike off.

They indicate that they are willing to accept the wages and working conditions fixed by the Railroad Labor Board, provided they shall be given rehearings regarding these matters. But they knew when they ordered the strike that the Labor Board was functioning daily and that they could always get hearings by it regarding any controversy with the railways. All they had to do to get further hearings was to go to work under the wages and rules awarded by the Board, get conferences with the railways regarding proposed new wages and working conditions and thus start a controversy within the meaning of the law. The Board would then have had to give them hearings even if there never had been any strike.

Another condition they make for calling off the strike is that the railways shall agree to abolish the system of contracting out work. But all the railways except two promised to do this before the strike order went into effect.

Another condition they make is that the railways shall agree to the establishment of a national board of adjustment. They knew when they ordered the strike and know now that most of the railways will never agree to this, although many of them are willing to establish regional boards of adjustment. The question of a national board of adjustment really was dragged in after the strike order was issued and had no actual part in causing it to be issued.

The labor leaders also demand as a condition of calling off the strike that all strikers shall be taken back to work with their full seniority rights. This the railways refuse to do. Recent developments have made clear the seniority issue for some days has presented the only real and substantial obstacle to the termination of the strike. This fact conclusively demonstrates that there never was any good reason for ordering the strike. Of course the issue of seniority rights arose only because the strike occurred, and after it occurred. Since the labor unions are willing to yield on every issue that existed before the strike began, it necessarily follows that no issue existed before the strike began that was sufficient to justify its being begun.

A large part of the public apparently does not fully understand why the railways are standing so firm on this question of seniority in spite of the fact that their stand obviously is protracting the strike. There are three main reasons:

First, the men who stayed at work and those who have since gone to work have been promised steady employment by the railways. On many railways if the strikers should be taken back with their full seniority rights it would be impossible to retain in the service even at present a large number of the men who are now at work. Furthermore, in periods of business depression when it is necessary to reduce forces, the men with the highest seniority rights are able to stay at work while those who come last on the seniority list are laid off. Therefore, to take the strikers back with their full seniority rights would be to condemn a large part of the men who are now at work to relative irregularity of employment, or to complete loss of their jobs. This would be unjust to these men and would involve violation by the railways of the promises they have made to them. It would also involve disregard of promises to protect them which were made by President Harding in his proclamation, and by the Board in the resolutions that were adopted when the strike began.

Second, it is not improbable that there will be future strikes on the railways either in the absence or in disregard of decisions rendered by the Labor Board, and if the men who have worked during this strike are not protected fewer men will be willing to work during future strikes, thereby increasing the difficulty of preventing interruptions of transportation.

Third, the labor leaders have indicated that they will "discipline" their members who have stayed at or returned to work during the strike. This doubtless means that they will throw them out of the unions and make their work as disagreeable as possible in future wherever they work among members of the unions. If these men are not to be protected by the railways in the settlement of the question of seniority and at the same time are to be "disciplined" by their unions, their punishment for having stayed loyally at work when not only the railways but the government of the United States, through the President and the Railroad Labor Board, asked them to do so will be severe indeed.

It is very unfortunate that the strike is being protracted because of inability to settle an issue which was not involved in the controversy which caused the strike, but it is a natural and indeed inevitable result of the calling of the strike without any justification. In the circumstances it is plain if the railways should lose, why this would make strikes more probable and numerous in the future. If, on the other hand, they win, and they are gaining ground every day, the outcome will greatly increase the probability of peaceful settlements in future. Certainly this is what the public and the railways desire, and what railway employees, in their own interests, ought to desire.

Letters to the Editor

[*The* Railway Age *welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about* 250 *words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.*]

Speed Control vs. Automatic Stop

Chicago.

To the Editor:

I have read with considerable care the editorial appearing on page 51 of the *Railway Age* of July 8, entitled "Permissive Features Omitted from Automatic Stop Specifications." This editorial is not at all in line with the facts, as I understand them, either as to the omission of the permissive feature or as to speed control. Certainly the statement of the editor that the use of speed control in connection with train control "may be compared to a contractor trying to erect a building by attempting to construct the top floors first," is incorrect to say the least; because obviously such construction is impossible while the use of speed control is not only practicable but it is, in fact, comparable to the foundation of a building upon which the entire structure is erected.

It is a well known fact that before a train can stop it must be slowed down. Where, then, in the movement of a train should the reduction of speed be made if not when approaching a stop signal? How can we insure that a train will approach a stop signal prepared to stop, other than by the use of speed control? How can safety be assured for a train passing a stop signal and running into an occupied block other than by prescribed low speed control? How can safety with dispatch be obtained by means other than speed control?

The successful solution of the problem of automatic train control in connection with railway operation must take into account trains of varying tonnage and varying speeds, areas of thin and areas of thick traffic density, gradients and curves, railroad crossings and junctions at grade, etc. A train moving slowly, particularly a heavy tonnage train moving slowly, should not be affected or restricted as to speed when passing a caution signal nor should such a train be restricted as to speed, so long as it approaches the stop signal prepared to stop.

The same rule holds true for a train of light tonnage moving slowly. Certainly all trains moving at high speed should be reduced as to speed, so that they will stop within safe limits.

It must be apparent that without automatic speed control either one of two objectionable conditions will be present: (a) An automatic stop located a sufficient distance from the stop signal to insure that the highest speed train, under steam, will be brought to a stop before passing the stop signal. (b) An overlap of sufficient length to insure that the highest speed train will stop within the overlap limits. (c) A combination embracing (a) and (b). The objection to such an arrangement is obvious. With reference to (a): Slow moving heavy tonnage trains would receive an automatic stop more than a mile from the stop signal, thus not only causing unnecessary stops but when the vision of the engineman is obscured as by rain, snow and fog, such a stop would leave him entirely uninformed as to conditions ahead and of necessity, in addition to the loss of time due to such an unnecessary stop, considerable additional time would be lost in approaching the stop signal. Precisely the same conditions are true of any train even when moving slowly and under complete control of the engineman. (b) An overlap is not practicable at all locations as at an interlocking plant at a crossing or junction where derails are adjacent to signals so that it is impossible to establish uniform operation with satisfactory results when (a) and (b) are considered.

Automatic speed control is necessary to successful operation and to make the train control system consistent with signal indications; it is necessary to provide sufficient flexibility to meet the varying demands of traffic. Why put a two-way train control system on a three-position signal system or a signal system carrying the three standard signal indications as proceed, proceed with caution, and stop? Speed control is necessary to insure that the train will conform with the indication of the caution signal and to avoid unnecessary delays when a train is running at a safe speed.

By a proper application of automatic train control, including speed control, trains may be kept moving safely and maximum capacity of the track will be secured. Automatic speed control may be applied to provide protection wherever conditions necessitate reduced speed.

Automatic speed control may be so provided that when the engineman is on the alert, the necessity of stopping a train at a permissive stop signal will be eliminated since the speed of the train may be restricted automatically to that predetermined for an occupied block.

It is evident that any train control system, to insure safety and observance of signals, should control the train when danger is immediately impending, hence speed control is necessary when approaching danger. Why permit unlimited speed to be restored when conditions necessitate reduced speed preliminary to a stop? Why provide for a repetition of such an accident as occurred at Porter, Ind.?

Automatic speed control is necessary to insure safe speed when approaching railway crossings or junctions at grade as an extended overlap cannot be provided at such locations. Obviously it is not good practice to stop a train automatically a considerable distance from a crossing or junction and then remove all speed restrictions in the face of danger.

Now as to paragraph (c) of the requisites of the Interstate Commerce Commission, referred to in your editorial, I believe that the editor is grossly incorrect in his interpretation of this paragraph. The order of the commission as published provides for the following: (a) Automatic stop, after which a train may proceed under low speed restriction until the apparatus is automatically restored to normal or clear condition by reason of the removal of the condition which caused the stop operation. (b) Low speed restriction; automatic brake application under control of the engineman who may, if alert, forestall application at a stop indication point or when entering a danger zone and proceed under the prescribed speed limit, until the apparatus is automatically restored to normal or clear condition by reason of the removal of the conditions which caused the low speed restriction. (c) Medium speed restriction, requiring the speed of a train to be below a prescribed rate when passing a caution signal or when approaching a stop signal or a danger zone, in order to forestall an automatic brake application. (d) Maximum speed restriction, providing for an automatic brake application if the prescribed maximum speed is exceeded at any point.

Under paragraph (c) it is evident that the medium speed restriction is provided so as to forestall automatically an automatic stop when passing a caution signal or in other words, to insure a safe speed when approaching a stop signal or danger zone. Under such conditions the train will receive an automatic stop before passing the stop signal, the stop indication being received a sufficient distance from the stop signal to insure a stop before passing the signal. Where the indicating point is close to the signal a short overlap would be provided at the rear of the signal to insure protection.

J. Beaumont.

The Santa Fe Has Recently Received 2,500 of These Cars

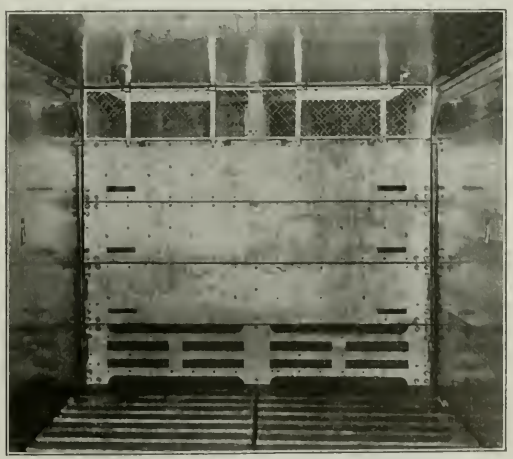
New Designs of Refrigerator Cars for the Santa Fe

Include Two Similar Types, One with Movable, the Other with Stationary Bulkheads

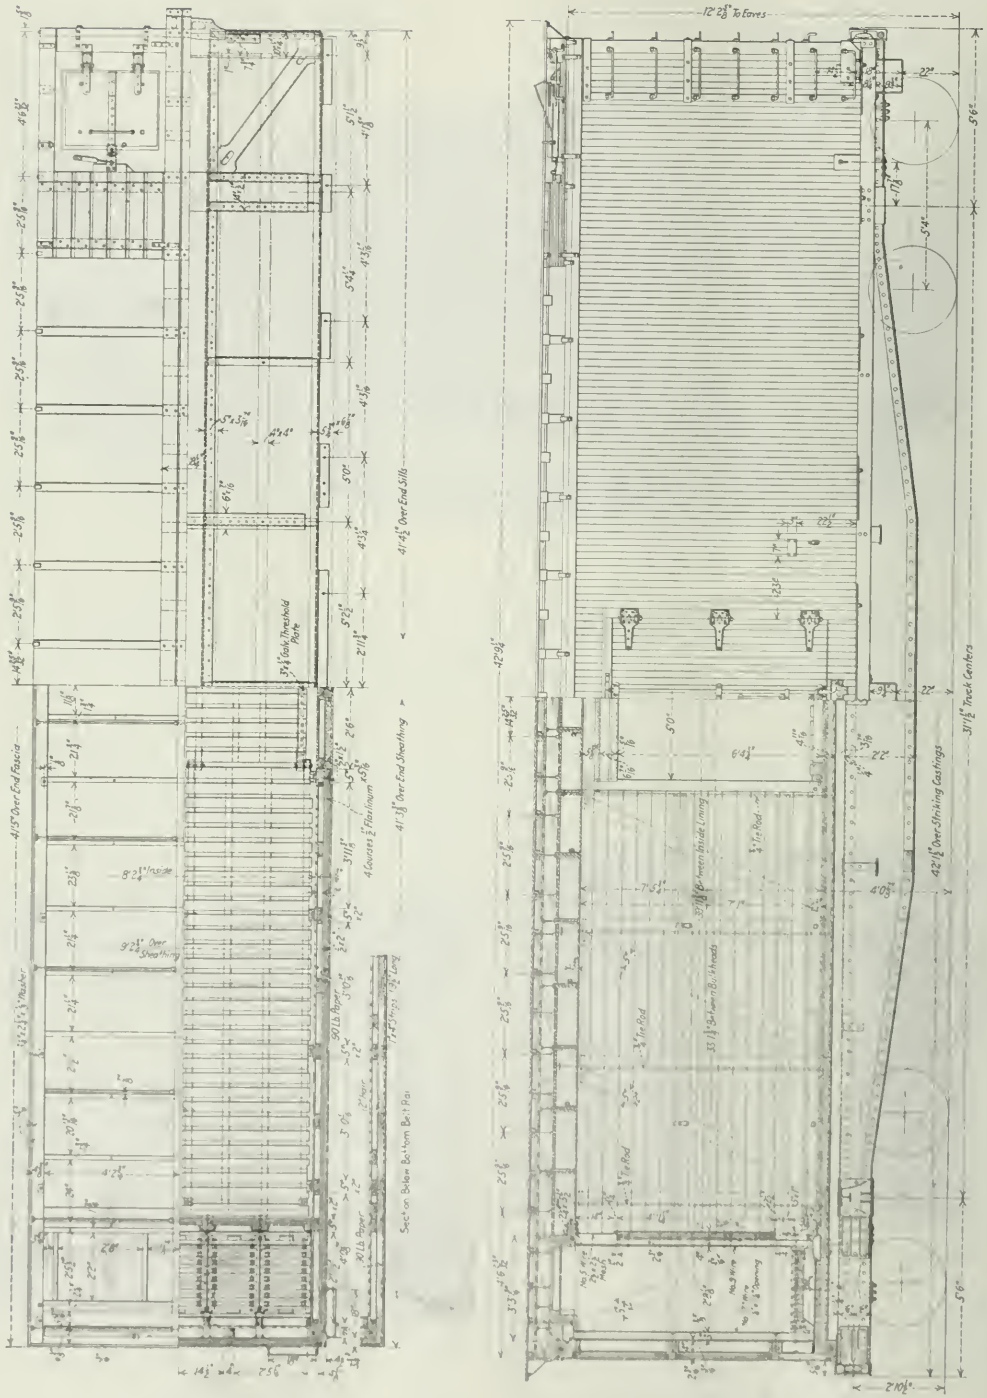
FRESH FRUITS and vegetables form an important part of the eastbound traffic of the Atchison, Topeka & Santa Fe, and to care for this business the road had in service at the end of 1921, 11,751 refrigerator cars. This is approximately 16 per cent of all the freight cars which the company owns. Compared with this is a total of 32,282 box and furniture cars. Since refrigerator cars form a comparatively large proportion of the house cars, the problem of keeping this equipment in revenue-earning service is important, and the road has followed the practice of loading suitable commodities in refrigerator cars for westbound movement. As the traffic is fairly well balanced, there has been comparatively little empty mileage, in fact it has sometimes been necessary to haul empty box cars eastward.

Bulkhead Sections and Floor Racks Raised to Permit Loading Entire Length of Car Body

In 1920 the Santa Fe needed refrigerator cars and in view of the excess of westward traffic at that time, a design with collapsible bunkers was prepared so that the cars could haul perishables eastward and be loaded to full cubical capacity with box car freight westward. Two thousand five hundred of these cars were accordingly built, half by the

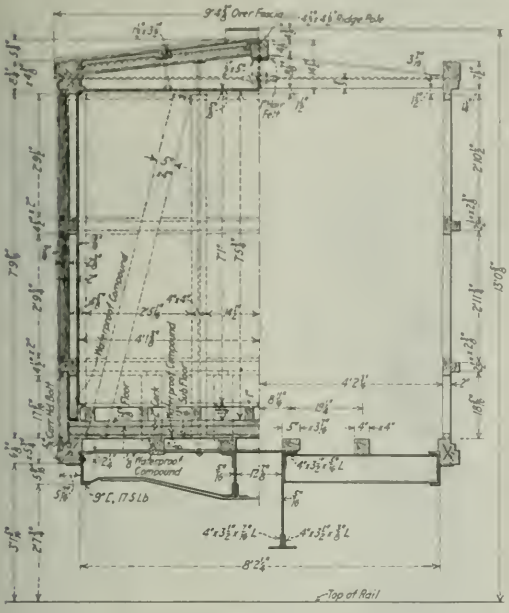


End View with Sectional Bulkhead and Floor Racks Down



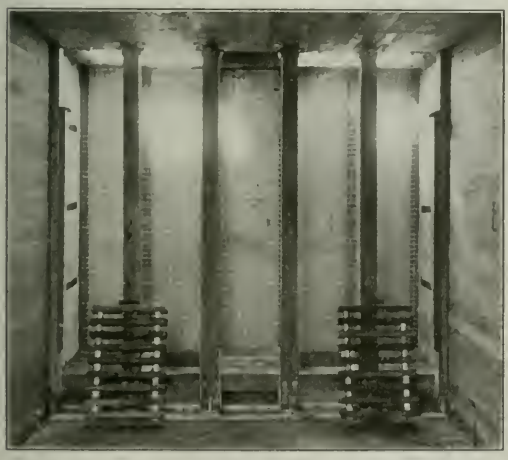
Plan and Elevation of Santa Fe Refrigerator Car with Fixed Bulkheads

American Car & Foundry Company and half by the Haskell & Barker Car Company. In the following year additional refrigerator cars were found to be required. At that time the traffic situation had changed and the box and refrigerator



Sections Through the Car Body

car equipment was adequate to handle the westward movement. The fixed bulkhead was somewhat cheaper and gave a capacity of 1,000 lb. more ice per car and was therefore

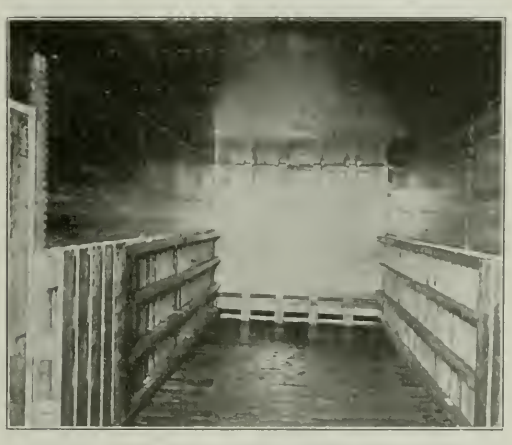


View of Bunker Before Bulkhead Is Applied, Showing Removable Ice Grates

adopted for the later design. An order of 2,500 of these cars, also divided equally between the American Car & Foundry Company and the Haskell & Barker Car Company, has recently been delivered.

Construction of Bunkers and Movable Bulkheads

The movable bulkhead applied to the first order of cars consists of four parts, each built up of 2½-in. boards lined on both sides with No. 20 galvanized sheets. Each section has arched screens on the inside, as shown in the illustration of the bulkhead in the raised position. A movable post is located at the center of the bulkhead to support the sections at that point. The ends of each section of the bulkhead are fitted with trunnions sliding in guides extending up the sides and horizontally just beneath the ceiling. Above the top section and hinged to the ceiling is a screen bound in a channel iron frame. When the screen is down the bulkhead sections are locked, making it impossible to enter the car through the hatches. When it is desired to raise the bulkhead the screen is swung up and secured beneath the ceiling, leaving room for the bulkhead to slide by in the guides to the overhead position. The bulkhead sections when raised are locked in place by gravity catches. The bottom of the bunker is formed by a floor rack hinged to the end so that it can be swung up out of the way when the bulkhead is raised. The back of the ice bunker consists of screens stapled to vertical wooden spacers. A recess is provided between the two center spacers to receive the movable post.



Interior of Car With Stationary Bulkheads; Floor Racks Raised

The sides of the bunker are lined with No. 24 galvanized iron sheets. A locking chain is used to hold the hatch plug down and prevent anyone entering the car through the hatch when the bulkhead is raised. The icebox pans are made of No. 12 galvanized steel with double outlet traps and drains as shown in the drawing.

Stationary Bulkheads

The stationary bulkheads used in the later cars have four intermediate posts, 4 in. by 4 in., and two side posts, 2 in. by 4 in. The tops of the intermediate posts are secured by stirrups, thus avoiding the use of a transverse member which would deflect the air current at the top of the bulkhead and retard circulation. The bottoms of these posts rest on galvanized malleable iron castings which bridge the gutters of the floor pans.

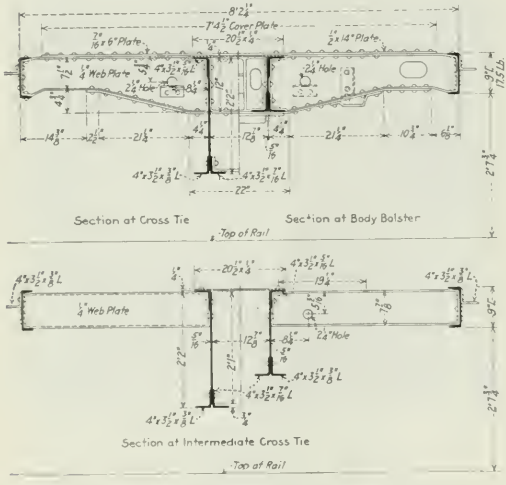
The bulkheads are insulated with two layers of ½-in. Insulite backed by 13/16-in. lining and faced on the outside of the posts by 1-in. shiplapped boards. The inner side of the bulkhead is covered with No. 24 gage galvanized sheets. The top opening of the bulkhead, which is 14 in. high, is covered with a galvanized screen of No. 15 wire, 2½ by

2½ mesh to the inch, and a netting of No. 9 wire with .977-in. openings is applied across the inside of the bulkhead posts. The sides of the iceboxes are covered with No. 20 galvanized sheets without netting. The ends of the cars are lined with No. 28 galvanized sheets. Over these sheets 2½ in. by 3 in. wood spacers are applied which in turn hold the netting of .177-in. wire with 1¼ by 1¼-in. openings.

The ice grates are supported on 4½-in. galvanized tee bars at each of the bulkhead posts and by galvanized angles at the sides of the bunkers. The grates consist of 1½ in. by 4 in. oak pieces rounded on the top, joined with rods and malleable iron spacers. The grates can be raised if it is desired to clean the floor pans and if it is necessary to remove the grates, they can be taken out through the hatches. The outlet traps and drains are of the same type used with the movable bulkhead.

General Design

Aside from the arrangement of ice bunkers, these two orders of cars have other interesting details of construction. Both types have the same general dimensions, the length over striking plates being 42 ft. 1½ in.; the width over eaves 9 ft. 4-⅜ in.; the height from rail to top of running

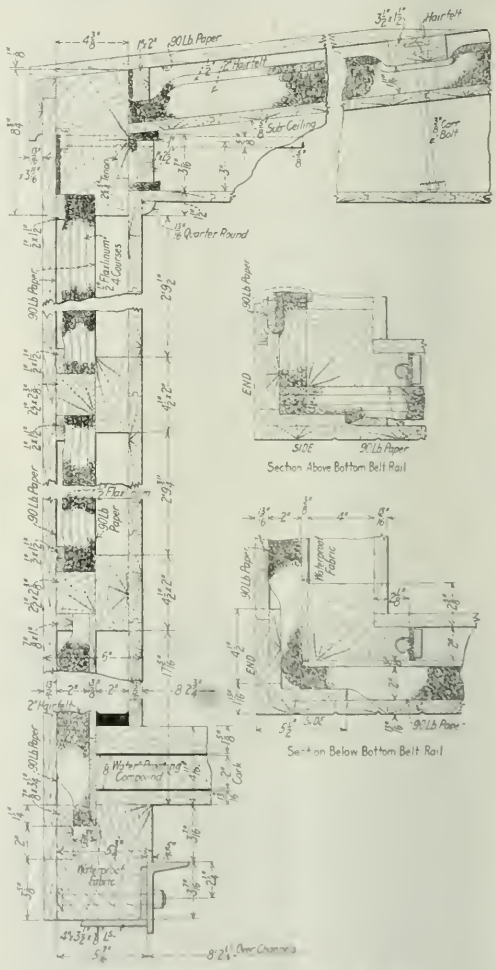


Sections Through the Underframe

board 13 ft. 5⅛ in., and the height inside from floor to ceiling, 7 ft. 5¾ in. The length between inside linings is 39 ft. 11⅜ in., the distance between the stationary bulkheads being 33 ft. 1¾ in. and between the sectional bulkheads 33 ft. 2¼ in. When the movable bulkheads are raised, the inside length of these cars is increased to 39 ft. 2¾ in., thus adding about 370 cu. ft. to the capacity.

The cars have steel underframes with wooden superstructure. The underframe is of the fish-belly centersill type, the depth of these sills at the middle portion of the car being 2 ft. 2¼ in. The web plates are 5/16 in. thick and are reinforced at the top by one 4 in. by 3½ in. by 5/16 in. angle on the outside and at the bottom by one 4 in. by 3½ in. by ⅜ in. angle on the outside and by a 4 in. by 3½ in. by 7/16 in. angle on the inside. The sills are reinforced at the top by a 20½-in. by ¼ in. cover plate extending the entire length of the car. The side sills are 9-in. channels weighing 17½ lb. per ft., and the end sills are of the same section. The body bolsters are of a built-up design with cast center fillers and two side diaphragms pressed from ¼-in. steel plate. The diaphragms are spaced 7½ in. between webs and reinforced at the top and bottom by a 14 in. by ½ in. cover plate. There are two main cross ties, each with a single diaphragm of the same section as used in the body bolsters, reinforced by plates on the top and bottom. The three intermediate cross ties are pressed of ¼-in. plate and are of a channel section 7⅞ in. deep. Six longitudinal stringers of fir support the floor.

The construction of the body framing in general follows the usual practice, one novelty being found in the use of



Sections Showing Insulation in Car Body

turnbuckles in the horizontal tie rods at the carlines. These provide a ready means for tightening the framing at this point should it become loose in service.

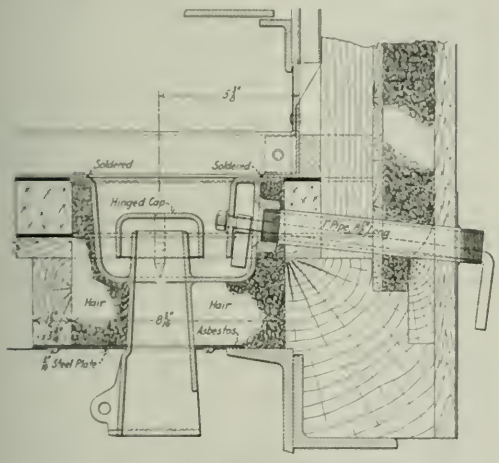
The false flooring which is laid on the floor stringers is 13/16 in. thick. A layer of paper is placed over the false floor and is covered with ⅛ in. of asphaltum. A layer of 2-in. cork board is then laid and is covered with ⅛ in. of asphaltum and one layer of paper before the 1⅝-in. top floor is applied. The floor racks used in both types of cars are the same with supports 3¾ in. high and 1 in. slats.

The sides of the car have 13/16 in. inside lining next to

which is a 2-in. air space. Between the lower belt rail and the side stringers hairfelt insulation is used. A 3/8-in. blind lining is applied which overlaps the floor at the bottom and the lower belt rail at the top. Next to this a layer of waterproof fabric is placed and the hairfelt is then inserted between the fabric and the 13/16-in. outside sheathing. Waterproofing compound is poured between the blind lining and the inside lining to a depth of 3/4 in. over the floor to seal the joints between these parts. Above the lower belt rail the insulation in the sides and ends is made up of four layers of 1/2-in. flaxlinum covered with a layer of paper.

The side of the door opening is 5 ft. 0 in. by 6 ft. 4 3/4 in. The doors are made double with siding on the outside and lining on the inside and with insulation to correspond with that in the sides of the car.

A 5/8-in. blind ceiling is laid over the top of the carlines and hairfelt insulation, held in place by a nailing strip, is applied to cover the joints between the blind ceiling, the lining, the ceiling and the side plate. The 5/8-in. ceiling is then applied under the carlines. The insulation in the ceiling is 2 1/2 in. of hairfelt in one 2-in. and one 1/2-in. layer. The hairfelt is covered with a layer of paper and a 13/16-in. sub-roof is placed over it, supported by the ridge pole and side plate and one intermediate purline. The Standard Railway Equipment Company's outside flexible metal roof, with No. 24 galvanized sheets in the center of the car and No. 20 gage around the hatches is laid over the sub-roof.



Double Outlet Drain and Trap

The light weight of the cars is 55,000 lb., being practically the same for both designs.

Painting

All parts coming in contact on the trucks and underframes are given one coat of carbon paint before assembling. The finished underframe is painted with three coats of carbon ready-mixed paint and the top of the underframe coated with Lucas car roof cement. The trucks are protected with two coats of carbon paint.

The sides of the car are finished with three coats of refrigerator yellow and the ends with three coats of mineral paint of the Santa Fe standard color. The roof boards, outside flexible metal roof and the hatch covers receive one coat of mineral paint. This is also applied on all tenons and in all mortises on both ends of posts and braces, on shoulders at all tenons and post and brace castings and in all places where two pieces of wood touch each other, except siding, lining, roofing and flooring. All iron fittings of the car receive two coats of paint, the same as used on the trucks and underframe.

The interior of the sides, the ceiling and all exposed wood in the interior of the car body is painted with three coats of raw linseed oil mixed with an equal quantity of Sipes Japan. All nails are set and puttied after applying the first coat of oil and Japan. The floors are finished with two coats of raw linseed and Japan.

The cars are carried on trucks with 5 in. by 9 in. journals, having Andrews cast-steel truck side frames and cast-steel truck bolsters fitted with the Standard Car Truck Company's lateral rollers. A.R.A. type D couplers with 6 in. by 8 in. shanks are applied, connecting to cast-steel coupler yokes by a transverse key. The draft gear is the Miner friction type A-18-S. The brake equipment is the Westinghouse Air Brake Company's schedule KD-1012. Other specialties applied to the cars include Creco brake beams and Imperial uncoupling arrangement.

Court of Appeals Reverses Pennsylvania Injunction Decree

THE RECENT RULING of Judge George C. Page of the United States District Court at Chicago upholding the Pennsylvania in its legal controversy with the Railroad Labor Board has been reversed by the United States Circuit Court of Appeals. Judge Page's decree was abstracted in the *Railway Age* of April 29, page 1021, and the hearings before the Court of Appeals were similarly described in the *Railway Age* of June 10, page 1339.

The latest ruling in this controversy, which was written by Judge Alschuler who with Judges Baker and Evans heard the case, followed to a large extent the analysis of Judge Page's decision made by Ben W. Hooper, chairman of the Railroad Labor Board, and outlined in the *Railway Age* of May 13, page 1124.

After reciting the history of the case, the Appellate Court's decision answers in detail the contentions of the Pennsylvania and the ruling of the lower court. The following is an abstract of the latest decree from which have been taken practically all of the supporting arguments of the court.

The Pennsylvania contends that if Title III of the Transportation Act makes the decisions of the Labor Board binding upon the carriers and enforceable by appropriate proceedings it is unconstitutional. Suffice it to say, there is not here involved any proceedings for the enforcement on the carrier of a decision of the Board as to wages or working conditions. Indeed, the action of the Board most complained of by the Pennsylvania was in furtherance of securing an agreement between the carriers and their employees with the probable alternative that if ultimately they failed to agree, the Board itself will decide upon and prescribe rules and working conditions. If and when this stage is reached and one or more of the parties refuse to obey the Board's decision, it will be time enough to interpose the defense of unconstitutionality to any undertaking to enforce the decision as one binding and conclusive on the parties.

The decree (of the lower court) seems to be predicated upon the assumption that the action of the Board in these matters was wholly under the provisions of Section 301 and that in the absence of a joint submission of the dispute to the Board, it was wholly without jurisdiction. Section 301 by its terms is applicable to "any dispute between the carrier and the employees." If the concluding sentence of the section, providing that in case the dispute is not decided in conference, it shall be referred "by the parties" thereto to the Board authorized to deal with the dispute, means that unless *both* parties agree so to refer it, the Board can not in any event deal with the matter, Title III might as well not have been enacted; for if the right of the Board to act depended upon the joint submission of the parties to the dispute, it lay in the power of either party to block utterly any action by the Board by simply refusing to join in the submission.

Referring to the Pennsylvania's contention that there was involved no dispute of which the Board could take cognizance, or of which under Title III it had jurisdiction, the

Appellate Court's decision calls attention to the existence of a nationwide controversy over wages, rules and working condition *prior* to the creation of the Board, adding:

The fact that the dispute existed long before the Board was created made it none the less a dispute cognizable by the Board in continuing to exist after the Board began to function. It is thus apparent that at the very outset, this dispute as to rules and working conditions *was* before the Board and was so treated by both parties to the dispute, including the Pennsylvania. Under these circumstances, it would be immaterial whether it got there by *ex parte* or joint submission or on the initiative of the Board itself. Title III is broad and remedial and no fine jurisdictional lines should be drawn to circumscribe its scope or by procedural technicalities to limit its application.

This will answer also the Pennsylvania's contention that the Board had no power to order (as in Decision No. 2), that existing rules and working conditions, until further order, remain as they then were under the National Agreement. The whole subject matter being before it, it could make such temporary order concerning it as in its judgment the exigencies of the case required.

Referring to the Pennsylvania's contention that "the matter of the election of representatives by the employees is wholly procedural and is something with which the Board is in no wise concerned and its action in this regard was wholly beyond its jurisdiction," the Appellate Court says:

The force of the contention is not apparent. Title III confers upon the Board important duty and prescribes in Section 308 that it "may make regulations necessary for the efficient execution of the functions vested in it by this title." This alone, if indeed in the very nature of things it were not necessarily so, would empower the Board to make provision for determining whether those purporting to represent disputants before the Board do in fact so represent them. If it is claimed that a pending dispute has been adjusted between the parties to it, it is very essential that the body before whom the dispute is pending assure itself of the authority to so dispose of the controversy of those who purport to act for the parties. This is especially true where one side of the dispute is a body of individuals such as employees of a great carrier. It was eminently proper that the Board, either by general rule or otherwise, indicate how in its best judgment such representation should be manifested and the election conducted.

The question of whether the employees may be represented by an organization as held by the Board or whether they may be represented only by individuals who are employees of the carrier as contended by the Pennsylvania "is not properly a question for account," the Appellate Court held. "Even though the court were of the belief that more just and true representation would result through the method of the Pennsylvania, it is not for the court to substitute its opinion for that of the Board in matters by law committed to the Board," the decree added.

In closing the decree, the Appellate Court said:

"Under the foregoing views, it follows that the Labor Board did not, as to the matters involved, transcend its power and functions under Title III and that relief under the bill should have been denied. It will not be necessary to consider the contention earnestly pressed for the Board, that the action is in effect one against the United States, which has not given its consent thereto, and must for that reason be dismissed. The decree of the District Court is reversed with directions to dismiss the bill."

Pennsylvania Will Appeal

The Pennsylvania has announced that it will appeal from the Circuit Court decision and take the case to the United States Supreme Court. W. W. Atterbury, vice-president in charge of operations, addressed a statement to this effect to the employees under date of July 21.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING during the week ended July 15, the second week of the shopmen's strike, totaled 860,907 cars, an increase of 86,023 as compared with the corresponding week of 1921 and a decrease of 81,944 as compared with 1920. This represented a decrease of about 17,000 cars as compared with the loading during the last two weeks of June, some of which may be attributed perhaps to the strike, the principal reduction being in coal loading, which was 77,334 cars as compared with 96,960 during the week of June 24, and 94,748 during the week of July 1. As compared with the last week in June increases were shown in the loading of grain and grain products, livestock and ore, but there were small reductions in the loading of coke, forest products, merchandise and miscellaneous freight. As compared with the corresponding week of last year increases were shown in all classes of commodities except grain and grain products, and coal and in all districts except the southwestern. The summary as compiled by the Car Service Division is given below.

The freight car surplus for the period from June 30 to July 8 averaged 239,160 as compared with 239,225 for the period ending June 30. Of the total, 147,558 were coal cars and 60,101 were box cars. The number of bad order cars also showed a further reduction during the half month ended July 1 to 14.3 per cent of the total as compared with 14.6 on June 15.

Plan for Coal Distribution and Price Restraint

Presidential Committee to Be Appointed—I. C. C. Declares Emergency and Issues Priority Orders

WASHINGTON, D. C.

THE ADMINISTRATION'S PLAN for controlling the distribution of the available coal supply to the most essential consumers, including the railroads, which is also designed to exercise a restraining influence upon coal prices during the period of coal shortage, as worked out by Secretary Hoover in collaboration with representatives of the Interstate Commerce Commission and other governmental departments and the American Railway Association, and coal operators was announced on Monday and the Interstate Commerce Commission on Tuesday issued two service orders, declaring the existence of a national emergency because of unfavorable labor conditions and shortage of fuel supply which furnish the necessary basis of legal authority to carry the plan into effect. Service Order No. 22, numbered to follow the series of service and priority orders issued by the commission in 1920, directs the railroads to forward traffic by the most available routes regardless of routing orders, and is intended to help clear up the congestion which has developed on certain lines. Service Order No. 23 directs the railroads east of the Mississippi to give preference and priority to food, feed, livestock, perishable products, coal, coke and fuel oil and preference in the use of coal cars for the transportation of coal over other commodities. It also sets up a classification of priority of coal for various purposes.

An outline of the general plan, as given out by Secretary Hoover on Monday after it had been approved by the Attorney General and accepted in principle by representatives of the coal operators, is as follows:

1. A committee in Washington, to be appointed by the President, of representatives of the Department of Commerce, the Interstate Commerce Commission, the Department of Justice, and the Department of the Interior, to be designated the Presidential Committee. This committee is to have general supervision of the measures to be taken hereunder and to authorize the execution of such of these measures as may be necessary from time to time.

2. The Administrative Committee, comprising representatives of the Presidential Committee together with representatives of operators, representatives of the railways, and, where necessary, representatives of the larger consuming groups.

3. The Presidential Committee will establish a representative in each coal producing district.

4. The Presidential Committee will appoint a committee of operators in each district to be nominated by the district operators' association or independent operators (in case of failure of the operators to take such action the Presidential Committee may appoint such operators as they see fit on such committee). The members of these district committees may be changed as determined upon by the Presidential Committee.

5. The Presidential Committee will co-operate with the Interstate Commerce Commission in carrying out preferential orders issued by the commission.

6. The governmental representatives of the districts with the co-operation of the district committees shall advise the agencies of the Interstate Commerce Commission as to local car movement to effect the purpose of this plan.

7. The operators will proceed with their usual business until they are affected by preference orders.

8. It is expected that the district committees under authority of the Presidential Committee will recommend the allotment of cars on the basis of those who conform to the fair prices to be agreed upon with the Presidential Committee.

9. When the operators demand, then suitable guarantees shall be given for payment by persons buying under priority orders.

10. The railroads will be requested to appoint a representative to deal with purchases of railway fuel.

11. The basis of prices agreed upon between the operators and the Secretary of Commerce on June first are to be maintained, except where varied by the Presidential Committee, and this same basis of price determination shall be applied to all districts which are so far not co-operating.

The whole of the above was called tentative, pending further consideration by the Interstate Commerce Commission, the Department of Justice, Department of Interior, and the Department of Commerce.

Secretary Hoover Busy on Situation

While the President was working on the railroad strike Secretary Hoover busied himself with the coal situation. On Thursday he talked with Commissioner Aitchison, who is in charge of car service matters for the Interstate Commerce Commission, after which the commissioners held a conference among themselves and on Friday Mr. Hoover announced that "plans had been formulated for the co-operation of the Department of Commerce and the Interstate Commerce Commission and the Department of Justice by which, with the co-operation of responsible operators, the control of price and distribution can be effected." The plan was placed before the Department of Justice for its consideration and further conferences between Secretary Hoover, Attorney General Daugherty and Chairman McChord and Commissioner Aitchison of the commission were held on Saturday and Sunday.

Mr. Hoover also called a meeting of the district representatives from the producing Virginia, West Virginia, Tennessee, Kentucky, Pennsylvania and Alabama districts for Monday to consider the questions of price and distribution.

In explaining the need for a coal distribution plan, Mr. Hoover emphasized the necessity of taking care of the railroads as well as of the public utilities, industries producing necessities, public institutions, etc. Some of the railroads, he said, have a three months' supply of coal, while others will need assistance within a week or so. Some have made arrangements for importing coal. British coal is being laid down at American ports at prices ranging from $6.50 to $7.75 and 600,000 tons of shipping have been engaged for the transportation of coal to this country from abroad. Forty-three Shipping Board vessels having an approximate tonnage of 350,000 tons have been chartered through the Shipping Board to transport coal from Wales and the east coast of England and the board has announced that it could place a sufficient number of its own ships in service within a short time to guarantee the importation to this country of at least 500,000 tons a month.

It is estimated that 8,000,000 to 10,000,000 tons of coal will be needed to supply the districts served through the Lake Superior docks during the balance of the season of navigation while the needs of the entire lake district are estimated at 17,000,000 to 25,000,000 tons.

Plan Approved by Attorney General

Attorney General Daugherty announced on Monday that he had submitted an opinion to Secretary Hoover sustaining every phase of his plan with reference to its legality, in part as follows:

"I have before me your letter of the 21st instant in which you inquire whether certain steps which you propose to take to safeguard the public interests in the face of the impeding coal famine run counter to the law of Congress. . . .

"As I understand it, your plan is to form associations acting under your directions whose sole purpose will be to meet the emergency in distribution and stop profiteering; and at the proper time you intend to apply to the Interstate Commerce Commission to promulgate rules governing car distribution during the existing shortage, to the end that the available equipment can be placed at mines affording the greatest opportunity of service and willing to charge for its coal no more than is fair and just. As between

two mines whose output is the same, your plan contemplates, during the existing shortage, favoring the mine in the supply of cars which charges the public fair prices as against the mine which allows its greed to exact whatever can be obtained, however unwarranted and extortionate the price may be. You have no purpose other than to promote the welfare of the public by inaugurating a plan of distribution designed to maintain national life itself and to restrain extortion by the stern hand of repression. Your idea is to have both operators and miners furnish you with statistics along the lines just mentioned, thus enabling you to place before the commission from time to time whatever information is necessary to enable it to give proper and intelligent directions. In thus acting you intend to represent the commission as one of its designated agencies, or to go before it in any other capacity, whichever method meets with its approval. In view of all these conditions causing the present emergency, the inevitable result of which is to disrupt and demoralize interstate commerce, you inquire whether the plan you have outlined would be illegal and whether authority exists for its adoption and enforcement.

"In my opinion the plan is entirely legal. I fail to see wherein any law of Congress will be violated. The interests of the public are deserving of paramount consideration, and I have no misgivings in giving it my unqualified approval. Moreover I feel convinced that full and ample authority exists for its adoption and effective enforcement. If the Interstate Commerce Commission finds the existence of an emergency such as you describe, that body has ample and unquestioned authority to provide such rules and regulations as will enable the plan you suggest to be carried into operation.

"In concluding I want to say that I have no hesitancy in advising you that in my opinion where and when an emergency exists on account of the shortage of coal for use in interstate commerce and in the transportation of the mails and when the price of coal for such purposes and for the general necessities of the people has been unjustifiably and unbearably increased by operators who produce a large supply, associations such as your plan contemplates to act with and under governmental agencies to meet the existing emergency, more equitably to distribute coal, and to prevent extortion in the price thereof while acting with and under governmental agencies for the purposes aforesaid, are legal and do not violate any provision of the so-called Sherman anti-trust law or any other federal law.

"In carrying out such plan for the sole purpose you propose all persons, firms, or corporations chosen by governmental agencies to assist you, as long as they act in good faith to carry out such plan with and under governmental agencies and not otherwise, will violate no law of the United States."

District Associations Express Approval

General approval of the necessity for a plan to maintain fair prices and distribution of coal was expressed by representatives of the producing bituminous fields in conference with Secretary Hoover on Monday, subject to reference back to the district associations concerned. An executive committee composed of the chairman of the district delegations considered details of the plan and reported back to the whole conference in the afternoon. The executive committee also appointed a smaller drafting committee which met with officials of the Interstate Commerce Commission and with representatives of the American Railway Association in the afternoon and discussed the general plan for coal control and discussions were conducted under the chairmanship of Secretary Hoover, in collaboration with Commissioner Aitchison of the Interstate Commerce Commission, Blackburn Esterline of the Department of Justice, Director Smith of the Geological Survey, and Acting Director Holbrook of the Bureau of Mines for the Department of the Interior, the representatives of the coal operators, M. J. Gormly, chairman of the Car Service Division of the American Railway Association, and J. C. Davis, director general of railroads.

Under the Hoover plan the Interstate Commerce Commission's emergency powers over car distribution are to be used not only to allocate coal to the most essential consumers but also to meet a situation with which the government found it impossible to deal at the time of the great demand for coal in 1920, that is, to control prices within reason by withholding cars from operators who refuse to observe the voluntary agreement entered into with Secretary Hoover a few weeks ago to observe a scale of maximum prices based on the Garfield scale with modifications, which in most instances means $3.50 a ton at the mines. While there is still a large surplus of coal cars, because of the congestion which has developed in some of the coal fields the surplus cars are not where they are needed and shortages have occurred at a few points during the past two or three weeks. The effect of the plan, it is understood, will be that no very strenuous efforts will be made to place cars for those who will not observe the price agreement and it is also expected that the plan will necessarily remain in effect during the balance of the year and will therefore be available if a real shortage of cars or congestion should develop after a settlement of the coal strike, which is regarded as inevitable sooner or later. Mr. Hoover had received reports that operators in one or two districts had refused to co-operate in the plan of voluntary price restraint and that certain operators in West Kentucky last week were charging as much as $7.50 a ton and on Monday had raised this to $13 a ton, although a group of operators in the same district were observing the $3.50 maximum. Also a minority of irresponsible operators in other districts have broken away from the agreement. "The responsible operators," Mr. Hoover said, "are holding to the price. On the other hand some panicky railway buyers are sending out orders offering $8 at the mines. The plan for restraint of prices to the Garfield basis threatens to break down through the above influences."

Mr. Hoover explained that the plan intends merely to make the best use of the available coal and does not guarantee the production of a pound of coal but that for the present the government has exhausted its resources in its efforts to settle the coal strike.

Service Order No. 22

The orders issued by the commission under the new plan are as follows:

The subject of routing of freight traffic being under consideration, and it appearing to the Commission, that an emergency exists upon the lines of all carriers by railroad in the United States subject to the Interstate Commerce Act, which requires immediate action; and that each of such carriers, by reason of unfavorable labor conditions, and shortage of fuel supply, is unable to transport the traffic offered it so as to properly serve the public.

Therefore, in order best to promote the service in the interest of the public and the commerce of the people, *it is ordered and directed*:

1. That from and after July 26, 1922, and until the further order or direction of this Commission, all said common carriers by railroad are hereby directed to forward traffic to destination by the routes most available to expedite its movement and prevent congestion, without regard to the routing thereof made by shippers or by carriers from which the traffic is received, or to the ownership of the cars, and that all rules, regulations, and practices of said carriers with respect to car service are hereby suspended and superseded in so far only as conflicting with the directions hereby made.

2. That inasmuch as such disregard of routing is deemed to be due to carriers' disability, the rates applicable to traffic so forwarded by routes other than those designated by shippers, or by carriers from which the traffic is received, shall be the rates which were applicable at date of shipment over the routes so designated, unless the rates applicable over such designated routes are higher, in which event the rates applicable over the route of movement will apply.

3. That in each instance where the traffic is routed, or rerouted by carriers by railroad under the authority of this order, the carrier responsible for such routing or rerouting, shall, within 24 hours thereafter deposit in the United States mail, a notice addressed to the consignee of the traffic, stating: the car numbers and initials, places and dates of shipment, the routing, and respective routes over which the traffic is moving and that charges for the transportation of the traffic, including transportation, and schedules of rates, fares, and charges, as those terms are defined in said Act, will be the same as they would have been if such routing, or rerouting had not taken place, unless, as above provided for, the rates applicable over the route the traffic moves is less.

4. That in the case of shipments in private cars, which are subject to equalization of empty mileage, and also of fruits and vegetables, live poultry and other shipments customarily reconsigned upon instructions of the consignor, a telegraphic notice of the diversion shall be sent to the consignor by the carrier responsible therefor.

5. That in executing the directions of the Commission contained in this order, the common carriers involved shall proceed without reference to contracts, agreements, or arrangements now existing between them with reference to the divisions of the rates of transportation applicable to said traffic, that such divisions shall be, during the time this order remains in force, voluntarily agreed upon by and between said carriers, and that, upon failure of the carriers to so agree, said divisions shall be hereafter fixed by the Commission in accordance with pertinent authority conferred upon it by said Act.

6. That copies of this order and direction be served upon all carriers by railroad in the United States, subject to the Interstate Commerce Act, and that notice of this order be given to the general public by depositing a copy of the order in the office of the Secretary of the Commission in Washington, D. C.

Service Order No. 23

It appearing, In the opinion of the Commission that an emergency which requires immediate action exists upon the lines of each and all the common carriers by railroad subject to the Interstate Commerce Act, east of the Mississippi River, including the west bank crossings thereof, and because of the inability of said common carriers properly and completely to serve the public in the transportation of essential commodities,

It is ordered and directed,

1. That each such common carrier by railroad, to the extent that it is currently to be unable promptly to transport all freight traffic offered to it for movement, or to be moved over its line or lines of railway shall give preference and priority to the movement of each of the following commodities: food for human consumption, feed for live stock, live stock, perishable products, coal, coke and fuel oil.

2. That to the extent any such common carrier by railroad is unable under the existing interchange and car service rules, to return cars to its connections promptly, it shall give preference and priority in the movement, exchange, interchange and return of empty cars intended to be used for the transportation of the commodities specially designated in paragraph numbered 1 hereof.

3. That any and all such common carriers by railroad which serve coal mines whether located upon the line or lines of any such railroad or customarily dependent upon it for car supply, herein termed coal-loading carriers, be, and they are hereby, authorized and directed whenever unable to supply all uses in full, to furnish such coal mines with open top cars suitable for the loading and transportation of coal, in preference to any other use, supply, movement, distribution, exchange, interchange or return of such cars; *provided*, that the phrase "suitable for the loading and transportation of coal" as used in this order shall not include or embrace flat (fixed) bottom gondola cars with sides less than 36 inches in height, inside measurement, or cars equipped with racks, or cars which, on July 1, 1922, had been definitely retired from service for the transportation of coal and stenciled or tagged for other service.

4. That all such common carriers by railroad other than coal-loading carriers, herein termed non-coal-loading carriers be, and they are hereby authorized and directed to deliver daily to a connecting coal-loading carrier or carriers, or to an intermediate non-coal-loading carrier for delivery through the usual channels to a coal-loading carrier, or carriers, empty coal cars up to the maximum ability of each such non-coal-loading carrier to make such deliveries and of each such connecting coal-loading carrier to receive and use the coal cars, so delivered for the preferential purposes herein set forth.

5. That all such common carriers by railroad be, and they are hereby, authorized and directed to discontinue the use of cars suitable for the loading and transportation of coal, for the transportation of commodities other than coal, so long as any coal mine remains to be served by it with such cars; and as to each non-coal-loading carrier, so long as deliveries of any such cars to connecting carriers may be due or remain to be performed under the terms of this order.

6. That all such common carriers by railroad be, and they are hereby, authorized and directed, to place an embargo against the receipt of coal or other freight transported in open top cars suitable for coal loading, by any consignee, and against the placement of such open top cars for consignment to any consignee, who shall fail or refuse to unload such coal or other freight so transported in coal cars and placed for unloading, within 24 hours after such placement, until all coal or other freight so transported in coal cars and so placed has been unloaded by such consignee and shall notify the Commission of such action. This authorization and direction as to embargoes shall not interfere with the movement of coal to tidewater or the Great Lakes for transshipment to water, nor shall it apply where the failure of the consignee to unload is due directly to errors or disabilities of the railroad in delivering cars.

7. That in the supply of cars to mines upon the lines of any coal-loading carrier, such carrier is hereby authorized and directed, to place, furnish and assign such coal mines with cars suitable for the loading and transportation of coal in succession as may be required for the following classes of purposes, and in following order of classes, namely:

Class 1. For such special purposes as may from time to time be specially designated by the Commission or its agent therefor. And subject thereto:

Class 2. (a) For fuel for railroads and other common carriers, and for bunkering ships and vessels; (b) for public utilities which directly serve the general public under a franchise therefor, with street and interurban railways, electric power and light, gas, water, and sewer works; ice plants which directly serve the public generally with ice, or supply refrigeration for human foodstuffs; hospitals; (c) for the United States, state, county, or municipal governments, and for their hospitals, schools, and for their other public institutions—all to the end that such common carriers, public utilities, quasi public utilities, and governments may be kept supplied with coal for current use for such purposes, but not for storage, exchange, or sale. And subject thereto:

Class 3: (As to each coal-loading carrier which reaches mines in Pennsylvania, Ohio, West Virginia, Kentucky, Tennessee, and Alabama.) For bituminous coal consigned to any Lake Erie port for transshipment by water to ports upon Lake Superior. And subject thereto:

Class 4: (As to all such common carriers by railroad.) Commercial sizes of coal for domestic use. And subject thereto:

Class 5: Other purposes.

No coal embraced in Classes 1, 2, 3, or 4, shall be subject to reconsignment or diversion except for some purpose in the same class or a superior class in the order of priority herein prescribed.

8. That all rules, regulations and practices of said common carriers by railroad with respect to car service as that term is defined in said act are hereby suspended so far as they conflict with the directions hereby made.

9. That this order shall be effective from and after July 26, 1922, and shall remain in force until the further order of the Commission.

10. That copies of this order be served upon the carriers hereinbefore described, and that notice of this order be given to the general public by depositing a copy hereof in the office of the Secretary of the Commission at Washington, D. C.

The commission is also expected to issue special orders from time to time to expedite particular shipments designated by the district committees. It is hoped that the routing order will assist in a short time in relieving the congestion which is said to have been caused to some extent by the desire of the coal-originating railroads to route cars in such a way as to save for themselves the long haul. The priority order, in addition to providing for the most essential uses for coal also gives recognition in Class 3 to the needs of the Northwest for shipments via the lakes.

The Intent of the Service Orders

While the commission's orders were heralded in some of the newspapers as amounting practically to "government control of the railroads" similar to that exercised during the war, an examination of the orders shows that they do not become applicable except to the extent that a road may be "currently unable promptly to transport all freight traffic offered to it for movement" and such a condition does not exist on many roads, although it would be very likely to exist very generally if a full production of coal were suddenly to be offered to the roads by a resumption of mining in the union fields. One of the most important, if not the most vital of the considerations which led to the issuance of the order and the setting up of the plan of distribution was the fact that whereas coal production had fallen to approximately 3,600,000 tons a week the railroad requirements alone were approximately 2,500,000 tons a week and some roads had only a few days' supply left. Therefore unless something was done at once many railroads that would not have been materially affected by the shopmen's strike for some time would have been disabled by shortage of fuel. It was also apparent that the effects of the railroad strike were being concentrated where they would have the most effect on the coal situation.

While the plan does not provide for repairing a single car or engine nor for digging a pound of coal it is intended to prevent efforts to stock up with coal on the part of those who might be able to do so by offering high prices, at the expense of other consumers who need it currently. While many telegrams received in Washington indicate apprehension on the part of shippers of other commodities that use open-top cars they will not in general be affected as long as the surplus of such cars exists unless they are so located as to come into competition with a coal mine for the cars in a particular locality. This part of the order will have more effect later if coal production is increased. The commission's order said nothing about withholding cars from the profiteers, which the Attorney General's opinion said would be entirely legal, but it is understood that that object will be accomplished in the practical administration of the plan.

R. H. Aishton, president of the American Railway Association, has been spending a large part of his time in Washington for some weeks and is in charge of the situation for the railroads.

The following telegram has been sent by Commissioner Aitchison to the various state commissions:

Commission desires to know whether if local developments connected with our general service orders require we can rely on having active assistance your Commission. This possibly may involve survey certification and policing certain local needs under priority orders issued or to be issued. Emergency most acute and requires best efforts of all under common plan if distress which will come is to be mitigated.

Coal Distribution Committee

The Presidential committee proposed in the plan was appointed on Wednesday when the President requested the Attorney General, the Secretary of the Interior, the Secretary of Commerce, and Commissioner Aitchison of the Interstate Commerce Commission, or their representatives, to act as a Coal Distribution Committee under the temporary chairman-

ship of the Secretary of Commerce. A fifth member is to be added to the committee later who will undertake the administrative direction. The ultimate character of the organization, it was stated, must depend upon the situation.

Secretary Hoover sent the following telegram today to the Governors of the states on behalf of the Presidential Coal Distribution Committee, as the first step toward decentralizing the organization for equitable distribution, and maintenance of fair prices, of coal. Under this plan the distribution for railway use will be directed from Washington, but, with the possible exception of a few interstate public utilities, the responsibility for all other distribution will rest upon organizations set up under state control.

In order that the federal government may do its part in the distribution of coal supplies over the present very difficult situation the President has appointed a committee on coal distribution comprising representatives of Departments of Justice, Interior, Interstate Commerce Commission and Department of Commerce under my chairmanship for the purpose of securing co-ordination of federal agencies in the best distribution of the available coal supplies. Certain priorities have been established in necessary commodities and fuel by the Interstate Commerce Commission, who have asked your state public utilities commission if Interstate Commission may have its active assistance in the distribution of coal to transportation and public utilities and governmental institutions if necessary. Beyond this the Presidential Committee on coal distribution are co-operating with coal operators and with the Interstate Commerce Commission in an endeavor to secure that coal shall be sold from the mines at a fair price. The agencies and present authority of the federal government of course do not enable it to protect the ultimate consumer of coal within the boundaries of a state further than such protection can be secured by the above means that coal sold in Interstate Commerce shall be sold to the original purchaser at a fair price and that fair distribution between states be obtained. The problem of securing that the ultimate consumer shall be protected upon coal now in circulation and on resale of coal distributed as above and that equitable distribution shall be carried out must rest within the authority of each state. I am sending this telegram at the request of the President to learn if you feel that you can undertake to create a state organization under your direction to secure that this shall be done and with which we can co-operate.

Electric Locomotives Rebuilt for English Railroad

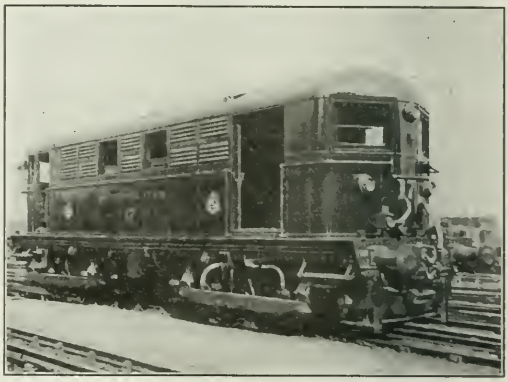
The Metropolitan Railway in England has recently made alterations in track layout on its electrified section which make it possible to run a number of trains without a stop from Baker Street to Harrow-on-the-Hill, a distance of nine and one-half miles. The greater part of the electric train service includes many stops requiring locomotives with large starting effort and moderate running speeds. The new service requires also high speed and for this purpose 20 locomotives are being reconstructed. Six-car trains are used, weighing with passenger load about 180 tons and with the locomotive 240 tons. The locomotive has a 0-4-4-0 wheel arrangement and is equipped with four 300 hp. motors. According to American standards the train is light, but the power of the locomotive is proportionally large.

The cost of coal in England has made the power consumption by electric trains a matter of greater importance than it was at one time and careful tests have been made to ascertain the performance of the locomotives. Automatic acceleration is used as it increases efficiency of operation when train weights are fixed as they are in this case. The tests showed the power consumption to be under 55 watt-hours per ton-mile. Complications of design are avoided in the reconstructed locomotive as regenerative braking is not required and the total amount of power used is not extremely large, permitting the use of self-ventilated motors.

There are four series-wound, commutating-pole motors on each locomotive. Each is rated at 300 hp. at 600 volts on the one hour rating, the corresponding locomotive speed being 30 miles an hour. The maximum speed of the locomotive on the non-stop runs is about 60 miles an hour. The motors are the largest it was possible to have with the standard rolling stock wheel which would at the same time conform to regulations for clearance between track level and the bottom of the motor and the gear case. The magnet frame is of the box type cast in one piece and provided with the usual arrangement of suspension bearings from the running axle and with a nose support at the other end. The running wheels are of the disc center type having brake blocks acting on both sides of the rim. The truck frames consist of plate frames stiffened with cast steel corner castings.

Vacuum brakes are used on the coaches while the locomotive is equipped with vacuum brakes and Westinghouse air brakes. These are interlocked with the controller so that unless one or the other of the two brake systems is operative, power can not be applied to the motors. The Westinghouse brake is used generally for switching in the yards and the vacuum brake for operating the train.

Direct current power is supplied to the locomotive at 600 volts on the third rail system and an insulated return rail is laid in the center of the track. The running rails are not used for the return and carry only signal circuits. There are



One of the Reconstructed Locomotives

four positive and two negative collecting shoes on the locomotives; the positive shoes are in duplicate, one set of two being placed on each side. The negative shoes are on the center line. Collecting shoes are also fitted to some of the coaches which are connected to a power bus line carried through the train to enable the train readily to pass over breaks in the collecting rails.

There is a driver's compartment in either end of the locomotive. The control apparatus, including contactors, resistances and auxiliary machinery is arranged in a group placed along the center line of the locomotive. This arrangement provides a runway on each side which facilitates inspection and the making of repairs.

PRINCIPAL DIMENSIONS

Length over buffers	39 ft. 6 in.
Length over body	35 ft. 0 in.
Width over body	8 ft. 0 in.
Height from rail	12 ft. 4½ in.
Centers of motor trucks	20 ft. 3 in.
Wheelbase of motor trucks	9 ft. 3 in.
Total wheelbase	29 ft. 6 in.
Diameter of running wheels	43½ in.
Gear ratio	26/54
Capacity of motors	300 hp.
Total hp.	1,200

The mechanical work on the locomotive is being done at the Barrow Works of Messrs. Vickers while the electrical equipment is being supplied and erected by the Metropolitan Vickers Electrical Company, under the direction and supervision of Charles Jones, chief locomotive and electrical engineer, Metropolitan Railway Company.

Strengthening Chicago Track Elevation Subways

Floors of Structures Built in the Nineties Are Now Being Renewed for Heavier Loading

About two years ago, the Illinois Central completed the replacement of its street subway structures for the first track elevation work done in Chicago in 1892. Evidence that some of the other structures of the early track elevation work in that city are gradually nearing their service life is seen in the replacement of the floor system of subways used by the Chicago, Rock Island & Pacific and the New York Central in their joint entrance to the La Salle Street station. The first stage of this work was completed last fall and it is anticipated that further progress will be made during the coming year. The present work is of interest

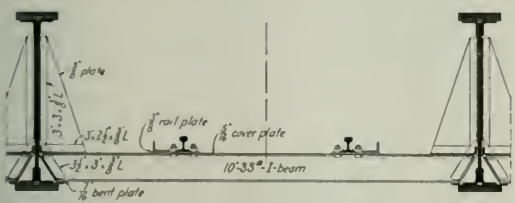


Fig. 1—The Original Construction

because it relates to a type of floor which was rather popular in the early subways, namely transverse steel I-beams covered with a steel plate, the rails being supported on a rail plate which was carried directly on the cover plate and secured by means of clips. The old floor in this case is being renewed with heavier construction of substantially the same type though with a number of improvements that decrease the cost of the work.

The old Rock Island-New York Central subways had floors consisting of 10-in. 33-lb. I-beams spaced 12-15/16 in. center to center and covered with a plate 15/16 in. thick, the general nature of the construction being shown in Fig. 1. However, after 20 years, through increases in the imposed loading and reduced strength of the steel on account of corrosion, it became necessary to relieve the floor beams by introducing cross ties supported on the beams by means of oak blocks under their ends. This had the effect of concentrating the live load on the beams closer to the ends and thereby reducing the live load bending moment. This, however, was designed purely as a temporary expedient and conditions finally required the renewal of the floor with heavier material.

The new floor beams are 12-in. 70-lb. Bethlehem girder beams carried on end connections substantially like those in the old structure and covered with a ⅜-in. plate. The track is supported on this floor after the manner of the original construction as modified, that is, with the use of cross ties and bearing blocks, every third tie being made long enough to engage a bracket on the girder so that the track can be secured to line without any connection being made through the deck plate.

The construction differs from the old in one important essential. There are no direct rivet connections between the deck plate and the flanges of the I-beam. The only rivets in these plates are those required for splices, for connections between plates, for curb angles along each side and for clip plates for holding the plates in position on the beams. This change in construction was effective in eliminating practically 1,000 rivets per track for each bridge, or approximately 26,000 rivets for the work done on 13 subways last year.

In order to further eliminate field riveting, the old shelf angle which was riveted to the web of the girders and to the old deck plates, was not provided for under the new arrangement. The new deck plates are entirely free or separate from the girder webs, small angles being riveted along the edges near the girders and the space between the web and this angle being filled with concrete for a water-shed.

Work Done Jointly

The line on which this work was done consists for the most part of four tracks, the right of way being on the center line between tracks so that each railroad owns two tracks. The two middle tracks are used as joint double tracks, the outside tracks being used as service or standing tracks. The work has been carried on jointly by the two roads; but instead of working independently with arrangements for cross piling, it was decided to carry on the work simultaneously with a crew for each road working on either side of the center line and arranging for an amicable sub-division of the work to be done on the center line girder as occasion demanded. This work was carried on under this arrangement without any misunderstanding or friction and the presence of the two crews assigned to exactly the same character of work served to foster a friendly rivalry which was instrumental in speeding up the progress. During the course of the work on a given structure a portion of the two middle tracks was isolated by introducing temporary cross overs to the outside track on either side. This left the tracks over the bridge free for the use of the construction forces and for occupancy by the erecting equipment. According to the usual arrangement the compressor

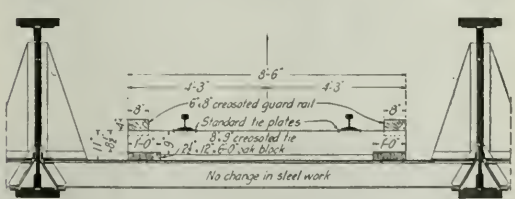

Fig. 2—Introduction of the Ties Reduced the Stresses in the Old Floor

car occupied the track at one end of the bridge and the derrick car that at the other end. The manner of carrying out the work at the individual bridge was as follows:

First the ties and rails were removed from the bridge. At this time the concrete along the sides of the girders and the ends was also removed and the brackets were burned with acetylene torches on the girders between the main line and side tracks, this being necessary so that the old rivets could be cut and new ones driven.

On many of these bridges considerable dirt had collected and packed down and hardened, and all this had to be removed before access could be had to the deck plates so as to cut the rivets. This work usually required about half a day's time.

The next step was cutting the rivets. When this work was started at Twenty-fourth street, the rivets had to be cut

by hand, which was a slow process, requiring 13 days. Later a Duntley-King pneumatic rivet buster, was used by which it was possible to reduce the time required for a bridge to five days. The first step in rivet cutting was on the brackets and angle irons running the entire length of the structure, then cutting the rivets in the hangers for the floor beams, and next cutting the rivets in the deck plates. To subdivide the work on the center girder, the New York Central forces cut the old rivets and the Rock Island forces drove the new rivets. This was considered an equal division of the work, with the exception of the Thirty-ninth street subway, where this method of procedure was reversed with respect to the center girder.

The deck plates were loosened and pried off and swung around in a parallel position, making them convenient for

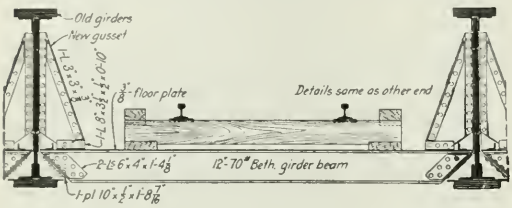

Fig. 3—The Present Floor with New Steel Beams

handling with the derrick. The derrick was then used to lift these plates and carry them from the bridge out of the way.

This being finished, the beams were next removed, using the derrick also for this purpose. Two beams could be removed at once and carried back out of place, and then a new beam brought up and installed. This method was followed until all of the beams were removed and the new ones installed. In doing this the rivets on the girder between the main line and the side track were driven out of place as the old beam was removed, and as the new one was installed it was held in place by a drift pin or a bolt, in some cases, until necessary to go on with the riveting.

When the old beams were removed the bottom flange of the girder was thoroughly cleaned of all rust and dirt and repainted on the face where the beam had been removed before the new beam was put in place. The new beams all being in place, the new top deck plates were installed and the riveting was then started on the floor beams. Riveting the deck plates was the next step and riveting the brackets last. During the period of riveting part of the crew was loading up the old beams and plates in gondola cars for shipment.

Whenever a girder was found out of level it was jacked up and shimmed to a fairly good level by placing oak board shims underneath the bearings. This was done in all cases where practicable. The rivets in the floor beams were all tested by inspectors from both the Rock Island and the New York Central, those for the center girder were inspected by both inspectors.

After the steel erecting crew had completed its work by replacing the new beams and deck plates, painters did the necessary painting, then the carpenter forces replaced the ties and the section forces replaced the rails. The division forces put on the necessary concrete work along the girders, and, where necessary, removed the old cracked and shattered bridge seats under the west girders and replaced them with new concrete bridge seats.

As the floors of these bridges are level, it was not thought necessary to waterproof the tops of the deck plates, as it would not be possible to obtain a good job of waterproofing with the ties resting directly upon the plates, as they do. However, as so many rivets connecting the deck plates to the beam flanges have been eliminated, thus doing away with the possibility of many loose rivets developing, it was thought that due to this change the steel itself would be tight enough to hold the water until it had either evaporated or run off over the backwalls of abutments.

This work was done under the direction of I. L. Simmons and B. R. Leffler, bridge engineers respectively of the Chicago, Rock Island & Pacific and the New York Central, Western Lines. The *Railway Age* is indebted for the above information to S. T. Corey, assistant bridge engineer of the Chicago, Rock Island & Pacific, Chicago.

Five Hundred Tons of British Columbia potatoes recently went to Cuba. The potatoes were all grown in the neighborhood of Vancouver City.

Administration Continues to Back Up Labor Board

No Settlement to Be Considered That Is Not Founded on Recognition of Its Authority

WASHINGTON, D. C.

THERE WERE some indications Thursday morning that efforts to settle the strike were coming to a head. T. DeWitt Cuyler, chairman of the Association of Railway Executives, went over the entire situation with the President after which Mr. Jewell and heads of the organizations on strike conferred with the President. Mr. Cuyler remained in Washington to await further developments and other railway executives were to see President Harding.

From the Indianapolis News

Among the Interested Parties

That the first essential looking to a settlement of the railroad strike is that the strike be first called off is apparently the position now taken by President Harding after a series of conferences during the past week at which he has gone over the entire situation. In a telegram made public on Wednesday, addressed to J. Cleve Dean, chairman of the "Railway Employees' Publicity Association," Chattanooga, Tenn., in reply to a protest against the attitude of the President, he extended an invitation to urge the striking railway men to accept the decision of the Railroad Labor Board and return to work under its decision, pending a rehearing on any question concerning which there is reasonable doubt as to the correctness or justice of the decision made. The President said in his telegram, dated July 25:

Since you speak as chairman of the Railway Employees' Publicity Association, and since it is exceedingly important that the American people know precisely the question at issue in the present railway and coal strikes, I am more than glad to answer your telegram, though I can only treat your politically partisan references with that contempt which is felt by every good citizen in the hour of deep public concern. Happily for the American public everything done and everything said by government authority relating to the two strikes is a matter of record, and can not in any way be distorted. There is no dispute about the American citizenship of the men on strike, nor will anyone question that many of them gave everything that men can give for the service of this country in the World War. Nor is it disputed that the men on strike are exercising their constitutional and lawful rights, under exsting statutes, in declining to work under the terms decided by the Railroad Labor Board or tendered to the workmen by the mine-operators of the country. No one has attempted or proposed to draft free men into either the railway or mining service, or suggested coercion under military force. The military forces of free America are never used for such a purpose. Their service is only that of preventing lawlessness and violence.

That same unchallenged freedom which permits you and your associates to decline to work is no less the heritage of the free American who chooses to accept employment under the terms proposed. The difference between the two positions is that the striking railroad workers exercise their rights of freedom in seeking to hinder the necessary transportation of the country; notwithstanding the provision made by law for the consideration of any just grievance; and the striking miners seek to prevent the production of coal necessary to common welfare, notwithstanding the offer of an agency to make an impartial settlement; while the men who choose to work in response to the call of the country are exercising their like rights, and at the same time are making their contribution to our common American welfare. The decisions of the Railroad Labor Board are in compliance with a mandate of the law-making body of the United States. Without discussing the decisions at issue, it is fair to assume that a government agency is ever ready to correct an error which is made, else government itself would become unjust. Moreover, it is indisputable that there can be no government unless its mandates are accepted by the citizenship of the Republic.

This observation relates more particularly to the railroad situation. When the mining situation became menacing I invited representatives of the mine-workers and the operators to a conference.

Photo by Keystone

New Employees at Work on Lackawanna Locomotive, Hoboken, N. J.

They came together, they were advised as to the call of common welfare, yet in eight days of opportunity no progress was made. In the absence of any tribunal authorized to settle disputes between mine-workers and their employers the federal government then voluntarily proposed the creation of a national commission before which the disputes might be settled justly, in the light of full information and in accordance with the best expressions of our modern civilization. Instead of contemplating the resort to force, it anticipated the very opposite—industrial peace with justice to every man concerned. Instead of aiming at involuntary servitude, to which you inexcusably refer, the government asked the mine-workers to resume their activities, in response to a manifest public need, at precisely the same wages and under precisely the same working conditions as those under which they had been working

contentedly for the last two years. Those who spoke for the mine-workers refused such a proposal. There is no dispute of the right to refuse. Since they declined to respond, and since it is believed there are enough men who love this country and cherish its security, and believe in serving the common welfare, to come to the relief of the mining situation, and avoid suffering, privaton and paralysis, I asked the governors of the coal-mining states to invite mine-operators and mine-workers to resume their activities, and to promise that to which every man is entitled, namely, protection in his lawful pursuits. This protection applies alike to the men on strike who observe the law and make no lawless interference with men at work, and to the men who are lawfully at work and entitled to protection by every agency of government in that work. If you mean to challenge the rightousness of free men to be protected in their lawful pursuits against interference and violence, I will be glad to join you in submitting that question to the decision of the American people.

It will interest you to know that instead of the government's action being an expression of the preference of the capitalistic class, it has been quite as much opposed by those who speak for employers as it is by you and your associates. Government undertakes to represent neither class alone, and is opposed to all conflict among classes, and disputes the right of any group or class, organized or unorganized, to imperil American welfare. Government speaks only for the American people as a whole and the common good of all its citizenship.

In view of all that the government has done or attempted to do during the past year and a half to relieve the American farmer from the burdens of readjustment and to relieve labor from the hardships of unemployment, I know your attempted appeal to American prejudice will fall upon deaf ears. It is ungrateful and it is untruthful. If you are the believer in peace and harmony and the reign of justice which you would have believed, I invite you now to pass judgment on the failure of the mine-workers to accept the awards of an able and impartial commission in determining the merits of the dispute between coal-miners and coal-operators, and I invite you to urge the striking railway workmen to accept the decision of the American Railroad Labor Board, acting under authority of the law, which must be supreme, and return to work under that decision, until you and I, and everyone else interested in American welfare, may join in asking the Railroad Labor Board to give a rehearing on any question concerning which there is reasonable doubt about the correctness or the justice of the decision made. These are the ways of peace, these are the requirements of enlightened civilization, these are the things expected by your government of its loyal and law-abiding citizenship.

The telegram from Mr. Dean to which the President replied was as follows:

I wish to point out to you that the railway employees and miners who are on strike are loyal American citizens and are only executing their constitutional rights. A large percentage of them fought on European soil that there might be no more war, and for you or any governor to attempt to operate the mines or railroads by military forces or to attempt to draft men into mining or railroad service would be an attempt to establish involuntary servitude. And I dare to predict when "involuntary servitude" is attempted by you, then the long predicted war between labor and capital will loom up. The American farmer and laborer have come to realize the hostile attitude of the G. O. P. toward them, and they realize that the hard times that now exist is a premeditated plan to bring the farmer and labor down to their knees. The blood of the American farmer and labor is at a boiling heat because they came to the firm conclusion that their government, or your administration at least, is against them. I pray that it will not come, yet I feel at liberty to predict that in your attempt to place the American labor under the gun nothing short of a revolution will happen. I am a lover of peace and harmony, yet I am for these striking railway employees and miners and I know that they will put forth every possible means to keep peace in our country. But these are days which "try the very souls of men," and I am hoping that you will be wise enough to see the dark clouds that are in the horizon sky and will change your attitude so as to remove those clouds.

It was stated that the government is not unmindful of the seriousness of the situation, the country being threatened with a coal famine this winter and diminished industrial production before that time, while there is "more or less of a threat of a paralysis of transportation," and that the government is seeking to work out the problem and at the same time "maintain the dignity and majesty of the government." The President had said on July 20 in a telegram to Governor Sproul of Pennsylvania that the selection of a commission similar to that proposed in the President's arbitration plan, not only to settle the coal wage controversy but to conduct a broad inquiry into the fundamental economic condition of the coal industry, may be expected in due time but that it may be desirable to modify the form of the commission as originally proposed. It was stated again on Tuesday that this commission would be appointed but not this week and it is thought that the President may be awaiting an opportunity for legislation authorizing its appointment. A bill providing for a commission was introduced in the Senate by Senator Borah on Tuesday.

President Takes Personal Charge

President Harding on July 20 took personal charge of the efforts to ascertain whether a basis exists for the settlement of the railroad strike, after word had been received from Chicago that the endeavors of Chairman Hooper of the Labor Board had failed to reconcile the "antipodal views" of the railroad executives and Mr. Jewell and his associates. Up to that time the President had been devoting more of his attention to the coal situation and leaving the railroad strike to be dealt with by the Labor Board but the failure to settle the coal strike served to emphasize the effect which the slowing up of rail transportation is having in some districts. At this writing the efforts of the President apparently have been confined to obtaining complete information regarding the situation from all angles. There has been no announcement that would indicate that he has found any method of procedure that can have any present effect. For some time administration officials appeared optimistic over the prospects of an early settlement after they had been told that Mr. Jewell was no longer insisting upon the rescinding of the wage decision that was the cause of the strike, but that, providing the board would allow a rehearing on the wages and working rules, a settlement could be speedily agreed upon if the railroads would waive the seniority issue and discharge their new employees to take back the strikers. They apparently failed to appreciate the importance of this question until they had been informed of the extent to which many roads, particularly those in the east, had replaced the strikers with new men to whom they had promised permanent positions and the places in the seniority list that had been forfeited by the strikers.

The President delegated three Republican members of the Senate Committee on Interstate Commerce to meet with a committee of railroad executives; Secretary of Labor Davis, while on a visit to his home at Mooseheart, Ill., conferred with Mr. Jewell and the President himself summoned Chairman Hooper to Washington for an extended conference at which the entire situation was gone over in the light of the information reported by the senators and Mr. Davis. It is understood that the senators were called upon to act as intermediaries with the idea that possibly a solution might be found in some form of emergency legislation, but it was early agreed that nothing of this kind could be made effective for the present and the discussion of legislation was mainly confined to changes in the Transportation Act designed to strengthen its provisions in such a way as to prevent a recurrence of the situation that has arisen.

Railway Executives Called to Washington

A telegram asking for a conference with the railroad executives for the purpose of ascertaining their exact position and the possibility of their making concessions was sent to a meeting of the eastern presidents at New York on Thursday, July 20, and in response a committee consisting of Thomas De Witt Cuyler, chairman of the Association of Railway Executives; W. H. Truesdale, president of the Delaware, Lackawanna & Western; L. F. Loree, president of the Delaware & Hudson; A. H. Smith, president of the New York Central, and W. W. Atterbury, vice-president of the Pennsylvania, came to Washington Thursday evening and held

a three-hour conference with Senators Cummins, Kellogg and Watson. The senators then reported to President Harding the next morning.

It was announced that they had discussed the possibility of legislation and had reached the conclusion that there was no immediate legislative solution for the present situation, although the possibility of future legislation had been considered, and that the senators had sought full information for the President regarding the points at issue which were in the way of a settlement. Senator Cummins said that there was "no immediate hope" and Senator Watson said that the committee of executives did not have full authority and that there would probably be other conferences. He said both the senators and the executives understood and that Mr. Hooper had indicated, that the question of seniority is the only real issue involved but that there was some doubt as to whether the question of adjustment boards is involved. It was apparent that the railroad men had offered no hope that they would recede from their insistence on standing by the new men they had taken on.

The senators communicated President Harding's conviction that with a big part of the year's coal production already lost, a heavy movement of fuel during the rest of the year necessary and large crops coming along, it is imperative that some settlement be reached, if possible, without waiting for the carriers and the unions to fight it out. The executives, on the other hand, pointed out the necessity of establishing the authority of the board and that this cannot be done if concessions are to be made to men who have struck against its decisions. They also pointed out that some of the eastern roads have filled half of the jobs made vacant by the strikers, giving the new men assurances of permanent employment, and therefore have the strike practically won, and that if they were to displace these men for the benefit of those who left their service they would not only be paving the way for future strikes but would make it much more difficult to replace strikers on another occasion.

Chairman Hooper Consults with President

After the senators had reported it was announced that Chairman Hooper had been summoned to Washington so that the President might inform himself more closely than he had been able to at long range. Mr. Hooper arrived on Saturday morning and spent five or six hours with the President, giving him a complete history of the situation up to date, including his various conferences with the strike leaders and the railway executives. During a part of the time Senators Cummins, Kellogg and Watson were also present and also Secretary Weeks of the War Department. Mr. Hooper left Washington late in the day to return to Chicago without making any public statement and there was no announcement from the White House. Senators Underwood and Pomerene, Democratic members of the Senate interstate commerce committee, also conferred with the President later. President Willard of the Baltimore & Ohio had been at the Capitol earlier in the day talking with senators regarding the situation and apparently inspired some confidence in the ability of some roads to effect individual settlements as he had arranged for conferences with the former employees of his road for Tuesday.

Secretary Davis reported to the President by long distance telephone regarding his conference with Mr. Jewell on Saturday and on Monday he reported personally. He expressed the opinion that the strike could be settled at once if the railroads would restore seniority rights to the strikers. J. C. Davis, director general of railroads, was also consulted by the President.

On Wednesday W. W. Atterbury of the Pennsylvania conferred with the President for an hour or so and it was learned that Chairman Cuyler of the Association of Railway Executives was to see the President on Thursday. Mr. Atterbury on leaving the White House gave out a statement that the Pennsylvania was willing to leave the question of seniority to its "employees," who are now those who did not strike or who returned after going out and new employees who have taken the places of the strikers, and who therefore would hardly be expected to vote to displace themselves in favor of the strikers. Mr. Atterbury said: "The President, realizing the importance of the seniority question as the crux of the present railroad situation, desired to discuss its various angles in a definite settlement of the railroad problem. I expressed to him the opinion that, so far as the Pennsylvania system was concerned, such a question should properly be determined by our employees and that the Pennsylvania system would be entirely guided by any determination that our employees thought wise, fair and equitable."

Jewell in Washington

B. M. Jewell and the heads of the unions on strike came to Washington on Thursday morning to see the President. It was stated at the White House that, while they had not been invited, the President would see them. Several railway executives were also expected.

Conferences at the Capitol

Attorney General Daugherty also conferred at the Capitol on Saturday with Senator Cummins, chairman of the committee on interstate commerce, and Senator Borah, chairman of the committee on education and labor. Senator Borah and

Halladay in the Providence Journal

Out of the Way!

Senators Walsh and King of his committee had previously held a meeting with President Gompers and Secretary Morrison of the American Federation of Labor and Edgar Wallace, legislative agent of the United Mine Workers. "I think we agree," the attorney general said, "that the government has all the law needed in case of emergency. If the government has the right to protect interstate commerce it has the right to protect the men in an industry essential to the maintenance of interstate commerce. We discussed the Transportation Act and additional legislation which might be thought necessary. We have a plan for anything which might happen." He also said that the Department of Justice was

watching the strikes with a view to determining whether there existed a conspiracy among the leaders to interfere with interstate commerce but that no evidence along this line had yet been discovered.

The legislative agents of the four train service brotherhoods at a long conference with Senator Cummins on Saturday presented a written argument urging the repeal of the labor provisions of the Transportation Act and the restoration of the plan of mediation and arbitration provided by the Newlands act. The latter has not been repealed but the United States Board of Mediation and Conciliation has been allowed to go out of existence by failure to make any appropriation for it. They also told the senator that they were receiving numerous reports of locomotives and cars in unsafe condition and that the trainmen might refuse to take out trains for this reason. Senator Cummins indicated that he might be willing to have the Transportation Act amended so as to provide more specifically for a "living wage," including a definition of a living wage, and also to make the orders of the Labor Board enforceable. He said the law now, at least by implication, contemplates a living wage and that he had no doubt the board had taken it into consideration in its decision.

Menace to Mail Service Past

Postmaster General Work announced on July 20 that any menace endangering the delivery of mails arising out of the strike of railway shopmen had passed. Except in isolated instances where local trains have been annulled and motor truck transportation has been substituted, he said, no emergencies have arisen recently and few are expected in the future. Since the outbreak of the strike the Postmaster General has received innumerable offers from private sources volunteering automobiles, trucks and aeroplanes.

"We will have no train service between Deleon and Cross Plains (Texas) until we get protection for men who will work at Deleon," was stated in a message received on July 20 by the Post Office Department from General Manager Whitenton of the Missouri, Kansas & Texas. "Also there will be no service between Stamford and Rotan," he continued. "The United States marshal is not furnishing deputies to protect our workmen at Deleon and as a result men will not go there to work. Service generally is going to depreciate unless the question of protection is settled and men given an opportunity to work who are so inclined."

The Post Office Department arranged for truck service between Deleon and Cross Plains, and the statement of Whitenton was placed with the Department of Justice for action.

Superintendent of Railway Mail Service W. G. Van Dervoort, Seattle, announced that the following Northern Pacific trains were discontinued: Trains 422 and 423 between Seattle and Moclips, Wash.; trains 593 and 594 between Centralia and South Bend, Wash.; two trains between Bellingham and Seattle; two trains between Kansaskat and Tacoma; two trains between Lewistown and Spokane; two trains between Dayton and Pasco; two trains between North Bend and Seattle; two trains between Missoula and Wallace, Mont.

Superintendent of Railway Mail Service A. A. Fisher, Washington division, reported that the Norfolk Southern had reduced train service between Belhaven and Mackeys, N. C., from six times a week to three times a week.

Superintendent of Railway Mail Service S. A. Cisler, St. Louis, stated that but 20 United States marshals were on duty at Hannibal, Mo., where the shops of the Missouri, Kansas & Texas are located, and that some minor conflicts had occurred between the marshals and the strikers at that point. Cisler stated that there was no immediate prospect of opening the shops, or resuming train service on the M. K. & T. between Hannibal and Moberly. The Wabash was still running trains through Hannibal by continuing the run of engine crews to Springfield, Ill., and Kansas City, Mo. The superintendent said that the Wabash had only 20 days' supply of coal, but he knew of no shortage on other roads.

A. F. of L. Urges Joint Conferences

Invitation to the federal government to "take the one step which labor believes effective" in settlement of both coal and railroad strikes was extended by President Samuel Compers of the American Federation of Labor on July 21.

"We invite the federal government," he said, "to see to it that employers and workers come together. The government has done everything except this one logical, necessary thing. The government has threatened a great deal. It has talked about troops and about the rights of the public. It has not talked effectively about conference and it has had little or nothing to say about the rights of the workers. Labor calls upon the government to talk about conference between employers and workers, both in the coal industry and in the railroad shop strike.

"The President has talked about the similarity of his action and the action of President Roosevelt in the anthracite strike. There is no parallel. The Colonel told the operators to get into conference with the union and he fixed a time limit for that conference to begin. President Harding has not told the mine owners to get into conference.

"Conference is the thing that is needed. Let there be less talking about force and coercion. It is un-American and it will have no good effect. American workers are the most efficient workers in the world, but they will not work under duress. They will not enter into involuntary servitude in violation of the constitution.

"Labor asks for conference with the employers. If the government wishes results, if it wishes operation of mines and railroads let it adopt the only course that can secure those results. Let it exert its tremendous influence to bring the employers into conference with the representatives of the workers.

"If the government cares more about sustaining the reputation of its helpless and all but defunct Railroad Labor Board, if it cares more about a costly and ineffective military show than it does about justice and results, then it is on the right track.

"But labor urges the government to come back to a constructive and sane viewpoint. Labor invites the government of the United States to bring about conference between workers and employers. Labor will enter conferences in every case in absolute good faith and unless employers are absolute bourbons and autocrats the strikes can quickly be adjusted and production and transportation put into effective operation."

Telegrams of support, sympathy and co-operation were sent on July 22 to President Bert M. Jewell of the A. F. of L. Railway Employees' Department and to President John L. Lewis of the United Mine Workers by the joint legislative conference, composed of the legislative representatives of the American Federation of Labor and of all national and international unions in Washington. The conference is composed of more than 50 representatives of labor organizations.

That the railroad shopmen have been preparing for this strike since April, 1921, and waited 15 months because of a desire to "accumulate enough grievances" was asserted by P. J. Conlon, vice-president of the International Union of Machinists, in a speech to a meeting of strikers in Washington on Sunday. At that time it was learned, he said, that the national agreements were to be abolished. "It generally takes from 30 to 60 days to make a shop strike effective," he said, "but before this one had been on ten days more than 250 trains had been cancelled, the West Virginia non-union mines had been bottled up, and the iron and steel industries were crying for help. And we have hardly started yet."

Labor Board Works to Prevent Spread of Strike

Following the Labor Board's announcement, quoted in last week's *Railway Age*, to the effect that it had found irreconcilable differences between the railroads and the shopmen on strike and that, therefore, its efforts at settlement of the controversy had ended, Washington became the center of interest because of the expressed desire of the present administration to end, if possible, the twin coal and rail strikes. The Labor Board's activities since July 20, when Chairman Ben W. Hooper announced the end of its efforts to bring the railroads and the striking shopmen together, have been confined largely to conferences with government officers including President Harding and Secretary of Labor James J. Davis and to efforts to prevent the spread of the strike to other classes of employees on several of the large carriers.

On July 21 Chairman Hooper was summoned to Washington by President Harding for a conference on the strike situation. Following this meeting, Chairman Hooper said:

"I have gone over the whole situation very thoroughly with the President, undertaking to give him the history of the controversy in every phase down to the present time. I do not feel at liberty to discuss details of the things talked about."

At the same time W. L. McMenimen, member of the labor group on the board; B. M. Jewell, head of the Federated Shop Crafts; the leaders of the seven shopmen's organizations involved in the strike; Arthur S. Nelson, Department of Labor Commissioner of Conciliation, and Timothy Healy, head of the firemen and oilers' union, were summoned to Mooseheart, Ill., by Secretary of Labor Davis for conference on the strike situation. Following this meeting, Secretary Davis announced that he believed "the strike could be settled if the roads would give the striking shopmen their seniority rights and there was a re-hearing by the Labor Board on other disputed questions." Secretary Davis said he believed the matter of establishing national adjustment boards "could be adjusted" and asserted that in his opinion the contract question "does not stand in the way of an agreement." He also admitted that every angle of the situation had been discussed with Mr. Jewell and the other labor leaders and that the general complaint was that the carriers did not accept the decisions of the Labor Board, while the employees in nearly every instance have abided by these decisions. He later talked with President Harding, submitting a report of the information he had gathered.

Jewell Cites Adjustment Board Controversy as Real Issue in Strike

Prior to these conferences, Mr. Jewell issued a statement in answer to the railroad's contention on seniority, accusing the latter of camouflaging their real objection to the union's stated terms of peace. The railroads' position that they cannot restore the seniority rights of the strikers if they should return to work is not "sincere," according to Mr. Jewell.

"The real stumbling block is our demand for a central board of adjustment as outlined in the Transportation Act," he declared. "The railroads know they cannot justify their fight against the national adjustment board before the public. The board would take working rule disputes off the hands of the Labor Board, except in cases of appeal, and leave the board free to devote practically all its time to wage questions."

In support of his demand for a national adjustment board, Mr. Jewell enumerated the following arguments:

"(1) Conditions of shop work are practically the same in all sections of the country and the character of the work is the same. Car and locomotive repairs are the same and must be made in about the same manner everywhere.

"(2) Uniform national rules have been promulgated by the Labor Board.

"(3) If these rules are interpreted and applied differently by different adjustment boards, a mass of conflicting cases eventually would be presented to the Labor Board.

"(4) Since uniform interpretation and application is desirable and will be the result of final decisions by the Labor Board, it is inefficient to establish several intermediate boards who will create inharmonious rulings which the Board must harmonize.

"(5) Regional boards would impose unfair expense and duplication of efforts upon labor organizations, requiring a representative of the six crafts on each adjustment board, thus requiring payment of expenses amounting annually to a large sum.

"(6) Since a national labor board has been established, thus insuring a national code of rules and working conditions, an intermediary court should be organized on the same basis logically and efficiently."

In commenting on the adjustment board issue, William H. Finley, president of the Chicago & North Western, said:

"The strike was declared against a decision of the Labor Board involving only wages and working rules in which no mention whatever, directly or indirectly, was made of a board of adjustment, national, regional or otherwise. The creation of such a board was never mentioned officially in the hearing of the shopmen's case and is in every way foreign to the issues now involved.

"The railroads are accused of opposing the formation of a national board of adjustment. How can the railroads oppose a matter to which they have never been asked to agree?

"Regional boards of adjustment have been formed by the railroads and employees in the train service, but the question of forming such boards or a national board of adjustment in connection with the shopmen has never been put up to the railroads.

"There is no connection whatever between the present strike and a national board of adjustment and by no stretch of the imagination can such a connection be construed. It is merely an attempt on the part of persons without a just cause to introduce purely irrelevant matter."

Maintenance of Way Men Approve Leader's Action

The spread of the strike of maintenance of way employees was finally ended when the grand lodge officers of the Brotherhood of Maintenance of Way Employees and Railway Shop Laborers voted their support of the course taken by E. F. Grable, president of that organization, in withholding a strike order. The fear that the general chairmen would censure Mr. Grable for having accepted compromises and that an "outlaw" strike might follow, failed to develop. The various district leaders reported concessions or progress obtained in local conferences with various railroads. Following the meeting, however, Mr. Grable announced that any road which refuses to confer with the unions' representative would immediately face a walkout of its maintenance of way employees.

Some interesting sidelights on the administration's attitude towards the strike and its settlement were given by Mr. Grable, who, after conferences with members of the Labor Board, said:

"I have received advice that Senator Cummins, chairman of the Interstate Commerce Committee of the Senate, is going to hold hearings immediately on disputed points in the labor provisions of the transportation act, principally to ascertain how the law may be amended so that the living wage principle would be made clear so that every employee would be granted a living wage.

"I advised the board of instructions I issued and sent to each of the general chairmen throughout the United States to immediately open negotiations with their respective roads on rules, working conditions and wages and if they cannot be satisfactorily adjusted, to submit these disputed matters to the board. The first of these new disputes has been received by the board coming from the Chicago, Milwaukee & St. Paul. The officials on that road set aside the 30-day clause in the existing agreement in order to meet with our representatives to negotiate the matters in dispute and forward the unadjusted matters to the board.

"This is the first of many disputed submissions on these subjects which the board will receive very shortly and I respectfully requested the board to give me their assurance that these cases will be set for a hearing at an early date and I have received assurance of the board that this will be done. I have also requested the board that any further decision on these new disputes, more favorable to the men, be retroactive to July 1."

Numerous Conferences Held

Numerous conferences between members of the Labor Board, particularly Mr. McMenimen and Chairman Hooper and the leaders of the national and system organizations of employees who have been threatening to walk out, have been held during the past week, representing the continuing effort of the Board to prevent a spread of the present strike. The result of these conferences have been for the most part to hold the employees involved in line and the efforts of the Board in that direction have been successful. Largely through work of this nature, strikes of station employees, signalmen, clerical and maintenance of way forces on several large carriers have been averted. For instance, the clerical forces on the Chicago & North Western, who have been threatening to strike for some time, have settled their dispute largely through the efforts of Mr. McMenimen. Many other similar disputes of system extent have likewise been settled during the past week by agreement with the carriers involved. At the present time, therefore, there seems to be little likelihood of a spread of the strike, although conferences are continuing, looking to the avoidance of such a contingency.

Approximately 300 general chairmen of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, express and Station Employees met in Chicago on July 26 to discuss the strike situation and formulate their plans for the future. Headed by E. H. Fitzgerald, president of the organization, a delegation met with certain members of the Labor Board behind closed doors, discussing, it is reported, the grievances of these employees concerning the Board's recent wage decision and certain working conditions. The clerks' general chairman subsequently adopted a resolution warning that they would resort to their "economic power" if grievances are not adjusted. However, at the same time they took action which will end the recurrent rumors of a general walk-out of clerical forces.

That new organizations of shopmen are being formed on various Eastern and Western carriers is indicated in telegrams and letters, which are being received at the Labor Board from newly created organizations asking that body for recognition under the Transportation Act.

Situation in East Improves Rapidly

EXCEPT AS concerns the developments at Washington, interest in the railway shopmen's strike in the east has been divided during the past week between the discussion relative to seniority and the outcome of the Baltimore & Ohio's conferences which began on Tuesday with the representatives of the shop crafts relative to a separate settlement.

The railroads in the eastern district apparently have the strike situation well in hand insofar as concerns operation. Latest reports are to the effect that forces have been recruited to between 50 and 60 per cent of normal and the situation is characterized by its continuing improvement. Passenger and fast freight schedules are generally being operated on time. Such delays as have occurred have been given publicity by the shop crafts organizations, but for the most part the delays have been only those such as would occur under more normal conditions. Reports are also to the effect that slow freight is being handled currently with certain exceptions. One of these is the Baltimore & Ohio, which, however, during the past week, reports considerable improvement over the preceding week. The Chesapeake & Ohio and the Norfolk & Western with a combination of a clerks' strike and a shopmen's strike have been handicapped to the extent that on the latter, for instance, the coal movement is running at present between 50 and 60 per cent of the unusually heavy movement in June. Coal loadings in the Pocahontas district for the week ending July 15—the latest figure reported—were only 22,174 cars, as compared with about 31,000 cars a week in June.

The Question of Seniority

The question of seniority is at present the outstanding feature in the strike in the eastern district as it is in the western district and in Washington. The subject is a leading one for discussion at the meeting of the Eastern Presidents' Committee, of which L. F. Loree, president of the Delaware & Hudson, is chairman. The position of the committee is given in the following statement which appeared over the signatures of the various railroads in newspapers in important centers, beginning Wednesday morning:

"Seniority"

What is this question of "Seniority" that is being discussed in connection with the railroad strike?

All employees on railroads are accorded seniority of service, if otherwise competent. This means that the senior employees are entitled to choice of work, and when it becomes necessary temporarily to reduce forces that the junior men are released and the senior employees retained.

A strike was ordered by union officers who have no connection with any railroad. Many employees, in compliance with the order, quit their jobs and left the railroad service, and many did not leave but remained loyally at work, accepting the Government Labor Board decision.

There are thousands of such men who must, under the rules of fair dealings as well as the rules of seniority, be protected and supported. To discharge these men would be ingratitude of the grossest sort.

In addition to those thousands who remained in service, other thousands who wanted to work have been employed in good faith. The new employees in a great many cases left other employment with the understanding that if competent, they would be retained in their present position.

These men—those who remained and those who enlisted—have kept the trains in operation and the needs and the comfort of the people supplied.

It is submitted that to ask the railroads now to set aside these loyal men and replace them with the men who left, is to ask the railroads as well as the Government, which is concerned through the action of the U. S. Railroad Labor Board, to be disloyal to these thousands of loyal men.

Optimistic Attitude

The attitude of the railroad managements towards the strike situation is rather apparently characterized by its increasing optimism. The executives apparently feel that the railroads have approached or will soon reach the point where they can say that the roads have won the strike. They draw attention particularly to the fact that the roads have succeeded in recruiting their forces to a satisfactory degree and they emphasize the fact that interruptions and delays of traffic have been kept at a minimum. The opinion is expressed in many quarters, however, that there is one unsatisfactory feature in the situation. It seems to be the idea that the strike would be settled more promptly if the railroads could be left to work out the matter themselves. It is realized that it was the duty of the Labor Board and of the administration to take whatever steps they could to settle the strike. It is, on the other hand, felt that each announcement of further steps to be taken by the Labor Board or the administration is looked upon with hope by the strikers with the result that the latter decide to wait for developments. It is, therefore, felt that if the government authorities would adopt a hands-off attitude the men would see that they have nothing further to gain by waiting and would return to work in increasing numbers.

Baltimore & Ohio Holds Conferences

Another interesting factor which has received comment is the attitude of the American Federation of Labor notably with respect to its statements in favor of the strikers which have been issued by President Gompers. The fact that the A. F. of L. has found it advisable to take a part in the strike in this fashion is regarded in many quarters as a sign that the strike is not going as well as the shop crafts organizations would desire and as a response to a call for much needed support and assistance.

Representatives of the striking shop crafts organizations

met in conference with C. W. Galloway, vice-president, in charge of operation of the Baltimore & Ohio, in Baltimore on Tuesday. The conference was held at the invitation of the management. The representatives of the Baltimore & Ohio System Federation received permission from the Railroad Employees' Department of the A. F. of L. in a telegram which read: "Conference will be permitted, but no action is authorized." It was understood that no matter what agreement is reached during the conference it will have to be referred to the employees' department for ratification.

The Tuesday meeting began at 2 o'clock and adjourned at 6:30 until Wednesday morning. The following statement was issued by the Baltimore & Ohio Tuesday evening: "The meeting was devoted to a general discussion of the wage reduction and the various rules and working conditions as handed down by the Labor Board. No conclusions were reached. . . . The discussion was harmonious."

The conference was still in session on Thursday.

Prior to the meeting Vice-President Galloway declared that he went into the meeting with an open mind in regard to seniority rights. President Daniel Willard in a statement issued prior to the conference said:

There are no matters in controversy between the Baltimore & Ohio Company and its employees that cannot in my opinion be settled and settled promptly by a conference called for that purpose. The Baltimore & Ohio Company would much prefer to keep in its employ the men who have been in its service, many of them for years, and who are familiar with its working conditions and requirements, and I am confident that if a conference could be had between representatives of the men and the officers of

Orr in the Chicago Tribune

A Little Sacrifice on His Part Would Help

this company, that the present unfortunate situation could be quickly cleared up, and the company earnestly invites the men to join in a conference for this purpose.

Unless those who left their positions are willing to return to work without further delay, or are willing and able to promptly join in such a conference as is suggested, it will be the duty of the Baltimore & Ohio Company to take such other steps as may be necessary and still possible in order to resume normal operations. I feel confident that if a conference can be arranged and if the parties to such conference are willing to approach the matter in a spirit of fairness and with a sincere desire to effect a settlement, a prompt and satisfactory conclusion can be reached. The Baltimore & Ohio Company, for which I am authorized to speak, will approach the matter in that spirit. The public has a right to expect all of us to make every reasonable effort to bring about an early settlement of this controversy in order that we may thereby be enabled to give to the public the service which it has a right to demand and expect.

On Wednesday evening Vice-President Galloway submitted to President Harding a copy of the road's proposals.

Southern Says It Has No Quarrel with Men

"We have no quarrel with our men. . . . We have issued no ultimatum nor have we employed any man to take a striker's place." These sentences are from a communication addressed to the striking shopmen on the Southern Railway by President Fairfax Harrison. The letter said in part:

"I have the greatest sympathy with our men in their respect for their fraternal obligation. Some of those now on strike, in obedience to a call from without our ranks, are my old and tried friends. My effort during a difficult ten days has been to keep the door open for all to return to work with honor. We have issued no ultimatum nor have we employed any man to take a striker's place. The only new men we have employed have been common laborers to do work deserted through sympathy or otherwise by men whose organizations are not on strike.

"The work of turning engines and current repairs necessary to keep the railroad running (and as everyone has seen, it has been kept running) has been done by officers and their clerical forces. On their behalf and my own I am glad to testify that the striking employees, with few exceptions, have not molested them unlawfully. The cases of violence and sabotage which we have experienced have generally been traced to a few youthful adventurers and it has often developed that they were never on our pay roll.

"All of this is testimony that we have no quarrel with our men. More than that, I have myself had during the past week on the road many assurances that the great majority of the men have no quarrel with us. In this situation I have hoped that, having recorded their impressive protest against the award of the Labor Board, the men would see the wisdom of returning to work and accepting the Labor Board's invitation to go into a rehearing of their grievances. Of course, if law means anything, that is the only way the Labor Board can now deal with the question.

"Having said this much, it is only fair to add that, if it shall be necessary, we will undertake to run the railroad without the aid of those on strike. Unless the men soon return to work we shall deem it our duty to the public to put others in their places and invoke all the authority of the United States to protect the newcomers in their work. That protection has been offered."

Number Now Employed 60.6 Per Cent

Following a meeting Monday of the eastern Presidents' Conference, L. F. Loree issued a statement in which he said in part:

"The last information, for the month of April 1, 1922, of the Interstate Commerce Commission gives as employed on the railroads of the United States in the six shop crafts 351,834 men. In order to furnish work to as many as possible of the men the roads exerted great efforts, in some cases working a part of the force only in alternate weeks and in others greatly reducing the hours of labor, so that these forces were not averaging more than 40 hours each week and in numbers were much greater than were needed. The figures available indicate that on June 30 on the roads in the eastern traffic region there were in service about 145,872 men.

"From such sources of information as we have there are now employed in this region 88,404 men, not including the foremen, or 60.6 per cent, and as these men are working full time the actual work performed will compare favorably with that before the walkout. Especially is this true if we consider that there is a full complement of foremen and their assistants and that the efficiency has been greatly increased by the elimination of many rules designed to restrict output and the fact that one willing mechanic now does the work that formerly was taken up in routine by several, with the consequent delays.

"It may, therefore, be said that, so far as the eastern region is involved, the possibility of the strikers tying up the railroads has passed. What remains to be done is to preserve the public peace, to protect the old men and incorporate these new men in the communities where they are located, gradually recruiting the forces to normal through the employment of additional men or the return of the former employees for whom places can still be found."

Traffic Moving Without Interruption

Reports from individual roads in nearly all cases show a gradually increased percentage of shop forces at work and in practically every instance the statement is made that conditions show a marked improvement. The strikers' organizations have made much in their publicity concerning delays reported to passenger and fast freight trains, but they have not shown how much of the delay may be due to the strike as distinguished from delay which might occur under normal conditions. The strikers' publicity has also had a great deal to say concerning equipment condition notably with respect to an alleged failure to keep motive

power in proper shape, but it is noticed that in general trains are being handled without unusual difficulty.

Recruiting continues in good volume, the railroads emphasizing that they have had sufficient men to permit of careful selection. An interesting feature is the advertising for men in the newspapers published in eastern industrial centers by roads such as the Denver & Rio Grand Western, the Great Northern, etc. The statement is made in some quarters that striking shopmen in large numbers are being hired on other roads.

The spokesman for the eastern roads is John G. Walber, secretary of the Bureau of Information of Eastern Railways. The information given out by Mr. Walber, however, has been of a general and rather interpretive character. The following reports have been given the *Railway Age* by individual roads, in most cases in response to telegraphic or other requests.

Atlantic Coast Line

This company now has forces at work in place of striking shopmen equivalent to about 40 per cent of the forces employed just prior to the strike. Both passenger and freight service are normal. Forces are being recruited daily and the road reports that it will soon be able to resume all normal maintenance work.

Baltimore & Ohio

This company reports continued improvement. Many old employees are returning to the service. On July 21 the company reported a movement of 20,000 cars and gains in the number of employees at 32 points on its system. On that date it was announced that no more daily bulletins would be issued by the company until the result of the conference with striking employees, which began on July 25, was ascertained.

Bangor & Aroostook

This company is working a force of 317 men in its shops, compared with a normal force of 337—making its present labor strength 94 per cent of that of pre-strike days. Furthermore, of the present force but 11 are returned strikers. No delays or interruptions to any class of traffic have occurred which could be charged to the strike.

Boston & Albany

On July 26 this company reported as follows:

"Our conditions continue to improve. No interruption in freight or passenger service."

Boston & Maine

This company's present shop forces number in excess of 50 per cent of normal. There have been no unusual interruption to traffic, either passenger or freight, and conditions are said to generally satisfactory.

Buffalo, Rochester & Pittsburgh

Of this company's normal force of motive power mechanics, 50 per cent were working on July 26 as were 29 per cent of its car department mechanics and laborers, making 41 per cent of the shop employees taken as a whole. The company reports that it has had no interruptions to movement and that traffic conditions show daily improvement.

Central of Georgia

A force of 785 men is now employed in this company's shops, representing 38 per cent of pre-strike strength. There has been no interruption to traffic, all freight being received and handled on time and passenger trains run according to schedule. No trains have been annulled. Conditions are reported as steadily improving.

Central of New Jersey

This road has a shop force of 2,416 men, out of a pre-strike total of 5,013. There have been no delays to trains on its lines chargeable to the strike. The company has no embargoes against any classes of traffic and is accepting all the business offered. Conditions are reported as steadily improving.

Chesapeake & Ohio

Some new men are being employed to take the places of striking shopmen. Positions of clerks made vacant by the walkout which occurred on July 20 are being rapidly filled.

Delaware, Lackawanna & Western

The Lackawanna reports a rapidly improving situation. It has suffered no delays to traffic since the strike began.

Erie

Prior to the strike 9,450 men were employed by the contractors who operate this company's shops. The present force is 5,280 and of these 2,010 are old employees. There have been no interruptions to traffic on this road and conditions are very noticeably improved. During the first three weeks of July the road moved 243,612 loaded cars, a total comparable to that for the same period in June, and is accepting all business offered to it. Its suburban passenger trains are operating 95 per cent on time. The road has made no move toward the formation of a union among its present forces. There has been no destruction to property, although one man was killed in a minor disturbance at Hornell, N. Y., last week. Injunctions have been secured by the company at the following points: Jersey City, Hornell, Salamanca, Cleveland, Galion, Huntington, Meadville, Brier Hill and Kent. These injunctions are said to have been effective in breaking up picketing. State troopers are guarding company property at Port Jervis, N. Y., Susquehanna, Pa., and Hornell, N. Y. The road has plenty of equipment and has suffered no congestion of traffic.

Lehigh Valley

"The Lehigh Valley has shown notable improvement since the last report. A few old men have returned to work but in addition the management has been able to recruit a considerable force of competent machinists, boilermakers, etc. This, with the fact that the Lehigh Valley has never been compelled to close its Easton back shop, because of the loyalty of the men there, has enabled the road to operate all its freight and passenger service without interruption.

"In accordance with the suggestion of the Labor Board a number of employees who remained loyal, together with some of the new men, have started a shop crafts organization and considerable progress has been made with it. The management, however, has taken no active part in its formation."

Maine Central

On the morning of July 26 the road had a total of 616 men working out of a total on June 30 of 1,502. Of the present force 227 are old men and 389 are new employees. Mail, passenger and freight service has been fully maintained. The number of workmen increasing daily.

New York Central

This company on Thursday in a statement giving the reasons why "it is impossible that the striking shopmen be taken back with restoration of their former seniority" gave also the following figures as to the number of men affected: "20,000 shop workers of all classes were on the payrolls on June 30 and were affected by the strike call on the New York Central Railroad. On July 26 a total of 15,000 men were working in these positions and of these forces at present working, 57 per cent are old employees and 43 per cent are new workers employed since the strike."

New York, New Haven & Hartford

This company continues to maintain normal movement of freight and passenger traffic. Its force of skilled mechanics is being increased daily by the employment of new men and the road reports that its forces are rapidly approaching normal. Some delay to passenger trains has been reported during the past week due to storms, one of which caused washouts at Providence, R. I., on the night of July 23.

Norfolk & Western

This company tells the *Railway Age* of the situation on its lines as follows:

"In so far as strike of clerks is concerned, it amounts to nothing. There has been no interference with the orderly conduct of the business on this account and the positions vacated by them have been largely filled. With reference to strike of shopmen, some of the older employees have returned to service and we are hiring new men, being careful to select competent and desirable ones. Of course, traffic is to some extent affected, more particularly with reference to coal loading. Coal movement is probably between 50 and 60 per cent of the June movement which was abnormally large."

Pennsylvania

On July 25 this company issued a statement which read:

"The most favorable situation that has existed on the Pennsylvania System at any time since the shopmen's strike began on July 1, was disclosed in today's reports from all regions of the system. Consistent and satisfactory gains were shown in the forces of every region.

"The total number of shopmen actually working on the entire system is 42,836, an increase, as compared with a week ago, of 1,851. An average week-day force under normal conditions would be approximately 55,000.

"The Eastern Region and the Altoona Works combined have

made a net gain, as compared with a week ago, of 420 men actually working; the Central Region has gained 746 men; the Northwestern Region, 331 men; the Southwestern Region, 354 men.

"The movement of freight, during the week just ended, was the heaviest that has been handled on the Pennsylvania System since the closing week in March last, when coal traffic was abnormally high in anticipation of the suspension in mining. The total number of freight cars dispatched last week was 734,872, and this total would have been considerably larger but for the fact that the current movement of coal is only approximately one-third of normal.

"From the point of view of on-time performance, the freight movement last week, of arranged and scheduled service, was practically 100 per cent perfect. Promptness of dispatching was considerably above normal, and unusually good records were made in the return of empty refrigerator and stock cars in order that the transportation of food supplies could be maintained uninterruptedly.

"Normal on-time performance was maintained in passenger service throughout all portions of the system. Last week showed the heaviest seashore and summer resort traffic of any period thus far during the present season, the volume of that class of travel being approximately 5 per cent greater than during the corresponding week a year ago.

"At no time since the strike began has any train movement, either passenger or freight, been canceled or interfered with, by any developments connected with the strike, on any portion of the Pennsylvania System."

Philadelphia & Reading

Publicity from the shopmen's organizations on Wednesday said that 1,000 Reading shopmen walked out that morning at Philadelphia, Harrisburg, Allentown and Tamaqua in sympathy with the strike on other roads. It was explained that the walkout took place at this late date because the majority of the shop workers on the Reading are affiliated with the American Federation of Railroad Workers and the present strikers had previously remained at work because of the majority agreement. Inquiry addressed to the Reading management brought out the following details:

"After special effort on part of A. F. of L. this (Wednesday) morning, at various points on system, there are 318 men out, of a total of 8,040, or less than 4 per cent."

Richmond, Fredericksburg & Potomac

Of a normal shop force of 981, this road now has 668 employees. There have been no interruptions to traffic and conditions are said to be improving as the strength of forces approaches normal.

Southern Railway

The Southern Railway has made a separate agreement with its clerks, who had been threatening to go on strike and has proposed a conference with representatives of its shop employees. The Southern had not issued any ultimatum setting a date by which the strikers must return in order to retain their seniority and it has made no effort to employ new men.

Virginian

This road reports as follows:

"We have not undertaken to open back shops because of excellent condition of our power when strike was called. We have about 60 per cent of our normal force at work in roundhouses. We have had little or no interference with traffic except in maintaining our heavy pusher engines. This we have overcome and will soon be normal at all points. We are getting men from various sections of the country and some of our old men are returning to work."

Western Maryland

This company, which has its shop work done by contractors, reports conditions normal, none of the contractors' employees having left the service on account of the July 1 strike. The road reports all traffic being handled currently and "in addition to" its own business "traffic of other railroads is being diverted via the Western Maryland."

The Strike Situation in the West

The fourth week of the strike bore a less turbulent aspect on the western roads than those preceding. The disorders on the part of the strikers seem to have subsided to a great extent while those outbreaks which occurred were of a less serious nature than in the preceding weeks. This was due, in large measure, to state and federal intervention and the injunctions which have been granted the roads. The suspension of train service was much greater than heretofore, but most of this was due to the shortage of fuel. It is estimated that the total withdrawal of trains at the present time is approximately 300.

Included in the list of roads curtailing service was the Pere Marquette which removed 20 trains and shortened the runs of many others; the St. Louis-San Francisco dropped two trains between Birmingham and Memphis and the Wabash two between Detroit and St. Louis, two between Toledo and Fort Wayne and two between St. Louis and Decatur, Ill. The Chicago & North Western dropped seven trains on the Milwaukee division, ten Chicago suburban, and other trains on its western lines. The Kansas City Southern removed four; the Missouri, Kansas & Texas dropped its Katy Flier between Waco, Houston and Galveston, and merged six other trains. The Great Northern dropped a number of short run and branch line trains. The Chicago & Eastern Illinois is reported to have dropped 11 trains from its schedule. The Grand Trunk removed 16 trains, principally on its Michigan lines, four of which ran between Chicago and Detroit. The Ann Arbor has also dropped several trains from its schedule.

The gloomy cast that this curtailment gave the situation on the roads was offset, however, by the greatly increased recruiting of men to fill the places of those who went on strike. Sufficient men are available to fill all vacant positions and with the continued progress of recruiting the roads should have a full complement of men within a short time.

A number of restraining injunctions were granted. The Missouri Pacific and the St. Louis-San Francisco secured temporary injunctions at Kansas City, Mo.; the Pere Marquette at Detroit; the Baltimore & Ohio and the Louisville & Nashville at East St. Louis; the Wabash at St. Louis and the Great Northern at St. Paul were also granted temporary injunctions. The injunctions granted the Chicago, Burlington & Quincy at Keokuk, Iowa and Chicago were made permanent and others were granted the Erie and the Chicago, Indianapolis & Louisville at Hammond, Ind. The Pullman Company, declaring that its employees were walking out in sympathy with the striking railway shopmen, also secured a restraining order against interference with its shops throughout the country.

State troops are on strike duty in nine states at the present time, but are encountering little disorder. Dispatching of state troops to centers of disorder was necessary in Kansas and Texas. Militia was ordered to Hoisington, Kansas, to do guard duty at the Missouri Pacific shops where rioting broke out last week and to Denison, Tex., where fresh outbreaks occurred. The situation at Denison had quieted for several days, and it was believed that troops would not be needed, but recent outbreaks forced Governor Neff to declare a state of martial law at that place, and to send troops to enforce the proclamation. The governor also issued two other proclamations placing the strike situation at Childress and Sherman under provisions of the "open port" law. State rangers will take charge at these places.

The situation on the Western lines, on July 25, may be summarized as follows: All freight is being moved as offered while passenger trains are being operated normally. Large numbers of men are being added to the shop forces and the number at work ranges from 23 to 75 per cent of the normal forces on the different roads. Freight car loadings reported for the first two weeks of July, as compared with the same weeks of last year, show increases ranging from 6 per cent to 53 per cent, the average being about 25 per cent. Railway fuel receipts are said to be satisfactory. Out of 22,644 cars of coal purchased by the lines with head-

quarters at Chicago since June 7, for delivery up to August 31, 60 per cent has already been received. This is in addition to the coal in storage.

The situation on a number of individual roads is reported below:

Atchison, Topeka & Santa Fe

The Atchison, Topeka & Santa Fe had 52 per cent of its normal force at work on July 25. No trains have been annulled nor have any embargos been issued against any kind of traffic. Both freight and passenger business have been better during the first three weeks of July than during the first three weeks in June. Eighty-seven per cent of the trains have arrived at their terminals on time since the strike started. At the Topeka shops, the number of cars repaired during the first three weeks of the strike averaged 44 per day, as against 74 per day for the corresponding period in June, but for the five days ending July 22, 77 cars were repaired per day, a gain of three per day over the average number repaired during the corresponding period in June, before the strike.

Chicago, Burlington & Quincy

Recruiting has been progressing steadily on the Chicago, Burlington & Quincy since July 10, 125 to 150 men being hired per day. The highest enrollment up to the present time was on July 24, when 455 men were employed, the greatest proportion of whom were skilled mechanics.

Cleveland, Cincinnati, Chicago & St. Louis

The Big Four is operating without serious difficulties, and is handling all traffic promptly. Passenger trains are running on time and recruiting is progressing favorably.

Denver & Rio Grande Western

This company has recruited a force of 324 men, its pre-strike enrollment being 2,400. Employment has been progressing in good shape, especially during the past week.

Great Northern

This company reports conditions improving daily. On July 26 163 more men were working than on the previous day. The embargo has been raised in Montana and if the road is given necessary protection it says that it will be able to furnish sufficient men at Wolf Point, Havre, Whitefish and Troy to relieve the situation at an early date. The matter of securing protection in Montana has been up to this time the greatest hindrance the company has had. On July 25, 2,333 men were working out of a total pre-strike force of 9,253.

Illinois Central

Conditions on this road are rapidly approaching normal, 9,514 shopmen being at work on July 24, as compared with a pre-strike force of 12,701. Little picketing or trouble with strikers is being experienced.

Kansas City Southern

The Kansas City Southern with a shop force of approximately 15 per cent of normal is moving traffic normally. Men are being added daily and no serious disturbances have been encountered.

Missouri, Kansas & Texas

The Missouri, Kansas & Texas, with a normal force of 4,200 men, has 1,300 at work. New men are being employed daily. A number of disturbances in Texas necessitated the calling out of troops.

Missouri Pacific

This company has a working force between 25 and 30 per cent of normal. There has been some tampering with engines and machinery on the part of strikers, but business and traffic movements are in a good condition.

Nashville, Chattanooga & St. Louis

This company reports 1,687 men at work out of a normal force of 2,500. Only slight labor disturbances have been encountered.

St. Louis-San Francisco

The situation is improving. A 30 per cent of normal force is handling a heavy freight business without serious delays.

Southern Pacific

The Southern Pacific System with a normal complement of 9,000 reports 7,438 now working. Strikers have caused much trouble by picketing and intimidation. Full freight and passenger schedules are being maintained and other classes of employees are remaining neutral. In a telegram to Chairman Kruttschnitt, President Sproule made clear the road's attitude on the question of restoring seniority rights to strikers. This telegram, which was made public in New York on July 26, follows:

"Press dispatches carry suggestions which leave the inference that negotiations may now be in progress between government and labor leaders that might result in strikers returning to work with their senority rights unimpaired. So far as the Pacific system is concerned there is no need for such concession. We told the 5,000 men who stayed with us that their loyalty would be respected and their senority rights, thus improved, would be protected.

"On the other hand, we have announced to the men who quit work that such of them as resumed work with us will do so as new men, taking their seniority from date and hour they resumed work. In employment of new men the question almost invariably asked has been answered by giving assurance that we will not displace them in order to take back deserters.

"Our officers unite in judgment that the backbone of the strike has been broken. We are constantly gaining accessions to workers and expect to have a high-grade labor organization for the Pacific system as a result which will be far more satisfactory to ourselves, to the government and to the men than under the disloyal labor leadership which has thrived upon unbalance to the detriment of the men and the whole country.

"Our officers unite in conviction that to bring deserters back by granting them restoration of their seniority rights would be for them the equivalent of winning the strike, because of surrender by the managements and the government, and in doing so the real intention of the labor leaders is to create such a condition as will make it impossible for the railroads of the country to win another strike, because men could not be found who would either stay with the company or take employment, if, after hardships of strike, they were to be displaced by strikers, who would show them but dastardly consideration as soon as they got into power again.

"We can, and will, win this strike on basis of Labor Board decision, which was the pretext for the strike; and the point of greatest importance at this time is that decision of Labor Board be sustained without tarnishing their authority by compromise."

Union Pacific

This system has approximately 5,000 men employed in its shops, which constitutes 75 per cent of its normal force. A full schedule of passenger trains is being operated and freight is handled without delay.

Colorado & Southern Assisted by Coal Strike

Beginning Late in May Coal Loadings Commenced to Be Much Ahead of Last Year's

THE COLORADO & SOUTHERN Lines operate a total of 1,809 miles of railroad of which 134 is operated under lease or contract. It also owns 132 miles which it does not operate. The system's main line extends from Orin, Wyo., where connection is made with the Chicago, Burlington & Quincy south through Cheyenne, Denver, Colorado Springs, Pueblo, Trinidad, etc., and thence southeast across the panhandle of Texas to Fort Worth. The system is divided into three main parts. The Colorado & Southern, operating 1,099 miles, includes the northern part of the system. The Fort Worth & Denver City, 454 miles, operates that part from the Texas state line, Texline, to Fort Worth. The Wichita Valley Lines, 256 miles, operate a line southwest from Wichita Falls. The system is tied together financially by the Colorado & Southern's ownership of practically all the capital stock of the other two companies. The Burlington has controlled the Colorado & Southern since 1908, this being exercised by majority stock control. On December 31, 1920 the Burlington owned $23,657,500 of the C. & S. $31,000,000 common stock, $1,130,000 of the first preferred and $6,078,700 second preferred, the C. & S. preferred issues totaling $17,000,000.

The Colorado & Southern figures are reported separately for the three companies. In 1921 the parent company had an income balance transferred to profit and loss of $870,156. This compared with $1,926,066 in 1920 or with $1,103,946 in 1919. Dividends for the year totaled $680,000, this including 4 per cent on each of the two preferred issues. A dividend of 3 per cent, amounting to $930,000, was declared on the common shares. This was the first common dividend since 1912; it was paid from surplus. Outstanding features in the 1921 income account were an increase in receipts in the form of dividends and miscellaneous interest from $1,352,530 in 1920 to $1,923,140 in 1921 and a decrease of about $120,000 in the credit balance for equipment hire. Details concerning the income from operations are discussed below.

The Fort Worth & Denver City reported an income balance for the year of $2,075,079, which compared with $836,898 in 1920 and $676,325 in 1919. Interest disbursements in 1921 were $916,466; in 1920, $639,152. The Wichita Valley had a net for 1921 of $178,122; in 1920 of $143,386.

While the Colorado & Southern annual report shows separate figures for the three constituent companies, it also gives a selection of certain grouped figures. These show that in 1921 as compared with 1920 the operating revenues of the three companies decreased $4,930,059 or 15.8 per cent. The operating expenses decreased $6,387,732 or 24.03 per cent. Net revenue from railway operations increased $1,457,673 or 25.62 per cent and net railway operating income increased $1,918,534 or 49.74 per cent. The system's operating ratio in 1921 was 72.80 per cent; in 1920, 81.77 per cent. The interesting feature is that whereas the net railway operating income of the Colorado & Southern decreased $931,308, that of the Fort Worth & Denver City increased $2,572,228. The latter company had a decrease of $1,814,290 in its operating revenues and a decrease of $3,985,067 in operating expenses; it operated at 66.27 in 1921 as compared with 87.44 in 1920.

These details are possibly better shown in the figures of net railway operating income. The Colorado & Southern had a standard return of $2,481,212; in 1920 it had a net after rentals of $2,835,102; in 1921 its net after rentals was $1,903,794, a decrease of $931,308. The Fort Worth & Denver City had a standard return of $1,891,386. In 1920 it had a net after rentals of $884,885; in 1921 it earned $3,457,113, an increase of $2,572,228. The Wichita Valley increased its net after rentals from $136,791 in 1920 to $414,404 in 1920.

The Colorado & Southern's tonnage in 1921 was 49.30 per cent bituminous coal. Products of agriculture made up 17.92 per cent. The tonnage of all commodities totaled 4,753,055 which compared with 6,789,747 in 1920. The decreases in tonnage were general although coal got more than its share of the falling off. There was an increase in products of agriculture.

The Fort Worth & Denver City in 1921 moved 2,851,717 revenue tons; in 1920, 3,441,773. Of the 1921 tonnage 30.83 per cent was products of agriculture; the tonnage of this commodity did not increase greatly over 1920 but the percentage did; in 1920 it was only 25.17 per cent. Bituminous coal made up 17.11 per cent as compared with 21.78 per cent in 1920; the 1921 tonnage was 487,936; the 1920 figure was 749,623. Refined petroleum made up 454,643 tons in 1921, 15.94 per cent; in 1920, it made up 461,177 tons, 13.40 per cent.

The Wichita Valley tonnage in 1921 was 385,456. In 1920 it was 472,020. In 1921 products of agriculture made up 34.60 per cent; 133,380 tons, as compared with 171,832 tons or 34.6 per cent in 1920. Bituminous coal in 1921 made up only 10.90 per cent. Refined petroleum made up 69,168 tons or 17.94 per cent.

The Colorado & Southern owns the Colorado Springs & Cripple Creek District. This line it leased to another company for operation. The road has been in the hands of a receiver but the line has not been operated for some time, and no plan has been advanced for its reorganization. The entire capital stock which is owned by the Colorado & South-

COLORADO & SOUTHERN LINES—RAILWAY OPERATING INCOME

	Colorado & Southern		Fort Worth & Denver City		Wichita Valley	
	1921	1920	1921	1920	1921	1920

ern has been determined to be worthless and the C. & S. profit and loss account for 1921 shows a debit charge of $1,397,013 representing the book value of the capital stock and certificates of indebtedness of the Colorado Springs & Cripple Creek District Railway Company.

The fortunes of the Trinity & Brazos Valley, in which the Colorado & Southern and the Rock Island each have a half interest, were in 1921 quite the opposite, this more pleasant state of affairs being due to the business derived from the opening of the Mexia (Texas) oil field and, according to the C. & S. annual report, to the "good management of the receiver." The T. & B. V. in 1921 had total operating revenues of $3,501,010 as compared with $2,273,445 in 1920 and its net railway operating income for 1921 was $288,066 as compared with a deficit in 1920 of $645,513.

The Colorado & Southern has been assisted rather than hurt by the coal strike due to the manner in which the Colorado mines are operating. This improvement, however, was not in evidence until late in May. Coal loadings in March—before the beginning of the strike—ran about 1,400 cars weekly. In April they averaged about 550 weekly. They increased gradually in May and figures for recent weeks have approached 1,300. Coal loadings at this time last year approximated 1,000 weekly. The effect has been reflected in total loadings. In the week ended July 1, the total loadings of all commodities were 2,088 as compared with 1,602 for the same week last year. Traffic received from connections for the same week totaled 1,701 cars as compared with 786.

The latest figures for net ton-miles (revenue and non-revenue freight) are those for April and the four months, the 1922 four months total being 232,153,000 as compared with 247,995,000 in 1921. These figures are not particularly favorable but should show some improvement with the inclusion of the June or later figures. Net after rentals figures are available for May. For the five months ending May 31 the net this year was $564,508 as compared with $852,147 in the same period of last year. The Fort Worth & Denver City figures are much more favorable. For the first five months of 1922 that company has made a net after rentals of $916,218 as compared with $1,086,513 in the first five months of 1921. Its tonnage is also running behind that of last year, the four months net ton-mile figures being for 1922, 150,137,000 and for 1921, 180,919,000.

TWELVE STEAMERS are now engaged in carrying iron ore from Newfoundland to Germany via Rotterdam, and it is estimated that about 750,000 tons will have been taken across by the end of the year.

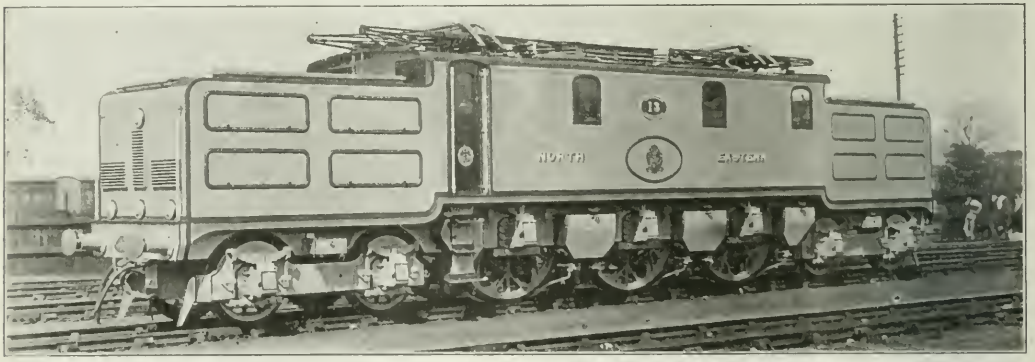
North Eastern Railway, England, Tries Out New Electric Locomotive

A NEW TYPE of electric locomotive for high speed passenger service, which has a symmetrical wheel arrangement and unusually large driving wheels, is being tried out on the North Eastern Railway in England. The locomotive was designed by Sir Vincent L. Raven, chief mechanical engineer, North Eastern Railway, the mechanical parts were built by the Locomotive Works at Darlington and the electrical equipment was supplied by the Metropolitan-Vickers Company. Only one locomotive has been built.

The locomotive is designed to haul a 450-ton express passenger train at an average speed of 65 miles an hour on level tangent track. The running gear is designed for a maximum safe speed of 90 miles an hour without doing damage to the mechanical parts of the locomotive, which is of the 4-6-4 type and consists of main frames mounted on three driving axles with three pairs of driving wheels 6 ft. 8 in. in diameter, and a four-wheel truck at each end. The cab and sloping ends are rigidly fixed to the main frames, and are provided with the necessary supporting members for carrying the auxiliary and control equipment.

GENERAL DIMENSIONS OF NORTH EASTERN PASSENGER LOCOMOTIVES

Wheel arrangement	4—6—4
Electrical system	Direct Current
Voltage	1,500
Length over all	53 ft. 6 in.
Width over all	8 ft. 10 in.
Height, pantograph locked down	13 ft. 0 ½ in.
Driving wheel diameter	80 in.
Pony wheel diameter	43¼ in.
Rigid Wheel base	16 ft. 0 in.
Weight of locomotive	102 tons
Weight per driving axle	18 tons 10 cwts.
One hour rating—Tractive effort	15,900 lb.
Speed	43 m.p.h.
Horse-power	1,800
Continuous rating—Tractive effort	9,480 lb.
Speed	51.5 m.p.h.
Horse-power	1,300



High-Speed, 1,500-Volt, Direct Current Electric Passenger Locomotive Built for the North Eastern Railway

The current is collected from the overhead trolley by pantographs mounted on the roof at each end of the center compartment. The main traction motors, which are of the twin-armature type, are rigidly fixed to the main frame of the locomotive, and transmit the torque to a gear wheel mounted on a hollow shaft or quill. The connection between the quill and driving wheels is through springs. The high tension apparatus is located in one of the sloping ends; the other sloping end contains an electric boiler for supplying steam for train heating.

The capacity of the locomotive is 1,800 hp. one hour rating, or 1,260 hp. continuous rating.

The locomotive was built for running on the main line, but at present trials can only be carried out on the Newport-Shildon branch, which has the same voltage which the locomotive is designed for.

The satisfactory result of the trial clearly indicated that the full horse-power for which the locomotive was designed could be developed. The test further proved that the heavy grades on this line could be dealt with in the manner anticipated. The results of the trial showed that, when this locomotive is put on the main line, it will be able to take the heavy passenger traffic up the grades at a higher speed than steam locomotives are able to do at the present time, and that it will be able to maintain a faster schedule without running excessive speeds on the level and down grade.

Great Northern Ore Traffic Will Help 1922 Net

Ore Loadings Increasing Rapidly After Long Period at Low Level —Totaled 10,149 Week Ending July 1

When, in March, the Great Northern directors changed the dividend payments on the preferred stock from a quarterly to a semi-annual basis, there was much uncertainty in financial circles as to whether the company would be able to maintain the seven per cent rate. This uncertainty was due not only to the statements issued at the time by the chairman of the board, but also to the rather poor earnings which the Great Northern was then reporting and had been reporting over an extended period of time. A few weeks ago the directors declared a semi-annual dividend of 3½ per cent, thus maintaining the regular seven per cent dividend rate. It is not difficult to give the declaration of the regular dividend even more importance than that it retained the regular rate. We believe that future earnings reports will show that it will have marked the long hoped for change in Great Northern fortunes. The outstanding reason for this opinion is that the Great Northern has within the last month begun to move iron ore in rapidly increasing volume. This, combined with the expansion of traffic in other classes of tonnage and the fact that Great Northern is operating on a very economical basis, should be reflected in the future monthly earnings statements.

It was primarily the Burlington's extra dividends which brought the Great Northern through in 1921. There accrued to the Great Northern, Burlington dividend payments amounting to $21,809,560. In addition, the Great Northern shows in its 1921 income statement the sum of $7,233,100 interest on bonds of the Spokane, Portland & Seattle, representing accruals for the period from March 1, 1915, to March 1, 1920, of which, it is noted, $1,005,379 has been paid. The net railway operating income for the year was $12,866,411. The income statement shows a balance after the seven per cent dividends and appropriations to sinking and other reserve funds of $10,982,668. In 1920 the income balance was $1,815,497.

The net railway operating income of $12,866,411 in 1921 represented a marked increase over 1920, but it was less than one-half the figure that was set for the Great Northern's standard return during federal control, which was $28,613,045. During federal control and continuing until quite recently the Great Northern showed extremely poor net earnings. In 1918 its net after rentals was about $11,978,800. In 1919 it reported about $12,459,620 and in 1920 it was but $3,000,000, the total for those three years being less than the standard return for one year.

Operating Expenses Decreased 29.36 Per Cent

The 1921 result was brought about by very drastic economies. As compared with 1920, the road in 1921 carried 40.72 per cent less revenue tons and 32.61 less revenue ton-miles. Its freight revenues were decreased 16.78 per cent and its gross operating revenues 17.36 per cent. On the other hand, it reduced its operating expenses 29.36 per cent. Maintenance of way expenses were reduced 46.09 per cent; maintenance of equipment, 21.18 per cent and transportation 27.28 per cent. There were but few roads that were confronted with a situation quite as difficult as was the Great Northern's in 1921, and there were few that came through with better results under comparable circumstances.

The revenue tonnage in 1921 was 19,533,134 as compared with 32,948,292 in 1920, the reduction being 13,415,158 tons. The average haul in 1921 was 293.91 miles; in 1920, 258.55. This explains why it was that the revenue ton-miles, 5,740,921,478, represented a reduction of 32.61 per cent, whereas the reduction in revenue tons was 40.7 per cent. The tonnage that suffered most strikingly was iron ore. In 1920 the Great Northern moved 299,471 cars and 14,755,241 tons of iron ore; in 1921 it moved but 90,824 cars and 5,048,120 tons, the reduction in this important commodity being, therefore, something like 65 per cent. Forest products in 1921 made up 2,597,018 tons as against 3,804,135 tons in 1920. In the case of farm products there was an increase, notably in wheat, the 1921 tonnage of the latter being 2,548,124 as against 1,928,737 in 1920.

The 1921 freight revenues were $74,700,241. In 1920 they were $89,760,845, the reduction being $15,060,605 or 16.78 per cent. Total revenues were $101,317,204, as compared with $122,597,865 in 1920, the reduction being $21,280,661 or 17.36 per cent. The reductions in operating expenses, which amounted to $33,450,202 or 29.36 per cent, were as follows:

	1921	1920	Decrease	Per cent
Maintenance of way.....	$13,865,917	$25,718,561	$11,852,644	46.09
Maintenance of equipment.	21,075,308	26,739,434	5,664,126	21.18
Transportation	40,494,719	55,684,548	15,189,829	27.28
Total	80,496,913	113,947,115	33,450,202	29.36

In 1921 the operating ratio was 79.45; in 1920 the Great Northern operated at 92.94. Now, of course, the first reason for the sharp decreases in expenses in 1921 as compared with 1920 was the fact that the 1920 expenses were abnormally high. A second reason was the severe decline in traffic, but the outstanding factor is that the Great Northern was able to take its situation in hand and bring things back to a more normal basis. The striking feature in the reduction in expenses is the decrease of 46.09 per cent in maintenance of way. It is worth noting, first, that in 1920 as compared with 1919 the road had an increase in this item of 41.61 per cent. Second, while the 1921 reduction was due to some extent to the decreased traffic, the annual report also says, "contributing factors were the favorable weather conditions and the improved individual performance of the employees. The tie and rail renewals in 1921 amounted to $2,496,160 as compared with $2,629,583 in 1920, practically the same for both years. There was no curtailment of the renewal of ties and rails and the track was maintained up to standard. The company, however, suspended certain other work, such as cutting grass and weeds and removal of snow and ice,

the effect of which was only transitory and which did not impair the road for safe operation."

Improvement in First Four Months

The idea was expressed above that Great Northern earnings should show a marked improvement in coming months. The latest earnings report we have at this writing is that for May and the first five months of 1922. The statement shows gross of $33,487,954 for the five months as compared with $33,455,184 in the first five months of 1921. Expenses were $28,937,099 as compared with $32,653,805 in the same period of last year, which indicates that the economy effected in 1921 is being continued. The result was a net after rentals for the first five months of this year of $2,208,792 as against a deficit after rentals last year of $2,799,145, an improvement of over $5,000,000. The May operating ratio was 81.3; for the four months it was 86.5. The traffic figures show a similar improvement. For the first five months of 1922 the Great Northern moved 2,538,545,000 net ton-miles (including revenue and non-revenue freight) as compared with 2,162,584,000 net ton-miles in the first five months of 1921, which shows that the revival of business has finally reached the Great Northern. The traffic on this system does not run large in the early part of the year. If, however, the road thus improved its position in the months of light traffic, the situation augurs well for the heavy traffic months later in the year.

Ore Loadings Show Rapid Increase

Although the June earnings figures are not yet available, the indications are that they will be much better than those for May. They will unquestionably show the effect of increasing ore traffic. After a long period characterized by the small amount of this tonnage, this traffic has again begun to move and in rapidly increasing volume. It began about the middle of April at the opening of the season of navigation on the Great Lakes. Prior to that time the ore loadings ran less than 100 cars weekly. In the week ending April 15 they were only 166 cars; the following week they jumped to 1,138 and for the week ending April 29 they were 2,006. There was a progressive increase during May. For the week of May 20 the figure was 2,436; for that of May 27, 3,460. The June figures showed the following favorable results: Week ending June 3—4,387; June 10—6,479; June 17—7,066; June 24—8,961; July 1—10,149. This last figure begins to approach normal business levels. In 1920, when tonnage was running heavy, weekly loadings of ore were at a rate of 10,000 cars weekly. In September they reached over 11,000. Ore in 1920 made up over 44 per cent of the Great Northern's total tonnage so the relative importance of the ore traffic will be readily appreciated. It has already been noted that the 1921 ore tonnage was about 65 per cent less than that of 1920; in May and June, 1921, ore loadings were running about 4,000 cars weekly. The rapidity of the present increase in ore traffic is a factor to be watched with interest as it will have a most important effect on Great Northern results.

In addition to ore, the Great Northern is also showing improvement in other commodities. Forest products this year have been ahead of the 1921 loadings for some months. The week ending June 24 was a typical week in this respect, the loadings of forest products being 2,749 cars as compared with 1,627 for the same week of last year. Grain loadings are ahead of last year. Coal is, comparatively speaking, not an important commodity to the Great Northern. The loadings have been, however, ahead of last year, the loadings during the past three months ranging from 400 to 900 cars a week. Total loadings of all commodities have been running slightly ahead of the loadings for the comparable weeks of last year, that is up to the beginning of June, when the great increase in ore loadings began to put the 1922 figures much ahead. The figures show the totals to be as follows: For week ending June 3, 13,375 as compared with 11,976 for the same week last year; June 10, 16,468 compared with 13,446; June 17, 17,061 compared with 12,273; June 24, 18,978 compared with 12,878. It will be a matter for surprise, it would seem, if the June earnings should not show some rather striking figures.

The Great Northern, taking things as a whole, seems to have finally made a change for the better. Its traffic is rapidly increasing, especially in its two important classes of ore and forest products, and the fact that the tonnage is being handled on a more economical basis should show in the size of the figure of net railway operating income. It is, of course, a question whether the road will be able in 1922 to restore its position to that of before the war when it was able to operate at 60 per cent, but there can be no question that the 1922 results will be strikingly better than those of 1921.

There may be some adverse effect from the present shopmen's strike. In the first five months of this year, however, the Great Northern earned practically $5,000,000 more net than it did in the first five months of 1921. It may, of course, not be able to keep up this record throughout the year, but it is presumably safe to assume that the system will earn $10,000,000 more in 1922 than in 1921. If this proves to be the case the net railway operating income for this year will approximate $23,000,000. Other income will bring this up to $25,000,000 or $26,000,000. As the fixed charges are $8,000,000 this will leave $17,000,000 or $18,000,000, or practically seven per cent on the stock. The evidence is that the poor earnings of the federal control period can be regarded as having been definitely left behind. The seven per cent dividend now seems to be safe.

The Southern Pacific received from the Union Pacific at Ogden 580,000 tons of freight and delivered to the Union Pacific at Ogden 1,332,000 tons of freight in the year 1921, William Sproule, president of the Southern Pacific, pointed out in a recent statement.

"Contrast this with the Sunset Route about which so much has been said," Mr. Sproule continued. "In 1921 we delivered at El Paso to the Sunset Route 348,000 tons of freight and received from them 412,000 tons of freight, showing how little figure the El Paso route cuts in comparison with the Southern Pacific's great contribution to the Ogden route."

When a Ferry Boat Crashed Into a Car Float Under Brooklyn Bridge, New York

Danish Railroads Benefit From Tie Preservation*

Careful Records of Renewals Over Long Period Demonstrate Advantages of Timber Treatment

RATIONAL IMPREGNATION of railway ties was introduced in Denmark over 30 years ago by starting a plant in the provincial town of Koge on the Baltic coast. During the first five or six years the activity of the plant was very restricted as only the state railways employed impregnation and that only as applied to the roads on the island of Zealand. In 1899 the second plant was built at Horsens and at the present time all railways in Denmark with a single exception use pressure treated ties.

Various Preservatives Have Been Used

A mixture of zinc chloride and creosote oil has been used from the first in Denmark for timber treatment. During the war, however, it became necessary to resort to treatment with dinitrophenol, sodium-silico-fluoride and crude naphthalene. Both dinitrophenol and sodium-silico-fluoride are salts soluble in water. Both substances possess good decay-preventing qualities, but their defect, as in the case of all salts used for impregnation, is that in the course of time they leach out. There is also to be considered the inconvenience arising from their use by reason of the fact that the wood after full-cell impregnation is heavy and wet, and must remain piled for a considerable time before it can be used. Another difficulty in the use of sodium-silico-fluoride is that it is hard to dissolve, necessitating the use of very warm liquid to obtain sufficient penetration.

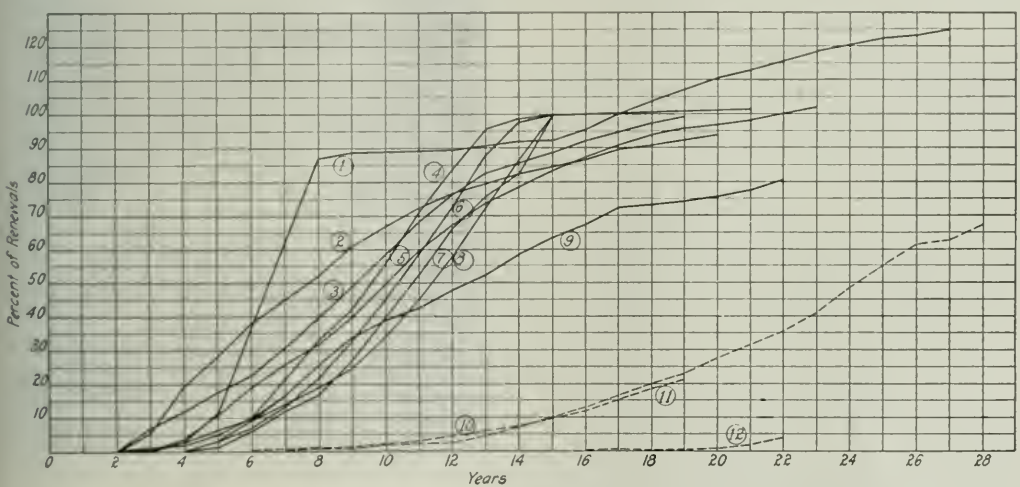
As is known, the various salts are not adapted for impregnation to beech. Only tar oil should be used for this species of wood, whereby it acquires an excellent durability. For lack of tar oil a limited number of beech ties were impregnated with crude naphthalene. Naphthalene, however, was found too difficult to handle since it stiffens even at quite high temperatures and the treatment of beech with it was soon discontinued.

Tie Renewals

The Danish State Railways Administration has for years kept record of the renewals of impregnated ties from year to year. The number of renewals show also the number of ties taken out during the year. An essential number of these ties are, however, presumably untreated, since of late years they have not been kept separate. However, the figures from which the accompanying curves were made represent in the main the true conditions.

The renewals represent both beech and pine. For 1908 the beech ties were impregnated with a mixture of chloride of zinc and tar oil, a practice affecting the renewal unfavorably since these beech ties have lasted hardly more than 10 years. The beech ties are now impregnated exclusively with tar oil and the result is an excellent tie, provided it has no red heartwood. In renewal, all ties are considered damaged which have been renewed for mechanical reasons.

In the reports of the State Railways, in the peninsula of Jutland and the island of Funen, the number of ties



Renewals of Untreated and Treated Pine and Beech Ties on the Danish Railways

1. Originally built with green Pomeranian pine ties. Renewals made with treated Pomeranian pine ties.
2. Originally built with green Swedish pine ties.
3. Originally built with green Swedish pine ties. Renewals made with treated Pomeranian pine ties.
4. Originally built with green Swedish pine ties. Renewals made with treated Pomeranian pine ties.
5. Originally built with green Swedish pine ties. Renewals made with specially treated Pomeranian pine ties.
6. Originally built with green Swedish pine ties.
7. Built with green Swedish pine ties. Renewals made with treated Pomeranian pine ties.
8. Originally built with green Swedish pine ties. Renewals made with treated Pomeranian pine ties.
9. Originally built with green Swedish pine ties. Renewals made with treated Pomeranian pine ties.
10. Average renewals of treated pine ties, as well as some beech, years 1889-1918.
11. Originally built with Pomeranian pine ties.
12. Originally built with treated 5-in. by 10-in. Dantzig pine ties.

*From a paper by A. Collatrop, of Denmark, translated by M. P. Jensen, and Published by the United States Forest Products Laboratory, Madison, Wis.

renewed annually was estimated in accordance with the number of ties in stock at the close of the fiscal year with the following results:

In 1897-1898	6.77	per cent
In 1898-1899	7.24	per cent
In. 1899-1900	6.50	per cent
In 1900-1901	6.53	per cent
In 1901-1902	8.23	per cent

In 1900 the treating plant at Horsens was started and the annual renewals in recent fiscal years for the Danish Kingdom are as follows:

In 1913-1914	3.20	per cent
In 1914-1915	3.05	per cent
In 1915-1916	2.98	per cent
In 1916-1917	3.11	per cent
In 1917-1918	2.50	per cent
In 1918-1919	2.26	per cent
In 1919-1920	2.48	per cent

These records show among other things that in the renewals for ordinary maintenance of late years only about 115,000 ties have been used, as compared with 300,000, which would have had to have been renewed if the annual renewal requirements had remained as high as they were initially. While this result is due, to a certain extent of course, to the many improvements in surface construction of late years, as tie plates, better ballast, use of screw-spikes, etc., it is principally the result of impregnation.

The Records for Certain Roads

In addition to the information on tie renewals to be obtained from the accompanying chart the following statements may well be noted respecting certain roads: The Slangerup Railway was opened for traffic on April 20, 1906. Originally constructed with 53,700, 6-in. by 8-in. by 8 ft. ties impregnated with zinc-chloride and tar oil, there have been exchanged in renewals 338 ties, or 0.63 per cent after 14 years of service.

That portion of the Naestved-Praestoe-Mern Railway, opened for traffic on March 20, 1900, was laid with 9,889 6¼ in. by 8¼ in. untreated Swedish pine ties and 22,344 impregnated Swedish pine ties of the same size. After 20 years of traffic over this section there has been a renewal of 10 per cent of the impregnated ties and 84 per cent of the untreated ties. That portion of the same line opened for traffic on November 16, 1913, was laid with 17,200, 6-in. by 8-in. by 8 ft. Pomeranian pine ties impregnated with tar oil. Of these none have yet been renewed.

The Odense-Norre-Broby Railway, opened for traffic October 3, 1906, was originally constructed with about 75,000 Pomeranian pine ties impregnated with zinc-chloride and tar oil. After 13½ years of service no renewals had been made. The Langeland Railway, opened for traffic on October 5, 1911, was originally constructed with about 54,000 Pomeranian pine ties, impregnated with tar oil, of which only 50 ties have been renewed.

As compared with the renewal records of these roads, records for the Veile-Vandel-Grinsted Railway, opened for traffic on September 10, 1897, and constructed with about 40,000 6-in. by 8-in. by 8-ft. untreated Swedish pine ties, are as follows:

After 4 years	1	per cent renewal
After 5 years	4	per cent renewal
After 6 years	7	per cent renewal
After 7 years	11	per cent renewal
After 8 years	16	per cent renewal
After 9 years	20	per cent renewal
After 10 years	26	per cent renewal
After 11 years	32	per cent renewal
After 12 years	37	per cent renewal
After 13 years	43	per cent renewal
After 14 years	49	per cent renewal
After 15 years	55	per cent renewal
After 16 years	61	per cent renewal
After 17 years	67	per cent renewal
After 18 years	74	per cent renewal
After 19 years	90	per cent renewal
After 20 years	93	per cent renewal
After 21 years	98	per cent renewal
After 22 years	102	per cent renewal

The renewals have been made principally with impregnated pine ties and the record of renewals is similar to that of several other roads.

Changes in Design of Elvin Stoker

In the original design of the Elvin Stoker a screw conveyor was used to carry the coal forward from the tender to the screw conveyor that delivers it to the elevator. In machines now being constructed the Elvin Mechanical Stoker Company, New York, is applying an improved type of chain belt feeder combined with a reciprocating crusher.

The feeder consists of four endless drag chains in a wide, shallow trough. The rate at which coal is delivered to the stoker is governed by the speed of the chains. They are fed forward intermittently at any rate required by the operator, delivering coal at any desired rate up to the maximum capacity of about seven tons per hour.

Coal which does not require crushing passes through four slots just back of the main crusher jaws, leaving the crusher to handle only the coal which requires breaking in order to reduce it to the proper size for the stoker shovels. No slide plates are used over the chains as the feeder operates under a full load of coal with a relatively small consumption of

A View of Feeder and Crusher with Tender Deck Removed

power. There is no possibility of injury to anyone walking back in the tender as the maximum speed of the chains is only about six feet per minute.

The crusher has a single crushing roll which revolves backward and forward through a partial revolution. The crusher is ahead of the coal gates and is not covered even when the tank is full of coal, being in plain view at all times during operation. Any obstruction in the crusher will stop the entire machine thus making its presence known. By reversing the stoker engine the crusher jaws can be opened allowing the foreign matter to be removed. The cover plate over the crusher is normally set at an angle to form a guard; when laid flat it forms a shovel plate for shoveling coal by hand on sidings or at terminals.

In order to compensate for the variable loads which are imposed by the crusher the stoker engine has been provided with a simple and compact governor apparatus. This operates on the hydraulic principle utilizing the varied pressure from a small gear pump to operate a balanced piston control valve. By means of the governor the stoker speed is maintained at any rate desired by the operator regardless of whether the fuel supply consists of slack coal or lumps or a mixture of both.

General News Department

Sleeping cars are now in use on the Alaska railroad, according to a recent press dispatch from Anchorage. Anchorage is 114 miles north of Seward. From there the sleepers are said to be in use to Fairbanks, the northern terminus of the road. Passengers will be allowed the use of the cars at division points where, heretofore, they had to sleep in "roadhouses." According to the latest time table of the road, as given in the Official Guide, passengers going from Anchorage to Fairbanks have to stop over night at Curry, 135 miles from Anchorage and again at McKinley Park, 99 miles from Curry. From McKinley Park to Fairbanks the distance is 120 miles.

L. & N. Veterans Receive Medals

Veteran employees of the Louisville & Nashville, at a meeting in Nashville, Tenn., on June 27 were presented with medals recognizing their length of service. Large numbers of officers as well as of employees, together with families and friends, attended the ceremony in the Young Men's Christian Association Building. An address was given by Rev. J. H. Parsons. The medals are of five different kinds—bronze, silver, silver with colored enamel, gold with colored enamel and gold with diamonds, the most costly going to the men of longest service. The total number awarded was 292, as follows: to employees over 45 years in service three; 25 to 45 years, 22; 25 to 35 years, 34; 15 to 25 years, 233.

County Seats Without Railroads

Traveling inspectors for the Missouri state boards have recently reported that of the 114 county seats in that state, 25 are without railroad facilities of any sort while several others have only meagre train service. The majority of the county seats in question are in the central and south central part of the state and only one of the 25 has more than 1,000 inhabitants. The largest county seat without railroad connections is Lebanon, Laclede county, with a population of 2,848, while the smallest is Danville, in Montgomery county, with 76. The most inconvenient county seat to reach is Gainesville, Ozark county, which is 43 miles from West Plains, the nearest railroad point.

Six Killed in Frisco Head-on Collision

Six persons were killed and a number injured when St. Louis-San Francisco passenger trains No. 2 "Texas Special," eastbound, and No. 9 "Meteor," westbound, met in a head-on collision at 3:47 a. m. on July 22, at Logan, Mo., where No. 2 was waiting on the main track. The wreck was the result of the engineer of train No. 9 failing to observe orders to take the siding at Logan, as well as disregarding the automatic signals. He had received orders at Billings, Mo., five miles east of Logan, but overlooked them and ran past the block signal, into No. 2, which was standing clear of the switch. He was killed, as were five passengers, all of the same family.

D. T. & I. Proposes Stock Ownership by Employees

The Detroit, Toledo & Ironton, Mr. Ford's railroad, on July 19, petitioned the Michigan Public Utilities Commission for permission to issue certificates of indebtedness up to $1,000,000, which will be sold only to its employees, the request stating that the purpose of the certificates is to "promote a sense of participation in the company, its welfare and its earnings." According to the present plan the certificates are to be issued in $100 denominations and will be non-negotiable. The company has 2,225 employees, with average earnings of $185 a month. The proposal is that these employees shall pay five per cent of their earnings month by month until the securities are settled for in full. The rate of interest will be determined by the board of directors of the company, although no set interest will be guaranteed. The funds derived from the money paid by the employees will be invested at the discretion of the directors.

The request to the utilities commission to sanction the issue of these certificates raises a new question. The Interstate Commerce Commission claims to exercise jurisdiction over the issue of railroad securities, and the Michigan Public Utilities Commission contends that it is vested by state law with authority over all issues of securities by Michigan railroads. The Detroit, Toledo & Ironton first went to the Interstate Commerce Commission to get authority to issue the certificates and the latter suggested that the case would be facilitated by getting an informal approval of the Michigan commission, and the latter now has the petition.

British Train Control Report

A limited number of copies of the report recently issued by the Ministry of Transport on automatic train control—a 33 page pamphlet, including appendices—will be available at the New York office of the *Railway Age* at 50 cents a copy.

The report, which was abstracted in the *Railway Age* of July 8, page 80 and July 22, page 149, is signed by the following:

Col. J. W. Pringle, Chief Inspecting Officer, Chairman.
W. C. Aefield, Signal Supt., Midland Ry.
E. C. Cox, Supt. S. E. & Chatham Ry.
Maj. C. H. W. Edmonds.
H. N. Gresley, Locomotive Engineer (superintendent of motive power), Great Northern Ry.
Maj. G. L. Hall, Inspecting Officer.
Hon. J. H. Thomas, General Secretary, National Union of Railwaymen.
Sir Robert Turnbull, director, L. & N. W. Ry.

The report says that the cost of the committee's inquiry, including the cost of printing the report, was £75 2s. 6d. ($334).

Prompt Settlement of Freight Claims

C. M. MacDonald, freight claim agent of the Boston & Maine, reports that during the first five months of this year 65 per cent of the freight claims paid by his office were settled within 30 days; 12,000 being thus settled, out of a total of 18,544. Another 18 per cent was settled within 90 days, and about 3,000, or 17 per cent, were over 90 days in course of settlement. In this connection it is to be noted that here, as in the other departments of railroad operation, the person in immediate charge frequently finds himself in some degree thwarted by governmental regulations. The claim agent who wishes to expedite matters may often be justified in paying a claim before the claimant has furnished full and legal proof that the amount is due him; but under the rulings of the Interstate Commerce Commission it is necessary in all cases that the investigation of a claim shall be thorough, "and must disclose a lawful basis for payment before the claim is adjusted." This requirement applies, of course, in the case of every one of the several carriers that may be interested in a claim.

On the Boston & Maine there has also been a noticeable improvement in the freight service, resulting in a smaller number of claims being presented. At the close of business on December 31, 1920, there were outstanding 8,042 loss and damage claims; one year later the total was 3,929, and on May 31, 1922, the number unsettled was but 2,980. This last number is 63 per cent less than the total at the end of 1920. There has been also a marked decrease in the gross amount paid on claims, although this is partly due to the lower level of commodity prices at the present time as compared with a year ago. The percentage of loss and damage payments to gross freight revenue, for the first five months of 1922, was 1.21, whereas that for the twelve months of 1921 was 2.46, a reduction of more than one-half; and freight revenues for the five months of 1922 was greater than that for the same five months in 1921.

I. C. C. Audits Orient's Books

Six auditors from the Interstate Commerce Commission are making an examination of the books of the Kansas City, Mexico & Orient. The auditing is being done at the request of W. T. Kemper, the receiver of that road, for the purpose of answering charges by the employees that the road has not been operated economically. The Orient must cease operation, its officers assert, unless employees accept voluntary wage cuts and other financial relief is obtained.

Roads Intervene in M. B. & S. Suit

An attack on the foreclosure proceedings brought by the Continental & Commercial Trust & Savings Bank, Chicago, against the Muscatine, Burlington & Southern to collect $517,000 has been directed against this bank by 23 railroads in an amended petition filed in the District Court at Muscatine, Ia. Various Muscatine attorneys have also joined the railroads in challenging the seniority of the claims of the financial institution.

The railroads, each an intervener in the foreclosure litigation, whose total claims against the Iowa road are believed to aggregate in excess of $200,000, charge that during the time the indebtedness was incurred the carrier in question and the bank, together with William P. Kopf, as trustee, were the actual owners. In line with this contention, the railroads concerned maintain that the mortgage held by the bank has no precedence over their claims. The trustees, it is asserted in the amended petition, were holders of all the capital stock of the Muscatine, Burlington & Southern and were the owners of the bonds. It is added that they likewise were the equitable owners of the road's obligations. The court is asked to have the bank's claims adjudged inferior to those of the railroads.

Claims Against Government for Fires Occurring Under Federal Control

An investigation is now being conducted by a federal grand jury at Duluth, Minn., to determine the validity of claims amounting to $2,000,000, filed against the government in connection with losses from forest fires in the Cloquet, Moose Lake, Automba, Lawler and Kettle river districts of that state, which are said to have been started by sparks from a locomotive in October, 1918, when the railroads were under federal control These fires resulted in a loss of 400 lives, and property damage of approximately $40,000,000, on which a number of claims already have been settled.

Legal questions regarding the liability of the individual railroads, their insurance companies, and the government, developed with the filing of the claims. The liability of the government, however, for losses due to the fires was established in an opinion handed down by the Minnesota supreme court on July 22, 1921. The decision directly affected claims of 276 people, all residents of the city of Cloquet, Minn. The claims had been filed against James C. Davis, as agent for the president of the United States under the Transportation Act, and while their claims aggregated but $1,000,000, other claims indirectly depending upon the outcome of the test cases, aggregated $35,000,000 to $40,000,000. The cases were tried first before five St. Louis county judges by stipulation and without jury, to determine the issue of liability. The five judges concluded that the director general's negligence caused the destruction of the property. Subsequently to facilitate carrying the case to a higher court, a district court at Duluth fixed the amount of damage in a specified case. The director general of railroads then moved for a new trial or amended findings, but the motion was denied and the appeal was taken to the supreme court, which sustained the findings of the lower court Under the act of February 28, 1922, was fixed as the last date on which claims could be filed against the director general: In all, it was estimated nearly 5,000 claims were filed. Suits were filed in St. Louis, Carlton, Aitkin and Pine counties. Non-residents who owned burnt-over timber land were among those who failed to file claims. A corps of claim agents acting for the government, has carried on extensive negotiations with the claimants in settling claims. Under an agreement made in 1921, settlements were made on the basis of 50 per cent of the appraised losses in each case, but they were without power to settle except where suit has been brought. Thousands of the claims have been settled in that way

Traffic News

The Pennsylvania has inaugurated new 22-hour train service between Chicago and New York in the establishment of the "Gotham Limited," which leaves Union Station, beginning July 16, will leave Chicago at 8:10 p. m. and arrive in New York at 7:10 p. m. the next day.

A sub-committee of the United States Shipping Board has gone west to hold a series of hearings at Chicago, Ill., Portland, Ore., Seattle, Wash., and San Francisco and Los Angeles, Calif., on the question whether or not adequate American flag tonnage facilities exist to warrant the enforcement of section 28 of the merchant marine act. They will be accompanied by an attorney examiner of the Interstate Commerce Commission.

The Chicago & Eastern Illinois has placed in effect round-trip summer tourist fares from Chicago to New York and Boston, via the "Dixie Flyer" to Jacksonville, Fla.; thence to Charleston, S. C., where connection is made with the Clyde Steamship Company for the remainder of the journey to New York. The return trip may be made from New York or Boston by any direct route to Chicago, including rail or steamship service. The tickets are limited to 60 days with the privilege of stop-overs at all points.

Rail Motor Bus on the Northern Pacific

A rail motor bus is to be put in operation on the Fargo & Southwestern branch of the Northern Pacific, to run between Fargo, N. D., and Lisbon, 56 miles. The Northern Pacific has experimented with a motor car on its subsidiary line, the Gilmore & Pittsburgh, but this will be the first car of this sort to run on the Northern Pacific proper. The car was built by the International Motor Truck Company, and has a seating capacity of 40 passengers.

"Message Exchange" at Grand Central Terminal

A "Message Exchange" is the latest innovation in the Grand Central Terminal, New York; a large booth where a clerk will attend to all sorts of passengers' wants, especially requests to send (or receive) a telephone message when the passenger has not time to attend to it himself; and a corps of uniformed attendants, wearing green caps, who are stationed at numerous places throughout the waiting rooms and upper and lower concourses, and perform the same functions. The uniform fee is ten cents. Written messages, telegrams, etc., are forwarded, or received and held to await the addressee. Another innovation is Polk's Information Bureau, adjacent to the regular information bureau, on the upper level. Polk is publisher of directories in various cities and his specialty is hunting up addresses. A city directory placed on a public shelf where everybody can have access to it is a convenience which, at the Grand Central Terminal, is classed as an impossible accomplishment. People who, when in a hurry will tear out a page or two from the book and carry them off, come along too frequently.

To Ascertain Cost of Various Classes of Mail

Fifteen inspectors representing the various inspection divisions and fifteen officers representing the various railway mail service divisions assembled on July 24 at the Post Office Department to secure direct instructions upon the process to be followed by the post offices in securing data upon which to make an ascertainment showing the cost of carrying and handling the different classes of mail matter. The Committee on Cost Ascertainment has charge of the instructions and the 30 inspectors and railway mail service officers gathered in their office. After receiving this instruction, which deals particularly with the weighing and counting of the number of pieces of mail matter of each class, these officers were to return to their districts and give an intensive course at the 61 central accounting offices and at the 50 large post offices of the country, 30 of which, however, are central accounting offices.

They will also superintend the work in the field, which is scheduled to begin September 18 and continue for 30 days in every post office in the United States.

According to the program, the tabulating and compiling of statistics after consolidations have been made in central accounting offices, will be done at the department in Washington by experts. The final and completed report, with the ascertainment of cost, will not be ready for submission to the Joint Commission of Congress on Postal Service by Postmaster General Work before sometime in February or March, 1923. Among other results the findings will show the cost of carrying parcel post packages. It is believed that the Department has been losing heavily on this particular class of mail matter. The last survey of this sort was submitted to Congress by the Post Office Department in 1909. It did not, however, result in any legislation.

The Commission has suspended from July 25 until November 22, the operation of schedules which propose to increase rates applicable on carload traffic, moving between industries on various lines in the Chicago district.

Coal Production

Under the influence of the railway shopmen's strike coal production is rapidly declining, according to the weekly bulletin of the Geological Survey. Traffic congestion has interfered with the placement of empty cars at non-union mines, and the weekly output of coal is already running 1,700,000 tons below the high point reached late in June. Preliminary reports for the week of July 17-22 indicate that production cannot exceed 3,600,000 tons, against a minimum of 3,575,000 tons in the third week of the strike and a maximum of 5,363,000 tons in the twelfth week.

In comparison with normal years the present deficit in production is even more marked. Final returns on the fifteenth week of the strike (July 10-15) show 4,114,000 tons of bituminous coal and 31,000 tons of anthracite, a total for all coal of 4,145,000 tons. In the corresponding week of 1921, the total quantity raised—anthracite and bituminous—was 9,280,000 tons; in 1920 it was 11,500,000 tons. In other words, considering anthracite and bituminous coal as a common source of supply, the present weekly output is from 5,000,000 to 6,000,000 tons below normal.

The trend of production is shown by the cars loaded daily. On Monday railroads reported loading 12,657 cars, a decrease of 2,437 cars below the preceding Monday. By Thursday loadings had dropped to 10,800 cars, the lowest on any Thursday since the strike began. On some days it had been as high as 17,000.

The cause of the decrease is said to have been unmistakably traffic congestion on railroads serving non-union fields. In the Southern West Virginia and Eastern Kentucky from which the bulk of the country's supply during the strike has come, almost every field reported acute transportation disability. In Virginia, Western Kentucky and Tennessee the interruption of car supply was less serious and in Alabama and the Far West increased.

The reports so far received indicate no significant change in the number of men at work. Production in non-union Pennsylvania during first half of the week showed a slight decrease from the week preceding.

The bulletin says that the accumulation of unbilled coal in cars at the mines has now been so far reduced that it no longer constitutes a significant factor in the reserve of coal above ground. The estimated production of bituminous coal from the first of the year to July 15 has been 195,644,000 net tons, as compared with 210,030,000 in the corresponding period of 1921. Cumulative dumpings at the lake ports for the same period now stand at 4,244,095 tons, as compared with 11,907,210 in 1921 and 5,376,150 in 1920 when this movement was so delayed that priority orders were issued to hasten it later in the year.

A new weekly statistical service is inaugurated by the Geological Survey, showing weekly shipments from each of the producing fields. The figures are based on reports furnished by the railroads, giving the number of cars loaded for shipment at the mines on each railroad division.

TOURIST TRAFFIC left in Canada, in 1921, about $18,000,000, according to J. B. Harkin, National Park Commissioner, in an address before the Canadian Good Roads Association. This was more than twice the sum which had been expended during the year on the parks (which had been one of the attractions drawing the tourists). In 1920, 99,000 American automobiles entered Canada, and in 1921 about 150,000.

Commission and Court News

Interstate Commerce Commission

Records of Time of Employees on Duty and of the Movement of Trains are to be kept by railroads on forms prescribed by the commission in order of May 2, 1921; but by an order issued on July 1, 1922, this requirement does not go into effect until August 30, 1922.

Commission Denies Further Reduction in Livestock Rates

The Interstate Commerce Commission, in a decision made public on July 21, after further argument on the complaint filed by the National Livestock Shippers' League, et al., has declined to order a further reduction in western livestock rates beyond the reductions made last fall on its recommendation and made permanent in its recent decision in the general rate reduction case. The opinion is by Commissioner Hall. Commissioners McChord, Cox, Potter and Campbell dissented on the ground that the rates should be further reduced. In its decision of last August the commission expressed the view that carriers should reduce by 20 per cent all livestock rates in western territory, except those on horses and mules, which were higher than 50 cents. The carriers made the reduction without an order. Subsequently the complainants, represented by S. H. Cowan and Clifford Thorne, asked that the reduction be extended to rates less than 50 cents, which the commission denied. In the general reduction on agricultural products made by the railroads on January 1 the rates less than 50 cents were reduced 10 per cent, effective for six months and this was made permanent by the general decision.

Commissioner McChord said that far more substantial reductions of all the livestock rates should be made without delay. Commissioner Potter also expressed the opinion that the commission should now make such reductions in livestock rates as would have been made if in addition to making the temporary reductions permanent, it had permitted livestock to share in the general reductions.

State Commissions

The Alabama Public Service Commission on July 11, ordered all railroads operating in Alabama to reduce their passenger fares from 3.6 cents per mile to 3 cents and to sell 1,000-mile books at the rate of 2.12 cents per mile, effective August 15. This order followed an investigation which has been conducted by that body since the first of this year. The commission stated that the railroads have failed to show that a reduction would not stimulate travel in Alabama.

The California Railroad Commission has issued a statement to the effect that it will co-operate to the fullest extent of its ability with the public utility commissions of other states in resisting the efforts of the railroads to increase by ten billion dollars or more the tentative valuations of the roads which were established by the Interstate Commerce Commission for rate making purposes. This announcement was authorized by the state commission, following a conference of the middle-western and western states held at Des Moines, Iowa, on July 6 and 7. "The Esch-Cummins Act," this commission states, "provides that railroad rates must be based on the value of the roads as found by the Interstate Commerce Commission. A tentative estimate of the value of all the railroads in the United States amounts to approximately $20,000,000,000. It is estimated that if the claims made by the railroads were allowed in full, the valuation tentatively fixed by the Interstate Commerce Commission would be increased by about 50 per cent, or in the neighborhood of ten billion dollars. If 5 per cent is taken as the minimum rate of return, it is apparent that a difference of $10,000,000,000 in the valuation will mean a difference in railroad and passenger rates of $500,000,000 a year. These figures show the great importance of these valuation proceedings."

Court News

Passenger Sitting on Steps of Car Negligent

The Massachusetts Supreme Judicial Court holds that a passenger who sits on the step of the platform of a moving car on a steam railroad with his foot extending beyond the line of the car, so that it comes in contact with a signal about six inches from the edge of the lowest step, is negligent, although the cars on the train are crowded, and a submission of the case to the jury is not required, notwithstanding the Massachusetts statute making contributing negligence an affirmative defense.—Daly v. Boston, R. B. & L. (Mass.), 134 N. E. 376.

Discriminating Drainage Assessment

In a suit to enjoin excessive drainage assessments the Circuit Court of Appeals, Eighth Circuit, holds that the assessment on a railroad of half the cost of an improvement which would increase land values at least $250,000, in a district of 12,000 acres, in which the railroad owned only 40.43 acres and 3.61 miles of track, constructed for the most part on high fills and a trestle and above overflow, was a discrimination so palpable and arbitrary as to amount to a denial of the equal protection of the law.—Thomas v. K. C. S., 277 Fed. 708.

Notice of Arrival of Goods, If Duly Mailed, is "Duly Sent"

The conditions of liability while goods are retained after arrival, as stipulated in the bill of lading, are controlling. A bill of lading, limiting liability to that of warehousemen after notice of arrival, provided that the notice of arrival might be "duly sent or given." The Court of Appeals of District of Columbia holds that "duly sent" means sent in a regular and approved manner, and it is sufficient if notice is deposited in the post office in a stamped and properly addressed envelope, though it is never received.—Peavey v. P., B. & W., 277 Fed. 333.

Barred Suit Under Employers' Liability Act Not Revived by Transportation Act

The Minnesota Supreme Court holds that the provision in the Transportation Act that the period of federal control shall not be computed as part of the period of limitations in actions against interstate carriers on claims arising prior to federal control does not apply to causes of action under the Federal Employers' Liability Act which had become barred by failure to bring suit within the allotted two years, and were not existing rights of action at the date of passage of the Transportation Act.—Kannellos v. Great Northern (Minn.), 186 N. W. 389.

Delay in Transporting Live Stock —Reasons Not Good Excuses

The Kansas Supreme Court holds that under the state statute requiring railroads to transport live stock without delay and at a rate of speed averaging 15 miles an hour, unless prevented by unavoidable accident, the following causes given for delay are not excusable: allowing trains to pass; track blocked by trains; waiting for block; taking water and coal, inspecting train; lunch for train crew; waiting for engine; cutting out helper; hot box, sparks from brake shoe; removal of team rod; loading stock for other shippers.—Anderson v. Hines (Kan.), 203 Pac. 726.

B. L. Provision Against Liability of Loss from Strikes

A provision in a bill of lading that the carrier shall not be liable for loss or damage "from riots or strikes" is binding upon the shipper. It is, however, held to be incumbent on a carrier setting up a strike as a defense to show that notwithstanding the strike it had used every reasonable effort to preserve the shipper's property, to prevent its being damaged, and to cause it to be transported to its destination. (This question as to where the burden of proof rests, upon the issue of a strike as an excusing condition, is suggested but not decided in Pennsylvania v. Olivit Bros., 243 U. S. 574, 37 Sup. Ct. 468).—American Fruit Distributors v. Hines (Cal. App.), 203 Pac. 821.

Foreign Railway News

Spanish Railway Electrification

London.

It is reported that the Compania Valencia de Tranvias y Ferrocarriles intends to electrify some of the railway lines it operates, in all amounting to about 45 miles. The headquarters of the company are in the Calle Orilla del Rio, Valencia.

Germany Building Rolling Stock

London.

Germany is making progress in the construction of rolling stock. Already the 150,000 freight cars and the 5,000 locomotives delivered to France by Germany after the armistice have been replaced by new equipment and it is estimated that by August 1, 1922, the German railways will be in exactly the same position as they were at the outbreak of war as regards the quantity of rolling stock and even better off as regards the quality.

Safety of Travel in Russia

London.

A Times (London) correspondent states that from reports published by the statistical department of the Bolshevist Commissariat for Communications, 427 passengers and 526 employees were killed in accidents on the railways of Russia during the year 1921. Moreover, 1,159 employees and passengers were taken from the trains and shot during the same period by order of the Revolutionary Tribunal.

French Railways Measures Against Accidents

London

M. le Troequer, Minister of Public Works, recently made a statement on the prospects of French railways. He believes that they have practically recovered from the worst of the difficulties through which they have been passing as a result of the war. "If nothing intervenes to thwart our efforts," he said, "in twenty years from now all the railways south of the Loire will be running by electricity. Over half the area the familiar black smoke will have vanished and we shall be saving nearly 3,000,000 tons of coal. The waterfalls of the Pyrenees, the Alps and the central range will all give their share of 'white coal.'" After careful consideration the minister has chosen a single type of current, 1,500 volts d. c., which will be used exclusively for electrification in France.

With regard to the safety of passengers, M. le Troequer states that two measures have been taken up which cannot fail of success. The first is that all the French systems will very shortly be provided with audible cab signals, so that a driver can no longer run past the disc without being aware of it. The second is that all passenger cars will be lighted by electricity.

Britain Gets Big Japanese Electrical Order

London.

The Imperial Government Railways of Japan have just placed with The English Electric Company for their Dick-Kerr Works at Preston an order for 34 complete electric locomotives of a total value of upwards of £500,000. This represents the whole requirements of locomotives up to the end of 1923 for those sections of the main line railways which the Japanese government has decided to electrify at once. The order, it is said, was obtained in the face of keen foreign competition, particularly from America.

Eight of the locomotives now ordered are for heavy express passenger service. They are of the 2-C-C-2 (i.e. 4-6-6-4) type. Their weight is approximately 96 (long) tons and they are designed to haul a 415-ton train at a balancing speed of about 60 miles per hour. Each locomotive is equipped with 6 motors, each rated at 306 h.p. at 500 volts, the motors being connected in two groups of three in permanent series on a trolley voltage

of 1,500 volts. The control equipment is of the standard "English Electric" cam-shaft multiple unit type.

Of the remaining locomotives, nine are for local passenger service and 17 for heavy freight service. These 26 are all of the 4-4 type and will weigh approximately 56 tons each. They are equipped with four motors similar to those on the express passenger locomotives, but in this case the motors will be connected in two pairs in permanent series. Here too the control is the standard "English Electric" multiple unit type. The locomotives for local passenger service are designed to haul a 315-ton train and the freight locomotives a 600-ton train, the balancing speeds being about 55 and 40 miles per hour respectively.

Further Reductions in British Freight Rates

Effective August 1, by agreement between the managements of the railways of England and Wales and shippers, freight rates are to be reduced as follows:

Coal, Coke and Patent Fuel—Increase over pre-war rate to be reduced from 75 per cent to 60 per cent, flat rate from 3d. per to 2d. per ton and maximum addition to remain at 3s. 6d.

Iron Ore, Limestone, etc., for Blast Furnace and Steel Works—Flat rate to be reduced from 3d. per ton to 2d.; percentage increase over pre-war to remain at 50 per cent and maximum addition to remain at 2s.

Manure and Lime for Agriculture—Flat rate to be reduced from 9d per ton to 4d., percentage increase remaining at 50.

Iron and Steel—Flat rate reduced from 6d. per ton to 4d., percentage increase remaining at 75.

Rolling Stock—Percentage increase to be reduced from 100 per cent to 75 per cent and flat rate from 6d. to 4d. per ton.

Livestock at Carload Rates—Percentage increase reduced from 100 to 75 and flat rates from 2s. per car to 1s.

Livestock at Head Rates—Percentage increase reduced from 100 per cent to 75.

Small Parcels—Percentage increase reduced from 150 per cent to 100 per cent.

Returned Empties—Percentage increase reduced from 100 to 75.

Certain other basic commodities bear similar reductions.

Westinghouse Ships Large Order to France

The Westinghouse Electric & Manufacturing Company recently shipped 32 carloads of electrical equipment—transformers and lightning arresters—to the Midi Railway (France). This material weighed over 800 tons and is part of an order totaling over $1,000,000 for this railway which is pushing its electrification program.

The lines of the Midi Railway are mostly located in the South of France north of the Pyrenees. As far back as 1906 the management of the railways commenced an exhaustive study of the electrification of this part of the system, having in mind the utilization of the water power available on the northern slopes of the Pyrenees. By 1914 four sections had been electrified with single phase current at 12,000 volts and 16.67 cycles, but all work was stopped at the outbreak of the war.

The French early in the war lost practically all their coal fields to the Germans. This more than anything emphasized the necessity of developing the water power resources of the country and electrifying the railroads wherever it could be economically done. Thus on the cessation of hostilities one of the first acts of the government was to send a technical commission abroad to study existing electrified railways.

The commission, after visiting Switzerland, Italy and America, recommended that 1,500 volts, direct current, be adopted as the standard for the electrification of all French railroads, and the Midi Railways Company, in conformity with this decision, immediately resumed the work interrupted by the war on this new basis. The sections already electrified at 12,000 volts will be changed to 1,500 volts direct current, so as to have a uniform system throughout.

Argentine Rate Controversy Not Yet Settled

Buenos Aires.

The controversy between the foreign-owned railways with the government over the question of increased rates has not yet been decided. A committee has been appointed by the government to study the rate situation, but, until this body reports, all rates are to remain at previous levels and the companies have been called upon to refund amounts charged in excess of these levels.

This reimbursement involves many difficulties. In first place, the companies are not at all willing to refund the extra sums collected (which in some instances amount to several million pesos). They must, however, comply with the decision of the public authorities and they seem to have come gradually to the decision to refund 70 per cent of the sums in point. The attitude taken up by the companies in this emergency is not, however, a uniform one, as some of them want to return but 50 per cent, and a few do not consider at all the possibility of a reimbursement.

There are three companies, whose general managers held recently a meeting with a view of adopting a common policy: the Buenos Aires & Pacific, the Southern Argentine and the Western Argentine. The first two companies were inclined to refund 70 per cent and the Western was willing to pay back the full sums in point. They have finally adopted the proposition moved by the Pacific and Southern.

The settlement of this question of reimbursement seems likely to take several months. The railway companies have to deal with opposite forces in the shape of associations like the Cereal Exporters' Association (Centro de Exportadores de Cereales) which in this occasion represents not only the large exporting firms forming the association itself, but also the brokers and the agriculturists of the provinces. The members of the "Centro" referred to have decided not to accept less than 70 per cent from the railways, for their own account as well as for the brokers and the sellers' account. It is to be anticipated, however, that the railways and the cereal exporters will find a satisfactory solution, as their reciprocal interests command a close collaboration with each other.

Railway Ties in China

There are both present and future market possibilities for selling American railway ties in China, according to Trade Commissioner Frank Rhea at Peking. Steel and concrete ties are used, but the demand is mostly for wooden ties. While concrete ties are quite satisfactory where there is a well-ballasted railroad, as is the case with the Canton-Knowloon, which runs through a territory not subject to freezing, and therefore has no heaving of track in the wintertime which would cause breakage of these ties, conclusions are that this tie is entirely too expensive to compete with the wooden tie which is imported into China. On the Canton-Samshui Railway use has been made of a Belgian steel tie, and while this was very expensive it has been reasonably satisfactory, especially as this railway has light traffic and also very light wheel loads. The meter gage Yunnan Railway is all laid with steel ties. The Shantung Railway was originally laid with a German-designed steel tie, but many of these were removed during the Japanese administration and replaced by wooden ties.

Northwestern American and Canadian timber is used very generally and is reported to give better results than either the Japanese or Manchurian timbers. In South China, however, the Australian, Indian, or Philippine hardwoods are said to give better service. This is because the wood resists the attack of the white ants, which are very destructive to railway ties in that section. Humidity also affects the ties in that territory to an extent. Most of North China has light rainfall and most of this during the summertime. This condition probably does not affect the life of railway ties, although the opinion is expressed that in such territory as the western end of the Peking-Suiyuan Railway extending into the Mongolian territory, it would increase the life rather than shorten it.

The usual dimensions for railway ties are 8 ft. by 9 by 6 in. Bridge ties, as a rule, are 10 ft. by 9 by 8 in. There are very few creosoted ties in use in China. The Chinese government railways, such as Peking-Hankow Railway, Tientsin-Pukow Railway, etc., treat their ties in their own creosoting plants. Treated ties will probably be used in the future as they become better known.

Tenders are usually called for by the railways concerned and terms of payment arranged by the railway. Payment is probably the most difficult situation at present, as the Chinese railways will give the business to whoever will give them the longest credit almost regardless of price. American exporters may deal directly with the several railway purchasing departments. A great deal of this business, however, is handled through commission houses. American species are included in official and semiofficial invitations for tenders.

Equipment and Supplies

Locomotives

THE UNION PACIFIC is inquiring for 55 Mountain type and 15 Santa Fe type locomotives.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE is inquiring for 5 Mikado type and 2 Pacific type locomotives.

THE TUCKERTON RAILROAD is having one locomotive repaired at the shops of the Baldwin Locomotive Works.

THE ERIE will have repairs made to 15 locomotives, including Santa Fe and Mikado types at the shops of the Baldwin Locomotive Works.

THE NEW YORK, NEW HAVEN & HARTFORD will have repairs made to 25 locomotives at the shops of the Baldwin Locomotive Works and to 10 locomotives at the shops of the American Locomotive Company.

THE CHESAPEAKE & OHIO will receive bids until 12 o'clock noon July 29, at Richmond, Va., for general repairs to three Mallet compound locomotives. Bids will also be received until 12 o'clock noon August 11 for general repairs to 50 locomotives.

THE NEW YORK CENTRAL announced on Thursday that in anticipation of the motive power requirements of 1923 and to protect the expected traffic needs of the winter in the territory served by the New York Central lines, orders have just been placed for the construction of 150 modern freight locomotives. The locomotives are to be the Mikado type, identical in design with Michigan Central locomotive 8,000, described in the *Railway Age* of July 22. It is understood that the order has been divided equally between the American Locomotive Company and the Lima Locomotive Works, Inc.

Freight Cars

THE NEW YORK CENTRAL is inquiring for 50 King-Lawson air dump cars.

THE LEHIGH & NEW ENGLAND has renewed its inquiry for 100, 50-ton gondola cars.

THE CHICAGO, BURLINGTON & QUINCY, reported in the *Railway Age* of July 22 as inquiring for repairs to 500 box cars, will have these cars repaired at the shops of the Streator Car Company.

THE CHICAGO, BURLINGTON & QUINCY reported in the *Railway Age* of July 22 as inquiring for repairs to 500 box cars and 500 steel gondolas, has placed on order for the latter with the American Car & Foundry Company and is expected to place an order for the box cars this week.

THE ILLINOIS CENTRAL, reported in the *Railway Age* of July 15, as inquiring for 2,000 gondola cars, has ordered 1,000 from the Pullman Company, 500 from the American Car & Foundry Company, 500 from the Mt. Vernon Car Manufacturing Company, 500 from the Bettendorf Company and 500 from the Western Steel Car & Foundry Company.

Passenger Cars

THE WAR DEPARTMENT AIR SERVICE is inquiring for one steel baggage car.

THE NORTHERN PACIFIC has ordered 70 express refrigerator cars from the American Car & Foundry Company.

THE MARYLAND & PENNSYLVANIA has ordered two passenger motor cars and two trailers from the Russell Company, Kenosha, Wis.

THE PITTSBURGH & WEST VIRGINIA is inquiring for 2, 60-ft. steel baggage cars, 1, 70-ft. steel baggage and mail, 1, 70-ft. steel passenger, baggage and mail.

Iron and Steel

THE KANSAS CITY SOUTHERN has placed an order with the McClintic-Marshall Construction Company for 1,900 tons of steel to be used in the construction of a bridge over the Arkansas river at Redlands, Okla.

Track Specialties

THE SOUTHERN PACIFIC is inquiring for 2,500 kegs of spikes.

THE ERIE is inquiring for 5,000 kegs of spikes.

THE MISSOURI, KANSAS & TEXAS is inquiring for 2,500 kegs of standard track spikes.

Miscellaneous

THE NEW YORK CENTRAL will receive bids until October 1 for its requirements of fuel oil, gasoline, kerosene, lubricating oil, grease and tallow candles.

THE NEW YORK CENTRAL will receive bids until 12 o'clock noon, August 3, for structural steel, castings and railings for bridge repairs and non-composite lead paper insulated covered cable.

THE CHICAGO & NORTH WESTERN has placed an order with the Graver Corporation for a Graver type "K" ground-operated water softener to be installed at Boone, Iowa. This plant will have a treating capacity of 23,000 gal. of water per hour.

Signaling

THE CANADIAN NATIONAL has ordered from the Federal Signal Company an electro-mechanical interlocking plant for Smith Falls, Ont.

THE ST. LOUIS-SAN FRANCISCO has ordered from the Federal Signal Company a 28-lever interlocking machine and the necessary materials for the rebuilding of the interlocking plant at Claremore, Okla.

THE NORFOLK & WESTERN has placed an order with the France Manufacturing Company, Cleveland, Ohio, for 470 mechanical type rectifiers, for use in charging storage batteries on the signal system between Phoebe, Va., and Bedford, Norfolk division, and between Lamberts Point, Va., and bridge eight, Norfolk terminal.

THE ATLANTA & WEST POINT has awarded a contract to the Union Switch & Signal Company for the materials for the installation of 16 miles of absolute-permissive block signaling on its main line between LaGrange, Ga., and West Point. These signals will be Style S 3-position, low voltage. Installation will be by railroad forces.

Trade Publications

ARCHITECTS' SPECIFICATION HANDBOOK.—The Truscon Laboratories, Detroit, Mich., have issued a loose-leaf handbook of specifications of 108 pages of 8½ in. by 11 in. size covering the use of Truscon waterproofing and dampproofing products, floor hardeners, enamels, paints and varnishes. The book is conveniently prepared for ready use by architects and engineers.

ADZING AND BORING CROSS-TIES.—The Century Wood Preserving Company, Pittsburgh, Pa., has issued a large size, 8-page bulletin, illustrated, devoted to the adzing and boring of cross-ties before treatment. The bulletin discusses the advantages of adzing and boring all cross-ties before treatment and shows by text and illustrations, the different methods which can be used. The machinery for this class of work is also described as well as a typical plant layout.

Supply Trade News

The refinancing plan of the **Lima Locomotive Works, Inc.**, as noted in the *Railway Age* of July 1, was adopted by the board of directors and approved at a special meeting of the stockholders in Richmond, Va., on July 14.

The Mid-West Engineering Sales Company, Masonic Temple, Cedar Rapids, Iowa, has been appointed representative in eastern Iowa of the **Conveyors' Corporation of America**, 326 West Madison street, Chicago, for the sale of American trolley carriers.

A. A. Murphy has been appointed resident sales manager of the industrial and railway paint and varnish division of the **E. I. du Pont de Nemours & Co., Inc.**, Wilmington, Del. He will be located at the new office the paint and varnish division has opened at 30 Church street, New York City.

Johns-Manville, Inc., New York, will build a new plant in Canada at Asbestos, Quebec, for the manufacture of asbestos. Work is to be started at once on the plant and is expected to be completed in about six months. The plant will cost over $1,000,000 and will give employment to about 300 people. The company has taken over the Bennett-Martin mine at Thetford Mines, Que.

A. C. Haberkorn, formerly Detroit branch manager of Manning, Maxwell & Moore, Inc., and the Biggs-Watterson Co., and **E. E. Wood**, former sales manager of the Jones & Lamson Machine Co., have formed a partnership under the name of **Haberkorn & Wood**, with an office and warehouse at 620 E. Hancock avenue, Detroit, Mich., to handle a line of machine tools, cutting oils and compounds, also permanent mould aluminum alloy castings.

F. W. Carter, assistant manager of the heavy traction division, railway department, of the Westinghouse Electric & Manufacturing Company, has resigned to become president of the **Louisville Frog & Switch Company**, Louisville, Ky. Mr. Carter was graduated in electrical engineering from the Virginia Military Institute in 1912 and in the same year entered the employ of the Westinghouse Company on the graduate student course. Between 1912 and 1916 he filled several important assignments and then took up heavy traction work in the New York office. In 1917 Mr. Carter entered the first Plattsburg Camp and was ordered immediately to France where he served with the Rainbow division until July 28, 1918, when he was severely wounded in action at Chateau-Thiery and later was honored with the D. S. C. After returning from the service Mr. Carter again entered the railway sales department at East Pittsburgh in charge of heavy traction negotiations. The Louisville Frog & Switch Company, of which Mr. Carter will be president, manufacture manganese frogs, crossings, switches, signals and other railway specialties.

F. W. Carter

G. A. Blackmore, vice-president of the **Union Switch & Signal Company**, Swissvale, Pa., has been elected first vice-president and general manager. He entered the service of the Union Switch & Signal Company in July, 1896, and in 1901, he was made chief clerk of the engineering and estimating department at Swissvale. In July, 1904, he was transferred to New York where he was engaged in work on the Interborough Rapid Transit Subways, the New York terminal of the Pennsylvania Railroad and other large signaling projects. In March, 1909, he was appointed assistant eastern manager with headquarters in New York and in April, 1911, was made eastern manager in charge of the New York, Montreal and Atlanta offices, and of sales and construction. He was appointed general sales manager of the Union Company in 1915, and his headquarters transferred to Swissvale, remaining in this capacity until January, 1917, when he was elected vice-president. He now assumes the additional duties of general manager.

Attorney General Approves Steel Merger

In response to a Senate resolution Attorney General Daugherty has transmitted to the Senate a report stating that in his opinion the merger of the Bethlehem and Lackawanna steel companies and the proposed merger of the Midvale, Republic and Inland companies are not in violation of the Sherman, Clayton or Webb laws and that there is no reason to believe that restraint of trade or monopolistic control will result. He did not express his opinion as to whether they are in violation of the federal trade act. The Federal Trade Commission is conducting an investigation on this point in accordance with the Senate resolution.

Globe Seamless Steel Tubes Company to be Sold

Negotiations are now under way and are expected to be completed soon for the sale of the Globe Seamless Steel Tubes Company, Milwaukee, Wis., manufacturers of stationary boilers and of steel tubes for use in locomotives. This company has been owned principally by W. Renshaw, Chicago, president, and L. Fitch, Milwaukee, vice-president and secretary, both of whom will retire. The new interests will be headed by R. P. Lamont, president of the American Steel Foundries, Chicago; P. J. Kalman, president of the P. J. Kalman Company, St. Paul, Minn., of the Bliss & Laughlin, Inc., Harvey, Ill., and of the Hudson Motor Company of Illinois; and by **F. J. O'Brien**, vice-president and general manager of the Globe Seamless Steel Tubes Company, who will continue in active charge of that business. The company at present maintains sales offices in New York, Chicago, Detroit, Mich., Atlanta, Ga.; Houston, Tex.; Portland, Ore; and San Francisco.

The Consolidated Machine Tool Corporation of America

The Consolidated Machine Tool Corporation of America, with general offices at 17 East Forty-second street, New York City, is a consolidation of the Betts Machine Company, Rochester, N. Y.; Ingle Machine Company, Rochester, N.Y.; Hilles & Jones Company, Wilmington, Del.; Modern Tool Company, Erie, Pa.; the Newton Machine Tool Works, Inc., Philadelphia, Pa.; the Colburn Machine Tool Company, Cleveland, Ohio, and the Dale Machinery Company, Inc., New York City and Chicago, Ill. The company's capital stock includes $10,000,000 preferred stock of $100.00 par value and 200,000 shares of common stock with no par value.

W. H. Marshall, formerly president of the American Locomotive Company, is chairman of the board of directors of the new company and C. K. Lassiter, formerly vice-president of the American Locomotive Company in charge of operations, is president of the new company. H. J. Bailey, H. W. Breckenridge, H. W. Champion, J. J. Dale and A. H. Ingle are vice-presidents; O. D. Miller, treasurer; and R. R. Lassiter, secretary. The directors include W. H. Marshall, C. K. Lassiter, H. J. Bailey, formerly president Hilles & Jones Company, B. J. Baker of B. J. Baker & Company, bankers, H. W. Breckenridge, formerly vice-president of the Colburn Machine Tool Company, Lawrence Chamberlain, president of Lawrence Chamberlain & Co., bankers; H. W. Champion, formerly president of the Newton Machine Tool Works, Inc.; J. J. Dale, president of the Dale Machinery Company; T. Allen Hilles, A. H. Ingle, formerly president of the Betts Machine Company and Ingle Machine Company, and F. D. Payne, formerly manager of Modern Tool Company.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company has awarded a contract to the Bates & Rogers Construction Co., Chicago, for the construction of a 38-mile cut off between Ellinor, Kan., and Eldorado. A belt line also will be constructed around the city of Eldorado, which, with other trackage, will total 5½ miles additional. The project will shorten the present route by 13.65 miles. The estimated cost is $3,046,000.

ATCHISON, TOPEKA & SANTA FE.—This company has applied to the Interstate Commerce Commission for authority for the construction of two branches, one from a point 1.7 miles south of Burbank, Okla., 6.24 miles in a northeasterly direction, and one from Denoya, Okla., east 2.97 miles.

BOARD OF PUBLIC WORKS of the city and county of San Francisco, Cal., opened bids on July 26, for the construction of a plate girder bridge at Six-bit gulch; for the construction of abutments and piers for this bridge, and for the grading of a roadway involved in the relocation of tracks, all on the Hetch Hetchy railroad.

CHICAGO, BURLINGTON & QUINCY.—This company, which was reported in the *Railway Age* of July 8, page 86, as calling for bids for the construction of a two-story brick addition to its freight house at Burlington, Iowa., has awarded the contract for this work to the T. S. Leake Construction Company, Chicago.

ILLINOIS CENTRAL.—This company has awarded a contract to the Fred R. Jones Company, Cleveland, Ohio, for the laying of approximately three miles of spur tracks in Louisville, Ky., to connect with the Standard Oil Company properties in that city, the work to cost approximately $100,000. This same company has awarded a contract to the Merrill Road Improvement Company, Vicksburg, Miss., for raising the grade and paving freight house approaches at Vicksburg, Miss., at an estimated cost of $25,000.

MAGMA ARIZONA.—This company has awarded a contract to Twohy Brothers, Phoenix, Ariz., for improvements on its line to include extensive grade revision work and the re-laying of 35 miles of track.

MISSOURI PACIFIC.—This company has awarded a contract to the T. S. Leake Construction Company, Chicago, for the construction of a car repair shed at Sedalia, Mo., to cost approximately $25,000.

PENNSYLVANIA.—This company is receiving bids for the construction of an overhead bridge at Leaman Place, Pa. The approximate quantities are as follows: 1,200 cu. yd. foundation excavation; 2,200 cu. yd. foundation and abutment masonry; 250 cu. yd. concrete bridge floor including reinforcement; and 375 sq. yd. paving on bridge. The work will be in charge of D. P. Pugh, assistant engineer, Norristown, Pa.

WABASH.—This company, which was reported in the *Railway Age* of March 4 as having been ordered by the Missouri Public Service Commission to construct a new freight station and to remodel its present passenger station, at Kirksville, Mo., has awarded a contract for this work to the T. S. Leake Construction Company, Chicago.

THE PANAMA LIMITED, which is operated between Chicago and New Orleans, La., as the Illinois Central's de luxe train, has completed one of the best "on time" records in its history. During the 12 months ending May 31 this train arrived in Chicago on time every day, while southbound, it arrived in New Orleans on time 361 days out of the year. The suburban trains of the Illinois Central to and from Chicago have been 99 per cent on time for the same period. This service runs 370 trains to handle an average of about 75,000 passengers a day. Approximately 60,000 of these passengers are carried during the morning and evening rush periods on their way to and from work.

Railway Financial News

BOSTON & MAINE.—*Injunction Petition Denied.*—Justice Crosby, of the Superior Court at Boston, Mass., has denied the petition of Edmund C. Codman for an injunction to restrain directors of the Boston & Maine and the New York Central, as operators of the Boston & Albany, from carrying out an alleged scheme to obtain "illegal control over the Boston & Maine."

CANADIAN NATIONAL RAILWAYS.—*Directors Resign.*—President D. B. Hanna on July 21 gave out the following statement:

> At a meeting of the board of directors of the Canadian National Railways, held yesterday, the members of that board tendered their resignations to the government.
>
> These resignations are preliminary to the appointment of the single board of directors which will succeed the separate boards of the Canadian National Railways and the Grand Trunk Railway. This will afford the government a free hand in the selection of the new directors.
>
> Such selection may not be completed immediately, but in the meantime the interest of the Government Railways will not suffer, as the present directors will continue to act until their resignations have been formally accepted.

CAROLINA, CLINCHFIELD & OHIO.—*Annual Report.*—The income account for the year ended December 31, 1921, compares as follows:

	1921	1920
Operating revenues	$7,464,112	$6,524,755
Operating expenses	5,320,170	4,982,121
Net operating revenues	2,143,942	1,342,634
Taxes	440,000	365,000
Railway operating income	1,702,140	1,176,868
Net railway operating income	2,492,298	*2,318,716
Total non-operating income	116,247	481,275
Gross income	2,608,545	2,799,991
Interest on funded debt	1,187,582	1,187,904
Total deductions	1,622,117	1,914,767
Net income (exclusive of interest on income debentures)	986,428	.....
Interest on income debentures	262,830	.....
Net income	723,608	885,224

*Includes corporate expenses for January and February, and covers ten months' operations, March 1 to December 31, 1920.

CHOWCHILLA PACIFIC.—*Asks Authority to Sell Property.*—This company has asked permission of the Railroad Commission of California to sell its entire property to Frank G. Drum for an agreed price of $730,000. This road extends from Chowchilla, Cal., a station on the Southern Pacific, to Dairyland, a distance of about 10 miles.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Call for Deposit of Stock.*—The protective committee for the preferred stock has issued a call for the deposit of the stock with the committee. The letter sent to the stockholders was occasioned by the recent ruling of the Interstate Commerce Commission approving the offer by the New York Central to change its stock on equal terms for the preferred stock of the Cleveland, Cincinnati, Chicago & St. Louis. The committee opposes the exchange, contrasting the earnings of the Cleveland, Cincinnati, Chicago & St. Louis available for preferred stock with the earnings of the New York Central available for dividends, and comparing the assets of the two roads. It is asserted also that by acquiring the majority of Cleveland, Cincinnati, Chicago & St. Louis preferred stock the New York Central would be able to control the issue of bonded debt and negotiation of leases involving an increase in fixed charges.

The protective committee is headed by Edwin G. Merrill, president of the New York Life Insurance and Trust Company, and includes George E. Roosevelt of Roosevelt & Son, and Willis D. Wood of Ladd & Wood, New York.

COLORADO & SOUTHERN.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Colorado & Southern Assisted by Coal Strike." See also excerpts from annual report on adjacent pages.

DENVER & RIO GRANDE WESTERN.—*Receivership.*—Joseph H. Young, president of the Denver & Rio Grande Western, was appointed receiver for the road in the Federal District Court at Denver, Colo., on July 21. The receiver was petitioned by the New York Trust Company and the Bankers Trust Company of New York, trustees for holders of defaulted mortgage bonds.

Richard Sutro, chairman of the committee of the adjustment

mortgage 7 per cent bondholders of the Denver & Rio Grande, in commenting on the appointment of a receiver said:

Application for a receiver made by New York Trust Company as trustee under a mortgage came as the result of many months of efforts and negotiations between our committee and its counsel and trustee and its counsel. Our committee considered that interests of the property and of all bondholders would best be served by a receivership.

An adjustment bondholders have substantial interest in the treatment which is accorded the refunding bonds. Among other things $7,005,000 refunding bonds are pledged as collateral under adjustment mortgage and there are in addition about $31,000,000 refunding bonds outstanding. Interest of adjustment bonds in refunding bond situation is a large one and as important as the interest represented by any committee. Adjustment bonds are entitled to protection and standing accordingly.

The Bankers Trust Company, with whom we have been in conference concerning this matter, as trustee for refunding bondholders, also appeared and supported the application for a receiver.

Interest has been unpaid on the adjustment bonds since April 1, 1921, and on refunding bonds since August 1, 1921.

Now that the court has taken the property under its protection, the committee of which I am chairman, feels that earnings will be available for rehabilitation of the road and eventually for interest, instead of being received by an alleged owner (new Denver & Rio Grande Railroad) which claims not to be liable for payment of principal and interest of any of the bonds upon the roads.

We accordingly look confidently to eventual readjustment whereby the bondholders will secure equitable treatment.

Alvin W. Krech, president of the Equitable Trust Company, and chairman of the Western Pacific, which bought the old Denver & Rio Grande, said that he had no idea of what would be done with the property following the naming of a receiver. The offer to bondholders, he said, of a plan of reorganization was rejected through their failure to deposit a sufficient number of bonds. As far as the Western Pacific is concerned, Mr. Krech declared, the offer will probably be withdrawn.

EL DORADO & SANTA FE.—*Authorized to Construct New Lines and Issue Stock.*—The Interstate Commerce Commission has issued a certificate authorizing this company to construct three new lines totalling 43½ miles connecting with the Atchison, Topeka & Santa Fe in Chase and Butler counties, Kan., and has also authorized the company to issue $50,000 of stock. The Atchison, Topeka & Santa Fe was also authorized to acquire control of the company by purchase of its stock and by lease.

FONDA, JOHNSTOWN & GLOVERSVILLE.—*Annual Report.*—The income account for the year ended December 31, 1921, compares as follows:

	1921	1920
Miles operated	89	89
Operating revenues	$1,355,659	$1,431,562
Operating expenses	865,245	920,880
Net from railway operations	490,415	510,683
Railway tax accruals	71,065	53,896
Operating income	430,919	463,478
Gross income	484,269	503,903
Deductions from gross income	383,147	392,327
Net income	101,122	111,576
Dividends on preferred stock	30,000	30,000
Balance to profit and loss	71,122	81,576

GRAND TRUNK.—*Directors Resign.*—Sir Joseph Flavelle, chairman of the board, president H. G. Kelly and A. J. Mitchell have resigned, and the resignations of J. N. Dupuis and E. L. Newcombe, K. C., are expected.

The resignation of the directors of the Grand Trunk, like those of the Canadian National directors do not take effect immediately. The purpose of the resignations is to give the Minister of Railways a free hand in the selection of the new board.

GREAT NORTHERN.—*Annual Report.*—This company's annual report for 1921 is reviewed in an article on another page of this issue entitled "Great Northern Ore Traffic Will Help 1922 Net." See also excerpts from annual report on adjacent pages.

NEW YORK CENTRAL.—*Authorized to Acquire Control.*—The Interstate Commerce Commission has authorized the acquisition of control of the Toledo & Ohio Central and the Kanawha & Michigan and their leased properties, by lease, on condition that none of the lessees shall dispose of any of the stock of the lessor now owned by it without the approval of the commission.

NEW YORK CENTRAL.—*Exchange of Stock Opposed.*—See Cleveland, Cincinnati, Chicago & St. Louis.

PITTSBURGH, CINCINNATI, CHICAGO & ST. LOUIS.—*Dividend Declared.*—The directors at a special meeting on Wednesday declared a dividend on the company's capital stock covering the period from January, 1921, to July, 1922, at the rate of 4 per cent per annum, being in the aggregate 6 per cent for the period.

The dividend is payable August 15, to stock of record August 7, out of rental to be received by the Pittsburgh, Cincinnati, Chicago & St. Louis from the Pennsylvania Railroad Company under the terms of the lease of its railroad property.

TENNESSEE CENTRAL.—*Authorized to Issue Securities.*—The Interstate Commerce Commission has authorized an issue of $3,000,000 of common stock in respect of the purchase price of the Tennessee Central Railroad, $1,700,000 of which is to be acquired and pledged as security for a loan of $563,000 from the government, also an issue of $1,500,000 of first mortgage 6 per cent gold bonds in respect of the purchase price, $850,000 to be acquired and pledged as further security for the loan, and $563,000 also to be pledged with the Secretary of the Treasury. The company is also authorized to assume liability in respect of $850,000 of promissory notes given by the stock and bond subscribers in respect of the purchase price, also to be deposited as security for the loan, and to assume obligation in respect of $210,000 of equipment trust certificates.

TENNESSEE CENTRAL.—*Mortgaged.*—This company has mortgaged all its properties to the American Trust Company, of Nashville, Tenn., for $3,000,000.

TOLEDO & OHIO CENTRAL.—*Annual Report.*—The income account for the year ended December 31, 1921, compares as follows:

	1921	*1920
Miles operated	504	503
Operating revenues	$10,711,986	.....
Operating expenses	8,425,297	.....
Net from railway operations	2,286,689	.....
Railway tax accruals	693,590	.....
Railway operating income	1,591,223	.....
Net railway operating income	1,858,993	A $2,193,342
Total other income	371,112	663,041
Gross income	2,230,105	2,856,383
Interest on funded debt	1,247,276	1,246,838
Total deductions from gross income	1,571,236	1,615,390
Surplus for the year	658,869	1,240,993

*Items not shown are not comparable. See note A.
A Includes compensation for January and February, guarantee, March to August and net railway operating income—corporate—September to December.

ULSTER & DELAWARE.—*Annual Report.*—The income account for the year ended December 31, 1921, compares as follows:

	1921	1920
Mileage operated	129	129
Operating revenues	$1,747,687	$1,324,180
Operating expenses	1,379,815	1,745,831

Thirty-Third Report of the Great Northern Railway Company

To the Stockholders:

The Board of Directors submits the following report for the year ended December 31, 1921.

CAPITAL STOCK

There has been no change during the year in the authorized share capital, same remaining at $250,000,000, of which there had been issued to December 31, 1921, $249,478,250.00.

FUNDED DEBT.

There has been an increase of $7,319,500 in the bonded indebtedness of the Company in the hands of the public, made up as follows:

By issue of the Company's General Mortgage 7 per cent Gold Bonds, Series "A" dated July 1, 1921, maturing July 1, 1936		$215,227,000.00
Less		
N. P.-G. N., C. B. & Q. Collateral 4 per cent joint bonds, matured and paid July 1, 1921, $215,227,000, (1. N. Ry. Co.'s proportion one-half	$107,613,500.00	
St. P. M. & M. Ry Co. Consolidated Mortgage bonds redeemed through the operation of the Sinking Fund	67,000.00	
		107,686,500.00
Net increase		$7,319,500.00

Under date of March 31, 1921, the Chicago, Burlington & Quincy Railroad Company made distribution of a stock dividend of 600,000 shares of par value of $100 each. The dividend upon the stock pledged under the Trust Indenture securing N. P.-G. N., C. B. & Q. Collateral 4 per cent joint bonds, aggregated 582,539 shares which were issued to the Guaranty Trust Company, Trustee under the joint indenture, increasing the security thereunder to 1,658,674 shares, of which one-half is owned by the Great Northern Railway Company, and one-half by the Northern Pacific Railway Company.

In order to secure funds with which to pay off and discharge the above described joint bonds, the Board of Directors of this Company at meeting held March 22, 1921, authorized the execution, with the Northern Pacific Railway Company, of a joint indenture to be dated July 1, 1921, for the issue of $230,000,000 in bonds to be known as Northern Pacific-Great Northern Joint 15-Year 6½ per cent Convertible Gold Bonds, dated July 1, 1921, maturing July 1, 1936, and secured by deposit with The First National Bank of the City of New York as Trustee under the joint indenture, 1,658,674 shares of the capital stock of the Chicago, Burlington & Quincy Railroad Company; $33,000,000 Northern Pacific Railway Company Refunding and Improvement 6 per cent. Mortgage Bonds, Series "B," maturing July 1, 2047; and $33,000,000 Great Northern Railway Company General Mortgage 7 per cent. Gold Bonds, Series "A," maturing July 1, 1936, the joint bonds being convertible, par for par, into bonds of the respective Railway Companies to the amount of $115,000,000 each. The indenture provides for the release of the above security upon a pro rata basis upon conversion of the joint bonds into the bonds of either of the Railway Companies. The Interstate Commerce Commission approved this plan on April 21, 1921.

The entire issue of the joint 6½ per cent. bonds was subscribed for by a syndicate represented by J. P. Morgan & Company and The First National Bank of the City of New York at price of 91½ per cent. and payment made therefor on May 16, 1921.

The amount required to pay and discharge the joint 4 per cent. bonds on July 1, 1921, aggregating $215,227,000, was obtained as follows:

From sale of the joint 6½ per cent. bonds, $230,000,000 at		
91½ per cent		$210,450,000.00
Less expenses covering fees, taxes, printing, authentication, etc., to Dec. 31, 1921		335,963.27
Net proceeds		$210,114,036.73
Provided by the railway companies from other sources		5,112,963.27
Total		$215,227,000.00

The conversions of joint 6½ per cent. gold bonds during the period May 15, 1921, to December 31, 1921, were as follows:

Into Great Northern Ry. Co. General Mortgage 7 per cent. Gold Bonds, Series "A"	$115,000,000.00
Into Northern Pacific Ry. Co., Refunding and Improvement 6 per cent. Bonds, Series "B"	9,950,400.00
Unconverted December 31, 1921 (N. P. Ry. Co. proportion)	105,049,600.00
Total	$230,000,000.00

The burden of interest to the Great Northern Railway Company in the issue of its 7 per cent. bonds by way of conversion as against the interest on the Northern Pacific Railway Company's proportion of the joint debt whether represented by the remaining joint 6½ per cent. or by the 6 per cent. bonds issued or which may be issued by the Northern Pacific Railway Company by way of conversion is claimed by the Great Northern Railway Company to be subject to equalization as a part of the cost of the joint financing. The Northern Pacific Railway Company opposes this claim and matter has been submitted to arbitration.

In order to have a more comprehensive and satisfactory mortgage to secure the issue of the series of 7 per cent. bonds above referred to, and also to secure the issue of other bonds for the purpose of future enlargement, improvement, extension, and equipment of the Company's properties, the Company executed and delivered to The First National Bank of the City of New York as Trustee, its mortgage dated January 1, 1921, to secure the issue of its General Mortgage Bonds.

The indenture provides for the issue of bonds in series dated July 1, 1921, maturing on dates subsequent to June 30, 1936, and on or prior to July 1, 2121, with interest rates, and such special provisions as the Board of Directors or the Executive Committee shall determine, and limited in amount, including bonds reserved to retire prior debt, to three times the then outstanding capital stock of the Company. Provision was made for the closing of the Company's First and Refunding Gold Bond Mortgage at $72,000,000, of which $35,668,000 are in the hands of the public, and $36,332,000 pledged under the indenture. Provision was also made for the issue at once of $140,000,000, Series "A," 7 per cent. bonds, dated July 1, 1921, and maturing July 1, 1936, of which $33,000,000 were pledged under N. P.-G. N. Joint 15-Year Convertible Gold Bond Mortgage, and $107,000,000 held for conversion purposes, and in case of same being so used that the Chicago, Burlington & Quincy Railroad Company stock released from the lien of the joint indenture as result of such conversion should be pledged with the Trustee of this indenture.

By the conversion of $115,000,000 of the joint 6½ per cent. bonds into General Mortgage Gold Bonds of this Company there were released from the lien of the joint indenture 829,337 shares of stock of the Chicago, Burlington & Quincy Railroad Company, which were immediately pledged with the Trustees of the indenture of January 1, 1921, and $33,000,000 of this Company's General Mortgage 7 per cent Gold Bonds, of which $8,000,000 (together with the $107,000,000 mentioned above) have been used in conversion and $25,000,000 placed in the Treasury of the Company for use as collateral or for sale.

GENERAL

The Interstate Commerce Commission approved the Company's plan for financing the purchase of five hundred 40-ton refrigerator cars, one steam lighter and one convertible pile driver and crane at an estimated cost of $1,172,450, one-half of which amount was to be secured from the United States Government under Section 210 of the Transportation Act, 1920, the balance to be obtained from other sources. The loan of $586,000 received from the Government is evidenced by fourteen notes of $39,000 each, maturing annually beginning September 1, 1922, and ending September 1, 1935, and one note for $40,000 maturing September 1, 1936, bearing interest at the rate of six per cent. per annum payable semi-annually. This loan is secured by the deposit with the Treasury Department of the United States of $780,000, par value, Great Northern Railway Company General Mortgage 7 per cent. Gold Bonds. The balance of the funds required was procured by the issue of the Company's 6½ per cent. Equipment Gold Notes, Series "A," dated August 1, 1921 in the principal sum of $606,000, payable in six annual installments of $101,000 each, beginning August 1, 1926, and ending August 1, 1931. These notes were sold at 97½ per cent., the Company realizing $590,850.

The details of expenditures for Equipment are given in the report of the President.

There was expended for Investment in road, the sum of $2,971,489.14 of which $2,965,810.05 was for Additions and Betterments, and $5,679.09 for Improvements on leased railway property.

The records of the Pension Department show the following:

Number of pensioners December 31, 1920	129	
Employes added to roll during the year	40	
Pensioners died during the year	16	
Number of pensioners December 31, 1921	144	
Pensions paid during the year		$49,683.04
Pensions paid September 16, 1916, to December 31, 1921		166,854.91

Work was continued during the year in connection with Federal Valuation of this Company's property. Conferences on the tentative land and accounting reports were held by the Company with the Interstate Commerce Commission and many differences adjusted. It is expected that the Company will shortly receive revised engineering, land and accounting reports to be followed by the tentative valuation. This tentative valuation will then become the subject of hearings before the Commission and its examiners. Data are being compiled for use in such hearings, and every possible effort as being made to see that the final values when determined shall be just and fair.

As stated in last year's report, the Company filed with the Interstate Commerce Commission its claim for deficit due under the guaranty provisions of the Transportation Act, 1920, and had received as partial payment thereon $12,500,000. It is expected that a final settlement with the Government will be effected during the current year.

An additional amount of $91,054.40 has been received from the Director General due to the revision of the annual rental, as mentioned in last year's report.

The Board respectfully calls the attention of the Stockholders to the reports of the President, of the Comptroller, with customary balance sheet and statistical tables, and of the Land Commissioner.

For the Board of Directors.

LOUIS W. HILL, *Chairman.*

April 30, 1922.

REPORT OF PRESIDENT.

To the Board of Directors:

Herewith report for the fiscal year ended December 31, 1921:

REVENUES, OPERATING EXPENSES, VOLUME OF TRAFFIC, ETC.

Gross Operating Revenues for the year were $101,317,203.81, a decrease of $21,280,661.40, or 17.3581 per cent. as compared with last year, while the decrease in Operating Expenses was 29.3559 per cent. The various amounts making the increases and decreases and the percentage for each, as compared with last year, are as follows:

Revenue from transportation	Increase or decrease	Amount	Per cent.
Freight	Decrease	$15,060,604.56	16.7786
Passenger	Decrease	$4,090,745.58	19.9053
Mail	Decrease	320,789.05	10.0948
Express	Decrease	538,356.60	17.9544
Sleeping car, Parlor and chair car, Excess baggage, and other passenger-train revenue	Increase	23,111.65	1.6276
Total Passenger service train revenue	Decrease	$4,926,779.58	17.5036
Switching, Special service train, and Other freight-train revenue	Decrease	143,537.83	17.9439
Total revenue from transportation	Decrease	$20,130,921.97	16.9583
Revenue from Operations other than Transportation	Decrease	1,149,739.43	29.5576
Gross operating revenues	Decrease	$21,280,661.40	17.3581

Operating Expenses	Increase or decrease	Amount	Per cent.
Maintenance of way and structures	Decrease	$11,852,643.55	46.0859
Maintenance of equipment	Decrease	5,664,126.18	21.1827
Traffic expenses	Increase	369,322.38	29.9737
Transportation expenses	Decrease	15,189,829.61	27.2784
Miscellaneous operations	Decrease	544,157.43	28.1900
General expenses	Decrease	185,800.41	6.3242
Transportation for investment—Cr.	Increase	382,967.24	.....
Total operating expenses	Decrease	$33,450,202.04	29.3559
Net operating revenue	Increase	$12,169,540.64	140.6761
Taxes accrued	Decrease	1,759,041.26	17.5024
Uncollectible railway revenue	Increase	17,128.85	55.3421
Operating income	Increase	$13,911,453.05	.....

The substantial decreases in revenue during the year were due primarily to the reduction in traffic handled resulting from the post war business depression. Net ton miles, reflecting the volume of freight traffic, decreased 32.6%, and passengers carried one mile, reflecting the volume of passenger traffic, decreased 30.2%. Although the Interstate Commerce Commission ordered rate increases in August 26, 1920, full benefit of these increases was not secured because of the many reductions and readjustments in rates made necessary in 1921.

Effective March 31, 1921, rates on lumber and shingles from the northwestern states destined to Missouri River, Chicago district, and points east were reduced 6 and 7 cents per cwt. This was followed on September 10, 1921, by reductions in rates to southwestern points, including Kansas City and Oklahoma districts, in amounts varying from one to three and one-half cents per cwt. On December 24, 1921, further reductions were made in rates to points east of Chicago, including Atlantic Seaboard, ranging from one-half cent to 16½ cents per cwt.

Effective June 23, 1921, rates covering east bound movement of vegetables from northwestern states destined to points east of Chicago were reduced by amounts ranging from 17 to 33½ cents per cwt. This was followed on October 3, 1921, by reductions to points Chicago and west on the basis of taking off one-half of the general increase of August 1920. This resulted in a reduction of about 15 cents per cwt.

Effective July 21, 1921, rates for movement of apples from Washington, Montana, etc., to destinations east of Chicago were reduced to the extent of 16½ cents per cwt.

On December 15, 1921, all rates in Canada were reduced to the basis of 20 per cent. higher level than those in effect prior to September, 1920.

As a result of the falling off in tonnage handled, the rate reductions mentioned above and other rate reductions and adjustments not specifically mentioned, there was a decrease in the freight revenue of 16.7786 per cent. as compared with the previous year.

Passenger traffic decreased $4,090,745.58, or 19.9053 per cent. Rates and train service were unchanged, but the business depression prevailing in all lines of industry had its effect in reducing the passenger travel.

The immigrant movement for the year 1921 was very light as compared with former years. The unusual deflation in the price of agricultural products and the increased rates for transportation prevented many home seekers from investigating and locating in the territory served by the Company.

With respect to the decrease in operating expenses, there was a reduction of 34 per cent. in gross ton miles and 30 per cent. in passengers carried one mile, as compared with the year 1920. This reduction in traffic is reflected principally in the accounts under Transportation—Rail Line and Maintenance of Equipment. It is also partly responsible for the large decrease in Maintenance of Way and Structures, although contributing factors were the favorable weather conditions and the improved individual performance of the employes. The tie and rail renewals in 1921 amounted to $2,496,159.61, as compared with $2,629,582.56 in 1920, practically the same for both years. There was no curtailment of the renewal of ties and rails and the track was maintained up to standard. The Company, however, suspended certain other work, such as cutting grass and weeds and removal of snow and ice, the effect of which was only transitory and which did not impair the road for safe operation.

Due to conditions over which the company had no control, operating expenses were abnormally high in 1921, notwithstanding the many economies effected which resulted in substantial reductions. In 1921 the operating expenses totaled nearly 80% of gross revenues, compared with approximately 60% in 1916, the last pre-war year. The cost of coal in 1921 was $13,000,000, the price per ton amounting to two and four-tenths times as much as in 1916. On June 1, 1921, the United States Railroad Labor Board rendered a decision providing for a general decrease in wages effective July 1, 1921, which resulted in a saving of approximately $3,000,000 for the last six months of the year. Notwithstanding this fact, the payroll, 58% of the total expenses, amounted to $47,000,000, and was the largest single item of expense, the average compensation per man being two and one-seventh times as much as in 1916. The Company endeavored to reach an agreement with its employes for lower wages, but failed, and the dispute has been referred to the Labor Board, the only method of procedure under the law.

EQUIPMENT.

During the year the following equipment was received and taken into account:

Purchased:
- 500 Refrigerator cars, 40 feet long, 60,000 lbs. capacity.
- 1 Boarding car, 60 feet long, second hand.
- 1 Steam timber derrick, 38 feet long, second hand.
- 2 Automobiles.
- 2 Automobile trucks.

Built at Company Shops:
- 4 Flat cars.
- 3 Timber derricks.
- 2 Water cars.

Improvements to rolling stock have been continued, such as superheaters, power grate shakers, automatic stokers, steel cabs and pilots for locomotives, minor improvements to passenger cars to insure the comfort and safety of passengers, to comply with the law, and to secure economy in operation. Owing to the readjustment of prices the Company has found it advantageous to use fuel oil as locomotive fuel on the Western divisions and has converted, during the year, 64 locomotives from coal to oil burners.

There were taken out of service:

5 Steam locomotives.	3 Steel ore cars.
1 Passenger and baggage car.	21 Ballast cars.
3 Baggage and express cars.	11 Sand cars.
193 Box cars.	15 Caboose cars.
51 Refrigerator cars.	9 Cinder cars.
114 Stock cars.	13 Boarding cars.
43 Flat and coal cars.	2 Derrick and tool cars.
13 Wooden ore cars.	5 Other work equipment cars.

Total amount expended for equipment purchased built at shops, and for improvements to equipment in service, was $1,891,115.33. The original cost of the equipment taken out of service, conversions, and adjustments, amounted to $605,972.03, resulting in a net increase in Investment in Equipment of $1,285,143.30.

ADDITIONS AND BETTERMENTS.

The replacing of outer half of Ore Dock No. 3, consisting of 166 pockets, trestle extension and fender at outer end, also renewing in kind pile and timber approach to Dock No. 1, at Allouez, Wis. which was in progress at the close of 1920, has been completed.

The improvements made this year are: 55.5 miles automatic block signal system installed between Leavenworth and Skykomish, Wash.; 1,280 lineal feet of new steel and concrete bridges, 6,349 lineal feet of bridges filled, 121 concrete and cast iron culverts, 198.71 miles of wire right of way fence, 31.61 miles of woven wire placed upon existing fence, 10 depots, 5 mechanical coal chutes, 5 water tanks, 85 sidings and spur tracks, and 357,823 cubic yards of material moved in changes of line, widening banks, ballasting and filling bridges. There were placed upon old lines 57,332 cubic yards of concrete and riprap.

Work is in progress replacing timber dock No. 2 at Allouez, Wis., with concrete and steel dock to be ready for operation at opening of 1923 ore season; constructing new terminals at Minneapolis Junction, Minn., and at Wenatchee, Wash., installing automatic block signals upon 165 miles of road; constructing 48.5 miles new second track; and renewing 1,457 lineal feet single track snowsheds between Leavenworth and Scenic, Wash.

The number of stockholders in the Company far exceeds that of its employes. At the annual meeting in 1921, its stockholders numbered 43,023, while the average number of employes during the year was only 24,403.

Respectfully submitted,

RALPH BUDD, *President.*

COMPTROLLER'S REPORT.

MR. LOUIS W. HILL,
Chairman, Board of Directors.

DEAR SIR—

Herewith I beg to submit statements showing the result of operations of the Great Northern Railway Company for the year ended December 31, 1921.

The statements, this year, do not include the operations of the Minneapolis Western Railway Company and the Duluth Terminal Railway Company and for purposes of comparison the figures for last year have been revised to exclude the operations of those companies.

Respectfully submitted,

GEO. H. HESS, JR., *Comptroller.*

REVENUE ACCOUNT.

EXCLUDING THE OPERATIONS OF THE MINNEAPOLIS WESTERN RAILWAY COMPANY AND DULUTH TERMINAL RAILWAY COMPANY, FOR BOTH YEARS.

YEAR 1921 COMPARED WITH YEAR 1920. OPERATING REVENUES.

Railway Officers

Financial, Legal and Accounting

H. W. Price has been appointed auditor of the Tuckaseegee & South Eastern, effective July 31.

J. J. Cornwell has been appointed general counsel of the Baltimore & Ohio with headquarters at Baltimore, Md., succeeding **Hugh L. Bond, Jr.**, deceased.

Operating

C. O. McHugh has been appointed transportation assistant in the office of the general superintendent of the Quebec district of the Canadian Pacific with headquarters at Montreal.

D. J. Swope has been appointed acting superintendent of the Toledo-Ludington division of the Pere Marquette with headquarters at Saginaw, Mich., to succeed **F. P. Little**, granted leave of absence on account of ill health.

Purchasing and Stores

W. P. Dittoe, purchasing agent of the New York, Chicago & St. Louis, has been appointed general purchasing agent of that road and of the Lake Erie & Western.

C. M. Yohe, assistant purchasing agent of the Pittsburgh & Lake Erie with headquarters at Pittsburgh, Pa., has been promoted to purchasing agent with the same headquarters.

Special

William N. Neff, until recently chairman of the Southwestern Railroad Executives' Association, with headquarters at St. Louis, Mo., has been elected president of the International de Productos Company, with headquarters at Asuncion, Paraguay, South America, this company controlling large interests including a railroad, packing house, timber lands, live stock and boat transportation on the Paraguay river. He will leave New York on July 22, to assume his new duties. Mr. Neff was born on Aug. 11, 1874, at Lawrence, Kan. He entered the service of the Missouri Pacific in June, 1889, as a warehouse foreman and served successively as telegraph operator, agent, roadmaster's clerk and chief clerk to a division superintendent of the same road, until September, 1895. From the latter date until March, 1900, he was a telegraph operator, maintenance of way clerk, clerk in superintendent's office, chief clerk to superintendent, chief clerk to the general superintendent and assistant superintendent of the Great Northern. He left in March, 1900, to become superintendent of the St. Louis-Southwestern which position he held until June, 1901, when he was transferred to the St. Louis-Southwestern of Texas. He later became chief clerk to the president of that road and on May, 1911, he was elected vice-president and general superintendent which position he held until January, 1915, when he left to become superintendent of the Northwestern Pacific. He returned to the St. Louis-Southwestern in November, 1917, as vice-president and general manager, and from July, 1918, to March, 1919, he was general manager of the St. Louis Southwestern, the Louisiana & Arkansas, and the Illinois lines of the Missouri Pacific. During the period of federal control he was federal manager of the St. Louis Southwestern and the Louisiana & Arkansas. Since April, 1920, he has been chairman of the Southwestern Railroad Executives Association, which position he resigned recently.

W. N. Neff

Mechanical

H. A. Shepard, superintendent of telegraph of the New York, New Haven & Hartford with headquarters at New Haven, Conn., has been appointed superintendent of electric transmission and communication with the same headquarters and the position of superintendent of telegraph has been abolished. The jurisdiction of Mr. Shepard's new office will include all lines of electric communication and transmission on the system, including the electrified territory between New York and New Haven. **Charles S. Dow** has been appointed superintendent of communication with headquarters at New Haven.

General

M. H. MacLean, vice-president of the Spokane & Eastern Railway and Power Company and the Inland Empire Railroad, has been elected president with headquarters at Spokane, Wash., succeeding **George H. Taylor**, deceased. Other officers have been appointed as follows: **J. W. Esmond**, vice-president with headquarters at Chicago; **F. E. Conners**, vice-president and general manager with headquarters at Spokane; **Waldo G. Paine**, vice-president, traffic manager and treasurer with headquarters at Spokane; **L. C. Ream**, secretary and auditor with headquarters at Spokane; **Chester Corey**, assistant secretary and assistant treasurer with headqurters at Chicago; **Graves, Kizer & Graves**, general counsel with headquarters at Spokane; **F. Weidmer**, claim agent; **J. F. Gannaway**, superintendent; **J. W. Hungate**, electrical superintendent; **A. J. Mayham**, mechanical superintendent; **J. J. Daschbach**, storekeeper; **A. J. Witchel**, chief engineer with headquarters at Portland, Ore.

Obituary

Herman Paepcke, chairman of the board of directors of the Blytheville, Leachville & Arkansas Southern, died on July 22 at Chicago.

C. W. Jones, manager of the first district of the Chicago, Rock Island & Pacific, with headquarters at Des Moines, Ia., died in that city on July 22 after a long illness.

Selecting the Work to Be Done

Railway development has been practically at a standstill for five years and relatively little improvement work has been done for ten years. Meanwhile the traffic has continued to grow and the need for increased facilities and for improvements to reduce the cost of operation has grown likewise. As a result the roads are facing an improvement program of tremendous proportions, involving work which will yield excellent returns on the investment. In fact, the problem of the managements now is to select for first attention those projects which will yield the largest returns. The president of a large railroad, to whom a promoter had presented a plan for improvements on a certain portion of his property which he claimed would yield a return of 18 per cent on his investment, replied recently that if he had available the amount of money which this project would require, he knew of many other places on his road where he could spend it and secure an even larger return. This indicates the necessity for a close analysis of each project in the light of present traffic and other conditions to determine what it will accomplish. With this information in hand, it is possible for a management to select the projects for first action most intelligently.

The New Haven's Low-Voltage Switch Machines

On a busy railroad like the two-track portion of the New York, New Haven & Hartford main line, described in another column of this paper, the benefit derived from avoiding a stop, in the case of a long and heavy freight train, is found in two principal directions, (1) the saving of time for the freight and for following passenger trains, and (2) the saving of the additional coal which would be used in starting the freight to resume its journey. In this case both of these elements are very considerable; but the most definite word about the savings that we find in the account given to us is that they are "incalculable." This word means, usually, "too large to be calculated," and presumably is used somewhat in that sense in this place; and with some reason. Taking it more literally, as meaning that the proper methods of making the calculations are not known, or are very difficult of application, the statement may, no doubt, be accepted, at least as far as the value of time saved is concerned. If passenger trains are kept on time and if consignees of perishable freight make no complaint of delay, it is perhaps permissible to defer the task of measuring these benefits in dollars and cents —at least until the strike and its burdens are out of the way. As to the amount of coal used, while different students of the problem have reported different estimates, it is to be said, first, that the smallest estimates show quantities well worth saving and, secondly, that the New Haven ought to be able to be the first to give to the world an accurate estimate; for it has now been using electric locomotives extensively for several years, and electric power (and fuel consumption) will be more susceptible of precise measurement. One significant item in the time-estimates of the New Haven people, and one which is sometimes overlooked, is that with hand-thrown switches the time lost in leaving the side track is, if trains are very long, much more than the time lost in stopping to enter the siding. In entering, they lose five to ten minutes; in leaving, from 15 to 20. To stop an 80-car train so that the caboose shall be just clear of the switch is a trick which in practice is often very poorly executed.

Support the Foremen

The foremen in the various mechanical departments are a picked lot of men who never would have been placed in their positions had they not shown more than ordinary ability both as mechanics and as leaders. In spite of the fact that they are proportionately poorly paid, they can usually be depended upon to meet an emergency and as a class have again and again shown their loyalty to the railroad on which they are employed. These are the men who come in direct and constant contact with the rank and file of the workmen and unless they work in the interests of the higher officers and pass on a spirit of fairness and loyalty, the whole organization of the department is bound to be at least inefficient. These men have been going through a trying period during the past few weeks and most of them have been working hard and intelligently. Like all men, they are human and appreciate a little praise when work has been well done and where support is needed they like to know that they can rely upon the interest and backing of the officers higher up the line. A good foreman knows the conditions under which his men work and their needs and will stick up for his men when they are in the right, knowing that by so doing he is bound to win and to hold their co-operation. In the same way an officer should know and support the foremen reporting to him either directly or indirectly. It takes time and experience to develop a foreman and it costs money. Having found a promising man or one who has shown ability, do not allow him to become discouraged or to leave for the lack of appreciation or support.

A Locomotive That Made Good

When a railroad buys a locomotive differing radically from those in service and after testing it for scarcely more than a month, buys 150 more identically like it, no further proof is needed that the new design has made good. The order placed by the New York Central last week is one of the noteworthy events of recent years and one that is likely to have a decided effect on motive power policies and on operating practice. Few details regarding Michigan Central locomotive 8000, after which the new motive power is to be patterned, have been made public. The announcements given out by the railroad indicate that the leading features of the design are maximum power per unit of weight, minimum fuel consumption and ease of operation. Apparently a few weeks' service has shown conclusively that these objectives have been attained and, what is more important, that a locomotive meeting these requirements is also a locomotive that will make money for the road. The engineers of the railroads, the locomotive builders and the supply companies have succeeded in developing the steam locomotive into a highly efficient machine from the engineering standpoint. These improvements are often

discussed by engineers but up to this time have been too seldom applied as effectively as they might be to reduce the cost of operation. When, as in this instance, the higher officers co-operate in designing a type that will meet the operating requirements and then give the motive power a chance to perform at its best efficiency, the savings that can be effected are remarkable. The New York Central's latest type of power is likely to be the forerunner of many designs of improved locomotives.

June Earnings Statements

It is to be expected that the stockholders of the Pennsylvania received with much pleasure the June earnings reports of that company. In view of the size and importance of the Pennsylvania System the report will be received with equal satisfaction by those interested in the railroad situation generally if not in the Pennsylvania in particular. The reason is that the report for the Pennsylvania System as a whole shows a net railway operating income for the first six months of 1922 of $44,442,202, an increase of $34,788,204 over the net for the first half of 1921. The report shows a decrease of $7,386,259 in gross revenues. The reason for the increased net was the cutting of expenses in the amount of $40,609,204. Nor was this decrease due to savings in maintenance; of the total, $29,197,303 was in transportation expenses. The Pennsylvania has been making some unusually rapid strides in getting back to something like its old-time form, but one must feel that this rather caps the climax. The Pennsylvania, however, is only one of a number of roads which have issued interesting earnings reports for June. The Rock Island, for instance, reports that its June net operating revenue was the best for that month in ten years. The Baltimore & Ohio's net after rentals for the six months was $14,580,295 as compared with $7,630,464 for the first half of last year. This road reported an increase of about $2,500,000 in its operating revenues. Its maintenance expenses increased slightly but its transportation expenses, the real test of operations, were decreased nearly $8,000,000 and total expenses nearly $6,000,000. Wall street seems to be very much interested in railroad stocks just now—coal strike or shopmen's strike notwithstanding. With monthly earnings statements like these and the possibilities that many of them hold out for increased dividend rates, this interest is hardly surprising.

British Views on Automatic Stops

A correspondent asks us to give an explanation of the British train-control committee's declaration (See *Railway Age*, July 29, page 149) that train stops are more necessary at stop than at caution signals. We are not sure that we can do so. The report indicates that the committee's decisions, on this and on other points, were based on the number or percentage of collisions which during the past ten years have been due to different causes. In America the advocate of automatic train-control aims to forestall *every* cause of collision, whether it shows itself once a month or once in twenty years. The engineman who from pure absentmindedness may run past a distant signal at 50 miles an hour is constantly considered in our calculations; while in theirs the prominent example is the case of a runner who by an error of judgment runs a short distance beyond a stop signal. It is to be remembered that Englishmen take for granted that there will always be an overlap of 80 rods beyond the stop signal. Their signals are almost all manually operated, and the signalmen's rules require them to allow this; never to admit a train at *A* until the rear of the preceding train has passed a quarter mile beyond *B*. When they depend on this overlap their problem is much simplified. The American habit of mind does not recognize this feature. Another query which occurs to the American in reading this report is as to the paragraph recommending the commencement of the installation of train stop apparatus at "selected" home signals. Who shall make the selection, or on what basis, is not indicated. Considering the question from the standpoint of cost, very few can be selected anywhere at present. This difficulty is felt in England, no doubt, as badly as it is felt here. On the basis of the fundamental theory in the premises, it is desirable to safeguard a great multitude of places; for to calculate the location of the next disaster, or next dozen disasters, would be harder than to predict what building in New York or London will next be struck by lightning. We may be quite sure that the British committee has no idea of requiring the installation of automatic train-control throughout 49 locomotive divisions within the next two years. Indeed, there will be critics who will say that the Englishmen's cautiousness—which is very evident, notwithstanding the positive and progressive tone of the report—is excessive. Evidently, they were able to reach a unanimous agreement only by keeping silent on some important points. But where is the competent engineer who today would proceed any faster?

Piecemeal Ordering

So far as possible the railroads should budget their material needs, particularly for shops and enginehouses, determining how much material of a given kind will be needed in a year and placing the order all at one time. Deliveries may be arranged as convenient throughout the year, but by placing a single large order for the year, important concessions in price can be obtained. Many railroads are not adhering to this practice and the following is but one of many examples which might be cited: A manufacturer of rivet forges for both car and locomotive shops uses a special tile lining for application to the forges when the fireboxes burn out. The manufacturer gets orders for one, two, four, twelve and up to fifty tile linings, at $14.00 a lining. If purchased in car load lots, the railroads could save $4 apiece on their linings, to say nothing of reduced cost of transportation. Small orders are usually wanted in a hurry, go by express at higher cost, and must be boxed with special care to avoid chipping and breaking. Knowing the number of forges on an entire system, and the average life of firebox linings, it would be easy for any road to determine its annual consumption of tile linings and order at one time instead of placing several small orders throughout the year. Other materials should be purchased in this way with resulting economy.

In Summer Prepare for Winter

While it may seem premature at this season of the year to suggest that the railways should undertake now to prepare to cope with winter problems, less than four months remain before cold weather may be expected with its added difficulties of operation. It is particularly important that adequate steps be taken in time this year because the indications are that the railroads will be called upon to handle a traffic of record proportions during this season of adverse operating conditions. A grain crop of unusual size is to be moved, much of which must of necessity be transported after snow flies. Even more pressing will be the demand for the transportation of coal, for it is evident that the normal reserves cannot be built up before winter, and that coal must therefore move during the cold weather in much larger volume than is customary. Confronted with such a situation the forehanded railway executive will plan to remove every possible obstacle to operation

before the critical time arrives. In view of the relatively short period remaining and the special demands which are now being made on engineering and maintainance officers in common with those of other departments, it is important that attention be given to the concentration of maintenance forces on that work which will contribute in the largest measure to good track, the repair of those buildings essential to operation, the rehabilitation of important pumping stations and other facilities which, if they fail, will affect operation most adversely. Likewise, it is equally advisable that preferred attention be given to those improvement projects which will relieve congestion and facilitate operation to the exclusion, for the time being, of that work which, while perhaps equally important, will not aid in carrying the peak load of the immediate future.

Railways' Rejection of President's Plan

THE DESIRABILITY of ending the shop crafts' strike was obvious to everybody when the railway executives met in New York on Tuesday to consider President Harding's plan of settlement. The country's prosperity is being jeopardized by industrial warfare. It sorely needs industrial peace. But the railway executives rejected the President's plan with more real unanimity than we have ever known them to show upon any subject.

It is important that the public should be made to understand just why this was the case. The crux of the President's plan was that part of it which related to the seniority rights of the strikers. He proposed that they should be taken back into service with the same seniority rights that they had before they struck. The railway executives refused to do this because it would have been not only inexpedient in the long run, but positively immoral.

It would have been contrary to the highest considerations of expediency from the standpoint not only of the railways, but also of the public, because in case of future railway strikes it would have furnished everybody an incentive to strike and nobody an incentive to work. Therefore, in case of strikes in future it would have greatly increased the difficulty of preventing an interruption of transportation.

It is most desirable that railway labor controversies should be settled by arbitration and not by strikes and lockouts. But to have adopted the President's plan would have been to have discriminated against men who accepted the arbitration awards of the Railroad Labor Board and stayed at work or went to work under them and in favor of men who refused to accept the awards and struck. The heaviest blow ever dealt the cause of peaceful settlement of labor disputes in this country was dealt by President Wilson in 1916, when he supported the railroad brotherhoods in their refusal to arbitrate the question of a basic eight hour day. Another heavy blow would be dealt the cause of arbitration if men who have struck rather than accept the awards of the Labor Board should lose nothing by doing so and those who have stayed at work under the awards should gain nothing.

The worst feature of the President's plan, however, was that most railway executives could not have accepted and carried it out without committing an act of perfidy and dishonor. And the fact should not be overlooked that the Railroad Labor Board would have been a partner in this perfidy and dishonor. The existing seniority rules were adopted by the Labor Board at the instance of the labor unions themselves. As the railway executives pointed out in the resolutions they adopted Tuesday, the Chairman of the Labor Board at the time the strike was called said in a public statement, which he indicated expressed the sentiments of a majority of the board, that "it must be understood now that men who remained in the service and those who are now entering it will have rights of seniority that the board could not ignore."

The railway managements, in order to maintain operation, had to offer inducements to men to stay at work and to new men to go to work. In most cases, therefore, the managements promised and authorized their supervisory officers to promise old employees who stayed at work and new men who went to work that they would be given seniority rights and the regularity of employment which those rights carry with them. The executives of the railways could not take back the strikers with their full seniority rights without violating their own promises to men now at work and completely stultifying the supervisory officers whom they authorized and directed to hold and to employ men under the obligation of the same promises. Furthermore, the Railroad Labor Board could not consent to the railways taking back the strikers with their full seniority rights without having to eat statements bearing upon the matter repeatedly made on behalf of a majority of its members immediately before and after the strike began.

It is plain that President Harding, in proposing his plan, did not fully realize how he was asking railway officers, both high and low, to sacrifice their personal honor, and that he was profoundly impressed by the menace to the country's welfare presented by the coal strike, the shop employees' strike and thinly veiled threats from high labor union sources to call sympathetic strikes in other industries if these strikes are not settled satisfactorily to the labor leaders. By a curious coincidence President Wilson in urging the railway executives in 1916 to grant the basic eight hour day, and spokesmen of the Harding administration six years later in urging that striking railway employees be taken back with their full seniority rights, have used the same argument—namely, that the railways should accept the terms proposed to help save the country from a great disaster due to the attitude of organized labor.

If a great disaster can be averted only by railway officers violating solemn promises they have made in order to keep the railways running and thereby sacrificing their personal honor, the disaster is so near and so inevitable that no sacrifice or concession that the railways or their officers could make would avert it. But President Wilson was unduly alarmed in 1916, and some other persons are unduly alarmed now. There was no real occasion then, and there is no real occasion now, for surrender to men who refuse arbitration of differences with their employers, or who refuse to accept the results of such arbitration. On the contrary, the surrender of President Wilson and Congress to the demands of the railroad brotherhoods in 1916 has caused since then far more labor trouble than it has prevented; and a similar compliance now by the government and the railroads with the demands of the striking shop employees for reinstatement of their full seniority rights probably would cause the country to reap a harvest of dragon's teeth as large as it has reaped as a result of the passage of the Adamson Act.

The only safe course for the government is to insist upon full compliance with the awards of the Railroad Labor Board and complete protection of those who have been willing to work under those awards. The only safe and honorable course for the railway managers is to keep the promises they have made to the men without whose loyal work they could not have kept the railways running. If organized labor has become so strong and reckless that it can bring disaster on the country because the railway managers will not commit an act of perfidy and dishonor to which the government itself would be a party, then a surrender to the unreasonable demands of organized labor would prove a far greater disaster to the country than any disaster which organized labor's own acts could bring upon it. Fortunately, however, organized labor is neither so strong nor so reckless as many people believe, and if government officials would only let developments in the shop crafts' strike take their natural and logical course they would soon see that at no time has there been any basis for some of their apprehensions.

Responsibility for the Threatened Coal Shortage

THERE is going to be a coal shortage. There can be no possible question about that now. It will come no matter how soon the coal strike is settled. In fact, it is already here in some parts of the country. The only question is how serious it will become.

It has been the custom for certain spokesmen of the coal operators when a coal shortage existed, or was threatened, to try to put all the responsibility for it upon failure of the railways to move all the coal offered them. They even did this after the great coal strike in November and December, 1919. They are starting to do it again. Already they are magnifying the effects of the railroad strike upon coal production with the obvious object of fastening upon the railways all the responsibility they possibly can for the coal shortage that is coming.

The *Railway Age* does not blame the coal operators for the coal strike or its effects. But the efforts of their spokesmen to make it appear that the threatened coal shortage will be due to transportation conditions rather than to mining conditions renders it necessary to present the facts regarding developments to date.

The strike in the coal mines began on April 1. Up to that date there had been produced by the mines and moved by the railways this year 129,300,000 tons of bituminous coal. This was 28,600,000 tons more than in the same period of 1921. In the four weeks before the coal strike the average tonnage of bituminous coal moved by the railways was 10,714,000 tons. If the railways had been given opportunity to move coal at that rate until their own strike began on July 1, there would not now be any danger of a coal shortage.

But the coal strike came. In the thirteen weeks from the time it began on April 1 until the railway strike began on July 1, it reduced average weekly production from 10,714,000 tons to 4,505,000 tons. This was a reduction of 6,209,000 tons a week, which means that in these thirteen weeks the coal strike prevented the railways from moving 80,717,000 tons of bituminous coal which they easily could have moved, and would have moved, if the coal strike had not occurred.

This is what the coal strike did before the railroad strike began. What effect has the railroad strike had. In the last week before the railroad strike began the production of bituminous coal was 5,226,000 tons. The production in the next week has no significance, because it included the Fourth of July holiday. In the week ended July 15, total production was 4,114,000 tons.

Even if the entire decline in production between the week ended July 1 and that ended July 15 be attributed to transportation conditions it amounted to only 1,112,000 tons, or to less than one-fifth as much as the average weekly reduction caused by the coal strike in the thirteen weeks before the railway strike began.

If the coal strike should end today the railways could immediately increase by 100 to 150 per cent the amount of coal they are transporting, regardless of the shop employees' strike. That would not be sufficient to offset the effects already produced by the coal strike. But it would be sufficient to meet all the country's really pressing needs for fuel, except possibly in the Northwest.

If there is any industry in this country which would be justified in denouncing the coal strike and its results and everybody responsible for it, it is the railroad industry. The railroads will have their traffic demoralized by it, and because they are the largest consumers of coal will have their operating expenses increased more by it than any other industry.

The railroads have troubles enough of their own without having other people's troubles shouldered upon them. Both they and the coal operators are the objects of constant attack, but at the present time the coal industry is far more vulnerable to attack than the railroad industry. The solution of the problem of providing the country with as much coal as possible is going to require close co-operation between the railroad and the coal mining interests, and mutual recriminations will make it more difficult to bring this co-operation about.

So far as we know no criticism of the coal operators because the coal strike prevented the production and transportation of 81,000,000 tons of coal in the first thirteen weeks it was in effect has yet come from any railroad source, although it would have been easy to have found grounds for such criticism. The coal industry will be well advised if it influences those who speak for it to be as reserved in what they say about transportation conditions in future as persons connected with the railways have been in what they have said recently about conditions in the coal mining industry.

Equipment Orders in July

THE NEW YORK CENTRAL'S order for 150 locomotives of the same type as Michigan Central 8,000 described in the *Railway Age* of July 22 brought July's total locomotive purchases up to 353. This made July the biggest month in locomotive purchases so far this year; the best previous month was April when 272 locomotives were ordered. The freight car orders in July totaled 15,675, the best month so far in 1922 with two exceptions namely April and May, in which months 30,507 and 18,337 cars respectively were reported. Passenger car orders in July totaled 120. The orders to date in 1922 have now reached the following figures: Locomotives, 835; freight cars, 103,847 and passenger cars, 1,352. These are shown in tabular form by months as follows:

CAR AND LOCOMOTIVE ORDERS

Month	Locomotives	Freight Cars	Passenger Cars
January	5	7,960	235
February	8	14,721	160
March	76	5,550	25
April	272	30,507	540
May	99	18,337	235
June	22	11,097	37
July	353	15,675	120
Total 7 mos.	835	103,847	1,352

The most important locomotive order reported in July was, of course, that of the New York Central, not only on account of the size of the order, but because of the progress represented in the locomotives' design. Other important orders reported during the month were the Southern's 15 Mikado and 6 switching; the Nickel Plate's 14 Mikado; the Chicago & Eastern Illinois' 10 Mikado and 6 Pacific; the Baltimore & Ohio's 35 Mikado; the Lackawanna's 5 Pacific and 25 Mikado and the Illinois Central's 15 switching, 25 Santa Fe and 25 Mikado locomotives. There is still pending the Union Pacific's inquiry for 55 Mountain, 15 Santa Fe and 10 Mallet locomotives. There seems to be a tendency in many quarters to admit that business is good but at the same time to feel, on the whole, pessimistic over the general situation. This, however, is a rather representative list of roads. It is significant that they should have placed orders in the face of the coal strike and the railroad strike and furthermore in sufficient quantity to make July—a month when business ordinarily falls off—the best month so far this year. Favorable prices are one factor. The necessity for catching up on the small acquisitions of new power in the recent past is another. The most important reason, however, is the expectation, expressed in these orders in a very practical manner, that the prosperity we now have with us is here to stay.

One wonders how it is that people can feel pessimistic in the light of such conditions as these.

Letters to the Editor

[The Railway Age welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

The Safety Department —A Money-Maker

St. Paul, Minn.

To the Editor:

During the past few years much has been said about the safety movement on railroads and figures have been published frequently to show that there has been a large decrease in the number of persons killed and injured as a result of that movement. Little or nothing, however, has appeared to illustrate the financial saving to the carriers from the decreased casualty lists.

To the railway managers who are impelled in these times to overlook no opportunity to decrease operating expenses, it would seem that this feature is important and one on which they should be fully enlightened in order better to appreciate what their safety departments mean to them. Instead of the safety department being the obtruding semi-essential humanitarian agency it is frequently regarded, it is an organization which, on many well managed roads, has become a big money-maker and a valuable asset to the company in other ways.

Illustrative of its money-making ability, a certain western trunk line's record shows that for the first three years after its safety department was established (year 1913) the yearly average number of employee casualties was 2,546. By unceasing safety activities, a gradual and material reduction of these casualties was effected so that during the past three years (notwithstanding that there was an annual force increase of about 20 per cent as compared with the former period) the reduction averaged 703 per annum. Each compensated injury averaged $350, and 65 per cent of all of the casualties were compensated, hence this reduced casualty list meant a saving in compensation payments of $140,832 per annum—a saving which is amply verified by the official operating figures.

The total cost of conducting the safety department on that line did not exceed $12,000 per annum. The return upon this expenditure therefore was 1,173 per cent, from which, of course, should be deducted the expenditure for physical changes made in carrying out the safety program. If a liberal estimate of $50,000 per annum was allowed, the yearly profit to the railroad would be 214 per cent as the result of its safety operations.

That the safety department activities were responsible for this showing is rather conclusively confirmed by the 1921 record of employees' casualties (the best showing per 1,000 men in service for which there is a record). During that year the major portion of the force was composed of men who had long been in the service of the company and had become thoroughly imbued with the principles promulgated by safety representatives.

The above amount was a direct and tangible saving, but there was a further saving effected which, though direct, is less possible to determine, and that is the increased efficiency produced through a decrease in casualties which automatically reduced the labor turnover.

F. M. Metcalfe,
Superintendent, Safety Section, Northern Pacific

Buy Specification Paints Or Buy Results?

Dayton, O.

To the Editor:

There are many ways of approaching a problem. For instance, if a given number of cubic feet be required in a block, the block could be of several different dimensions and still the number of cubic feet contained therein would be the same. So it is with the manufacture of a gallon of paint.

Recently the writer was requested to criticize a specification in which one of the ingredients specified was found to be unnecessary. A better result would have been obtained by omitting this particular ingredient as the paint would have been easier to apply, with less wastage to the consumer and with equal or even greater durability.

Many paint manufacturers maintain a research department, taking pride in the paints they produce and carefully checking their raw materials and finished products. Surely a purchaser who buys from such a manufacturer should value very highly every provision that is made for this research and for bettering the product. The buyer is more apt to secure a superior paint, possibly at less cost, than when he submits his own specification for a given paint to the manufacturer and solicits the lowest possible bid. A manufacturer furnishing paint on this basis can have no object other than to produce a paint which will just meet specification, and cannot, therefore, take the pride in such a product that he would in a material designed by himself.

Any reputable manufacturer would object to being judged by the performance of paints made to certain specifications now in force; yet a manufacturer who would hesitate to bid upon such specification paints might lose other business which he considered desirable. It is not our intention to intimate that all specifications are bad; on the contrary, from the results of practical tests by railroads, there have been drawn up some specifications which have assisted the paint manufacturer to produce superior paint for some particular purpose. Is it not also reasonable to assume that the purchaser can receive valuable information and assistance from the experience and knowledge of the manufacturer?

If there were seven brothers operating as many different paint factories, all having equal amounts of capital invested in their businesses, it is safe to say that no two of them would make their paints upon exactly the same formulæ. And were they to figure upon supplying paints such as are required by some specifications today, it is again safe to say that no two of them would figure the same way. Differences of 100 per cent have been known in the estimate submitted by different manufacturers on a given specification.

If a purchaser of paint requested a price on specification paint from each of the brothers mentioned above, it is quite certain that if each one quoted on the specification, there would be a material difference in the prices.

Paint and varnish manufacturers might be compared to housewives making bread. Two housewives might each use the same ingredients and the same oven or "mixer," yet unquestionably one would produce a loaf superior to that of the other, though both followed the same specification or recipe. Superior ingredients do not insure a superior loaf; neither do exact proportions nor perfect ovens, but judgment and experience make the difference between good bread and poor bread.

In conclusion let us say—"give the paint manufacturer a chance to use his experience and resources." The policy of many manufacturers is to produce quality. Paint manufacturers are like manufacturers of any other product; some endeavor to produce the best that money and brains can devise, while the policy of others may be to produce paints to be sold strictly upon price, regardless of quality. Let the manufacturer use his brains, his experience and his facilities to pro-

duce results and let the purchaser benefit by the results produced

Very little has been done in an effort to establish anything approaching a close relationship between the purchasing agent, the engineer of tests and the manufacturer, but the more the manufacturer develops his business along these lines and the closer the relationship between the three upon a broad scale, the better will be the results obtained.

LANGLEY INGRAHAM.

Why Speed Control Is Needed

NEW YORK CITY.

TO THE EDITOR:

I have noted with interest the editorial comments in your recent issues on the omission, by direction of the Interstate Commerce Commission, of the permissive feature in the "automatic stop" specifications, and the view expressed that this decision puts a premium upon speed control, or what is designated by inference, an incomplete or more complicated system. It is, of course, the easiest way to begin with the simplest fundamentals, but there are two sides to every question, and it may not be amiss to point out the fact that the Automatic Stop committee of the Railroad Administration, composed almost entirely of operating railway officers, specifically emphasized the need and importance of speed control in order to get trains over the road, in apparent recognition of the fact that it could be so developed as to secure the necessary freedom of movement sought by the advocates of permissive elimination of control by the engine crew, but with certain limiting conditions imperatively demanded for safe operation.

Of course, there must at all times be certain permissive possibilities in order to keep trains moving, and I would not for one moment insist that this feature is under all conditions necessarily limited to track elements under control of traffic conditions, imperative as this may be at times. But I am firmly of the opinion that free permission for an engineman simply to acknowledge the receipt of a track impulse and then cut out all automatic control, as has been sought by some proponents, would be fatal to success, for such practice could not but imperil train operation. This would afford no more protection than a simple cab signal or a track torpedo, its dangerous possibility being that the engineman, relieved from all compulsory braking, would be allowed to enter an occupied block at the speed at which he acknowledged the track impulse, or in fact at any speed to which the train could be accelerated, however unlikely he would do so.

If a frank recognition of this fact needs stress the importance of speed control, I fail to see why the Commission and its technical advisors, the Bureau of Safety, should be criticised for the elimination of a permissive feature which strikes at the root of the whole protective intent. Speed control limitation does not necessitate any serious increase in either first cost or cost of maintenance, nor does it spell undue complication. It is essential to flexibility of operation, and, properly installed, will secure not only safe reduction of operating speeds when needed, but permit the maximum of train movements with the minimum of delay. It is quite a different thing to permit an engineman to proceed under a low speed after definite warning or an enforced manual braking from allowing him to proceed under unrestricted speeds regardless of circumstances. Even without speed control definite restriction should and can be put upon manual permissive features, but whatever provision is made in this respect the use of a suitable speed control equipment will simplify and safeguard the entire operation.

FRANK J. SPRAGUE,
President, Sprague Safety Control & Signal Corporation.

A Joint Bureau of Research

NEW YORK.

TO THE EDITOR:

In your issue of May 6 you publish a letter from Professor A. J. Weishardt of the University of Arizona with a heading "Why Not Have a Joint Bureau of Research?"

Out of Arizona comes a ray of sunshine which if appropriated by the railroads will be to their very great advantage. Ways and means of cutting corners and effecting economies have never been sought after as vigorously by the railroads as they are today.

In a number of years' experience in contact with the accounting officers of the railroads it is our observation that the accounting officer in most every instance is interested in what his brother accounting officer on some other road is doing when this information is brought to him.

Why not have a joint bureau of research and where an accounting officer has by reason of a system installed, or by an installation of a mechanical device made, effected economies and ironed out wrinkles in accounting procedure why should information regarding this not be passed along the line by the bureau?

This leads us to quote from an article by Frank Nay, formerly comptroller of the Rock Island, addressed to the president of the R. A. O. A. in which he says:

> I express the hope that we may all take more time to co-operate with our brother accounting officers in the two ways which you set forth, viz., in presenting to the association the problems which have perplexed us, over which we may be "stewing," while our brother accounting officers across the way have already reached the solution; and, second, with due modesty, presenting certain methods and practices which we have found to be helpful, economical and efficient which may be just what our brother accounting officers would like to know about.

Again the same writer says:

> Our work is done in offices in the top stories in buildings. . . . Rarely do we meet our own brother officers outside of the circle of a certain half dozen with whom we come in contact regularly. . . . Without the constantly broadening influences of contact with people outside of our own department and outside of railroad service, as is the case with nearly all other departments of railroad operations, it is no wonder that we do sometimes become narrow.

While the high cost of travel does not affect the railroad official as it does the general public, it is a fact that he does not visit with his fellow accounting officers as frequently as he well might.

It is not on the largest system that we find at all times the best and most economical accounting procedure, but many times the officer in the little road, by reason of necessity, has effected economies that are well worth while. Here is where your bureau of research would bring out in detail this procedure and apply it to similar departments of other railroads.

The bureau of research could be well appealed to by the higher railroad officials to check up any department in their system which they thought might be improved upon, and also to confirm the practicality of recommendations for an installation asked for by some of their department heads.

Where a mechanical device is offered to a railroad officer today his first question is, "What can I save in the way of clerical help by its use?" At times it is impossible to save a clerk, but many clerk hours can be saved and the expensive overtime eliminated; to say nothing of the work being handled more correctly and in a better manner.

A joint bureau of research properly equipped would be one of the best investments the railroads could make.

A New Building of Solid Sheet of Glass

Santa Fe Completes Modern Shops at Albuquerque

Large Locomotive Repair Building Embodies Numerous New Features of Construction

The Atchison, Topeka & Santa Fe is now engaged in an extensive program of rehabilitation of its extensive locomotive repair facilities at Albuquerque, N. M., which involves the expenditure of more than $2,500,000. The most important unit in the new layout is a large machine shop 239 ft. wide and 604 ft. long, which has just been completed and placed in operation. This building, which with its equipment cost approximately $1,750,000, is indicative of the trend of modern shop building construction. Conspicuous among the newer features is the large proportion of the wall and roof areas which are of glass construction, affording light and ventilation to an unusual degree.

The Flue Shop Is Typical of the Smaller Buildings

Albuquerque is one of the most important locomotive repair points on the Santa Fe, being located at the junction of the El Paso line and the low grade main transcontinental freight line with the main line between Chicago and the Pacific coast. These lines are important main traffic arteries over which the largest locomotives of the system are operated.

The first shops were built at Albuquerque in 1881 soon after the main line was extended west to the coast. The more important buildings erected at that time consisted of a machine shop, a boiler shop and a blacksmith shop, all of which were constructed of red sandstone walls, supporting frame trusses and tile roofs. All of the other buildings were of frame construction with the exception of the enginehouse, which was of white stone.

The Old Layout Was Outgrown

It became apparent several years ago that this layout had become inadequate and consideration was given to the construction of entirely new facilities. The studies made at that time indicated that the best arrangement would be secured by constructing the new facilities on the present location. To that end, additional land was acquired in 1913 and several units of the new layout were constructed in 1914 and 1915. These consisted of a reinforced concrete carpenter shop and storehouse, a frame coaling station, a frame car repair shed and three lavatories of brick construction. The tracks were also rearranged at the same time to conform with the new design. In 1917, a blacksmith shop 80 ft. wide and 306 ft. long was built of steel and brick and another lavatory was added.

The Doors, Open and Closed

Following the outbreak of the war, further work was held up until 1920, when it was decided to construct a new machine shop and five small special buildings. The program called for the construction first of a pattern storage building and a flue shop and a contract was let for the building of these structures in June, 1920. Upon their completion work was commenced on the clearing of the site for the new ma-

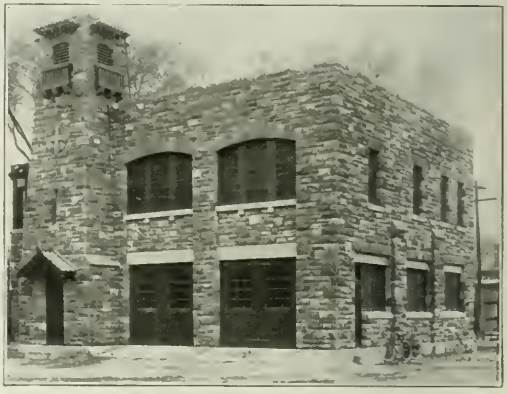
chine shop south of the transfer table which area had been occupied by the boiler shop, the blacksmith shop and several other buildings of frame and adobe construction. The equipment in the boiler shop was moved temporarily into the blacksmith shop, which arrangement permitted all work to be carried on north of the transfer table and left the space south of it for the use of the contractors engaged in building the new machine shop. In December, 1920, work was commenced on three other small buildings, a locomotive cab painting shop, a waste cleaning building and a fire department building. Early in 1921 a concrete babbitt shop was also built, while changes were made in the present power plant to enable it to carry the increased load from the new shop.

Showing the Skylight Construction

Locomotive Repair Shop Most Important Structure

The principal interest in the improvements at this point centers in the locomotive repair shop. This building, which covers a ground area of 3.5 acres, is divided into four bays. The erecting bay, which is 90 ft. wide and 57 ft. high from floor to underside of trusses, is located adjacent to the transfer table. Adjoining this section is a heavy machine bay, 65 ft. in width, and light machine and bench bays, each 40 ft. in width beyond. The heavy and light machine bays are 35 ft. in height, while a balcony extends over the entire bench bay with a small mezzanine floor 88 ft. long between it and the main floor.

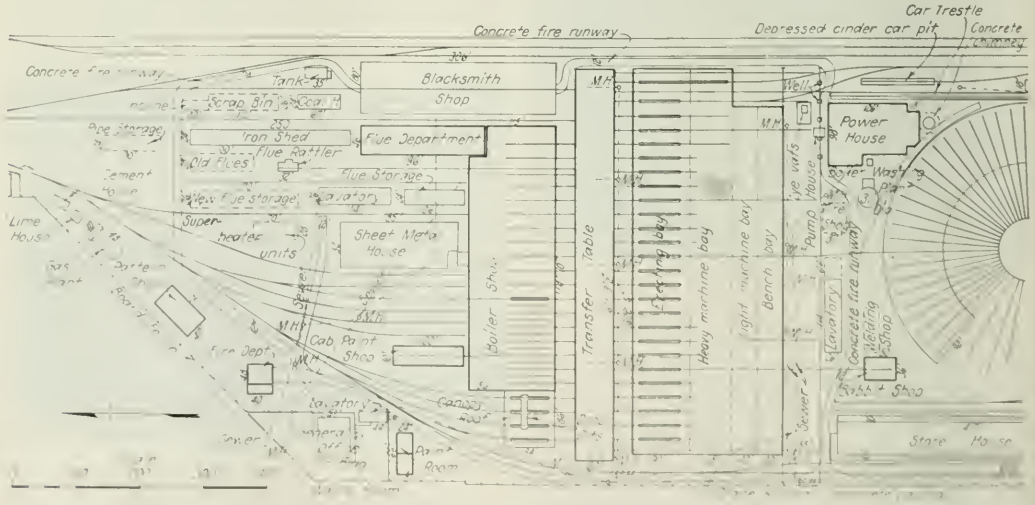
The building is of steel frame construction supported on concrete piers. The end walls are of concrete construction with liberal provision for steel sash, while the sides are almost entirely of sash. The roof consists of double sheathing, carried on steel roof trusses and covered with five-ply Barrett Specification roofing.



The Fire Station Is Unique in Appearance

The columns supporting the erecting bay and the traveling cranes are supported on creosoted wooden piling designed to carry a load of 16 tons. A total of 836 piles were used, for which an average penetration of 26 ft. 4 in. was secured. At other points the concrete footings rest on a thick stratum of stiff adobe and are designed for a loading of 3,000 lb. per sq. ft.

The most noteworthy feature of this building is the large area of wall which has been given over to Truscon steel sash and glass construction. The two sides of the building are of glass from sill to cornice, while liberal use of the same construction has prevailed in the ends. The glass in the



Layout of the New and Old Buildings—

sides is placed in a plane four inches beyond the face of the structural members, thus presenting an almost unbroken surface of glass. This arrangement simplified the construction details and protects the steel work from outside exposure. "Solite," factory ribbed glass, made by the Streator Glass Co., Streator, Ill., was used in panes 14 in. by 20 in. All fronts of steel sash are equipped with ventilating sash which are opened and closed by mechanical operating devices, which work in sections of four panels 288 ft. in length. Approximately 14 per cent of the wall area above the doors in the sides of the building is equipped with this ventilating sash.

To supplement the natural illumination from the sides, A-shaped sky-lights have been installed at intervals of 22 ft. over the heavy and light machine bays and the balcony floor. These lights are glazed with ¼ in. Penticor ribbed wire glass, made by the Mississippi Wire Glass Co., New York, which bars the direct rays of the sun.

The upper portions on one-half of the sash area in these skylights are arranged to be opened and closed mechanically.

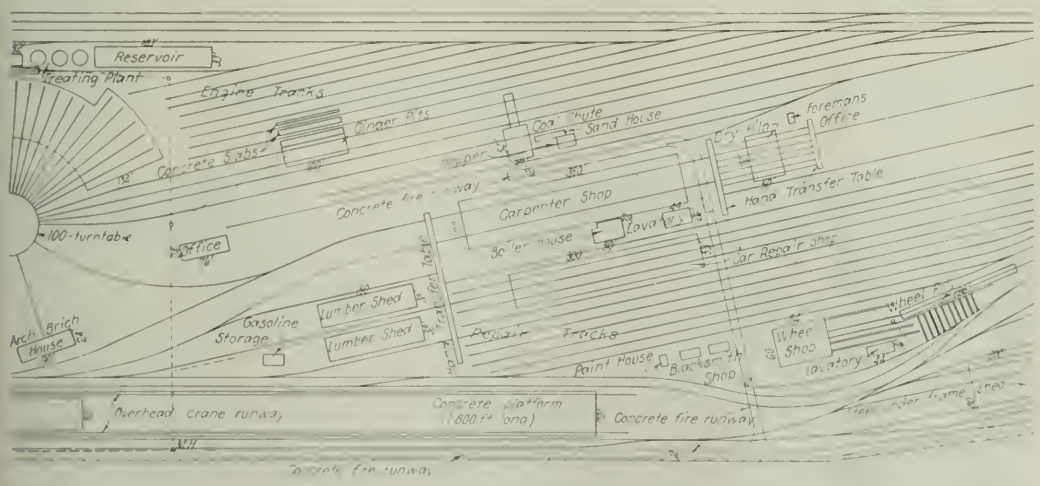
Artificial ventilation and heat are provided through two fan rooms placed on the roof of the heavy machine bay, adjacent to the erecting shop and opening into it. Each of these rooms contains two electric fans, of the Buffalo Forge type, one of 90,700 cu. ft. and the other of 68,000 cu. ft. air capacity per minute. These fans force the air through heating coils from which it is distributed through the shop by means of a series of main ducts encircling the building with small branches leading down the columns and discharging the air at a level of seven feet above the floor. When the temperature is such that the full capacity of the fans is not required, one or more can be shut down. The ventilating system has a capacity sufficient to change the air in the entire shop building three times in an hour.

The Old Machine Shop Differs Radically from the New

Artificial illumination is secured in the erecting bay by a direct system of electric lighting with sockets for portable lamps in the pits. Other bays are lighted by incandescent lamps.

Another special feature of this building is the use of three-inch Kreolite creosoted wood blocks on a six-inch concrete base as a floor. This concrete sub-floor was finished to a true surface and primed with a one-eighth-inch bituminous coating upon which the blocks were laid. Pitch was squeezed in the cracks between the blocks, effectively waterproofing them. Of the nearly four acres of floor area in this building, 123,916 square feet, or nearly three acres, is of wood block construction, all of which was furnished by Jennison & Wright, Toledo, Ohio.

Another new development in this shop is the type of door construction provided in the north wall of the erecting bay, through which locomotives pass to the transfer platform.



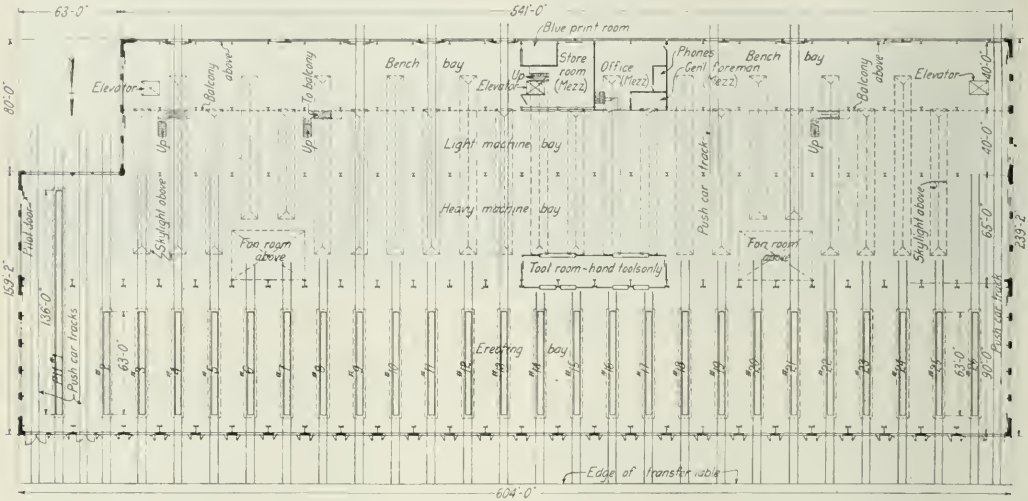
New Buildings Shown in Heavy Lines

These doors, which are of Truscon design, with Richards Wilcox hardware, are 8 feet wide and 18 feet high. They are of bifold design and open outward with a maximum projection of only slightly over four feet. When open they are held in place by means of latched posts. They are glazed with ¼-in. wire glass. These doors are built with a heavy drawn steel tubing frame and are supported on rollers on overhead tracks, causing them to operate unusually easily for doors of this size. Smaller pilot doors 2 ft. 6 in. wide and 6 ft. 3 in. high are provided in a number of these doors for pedestrian use.

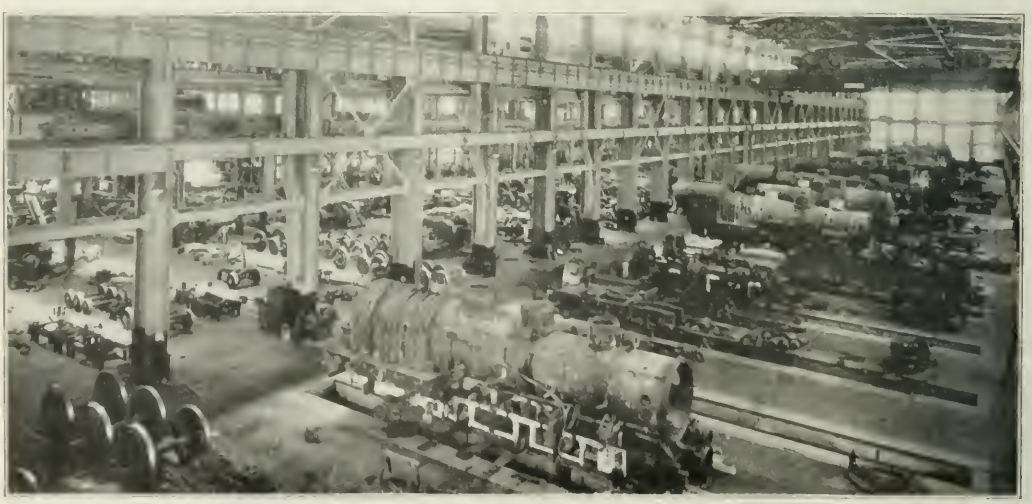
The erecting bay contains 26 concrete engine repair pits 63 ft. long, 43 in. wide at the bottom and 48 in. wide at the top and 2 ft. 8 in. to 3 ft. deep. These pits are fitted with slots containing connections for various power, gas and light sockets for portable lamps. The tracks over these pits and three push car trucks extend through the folding doors in the north wall to the transfer table.

A special feature of the equipment of this building is the liberal installation of cranes, all of which were furnished by Manning, Maxwell & Moore, Inc., New York. A 250-ton, and two 15-ton electric cranes have been installed in the erecting bay. Two 15-ton cranes have been erected in the heavy machine bay and two 2½-ton floor-controlled cranes have been placed in the bench bay. The light machine bay is served by a five-ton monorail crane, in addition to which automatic power-driven jib cranes serve individual machines when required. A crane runway has also been provided outside of and around the south side of the building, extending 50 ft. beyond the west wall. This crane, which has a 55-ft. span, serves a storage yard to be paved with concrete.

More than 60 new tools are included in the equipment of



The Layout of the Shop



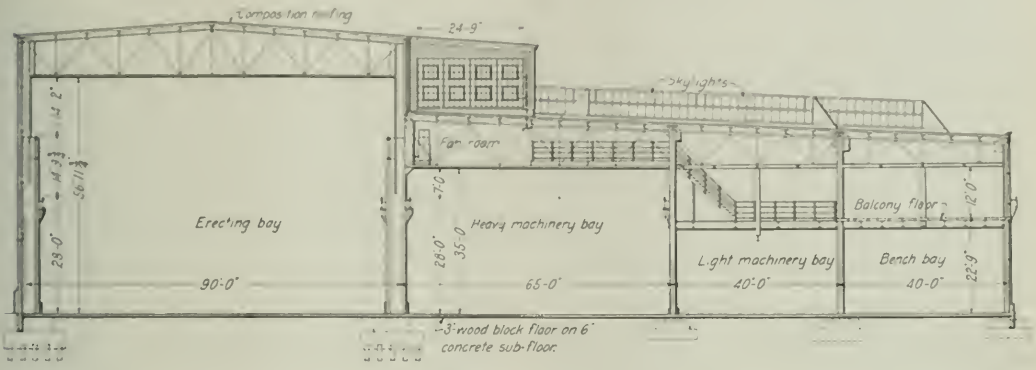
Looking Across the Erecting Bay into the Heavy and Light Machine Bays

the new shop. Among these are 15 engine lathes, two of which are portable, a car-wheel lathe and a double-head car axle lathe, two vertical and one horizontal turret lathes, one 100-in. boring mill and four of smaller size, five radial drill presses, one double-head and five single head shapers, three slotters, one piston rod, and one guide grinder, three double-head dry grinders and two single wet tool grinders, and, among others, several tools for the tin shop.

The exterior steel sash and doors of the building are painted with Tocholith in a dark green, while the steel frame interior is painted with Toch Bros. battleship gray in enamel. The underside of the roof and the interior walls are painted with Pratt & Lamberts' Lyt-All mill enamel.

Wash rooms fitted with Lyon metallic lockers for 800 men, together with a brass room, a headlight room, an electric shop and an apprentice school room are located on the balcony, while the file room, storeroom and office are on the mezzanine floor. Three Otis electric elevators and stairways connect these floors.

Work on this building was commenced on October 28, 1920. The driving of the fundation piles was completed on January 19, 1921, and the foundations early in March, 7,401 cu. yds. of concrete and 9,286 cu. yds. of excavation being handled. The steel erection was begun on March 6 and finished on June 2, 3,849 tons being placed in position in this interval by the American Bridge Co., which also fabri-



Section Through the Main Shop Building

cated the steel. The building itself was practically completed by January 1, while the machinery was in place and the shop in operation in June of this year.

Several Other Buildings Also Added

Other buildings which have been completed at this point include a flue shop, 46 ft. by 196 ft. in area, a cab paint shop 36 ft. by 122 ft., a pattern shop 40 ft. by 70 ft., a waste

The Large Areas of Glass Are Evident Here

cleaning shop 24 ft. by 66 ft., a babbitt shop 36 ft. by 50 ft. and a fire department building 40 ft. by 47 ft. All of these structures except the fire station are one-story in height and of reinforced concrete construction. The latter building is constructed of stone salvaged from buildings which have been dismantled and is two stories high. Additions have also been made to the power house and a chimney 230 ft. high has been erected. A new transfer table 60 ft. by 611 ft. is now under construction between the new machine shop and a projected boiler shop.

As now planned, this latter building will be 416 ft. long and 140 ft. wide, with drop pits outside the west end to be covered by a steel and concrete canopy 80 ft. square. The construction of the new boiler shop will be along the same general lines as the machine shop. Other projected improvements include a complete system of concrete fire runways about the yard, a welding shop, a dry kiln of 300,000 ft. b. m. capacity and extensions to certain of the lavatories.

These structures have been designed by E. A. Harrison, architect of the Santa Fe System, under the immediate supervision of C. F. W. Felt, chief engineer system, and G. W. Harris, assistant chief engineer system, A. F. Robinson, bridge engineer system, co-operating in the design of the structural steel. The construction of the buildings was carried on under the supervision of F. M. Bisbee, chief engineer Western lines, with W. M. Holm resident engineer on the ground. The work of installing the machinery and piping was handled under the jurisdiction of B. P. Phelps, engineer shop extensions, while all electrical installations were in charge of C. E. Nutter, electrical engineer of the Santa Fe.

The contractor for the main locomotive repair shop was Joseph E. Nelson & Sons, Chicago. C. A. Fellows, Los Angeles, Cal., was the contractor for the remainder of the buildings.

Freight Car Loading

WASHINGTON, D. C.

REPORTS received by the Car Service Division of the American Railway Association show that despite the railway strike the total loading of all commodities, other than coal, during the week which ended on July 22, was the heaviest for this season of the year of any in the history of the carriers, and within nine-tenths of 1 per cent of the peak of October 15, 1920.

During that week 861,124 cars were loaded with revenue freight, an increase of 217 cars over the preceding week and an increase of 73,090 cars over the corresponding week last year. Compared with the corresponding week in 1920, however, total loadings for the week of July 22, this year showed a decrease of 67,294 cars. Omitting coal loadings, the loading of all other commodities during the week of July 22, this year totaled 785,064 cars, which was an increase over the total for the same commodities during the same week two years ago of 58,236 cars.

Grain and grain products totaled 57,566 cars, an increase of 8,655 cars over the previous week. This was a decrease of 7,149 cars compared with the corresponding week last year, but an increase of 22,089 cars over the corresponding week in 1920. Loadings for the week, however, were the highest since the week of September 3, 1921.

Coal loadings totaled 76,060 cars, a reduction of 1,274 cars under the previous week. Compared with the same week last year this was a decrease of 73,745 cars, and with the same week two years ago a decrease of 125,530 cars. Coke loadings amounted to 9,949 cars, a gain of 251 cars over the preceding week. It also was an increase of 6,179 over the same week last year, but 3,178 below two years ago. Live stock loadings totaled 27,455 cars, a reduction of 2,761 compared with the preceding week. However, that this was an increase of 3,199 cars compared with the same week last year, and an increase of 1,345 cars over the same week in 1920.

Merchandise and miscellaneous freight, totaled 567,165 cars, 300 cars less than the week before. This exceeded the corresponding week last year by 98,342 cars, and the corresponding week in 1920 by 50,480 cars. Forest products totaled 58,512 cars, a gain over the week before of 391 cars. This also was a gain of 15,454 cars over the same week last year, and 397 cars over two years ago. Ore loadings totaled 64,417 cars, 4,745 cars less than the previous week. While this was an increase of 30,810 cars above last year, it was a decrease of 12,897 cars under two years ago.

Compared by districts, the reports show an increase over the week before in the total loading of all commodities in the Eastern, Allegheny and Southwestern districts, while the Pocahontas, Southern, Northwestern and Centralwestern districts reported decreases. Compared with the corresponding week last year all showed increases with the exception of the Pocahontas and Southwestern districts.

The car surplus was reduced during the period July 15-23 to 203,322, and shortages amounting to 15,366 were reported from various sections. The surplus included 35,145 box cars and 141,430 coal cars, while the shortages included 8,330 box cars and 3,597 coal cars.

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS. COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JULY 22, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L.C.L.	Miscellaneous	Total revenue freight loaded: This year, 1922	Corresponding year, 1921	Corresponding year, 1920

Executives Flatly Reject Harding Peace Proposal

Rail Carriers Refuse Absolutely to Restore Shop Strikers' Seniority—Unions Accept Plan

MEMBER ROADS OF the Association of Railway Executives meeting in New York on Tuesday rejected President Harding's proposals for a settlement of the shopmen's strike. The rejection was unanimous. It was based on the third of three suggestions contained in a letter from the President to T. DeWitt Cuyler, chairman of the Association. This suggestion was that all strikers be returned to service "with seniority and other rights unimpaired." The executives held that they could not with honor accept this part of the President's program, since it would involve a breach of faith with men now at work in the strikers' places who have been promised "that their services would be retained regardless of the settlement of the strike, with all the rights appertaining to such employment, including that of seniority under the working rules and regulations previously approved by the Labor Board." Special reference was made in the executives' reply to the President's letter to a statement made by Chairman Hooper of the Labor Board in the early days of the strike which said that "It must be understood now that men who remained in the service and those who are now entering it will have rights of seniority that the Board could not ignore." The President's letter to Mr. Cuyler contained three proposals which were briefly: (1) that executives and shopmen agree to recognize the validity of all decisions of the Labor Board: (2) that the carriers withdraw all lawsuits growing out of the strike and that Labor Board decisions involved in the strike be taken to the Labor Board for a rehearing, and (3) that all employees now on strike be returned to their former positions with seniority and other rights unimpaired.

The executives accepted the first two proposals with conditions, these being in the case of (1) that the roads reserved the right to question in the courts the validity of any order of the Board which they believed beyond its jurisdiction and in the case of (2) with the understanding that the strike is first called off, that the unions pledge themselves against any form of violence "since otherwise it be impossible to consider the dismissal of injunctions" necessary to protect railroad property.

The third measure was flatly rejected. Moreover, the executives showed their astonishment when it was read that the President should make a suggestion of its character. Last Thursday Chairman Cuyler called on President Harding and discussed with him possible means of bringing the strike to a close. After the conference Mr. Cuyler called a special meeting of member roads of the association to be held in New York on Tuesday. This meeting was to consider a plan to be presented to Mr. Cuyler by the President and it was the general understanding that the plan would be such that Mr. Cuyler would recommend its adoption. No official statement was issued, however, concerning the form which the President's suggestions would take. It is understood in fact that no particular plan was talked over at the conference between Mr. Cuyler and the President. Later, however, the understanding was given out that settlement of the seniority issue was to be contained in a provision somewhat as follows: The shopmen who remained in service were to have seniority over returning strikers, and employees hired since the beginning of the strike were to acquire seniority only in accordance with the length of their service.

This plan would presumably have been acceptable to some of the executives, and it was the general impression that the issue would result in no small amount of discussion at the executives' meeting. Possible conflict of opinion among the executives, however, was not realized. When it was learned that the President's proposal was so far reaching the opinion against it was unanimous. The resolution rejecting the president's suggestion was passed with two dissenting votes —by a vote of 205 to 2—both of these being cast by L. F. Loree, voting as president of the Delaware & Hudson and as chairman of the board of the Kansas City Southern. Mr. Loree dissented on the ground that the rejection was not sufficiently strong.

The full text of the President's letter and of the executives' resolution in reply will be found on an adjacent page.

Immediately after the meeting the resolution was wired to the President at Washington. Secretary of Commerce Hoover was at the meeting to give the viewpoint of the Administration on the strike issue. He expressed the view that the Administration was feeling great anxiety about the labor situation and desired a prompt settlement.

The Situation at Washington

That the President had reached in his own mind a basis for "a compromise settlement" of the railroad strike, which was to be put in writing and submitted to the railway executives at their meeting in New York on Tuesday and to the shop crafts at a meeting of their general committee in Chicago on Tuesday or Wednesday was officially announced at the White House Friday afternoon after a series of conferences which the President had held with Thomas DeWitt Cuyler, chairman of the Association of Railway Executives and W. W. Atterbury, vice-president of the Pennsylvania, representing the railroads, and B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, and the heads of seven unions on strike. The President was represented as confident that "the plan would meet the situation in a way that cannot be denied" but it was stated that the details could not be divulged and that the plan had not yet been completely formulated but would be on the following day. He had also expressed confidence that the coal situation would be met.

The fact that the President had a plan to propose was also announced to the press by the labor leaders a few minutes before the official announcement from the White House, as they left the President after a final conference. They also stated positively that there would be no separate settlements with individual roads. This referred to the fact that the proposal of the Baltimore & Ohio had been submitted to the President through Senator Watson.

The meeting of the member roads of the Association of Railway Executives at New York on Tuesday, for the purpose of considering whether the railroads would make any concessions to settle the strike, in accordance with the wishes of the President, was called by Chairman Cuyler following a conference with President Harding at the White House, Thursday evening and after the President had spent the day in conference with Mr. Cuyler and the heads of the labor organizations now on strike. While Mr. Cuyler said that no definite basis of settlement had been proposed and that the President had made no definite request of the railroads, it was understood that he had expressed to them his very great anxiety that some method of settlement be reached that would end the strike without a long-drawn out fight. The President had begun conferring with the direct parties to the controversy, after having previously dealt through Chairman Hooper of the Labor Board, members of his cabinet and senators as intermediaries, by meeting on Wednesday

Text of President Harding's Suggestions for Ending Shopmen's Strike and the Reply by the Railway Executives

The President's Letter

THE WHITE HOUSE, Washington, July 31, 1922.

MY DEAR MR. CUYLER:

I am writing to convey to you the terms of agreement, as I understand them, upon which the railway managers and united shopcraft workers are to agree, preliminary to calling off the existing strike.

First—Railway managers and workmen are to agree to recognize the validity of all decisions of the Railroad Labor Board, and to faithfully carry out such decisions as contemplated by the law.

Second—The carriers will withdraw all lawsuits growing out of the strike, and Railroad Labor Board decisions which have been involved in the strike may be taken, in the exercise of recognized rights by either party, to the Railroad Labor Board for rehearing.

Third—All employees now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and the representatives of the organizations especially agree that there will be no discrimination by either party against the employees who did or did not strike.

In view of the things said in our personal interview, it is hardly necessary for me to emphasize my belief in the wisdom of the railway managers accepting this compromise in order to bring the strike to an end. I have made a very full appraisal of all the embarrassments involved in making the seniority restoration. It has seemed to me that the proposition that the order of things on the day the strike began be restored, and that both employers and workers agree against discrimination toward either those who struck or did not strike, will leave to the managers only the difficult problem of dealing with the new men employed. It would be futile for me to attempt to point the way of most easily solving that difficulty. I have only attempted to appraise the situation from the larger viewpoint. It seems to me that such a settlement brings, first of all, the restoration to normal operations in transportation for which the country is calling. In the second place, it establishes definitely the full recognition of the Railroad Labor Board by all parties concerned. I have not specifically stated it in the terms of settlement, but, of course, the abandonment of the contract system, in accordance with the decision of the board, is to be expected on the part of all railroads. It is wholly unthinkable that the Railroad Labor Board can be made a useful agency of the Government in maintaining industrial peace in the railway service unless employers and workers are both prompt and unquestioning in their acceptance of its decisions. I think it is more desirable than I know how to express to have established the unchallenged authority of the Railroad Labor Board, because we must do those things which are necessary to bring about the recognition of suitable authority to decide and end such disputes as menace the continuity of transportation.

You are at liberty to present the situation as I have outlined it to you, and I hope you will convey to the members my deep conviction that this dispute must be brought to an early termination. I need hardly add that I have reason to believe these terms will be accepted by the workers. If there is good reason why the managers cannot accept, they will be obligated to open direct negotiations or assume full responsibility for the situation. With very best regards, I am, very truly yours. WARREN G. HARDING.

T. DeWitt Cuyler, Chairman, Association of Railway Executives, Waldorf-Astoria Hotel, New York City, N. Y.

The Executives' Reply

ASSOCIATION OF RAILWAY EXECUTIVES, 61 BROADWAY, NEW YORK.

Resolved, (1) That we accept the first recommendation of the President, reading as follows:

First—Railway managers and workmen are to agree to recognize the validity of all decisions of the Railroad Labor Board, and to faithfully carry out such decisions as contemplated by the law.

with the understanding that this is not intended to preclude any party to a controversy from proceeding by legal action to question the validity of any order of the board on the ground that jurisdiction and authority to make the order was not conferred by the statutes creating the Board and defining its authority

(2) That we accept the second proposal of the President, reading as follows:

Second—The carriers will withdraw all lawsuits growing out of the strike, and Railroad Labor Board decisions which have been involved in the strike may be taken, in the exercise of recognized rights by either party, to the Railroad Labor Board for rehearing.

with the understanding that the strike is first called off, and the representatives of the strikers pledge themselves and the strikers against violence in any form against the men now at work and the property of the carriers, since otherwise it would be impossible to consider the dismissal of injunctions and other legal measures necessary to protect such persons and property from the violence and intimidation of the character resorted to in many localities since the strike was called.

(3) That it is impossible to agree to the first sentence of the third proposal of the President, the whole of which reads as follows:

Third—All employees now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and the representatives of the organizations especially agree that there will be no discrimination by either party against the employees who did or did not strike.

The railroad executives and managers agree entirely with the President's statement in his letter that "It

is wholly unthinkable that the Railroad Labor Board can be made a useful agency of the Government in maintaining industrial peace in the railway service unless employers and workers are both prompt and unquestioning in their acceptance of its decisions. I think it is more desirable than I know how to express to have established the unchallenged authority of the Railroad Labor Board, because we must do those things which are necessary to bring about the recognition of suitable authority to decide and end such disputes as menace the continuity of transportation."

By this language the President has expressed with great force and clearness the policy which we advocate. But the decisions of the Railroad Labor Board were flouted and defied by the six organizations comprising the Federated Shop Crafts; the strike was called to take effect July 1, 1922, and even the summons of the Board to appear with the railroad executives before the Labor Board, after the strike was called and before it took effect, was contemptuously ignored by the leaders of the strikers, who refused to attend the hearing. Thereupon it became the plain duty of the railroads actively and vigorously to undertake to uphold the orderly processes for the adjustment of industrial disputes contemplated by the statute creating the Labor Board, and represented by the decisions of that Board against which the strike in question was directed, and at the same time continue to the best of their ability to discharge their duty to the public as common carriers.

Many men in the service refused to join the strike and in so doing were assured of the seniority rights accruing to them and of the permanence of their positions. On some important lines 50 per cent or more refused to join the strike. To these old loyal employees have been added thousands of new men who were employed and could be secured only upon a definite promise that their services would be retained regardless of the settlement of the strike, with all the rights appertaining to such employment, including that of seniority under the working rules and regulations previously approved by the Railroad Labor Board. We especially point out that a refusal to the old men who remained in the service and to the new men who accepted service of the rights of seniority incident to their employment would have just the opposite effect to that desired by the President, and would most seriously discredit the Labor Board. The Board itself prescribed the rules of seniority under which the men referred to have secured their seniority rights, and the railroad companies have neither the legal nor moral right to deprive these men of those rights. By public utterances since the strike began the Board has recognized and emphasized these rights, and to deny them now would, instead of upholding the authority of the Labor Board, overthrow its rules and discredit its authority.

The Chairman of the Labor Board at the time the strike was called made the following public statement:

> Upon one question the striking employees should not be deceived. Their leader has said that the strikers are no longer employees of the railways, and they have thus automatically abandoned all the rights they possess under their agreements and under the decisions of the board, including their seniority. This is not the board's action. It is their own.
>
> Many carriers are giving their former employees the opportunity to re-enter the service within a limited time. It must be understood now that men who remained in the service and those who are now entering it will have rights of seniority that the board could not ignore.

The chairman of the board's statement that this is an individual utterance, but it expresses, in substance, the sentiments of a large majority of the members of the Railroad Labor Board was justified by formal action of the Board taken in its resolution of July 3, 1922, which stated, among other things, as follows:

> Be it further resolved, That the employees remaining in the service and the new ones entering same, be accorded the application and benefit of the outstanding wage and rule decisions of the Railroad Labor Board, until they are amended or modified by agreements with said employees, arrived at in conformity with the Transportation act, or by decision of this board, and
>
> Be it further resolved, That if it be assumed that the employees who leave the service of the carrier because of their dissatisfaction with any decision of the Labor Board are within their rights in so doing, it must likewise be conceded that the men who remain in the service and those who enter it anew are within their rights in accepting such employment; that they are not strike-breakers seeking to impose the arbitrary will of an employer on employees; that they have the moral as well as the legal right to engage in such service of the American public to avoid interruption of indispensible railway transportation, and that they are entitled to the protection of every department and branch of the Government, State and national.

It must be understood that any proposal that employees now on strike shall be permitted to return to the service, without impairment to their seniority, is merely another way of suggesting that those men who took employment in this crisis in good faith, relying on the promises of the railroads to protect them in their positions, these promises being justified by the authoritative utterances of the Labor Board, and thus have made possible the continued operation of the railroads, shall now be sacrificed in favor of men now on strike, who not only brought about the crisis, but, by their own action and declaration, are no longer employees of the railways, under the jurisdiction of the United States Railroad Labor Board, or subject to the application of the Transportation Act.

In addition to the necessity of upholding the Labor Board, and maintaining the pledges made by the railroads to the men now at work, there is the practical effect on the supervisory officers of a violation of the pledges they were authorized to make. Their discouragement and demoralization would be far more disastrous than this or any other strike. Much harm has already been done by repeated publication of rumors in recent days that the loyal men and the new men are to be sacrificed to the strikers. This has discouraged new men from accepting employment in as great numbers as would come forward if certain that the pledges given would be fulfilled. Such published rumors only delay the complete collapse of the strike.

In view of the above, it is submitted that the striking former employees cannot be given preference to employees at present in the service without doing violence to every principle of right and justice involved in this matter and without the grossest breach of faith on the part of the railroads to the men at present in their service. Under these circumstances, it becomes apparent that the railroads cannot consider any settlement of the present strike which does not provide protection in their present employment both to the loyal employees who remained in the service and to the new employees entering it.

with General Atterbury, who had said that the Pennsylvania would be guided on the seniority question by the determination of its employees.

On Thursday morning he conferred for over an hour with Mr. Cuyler, who said he would remain in the city awaiting the pleasure of the President. From 11:00 in the morning until nearly six, with an intermission for luncheon, the President met with B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, and the officers of the seven organizations on strike who had come from Chicago for the purpose. While it was stated at the White House that they had not been invited to a conference with the President it is understood the visit may have been arranged by Secretary of Labor Davis who had met with Mr. Jewell at Mooseheart on July 22. Secretary Hoover joined the conference for a short time toward its close.

The labor leaders on emerging from the conference declined to say what had been discussed except that they had gone over the entire situation with the President and had expressed their views and that they were remaining in the city over night, whereas they had earlier announced their intention to return to Chicago immediately after the conference. They indicated that they were barred from answering questions of the newspaper men by the request of the President. It was understood that they were staying over to await possible results from the second conference between the President and Mr. Cuyler in the evening which lasted for two hours. While there had been reports that at least a tentative proposal for a settlement had been made during the day Mr. Cuyler said that he had no definite proposal to place before the meeting on Tuesday and in reply to a question as to whether the President had requested the roads to yield on their position of declining to subordinate their new employees or those who had remained loyal to the strikers in point of seniority, he said that the President had made no request of any kind. The conference, he said, had been devoted to a general survey of the situation but he could not report what he or the President had said. He would place the views of the President before the meeting but would not attempt to predict the outcome.

The labor leaders who accompanied Mr. Jewell to the White House were: W. H. Johnston, president of the International Union of Machinists; J. A. Franklin, president of the International Union of Boiler Makers; M. F. Ryan, president of the Brotherhood of Railway Carmen; James Burns, vice-president of the Sheet Metal Workers' International Alliance; Edward Evans, vice-president of the Brotherhood of Electrical Workers; James Kline, president of the International Brotherhood of Blacksmiths, and Timothy Healy, president of the International Brotherhood of Stationary Firemen and Oilers.

Mr. Jewell held another conference with the President on Friday morning and in the afternon he saw the President again accompanied by Mr. Johnston and Mr. Franklin, who made the announcement as they came out that the President would submit a plan.

It is understood that there was considerable difference of opinion among the President's cabinet advisors over the question as to whether he should demand that the railroads take back the strikers with full seniority rights if they would agree to call off the strike pending a rehearing of the wage question. Some of them have been inclined to consider this question a mere technicality, failing to appreciate its effect in the case of the large number of roads that have been able to retain or recruit a considerable percentage of a normal force. It was suggested that a possible basis of settlement would be for the strike to be called off and the men to return to work with an understanding that the seniority question would be submitted to the Labor Board as a new dispute.

The President's plan, as given out at the White House for the first time on Tuesday noon, caused considerable surprise because the proposed surrender of the seniority question was so much more complete than had been indicated in the newspaper forecasts. While government officials had freely predicted that the plan would be accepted by both sides, in other quarters it had been assumed that this optimism must have been based on some feature of the plan which had not been published or upon the idea that some assurances would be given to the railroads of legislation to prevent a recurrence.

Lack of Balance in President's Plan

In proposing to settle the railroad strike by a compromise, President Harding was actuated by two primary motives—the desire to increase coal production and to strengthen the authority of the Labor Board. The most direct object, undoubtedly, was to make it easier to deal with the coal situation in which the President's plan of arbitration was rejected by the miners' union. Although the railroad strike has not yet interfered very seriously with commerce in general, as indicated by the fact that car loadings during the second and third weeks of July were only 15,000 to 17,000 cars less than during the last two weeks of June, the effect of the railroads originating most of the present supply of coal was becoming very serious, especially when added to the difficulty of car shortage and congestion that had begun to develop even before the railroad strike. The week of maximum coal production since the strike began was that ending June 24, when it reached 5,363,000 tons. There was a drop in the following week ascribed to railroad disability, followed by a sharper drop during the first three weeks of July after the calling of the shopmen's strike. There was an increase to about 3,900,000 tons during last week but this had not been shown by the time the President formulated his plan for settling the railroad strike, and preliminary reports indicate only a small further increase during the present week. Following failure of the efforts to settle the coal strike it then became necessary to try to meet the situation as well as possible by setting up the organization to distribute the available coal to the most essential consumers and it was the hope that if the railroad strike could be terminated the production of coal from the non-union mines and such union mines as could be opened might be gradually increased until it could at least supply the most essential requirements and possibly amount to enough to gradually break the strike.

Aside from the question of expediency presented by the coal shortage, the President also apparently saw an opportunity to strengthen the authority of the Labor Board, without waiting for "teeth" to be furnished by new legislation, by inducing both sides to recognize hereafter the validity of all its decisions.

The lack of balance in the President's plan seems to have arisen from his failure to appreciate the importance of the seniority issue and the fact that the roads that were most anxious to settle the strike, because they have not been able to recruit a sufficiently large force to replace the strikers, and to whom, therefore, the return of the strikers with only a promise of a rehearing might be regarded as a concession on the part of the unions, were not the ones to which the seniority question was an acutely practical one. Many of them had not issued any ultimatums to the strikers and would be able to take back all their old men with full seniority, without in any way displacing or breaking faith with new employees. On the other hand, to roads located in districts having an industrial population to draw from, that had been able to retain and recruit a large percentage of a normal force, a calling off of the strike represented no concession on the part of the unions and an agreement to take the strikers back with unimpaired seniority would raise a very practical question of how to use both the old and the new men unless they were to

break faith with the new employees. To roads of this class the proposed compromise meant that, after they had beaten Mr. Jewell and, they hoped, in such a way as to make him very reluctant to call another strike in the near future, he was asking that his men be taken back, with only the loss of the month's work which they had spurned; that the men who had remained loyal should receive no reward except the overtime they had earned and the ill-will of the strikers who would naturally blame them for their own lack of success, and that the new men be treated as "scabs" in spite of the Labor Board resolution.

No statement was forthcoming from the White House on Wednesday as to the President's next move. Secretary Hoover reported to him in the morning on his return from the New York meeting but said he could not say whether the President would reply to the letter from the railway executives.

A resolution was introduced in the Senate on August 1 by Senator Harrison for Senator King of Utah directing the Interstate Commerce Commission to make an immediate investigation of charges made by the unions that locomotives were being used without federal inspection in violation of the law. It was referred to the committee on interstate commerce.

Unions Accept President's Plan

The shop crafts' leaders meeting in Chicago voted on Wednesday to accept President Harding's peace proposals, conditioned, however, upon recognition of the unions' interpretation of the settlement suggestions. President Harding was apprised of the acceptance by the shopmen's leaders in a lengthy telegram emphasizing the shop crafts' demand for the establishment of a national board of adjustment and reluctantly accepting the other issues.

The message read as follows:

"The representatives of the employes feel themselves under obligation to support every proper effort on the part of the Government to bring about or to preserve the uninterrupted operation of the transportation industry. The stubborn refusal of the railway executives to establish a board of adjustment, as contemplated by law, in order to settle efficiently disputes over rules and working conditions between the carriers and their employes; the continued refusal of railways, representing over a quarter of the mileage of Class I railroads, to comply with the decisions of the Railroad Labor Board against the practice of contracting out work and shops; the persistent campaign to deny to the railway employes just and reasonable wages, to impose upon them unfair working conditions and to disintegrate their organizations, all in cumulative effect rendered service by railway employes under the terms and conditions to be effective July 1, 1922, intolerable to over 95 per cent. of these employes, who, therefore, voted to suspend work.

"It is now proposed that the return to work, temporarily accepting wages and working conditions which they feel to be unjust, with reliance upon the following program for redress of grievances:

"'First—Railway managers and workmen are to agree to recognize the validity of all decisions of the Railroad Labor Board, and to faithfully carry out such decisions as contemplated by law.'

"The employes have always taken the position that as long as they continued to render service they should abide by the rules and working conditions and accept the wages agreed upon by proper negotiation or determined by the Labor Board after a hearing of a dispute upon any of these matters. They respectfully point out again that violations of law and refusals to comply with decisions of the Labor Board have been exhibited only by the railway managements, and that it has been universally admitted that the employes, in exercising their right to suspend work upon non-acceptable conditions, were neither violating the law nor the decisions of the board.

Quotes Case of Pennsylvania

"We understand that the recognition of the validity of all decisions by the Railroad Labor Board, as contemplated by the law, means, for example, that in the case of the Pennsylvania Railroad, all employes will return to work under the wages and working conditions established in the decisions of the Labor Board, and that the sole question of 'validity' pending is the authority of the Labor Board to determine, as in Decision No. 218, the method of selecting accredited representatives of the employes, assuming that the railroad has appealed from the decision of the United States Circuit Court of Appeals, which sustained the action of the Labor Board.

"'Second—The carriers will withdraw all lawsuits growing out of the strike, and the Railroad Labor Board decisions which have been involved in the strike may be taken, in the exercise of recognized rights by either party, to the Railroad Labor Board for rehearing.'

"It is our understanding that the representatives of the employes, upon seeking a rehearing of the controverted decisions concerning wages and working conditions, will be afforded a prompt rehearing and decision by the Labor Board. We assume also that the practically unanimous action of the employes in electing to suspend work and in continuing this suspension under the sanction of, and in accordance with the laws of their national organizations, has ended any captious questioning as to who are the properly accredited spokesmen of the vast majority of railway employes.

"We desire to call attention to the orderly and disciplined conduct of these employes under difficult conditions, which has demonstrated the indispensable value of their national organizations in aid of the effective adjustment of controversies and the efficient conduct of the industry.

"'Third—All employes now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and of the organizations especially agree that there will be no discrimination by either party against the employes who did or did not strike.'

"We are glad to observe that the obvious justice of this proposition has been accepted. It would certainly be a wholesale injustice of unparalleled extent if hundreds of thousands of experienced men, who have given four to forty years' service, and whose value to the transportation industry is proportioned to the length of their service should be placed in a position of inferiority to a limited number of men who have been employed as substitutes for these experienced railroad workers. The demand that such a wrong should be perpetrated as a penalty against men who have exercised a fundamental and admitted right not to render service under non-acceptable conditions, was so unfair that we could not believe it would receive the sanction of any impartial judgment.

"We understand the language 'all employes now on strike' to include all employes who hold seniority rights under the rules agreed upon between the carriers and the organizations of employes or as promulgated by the United States Railroad Labor Board. It should be understood that in acting favorably upon the proposals for settlement of the pending controversies, the representatives of the organized employes feel that they are making concessions and sanctioning sacrifices on the part of the employes which entitle them to the highest consideration and to recognition as law-abiding American citizens, who are ready and willing to do all in their power, even beyond that which is strictly reasonable, in order to promote industrial peace and to further the uninterrupted flow of the commerce of the nation.

"We see evidence of little sacrifice required on the part of the managements to whom like proposals have been submitted. They will suffer no loss in abandoning a host of futile lawsuits, complaining of wrongs which have never been committed. It is understood that the Labor Board must confirm its previously announced position and that the railways must abandon the condemned practice of contracting out work and shops and restore the employes to their former status. It should be noted that this practice is not only a violation of the transportation act and of the decisions of the board, but, as shown by many decisions of the courts, in violation of the charter obligations of the railroads and would have been unlawful without the passage of the transportation act or any action by the Labor Board.

"We understand that an effort will be made to insure the setting up of a board of adjustment, but inasmuch as such a board can function effectively only with the full co-operation of both managements and employe, we can look merely with hope, and not with certainty for the establishment of this 'essential part of the machinery to decide disputes between the carriers and their employes.' In the meantime, upon advice from you of the expressed acceptance of your terms of agreement contained in your telegram of July 31, by all carriers, we will take the responsibility of directing the employes to return to work, and upon the confidence that by action of the Labor Board upon rehearing of the recent controverted decisions a delayed justice will be rendered to the employes in the matter of wages and working conditions.

"We should certainly assume that the railways executives, in their own obvious interest, eventually will accept the proposals made, unless their counsels are dominated sufficiently by anti-labor forces to resist even the pressure of public opinion exerted through your high office, and to carry on to the bitter end a nihilistic policy of attempting to destroy the self-respecting, democratic institutions of organized labor. We can hardly believe that such a counsel of folly will finally prevail within the railroad managements.

"It, therefore, appears that upon the organizations of railway executives and employes rests the immediate responsibility of serving the public interests in bringing about a resumption of efficient operation of the railroads. Under pressure of this respon-

sibility we have voted, by the required constitutional majority, to accept the terms of agreement which you have submitted to us. We accept reluctantly, it is true, but commit ourselves to carry out the terms of settlement in utmost good faith and in aid of the general welfare. If these proposals fail to bring about the results which you desire, the responsibility of failure will not rest upon the representatives of the organized employes."

Ben W. Hooper, chairman, and A. O. Wharton, labor member of the Railroad Labor Board, attended the opening session of the shopmen's meeting. The former is reported as directly representing President Harding, occupying the same place in the Chicago meetings that Secretary Hoover occupied in the meeting of the executives at New York.

Insofar as the Railroad Labor Board is concerned no further steps to bring about the settlement of the dispute have been made. E. F. Grable, president of the maintenance of way brotherhood, has filed approximately 35 disputes on various carriers with the Board, all of them involving questions of wages and working conditions. This action follows the Labor Board's assurance to Mr. Grable that it would hear at any time disputes over wages or working conditions which the men felt were justified by the changes in the economic factors governing these questions.

Baltimore & Ohio Negotiations Fail

The negotiations of the Baltimore & Ohio with representatives of the Federated Shop Crafts looking to a possible separate agreement as to the strike ended on July 28 in failure to arrive at the desired result. This conference began on Tuesday and lasted until Friday. Announcement of the failure to come to an agreement was made on Friday in a statement issued from the office of C. W. Galloway, vice-president in charge of operation. The statement made public for the first time the plan which the railroad submitted as a basis for the negotiations. Mr. Galloway's statement follows:

The Baltimore & Ohio management met the committee representing the Federated Shop Crafts on the Baltimore & Ohio Railroad, in conference on Tuesday, July 25, and again on Wednesday, July 26. The meeting on Tuesday was devoted to a general discussion of all the questions involved. At the meeting on Wednesday the committee assured us that they had authority to order the men on the Baltimore & Ohio back to work provided a proposition satisfactory to them was submitted, and at their request for a specific answer to the proposition submitted by them, the following memorandum was handed to them:

MEMORANDUM

"Taking up the questions in the order in which they were discussed yesterday, and in reply to your request for some definite expression from the Baltimore & Ohio Management on the particular points raised by your Committee, you are advised as follows:

First: Request for National Board of Adjustment.

"You are reminded that the question of National Board of Adjustment was not a factor in the issuance of the strike order and has only been injected into the question since the strike occurred, consequently it is hardly a proper matter for negotiation in connection with reaching an understanding that would result in the resumption of service. However, as pointed out to your Committee it is our belief that a National Board of Adjustment is unnecessary and would not correct the conditions of which you complain, for the reasons which I endeavor to specifically set forth. The Baltimore & Ohio is willing however to set up a Board of Adjustment or reviewing board for the Baltimore & Ohio System, to be composed of its own employees and representatives of the Management, believing that this direct dealing between the men and the Management will go far towards an early adjustment of any differences that might arise and which could properly be referred to such a Board; or, if the employees are unwilling to have an individual Board of Adjustment, then the Baltimore & Ohio is willing to join with other companies in the Eastern Region in the establishment of a Regional Board of Adjustment on a basis similar to that governing the Train Service Board of Adjustment of the Eastern Railroads composing that Board.

Second: Request for Restoration of Overtime Rules in Existence Prior to July First.

Third: Request to Restore the Wages in Effect Prior to July First.

"With the understanding that the men now on strike will promptly report for service under the rules and working conditions as now prescribed by the United States Railroad Labor Board and which will remain in effect until or unless changed by the Labor Board or by mutual agreement between the Company and the men, the Baltimore & Ohio is willing to join in a conference with representatives of its employees to discuss these questions, and failing to reach an understanding, join in submission of the questions to the Labor Board for their consideration in accordance with the terms of the Transportation Act.

Fourth: Request That Seniority Be Restored to the Men Who Have Left the Service.

"The men who withdrew from the service of the Baltimore & Ohio at 10.00 o'clock A. M., July first, and those who have left since and who have not returned and who have not in the meantime committed any overt acts against the law of the land, will be taken back at the rates of pay and under the rules now in effect for their respective crafts, the question of wages and rules to be taken up for discussion in the manner outlined above.

"Men who, through pernicious activities or by the commission of overt acts during the period of this strike, have made themselves objectionable, will have charges preferred against them and be given a trial in accordance with the discipline rules of the shop crafts.

"It is not the purpose of the Baltimore & Ohio Company to ignore the loyalty of those who have continued in its service or the rights of those who have entered the service since the strike was called, and it is fair to state that the position of your organizations, as has been expressed, is that the men who have left the service are not employees of the railroads and therefore are outside the jurisdiction of the Labor Board. Aside from any other commitments or assurances to the employees who have remained in the service under their recognized right to work, the matter of seniority does not present an insurmountable situation, but as pointed out to you in our conference, it is one that can be very readily adjusted to the mutual satisfaction of all concerned and without surrender of principle on the part of either and is one that will be given prompt consideration by the officers of the Baltimore & Ohio Company and an earnest effort made to adjust all matters of that character on the basis of equity and fairness and in a manner that we firmly believe will ultimately prove satisfactory to both sides and be looked upon as fair and decent by every interest.

"If, at the end of 30 days any individual cases have not been adjusted in a manner that would be considered satisfactory to the employees we are willing to have such cases submitted for decision to a Committee to be selected, upon which the company and the men will have equal representation.

"We desire to emphasize the fact that the question of rates of pay and rules and working conditions, suggested in the forepart of this memorandum to be handled in accordance with the provisions of the Transportation Act, narrows the questions in dispute down to that of seniority, so far as the Baltimore & Ohio is concerned, and on that question we have pointed out how it may be disposed of in a fair and honorable manner.

"While much has been said in objection to the leasing of engine and shop facilities to outside contractors, this has not been in question on the Baltimore & Ohio, but in order to make the matter clear to its employees, the Baltimore & Ohio Company is willing to refrain from such action so long as the employees affected are willing to accept the wages and abide by the working conditions prescribed by the Labor Board or mutually agreed to in conference with the company.

"In concluding this memorandum, let me again remind you of the fact that the relations between the Baltimore & Ohio and its employees have for many years been pleasant, and I am hopeful that in considering this question, due consideration will be given to this, and the employees will see the reasonableness of the opportunity to resume service."

Conference with the committee was resumed this afternoon (July 28) when they advised us that our proposition was declined, which terminates all negotiations and our proposal is consequently withdrawn.

Of course, I regret the failure of these negotiations, being hopeful that the Baltimore & Ohio, first by seeking conference and then offering basis for negotiating a settlement which we believe to be fair and equitable to all parties under the circumstances, would indicate to the men the sincerity of purpose on our part that would justify acceptance of our terms, at least as a basis for discussion, but now that the negotiations have failed the Baltimore & Ohio will continue vigorously to build up its forces with a view to restoring normal conditions as early as possible.

Southern Invites Strikers to Return

The Southern Railway on Wednesday invited its striking shopmen to return to work with full seniority rights unimpaired, on the basis of the President's proposals for a settlement. In a statement to the employees Vice-President H. W. Miller said:

"The policy of the management of the Southern Railway system has been to create no conditions pending a termination of the strike that would embarrass the company, its employes or the public, and with this end in view no ultimatum has been issued to the men, no promises have been made, no new men have been employed and no writs of injunction have been invoked. There is therefore now no obstacle of the company's creation to prevent its men returning to work under the President's proposal as of their former seniority. The shop crafts committee on the Southern has been invited to confer on this basis."

L. E. Jeffries, vice-president of the Southern had explained the company's purpose to President Harding on Tuesday.

The Southern, from the beginning of the strike, has adopted a policy different from that of the other roads. It has not attempted to fill the places of the strikers and no ultimatum was given them to return by a certain date or forfeit their seniority and other rights.

Strike Situation in the East

The strike situation in the East during the past week continued its gradual improvement. It was too early at the time of going to press to determine the full effect of the rejection of the President's proposal as to seniority rights by the Association of Railway Executives. It was the general impression, however, that the strong stand taken by the executives would serve to encourage the men now at work and possibly assist in the recruiting of new men. Whether it would serve to induce men now on strike to return to work in large numbers is still to be determined.

Several of the carriers promptly posted on bulletin boards notices concerning the stand on seniority, the purport of these notices being to renew and strengthen the promises made to the loyal employees.

The notice posted on Pennsylvania Railroad bulletin boards was signed by Vice-President W. W. Atterbury and read as follows:

August 1, 1922.

To the employees of the Pennsylvania System, the old men who have remained loyal, and to the new men who have entered our service, and who jointly have enabled the railroad and its officers to perform its duty in a full and efficient manner:

I give you my personal assurance that my obligation to you under our agreements will be fully carried out.

Those agreements fully protect the old and new men in their seniority and the terms of the agreement cannot be changed except by mutual consent.

Strike Situation in the West

In the West the strike's fifth week was one of increased activity. The roads continued to devote their efforts to the upbuilding of the working personnel while the strikers retaliated with violence. The week previous to July 27 saw but few isolated outbreaks but on this date strikers in many centers throughout the country resorted to violence, but after several days of widespread outbreaks the violence subsided. The nature of the violence changed to some extent from that of the first weeks of the strike. The previous acts were directed at the railroads in an attempt to prevent the operation of the shops, and now that these acts are prevented by the injunctions secured by the roads, the strikers are aiming their attacks at individual workers in an attempt to intimidate them.

On July 27, a Pullman car occupied by sleeping non-union shopmen was dynamited in the yards of the Chicago, Indianapolis & Louisville at Bloomington, Ind., the car being badly damaged but none of the occupants being injured. On the same day a special guard in the yards of the Atchison, Topeka & Santa Fe at San Bernardino, Cal., was shot and killed; two Malesus, Tenn., shopmen died from bullet wounds received when unidentified men fired at them as they were returning from work, and workers were kidnapped and beaten at Galesburg, Ill., Chicago, Aurora, Burlington, Ia., and Memphis, Tenn. Three workers were assaulted at Janesville, Wis., and 30 non-union mechanics quit their work at Milwaukee when shots were fired at them.

On July 28, Chicago became the scene of further violence and two strikers were shot in a clash between one hundred striking shopmen and fifty workers at the Burnside yards of the Illinois Central. Numerous other sluggings and stonings occurred in Chicago on the same day. A non-union shop worker at Roseville, Cal., was carried out of town in an automobile, beaten and warned to stop work. A deputy federal marshal on guard at the Missouri Pacific roundhouse at Jefferson City, Mo., was slugged by three men after he had been called from the building. Striking shopmen of the Mobile & Ohio were said to have taken charge of the shops at West Point, Miss., and driven out new men who had been employed. At St. Louis two guards of the Missouri Pacific and a blacksmith of the Terminal railroad were stoned and beaten by men believed to have been strikers.

Western railroads whose headquarters are in Chicago report continued improvement. Substantial increases in the number of shop employees at work on the western railroads were recorded and in addition, all of these railroads reported that they were handling a heavy freight traffic without serious delays and that the operation of passenger trains continues normal.

Atchison, Topeka & Santa Fe

On the Atchison, Topeka & Santa Fe the shop forces were approximately 60 per cent. of normal on August 1.

Chicago, Burlington & Quincy

The total number of men at work in the shops of the Chicago, Burlington & Quincy was approximately 50 per cent. of normal on August 1.

Chicago, Milwaukee & St. Paul

The Chicago, Milwaukee & St. Paul reports that conditions on that road are improving steadily, approximately 4,300 shop employes being at work at various points along the line.

Denver & Rio Grande Western

This company reports that 467 men are at work in its shops—an increase of 256 over the number reported in last week's *Railway Age*. Operating conditions are said to be practically normal, and many strikers are returning to their posts.

Illinois Central

The Illinois Central had 10,698 shopmen at work on August 1, as compared with a normal force of 12,701. This compares with 8,149 on July 14 and 9,514 on July 24. That the strike has had no effect on the passenger traffic of this road is shown by the report that 98.2 per cent. of the Illinois Central passenger trains were on time during the month of July.

Kansas City Southern

The Kansas City Southern has increased its shop forces to 374 men, or almost double the number employed July 26, and new men are being added daily. The Missouri, Kansas & Texas is making substantial progress; 1,550 men, or approximately 37 per cent. of normal forces, are at work.

Missouri Pacific

Of this company's normal shop forces, approximately one-third are at work and the movement of traffic is said to be fair.

Nashville, Chattanooga & St. Louis

The Nashville, Chattanooga & St. Louis has 1,797 men at work, 87 per cent. of its normal force.

Chicago Car Strike Places Pressure on Steam Roads

The steam roads entering Chicago were again forced to handle the bulk of the city's local transportation business on Tuesday of this week when a strike of 20,000 employees of the street railway and elevated lines tied up the regular channels of traffic. However, experiences with like situations for three days in June, 1915, and for four days in July, 1919, found the carriers prepared to meet the increased burden placed upon them. The number of persons using suburban service daily has been variously estimated in the past, but no late accurate figures are available at the present writing. The estimated daily traffic handled by the roads during the 1915 strike was 625,000, and it is not believed that this number will be exceeded during the present walkout as a larger number of street vehicles were pressed into immediate service with the beginning of the strike. Owing to the perfected arrangements the traffic is being handled with much less congestion than in the other two emergencies. One factor which tended to help the situation was that the strike was threatened and expected for more than two weeks, thus giving the railroads plenty of time to complete their arrangements. The traffic did not reach its maximum until Tuesday evening or Wednesday morning,

which enabled the traffic officers to test their plans. As it was, little overcrowding was noted, while some of the roads actually provided more equipment than was necessary.

By far the largest part of the crowd is being carried by the Illinois Central and the Chicago & North Western. These roads normally carry the bulk of the suburban traffic since their lines traverse the more highly developed residence sections of the city from which most of the down-town workers are drawn.

The Chicago & North Western which normally handles about 60,000 passengers averaged 110,000 in and out of city during first day of the strike. Trains were rushed back and forth as quickly as possible during the rush hours. The Illinois Central usually hauls about 75,000 suburbanites daily but this number was increased to 150,000 on the first day of the strike and a gradual increase beyond this figure was in evidence each succeeding day. In place of the normal 378 trains operated daily, 592 were placed in running by this road with the start of the strike. The Chicago, Milwaukee & St. Paul added 17 suburban trains to its schedule and reports a heavy increase in its traffic. The Chicago, Rock Island & Pacific added 5 train crews and all the coaches available to take care of its suburban traffic which was increased by more than 50 per cent, its normal business being 4,000 passengers. The Chicago & Western Indiana added 15 extra trains and estimates its increase in traffic to be more than 60 per cent. The Chicago Burlington & Quincy and the Pennsylvania added no extra suburban trains to their service although both these roads added local stops to their schedules and increased the lengths of their trains. The New York Central was not forced to increase its service to any great extent as the majority of the people now using the line use it also under normal conditions. The Chicago, Aurora & Elgin and the Chicago, North Shore & Milwaukee are both operating but are not permitted by union labor to make local stops.

In most cases extra train service was provided by abandoning the regular suburban schedules and substituting a shuttle service under which trains are run as fast as traffic conditions permit. In handling the passengers at terminals little difficulty was encountered in disposing of the crowds arriving at the stations during the rush hours in the morning.

The use of long trains with capacity crowds makes it unpracticable for the trainmen to collect cash fares, consequently the passengers were required to buy trip or commutation tickets before entering trains, and to avoid interference with the regular through business of the ticket offices, liberal use is being made of temporary ticket booths for the sale of suburban tickets. Several of the roads avoided the collection of fares on incoming trains by fencing off the platforms at the local stations and taking or punching the tickets as the passengers passed on to the platform.

Railroad Shop Wages 32 Per Cent Above Outside Industries

A comparison of the wages of railroad shopmen with the wages paid to employees in foundries and machine shops in other industries, prepared by the National Industrial Conference Board, New York, shows that the average hourly earnings of the railroad employees stand at least 25 per cent and weekly earnings at least 32 per cent above those paid to men performing practically identical work in privately controlled plants. Railroad skilled shop mechanics include machinists, boiler makers, blacksmiths, sheet metal workers, and electrical workers, whose duties in the railroad shops are practically identical with the duties of men employed in commercial foundries and machine shops.

The National Industrial Conference Board has just completed a survey of the wages of employees of foundry and machine shops other than railroad, which shows that the average earnings of skilled labor stood at 56.1 cents on January 1, 1922. In a statement given out by the Board on July 2, the average hourly earnings of railroad skilled shop labor was shown to be 70.1 cents under the new wage rates, this being based on the hourly rate of 70 cents laid down by the Labor Board, and a working week of 48.06 hours.

The hourly wages of skilled mechanics employed by the railroads are therefore 25 per cent higher than those paid skilled mechanical employees of all the other industries in the country at the first of the year. Wage rates in private industry, moreover, have declined in the past six months, so that the comparative position of railroad shopmen and other shop workers in private industry in probably at present more marked than here shown. The National Industrial Conference Board's report covers the wages of 388,560 men employed in 1,338 plants, or 73 per cent of all the wage earners in foundries and machine shops as shown by the United States Census of Manufactures in 1919, and can therefore be regarded as thoroughly representative of the conditions existing in foundries and machine shops throughout the country.

Railroad Wages Almost Equal to Peak Wages in Industries

Studies by the Board show that the average hourly earnings of skilled shop labor in privately controlled plants rose from 30.4 cents per hour in 1914 to 71.3 cents in September, 1920. On January 1 of the present year, these wages had declined to 56.1 cents per hour. The railroad shopmen's wages rose during the war period from 29.8 cents per hour in 1914, to 86.4 cents per hour at the peak in November, 1920, and despite two wage cuts ordered by the Labor Board, the wages of the striking shopmen have been reduced to a point which is only 1.2 cents per hour below the rates paid to shopmen in other industries at the peak of the industrial inflation.

Weekly Wages Even More Favorable

A comparison of the weekly wages of the two classes of employees shows a situation which is even more favorable to the railroad shopmen than in the case of hourly earnings. This aspect of the matter is important, as weekly earnings constitute a much better basis for judging the comparative status of the two groups of workers than do hourly earnings. The statement of the National Industrial Conference Board referred to above, estimated the average weekly earnings of skilled railroad mechanics to be $33.67, under the reduced rates recently established by the Railroad Labor Board. The weekly wages of foundry and machine shop employees, however, on January 1, 1922, were $25.08, giving the railroad employees a clear advantage of 32 per cent in weekly earnings over the earnings of men performing work identical with their own, but in the shops of privately controlled companies. Since a decline in wages of outside shop workers has taken place since the first of the year, the position of the railroad shopmen is even more favorable.

The employees of the foundry and machine shop industry are shown to have been working an average of 44.7 hours per week on January 1, while it is estimated that on the basis of the average number of hours worked per week since September, 1919, the rail shopmen will average 48.06 hours. Statements have recently appeared which purport to show that any comparison of the estimated earnings of railroad employees for 1922 with the actual earnings of 1914 are unfavorable to the employees because of the fewer hours of work performed in 1914 on account of the severe industrial depression of that year. The figures published by the Interstate Commerce Commission, however, show that in 1914, the average number of hours of work per week for railroad shopmen was 51.4 or nearly three hours per week more than the estimate of 48.06 hours for 1922.

In 1914, moreover, the average working day of railroad shopmen was nominally ten hours but fell to the lower figure by reason of lack of business. Since that time the nominal week has been reduced by the insistence of the unions to 48 hours or 8 hours per day, with a 6-day week, and the attempt is now being made to use this fact to make the real earnings of railroad employees appear to be less than they were in the year 1914.

The result is, therefore, that railroad shopmen are in a more advantageous position than they were in 1914, in three ways. First, That their hours of employment have been reduced, giving them more time for leisure and recreation; second, that their economic status, even under the new wage cuts, is 10 per cent higher than eight years ago, and third, that the average weekly wages of railroad shopmen are at least 32 per cent higher than those of men doing the same work but employed by other industries, where wages are regulated by the supply and demand for labor.

Remote Operation of Switches on the New Haven

Highly Satisfactory Results Reported After Four Years' Experience with 28 Low-Voltage Machines

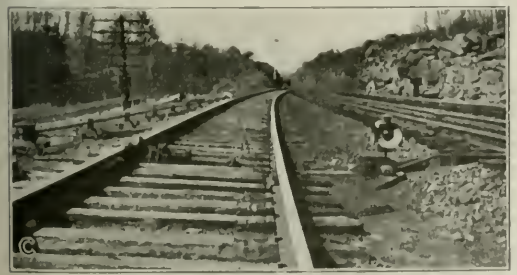
The New York, New Haven & Hartford has now been using an extensive installation of low-voltage switch machines for about four years, with marked satisfaction. The introduction of this important economy on the main line of the New Haven was the subject of an article in the *Railway Age* of April 19, 1918, page 1041. The low-voltage machine is one that can be operated in isolated situations and from a long distance, at small operating cost. West of New Haven, Conn. and east of Readville, Mass., this line is four-track and completely signaled; but between New Haven and Readville, 147 miles (mostly two-track), there are 16 stations where, until this improvement was installed, the movement of the heavy freight traffic of the line was greatly hampered by the necessity of using passing tracks which could be entered only by means of hand-thrown switches.

Switches at East Haven, Conn., New York, New Haven & Hartford—Looking East

The cost of establishing and operating interlockings for these sidings with current at 110 volts would be excessive, either nearby or at remote locations; but by operating the switches (and signals) by low-voltage machines, requiring no power supply but a small battery, and from the nearest signal tower, having either mechanical or power interlocking, an economical combination is accomplished. The only disadvantage of the low-voltage machine, its slowness, is no disadvantage at all, for in these situations the signalman always has two or three minutes, or longer, in which to perform the operations necessary for moving a train to or from the siding.

The approximate locations of the remote controlled switches are shown by dots on the sketch map. The first location, starting eastward from New Haven, is at East Haven, six miles from New Haven. Altogether there are 11 facing-point switches and 17 trailing points. The maximum distance between a tower and a switch is 7,300 ft. Throughout the main line, Harlem River to Boston, the signalmen in the towers now control every switch, either facing or trailing, which connects the main line with a passing siding and also every switch of the cross-overs which connect two main tracks that are operated in the same direction.

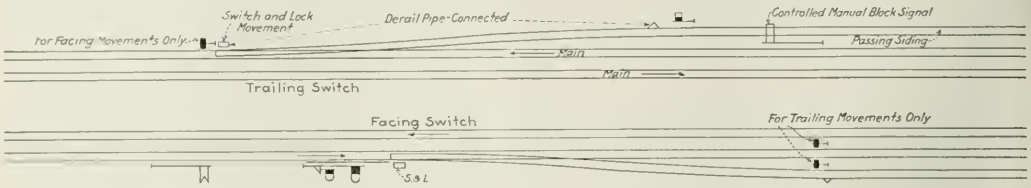
The illustration, *A*, shows an electric switch and lock movement, the battery, the relay housing and the pipe line to the derail, at a facing point switch. The next view, *B*,



Switches with Remote Control at East Haven, Connecticut—Looking West

shows a similar equipment installed for the operation of a trailing switch.

The other two views show (*C*) the derail and the target (both pipe connected from the switch) shown in *A*; and (*D*) a facing and a trailing switch nearly opposite each



Passing Sidings, New York, New Haven & Hartford—Switches and Signals Operated from Remote Tower

other, one on the eastbound track and the other on the westbound.

In the drawing showing typical facing and trailing layouts, it will be noted that the facing switch is provided with a high-speed main line signal, and a dwarf signal for the diverging route; and that the approach to these signals is regulated by a distant signal. The trailing switch is protected by an absolute block signal both on the main line and from the siding. These signals are operated from the tower and are under the control of the block system. With the distant signal controlled from the tower the speed of trains approaching the stop signal can at all times be regulated from the tower.

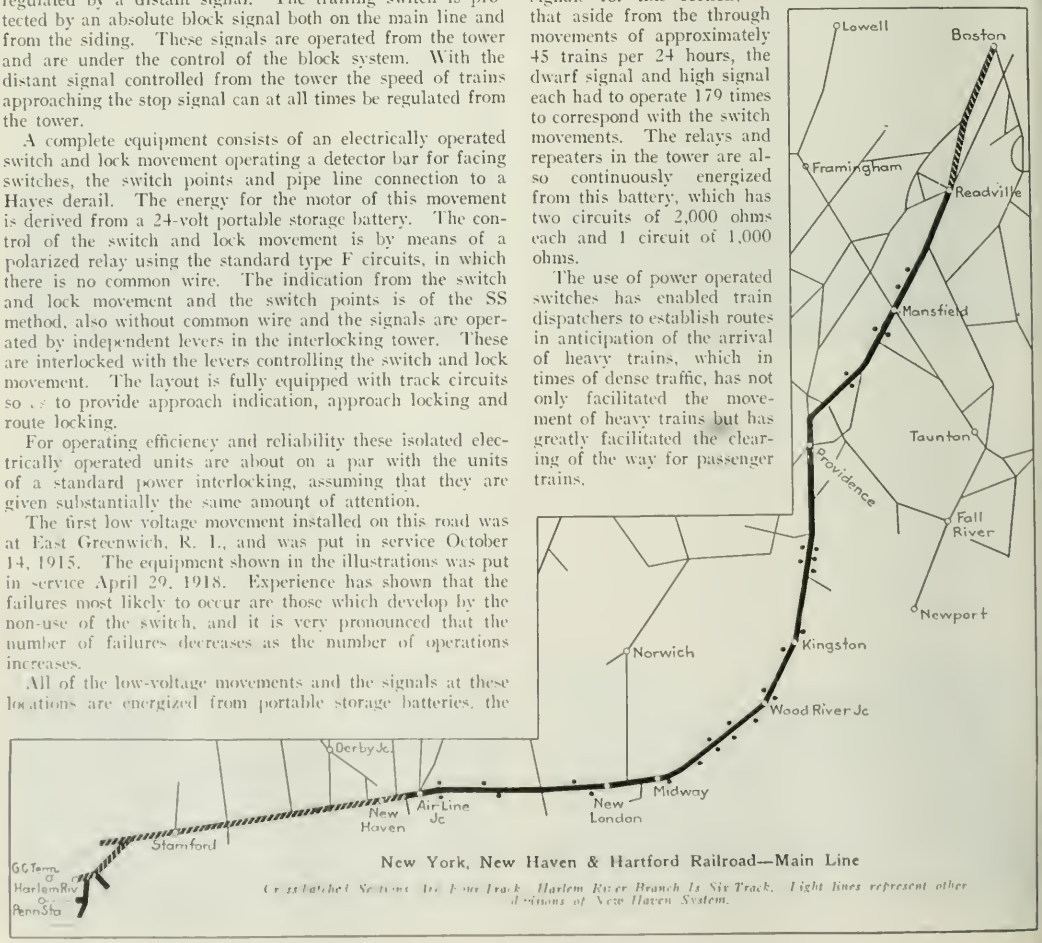
A complete equipment consists of an electrically operated switch and lock movement operating a detector bar for facing switches, the switch points and pipe line connection to a Hayes derail. The energy for the motor of this movement is derived from a 24-volt portable storage battery. The control of the switch and lock movement is by means of a polarized relay using the standard type F circuits, in which there is no common wire. The indication from the switch and lock movement and the switch points is of the SS method, also without common wire and the signals are operated by independent levers in the interlocking tower. These are interlocked with the levers controlling the switch and lock movement. The layout is fully equipped with track circuits so as to provide approach indication, approach locking and route locking.

For operating efficiency and reliability these isolated electrically operated units are about on a par with the units of a standard power interlocking, assuming that they are given substantially the same amount of attention.

The first low voltage movement installed on this road was at East Greenwich, R. I., and was put in service October 14, 1915. The equipment shown in the illustrations was put in service April 29, 1918. Experience has shown that the failures most likely to occur are those which develop by the non-use of the switch, and it is very pronounced that the number of failures decreases as the number of operations increases.

All of the low-voltage movements and the signals at these locations are energized from portable storage batteries, the battery being taken to the division headquarters periodically for recharging. The frequency of recharging depends mainly upon the number of switch operations and the climatic conditions. A test made in 1918 at one facing switch is perhaps a criterion for the average condition. At this point a storage battery having 56 ampere-hour capacity on intermittent discharge was put into service August 26, 1918; volts per cell 2.2, specific gravity 1210. The battery was taken out of service October 1, 1918. The number of switch movements from August 26 to October 1 was 358. In addition to this load the battery also energized the automatic signals for this section, so that aside from the through movements of approximately 45 trains per 24 hours, the dwarf signal and high signal each had to operate 179 times to correspond with the switch movements. The relays and repeaters in the tower are also continuously energized from this battery, which has two circuits of 2,000 ohms each and 1 circuit of 1,000 ohms.

The use of power operated switches has enabled train dispatchers to establish routes in anticipation of the arrival of heavy trains, which in times of dense traffic, has not only facilitated the movement of heavy trains but has greatly facilitated the clearing of the way for passenger trains.



New York, New Haven & Hartford Railroad—Main Line

Cross-hatched Sections Are Four Track. Harlem River Branch Is Six Track. Light lines represent other divisions of New Haven System.

When Equipment Renewals Become an Investment

Expenditures Requiring Retirement of Old and Reinstatement of Rebuilt Units Under I. C. C. Rules

By George W. Bashaw

Mechanical Valuation Engineer, Denver & Rio Grande Western

THE VALUATION ACT and the requirements of the Interstate Commerce Commission as contained in Order No. 3, second revised issue, require a different treatment of reconstructed equipment from that which has generally been the practice. Carriers have generally treated all rehabilitation and renewals as repairs and charged the expenses to operation. If this practice is continued it will result in violations of the commission's instructions and the loss of a vast amount in the investment from which no return may be expected.

The instructions of the Interstate Commerce Commission relative to accounting for equipment renewals* reads as follows:

> When the cost of renewals to be made to any unit of equipment will constitute the major portion of its value as renewed, the equipment, when taken out of service, shall be considered as retired and accounted for as provided in the preceding paragraph, and for the purpose of this classification the renewed equipment shall be considered an addition and the appraised cost thereof shall be included in the account appropriate for the cost of the equipment. In no case shall the charge for the renewed equipment exceed the cost (at current market prices of labor and material) of new equipment of similar type, equal capacity and equal expectation of life in service, less a suitable allowance on account of the second hand parts remaining therein.

The determination of just how extensive renewals must be before they cease to be repairs, chargeable to operating expenses, and become rebuilding, requiring the retirement of the old unit and reinstatement of the rebuilt unit in the property account at an appraised value, has been the subject of considerable discussion, and is a matter in which both the accounting and mechanical departments are interested.

The present rule, in all probability, is an adaptation of a somewhat similar rule appearing in the Classification of Expenditures for Additions and Betterments, first revised issue, effective July 1, 1910, which reads in part as follows:

> When any equipment is in such physical condition that it must be practically rebuilt in order to fit it for service, or when any equipment requires repairs which, if made, would constitute the major portion of its value, it should, when taken out of service, be considered as retired and be written out of the accounts. * * *

It is apparent that the end sought is the proper determination of the question as to when repairs are of sufficient magnitude to constitute a virtual rebuilding of the unit. The rule in the old classification was, perhaps, more specific with respect to the end sought than the present rule. The present rule in making the money costs of the renewals the gage for determining whether the unit shall be retired was probably an acceptable substitute to be applied under conditions obtaining when the present classification for investment was issued in 1914. At that time there was little or no fluctuation in the market for equipment and the terms "value" and "cost" were approximately synonymous. Since the increases in prices of labor and materials we cannot use the terms interchangeably in the interpretation of these instructions. Such an interpretation would lead to the unjustifiable result of accounting for minor equipment repairs as if they constituted rebuilding when a very small portion of the physical unit would actually be renewed.

It is evident, then, that the word "value" as it occurs in the instructions now in force should be interpreted to mean current value and not original or book value. Therefore, for the purpose of determining what course to take in accounting for the cost of heavy repairs to a unit of equipment, a comparison should be made as to all costs involved in the repairs, including additions and betterments, and the appraised value as rebuilt. If the cost of renewals, including additions and betterments will constitute more than 50 per cent of the appraised current value as rebuilt, then the retirement instructions are applicable.

Because this subject has never been given the place to which its importance entitles it, the mechanical department as well as the accounting department will need to make a careful study of the problem if the practices introduced are to get results. After considerable inquiry it is found that many carriers have introduced formulæ which cannot be interpreted by the forces who must apply them and others employ systems which are so cumbersome as to be beyond the capacity of the forces to handle intelligently.

It is the purpose of this article to introduce a method which will be easy to apply in practice with little or no extra expense. It has as its central feature the development of a table or tables showing for each class or series of equipment an amount in dollars which, if spent in direct labor and material at one shopping, exclusive of additions and betterments, will constitute the renewal of a major portion of a unit, within the meaning of the Interstate Commerce Commission's instructions.

Reproduction New

The first step in the development of this method is to ascertain or estimate the current cost to reproduce or rebuild the equipment new. This can be done and has been done in many cases by the use of the Equipment Committee method adopted by the President's Conference Committee. The figures so obtained must be modified according to the trend of prices in order to find a reasonably correct current price. The current price has been trended forward by the Equipment Committee to June 30, 1920, but unfortunately the work has been suspended since that date. It is hoped that this committee can keep these prices current because of the constant use to which they may be put. In the absence of figures supported by sales data, we can reasonably estimate the modifying factor by the general trend of commodity prices, together with any recent sales which are available. The American Railway Association rules for finding the current value or cost to replace new can be used for freight cars and similar equipment in Account 57 in the absence of better prices.

The current reproduction cost is the prime factor in the method proposed, or in any other, because in order to meet the requirements of the classification it is necessary that the rebuilt unit shall not exceed the current cost new.

What Constitutes a Major Portion of the Value as Rebuilt

The determination of this question is the most difficult part of the whole task. It cannot be left to the accounting or

*See page 33 of the current issue of the Classification of Investment in Road and Equipment of Steam Roads, prescribed by the Interstate Commerce Commission.

mechanical department forces for settlement as each case arises if consistent results are to be obtained.

Major renewals are generally construed to mean more than 50 per cent of the current value of a unit of equipment as rebuilt, and not of a like unit new. The current value of the second hand portions is less than their value new. The solution of the problem depends on the appraised values assigned to the "major portion renewed" and to the "second hand portion remaining therein."

There can be no objection to assigning 51 per cent as the lower limit of what constitutes a major portion. Similarly, there can be no vital objection to assigning 70 per cent of the current value new as the service value of the second hand portion remaining. There may be a few cases where wrecks rquire the rebuilding of new cars, in which a rating of 70 per cent as the condition of the old parts may be considered less than the circumstances would warrant. These cases may require the use of a different appraisal if of sufficient importance. But a factor of 70 per cent can be applied to equipment over seven years old, because as a general rule equipment must be maintained up to this standard to be serviceable.

It is proposed then to determine the amount of money which, when spent on a given unit, will equal 51 per cent of its value as rebuilt and will, therefore, determine the point at and above which the unit must be retired and reinstated in the property account at its appraised cost after reconstruction.

If we let

Current value of a new unit = 100
Major portion renewed = 51 per cent of the value of the unit as rebuilt
Service value of second hand portions used will = 49 per cent of the value of the unit as rebuilt
Service condition of second hand portions = 70 per cent of their current value new
Current value new of old parts used = X
Current value of renewals = Y
Value of unit as rebuilt = Z

Then

(1) $X + Y = 100$
(2) $.70X + Y = Z$
(3) $Y = 51Z$
(4) $.70X + .51Z = Z$
(5) $X = \frac{.49Z}{.70}$

Substituting the value of X and Y in (1), we have:

$Z = 82.65$

Substituting the value of Z in (5) we find that

$X = 57.9$
$Y = 42.1$

That is, if 42.1 per cent of the current cost new of a unit of equipment is expended at one shopping for repairs and renewals, it will amount to 51 per cent of the value as rebuilt, consideration being given to the depreciated condition of the second hand parts remaining. Likewise the service value of the rebuilt unit as it leaves the shops will be 82.65 per cent of the current value of a complete new unit and the current value, new, of the old parts retained will be 57.9 per cent of the value of an entire new unit. The percentage representing the value remaining in the second hand portions may be varied for use with equipment less than six or seven years old.

The money expenditure obtained by this process will contain such overhead elements of cost as store expense on material and shop expense on labor. The element of profit may be neglected for the reason that, as a general rule, it will cost the railroad company as much to build the equipment as it would to purchase from the manufacturer. We cannot well include the element of profit in the cost to the railroad company.

Where circumstances will permit the elimination of shop and store expenses it is by all means advisable not to complicate the estimate by including these elements. Our tables should be prepared so as to show only the direct labor and material costs which will constitute a major renewal. We should also know within reasonable limits what is the labor and material ratio in connection with the reconstruction of various classes of equipment. From an investigation of the latter, it has been found that for locomotives and passenger cars the ratio is approximately 70 per cent for labor and 30 per cent for material. For freight cars labor is 40 per cent and material 60 per cent. If we assume then, that store expense is five per cent and shop expense 20 per cent, the factor to cover labor and material only would be as follows:

For Locomotive and Passenger Cars

Material	42.1 × .30 × .95	= 12.00
Labor	42.1 × .70 × .80	= 23.57
Per cent of current cost new		= 35.57

For Freight Train Cars

Material	42.1 × .60 × .95	= 24.00
Labor	42.1 × .40 × .80	= 13.47
Per cent of current cost new		= 37.47

It is obvious that considerable fluctuation in the labor and material ratio will not distort the factor for various classes of equipment to any appreciable extent,—certainly not enough to affect the figures as a seasonable appraisal of the amount which will constitute a 51 per cent renewal. Similarly, a considerable variation in store and shop expense would have very little bearing on the general result.

Tables for Shop Use in Rebuilding Equipment

Having derived these factors for the different classes of equipment, we may now proceed with the construction of tables which will show the direct labor and material cost, exclusive of additions and betterments, constituting a 51 per cent renewal. The values for the tables are derived by making up a list of current prices new and multiplying each of these values by one of the factors derived above. In the sample table shown it will be noted that the reproduction value has been omitted in order to avoid confusion when the table is used in the shops. The reproduction value may be readily obtained by multiplying the figure given in the table by the reciprocal of the factor used in building up the table, i.e., 2.67 in the case of freight cars and 2.81 in the case of locomotives or passenger cars.

Cost of Labor and Material Per Car Which Must Not Be Exceeded at One Shopping Without Obtaining Authorities for Retiring Old and Reinstating Rebuilt Unit

Car Series	Kind	Amount in Dollars	Car Series	Kind	Amount in Dollars
15000-15987	Coal	360	29800-29824	Coke	455
16000-16258	Coal	460	29908-29922	Coke	375
17000-17098	Coal	400	17400-17494	Flat	500
17100-17186	Coal	445	20000-20339	Flat	310
17500-17999	Coal	475	20341-20463	Flat	320
18100-18198	Coal	530	20500-20598	Flat	415
18200-18323	Coal	520	21000-21249	Flat	520
18274-18271	Coal	540	29000-29249	Ore	535
27000-27499	Coal	500	31000-31199	Ref.	665
28000-28499	Coal	590	10007-10187	Stock	380
40000-41000	Coal	610	35000-36004	Stock	470
41001-43349	Coal	615	37000-37499	Stock	560
26475-26749	Coke	575	37500-37599	Stock	575
26750-26999	Coke	625			

Note—This table to be modified as the change in equipment prices will warrant.

Rebuilding Involving Additions and Betterments

Very often extensive improvements are made in connection with heavy renewals and, instead of treating these improvements under the accounting provisions of the investment classification for additions and betterments, the old unit should be retired and the improved and reconstructed one reinstated in the property account under the provisions for major portions renewed. When such cases arise a comparison must be made between all costs in connection with repairs, including the additions and betterments, and the appraised value of the improved unit as rebuilt. With the table giving the expenditures for a 51 per cent renewal of the unit without additions and betterments as a base, the problem is to determine what per cent of the total cost of the additions and betterments must be added to the amounts

shown in the table. The additions and betterments are worth exclusive of store and shop expense:

For Locomotives and Passenger Cars

Material portion	..	60 × 95	= 57 00
Labor portion	..	40 × 80	= 32 00
Total per cent of new			89 00

For Freight Cars

Material portion	..	60 × 95	= 57 00
Labor portion	..	40 × 80	= 32 00
Total per cent of new			89 00

Now, if we wish to take into account 51 per cent of the total cost of the additions and betterments in the rebuilt unit, for the direct cost of labor and material we must add 84.50 × .51, or 43 per cent for locomotives and passenger cars, and 89.00 × .51, or 45 per cent for freight cars.

In case additions and betterments are involved, then, add 43 per cent or 45 per cent, as the case may be, of the net cost of the additions and betterments to the amount shown in the table to obtain the total expenditure for labor and material which must not be exceeded without authorities to retire from and reinstate in the property accounts.

Value of the Rebuilt Unit

What has been said heretofore is applicable only to the determination of whether a unit is to be considered as rebuilt or simply repaired. The value at which the rebuilt unit is to be entered on the books must be based on the costs to the carrier. These costs are made up of the following elements:

(a) The estimated original cost of that portion of the old unit used in reconstructing the new, less a suitable allowance for depreciation. If the original cost of the old unit is a depreciated one, then no allowance may be made on this account because this would result in an unduly low appraisal for this portion. In other words, we should not doubly depreciate the second hand portion.

(b) The actual current cost of renewals, including the conditioning and repair of old parts used.

(c) The cost of additions and betterments, if any.

The first of these elements alone needs discussion. This can best be determined from an analysis of the actual charges for those portions referred to in (b) and (c).

We have seen that an expenditure for labor and material equal to 35.57 per cent of the cost new for locomotives and passenger cars and 37.47 per cent for freight cars is equivalent to the use of 57.9 per cent of the old unit. Similarly, eliminating store and shop expense, 84.5 per cent and 89 per cent respectively, of the cost new, will represent complete reconstruction. Hence, the increase in expenditures for labor and material from a 51 per cent renewal to a 100 per cent one, exclusive of overheads, will be:

For locomotive and passenger cars: $\frac{84.50 - 35.57}{35.57} = 1.375$ times.

For freight train cars: $\frac{89 - 37.47}{37.47} = 1.375$ times.

There is no difference in the factor produced for the various classes of equipment, and by dividing this factor by 57.9, an increment is obtained by which to construct a table of factors equivalent to the various proportions of the old unit used, as obtained from the amount of money spent, which can be used for any class of equipment. If 1.000 be assigned as the factor where 57.9 per cent of the old unit is used, the factor for complete reconstruction will be 2.375, and the variations between these extremes are as shown in the table given below.

When rebuilt without additions and betterments, this table of factors is used for finding the cost of the second hand portions as follows: Suppose the cost to rebuild a car for renewals and repairing second hand parts used is $700. Look in the table showing the labor and material expenditure equivalent to a 51 per cent renewal, and suppose it to be $570. Then 700 is 1.890 times 370 and the factor 1.890 in the table corresponds to 20 per cent of the old unit used.

Suppose that a unit of equipment is rebuilt at a total cost of $675, of which $200 is for additions and betterments and $475 for renewals and conditioning. If the car is of the same series as that just considered the factor would be equal to 475 divided by 370, or 1.283, which is equivalent to the use of 46 per cent of the old unit.

Factors for Ascertaining Per Cent of Old Unit Used in Rebuilt Equipment

Per Cent of Old Unit Used	Factor	Per Cent of Old Unit Used	Factor	Per Cent of Old Unit Used	Factor
57.9	1.000	38	1.472	18	1.947
57	1.021	37	1.496	17	1.971
56	1.045	36	1.520	16	1.995
55	1.069	35	1.544	15	2.019
54	1.092	34	1.567	14	2.042
53	1.116	33	1.591	13	2.066
52	1.140	32	1.615	12	2.090
51	1.164	31	1.639	11	2.114
50	1.187	30	1.662	10	2.137
49	1.211	29	1.686	9	2.161
48	1.235	28	1.710	8	2.185
47	1.259	27	1.734	7	2.209
46	1.282	26	1.757	6	2.232
45	1.306	25	1.781	5	2.256
44	1.330	24	1.804	4	2.280
43	1.354	23	1.829	3	2.304
42	1.377	22	1.852	2	2.327
41	1.401	21	1.876	1	2.351
40	1.425	20	1.900	0	2.375
39	1.449	19	1.924	..	.....

Knowing the percentage of old unit used, it is reasonable to say that the cost of the old parts used is that per cent of the total cost of the old unit as carried in the accounts of the carrier. We can further say that its condition in the unit as rebuilt will not be less than 70 per cent as a fair estimate. Then, if the car cost is carried on the books at $900, the value in the two cases cited is 900 × .20 × .70 = $126, and 900 × .46 × .70 = $298.80, respectively.

Some roads attempt to value the second hand portion on the basis of its condition before the process of repairs begins. The rule referred to in the classification does not contemplate any such treatment, but intends that the appraisal shall be based on the condition of this part of the unit as finally turned out of the shop. Of course the use of 70 per cent condition for old parts is susceptible of variation on the part of each carrier to suit conditions. But if 70 per cent is used in determining whether or not the repairs constitute a major renewal, the same conditioning factor should be applied here for the sake of consistency.

Incidentally, this method of estimating the extent to which old parts are used in the reconstructed unit may also be of service in estimating scrap and salvage since, if we use 40 per cent in reconstruction, 60 per cent will be scrap or parts returned to the store. When scrap credits are distributed over the accounts, the amount estimated on this basis may be credited to retirements as shown in the estimate.

Incidental Costs Chargeable to Operating Expenses

The supervising forces should be educated thoroughly in what constitutes charges to operating expenses, for, if these costs are included in the charges for renewals, an exaggerated reconstruction cost will result.

First, there are the operating expenses pertaining to the retirement of the old unit, which occur under the A. F. E. for the retirement. The appropriate operating expense account for equipment retirements should be charged with the expense of scrapping old parts, removing old material and all other analogous processes in preparing for the actual rebuilding operations under the A. F. E. for reconstruction. The latter may have operating expenses charged with such items as the removal of material incident to repairs which were overlooked under the authority for retirement.

The important point in administering the system here proposed is to get the master mechanic to estimate and report

whether the renewals and repairs required on any unit of equipment will come within the amount shown in the tables prepared for his use. These officers and their supervising forces can generally be depended on to know from experience what their heavy repairs will amount to within reasonable limits. If they have reason to believe the amount shown will be exceeded, certainly they can go into the matter in sufficient detail to settle the question with reasonable accuracy. In their estimates, care should be taken to eliminate costs chargeable to operating expenses. An occasional check by some member of the executive staff may be necessary to ascertain whether the mechanical department is making reasonable efforts to comply with the instructions issued. In initiating this or any other method, it will be necessary to educate the forces dealing directly with it, but eventually the system should take care of itself.

Authority for Expenditures

Two authorities are required, one to retire the old unit, and one to reinstate the rebuilt unit in the property account. In order to secure uniformity of results and efficiency in handling, one man should be charged with the responsibility for making up all authorities of this character. The requests for authorities should contain all necessary information, such as the cost of renewals, additions and betterments, incidental operating expenses and probable amount of salvage or scrap. From this information both of the A. F. E.'s may be prepared. Freight cars should be handled in groups if found practical to do so, because of the amount of clerical work involved in individual treatment.

The following example illustrates the method of preparing detailed estimates for retirements and reinstatement:

DETAILED ESTIMATE FOR RETIRING LOCOMOTIVE 1101

Retirement		
Ledger value, credit Account 51		$9,000.00
Salvage		
Accrued depreciation, debit accrued depreciation		5,000.00
*Parts to be used in rebuilding debit material		2,250.00
Scrap, debit material		930.00
Total		$8,180.00
Costs Chargeable to Retirements		
Ledger value	$9,000.00	
Less Salvage	8,180.00	
		$820.00
Incidental Costs Chargeable to Retirements		
Labor dismantling	$200.00	
Shop Expense	40.00	
Material used in dismantling	20.00	
Store Expense	1.00	261.00
Total Debit Account 310		$1,081.00

DETAILED ESTIMATE FOR INCLUDING LOCOMOTIVE 1101 IN THE ACCOUNTS

Property Added:	
Value of second hand parts used (found by method set forth above, and rated as 70 per cent new)	$3,140.00
†Labor used in reconstruction	10,500.00
Shop expense	2,100.00
†Material used in reconstructing	4,500.00
Store Expense	225.00
Total, Charge Account 51	$20,465.00

*Experience has shown that this material is generally worth 50 per cent of its value new before repairs are made. The mechanical forces should be required, however, to give this value in their request for A. F. E. in order that the estimator may check up his work.

†The labor and material includes replacing in kind as well as addition and betterment work

---

IN DANE COUNTY, Wisconsin, Judge E. R. Stevens, in the Circuit Court has reversed a recent ruling of the state railroad commission which ordered the Chicago & North Western to rebuild an industrial spur track at Beloit, which it had removed more than a year ago. Judge Stevens held that the state railroad law does not compel railroads to build spur tracks to accommodate single industries.

Cummins Investigation Completed

WASHINGTON, D. C.

THE TAKING of testimony in the general investigation of the railroad situation by the Senate committee on interstate commerce, which was begun early last year, was completed on July 26 by the filing of a statement of S. Davies Warfield, president of the National Association of Owners of Railroad Securities, urging legislation to put into effect the plan which the association has been advocating for co-ordinating railroad facilities under the direction of the National Railway Service Corporation. Senator Cummins, chairman of the committee, will prepare a report on the investigation but it probably will not be completed before the next session of Congress.

Mr. Warfield said that permanent standing conference committees have been named by the National Association of Owners of Railroad Securities and by the Association of Railway Executives to discuss the proposals for pooling interchange freight cars under a central agency, advocated by representatives of the security owners before the Interstate Commerce Commission in February last.

A tentative bill was presented for the Federal incorporation of the National Railway Service Corporation. This is the agency of a public character, operating without profit, organized by the association of security owners under state charter to demonstrate its feasibility and economic necessity, and which has financed equipment for a number of carriers. Under federal charter, he said, its operations and usefulness would be extended.

Advantages of this agency for also financing the rebuilding of freight cars without cash margin from the carriers were also set forth.

"As a result of correspondence," Mr. Warfield stated, "a committee was appointed consisting of the chairmen of the four railroad groups and the chairman of the Advisory Committee of the Association of Executives to meet a committee named by the association of security owners to discuss its proposals." At a conference no objection was found by the Railroad Committee, it is stated, to the use of the Service Corporation by carriers so desiring, for financing equipment, new or rebuilt, or to the federal incorporation thereof. The proposals for pooling freight cars were deferred but will be immediately presented before the permanent Railroad Conference Committee recently appointed. Senator Cummins requested a copy of the proposals for car pooling also, as he had been waiting for all available data to close the hearings.

In the statement to the Senate Committee, Mr. Warfield made an urgent appeal to maintain the provisions of Section 15a of the Transportation Act as a necessity to adequate rail transportation.

Mr. Warfield said the attempt to provide for traffic inequalities through the consolidation of all the railroads into a few large systems is utterly impracticable. He contends that to lay out territories so that competing newly consolidated large railroad systems operating therein will earn alike, "cannot be done," and that "the necessary results of competition would be varied earnings among the systems." He said the inequalities between traffic territories could be provided for, other than through Section 15a, only by the "drastic method of consolidating all the railroads of the country into one large system," and that the full use of the Service Corporation in connection with the provisions of Section 15a of the Act, will produce much greater savings than from the large consolidations, which should remain permissive.

The members of the Railroad Conference Committee are: T. DeWitt Cuyler, Chairman; Howard Elliott, L. F. Loree, W. B. Storey and Daniel Willard. The members of the security owners' Conference Committee are: S. Davies Warfield, Chairman; George E. Brock, Haley Fiske, Darwin P. Kingsley and John J. Pulleyn.

Rock Island's June Report Best in Ten Years

System Earned 2.95 Per Cent on Stock in 1921; June Net Operating Revenue $2,699,212

The Rock Island's recently issued monthly report for June shows a net operating revenue of $2,699,212. This compared with a figure for May of $1,832,158 and with a figure for June a year ago of $2,032,656. The report shows also that the corporate net after fixed charges for the month was $988,643 which compared with $395,220 for June last year. For the six months' period the corporate net after fixed charges was $9,477. Up to the end of June a year ago the system had suffered a deficit after fixed charges of $397,167.

With reference to this monthly report Charles Hayden, chairman of the Rock Island board of directors, has issued a statement saying:

"The results for June we consider very satisfactory. The net operating revenue is the largest net operating revenue we have had for the month of June in the past ten years. The ratio of operating expense to operating revenues, namely 76.01, is substantially better than was our 1921 ratio. We estimate that the loss in freight revenue for the first six months of 1922, due to the reduction in rates which was made effective January last, on grain and livestock, amounts to about $3,000,000."

Outside of the fact that the June report shows the largest net operating revenue for June in a period of ten years, the next most interesting detail is that the June results finally succeeded in putting 1922 ahead of 1921 from the standpoint of corporate net income. Up to the end of May, 1922 was not showing quite as favorable results as last year. For the first five months of 1922 there was a corporate deficit after fixed charges of $979,166 which compared with a deficit in the same period of 1921 of $792,387. The fact that the figure after fixed charges in the earlier part of the Rock Island year's earnings is shown in red as it was up to May is somewhat of secondary importance. The Rock Island earnings are much better in the latter part of the year than in the first part.

In the annual report for the year 1921, President J. E. Gorman's opening paragraph read:

"We are very happy to advise you that, after the payment of all fixed charges and taxes during the year, the company showed a balance of income available for dividends on the preferred stock, leaving a surplus credited to profit and loss of $2,212,564, equivalent to 2.95 per cent on the common stock. While this is not as much as the property should earn, and as we believe it will earn when conditions have been readjusted, it is so much better than the result of operations during federal control that we consider it a most creditable showing. The Rock Island is one of the few railroads in its territory which in 1921 showed an increase in freight earnings; and, although present conditions are not so favorable as in 1921 towards an increase in gross earnings, we will make every effort to maintain the enthusiasm on the part of the operating staff and the friendly relations with the shipping public which that fact manifests."

Best Year Since 1917

The Rock Island's balance after payment of preferred dividends was in 1921, as noted, $2,212,564. This compared with $1,095,670 in 1920. The per cent earned on common stock in 1921—2.95 per cent—compared with 1.46 per cent in 1920. The reason for the improvement was the manner in which earnings held up—there was an increase of 4.24 per cent in freight revenues—combined with a reduction of 14.10 per cent in operating expenses. This situation resulted in an improvement in net revenue from railway operations from $10,527,448 in 1920 to $26,318,967 in 1921, or 150 per cent, more than sufficient to supply the place taken in 1920 by the standard return and guaranty. The Rock Island's net available for dividends in 1921 was the best since 1917; it was not as good as in 1917 or 1916.

One of Few Roads to Increase Freight Earnings

The road's good fortune in having in 1921 an increase in freight revenues which permitted it to realize on the reduction made in its operating expenses makes it an exception from the majority of the country's railroads. Most of the railways were able, in 1921, to effect drastic economies in their operating expenses, but the larger proportion were unable to realize in adequate measure on the reduction in expenses because of the severe falling off in traffic which they experienced. The Class I railroads, as a whole, suffered a decline in 1921 as compared in 1920 of 9.4 per cent in freight earnings. There were, however, a fairly large number of carriers which had larger freight earnings in 1921 than 1920. Most of these lines were in the east. The Rock Island was one of the few in its territory, as Mr. Gorman points out, to have this good fortune.

This makes it important to ascertain why the Rock Island should not have suffered from the general decline in the freight earnings. The first reason was the increase in earnings per ton-mile; the second, the manner in which the road was helped by a large increase in its tonnage of wheat, perishables and oil. The total tons carried in 1921 were actually less than in 1920. The figure for 1921 was 25,924,576 tons as compared with 29,867,233 tons in 1920, a decrease of 13.20 per cent. The revenue ton-miles were 6,857,672,913 as compared with 7,885,424,422. In spite of this reduction in tons and tons one mile, the freight revenues totaled in 1921, $99,000,440 as compared with $94,973,798 in 1920, an increase of 4.24 per cent. The fact that there was an increase in freight revenues with a reduction in tons one mile is explained largely by the freight rate increases which became effective during the year 1921; the rate per ton-mile in 1921 was 1.44 cents as compared with 1.20 cents in the preceding year.

Increased Freight Earnings—Decreased Ton-Miles

The figures of tons carried, given above, show a decrease of 3,942,657 tons as between 1921 and 1920. The larger part of this reduction came in coal, other products of mines, lumber and manufactures. On the other hand, there was a very decided increase in products of agriculture; namely, 1,276,443 tons or 14.64 per cent. Products of agriculture which totaled 24.22 per cent of the total tonnage in 1920, made up 32.83 per cent of the tonnage in 1921. There was an increase in tonnage of crude petroleum of 109.06 per cent.

An analysis of this situation will bring out some of the interesting railway developments which have been taking place in the central west and southwest during the past year or, in fact, several years. These factors have been treated in the reviews of the operations of some of the other roads, so a brief resumé is all that is necessary at this time. Reference is made to the three factors of increased traffic in perishables, the oil business and, as a special feature of 1921, to the wheat traffic. Some of the roads have been affected by one or the other of these factors—the Rock Island, as we have noted, by all three.

1921 Wheat Traffic Big Factor

First as to wheat. It will be remembered that in nearly every week of 1921 the car loadings of grain were in excess of the loadings for the comparable week of 1920—a fact

which applied to no other leading commodity. The reason was the fact that the 1920 crop, held on the farms in 1920, was offered for 1921 movement. There was further a large export demand, an interesting feature of which was the tendency to move the grain to the Gulf ports rather than to the Atlantic seaboard with resulting advantage to the lines serving the Gulf. The effect on the Rock Island was marked. Wheat in 1921 constituted 11.53 per cent of the total tonnage of the road as compared with 6.52 per cent in 1920. There was an actual increase of over 1,000,000 tons in wheat traffic, or 53.61 per cent over 1920—the 1921 tonnage being 2,988,922. Similarly corn, which in 1921 made up 6.40 per cent of the total tonnage, showed an increase over 1920 of 49.85 per cent. The grain traffic, incidentally, is one of the uncertain features of 1922, primarily because of the reduction in grain rates reference to which is made in Chairman Hayden's statement quoted above.

The Rock Island has a very large tonnage in fruits and vegetables, it having a special position in that connection because of being a part of the traffic route from California constituted by the Southern Pacific, the El Paso & Southwestern and the Rock Island. This tonnage moved in heavy volume in 1921, the tonnage of citrous fruits being 18.85 per cent greater than in 1920, and other fresh fruits, 26.55 per cent greater.

Increase of 109.06 Per Cent in Crude Petroleum

The Rock Island, in 1920, handled crude petroleum amounting to a total tonnage of 287,405. In 1921 it carried 600,849 tons, or more than double that amount. This means that the Rock Island, in the space of one year, has become an oil carrier of some importance. The details are given in President Gorman's remarks as follows:

"The most important development along these lines of the company for many years was the increase in traffic obtained from the discovery of oil fields adjacent to our lines. In January, 1921, the first oil well was brought in at Eldorado, Ark., and since that time 479 producing wells have been brought in in that field, of which 462 were oil wells. The aggregate daily production from the field has been about 38,000 barrels. Up to January 31, 1922, 3,855,840 barrels had been moved by rail, of which your company hauled approximately 88 per cent. Our right-of-way extends throughout the length of the field, about 12 miles. While no great production has been developed on this right-of-way, the company has profited greatly from the traffic development. In 1920 the earnings of the El Dorado station on all freight traffic were about $300,000, and in 1921 about $2,700,000. Of course, the future of any oil field is uncertain, but we have been very much gratified over this development.

"There have been new oil developments also in the vicinity of Duncan and Walter, Okla.

"The field of Mexia, Tex., which was developed in 1921, promises to be a much larger producing field than the El Dorado field. This is located on the Trinity & Brazos Valley line, of which your company is one-half owner, the other half being owned by the Colorado & Southern Railway Company. The Trinity & Brazos Valley has been a losing venture for many years, and it is with great satisfaction that we observe this oil development along its lines."

Maintenance

It was noted above that the Rock Island freight revenues in 1921 were 4.24 per cent in excess of freight revenues for 1920, due to the increase in earnings per ton-mile. The passenger revenues, however, experienced a reduction of 13.46 per cent. The total operating revenues, $139,272,024, compared with $142,026,152, a reduction of 1.94 per cent. As against this reduction of less than 2 per cent in operating revenues, there was a reduction of 14.10 per cent in operating expenses. The operating expenses in 1921 totaled $112,953,057, as compared with $131,498,704 in 1920. Reductions were made of 20.76 per cent in maintenance of way; 17.50 per cent in maintenance of equipment and 11.32 per cent in transportation.

With reference to the reduction in maintenance expenses, the figures show that the average number of ties renewed per mile of track in 1921 were 232 as against 255 in 1920. Figures with reference to rail show that there were laid 54.19 miles of 100-lb. and 234.80 miles of 90-lb. rail, as compared with 99.88 and 131.30 miles respectively in 1920. Track miles of new ballast show 47.07 for 1921, as compared with 17.40 in 1920; track reballasted was 148.99 miles as compared with 164.51 miles. Although these figures give varying comparisons with 1920, it appears that the savings in maintenance expenses were not due to reductions in the standards of maintenance.

The Rock Island appears to be in good shape insofar as concerns maintenance of equipment. Its percentage of bad-order cars on July 1 was only 10.5 per cent as compared with the country's average of 14.3. The percentage of unserviceable locomotives was 11.4.

I. C. C. Prevents Reduction in Ex-Lake Ore Rates

Washington, D. C.

The Interstate Commerce Commission in its decision handed down on July 27 in the trunk-line and ex-lake iron ore rate cases has exercised its authority to prevent a reduction in rates asked by the railroads on the ground that the reduction would not only be unreasonable in relation to other rates and cast an undue burden upon other traffic but would tend to jeopardize a 5.75 per cent return. The commission says the reduction on ex-lake ore rates, which it declined to allow to become effective, would not result in increased revenues but in substantial reduction, probably more than $3,000,000 per annum, and that the record does not justify the conclusion that increases in movement will result from such reductions sufficient to offset the reduction in rates. The railroads took the position that the lower rates would increase their revenues and Commissioner Potter vigorously dissented from the majority opinion, saying that their judgment is probably better than the commission's and "in individual instances of this kind they are entitled to have it prevail."

By tariffs filed to become effective April 1 and at later dates the railroads had proposed to reduce the rates on iron ore in carloads from mines and tidewater ports to points in trunk line territory 28 per cent and from Lake Erie ports to interior furnace points in central and trunk line territories 20 per cent. Protests were filed by iron and steel interests at Buffalo on the ground of discrimination and the operation of the tariffs was suspended by the commission. Practically all other iron and steel companies having furnaces in the territory wherein the rates would apply appeared at the hearing in support of the proposed reductions.

In October, 1921, reductions of about 28 per cent were made in both the eastern trunk lines and ex-lake ore rates limited to expire December 31, 1921. The carriers applied to the commission for authority to extend this period for an additional three months, which was denied. A large part of the decision is taken up by comparisons of rates and a discussion of the complications caused by the fact that no change was made in ex-lake ore rates at the time of the Railroad Administration increase in 1918 and that no further increase was made in the rates to the upper lake ports following the commission's order in Ex Parte 74. The commission finds that no undue prejudice is caused protestants by permitting the suspended rates on ore in eastern trunk line territory to go into effect.

As to the ex-lake rates, the Buffalo interests, representing 22 blast furnaces out of a total of 200, were the sole protestants. They objected to the proposed reduced rates on iron ore for the benefit of their competitors without a simultaneous and corresponding reduction in the rates on coal

and coke to Buffalo. The commission points out that the proposal is now to reduce the ex-lake rates by twice the percentage that rates on other traffic were reduced by its general decision effective on July 1. It also says that the proposal of the carriers in this case to single out only one of the raw materials for the manufacture of pig iron and to leave unchanged the general level of rates on all other raw materials used for the same purpose does not contemplate the same principle as the plan of equalizing the assembling cost of raw materials which it had previously held unlawful, but that in other respects it is equally indefensible, and in the absence of some showing that the ex-lake rates on ore are relatively high compared with other rates on ore with rates on traffic in general, further reductions at this time would appear to be out of harmony with its finding in the general rate reduction case.

The opinion points out that in the general rate case shippers generally contended that reductions in rates would stimulate traffic, while the carriers in general controverted this argument, but as to the suspended ore rates they claim that lower rates would stimulate movement and perhaps in the aggregate produce as much for the carriers as will the existing rates or even more. In this connection the commission refers to the car loading figures showing an increase of about 45 per cent in the number of cars of ore loaded in the Eastern, Allegheny and Pocahontas districts in the five weeks ended July 1 as compared with the corresponding period of the previous year, whereas for the United States as a whole the increase was almost 80 per cent.

After calling attention to the fact that in accordance with the transportation act it has recently determined that 5.75 per cent will be a fair return and that it had made a 10 per cent general reduction, the commission says:

Those rates became effective July 1, 1922, and included reductions of 10 per cent in all of the ore rates here under consideration except those which had been reduced 10 per cent or more since the general increase of 1920. While the record contains no conclusive estimate of the effect of the additional reductions proposed on ex-lake ore, we are persuaded that they will not result in increased net revenues to the carriers, but in substantial reduction, probably more than $3,000,000 per annum. The record does not justify the conclusion that increases in movement will result from such reductions sufficient to offset the reduction in rate.

We, therefore, find the suspended rates on ex-lake ore unreasonable and unlawful, and by order shall require their cancellation. We find them unreasonable and unlawful for the reason that in relation to rates in general and in relation to rates closely affiliated, such as on coal, they would tend to cast an undue burden upon other traffic that they would be unduly prejudicial to ore traffic from mines to eastern trunk-line territory, so far as the same carriers participate in the interstate carriage of both ex-lake and local mine ore traffic; that they are unlawful inasmuch as their establishment would jeopardize the rates on a large volume of other heavy-loading low-grade traffic which we have initiated under the authority of section 15a of the interstate commerce act with the intent that the carriers in the rate groups by us established shall "under honest, efficient and economical management and reasonable expenditures for maintenance of way, structures ad equipment, earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation." This rate of annual return we have fixed at 5.75 per cent, a rate of return which certain of the respondents have protested as inadequate, and which, if our judgment upon the effect of the proposed reduction in ex-lake ore rates is correct, the carriers are hereby likely to further reduce and jeopardize. We have only recently rejected tariffs of certain of the respondents intended to establish on three days' notice a further 10 per cent reduction over the 28 per cent reduction already in effect in some of the eastern and import rates, notably the rate from Constable Hook to Bethlehem. We mention this fact in connection with the reductions on ex-lake ore here proposed by the carriers, in order to make clear that in our judgment our authority under section 15a, in the exercise of our power to prescribe just and reasonable rates to "initiate, modify, establish or adjust" rates is not a mere transitory authority to establish in the first instance a general rate structure calculated to produce a fair return, but is a continuing authority to see that such a rate structure shall not be undermined and its purpose thwarted by new rates, either increases or reductions, proposed by particular carriers for the purpose of augmenting the traffic on certain carrier lines, or on certain descriptions of traffic, or for immediate and special benefit of particular persons, companies, firms, corporations, localities, or particular descriptions of traffic, in disregard of the more general and seemingly inevitable consequences of such rates newly proposed. To upset or seriously to menace a general structure lawfully established suffices to make proposed rates calculated to effect such a disruption unreasonable and unlawful.

Commissioner Potter said:

As to the alleged undue burden on other traffic: The proposed rates on ex-lake ore to the various groups shown in the majority report would yield from 6.1 to 11.6 mills per long ton per mile. Generally speaking, the movement is regular at least throughout the season of navigation, and in large volume per unit movement. The return movement of coal and other commodities is heavy. The cost of handling is low. There are innumerable rates on practically all roads throughout the United States which yield to carriers a lower return per ton-mile on traffic handled at higher cost. The proposed rates would be remunerative. The position of the carriers affected is that their net revenues would be increased by putting these rates into effect. It is obvious that anything that makes for a reduction of the cost of pig iron may through stimulation of industrial activity reach much farther than would now be apparent to us. The carriers think it would be good traffic policy to put in these rates. We should not on the record in this case condemn their conclusions and force ours upon them. We are not responsible initially for the details of traffic policy in railroad management and we are not equipped for that job.

As to the finding that the proposed rates would imperil the returns to which the carriers are entitled: The carriers do not think they would. Their judgment is probably better than ours and in individual instances of this kind they are entitled to have it prevail. In working out their conclusion they have available much information of which necessarily we are ignorant. The majority report claims no more than that the proposed rates "are likely to further reduce and jeopardize" a 5.75 per cent return. This apprehension, conflicting as it does with the deliberate judgment of the carriers, does not justify the interference of the majority view. Our condemnation of reductions in rates should have a better foundation in certainty as to what the results would be.

As to the undue prejudice against mines in the eastern trunk-line territory: The suspended rates not being unduly low, if their relationship to the present rates from mines to eastern trunk-line territory would unduly prejudice such mines that fact does not justify the withholding of our approval. The extent of the undue prejudice should be determined and its removal as a part of the adjustment should be required by appropriate order. Speaking as of prior to *Reduced rates*, 1922, as does the majority report, a reduction of the ex-lake or rate 20 per cent would be approximately 25 cents per ton and aggregate approximately $9,000,000 per year, based on the 1920 movement. Such reduction would reduce the cost of pig iron approximately 50 cents per ton and correspondingly reduce the cost of iron and steel products produced therefrom.

The total 1920 movement of ore from mines in eastern trunk-line territory was approximately 2,096,000 tons. The protection afforded these ores by denying the proposed ex-lake reduction is 25 cents per ton or an aggregate of $524,000 on the total movement. The protection of the eastern mines to the extent of $524,000 is by the majority report made to cost the consumers of products of iron ore $9,000,000. To put it another way, in order to protect the eastern ores to the extent of 25 cents per ton the consumers of ore products are to be compelled to pay in excess of what they otherwise should more than $4 per ton on the ore produced by the local mines. I can see no justice in such action. We are not called upon to subsidize the eastern mines out of the funds of consumers generally of the products of iron ore. If the local mines are entitled to protection to the extent of 25 cents per ton, some means should be found which would not cost the consumers $4 per ton. It is to be noted, too, that the higher cost of pig iron continued by refusing the proposed reduction will naturally affect the cost to the consumer of products of import ore so that the aggregate amount which the consuming public would pay on the basis of the majority report to protect the eastern mines to the extent of $524,000 will be much in excess of $9,000,000. The interstate commerce act requires no such relation of ward and guardian between the local mines and this commission as the majority report recognizes. . . .

Our function is to see that traffic moves under fair rates and that competing industries bear a proper relation to one another. In performing the function we should put into effect a remunerative rate which carriers desire, and if that rate would cause undue prejudice, deal with competing rates as facts and conditions warrant.

C. C. & O. Net Expands with Non-Union Coal Traffic

Six Months Net Railway Operating Income Is $1,506,416 This Year; $962,718 Last Year

The Carolina, Clinchfield & Ohio operates a line from Elkhorn City, Ky. to Spartanburg, S. C. Its mileage totals 291 of which nearly all is main line. Of the company's total revenues, about 55 to 60 per cent are derived from the transportation of bituminous coal. This coal originates in the Clinchfield district and the normal method of operation is to move the coal in heavy train loads —in 1921 the revenue train load was 1,228 tons—to Spartanburg where delivery is made to the Southern for movement to tidewater at Charleston. Normal interest in C. C. & O. matters results from its high engineering standards and its general method of heavy train loading and economical operation. At present there is a special interest in the property's operation because of the manner in which it is receiving benefit from the coal strike. The Clinchfield district is non-union. The coal loadings on the C. C. & O. are at present running about 1,950 cars weekly whereas a year ago at this time they were averaging about 1,200 cars weekly. While, as was above noted, the greater part of the C. C. & O. coal movement is south to Spartanburg, at present there is a heavy movement to the industrial districts to the north which are not now receiving coal from their usual sources. This new movement is to Elkhorn City where the coal is turned over to the Chesapeake & Ohio for movement beyond.

Accentuates Improvement

The result has been to accentuate an improvement in C. C. & O. net earnings which dates back to 1920. The property had a standard return of $1,758,957. In 1918, it earned for the government a net railway operating income of $1,162,282. In 1919 its net railway operating income was $1,497,762. In 1920, however, the figure was $2,489,561 and in 1921 it was $2,492,298. The result of the increased coal movement is especially evident in the 1922 six months' figures. The gross income for the first six months of this year has totaled $3,863,255 as compared with $3,581,721 in the first half of last year. The net after rentals for the six months was $1,506,416 this year as compared with $962,718 for the same period last year. In the first half of 1921 the C. C. & O. operated at a ratio of 79.80. For the whole year its ratio was 71.28. The figure for the first six months of 1922 was brought down to 66.05.

The 1921 Results

The C. C. & O. in 1921, as is shown in its recently issued annual report had less gross than in 1920 but increased net due to the savings in operating expenses. It is realizing on this saving in operating expenses at present because of the increase in coal tonnage from the non-union field which it serves. The 1921 gross revenues totaled $7,464,112 of which $4,024,728 or 53.92 per cent was from coal traffic and $2,765,419 or 37.05 per cent was from merchandise freight. In 1920, gross revenues were $7,560,880 of which $4,478,865 or 59.24 per cent was from coal. The operating expenses in 1921 totaled $5,320,171 as compared with $5,-991,271 in 1920. The operating ratio was 71.28 which compared with 79.24 in 1920. This figure of 71.28 was the best since 1917 in which year the road operated at 57.18. In 1921 the C. C. & O. ratio of transportation expenses to revenues was but 27.93 as compared with 33.68 in 1920. It is interesting to observe that prior to the war the road used to have an operating ratio of about 50 or a transportation ratio approximating 20. Increased traffic has compensated for the fact that these results are not being obtained today.

The total revenue tonnage in 1921 was 4,887,990 as compared with 5,890,136 in 1920 and the revenue ton mileage was 817,962,370 as compared with 904,765,779 in the preceding year. The annual report shows separately the figures of tons and ton miles for coal and merchandise. The 1921 figures show a coal tonnage of 3,326,264 as compared with 4,261,427 in 1920. The coal ton mileage in 1921 was 620,-794,859. One of the most interesting figures is that of coal tons one mile per mile of road which in 1921 was 2,133,243 which one would suggest is the outstanding feature of Clinchfield operations. It is further brought out that the average haul on coal in 1921 was 186.63 miles whereas merchandise freight has a haul of but 126.25 miles. Coal receipts per ton per mile in 1921 were 0.65 cents; merchandise, 1.40 cents and all freight, 0.83 cents.

High Coal Traffic Density

Thus the figures bring out the relative importance of the coal tonnage. They show the high traffic density of the coal tonnage which has always been a feature of C. C. & O. operations. Naturally with such a predominance of coal tonnage and considering the high engineering standards to which the line was built we should also expect to find a heavy train and car load. The 1921 average train load was 1,228, the highest in the South. The average car load was 41.92. It is interesting to observe that both of these figures represent increases over 1920 in spite of the falling off in traffic. The C. C. & O. owns 67 freight locomotives, the average tractive effort of which is 69,360 lb. Of these, 38 are Mallets including 21 of the 2-6-6-2 type with an average tractive effort of 73,859 lb. and 17 of the 2-8-8-2 type with an average tractive effort of 102,359 lb. The larger part of the line is laid with 85-lb. rail, in fact all but about 50 miles laid with 100-lb. Over one-half the total mileage is ballasted with rock, the rest with slag or stone and slag mixed.

The Carolina, Clinchfield & Ohio's capitalization includes $25,000,000 common stock, $11,500,000 preferred, and $27,-241,000 long-term debt. There are also outstanding $6,-854,000 equipment trusts. This gives a rather high capitalization per mile—considerably exceeding $200,000 per mile. Interest charges, including interest on the six per cent income debentures, now total not quite $2,000,000 annually. In 1921 the company had a corporate net after fixed charges of $723,608. Figures for years immediately preceding were: 1920, $885,224; 1919, $314,298; 1918, $449,908. The corporate surplus on December 31, 1921 was $4,680,680. The company paid 3 per cent on its preferred in 1913 and 6 per cent in 1914 but none since; no dividends have ever been paid on the common. The outstanding feature is that while it is true that the company has a high capitalization per mile its economical method of operation as embodied in the heavy train load and high coal traffic density enable it to meet that fact to the extent that it is able to yield a sizeable margin over the heavy fixed charges. The 1922 annual report will undoubtedly be of special interest because of the present heavy movement of non-union coal.

Excursion Trains bearing harvesters for the Western prairies have begun to arrive at Winnipeg, Manitoba. It is said that the farmers want 41,000 men and that the pay will be $3.50 a day for harvesters and $4 for threshers.

Administration's Coal Distribution Plan in Effect

Henry B. Spencer Appointed Federal Coal Distributor—Production Shows Slight Recovery

WASHINGTON, D. C.

WITH THE APPOINTMENT by the President of Henry B. Spencer to act temporarily as federal coal distributor as the administrative member of the coal distribution committee, the federal government's machinery for regulating the distribution of coal during the period of shortage began functioning actively on Monday. Mr. Spencer is president of the Fruit Growers' Express, was formerly vice-president of the Southern Railway, director of the Division of Purchases of the Railroad Administration during the war, and had charge of national coal distribution at the time of the 1919 strike after the dissolution of the old Fuel Administration.

Secretary Hoover has stated that the announcement referring to Mr. Spencer as coal "administrator" represented a typographical error, and that he should be called fuel distributor because it was not proposed to set up an entire fuel administration. He emphasized the decentralization of the plan, pointing out that the federal government will concern itself mainly with seeing that each state gets its fair quota of the available coal and that the distribution within the states and the prevention of local profiteering is within the responsibility of the state governments. He also pointed out that until coal production is largely increased, as by the settlement of the coal strike, the priority orders given to mines will cover practically all of their production and that these orders will be directed from Washington. He has requested all bunkering companies to furnish a bunker supply only to the next port of call and that foreign ships should bunker for the round trip at their home port. Canada has also been requested to import for its own safety. The governors of the principal states concerned have already undertaken to erect the necessary administration to control profiteering and distribution of coal within their states and most of the state commissions have sent telegrams to Commissioner Aitchison of the Interstate Commerce Commission promising their co-operation in accordance with his telegram.

Fuel Distributor, Not Fuel Administrator

Secretary Hoover, as chairman of the President's Fuel Distribution Committee, has announced that the plan of coal distribution communicated to different governors embraces the following principles:

The federal government will limit its activities in coal distribution entirely to interstate questions. Mr. Spencer has been appointed fuel distributor, not fuel administrator, because the federal distribution is concerned with coal distribution between the different states, not with coal administration in the sense of the war organization.

The control of coal distribution to individual consumers within the state boundaries is entirely in the hands of state authorities except for railway coal.

The methods of handling coal for railways responsible to the Interstate Commerce Commission will be determined directly from Washington in maintaining interstate commerce.

Distribution problems vary in different groups of states; that is in New England, Middle Atlantic, Southern, Middle West, Northern Lake states, Intermountain and Pacific states. The last two groups are able to look after themselves and are not now embraced in active administration.

Each state outside the latter groups has been requested to canvass its situation as to stocks and requirements in order of the priority in different classes—public utilities, public institutions, households, and industrial coal.

Each state has been asked to make such rules and regulations as it may see fit to control speculation and distribution within the boundaries of the state. It has been suggested that the co-operation of their state wholesale and retail coal dealers' associations should be secured. The federal government has no authority and can exert none in this matter beyond moral pressure.

Each state that must import coal from other states has been asked to create a central state agency or committee for the purchase or guarantee of purchases of coal that may be imported into the state from other states or from abroad, all coal to be consigned to an agency designated by the state. By this arrangement a great deal more mobility is given the state authorities in shifting coal to meet its local emergencies. Furthermore, this arrangement will remedy the financial impossibility of asking coal producers to ship to strange consumers whose reliability must be established. The repudiation of coal during the last strike caused great losses and litigation.

The federal fuel distributor will place these state central purchasing agencies or committees in contact with the coal producers in states of coal surplus and will undertake to see that coal is sold to the central purchasing agencies at a fair price. The state purchasing agencies will indicate the destinations within the states to which coal is to be shipped.

The federal distribution will prorate the available supplies between states following the general basis of priorities declared by the Interstate Commerce Commission.

Where coal is already flowing through natural channels to priority concerns approved by the state agencies, it will continue, but it will form part of the state quota.

The whole plan is one of complete decentralization into the hands of the state authorities, the federal agencies acting solely in interstate commerce.

The governors of the following states have already undertaken to erect the necessary administration to control profiteering and distribution of coal within their states:

Ohio, Indiana, Illinois, Michigan, Wisconsin, North Dakota, Minnesota, Maine, Massachusetts, New Hampshire, Connecticut, Rhode Island, New York, New Jersey, Maryland, Pennsylvania, West Virginia, Iowa, Oklahoma, Florida, Kentucky, Tennessee, and Louisiana. Kansas has already an establishment under its industrial court. It is not considered necessary to establish coal control in the Inter Mountain and Pacific states as they have supplies of coal and fuel oil.

The following have so far been designated as members of the advisory committee of operators from the producing coal districts under the chairmanship of C. E. Bockus of Virginia: E. L. Douglass of Kentucky, George S. Francis of Pennsylvania, E. C. Mahan of Tennessee, W. J. Magee of West Virginia, E. E. White, West Virginia, also C. E. Tuttle to advise as to Lake and Northwest movement, and LeBaron S. Willard to advise on bunker and tidewater movement.

Coal Production

Returns received by the Geological Survey on coal output in the seventeenth week of the strike (July 24-29) give the first test of the response to the invitation to reopen mines. There had been a slight recovery as compared with the sixteenth week. Production was running at the rate of 3,900,000 tons against 3,700,000 tons the week before. The increase is said to be due partly to more men at work in Pennsylvania, partly to improved car supply in Southern West Virginia, and partly to heavier shipments from Ala-

bama and the Far West. Production of anthracite remains practically zero.

Loadings on Monday, July 24, were 13,083 cars. This was 417 cars above the preceding Monday, but 3,664 cars below the last Monday before the shopmen's strike. On Tuesday and Wednesday loadings declined, but on Thursday a slight recovery was noted. The trend of production is indicated by the following statement of cars loaded daily.

	12th week	13th week	14th week	15th week	16th week	17th week
Monday ...	11,445	15,311	16,747	11,039	15,094	12,666	13,083
Tuesday ..	11,019	16,622	15,748	334	12,909	10,821	11,861
Wednesday .	11,437	17,032	15,656	11,979	12,398	10,932	11,383
Thursday ..	11,090	16,432	16,402	14,521	11,593	10,805	11,760
Friday	11,296	16,073	15,980	14,631	11,606	10,623	....
Saturday ..	8,888	13,993	12,603	12,523	9,694	9,864	....

It thus appears likely that the total output for the seventeenth week will be less than 4,000,000 tons, probably only 3,900,000 tons. In the lowest week of the strike 3,575,000 tons were produced and in the highest week (June 19-24), 5,363,000 tons. The decrease since June is said to be attributable to traffic congestion resulting from the shopmen's strike. In the Middle Appalachian region, the congestion is still acute, although a slight improvement over last week has been reported from certain districts.

Normal production at this season, including anthracite, is from 9,500,000 to 12,000,000 tons.

No Indication of Increased Production

There was said to be no indication of increased production in response to the invitation to reopen mines in any of the strongly organized districts. More coal is coming out of the former non-union fields of Pennsylvania, and a little more from the Fairmont and Kanawha districts of West Virginia, but the additional supply from these sources is not yet significant in comparison with the requirements of the country.

The all-rail movement of anthracite to New England increased to 433 cars during the third week in July. Bituminous shipments, however, decreased to 445 cars. In addition to this movement through the rail gateways of Maybrook, Harlem River, Albany, Rotterdam, Troy and Mechanicsville, one car of anthracite and four cars of bituminous coal were forwarded through Rouses Point.

Shipments of bituminous coal through Hampton Roads continue to decline steadily. A total of 294,563 net tons was dumped in the week ended July 22, against 355,993 tons in the week preceding, a decrease of more than 17 per cent.

Lake shipments continued to decline during the week ended July 23. A total of 144,952 tons was dumped over the Lake Erie piers, of which 126,150 tons were cargo coal, and 18,802 tons were vessel fuel. In the corresponding week in 1921, 766,436 tons were dumped. Shipments to Buffalo and other lower Lake Erie ports have practically ceased and but 961 tons were shipped to such points. Of the 4,200,151 tons of cargo coal dumped during the present season to date, 844,169 tons, or 20 per cent, have been shipped to destinations not ordinarily taking Lake coal.

More than a million tons of coal will be moving from Wales and the East Coast of England by September 1, according to figures compiled by J. Barstow Smull, vice-president, United States Shipping Board Emergency Fleet Corporation, in charge of allocations and charters. "The Shipping Board has already chartered 50 of its vessels to import coal from the British Isles, and by September 1, a million tons will be moving to this country," he said. "The 50 vessels operated through the Shipping Board will carry approximately 400,000 tons, and with the charters made abroad there will be moving to this country the above quantity within the next 30 days."

Contact between the Federal Coal Distribution Committee and the railroads is maintained through M. J. Gormley, chairman of the Car Service Division of the American Railway Association. Information as to the fuel needs of the railroads is to be collected by a committee of purchasing agents representing the Eastern, Southern, Western and Southwestern regions and consisting of B. P. Phillippe, assistant purchasing agent of the Pennsylvania, chairman; F. H. Fechtig, purchasing agent of the Atlantic Coast Line; E. A. Clifford, assistant general purchasing agent of the Atchison, Topeka & Santa Fe, and W. G. O'Fallon, purchasing agent of the Terminal Railroad Association of St. Louis. Mr. Spencer has established his office in the building occupied by the Car Service Division, which is also across the street from that of the Interstate Commerce Commission.

The Norfolk & Western and Chesapeake & Ohio on July 27 issued embargoes against all freight except the classes given preference and priority by Service Order No. 23 of the commission.

Organization and Plan for Coal Distribution

Fuel Distributor Spencer on Wednesday announced the following organization and plan for the distribution of fuel in the existing emergency:

(1) The President's Fuel Distribution Committee, consisting of Secretary of Commerce Hoover, Chairman; Attorney-General Daugherty, Secretary of the Interior Fall, Commissioner Aitchison, Interstate Commerce Commission; Federal Fuel Distributor Spencer.

(2) The federal fuel distribution will be set up in Washington for the purpose of directing the distribution of available supplies among the railways, federal institutions and states, consisting of an Administrative Committee, as follows:

H. B. Spencer, Federal Fuel Distributor, Chairman; Samuel Porcher, railroad fuel; Le Baron S. Willard, tidewater coal; J. N. Snider, New England and Eastern; C. E. Tuttle, Lake coal; George F. MacGregor, Southwestern region; E. M. Durham, Jr., Southeastern region; E. W. Thornley, manager of orders; F. G. Tryon, Geological Survey; Lt. Com. E. A. Cobey (S. C.), U. S. Navy; M. J. Gormley, American Railway Association; J. C. Roth, interstate Commerce Commission; D. R. MacLeod, secretary to the committee.

The Coal Operators' Advisory Committee will consist of C. E. Bockus, Chairman, Virginia; E. E. White, Southern West Virginia; E. C. Mahan, South Appalachian; E. L. Douglas, Eastern Kentucky; William J. Magee, High Volatile District of Southern West Virginia; George R. Francis, Pennsylvania.

(3) Creation of district committees in the principal producing districts east of the Mississippi for the purpose of distributing orders from the Federal Fuel Distributor among the mines, consisting of a representative of Federal Fuel Distributor, Interstate Commerce Commission, coal operators, railroads. District headquarters have been established as follows: Norton, Va.; Bluefield, W. Va.; Huntington, W. Va.; Knoxville, Tenn.; Louisville, Ky.; Birmingham, Ala.

Pending the completion of this organization, three intermediate stages will ensue:

(a) Continuation of their normal ordinary business by the operators.

(b) Priority buyers, in accordance with I. C. C. Service Order No. 23, will gradually encroach upon operators' business.

(c) Coal orders placed through the Federal Fuel Distributor for railway purposes and state committees will gradually absorb the total output of the mines.

(4) Creation of a Fuel Committee by each Governor, the orders from whom will be sent to the Federal Fuel Distibutor, at Washington, and thence out to the district committees, and the Governors have been asked to create organizations in each state, with the following duties:

(a) To report at once the consumption of coal in their state in the different categories—utilities, household, industries, etc.

(b) To furnish a statement showing:

1. A list of those who should receive priority coal for current use, not for storage, in the order of emergency of their need.

2. Nature of consumer, whether public utility or whatnot.

3. Character of coal required, including source from which consumer previously obtained his supply.

4. Name of coal operator with whom he does business, if in the present producing field.

5. Weekly supply needed by such consumer.

6. Number of weeks' stock he now has in hand.

(c) To set up a single consignee in each state on behalf of all coal shipped into that state on orders from the governor's

committee, through the Federal Fuel Distributor. The governor's committee will become responsible for payment for all coal shipped into the state and will put up advance bank deposit to cover same, which depository will honor sight draft with weight certificate, car number, etc., this being practically an f. o. b. sale.

(d) The governor's committee will distribute coal made available to him according to their judgment of the respective needs in the state, and is at liberty to reconsign or to move coal after it has reached points in the state.

The governor's committee would naturally proceed in this distribution according to the rotation of public necessity:

1. Public utilities and public institutions.
2. Household coal.
3. Industries manufacturing public necessities.
4. Industries in general.

(e) In order to effect proper distribution, governor's committees will find it advantageous to secure the co-operation of the wholesale and retail dealers within their states.

(f) Governor's committees are entirely responsible for the prevention of profiteering and extortion in the sale and distribution of coal within their states.

(6) Shipments of coal by the Lakes to the states of Minnesota, North Dakota, South Dakota, Northern Wisconsin, Northern Michigan and Canada shall operate through the Ore and Coal Exchange of Cleveland. Orders for such coal on contracts in existence will come through, or be approved by, the Federal Fuel Distributor to the District Committees. It is the purpose to inaugurate a regular weekly movement of coal to this trade. The division of such coal between states or receiving points must be indicated from the Federal Fuel Distributor.

(7) Coal operators will continue to function individually in respect to filing their ordinary business or priority orders that may come to them under the I. C. C. Service Order No. 23 until such time as orders that have been received by the District Committees from the Federal Fuel Distributor supplant their capacity.

Upon receipt of orders for coal from the Federal Fuel Distributor in Washington the service agent of the Interstate Commerce Commission on the District Committee will issue an order upon the recommendation of the representative of the Federal Fuel Distributor to the railroads to place the cars for the coal shipment.

This order will be delivered to the representative of the railway on the District Committee for transmission to the proper officer of the railway for execution.

The District Committee will specify the mines from which the coal shall be shipped. The representative of the Federal Fuel Distributor will, subject to a guarantee of payment which shall be satisfactory to the mine operator, with due regard to the Hoover fair price, allocate such orders to the various mines in the district.

Representative of the railroads on the District Committee will report to the Service Agent of the Interstate Commerce Commission the number of cars shipped daily under the order.

The District Committee will report to the Federal Fuel Distributor at Washington shipments made.

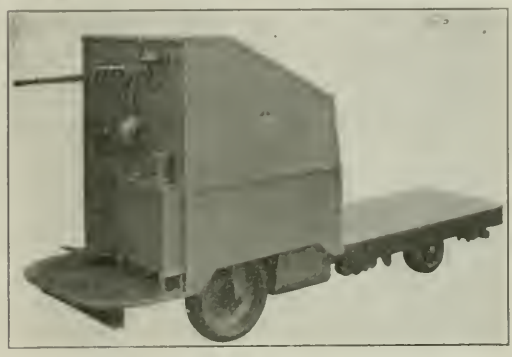
(8) Distribution of fuel for the railroads will be gradually concentrated in the hands of a Railroad Coal Committee, composed of coal buyers from the different railway groups.

Railway Coal Committee—B. P. Phillippe, Chairman, representing Eastern group; E. A. Clifford, representing Western group; F. H. Fechtig, representing Southern group; W. G. O'Fallon, representing Southwestern group.

This committee will sit in Washington (718 18th street, N. W.) and the needs of the different railroads with respect to coal will be checked and passed upon by it and applications for emergency coal for railroad use will be made to it for action by the Federal Fuel Distributor.

A Gas-Operated Industrial Truck With Elevating Platform

An elevating platform on a gas-engine-operated industrial truck is a new development in the industrial equipment field that has been added to the line of gas engine trucks manufactured by the Clark Truck Tractor Company, Buchanan, Mich. The truck has a platform 54 in. by 26 in. with a minimum height above the floor of 11 in. This can be raised to 16 in. through the agency of the lifting mechanism which consists of a system of toggles operated by a rack and pinion gear from an hydraulic cylinder. The lifting mechanism is designed for a maximum working load of 4,000 lb. and is equipped with a pressure release so that the mechanism becomes inoperative if an attempt is made to lift a load in excess of that weight. The car has a total length of 9 ft. and a total width of 3 ft., and can be operated with a turning radius of 8½ ft. The drive wheels which are under the platform are 10-in. diameter rubber-tired wheels, spaced 20 in. center to center, while the steering wheels are 16 in. in diameter, spaced 26 in. center to center. These steering wheels are mounted with a pivoted connection at



All Operating Control Levers Are Conveniently Located for the Driver

the center of the frame so that a three-point suspension is obtained which eliminates distortion in the frame of the truck when passing over uneven floors.

The entire operating mechanism is enclosed in a hood at the operator's end of the truck. The power plant consists of a 15-hp. four-cylinder tractor engine with planetary type transmission to the drive wheels. The control is effected by a small hand lever mounted in a standard H gate. The clutch and brake are combined in a foot lever on the oper-

The Elevating Platform Adds Greatly to the Labor Saving Possibilities of the Truck

ator's platform which is automatically in the braked position when it is not pressed down by the operator's foot. The truck has two speeds in each direction, the maximum being six miles per hour. The operation of elevating motion in either direction can be completed in eight seconds, the lifting mechanism being equipped with automatic stops at both ends of the travel. It is said that the car will travel up a 12-per cent grade under full load.

General News Department

By a Washout at East Chatham, N. Y., due to a cloudburst, on July 28, the Boston & Albany was blocked for about 36 hours. The roadbed was badly damaged nearly all the way for about five miles.

Glenn E. Plumb, counsel for the principal railroad labor organizations in matters pertaining to legislation and cases before the Interstate Commerce Commission, and the author of the Plumb plan for government ownership of the railroads and their operation for the benefit of the employees, died at Washington on August 1 after an illness of several months.

The American Association of Railroad Superintendents will indefinitely postpone the convention scheduled to be held in Kansas City on August 23, 24, 25, for which full arrangements had been made. The industrial atmosphere is such that it is the unanimous opinion of the executive committee that even if the strikes are called off shortly, it would be too late to hold a successful meeting, as members would be busy for some time in getting things back to normal.

Preliminary Compilation of Railway Earnings

One hundred and 87 Class I railroads that had filed their earnings reports with the Interstate Commerce Commission by Wednesday had a net railway operating income for June of $73,726,800, as compared with $48,844,000 in June, 1921.

Clerks Buy Building Site

The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, has purchased a prominent tract of land in Cincinnati, Ohio, for $200,000 and is preparing plans to construct a seven-story building, to cost about $350,000.

Big Demand for Bus Permits

Owing to the curtailment of passenger service on a number of roads because of the coal shortage and the railroad strike, state public utilities commissions have been flooded of late with petitions from motor bus companies requesting certificates of public convenience to operate stage lines over the highways. There are 25 petitions of this nature on docket with the Illinois Commerce Commission and other state commissions report similar activity along this line.

Illinois Central Conserves by Reweighing

One month of reweighing and inspection of less than car load freight on the Illinois Central increased the revenues of that company $11,610. Of the shipments reweighed, 11.6 per cent were corrected, resulting in an increase in revenue of $3,860, while 2,777 of the 31,729 shipments inspected were found incorrectly described, and the resulting corrections added $7,750 to the company's revenue. It is said that the tendency toward incorrect description of freight and the consequent loss in revenue is greater now than in years past.

Traveling Passenger Agents

F. R. Perry, General Agent of the Canadian Pacific, New York City, and president of the American Association of Traveling Passenger Agents, states that the annual convention of that association will be held in September in the Canadian Pacific Rockies. The first business session will be held at Calgary, Alberta, on September 12. The night of the 13th will be spent at Banff, and the 14th and 15th at Lake Louise. The members, on special trains, will then proceed through the Canadian Rockies in daylight, and the convention will adjourn at Seattle on September 20.

Roby & Northern Sold

The Roby & Northern, a railroad extending from Roby, Tex., to North Roby, a distance of five miles, was sold last week to J. D. McCall and J. L. Blain of Dallas, Tex., who purchased 55 per cent of the stock of the road. The road is valued by the Texas Railroad Commission at $75,000 to $100,000. It owns one locomotive, two motor cars, two freight, one passenger and six miscellaneous cars. Trains are operated on regular schedules daily between the two towns. It is said that plans are being made for improvements with possible extensions and the purchase of new equipment.

Iowa Rail Valuations

After months of wrangling between the railroads and the Iowa railroad commissioners the assessed valuations of the railroads in that state were finally fixed by the state executive council on July 26, after it was settled that the railroads would contest the alleged excessive valuation, placed against them for taxation purpose. As the figures now stand, the value per mile of the leading railroads is as follows: Chicago, Burlington & Quincy, $36,000; Chicago Great Western, $30,000; Chicago, Milwaukee & St. Paul, $33,000; Chicago & North Western, $38,000; Chicago Rock Island & Pacific, $30,400; Illinois Central, $30,500; Minneapolis & St. Louis, $20,000; Wabash, $20,000.

Fifty-seven Per Cent Looked

Automobile drivers are actually becoming more careful. This is the conclusion of the Safety Department of the Southern Railway from a check at three crossings on the Dixie Highway in Kentucky. The checkers found:

Number of vehicles passing over crossings	967
Number stopped before crossing tracks	221
Number where driver looked in one direction	354
Number where driver looked in both directions	555
Number where driver crossed without taking any precautions	58
Number crossed at speed exceeding twenty miles per hour	28

This check discloses that one driver out of every four actually stopped to make sure that no trains were approaching and 57 per cent looked in both directions. Only 6 per cent crossed without taking any precaution whatever.

New Railroad Legislation in 1921

J. E. Fairbanks, general secretary of the American Railway Association, speaking for the committee on relations of railway operation to legislation, reports that in the year 1921 a total of 166 laws were enacted by the legislatures of one state or another on subjects relating to railway operation. The number of bills of this class introduced was 588; so that something over one-fourth of those introduced succeeded in gaining the approval of the legislators and the executives. Mr. Fairbanks' statement consists of a table showing, for each state, the number of bills introduced and the number enacted, under each one of 97 classes and sub-classes. California enacted 13 laws; Iowa, 10; Minnesota, 14; South Dakota, 12, and other states lesser numbers.

Unsafe Practices in Handling Explosives

Numerous important suggestions for avoiding danger from explosive and inflammable articles are contained in Bulletin No. 56 recently issued by the Bureau of Explosives. One of the most important matters discussed is the handling of casinghead gasoline. In spite of the wide publicity given to the dangerous character of this commodity after the disastrous explosions at Ardmore, Okla., in 1915, and at Memphis, Tenn., in 1921, three accidents occurred during May and June as results of failure to observe the rules of the bureau. The bulletin again calls attention to the necessity for relieving internal pressure through the safety valve before dome covers are removed and for cooling cars in

case the pressure rises and gas is discharged through the valve. Other causes of accidents noted in the bulletin are the storage of black powder at too short a distance from a car storage yard and disregard of a smoldering fire while handling a car of naphtha involved in a wreck.

Pullman Car Tax in Wisconsin Upheld

The Wisconsin Supreme Court recently upheld the State Tax Commission's assessment against the Pullman Company and ordered payment of back taxes amounting to nearly $200,000, accumulated since the case was commenced in the Dane County Circuit Court in 1913. Justice Jones reversed the lower court's decision and directed a judgment for the state, sustaining the constitutionality of the statute governing the valuation of railroad property. He said: "It is our conclusion that neither the statute in question nor the methods pursued by the commission were in violation of any of the provisions of the state or federal constitutions; that the assessment made by the commission was not excessive or unjust; and that it should be sustained." The Pullman Company was assessed $21,268 as its tax for 1913, paid $10,728 of that amount and refused to pay the remainder and has continued to refuse in like manner during the following years up to the present, claiming that the state had assessed intangible property outside of Wisconsin.

All Cattle Shipments in Utah Subject to Inspection

The attorney general of Utah has rendered an opinion relative to the law governing the transportation of cattle by rail in that state, in which he contends that all shipments of cattle and horses are subject to a brand inspection prior to shipping, and that no railroad can lawfully accept cattle for shipment until the certificate of inspection is presented. The purpose of the brand inspection is to prevent the theft of cattle. Railroad agents state that with the law reading as it does, they have had no option but to accept cattle for shipment on a statement by the owner that he is shipping them for grazing purposes only, for which an exception is made in the state brand inspection law. The attorney general differs with this view, which leaves a big loophole for the benefit of the cattle thief. He stated: "It is my opinion that it was clearly the intent of the legislature that the phraseology 'other than for grazing purposes' should apply only in case of driving animals from the state or from one county to another; and such a phrase was never intended to apply where animals are shipped by rail, even though they are only to be shipped from one county to another."

Will Attempt to Keep M. D. & G. Intact

The attorney general of Arkansas has been instructed by the railroad commission to be in readiness, as soon as the sale of the road is effected, to file suits to prevent the dismantling of any part of the Memphis, Dallas & Gulf. The Interstate Commerce Commission recently granted permission to the receivers to abandon parts of the line, this overruling former action on the part of the Arkansas commission, which denied a like petition several months ago after extensive hearings. The petition alleged that the branch could not be operated at a profit, but the Arkansas commissioners contended that because of an increase in truck farming and other industries in the section the road was necessary as an outlet to the markets; and they held that a better division of the overhead expenses would permit a profit on the branch. The receiver appealed to the Interstate Commerce Commission and recently obtained a decision favorable to junking. The Arkansas commission, however, contends that the road operates only in intrastate traffic and that therefore the Interstate Commerce Commission has no jurisdiction. The sale will be held in St. Louis, Mo., August 18.

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings:

Air Brake Association.—F. M. Nellis, 165 Broadway, New York City. Next convention, May, 1923, Denver, Colo. Exhibit by Air Brake Appliance Association.

Air Brake Appliance Association.—J. F. Gettrust, The Ashton Valve Company, 318 W. Washington St., Chicago. Meeting with Air Brake Association.

American Association of Demurrage Officers.—F. A. Pontious, Supervisor of Demurrage and Storage, C. & N. W. Ry., Chicago.

American Association of Dining Car Superintendents.—L. A. Stone, C. & E. I. Ry., Chicago. Annual meeting, Oct. 17-20, San Francisco, Cal.

American Association of Engineers.—C. E. Drayer, 63 E. Adams St., Chicago.

American Association of General Baggage Agents.—E. L. Duncan, 332 So. Michigan Ave., Chicago.

American Association of Passenger Traffic Officers.—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York. Annual meeting, October 10 and 11, Seelbach Hotel, Louisville, Ky.

American Association of Railroad Superintendents.—J. Rothschild, Room 400 Union Station, St. Louis, Mo. Next convention, August 23-25, 1922, Kansas City, Mo.

American Electric Railway Association.—J. W. Welsh, 8 W. 40th St., New York.

American Railroad Master Tinners', Coppersmiths' and Pipe Fitters' Association.—C. Borcherdt, 252 North Hamlin Ave., Chicago, Ill.

American Railway Association.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.
Division 1.—Operating.
Freight Station Section (Including former activities of American Association of Freight Agents). R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.
Medical and Surgical Section. J. C. Caviston, 75 Church St., New York.
Protective Section (including former activities of the American Railway Chief Special Agents and Chiefs of Police Association). J. C. Caviston, 75 Church St., New York, N. Y.
Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 75 Church St., New York, N. Y. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.
Safety Section. J. C. Caviston, 75 Church St., New York.
Division II—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.
Division III—Traffic, J. Gottschalk, 143 Liberty St., New York.
Division IV—Engineering, E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Exhibit by National Railway Appliances Association.
Construction and Maintenance Section. E. H. Fritch.
Electrical Section. E. H. Fritch.
Signal Section (including former activities of the Railway Signal Association). H. S. Balliet, 75 Church St., New York, N. Y.
Division V.—Mechanical (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Exhibit by Railway Supply Manufacturers' Association.
Equipment Painting Section (Including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.
Division VI—Purchases and Stores (including former activities of the Railway Storekeepers' Association).
Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.

American Railway Bridge and Building Association.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next convention October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.

American Railway Development Association.—A. Leckie, Industrial Agent Kansas City Southern Ry., Kansas City, Mo.

American Railway Engineering Association.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Exhibit by National Railway Appliance Association.

American Railway Master Mechanics' Association.—(See American Railway Association, Division V.)

American Railway Tool Foremen's Association.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

American Short Line Railroad Association.—T. F. Whittelsey, Union Trust Bldg., Washington, D. C.

American Society for Steel Treating.—W. H. Eiseman, 1600 Prospect Ave., Cleveland, Ohio. Annual convention, Oct. 2-7, 1922, General Motors Building, Detroit, Mich.

American Society for Testing Materials.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

American Society of Civil Engineers.—Prof. J. H. Dunlap, University of Iowa, Iowa City, Ia. Regular meetings 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York.

American Society of Mechanical Engineers.—Calvin W. Rice, 29 W. 39th St., New York.
Railroad Division—A. F. Stuebing, Manager Editor, Railway Mechanical Engineer, Woolworth Bldg., New York.

American Train Dispatchers' Association.—C. L. Darling, 1310-1311 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

American Wood Preservers' Association.—S. D. Cooper, A. T. & S. Fe R. R., Topeka, Kan. Next meeting, January 23, 1923, New Orleans, La.

Association of Railway Claim Agents.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn.

Association of Railway Electrical Engineers.—Jos. A. Andreucetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.

Association of Railway Executives.—Thomas De Witt Cuyler (chairman), 61 Broadway, New York, N. Y.

Association of Railway Supply Men.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.

Association of Railway Telegraph Superintendents.—(See American Railway Association, Division I.)

Association of Transportation and Car Accounting Officers.—(See American Railway Association, Division II.)

Bridge and Building Supply Men's Association.—D. J. Higgins, American Valve & Meter Company, 332 S. Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Ass'n.

Canadian Railway Club.—W. A. Booth, 53 Rushbrook St., Montreal, Que.

Car Foremen's Association of Chicago.—Aaron Kline, 626 North Pine Ave., Chicago. Regular meetings, 2d Monday in month, except June, July and August, New Morrison Hotel, Chicago.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Koeneke, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.

CENTRAL RAILWAY CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Iroquois, Buffalo, N. Y.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill. Annual convention, August 22-24, Chicago.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesian Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors' and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, 614 F St., N. W., Washington, D. C.

FREIGHT CLAIM ASSOCIATION.—(See American Railway Associations., Division VII.)

GENERAL SUPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday, preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Annual convention, August 15-17, Hotel Sherman, Chicago. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George P. White, 747 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—I. G. Crawford, 702 E. 51st St., Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Wabash Ave., Winona, Minn. Next convention, September 5-8, Hotel Sherman, Chicago.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTER CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James B. Walker, 49 Lafayette St., New York. Next convention, September 26, 1922, Detroit, Mich.

NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York.

NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition at convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Noxon, 600 Liberty Bldg., Broad and Chestnut Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.

RAILWAY CLUB OF PITTSBURGH.—J. D. Conway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh, Pa.

RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electrical Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va. Next meeting October 10-13, 1922, Pittsburgh, Pa.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A., Division IV., Signal Section.)

RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division VI.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Church St., New York.

RAILWAY TREASURY OFFICERS' ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa. Annual meeting, October 19 and 20, Asheville, N. C.

ROADMASTERS' AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, C. & N. W. Ry., Sterling, Ill. Annual convention, September 19-21, 1922, Hotel Statler, Cleveland, Ohio. Exhibit by Track Supply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Frauenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill, P. O. Box 1305, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—I. L. Carrier, Car Serv. Agt., Tenn. Cent. Ry., 319 Seventh Ave., North Nashville, Tenn. Next meeting, October 19, St. Augustine, Fla.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, 9 W. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hilburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, 1177 East 98th St., Cleveland, Ohio. Annual convention, September 12-15, Hotel Sherman, Chicago. Exhibit by Railway Equipment Manufacturers' Association.

WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago. Regular meetings, 3d Monday each month except June, July and August.

Foreign Railway News

Railroad Disasters in France and Russia

Forty persons killed and 50 injured is the heading of a press dispatch from France on August 1, reporting a rear collision of passenger trains near Villecomtal. The trains were filled with pilgrims from Moulins bound for Lourdes.

Two hundred killed, many of them burned to death, is the reported result of the burning of a five-car passenger train on August 2 between Kiev and Schepetowka.

Chile and Argentina Agree on Trans-Andine Roads

The governments of Argentina and Chile believe that the time has come for the establishment of a standard which shall define and govern their future policy in the matter of Trans-Andine railroads, according to Commerce reports.

The Minister of Foreign Affairs in Chile and the Argentine Minister to Chile signed an agreement in Santiago, on April 25, which will put such a plan into effect. By this agreement two railroads will be built to connect, without change of cars: (1) In the north, Salta (Argentina) and the port of Antofagasta (Chile); (2) in the south, an extension of the Southern Railroad from Zapala (Argentina) to Curacutin (Chile), which will connect Bahia Blanca with cities on the Southern Chilean system. Both lines are to be completed and put into service within three years after ratification of the agreement by both governments.

The agreement provides that:

1. The minimum rates on freight and stock shall be based on operating expense only, not including fixed charges. In special cases or for the encouragement of certain industries, an exception to the above basis may go into effect under a temporary agreement.

2. In each case the conditions under which the commodity is produced, cost of production, market price, and the producer's profit are considered in establishing an increase over the minimum or basic tariff, which will allow some profit to the railroads without hindering industry and commerce.

3. The tariffs established on the above basis shall always be of an elastic nature to allow their adaptation to changing conditions.

4. The tariffs, in general, shall be alike for merchandise in transit and for that consigned to intermediate points on the lines. Special rates may be established to encourage local production, and in such cases reciprocal compensation may be arranged, if convenient. In other cases, unless interests conflict, the tariffs will be developed so as to encourage general traffic which will assist the producing zones and the terminals.

5. The rolling stock used in common on the Argentine and Chilean sections shall be of such type that it may be operated with safety and without change over all sections of the same gage on both international lines. A technical agreement shall be made to carry out the above. The rules established by the Berne convention for the railroads of Central Europe will be used to govern the interchange of rolling stock, for which payments will be liquidated on a per-car per-day basis.

6. The Argentine and Chilean governments shall agree opportunely upon the necessary supplementary regulations and upon the detailed application of this agreement. The present agreement shall be ratified and ratifications exchanged in Santiago, Chile, as soon as may be possible.

There is some opposition to the ratification of this agreement, but it is argued that national boundaries can no longer limit trade. Chilean nitrate and coal, it is said, will move to Argentina in exchange for agricultural products. The distance would be shortened from Argentina to the United States via Antofagasta, and Chile would be in closer connection with Europe through Buenos Aires.

Equipment and Supplies

Locomotives

THE DETROIT TERMINAL has ordered 2, 0-8-0 type locomotives from the American Locomotive Company.

THE SOUTHERN PACIFIC has ordered from the American Locomotive Company two snow plows, to have 12 ft. cut, and 18 by 26 in. cylinders.

THE UNION PACIFIC is inquiring for ten 2-8-8-2 Mallet type locomotives. This is in addition to the inquiry for 70 locomotives noted in the *Railway Age* of July 29.

THE BALTIMORE & OHIO, reported in the *Railway Age* of July 22 as inquiring for 15 Pacific type locomotives, has ordered this equipment from the Baldwin Locomotive Works.

THE PARIS-ORLEANS (France) has ordered through the General Electric Company one, 4-6-6-4 type electric locomotive from the American Locomotive Company. This locomotive will have a total weight in working order of 240,000 lb.

THE DAVIS J. JOSEPH COMPANY, Cincinnati, Ohio, has ordered one, 0-4-0 switching locomotive from the American Locomotive Company. This locomotive will have 13 by 20 in. cylinders and a total weight in working order of 65,000 lb.

THE ST. LOUIS COKE & CHEMICAL COMPANY, Granite City, Ill., has ordered one, 0-6-0 type switching locomotive from the American Locomotive Company. This locomotive will have 21 by 26 in. cylinder and a total weight in working order of 147,000 lb.

THE CHESAPEAKE & OHIO will receive bids until 12 o'clock noon August 25 at Richmond, Va., for general repairs to 50 locomotives. This company, as noted in the *Railway Age* of July 29, is also asking for bids until August 11 on the repair of 50 locomotives.

Freight Cars

THE FRUIT GROWERS' EXPRESS is inquiring for 1,000 refrigerator cars.

THE INDIANA GAS & COKE COMPANY is inquiring for repairs to 50 hopper cars.

THE BOSTON & MAINE is having 1,000 box cars repaired at the shops of the Laconia Car Company.

THE CHICAGO, BURLINGTON & QUINCY has ordered repairs to 500 gondolas from the Keith Railway Equipment Co.

THE BURMA RAILWAY COMPANY, LTD., is inquiring through the car builders for 446 covered goods wagons, 60 bogie quarduple bolster wagons and 10 goods brake van underframes.

THE NORTHERN PACIFIC, reported in the *Railway Age* of July 22 as inquiring for 1,000 steel center constructions, has ordered this equipment from the Western Steel Car & Foundry Co.

THE CHICAGO & NORTH WESTERN, reported in the *Railway Age* of July 15, as about to issue inquiries for repairs to a number of freight cars, has ordered repairs to 500 box cars from the American Car & Foundry Company.

THE MISSOURI PACIFIC has placed orders for repairs to 2,500 freight cars as follows: American Car & Foundry Company, 1,250; Sheffield Car & Equipment Company, 1,000; and the Mount Vernon Car Manufacturing Company, 250.

THE CHICAGO, ROCK ISLAND & PACIFIC, reported in the *Railway Age* of July 15 as inquiring for repairs to 1,500 box cars, 500 to 1,500 gondola cars, 500 refrigerator cars and 500 automobile and furniture cars, has placed orders so far with the Western Steel Car & Foundry Co. for repairs to 400 wooden box cars, 300 automobile and furniture cars and 400 steel underframe box cars.

THE NEW YORK CENTRAL is having 500 coke cars converted to gondola cars at the shops of the Ryan Car Company, Hagewisch, Ill; 500 coke cars converted into gondola cars at the shops of the Buffalo Steel Car Company, Buffalo, N. Y., and 973 coke cars converted into 500 flat, 300 double deck stock, and 173 single deck stock cars at the shops of the American Car & Foundry Company, Detroit, Mich.; for the Pittsburgh & Lake Erie 1,200 coke cars are being converted into box cars at the shops of the Standard Steel Car Company, Newcastle, Pa.; 300 coke cars converted into box cars at the shops of the American Car & Foundry Company, Detroit, Mich.

Passenger Cars

THE CHICAGO ELEVATED RAILWAY has ordered 100 elevated cars from the Cincinnati Car Company.

THE A. B. C TRANSIT REFRIGERATOR COMPANY, Chicago, has renewed its inquiry for 150, 40-ton express refrigerator cars.

THE NATIONAL RAILWAYS of Mexico have ordered 5 first-class and 10 second-class, narrow gage passenger coaches, from the Pullman Company.

THE BOSTON ELEVATED, reported in the *Railway Age* of July 1 as inquiring for 40 tunnel cars, has ordered this equipment from the Pullman Company.

THE PITTSBURGH & WEST VIRGINIA, reported in the *Railway Age* of July 29 as inquiring for four cars for passenger service, has ordered nine coaches, one passenger and baggage, two passenger, baggage and mail and two baggage cars from the American Car & Foundry Company.

Iron and Steel

THE NORFOLK & WESTERN is receiving bids for fabricated steel to be used in repairing and enlarging its coal piers and for track work at Lamberts Point, Va.

THE CHICAGO & NORTH WESTERN has placed an order with the American Bridge Company for three steel-deck girder spans (215 tons) to be used over the Milwaukee River near Lindwerm, Wis.

THE MISSOURI, KANSAS & TEXAS has placed an order with the Mississippi Valley Structural Steel Company for 350 tons of steel to be used in the construction of its new shops at Denison, Tex.

Machinery and Tools

THE CHICAGO, MILWAUKEE & ST. PAUL is inquiring for a 20-ton crane, a 1,100-lb. steam hammer, two lathes, a shaper and a drill press.

THE ATCHISON, TOPEKA & SANTA FE has placed an order with the Milwaukee Electric Crane & Manufacturing Company, Milwaukee, Wis., for a 15-ton crane.

One of the Wheeling & Lake Erie's Mallets

Supply Trade News

T. H. Lange has been appointed traffic manager of the Pawling & Harnischfeger Company, Milwaukee, Wis.

C. H. G. Larrimore has been appointed general manager of the Railway Audit & Inspection Company, Philadelphia, Pa., in charge of all operations, succeeding T. C. Cary deceased.

L. H. Matthews, for 19 years connected with the railroad department of the Fairbanks, Morse & Co., resigned on August 1, to become Pacific coast manager of the Chicago Metallic Packing Company, with headquarters at Los Angeles.

The Rome Wire Company, Rome, N. Y., has acquired an interest in the Atlantic Insulated Wire & Cable Company, Stamford, Conn. The latter company will continue to manufacture its brands of high-grade rubber covered wires and cables.

A. L. Roberts, formerly master mechanic of the Lehigh Valley Railroad, and recently chief engineer of the Arlas Crucible Steel Company, has been appointed sales engineer, railroad department, of the United Alloy Steel Corporation, Canton, Ohio.

The Roberts-Pettijohn-Wood Corporation has moved its offices in Chicago to 646 North Michigan avenue. Fred Pettijohn, vice-president of the company, has taken charge of its Eastern office in the Mills building, Washington, D. C. W. A. Van Hook has been appointed chief engineer of the valuation department with headquarters at Chicago. James C. Kelsey has joined the staff of the company as consulting engineer and Joseph M. McShane as chief accountant of the company's public utilities department, both with headquarters at Chicago.

The Tuttle Railway Supply Company, Inc., has opened offices in the Woolworth Building, New York City, for the handling of railway supplies and specialties. This company has just been appointed the eastern representative of the Edward S. Woods Company of Chicago. S. W. Tuttle, president of the Tuttle Railway Supply Company, Inc., was, some years ago, connected with the National Dump-Rodger Ballast Car Company, Chicago, in their shops, and for the past fourteen years has been connected with the American Car & Foundry Company, in the manufacturing, executive and selling departments.

The Air Reduction Sales Company, N. Y., has under way a program of plant expansion. Sites have been bought for an Airco acetylene plant at Birmingham, Ala.; an oxygen plant at Milwaukee, Wis.; and an acetylene plant and a calorene plant at Pittsburgh, Pa.; at the latter place the company recently completed an oxygen plant. Construction of the plant at Birmingham already has begun, and plans are well under way for putting up the plants at Milwaukee and Pittsburgh. In addition to these new plant installations, the company's facilities for producing oxygen from the air will be enlarged in Buffalo and Minneapolis. The estimated cost of the proposed improvements is over $500,000.

Obituary

William Andrew Thompson, Jr., one of the vice-presidents of the Texas Company, New York City, died at his home in Brooklyn on July 24.

L. O. Henggi, inventor of the Henggi rail-anchor and for a number of years connected with the P & M Co., Chicago, died at his home in Oakmont, Pa., on July 22.

T. C. Cary, vice-president and general manager of the Railway Audit & Inspection Company, Philadelphia, Pa., died recently. Mr. Cary was born on December 25, 1878, at Sheboygan Falls, Wis.

Railway Construction

Atchison, Topeka & Santa Fe.—This company will receive bids until August 17 for the construction of a new boiler and tank shop at Albuquerque, N. M., 140 ft. by 405 ft., to cost approximately $400,000. Authorization of this work was reported in the *Railway Age* of June 3, page 1312.

Chicago, Burlington & Quincy.—This company is calling for bids for the construction of a combination passenger and freight station at Elsberry, Mo. Bids for this work are to be closed August 14.

Illinois Central.—This company has awarded a contract to the Fred R. Jones Construction Company, Chicago, for the laying of a second track between Paducah, Ky., and Clarks, a distance of 3½ miles at an estimated cost of $125,000.

Illinois Central.—This company is calling for bids for the construction of nine water treating plants to be located at Council Bluffs, Iowa, Logan, Dunlap, Denison, Rockwell City, Wall Lake and Fort Dodge on the Iowa division; and at Amboy, Ill., and LaSalle on the Wisconsin division, four of these to be of 10,000, three of 20,000 and two of 30,000-gal. per hour capacity. Bids are also asked for the rebuilding of exisiting water treating plants at Manchester, Iowa, Galena, Ill., and Scale's Mound on the Minnesota division, to increase their capacity from 10,000 gal. to 20,000 gal. per hour and to install filters.

Illinois Central.—This company is calling for bids for the construction of a water station, including a 100,000-gal. storage tank, at Matteson, Ill., in connection with grade separation work at that place.

Union Pacific.—This company, which was reported in the *Railway Age* of June 22, page 134, as calling for bids for the construction of a brick freight house at Denver, Colo., has awarded a contract for this work to P. J. Sullivan, Denver, Colo., at an estimated cost of $240,000.

Union Pacific.—This company is calling for bids for the construction of two standard brick oil houses 28 ft. by 115 ft. at Grand Island, Neb., and Green River, Wyo.

Railway Financial News

BALTIMORE & OHIO.—*Asks Authority for Equipment Trust Certificates.*—This company has applied to the Interstate Commerce Commission for authority to issue $6,750,000 of 5 per cent, 15-year equipment trust certificates to be used in connection with the purchase of equipment to the amount of $9,069,680. The certificates have been purchased by Kuhn, Loeb & Co., and Speyer & Co., at 96.40.

BOSTON & MAINE.—*Stockholders Meeting Held.*—The meeting of the stockholders, adjourned several times by court action of E. D. Codman, was held July 27. The former board of directors was re-elected and William D. Woolson, of Springfield, Mass., was elected a director to succeed the late Charles P. Hall.

CHICAGO & ALTON.—*Ownership of Stock by Rock Island.*—See Chicago, Rock Island & Pacific.

CHICAGO, ROCK ISLAND & PACIFIC.—*Approval of Holding of Alton Stock Unnecessary.*—The Interstate Commerce Commission has dismissed this company's application for an order approving the ownership and holding by it of common and preferred stock of the Chicago & Alton on the ground that it does not come within the jurisdiction conferred by paragraph 2 section 5 of the commerce act.

DEATH VALLEY.—*Application to Issue Stock Denied.*—The Interstate Commerce Commission has denied this company's application for authority to issue either such amount of its capital stock from time to time as may be necessary when the proceeds thereof are used in conjunction with its sinking fund to retire its outstanding first mortgage 5 per cent sinking fund bonds as they become due, or such amount as may be required in conjunction with the sinking fund to retire 100 bonds which matured on March 1. The commission says the company has failed to show any satisfactory reason why the outstanding bonds cannot be retired otherwise than through the issue of capital stock from cash on hand.

GRAND RAPIDS & INDIANA.—*Lease by Pennsylvania.*—See Pennsylvania.

GREAT NORTHERN.—*Rehearing Denied.*—The Interstate Commerce Commission has denied an application for a rehearing of the decision in which the commission denied authority to abandon 3.69 miles of its Portland branch in Traill County, N. D.

ILLINOIS CENTRAL.—*Six Months' Guaranty Certified.*—The Interstate Commerce Commission has issued a certificate certifying the amount of this company's guaranty for the six months' period of federal control, including the Chicago, Memphis & Gulf and the Yazoo & Mississippi Valley, as $13,689,078, of which $1,313,078 was still to be paid.

INTERNATIONAL & GREAT NORTHERN.—*Properties Sold.*—In accordance with the reorganization plan recently announced the properties of the International & Great Northern were sold at public auction at Houston on July 28. The purchasers were representatives of the Central Trust Company of New York, representative, in turn, of the second mortgage bondholders. The purchase price was $5,000,000.

LEETONIA.—*Asks Authority to Abandon Line.*—This company has applied to the Interstate Commerce Commission for authority to abandon its line from Tiadaghton, Pa., to Leetonia, 8.7 miles.

NEW YORK, CHICAGO & ST. LOUIS.—*Asks Authority to Issue and Sell Bonds.*—This company has applied to the Interstate Commerce Commission for authority to sell $5,071,000 of second and improvement mortgage 6 per cent bonds, Series A and Series B, the issue of which had been previously authorized, and also to issue and sell $3,592,000 of Series B and Series C bonds. Some of the bonds previously issued have been pledged a security for a note for $1,000,000 to the director general of railroads which it is now proposed to retire and the balance of the proceeds is to be used to reimburse the treasury for expenditures not yet capitalized.

NORFOLK SOUTHERN.—*Equipment Notes Authorized.*—The Interstate Commerce Commission has authorized an issue of $375,000 of first lien equipment notes to be pledged with the Secretary of the Treasury as collateral for a loan from the government.

PENNSYLVANIA.—*Authorized to Acquire Control.*—The Interstate Commerce Commission has authorized the acquisition of control of the Grand Rapids & Indiana by lease for 999 years on the condition that the Pennsylvania shall not dispose of its stock of the G. R. & I., without the consent of the commission.

PERE MARQUETTE.—*Permission to Abandon Line Denied.*—The Interstate Commerce Commission has denied applications of this company for certificates authorizing the abandonment of its Freeport branch in Michigan, 6.23 miles long, and also that part of its line extending from a point near White Cloud to Big Rapids, Mich., 19.67 miles. Objections to the proposed abandonment were filed by interested shippers, organizations of business men and certain public utilities, and the commission holds that it is unable to find that present and future public convenience and necessity permit the proposed abandonment.

PITTSBURGH & WEST VIRGINIA.—*Vote Stock Increase.*—Stockholders of the Pittsburgh & West Virginia at a special meeting in Pittsburgh, July 27, voted unanimously in favor of increasing the capital stock from $47,000,000 to $51,900,000.

SAN FRANCISCO SACRAMENTO.—*Asks Authority to Issue Bonds.*—This company has applied to the California Railroad Commission for permission to issue $200,000 of its first mortgage gold bonds to be known as the series of 1923. These bonds are to bear interest at the rate of 6½ per cent and to mature on Jan. 1, 1940. They will be redeemable on any interest date at par and accrued interest plus a premium of 10 per cent. The proceeds are to be used to pay for extensions and additions.

ST. LOUIS SOUTHWESTERN.—*Annual Report.*—The annual report issued Wednesday shows for the year ended December 31, 1921, a net income of $2,493,481 as compared with 2,959,386 in 1920. The report shows the following details:

	1921	1920
Operating revenues	$25,140,164	$31,020,958
Expenses	19,089,559	25,886,056
Taxes, etc.	1,122,764	1,249,454
Operating income	$4,927,841	$3,885,448
Non-operating income	962,610	1,836,952
Gross income	$5,890,451	$5,722,400
Interest, rentals, etc.	3,396,970	3,298,656
Net income	$2,493,481	$2,423,744
Federal deficit	.....	536,093
Corporate net income	$2,493,481	$2,959,837
Investment in physical property	2,493,481	2,959,837

WABASH.—*Equipment Trust Certificates Authorized.*—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of $4,245,000 of equipment trust certificates to be sold at 95¾.

WESTERN PACIFIC.—*Rehearing Granted.*—The Interstate Commerce Commission has announced a rehearing before Examiner Clarke at Washington on August 24 on this company's application for authority to acquire control of the Sacramento Northern, which was denied.

YAZOO & MISSISSIPPI VALLEY.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of $5,034,000 5 per cent gold improvement bonds to be delivered at par to the Illinois Central in reimbursement of advances.

Regulations for Applications for Issue of Securities

The Interstate Commerce Commission has issued a revised order prescribing regulations for the filing of applications for authority to issue securities or to assume obligation or liability under Section 20-a of the interstate commerce act, which it says, shall be filed sufficiently in advance of the date of the proposed issue or assumption to give the commission reasonable time,

not less than 30 days, for the notices and investigation required by law. The order also includes the following definitions:

(a) Capital stock is considered to be *nominally issued* when certificates are signed and sealed and placed with the proper officer of the carrier for sale and delivery.
(b) Funded debt securities are considered to be *nominally issued* when certified by trustees and placed with the proper officer of the carrier for sale and delivery.
(c) "Securities," as that term is defined in said section 20a, are considered to be—
(1) *Conditionally issued*, when pledged or otherwise placed in some special fund of the obligor or issuing carrier.
(2) *Actually issued*, when they have been sold to a bona fide purchaser for a valuable consideration, and such purchaser holds them free from all control by the obligor or issuing carrier.
(3) *Actually outstanding*, when actually issued and not reacquired and held by or for the obligor or issuing carrier.
(4) *Nominally outstanding*, when reacquired by or for the obligor or issuing carrier under such circumstances as require them to be considered as held alive.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to the several roads the following amounts:

Maine Central	$850,000
Portland Terminal	850
Southern Pacific Terminal	412,000
San Francisco & Portland Steamship Co	54,000
Troy Union	42,000
Baltimore & Ohio, as result of final settlement, gave director general its obligation, on account of additions and betterments for.	9,000,000
SHORT LINES	
Leetonia	$4,600
Okmulgee Northern	1.00

The payment of these claims on final settlement is largely made up of balance of compensation due, but includes all other disputed items as between the railroad companies and the administration during the 26 months of federal control.

The Railroad Administration has also issued a quarterly summary of its settlements which shows that up to June 30 final settlements had been made with 252 railroads, which received a total of $152,259,146.73. Ten companies had paid the director general a total of $11,181,142.

Dividends Declared

Illinois Central.—Preferred, $1.10, payable September 1 to holders of record August 4, common, 1¾ per cent, payable September 1 to holders of record August 4.

Delaware & Hudson.—$2.25, quarterly, payable September 20 to holders of record August 28; common 2¼ per cent, payable September 20 to holders of record August 28.

Trend of Railway Stock and Bonds Prices

	August 1	Last Week	Last Year
Average price of 20 representative railway stocks	$68.98	$67.23	$58.69
Average price of 20 representative railway bonds	88.36	87.82	76.24

Railway Officers

Operating

R. B. Hoffman has been appointed superintendent of transportation of the Pacific Fruit Express with headquarters at Chicago with jurisdiction over car service matters in the territory east of Omaha, Neb., and El Paso, Tex.

F. H. Knickerbocker, general superintendent of the Oregon Short Line, with headquarters at Pocatello, Idaho, who has been appointed general manager of the Alaska Steamship Company and the Copper River & Northwestern, was born on December 10, 1875, at Chicago and entered railway service on March 16, 1897, as stenographer to the general freight agent of the Oregon Short Line with headquarters at Salt Lake City, Utah. He was successively promoted to secretary to the general superintendent on January 1, 1900; secretary to the vice-president and general manager, May 16, 1902, and to assistant to the general manager, January 1, 1909, his headquarters in each case being at Salt Lake City. He served in the latter capacity until August 15, 1916, when he was promoted to general superintendent with headquarters at Pocatello, Idaho, which position he held until the date of his recent appointment as general manager of the Alaska Steamship Company.

F. H. Knickerbocker

R. A. Pierce, superintendent of the Utah division of the Oregon Short Line with headquarters at Pocatello, Idaho, has been promoted to general superintendent with the same headquarters to succeed F. H. Knickerbocker, resigned. Mr. Pierce was born at Elmwood, Ill., on August 3, 1875, and entered railway service on November 4, 1890, as a yard clerk on the Rio Grande Western at Ogden, Utah. He served in this capacity until February 1, 1894, when he was promoted to general yardmaster at the same place, resigning this position on November 26, 1902, to become yardmaster of the Union Pacific at Ogden. He held this position until April 1, 1903, when he entered the services of the Southern Pacific as trainmaster at Ogden, which position he held until November 1, 1906, when he returned to the Union Pacific as general yardmaster at Ogden. He was appointed superintendent of the Ogden Union Railway & Depot Company on April 1, 1913, and was employed in this capacity until May 1, 1916, when he was appointed superintendent of the Utah division of the Oregon Short Line, which position he held until his recent promotion.

Service Continues Good

The shopmen's strike has now been under way for six weeks. It has had some adverse effects. These have been in evidence on some of the leading carriers serving non-union coal fields but latest reports are that congestion even on these roads is now being rapidly cleared up assisted in some cases by embargoes on traffic other than coal. On roads other than these, fast freight service—which is perhaps the best indicator of any—is not moving with quite its old time punctuality or regularity. It can hardly be said, however, that the delays are serious and certainly there is no approach whatever to anything like a crisis as to the transportation of perishable food supply. It seems rather safe to presume that most railroad managements a month ago would have considered themselves unduly optimistic if they had hoped that the operating situation would have been as good as the situation now happens to be at the end of that month. The newest development in the strikers' activity is their contention that there has been a rapid deterioration of equipment due to a failure to give it proper repairs. There may have been some deterioration but if in six weeks the strikers have failed to hinder passenger service or to slow down fast freight service any more than they have it looks as if the situation could not be much worse at the end of three times six weeks than it is now.

Theory and Practice in Concrete

The use of concrete has become so universal on the railroads and in fact so much a commonplace in the day's work that cognizance is seldom taken nowadays of the fact that its manufacture is really an art, based on sound principles of science derived from voluminous experimental data, and representing an infinite amount of careful study by no means ended. There are many evidences of this. One that merits special attention, is the method by which a number of roads have been observed to proportion aggregates on construction. However strange it may seem to close students of modern concrete construction, it is nevertheless true while some railroads are giving close attention to the design of the structure in the office, even to specifying definitely the proportions of cement, sand and gravel they give a conspicuous lack of attention to the quality and proportions of the aggregate that actually are used. As an illustration of this, it is frequently observed that where definite proportions of cement, sand and gravel are called for in the specifications governing the work of contractors, concrete is actually made by mixing the cement with run of bank gravel which often contains strippings and without giving more than the crudest consideration to wide variations in the uniformity of the material not to mention a neglect of screening to insure correct proportioning. In fact on some jobs it has appeared that more thought was given to the salvaging of the cement sacks than to the proper use of their contents. Whatever might be said about the good results which have occasionally been obtained from this method of undertaking concrete construction, this practice may nevertheless be said to represent an attitude toward concrete construction (for which surprisingly large sums are spent annually) that will sooner or later work to the injury of any road countenancing it. It may indeed be theory to include in specifications requirements as to the proportioning of the aggregate and as distinguished from this it may be good practice to use bank run. But if the results which have been obtained in the past justify the specifying of proportions, as they have, it is obvious that good reasons still exist for the railroads to conform rigidly to a practice more nearly in conformity with the art than some of them now employ.

Rail Strike and Financial Centers

One of the curious reactions to the railway shopmen's strike is the manner in which the strike has been regarded in financial circles. The facts of leading interest are that last week something like 20 leading railroad stocks advanced to new highs for the year. Among these stocks were the Chesapeake & Ohio, the Norfolk & Western and the Louisville & Nashville, all three of which have been rather badly hit by the shopmen's walkout. The reason for the favor which has been shown for the railroad issues is presumably in the main the favorable June earnings statements of a large share of the carriers. Insofar as concerns the C. & O., the N. & W. and the L. & N., the June statements were, of course, especially favorable because they reflected the heavy non-union coal traffic in June. Wall street, if one may revert to that expression, has come in recent weeks to look upon railroad stocks with a much more favorable attitude than formerly. Railroad issues have not had that same increase in price that industrial issues have had. Financial circles are, however, now turning their attention to the railroad stocks and to what the railroads are doing generally. The fact that they pay little or no attention to any possible adverse effects of the strike apparently indicates that they agree that the shopmen's strike has failed to hinder the railroads greatly in their start on a march to increasing prosperity.

Avoiding Mechanical Ruts

There is no doubt that the stockholders of railroads as well as other corporations sustain large annual losses because mechanical methods are often over standardized, new labor-saving methods and machinery being introduced only with great difficulty. The older mechanical department officers and shop foremen, in particular, are liable to get in a rut, rely too much on precedent, and believe that certain operations must be correct because they have always been done that way. Realizing that hundreds of more or less impractical machines and methods are proposed each year, it is easy to understand the caution with which railroad men adopt anything new. There is no justification, however, for the point blank refusal to try a promising new machine or method simply because it is new. Neither should it be rejected because shop men think they know more about their business than any one else and have nothing to learn. If an open-minded attitude is maintained, valuable lessons can be learned from the specialists in similar kinds of shop work. In this connection it is safe to say that some railroads maintain too stringent a policy in keeping salesmen out of the shops, as these men often convey suggestions of immense practical

value regarding carrying out the work. One of the important functions of the modern mechanical department is to avoid ruts, developing a policy of thorough investigation of the merits of new machinery and methods applicable to shop work. It is also the function of the department to show higher railroad officers the relation between modern labor-saving shop machinery and railroad net earnings.

The Proof of the Pudding

The many experiences which railways have had in adopting new ways of doing things or authorizing large expenditures for equipment on the strength of the glowing representations made by their advocates, only to find later that the results expected were not forthcoming, has quite naturally and rightly operated to put the roads constantly on their guard against newcomers. The necessity for the roads maintaining this attitude to avoid becoming the dumping ground for immature ideas does not, however, mean that they should close their minds to the ever-present possibilities of effecting economies or otherwise improving conditions to their own benefit, nor that they should not be always ready to consider the introduction of such methods or equipment as really offer some promise of substantial benefit. In view of this it is of interest to comment on the recent authorization by a large western railroad of the construction of nine new water treating plants and the remodeling of three others at an expenditure in excess of $200,000. This action has a two-fold significance, arising on the one hand, from the fact that a railroad has deliberately undertaken the construction of as many as nine new plants after having had several years' experience in water treating by various means, and arising on the other hand, from the fact of its remodeling a number of existing plants. Its action in building new plants is conclusive evidence of the continued belief of this road, at least in the efficacy of the process, and its action in remodeling existing plants affords evidence that treating plants, like other equipment established to do a certain work, are susceptible of improvement to keep pace with the development of the art. When it is considered that water treatment on railroads is still comparatively in its infancy and that some roads have not yet seen fit to interest themselves aggressively in it, these two points command attention. As ever, the proof of the pudding is in the eating, and when one road is found building treating plants upon the strength of the service obtained from others, it is reasonable to conclude that similar results may be obtained elsewhere.

Line Wire Crossings

Because of the rapidly increasing number of cross country transmission lines, in addition to the growing net work of public telephone systems, the railroads should be seriously interested in the character of the construction of these lines at the crossings with their communication and signal pole lines. Interference between power lines and railroad telegraph or signal control wires results in serious delays to traffic, to say nothing of the danger to employees. If a road operates a high tension a.c. signal line on the right of way that could become crossed with public telephone lines, the railroad may also be liable for damages resulting therefrom. These problems have received serious consideration from various state bodies, the American Railway Association and the Bureau of Standards. The A. R. A. specifications call for heavier construction for telegraph lines at power line crossings than is deemed necessary in the National Electrical Safety Code issued in 1920. The specifications of the Telegraph and Telephone Section of the A. R. A., adopted in 1922, are at variance with the code in respect to the number of wires which may be carried by an unguyed pole and also with reference to the limits on wire sag. The introduction of legislation recently in several different states relative to wire crossings has called for an unusual amount of time and information from railroad telegraph and signal officers and representatives of the communication and public utilities organizations. In order that the National Electrical Safety Code may serve as the basis for legislation in these states with minimum changes and conferences, the American Engineering Standards Committee is now forming a representative committee to consider the revision of the code dealing with wire crossings. There are several important matters for the railroad representatives to keep in mind in this revision, among which would be the elimination of the differentiation between the construction of power lines over main lines, branches and sidings. The railroad communication lines should be equally as well protected from public utilities power lines regardless of the number of trains or the size of the telegraph leads. The code, no doubt, will be adopted in whole or part as the law in numerous states, and the several sections of the A. R. A. and the railroad officers concerned might well follow the action of this proposed committee in order that the interests of the railroads may be guarded in the changes made in the code at this time.

Railroad Shop Transportation Facilities

It is a common saying that a carpenter is too busy to attend to small repairs about his own house or even to fix his roof until it leaks so badly as to be decidedly uncomfortable. In the same way it often looks as though a railroad was so busy furnishing or preparing to furnish transportation facilities to the public that no time was found to attend to the strictly local transportation problems around its own shops and terminals. Such a group of buildings, many of them often of considerable size, is frequently spread out over a large area. When the plant is laid out provision is made for standard gage tracks at the sides of the buildings and leading into them so that a car of coal can be delivered to the power house or alongside the blacksmith shop, or a car of couplers to the freight car shop. But what are the provisions for moving the coal from the bin to the various furnaces or for delivering the couplers at the car to which they are to be applied? Shops must have an adequate supply of standard gage tracks. At certain shops these have been supplemented by a well planned system of narrow gage industrial tracks which has aided greatly the distribution of materials. In the majority of cases, however, the only rolling stock provided is composed entirely of hand-pushed cars. Where tracks are well laid out a small storage battery locomotive or a platform car, self-propelled and with sufficient surplus power to haul several other small cars, would aid considerably in expediting deliveries and in reducing the costs of moving materials. In storage battery or gasoline engine industrial trucks and tractors a most convenient means of transportation is now available. Because of their flexibility and speed they can be used to great advantage even in shops which already have a system of industrial tracks. In order that they may be used to the best advantage it is important that the aisle space be of good width, well defined and kept free from obstructions. Suitable concrete walks or passage-ways also should be laid out to connect the various buildings. The whole problem of shop transportation is a large one and needs careful study, preferably by an expert. How many shops are there which have what may properly be called a real transportation system? The system and its equipment having been provided, the results obtained will then depend upon its operation. The selection of routes, the frequency with which they are covered and other problems of a similar character should be easily solved provided a suitable man is selected who is given full charge of the traffic.

President Harding's Second Strike Plan

PRESIDENT HARDING'S first plan for settling the shop employees' strike was "accepted" by the labor leaders with reservations that amounted to a rejection of it. Their answer to his proposal that railway managers and workmen should agree to recognize the validity of decisions of the Railroad Labor Board and faithfully carry them out clearly reserved to the employees the right to strike rather than carry out the Board's decisions. The railways accepted all parts of the President's plan except that which provided for taking back the strikers with their full seniority rights.

The definite rejection by the railway executives of the President's proposal regarding seniority rights has resulted in his submitting to the labor leaders and the railway executives a second plan. That is, that the strikers shall return to work, the railways shall give them employment, and the question of seniority rights shall be submitted upon its merits to and be decided by the Railroad Labor Board. Of course the President's second plan, like his first, involves, although he does not say so, rehearing by the Labor Board of the wage case and regarding the rules adopted by it to which the labor leaders object. The President's second plan was promptly rejected by the labor leaders. The meeting of the railway executives called to consider it was held too late for its outcome to be reported in this week's issue of the *Railway Age*.

It is the opinion of the *Railway Age* that the President's second plan is the only one he could have suggested which would have been consistent with the views he expressed in his letter to Chairman Cuyler of the Association of Railway Executives. The fundamental issue presented by the shop employees' strike is whether controversies between the railways and their employees are to be settled by arbitration by the Railroad Labor Board, or by strikes. The plain purpose of the labor provisions of the Transportation Act was to prevent strikes by causing every controversy which might result in a strike to be settled by decision of the Labor Board. If employees are to strike rather than accept any and every decision of the Board they do not like, then the labor provisions will fail to accomplish their purpose, and had better be repealed and the Labor Board abolished. In this instance, the labor provisions did fail of their purpose, and the supposed preventive of strikes has proven worse than the disease. It has delayed changes in working rules and reductions of wages which should have been made months before, it has not prevented a strike, and it has not made the strike any easier to settle.

The raising of the seniority issue and its becoming the principal obstacle to the settlement of the strike were inevitable results of the strike. Most of the railways could not hope to maintain normal operation without keeping many of their old shop employees and getting many new men. They could not do this without promising these men regular employment, and they could not assure them regular employment without promising them seniority rights. Once the question of seniority rights had been raised, it was a foregone conclusion that it could be settled only either first, by a complete victory for one of the combatants, or secondly, by some kind of arbitration, the performance of which function should naturally be delegated to the Railroad Labor Board. To settle the question arbitrarily in favor of either side would be to disregard the Railroad Labor Board, minimize its functions, reduce its authority and impair its prestige. On the other hand, to submit to it every issue involved, whether an issue which helped cause the strike, or one which is a direct outgrowth of it, will tend to do the very thing the President said he desires to do; viz., "establish the unchallenged authority of the Railroad Labor Board" and thereby help to make it a useful agency in "maintaining industrial peace in railroad service."

Neither the railroads, nor the employees now at work, nor those who have struck, can reasonably refuse to submit the seniority issue to the Railroad Labor Board, because this involves submitting to an impartial body on which all parties in interest are represented the determination of the question of what actually are the rights of each party. Anybody who says that this cannot be done with fairness to all says, in effect, that there is no fair way except by the use of force to settle such controversies, which is equivalent to saying that civilized society has discovered a kind of controversy that certain of its members cannot fairly settle in any way except by the uncivilized method of submitting it to the arbitration of force and violence. Any group of men who take the position that they have rights which are so clear and so paramount to those of all other members of society that the determination of whether they actually possess those rights cannot more fairly and safely be left to some form of judicial arbitrament than to the arbitrament of force take a position which no civilized society can tolerate with justice to other parties in interest, or with safety to itself.

It cannot reasonably be assumed that the Railroad Labor Board or any other governmental body performing judicial or semi-judicial functions always has or always will perform them with perfect fairness. But the Railroad Labor Board, or any other governmental body performing judicial or semi-judicial functions is much more likely, in the long run, to do approximate justice as between the parties to a controversy than either party is to do justice to the other. Both parties to the strike have agreed to submit to rehearing by the Board of the controversies which caused the strike, and the Board is just as competent to settle fairly questions which have arisen as a result of the strike as those which caused it.

The coal strike and the railroad shopmen's strike afford the most powerful arguments ever afforded in this country in favor of the public, in the interest of justice and for its own protection, adopting and rigorously enforcing measures which will require all labor controversies in essential industries to be submitted to arbitration and which will compel the parties to such controversies to accept and faithfully carry out the arbitration awards.

The "Crimes" of the Railways

SO MUCH PROPAGANDA has been disseminated from labor union sources alleging wholesale violations by the railways of the labor provisions of the Transportation Act and the decisions of the Railroad Labor Board, that it is time the public was given a plain statement of the actual facts.

The facts given in this editorial will relate only to cases affecting the shop crafts, since they are the employees who have gone on strike and offered offences committed by the railways as a reason for doing so. The facts which will be presented are taken from records compiled by and for the Railroad Labor Board, and public members of the Board are the *Railway Age's* authority for stating that the cases we shall mention are the only cases involving alleged violations by railways of the law or directions of the board, which have been brought to the attention of the board.

There are over 200 Class I railways. How many of these are involved in these alleged violations? Exactly 24. How many violations of the law or decisions of the board have been charged against these 24 carriers? The number of the alleged violations is 34. What is the nature of the alleged violations? Twenty-two out of 34 cases involve the contracting of work by 17 different railways. These railways had 12 per cent of the total mileage of all the Class I railways. Therefore no contracting of work has been complained of upon railways having 88 per cent of the total mileage. All these railways engaged in contracting work before there had ever been a decision by the Labor Board regarding whether it was legal or even desirable. Since the board rendered its decision all the railways but two have

indicated to it that they will quit contracting out work. These two railways have a mileage of 2,691 miles, which is 1.2 per cent of the total mileage of the Class I carriers.

There are seven railways which have been charged with making reductions in wages not authorized by the Labor Board. The total mileage of these railways is 4,460 miles, or about five per cent of the total mileage of the Class I railways. There have been four cases involving alleged violations of rules and working conditions fixed by the Labor Board, but they are all cases of minor importance and in not one of them has a decision been rendered by the Labor Board. The foregoing is the sum total, as shown by the records of the Labor Board, of all the outrageous violations of the law and of decisions of the board which the leaders of the shop crafts unions could truthfully charge against the Class I railways as justification for ordering the present strike.

The propaganda the labor leaders have disseminated regarding alleged violations of the law and the decisions of the Labor Board committed by the railways, is precisely similar in character to all the other propaganda that they carry on for the purpose of misleading the public.

Labor Leaders Did Not Accept President Harding's First Plan

One of the most astounding illusions that ever prevailed in the United States is the illusion that the railway shop crafts unions accepted President Harding's first plan for settling the shop employees' strike. They did not accept it any more than the railways did.

President Harding made three proposals as a basis for settling the strike. The railways rejected the third of these proposals—that relating to seniority rights. The labor unions rejected the first, which related to the attitude to be assumed in future by railways and employees toward decisions of the Railroad Labor Board. President Harding in his letters transmitting his second plan to the railways and the labor leaders expressed gratification that both of them had agreed to accept and carry out decisions of the board in future. But the labor leaders in their reply to the President's first proposal expressly reserved the right to order strikes in future against every decision of the Labor Board which may be "non-acceptable" to them.

The first of the terms of agreement presented by the President was stated in his own language as follows:

"First, railway managers and workmen are to agree to recognize the validity of all decisions of the Railroad Labor Board and to faithfully carry out such decisions as contemplated by law."

President Harding must have meant when he wrote these words that the former employees belonging to the shop crafts unions, as one of the conditions of settlement of the strike, should agree not to strike rather than accept decisions of the board in future. Otherwise his presentation of this proposal to the employees would have been meaningless, for it is only by striking that they can refuse to accept and carry out its decisions. The following is the language in which the labor leaders "accepted" this proposal, the italics used being ours:

"The employees have always taken the position that *so long as they continued to render service* they should abide by the rules and working conditions and accept the wages agreed upon by proper negotiation or determined by the Labor Board after hearing of a dispute upon any of these matters. They respectfully point out again that violations of law and refusals to comply with decisions of the Labor Board have been exhibited only by the railway managements, and that it *has been universally admitted that the employees in exercising their right to suspend work upon non-acceptable conditions, were neither violating the law nor the decisions of the Board.*"

Now, everybody who ever read the labor provisions of the Transportation Act knows that if it is a violation of law for a railroad to refuse to comply with any decision of the board, then it is equally a violation of law for any group of railway employees to refuse to abide by any decision of the board. When Mr. Jewell and his associates said it had been "universally admitted that the employees, in exercising their right to suspend work upon non-acceptable conditions, were neither violating the law nor the decisions of the board," he stated that something had been "universally admitted" which never has been admitted by anybody outside of the labor unions.

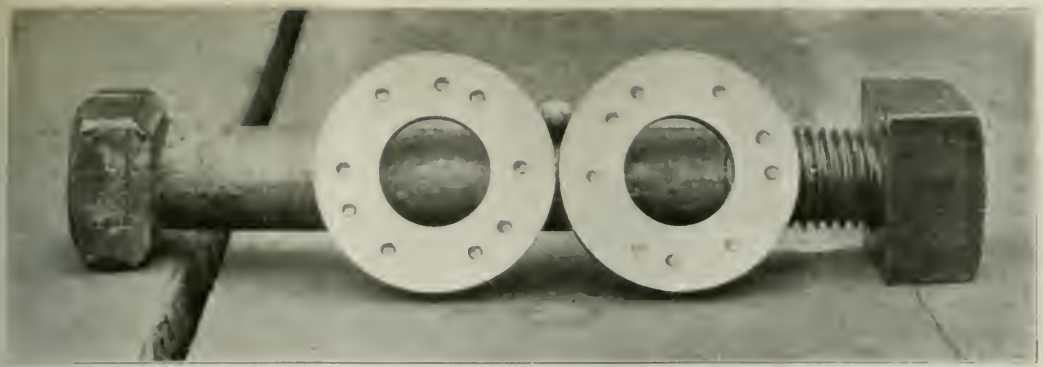
But what do these phrases, "as long as they continued to render service" and "exercising their right to suspend work upon non-acceptable conditions," mean? They mean simply that the labor unions demand that the railways shall accept and carry out every decision of the Railroad Labor Board, while the labor unions themselves reserve for themselves the "right" to strike at any time against any and every decision of the board which imposes "non-acceptable conditions" and that they even claim when they do this they are not violating the very decision of the board against which they strike! The railway executives accepted this proposal of the President, but with the understanding that it was not intended to preclude any party to a controversy from taking a decision or order of the board into court to determine whether it actually is valid.

President Harding said in his letter of July 31 to Thomas DeWitt Cuyler, chairman of the Association of Railway Executives: "It is wholly unthinkable that the Railroad Labor Board can be made a useful agency of the government in maintaining industrial peace in railway service unless employers and workers are both prompt and unquestioning in their acceptance of its decisions. I feel it is more desirable than I know how to express to have established the unchallenged authority of the Railway Labor Board because we must do those things which are necessary to bring about recognition of suitable authority to decide and end such disputes as menace the continuity of transportation." If any interpretation of the President's first proposal were needed, the language here used by him would afford it. He is seeking to make the Railroad Labor Board a useful agency in "maintaining industrial peace in the railroad service" and as a means to this end he asks employers and workers both to be "prompt and unquestioning in their acceptance of its decisions." But can it be said that a group of railway employees which expressly reserves the right to "suspend work upon non-acceptable conditions" established by the Labor Board is showing any disposition whatever to be "prompt and unquestioning in its acceptance" of the decisions of the board?

It is only too plain that the labor leaders, in pretending to "accept" the President's plan, accepted only two parts of it. The first part they accepted was that which provided that the railways should withdraw all lawsuits against the labor unions or their members growing out of the strike. The second of the terms they accepted was the President's suggestion that the striking employees should be allowed to return to work with their seniority rights unimpaired. In other words, they agreed to those parts of his plan which provided that the railways should make concessions, but rejected the most important part of it, namely, that which was designed to promote industrial peace in future.

There was much astonishment felt by railway officers that the President ever could have believed the railways would accept the first plan which he proposed for settling the strike.

There is even more reason for astonishment, however, that he or anybody else could have believed, after reading the labor leaders' letter to him, that they had accepted this plan.

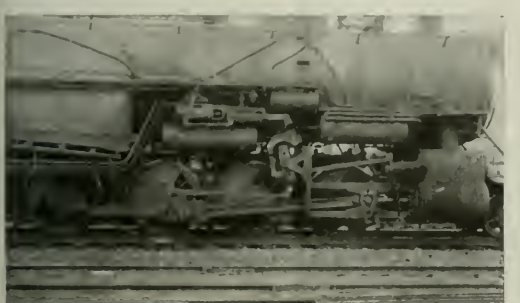


Two of the Washers Showing the Impressions Made by the Brinell Balls

Determining the Impact Loads on Track Bolts

Interesting Tests Performed on Philadelphia & Reading to Evaluate and Compare Induced Stresses

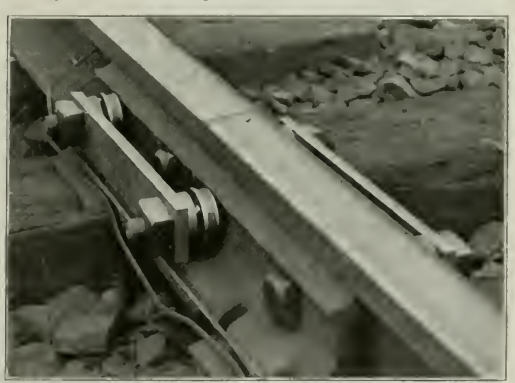
SOME INTERESTING TESTS were carried out recently to determine the stresses in track bolts induced by the impact of trains and locomotives and the pull of a trackman on a wrench. A separate test was also made to secure the breaking strength of a track bolt installed under the same conditions. These tests were conducted on the Philadelphia & Reading by the National Lock Washer Company, Newark, N. J., working with the officers of the railroad. The load caused by the impact was measured by an adaptation of the Brinell system of testing hardness, the impact or pull of the wrench forming depressions in hardened steel washers from which the stresses were determined. The average minimum and maximum loads were 25,980 lb. and 29,298 lb., giving stresses on the one-inch bolts used of 47,236 lb. per sq. in. and 53,270 lb. per sq. in. respectively.



The Locomotive Stopped Over the Joint to Show Position of Counterweight

The underlying principle of the method consisted of the forming of impressions upon hardened steel washers, through the medium of standard Brinell balls, by the loads which it was desired to determine. The equipment, which was developed, is shown clearly in the illustration and was for use with a four-hole joint. It consisted of four standard untreated one-inch bolts such as are used in insulated track joints (the standard track bolt being too short); four coned filler blocks with an angle of 41 deg. from the largest diameter face; eight hardened steel washers, $2^1/_4$ in. in diameter and $^3/_8$ in. thick, four 3-ball retaining washers, two steel bars used to prevent the washers from turning and the necessary nuts and Brinell balls. Washers were made from crucible steel, about 0.90 carbon, heat treated by quenching in oil at 1550 deg. Fahr. and drawing at 600 deg.

The field tests were made on the southbound, high-speed main track of the Philadelphia & Reading at a point opposite tower "PW," slightly over $2^1/_2$ miles north of Norristown Junction, Pa. The track at this point was laid with the Pennsylvania Steel Company's Section 105, open hearth, 100-lb. rail on tie-plated, creosoted pine ties, on stone ballast with good line and surface and four hole, reinforced angle bars.



The Test Apparatus Installed in Track

The old bolts were removed from one of the angle bars by a section man, after which the test arrangement was put in place, the new bolts being numbered 1, 2, 3 and 4 in the direction of travel. The nuts were then pulled up by the section man, using a 36-in. track wrench and applying, as nearly as possible, a normal amount of force. This was done in preparation for train No. 92, a high-speed passenger train which passed over the joint a short time after, at 58 miles an hour. The equipment consisted of a fairly heavy Atlantic

type engine with a weight on drivers of 129,210 lb.; a combination car, three day coaches and two Pullmans.

After the passage of this train, the nuts were loosened, the impressions marked for future identification and the washers turned through a small angle to secure a new bearing surface for the balls. The nuts were then turned up and a heavy Consolidation engine running light at 45 miles an hour, was run over the joint. The weight on the drivers of this locomotive was 251,920 lb., the weight on the third pair of drivers being 64,690 lb. The drivers were 53½ in. in diameter. The locomotive was stopped gradually, backed up to the joint and stopped with the third pair of drivers exactly over the joint to locate the position of the counterweight. The joint was neither subjected to a maximum nor a minimum stress but one more nearly approaching an average.

Following this test, a new surface was again brought into position and the nuts tightened by the same section man to secure the load produced by the pull of the wrench. Another surface was brought into position after this had been done and a nut on one of the bolts tightened until it broke. The hardened washers, carefully marked for identification, were taken later to a testing laboratory where each washer was subjected to a test load of 10,000 lb., using a Brinell ball of the same diameter employed in the field test. This was done to determine the unit resistance to pressure of washer from which the actual field loads could be calculated.

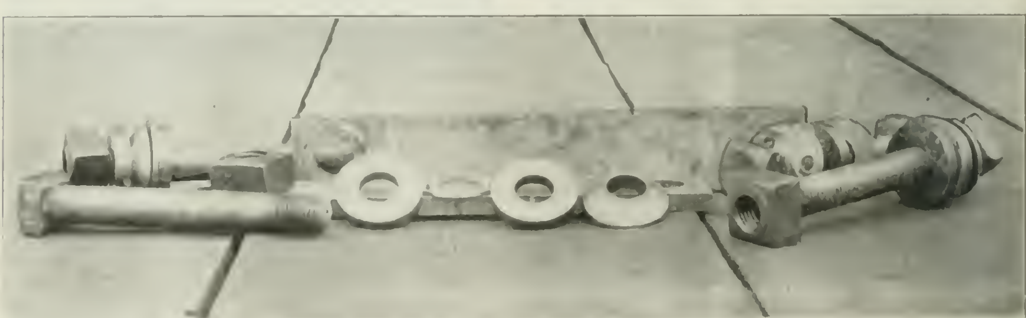
The load, as indicated by the units of three impressions on each washer, was calculated separately after which the results for the two washers on the individual bolts were averaged to secure the load. The final loads were determined from an average of the loads on each bolt. The results give a stress of 26,145 lb. on a one-inch bolt resulting from the passage of the passenger train, 26,374 lb. for the free-running freight locomotive, 25,980 lb. for the wrench pull and 29,298 lb. for the breaking pull. This gives stresses per sq in. of approximately 47,536 lb., 47,952 lb., 47,236 lb., and 53,270 lb. respectively, using 0.550 sq. in. as the area at the root of the thread. The formulas follow:

$$H = \frac{P}{2\pi r\left(r-\sqrt{r^2-\frac{D^2}{4}}\right)}$$

$$P_1 = 2\pi r H\left(r-\sqrt{r^2-\frac{D_1^2}{4}}\right)$$

H = Unit pressure on surface of ball impression made by test load or unit pressure resistance of material in washer.
P = Pressure on ball making test impression = 10,000 lb. P_1 = Pressure on ball to make track impression.
r = Radius of ball—5 m.m. in each case.
D = diameter of impression made by test load of 10,000 lb. in each class. D_1 = Diameter of impression made when washers were on track bolts.

The test described here was conducted under the direction of J. Howard Horn, National Lock Washer Company, Newark, N. J., and R. B. Abbott, assistant general superintendent, and J. S. Goodman, division engineer of the Philadelphia & Reading.



The Complete Equipment Used in the Track Test

President Proposes New Plan to Settle Strike

Asks Unions to Call Off Strike and Roads to Take Men Back, Leaving Seniority Question to Labor Board

WASHINGTON, D. C.

AFTER HAVING maneuvered both the railway executives and the federated shop craft unions into an agreement to recognize the validity of decisions of the Railroad Labor Board, President Harding on Monday proposed a new plan for a settlement of the railroad strike by a submission of the respective seniority rights of the strikers, the loyal employees who remained at work and the new employees to the Labor Board for a decision.

This proposal, which contemplates that the strikers return to work and that the railroads take them back, was embodied in nearly identical communications sent by wire to Thomas DeWitt Cuyler, chairman of the Association of Railway Executives, in New York, and by messenger to B. M. Jewell, president of the Railway Employees' Department of the American Federation of Labor, who was in Washington, about noon on Monday. The President then called the newspaper correspondents to the White House, where they were given copies of the messages with a brief explanatory statement that after great reflection and thorough investigation of all avenues of adjustment the plan of referring to the Labor Board the only remaining dispute in the way of a settlement "seems the only practical course for the government to take" and that "this is done as rather a final call, mindful of all existing conditions" including the threatened paralysis of transportation affecting many varieties of seasonal traffic and "the very great inconvenience and menace which threatens general industry through the fuel situation," and as representing "the best judgment of the government, stand-

Text of the President's Second Proposal

B. M. JEWELL:

I had your communication in which you and your associates, speaking for the striking railway shopmen pledged your agreement to the proposals which I submitted to the railway executives and your organizations for the settlement of the pending railroad strike. Inasmuch as I was acting as a voluntary mediator, seeking the earliest possible settlement, I confess to you the same disappointment which I have conveyed to the executives that the terms were not unanimously accepted. As you are already aware the executives of the carriers declared their inability to restore seniority rights unimpaired.

It is exceedingly gratifying, however, that in responding to the terms which were proposed that both the spokesmen for the carriers and the spokesmen for the employees have pledged that they "will recognize the validity of all decisions by the Railroad Labor Board and to faithfully carry out such decisions as contemplated by the law." Moreover, spokesmen for carriers and employees have approved the second paragraph of the proposal and in their approval have agreed that "Railroad Labor Board decisions which have been involved in the strike may be taken, in the exercise of recognized rights, by either party, to the Railroad Labor Board for rehearing."

Inasmuch as the employees have agreed to all the terms proposed and the executives have agreed to two of the bases of settlement and rejected the third, there remains only the question of seniority covered in paragraph three in dispute, to bar a settlement. Mindful of the pledge of both the executives and the striking workmen to recognize the validity of all decisions by the Railroad Labor Board I am hereby calling on the striking workmen to return to work, calling upon the carriers to assign them to work, calling upon both workmen and carriers, under the law, to take the question in dispute to the Railroad Labor Board for hearing and decision and a compliance by both with the decision rendered.

WARREN G. HARDING.

T. DEWITT CUYLER:

I had your communication in which you conveyed to me the resolutions of your association agreeing to two paragraphs in the proposal which I submitted for the settlement of the pending strike of railroad shop employees, and declining to accept the third, which provided for restored seniority rights of the workmen on strike. Inasmuch as I was acting as a voluntary mediator, seeking the earliest possible restoration of railway transportation to full efficiency, I confess a disappointment that the terms were not accepted.

The resolutions which you transmit on behalf of the executives do pledge that the carriers "will recognize the validity of all decisions of the Railroad Labor Board, and to faithfully carry out such decisions as contemplated by the law." You convey the further agreement, as expressed in the second paragraph of the proposal, that "Railroad Labor Board decisions which have been involved in the strike, may be taken in the exercise of recognized rights, by either party, to the Railroad Labor Board for rehearing."

The striking employees agreed to all the terms proposed, therefore only the question of seniority, covered in paragraph three, which the executives rejected, remains in dispute and bars a settlement. Mindful of the pledge of both the executives and the striking workmen to recognize the validity of all decisions by the Railroad Labor Board, I am hereby calling on the striking workmen to return to work, and calling upon the carriers to assign them to work, and calling upon both workmen and carriers under the law, to take the question in dispute to the Railroad Labor Board for hearing and decision, and a compliance by both with the decision rendered.

WARREN G. HARDING.

ing between the two contending forces and seeking an adjustment in the public interest."

The President had conferred for an hour or so on Saturday with Mr. Jewell, W. H. Johnston, president of the International Association of Machinists, and J. P. Noonan, president of the Brotherhood of Electrical Workers, and they had remained in the city and called on the President again on Monday prior to the announcement, but it was stated at the White House that he was not in a position to say what would be the attitude of labor toward the new proposal and that he had had no formal conference with any one representing the executives. It was said that "this is the government's own motion, it is not a partisan appeal, and the President hopes it will meet with public approval."

The plan is in accordance with the President's purpose as expressed on several occasions to uphold the authority of the Labor Board as the final arbiter of all disputes between the railroads and their employees. Although the President had expressed great disappointment that his original plan had been rejected by the railroads he was represented as attaching far greater importance to the acceptance of the principle of recognizing the authority of the Board.

Association of Railway Executives Meets Friday

Mr. Cuyler, who was at Bar Harbor, promptly called a meeting of the member roads of the Association of Railway Executives for New York on Friday. A meeting of the strike leaders was also called to be held at Washington on Wednesday. It was stated, however, that any decision reached at this meeting would probably be withheld until after a conference of the executives of all the railroad labor organizations on Friday.

Unions Oppose New Plan

While it was at first assumed that, as before, the President had reason to believe that his new plan would be acceptable to the shopcraft leaders, it soon became evident that they were as much opposed to the idea of calling off the strike without being assured of seniority for the strikers as the executives had been to the idea of completely surrendering the rights of their present employees. What they now want is that the President should get the Labor Board to assume jurisdiction over the seniority question before the strike is called off, and without waiting for it to be submitted as a joint dispute. The first move of the strike leaders after receiving the President's message was to call upon the train service and other railroad labor organizations for help and at the same time they apparently began a campaign of trying to alarm the public by declaring that railroad equipment is in an unsafe condition.

General Conference of Railroad Labor Leaders Called

Messrs. Jewell, Johnston and Noonan issued a statement Monday evening announcing that they had requested a conference of all executives of railroad labor organizations to be held in Washington on Friday and in their telegram to the labor executives said, "it is now apparent that no constructive program is being proposed."

Before asking for the general meeting of labor leaders they had conferred with the legislative agents of the engineers, firemen and trainmen. The statement said:

"We have requested this conference because we recognized that railroad employees not now on strike will, in defense of the traveling public and themselves, necessarily have to decline to operate the defective locomotives and cars now in service.

"It is clear to any unbiased person that railroad equipment is growing more unsafe each day, and the relief must be had through an honorable settlement. Employees now on strike are firm in their position and will continue as long as the Association of Railway Executives declines to accept reasonable terms of agreement."

The message to Warren S. Stone, as chairman of the Labor leaders, was as follows:

"Shop crafts did everything conceivable to avoid the necessity for a strike and since the strike have at all times been willing to confer with any party authorized to submit a proposal as a basis for honorable settlement. We accepted the President's terms of agreement submitted to employees and managers July 31. The Association of Railway Executives in rejecting the President's terms of agreement, obviously acting under the direction of those who exercise financial control and dictate the labor policies of the railroads, repudiated the promise given by their chairman to the President and defied the spokesman of the American people. To date, only the employees have made concessions. Obviously the strike must be settled if the country is to avoid the impending calamity of a collapse of transportation. The government has the authority to promptly settle the strike on the just, fair and reasonable basis proposed by the President July 31.

"However, it is now apparent that no constructive program is being proposed, and that unless the railroad employees can offer additional counsel and advice, the lives and safety of employees and traveling public, already endangered by the continued use of defective railroad equipment, will be imperiled to a greater extent.

"Believing that the chief executive of each of the standard railroad labor organizations, as a result of their years of experience, broad public viewpoint and sincere desire for industrial peace, can, by conference with the officers of shop crafts formulate a program having for its purpose protection of the public, preservation of the railroad industry and an honorable basis of settlement for the managers and the employees, we urgently recommend that you, as chairman of the railroad organizations, wire each chief executive requesting him to attend a conference in Washington on Friday, August 11."

Mr. Stone replied on Tuesday that the heads of all the organizations except the train service brotherhoods were in Washington or on their way and that they would be present on Friday.

Mr. Jewell has inaugurated a series of twice a day conferences with newspaper men and on Tuesday he exhibited a large number of telegrams from local organizations insisting that they would not "stand for" leaving the seniority question to the Board and that they would accept only the President's proposal of July 31. Mr. Jewell said that his message to Mr. Stone carried no suggestion of a general strike, but that the meeting was for the purpose of obtaining advice and counsel. Regarding the seniority question, he said that in the past whenever a strike had been settled it had been taken for granted that the men were to retain their seniority. When he was reminded that the present strike is the first nation-wide strike and that the situation differs from that involved in previous settlements because while some roads could take back the strikers without difficulty, many others consider that they have already defeated the strikers, he declined to admit that any road has beaten the strike and took the position that the new men employed by the roads are "no good."

One of the obstacles to the acceptance of the plan by the unions is the Labor Board resolution of July 3 which recognized the present employees rather than the strikers as the real employees of the railroads, and which the Board attempted to tone down by its action on August 7. The fact that the resolution had been adopted increases the unwillingness of the strikers to take their chances by trusting their seniority rights to the decision of the Board and they resent bitterly the idea which they consider represents the attitude of the government that they cannot be strikers and employees at the same time.

House to Be in Session

The strike situation was discussed by the Cabinet in a general way on Tuesday but no results were announced and the President declined to give any indication as to what course he would pursue if the latest plan is rejected. It was stated, however, that the House of Representatives would be kept in session after the members return on August 15. There had been some discussion of a series of short recesses

that would permit many of the members to stay away but it was stated that it was considered wise to have Congress on the job because "there is no disguising the seriousness of the coal situation and perhaps the seriousness of the railroad situation." This was taken by the newspapers to mean that the President had a legislative plan to propose. There has been some consideration of amendments to the Transportation Act to strengthen the authority of the Labor Board for the future but no definite plan for meeting the present railroad situation by legislation has been suggested.

White House Says Cuyler Saw Plan in Writing

That there was no modification of the terms of the President's proposal for a settlement of the shop strike between the time of his personal talk with Mr. Cuyler on July 27 and the formal statement of the plan in his letters to Mr. Cuyler and Mr. Jewell, except the change in the second part of the plan, relating to a rehearing before the Labor Board to which he called attention in the letter to Mr. Jewell, was stated officially at the White House on Friday. This was in response to suggestions that appeared in the press to the effect that the President's proposal on the seniority question came as a bombshell to the railway executives at their meeting in New York on August 1, for the reason that some change had been made in the plan. There was a very marked difference in the plan as formally announced and the unofficial forecasts of it that had appeared in the newspapers and attributed to official sources, but the President authorized the newspaper men to quote him as saying that "in a matter of such importance or in any of his official transactions he never permits a misunderstanding or makes a misrepresentation." It was stated that there was a change in part 2 of the plan, wholly voluntary on the President's part, because it was contrary to the original proposal, and that the President had pointed this out in formally communicating the plan to Mr. Jewell, but that Mr. Cuyler saw the proposal in writing at the time of his personal conference with the President and that there was no change thereafter in the part relating to seniority. Newspaper men had been told at the White House on July 28, at the time it was announced that the President had a plan to propose, that it had not been completely formulated, and Mr. Cuyler had been quoted in New York as saying that when he left Washington it had not been drafted. No information was given out at the White House regarding the terms of the plan until one o'clock Tuesday afternoon, after it had been submitted to the railway executives in New York, but the stories printed to the effect that the employees remaining at work would be given seniority above the strikers certainly received some encouragement, if not inspiration, in official circles and the statement indicating that Mr. Cuyler and Mr. Atterbury had promised that they would back the plan or at least not oppose it was attributed to a Senator who has been acting as one of the go-betweens for the President.

It was also stated at the White House that the government is always anxious to bring about a settlement in matters of this kind which vitally affect the public welfare and that there was very great disappointment that the proposal submitted was not accepted all around. However the President was represented as feeling that a great advantage had been gained in that both the railroad executives and the union leaders have accepted what he terms the two basic points in the settlement proposal, namely, that both managers and workmen agreed to recognize the validity of all decisions of the Labor Board, that the carriers would withdraw lawsuits and that Labor Board decisions which have been involved in the strike may be taken to the Labor Board for rehearing. This recognition of the authority of the Labor Board is regarded by the President as the most important point and he feels that so long as both parties accept the jurisdiction of the Labor Board a marked degree of progress has been made. As to the third point of the proposal, relating to seniority rights, it was stated on behalf of the President that the government only undertook voluntary mediation because that sort of mediation between carriers and employees is contemplated in the Transportation Act.

Brotherhoods Urge Acceptance of President's Original Proposal

The legislative agents of the engineers', firemen's and trainmen's brotherhoods called on President Harding on Saturday, August 5, to present the views of their executives in connection with the shop strike situation and their complaints that their members had been urged to take out equipment in unsafe condition. A telegram to the legislative agents sent by W. S. Stone, grand chief of the Brotherhood of Locomotive Engineers; W. G. Lee, president of the Brotherhood of Railroad Trainmen, and D. B. Robertson, president of the Brotherhood of Locomotive Firemen and Enginemen, had asked them to present the following to the President:

"Complaints in increasing numbers are pouring into our respective offices against demands that our men take out locomotives and equipment which are in dangerous and unsafe condition, in violation of safety statutes and rules which have been enacted for the protection of the lives and property of the public, and of assaults on and insults to our members by armed guards that are placed on the various railroad properties.

"Up to this time, by constant urging of a neutral attitude, fidelity to their contracts and in the interest of public peace and safety, we have prevailed on our members to continue at their posts. Constant aggravation of the above conditions and the refusal of the railroad executives to accept the proposals of the President for a compromise settlement of pending questions are making the situation infinitely more difficult to handle. The plain intention of the railroad executives to smash the shop craft unions is resulting in more and more of the locomotives and equipment getting into disrepair, and the dangers of a most hazardous occupation are being daily increased.

"We fear that a continuation of these conditions will inevitably result in our members, as a matter of self-protection, being drawn into the controversy, and we greatly deplore such a contingency.

"We feel that the American public is fully in sympathy with the President's efforts to settle this strike, and, in the light of the above facts and in the interest of public welfare, peace and safety, we suggest you call upon the President and urge him to again bring this matter to the attention of the railroad executives, with the hope that he may yet succeed in convincing them of the necessity for their prompt acceptance of the President's proposals, which have been accepted by the shop crafts.

"Continued refusal to accept the President's proposals for a compromise settlement of pending questions will place upon the railroad executives full responsibility for the increasing seriousness of the situation.

"We suggest you file this message with the President, as a basis for discussion with him of the questions at issue and to show you have full authority of the undersigned chief executives to meet him. We are wiring the President you will call upon him with full authority to discuss this subject."

The brotherhood representatives told the newspaper men that they had no thought of a sympathetic strike but that they were trying to emphasize the seriousness of the situation.

I. C. C. to Report on Locomotive Inspection

The Senate on August 7 adopted without debate the resolution proposed by Senator King of Utah directing the Interstate Commerce Commission to report whether the locomotive inspection act is being violated and, if so, the extent of such violation, and whether inspection of locomotive boilers is presently being made in all federal locomotive boiler inspection districts and on all roads, as required by the act. The commission is preparing to reply to the resolution as quickly as possible. It will probably reply that its force of inspectors is totally inadequate to report on the condition at any given time of 70,000 locomotives scattered over 270,000 miles of track and 4,000 terminals, but it is doubtless in a position to give the results of the reports that have been made by its inspectors.

According to reports reaching the commission, there have

been comparatively few cases of enginemen refusing to take out locomotives because of their condition and they have received instructions from their officers to ignore minor defects but to take it up with the management if they feel that the engine is actually unsafe. Labor leaders said on Tuesday, however, that new instructions had been issued.

Mr. Gompers on Record

As a part of the campaign to alarm the public, Samuel Gompers, president of the American Federation of Labor, on August 8, issued the following statement:

"Reports of railroad wrecks have been frequent of late and in at least one such accident, on the Missouri Pacific, 35 persons were killed and more than 100 injured.

"There has been no statement as to the cause of these frequent wrecks other than the statements issued by railroad managers which have uniformly ascribed the wrecks to causes other than faulty railroad equipment. In the most serious of these recent wrecks the railroad officials stated that the engineer had run past stop signals.

"In view of the large number of apparently authentic statements charging a deplorable condition of railroad equipment, the public should be furnished with a more authoritative and unbiased statement than any which are furnished by railroad officials where train accidents occur.

"If it is true that a high percentage of locomotives is unfit for operation may it not be the case that the increasing frequency of railroad wrecks is due to the use of such defective locomotives?

"It seems to me entirely proper that in every case of a railroad accident there should be an immediate inquiry by public officials who are not under the influence of railroad authorities and that the public should be immediately informed of the results of such inquiry in order that it may be known whether use of unfit locomotives, in defiance of rules of safety and in defiance of law, is taking a toll of human life.

"Constant reiteration, by persons evidently in possession of accurate information, of charges that totally unfit locomotives are being used both in the freight and passenger service of the various railroads justifies the demand for some other explanation for the increasing number of wrecks than those offered by railroad officials."

The Bad Order Locomotive Situation

The Association of Railway Executives on August 4 authorized the following:

"Representatives of the striking railroad employees are attempting to arouse public concern over the alleged enormous impairment in the condition of the motive power and cars of the railroads.

"No industry in the world is conducted with anything like the publicity which surrounds all the important aspects of American railroad operation. Among other things the railroads report and publish regularly statistics covering their car loadings, their idle cars and their bad order equipment.

"The stories to the effect that a thousand locomotives are falling out of use every day are ridiculous. On July 15 of this year two weeks after the strike began there were fewer locomotives in bad order than February 1, March 1, April 1, May 1 or June 1. Below are the figures showing the number of bad order locomotives from July 1, 1921 to July 15, 1922, inclusive

	Locomotives
July 1, 1921	15,437
August 1, 1921	15,643
September 1, 1921	15,569
October 1, 1921	15,471
November 1, 1921	15,491
December 1, 1921	15,790
January 1, 1922	18,881
February 1, 1922	15,865
March 1, 1922	16,497
April 1, 1922	16,165
May 1, 1922	16,237
June 1, 1922	15,765
July 1, 1922	11,134
July 15, 1922	15,764

The number of bad order cars has been excessive ever since the period of federal control. The inability of the railroads to earn even operating expenses during a part of 1921, coupled with the resistance of the men now on strike to any reasonable reduction in wages, made the adequate maintenance of the cars of the country financially impossible over a long period. Bad order cars on July 1 numbered 324,583, and on July 15, 342,078, an increase of 17,495. This is not an abnormal increase, in view of the traffic indicated by the heavy car loadings of the months of June and July."

Of the 15,764 locomotives in bad order on July 15, 12,254 needed repairs requiring over 24 hours and 3,510 required less than 24 hours.

In a conference with newspaper men on Tuesday Mr. Jewell and Mr. Johnston said they had been trying to get information regarding the condition of equipment but had not yet analyzed their reports. However, they said, experience indicated that the railroads ought to repair 70,000 cars a day, including 6,000 for heavy repairs and 64,000 for light repairs, and about 1,000 locomotives a day, and with the men on strike these repairs are not being made while accurate reports are not being made because only a few inspectors are left in service. Mr. Johnston said that even if the strike were settled at once it would take a year to get the equipment back into proper condition.

Mr. Johnston also volunteered the information that they had received reports from pickets that railroads had imported strikebreakers from Europe, in ignorance of the character of the work, and that they had taken the matter up with the Department of Labor. He said he had not the faintest idea as to how many had been so imported and he mentioned the Chesapeake & Ohio as the source of his "first report" on the subject.

Asked whether the men would go back to work in the event the government should take over certain roads on the basis of the President's proposal Mr. Johnston said: "If the government took over all the roads," and Mr. Jewell assented, "is this government going to constitute itself a strikebreaking agency by taking over the roads on which we make the strike most effective?" he asked. There will be no separate settlements, they added. The labor leaders also asserted that Mr. Cuyler had not only seen a written copy of the President's original plan but that he had promised to accept it and that the President was "put out" because the labor leaders insisted that they were without authority to accept a plan.

Predictions That President May Take Over Coal Roads

Press predictions that the President is thinking of taking over the railroads or those on which coal movement has been retarded since the beginning of the strike of shop employees are apparently based on rather vague statements of one or two cabinet officers that the government has the power, if it were deemed necessary, to have receiverships declared for roads which are unable to give proper service, but there have been no indications in official circles that such a plan has been very seriously considered. It has been definitely stated at the White House that the President believes he has power in case of a sufficient emergency to take over either the railroads or the coal mines without legal legislation, but it was added that it was not likely that the railroad situation would take that tack. There has been a suggestion, however, that the President would propose legislation for the creation of a coal commission and there are some more or less definite plans for amendments to the labor provisions of the transportation act.

Southern Railway's Proposals Rejected

The committee representing the shop crafts on the Southern Railway on Tuesday definitely rejected the proposals of the company for an individual settlement on the basis of the President's original proposal, on the ground that a national issue is involved and that any settlement must be made on a national basis.

Declaring that the Southern Railway had "more than fulfilled" its duty to striking shop employees in endeavoring to get them to return to work under the terms of President Harding's strike settlement offers, Fairfax Harrison, president of the road, sent telegraphic appeals throughout the service for assistance in the endeavor to maintain "unimpaired transportation service" notwithstanding the strike.

"Our duty is to our employees, the public and the company," the message said. "The duty to our striking employees we have more than fulfilled, and I now call upon you, whatever is your occupation, to assist the management in performing its duty also to the public and the company. This obligation calls for unimpaired transportation service and this we will perform."

Strikers' Meeting Postponed

The meeting of the officers of the shop crafts intended to be held on Wednesday to consider the President's proposal was postponed until Thursday, but it was stated that no definite answer to the President would be formulated at least until after the general conference of the 17 railroad labor organization executives on Friday.

T. H. Davis, chairman of a general shop crafts committee of the Pennsylvania System, headed a delegation of Pennsylvania employees who called on President Harding on Wednesday and urged the President not to countenance any strike settlement which would impair the seniority status of men who remained in railroad service in spite of the strike. About 65 per cent of the Pennsylvania shop employees, Mr. Davis said, remained at work and others who went out have returned, so that at present about 75 per cent of the old men are on the job.

Mr. Jewell issued a statement on Wednesday based on the figures in the American Railway Association's semi-monthly report of locomotive equipment filed for July 15, which, he said, showed that the railroads had fallen behind in required locomotive repairs during the first 15 days of the strike by 6,587 locomotives. He also called attention to the fact that the report itself shows that the figures of previous reports were used "account labor trouble" for 18 roads. The statement also said that the federal locomotive inspection and safety appliance laws are not being complied with during the strike; that no proper inspections are being made and no reports being released giving the true condition. Mr. Jewell said there are only 50 government inspectors and asked why additional government officials are not assigned to require compliance with the law and protect the traveling public and railroad employees when taxpayers are called upon to pay for "thousands of additional guards, police and sheriffs, to say nothing about state militiamen and federal soldiers."

Secretary Hoover on August 7 issued the following statement in reply to reports that at a conference with a number of New York bankers on August 1, preceding his address to the railway executives, he had tried to persuade the bankers to use their influence toward a settlement of the strike: "The statement as it appears in the press is entirely incorrect. The meeting took place between myself and a small group of bankers and others at the request of some of their members, in which the general economic situation that was resulting from the coal and railway strikes was discussed by me, and I counseled that all responsible men should show moderation.

"There was no suggestion that banking pressure should be brought on any particular group, but that men of influence should exert themselves toward securing compromise and early settlement."

Strike Developments in Chicago and the West

In the West during the past week the strike of shopmen has been a story of continued success on the part of the railroads in rebuilding their shop forces, accompanied by intermittent outbreaks of rioting and violence which has resulted in the death of strikers, loyal employees and police officers who have attempted to restore order. To a large extent the past week's developments are a repetition of those described for the previous week in the *Railway Age* of August 5, page 249. The resumption of violence on the part of the striking shopmen was not wholly unexpected inasmuch as the railroads emphatic stand on the seniority issue, their announced intention of protecting to the fullest extent their loyal employees and those who have been hired to take the place of strikers, and the success of the carriers in recruiting new and experienced men, have all tended to make the strikers restless and apprehensive as to the success of the strike and their future. On the other hand, the constantly recurring rumors of a settlement by the government, always with the intimation that the strikers will be restored with their seniority and other rights practically unimpaired has tended to retard the return of shopmen to work.

The success western roads are meeting in rebuilding their shop forces is clearly indicated by the fact that whereas on July 25, 44,501 shopmen were at work, on August 1, the forces had been increased to 58,075, on August 3 to 63,329 and on August 5 to 65,552.

Practically all of the larger roads in the west are reporting daily increases in their shop forces of from 150 to 300 men, all experienced and capable workers who have been selected with the view of their becoming permanent and useful employees. Some of the large roads in Chicago have been so successful in the recruiting of employees that their shop forces are rapidly approaching normal and this has resulted in several cases in an actual improvement in the bad order car situation as compared with the situation prevailing before the strike began.

The propaganda to the effect that the strike is seriously interfering with freight and passenger traffic in western territory has led to the issuance of several statements by the western executives giving the results of daily reports, particularly by those roads whose headquarters are in Chicago. On August 4 it was said:

"The reports of the roads (with headquarters in Chicago) show that the strike is having practically no effect upon the ability of the carriers to render adequate freight and passenger service, all of the roads reporting that they are handling freight traffic currently and that the operation of passenger trains continues normal."

On August 8, it was announced that:

"The western roads report that they are handling the freight traffic offered in a normal way. Several of the larger roads report that they are handling an exceptionally heavy freight traffic, almost equal, in several cases, to the heaviest movement on record. As to the passenger traffic, reports of the curtailment of service, when correct, apply practically without exception to unprofitable and unnecessary trains which have been taken off solely to conserve coal supplies."

Rioting and Intimidation Continues at Various Points

The violence which has accompanied the success of the carriers in building up their shop forces and followed their decided stand on the seniority issue has been most marked at Joliet, Ill., where on August 7 a serious riot necessitated the calling of state militia to restore order. A special agent of the Elgin, Joliet & Eastern and a striker were killed and Sheriff James A. Newkirk was seriously wounded in the fighting. According to the latest reports the state troops have restored order.

At Joliet, as has been the case at many other points during the past two weeks, violence has been due not to attempts on the part of strikers to interfere with railroad operations but to their attempt to intimidate loyal employees in and around their homes. In the majority of cases strikers have gathered, marched to the homes of loyal employees with the intention of damaging their houses and property as much as possible and bloodshed has resulted when police officers have attempted to disperse the rioters.

The tense situation prevailing after the rioting at Joliet

and the arrival of state troops resulted on August 9 in the refusal to work by the train service employees on the Joliet division of the Elgin, Joliet & Eastern. The walkout was called in protest against the presence of the troops in the terminal yards at Joliet and was decided upon at a meeting of the brotherhood men involved on August 8. The train service men felt that the troops were not needed in Joliet, according to the chairman of the local organization. The engineers, firemen, conductors and brakemen reported for work as usual on August 9 but refused to take out their trains and engines until the troops had been removed.

Among the other acts of violence which have been reported during the past week are the following:

One man said to be a striker was killed and another wounded during an exchange of shots on August 3 at Van Buren, Ark., between guards in the Missouri Pacific shop and men who are believed to be strikers or strike sympathizers. At Jackson, Mich., several police officers and striking shopmen were injured, when more than a thousand strikers and sympathizers, including many women and children, attacked non-union workers as they were leaving the shops of the Michigan Central at that place. Eighty strike sympathizers attacked more than sixty workers in the Chicago Great Western shops at Des Moines, Iowa, resulting in the severe injury of one participant and the kidnapping of several of the loyal employees. All of the men kidnapped were later accounted for, having been carried some distance and mistreated before being released. On the same day two demonstrations before the homes of loyal employees were made in Lincoln, Neb., by strikers and sympathizers. Four non-union employees of the Missouri, Kansas & Texas were severely treated and put off a train at Upton, Texas, by strike sympathizers.

On August 4 two deaths resulting from rioting were reported, one in Edgemond, S. D., where a switchman of the Chicago, Burlington & Quincy was shot and the other in Chicago where a carpenter employed in the Illinois Central shops was beaten to death. A repairman in the Illinois Central shops at Chicago was also severely beaten because he refused to join the strikers. A Union Pacific trainmaster was seized by a mob at Las Vegas, Nev., taken several miles into the desert and given a coat of tar and excelsior by a crowd of strike sympathizers. Previous to this four women had attacked the wife of a Union Pacific roundhouse foreman as she was carrying dinner to her husband and severely beat her. At Birmingham, Ala., two men and two women were severely injured in a clash between non-union workers and striking shopmen of the St. Louis-San Francisco.

On August 5 the reports from various parts of western territory included the following:
